#	Requirement	Questions	Answered	Successfully Answered	URL
1	JBNET-2391	Is this something we really want to add to the CSP or simply add to existing functionality within Issue-Tracker?	0	0	https://issues.jboss.org/browse/JBNET-2391
2	JBNET-2376	mike, Got a couple of questions from reading the "Expected tasks". Please read inline: > - create script to set all groups to default "false" preference Should it be setting "Force private comments when escalated form another group" to "true" ? > - create script to set desired JBoss and MetaMatrix groups to "true" preference Should it be setting "Force private comments when escalated form another group" to "false" ? Lisa	1	1	https://issues.jboss.org/browse/JBNET-2376
3	JBNET-2375	Mike, Who in IT/HC I can work with? Thanks, Lisa	1	1	https://issues.jboss.org/browse/JBNET-2375
4	JBNET-2372	Frank, attached, portal_part1.csv are tables (with columns shown) not used/referenced by I-T. Could you please go through them and see if any of the columns are deprecated? Can the deprecated columns be dropped for this iteration? Thanks, Lisa	1	1	https://issues.jboss.org/browse/JBNET-2372
5	JBNET-2372	Frank, One more favor from you please. Can you review the attached, portal_part2.ods file and see if the csp-team references any of the columns that are colored in Red? The colored columns are no longer used by I-T any more. Hopefully dropping them off the schema won't break CSP... thanks, Lisa	1	1	https://issues.jboss.org/browse/JBNET-2372
6	JBNET-2292	The translation fix of the login.html/logout.html, could please do a replacement: s/Please complete a // and this will be the fix. IWO, only the "Please complete a " words are unnecessary. Please note there is a space after "a". Both the pages seems to be non-static page because I can see sessionid are embedded in the pages and I guess we have a template but I'm not sure. Will upload the translated csp help page later.	1	1	https://issues.jboss.org/browse/JBNET-2292
7	JBNET-2273	Jessica, is this a request for SEP or the CSP?	0	0	https://issues.jboss.org/browse/JBNET-2273
8	JBNET-2240	Is there another jira for the logic used to decide who receives each notification?	0	0	https://issues.jboss.org/browse/JBNET-2240
9	JBNET-2123	Lisa, did you just complete the analysis or did we commit these changes at some point?	0	0	https://issues.jboss.org/browse/JBNET-2123
10	JBNET-2099	Does you new table include the label you're using for the drop-down? i.e. "Customer Service Asia/Pacific" label <= "Customer Service APAC" product	1	1	https://issues.jboss.org/browse/JBNET-2099
11	JBNET-2073	results.issues.php line 236 change from if (is_array($opened)) { $search_statement .= "AND ("; $first = TRUE; foreach ($opened as $val) { $search_statement .= $first ? 15	JBNET-1990	The skus were added as part of the work for JBNET-1878. Should this issue remain open until the skus are added in prod?	0	0	https://issues.jboss.org/browse/JBNET-1990
16	JBNET-1945	frank, is this one regarding aliases like matamatrix-support@redhat.com? I discovered a unforseen bug with this one. If we are to use those aliases instead of tao@ for internal users, it breaks the email interface. email udpates bounce if internal users try to update tickets that are opened by customers through those aliases... Things still work if internal users email tao@redhat.com Let me know where we are heading regarding this complication. Lisa	1	1	https://issues.jboss.org/browse/JBNET-1945
17	JBNET-1941	Please ensure that the authentication type can be set by configuration. Should have a constant defined in configuration called "_AUTH_TYPE_" _AUTH_TYPE_ = 1 :: use native authentication, ignore UserService. _AUTH_TYPE_ = 2 :: use new authentication alghorithm (UserService, then native)	0	0	https://issues.jboss.org/browse/JBNET-1941

23	JBNET-1916	This issue has the same situation as JBNET-1915. The label on the list view table is generated within three steps. 1. From $_REQUEST variable. If you altered the view only for this session, the changes will not be stored in database. 2. From database. If you altered the view for not only this session, the changes will be stored in database. The list view on Groups page works this way. 3. From hard codes. If there is no label information available from $_REQUEST and database, it will read from the hard codes. The list views on My Opened, My Assigned, My Subscribed and My Recent pages are using this way. For the third step, I can change it without problem. For the second step, it is not easy to update all the data in database. But it can be easily changed on list view page by replace the string when it needs to be displayed.	1	1	https://issues.jboss.org/browse/JBNET-1916
24	JBNET-1916	These changes only affect the list views on My Opened, My Assigned, My Subscribed and My Recent pages. But not Group page.	1	1	https://issues.jboss.org/browse/JBNET-1916

25	JBNET-1915	(from Marvin via email) Hi, Mike: I investigated this issue and JBNET-1916 throughly. I found that the label on the list view table is generated within three steps. 1. From $_REQUEST variable. If you altered the view only for this session, the changes will not be stored in database. 2. From database. If you altered the view for not only this session, the changes will be stored in database. The list view on Groups page works this way. 3. From hard codes. If there is no label information available from $_REQUEST and database, it will read from the hard codes. The list views on My Opened, My Assigned, My Subscribed and My Recent pages are using this way. For the third step, I can change it without problem. For the second step, it is not easy to update all the data in database. But it can be easily changed on list view page by replace the string when it needs to be displayed. Marvin	1	1	https://issues.jboss.org/browse/JBNET-1915
26	JBNET-1896	Don't we already do this? Or is this for Issue-Tracker?	0	0	https://issues.jboss.org/browse/JBNET-1896
27	JBNET-1815	set up group accounts (all noted on the Intranet URL below) where we encourage RH employees to set up their access to our systems and products we offer. This ensures only current employees have access to the free subscriptions (admins deactivate users when they leave the company), and allows us to enter 10 or 20 orders total to give RH employees free subscriptions as opposed to potentially thousands a year. The sku noted below is set up to open up access to all Red Hat/JBoss/RHX products available, and is currently updated by Matt Webbink when new products are set up. Anyone who has asked for an Employee login on one of the RH Employee accounts noted on the Intranet page below will have access to these (all Red Hat) products after they are set up by the admin on the account. I'll leave it up to you guys to decide what's best, but as a fair number of JBoss employees have logins in the Red Hat systems, we thought it might be best to send a note so we can spend less time migrating the free access for internal folks to ensure they are set up the right way in the Red Hat Systems. These users are unique in the respect they will not renew like a customer will, so their account issues won't likely "go away" at renewal time. It almost makes sense to just have these folks request access to the Red Hat accounts set up now rather than migrating. We have tried our best to match current employees to existing Red Hat Employee accounts (thanks Edith) as part of the migration but it is likely there will be others who need/want access, and we wanted to be sure there was a clear way how to do this. That being said, you are the engineer, so please do what will be easiest for your teams during the migration! Jessica and Edith are available anytime if you need additional assistance from Customer Service. Regards, Deborah :) Frank Merenda wrote: > Hi Deborah! Long time no hear! > > We do not recognize this SKU. I just searched email, and I don't see this SKU anywhere. Not an issue, see below. > > I sent Jessica a list of red hat and jboss employees on Friday who currently have access as customers, which she is updating for our data migration with the correct account numbers. I am *assuming* that these accounts will have the magical SKU enabled for it, and all our employees will have access via that mechanism, is that correct? > > Which products does this sky allow access to? Should I assume it's all products? > > Cris, I added this to Jira: http://jira.jboss.com/jira/browse/JBNET-1815 > > -f- > > > Deborah Curtis wrote: >> Hi Chris, Frank! >> >> Jessica was kind enough to draft this email for us to notify former JBoss folks with access to the JBN that they will need to get access on an existing Red Hat Employee Subscription account to access JBoss subscriptions through the Red Hat CSP. Please make sure the CSP is accurately recognizing the Employee Subscription skus (SYS/SVC 0395 Red Hat Employee Subscription), and assist us in getting this communication to the right folks so we can make sure access for JBoss products/support for anyone who needs it is in place before the migration go-live date. Thank you! >> >> Regards, >> Deborah >> >> >>> >>> >>> Hello, >>> >>> You are receiving this email because you are listed as one of the active employees with current access to JBoss subscriptions on the CSP. The JBoss and Red Hat systems are merging to consolidate all accounts into one database. Beginning October 16th, you will be able to access JBoss employee subscriptions using your Red Hat website/RHN login _only_, rather than your current login for https://network.jboss.com . If you wish to continue using your JBoss employee subscription, please verify that you have access to a Red Hat Employee Subscription, which will grant you access to JBoss products. Please check with your manager or visit the following link for more information on accessing employee subscriptions: >>> >>> http://intranet.corp.redhat.com/ic/intranet/wiki.html?wikicat=Customer%20Service%3aEmployee%20Subscriptions&master=00138&toggle=00160 >>> >>> Please email global-customerservice@redhat.com , (INTERNAL ONLY alias), with any questions regarding this process. >>> >>> Have a great day, >>> >>> Jessica >>> Customer Service >>> Red Hat, Inc. >> > -- Deborah Stumpf Curtis Manager, Customer Service Red Hat, Inc. 1801 Varsity Drive Raleigh, NC 27606 888-733-4281, Ext 44225	1	1	https://issues.jboss.org/browse/JBNET-1815

35	JBNET-1390	Ahmad, Need some details for this task please: regarding browse the FTP dir part, which FTP service are we talking about here? Lisa	1	1	https://issues.jboss.org/browse/JBNET-1390
36	JBNET-1207	Use this to show how many are RH logins vs how many all unique logins query above Red Hat user count select count(distinct(log_user)) FROM group_users,logs where log_time BETWEEN extract('epoch' FROM '2007-02-07'::date) AND extract('epoch' FROM '2007-02-14'::date) AND log_type='logins' AND group_users.userid=logs.log_user AND group_users.gid = 72;	0	0	https://issues.jboss.org/browse/JBNET-1207
37	JBNET-1198	I'm not sure I understand the problem. If I'm logged in as mamburn and create an issue, then I should show as the owner of the ticket. How can you not know the owner?	1	0	https://issues.jboss.org/browse/JBNET-1198
38	JBNET-1198	Mike, If RH employee X opens an Issue for customer, then yes he is the owner of the ticket. But, if X then needs something from the customer, this will have to be done by person Y from customer staff. So, if there was a customer owner field in addition to the existing RH owner field, then tech Y on the customer side could not hide behind his organisation and claim "oh, I did not know this was for me to do" (happens rather frequently. That is why I made the request, I want to see clearly ownership on the customer side in addition to the ownership we see on the RH side. Does this make the request clearer?	1	1	https://issues.jboss.org/browse/JBNET-1198
39	JBNET-1198	I still don't quite understand. Suppose Mike is a Red Hat employee and Joe is a customer from Company XYZ. Is Mike opening the issue for Joe in the Company XYZ Issue-Tracker group and not under Joe (so that the ticket has no direct customer attachment)? Is that the problem?	1	0	https://issues.jboss.org/browse/JBNET-1198
40	JBNET-954	Is this ticket done? I thought these were created.	1	1	https://issues.jboss.org/browse/JBNET-954
41	JBNET-907	Hua Li began testing using one of our stock users. Here is the feedback I've received thus far: There are some mistakes that I can't find file to modify. 1. the title of http://10.10.29.31:8080/jbossnetwork/restricted/main.html now the title of main.html is "JBoss??????????" , should be modified to "JBoss??????" . 2. the title of http://10.10.29.31:8080/jbossnetwork/help/zh/help-main.htm can't be correctly shown. Please check it. title of help-main.htm 3. please access http://10.10.29.31:8080/jbossnetwork/restricted/knowledgeHome.html I don't know what is "????" ? what is "????" ---- Addressing what I can for these now. Will work with Hua for items needing more translation and clarification.	0	0	https://issues.jboss.org/browse/JBNET-907
42	JBNET-891	Notes on that meeting with Lisa: 1. (Lisa) Create event_types table with the following event types: 0 - Unknown 1 - State Change 2 - Comment 3 - Attachment 4 - Task (for recording time spent on a ticket) 5 - Notification 2. (Lisa) Create event_type field of type integer in the event table 3. (Ahmad) Update CSP schema and mappings 4. (Ahmad) Change all queries for CSP and GK 5. (Ahmad) Change case migration 6. (Lisa) Change IT to store events in correct types 7. (Lisa) Change Notifications to pull from events that are type 5 8. (Lisa) Change migration so that all events are type 5 9. (Lisa & Ahmad) Update dev and wendyc-t	0	0	https://issues.jboss.org/browse/JBNET-891
43	JBNET-873	Lamon, Can you add Active Entitlements to the IssueTracker Batch Process and start testing this? IM me for details. Ahmad	1	1	https://issues.jboss.org/browse/JBNET-873
44	JBNET-831	<llu> what's the possible values for 'Type'? <fmerenda> let me get them one sec <fmerenda> "Question", "Problem" and "Feature Request" <llu> Problem == bug? <fmerenda> could be a problem in - for example - their production environment, and they need help, may be that it is not a bug <fmerenda> one sec looking up details <fmerenda> llu, when we add cases we ususally set to "Problem", unless it is dev assist, or question when they submit the case, then it's a "Question". <fmerenda> your UI just needs to be able to change the type <fmerenda> We only use it for information, not for queueing or anything like that	1	1	https://issues.jboss.org/browse/JBNET-831
45	JBNET-830	Question: How do we want to define and map the filter that will UNBIND all customer URLs when they are accessed? Do we care (i.e. something other than /files/customer/*)?	1	1	https://issues.jboss.org/browse/JBNET-830
46	JBNET-755	frank, what's the difference between software and products? what does repository do? The page for creating/editing products is avai. today in Issue Tracker production. Lisa	1	1	https://issues.jboss.org/browse/JBNET-755
47	JBNET-755	Frank, how high priority is this task? Need it to be done before the integration? Lisa	1	1	https://issues.jboss.org/browse/JBNET-755

#	Requirement	Questions	Answered	Successfully Answered	URL
48	JBNET-309	Question on this: What is happening when you try to update/create an object? Not compatible? Is this a salesforce-connector issue or an actual Axis issue? Has anyone tried to work with the SForce API directly using Axis 1.3?	1	1	https://issues.jboss.org/browse/JBNET-309
49	ENTMQBR-667	This is needed to get Artemis working with Fuse 7. Can you get it into one of the next AMQ patches?	0	0	https://issues.jboss.org/browse/ENTMQBR-667
50	ENTMQBR-644	[~jbertram] thanks for the info, my bad that I considered SSLv2Hello to be SSLv2 use. I need to gain more knowledge of that. I'll have a closer look at your comments after the A-MQ 7.0 GA is out of the door. This was proposed to 7.0.1 and we are currently very busy now. Just one note right now: \\ when I run a client twice, ie: {code} # openssl s_client -connect $(hostname):5671 -cert /opt/A-MQ-certificates/client_cert.pem -key /opt/A-MQ-certificates/client_private_key.pem -pass pass:changeit -tls1_2 # openssl s_client -connect $(hostname):5671 -cert /opt/A-MQ-certificates/client_cert.pem -key /opt/A-MQ-certificates/client_private_key.pem -pass pass:changeit -tls1_2 {code} Broker log contains two INFO messages regarding disallowing SSLv2Hello: {code} 23:32:41,507 INFO [org.apache.activemq.artemis.core.server] AMQ221053: Disallowing use of vulnerable protocol 'SSLv2Hello' on acceptor 'netty-ssl-acceptor'. See http://www.oracle.com/technetwork/topics/security/poodlecve-2014-3566-2339408.html for more details. 23:32:44,517 INFO [org.apache.activemq.artemis.core.server] AMQ221053: Disallowing use of vulnerable protocol 'SSLv2Hello' on acceptor 'netty-ssl-acceptor'. See http://www.oracle.com/technetwork/topics/security/poodlecve-2014-3566-2339408.html for more details. {code} This seems to me in contrast with what you are saying (logging is done when the acceptor is started, not on every connection). Am I missing something? Thanks in advance for explanation.	1	0	https://issues.jboss.org/browse/ENTMQBR-644
51	ENTMQBR-539	I understand why you may want to configure a max size on a per destination basis, however there is currently no scenario where 1 queue paging will stop another. Queues are never starved no matter what state paging is in across the broker. Could you provide more information?	0	0	https://issues.jboss.org/browse/ENTMQBR-539
52	ENTMQBR-526	Hi Karl, What kind of clients are the user having in their test (OpenWire or others) and do you have a test case? Howard	1	1	https://issues.jboss.org/browse/ENTMQBR-526
53	ENTMQBR-526	Ah. I noticed the following in from the customer in the open ticket #01782533: We have clients both using JNDI: Sample property files content: java.naming.factory.initial=org.apache.activemq.artemis.jndi.ActiveMQInitialContextFactory connectionFactory.ConnectionFactory=(tcp://artemis-1.test.iggroup.local:61616,tcp://artemis-2.test.iggroup.local:61616,tcp://artemis-3.test.iggroup.local:61616,tcp://artemis-1.test.iggroup.local:61716,tcp://artemis-2.test.iggroup.local:61716,tcp://artemis-3.test.iggroup.local:61716)?clientID=1234 And code-ally String connectionUrl = "(tcp://artemis-1.test.iggroup.local:61616,tcp://artemis-2.test.iggroup.local:61616,tcp://artemis-3.test.iggroup.local:61616,tcp://artemis-1.test.iggroup.local:61716,tcp://artemis-2.test.iggroup.local:61716,tcp://artemis-3.test.iggroup.local:61716)"; URIFactory parser = new URIFactory(); ActiveMQJMSConnectionFactory cf = new ActiveMQJMSConnectionFactory(parser.expandURI(connectionUrl).toString());	1	1	https://issues.jboss.org/browse/ENTMQBR-526
54	ENTMQBR-512	If [~joef551] will not manage to test this, will you manage this sprint [~dlenoch]?	1	1	https://issues.jboss.org/browse/ENTMQBR-512
55	ENTMQBR-496	[~opiske] what do you mean by purge?	1	0	https://issues.jboss.org/browse/ENTMQBR-496
56	ENTMQBR-496	[~opiske] what would you suggest?	1	0	https://issues.jboss.org/browse/ENTMQBR-496
57	ENTMQBR-486	shouldnt we wait for a QPID-JMS JMS 2.0 to be released before we start raising Jiras?	1	1	https://issues.jboss.org/browse/ENTMQBR-486
58	ENTMQBR-486	Bumping this one before PM call. Any idea what to do with this [~ataylor]? Are we ok for not 100% support JMS 2.0? Release notes for Beta2?	1	1	https://issues.jboss.org/browse/ENTMQBR-486
59	ENTMQBR-422	As a follow-up, I've updated the QE results parser to skip all the issues identified here and in the parent issue ENTMQBR-417. There are still few failing tests that were not investigated yet and thus _may_ indicate a real broker issue: {code} 1) test: N8activemq4test8openwire27OpenwireTempDestinationTestE::testPublishFailsForClosedConnection (F) line: 369 activemq/test/openwire/OpenwireTempDestinationTest.cpp expected exception not thrown - Should throw a InvalidDestinationException since temp destination should not exist anymore. - Expected: cms::InvalidDestinationException 2) test: N8activemq4test8openwire26OpenwireXATransactionsTestE::testXAResource_Exception1 (E) uncaught exception of type N3cms11XAExceptionE - 3) test: N8activemq4test8openwire26OpenwireXATransactionsTestE::testXAResource_Exception2 (E) uncaught exception of type N3cms11XAExceptionE - 4) test: N8activemq4test8openwire26OpenwireXATransactionsTestE::testXAResource_Exception3 (E) uncaught exception of type N3cms11XAExceptionE 5) test: N8activemq4test8openwire18OpenwireSimpleTestE::testWithZeroConsumerPrefetchAndZeroRedelivery (E) uncaught exception of type N8activemq10exceptions17ActiveMQExceptionE - AMQ119025: Cannot delete queue jms.queue.testWithZeroConsumerPrefetchAndZeroRedelivery on binding jms.queue.testWithZeroConsumerPrefetchAndZeroRedelivery - it has consumers = org.apache.activemq.artemis.core.postoffice.impl.LocalQueueBinding 6) test: N8activemq4test8openwire20OpenwireAdvisoryTestE::testConcurrentTempDestCreation (F) line: 177 activemq/test/openwire/OpenwireAdvisoryTest.cpp assertion failed - Expression: thread1.isNoErrors() {code} *^^ These are regression between ER2 and ER3 and still persists on ER12 (except testConcurrentTempDestCreation that is passing again on ER12)* ---------- {code} 7) test: N8activemq4test8openwire23OpenwireTransactionTestE::testSendSessionClose (E) uncaught exception of type N8activemq10exceptions17ActiveMQExceptionE - AMQ119017: Queue jms.queue.testSendSessionClose does not exist {code} *^^ These are regression between ER4 and ER6 and still persists on ER12.* ---------- {code} 8) test: N8activemq4test8openwire18OpenwireSimpleTestE::testDestroyDestination (F) line: 306 activemq/test/openwire/OpenwireSimpleTest.cpp assertion failed - Expression: false - CAUGHT EXCEPTION {code} *^^ These are regression between ER7 and ER8 and still persists on ER12.* ---------- following test are failing occasionally: {code} 9) test: N8activemq4test8openwire24OpenwireQueueBrowserTestE::testReceiveBrowseReceive (F) line: 81 activemq/test/QueueBrowserTest.cpp assertion failed - Expression: enumeration->hasMoreMessages() - should have received the second message (OR sometimes: - should have received the third message) {code} Reproducibility ~25% {code} 10) test: N8activemq4test8openwire24OpenwireQueueBrowserTestE::testBrowseReceive (F) line: 137 activemq/test/QueueBrowserTest.cpp assertion failed - Expression: enumeration->hasMoreMessages() - should have received the first message {code} Reproducibility ~25% Also worth mentioning that following tests were fixed from ER2 (were failing on ER2 but are passing on ER12) * N8activemq4test8openwire18OpenwireSimpleTestE::testMultipleConnections * N8activemq4test8openwire18OpenwireSimpleTestE::testMultipleSessions * N8activemq4test8openwire18OpenwireSimpleTestE::testReceiveAlreadyInQueue * N8activemq4test8openwire27OpenwireTempDestinationTestE::testBasics [~ataylor] I expect that you want to treat these as separate issues? I'll create a separate Jira's for them on Monday if not requested otherwise. Thanks in advance for helping me sort the supported CMS tests out.	1	1	https://issues.jboss.org/browse/ENTMQBR-422
60	ENTMQBR-422	Hi Petr, I followed the steps given by you but after I did 'make check', I couldn't find the executable activemq-test-integration. I do see a lot object files generated thou. What could be the reason for the missing executable? Thanks Howard	0	0	https://issues.jboss.org/browse/ENTMQBR-422
61	ENTMQBR-418	[~ataylor] Can you please add more documentation for user drop down box "in the top right hand corner" and items as "Connect, Console Logging, Core, Editor, Git, Jolokia, Plugins, Reset, Theme". Or only send me more information about this options.	1	0	https://issues.jboss.org/browse/ENTMQBR-418

#	Requirement	Questions	Answered	Successfully Answered	URL
62	ENTMQBR-418	Some typos found: In the section *deploying the plugin* [standalone subsection|https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#standalone] ??To deploy standalone refer to the HawtIO documentation on installing plugins. for e?? - hanging leftover *"for e"* Adjacent section [Logging in to the Artemis console|https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#logging-in-to-the-artemis-console] ??If you have installed HawtIO standalone and want to connect to a remote broker you will need to connect to it by clicking on the connect tab and entering the Jolikia path?? - typo in *Jolikia* Subsection *##Sending a message to a Queue* ??Sometimes it is desirable to test an installation by sending a test message or to simply just send a message. To do this choose the Queue from the JMX tab that you want to send the message to and click on the send tab. Fill in the message content and any headers and click on the Send Message` button, like so:?? - lost styling at *Send Message`*?	0	0	https://issues.jboss.org/browse/ENTMQBR-418

64	ENTMQBR-412	Did we get any feedback on what the preferred directory is here. On Ubuntu based systems there's not always an /etc/sysconfig but I think on RHEL based systems the sysconfig tends to be preferred over /etc/default.	0	0	https://issues.jboss.org/browse/ENTMQBR-412
65	ENTMQBR-411	Seems like [~ataylor] moved this one from test to ready to release. Was that a missclick? If not, we could mark it with label "internal" or close it as a duplicate of ENTMQBR-523. What do you think?	0	0	https://issues.jboss.org/browse/ENTMQBR-411
66	ENTMQBR-379	Thanks, Andy. Is the blue cylinder at the top a message store? Where does the aspect of persistence come into this scenario? The steps w/ descriptions of what's happening are good.	1	0	https://issues.jboss.org/browse/ENTMQBR-379
67	ENTMQBR-379	I agree - the audience will understand your visual. Maybe just a short sentence about the msg store? (I'm a pain, I know.) Do you want to share with Ted and Justin before modifying to reflect the logging with persistence using Topics scenario? Let me know if I can help.	1	0	https://issues.jboss.org/browse/ENTMQBR-379
68	ENTMQBR-379	[~sjayatredhat] the logging scenario will be a different document, I'll get to that soon. [~tedross] [~justi9] guys you can review what Ive done if you like, also I'm not sure If we mean the same thing when we talk about the logging with persistence scenario, what were you thinking of?	1	0	https://issues.jboss.org/browse/ENTMQBR-379
69	ENTMQBR-379	[~rhn-support-pfestoso], I'm not certain if I've shared these mock-ups with Amanda yet? Can you please check what she returned for the Intro recently and share these with her if they're not in that batch? Muchos gracias.	0	0	https://issues.jboss.org/browse/ENTMQBR-379
70	ENTMQBR-378	- If user try extending the "org.apache.activemq.pool.PooledConnectionFactory" as attached and then they with the help of following spring configuration it can be achieved. {code} <!-- The ActiveMQ JMS connection pool The actual pool implementation is 'org.apache.activemq.pool.PooledConnectionFactory', but this doesn't expose any details at runtime, so we use a subclass to provide some information. --> <bean id="activemq-jms-cf-tx" class="custom.activemq.pool.MonitorablePooledConnectionFactory" init-method="start" destroy-method="stop"> <property name="maxConnections" value="${amq.pool.size}" /> <property name="connectionFactory" ref="activemq-jms-connection-factory"/> </bean> <!-- Expose ActiveMQ JMS connection pool statistics via JMS --> <bean id="activemq-pool-monitor" factory-bean="activemq-jms-cf-tx" factory-method="createPoolMonitor"/> <bean id="exporter" class="org.springframework.jmx.export.MBeanExporter" lazy-init="false"> <property name="beans"> <map> <entry key="custom.activemq:name=activemq-jms-pool" value-ref="activemq-pool-monitor"/> </map> </property> </bean> {code} - Can the similar functionality be implemented so that customers need not to write custom code.	0	0	https://issues.jboss.org/browse/ENTMQBR-378
71	ENTMQBR-376	[~ataylor] [~ganandan-Redhat] I have stumble across this issue. Is it still valid? If so, for what version do we target? etc... Thank you	1	0	https://issues.jboss.org/browse/ENTMQBR-376

#	Requirement	Questions	Answered	Successfully Answered	URL
72	ENTMQBR-376	The following is taken from the SFDC case (comment #12): {quote} Created By: Jason Meyer (2/26/2015 10:30 AM) Akhmad, Good morning! This enhancement has been approved and is targeted for the next major release, which is A-MQ 7.0. Schedule-wise it is too soon to tell. We can probably expect A-MQ 7.0 to be released around a year after 6.2. Since this has now been approved we can track it via the enhancement request. Do you have any issues with me closing this out now? We will still be tracking the progress through the enhancement request. Let me know if you have any questions! Thanks. -Jason- {quote} Akhmad is no longer with Nielsen - he's moved on to Raymond James Financial - so I really don't know where this stands wrt the customer.	0	0	https://issues.jboss.org/browse/ENTMQBR-376
73	ENTMQBR-366	QE currently do not have any knowledge of the scheduler, could you possibly point us to a documentation for scheduling messages? Thanks in advance. [~ataylor]	1	0	https://issues.jboss.org/browse/ENTMQBR-366
74	ENTMQBR-362	QE is not sure how to verify this issue, could you possibly provide verification scenario? QE may do some performance testing, but this do not really verify the reuse of the context objects. [~dbosanac]	0	0	https://issues.jboss.org/browse/ENTMQBR-362
75	ENTMQBR-362	[~ataylor], we don't currently re-use the context object for the LDAP connection. [~jcordes], have you run a particular benchmark to determine this is a performance bottleneck or is this simply based on a reading of the code?	0	0	https://issues.jboss.org/browse/ENTMQBR-362
76	ENTMQBR-358	Hello Justin, the configuration reloading is documented in [Apache ActiveMQ Artemis User Manual|https://activemq.apache.org/artemis/docs/1.5.2/book.pdf] (page 99), right? Do we have another subscription of this feature, please?	1	1	https://issues.jboss.org/browse/ENTMQBR-358
77	ENTMQBR-358	According to [Apache ActiveMQ Artemis User Manual|http://activemq.apache.org/artemis/docs/1.5.2/config-reload.html] automatic configuration reloading should work for these modules of "Broker.xml" configuration file: * Address Settings * Security Settings * JMS Queues * JMS Topics Configuration reloading works for "Address settings" and "Security Settings" modules, but the new addressing model do not have a separate JMS configuration and changes in "addresses" module are not reloaded. Is this an expected behavior, please? Note: I already created a Jira to update the Artemis User Manual: [Apache ActiveMQ Artemis User Manual|http://activemq.apache.org/artemis/docs/1.5.2/].	1	1	https://issues.jboss.org/browse/ENTMQBR-358
78	ENTMQBR-355	Wrt to the comment above, shouldn't this be really closed as a duplicate then? Otherwise it will still appear in 7.0.0 queries and will be synced to Polarion. [~ataylor]	1	1	https://issues.jboss.org/browse/ENTMQBR-355
79	ENTMQBR-351	[~grgrzybek] Can you comment on this? Is it one we can do for 6.2.1?	1	0	https://issues.jboss.org/browse/ENTMQBR-351
80	ENTMQBR-351	Are you saying that we already show this in HawtIO?	0	0	https://issues.jboss.org/browse/ENTMQBR-351
81	ENTMQBR-351	Is this issue for AMQ6 or AMQ7? According to "Target release" it is for AMQ7, but all the talk is about AMQ6 if I am correct. [~garytully] [~ataylor] could you please make it clear for us? if it is for AMQ6, could you please move this item to ENTMQ project, where it belongs? Thank you :)	0	0	https://issues.jboss.org/browse/ENTMQBR-351
82	ENTMQBR-348	Hello Justin, could you possibly add any description about this enhancement, how is it implemented or how to test it, please? Thank you in advance.	1	1	https://issues.jboss.org/browse/ENTMQBR-348
83	ENTMQBR-348	Justin, thank you for your clarification of this enhancement. I already can understand how it should work (I hope ;)). I am very sorry, but I have other questions: 1. Is this enhancement specific for durable subscribers only or is it relevant also for non durable ones? 2.How shall I configure the security-setting in broker.xml file? Could you possibly add any example, please? 3. Where can I find any documentation of this enhancement (how it is implemented)?	0	0	https://issues.jboss.org/browse/ENTMQBR-348
84	ENTMQBR-341	What should I pay attention to when testing it? What is the sign of self-discovery?	0	0	https://issues.jboss.org/browse/ENTMQBR-341
85	ENTMQBR-331	Approved - will try to schedule for future release	0	0	https://issues.jboss.org/browse/ENTMQBR-331
86	ENTMQBR-331	Assessment effort started. There are pending questions: * Is certification for both GFS and GFS2 needed? * What platforms are we going to include in certification, all (RHEL5 i686/x86_64, RHEL6 i686/x86_64, RHEL7 x86_64)? * What is desired cluster configuration? (2/3/more nodes?) At the moment it is clear that effort will be manual and that's why those question matter.	1	1	https://issues.jboss.org/browse/ENTMQBR-331
87	ENTMQBR-325	The issue retested with latest jboss-a-mq-6.2.0.redhat-114.zip with same results.	0	0	https://issues.jboss.org/browse/ENTMQBR-325
88	ENTMQBR-325	Additional details: When JBoss A-MQ finds there is a problem to bind to any of ports specified as transport connectors then waits until all ports are available. Once all ports are available to bind then JBoss A-MQ continue to load transport connectors. The issue is still there but probably lower severity, feel free to adjust. The key point of this defect is that no transport connector is loaded until *ALL* transport connector ports specified in broker configuration are ready to bind. Broker is not ready to operate. Possibly two ways to resolve this (sorted by QE preference): * incorporate changes that ALL transport connectors which can be loaded and bind to ports are loaded and can be used, the ones which cannot are waiting and finally failing to initiate after a timeout. This is making sure broker is functional even if one port cannot be bound. * document the current behavior	0	0	https://issues.jboss.org/browse/ENTMQBR-325
89	ENTMQBR-314	[~ataylor] We need more info/description. Do you think "Browse message" [https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#browsing-a-queue-for-messages] ?	0	0	https://issues.jboss.org/browse/ENTMQBR-314
90	ENTMQBR-309	[~ataylor] Hawtio thing, you mean? Browser just renders what the console plugin and the console itself give it. If this won't be fixed downstream, should I report it to upstream hawtio, as Ernie suggested on the original DISPATCH-422?	0	0	https://issues.jboss.org/browse/ENTMQBR-309
91	ENTMQBR-266	QE assumes that this relates to Hawtio. We expect that Hawtio shall be extended with a browser for management messages. Is that correct? Could you possibly update the components accordingly.	1	1	https://issues.jboss.org/browse/ENTMQBR-266
92	ENTMQBR-262	Could you please add more description? Thank you.	1	1	https://issues.jboss.org/browse/ENTMQBR-262

#	Requirement	Questions	Answered	Successfully Answered	URL
93	ENTMQBR-256	+jms-bridge.message-count=The number of messages successfully committed. +jms-bridge.aborted-message-count=The number of messages aborted/rollback. What I observed is that when a message fails to be committed, it gets counted both to messageCount and to abortedMessageCount. Going by the doc strings in that WildFly UI, I'd say it should be counted only to abortedMessageCount. Reproducer output: {noformat} getMessageCount: 0 getAbortedMessageCount: 0 10:43:12,574 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main$1$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) getMessageCount: 1 getAbortedMessageCount: 1 10:43:14,545 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main$1$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) 10:43:16,048 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main$1$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) 10:43:16,551 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main$1$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at	1	1	https://issues.jboss.org/browse/ENTMQBR-256
94	ENTMQBR-248	Lami, would you be able to clarify the details here? Is this from Hawtio? There is a move operation exposed through MBean Operation?	0	0	https://issues.jboss.org/browse/ENTMQBR-248
95	ENTMQBR-244	WE believe this should not be tested by us - QE. Could devs verify this? Adding "internal" label.	0	0	https://issues.jboss.org/browse/ENTMQBR-244
96	ENTMQBR-234	[~chirino_hchirino] can you let us know if this need any engineering work	1	1	https://issues.jboss.org/browse/ENTMQBR-234
97	AMQDOC-2425	What should QE focus on this item? Is it relevant for QE? If not, please close this one.	1	1	https://issues.jboss.org/browse/AMQDOC-2425
98	AMQDOC-2408	Hello Susan, could you possibly send me a link to the document, please?	1	1	https://issues.jboss.org/browse/AMQDOC-2408
99	AMQDOC-2408	Hi [~psvobodo], Most certainly. :-) Because the Portal tools/style sheet specifies all caps for headings in HTML and PDF, it's hard to find "where" one can verify that the capitalization is correct (other than looking at the source)! If you go here: https://access.redhat.com/documentation/en-us/red_hat_jboss_amq/7.0/html/using_amq_broker/ You can browse all of the headings in the grey panel on the left. Thanks for checking it out! Susan	1	1	https://issues.jboss.org/browse/AMQDOC-2408
100	AMQDOC-2399	Hello, Phil, could you possibly send me a link to the document, please?	1	1	https://issues.jboss.org/browse/AMQDOC-2399
101	AMQDOC-2398	After looking through the content in chapters 8.1 and 8.2, this is a first draft of a 'toc' that may suit the new chapter. It seems pretty basic, but it maps to the content currently available when viewed through the lens of 'Users and Roles'. [~nicole.engard] WDYT? = Users and Roles == Overview == Guest Authentication === `login.conf` == User Authentication === `users.properties` == Roles === `roles.properties`	1	1	https://issues.jboss.org/browse/AMQDOC-2398
102	AMQDOC-2398	A few comments: - "Preamble" should not have its own section heading - http://file.rdu.redhat.com/~jross/amq7-documentation-contrib/internal-resources/information-architecture.html#general_guidelines - last bullet - Users wouldn't say "adding a guest" because it's really for a class of users - I recommend "Enabling Guest Access" or "Adding a Guest Account" - The section on configuring the roles property file location - is that necessary? If there is a default, users should stick to that in general. Even if we do retain that part, I don't think it should be primary.	1	1	https://issues.jboss.org/browse/AMQDOC-2398
103	AMQDOC-2398	Thanks for the feedback [~justi9] I've actioned your first two points, but I'm a little unsure about the last one re; the roles.properties file location? While I mention that the 'roles.properties' does not necessarily have to be called that (which I confirmed with an SME at the time of writing the original security content), I don't think that I imply users should do this. On the contrary, a comment left on my initial push of this content called negative attention to how subtly I'd mentioned the option to use a custom filename. Can you elaborate on your take on this? You feel we shouldn't mention this option?	1	1	https://issues.jboss.org/browse/AMQDOC-2398
104	AMQDOC-2384	[~jdanek] can this tool be used with A-MQ 6? Or is it just something for our 7.0 beta and alpha users?	0	0	https://issues.jboss.org/browse/AMQDOC-2384
105	AMQDOC-2224	Where can I check/verify added documentation for this?	1	1	https://issues.jboss.org/browse/AMQDOC-2224
106	AMQDOC-2224	I don't think there is a relevant equivalent part as in EAP doc. In EAP doc, there is expiring of messages from client POV. In broker guide I have found only expiring messages from broker POV in {{16.2.3. Core Queue Management}} Should I consider it as relevant and what this feature jira added?	1	1	https://issues.jboss.org/browse/AMQDOC-2224
107	AMQDOC-2171	[~jdanek], Do you feel that we've worked through the dependencies to ensure that we're tending to ENTESB issues efficiently + reliably? Please mark this Closed or Reopen with other suggestions.	1	0	https://issues.jboss.org/browse/AMQDOC-2171
108	AMQDOC-2171	[~esammons], what do you think? I know that Petr talked to you about whether we are supposed to do QE verification on the ENTESB Jiras on Monday, this is related. It seems to me that the label=artemis may be enough to mark the Jiras for QE purposes as well. The router is using hawt.io too, so we should maybe add the {{dispatch}} label to the filter. We would have to add this to filter so that we don't miss them. Or is it that all issues in Hawtio framework itself get verified by the Fuse QE, so we don't care? I'd like that ;)	0	0	https://issues.jboss.org/browse/AMQDOC-2171
109	AMQDOC-2155	The sudo note should now be included in every A-MQ 7 doc.	1	1	https://issues.jboss.org/browse/AMQDOC-2155

#	Requirement	Questions	Answered	Successfully Answered	URL
110	AMQDOC-2118	Hi - Just curious....who is the customer for this JIRA?. *Dean Richardson* Middleware Account Executive, Strategic Accounts drichardson@redhat.com (513) 382-9606 (mobile) (513) 231-3530 (office) --	1	1	https://issues.jboss.org/browse/AMQDOC-2118
111	AMQDOC-2118	I'm getting this too and don't know why. Might be that Jira is spamming everyone.	0	0	https://issues.jboss.org/browse/AMQDOC-2118
112	AMQDOC-2118	So this is a different version of SPAM. Should we open a JIRA ticket for that?	0	0	https://issues.jboss.org/browse/AMQDOC-2118
113	AMQDOC-2118	The second page of the PDF is empty, and the third just repeats info on the first/front page, perhaps they can be removed? GW: It is automatically rendered by our publishing software. I think these pages are left blank intentionally. In the TOC, Chapter 1 is listed as being about 'installing', which 1.1 and 1.2 then indeed are, but 1.3 is really for configuration. Perhaps it could be split out as a '2' rather than 1.3? GW: The ZIP package cannot work without subsequent configuration. But you comment do make sense. The Zip installation is likely the more universally applicable, maybe those instructions should be first ahead of the RPM ones? GW; I agree. The RPM instructions in "1.1.3. Installing JMS Client" say to install the C++ client. There is a note below it about the instructions being for Alpha, but that still seems off? GW: Yes. These instructions will be removed after Alpha release. In "1.1.7. AMQP JMS A-MQ 1.0 Java Client" it says "Qpid JMS is a complete AMQP JMS 1.0 and JMS 1.1 client". Should be "AMQP 1.0 and JMS 1.1 client"? The Note below this section seems like it needs updated, it describes it as if there are two seperate clients 'both' requiring Java 1.7+, but its just a single client. This section seems like it should perhaps be nearer at the start of the doc rather than mid-installation. GW: Yes. This is confusing. I will figure out better ways to make it more clear. The "1.1.8. AMQP C++ Client" and "1.1.9. Python Language Bindings for AMQP API" sections seem like they should be removed from the document given its JMS focus. GW: I think so. In "1.2. INSTALLING JMS CLIENT (ZIP INSTALLATION)" the initial instructions indicate to download the RPM and extract things from it. I presume the note about alpha means that should be removed from the final, given the instructions in "1.2.1. Downloading the A-MQ Broker ZIP File From the Red Hat Customer Portal" then go on to describe getting the actual zip from the website. The main thing here though was that the title in 1.2.1 should say Client rather than Broker. GW: Yes. Instructions for Alpha release will be removed after the release Downloading packages from Red Hat Customer Portal is not possible and actually irrelevant for the Alpha release. I keep it there as a place holder for future release.	1	1	https://issues.jboss.org/browse/AMQDOC-2118
114	AMQDOC-2117	Hi George, I see that you updated the Status of a handful of doc review sub-task JIRAs to Coding in Progress. I'm not certain if this status is reflective of the activity that's happening in real life. Does it denote you are incorporating SME feedback? Or are you requesting a review to confirm updates you've made? Let's discuss and clarify. I'm sure that our JIRA workflow could use some work.	0	0	https://issues.jboss.org/browse/AMQDOC-2117
115	AMQDOC-53	[~tabish121], I get why we have to add this information, but I can't find any mention of the KahaDB Store version setting. I've been looking in the Configuring Broker Persistence doco [1], but there's no mention. I've also been searching the Apache doco but it doesn't seem to be much different. Can you give me a clue as to where this setting might live? Cheers, Nichola [1] https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_A-MQ/6.2/html-single/Configuring_Broker_Persistence/index.html#FuseMBKahaDB	1	1	https://issues.jboss.org/browse/AMQDOC-53
116	AMQDOC-53	[~tabish121], I've added the setting to the table. Have a look at [1]. I basically used your description because I couldn't explain it any better myself! Can you let me know if it looks OK? Cheers, Nichola [1] http://jenkinscat.gsslab.pnq.redhat.com:8080/job/doc-AMQ-6-2-1/lastStableBuild/artifact/publican/Configuring_Broker_Persistence/tmp/en-US/html-single/index.html#KahaDBConfiguration	1	1	https://issues.jboss.org/browse/AMQDOC-53
117	ENTMQIC-1925	[~tedross] - Please review and update the issue. Should this be a bug instead of enhancement?	1	0	https://issues.jboss.org/browse/ENTMQIC-1925
118	ENTMQIC-74	Thank you for mentioning {{qdmanage}}, I might've forget that it has this functionality too. I noticed that the upstream project has a management web console. Is the console part of Interconnect as well?	1	0	https://issues.jboss.org/browse/ENTMQIC-74
119	ENTMQIC-69	Hi Ted, could you possibly add a description of this issue? Thank you in advance.	0	0	https://issues.jboss.org/browse/ENTMQIC-69
120	ENTMQIC-69	Is this issue in a valid state?	1	1	https://issues.jboss.org/browse/ENTMQIC-69
121	ENTMQIC-69	Is there a problem that Engineering needs to look at?	1	1	https://issues.jboss.org/browse/ENTMQIC-69
122	ENTMQIC-58	Matej, What does "Interior" mode mean? (As opposed to stand-alone mode) I could use a term that better describes this mode. This is in your Mojo doc in the Usage/Differences section.	1	0	https://issues.jboss.org/browse/ENTMQIC-58
123	AEROGEAR-1696	where is the latest info provided ?	0	0	https://issues.jboss.org/browse/AEROGEAR-1696
124	AEROGEAR-1665	Why is that assigned to me? Should I update the plugin names in the XML file? Not sure I understand this ticket	1	1	https://issues.jboss.org/browse/AEROGEAR-1665
125	AEROGEAR-1664	[~lfryc] ALL platforms in one document ? or one per platform (the later I like)	1	1	https://issues.jboss.org/browse/AEROGEAR-1664
126	AEROGEAR-1633	I believe it was partially resolved as part of other issue. Could you take a look and send a PR for few more changes that are required?	1	1	https://issues.jboss.org/browse/AEROGEAR-1633
127	AEROGEAR-1631	[~mwessendorf] Andres refactored the page as I suggested into one long document with TOC: http://staging-aerogearsite.rhcloud.com/docs/unifiedpush/ups_userguide/index/ WDYT?	1	1	https://issues.jboss.org/browse/AEROGEAR-1631
128	AEROGEAR-1616	Hey Andres, could you perhaps look at this as you work on footer changes?	0	0	https://issues.jboss.org/browse/AEROGEAR-1616
129	AEROGEAR-1615	What do you expect other then: "open Visual Studio and press build"?	1	1	https://issues.jboss.org/browse/AEROGEAR-1615
130	AEROGEAR-1607	Could you please do a design work and I will make it work javascript-wise?	1	1	https://issues.jboss.org/browse/AEROGEAR-1607
131	AEROGEAR-1607	Here it is: https://github.com/andresgalante/aerogear.org/tree/new-design We need to save vertical space on the sidebar. Can we use that awesome combo selection box?	1	1	https://issues.jboss.org/browse/AEROGEAR-1607
132	AEROGEAR-1580	It would be interesting to have some styling ready for use in blogs: - icons (such as info, warning, danger), see http://arquillian.org/guides/ - panels (used with icons: http://arquillian.org/guides/getting_started/) Another nice sample of panels with icons is on http://jekyllrb.com/docs/home/ Wdyt [~agalante], could you prepare such styles? A complete list TBD	1	1	https://issues.jboss.org/browse/AEROGEAR-1580
133	AEROGEAR-1580	[~lfryc] How about something like this: https://issues.jboss.org/browse/AEROGEAR-1551 Jekyll samples are great, should I make something fancier?	1	0	https://issues.jboss.org/browse/AEROGEAR-1580
134	AEROGEAR-1557	anymore info? Autoinstall what?	0	0	https://issues.jboss.org/browse/AEROGEAR-1557
135	AEROGEAR-1553	Let's do the HTML validation once again later before going with Site 2.0 to production.	1	1	https://issues.jboss.org/browse/AEROGEAR-1553
136	AEROGEAR-1484	I thought there already was a theme. Is this not what we see when we use the UPS Admin Console to update user information?	1	1	https://issues.jboss.org/browse/AEROGEAR-1484
137	AEROGEAR-1484	Ah gotcha. Thanks Just curious, what is a mobile theme in regards to KC?	1	1	https://issues.jboss.org/browse/AEROGEAR-1484
138	AEROGEAR-1484	Hey [~sebastienblanc], I believe it is sufficient for demoing at this point, we can expand later. WDYT?	1	1	https://issues.jboss.org/browse/AEROGEAR-1484

#	Requirement	Questions	Answered	Successfully Answered	URL
139	AEROGEAR-1464	I have created the project - https://issues.jboss.org/browse/AGCORDOVA/ Matthias, Erik, and Luke admins for now. Erik, could you go in and create the appropriate components, and versions for tracking, and labels as needed. Including marking issues with "Mobile Push 1.0" for issues related to that.	0	0	https://issues.jboss.org/browse/AEROGEAR-1464
140	AEROGEAR-1450	OK, I see I am able to create it. Does one know why to actually import the repo from passos ?	0	0	https://issues.jboss.org/browse/AEROGEAR-1450
141	AEROGEAR-1446	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-1446
142	AEROGEAR-1443	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-1443
143	AEROGEAR-1426	[~supittma] Would it be alright to close if I close this JIRA in favor or the tasks created for the [Revision control|http://aerogear.org/docs/planning/roadmaps/AeroGearConflictResolution] roadmap?	0	0	https://issues.jboss.org/browse/AEROGEAR-1426
144	AEROGEAR-1423	[~supittma] Can I close this in favour of the jiras create in the [Data sync|http://aerogear.org/docs/planning/roadmaps/AeroGearDataSync/] roadmap?	0	0	https://issues.jboss.org/browse/AEROGEAR-1423
145	AEROGEAR-1422	[~supittma] Can I close this in favour of the jiras create in the [Data sync|http://aerogear.org/docs/planning/roadmaps/AeroGearDataSync/] roadmap?	0	0	https://issues.jboss.org/browse/AEROGEAR-1422
146	AEROGEAR-1421	[~supittma] Can I close this in favour of the jiras create in the [Data sync|http://aerogear.org/docs/planning/roadmaps/AeroGearDataSync/] roadmap?	0	0	https://issues.jboss.org/browse/AEROGEAR-1421
147	AEROGEAR-1408	How is purge different from deleting a record from your local store and syncing that?	1	1	https://issues.jboss.org/browse/AEROGEAR-1408
148	AEROGEAR-1408	This is what I am thinking https://docs.google.com/drawings/d/1hYO0P-qJZJvn9sIUN3j_lxxLk4Vm0dWcWqdhJH88cEw/edit?usp=sharing How is `purge` separate from removing a record from your local data and then telling the sync client to sync?	1	1	https://issues.jboss.org/browse/AEROGEAR-1408
149	AEROGEAR-1408	i do see what you are saying though, but in that case, why do we have remove methods on a store, if save/update can do the same thing?	1	1	https://issues.jboss.org/browse/AEROGEAR-1408
150	AEROGEAR-1408	Ahhhh I see now. Basically I wasn't thinking of the sync client spec including data transfer per se when I made this issue. I was more thinking of it as a data inspection API. IE is the data in sync, is there new data? is there data to be pushed, will our syncs conflict, etc. Data transfer is a part of that which I always thought was "move what is new"	1	1	https://issues.jboss.org/browse/AEROGEAR-1408
151	AEROGEAR-1408	I guess we're focusing right now on sync itself rather than the whole picture, storing offline and then sync local storage with remote. Here we're in sending data (no store involved yet). BTW I didn't watch the JIRa issues so was out of sync with you guys. What about using ML thread: http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-sync-To-pipe-or-not-to-pipe-td6135.html To gist/discuss SyncPipe API (what luke called DataSync). we need to agree on API/vocabulary. wdyt?	1	0	https://issues.jboss.org/browse/AEROGEAR-1408
152	AEROGEAR-1398	This issue doesn't make sense to me inside an integration tests server. How could the app scan the QRCode? If we don't have anything on the client side, I vote to close it.	1	1	https://issues.jboss.org/browse/AEROGEAR-1398
153	AEROGEAR-1394	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-1394
154	AEROGEAR-1372	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-1372
155	AEROGEAR-1347	how about _jaxrs_ (https://jaxrs-aerogear.rhcloud.com) ?	1	1	https://issues.jboss.org/browse/AEROGEAR-1347
156	AEROGEAR-1316	do this still makes sense in face of our recent discussions? (ag-controller is dead)	1	0	https://issues.jboss.org/browse/AEROGEAR-1316
157	AEROGEAR-1297	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-1297
158	AEROGEAR-1279	Does this mean the AGPUSH project would just be UnifiedPush? If so, that means we remove any SimplePush labeled components from AGPUSH, right? I just want this to be clear so I don't have to keep track of JIRAs for a single "project" across multiple JIRA projects. Just like anything push relates for JS goes in AGJS.	0	0	https://issues.jboss.org/browse/AEROGEAR-1279
159	AEROGEAR-1269	Could you provide more info on this? Selecting a component and an affected version plus adding a description referencing some links to your code and steps to reproduce your error would be a good start. Thanks!	0	0	https://issues.jboss.org/browse/AEROGEAR-1269
160	AEROGEAR-1189	what is the desired repo name?	0	0	https://issues.jboss.org/browse/AEROGEAR-1189
161	AEROGEAR-1133	Is there a description / explanation on why we do/want this ?	0	0	https://issues.jboss.org/browse/AEROGEAR-1133
162	AEROGEAR-1133	There's an explanation about why we want to get rid of this. Works for you?	1	1	https://issues.jboss.org/browse/AEROGEAR-1133
163	AEROGEAR-1115	Is this still relevant ?	0	0	https://issues.jboss.org/browse/AEROGEAR-1115
164	AEROGEAR-995	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-995
165	AEROGEAR-970	Push was part of AG 1.1.0 (umbrella) release	0	0	https://issues.jboss.org/browse/AEROGEAR-970
166	AEROGEAR-952	I can't reproduce this issue. Abstractj or matzew, can you help me work out what is breaking between our systems?	0	0	https://issues.jboss.org/browse/AEROGEAR-952
167	AEROGEAR-903	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-903
168	AEROGEAR-888	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-888
169	AEROGEAR-849	Hi guys, may I close it?	1	1	https://issues.jboss.org/browse/AEROGEAR-849
170	AEROGEAR-830	is this still valid as an umbrella ticket? I think AEROGEAR-1374 fits the bill better	0	0	https://issues.jboss.org/browse/AEROGEAR-830
171	AEROGEAR-829	is this still relevant?	1	0	https://issues.jboss.org/browse/AEROGEAR-829
172	AEROGEAR-823	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-823
173	AEROGEAR-815	what name that repo would have? aerogear-examples?	1	0	https://issues.jboss.org/browse/AEROGEAR-815
174	AEROGEAR-791	The current guide has reference to the kitchensink-mobile archetype. If we want to update these guides to be based on the kitchensink-aerogear-js, would we need to also create a new archetype for that, or remove that reference altogether. Also, are the current guides somehow tied to JDF, or can we do anything we want?	0	0	https://issues.jboss.org/browse/AEROGEAR-791
175	AEROGEAR-791	what's the status of this?	0	0	https://issues.jboss.org/browse/AEROGEAR-791
176	AEROGEAR-791	There is no getting started guide for AeroGear Controller, though we do have the User Guide plus the controller demo (which show basic usage). Is that enough or should there be a getting started guide as well?	0	0	https://issues.jboss.org/browse/AEROGEAR-791
177	AEROGEAR-790	is the fixed by correct ?	0	0	https://issues.jboss.org/browse/AEROGEAR-790
178	AEROGEAR-786	So maybe is just a matter of add it at our demos? Let me know, maybe my description was too vague, I can change it.	1	1	https://issues.jboss.org/browse/AEROGEAR-786
179	AEROGEAR-774	We have decided to remove the year from the license. JS is done. Android and iOS, where are you at on this? I'll assign this to me for now and just bug you about it until you're done :)	0	0	https://issues.jboss.org/browse/AEROGEAR-774
180	AEROGEAR-772	Why would we want to create a plugin when we have a javascript implementation for this that works?	1	0	https://issues.jboss.org/browse/AEROGEAR-772

#	Requirement	Questions	Answered	Successfully Answered	URL
181	AEROGEAR-768	Hi Matthias, I'm trying to reproduce the error here. After insert a task with: <script>window.status='Hello World';\"></script> Is still possible to add more tasks. Am I missing something?	1	1	https://issues.jboss.org/browse/AEROGEAR-768
182	AEROGEAR-760	Is this still relevant ?	1	0	https://issues.jboss.org/browse/AEROGEAR-760
183	AEROGEAR-746	Is this iOS specific - or more a general thing for the site? (wondering about the two used components)	1	1	https://issues.jboss.org/browse/AEROGEAR-746
184	AEROGEAR-745	@Kris what did you have in mind that isn't covered under documentation/guides&tutorials/examples?	1	1	https://issues.jboss.org/browse/AEROGEAR-745
185	AEROGEAR-734	Updated http://corscontroller-aerogear.rhcloud.com/aerogear-controller-demo to version 1.0.0.M1.20121217-SNAPSHOT. Was there anything else to be done for this task Bruno?	0	0	https://issues.jboss.org/browse/AEROGEAR-734
186	AEROGEAR-707	shouldn't it be aerogear-store-ios, to avoid confusion?	1	1	https://issues.jboss.org/browse/AEROGEAR-707
187	AEROGEAR-674	what JS authentication demos? can you provide a link?	1	0	https://issues.jboss.org/browse/AEROGEAR-674
188	AEROGEAR-664	Is this task related to AEROGEAR-680 ?	1	0	https://issues.jboss.org/browse/AEROGEAR-664
189	AEROGEAR-629	Is there a 'status' for this?	1	0	https://issues.jboss.org/browse/AEROGEAR-629
190	AEROGEAR-629	regarding hypermedia, LINKing was already implemented (server and client). Is there anything else you had in mind ?	1	0	https://issues.jboss.org/browse/AEROGEAR-629
191	AEROGEAR-628	Is this still on our list ?	0	0	https://issues.jboss.org/browse/AEROGEAR-628
192	AEROGEAR-622	I noticed that PicketBoxLoadUsers has the following comment: {quote} //TODO this entire initialization code will be removed {quote} Can we remove this class since users can register there own accounts now?	1	0	https://issues.jboss.org/browse/AEROGEAR-622
193	AEROGEAR-611	Should the title of the Tutorial be changed also, from JBDS 5 to JDBS 6?	0	0	https://issues.jboss.org/browse/AEROGEAR-611
194	AEROGEAR-607	nice :) shouldn't the container (jax-rs impl) give a warning ?	1	1	https://issues.jboss.org/browse/AEROGEAR-607
195	AEROGEAR-607	Could you please elaborate more? I'm not following you	1	1	https://issues.jboss.org/browse/AEROGEAR-607
196	AEROGEAR-607	Ah..... I think I now understand... So.. This: {code} @ApplicationPath("/") public class Foo extends Application { } {code} will mess around with this: {code} public class Routes extends AbstractRoutingModule { @Override public void configuration() { route() .from("/") .on(RequestMethod.GET) .to(Home.class).index(); } } {code} Or am I wrong ?	1	1	https://issues.jboss.org/browse/AEROGEAR-607
197	AEROGEAR-493	How should the demo app handle being "offline"? It is not one of the current features of the application - at least not at this point.	0	0	https://issues.jboss.org/browse/AEROGEAR-493
198	AEROGEAR-492	Are we going to want the ability for users to build custom builds of past releases? or just the current release?	1	1	https://issues.jboss.org/browse/AEROGEAR-492
199	AEROGEAR-482	[~jbalunas], should we push this to 1.future? I honestly forgot about it and don't think it's a super-high priority if we even do it.	1	1	https://issues.jboss.org/browse/AEROGEAR-482
200	AEROGEAR-475	Hi Daniel, I saw that you've done it here https://github.com/danbev/aerogear-controller/commit/e96423550bfd93f8f158bf77273e3601fa05beb1 Do you want to take a stab at it and send the PR?	1	1	https://issues.jboss.org/browse/AEROGEAR-475
201	AEROGEAR-475	Hi Bruno, I've sent a pull request now. I was not able to assign this jira to myself, do you know if this is excepted?	1	1	https://issues.jboss.org/browse/AEROGEAR-475
202	AEROGEAR-459	Hi Matthias, what do you think about https://community.jboss.org/wiki/MavenSettings ?	0	0	https://issues.jboss.org/browse/AEROGEAR-459
203	AEROGEAR-457	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-457
204	AEROGEAR-447	Is it alright if I take this task?	0	0	https://issues.jboss.org/browse/AEROGEAR-447
205	AEROGEAR-438	Who has the PSD or the ability to modify this image?	1	1	https://issues.jboss.org/browse/AEROGEAR-438
206	AEROGEAR-438	i was able to modify the image http://blog.lholmquist.org/img/app_types_updated.png got the image from a presentation of matthias's, use it?	0	0	https://issues.jboss.org/browse/AEROGEAR-438
207	AEROGEAR-435	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-435
208	AEROGEAR-426	Hi Bruno, would you mind if I take a stab at this task? Thanks, /Daniel	1	1	https://issues.jboss.org/browse/AEROGEAR-426
209	AEROGEAR-412	Do we want an 'index page', located at http://aerogear.github.com/ ? Right now the JS and iOS (sub)projects have some documentation online: - http://aerogear.github.com/aerogear-js/ - http://aerogear.github.com/aerogear-ios/ Would be nice, to link to those, from an index page. What we need for that is just a github repo called 'aerogear.github.com'	1	0	https://issues.jboss.org/browse/AEROGEAR-412
210	AEROGEAR-395	Does this include moving anything that has changed from the quickstart repo to the archetype? Just want to make sure that is covered somewhere as there are changes in the quickstart that are not yet present in the archetype.	0	0	https://issues.jboss.org/browse/AEROGEAR-395
211	AEROGEAR-366	Could you please test it? https://github.com/aerogear/TODO/commit/ecd641e4895592b4126b8f7de844bf6d4221c6e8 I did some tests with: curl -v -H "Accept: application/json" -H "Content-type: application/json" -X POST -d '{"title": "test", "style":"mydescription"}' http://localhost:8080/todo-server/rest/project/ curl -v -H "Accept: application/json" -H "Content-type: application/json" -X GET http://localhost:8080/todo-server/rest/project/ curl -v -H "Accept: application/json" -H "Content-type: application/json" -X PUT -d '{"title":"test","style":"BROdescription"}' http://localhost:8080/todo-server/rest/project/1 for i in {1..10} do curl -v -H "Accept: application/json" -H "Content-type: application/json" -X PUT -d '{"title":"test","style":"$i-description"}' http://localhost:8080/todo-server/rest/project/1 done curl -v -H "Accept: application/json" -H "Content-type: application/json" -X GET http://localhost:8080/todo-server/rest/project/ Optimistic locking is not a requirement for us currently, of course we need to think about it in the future.	0	0	https://issues.jboss.org/browse/AEROGEAR-366
212	AEROGEAR-362	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-362
213	AEROGEAR-360	Could please test it https://github.com/aerogear/TODO/commit/a421a74091158b2c6ba52ab86ff5a035ee6066df and let me know how it goes?	1	1	https://issues.jboss.org/browse/AEROGEAR-360
214	AEROGEAR-342	Is https://issues.jboss.org/browse/AEROGEAR-581 a duplicate of this task perhaps?	0	0	https://issues.jboss.org/browse/AEROGEAR-342
215	AEROGEAR-338	Can you please add some more details for your jira? I'm not exactly what your setup is, or what you are using. I'm assuming this is related to the AeroGear Controller, or one of our examples - right?	1	1	https://issues.jboss.org/browse/AEROGEAR-338
216	AEROGEAR-336	is this out dated since we are deprecating asciidoc on aerogear.org?	0	0	https://issues.jboss.org/browse/AEROGEAR-336
217	AEROGEAR-326	In the Readme for the html5-kitchensink app, it says how to run the tests. Is that what the wiki was suppose to be, or a more in depth on? maybe a more General version? using Arquillian Drone?(haven't actually played with it yet)	1	1	https://issues.jboss.org/browse/AEROGEAR-326
218	AEROGEAR-310	Should these be the same as documented here: https://community.jboss.org/wiki/JBossProjectVersioning The current version of aerogear-controller is '1.0.0.Alpha1-SNAPSHOT', which seems like it fits in with what the above document describes (Alpha for early releases that are not API complete). Is this task only related to versioning in Jira/Roadmap?	1	1	https://issues.jboss.org/browse/AEROGEAR-310
219	AEROGEAR-296	Hi guys, if nobody's against, I'd like to start these requirements to android libraries. Could you please point me out to the specific documentation on iOS and JS?	0	0	https://issues.jboss.org/browse/AEROGEAR-296
220	AEROGEAR-253	What's the status on this ?	0	0	https://issues.jboss.org/browse/AEROGEAR-253

#	Requirement	Questions	Answered	Successfully Answered	URL
221	AEROGEAR-252	This is likely caused because the tests and application use the same datasource. During the M2 release we used deployable datasources and I do not believe we had this issue. However we had to remove that functionality because openshift did not support it at that time. Since then it seems the jboss-as archetypes have switched to using deployable datasources and do not have this issue. If we switch to this configuration we need to make sure that jboss-as archetypes/quickstarts will also be released this way, and that openshift, and the target jboss-as 7.1 release support this.	0	0	https://issues.jboss.org/browse/AEROGEAR-252
222	AEROGEAR-215	Is android/iOS the right component ? I'd assume only Cordova would be appropriate	1	0	https://issues.jboss.org/browse/AEROGEAR-215
223	AEROGEAR-215	Is this now JDF ?	1	0	https://issues.jboss.org/browse/AEROGEAR-215
224	AEROGEAR-174	Started work in https://github.com/mbogoevici/as-quickstarts/tree/upgrade-entities Some notes: - Changing URL scheme from /{entity}/{id}/json to /{entity}/json/{id} (to allow for /{entity}/json scheme prefixing) - Adding Country CRUD services Open points: Are some of the existing resources still needed (e.g. GET or form-based entity create) or shall we just focus on JSON/XML (which is what the actual example is using)?	0	0	https://issues.jboss.org/browse/AEROGEAR-174
225	AEROGEAR-174	Is there any way we can get rid of the XML stuff. We don't use it except to show that it's available do we? It's terrible to work with client side as well so everything is done with JSON now. Just a thought. :)	0	0	https://issues.jboss.org/browse/AEROGEAR-174
226	AEROGEAR-160	I've just tried the kitchensink-html5-mobile quickstart example on android 2.3.6, the member list is vertically scrolled but the one memeber is not displayed on one line. Did you rethink this or am I doing something wrong?	0	0	https://issues.jboss.org/browse/AEROGEAR-160
227	AEROGEAR-157	Kris - this should be two minutes since you already have the env setup. Can you grab this one.	0	0	https://issues.jboss.org/browse/AEROGEAR-157
228	AEROGEAR-130	Isn't this resolved? https://github.com/aerogear/aerogear-parent	0	0	https://issues.jboss.org/browse/AEROGEAR-130
229	AEROGEAR-126	Must now review and update based on latest updates to archetype - namely dir and url updates. Plus screenshots.	0	0	https://issues.jboss.org/browse/AEROGEAR-126
230	AEROGEAR-126	Almost all the updates are already done, but will the latest updates some images need updating (only archetype related ones in tools), and we need to mention the sub-module naming changes in archetype. The best bet is to go through the instructions and just see what is not accurate (should not be much at this point) https://community.jboss.org/wiki/GetStartedWithHTML5MobileWebDevelopmentWithJBoss https://community.jboss.org/wiki/HTML5MobileQuickstartArchetypeDeepDive	0	0	https://issues.jboss.org/browse/AEROGEAR-126
231	AEROGEAR-123	what do you think on having a deployer/handler that do the processing for us on deploy/runtime? (view compilation, minification, etc)	1	1	https://issues.jboss.org/browse/AEROGEAR-123
232	AEROGEAR-123	[~qmx] Any projects in mind? Do you mean a servlet filter with GZIP or a static file preprocessor?	1	1	https://issues.jboss.org/browse/AEROGEAR-123
233	AEROGEAR-121	What are you thinking for this?	0	0	https://issues.jboss.org/browse/AEROGEAR-121
234	AEROGEAR-108	There was no marketing or spins in my previous comment. In fact, your comment is really not appreciated, specially when I offered to help and provide a nice cool demo. Your reply doesn't even contain a thank you by the way. Politeness will take you a long way, you seem to have none. Our definition of purity also seems to be different. JBoss is mostly used by Java devs. A puristic approach would be do have an end-to-end Java solution. So my statement was by no means intended to be marketing related or spin as you put it, but a more elegant solution or showcase where Appcelerator is used at the end of the day. If you took the liberty of editing my previous comment, you can safely remove now both completely. Best of luck. Alfredo	1	1	https://issues.jboss.org/browse/AEROGEAR-108
235	AEROGEAR-107	Do we still showcase PhoneGap build even though we're using a more standard local build setup?	1	0	https://issues.jboss.org/browse/AEROGEAR-107
236	AEROGEAR-107	We should find the JBIDE jira for this and link it. We also need to review phonegap build again and see if this is something we still want to use. I.e. is it keeping up with the core Cordova project.	0	0	https://issues.jboss.org/browse/AEROGEAR-107
237	AEROGEAR-101	Also are you planning on flushing out the "In The Works" down? They could use some attention.	1	1	https://issues.jboss.org/browse/AEROGEAR-101
238	AEROGEAR-97	James - Can we get this video up on .org somewhere for AeroGear launch?	0	0	https://issues.jboss.org/browse/AEROGEAR-97
239	AEROGEAR-97	This is the link correct? Does this replace a current video? http://player.vimeo.com/video/35705170?byline=0&portrait=0	1	1	https://issues.jboss.org/browse/AEROGEAR-97
240	AEROGEAR-96	I've managed to get it onto tools, it will be like this once we manage to deploy https://img.skitch.com/20120206-pftpi1h8wtg1df6q2p21rga88u.jpg what are the next steps? will we wait for M2 to deploy it?	0	0	https://issues.jboss.org/browse/AEROGEAR-96
241	AEROGEAR-95	Comment from the review: The application will be running at the following URL http://localhost:8080/jboss-as-html5-mobile/. Should the context be changed to http://localhost:8080/jboss-as-kitchensink-html5-mobile to match the directory and jar name? Other than that it is good. The helloworld quickstart needs to be updated to match however.	0	0	https://issues.jboss.org/browse/AEROGEAR-95
242	AEROGEAR-86	Archetype notes: ---------- * Archetype versioning * should it sync with quickstart * referring to the /pom.xml not the one in resources * Do we need the .gitignore, or .factorypath? * Java Packages seem messed up ** https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/test/java ** https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/java * Still showing older quickstart webapp files ** https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/webapp ** Need to get latest from Quickstart here Ideally a project built from the archetype (with the same groupid/artifactid) should be identical to the quickstart.	1	1	https://issues.jboss.org/browse/AEROGEAR-86
243	AEROGEAR-86	Wesley - as I mention in the comments for AEROGEAR-88 [1] PR#72 needs to be merged into aerogear/as-quickstarts, and not into /jbossas/quickstarts. Also can you put this change into as-archetypes? Doug already completed this jira. If needed, post launch we can figure out an automated way of doing this, but we don't have that now :-([1] https://issues.jboss.org/browse/AEROGEAR-88?focusedCommentId=12662058&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12662058	0	0	https://issues.jboss.org/browse/AEROGEAR-86
244	AEROGEAR-78	fixed at https://github.com/aerogear/as-archetypes/compare/c4d09d26a50a9f18b19e85f9c5d947b50bb47b1d^...master and https://github.com/aerogear/as-quickstarts/compare/25b35b0b006f90c85431f9660e91c8c946a3876a...e183e48d64ea6ead61330e412d91c3465e5fbff1 What about the code generated from the archetype? It don't inherits the license file too, right?	1	1	https://issues.jboss.org/browse/AEROGEAR-78
245	AEROGEAR-64	sanity check, did you mean ag-archetype and ag-quickstart?	1	1	https://issues.jboss.org/browse/AEROGEAR-64
246	AEROGEAR-64	i've did one initial round of git wrestling, can anyone review if this is what you all expected? (only quickstarts for now) https://github.com/aerogear/quickstart/tree/new-layout	1	1	https://issues.jboss.org/browse/AEROGEAR-64
247	AEROGEAR-63	Can anyone review the page please? Might need some polish, but I think the basics are there.	1	1	https://issues.jboss.org/browse/AEROGEAR-63

#	Requirement	Questions	Answered	Successfully Answered	URL
248	AEROGEAR-57	{quote} On my Android 2.3.6 it showed the mobile version, and the navigation bar also displayed. This was based on code from yesterday though, not sure if that changed. {quote} I forked the quickstart repo today and applied the patch. {quote} We know Android has some quirks here, any idea on the cause? If not feel free to comment in the PR {quote} I am not aware of the quirks since I do not have a 2.3.6 device to test on. {quote} The content flowing out of bounds is a known issue, not with Kris's This in on the portrait version of the list page - right? You or I should enter a jira for that {quote} It flows out on both orientations in list page. I guess you have a list of known issues? Might be better for you to create that one. {quote} Landscape on iOS This unfortunately is another known issue with no fix Its a problem with iOS and how it handles rotation Again we should probably put in a jira {quote} I did not have this problem with the RichFaces mobile showcase. Is this a JQuery issue?	1	1	https://issues.jboss.org/browse/AEROGEAR-57
249	AEROGEAR-55	can you do a simple google docs diagram showing me your ideas on this? You and Burr are the masterminds of this concept and I want to make sure I understand it fully as it plays out in your mind.	1	1	https://issues.jboss.org/browse/AEROGEAR-55
250	AEROGEAR-54	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AEROGEAR-54
251	AEROGEAR-45	do you think this is still needed?	0	0	https://issues.jboss.org/browse/AEROGEAR-45
252	AEROGEAR-44	I meant to say "What is Aerogear?" section... not the roadmap section. Thanks for clarifying Jay!	0	0	https://issues.jboss.org/browse/AEROGEAR-44
253	AEROGEAR-40	This should likely take the form of a wiki page. wdyt?	1	1	https://issues.jboss.org/browse/AEROGEAR-40
254	AEROGEAR-37	any feedback on this approach? Does it look good enough? https://github.com/qmx/as-archetypes/commit/08487b3bf840d553d4acef9277aafd01d68e55f0	1	1	https://issues.jboss.org/browse/AEROGEAR-37
255	AEROGEAR-33	What do we mean by POH5? Just want to be sure I have all the concepts included.	1	1	https://issues.jboss.org/browse/AEROGEAR-33
256	AEROGEAR-28	Nice! thanks for the warm comments. I just needed a few ideas from you. Thanks!	0	0	https://issues.jboss.org/browse/AEROGEAR-28
257	AEROGEAR-7	Does this need to be more than the archetype and quickstart already created? The archetype and quick start could be updated for full CRUD - at the moment they are CR not UD	1	1	https://issues.jboss.org/browse/AEROGEAR-7
258	AEROGEAR-7	Adding this as a subtask of as-quickstart. Should we add this functionailty to the current as-quickstart if we end up using a JavaScript MVC. We need a decision on that and if this should be a new demo under AeroGear or added to the quickstart.	1	0	https://issues.jboss.org/browse/AEROGEAR-7
259	AEROGEAR-2	Are you talking about the tweets on the right hand column or the RSS feed at the bottom of the main content pages?	1	1	https://issues.jboss.org/browse/AEROGEAR-2
260	AGDROID-599	[~danielpassos] since you removed this, are you ok when i assign this to you?	1	1	https://issues.jboss.org/browse/AGDROID-599
261	AGDROID-587	pipe/src/main/java/org/jboss/aerogear/android/pipe/rest/multipart/MultipartRequestBuilder.java#L155] started read the static fields like _serialVersionUID_ and we don't have get/set for this field to make [_Property_|https://github.com/aerogear/aerogear-android-core/blob/master/src/main/java/org/jboss/aerogear/android/core/reflection/Property.java] happy. #	Requirement	Questions	Answered	Successfully Answered	URL
262	AGDROID-585	After update to Android N the app start to crash. I see it's related to Firebase version in Android N, but I did not had too much time to update the AeroGear Android Push library locally to test with new versions. Code: https://github.com/danielpassos/aerogear-android-cookbook/tree/hellopush-android-n **Error* {code} V/FA: Processing queued up service tasks: 1 E/FA: Task exception on worker thread: java.lang.IllegalAccessError: Method 'void android.support.v4.content.ContextCompat.<init>()' is inaccessible to class 'com.google.firebase.iid.zzg' (declaration of 'com.google.firebase.iid.zzg' appears in /data/app/org.jboss.aerogear.android.cookbook.hellopush-2/base.apk): com.google.android.gms.measurement.internal.zzt.zzEd(Unknown Source) V/FA: Activity paused, time: 27278 V/FA: onActivityCreated --------- beginning of crash E/AndroidRuntime: FATAL EXCEPTION: AsyncTask #1 Process: org.jboss.aerogear.android.cookbook.hellopush, PID: 2690 java.lang.RuntimeException: An error occurred while executing doInBackground() at android.os.AsyncTask$3.done(AsyncTask.java:309) at java.util.concurrent.FutureTask.finishCompletion(FutureTask.java:354) at java.util.concurrent.FutureTask.setException(FutureTask.java:223) at java.util.concurrent.FutureTask.run(FutureTask.java:242) at android.os.AsyncTask$SerialExecutor$1.run(AsyncTask.java:234) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1113) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:588) at java.lang.Thread.run(Thread.java:818) Caused by: java.lang.IllegalAccessError: Method 'void android.support.v4.content.ContextCompat.<init>()' is inaccessible to class 'com.google.firebase.iid.zzg' (declaration of 'com.google.firebase.iid.zzg' appears in /data/app/org.jboss.aerogear.android.cookbook.hellopush-2/base.apk) at com.google.firebase.iid.zzg.zzeC(Unknown Source) at com.google.firebase.iid.zzg.<init>(Unknown Source) at com.google.firebase.iid.zzg.<init>(Unknown Source) at com.google.firebase.iid.zzd.zzb(Unknown Source) at com.google.firebase.iid.FirebaseInstanceId.getInstance(Unknown Source) at com.google.firebase.iid.FirebaseInstanceId.getInstance(Unknown Source) at org.jboss.aerogear.android.unifiedpush.fcm.AeroGearFCMPushRegistrar$2.get(AeroGearFCMPushRegistrar.java:100) at org.jboss.aerogear.android.unifiedpush.fcm.AeroGearFCMPushRegistrar$2.get(AeroGearFCMPushRegistrar.java:96) at org.jboss.aerogear.android.unifiedpush.fcm.AeroGearFCMPushRegistrar$4.doInBackground(AeroGearFCMPushRegistrar.java:145) at org.jboss.aerogear.android.unifiedpush.fcm.AeroGearFCMPushRegistrar$4.doInBackground(AeroGearFCMPushRegistrar.java:135) at android.os.AsyncTask$2.call(AsyncTask.java:295) at java.util.concurrent.FutureTask.run(FutureTask.java:237) at android.os.AsyncTask$SerialExecutor$1.run(AsyncTask.java:234) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1113) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:588) at java.lang.Thread.run(Thread.java:818) V/FA: Activity resumed, time: 27389 E/Surface: getSlotFromBufferLocked: unknown buffer: 0x7fe4e955a240 V/FA: Activity paused, time: 28121 {code}	1	1	https://issues.jboss.org/browse/AGDROID-585
263	AGDROID-574	I have started the work here: https://github.com/danielpassos/aerogear-android-pipe/tree/Android-N What I did: * Bump to Android N * Bump plugins versions (some plugins have Android 23 dependency) * Organize/update travis.yml What I didn't * Bump core version to 3.1.0 (waiting for be on Maven Central) * Update test to the new Android test style	1	1	https://issues.jboss.org/browse/AGDROID-574
264	AGDROID-571	[~danielpassos] Yep, just realised, sorry about that! So can this just be moved to Done?	1	1	https://issues.jboss.org/browse/AGDROID-571
265	AGDROID-551	[~supittma] as discussed in AGPUSH-1636, the entire Google section (including screenshots) need to be updated. Perhaps this is something that [~rsmeral] or [~ssitani] can assist with ?	1	1	https://issues.jboss.org/browse/AGDROID-551
266	AGDROID-551	Which doc is this referring to? https://aerogear.org/docs/unifiedpush/ups_userguide/index/, or https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides/ ? We need changes in both: https://aerogear.org/docs/unifiedpush/ups_userguide/index/ * change mentions of GCM to e.g. "FCM (formerly GCM)" or similar https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides * the whole "Google Related Setup" needs to be redone for FCM - I believe we (Docs team) could handle this by 3.12 * "Your first Android/Push App" and "Send a Push Notification" - these need updates for FCM too, but would require significant on-ramp for us (docs), so I can't commit to this for 3.12 without Engineering help. That being said - [~supittma], which part are you working on here? (you are assigned and Coding in Progress) Also, why was AGPUSH-1636 closed? It covered the Google-related setup, while this issue seems (by the description) to cover some other part. They don't seem to be duplicates. If we re-open AGPUSH-1636, I can take it into this/next sprint.	1	1	https://issues.jboss.org/browse/AGDROID-551
267	AGDROID-551	[~ssitani] can you send a PR with whatever you have? So that [~supittma] and I can continue and solve the doc issue ?	1	1	https://issues.jboss.org/browse/AGDROID-551
268	AGDROID-551	[~mwessendorf] [~supittma] Small update on our (docs team) availability: at this moment, we have to invest 100% of time on RHMAP 4.2 documentation - there's a lot to write/edit: https://issues.jboss.org/browse/RHMAP-9018 I'm unassigning this from [~ssitani] for now. We may be able to do a language review if you can provide a complete draft. WDYT?	1	1	https://issues.jboss.org/browse/AGDROID-551
269	AGDROID-550	I think we could add an empty JSON file to the app folder of the demos, and get some documentation out, what's needed to get the file (content) in place	1	1	https://issues.jboss.org/browse/AGDROID-550
270	AGDROID-546	/cc [~danielpassos] So this has some interesting consequences for the UPS life cycle. Right now we assume that when the success callback is called we are registered with all of the categories, have a token, etc. Now happens inside of a service that we extend. However, what does this mean for the register method? For starters, all of the methods we call are non blocking so we can kill the Callback method (YAY!), but this means that failures to connect to UPS are now handled by a service and not communicated to the client (boo!). There are several solutions to this, but none of them are a clear cut winner. 1) We continue to use the callback, but don't call it until the registration state with UPS is determined. 2) We register a handler that is called with the connection state passed to it (similar to how Google's client SDKs work) 3) UPS state is totally handled by our libraries. Developers will tell us what state they want us to be in and the library will fight the good fight keeping the device in that state. wdyt?	0	0	https://issues.jboss.org/browse/AGDROID-546
271	AGDROID-539	Should we send the global topic to the push service with the categories payload?	1	1	https://issues.jboss.org/browse/AGDROID-539
272	AGDROID-519	[~danielpassos] [~supittma] with Android N coming, will this mean, that there is JDK8 / OpenJDK only ?	0	0	https://issues.jboss.org/browse/AGDROID-519
273	AGDROID-428	yeah, would be nice, no ?	1	0	https://issues.jboss.org/browse/AGDROID-428

#	Requirement	Questions	Answered	Successfully Answered	URL
274	AGDROID-421	[~supittma] Maybe I don't get it but I meant this method: https://github.com/aerogear/aerogear-android-push/blob/45606e795f10e6a6343183981fd2b12dd17f0d49/aerogear-android-push/src/main/java/org/jboss/aerogear/android/unifiedpush/gcm/UnifiedPushConfig.java#L145-L156 There is no way to get the device token from the android libs right? So why can I set it here?	1	1	https://issues.jboss.org/browse/AGDROID-421
275	AGDROID-421	[~danielpassos] I took a quick look but this isn't actually used. In the constructor of GCMPushRegistrar we set the value, but it is always overriden in the .register method. wdyt about removing it?	1	1	https://issues.jboss.org/browse/AGDROID-421
276	AGDROID-376	Did you mean 2015? ;) Much of the benefit of the GCM/XMPP bridge is that it is a two way communication channel that is managed by Android. Device goes down and comes back up? Messages will make it out and the app won't crash. Last I checked the best Java/Android WebSocket client still needed lots of setup around it. Ideally by the time this hits final we will be able to make all of these choices configurable and/or automagic.	1	1	https://issues.jboss.org/browse/AGDROID-376
277	AGDROID-376	|yes, but in a lot of countries delivering data to a 3rd party (which would be the fact here) is not allowed. Have you been spying on me? Because I swear I had this conversation with a different German last night... |Having a solid aerogear-android-websocket repo/library would be benefit for the overall Android community, not just us Writing a solid Android WebSocket library is something I want to do.	0	0	https://issues.jboss.org/browse/AGDROID-376
278	AGDROID-351	Most likely can be resolved. Is there any ETA to release 3.0.0 version of this?	1	1	https://issues.jboss.org/browse/AGDROID-351
279	AGDROID-319	Is there anything blocking progress on this issue? Is it a simple matter of replacing the webview invocation with an appropriate intent? If so I'll gladly provide a PR making this change.	1	1	https://issues.jboss.org/browse/AGDROID-319
280	AGDROID-289	Others, like Google (http://blog.chromium.org/2015/02/hello-http2-goodbye-spdy-http-is_9.html) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it ?	1	0	https://issues.jboss.org/browse/AGDROID-289
281	AGDROID-258	That;s actually a new feature on iOS8 [~supittma] If you want to support that on Android (does it make sense?), we can send that to GCM as well	1	1	https://issues.jboss.org/browse/AGDROID-258
282	AGDROID-254	Could you provide a list of which elements you want to test to jumpstart this?	1	1	https://issues.jboss.org/browse/AGDROID-254
283	AGDROID-250	Do we plan to make this gotcha a part of our guides?	1	1	https://issues.jboss.org/browse/AGDROID-250
284	AGDROID-231	Wasn't [~aemmanou] doing similar already for the Java Sender's Http(s)URLConnection ?	0	0	https://issues.jboss.org/browse/AGDROID-231
285	AGDROID-218	We've moved on to 4.3.0 at this point. [~kpiwko] if this is still a problem please reopen with a link to a failing project in github.	0	0	https://issues.jboss.org/browse/AGDROID-218
286	AGDROID-59	Was this for a simple demo (PushEEDemo - used by the tutorial) ? Or was this the ProDoctor/AeroDoc "topic demo" ?	1	0	https://issues.jboss.org/browse/AGDROID-59
287	AGDROID-7	Passos, did you work on this at some point?	1	1	https://issues.jboss.org/browse/AGDROID-7
288	AGCORDOVA-158	I've been doing some testing: If the app is in foreground, it doesn't appear as open, shouldn't it appear as open as the message is received? If the app is in background it works fine in both iOS and Android. If the app is closed: - It doesn't appear as open for Android. - It can appear as 2 messages open for iOS instead of 1	0	0	https://issues.jboss.org/browse/AGCORDOVA-158
289	AGCORDOVA-136	Hi ! all of you, I am tested org.jboss.aerogear.cordova.push plguin . this plugin is deprecated with cordova 6.0.0 version right now. This is working fine with till cordova version 5.x. , I request to aerogear lead developer to update this plugin for further use. Thanks.	1	1	https://issues.jboss.org/browse/AGCORDOVA-136
290	AGCORDOVA-134	[~edewit] [~mwessendorf] [~supittma] adding above code resolves android errors however there are iOS errors as well. Please see https://issues.jboss.org/browse/AGCORDOVA-146 issue for iOS error logs. Is there any way you guys can take a look at this?	0	0	https://issues.jboss.org/browse/AGCORDOVA-134
291	AGCORDOVA-50	3) I'm not sure, but I don't think you must have this, on the ios shoot project it's also not there 4) why should these be remove? Isn't it nice to have an example of how to configure it? 5) when you add android platform you get the information about building via gradle in your terminal I must admit I rather have that we didn't require these additional setup steps, but android and ios libraries are not easy to consume in a cordova project.	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
292	AGCORDOVA-50	3) I am not sure if it is required, but Android version of this application has it. 4) Well I guess that this client Ids belong to somebody on our team. What if somebody just copies the project, build their app on top of it and release it with this Ids? This doesn't concern us? And what about the developer? 5) I know and I think it is not sufficient, because you make the first steps once, but you might want to build the application several times and later forget how to do it. I think what we should strive for is a great developer's experience and easy of use of the examples. Complete and clear documentation is necessary to do that.	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
293	AGCORDOVA-50	I am reopening this, because there are still some problems. Ad 2) Facebook worked fine. But Google & Keycloak buttons still don't work. This time, instead of crashing, their output is alert window with "java.lang.reflect.InvocationTargetException". Does it work for you, am I doing something wrong? With that in mind I just realized that there is no information about the configuration of oauth providers in README. There should probably be a link to Android version which covers setting up the accounts, but it should also mention what changes have to be made in app.js and controllers.js.	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
294	AGCORDOVA-50	have you added the extra dependencies? e.g. compile 'com.google.code.gson:gson:1.7.2' compile 'com.google.guava:guava:18.0' I'll add some more to the readme	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
295	AGCORDOVA-50	[~pstribny] regarding "information about the configuration of oauth providers in README", can you file a new/different JIRA ?	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
296	AGCORDOVA-50	have you updated the plugin with the new version 1.0.1?	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
297	AGCORDOVA-50	[~pstribny] [~edewit] since the error is slightly different (This time, instead of crashing, their output is alert window with "java.lang.reflect.InvocationTargetException".) should we get a new JIRA for this as well ?	1	1	https://issues.jboss.org/browse/AGCORDOVA-50
298	AGCORDOVA-50	I've updated the 1.0.1 release with a fix for this, seems I should have tested all the settings not just google. Could you give it another go?	0	0	https://issues.jboss.org/browse/AGCORDOVA-50
299	AGCORDOVA-50	I deleted the platforms & plugins folder and built the application again and it behaves in the same way. Should I also clear/delete some dependencies?	0	0	https://issues.jboss.org/browse/AGCORDOVA-50
300	AGCORDOVA-35	what's the status here ?	1	1	https://issues.jboss.org/browse/AGCORDOVA-35
301	AGCORDOVA-21	[~edewit] Since the related PR has been merged to a branch, due to the fact that some more work is needed, should the Fix Version be updated to push-1.0.1 ? Let's not make that part of the initial 1.0.0 release	1	1	https://issues.jboss.org/browse/AGCORDOVA-21
302	AGCORDOVA-21	what should be the fix version for this ?	1	1	https://issues.jboss.org/browse/AGCORDOVA-21

#	Requirement	Questions	Answered	Successfully Answered	URL
303	AGDIGGER-113	This is a bit problematic... {{zipalign}} is versioned under {{build-tools}} directory. e.g. on the current Android slave container I checked, it is here: {{/opt/android-sdk-linux/build-tools/25.0.3}} This means, we have to know what version of the build tools are available in the Android SDK container that we mount to Android slave container. [~lrossett] [~weil] what do you think of creating a symlink {{LATEST}} in {{build-tools}} directory in Android SDK container? This should be easy to do with androidctl. However, this brings 2 questions to my mind: 1. Is it ok to use latest build tools all the time, at least in Jenkins Android Signing plugin? 2. Would symlinks in the Android slave container? Note that symlink will be created in Android SDK container, not slave. I cannot think of any other solution except defining the version as an env var in Android slave container's deployment config?	1	1	https://issues.jboss.org/browse/AGDIGGER-113
304	AGDIGGER-113	Shouldn't we just set the "zipalignPath" parameter in the jenkinsfile as the default/recommended version? Users/developers/customers can change it as they want. I think that keeping it as a string with the zipalign path makes it easy and obvious for someone to change it rather than hide it in an env var.	1	1	https://issues.jboss.org/browse/AGDIGGER-113
305	AGDIGGER-108	[~weil] Are you happy to close this one. Is the installation of the instance on OSM4 sufficient to consider this one verified?	1	1	https://issues.jboss.org/browse/AGDIGGER-108
306	AGDIGGER-108	[~lfitzgerald] Yeah, I think so. Does the groovy scripts that updates the templates and setup proxy works fine? I am asking because we are seeing some issues with the jenkins-cli in different versions of Jenkins. To make sure, you need to remove the jenkins-cli.jar from the local dir (like /tmp) before running the playbooks.	1	1	https://issues.jboss.org/browse/AGDIGGER-108
307	AGDIGGER-99	[~wtrocki] thanks for the investigation. really good work! It seems that the integration is easier than I thought. 2 questions: 1. {{## Monitor filesystem to check what files were changed}} how easy is it to do this? This is an awesome idea! We can remove created files afterwards. 2. "slaves on demand" is awesome, but I am worried that the queuing could be problematic. We don't want to have our same machine to have 10s of slaves running at the same time and building things. It might be bad in terms of performance and memory. Any experience with that?	1	0	https://issues.jboss.org/browse/AGDIGGER-99
308	AGDIGGER-96	Template should support one slave. More slaves can be added using gui (which is no more complicated than environment variables in template) We should document this process. Documentation ticket is here: https://issues.jboss.org/browse/AGDIGGER-69 Can we close this as duplicate and provide more useful information to description. ??We reference the node name (slave name) in Jenkinsfile. But ideally, Jenkins should pick any OSX slave which is not busy. Perhaps: https://wiki.jenkins-ci.org/display/JENKINS/Compound+Slaves?? That's really good comment. We should make sure that this is documented and tested. We may just say that users would need to specify slave name in pipeline definition or.. loadballance using mentioned plugin. For now it's best to keep it simple.	0	0	https://issues.jboss.org/browse/AGDIGGER-96
309	AGDIGGER-88	[~luigizuccarelli] - I would say that for this ticket we do not need to provide any runnable scripts. Best to figure out how we can do this operation on one node (for example using labels) to feed android SDK to the build process. Once we would know the best way to do it we can finish this as part of ansible epic. WDYT?	1	1	https://issues.jboss.org/browse/AGDIGGER-88
310	AGDIGGER-87	What's the status here ??	1	1	https://issues.jboss.org/browse/AGDIGGER-87
311	AGDIGGER-80	How to prepare sandbox definiton files: * Create a sandbox file which traces things: {code} ; file logall.sb (version 1) (debug all) (trace "trace.sb") {code} * Use the file {code} sandbox-exec -f logall.sb xcodebuild arg1 arg2 {code} * Open trace.sb, remove duplicate lines in it * Optimize and normalize things in it * It makes sense to change many {{path}} entries with {{literal}} entries * Use the new sandbox file and see if the same command works! The way that tracing works is, * it logs only the things that are not normally allowed. * everything is allowed So, you can enable tracing again in the optimized file and in that case you will only see the requests that are not satisfied.	1	1	https://issues.jboss.org/browse/AGDIGGER-80
312	AGDIGGER-79	[~aliok2] Why don't we make "PLATFORM" parameter type - "Choice parameter" and add just valid choices android/ios ?	1	0	https://issues.jboss.org/browse/AGDIGGER-79
313	AGDIGGER-73	[~wtrocki] Not really sure what you mean. It looks like the DiggerClient is supporting passing the branch info when creating a Jenkins job. Are you saying it is not working? Or did you mean that the we need to integrate the DiggerClient with the platform?	1	1	https://issues.jboss.org/browse/AGDIGGER-73
314	AGDIGGER-71	[~wtrocki] Not really sure what's this ticket is about. What "client" do you mean here? RHMAP or the digkins Java client?	1	1	https://issues.jboss.org/browse/AGDIGGER-71
315	AGDIGGER-70	[~wtrocki] how does this relate to RHMAP-11958 ?	1	1	https://issues.jboss.org/browse/AGDIGGER-70
316	AGDIGGER-70	what permissions would those normal users have ?	1	1	https://issues.jboss.org/browse/AGDIGGER-70
317	AGDIGGER-63	??tell build use "Android 24" image, based on this setting:?? How you see this happening? I would see it as node("Android 24") so you need to specify this as target in your jenkinsfile and do not use actual setting. If we want to extend this idea we can have some function called from Jenkinsfile: {code} var nodeName = "android" + readAndroidVersionFromBuildGradle(); node(nodeName) { ... } {code} ??Perhaps this can be added as a plugin? As a way to tell the kubernetes plugin "launch Android-24 image"?? Kubernetes plugin would have everything for this already. We planning to wrap s2i process into ansible scripts. When images are created then we would need to change kubernetesPodTemplates, but this would happen just once (or better to say every time someone would run playbook). I my missing some context here so correct me if I'm wrong but I think that having plugin here would just complicate things. Let's add this to the topic list for technical discussions and create some additional jiras if needed.	1	1	https://issues.jboss.org/browse/AGDIGGER-63
318	AGDIGGER-63	[~wtrocki] Ok tried the digger-node , the document needs to be updated a bit - It does not show the steps to install node and run it locally - I know what todo but the community will be confused. Also got this error node bin/digkins.js login https://jenkins-jenkins.192.168.2.194.xip.io admin xxxxx info: Cannot connect to jenkins instance Error: self signed certificate in certificate chain at Error (native) at TLSSocket.<anonymous> (_tls_wrap.js:1022:38) at emitNone (events.js:67:13) at TLSSocket.emit (events.js:166:7) at TLSSocket._init.ssl.onclienthello.ssl.oncertcb.TLSSocket._finishInit (_tls_wrap.js:586:8) at TLSWrap.ssl.onclienthello.ssl.oncertcb.ssl.onnewsession.ssl.onhandshakedone (_tls_wrap.js:428:38)	1	1	https://issues.jboss.org/browse/AGDIGGER-63
319	AGDIGGER-58	[~aliok2] https://github.com/aerogear/digger-java/pull/1 PR created. Can you review that? I merged that by mistake, any comments would be resolved as different PR :)	0	0	https://issues.jboss.org/browse/AGDIGGER-58
320	AGDIGGER-41	[~wtrocki] Could you please write a summary of what we've talked during the backlog refinement meeting?	1	0	https://issues.jboss.org/browse/AGDIGGER-41
321	AGDIGGER-33	[~wtrocki] would love to see some instructions with bunch of commands somewhere in our repo? mind preparing one? think about community as well.	1	0	https://issues.jboss.org/browse/AGDIGGER-33
322	AGDIGGER-22	Is there any reason why ant is crossed out? While there is no ant template at this point, can we ensure there are no Ant based apps currently at customers side? AIUI this would be breaking backwards compatibility with 3.15.0.	1	1	https://issues.jboss.org/browse/AGDIGGER-22

#	Requirement	Questions	Answered	Successfully Answered	URL
323	AGDIGGER-22	Q: Where to have the debug keystore? In Openshift? Outside Openshift? In Docker image? etc [~mwessendorf] That's sounds like separate issue for me. Can I create this? A: It is part of the build. We need to provide the debug keystore and users won't provide their own (for MVP) [~mwessendorf] IMHO: That's platform integration part. I have couple ideas for the logic here, but basically we can copy solution we using in old digger.	0	0	https://issues.jboss.org/browse/AGDIGGER-22
324	AGDIGGER-20	[~luigizuccarelli] I now have my Openshift cluster working properly. Gave a try, although we now have other pipelines. Same result with you, all good!	0	0	https://issues.jboss.org/browse/AGDIGGER-20
325	AGIOS-439	is this any longer needed - given that iOS9 is around ?	0	0	https://issues.jboss.org/browse/AGIOS-439
326	AGIOS-427	Why are we removing https://github.com/aerogear/aerogear-ios-sync-client ?	1	1	https://issues.jboss.org/browse/AGIOS-427
327	AGIOS-394	This is the OTP demo, right? https://github.com/aerogear/aerogear-ios-cookbook/tree/master/Two-Factor It's updated to Swift 3 So, can we close this?	1	1	https://issues.jboss.org/browse/AGIOS-394
328	AGIOS-347	how about moiving to future?	0	0	https://issues.jboss.org/browse/AGIOS-347
329	AGIOS-343	Do we really need SockJS ? I'd think that WSS would be good enough here	0	0	https://issues.jboss.org/browse/AGIOS-343
330	AGIOS-342	Should the label _sync-1.0.0.alpha.1_ be removed for this task. I don't think this will be included for 1.0.0.alpha.1?	1	0	https://issues.jboss.org/browse/AGIOS-342
331	AGIOS-277	Good morning [~corinnekrych], I couldn't find any good reference on it. Is the section 4.4 from the RFC what do you have in mind? http://tools.ietf.org/html/rfc6749#section-4.4	1	0	https://issues.jboss.org/browse/AGIOS-277
332	AGIOS-271	Others, like Google (http://blog.chromium.org/2015/02/hello-http2-goodbye-spdy-http-is_9.html) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it ?	0	0	https://issues.jboss.org/browse/AGIOS-271
333	AGIOS-255	Once this is there, does that mean the 2.x version of the push/registration SDK can be based on aerogear-ios-http? (since that requires http basic to work)	1	1	https://issues.jboss.org/browse/AGIOS-255
334	AGIOS-231	Initial version is: https://github.com/corinnekrych/aerogear-ios-oauth2 could you move it to aerogear organization? it contains OAuth2: - request authz code - request access token - refresh token - revoke AccountManger for fluid integration and storage of tokens is tracked in this JIRA https://issues.jboss.org/browse/AGIOS-253	1	1	https://issues.jboss.org/browse/AGIOS-231
335	AGIOS-150	Thanks Corinne. From the description i understand that you are looking for an option to allow uploading a new file to Google Drive and also some way to demo modify/update (i.e. could be just as simple as updating the file title) an existing file. Is my understaning correct? Regards, Yagyesh	1	1	https://issues.jboss.org/browse/AGIOS-150
336	AGIOS-150	I have started working on this & hopefully by today i could have a PR ready. In the meantime, would it be possible to get this ticket assigned to me. I tried, but looks like i dont have permissions.	0	0	https://issues.jboss.org/browse/AGIOS-150
337	AGIOS-34	We already have a branch, that does update the requirements to iOS5 and adds AFN 1.2.1 (as a matter of fact) https://github.com/aerogear/aerogear-ios/tree/matzew_afn121	1	1	https://issues.jboss.org/browse/AGIOS-34
338	AGIOS-17	[~corinnekrych] Let's lower the priority for this one. IMO all other 2.2.0 items are way more important. Ok?	0	0	https://issues.jboss.org/browse/AGIOS-17
339	AGIOS-11	we could do it for 1.2.0 as well;	1	1	https://issues.jboss.org/browse/AGIOS-11
340	AGIOS-6	[~abstractj] do you recall why we want/need such a parameter ?	1	0	https://issues.jboss.org/browse/AGIOS-6
341	AGIOS-6	It;'s ok :-) We were not sure as well - let's keep it ... perhaps someday... there is need for it :-)	0	0	https://issues.jboss.org/browse/AGIOS-6
342	AGJS-272	This is now available on master: https://github.com/aerogear/aerogear-sync-server/tree/master/distribution When _mvn package_ is run the produces jar will be in the format: {noformat} target/aerogear-sync-server-version.jar {noformat} How do you want to use this. Do we need to stick the produced jar somewhere? This is actually not part of the build at the moment (is a manual task) but perhaps it should so you can access snapshots. Let me know what you need and we will sort it out.	1	0	https://issues.jboss.org/browse/AGJS-272
343	AGJS-261	the JIRA says PR sent, but the PR was closed. Should it go back to "open" ?	1	1	https://issues.jboss.org/browse/AGJS-261
344	AGJS-260	[~lucas.holmquist] the JIRA says PR sent, but the PR was closed. Should it go back to "open" ?	1	1	https://issues.jboss.org/browse/AGJS-260
345	AGJS-255	[~lucas.holmquist] I was digging into a several repositories and was wondering about where the OAuth2 library is located today. Is here https://github.com/lholmquist/ag-google-drive ?	1	0	https://issues.jboss.org/browse/AGJS-255
346	AGJS-237	Notifier's API's are event based, so Promises would not be recommend here	0	0	https://issues.jboss.org/browse/AGJS-237
347	AGJS-189	I believe this is comment to AGJS-211 ^, am I right?	0	0	https://issues.jboss.org/browse/AGJS-189
348	AGJS-175	By dependencies you mean: {code} Pipeline -depends-on-> Ajax then watch(ajax) --> run(ajax, pipeline, ...)? {code}	1	1	https://issues.jboss.org/browse/AGJS-175
349	AGJS-143	[~lucas.holmquist] do we have any use cases for that? Why current solution isn't sufficient?	0	0	https://issues.jboss.org/browse/AGJS-143
350	AGJS-137	Could this please be unassigned from me? I have no permissions to drop it :)	0	0	https://issues.jboss.org/browse/AGJS-137
351	AGJS-64	Have a suggestion parked in this [branch|https://github.com/danbev/aerogear-js/tree/AGJS-64-subprotocols] until the SockJS [task|https://github.com/sockjs/sockjs-client/issues/130] is completed.	1	0	https://issues.jboss.org/browse/AGJS-64
352	AGJS-47	The QUnit tests reside in the integration repo: https://github.com/tolis-e/aerogear-js-integration Execute ./servers/activemqtest/server.sh and then open the tests/notifier/mqttws.html file in a browser. The problem is that it doesn't work in phantomjs for some reason after updating to activemq-5.9.0 (version which supports MQTT). When using the debug mode I can see: phantomjs console Unexpected response code: 400. Looks like the issue is probably related to https://groups.google.com/forum/#!msg/phantomjs/p4scrV2GwB4/c--SS5owLZIJ	1	1	https://issues.jboss.org/browse/AGJS-47
353	AGJS-41	Hey [~sienaluke], would you mind to review this beast? :-)	0	0	https://issues.jboss.org/browse/AGJS-41
354	AGJS-22	So, is there a generic way to wrap form data as JSON for PUT/POST to a REST endpoint?	1	1	https://issues.jboss.org/browse/AGJS-22
355	AGJS-17	what exactly would it be confused with? If you downloaded the sources and playing around with them, then maybe there would be some confusion since the folder that holds the different types is named adapter. But for a regular developer who is just using the lib, i think type is fine. I think the pay off of this change wouldn't equal the amount of time for deprecation, refactor, etc..	1	1	https://issues.jboss.org/browse/AGJS-17
356	AGJS-8	[~lucas.holmquist] Any update on this? Will it make it in for 1.1 or should we push it?	1	0	https://issues.jboss.org/browse/AGJS-8
357	AGJS-5	[~abstractj] Any objection to pushing this to 1.2.0? I would like to code freeze 1.1.0 so we can complete tests and docs and release 1.1.0 this week as planned.	1	1	https://issues.jboss.org/browse/AGJS-5
358	AGPUSH-2121	[~dimitraz] AGPUSH-2121, AGPUSH-2132 and AGPUSH-2136 look like one task to me. Can you take a look, sum them up in one task and close the others?	0	0	https://issues.jboss.org/browse/AGPUSH-2121

#	Requirement	Questions	Answered	Successfully Answered	URL
359	AGPUSH-2114	While we are still researching the CDI model, does it make sense to have any unit tests other than a simple send and receive? This is what I have currently: https://github.com/dimitraz/aerogear-unifiedpush-server/commit/ff104bb98c37876e877b48f0e86f64ef7d82d91d Based on Matthias' 'SimpleTest' class: https://github.com/matzew/kafka-cdi/blob/master/src/test/java/net/wessendorf/kafka/cdi/SimpleTest.java#L83-L88	1	1	https://issues.jboss.org/browse/AGPUSH-2114
360	AGPUSH-2111	[~mwessendorf], can you say when it is likely that we start working on this topic?	1	0	https://issues.jboss.org/browse/AGPUSH-2111
361	AGPUSH-2108	Hi [~ppatiern], can I message you on IRC if thats ok? What channels are you on?	1	0	https://issues.jboss.org/browse/AGPUSH-2108
362	AGPUSH-2105	[~mwessendorf] What do you think about [spring-kafka|https://projects.spring.io/spring-kafka/] ?	1	1	https://issues.jboss.org/browse/AGPUSH-2105
363	AGPUSH-2105	[~mwessendorf], I have explored the library. Do you have any concrete ideas for extensions you want to add? I think for now and taking into consideration what exactly we have in Kafka-UPS, the library is enough to be used. We can start using the library for integration.	1	1	https://issues.jboss.org/browse/AGPUSH-2105
364	AGPUSH-2103	After the first consumer is ready, what exactly did u mean by this task? I think the replacement of the counter so that it is based only on Kafka is already done in [[AGPUSH-2102]|https://issues.jboss.org/browse/AGPUSH-2102]?	1	1	https://issues.jboss.org/browse/AGPUSH-2103
365	AGPUSH-2102	The task is ready [github branch|https://github.com/polinankoleva/aerogear-unifiedpush-server/tree/installation_metrics_consumer]. I am waiting for your feedback to make a pull request. Is the implementation what did you expect?	1	1	https://issues.jboss.org/browse/AGPUSH-2102
366	AGPUSH-2101	I see that in the updateAnalytics method there's a query to the database and if pushMessageInformation is not null it means the app has been opened. I'm a bit confused as to how to do this without querying the DB. Is it correct to say that if pushMessageId is not null then this is another way to tell if the app has been opened? [~mziccardi] [~mwessendorf]	1	1	https://issues.jboss.org/browse/AGPUSH-2101
367	AGPUSH-2096	Hi [~mwessendorf] I saw this list of bugs and started resolve. I update this file to version 3.2. Among the changes, the main difference is the best way to use the environment variables, since the version 2 of docker-compose it is not a good pratice share the environment variables between services, so I created an .env file that has the variables needed to start the services. I do not know what do you prefer, send the pull request or attach the files here?	1	1	https://issues.jboss.org/browse/AGPUSH-2096

375	AGPUSH-2008	Where can the swagger docs be found? What is the url for the generated docs?	1	0	https://issues.jboss.org/browse/AGPUSH-2008
376	AGPUSH-1988	A working installation can be found at http://52.51.162.165:8080/ What we have done so far: * Installed HBASE on 52.51.162.165 * Installed Tomcat on 52.51.162.165 * Installed pinpoint web and pinpoint collector on the newly installed tomcat * Installed the pinpoint agent into the JBoss instance of the eteam cluster * Configured pinpoint * Made some test to check the pinpoint outcomes	0	0	https://issues.jboss.org/browse/AGPUSH-1988
377	AGPUSH-1987	[~mziccardi] found a command tool named [Artillery|https://artillery.io] that read a YAML file with some test configuration, for example "create 50 request every second during 1 hour". It's actually very easy and faster than creating a node/java client (it uses UPS's REST API). It also generates some reports. What do you think [~mwessendorf] EDIT: This was to be an example of 10k requests every second during 1 minute but it has gone too bad, UPS is completely down... EDIT 2: This is a test with 100 request every second during 1 minute: {noformat} Complete report @ 2016-12-20T12:24:13.046Z Scenarios launched: 6000 Scenarios completed: 4765 Requests completed: 4765 RPS sent: 48.03 Request latency: min: 487.8 max: 90958.1 median: 20366.8 p95: 33191 p99: 33426.1 Scenario duration: min: 526.5 max: 90997.2 median: 20385.2 p95: 33205.6 p99: 33459.9 Scenario counts: 0: 6000 (125.918%) Codes: 202: 4764 500: 1 Errors: ECONNRESET: 1235 {noformat}	1	1	https://issues.jboss.org/browse/AGPUSH-1987
378	AGPUSH-1979	An idea from [~jusanche]: {quote} If we switch to FCM for iOS too, we shouldn't need to ask for the certificates ourselves anymore, but document that they have to provide them on firebase console, and the same Sender ID and Server Key/token will work for both iOS and Android, so it might simplify the configuration on our part. {quote} I like this idea, and implementation could be quick, since at the end it's really just an "Android Variant". Perhaps we explicitly call it out FCM/APN mapper ? To avoid confusion w/ the pure Android Variant. Or.... we just give them example doc, how to upload the apple things, to use an Android variant. Heck, we should rename it "FCM variant", no ?	0	0	https://issues.jboss.org/browse/AGPUSH-1979
379	AGPUSH-1979	It seems that the current code can support FCM iOS. Do we have any APN Cert to test it on iOS? This document shows how to push notification to iOS by FCM: https://firebase.google.com/docs/cloud-messaging/ios/certs	0	0	https://issues.jboss.org/browse/AGPUSH-1979
380	AGPUSH-1978	[~jmesnil] Hi Jeff, does the above ring a bell, or is there something we can improve in our HornetQ usage, generally?	1	1	https://issues.jboss.org/browse/AGPUSH-1978
381	AGPUSH-1978	[~kpiwko][~mwessendorf] Looking at PagingManagerImpl and JournalImpl, the objects which got really huge are maps which contain in-flight transactions. Looks like that something started to fail transactions so HornetQ could not finish them. New and new transactions were started but they failed as well (most likely) and this map got really huge causing OOME (OutOfMemoryError). As HornetQ is storing those transactions in file journal as well then when it tries to load journal after restart then new OOME can be thrown as it's putting all "unfinished" transactions to this map again during initialization. By default there is 5 minute timeout for those transactions and then they're removed. But in this case it seems that memory got full before those transactions could be timeouted. At this moment this seems to be a symptom but not the cause. Any idea why the transactions are failing? What are the first error messages in server.log? [~mwessendorf] hornetq-jms.xml just defines which queue/topics should be deployed together with the deployment. I cannot find configuration of the server where this deployment is deployed. Could you help? Is there described what the deployment is doing?	1	1	https://issues.jboss.org/browse/AGPUSH-1978
382	AGPUSH-1978	[~mwessendorf] Thanks! It's pretty default configuration. Nothing interesting there. Could you share with me the heap dump so I can take the look? I would like to take a look at hornetq journal? By default it's located in $JBOSS_HOME/standalone/data/ directory. You can send me the the whole data directory. I'm interested in following directories messagingbindings, messagingjournal, messaginglargemessages, messagingpaging.	1	1	https://issues.jboss.org/browse/AGPUSH-1978
383	AGPUSH-1951	it was resolved as done, is there any produced artifact ?	1	0	https://issues.jboss.org/browse/AGPUSH-1951

#	Requirement	Questions	Answered	Successfully Answered	URL
384	AGPUSH-1951	[~mwessendorf] This was just to track the time spent on looking into using something like seneca or to use docker & openshift. I had a look at both and decided to use openshift. I went through it with my project supervisor and Leigh also put me on to a couple of graduates who used microservices last year in their college projects to discuss my approach. I plan to break up what I have into the following services: push configuration service, lead service & sales agent service. From studying the code and how it is currently it looks like I can separate out the functionality for each one to be its own service, and seems like the most obvious thing to do. I should have really ran it by you also to get your input, apologies. Does this plan sound ok with you? I have extracted the push configuration service and plan to do the others in the next sprint.	0	0	https://issues.jboss.org/browse/AGPUSH-1951
385	AGPUSH-1898	can you do an "ls -la" in the deployments folder and paste the result here ?	0	0	https://issues.jboss.org/browse/AGPUSH-1898
386	AGPUSH-1898	In your Apache log I see "Token audience doesn't match domain. Token issuer is http://URL/auth/realms/aerogear, but URL from configuration is https://URL/auth/realms/aerogear" , have you changed something around httpS ? Basically keycloak does not accept the token because it has not the same domain origin.	1	0	https://issues.jboss.org/browse/AGPUSH-1898
387	AGPUSH-1892	Is it possible, that you use a version that has FCM support already ? Becuase there the Android receivers are not correct :-/	1	0	https://issues.jboss.org/browse/AGPUSH-1892
388	AGPUSH-1605	You mean on the docker images? Or where ?	1	1	https://issues.jboss.org/browse/AGPUSH-1605
389	AGPUSH-1604	That's awesome! Mind giving it a shot? The snippets are located in here: * https://github.com/aerogear/aerogear-unifiedpush-server/tree/master/admin-ui/app/snippets/register-device While the related code for rendering is here: * https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/admin-ui/app/scripts/directives.js * https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/admin-ui/app/directives/ups-client-snippets.html Do you want this is a 1.1.3 release? Or do you think the 1.2.0 series is "good enough" ?	1	1	https://issues.jboss.org/browse/AGPUSH-1604
390	AGPUSH-1603	[~mwessendorf] Looking at the PHP sender, it looks like there aren't any code changes needed. The index.php page can have priority keys added to the message object manually and that will get passed correctly. Can you confirm?	1	0	https://issues.jboss.org/browse/AGPUSH-1603
391	AGPUSH-1600	[~mwessendorf] I just build everything from head and gave it a go. UPS accepted the token and sent a message no problem.	1	1	https://issues.jboss.org/browse/AGPUSH-1600
392	AGPUSH-1596	Matthias - what about OpenShit Cartridges ? Do they get updated with this issue resolved?	1	1	https://issues.jboss.org/browse/AGPUSH-1596
393	AGPUSH-1559	[~mwessendorf] This setup assumes the databases inside kubernets. How could I tweak the setup so that: UPS_DB and KC_DB are for instance inside openstack?	0	0	https://issues.jboss.org/browse/AGPUSH-1559

401	AGPUSH-1522	We could do that depending on what the UPS is actually returning for it's response. [~evanshortiss] what version of the UPS are you using. and what node-sender version are you using.	1	1	https://issues.jboss.org/browse/AGPUSH-1522
402	AGPUSH-1522	Hi Guys, I missed this update. Here's the version: AeroGear UnifiedPush Server 1.0.3 and WildFly	1	0	https://issues.jboss.org/browse/AGPUSH-1522
403	AGPUSH-1522	I see this has been resolved. Can you specify the new patched node module version and AeroGear server version that are compatible and will return rich error responses? Sure, will use a mailing list in the future. Can you specify which list specifically?	0	0	https://issues.jboss.org/browse/AGPUSH-1522
404	AGPUSH-1522	Thanks, I still don't feel that the original issue has been resolved though; it can't be without updating the node module to take the AG server response and feeding that as JSON Object or String to the callback along with the status code. Or is there also a separate issue open for that besides this one?	0	0	https://issues.jboss.org/browse/AGPUSH-1522
405	AGPUSH-1496	I'm been looking into this and trying to figure out why this is happening. The version of UPS in [bbe1c0e#diff-23e531d12489411024ea5c379be1d178R70|https://github.com/aerogear/aerogear-unifiedpush-server/commit/bbe1c0e80a4a5295a3c7cefe66f5e8cc07da66be#diff-23e531d12489411024ea5c379be1d178R70] is 1.1.0.Final-SNAPSHOT: {noformat} git show bbe1c0e:pom.xml {noformat} With the addition of the migrator we now have the requirement to create the data base schema using the [migrator|https://aerogear.org/docs/unifiedpush/ups_userguide/index/#schema] and not have it automatically created by hibernate upon application startup. {noformat} ./bin/ups-migrator --logLevel=debug update {noformat} This would populate the database succesfully with a clean database. Now, if we take checkout the commit above: {noformat} git co -b migrator-qe-issue bbe1c0e {noformat} Build and deploy against to the server (with a clean mysql database) will create the data base schema, but an incorrect one. Running the migrator against this database will error with the above reported error. At the time of the bbe1c0e commit ,there was no migrator yet so letting hibernate create the database schema was the way to do it. Now that the migrator was introduced it should be used to generate the schema. One thought that I had is that you mentioned in the thread that you run an integration test with _runMigrator=false_. Depending on the version of UPS used it might be possible that it is creating the incorrect database schema {noformat} $ ./gradlew --stacktrace :spacelift:test -Pwildfly8UpsFromSource -Pdatasource=mysql -PrunMigrator=false {noformat} I tried running this on my local machine but it fail but it looks like this is using _1.1.0-beta.3_ which does not contain the migrator. So this could indeed be the case that the schema is created upon application deployment instead of by the migrator. I'm also wondering about the version used to test. Should we not be using a later version to testa against?	1	0	https://issues.jboss.org/browse/AGPUSH-1496
406	AGPUSH-1493	We could still make topics work like the old categories, when we apply the alias 'filter' in UPS and then remove the devices that don't have specific alias. Then use the topic to send the message, that way we have the same behavior we used to have with the 'old' categories. How does that sound?	0	0	https://issues.jboss.org/browse/AGPUSH-1493
407	AGPUSH-1490	[~fturizo] one potential reason behind this could be if the time on your desktop is out of sync with the Keycloak server. Is the Keycloak server on a separate machine? Can you check the date on your machine and the server and let me know what the difference is?	1	1	https://issues.jboss.org/browse/AGPUSH-1490
408	AGPUSH-1490	Mmm, now that you mention it, the wildfly server and the UPS application are deployed in an AWS server located in the US. West Coat (GMT - 4) and i'm testing in Bogota (GMT - 5). Could this be a reason for this error?	0	0	https://issues.jboss.org/browse/AGPUSH-1490
409	AGPUSH-1490	Yes, I think so - could you try to set your machine to the same time zone and make sure the time is in sync, then confirm if that fixes the issue? If so I'll figure out some fix for keycloak.js to deal with this.	1	1	https://issues.jboss.org/browse/AGPUSH-1490

#	Requirement	Questions	Answered	Successfully Answered	URL
410	AGPUSH-1489	The problem is that the protocolType for the windows variant is never set before we go to editing https://github.com/aerogear/aerogear-unifiedpush-server/blob/6ad62a16bbbb9f838acc85c7c3511a0097c90b9f/admin-ui/app/scripts/services/variantModal.js#L70 Looks like it's set only when we create a variant, but this info is lost after reload. [~lfryc] Could you take a look ?	0	0	https://issues.jboss.org/browse/AGPUSH-1489
411	AGPUSH-1486	[~abstractj] [~sebastienblanc] does this somewhat security related ticket make sense for 1.2.0 ? Or should we do it later ?	0	0	https://issues.jboss.org/browse/AGPUSH-1486
412	AGPUSH-1470	[~abstractj] perhaps this could be something already for 1.2.0? Or would 2.0.0 be a more relaxed time-frame ?	0	0	https://issues.jboss.org/browse/AGPUSH-1470
413	AGPUSH-1458	What is the issue here? We could also use yaml instead of xml.	0	0	https://issues.jboss.org/browse/AGPUSH-1458
414	AGPUSH-1452	Just please consider a need to use alternative delivery network capabilities in underlying impl - I'd much rather implement a http/2 server then http/2 proxy in the future. Seems that pushy support that which is a significant plus from QE perspective! https://github.com/relayrides/pushy/blob/master/src/main/java/com/relayrides/pushy/apns/ApnsEnvironment.java	1	0	https://issues.jboss.org/browse/AGPUSH-1452
415	AGPUSH-1422	should we move to .Final ?	1	1	https://issues.jboss.org/browse/AGPUSH-1422
416	AGPUSH-1422	[~sebastienblanc] do you need some more input from [~kpiwko] or [~smikloso] on this ? Or should we move to 1.1.x ?	1	1	https://issues.jboss.org/browse/AGPUSH-1422
417	AGPUSH-1410	What's the status here?	1	1	https://issues.jboss.org/browse/AGPUSH-1410
418	AGPUSH-1409	What's the status here?	1	1	https://issues.jboss.org/browse/AGPUSH-1409
419	AGPUSH-1393	Should we move to .Final ?	1	1	https://issues.jboss.org/browse/AGPUSH-1393
420	AGPUSH-1392	[~sebastienblanc] [~agalante] Guys, I'd like to know your opinion how this feature should be implemented. In the old UI, the "generate push-config.json" button is little bit independent from the rest of samples. Andres, to get you into a picture, {{push-config.json}} is an alternative mechanism how to configure Cordova based applications. You need to store the JSON file such as [1] side by side your Cordova project sources. It will be loaded automatically when you don't specify configuration in your code. But, the problem is that {{push-config.json}} contains configuration for several platforms, not just one (see the sample [1]). In the old UI we've decided to have a separated button that opened a dialog for variants selection for which you wanted to generate the {{push-config.json}}. Then you was able to download the configuration file or copy its contents. You can see full discussion about this feature here: http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-Cordova-push-config-json-generated-in-UPS-Console-multiple-variants-tp9799p9824.html My question is whether this is something we want to re-do in a new UI or something that should be re-designed. Could you possibly work this feature in the mockup? [1] https://github.com/jboss-mobile/unified-push-helloworld/blob/master/cordova/www/push-config.json	1	1	https://issues.jboss.org/browse/AGPUSH-1392
421	AGPUSH-1373	Want me to help on the KC related Screenshots ? Once we got 1.3 of KC in ?	1	1	https://issues.jboss.org/browse/AGPUSH-1373
422	AGPUSH-1361	[~lfryc] do we need this? Or can we now close it ?	0	0	https://issues.jboss.org/browse/AGPUSH-1361
423	AGPUSH-1338	[~agalante] we check that on the server once the user hits Create button. Is there strong reason to pre-validate that even before? It's technically feasible, but I would personally avoid that.	1	1	https://issues.jboss.org/browse/AGPUSH-1338
424	AGPUSH-1320	> Just wondering, is that a constant problem, or did it occur just on those two messages? I don't think any new messages could be sent at that time, so I restarted WildFly today. Some messages were sent correctly a few months ago, then some time passed when I don't think any messages were sent, and then two messages were attempted to be sent in the two past days, and failed. So the WildFly server has been running for a very long time. >Another question is, did a reboot of the WildFly server fix the problem? According to the stack, it's some problem related to the transaction execution. I have restarted the WildFly server now, and will see if that fixes the problem. >Would you be willing to test if the problem occurs on 1.0.3 as well? Yes, I can do that. Thanks, Andreas R.	1	1	https://issues.jboss.org/browse/AGPUSH-1320

429	AGPUSH-1320	Andreas, I'm trying to identify which Push Network your application uses, could you list types of variants listed in the application that fails? e.g. GCM, APN.. I guess some sender implementation throws error and does not catch/log it appropriately.	1	1	https://issues.jboss.org/browse/AGPUSH-1320
430	AGPUSH-1320	Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container).	1	1	https://issues.jboss.org/browse/AGPUSH-1320
431	AGPUSH-1320	> Andreas, I'm trying to identify which Push Network your application uses, could you list types of variants listed in the application that fails? e.g. GCM, APN.. The application in Aerogear push has one variant, which is APN (iOS). > You could also try to fetch a debug log so we could get more insight - here is how you can switch wildfly to debug mode for a little while in production and then turn it back while this "defective" push message is being sent: Thanks, will try that. > Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container). There are many thousand installations in the production env.	1	1	https://issues.jboss.org/browse/AGPUSH-1320
432	AGPUSH-1320	> Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container). This is a very likely cause of the problem. Looking at the timestamps in the logs I have attached previously, the sending was aborted after 5 minutes. I logged into the WildFly admin console, and found that in "Container" -> "Transactions" the default timeout was set to 300s (5 minutes). I have now increased this to 7200s, and hope that this will solve the problem the next time a push message is sent. This would also explain why sending worked correctly some months ago, and now the number of device installations has increased significantly. Thanks for the help everyone, I am optimistic now!	1	1	https://issues.jboss.org/browse/AGPUSH-1320
433	AGPUSH-1320	This is a push message service for a iOS news app, so it is important for the users that the push-message is sent as quickly as possible. So the users have said that even five minutes is too long. Is there anything I can do to improve sending performance?	1	1	https://issues.jboss.org/browse/AGPUSH-1320
434	AGPUSH-1317	[~agalante] [~sebastienblanc] what's the status here? are the mocks ready ?	1	1	https://issues.jboss.org/browse/AGPUSH-1317
435	AGPUSH-1311	Here's a quick overview of the cartridge changes that will be needed: # The binaries for the migration tool will need to be added to the cartridge repository (e.g., in versions/1.0.3/usr/lib/migration/). # The binaries for the migration tool will need to be installed on the gear (e.g., in $OPENSHIFT_AEROGEAR_PUSH_DIR/usr/lib/migration). This will need to be done in the cartridge's [install |https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/blob/master/bin/install#L23] script. # The migration tool will need to be invoked from an action hook in the cartridge's [control | https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/blob/master/bin/control] script. Once the above changes have been made, they can be tested using the following commands: {code} rhc snapshot save <APP> rhc app delete <APP> rhc create-app --no-git <APP> <CARTRIDGE_URL> rhc snapshot restore <APP> -f /PATH/TO/APP.tar.gz {code}	1	1	https://issues.jboss.org/browse/AGPUSH-1311
436	AGPUSH-1311	[~fjuma] with the PR for AGPUSH-1310, most of this is already implemented, on version 1.0.3. What is needed to actually give users with previous versions a chance to upgrade? Or is the best option, to offer migration from 1.0.3 and later? (e.g. also enabling git hooks to manually upload WAR files?)	1	1	https://issues.jboss.org/browse/AGPUSH-1311
437	AGPUSH-1306	Looking closer to GCM, looks like they are no "GCM" specific keys for the Push Payload, could [~danielpassos] and [~edewit] confirm this ? If so, I think we can close this one.	1	1	https://issues.jboss.org/browse/AGPUSH-1306
438	AGPUSH-1291	[~qmx] [~sebastienblanc] Not sure I really get this ticket. Isn't applying the changes implicitly part of the merge exercise? If yes, let's close this as out dated	0	0	https://issues.jboss.org/browse/AGPUSH-1291

#	Requirement	Questions	Answered	Successfully Answered	URL
439	AGPUSH-1274	reopening, since it has not been merged, and therefore is not done	1	1	https://issues.jboss.org/browse/AGPUSH-1274
440	AGPUSH-1260	are we going to camelCase those? so titleLocKey, titleLocArgs? or how does the UPS deal with them?	0	0	https://issues.jboss.org/browse/AGPUSH-1260
441	AGPUSH-1259	[~sebastienblanc] oh yeah. Can you do a a sub-task for this ?	0	0	https://issues.jboss.org/browse/AGPUSH-1259
442	AGPUSH-1248	[~agalante] I would like to have your opinion on this one, what is the best regarding user experience ?	1	1	https://issues.jboss.org/browse/AGPUSH-1248
443	AGPUSH-1243	What's the status here? Looks like the PR is no longer open	1	1	https://issues.jboss.org/browse/AGPUSH-1243
444	AGPUSH-1240	[~mwessendorf] on the UI, we no longer expose descriptions, should we remove that also on database layer?	1	0	https://issues.jboss.org/browse/AGPUSH-1240
445	AGPUSH-1223	[~kpiwko] It looks like those tests are for the Unified Push server and not the SimplePush server which is the target component for this particular jira. Was the sub-task meant for a different jira perhaps?	1	0	https://issues.jboss.org/browse/AGPUSH-1223
446	AGPUSH-1222	should we move to 0.11.0 (next release) ?	0	0	https://issues.jboss.org/browse/AGPUSH-1222
447	AGPUSH-1221	Is that still on the bubble? I'd vote nope, to stay in line w/ Mozilla's SimplePush specification	0	0	https://issues.jboss.org/browse/AGPUSH-1221
448	AGPUSH-1220	should we move to 0.10.0 (next release) ?	0	0	https://issues.jboss.org/browse/AGPUSH-1220
449	AGPUSH-1220	should we move to 0.11.0 (next release) ?	0	0	https://issues.jboss.org/browse/AGPUSH-1220
450	AGPUSH-1216	Have this working on this [branch|https://github.com/danbev/aerogear-simplepush-server/tree/new-netty-sockjs]. These is one issue that I discovered regarding [CORS configuration|https://github.com/netty/netty/pull/2427] and details can be found in this [commit|https://github.com/danbev/aerogear-simplepush-server/commit/b23ada1bdccb32f339ff3d544838361f3d71a6b8].	0	0	https://issues.jboss.org/browse/AGPUSH-1216
451	AGPUSH-1210	should we move to 0.10.0 (next release) ?	1	0	https://issues.jboss.org/browse/AGPUSH-1210
452	AGPUSH-1205	The PR for this ticket has been closed; Should we close/reject this ticket as well ?	1	0	https://issues.jboss.org/browse/AGPUSH-1205
453	AGPUSH-1189	Others, like Google (http://blog.chromium.org/2015/02/hello-http2-goodbye-spdy-http-is_9.html) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it ?	0	0	https://issues.jboss.org/browse/AGPUSH-1189
454	AGPUSH-1149	[~kpiwko] [~abstractj] for this, the default should stay, as is. and I think it is reasonable to just enable this with a system property, if possible. In case the container is started with -Dorg.aerogear.keycloak.direct.access(=true), the direct access should be there. Using system properties minimizes the risk of users accidently enabling this, by messing around inside of cfg files. What's your thoughts?	1	1	https://issues.jboss.org/browse/AGPUSH-1149
455	AGPUSH-1146	[~edewit] does that mean we need to change the data model ? Or should we just ignore the ERROR?	1	1	https://issues.jboss.org/browse/AGPUSH-1146
456	AGPUSH-1130	I think the questions are: * What's next on this? * Do we support a migration from 1.0.0.final to any new release of the 1.0.x series * Does a fix for this ticket need to be included in the 1.0.3 release ? [~edewit] [~qmx] any comments?	0	0	https://issues.jboss.org/browse/AGPUSH-1130
457	AGPUSH-1129	[~edewit] great work. Can I ask for a small change list screen? - Font size for the text should be 16px, color black 87% (or #212121) and line height 20px - I guess the header is standard windows phone, right? - Dividers lines, if they are not windows phone standard please make them black 12% (or #e0e0e0) - Make padding between the screen and the starting point of the text 16px. - Make padding between the line and the starting point of the text 20px. If they are not easy changes, forget about them :)	1	1	https://issues.jboss.org/browse/AGPUSH-1129
458	AGPUSH-1127	[~mwessendorf], yes, absolutely. What's the easiest way for me to reproduce this and issue these statements? Or should we do a short hangout some time this week to discuss it?	1	1	https://issues.jboss.org/browse/AGPUSH-1127
459	AGPUSH-1126	[~edewit] can we close this? Or is this still something 'reasonable' ?	1	1	https://issues.jboss.org/browse/AGPUSH-1126
460	AGPUSH-1124	is this for both? MPNS and WNS ?	0	0	https://issues.jboss.org/browse/AGPUSH-1124
461	AGPUSH-1111	[~abstractj] hey man, do you have an idea how to get this implemented? We could hangout and discuss it /wrt connection to admin console (AGPUSH-1112).	0	0	https://issues.jboss.org/browse/AGPUSH-1111
462	AGPUSH-1110	[~lfryc] for the all new UI - do we have an epic already for this ?	1	1	https://issues.jboss.org/browse/AGPUSH-1110
463	AGPUSH-1110	[~mwessendorf] [~lfryc] New UI is not on Jira yet. Thanks for reminding me of this screen. I'll add it to the new UI. Is there any other "hidden" screen I should know about?	1	1	https://issues.jboss.org/browse/AGPUSH-1110
464	AGPUSH-1108	You can see it in action here: http://andresgalante.com/ups-console/app-detail-variants.html What do you think?	1	1	https://issues.jboss.org/browse/AGPUSH-1108
465	AGPUSH-1108	[~lfryc] this can be moved to ups-1.1.x ?	1	1	https://issues.jboss.org/browse/AGPUSH-1108
466	AGPUSH-1075	what's the status here?	1	1	https://issues.jboss.org/browse/AGPUSH-1075
467	AGPUSH-1075	[~edewit] ok, do we have a JIRA for the actual migration (https://github.com/aerogear/aerogear-unifiedpush-server/pull/448). If not, can you create one for 1.0.3 ?	0	0	https://issues.jboss.org/browse/AGPUSH-1075
468	AGPUSH-1039	[~sblanc] [~mwessendorf] [~lfryc] I do think there is a need for it. Should this be just a search box? or also sorting options?	1	0	https://issues.jboss.org/browse/AGPUSH-1039
469	AGPUSH-1039	I don't think sorting is required, if yes I would ask which categories it should be based on (username (visible just to admins), # of variants, # of notifications delivered, # of devices registered)?	1	1	https://issues.jboss.org/browse/AGPUSH-1039
470	AGPUSH-1032	Hey [~gcardoso] would you know how to implement this? I can't find any samples in https://www.patternfly.org/wikis/patterns/navigation/	1	1	https://issues.jboss.org/browse/AGPUSH-1032
471	AGPUSH-1032	There is a widget for the horizontal navigation, but no sample for the vertical navigation. What exactly do you need?	1	1	https://issues.jboss.org/browse/AGPUSH-1032
472	AGPUSH-1032	The Admin link opens the User Management / Log Out dropdown directly, but in responsive mode, you see the hamburger icon, which, when you click on, reveals Admin link that opens the User Management / Logout. Would you consider that a critical fix? As I see there are changes in bootstrap/patternfly needed to make this work.	1	1	https://issues.jboss.org/browse/AGPUSH-1032
473	AGPUSH-1000	[~mhusnain] any hint on how this is wrong ? (e.g. what path)	0	0	https://issues.jboss.org/browse/AGPUSH-1000
474	AGPUSH-990	[~lfryc] Done for Keycloak, currently gets the realm name. In our case "aerogear"	1	1	https://issues.jboss.org/browse/AGPUSH-990
475	AGPUSH-986	[~lfryc] do we need this for 1.0.x ? Or would that be just fine for 1.1.x ?	1	1	https://issues.jboss.org/browse/AGPUSH-986
476	AGPUSH-972	[~burrsutter] I am not sure, but should we explain Xcode/IntelliJ here ?	1	1	https://issues.jboss.org/browse/AGPUSH-972
477	AGPUSH-968	[~mwessendorf] Regarding timing, wouldn't it be better to investigate this for 1.1 ?	1	0	https://issues.jboss.org/browse/AGPUSH-968
478	AGPUSH-967	[~sebastienblanc] I wonder, do we expect to get anything with the upgrade? I'd incline to reject this and wait before we do some bigger refactoring. Sounds good?	1	1	https://issues.jboss.org/browse/AGPUSH-967
479	AGPUSH-967	what's the status here? should we do that for alpha.2 ? or not?	1	1	https://issues.jboss.org/browse/AGPUSH-967
480	AGPUSH-965	What's the status here? Should we do that for alpha.2, or later, e.g. beta.1 ?	1	0	https://issues.jboss.org/browse/AGPUSH-965
481	AGPUSH-964	What's the status here? Should we do that for alpha.2, or later, e.g. beta.1 ?	1	0	https://issues.jboss.org/browse/AGPUSH-964
482	AGPUSH-963	What's the status here? Should we do that for alpha.2, or later, e.g. beta.1 ?	1	1	https://issues.jboss.org/browse/AGPUSH-963

#	Requirement	Questions	Answered	Successfully Answered	URL
483	AGPUSH-962	What's the status here? Should we do that for alpha.2, or later, e.g. beta.1 ?	1	1	https://issues.jboss.org/browse/AGPUSH-962
484	AGPUSH-953	should we backport this to 1.0.x as well ?	1	1	https://issues.jboss.org/browse/AGPUSH-953
485	AGPUSH-943	At some point do we want to have this import endpoint exposed also in our UI Console ? Do we want to have the opposite as well , an export function ?	1	1	https://issues.jboss.org/browse/AGPUSH-943
486	AGPUSH-934	[~lfryc] I like what Gabriel did with the styles. Should I make the changes on the less to reflect that?	1	1	https://issues.jboss.org/browse/AGPUSH-934
487	AGPUSH-934	What about preparing one more, "darker" version of pastel colours and opening a poll, where we would let community choose? (can be open to twitter-verse) Also I re-read the github discussion and people reported there that the [colours of the header do not align with colours of buttons and other controls|https://github.com/aerogear/aerogear-unifiedpush-server/pull/384#issuecomment-55136194]. Just to let you know what was the feedback.	1	1	https://issues.jboss.org/browse/AGPUSH-934
488	AGPUSH-934	[~agalante] Andres, could I ask you for your help with redefining the patternfly button colours? I have hard time to apply it properly: https://github.com/aerogear/aerogear-unifiedpush-server/pull/384	0	0	https://issues.jboss.org/browse/AGPUSH-934
489	AGPUSH-928	What's the status here? Should we do that for alpha.2, or later, e.g. beta.1 ?	0	0	https://issues.jboss.org/browse/AGPUSH-928

494	AGPUSH-853	A few items I noticed, while looking at http://staging.aerogear.org/docs/guides/aerogear-cordova/AerogearCordovaPush/ * cordova plugin add https://github.com/aerogear/aerogear-pushplugin-cordova.git Should it use the latest release, from the plugin repo, instead of the GH repo? * the Helloworld/Quickstart explicitly talk about steps required for Cordova installation: ** "npm install -g Cordova" ** "npm install -g ios-deploy" (for iOS) [~edewit] should we do that here too ? * link to "AeroGear Push plugin API doc" seems to present old docs. At the bottom of http://staging.aerogear.org/docs/specs/aerogear-cordova/Push.html it says _Documentation generated by JSDoc 3.3.0-alpha5 on Sat Jul 26 2014 15:37:23 GMT+0200 (CEST)_ - I think this was generated before our last (0.7.0) release	0	0	https://issues.jboss.org/browse/AGPUSH-853
495	AGPUSH-846	These lines: https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/push/src/main/java/org/jboss/aerogear/unifiedpush/message/sender/APNsPushNotificationSender.java#L116-L117 are invoked in a few cases: * no certificate in the database (e.g. some smart DBA deleted it there) * certificate revoked at the Apple Developer Network site Wondering, if we should replace "No certificate was found" with something like "No (valid) certificate was found. Did you revoke it at the Apple Developer Center" ?	0	0	https://issues.jboss.org/browse/AGPUSH-846
496	AGPUSH-785	Could you [~mwessendorf] find out for which request this is happening. I think there is somehow an invalid json request in there. I cannot reproduce this.	1	1	https://issues.jboss.org/browse/AGPUSH-785
497	AGPUSH-782	I am still trying to figure out how to add a floating action button for "ADD" on ionic. In the mean time here are the screens. Should I create a repository to upload this?	1	1	https://issues.jboss.org/browse/AGPUSH-782
498	AGPUSH-782	Hi Erik Jan de Wit please check out https://github.com/andresgalante/ionicquickstart You'll see the action btw on list.html: ADD And there is css to style and position it at ionic.app.scss If the action btw is a problem, I added a "ADD" btn on the Action Bar. Also let me know if there is any screen or part missing and I'll take care of it. The floating btn is not fully styled yet, I should add an icon, shadows, etc. If you make it work let me know and I'll update the css. Thanks a lot!	1	1	https://issues.jboss.org/browse/AGPUSH-782
499	AGPUSH-781	Should this be a full Responsive website or just mobile?	1	1	https://issues.jboss.org/browse/AGPUSH-781
500	AGPUSH-781	What is the status here ?	0	0	https://issues.jboss.org/browse/AGPUSH-781
501	AGPUSH-780	truly look awesome! nice work [~agalante] mind to share a bit on where can I find the artificacts used on it e.g. font name used icons colors Thanks!	1	1	https://issues.jboss.org/browse/AGPUSH-780
502	AGPUSH-780	Thanks a lot Christos! Primary color #00bcd4 Secondary color #0097a7 Accent color (for login btn) #8bc34a Font color black 87% Font secondary text black 54% Font color white 100% Font secondary text white 70% divider lines color black or white 12% (but you can use the default if there is a ready made solution for the list) Font Family Helvetica Neue (Regular for normal text and Medium for bold text) I'll attach icons soon. Please let me know if there is anything missing. I wish I knew some xcode to help on implementation more.	1	1	https://issues.jboss.org/browse/AGPUSH-780
503	AGPUSH-778	[~agalante] are the sub-tasks still open? or were they all applied to the actual demo apps?	1	1	https://issues.jboss.org/browse/AGPUSH-778
504	AGPUSH-778	What is the status here ?	1	1	https://issues.jboss.org/browse/AGPUSH-778
505	AGPUSH-778	[~mwessendorf] HTML5 app is based on jQuery mobile. I need to learn how to skin jQuery mobile but I always find something to do before. Should I give priority to it? Erik is super busy with FH windows support, I wonder if he can implemente it if I do it.	1	0	https://issues.jboss.org/browse/AGPUSH-778
506	AGPUSH-776	What is the status here ?	1	1	https://issues.jboss.org/browse/AGPUSH-776
507	AGPUSH-775	Hey [~agalante] could you share the icon and colors used on it?	1	1	https://issues.jboss.org/browse/AGPUSH-775
508	AGPUSH-775	Hey [~agalante] what do you think about make splash and registering fullscreen?	1	1	https://issues.jboss.org/browse/AGPUSH-775

#	Requirement	Questions	Answered	Successfully Answered	URL
509	AGPUSH-775	Daniel Passos this is great! very good implementation. If you can make this minor changes to make it look perfect: 1- Background should be white #fff 2- Good idea on the splash page been fullscreen, I'll make one and send it over. 3- I think we should leave the action bar for registering, is that doable? 4- Registering activity bar, can you make it: Background color: #ffcc80 bar color: #ff9800 with: 180dp 5- Font sizes: Action bar: Medium 20sp text in general (all of them): Regular 14sp, Tracking 10, Leading 20 bold text make it Medium weight please. 6- On list, please put a padding top and bottom: 20dp (between the text and the line) 7 - Black screen, please make the icon smaller with 36dp height 40dp and color black 40%. All text on that screen is the same spec as text in general, text but leading is 24. 8- Shadow on action bar is too strong. If that is measure in index, it should be level 1. If any of these are hard to do, forget about them :) Thanks a lot!	1	1	https://issues.jboss.org/browse/AGPUSH-775
510	AGPUSH-775	1) * Done 2) * Don't need update the mockup. Only to clarify I mean without ActionBar not fullscreen, because fullscreen hide NotificationBar 3) * Done 4) * Background color: Done * bar color: Done * with: I have no idea what it means :D 5) * Action bar: Not sure if is a good ideia change the default font size on ActionBar * Text: Added in dimens.xml 6) * Done * I also added a little padding left 7) * Make the icon smaller: Done * Image color: I can't apply alpha on ImageView because alpha was introduced on API leval 11 and the app is for API leval 10. Could you apply that on image and send me? * No sure what you mean by leading on that 8) * Agreed, but it will be a little hard to fix, probably I will need change the ActionBar by toolbar	1	1	https://issues.jboss.org/browse/AGPUSH-775
511	AGPUSH-775	That ActionBar colour is a little different for the Notifications ActionBar colors. That is the ideia? I'm using the same ActionBar colors for registering and notifications for now 6) * Done 7) I have some problem to use *medium* and differents kind of fontFamily on this app because the minSdkVersion is 10. so, I add: * "Nothing here" - 14sp + Bold * "rest of text" - 12sp What do you think? See new screenshots here => https://www.dropbox.com/sh/nvjru5l0e0px3g4/AAApUcF_URMktOalurJ9_t0Va/v3?dl=0	0	0	https://issues.jboss.org/browse/AGPUSH-775
512	AGPUSH-774	[~agalante] are the sub-tasks still open? or were they all applied to the actual demo apps?	1	1	https://issues.jboss.org/browse/AGPUSH-774
513	AGPUSH-774	[~agalante] This is done you made the html yourself	1	1	https://issues.jboss.org/browse/AGPUSH-774
514	AGPUSH-774	[~edewit] yeap, but is it implemented?	0	0	https://issues.jboss.org/browse/AGPUSH-774
515	AGPUSH-774	What is the status here ?	1	1	https://issues.jboss.org/browse/AGPUSH-774
516	AGPUSH-770	What other should Android library do than throwing URISyntaxException if URI contains invalid characters? Still, the example app should handle this exception.	1	1	https://issues.jboss.org/browse/AGPUSH-770
517	AGPUSH-761	The actual issue: {code} TypeError: Cannot read property 'token' of null at request (http://localhost:8080/ag-push/scripts/app.js:178:23) at deferred.promise.then.wrappedCallback (http://localhost:8080/ag-push/bower_components/angular/angular.js:11319:81) at deferred.promise.then.wrappedCallback (http://localhost:8080/ag-push/bower_components/angular/angular.js:11319:81) at http://localhost:8080/ag-push/bower_components/angular/angular.js:11405:26 at Scope.$RootScopeProvider.$get.Scope.$eval (http://localhost:8080/ag-push/bower_components/angular/angular.js:12412:28) at Scope.$RootScopeProvider.$get.Scope.$digest (http://localhost:8080/ag-push/bower_components/angular/angular.js:12224:31) at Scope.$RootScopeProvider.$get.Scope.$apply (http://localhost:8080/ag-push/bower_components/angular/angular.js:12516:24) at HTMLDocument.<anonymous> (http://localhost:8080/ag-push/bower_components/angular/angular.js:9567:22) at HTMLDocument.jQuery.event.dispatch (http://localhost:8080/ag-push/bower_components/jquery/dist/jquery.js:4409:9) at HTMLDocument.elemData.handle (http://localhost:8080/ag-push/bower_components/jquery/dist/jquery.js:4095:28) angular.js:9778 4 Server returned : {code}	0	0	https://issues.jboss.org/browse/AGPUSH-761
518	AGPUSH-746	On the code snippet page I am seeing a different one: {code} ypeError: Cannot read property 'childNodes' of undefined at d (http://judcon-pushee.rhcloud.com/ag-push/scripts/08ae27be.modules.js:37461:264) at p [as highlightBlock] (http://judcon-pushee.rhcloud.com/ag-push/scripts/08ae27be.modules.js:37461:5169) at http://judcon-pushee.rhcloud.com/ag-push/scripts/0b26ed0d.scripts.js:687:10 at http://judcon-pushee.rhcloud.com/ag-push/scripts/08ae27be.modules.js:23205:28 at completeOutstandingRequest (http://judcon-pushee.rhcloud.com/ag-push/scripts/08ae27be.modules.js:13491:10) at http://judcon-pushee.rhcloud.com/ag-push/scripts/08ae27be.modules.js:13792:7 08ae27be.modules.js:18969 {code}	1	1	https://issues.jboss.org/browse/AGPUSH-746
519	AGPUSH-742	where is the URL ?	1	1	https://issues.jboss.org/browse/AGPUSH-742
520	AGPUSH-725	[~hbons] I belive this is related to Keycloak User Management screens. Is this really done?	1	1	https://issues.jboss.org/browse/AGPUSH-725
521	AGPUSH-725	[~bruno_oliveira] How do I access these user management pages to be able to work on this? If we can have a link from the sidebar or if you can give me a a direct path to it I can have a look.	1	1	https://issues.jboss.org/browse/AGPUSH-725
522	AGPUSH-707	Similar to AGPUSH-268 ? If so, please mark AGPUSH-268 as duplicated; Also, since the PR #207 was merged, should this be marked as resolved:done ?	0	0	https://issues.jboss.org/browse/AGPUSH-707
523	AGPUSH-669	Beside org.jboss.resteasy:resteasy-jackson-provider , the other dependencies mentioned are not in the POM of the Java Sender, how can we align these ?	1	1	https://issues.jboss.org/browse/AGPUSH-669
524	AGPUSH-669	You are absolutely correct, those are transitive dependencies. Sorry about that, you may close this issue. What is left is just the use of the aerogear bom (https://issues.jboss.org/browse/AGPUSH-663).Thanks	0	0	https://issues.jboss.org/browse/AGPUSH-669
525	AGPUSH-661	np, so when you are trying to import/update 100k devices. are you doing any batching (eg persisting many entities in one bang instead of one and one)? another thing you could look at if updates is an issue is to enable entity caching, looking at what attributes that can be lazy loaded etc. if you're using the same query over and over again query caching would also speed things up. - as always, caching need to be done right, or it might even slow things down :)	1	1	https://issues.jboss.org/browse/AGPUSH-661
526	AGPUSH-657	[~hbons] any ETA on a new icon ? Or is this something unrelated to the actual icon ?	1	1	https://issues.jboss.org/browse/AGPUSH-657
527	AGPUSH-637	Is that a priority? Or do we have the time to do it for the 1.0.0 ?	1	1	https://issues.jboss.org/browse/AGPUSH-637
528	AGPUSH-637	This is not priority for 0.11.0 and since Erik had problems with adopting aerogear.js in UPS, I wonder whether it is doable in 1.0 at all. ---- Here is a branch where Erik started refactoring: https://github.com/edewit/aerogear-unifiedpush-server/tree/angular-aerogear [~edewit], could you please elaborate little bit on what were blockers here?	1	0	https://issues.jboss.org/browse/AGPUSH-637
529	AGPUSH-637	Should we move this to 'future', [~edewit], [~lfryc], [~lucas.holmquist] ?	1	1	https://issues.jboss.org/browse/AGPUSH-637
530	AGPUSH-629	Hey Erik, is there anything else we should do about this issue?	1	1	https://issues.jboss.org/browse/AGPUSH-629
531	AGPUSH-571	Most of the content has been already moved out, instead of linking to 'real' documentation, we did link to the old 0.10.x branch	0	0	https://issues.jboss.org/browse/AGPUSH-571
532	AGPUSH-567	Is this still relevant ?	0	0	https://issues.jboss.org/browse/AGPUSH-567

#	Requirement	Questions	Answered	Successfully Answered	URL
533	AGPUSH-546	Do you mind to share a link for the main page you are talking about ?	0	0	https://issues.jboss.org/browse/AGPUSH-546
534	AGPUSH-544	Right, REST represents the API. However, in various tests we need to generate applications, variants, etc. Java is the language of choice. We are using REST in the end but we need DTO objects. I was thinking of reusing model jar. Do you plan to have model released in Maven Central? Otherwise me would duplicate and make our own DTO objects.	1	1	https://issues.jboss.org/browse/AGPUSH-544
535	AGPUSH-541	[~supittma] yeah ... I was asking about the registrationID a device/app gets from GCM; Paylload we know: up to 4k - but how long can the actual regID get ? reading some stackoverflow, it seems that 256 is a safe bet (which is what we have, for the registrationId)	1	1	https://issues.jboss.org/browse/AGPUSH-541
536	AGPUSH-530	Are you saying it works on your iOS7 device? That you are seeing a notification on the lockscreen (using the Cordova plugin) ?	1	1	https://issues.jboss.org/browse/AGPUSH-530
537	AGPUSH-530	I think you mean the pull-down/drop-down notification bar, is that what you mean by "touch the notification"?	1	0	https://issues.jboss.org/browse/AGPUSH-530
538	AGPUSH-530	[~edewit] everything works fine w/ iOS6 - did you test w/ iOS7 as well ? The interesting part - the native (non Cordova) bits worked on my iOS 7 (7.0.4) device (meaning I did see an "alert" whlile watching the lockscreen)	1	1	https://issues.jboss.org/browse/AGPUSH-530
539	AGPUSH-528	Should we import this to AeroGear, on Github?	1	1	https://issues.jboss.org/browse/AGPUSH-528
540	AGPUSH-491	What's the status here ?	1	1	https://issues.jboss.org/browse/AGPUSH-491
541	AGPUSH-490	what's the status of this ?	1	0	https://issues.jboss.org/browse/AGPUSH-490
542	AGPUSH-487	[~lfryc] [~sebastienblanc] [~hbons] what is the status ? can we close this out ?	1	1	https://issues.jboss.org/browse/AGPUSH-487
543	AGPUSH-456	What's the status here ?	1	0	https://issues.jboss.org/browse/AGPUSH-456
544	AGPUSH-456	[~lucas.holmquist] what's the status here? Is there anything left?	1	0	https://issues.jboss.org/browse/AGPUSH-456
545	AGPUSH-456	[~lucas.holmquist] what's the status here ? and related tickets? Can we close them ?	1	0	https://issues.jboss.org/browse/AGPUSH-456
546	AGPUSH-446	[~mwessendorf] This ticket made me think of a useful criteria we could have in the future for the client sender API : some kind of alias exclusion filter. For example : { "variants" : ["c3f0a94f-48de-4b77-a08e-68114460857e", "444939cd-ae63-4ce1-96a4-de74b77e3737" ....], "excludeAlias" :["john", "maria"], "categories" : ["someCategory", "otherCategory"], "deviceType" : ["iPad", "AndroidTablet"], "ttl" : 3600, "message": { "alert":"HELLO!", "sound":"default", "badge":7, "someKey":"some value", "anotherCustomKey":"some other value" }, "simple-push": "version=123" }' wdyt ?	0	0	https://issues.jboss.org/browse/AGPUSH-446
547	AGPUSH-400	Which is the best place to add this reset button ? 1. Add an reset action button/link on the pushApps/variants list 2. Add an reset button on the detail screen of the selected pushApp/Variant , in the section "Authentication Info". My preference is #2.	0	0	https://issues.jboss.org/browse/AGPUSH-400
548	AGPUSH-400	i would say, lets put in that modal box, instead of using the confirm, that is the plan for the other ones too https://issues.jboss.org/browse/AGPUSH-315	0	0	https://issues.jboss.org/browse/AGPUSH-400
549	AGPUSH-351	[~sebastienblanc] what is the state of this ticket and the mentioned GIST ?	1	1	https://issues.jboss.org/browse/AGPUSH-351
550	AGPUSH-343	how many seconds do we want to use for the default ? Looks like the default could be pretty high...	1	1	https://issues.jboss.org/browse/AGPUSH-343
551	AGPUSH-343	I think a really high value is fine. How often are you really changing CORS access parameters? If you're developing and making a CORS change, you can clear the browser's cache manually. I think something like 20 or 30 days is fine. If that feels too long, even a week (7 days) would be good.	0	0	https://issues.jboss.org/browse/AGPUSH-343
552	AGPUSH-323	if we are changing things, can we just change the sendTo method to "send" ?	1	1	https://issues.jboss.org/browse/AGPUSH-323
553	AGPUSH-308	A few questions: What information is required to connect to a proxy server? Is it like your regular HTTP proxy or something else? Can we test whether the connection is successful somehow?	0	0	https://issues.jboss.org/browse/AGPUSH-308
554	AGPUSH-307	[~craig.brookes] [~pgough] thanks the PR, and the documentation. Besides that, is there more that's needed to support proxy servers ? If this is really all, I'd like to close this JIRA, as done	0	0	https://issues.jboss.org/browse/AGPUSH-307
555	AGPUSH-287	Mrunal Patel <mpatel@redhat.com> made a comment on [bug 997108|https://bugzilla.redhat.com/show_bug.cgi?id=997108] Matthias, Do you know why aerogear cartridge refuses connection over 8443? Thanks, Mrunal	1	1	https://issues.jboss.org/browse/AGPUSH-287
556	AGPUSH-287	Meng Bo <bmeng@redhat.com> made a comment on [bug 997108|https://bugzilla.redhat.com/show_bug.cgi?id=997108] I have tried create new app with cartridge in comment#7 on INT. Still get the same result. # openssl s_client -connect tls-bmengdev.int.rhcloud.com:8443 connect: Connection refused connect:errno=111 # rhc app show tls tls @ http://tls-bmengdev.int.rhcloud.com/ (uuid: 52130e206cec0e079100095d) ---------- Domain: bmengdev Created: 2:35 AM Gears: 1 (defaults to small) Git URL: ssh://52130e206cec0e079100095d@tls-bmengdev.int.rhcloud.com/~/git/tls.git/ SSH: 52130e206cec0e079100095d@tls-bmengdev.int.rhcloud.com aerogear-aerogear-push-0.8.0 (AeroGear Push Server 0.8.0) ---------- From: https://cartreflect-claytondev.rhcloud.com/reflect?github=aerogear/openshift-origin-cartridge-aerogear-push Gears: Located with mysql-5.1 mysql-5.1 (MySQL Database 5.1) ---------- Gears: Located with aerogear-aerogear-push-0.8.0 Connection URL: mysql://$OPENSHIFT_MYSQL_DB_HOST:$OPENSHIFT_MYSQL_DB_PORT/ Database Name: tls Password: <Hidden> Username: <Hidden> And when I creating same app on stage, the 8443 port can be connected.	1	1	https://issues.jboss.org/browse/AGPUSH-287
557	AGPUSH-282	Can Developers create other Developers (users) or should we create another role ?	1	1	https://issues.jboss.org/browse/AGPUSH-282
558	AGPUSH-263	Sounds good. I fixed the URL in https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/commit/302c4eab79fc50ac92261eb9072b33347d44a6ff and I'm marking this issue as resolved. [~mwessendorf], what would be proper fix version here? Should the issue be moved to a different project if the cartridge has independent versioning? Or do you plan to add versions like *cartridge-0.8.0*?	1	1	https://issues.jboss.org/browse/AGPUSH-263
559	AGPUSH-224	Mrunal Patel <mpatel@redhat.com> made a comment on [bug 997108|https://bugzilla.redhat.com/show_bug.cgi?id=997108] Matthias, Do you know why aerogear cartridge refuses connection over 8443? Thanks, Mrunal	1	1	https://issues.jboss.org/browse/AGPUSH-224
560	AGPUSH-224	Can you take a look, or attach, server.log from the instance that does not work correctly? Perhaps there is an error upon startup. The log can be found in aerogear-push/logs/server.log.	1	0	https://issues.jboss.org/browse/AGPUSH-224
561	AGPUSH-211	AFAIK, for broadcast we don't use already a "message" object. So that is really specific for "selected" messages, right ? https://github.com/aerogear/aerogear-unified-push-java-client/blob/master/src/main/java/org/jboss/aerogear/unifiedpush/SenderClient.java#L89	1	1	https://issues.jboss.org/browse/AGPUSH-211

#	Requirement	Questions	Answered	Successfully Answered	URL
562	AGPUSH-211	[~kborchers] [~mwessendorf] I'm not against that (from the java sender perspective) but that means adding more logic on the Sender impl. And what if we send a "selected" message for both a simplepush network and a "native" network ? We shoudl only choose one of the option, or keep "message" or get rid of it.	1	1	https://issues.jboss.org/browse/AGPUSH-211
563	AGPUSH-195	Do you know the git repo will be 'moved' into this git folder: https://github.com/openshift/origin-server/tree/master/cartridges Or is a different one being used ? Regarding enabling this DB in your MASTER, should we keep this open, or should we close that out ?	1	1	https://issues.jboss.org/browse/AGPUSH-195
564	AGPUSH-162	[~abstractj] "For example here we should add @param annotation of Javadocs doesn't make too much sense:" What do you mean ? We should add the @param ? Or or not (because of the "doesn't make too much sense")	0	0	https://issues.jboss.org/browse/AGPUSH-162
565	AGPUSH-150	I started on this. Just to be clear : we do only paging on the UI side for now ? Nothing to be done the UPS side ? I'm following this approach http://stackoverflow.com/a/13033425 and looks good so far. I'm using a mixin to avoid too much duplication. How many items do we want per page ? 10 ? [~hbons] Any advice about the layout for the pagination ("next", "previous" and page numbers links) ? I will start with a classic / lean design	1	1	https://issues.jboss.org/browse/AGPUSH-150
566	AGPUSH-150	[~hbons] Could you elaborate a bit on patternfly ? Is it a concrete CSS lib or just guidelines ? Samples seems to be based on bootstrap.	1	1	https://issues.jboss.org/browse/AGPUSH-150
567	AGPUSH-116	i'm not sure that plan for this feature, but as we've been building our mobile just a few thoughts on what types of metrics/analytics that could potentially be gathered: Users Date New Returning Total Sessions Date New Returning Total Location Country ex. US, Canada, Germany, etc... City ex. Raleigh, Toronto, Munich, etc... Devices OS ex. Android, iOS, etc... OS Details (Major Version & Minor Version) ex. iOS 7.0.2, iOS 7.1, Android 4.4, etc... Device Maker/Brand ex. iPhone 5 (Global), iPhone 5S (GSM), iPod Touch 5G, SAMSUNG-SGH-I727, HTC One, Full MIPS Android on Emulator, Simulator, etc... Resolution/Width & Height ex. 800x480, 1920x1080, etc... App Version ex. 1.0, 3.1, 2.1.223, etc... Carrier ex. AT&T, T-Mobile, Verizon, etc... Custom Events (Can be used to track a wide variety of custom events that could be used by a funnel, or could be used to drill down into data. Its just a simple server based counter.) ex. Newsletter Signups, Subscriptions, Bought, Video Plays, Articles Read, Button Clicks, Demographics, Behavior flow/how users user the app, etc... Error/Bug Reporting Automatically sends crash report (no sensitive or user data) back to AG Gives user option to give additional error information and perhaps a screenshot Potentially useful links/examples https://github.com/Countly/countly-server http://docs.phonegap.com/en/3.3.0/cordova_device_device.md.html#Device https://github.com/AppBlade/AppBladeSDK/wiki/Feature-Implementation-Guide#iOS-crash-reporting http://devcenter.kinvey.com/phonegap/guides/troubleshooting http://try.crashlytics.com/reports/ https://www.google.com/analytics/mobile/ http://piwik.org/blog/2012/04/how-to-use-piwik-to-track-mobile-apps-activity-clicks-phones-errors-etc/	1	1	https://issues.jboss.org/browse/AGPUSH-116
568	AGPUSH-110	currently SimplePush has _NO_ support for this; but could be good enough for the native plaforms that have support for it	0	0	https://issues.jboss.org/browse/AGPUSH-110
569	AGPUSH-92	I agree this should be configurable, but I'm not sure yet if it should be in present in the UI. OpenShift should change the default path without bothering the user with it. $HOME should normally be writable. If it's not for whatever reason we can ask to change it and show a field in the UI or point to a configuration file. What are potential use cases for changing the default path?	1	0	https://issues.jboss.org/browse/AGPUSH-92
570	AGPUSH-38	How about we show the CURL command for sending, on the Admin UI ?	1	1	https://issues.jboss.org/browse/AGPUSH-38
571	AGPUSH-36	https://developer.android.com/google/gcm/ccs.html#implement The example uses Jive's Smack (an Open Source XMPP (Jabber) library): {code} import org.jivesoftware.smack.ConnectionConfiguration; import org.jivesoftware.smack.ConnectionConfiguration.SecurityMode; import org.jivesoftware.smack.ConnectionListener; import org.jivesoftware.smack.PacketInterceptor; import org.jivesoftware.smack.PacketListener; import org.jivesoftware.smack.XMPPConnection; import org.jivesoftware.smack.XMPPException; import org.jivesoftware.smack.filter.PacketTypeFilter; import org.jivesoftware.smack.packet.DefaultPacketExtension; import org.jivesoftware.smack.packet.Message; import org.jivesoftware.smack.packet.Packet; import org.jivesoftware.smack.packet.PacketExtension; import org.jivesoftware.smack.provider.PacketExtensionProvider; import org.jivesoftware.smack.provider.ProviderManager; import org.jivesoftware.smack.util.StringUtils; import org.json.simple.JSONValue; import org.json.simple.parser.ParseException; import org.xmlpull.v1.XmlPullParser; import java.util.HashMap; import java.util.Map; import java.util.Random; import java.util.logging.Level; import java.util.logging.Logger; import javax.net.ssl.SSLSocketFactory; /** * Sample Smack implementation of a client for GCM Cloud Connection Server. * * <p>For illustration purposes only. */ public class SmackCcsClient { Logger logger = Logger.getLogger("SmackCcsClient"); public static final String GCM_SERVER = "gcm.googleapis.com"; public static final int GCM_PORT = 5235; public static final String GCM_ELEMENT_NAME = "gcm"; public static final String GCM_NAMESPACE = "google:mobile:data"; static Random random = new Random(); XMPPConnection connection; ConnectionConfiguration config; /** * XMPP Packet Extension for GCM Cloud Connection Server. */ class GcmPacketExtension extends DefaultPacketExtension { String json; public GcmPacketExtension(String json) { super(GCM_ELEMENT_NAME, GCM_NAMESPACE); this.json = json; } public String getJson() { return json; } @Override public String toXML() { return String.format("<%s xmlns=\"%s\">%s</%s>", GCM_ELEMENT_NAME, GCM_NAMESPACE, json, GCM_ELEMENT_NAME); } @SuppressWarnings("unused") public Packet toPacket() { return new Message() { // Must override toXML() because it includes a <body> @Override public String toXML() { StringBuilder buf = new StringBuilder(); buf.append("<message"); if (getXmlns() != null) { buf.append(" xmlns=\"").append(getXmlns()).append("\""); } if (getLanguage() != null) { buf.append(" xml:lang=\"").append(getLanguage()).append("\""); } if (getPacketID() != null) { buf.append(" id=\"").append(getPacketID()).append("\""); } if (getTo() != null) { buf.append(" to=\"").append(StringUtils.escapeForXML(getTo())).append("\""); } if (getFrom() != null) { buf.append(" from=\"").append(StringUtils.escapeForXML(getFrom())).append("\""); } buf.append(">"); buf.append(GcmPacketExtension.this.toXML()); buf.append("</message>"); return buf.toString(); } }; } } public SmackCcsClient() { // Add GcmPacketExtension ProviderManager.getInstance().addExtensionProvider(GCM_ELEMENT_NAME, GCM_NAMESPACE, new PacketExtensionProvider() { @Override public PacketExtension parseExtension(XmlPullParser parser) throws Exception { String json = parser.nextText(); GcmPacketExtension packet = new GcmPacketExtension(json); return packet; } }); } /** * Returns a random message id to uniquely identify a message. * * <p>Note: * This is generated by a pseudo random number generator for illustration purpose, * and is not guaranteed to be unique. * */ public String getRandomMessageId() { return "m-" + Long.toString(random.nextLong()); } /** * Sends a downstream GCM message. */ public void send(String jsonRequest) { Packet request = new	0	0	https://issues.jboss.org/browse/AGPUSH-36
572	AGPUSH-20	It looks like there is no way to "GET" a list/one instance other than getting a particular variant and then looking at the instance array. was thinking this could/should go in the corresponding VariantEndpoint.java file ex: /application/{pushAppId}/{variantType}/{variantId}/instance(s) and /application/{pushAppId}/{variantType}/{variantId}/instance/{instanceId} should we reopen?	0	0	https://issues.jboss.org/browse/AGPUSH-20

#	Requirement	Questions	Answered	Successfully Answered	URL
573	AGPUSH-11	those look pretty good. do we need a Push Cordova plugin thing?	0	0	https://issues.jboss.org/browse/AGPUSH-11
574	AGPUSH-11	I've been thinking about this for a while now and I'm honestly not sure. The question is, does Cordova, or one of its plugins bridge JS to the notifications? On the one hand, since it's a native app, it could be covered by the iOS or Android clients but the user would have to know how to incorporate their own or build that bridge. Since it's also using JS, it could just be handled by the JS SimplePush client but then you're only getting in app notifications while it's open. I say we at least create a Cordova component and we'll investigate this more later.	1	1	https://issues.jboss.org/browse/AGPUSH-11
575	AGPUSH-11	Do we need need to duplicate "Unified Push Server" and "SimplePush" so many times? I would recommend # Unified Push # SimplePush # Security # APNs # Server # Client # Admin # UI etc.... Then mix and match as needed - such as "SimplePush, Server, Security". Otherwise you'll end up with tag spagetti imo.	0	0	https://issues.jboss.org/browse/AGPUSH-11
576	AGPUSH-8	Can we mark AEROGEAR-1038 as 'done' ?	0	0	https://issues.jboss.org/browse/AGPUSH-8
577	AGSEC-182	[~kpiwko] reason? Is http://web.nvd.nist.gov/view/vuln/detail?vulnId=CVE-2013-1624 the reason? We don't make use of CBC	0	0	https://issues.jboss.org/browse/AGSEC-182

585	AGSYNC-37	this is linked to offline epic - should it be part of AGSYNC ?	1	0	https://issues.jboss.org/browse/AGSYNC-37
586	AGSYNC-30	yes [~supittma] I told [~agalante] that the impl. is _NOT_ scope for alpha.1. However, providing the UX/screenshot/mocks is fine - IMPL on the demo app: _not_ needed alpha.1 :-)	0	0	https://issues.jboss.org/browse/AGSYNC-30
587	AGSYNC-21	[~supittma] [~beve] what should the name of the repo be ? aerogear-android-sync ?	1	1	https://issues.jboss.org/browse/AGSYNC-21
588	AGSYNC-9	[~beve] [~mwessendorf] I wonder, have we discussed which of the two mentioned formats we will use for the Alpha1 impl? While *JSON Patch* is similar to what we have now: {code} [{ "op": "test", "path": "/a/b/c", "value": "foo" }, { "op": "remove", "path": "/a/b/c" }, { "op": "add", "path": "/a/b/c", "value": ["foo", "bar"] }, { "op": "replace", "path": "/a/b/c", "value": 42 }, { "op": "move", "from": "/a/b/c", "path": "/a/b/d" }, { "op": "copy", "from": "/a/b/d", "path": "/a/b/e" }] {code} *JSON Merge Patch* may be actually simpler to adopt and it is IMO also more straightforward to read: {code} { "title": "Hello!", "author" : { "givenName" : "John" }, "tags": ["example"], "content": "This will be unchanged", "phoneNumber": "+01-123-456-7890", "this_will_be_removed": null } {code} The *JSON Patch* is obviously more powerful with its "test", "copy" and "move" operations (the latter two we could potentially use), still they are not necessary.	1	1	https://issues.jboss.org/browse/AGSYNC-9
589	AGSYNC-9	Neither? Is binding our internal representation of the sync data to JSON what we want to do? Also neither of these proposals address the case of small changes to large text values (the diff and merge of the diff sync algorithm). Double also neither of these protocols make any claims for the order of the json fields/values which could also be quite problematic when it comes time to implement shadows and diffing.	1	1	https://issues.jboss.org/browse/AGSYNC-9
590	AGSYNC-9	Sorry, I was incorrect regarding my comment about JSON Merge Patch. It is only the patches that are being sent. My view on this that we could provide different algorithms/storage options for different use cases. The first version, though inefficient, could be used to handle the small changed to large text values like Summers brought up. And a different implementation could use JSON Patch or JSON Merge Patch and store JSON Objects which it then performs the operations on. We could use a content-type property (header depending of transport protocol) to know what type is being targeted. The initial goal of the sync engine was to make this easy to implement, basically you should only have to provide a [ServerSynchronizer|https://github.com/aerogear/aerogear-sync-server/blob/master/api/src/main/java/org/jboss/aerogear/sync/server/ServerSynchronizer.java], and a [ServerDataStore|https://github.com/aerogear/aerogear-sync-server/blob/master/api/src/main/java/org/jboss/aerogear/sync/server/ServerDataStore.java] and you'd be good to go. But it has become painfully obvious that this is not enough since what is called a Diff in the current implementation can vary with the implementation. For example, it might be operations for the current DiffMatchPatch implementation, but for JSON Patch just a patch. I'm currently looking into this refactoring and trying to fix this. @supittma When you say neither. What would you suggest we have here instead or in addition to this?	0	0	https://issues.jboss.org/browse/AGSYNC-9
591	AGSYNC-8	This is about a Java client ? or generally an overall ticket for all different client engines ?	1	1	https://issues.jboss.org/browse/AGSYNC-8
592	AESH-433	is this fixed now with your latest changes [~jdenise]?	1	1	https://issues.jboss.org/browse/AESH-433
593	AESH-399	I think that the appropriate behavior is that if you have something like: "ls "<tab> it should default to call the argument value completor if the command accept arguments, if not it should list options. However if you have something like: "ls -"<tab> or "ls --"<tab> it should list option names and not call the argument value completor. Is this acceptable?	1	1	https://issues.jboss.org/browse/AESH-399
594	AESH-399	If there is a completer on the Argument and the completer has something to show, this could be a valid behavior. But when the completer is not present or there is nothing to show, the user has no clue about what is going on. The argument could be required or not (this is something that should be added, I logged an RFE some time ago). If the argument is not required, do we default to the argument? When a choice is possible between showing argument values or options, something like the following could help: ls <TAB> Command Options: --verbose, -l Command Argument: /subsystem= /core-services= ...	1	1	https://issues.jboss.org/browse/AESH-399
595	AESH-397	the parser currently supports the use of ",' and double quotes "","" using these you can have space in values. is the usage of {,} a standard? if so we could probably extend the parser to support that as well.	0	0	https://issues.jboss.org/browse/AESH-397

#	Requirement	Questions	Answered	Successfully Answered	URL
596	AESH-393	Just immediately I'm thinking that this kind of syntax is very "non-standard". Could we change it to something like:$ ls -l | echo-drm ? If we really have to support this, I think you second suggestion looks like the best. I also would prefer to hide as much as possible.	1	1	https://issues.jboss.org/browse/AESH-393
597	AESH-358	In which context is this needed in the public api?	1	1	https://issues.jboss.org/browse/AESH-358
598	AESH-354	The commits concerning this issue are not merged into the master branch. Is that on purpose?	0	0	https://issues.jboss.org/browse/AESH-354
599	AESH-354	what is the commit not present in master? It seems that it is present but a mismatch in merge message. Stale used "Fix for AESH-354" for something else (interactive mode). In master: https://github.com/aeshell/aesh/commit/cd15eb9780a8d8c356fe5b9d85b710bede9d6c7f In 0.66.+: https://github.com/aeshell/aesh/commit/b1868f4a65c12adde452065f071a1fc50c7cf650 [~stalep] could you confirm?	1	1	https://issues.jboss.org/browse/AESH-354
600	AESH-354	Ok, we'll switch from master to 0.66.+ branch. Although we haven't had any problems using the master branch for our dev in the last 9 month. Thanks for this great project!	1	1	https://issues.jboss.org/browse/AESH-354
601	AESH-352	[~stalep] (CC: [~jdenise]): Any update here? Do you have fixed this issue in Aesh-readline?	1	0	https://issues.jboss.org/browse/AESH-352
602	AESH-352	hi, i have not added functionality to do this yet. I'll try to do it tomorrow, it should not be very difficult. we need æsh to run that command and parse the output. its important that we get the correct width and height. i wonder how infocmp works on hp-ux, do you know [~mkopecky]?	0	0	https://issues.jboss.org/browse/AESH-352
603	AESH-348	I added some unit tests to my maven project to show how to reproduce. There is still an issue with 0.66.7-SNAPSHOT. The "hasOption" is not working. See my README for the full replication steps - just build with the latest snapshot and you'll see the one unit test fails. $ git clone git@github.com:jmazzitelli/aesh-348.git && cd aesh-348 $ mvn clean install -Daesh.version=0.66.7-SNAPSHOT Tests run: 5, Failures: 1, Errors: 0, Skipped: 0, Time elapsed: 0.124 sec <<< FAILURE! testMyOptionAtEndWithoutValue(MainTest) Time elapsed: 0.012 sec <<< FAILURE! java.lang.AssertionError: Should have myoption at MainTest.testMyOptionAtEndWithoutValue(MainTest.java:41) This happens when the option is specified last, with no value, such as: mycmd --abc 123 --myoption	1	1	https://issues.jboss.org/browse/AESH-348
604	AESH-348	What is the probability of getting this bug fixed? There is still a problem in the latest 0.66.7.SNAPSHOT release - see my last comment - including the automated test that can be used to demonstrate the problem.	1	1	https://issues.jboss.org/browse/AESH-348
605	AESH-321	with the current impl thats in master child commands of a groupcommans will be autocompleted if the the groupcommand do not contain any options/arguments. atm this also happens when autocompleting on an empty input line: {quote} [aesh@rules]$ alias export group child1 ls prompt test exit foo group child2 man run unalias [aesh@rules]$ {quote} compared to 0.60 behaviour: {quote} [aesh@rules]$ alias exit export foo group ls man prompt run test unalias [aesh@rules]$ {quote} is that ok [~brmeyer]?	1	1	https://issues.jboss.org/browse/AESH-321
606	AESH-306	hi, its been a while since i looked at the code for the groupcommand parser, but i think one of the reasons it only add a space when pressing space for 1. is that the group "main" command also can contain options. the parser could be smarter though and check if there are no options it could instead list all the child commands. does this sound like a ok solution? i dont think i can get this in 0.61 though. im planning to release 0.61 tomorrow or monday and im leaving on vacation after next week. regarding 2. i think that could be done as well. we could add a "separator" char for the group command or something. i need to look into it, but i think its doable. in any case i think it deserves a separate jira :) 3. we have the possibility to specify the color/font/etc for options, but not commands atm. one idea might be to add a feature for commands to have a specified renderer similar to options (OptionRenderer). - as with 2. i also think it deserves a separate jira.	1	1	https://issues.jboss.org/browse/AESH-306
607	AESH-306	{quote} the group "main" command also can contain options. the parser could be smarter though and check if there are no options it could instead list all the child commands. does this sound like a ok solution? {quote} +1 Re: #3, it could be something even simpler. Append ":" to the end of them, assuming you use that as the separator?	1	1	https://issues.jboss.org/browse/AESH-306
608	AESH-300	Im probably a bit slow but i dont see the practical usecase for this, could you give an example? :) - i dont oppose it, i just would like to understand why.	1	1	https://issues.jboss.org/browse/AESH-300
609	AESH-289	hi, sorry for the late reply. do you know which version of æsh you are using? the latest version should work with those keys you describe. if you are using æsh 0.5* then it would be helpful if you tried to run: java -cp aesh-version.jar AeshExample that example should create a aesh.log file in your tmp folder (/tmp on posix) for each keypress there will be a line starting with "GOT" if you could comment here what you see when you press the home/end keys that would be great. æsh have hardcoded some values that might change, but it is also using infocmp on posix systems to try to find the correct key (which works in most cases).	1	1	https://issues.jboss.org/browse/AESH-289
610	AESH-289	I am using whatever is in Forge 2.10.0. I think it's 0.56.1. Could you please give a link to aesh-version.jar? Since we use it as a lib, I only have aesh.jar and aesh-extensions.jar.	1	1	https://issues.jboss.org/browse/AESH-289
611	AESH-281	hi, i did some inital work on this, but didnt get it to work as wanted. could you look at this when you have time [~danielcunha]?	1	1	https://issues.jboss.org/browse/AESH-281
612	AESH-259	Can we close it?	1	1	https://issues.jboss.org/browse/AESH-259
613	AESH-251	What do you prefer? Close the issue or return "" case the method called with parameter without $? (I have PR in gun! Hehehe!)	1	1	https://issues.jboss.org/browse/AESH-251
614	AESH-249	yup, that should work. another thing is in æsh we're using a lot System.getProperty("file.separator") can we still assume that we can use this or do we have to get that from this new api? we also need a method ala: List<AeshResource> listRoots();	1	1	https://issues.jboss.org/browse/AESH-249
615	AESH-223	so, thinking about this a bit further. do you think it would make sense to have an annotation type for pipe/redirection handling? atm the pipe "result" is caught by æsh and stored in a buffer, then the "receiving" command needs to check that buffer to see if there is any input. would it be easier to use the api you suggested and have æsh "automatically" populate the field with data if it receives data through pipe (i guess identical to what you said if im not misunderstanding you but with a specific annotation name) ? ala: {code:java} @Retention(RUNTIME) @Target(FIELD) public @interface PipedList { } public class GrepCommand { @PipedList private List<Object> pipeInput; @Option private String arguments; Result<Set<Object>>, Formatter<Set<Object>> execute(CommandInvocation) { .. grep based on el expression passed in by arguments on each Object in pipeinput and return Set<Object> } } {code}	1	1	https://issues.jboss.org/browse/AESH-223
616	AESH-223	ive started implementing it in the result_and_format branch, but im a but uncertain regarding the Format interface. what is the reason for it, eg what is it meant to do? another thing, lets say we have; command1 | command2 command returns some text that is picked up by æsh and is then injected into the pipelist (or whatever its called) field of command2. the value from command1 is always as text so the question is if we need a "converter" from text to whatever object type is used for the field that is tagged with pipelist?	0	0	https://issues.jboss.org/browse/AESH-223

#	Requirement	Questions	Answered	Successfully Answered	URL
617	AESH-223	after thinking a bit more about this (and implementing a bit), im not sure if this will be very intuitive since it will require a two-step execution of commands. but i would still like to try to get it implemented somehow. what if we do something like: {code:java} public interface Command<T> { List<T> process(CommandInvocation2 ci); CommandResult execute(CommandInvocation ci, List<T> data); } {code} process will not push anything to the shell, just return some data that will be sent as a value to the execute method. CommandInvocation2 (in lack of a better name in this example) is identical to CommandInvocation, but do not have a reference to Shell.out() (not sure if this is required, but it would prohibit commands to push anything to the terminal at this stage). in a pipeline scenario we could either have the values thats passed from the previous command included in the CommandInvocation object or a command might also have a field annotated with {code}@Pipeline{code} where æsh could inject the values. what do you think? [~lincolnthree] and [~gastaldi] any input?	0	0	https://issues.jboss.org/browse/AESH-223
618	AESH-209	AESH-210 should have resolved these afaik. could you please check?	1	1	https://issues.jboss.org/browse/AESH-209
619	AESH-150	I think that a better way to do this would be to implement a ManProvider, which accepts a class, or a command, an returns the URL to a MAN page. Thus, Forge could provide our own ManProvider extension, and do our own resolution. Do you still support AsciiDoc?	1	1	https://issues.jboss.org/browse/AESH-150
620	AESH-108	Or probably we could have a single Completion implementation in Forge 2 and then it could iterate through the available commands. What do you think that would be the best strategy ?	1	1	https://issues.jboss.org/browse/AESH-108
621	AESH-23	yes i agree the way its works now is not good enough. so, do if we change it to: --name "joe bloggs", will set the option name value to "joe bloggs" (without "). it should also accept ' AND change escaped spaces to "normal" spaces does that sound ok?	1	1	https://issues.jboss.org/browse/AESH-23
622	AGOVA-83	Seems resolved. Socializer shows a failure, but it is related to a missing repository. Should that persist I guess I'll create another issue.	0	0	https://issues.jboss.org/browse/AGOVA-83
623	AGOVA-6	Can this be moved to a 0.5.1 target, because existing project that depends on Seam would not benefit from having the DS dependency until DS is "Seam/Solder"-grade?	1	1	https://issues.jboss.org/browse/AGOVA-6
624	AGOVA-6	That's great Ove ! We keep Solder because of Generic Bean mechanism : DS team is not convince to adopt it and I didn't have time to convince them. Do you think we could swith to your ptoject for Generics ?	1	1	https://issues.jboss.org/browse/AGOVA-6
625	AGOVA-3	The obvious way would be to support client side information storage in a cookie, but in some use case we me need to have user information on server side (asynchronous or long batch like crawling user network graph). should we support both scenario or try to have a unique smart one ?	0	0	https://issues.jboss.org/browse/AGOVA-3
626	AJSF-80	Is this going to be fixed with 3.1? Without this fix I will not be able to use RichFaces in my application	0	0	https://issues.jboss.org/browse/AJSF-80
627	AJSF-46	Search components in reRender'ed set changed to same algorithm as in h:outputLabel, h:message components : 0) absolute paths, started from ':' used "as is" 1) search all enclosed NamingContainer components for a given id. 2) descendand search from ViewRoot.	1	1	https://issues.jboss.org/browse/AJSF-46
628	AJSF-33	Can anyone tell us how to do it?	1	0	https://issues.jboss.org/browse/AJSF-33
629	AJSF-7	a4j-trinidad is not yet published to maven repository and not build by default. However, it is possible to build and deploy the package manually. Is there any special reason is package is released to public? Are there any outstanding issue?	1	0	https://issues.jboss.org/browse/AJSF-7
630	ENTMQCL-251	Unclear on scope - wouldn't this require the python-qpid client be ported to python 3.x?	0	0	https://issues.jboss.org/browse/ENTMQCL-251
631	ENTMQCL-164	[~justi9] What is expected to be tested here? I believe that connection failover was supported in python amqp client prior to 1.1.0-alpha. Have there been any changes to this functionality?	1	1	https://issues.jboss.org/browse/ENTMQCL-164
632	ANDIAMO-30	I think the answer here might be to tell Windows users to use Wordpad instead of Notepad. Wordpad, apparently, can handle either LF or CR+LF, just like VIM can on Linux. Any fairly recent Windows version has Wordpad along with Notepad (at least from XP on, which should be more sufficient). Jim, can you test out Wordpad on a file that doesn't work with Notepad. We could possible put a note on this in the knowledge base in the customer portal, and include it the right documentation as a side note.	1	1	https://issues.jboss.org/browse/ANDIAMO-30
633	ANDIAMO-24	I guess the comment was for EPP, Jim, why didn't you report in EPP instead ?	1	0	https://issues.jboss.org/browse/ANDIAMO-24
634	ANDIAMO-20	Jim, can you elaborate on why this is a major problem? I want to understand the priority. Also, if notepad on Windows doesn't respect the carriage return line feeds, what's going to make it easy to edit something in notepad?	1	1	https://issues.jboss.org/browse/ANDIAMO-20
635	ANDIAMO-20	I don't have a Windows box around, but I do have Wine installed, and it has the notepad application. When I open the configuration files in EAP 5.0.1, they all look fine. What's the trick here?	1	1	https://issues.jboss.org/browse/ANDIAMO-20
636	ANDIAMO-20	Jim, Could you also attach the files directly. I want to do a hex diff of the file on your system, and the file on mine.	1	1	https://issues.jboss.org/browse/ANDIAMO-20
637	ANDIAMO-20	Windows XP: Steps: Downloaded EAP 5.0.1 zip file Run from the cmd.exe jar -xf ${name of file} Browse attached file/s via Notepad Just reconfirmed all of the above Not sure how you can not reconfirm? Very interesting. What is your environment? If you are still running Wine, I would guess that the libs are converting these characters correctly for you when you open the file. jar -xf changing the contents of the file on the way out, that sounds pretty crazy to me. Although that is why I call it Computer Art sometimes and not Computer Science or Computer Engineering	1	1	https://issues.jboss.org/browse/ANDIAMO-20
638	ANDIAMO-20	I did attach the two files..below..what files are you seeking..I attached jboss-service.xml and jmx-console-users.properties???? at Aug 16th at 11:18 and 11:17 AM????	1	1	https://issues.jboss.org/browse/ANDIAMO-20
639	ANDIAMO-20	Is a process in place to test this for all products/projects etc so this is never an issue again?	1	0	https://issues.jboss.org/browse/ANDIAMO-20
640	ANDIAMO-7	Does this apply to the AS7 subsystem codebase only or is it relevant to jboss projects that are pulled in as binary dependencies too?	0	0	https://issues.jboss.org/browse/ANDIAMO-7
641	ANDIAMO-2	Discussions on Andiamo mailing list. General consensus seems almost complete at least in terms of the format for messages. No discussion yet on common API though. Outstanding issue around exceptions though: how are they formatted? Jason will complete the format thread and then move to the implementation/API discussion.	0	0	https://issues.jboss.org/browse/ANDIAMO-2
642	APIMAN-1236	Do you want metrics to be disabled entirely or stored in some other system? To disable completely, set and/orchange these properties in apiman.properties: {code} apiman-gateway.metrics=io.apiman.gateway.engine.impl.InMemoryMetrics apiman-manager-ui.metrics.enable=false {code}	1	0	https://issues.jboss.org/browse/APIMAN-1236
643	APIMAN-1234	Thank you Eric. I need to increase buffer size for request as well as response payload. I hope change in these 3 files will increase buffer for both request and response. Will there be any consequences if I make it to 32K ?	1	0	https://issues.jboss.org/browse/APIMAN-1234

651	APIMAN-1129	Ok I tested My plugin on the new version, it by pass the last error but now I het an error in class Policy where I have the Authorization {code:java} if (result.getResult()) { String forwardIdentityHttpHeader = config.getForwardIdentityHttpHeader(); if (forwardIdentityHttpHeader != null && !forwardIdentityHttpHeader.trim().isEmpty()) { request.getHeaders().put(forwardIdentityHttpHeader, forwardedUsername); } RequestMetric metric = context.getAttribute(PolicyContextKeys.REQUEST_METRIC, (RequestMetric) null); if (metric != null) { metric.setUser(forwardedUsername); } // Remove the authorization header so that it doesn't get passed through to the backend API // TODO: make this optional - perhaps they *want* the auth header passed through? request.getHeaders().remove("Authorization"); //$NON-NLS-1$ chain.doApply(request); } else { sendAuthFailure(context, chain, config, PolicyFailureCodes.BASIC_AUTH_FAILED); } {code} In this part I don't get why? finally I have a 404 not found error trace : {code:java} 14:31:18,857 ERROR [stderr] (default task-43) java.nio.channels.ClosedChannelException 14:31:18,866 ERROR [stderr] (default task-43) at io.undertow.channels.DetachableStreamSinkChannel.write(DetachableStreamSinkChannel.java:238) 14:31:18,879 ERROR [stderr] (default task-43) at io.undertow.server.HttpServerExchange$WriteDispatchChannel.write(HttpServerExchange.java:2000) 14:31:18,885 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.writeBufferBlocking(ServletOutputStreamImpl.java:567) 14:31:18,892 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.flushInternal(ServletOutputStreamImpl.java:482) 14:31:18,898 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.flush(ServletOutputStreamImpl.java:469) 14:31:18,907 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet$3.write(GatewayServlet.java:310) 14:31:18,933 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet$3.write(GatewayServlet.java:298) 14:31:18,942 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.DefaultPolicyFailureWriter.write(DefaultPolicyFailureWriter.java:98) 14:31:18,948 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet.writeFailure(GatewayServlet.java:295) 14:31:18,978 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet$1.handle(GatewayServlet.java:152) 14:31:18,990 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet$1.handle(GatewayServlet.java:103) 14:31:18,995 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.ApiRequestExecutorImpl.lambda$wrapResultHandler$0(ApiRequestExecutorImpl.java:159) 14:31:19,013 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.ApiRequestExecutorImpl.lambda$createPolicyFailureHandler$16(ApiRequestExecutorImpl.java:609) 14:31:19,020 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.policy.Chain.doFailure(Chain.java:230) {code}	1	1	https://issues.jboss.org/browse/APIMAN-1129
652	APIMAN-1122	Sorry but I didn't know about the mailing List or the IRC (which I can't install), anyway do you have an idea how can I get the pluginClassLoader in my plugin? I'm trying this code but it does not work :/ {code:java} PluginClassLoader cl = (PluginClassLoader) Thread.currentThread().getContextClassLoader(); try{ URL toto = cl.getResource("mongoDB.properties"); System.out.println(toto.toURI().getPath()); System.out.println(toto.toString()); } catch (Exception e){ System.out.println("----------"); System.out.println("----------"); System.out.println(e.getMessage()); System.out.println("----------"); System.out.println("----------"); } {code} Knowing that actually there is a class in my JAR that load mongoDB.properties and this file exists in the Jar. I copy it but I have to call the class in the JAR to do the processing. Thank you for your help	1	1	https://issues.jboss.org/browse/APIMAN-1122

#	Requirement	Questions	Answered	Successfully Answered	URL
653	APIMAN-1122	So I have no control on my service loader, but I didn't get your last solution about changing the current thread's context classloader prior to calling whatever library. Can you give me a simple example please?	1	1	https://issues.jboss.org/browse/APIMAN-1122
654	APIMAN-1122	Ok, I will test it once you release it in the website and give you a feedback. When can we have the possibility to extend the policies in APIMAN like BASIC AUTHENTICATION with our needs? It is something necessary I guess. Like in my case I just needed it to use a new identity source but I had to rewrite the doApply function because it called a private function which is validateCrendentials who only let you use the 3 identity source defined by you. I guess it will be interessting to let this function public so I can override it or expand it. What do you think?	1	1	https://issues.jboss.org/browse/APIMAN-1122
655	APIMAN-1122	Can you open up a separate JIRA issue to make the basic auth policy more extensible? :)	1	0	https://issues.jboss.org/browse/APIMAN-1122
656	APIMAN-1122	Would you be able to share your code or create a stripped-down version that reproduces the problem? I'd be happy to give it a try and figure out what's going wrong!	0	0	https://issues.jboss.org/browse/APIMAN-1122
657	APIMAN-1119	Do you want this INI file to be packaged inside the plugin? You should be able to access such a resource by loading it through the plugin's classloader. Something like this: {code} URL configURL = getClass().getClassLoader().getResource("/config/my-properties.ini"); {code} Assuming you put the file into *src/main/resources/config/my-properties.ini*. Note: I can never remember if the leading slash in the string is required. Try both. :)	1	1	https://issues.jboss.org/browse/APIMAN-1119
658	APIMAN-1119	Do you have a full stack trace you can include? I will try to reproduce this locally.	1	1	https://issues.jboss.org/browse/APIMAN-1119
659	APIMAN-1119	Yes I really like too. Especially the Pom.xml!! Where did you put the shiro.ini? In the resources folder?	1	1	https://issues.jboss.org/browse/APIMAN-1119
660	APIMAN-1119	Thank you I have already solved the problem. It was in the pom.xml apiman-plugins parent where the ressource are ignored. I have a question about this part of code: {code:xml} <plugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-enforcer-plugin</artifactId> <version>${version.enforcer.plugin}</version> <dependencies> <dependency> <groupId>de.is24.maven.enforcer.rules</groupId> <artifactId>illegal-transitive-dependency-check</artifactId> <version>1.7.4</version> </dependency> </dependencies> <executions> <execution> <id>enforcer-transitives-check</id> <goals> <goal>enforce</goal> </goals> <phase>process-classes</phase> <configuration> <fail>true</fail> <rules> <illegalTransitiveDependencyCheck implementation="de.is24.maven.enforcer.rules.IllegalTransitiveDependencyCheck"> <reportOnly>false</reportOnly> <regexIgnoredClasses> <regexIgnoredClass>javax\..+</regexIgnoredClass> <regexIgnoredClass>org.w3c.dom\..+</regexIgnoredClass> </regexIgnoredClasses> <useClassesFromLastBuild>true</useClassesFromLastBuild> </illegalTransitiveDependencyCheck> </rules> </configuration> </execution> </executions> </plugin> {code} For what reason do you use this plugin like this? Can you explain please?	1	1	https://issues.jboss.org/browse/APIMAN-1119
661	APIMAN-1093	How to use this new feature? It's easy, just get the current *RequestMetric* object from the policy context and add your own custom attributes to it! {code} RequestMetric metric = context.getAttribute(PolicyContextKeys.REQUEST_METRIC, (RequestMetric) null); metric.getAttributes().put("my-property-1", "value-1"); metric.getAttributes().put("my-property-2", "value-2"); {code}	0	0	https://issues.jboss.org/browse/APIMAN-1093
662	APIMAN-1045	When you say backend services are clustered, wouldn't you be having a cluster IP or basically a load balancer ip such as F5 (Hardware based) or Apache web server (software based) IP? On the APIMAN you could just configure the backend services load balancer IP which in the event of outage for one of the servers could re-direct the traffic to the one that is alive.	1	0	https://issues.jboss.org/browse/APIMAN-1045
663	APIMAN-1027	If [~opontes] and [~eric.wittmann] could comment... > 1) section 4.4.3 is suggesting that redirect URLs should be modified for apimanui only. Other clients (apiman, apiman-geteway) should be mentioned as well Do we need redirect URLs for apiman and apiman-gateway? The user shouldn't be logging directly into either of those endpoints using a browser, AFAIK. Does it not work unless you change it? > 3) The guide seems to lack any information that client configuration in KC needs to be reflected in related section of standalone.xml as well. Additionally the realm file linked in the docs [2] is configured as confidential while default values in standalone.xml are configured for public clients (at least apimanui is). Yes, this is an annoying aberration. For demo and other reasons (it was tricky to get the secrets to work properly when using cURL, it might be fixed now) we turned it off in the example config. We should harmonise it (e.g. provide a separate one with secrets enabled for this guide).	1	1	https://issues.jboss.org/browse/APIMAN-1027
664	APIMAN-1018	How do we envisage this working? It's simple to do given the groundwork already done, but I want some clarification. * What are the preconditions for allowing a plan to be deleted? That it's unused by any ClientApp/Contract? Or we just delete any contracts that use the plan * Are we anticipating that we'd want to do batch deletes of plans in isolation? (seems functionality with low usefulness IMO given delete API, ClientApp & Org)	0	0	https://issues.jboss.org/browse/APIMAN-1018
665	APIMAN-1012	[~eric.wittmann], [~msavy] I've created an initial implementation of this policy here: https://github.com/outofcoffee/apiman-plugins/tree/feature/url-whitelist-plugin The policy normalises the incoming URL, then applies the configured rules, based on URL and HTTP method to determine if the request is permitted to be passed-on to the back-end API. Please see the {{url-whitelist-policy}} directory for implementation and tests. Would you be interested in including this in the main {{apiman-plugins}} repo, or would you prefer I keep it as a separate project?	1	1	https://issues.jboss.org/browse/APIMAN-1012
666	APIMAN-982	Can we rephrase this to read "uninstalling" plugins? Thanks!	0	0	https://issues.jboss.org/browse/APIMAN-982
667	APIMAN-973	We don't use a KC json config. When running in EAP/WF the adapters are configured in the standalone.xml file. Is there a way to configure the tomcat KC adapters in some sort of equivalent tomcat config file? If we can avoid requiring users to fiddle with the WAR that would be ideal.	1	0	https://issues.jboss.org/browse/APIMAN-973
668	APIMAN-961	Wouldn't it make more sense to move as much of apiman into WF module as possible? This would enable us to leverage WF's patching mechanism in the future if we need it.	1	1	https://issues.jboss.org/browse/APIMAN-961
669	APIMAN-942	Great! Would it be possible for you to create a pull request in github? https://help.github.com/articles/using-pull-requests/	1	1	https://issues.jboss.org/browse/APIMAN-942
670	APIMAN-931	Could you clarify how this works. My understanding is that we just need to compare the SOAPAction value to the allowed value(s) and see whether it matches one of those patterns, then go/no-go? One complication is that the SOAP spec seems to indicate the use of multiple headers with identical keys: https://www.w3.org/TR/2000/NOTE-SOAP-20000508/#_Toc478383528 - presumably it's possible to do multiple actions with one message? I'm hesitant to do loads of Map<String, List<String>> due to the overheads, but I guess we should profile that before worrying (allocation is cheap, after all). I can think of a few workarounds.	1	1	https://issues.jboss.org/browse/APIMAN-931

#	Requirement	Questions	Answered	Successfully Answered	URL
671	APIMAN-906	I'm a big +1 to creating new pages with explanations of what certain things mean. For example, creating a page to explain Centralized Security...and another page to explain rate limiting, etc. I've actually been meaning to create a better "How does apiman work?" page or series of pages. Basically something that will explain what the concepts are: API, Client App, Plan. I'm also good with adding a Resources page.	1	1	https://issues.jboss.org/browse/APIMAN-906
672	APIMAN-906	[~eric.wittmann] - Thanks for the quick response. What about breaking up the guides into multiple pages? Are those automatically generated? Can they be broken up? I'm referring to the Installation, User, Developer, and Production guides. Thanks!	0	0	https://issues.jboss.org/browse/APIMAN-906
673	APIMAN-892	Is it something difficult to acheive ? We need apiman to work with a recent version of ES and are considering doing it ourself.	1	0	https://issues.jboss.org/browse/APIMAN-892
674	APIMAN-876	I spent a while on this, and can't reproduce it on 1.2.x at all. I just realised after re-analysing it that this is probably a UI bug, and I think we've since fixed it. I can't find any data flows whereby the apiman-manager-api returns the user's credentials. I think this is the UI's AJAX request breaking somehow, and then displaying it in the error box in a manner that misleads us into thinking it's the backend! Investigating 1.1.9.Final to see if I can reproduce the bug, but seemingly not.	0	0	https://issues.jboss.org/browse/APIMAN-876
675	APIMAN-876	Console output seems to validate my theory {code} Failed to load resource: net::ERR_CONNECTION_REFUSED apiman-manager-ui.js?cid=2016-01-16_16:44:1629 apiman [18:30:33]>> Failed to refresh bearer token: { "readyState": 0, "status": 0, "statusText": "error" }error @ apiman-manager-ui.js?cid=2016-01-16_16:44:1629 apiman-manager-ui.js?cid=2016-01-16_16:44:437 ** Auth type was bearerToken but no bearer-token was found! ** deps.js?cid=2016-01-16_16:44:37465 PUT http://localhost:8080/apiman/gateways // Pressed test again when we no longer have a valid token net::ERR_CONNECTION_REFUSED(anonymous function) @ deps.js?cid=2016-01-16_16:44:37465sendReq @ deps.js?cid=2016-01-16_16:44:37258serverRequest @ deps.js?cid=2016-01-16_16:44:36965processQueue @ deps.js?cid=2016-01-16_16:44:41488(anonymous function) @ deps.js?cid=2016-01-16_16:44:41504Scope.$eval @ deps.js?cid=2016-01-16_16:44:42732Scope.$digest @ deps.js?cid=2016-01-16_16:44:42543Scope.$apply @ deps.js?cid=2016-01-16_16:44:42840(anonymous function) @ deps.js?cid=2016-01-16_16:44:50297jQuery.event.dispatch @ deps.js?cid=2016-01-16_16:44:72334elemData.handle @ deps.js?cid=2016-01-16_16:44:72020 apiman-manager-ui.js?cid=2016-01-16_16:44:437 ** Auth type was bearerToken but no bearer-token was found! ** deps.js?cid=2016-01-16_16:44:37465 PUT http://localhost:8080/apiman/gateways {code}	0	0	https://issues.jboss.org/browse/APIMAN-876
676	APIMAN-876	I've had an idea: How's about we add a filter to the remote call that regexes the returned JSON and replaces anything that looks vaguely like "Password: 1234" with Password: <REMOVED>". If that is too broad (there may be some cases where we actually want to display passwords in the UI that we've downloaded?), we can add an option to turn the filtering off. The main thrust of my point is that it seems sensible _default_ behaviour, as it will avoid future accidental displays of user credentials. It should only be turned off in cases where we are fully aware of the caveats, and hence have _explicitly_ disabled the obfuscation. Seem a reasonable option?	0	0	https://issues.jboss.org/browse/APIMAN-876
677	APIMAN-847	Yeah - I already added initial support for this in the community version. What form would you want the icon to take for f8 services? The community edition supports fa-* (font awesome) icons ATM, but I could support image URLs too I suppose. I'd need to be careful to scale a URL based icon appropriately, of course.	1	1	https://issues.jboss.org/browse/APIMAN-847
678	APIMAN-828	This is something that we have discussed internally and I think is a very good feature to have. Thanks for the feature request. The hardest thing about this feature, of course, is making sure we don't allow the same base URL for multiple APIs. :)	0	0	https://issues.jboss.org/browse/APIMAN-828
679	APIMAN-822	Where can we find this documentation?	1	0	https://issues.jboss.org/browse/APIMAN-822
680	APIMAN-795	[~eric.wittmann]- Do you mean the disabled endpoint field on the Service Implementation tab? Because for the Endpoint tab it looks like that field already has a copy-to-clipboard feature on it.	1	1	https://issues.jboss.org/browse/APIMAN-795
681	APIMAN-795	You get there by "searching for a service to consume" from the Application UI. Or by Find/Consume a service from the Home page.	0	0	https://issues.jboss.org/browse/APIMAN-795
682	APIMAN-790	[~ryordan] - can you add basic validation of the Service Endpoint in the UI? Just start out with ensuring that it starts with "http://" or "https://" . :)	0	0	https://issues.jboss.org/browse/APIMAN-790
683	APIMAN-772	Eric, why are you no longer showing if the serviceType, and the link to the Definition Document?	1	0	https://issues.jboss.org/browse/APIMAN-772
684	APIMAN-750	Can you try something where there is an arrow pointing @ the disabled Publish button with a link/button labeled something like "Why can't I publish?" That link/button could then open a dialog (or something else) with a comprehensive checklist of items required for publishing. That allows us to defer asking the server for the checklist data until the user actually wants to see the checklist. So we won't need to load that data for every tab, instead we do it on demand (on click of the "Why can't I publish?" button). I also like that because advanced users can just easily ignore it. Thoughts?	1	1	https://issues.jboss.org/browse/APIMAN-750
685	APIMAN-722	[~eric.wittmann] What do you think of this idea? Seems a reasonably simple solution, I think.	1	0	https://issues.jboss.org/browse/APIMAN-722
686	APIMAN-688	We can use different plans for different consumers. Eg. A Plan for us consumers and another plan for Japan consumers	0	0	https://issues.jboss.org/browse/APIMAN-688
687	APIMAN-683	What about create a tree with the versions and the correspondent status?	0	0	https://issues.jboss.org/browse/APIMAN-683
688	APIMAN-664	To be clear, the REST api for installing plugins has not changed - you can still use the REST API to install a plugin, but you need the plugin's maven GAV information to do this. The addition of plugin registry support is simply a *list* of possible plugins. You can still install a plugin that is not on the list. You can *retrieve* the list of available plugins via REST: {code} /apiman/plugins/availablePlugins {code} This simply returns a list of all plugins listed by all configured plugin registries. A consumer would need to invoke the above endpoint, then iterate through the results in some way. Once the desired plugin is found in the list, the GAV information for that plugin will be available. What additional registry REST API functionality would be useful?	1	1	https://issues.jboss.org/browse/APIMAN-664
689	APIMAN-652	The "next page" button *should* be adding activity items to the bottom of the list. So if you want to see previous entries you should be able to just scroll back up in your browser. Does that work?	0	0	https://issues.jboss.org/browse/APIMAN-652
690	APIMAN-652	[~ldimaggio], can you check the previous comment? Wondering if it works for you.	0	0	https://issues.jboss.org/browse/APIMAN-652
691	APIMAN-649	What would the level of detail mean? You mean whether to show the details or not?	1	1	https://issues.jboss.org/browse/APIMAN-649
692	APIMAN-647	You're supposed to see a "Load More" button at the end of the activity list if there are more items to see. Is that not working?	1	0	https://issues.jboss.org/browse/APIMAN-647
693	APIMAN-640	I am interested in Russian localization of APIMAN. I have discovered where are few i18n files in project. I have found html-files with "apiman-i18n-key" properties and TemplateScanner.java which generates messages.properties from html. I can't understand how messages.properties backward affect to html. Yes, I have registred at zanata.org. I have entered apiman in search field but found nothing. Is the project registered where. By the way. I'm ready to localize the project for Russian language. How can I start?	1	0	https://issues.jboss.org/browse/APIMAN-640

#	Requirement	Questions	Answered	Successfully Answered	URL
694	APIMAN-588	Is usage by contract different from usage by application? I suppose an application could have multiple contracts. FWIW, the data to do this query is easily available.	1	0	https://issues.jboss.org/browse/APIMAN-588
695	APIMAN-582	[~eric.wittmann]: Hey! For the multiple versions do you mean adding an extra column for the version, and an extra row for each unique version? So, something like this: https://drive.google.com/open?id=0B54p6afFhym-VUcxaU0tcDlLOXc Please excuse the hideous mockup, I don't have any design tools installed on this laptop. :D As for the multiple services an organization has, don't we already have a page/view for that with the path /api-manager/orgs/<org>/services?	1	1	https://issues.jboss.org/browse/APIMAN-582
696	APIMAN-544	{code} TypeError: Cannot read property 'length' of null at Object.compile (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:102059:22) at Object.JSONEditor.compileTemplate (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:95693:19) at Class.JSONEditor.AbstractEditor.Class.extend.getLink (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:96748:32) at Class.JSONEditor.AbstractEditor.Class.extend.addLinks (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:96705:29) at Class.JSONEditor.AbstractEditor.Class.extend.postBuild (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:96640:10) at Class.JSONEditor.defaults.editors.select.JSONEditor.AbstractEditor.extend.postBuild (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:100144:10) at Class.prototype.(anonymous function) [as postBuild] (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:95279:26) at http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:97881:16 at $each (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:95439:10) at Class.JSONEditor.defaults.editors.object.JSONEditor.AbstractEditor.extend.build (http://localhost:8080/apimanui/dist/deps.js?cid=2016-02-11_23:00:97875:7) {code}	1	1	https://issues.jboss.org/browse/APIMAN-544
697	APIMAN-544	[~msavy] - is this regressed? If so please open it again, assign to [~ryordan] and set to Blocker.	1	1	https://issues.jboss.org/browse/APIMAN-544
698	APIMAN-540	That's a really great start! The back-end bits should be easy enough to implement - you are well on your way. Have you thought about how best to display the data in the UI? What kind of chart(s) would you want to see? If you want to take a stab at implementing the UI as well, of course that would be most welcome. If that's not your cup of tea then I'm happy to finish that part off.	1	1	https://issues.jboss.org/browse/APIMAN-540
699	APIMAN-540	It's basically just a vertical bar chart, one resource per bar. I realized just recently that simply aggregating over resource doesn't really cut it because resource is stored with parameters, so if you have 1000000 users searched on a /users endpoint, this means 1000000 entries in the chart. I think there are two things an API owner might want to know: 1. Which parameters are hit the most on a certain endpoint (which users in /users ?) 2. Which endpoints are hit the most? The problem is actually filtering out the endpoint or the set of endpoints (which you get from swagger), especially with endpoints with path parameters. For example: /organizations/:organizationId/applications/:applicationId /organizations/organizationId/plans You'd have to filter by two substring tokens to recognise these two endpoints and aggregate over them. I'm pretty sure ES was never meant for this kind of queries. So at this point I am thinking that you'd need some kind of endpoint identifier field added to the database for easier filtering. This means you'd need to actually recognise the endpoint when it is accessed which further complicates the problem. As far as I know, Apiman uses swagger upload just for the reference and does not actually use that information for anything important.	1	1	https://issues.jboss.org/browse/APIMAN-540
700	APIMAN-538	Out of curiosity question. I vaguely remember [~ibek] telling me about discussion he had with you about the use of JRAPIDoc [1]. Was this idea dismissed or do I remember incorrectly? [1] https://github.com/projectodd/jrapidoc	1	0	https://issues.jboss.org/browse/APIMAN-538
701	APIMAN-516	I'm using AngularJS and calling the application with the simple call : $http.get($scope.service,{'headers': { 'Authorization': getBearerKey() }}); Is there something else i should send ?	1	1	https://issues.jboss.org/browse/APIMAN-516
702	APIMAN-516	You may need to add a CORS policy if you're doing a CORS request. Or do you want the service itself to service the CORS? I suggest you add and configure the CORS plugin policy for best functionality. It should be very easy. There may be an argument for passing CORS requests through to the back end but I'm not convinced that's a good idea.	1	1	https://issues.jboss.org/browse/APIMAN-516
703	APIMAN-516	Do you think this is why the calls not working for me ? I'll try to add that . Are you able to test your fix on http://fadiabdeen.github.io/keycloak-oauth/public_html/ ? This should be pretty easy , just type in the information on the keycloak.json file and and put the same url as your redirect url. you should be able to get a code and then a token , then test your service. When you click "TEST" , it will attach a header and send it , and this is where it sends only the preflight and doesn't finish .	1	1	https://issues.jboss.org/browse/APIMAN-516
704	APIMAN-516	I know i'm a pain :(... I think we are very close. I did not know there was a CORS policy ,, so for the first time i'm using it now. I added the CORS policy on both the 1.1.3 and your version 1.1.7-SNAPSHOT and gave it a shot . i only tried the older version because you said its your fix might be releated , but it didnt work. Your version 1.1.7-SNAPSHOT (before tiring down and rebuilding) gave me problems. XMLHttpRequest cannot load http://localhost:8080/apiman-gateway/express/test/4.0. No 'Access-Control-Allow-Origin' header is present on the requested resource. Origin 'http://fadiabdeen.github.io' is therefore not allowed access. The response had HTTP status code 403. even when i remove the Auth policy completely. Then i decided to change the "Terminate on CORS error" to false . and what i got is : XMLHttpRequest cannot load http://localhost:8080/apiman-gateway/express/test/5.0. Request header field Authorization is not allowed by Access-Control-Allow-Headers. I have the CORS policy setup same as your screen shot but it seems not to be reading the values : Access-Control-Allow-Origin : http://fadiabdeen.github.io, * Access-Control-Allow-Headers : Authorization The Access-Control-Allow-Credentials are false , i'm not passing username/password and i turned off the terminate on cors error That was my cors-fix branch setup from yesterday. should it not work ? When you said update from the latest and rebuild , you mean from master ?	1	1	https://issues.jboss.org/browse/APIMAN-516
705	APIMAN-516	It seems this issue still occurs in APIMan 1.2.3. Does anyone has the same issue?	1	0	https://issues.jboss.org/browse/APIMAN-516
706	APIMAN-516	It is the only policy you have in the whole chain? i.e. client + plan + api? In general you'd probably want CORS on the client (or API if you're using a public API). If it's still not working then you may have your CORS policy setup slightly wrong. Could you share it, please?	1	1	https://issues.jboss.org/browse/APIMAN-516
707	APIMAN-516	Can you paste the precise error you're seeing if that doesn't resolve your situation.	1	1	https://issues.jboss.org/browse/APIMAN-516
708	APIMAN-516	Maybe this sounds like a silly question, but should I have build a new war file and deploy it on my Wildfly? I'm using the standalone version of APIMan. Could I just remove my old version (1.2.3) and then deploy the new one? I'm using the standalone-apiman.xml config. So I'd like to know if when I deploy the new version this going to continue running fine, or should I need to change something?	0	0	https://issues.jboss.org/browse/APIMAN-516
709	APIMAN-503	Are you using Joda time? I've heard that helps. Also must be careful in date ranges as you mention above to be inclusive of all time within a day - a typical daily date range would be something like: 01-01-2015-00-00-00 to 01-01-2015-11-59-59....	1	1	https://issues.jboss.org/browse/APIMAN-503

#	Requirement	Questions	Answered	Successfully Answered	URL
710	APIMAN-470	Can you explain #1 - I don't understand what that means.	1	1	https://issues.jboss.org/browse/APIMAN-470
711	APIMAN-458	Not sure this is an intended use-case, but here's what I did: 1) Create new Apiman/WildFly 8.2 instance 2) Login as admin/admin123! 3) Create organization -> fails, no auto-roles defined 4) Edit Roles/Permissions 5) Create new role called "admin" with some description 6) Select "Auto-Grant Role" 7) Select all available permissions 8) Click "Create Role" Upon doing so, the default admin user has been updated and now has membership association with the admin role to include all admin role permissions. Is this intended? Or is the default "admin" user intended to be like a "super admin" with the expectation that end users of Apiman would be creating new "admin" users for administering organizations? With all that said, I'm trying to put into context the feature description above. Do you mean when creating new users and assigning them the admin role, by default those users should inherit "Publish" and "Register" in addition to "Edit"? It seems as if database pre-population scripts are missing that create default system roles and assign default permissions to those roles, or something along those lines.	1	1	https://issues.jboss.org/browse/APIMAN-458
712	APIMAN-445	Thanks for the pointers! Next question is which version you'd like to use. We strife to be very conservative with APIs, however Lucene doesn't always do the same, so the Hibernate Search version in WildFly 8 turns out to be slightly different than the one in WildFly 10. You can of course ignore the version from WildFly and include any other version.. that's particularly good in case we need to develop a new feature (unlikely but it's good to have the options). Personally I would expect you to move to WildFly 10 since it's stable now, so we could use the version provided by it which is nicely up to date (and will get long term product support), while also avoiding to bloat the download size of ApiMan with new dependencies. So that would be my preference, but I don't know if you can have "master" drop support for WildFly 8 now?	0	0	https://issues.jboss.org/browse/APIMAN-445
713	APIMAN-430	Wow it looks like I never released them! Sorry about that. I'll make sure that when we release 1.1.3.Final (soon) I won't forget the plugins. I am filled with self loathing now.	1	1	https://issues.jboss.org/browse/APIMAN-430
714	APIMAN-426	Hi [~eric.wittmann] [~msavy], I've been working on a CLI for apiman, so you can do things like this: Create a new service: {noformat} $ ./apiman service create \ --server http://localhost:8080/apiman \ --name example \ --endpoint http://example.com \ --initialVersion 1.0 \ --publicService \ --orgName test {noformat} Add a gateway: {noformat} $ ./apiman gateway create \ --server http://localhost:8080/apiman \ --name test-gw \ --endpoint http://localhost:1234 \ --username apimanager \ --password "apiman123!" \ --type REST {noformat} You can find the project at https://github.com/outofcoffee/apiman-cli It uses the management API documented at http://www.apiman.io/latest/api-manager-restdocs.html to perform common operations such as: Manage Gateways: {noformat} apiman gateway test [args...] apiman gateway show [args...] apiman gateway create [args...] apiman gateway list [args...] {noformat} Manage Plugins: {noformat} apiman plugin show [args...] apiman plugin create [args...] apiman plugin list [args...] {noformat} Manage Organisations: {noformat} apiman org show [args...] apiman org create [args...] {noformat} Manage Services: {noformat} apiman service create [args...] apiman service policy [add|remove] [args...] apiman service publish [args...] {noformat} Would you be interested in adopting this as part of the main project at some point?	1	0	https://issues.jboss.org/browse/APIMAN-426
715	APIMAN-426	Thanks [~stalep] - æsh looks interesting as a front-end to the CLI, as it provides completion, which is something that we don't get from Args4j. It also looks like æsh's annotation-based commands are similar to what we do at the moment, so hopefully it wouldn't be too much rework. Do you have an idea about how we can create hierarchical command trees using æsh, like we have right now? For example: {noformat} apiman api list [args] apiman api policy add [args] {noformat} Each subcommand makes things more specific. It looks like {{@GroupCommandDefinition}} might do this - does it work for >1 level deep?	1	0	https://issues.jboss.org/browse/APIMAN-426
716	APIMAN-426	so the gist i created show how to create a groupcommand as you saw. its not possible to go more than one level deep unfortunately, but i would assume that it wont be needed to use the "apiman" name if you start a apiman-cli? im thinking: $ ./apiman-cli.sh (some welcome text here if needed) [apiman] > *user press tab* service gateway org api .... [apiman] > ... not sure if i mange to show my point, but the idea is that we dont need the apiman anymore since we're running in an interactive cli. does that make sense? if so, it should be sufficient to have one level deep group commands as æsh supports i think.	0	0	https://issues.jboss.org/browse/APIMAN-426
717	APIMAN-421	Additional elements - the time period - if "day" can use an ID, why can't they all use id's? Thx! Second: //div[@id='form-page']/div[5]/div/div/div/div/div[2]/div/ul/li[2]/a/span Minute: //div[@id='form-page']/div[5]/div/div/div/div/div[2]/div/ul/li[3]/a/span Hour: //div[@id='form-page']/div[5]/div/div/div/div/div[2]/div/ul/li[4]/a/span Day: link=Day Month: //div[@id='form-page']/div[5]/div/div/div/div/div[2]/div/ul/li[6]/a/span Year: //div[@id='form-page']/div[5]/div/div/div/div/div[2]/div/ul/li[7]/a/span	0	0	https://issues.jboss.org/browse/APIMAN-421
718	APIMAN-408	Eric, I've been trying to find a way to convert the data in chunks, therefore avoiding the storage of the whole data in memory. Unfortunately I haven't found a way to do it. Do you have any suggestions?	1	1	https://issues.jboss.org/browse/APIMAN-408
719	APIMAN-408	In the policy's getResponseDataHandler method, I have the following line of code: final IBufferFactoryComponent bufferFactory = context.getComponent(IBufferFactoryComponent.class); When I run the test, I get the following error: {code} io.apiman.gateway.engine.beans.exceptions.ComponentNotFoundException: Component not found: io.apiman.gateway.engine.components.IBufferFactoryComponent at io.apiman.gateway.engine.impl.DefaultComponentRegistry.getComponent(DefaultComponentRegistry.java:87) at io.apiman.gateway.engine.policy.PolicyContextImpl.getComponent(PolicyContextImpl.java:81) at io.apiman.plugins.transformation_policy.TransformationPolicy.getResponseDataHandler(TransformationPolicy.java:95) {code} How do I register the component in my test set up?	1	1	https://issues.jboss.org/browse/APIMAN-408
720	APIMAN-368	Erm, so :-)... What are we thinking on this issue, Jakub?	0	0	https://issues.jboss.org/browse/APIMAN-368
721	APIMAN-353	The client will send a request with a query string parameter specifying the name of the callback function, e.g., "http://host/service/resource?callback=myCallbackFunctionName". Should the parameter name be parameterized? jQuery provides that flexibility (http://api.jquery.com/jQuery.ajax/ - jsonp). In case jQuery users don't specify a parameter name, it uses 'callback' by default. Should the callback function name parameter be sent to the endpoint? It will be of no use in the endpoint. We could remove it of just leave it there. I'm not sure it could cause issues.	1	1	https://issues.jboss.org/browse/APIMAN-353
722	APIMAN-347	is there any workaround right now ?	1	0	https://issues.jboss.org/browse/APIMAN-347
723	APIMAN-336	I don't see where the CORS policy uses the shared state component... Isn't the IPolicyContext sufficient for this? Specifically getAttribute() and setAttribute() are conversation-scoped (in-memory). The ISharedStateComponent is what should be used if the state needs to be shared across requests.	1	0	https://issues.jboss.org/browse/APIMAN-336

#	Requirement	Questions	Answered	Successfully Answered	URL
724	APIMAN-173	[~jorgemoralespou_2] - did you offer to take this on?	1	1	https://issues.jboss.org/browse/APIMAN-173
725	APIMAN-173	Great, thanks [~jorgemoralespou_2]. Does Keycloak support some sort of command line for creating users? I honestly think it doesn't. Not sure how to implement that last bullet point above.	1	1	https://issues.jboss.org/browse/APIMAN-173
726	APIVIZ-8	Does this _only_ exclude it from the overview summary? Does this also apply to subpackages?	0	0	https://issues.jboss.org/browse/APIVIZ-8
727	APIVIZ-7	This can probably be solved in Edge.java via spec.replaceAll("\\.\\s*\\n\\s+", "") Although this still is a bit of a hack.	0	0	https://issues.jboss.org/browse/APIVIZ-7
728	AF-564	Hi Matt, As we talk before, here are my thought on the subject: 1) Teams are a bad name, I rather prefer to use Organizations. Organizations are how name, it sets basically a namespace. Another thing that contribute to me don't like the Team terminology is that this will limit us in the future to create team in the scope of the Organization. 2) Embrace Organizations are fundamental for multi tenancy (cloud first) 3) Now the technninical `implications`: 3.1) If users can create a project without a `Organization` setup first, where should we store the project? If projects aren't bound to thier organizations, we'll limit ourselves to have one single project name in the whole installation (we'll end up with: hello-world1, hello-world11, hello-world2, hello-world133, hello-world13422, my-hello-world-12,...) 3.2) What exactly projects we'll list under the Teams? 3.3) What about pagination? We'll need paginate everything for sure (multi tenancy in mind)	1	0	https://issues.jboss.org/browse/AF-564
729	AF-561	[~mstevens1] Yes ! I really like option2. If that becomes too big, I would recommend to move some behind a more... link (or something similar) that would then open the wizard with all options listed there. But imho it significantly improves the experience for the most common asset types.	1	1	https://issues.jboss.org/browse/AF-561
730	AF-546	Hello [~mbarkley], did you do some benchmarking before/after these changes? I'd like to have an idea about how fast it was/is now for some example app. Also can we expect some kind of speedup for kie-wb? If so at what point (e.g. the initial loading of the app after we login etc.).	1	0	https://issues.jboss.org/browse/AF-546
731	AF-411	Hi [~ederign] we chatted about two thinigs. 1) the ability to expand multiple categories via API. This is now implemented by the addExpandedCategory(String... categoriesToExpand) method. and 2) the ability to have an event in order to be aware of the categories expand/collapse. Did you add this event too?	0	0	https://issues.jboss.org/browse/AF-411
732	AF-338	Hello [~paulovmr], do I understand it right that this wysiwyg editor is some third party library that is just being integrated at some places in our product? In such case QE would only have to create basic selenium integration test(s) - e.g. set some HTML using editor's source view and verify it's rendered correctly in the places where the edited HTML is used. Or is this editor more like part of the product, with some heavy customizations from our side? In such case we would also need to create some tests like checking that the editor's buttons for inserting images or tables in the visywyg mode are working correctly.	1	0	https://issues.jboss.org/browse/AF-338
733	AF-288	[~porcelli] Thanks. I made a new commit on the PR that uses more adequate images to illustrate the example on uberfire-wires: https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconBlue.png https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconWhite.png Do you think we could do anything else to try to prevent that to happen? In our case, I think the PR review should catch this kind of thing.	1	1	https://issues.jboss.org/browse/AF-288
734	AF-110	Ok this makes sense. I would anticipate that I will go with PicketLink and a derivative of the Errai's FormAuthenticationScheme. As for tracking this, should I open a ticket in Errai or Picketlink? Also, whats the thought on a release date for UberFire 0.5.0.Final?	1	0	https://issues.jboss.org/browse/AF-110
735	AF-49	Leverage work done by Catherine Robson: Section 508 Compliance - Developer Reference Guide: https://mojo.redhat.com/docs/DOC-175787 1) Prior to Uberfire release, Determine how to test, execute an internal audit of Uberfire. What tools will you use to automate this effort? 2) Documents results of internal audit, 508 non-compliance log bugs 3) Fix 508 non-compliance bugs	1	1	https://issues.jboss.org/browse/AF-49
736	JBAS-9571	Tomaz and Bilge, Should this move to the EAP 7 jira instead or should it also be opened in BZ? I know EAP 6 is basically done, so maybe this belongs somewhere else, where is that somewhere else? Jim Tyrrell Principal JBoss Solutions Architect Public Sector Middleware Advocate 720-839-2251 mobile	1	1	https://issues.jboss.org/browse/JBAS-9571
737	JBAS-9571	Good point on Undertow, do we need to have a test case validating this behavior doesn't occur in Wildly, how do we figure that out? Jim Tyrrell Principal JBoss Solutions Architect Public Sector Middleware Advocate 720-839-2251 mobile	1	1	https://issues.jboss.org/browse/JBAS-9571
738	JBAS-9526	I have very similar issue. +JBoss 5.1.0.+ During the load test with >200 users per instance each instance run into high CPU load >99%. The thread dump analysis and statistics for CPU usage per Application Threads revealed that most of CPU (>75%) is taken by org.apache.tomcat.util.net.JIoEndpoint$Worker threads. During the load test multiple new +JIoEndpoint$Worker threads+ were created, and +each took from 1 to 9% of CPU+. Surprisingly, most of JIoEndpoint$Worker threads which were on high CPU usage were in Waiting state, which doesn't makes much sense to me. To collect CPU per Application thread statistics I used the following linux command: {code:java} ps -mo pid,lwp,stime,time,%cpu,%mem -C java >>/shared/threads_per_cpu.$(date +"%F_%H-%M-%S") {code} Why JIoEndpoint$Worker Threads took so much of CPU? (Especially the Threads which were in Waiting state) Is there any way to workaround this? (e.g. configuration change or Hotfix) Dump example for the heavy CPU threads: {code:java} "http-0.0.0.0-8280-25" daemon prio=10 tid=0x00002b4f7d5ee800 nid=0x6c05 in Object.wait() [0x00002b4f9d64b000] java.lang.Thread.State: WAITING (on object monitor) at java.lang.Object.wait(Native Method) - waiting on <0x000000078f5c3298> (a org.apache.tomcat.util.net.JIoEndpoint$Worker) at java.lang.Object.wait(Object.java:485) at org.apache.tomcat.util.net.JIoEndpoint$Worker.await(JIoEndpoint.java:420) - locked <0x000000078f5c3298> (a org.apache.tomcat.util.net.JIoEndpoint$Worker) at org.apache.tomcat.util.net.JIoEndpoint$Worker.run(JIoEndpoint.java:446) at java.lang.Thread.run(Thread.java:662) {code}	1	0	https://issues.jboss.org/browse/JBAS-9526
739	JBAS-9472	I'm sorry for very slow reaction. We can understand your stance for this issue. But, you revised the implementation of Parameters class for JBoss AS 7.1.1 in AS7-3989. Could you tell us if you have a plan for back-porting it to JBoss AS 5.1.0.GA? Regards,	1	0	https://issues.jboss.org/browse/JBAS-9472
740	JBAS-9472	Hello, We have the same problem in production. Can you gives as a version of jboss modified with a patch ? Thx.	0	0	https://issues.jboss.org/browse/JBAS-9472

743	JBAS-9425	where did you get the download file for hibernate 3.6.6-final. Please comment Thanks Chris	1	0	https://issues.jboss.org/browse/JBAS-9425
744	JBAS-9164	Jozef, what version are you referring to? 2.1.0.GA is the only GA version I see released which is currently in AS 6. Can you be more specific what version you are requesting?	1	1	https://issues.jboss.org/browse/JBAS-9164
745	JBAS-8948	Thanks for the quick reply! Yep, that workaround works for us. The only problem with this was that it requires us to modify all our deployments which would also be required if we went with the jboss-scanning.xml solution. But this is doable. Do you think adding a configuration property is a valid enhancement that you might consider adding to a future version? Thanks, /Daniel	1	1	https://issues.jboss.org/browse/JBAS-8948
746	JBAS-8948	{quote} Do you think adding a configuration property is a valid enhancement that you might consider adding to a future version? {quote} Yeah, that looks reasonable. I'll see what needs to be done to add that support for 6.1.0.	1	0	https://issues.jboss.org/browse/JBAS-8948
747	JBAS-8948	Daniel, I've committed a fix for JBAS-8318. Can you try this application against the latest snapshot containing this fix and see if it helps?	1	0	https://issues.jboss.org/browse/JBAS-8948
748	JBAS-8939	Marius, one obvious thing that comes to mind about this solution is that it will mean that anything that relies on this new feature will not be able to run on earlier versions of AS6, right? In the case of SwitchYard, that's probably going to be an issue (need to check that). I might have a look ar the current Weld war deployer + JndiBinder class and see can we replicate that for SwitchYard. If it works, can we make sure that the resolution of this issue checks that the BeanManger is not already bound in.	0	0	https://issues.jboss.org/browse/JBAS-8939

#	Requirement	Questions	Answered	Successfully Answered	URL
749	JBAS-8745	This is done. metadata-deployer-jboss-beans.xml now has the following config options <bean name="SchemaResolverConfig" class="org.jboss.xb.binding.sunday.unmarshalling.SchemaResolverConfig"> + <property name="schemaInitializerInstances"> + <map keyClass="java.lang.String" valueClass="java.lang.String"> + <entry> + <key>http://java.sun.com/xml/ns/javaee</key> + <value> + <!-- Every specified property in this schema initializer + will override the value of the corresponding SchemaBinding property + which was initialized from binding annotations. + Properties that are commented will not affect the corresponding SchemaBinding properties. --> + <bean class="org.jboss.xb.util.SchemaBindingPropertyInitializer"> + <!-- must all content have a valid binding + <property name="strictSchema">true</property> --> + <!-- Should ${x} references be replaced with x system property + <property name="replacePropertyRefs">true</property> --> + <!-- if all the characters in the mixed content are whitespaces + should they be considered indentation and ignored? + <property name="ignoreWhitespacesInMixedContent">true</property> --> + <!-- whether to trim string values + <property name="normalizeSpace">true</property> --> + </bean> + </value> + </entry> + </map> + </property>	0	0	https://issues.jboss.org/browse/JBAS-8745
750	JBAS-8613	The following tests run in Hudson environment were failing when because the lookup was resolving to localhost:1099 instead of honoring the -Dnode0 IP address passed in to the tests. Specifically, org.jboss.test.cluster.defaultcfg.web.test.PersistentManagerFormAuthTestCase org.jboss.test.cluster.ejb3.clusteredsession.ejbthree1136.unit.ClusteredCacheCleanStartUnitTestCase These tests extend JBossTest* instead of JBossTestCluster* which results in: Stacktrace javax.naming.CommunicationException: Could not obtain connection to any of these urls: localhost:1099 and discovery failed with error: javax.naming.CommunicationException: Receive timed out [Root exception is java.net.SocketTimeoutException: Receive timed out] at org.jnp.interfaces.NamingContext.discoverServer(NamingContext.java:1690) at org.jnp.interfaces.NamingContext.checkRef(NamingContext.java:1761) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:695) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:688) at javax.naming.InitialContext.lookup(InitialContext.java:392) at org.jboss.test.JBossTestServices.getServer(JBossTestServices.java:154) at org.jboss.test.JBossTestServices.invoke(JBossTestServices.java:228) at org.jboss.test.JBossTestCase.invoke(JBossTestCase.java:240) at org.jboss.test.cluster.ejb3.clusteredsession.ejbthree1136.unit.ClusteredCacheCleanStartUnitTestCase.getExtraneousData(ClusteredCacheCleanStartUnitTes return server; }	1	1	https://issues.jboss.org/browse/JBAS-8613
751	JBAS-8610	Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.	0	0	https://issues.jboss.org/browse/JBAS-8610
752	JBAS-8559	Adding the details on what exactly is required out of this task. The JavaEE 6 spec (section EE.5.17) states that: <quote> A DataSource resource may be defined in a web module, EJB module, application client module, or application deployment descriptor using the datasource element. For example: <data-source> <description>Sample DataSource definition</description> <name>java:app/MyDataSource</name> <class-name>com.foobar.MyDataSource</class-name> <server-name>myserver.com</server-name> <port-number>6689</port-number> <database-name>myDatabase</database-name> <user>lance</user> <password>secret</password> <property> <name>Property1</name> <value>10</value> </property> <property> <name>Property2</name> <value>20</value> </property> <login-timeout>0</login-timeout> <transactional>false</transactional> <isolation-level>TRANSACTION_READ_COMMITTED</isolation-level> <initial-pool-size>0</initial-pool-size> <max-pool-size>30</max-pool-size> <min-pool-size>20</min-pool-size> <max-idle-time>0</max-idle-time> <max-statements>50</max-statements> </data-source> A DataSource resource may also be defined using the DataSourceDefinition annotation on a container-managed class, such as a servlet or enterprise bean class. For example: @DataSourceDefinition(name="java:app/MyDataSource", className="com.foobar.MyDataSource", portNumber=6689, serverName="myserver.com", user="lance", password="secret") (Of course, we do not recommend including passwords to production systems in the code, but it's often useful while testing. Passwords, or other parts of the DataSource definition, can be overridden by a deployment descriptor when the application is deployed.) </quote> So all that needs to be done is to process this Java EE spec defined datasource deployment descriptor element and the corresponding annotation and create a JBoss specific datasource and bind it to JNDI. That's it.	0	0	https://issues.jboss.org/browse/JBAS-8559
753	JBAS-8481	Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.	1	1	https://issues.jboss.org/browse/JBAS-8481
754	JBAS-8468	Richard, this should be Resolved with this commit: http://fisheye.jboss.com/changelog/JBossAS/?cs=108309 Can you confirm?	1	1	https://issues.jboss.org/browse/JBAS-8468
755	JBAS-8438	There is still more work to do. Can this issue be moved to the next release?	0	0	https://issues.jboss.org/browse/JBAS-8438
756	JBAS-8409	We dropped support of AS6 in jbosgi. Our current implementation targets AS7 M1 and is based on MSC. IMHO, it'd be sufficient to remove the osgi profile and delete the test. Is that acceptable?	1	1	https://issues.jboss.org/browse/JBAS-8409
757	JBAS-8400	There is a separate plugin for jbcache, jopr-jboss-cache-v3-plugin-3.0.0.B06.jar. So it may be that we'd just need to add an Infinispan plugin. Is there one?	1	1	https://issues.jboss.org/browse/JBAS-8400
758	JBAS-8399	This is probably not the best solution to deal with instantiation. The original idea was to have a BeanInstantiator registered per-component (i.e. EJB) in order for the insantiator to know what EJB is instantiated (and retrieve the appropriate AnnotatedType in Weld). But WAR deployments containing EJBs share the same java:comp context (and with java:module) so two EJBs will share the same BeanInstantiator.	0	0	https://issues.jboss.org/browse/JBAS-8399
759	JBAS-8371	Done in weld-snapshot branch, Marius, can you merge to trunk?	1	1	https://issues.jboss.org/browse/JBAS-8371
760	JBAS-8350	Daniel, questions like these are more appropriate in the user forums http://community.jboss.org/. For this specific question, the JCA user forum is appropriate http://community.jboss.org/en/jbossas/jca?view=discussions. Could you please create a topic there?	0	0	https://issues.jboss.org/browse/JBAS-8350
761	JBAS-8315	Stan, what is the deadline for this? Dan, any updates?	1	1	https://issues.jboss.org/browse/JBAS-8315
762	JBAS-8268	I think, this made to 6.0.0.Final, didn't it?	1	1	https://issues.jboss.org/browse/JBAS-8268

#	Requirement	Questions	Answered	Successfully Answered	URL
767	JBAS-8169	If we want to make a service accessible through CORBA 1) We create a standard EJB service using a standard invoker (not IIOP, no IOR Security config). 2) We create the public interfaces accessible through CORBA in an independent IDL file 3) We create the necessary java objects using IDLJ plug-in. 4) We implement the servant by extending the POA object generated by IDLJ (This servant object will then make (relay) a CORBA IIOP call to a standard EJB) 5) We add a listener to our EJB application that will register this CORBA object at deployment using the following schema. // initialisation InitialContext ctx = new InitialContext(); NamingContextExt rootNC = (NamingContextExt)ctx.lookup("java:JBossCorbaNaming"); POA poa = (POA) ctx.lookup("java:JBossCorbaPOA"); ORB orb = (ORB)ctx.lookup("java:JBossCorbaORB"); // using reflexion, we create a IorSecurityConfigMetaData with our custom realm IorSecurityConfigMetaData data = new IorSecurityConfigMetaData(); Class asConfigClass = data.getAsContext().getClass(); Class sasConfigClass = data.getSasContext().getClass(); Field realm = asConfigClass.getDeclaredField("realm"); realm.setAccessible(true); realm.set(data.getAsContext(),"weblogicDEFAULT"); Field propagation = sasConfigClass.getDeclaredField("callerPropagation"); propagation.setAccessible(true); propagation.set(data.getSasContext(),"SUPPORTED"); Any secPolicy = orb.create_any(); secPolicy.insert_Value(data); Policy csiv2Policy = orb.create_policy(CSIv2Policy.TYPE, secPolicy); Policy[] policies = new Policy[]{csiv2Policy}; poa.the_POAManager().activate(); // Create a secure child POA POA childPOA = null; try{ childPOA = poa.find_POA("csiv2POA",true); }catch(org.omg.PortableServer.POAPackage.AdapterNonExistent e){ logger.info("csiv2POA do not exist => Beeing created"); childPOA = poa.create_POA("csiv2POA", poa.the_POAManager(), policies); } // register the servant in the secure POA and activate it childPOA.activate_object(servant); childPOA.the_POAManager().activate(); // add the service in the naming directory org.omg.CORBA.Object o = childPOA.servant_to_reference(servant); createContext(nsPath, rootNC); rootNC.rebind(rootNC.to_name(nsPath), o); As you can see, the way we register CORBA objects do not allow us to use the IOR configuration available in the deployment descriptor. The code presented before allows us to register CORBA services with our custom realm and to change the callerPropagation setting. Nevertheless, we would like to avoid reflexion. We propose you to either give the possibility to set these values through a configuration XML file or by making the constructor of IorSecurityConfigMetaData to public. Furthermore, we remarked that the CSIV2 security settings are not propagated to the EJB in this configuration although the CSIV2 security context is correctly intercepted by org.jboss.iiop.csiv2.SASTargetInterceptor . Why don't you populate the SecurityAssocation variable with these intercepted values? If this is a desired feature, how can we access to the CSIV2 security context in our CORBA servant in order to forward them to the EJB. It is realy important for us to be able to use this architecture to register CORBA services and that the security context is correctly propagated.	1	1	https://issues.jboss.org/browse/JBAS-8169
768	JBAS-8166	The hudson run JBoss-AS-6.0.x-testSuite-sun16 (Build #801 (Jul 15, 2010 2:26:27 AM) ran with Remoting 2.5.3. There are three failures that didn't occur in the previous run that went to completion: * org.jboss.test.cluster.defaultcfg.simpleweb.test.SessionCountUnitTestCase(Default-udp).testMarshalledRedeployWarAndCache * org.jboss.test.profileservice.test.Ejb3MetricsUnitTestCase(profileservice).testSlsbLocal * org.jboss.test.xml.DDValidatorUnitTestCase.testJBossXml They don't appear to have any relationship to Remoting, so I'm closing the case.	0	0	https://issues.jboss.org/browse/JBAS-8166
769	JBAS-8159	Thanks for the 5.x patch, that will be useful to others also using 5.x. The JSR-160 connector can be secured already in 6.x (see umbrella jira JBAS-7818), but if you have improvements (for AS 6) to what we did, that is always welcome. What do think?	0	0	https://issues.jboss.org/browse/JBAS-8159
770	JBAS-8159	Question: How complete is the patch for securing the JSR-160 (example) code in AS 5? I am wondering if its complete or known to need further work (as a solution to patch the current JSR-160 example code in AS 5). In addition to looking at any new proposals for securing JSR-160 support, we should look at merging any parts of this contribution to AS-7 release (that make sense). Marking as fix for AS 7 to support that separate effort.	0	0	https://issues.jboss.org/browse/JBAS-8159
771	JBAS-8148	Just a reminder - M4 is planned to be tagged on the coming Wednesday (July 21). Looking at the AS trunk, these files seem to come from HornetQ distribution (although I don't know why, since these configs should perhaps be in AS). So that means, this will require a HornetQ release before 21st. I believe this is a good improvement to have in terms of boot time, so IMO should make it to M4.	0	0	https://issues.jboss.org/browse/JBAS-8148
772	JBAS-8143	Why there is a JCA task separated from the server? All the security events are done at the Server's Session. (I.e. I'm not sure there's any need for a JCA specific part).	1	0	https://issues.jboss.org/browse/JBAS-8143
773	JBAS-8105	What happened to conf/jbossts-properties.xml in trunk, can't find it?!	0	0	https://issues.jboss.org/browse/JBAS-8105
774	JBAS-8105	Clebert, could you comment on Robert's entry whether that would be the proper way to configure it manually? Thanks in advance - Rico.	1	0	https://issues.jboss.org/browse/JBAS-8105
775	JBAS-8105	Well, for JBoss 6.0.0 this is definitely not the case. So you would say that here, Robert's configuration is correct? Also for 6.1.0 or even 7.x I cannot see that this configuration has made it into the general distribution - can you point me to it in case you found it? At least I think HornetQ's documentation should reflect the necessary configuration for JBoss 6 and later, instead of only for JBoss5 at is atm.	0	0	https://issues.jboss.org/browse/JBAS-8105
776	JBAS-8099	This probably won't happen until AS7, but I don't have a target release version yet. Very minor task.	1	1	https://issues.jboss.org/browse/JBAS-8099
777	JBAS-8093	INFO in that case You might want to have web applications that aren't CDI enabled (and therefore you left out beans.xml). But isn't this a chicken-egg syndrome since if you left out beans.xml, Weld isn't booting (not going the weld-deployers route) and who does the warning in that case?	0	0	https://issues.jboss.org/browse/JBAS-8093
778	JBAS-8093	Underlying issue is that if CDI annotations are present but beans.xml isn't then the AS should complain. However I don't think the AS can do this right now? Maybe in AS7? Jason, could you let me know what the best course of action is.	1	1	https://issues.jboss.org/browse/JBAS-8093
779	JBAS-8078	Tim Fox wrote: The first time you boot HQ it will take longer, since it has to create the journal files. On subsequent boots it will be faster since it just has to open them. I didn't measure first run (heat phase). Tim Fox wrote: You can reduce the number of initial files in the config (see user manual) if you want to speed this up. Why isn't it default in AS?	1	0	https://issues.jboss.org/browse/JBAS-8078
780	JBAS-8061	I'm not sure this is working in M4 -- I'm still getting: 15:11:21,069 SEVERE [javax.enterprise.resource.webcontainer.jsf.application] JSF1005: Cannot instantiate validator of type integerValidator When this class is on the classpath, and I try to reference it in a Facelet via the <f:validator validatorId="integerValidator" /> tag: ---------- ---------- package com.ocpsoft.socialpm.validator; import javax.faces.application.FacesMessage; import javax.faces.component.UIComponent; import javax.faces.context.FacesContext; import javax.faces.validator.FacesValidator; import javax.faces.validator.Validator; import javax.faces.validator.ValidatorException; @FacesValidator("integerValidator") public class IntegerValidator implements Validator { @Override public void validate(final FacesContext context, final UIComponent component, final Object value) throws ValidatorException { //... } }	1	1	https://issues.jboss.org/browse/JBAS-8061

#	Requirement	Questions	Answered	Successfully Answered	URL
781	JBAS-8061	How are you deploying your validator? Is it in a jar or in WEB-INF/classes? If it's a jar, please attach.	1	1	https://issues.jboss.org/browse/JBAS-8061
782	JBAS-8061	Some annotations are found but others are not. Need to investigate why.	1	1	https://issues.jboss.org/browse/JBAS-8061
783	JBAS-8055	Does this happen on AS startup? Or during an actual AS unit test? Which test?	1	1	https://issues.jboss.org/browse/JBAS-8055
784	JBAS-8026	All the nodes that are part of a cluster are supposed to use the same ports. How the service binding manager would help here? Also, I have a question about this phrase: "Currently the discovery group and the broadcast group in hornetq-configuration.xml in AS are used for configuring the group-address and the port: " What you meant by this statement? Are you affirming we are clashing with another port, or that was just informing what the port was for?	0	0	https://issues.jboss.org/browse/JBAS-8026
785	JBAS-8026	>> All the nodes that are part of a cluster are supposed to use the same ports. How the service binding manager would help here? The ServiceBindingManager (SBM) is the central place where all ports and group addresses are centrally configured. Each such address and/or port is part of a group known as ServiceBindingSet. The advantage of this approach is that end user/admins can just use a single resource (the SBM) to manage their ports. If they want to switch their ports, then that just switch the ServiceBindingSet group by passing a JVM system param (like in the example in the wiki). >> Also, I have a question about this phrase: >>"Currently the discovery group and the broadcast group in hornetq-configuration.xml in AS are used for configuring the group-address and the port: " >> What you meant by this statement? Are you affirming we are clashing with another port, or that was just informing what the port was for? Just informing what those ports are for.	0	0	https://issues.jboss.org/browse/JBAS-8026
786	JBAS-8026	on that case.. even with you inform -Dports=, those groups should still be the same... unless they form another group. I'm not sure how the ServiceBinding would help here	0	0	https://issues.jboss.org/browse/JBAS-8026
787	JBAS-8026	"SBM internally adds +100 (just an example) to the default port." This is exactly my point.... if you add another server on the same box... everything should be added +100 except those groups ports. Unless the user wants to make them part of a different cluster. In other words.. most of the same the user will want the same port for those two groups. Notice that the connectors and acceptors are using the binding manager	0	0	https://issues.jboss.org/browse/JBAS-8026
788	JBAS-8020	Dan, can you take care of this please?	0	0	https://issues.jboss.org/browse/JBAS-8020
789	JBAS-8016	Ron, can you work on the remoting docs?	0	0	https://issues.jboss.org/browse/JBAS-8016
790	JBAS-8015	Clebert, can you or someone from hornetQ work on the docs?	0	0	https://issues.jboss.org/browse/JBAS-8015
791	JBAS-8015	Can we have some context about what the purpose of this task is, what's expected of us etc? So far I was under the impression that AS docs would simply reference our existing HornetQ docs.	0	0	https://issues.jboss.org/browse/JBAS-8015
792	JBAS-8012	Anil, can you work on the AS6 docs for security?	0	0	https://issues.jboss.org/browse/JBAS-8012
793	JBAS-8008	Jason, can you take this take this task or re-assign?	0	0	https://issues.jboss.org/browse/JBAS-8008
794	JBAS-8008	I think that the twiddle JIRA (JBAS-8013) could probably be closed as duplicated by JBAS-8008. If no one disagrees, I'll merge my current twiddle changes in to the admin doc. Thinking more about it, we probably need several subtasks for JBAS-8008 (to allow multiple people to work on JBAS-8008). Does Jira allow subtasks for subtasks? We could then have a twiddle subtask.	1	1	https://issues.jboss.org/browse/JBAS-8008
795	JBAS-7988	Can you please check Paul if there is a flag to disable this update check?	1	1	https://issues.jboss.org/browse/JBAS-7988
796	JBAS-7970	Ales, is there a plan that backport this fix into EAP 5.1?	1	0	https://issues.jboss.org/browse/JBAS-7970
797	JBAS-7955	No idea, and as you can see, this was a while ago. I would have to look again. btw: this our jsr77 impl doesn't do much, mostly basic deployment structure What exactly is the issue or you're trying to do?	0	0	https://issues.jboss.org/browse/JBAS-7955
798	JBAS-7889	updated existing wiki pages: Remote bean access http://community.jboss.org/wiki/HowDoIGetRemoteAccessToMyMBean Which interface should I use for remote bean access http://community.jboss.org/wiki/WhichRemoteInterfaceShouldIUseForTheMBeanServer There is some jsr160 support in remoting (see jmx-remoting.sar in http://community.jboss.org/wiki/Remoting) twiddle page http://community.jboss.org/wiki/Twiddle shutdown page http://community.jboss.org/wiki/StartStopJBoss https://community.jboss.org/wiki/SecureTheJmxConsole jconsole page http://community.jboss.org/wiki/UseJDK5JConsole	0	0	https://issues.jboss.org/browse/JBAS-7889
799	JBAS-7857	Sorry for not getting back earlier on this. Does this upgrade still need to happen for AS6? I see both apache-xalan:xalan and xalan:xalan included in the AS6 dep tree, so probably the "apache-xalan" deps should be excluded. And the new patched version should be uploaded to the thirdparty-releases community repo.	1	0	https://issues.jboss.org/browse/JBAS-7857
800	JBAS-7830	Is there anything in jmx-invoker-service.xml that we should keep? :)	1	1	https://issues.jboss.org/browse/JBAS-7830
801	JBAS-7828	Should we do this still? What is the major advantage over jmx-jboss-beans.xml?	0	0	https://issues.jboss.org/browse/JBAS-7828
802	JBAS-7828	I see various examples of other services doing this, such as jboss-threads Should I create a separate subversion project, as you did for jboss-threads? Or should this live in an existing project?	0	0	https://issues.jboss.org/browse/JBAS-7828
803	JBAS-7818	Is this going to be scheduled on the remoting roadmap?	0	0	https://issues.jboss.org/browse/JBAS-7818
804	JBAS-7818	The OSGi remote testsuite relies on the RMIAdaptor. Recent changes made <groupId>org.jboss.jbossas</groupId> <artifactId>jboss-as-client</artifactId> <version>6.0.0.20100216-M2</version> unusable with jbossas/trunk. Could you please provide documentation on the intended migration path? * How should clients remotely connect to JMX in the future? * When is the existing access method intended to go out of service? I assume that access to the RMIAdaptor using the 6.0.0.20100216-M2 client libraries should continue to work for a while and that I am seeing a bug introduced by recent changes.	1	1	https://issues.jboss.org/browse/JBAS-7818
805	JBAS-7818	Scott, It appears that with the recent changes around this, the following lookup: MBeanServerConnection adaptor = (MBeanServerConnection) ctx.lookup("jmx/rmi/RMIAdaptor"); runs into issues (in EJB3 testsuite). This throws a: javax.naming.Reference cannot be cast to javax.management.MBeanServerConnection java.lang.ClassCastException: javax.naming.Reference cannot be cast to javax.management.MBeanServerConnection at org.jboss.test.JBossTestServices.getServer(JBossTestServices.java:154) at org.jboss.test.JBossTestServices.invoke(JBossTestServices.java:228) at org.jboss.test.JBossTestServices.undeploy(JBossTestServices.java:364) at org.jboss.test.JBossTestSetup.undeploy(JBossTestSetup.java:197) at org.jboss.test.JBossTestCase$1.tearDown(JBossTestCase.java:333) at junit.extensions.TestSetup$1.protect(TestSetup.java:24) at junit.extensions.TestSetup.run(TestSetup.java:27) The root cause appears to be the class org.jboss.system.server.jmx.JMXAdapter (present in JBOSS_HOME/lib/jboss-system.jar) missing from the client classpath (which uses the jars in JBOSS_HOME/client folder, especially jbossall-client.jar). Looking at the name of that class, i don't think it would be appropriate to include that in the client jar files.	1	1	https://issues.jboss.org/browse/JBAS-7818

#	Requirement	Questions	Answered	Successfully Answered	URL
806	JBAS-7818	Scott, is this work completed for AS 6.0.0? There is a problem starting AS 6 with IPv6; specifically, the error shown below. This prevents additional testing with IPv6 to proceed. Can you comment on this failure? 4:15:34,374 INFO [JMXConnector] starting JMXConnector on host 3ffe:ffff:100:f101::1:1090 14:15:34,393 ERROR [JMXConnector] Could not start JMXConnector: java.net.MalformedURLException: Bad port number: "": java.lang.NumberFormatException: For input string: "" at javax.management.remote.JMXServiceURL.<init>(JMXServiceURL.java:193) [:1.6.0_13] at org.jboss.system.server.jmx.JMXConnector.start(JMXConnector.java:143) [:6.0.0.20100721-M4 (Build SVNTag:JBoss_6.0.0.20100721-M4 date: 20100723)]	1	1	https://issues.jboss.org/browse/JBAS-7818
807	JBAS-7739	Stan, can you check the versions for jsf.deployer and jsf-impl in jbossas/trunk/component-matrix/pom.xml. There seems to be some discrepancy in the pom. From the JIRA, your comment is to upgrade the jsf.deployer to 1.0.3, but trunk contains 1.0.2: <version.jboss.jsf-deployer>1.0.2</version.jboss.jsf-deployer> http://fisheye.jboss.com/changelog/JBossAS/?cs=108115 There is also a dependency for jsf-impl; <dependency> <groupId>javax.faces</groupId> <artifactId>jsf-impl</artifactId> <version>${version.javax.faces}</version> </dependency> where version.javax.faces is: <version.javax.faces>2.0.2-FCS</version.javax.faces> The 1.0.0.Beta6 of org.jboss.javaee.specs.bom also defines the JSF API version as: <version.jsf.api>2.0.2-FCS</version.jsf.api>	1	1	https://issues.jboss.org/browse/JBAS-7739
808	JBAS-7735	As per http://community.jboss.org/wiki/JBossProjectVersioning 6.0.0.20100215-M2 is the official and correct name of the release. Any formal declaration of the version should use the full and correct name; IMO the logging above is a formal declaration of the version. The one semi-exception to this is the decision not to include the timestamp in the name of the zip files for the dist, as discussed at http://post-office.corp.redhat.com/archives/jboss-tag-public/2010-February/msg00032.html . I say semi-exception, because a name of a zip file isn't really a formal declaration of the version. Changing the directory name seems harmless enough, but doing it means hacking the build scripts to essentially manually set it. Is that worth doing?	0	0	https://issues.jboss.org/browse/JBAS-7735
809	JBAS-7735	Are you thinking more like (build: SVNTag=JBoss_6_0_0_20100215-M2 revision=r100927) ? I'll ping Paul Gier to see what's involved.	0	0	https://issues.jboss.org/browse/JBAS-7735
810	JBAS-7735	What happened to the old codenames (Trinity, Morpheus, Neo). Why they disappeared?	1	1	https://issues.jboss.org/browse/JBAS-7735
811	JBAS-7715	Dimitris - is this planned for 6.0.0.CR1? If javax.script is part of JDK 6 now, what is needed to be done in AS (remove the 2.4.0 dep?)?	1	0	https://issues.jboss.org/browse/JBAS-7715
812	JBAS-7706	On a remote client I get: Failed to initialise session factory javax.jms.JMSException: Failed to initialise session factory at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSessionInternal(ClientSessionFactoryImpl.java:1043) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSession(ClientSessionFactoryImpl.java:790) at org.hornetq.jms.client.HornetQConnection.authorize(HornetQConnection.java:572) at org.hornetq.jms.client.HornetQConnectionFactory.createConnectionInternal(HornetQConnectionFactory.java:602) at org.hornetq.jms.client.HornetQConnectionFactory.createQueueConnection(HornetQConnectionFactory.java:128) at org.hornetq.jms.client.HornetQConnectionFactory.createQueueConnection(HornetQConnectionFactory.java:123) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.getQueueSession(MDBUnitTestCase.java:129) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.testQueue(MDBUnitTestCase.java:155) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.testQueue(MDBUnitTestCase.java:270) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:23) at junit.extensions.TestSetup.run(TestSetup.java:27) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:23) at junit.extensions.TestSetup.run(TestSetup.java:27) Caused by: HornetQException[errorCode=0 message=Failed to initialise session factory] Caused by: java.lang.IllegalArgumentException: Error instantiating connector factory "org.hornetq.integration.transports.netty.NettyConnectorFactory" at org.hornetq.core.client.impl.FailoverManagerImpl.instantiateConnectorFactory(FailoverManagerImpl.java:1016) at org.hornetq.core.client.impl.FailoverManagerImpl.<init>(FailoverManagerImpl.java:228) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.initialise(ClientSessionFactoryImpl.java:237) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSessionInternal(ClientSessionFactoryImpl.java:1039) Caused by: java.lang.ClassNotFoundException: org.hornetq.integration.transports.netty.NettyConnectorFactory at java.net.URLClassLoader$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:307) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:252) at org.hornetq.core.client.impl.FailoverManagerImpl.instantiateConnectorFactory(FailoverManagerImpl.java:1011)	0	0	https://issues.jboss.org/browse/JBAS-7706
813	JBAS-7703	Carlo, can you or one of your guys have a look at this? One thing I notice is ContainerDependencyMetaData has an unused jndiPolicy field, which if used would seem to be a hook for making a more sophisticated determination of the jndi name.	1	1	https://issues.jboss.org/browse/JBAS-7703
814	JBAS-7703	Do you have some time to make a servlet that does the same thing as simple.jsp, throw it in the war and invoke on that? If that fails, it's a more significant issue since as you say resource injection in JSP pages is not supported.	1	1	https://issues.jboss.org/browse/JBAS-7703
815	JBAS-7690	The produced Maven artifacts will just use whatever version is in the POM. The same goes for the base directory in the zip. According to the guidelines linked in the summary, the community release should be 6.0.0.Final. Dimitris, is there anything remaining to do on this issue?	1	1	https://issues.jboss.org/browse/JBAS-7690
816	JBAS-7689	Do we want all build artifacts to use that version string? I'm not sure if there is anything to change in the build for this. As long as the version is changed in the pom it will affect all the artifacts and the distribution zip.	0	0	https://issues.jboss.org/browse/JBAS-7689
817	JBAS-7661	Per discussion on jboss-dev, can we move this to a special osgi profile for now?	1	1	https://issues.jboss.org/browse/JBAS-7661

#	Requirement	Questions	Answered	Successfully Answered	URL
818	JBAS-7661	FYI, here a transcript of the chat that I had with Dimitris Friday 09 April 2010 ... [12:38:37] Thomas Diesler: The discussion is however relevant for the upcoming M3 release. ;-) [12:45:25] Thomas Diesler: the beauty about smoke-tests is that folks actually run them often [12:45:45] Dimitris Andreadis: i know, but your test target will also show up in hudson runs [12:45:45] Thomas Diesler: thats why I wanted osgi coverage in there out of the box ... [12:46:28] Thomas Diesler: again, whats your concern against osgi being part of 'all'? is it just boot time? [12:46:42] Dimitris Andreadis: yea, boot time ... [12:51:20] Dimitris Andreadis: I think the 'osgi' config is a good first step to show that "we do OSGi", too. And we can take it from there depending on user interest. [12:53:59] Thomas Diesler: my main concern with that approach is that other services i.e. ejb3, web, hornetq, etc. would not work as expected when a user installs jbosgi using the installer. Because there is no test coverage that tests these services with osgi in place. [12:54:07] Thomas Diesler: Here is a prime example http://community.jboss.org/thread/150453?tstart=0 [12:54:54] Thomas Diesler: Simple EJB3 SLSB breaks when osgi is installed [12:55:13] Thomas Diesler: Issues like this I'd like to see in the AS hudson run [12:55:37] Thomas Diesler: which I would not if its (only) in a separate profile [12:55:53] Dimitris Andreadis: but we could test for that with your custom osgi-test config, no? [12:57:01] Thomas Diesler: only if we run all-tests against an 'all+osgi' configuration [12:57:18] Thomas Diesler: I claim taht it would be better to make osgi part of all [12:57:35] Thomas Diesler: so that all test coverage must work with osgi in place [12:58:01] Dimitris Andreadis: i see your point [13:04:34] Thomas Diesler: Here is another example: https://jira.jboss.org/jira/browse/JBAS-7909 [13:04:51] Thomas Diesler: the 'default' profile would not even boot with osgi in place [13:05:17] Thomas Diesler: because the AOP subsystems makes certain assumptions that osgi bundle deployments do not sattisfy [13:05:59] Thomas Diesler: stuff like this I'd like to catch early before I want to ship osgi as part of AS [13:06:07] Dimitris Andreadis: in that case the only way to satisfy everybody is to copy over osgi for all tests and remove it afterwards. [13:06:20] Dimitris Andreadis: i.e. make all-test a custom config [13:06:38] Thomas Diesler: that would work ... [13:07:47] Dimitris Andreadis: maybe you can throw the idea/reasoning on the dev-list thread [13:08:26] Thomas Diesler: sure, let me add the boot time delta [13:08:38] Dimitris Andreadis: yes, thats imporant [13:19:17] Thomas Diesler: on my machine I get 'all' config boot times of osgi excluded: ~ 1:17min osgi included: ~ 1:37min This is an increase of ca. 29% [13:19:50] Dimitris Andreadis: 1:17 is a lot already ... [13:28:05] Dimitris Andreadis: all+osgi: 1:02 [13:29:52] Dimitris Andreadis: all-osgi: 49 [13:30:33] Dimitris Andreadis: +26.5% [13:31:26] Thomas Diesler: same result [13:31:31] Thomas Diesler: so what do you say? [13:33:13] Dimitris Andreadis: do the isolated testing anyway (custom config with smoke tests + osgi tests anyway) and discuss if we should alter the all testing [13:33:36] Thomas Diesler: ok	1	1	https://issues.jboss.org/browse/JBAS-7661
819	JBAS-7651	Stan, do you still consider this a BLOCKER for 6.0.0.Final?	0	0	https://issues.jboss.org/browse/JBAS-7651
820	JBAS-7612	I see this largely as a usage issue. The work unit stuff should be adapted to the new thread pool code since the old thread pool code predates JDK5 and Executors. Can you describe the requirements (preferably in a forum thread linked into this issue)?	0	0	https://issues.jboss.org/browse/JBAS-7612
821	JBAS-7588	>> The issue here is that org.jboss.system.RMIClassLoader is no longer getting used. >> It was previously configured in conf/jboss-service.xml before any subsystem (e.g. naming) used RMI. If you don't do it that way it won't work. Thanks a lot Adrian, for that help. Without it, this surely would have taken me a lot longer to even get a complete grasp of what's going on :) Just as a quick check, i booted the server with -Djava.rmi.server.RMIClassLoaderSpi=org.jboss.system.JBossRMIClassLoader in the JAVA_OPTS of the run script. The tests started passing consistently. I'll do the necessary changes (which you already explained).	1	1	https://issues.jboss.org/browse/JBAS-7588
822	JBAS-7583	Some time back there was a suggestion to move the SBM configuration to a central location instead of per server config/profile http://community.jboss.org/message/434149. Is that something that could be done?	0	0	https://issues.jboss.org/browse/JBAS-7583
823	JBAS-7563	Do we need to remove JRMPInvokerProxyHA JRMPInvokerProxy? I assume yes but wanted to see if others agree. Class JRMPInvoker has the following method which tells me that we do want to remove the proxies for JRMPInvoker: protected Invoker createDelegateInvoker() { return new JRMPInvokerProxy(this); }	1	1	https://issues.jboss.org/browse/JBAS-7563
824	JBAS-7563	From IRC re: WrapperDataSourceService: <bstansberry> smarlow: is that tied to JRMP? or just to Invoker? <bstansberry> smarlow: i.e. i suspect UnifiedInvoker is fine <bstansberry> yeah, it takes a property named "JMXInvokerName" where "JMXInvoker" means a legacy detached invoker that calls through the JMX bus <bstansberry> UnifiedInvoker meets the requirements <smarlow> well, it uses the Invoker interface but the comment mentions creating a JRMPInvokerProxy <bstansberry> where? <smarlow> around line 273 <smarlow> bstansberry: line 273 of WrapperDataSourceService.java <bstansberry> smarlow: ok, but it actually calls into GenericProxyFactory, which can create a proxy that can deal with any legacy detached invoker <bstansberry> a lot of code comments are from the early days when JRMP was the only detached invoker <smarlow> bstansberry: okay, so we should be good just updating the comment <bstansberry> yes	1	1	https://issues.jboss.org/browse/JBAS-7563
825	JBAS-7542	Shouldn't the solution be to update to use the correct library (or wait for that), rather than reverting to reflection?	1	1	https://issues.jboss.org/browse/JBAS-7542
826	JBAS-7539	Emanuel, if the profileservice-secured.jar is no longer needed, can I also remove ejb-jar.xml, profileservice-users.properties, and profileservice-roles.properties?	0	0	https://issues.jboss.org/browse/JBAS-7539
827	JBAS-7533	Can we make this an alpha3 with JBASM-33 fixed? That will stabilize the testsuite run by preventing the JBM clustering tests screwing it up. I volunteer to do JBASM-33 right away if not throwing the ISE is the right thing to do.	1	1	https://issues.jboss.org/browse/JBAS-7533
828	JBAS-7509	Is the console code going to be removed for M2? If not, please open a separate JIRA for cleaning out the code. The AS dist no longer includes the web-console, so this JIRA should be closed before M2 so that fact is reflected in the release notes.	1	1	https://issues.jboss.org/browse/JBAS-7509
829	JBAS-7509	I might have a go with it. What's the cutoff, Thursday 11th?	0	0	https://issues.jboss.org/browse/JBAS-7509
830	JBAS-7503	Howard, A couple questions: 1) When will the HornetQ upgrade happen? 2) How much effort is it to move trunk to 1.4.3.GA? Is it more than changing component-matrix/pom.xml and running the testsuite? I ask because 6.0.0.M1 includes 1.4.3.GA, and the development branch for the next milestone release does not. That's a regression, plus it makes other efforts to ensure things are working correctly in trunk more suspect. It's not good to leave the AS in a regressed state for a long time, even if we know that in the end JBM is going to be replaced.	1	1	https://issues.jboss.org/browse/JBAS-7503

#	Requirement	Questions	Answered	Successfully Answered	URL
831	JBAS-7457	Ok, the issue is that the NamingService is now deployed as an MCBean: <!-- An obsolete bean only needed if using legacy detached invoker access, or the createAlias/removeAlias operations --> <bean name="NamingService" class="org.jboss.naming.NamingService"> <annotation>@org.jboss.aop.microcontainer.aspects.jmx.JMX(name="jboss:service=NamingService", exposedInterface=org.jboss.naming.NamingServiceMBean, registerDirectly=true)</annotation> <!-- An example of using the unifed invoker as the transport. <depends optional-attribute-name="InvokerProxyFactory" proxy-type="attribute">jboss:service=proxyFactory,type=unified,target=Naming</depends> --> <property name="namingInfo"><inject bean="RemoteNamingBean"/></property> </bean> and this is not reproducing the same attributes as are exposed by default or via the xmbean descriptor. What I see is: {JNPServerSocketFactory=InvocationContext[name=JNPServerSocketFactory, type=null, attributeType=java.lang.String, isReadable=true, isWritable=true, returnType=null, signature=null], BootstrapURL=InvocationContext[name=BootstrapURL, type=null, attributeType=java.lang.String, isReadable=true, isWritable=false, returnType=null, signature=null], ClientSocketFactory=InvocationContext[name=ClientSocketFactory, type=null, attributeType=java.lang.String, isReadable=true, isWritable=true, returnType=null, signature=null], ClientSocketFactoryBean=InvocationContext[name=ClientSocketFactoryBean, type=null, attributeType=java.rmi.server.RMIClientSocketFactory, isReadable=true, isWritable=true, returnType=null, signature=null], InstallGlobalService=InvocationContext[name=InstallGlobalService, type=null, attributeType=boolean, isReadable=true, isWritable=true, returnType=null, signature=null], NamingProxy=InvocationContext[name=NamingProxy, type=null, attributeType=java.lang.Object, isReadable=true, isWritable=true, returnType=null, signature=null], RmiBindAddress=InvocationContext[name=RmiBindAddress, type=null, attributeType=java.lang.String, isReadable=true, isWritable=true, returnType=null, signature=null], Port=InvocationContext[name=Port, type=null, attributeType=int, isReadable=true, isWritable=true, returnType=null, signature=null], NamingInfo=InvocationContext[name=NamingInfo, type=null, attributeType=org.jnp.server.NamingBean, isReadable=true, isWritable=true, returnType=null, signature=null], Backlog=InvocationContext[name=Backlog, type=null, attributeType=int, isReadable=true, isWritable=true, returnType=null, signature=null], JNPServerSocketFactoryBean=InvocationContext[name=JNPServerSocketFactoryBean, type=null, attributeType=javax.net.ServerSocketFactory, isReadable=true, isWritable=true, returnType=null, signature=null], ServerSocketFactory=InvocationContext[name=ServerSocketFactory, type=null, attributeType=java.lang.String, isReadable=true, isWritable=true, returnType=null, signature=null], NamingInstance=InvocationContext[name=NamingInstance, type=null, attributeType=org.jnp.interfaces.Naming, isReadable=true, isWritable=false, returnType=null, signature=null], BindAddress=InvocationContext[name=BindAddress, type=null, attributeType=java.lang.String, isReadable=true, isWritable=true, returnType=null, signature=null], ServerSocketFactoryBean=InvocationContext[name=ServerSocketFactoryBean, type=null, attributeType=java.rmi.server.RMIServerSocketFactory, isReadable=true, isWritable=true, returnType=null, signature=null], RmiPort=InvocationContext[name=RmiPort, type=null, attributeType=int, isReadable=true, isWritable=true, returnType=null, signature=null], UseGlobalService=InvocationContext[name=UseGlobalService, type=null, attributeType=boolean, isReadable=true, isWritable=true, returnType=null, signature=null], CallByValue=InvocationContext[name=CallByValue, type=null, attributeType=boolean, isReadable=true, isWritable=true, returnType=null, signature=null], LookupListenerException=InvocationContext[name=LookupListenerException, type=null, attributeType=java.lang.Exception, isReadable=true, isWritable=false, returnType=null, signature=null]}	0	0	https://issues.jboss.org/browse/JBAS-7457
832	JBAS-7440	I couldn't reproduce locally for some reason (maybe it was fixed by someone already). Could you point me to the failure on hudson? Thanks!	1	1	https://issues.jboss.org/browse/JBAS-7440

834	JBAS-7434	Open question for anyone following/working this issue. Is there a way to make the com.arjuna.ArjunaOTS.ManagedSynchronizationPOA._invoke run in the user/application thread that commited the transaction. This would be an optimization for the case where the invocation came from a local thread. Assumingly, the user/application thread must be blocked on the completition of the com.arjuna.ArjunaOTS.ManagedSynchronizationPOA._invoke and we probably have a way to make this "local" optimization.	1	0	https://issues.jboss.org/browse/JBAS-7434
835	JBAS-7434	Which version of Hibernate is this? 3.5?	0	0	https://issues.jboss.org/browse/JBAS-7434

853	JBAS-7223	Juergen, could you provide this as a test case. Either VFS, Deployers or JBossAS test. If you need any help, we can continue the discussion on MC or JBossAS dev forums.	1	1	https://issues.jboss.org/browse/JBAS-7223
854	JBAS-7222	I've added hibernate-commons-annotations.jar & hibernate-validator.jar Regarding hibernate-client.jar, I see it produced by the ejb3 module in Branch_4_2: <!-- build hibernate-client.jar --> <!-- <unjar src="${hibernate.hibernate.lib}/hibernate3.jar" dest="${build.classes}" /> --> <jar jarfile="${build.lib}/hibernate-client.jar"> <zipfileset src="${hibernate.hibernate.lib}/hibernate3.jar"> <include name="org/hibernate/AssertionFailure.class"/> <include name="org/hibernate/**/*Exception.class"/> <include name="org/hibernate/collection/**"/> <include name="org/hibernate/exception/Nestable*.class"/> <include name="org/hibernate/exception/ExceptionUtils.class"/> <include name="org/hibernate/engine/SessionImplementor.class"/> <include name="org/hibernate/loader/CollectionAliases.class"/> <include name="org/hibernate/persister/collection/**"/> <include name="org/hibernate/pretty/MessageHelper.class"/> <include name="org/hibernate/type/Type.class"/> <include name="org/hibernate/EntityMode.class"/> <include name="org/hibernate/util/**"/> <include name="org/hibernate/proxy/**"/> </zipfileset> </jar> Do we want to do the same, or just copy the whole hibernate3.jar?	0	0	https://issues.jboss.org/browse/JBAS-7222
855	JBAS-7179	Should be resolved due to sub-task JBAS-7311 Both the upcoming JBAS 5.2 as well as in AS6.	1	1	https://issues.jboss.org/browse/JBAS-7179
856	JBAS-7179	The attached file may fix the issue in JBAS 5.1 but no guarantees.	1	1	https://issues.jboss.org/browse/JBAS-7179
857	JBAS-7179	Can we expect a fix for jboss-4.2.3.GA as well? It's the same behaviour, ExtendedFormAuthenticator.forwardToLoginPage will not invoke SecurityAssociationValve, so calls to WebAutentication will result in java.lang.IllegalStateException: request is null	0	0	https://issues.jboss.org/browse/JBAS-7179
858	JBAS-7085	Can you summarize what the JNDI binding names are for: 1) the remote AOP proxy(s) 2) the local java:* unsecured proxy Also, can you confirm that authentication is enabled by default for the AOP proxy and also describe the configuration steps for turning authentication on and off for it?	1	1	https://issues.jboss.org/browse/JBAS-7085
859	JBAS-7085	> the local unsecured ProfileService is only available via injection from the "ProfileService" MC bean Can you describe how to do this? I'll need to do it from within the jbas5 Jopr plugin, which will need to run both within the AS process (i.e. for the admin console) and external to it (in the JON Agent).	1	1	https://issues.jboss.org/browse/JBAS-7085
860	JBAS-7081	(11:38:59 AM) ccrouch: were you seeing this repeatedly? (11:38:59 AM) ccrouch: JBAS-7081 ConcurrentModificationException when invoking 'stop' managed operation on Queue managed component (11:42:21 AM) ips: no, i only saw that in a multi-threaded PS client i wrote that was sending concurrent requests (11:42:35 AM) ips: never saw it in admin console orJON regular use	1	0	https://issues.jboss.org/browse/JBAS-7081
861	JBAS-7078	Shouldn't this new work be a separate issue? The initial work is already in a released version and included in its release notes	1	1	https://issues.jboss.org/browse/JBAS-7078
862	JBAS-7074	that does not have jboss-dependency.jar in its classpath: java.lang.NoClassDefFoundError: org/jboss/dependency/spi/ControllerState at org.jboss.profileservice.spi.types.ControllerStateMetaType.<init>(ControllerStateMetaType.java:53) at org.jboss.profileservice.spi.types.ControllerStateMetaType.<clinit>(ControllerStateMetaType.java:49) at sun.misc.Unsafe.ensureClassInitialized(Native Method) at sun.reflect.UnsafeFieldAccessorFactory.newFieldAccessor(UnsafeFieldAccessorFactory.java:25) at sun.reflect.ReflectionFactory.newFieldAccessor(ReflectionFactory.java:122) at java.lang.reflect.Field.acquireFieldAccessor(Field.java:918) at java.lang.reflect.Field.getFieldAccessor(Field.java:899) at java.lang.reflect.Field.getLong(Field.java:528) at java.io.ObjectStreamClass.getDeclaredSUID(ObjectStreamClass.java:1614) at java.io.ObjectStreamClass.access$700(ObjectStreamClass.java:52) at java.io.ObjectStreamClass$2.run(ObjectStreamClass.java:425) at java.security.AccessController.doPrivileged(Native Method) at java.io.ObjectStreamClass.<init>(ObjectStreamClass.java:413) at java.io.ObjectStreamClass.lookup(ObjectStreamClass.java:310) at java.io.ObjectStreamClass.initNonProxy(ObjectStreamClass.java:547) at java.io.ObjectInputStream.readNonProxyDesc(ObjectInputStream.java:1583) at java.io.ObjectInputStream.readClassDesc(ObjectInputStream.java:1496) at java.io.ObjectInputStream.readOrdinaryObject(ObjectInputStream.java:1732) at java.io.ObjectInputStream.readObject0(ObjectInputStream.java:1329) at java.io.ObjectInputStream.readObject(ObjectInputStream.java:351) at org.jboss.managed.plugins.DefaultFieldsImpl.readObject(DefaultFieldsImpl.java:381) at sun.reflect.GeneratedMethodAccessor9.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at java.io.ObjectStreamClass.invokeReadObject(ObjectStreamClass.java:974) at java.io.ObjectInputStream.readSerialData(ObjectInputStream.java:1849) at java.io.ObjectInputStream.readOrdinaryObject(ObjectInputStream.java:1753) at java.io.ObjectInputStream.readObject0(ObjectInputStream.java:1329) at java.io.ObjectInputStream.readObject(ObjectInputStream.java:351) at org.jboss.managed.plugins.ManagedPropertyImpl.readVersion1(ManagedPropertyImpl.java:663) at org.jboss.managed.plugins.ManagedPropertyImpl.readObject(ManagedPropertyImpl.java:633) at sun.reflect.GeneratedMethodAccessor25.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at java.io.ObjectStreamClass.invokeReadObject(ObjectStreamClass.java:974) at java.io.ObjectInputStream.readSerialData(ObjectInputStream.java:1849) at java.io.ObjectInputStream.readOrdinaryObject(ObjectInputStream.java:1753) at java.io.ObjectInputStream.readObject0(ObjectInputStream.java:1329) at java.io.ObjectInputStream.readObject(ObjectInputStream.java:351) at java.util.HashMap.readObject(HashMap.java:1030) at sun.reflect.GeneratedMethodAccessor26.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at java.io.ObjectStreamClass.invokeReadObject(ObjectStreamClass.java:974) at java.io.ObjectInputStream.readSerialData(ObjectInputStream.java:1849) at java.io.ObjectInputStream.readOrdinaryObject(ObjectInputStream.java:1753) at java.io.ObjectInputStream.readObject0(ObjectInputStream.java:1329) at java.io.ObjectInputStream.defaultReadFields(ObjectInputStream.java:1947) at	1	0	https://issues.jboss.org/browse/JBAS-7074
863	JBAS-7052	Ian, this jira is not assigned to me but I wanted to try helping with a few questions. I read the above jira information and am left wondering a few things. I assume that you already put in effort to resolve this on your own, so please help me answer these questions: 1. Does the above exception occur after the server side getComponentsForType() has been invoked? I assume yes and that this is caused by the handling of the getComponentsForType() result object being returned. 2. Assuming that this is caused by the result value from the getComponentsForType(), what classes are being returned? 3. If you know, can you tell me why the org.jboss.profileservice.management.ManagedOperationDelegate class is being referenced in the above call stack?	1	1	https://issues.jboss.org/browse/JBAS-7052
864	JBAS-7052	Scott, it looks like you only made this fix in the Branch_5_x branch. I'm using the EAP5 branch. Can you make the change in that branch too?	1	1	https://issues.jboss.org/browse/JBAS-7052

869	JBAS-7047	I'm still not seeing any change of behavior in the latest 5.2 snapshot downloaded from hudson. The exception received client side is an IncompleteDeploymentException which contains a the contextsInError. The context in error that relates to WebBeansBootstrapBean contains the root cause of the exception. See http://anonsvn.jboss.org/repos/webbeans/ri/trunk/jboss-tck-runner/src/test/java/org/jboss/webbeans/tck/jbossas/WebBeansProfileServiceDeploymentExceptionTransformer.java for the way I extract the exception. Is this correct?	1	1	https://issues.jboss.org/browse/JBAS-7047
870	JBAS-7046	Where does this stand?	1	1	https://issues.jboss.org/browse/JBAS-7046
871	JBAS-7013	Hi Stan, I have reproduced this issue on a previously successfully running Seam 2.2.1.EAP5 web application when I upgraded the JBoss AS 5 (EAP) from jbdevstudio 3.0.1 using your cheat sheet (http://community.jboss.org/wiki/upgradejbossastojsf2). This is using Mojarra: 2.0.3 (b05), after the admin-console is successfully loaded but is of no effect - just a nuisance. I, too, am stuck with AS5 rather than deploying to AS5 based on client req't. Any more insights? Regards, Henry Katz	1	1	https://issues.jboss.org/browse/JBAS-7013
872	JBAS-7008	What do we need exposed? Any desired behaviour should be reflected in: http://anonsvn.jboss.org/repos/jbossas/branches/Branch_5_x/testsuite/src/main/org/jboss/test/profileservice/test/Ejb3MetricsUnitTestCase.java	0	0	https://issues.jboss.org/browse/JBAS-7008
873	JBAS-7008	Well the minimum would just be one ManagedObject for each entity bean with a 'name' property whose value is the EJB's name. As for metrics, I'm not sure what's available. If the Hibernate stats are not turned on, are there still any other metrics exposed by the EJB3 container for entity beans?	1	0	https://issues.jboss.org/browse/JBAS-7008
874	JBAS-7008	I've deployed an EJB3 entity bean, and the corresponding MBean in the jmx-console (jboss.j2ee:jar=entity-test.jar,name=EntityTestBean,service=EJB3) contains the following metrics: CreateCount R int MBean Attribute. InvokeStats R org.jboss.ejb3.statistics.InvocationStatistics MBean Attribute. CurrentSize R int MBean Attribute. RemoveCount R int MBean Attribute. MaxSize R int MBean Attribute. AvailableCount R int MBean Attribute. Can we expose these same metrics via the Entity Bean ManagedObject?	1	0	https://issues.jboss.org/browse/JBAS-7008
875	JBAS-7008	Are you sure EntityTestBean is an entity, not some SLSB used to test entities? Because these metrics make no sense for entities; they're not invoked, we don't track create counts, etc.	0	0	https://issues.jboss.org/browse/JBAS-7008
876	JBAS-7008	Yeah, my bad. EntityTestBean is indeed an SLSB. Jason, is it possible for you to use some Hibernate API to obtain the list of deployed entities and their associated deployments?	0	0	https://issues.jboss.org/browse/JBAS-7008
877	JBAS-6982	I'm still getting a "javax.ejb.EJBAccessException: Caller unauthorized" using either set of credentials. It looks like the difference may be in the method I'm using to authenticate. I'm setting the principal and credentials in the env props I pass when creating the InitialContext. My client code is at: https://svn.jboss.org/repos/jopr/trunk/etc/jbas5-ejb-client/src/main/java/test/EjbClient.java Whereas in: https://svn.jboss.org/repos/jbossas/branches/JBPAPP_5_0/testsuite/src/main/org/jboss/test/profileservice/testsecure/ProfileServiceUnitTestCase.java you are instead directly using JAAS to authenticate prior to doing the JNDI lookups. Is the method I'm using supposed to work or do I need to switch to the JAAS method?	1	1	https://issues.jboss.org/browse/JBAS-6982
878	JBAS-6942	Jesper, which MBean exposes the new operation and what is the name of the operation? Also, did you expose the functionality via the Profile Service as well, or only JMX? Thanks, Ian	1	0	https://issues.jboss.org/browse/JBAS-6942

Now I am getting an error as follows: ================================= Failed to parse source: Element {urn:jboss:security-config}policy is not bound as a global element. org.jboss.xb.binding.JBossXBException: Failed to parse source: Element {urn:jboss:security-config}policy is not bound as a global element. at org.jboss.xb.binding.parser.sax.SaxJBossXBParser.parse(SaxJBossXBParser.java:203) at org.jboss.xb.binding.parser.sax.SaxJBossXBParser.parse(SaxJBossXBParser.java:183) at ================================= What does that really mean?	1	1	https://issues.jboss.org/browse/JBAS-6836

#	Requirement	Questions	Answered	Successfully Answered	URL
882	JBAS-6804	Can you comment on these failures?	0	0	https://issues.jboss.org/browse/JBAS-6804
883	JBAS-6796	Emanuel, Did you mark this as resolved, because you thought we could update the Jopr jbas5 plugin's GenericValue adapter code to set the missing field(s) on the wrapped ManagedObject? If so, I'll need a little direction. Is attachmentName the only field I need to set, or are there others? What should I set the attachment name to for the security-domain property? You mentioned that you thought it was a good idea to represent the security-domain prop as a CompositeValue, rather than a GenericValue wrapping an MO. Is that something you plan on doing in the CR1 timeframe? Thanks.	1	1	https://issues.jboss.org/browse/JBAS-6796
884	JBAS-6789	Do you require support specifically for log4j deployments? Or simply the ability for each deployment to provide its own logging configuration?	1	1	https://issues.jboss.org/browse/JBAS-6789

888	JBAS-6779	Changing target release to 2.0.0.CR1 as GA depends on JBC 3.1.0.GA which won't be out. I expect no difference between 2.0.0.CR1 and 2.0.0.GA, nor do I expect any changes in JBC between current 3.1.0.CR1 and 3.1.0.GA that will affect ha-server-cache-jbc.	0	0	https://issues.jboss.org/browse/JBAS-6779
889	JBAS-6777	Using the EAP branch r90329, I'm still seeing the interleaving prop always having a value of false, for new ds.xml files that contain the interleaving element, as well as after I've updated the prop's value to true via the Profile Service. Did you forget to check the fix into the EAP branch?	1	1	https://issues.jboss.org/browse/JBAS-6777
890	JBAS-6777	Using EAP branch r90482, the 'interleaving' prop still gets reset to false by the Profile Service after I set it to true via a component update. I tried with both an XA Datasource and a Tx Connection Factory with XA enabled. Did you forget to check the fix into the EAP branch?	1	1	https://issues.jboss.org/browse/JBAS-6777
891	JBAS-6777	Yes, its in the https://svn.jboss.org/repos/jbossas/branches/JBPAPP_5_0 and the test is validating that the interleaving property is true on the underlying component: // Query the interleaving ManagementView mgtView = getManagementView(); ComponentType type = KnownComponentTypes.DataSourceTypes.XA.getType(); ManagedComponent txcf = mgtView.getComponent(jndiName, type); assertNotNull(txcf); ManagedProperty interleaving = txcf.getProperty("interleaving"); assertNotNull("interleaving", interleaving); MetaValue interleavingMV = interleaving.getValue(); assertNotNull("interleaving.value", interleavingMV); assertEquals("interleaving.value is true", SimpleValueSupport.wrap(Boolean.TRUE), interleavingMV); Can you attach the ds.xml file that is showing the false value.	1	1	https://issues.jboss.org/browse/JBAS-6777
892	JBAS-6765	The NPE is now avoided, but a null value is not valid for an ObjectName type property. There is no meaningful default. The stack trace you show does not look like the setting of a template property. Is this the origin of the property?	0	0	https://issues.jboss.org/browse/JBAS-6765
893	JBAS-6750	Where do I get this war from? Is it in the maven repository somewhere?	1	1	https://issues.jboss.org/browse/JBAS-6750
894	JBAS-6750	How does common/deploy work? Do files in there get deployed for all config sets? That directory doesn't even exist in my AS 5.1 build.	1	1	https://issues.jboss.org/browse/JBAS-6750
895	JBAS-6750	Create thread on jboss-development about this - having a common/deploy doesn't make sense if you don't plan to support all configuration under server/ - like minimal. Also remember that the idea of having configurations under server is to enable users to create their own. Are you going to support these also ? Email or forum thread, please.	0	0	https://issues.jboss.org/browse/JBAS-6750
896	JBAS-6750	Hey Paul Ian prepared a non-snapshot version to test the process http://repository.jboss.com/maven2/org/jboss/jopr/jopr-embedded-jbas5/1.2.0.CR1/ Can you make the necessary updates to get this in the JBAS build. We can then just update the version to say 1.2.0.CR2 next week. Thanks Charles	1	1	https://issues.jboss.org/browse/JBAS-6750
897	JBAS-6750	Ian, can you also add the CR1 version of the parent pom? When I tried to update to the new version, maven couldn't find the parent pom.	1	1	https://issues.jboss.org/browse/JBAS-6750
898	JBAS-6731	Did this doc find its way into the AS documentation?	1	0	https://issues.jboss.org/browse/JBAS-6731
899	JBAS-6728	Shouldn't the same be done for the "xa-transaction" property?	1	1	https://issues.jboss.org/browse/JBAS-6728
900	JBAS-6728	That is, should that property be read-only too, or can the transaction type of a datasource be flipped back and forth between XA and Local at runtime? If that is supposed to work, right now it's broken. When I change the value of xa-transaction from false to true and then call updateComponent(), the value gets reset to false.	1	1	https://issues.jboss.org/browse/JBAS-6728
901	JBAS-6721	1) I've updated the Queue and Topic service: the Name is now available and can be set in the template. But is now STATISTIC, as it does not have a setter. 2) done 3) Yes, I've set the messageCounterHistoryDayLimit to STATISTIC, as it does not work - if you specify a value for that the deployment fails, so until this is not fixed it should be ignored. 4) clustered is now readOnly, but still available in the template. Can we close this jira then ?	0	0	https://issues.jboss.org/browse/JBAS-6721
902	JBAS-6716	Emanuel, so the above is the meta data for the securityConfig property generated from the management interface. Can you explain how this maps to the attribute in the xml definition, e.g. <attribute name="SecurityConfig"> <security> <role name="publisher" read="true" write="true" create="false"/> </security> </attribute>	0	0	https://issues.jboss.org/browse/JBAS-6716

#	Requirement	Questions	Answered	Successfully Answered	URL
903	JBAS-6716	Which revision of 5_x are you using, as I cannot reproduce this in r87033?	0	0	https://issues.jboss.org/browse/JBAS-6716
904	JBAS-6716	r87027. Have you tried reproducing using the admin console?	0	0	https://issues.jboss.org/browse/JBAS-6716
905	JBAS-6701	Can you please provide more information? There are some test cases which are removing exploded deployments, so it might be something different.	1	1	https://issues.jboss.org/browse/JBAS-6701
906	JBAS-6701	Ian can this be resolved now?	1	1	https://issues.jboss.org/browse/JBAS-6701
907	JBAS-6697	That sounds close to what we need, but not exactly. In the Jopr jboss-as-4 plugin, when a user creates a new WAR or EAR via Jopr, they are prompted to enter the deploy directory, which is a path relative to the AS configSet dir. They would usually enter "deploy" or "farm", but we had a couple users who deployed to "my.custom.deploy" or something (e.g. when they wanted to keep their deploy dir on a different filesystem). We were hoping to provide this same option at app create time in the jboss-as-5 plugin. Prompting for a deployment profile name seems like it might be too low-level for an end-user; it might be more intuitive to them to just specify the directory they want to deploy to. What do you think? Charles, any thoughts?	0	0	https://issues.jboss.org/browse/JBAS-6697
908	JBAS-6689	Can you verify we are persisting the destination properties marked as DEPLOYMENT_RESTART across restarts in one of the jms destinations testcases Emanuel.	1	1	https://issues.jboss.org/browse/JBAS-6689
909	JBAS-6676	As I mentioned in my forum post, there is a similar issue where the {type=MCBean, subtype=*} ComponentType is used to represent multiple types of underlying managed resources - ServerInfo, etc. From the Jopr perspective, we'd much rather see a different ComponentType used for each different type of underlying entity. Is this feasible?	0	0	https://issues.jboss.org/browse/JBAS-6676
910	JBAS-6669	Can this now be resolved? I've set those config-proerties to readOnly, as config-properties can only be edited for NoTx and TxConnectionFactories.	1	1	https://issues.jboss.org/browse/JBAS-6669
911	JBAS-6664	Files Changed MODIFY /branches/Branch_5_x/connector/src/main/org/jboss/resource/deployers/management/DsDataSourceTemplateInfo.java Are you sure this is going to fix the issue for connection factories too?	1	1	https://issues.jboss.org/browse/JBAS-6664
912	JBAS-6657	Please let me know: was this ever resolved? I am implementing jboss 5.1.0.GA and get this same WARN re: Cannot create String name from non-Simple property: ManagedProperty{JNDIName,JNDIName,metaType=SimpleMetaType:java.lang.String. Is this a warning that can be ignored?	1	0	https://issues.jboss.org/browse/JBAS-6657
913	JBAS-6646	Another missing one is MBean.Platform. Also, for the MCBeans, would MCBean.* (i.e. with subtype=*) encompass all of the other MCBean subtypes (ServiceBindingSet, JTA, etc.), or do separate items need to be added to the MCBean enum for them?	1	0	https://issues.jboss.org/browse/JBAS-6646
914	JBAS-6630	Yep, that's it. See why I volunteered to take on the task? ;-)	0	0	https://issues.jboss.org/browse/JBAS-6630
915	JBAS-6625	This has been fully implemented in the EAP5 branch. See the JMXMappingUnitTestCase: Set<ManagedComponent> comps = mgtView.getComponentsForType(new ComponentType("EJB", "StatefulSession")); for (ManagedComponent comp : comps) { System.out.println(comp.getName()); ManagedProperty property = comp.getProperty("DetypedInvocationStatistics"); if ("jboss.j2ee:jndiName=ejb/StatefulCounterEjb,service=EJB".equals(comp.getName())) { MetaValue value = property.getValue(); System.out.println("Value = " + value); CompositeValue methodStatsMap = (CompositeValue)((CompositeValue) value).get("methodStats"); CompositeValue methodStats = (CompositeValue)methodStatsMap.get("count"); assertEquals(2L, ((SimpleValue)methodStats.get("count")).getValue()); return; } } fail("Could not find EJB!");	0	0	https://issues.jboss.org/browse/JBAS-6625
916	JBAS-6597	Have you tried w/o primkey-field in ejb-jar.xml? The primkey-field element is not used if the primary key maps to multiple container-managed fields (i.e. the key is a compound key). In this case, the fields of the primary key class must be public, and their names must correspond to the field names of the entity bean class that comprise the key.	0	0	https://issues.jboss.org/browse/JBAS-6597
917	JBAS-6587	Hi Adrian, this issue is closed, so I don't know if my comment reaches you. I also used YourKit to profile an app deployed on a JBoss 4.2.3 with an underlying MySQL database. Basically all stack traces where time is spent boil down to the following: <pre> -> our stuff --> some Hibernate method time spent so far: 1% ----> org.jboss.resource.adapter.jdbc.WrappedPreparedStatement.executeQuery() time spent in this method: 95% -------> net.sourceforge.jtds.jdbc.JtdsPreparedStatement.executeQuery() time spent in this method: 4% </pre> The interesting thing now is that 95% of the time is spent in WrappedPreparedStatement, BUT ONLY 4% in JtdsPreparedStatement.executeQuery(). So it looks as if 95% of the time is spent inside Jboss and only 4% in the actual query to the database!!! This also complies with the observation that our application is terribly slow, but the database load is still quite low. I debugged into org.jboss.resource.adapter.jdbc.WrappedPreparedStatement.executeQuery() to see where this time could have been spent and I have the suspicion it is in the synchronized(stateLock) block of the following method (called from WrappedPreparedStatement.executeQuery()): org.jboss.resource.adapter.jdbc.BaseWrapperManagedConnection.checkTransaction() So is this really the desired behaviour? Or are we doing something completely wrong (likely :-)? Any help is highly appreciated! Regards, Christian Naeger	1	0	https://issues.jboss.org/browse/JBAS-6587
918	JBAS-6582	Wasn't agreed that org.jboss.test.ejb3.servlet.unit.ServletUnitTestCase.testEJBServlet is not a valid usecase, and we need to remove from the suite?	1	1	https://issues.jboss.org/browse/JBAS-6582
919	JBAS-6580	I thought that might be the case when I looked closer at the failure. Would the fix also resolve JBAS-6140 that we've seen with OpenJDK?	0	0	https://issues.jboss.org/browse/JBAS-6580
920	JBAS-6568	Wrong component - should have been "JMS (JBossMQ)" - please move, thx.	1	0	https://issues.jboss.org/browse/JBAS-6568
921	JBAS-6554	Scott, is this out of date? The AS trunk component-matrix/pom.xml shows jboss-man at 2.1.1.SP1. A quick look at the subversion history for JBAS-6285 indicates Emanuel ported those changes to AS trunk.	0	0	https://issues.jboss.org/browse/JBAS-6554
922	JBAS-6549	Why do these problems show up in GA versions and not before? All JBoss has to do is load test a few apps and analyze results, no?	0	0	https://issues.jboss.org/browse/JBAS-6549
923	JBAS-6549	We also are suffering from the memory problems in AS5.0.1, so much so we've switched to IBM's JRE (which seems to help slightly with OOME's). Even still we have OOME's at least once a day in our production environment. Has anyone tried AS5.1.0 to see if it's better?	0	0	https://issues.jboss.org/browse/JBAS-6549
924	JBAS-6549	Magnus, thanks for reporting. Is this memory usage after boot up and before accessing your application? Or is this the memory usage of a clean AS 5.1 without your applications deployed?	0	0	https://issues.jboss.org/browse/JBAS-6549

925	JBAS-6508	Latest vfs snapshot fixes this. C:\projects\branches\jbossas\Branch_5_0\testsuite>build jboss-minimal-tests Calling ..\tools\bin\ant.bat jboss-minimal-tests Buildfile: build.xml jboss-minimal-tests: [server:start] Starting server "minimal", with command (start timeout is 120 seconds): [server:start] C:\Java\jdk1.5.0_14\bin\java -cp C:\projects\branches\jbossas\Branch_5_0\build\output\jboss-5.0.1.GA\bin\run.jar;C:\Java\jdk1.5.0_14\lib\tools.jar -Djboss.vfs.forceNoReaper=true org.jboss.Main -c minimal -b localhost -g DefaultDomain [copy] Copying 1 file to C:\projects\branches\jbossas\Branch_5_0\build\output\jboss-5.0.1.GA\server\minimal\deploy [echo] Minimal server started, stopping [delete] Deleting: C:\projects\branches\jbossas\Branch_5_0\build\output\jboss-5.0.1.GA\server\minimal\deploy\shutdown.sar BUILD SUCCESSFUL Total time: 23 seconds	0	0	https://issues.jboss.org/browse/JBAS-6508
926	JBAS-6411	Example: $ java -version java version "1.6.0_0" IcedTea6 1.4 Runtime Environment (build 1.6.0_0-b12) OpenJDK Server VM (build 10.0-b19, mixed mode) With the code change, boot.log now shows the same information: 00:40:36,112 INFO [ServerInfo] Java version: 1.6.0_0,Sun Microsystems Inc. 00:40:36,112 INFO [ServerInfo] Java Runtime: IcedTea6 1.4 (fedora-7.b12.fc10-i386) Runtime Environment (build 1.6.0_0-b12) 00:40:36,112 INFO [ServerInfo] Java VM: OpenJDK Server VM 10.0-b19,Sun Microsystems Inc.	1	1	https://issues.jboss.org/browse/JBAS-6411
927	JBAS-6411	Re: Before doing changes, I did the changes last night. Re: isn't boot.log logging *all* system properties already? It is indeed. However, we could use your same argument to remove the following two lines which also come from system properties.: 00:40:36,112 INFO [ServerInfo] Java version: 1.6.0_0,Sun Microsystems Inc. 00:40:36,112 INFO [ServerInfo] Java VM: OpenJDK Server VM 10.0-b19,Sun Microsystems Inc. The idea here is to visually have the same feedback as you get when doing java -version. It's a matter of all or nothing with regards to printing Java/VM version information. I'm happy with either as long as we're consistent. To show information partially, like it was before I did these changes can be confusing.	1	1	https://issues.jboss.org/browse/JBAS-6411
928	JBAS-6402	Is there some other configuration change/deployer update needed to deal with the current VFS issues?	1	1	https://issues.jboss.org/browse/JBAS-6402
929	JBAS-6402	Where is that?	1	1	https://issues.jboss.org/browse/JBAS-6402
930	JBAS-6392	Since this fix was integrated into AS 5 Branch_5_0, the testsuite's web server config fails to shutdown. See: http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-testSuite-sun15-sun16/415/console The testsuite target is: tests-web-profile. Can you comment on this failure?	1	1	https://issues.jboss.org/browse/JBAS-6392
931	JBAS-6392	Is that a public address? I don't have access to it. I have this problem in 4.2 generally with the HTTP invoker WHENEVER I've used it at least once regardless of this change. It isn't related to initiating a Jaas authentication.	1	1	https://issues.jboss.org/browse/JBAS-6392
932	JBAS-6390	Why adding host@port syntax instead of supporting standard notation for URL containg IPV6 address? Thanks.	1	1	https://issues.jboss.org/browse/JBAS-6390
933	JBAS-6390	Could not we add support for standard URL notation containing IPV6 address? E.g.: jnp://[fec0::f101:21a:a0ff:fea0:d745]:1099 Some test cases in the testsuite rely on HOST:PORT notation. Thanks.	1	1	https://issues.jboss.org/browse/JBAS-6390
934	JBAS-6386	Do I also find that problem in the construction of my applications, can you position us on as we should proceed?	0	0	https://issues.jboss.org/browse/JBAS-6386

936	JBAS-6378	Jason, where does "AS5 Administration And Configuration Guide" live?	1	1	https://issues.jboss.org/browse/JBAS-6378
937	JBAS-6378	Jason, I wrote a new Remoting chapter for EAP 5. Is there any reason I shouldn't commit it for AS 5 as well?	0	0	https://issues.jboss.org/browse/JBAS-6378
938	JBAS-6346	Yeah weird, I didn't realize until your comment that the ClusterChooser had been factored out of the invocation retry (which is how it was done in the EJB2 stack). Is that really wise? It isn't obvious to me that they can really be separate concerns along the chain of command pattern that forms the client interceptor stack.	0	0	https://issues.jboss.org/browse/JBAS-6346
939	JBAS-6334	When do you expect 1.4.3.GA to be ready? In the meantime should we move to 1.4.2.GA.SP1 in AS Branch_5_x?	0	0	https://issues.jboss.org/browse/JBAS-6334

#	Requirement	Questions	Answered	Successfully Answered	URL
940	JBAS-6334	I think we should update jbm 1.4.2.GA.SP1 to Branch_5_x. Because it's the latest release. As for 1.4.3.GA, I'm not sure. Can you make some comment Clebert?	0	0	https://issues.jboss.org/browse/JBAS-6334
941	JBAS-6334	So which release is the target and when to expect it?	1	1	https://issues.jboss.org/browse/JBAS-6334
942	JBAS-6330	I've committed initial work into 5_x branch. Max, can you check if this works for you Tools guys?	1	1	https://issues.jboss.org/browse/JBAS-6330
943	JBAS-6330	What exactly was this list? String, array, ... What did it show? Folders to scan, actual deployments, ... This is probably the old interface: - http://anonsvn.jboss.org/repos/jbossas/branches/Branch_5_x/system-jmx/src/main/org/jboss/deployment/scanner/URLDeploymentScannerMBean.java	1	1	https://issues.jboss.org/browse/JBAS-6330
944	JBAS-6330	This should now be fixed in 5_x branch. Rob, can you try it?	1	1	https://issues.jboss.org/browse/JBAS-6330
945	JBAS-6330	1) Fix removeURL to make sure it undeploys 2) I'm not seeing suspendDeployment or resumeDeployment at all here. Eh?	1	1	https://issues.jboss.org/browse/JBAS-6330
946	JBAS-6330	Cool. Ales - how about 5.0.x ? are those fixes rolled back, the same as in 5.x or some partial/halfbaked state ?	1	1	https://issues.jboss.org/browse/JBAS-6330
947	JBAS-6330	This patch is for unit tests. It has found a bug in listDeployedURLs I am not sure that the unit test works 100% even after listDeployedURLs is fixed so the unit test may need some tweaking. Another issue is that the full test takes 40 seconds to run. This seems a little long for me, but the nature of deployment scanning takes a while. Is there a way to force a scan so that maybe it can go faster?	1	1	https://issues.jboss.org/browse/JBAS-6330
948	JBAS-6330	better unit test. Nothing needs to be changed on the server side... but I did need to increase the delay on the client side. I have a general feeling 5 seconds is too much but what can I do to lower it? If I lower it it fails.	1	1	https://issues.jboss.org/browse/JBAS-6330
949	JBAS-6320	After some more investigating it seems that jboss as jars are now located at http://repository.jboss.org/maven2/org/jboss/jbossas If so, it looks like http://repository.jboss.org/maven2/org/jboss/jbossas/jboss-as-client/5.0.0.GA/jboss-as-client-5.0.0.GA.pom could fit the bill. Could you confirm that this pom is equivalent to the old jbossall-client.jar?	0	0	https://issues.jboss.org/browse/JBAS-6320
950	JBAS-6245	Kabir can you take a look please? http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15-sun16/lastBuild/testReport/org.jboss.test.asynch/AsynchTestCase/unknown/ I think this started when I synched o.j.invocation.InvokerInterceptor with the one from Branch_4_2 and the new version has a an anonymous inner class /** These objects are safe to reuse in callByValue operations */ static final SafeClone safeToReuse = new SafeClone(){ public boolean isSafeToReuse(Object obj) { if (obj==null) { return false; I can see the class included in the jboss.jar and jboss-client.jar What's the problem with the inner class? Caused by: org.jboss.aop.instrument.TransformationException: Failed to aspectize class org.jboss.invocation.InvokerInterceptor. Could not find class it references org.jboss.invocation.InvokerInterceptor$1 It may not be in your classpath and you may not be getting field and constructor weaving for this class. at org.jboss.aop.instrument.Instrumentor.convertReferences(Instrumentor.java:708) at org.jboss.aop.instrument.Instrumentor.transform(Instrumentor.java:763) at org.jboss.aop.instrument.GeneratedAdvisorInstrumentor.transform(GeneratedAdvisorInstrumentor.java:119) at org.jboss.aop.SuperClassesFirstWeavingStrategy.instrumentClass(SuperClassesFirstWeavingStrategy.java:202)	1	1	https://issues.jboss.org/browse/JBAS-6245
951	JBAS-6244	HI all, when this problem occur , it seems that the exceptions mechanism in Jboss is affected. Another problem is that the affected timer stops. In My opinion the transactions that cannot recover , should be just quit. Can i do this ..somehow? Or is there another way to deal with the situation ? Thanks in advance!	1	1	https://issues.jboss.org/browse/JBAS-6244
952	JBAS-6242	In my opinion, what it is doing is correct. The format of the statistics is determined by the statistics formatter. Which by default returns a String, but it could return anything. A collection of JBossSubPoolStatistics would be the most obvious alternative which would map to a collection of composite types for the same. You need to be able handle the return type dynamically, Its called polymorphism which is an integral part of any object orientated language. :-) i.e. MetaValue returnValue = invoke(...) MetaType type = returnValue.getMetaType(); // etc. If you can't handle that, then I'd suggest we add a new method which hardwires the String formatter with a String return type and only annotate that as a ManagedOperation. But this issue will come up elsewhere where the return type cannot be constrained so easily.	0	0	https://issues.jboss.org/browse/JBAS-6242
953	JBAS-6235	Not joining the cluster until everything else is started isn't really possible, because the proper startup of some of that "everything else" requires that the node has joined the cluster. But, clustered services should still work properly during the startup/shutdown period. To the extent they aren't, that's something we need to address on a case by case basis. Could you open a thread on http://www.jboss.com/index.html?module=bb&op=viewforum&f=155 and give more details about your specific issues?	1	0	https://issues.jboss.org/browse/JBAS-6235
954	JBAS-6226	Needs to be rolled back. Stefan, can u do the rollback?	0	0	https://issues.jboss.org/browse/JBAS-6226
955	JBAS-6221	This "bug report" contains at least two misunderstandings. 1) JMSXDeliveryCount is set by the jms provider. The DLQHandler just references it. (Also, if your jms provider already has DLQ handling on the server - unlike JBossMQ - then you don't need any DLQ handling within JBoss). 2) EJB3 has never referenced standardjboss.xml or had invoker/container-configurations It uses aop and annotations to override/control configurations. For (1) you should talk to your jms provider. For (2) I've discussed this before with the EJB3 team (I won't go into details here). So I'm making this a feature request for them. Discussions around this feature request belong in the forums (which is where also this post should have originated). JIRA is for tracking what gets done, it is the release notes. It should not be used for confusing other users with misguided speculation.	0	0	https://issues.jboss.org/browse/JBAS-6221

#	Requirement	Questions	Answered	Successfully Answered	URL
956	JBAS-6219	client passes back an updated copy that is never written back onto the original template properties. Is there some way your caching the original template info? I have added logging of the DeploymentTemplateInfo as received and after updated, and for this output I have run the testAddDataSource test twice, but I still see null/default values in the template properties that are updated to non-null values: 1552 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: valid-connection-checker-class-name,null 1552 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: valid-connection-checker-class-name,SimpleMetaType:java.lang.String:org.jboss.resource.adapter.jdbc.vendor.DummyValidConnectionChecker 1553 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: jndi-name,SimpleMetaType:java.lang.String: 1553 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: jndi-name,SimpleMetaType:java.lang.String:TestLocalTxDs 1553 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: validate-on-match,SimpleMetaType:java.lang.Boolean:true 1553 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: validate-on-match,SimpleMetaType:java.lang.Boolean:false 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: connection-url,null 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: connection-url,SimpleMetaType:java.lang.String:jdbc:hsqldb:. 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: metadata,null 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: metadata,CompositeValueSupport: metaType=[MutableCompositeMetaType{org.jboss.resource.metadata.mcf.DBMSMetaData items=[name=typeMapping type=java.lang.String]}] items=[typeMapping=null] 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: url-delimiter,null 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: url-delimiter,SimpleMetaType:java.lang.String:+ 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: driver-class,null 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: driver-class,SimpleMetaType:java.lang.String:org.hsqldb.jdbcDriver 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: min-pool-size,SimpleMetaType:java.lang.Integer:0 1554 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: min-pool-size,SimpleMetaType:java.lang.Integer:0 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: prepared-statement-cache-size,SimpleMetaType:java.lang.Integer:0 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: prepared-statement-cache-size,SimpleMetaType:java.lang.Integer:12 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: exception-sorter-class-name,null 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: exception-sorter-class-name,SimpleMetaType:java.lang.String:org.jboss.resource.adapter.jdbc.vendor.DummyExceptionSorter 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property before: max-pool-size,SimpleMetaType:java.lang.Integer:10 1555 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - template property after: max-pool-size,SimpleMetaType:java.lang.Integer:11 1555 [main] DEBUG	1	1	https://issues.jboss.org/browse/JBAS-6219
957	JBAS-6204	In the current trunk I added a test of the security-domain property type and value of the DefaultDS and its returning the expected GenericMetaType/GenericMetaValue: 1056 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - security-domain type: GenericMetaType:org.jboss.managed.api.ManagedObject 1056 [main] DEBUG org.jboss.test.profileservice.test.ProfileServiceUnitTestCase - security-domain value: GenericMetaType:org.jboss.managed.api.ManagedObject:ManagedObject{org.jboss.resource.metadata.mcf.SecurityDomainMetaData} Is there a specific datasource deployment your seeing the incorrect type on?	0	0	https://issues.jboss.org/browse/JBAS-6204
958	JBAS-6200	Shelly, can this be resolved now?	0	0	https://issues.jboss.org/browse/JBAS-6200
959	JBAS-6178	Did you just add the missing org.jboss.invocation.MarshalledValueEX class? In my local copy I've more or less synched the Branch_4_2 changes of org/jboss/invocation/** and there are quite a few. With that I believe I get similar results.	1	1	https://issues.jboss.org/browse/JBAS-6178
960	JBAS-6171	Isn't this moving to the next point release?	0	0	https://issues.jboss.org/browse/JBAS-6171
961	JBAS-6144	Would synchronous replication help? With async there is a small window (or it could be larger depending on the communication channel queue length). If we want to track down the why, maybe some debug logging in key places would help. Certain applications that require absolute data integrity would be happier with sync (IMO). Applications that don't mind a short period of dirty data on the failed over to node, would be happy with async (but the test probably needs enhancing to properly handle async IMO).	1	0	https://issues.jboss.org/browse/JBAS-6144
962	JBAS-6139	Can you coordinate with Rajesh to make the JBOSS-AS-5.0.x build work by accessing the jboss-repository only? http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x/	0	0	https://issues.jboss.org/browse/JBAS-6139
963	JBAS-6133	Shouldn't this issue be moved to JBossAS-6.x?	0	0	https://issues.jboss.org/browse/JBAS-6133
964	JBAS-6133	I updated trunk to use Quartz 1.7.3 in r102577 [1]. I had to add a few methods to JBossQuartzThreadPool to implement the interface. Ales, can you take a look at my changes? I wasn't sure what to put for the new method blockForAvailalbeThreads() so I just return 1 to say that there is always a thread available. [1]http://fisheye.jboss.org/changelog/JBossAS/?cs=102577	1	1	https://issues.jboss.org/browse/JBAS-6133
965	JBAS-6125	Is this setting on the client side?	1	1	https://issues.jboss.org/browse/JBAS-6125
966	JBAS-6125	So, what's then that got to do with tests? Tests == client side. ;-)	1	1	https://issues.jboss.org/browse/JBAS-6125
967	JBAS-6105	Jesper can you profile AS in trunk to find out what's wrong?	0	0	https://issues.jboss.org/browse/JBAS-6105
968	JBAS-6105	Ales, could you take a look at the BaseClassLoader and check what's going on ? Feel free to reassign back to me and I'll take another look once I get back	0	0	https://issues.jboss.org/browse/JBAS-6105
969	JBAS-6105	This was recently fixed: https://jira.jboss.org/jira/browse/JBCL-49 Jasper, can you re-run your profiling, but with jboss-cl build from trunk?	0	0	https://issues.jboss.org/browse/JBAS-6105
970	JBAS-6055	There are two versions of jsp-api and servlet-api currently being used javax.servlet.jsp:jsp-api:jar:2.1 vs. jboss.web:jsp-api:jar:2.1.1.GA javax.servlet:servlet-api:jar:2.5 vs. jboss.web:servlet-api:jar:2.1.1.GA Are these duplicates, or are they both required?	1	1	https://issues.jboss.org/browse/JBAS-6055
971	JBAS-6055	I've cleaned up most of the dependency issues identified by Fernando and Dimitrius. I'm not sure how to resolve the servlet-api and jsp-api issue. Based on the discussion on jboss-development should we use the one from jboss.web? The other remaining issue is the xml-apis duplication. We have: apache-xerces:xml-apis:jar:2.9.1 and this is pulled in transitively. xml-apis:xml-apis:jar:1.0.b2 Which one should we use?	1	1	https://issues.jboss.org/browse/JBAS-6055

#	Requirement	Questions	Answered	Successfully Answered	URL
972	JBAS-6055	Re: FastInfoset.jar, my guess is we should be importing only sun-fi, since this is the one explicitly specified in the component-matrix pom: [INFO] +- sun-fi:FastInfoset:jar:1.2.2:compile [INFO] +- sun-fi:FastInfosetUtilities:jar:1.2.2:compile jbossws uses com.sun.xml.fastinfoset:FastInfoset:jar:1.2.2:compile, but I understand it's essentially the same binary under a different name. The sun-jaxws one, should propably be exluded, too: [INFO] +- sun-jaxws:FastInfoset:jar:2.1.1:compile What's gets deployed with AS is a mystery to me, because of the stupid jbossws-deploy-macros.xml: <patternset id="jbossws.service.lib.patternset"> <include name="**/FastInfoset.jar"/> By comparing the jars, I think the sun-fi is deployed.	1	1	https://issues.jboss.org/browse/JBAS-6055
973	JBAS-6047	Ivo, these tests started failing after your testsuite changes to JBAS-5349. The first issue has been resolved. Can you look at this issue further and determine if your changes affect these remaining two tests. If not, pls reassign back to me.	1	1	https://issues.jboss.org/browse/JBAS-6047
974	JBAS-6013	How do I create such a queue using @MessageDriven annotation only? I tried to build latest jboss where I could find all the new stuff but could not figure out how to do this.	1	0	https://issues.jboss.org/browse/JBAS-6013
975	JBAS-6013	Where can I find documentation on how to use this CreateDestination feature with an annotation based MDB?	0	0	https://issues.jboss.org/browse/JBAS-6013
976	JBAS-6008	What you are doing wrong is posting help requests to JIRA. In what does this issue in your ant task/jndi configuration need any work doing on the application server by any jboss developer? Use the forums to ask for help.	0	0	https://issues.jboss.org/browse/JBAS-6008
977	JBAS-5965	The error-message using 5.0.0-CR2 is as follow: bash-3.2$ ./run.sh ./run.sh: line 89: ulimit: open files: cannot modify limit: Invalid argument run.sh: Could not set maximum file descriptor limit: unlimited ========== ... I hope to find time to fix it this week.	1	1	https://issues.jboss.org/browse/JBAS-5965
978	JBAS-5965	Marc, I having the issue you mentioned with 4.2.3 It looks like this: (I'm using JDK 1.6) jboss/bin/./run.sh: line 89: ulimit: open files: cannot modify limit: Invalid argument run.sh: Could not set maximum file descriptor limit: unlimited ========== JBoss Bootstrap Environment JBOSS_HOME: /Users/Troy/jboss JAVA: java JAVA_OPTS: -Dprogram.name=run.sh -Xms128m -Xmx512m -Dsun.rmi.dgc.client.gcInterval=3600000 -Dsun.rmi.dgc.server.gcInterval=3600000 CLASSPATH: /Users/Troy/jboss/bin/run.jar jboss starts, but I cannot seem to get a page up, because of this: description The requested resource (/hello) is not available. JBossWeb/2.0.1.GA I would really appreciate any suggestions. I've searched everywhere. the same jboss works fine with jdk 1.6 in windows. Is there something wrong with the environment variables? thanks	1	1	https://issues.jboss.org/browse/JBAS-5965
979	JBAS-5965	I suppose you are talking about OSX Leopard. Did you add the line "ulimit -n 1024" to run.sh? It will set the maximum number of open files. The error message will disappear.	1	1	https://issues.jboss.org/browse/JBAS-5965
980	JBAS-5965	Hi Marc, I didn't see your jboss_init_osx.sh attached. Did you write one? Can you share? Thanks...	1	1	https://issues.jboss.org/browse/JBAS-5965
981	JBAS-5945	Change is a bit more complex than what's in the JIRA description. What's going on in initAfterLoad() is really three things: 1) Storing refs to the session Manager and some of its components. This is eliminated; the session no longer drops its refs via serialization, so it already has them. 2) populateAttributes(). Moved into update(), with real work actually done in the ha-server-cache layer. 3) Activation notifications. This is still called by JBossCacheManager, but we just use the existing notifyDidActivate method.	0	0	https://issues.jboss.org/browse/JBAS-5945
982	JBAS-5930	Is EJBTHREE-1487 suficient for the changes you want to make?	0	0	https://issues.jboss.org/browse/JBAS-5930
983	JBAS-5928	Branch_4_2 haven't IMAPMailFolder/POP3MailFolder too. Seam, they have their branches about mail.rar, right? Will seam depends on Branch_4_2 or trunk after AS 5.0 release?	1	1	https://issues.jboss.org/browse/JBAS-5928
984	JBAS-5927	There are still a couple of dependencies on CR versions of other stuff. jboss-aop-jdk50-client - 2.0.0.CR16 jboss-jca-api - 1.5.0.CR2 jboss-transaction-api - 1.0.1.CR2 Should I wait until these are released before doing a GA release of integration?	0	0	https://issues.jboss.org/browse/JBAS-5927
985	JBAS-5920	The issue is why does it have (JBoss)AppClientMetaData at all. The problem is the AppClientScanningDeployer: String mainClassName = getMainClassName(unit); if(mainClassName == null) return; Class<?> mainClass = unit.getClassLoader().loadClass(mainClassName); log.info("mainClass = " + mainClass); if(hasAnnotations(mainClass)) { // add a dummy application client dd to fire up the ejb3 client deployer dd = new JBossClientMetaData(); unit.addAttachment(JBossClientMetaData.class, dd); } // TODO: should we check for type of annotations? private boolean hasAnnotations(Class<?> cls) { ... } The answer to that question is that it should only process jars with a main-class if it has the EJB3 environment annotations, e.g. @Resource Otherwise it is going to make most jars with a main-class in the manifest appclients (with the likely assumption that any modern class has some annotations). The NPE still needs fixiing: JBossAppMetaData earMD = earUnit.getAttachment(JBossAppMetaData.class); // oops earMD == null when the parent is not an ear. String libDir = earMD.getLibraryDirectory(); The AppClientScanningDeployer should probably include a similar test for the parent being an ear?	1	1	https://issues.jboss.org/browse/JBAS-5920
986	JBAS-5918	Oddly the issue doesn't appear when I execute only one target with few tests between start and stop. Anyways, the bug seems related to https://issues.apache.org/bugzilla/show_bug.cgi?id=41368 Should I care to try out the patch and go for patching the built-in ant, or just explain in the build.xml why the stop command is commented out?	0	0	https://issues.jboss.org/browse/JBAS-5918
987	JBAS-5905	Just in case, opened a forum thread to get input from JBM folks as to why this is this way. But based on following chat w/ Bela, I'll add FD; if there's a reason not to, it can always be removed for 5.0.0.GA. [10:26:22] Brian Stansberry: can you imagine any reason to just have FD_SOCK and not FD in a TCP-based stack? [10:26:46] Bela Ban: No, not really	1	1	https://issues.jboss.org/browse/JBAS-5905
988	JBAS-5900	Hi, Can some one please give me the solution in jboss-structure.xml in JBoss5.1.0? That would be great.	0	0	https://issues.jboss.org/browse/JBAS-5900
989	JBAS-5891	Let me understand: are you fixing those 2 tests as well (or what is needed?)	1	1	https://issues.jboss.org/browse/JBAS-5891
990	JBAS-5872	I agree. Additionally, I have been looking to incorporate the tests-matrix for AS 5.0 considering the client/server combinations: 1) 4.2.x jdk5 ==> 5.0 jdk5 2) 4.2.x jdk6 ==> 5.0 jdk6 3) 4.2.x jdk5 ==> 5.0 jdk6 The tests-matrix test targets and associated sources were removed from jbossas/trunk. Is there some history of why that was deliberately done? With the client/server combination of #1) above, all tests fail due to: 2008-08-21 14:09:51,900 ERROR [org.jboss.remoting.transport.socket.ServerThread] (WorkerThread#0[127.0.0.1:53720]) WorkerThread#0[127.0.0.1:53720] exception occurred during first invocation java.lang.ClassNotFoundException: org.jboss.invocation.MarshalledValueEX at java.net.URLClassLoader$1.run(URLClassLoader.java:200)	1	1	https://issues.jboss.org/browse/JBAS-5872
991	JBAS-5872	If the jdks themselves are inconsistent regarding their SUIDs then it's not our fault :) I mean what can we do to correct this?	1	0	https://issues.jboss.org/browse/JBAS-5872
992	JBAS-5870	I've created this JIRA here because I'm not sure whether such handler would end up going in AS or Common because the handler needs to be available to the System classloader (sun.misc.Launcher$AppClassLoader) so maybe it'd need to live in run.jar?	1	0	https://issues.jboss.org/browse/JBAS-5870

#	Requirement	Questions	Answered	Successfully Answered	URL
993	JBAS-5867	Is this the correct fix? This issue was also seen in the refs tests (JBAS-5806). The refs tests had similar lookups for the remote interface: ic.lookup("BeanImpl3x/remote") but changed the tests to do the lookup using mappedName. So the way to do the lookup is to include the entire interface name in the lookkup? - BeanRemote3x bean = (BeanRemote3x) ic.lookup("BeanImpl3x/remote-org.jboss.test.profileservice.ejb3x.BeanRemote3x"); Or, we could used the bean mappedName too? + BeanRemote3x bean = (BeanRemote3x) ic.lookup("profileservice/ejb3x/BeanRemote3x");	0	0	https://issues.jboss.org/browse/JBAS-5867
994	JBAS-5866	What type of logs do you want. Something that looks weird to me is the testsuite executions do not produce the output/log/test.log anymore.	0	0	https://issues.jboss.org/browse/JBAS-5866
995	JBAS-5866	A test log can be found here: http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15/869/artifact/trunk/testsuite/output/log/test.log Do you need something more?	0	0	https://issues.jboss.org/browse/JBAS-5866
996	JBAS-5856	This task was about placing properties on the ports.. I was planning to use the old JMX style XML. I thought you were providing that kind of change. (sorry for misunderstanding your comments) We are moving towards JBM 2, and we don't have the MC in place at JBM, so we can't maintain / test this configuration. Is it okay if we keep the old XML style?	0	0	https://issues.jboss.org/browse/JBAS-5856

#	Requirement	Questions	Answered	Successfully Answered	URL
1018	JBAS-5673	I'm reopening this because the fix can cause a NPE for JSF managed beans. I changed the JSF integration test in the testsuite. If you run org.jboss.test.web.test.JSFIntegrationTestCase you will see the NPE. I used a JButton as a managed bean in faces-config.xml like this: <managed-bean> <description>Use a swing JButton as a simple javabean</description> <managed-bean-name>myJButton</managed-bean-name> <managed-bean-class>javax.swing.JButton</managed-bean-class> <managed-bean-scope>session</managed-bean-scope> <managed-property> <property-name>text</property-name> <value>Initial Value</value> </managed-property> </managed-bean> Note that this is an odd example. I'm not actually using JButton for anything other than the fact that I can use it as a holder to getText()/setText(). But it is perfectly valid to use a JDK class for this purpose. The NPE is in TomcatInjectionContainer.isDymanicBean() where it says: // Check if the object was loaded by a dynamic class loader (e.g. Jasper) String classLoaderName = object.getClass().getClassLoader().getClass().getName(); if(dynamicClassLoaders.contains(classLoaderName)) return true; Since JButton is loaded by the bootstrap classloader, object.getClass().getClassLoader() will return null and you get a NPE. Furthermore, as the code currently stands, it looks like any JSF managed bean that was not loaded by Jasper's classloader will not have annotations processed. Most JSF applications don't use JSP at all, so it looks to me like this code will often fail to process annotations for managed beans. Can you explain exactly what this code is trying to do?	1	1	https://issues.jboss.org/browse/JBAS-5673
1019	JBAS-5672	Do you want this to remain open Scott? Or is it done?	1	1	https://issues.jboss.org/browse/JBAS-5672
1020	JBAS-5672	With the current work that has been done (deployers are now used to parse all metadata, which the web container uses rather than do its own parsing), is there anything more that should be done for AS 6 or can this be considered complete for this release ?	1	0	https://issues.jboss.org/browse/JBAS-5672
1021	JBAS-5640	Can you elaborate on what you mean?	1	1	https://issues.jboss.org/browse/JBAS-5640
1022	JBAS-5636	Yes it looks JBAS-4735. Remy, you said "This cannot be addressed properly in the java.io connectors" in JBAS-4735, I don't get how this comes. Could you advice on it? I did quick hack in JBossWeb to call pause() method on connectors when Server.START_NOTIFICATION_TYPE received. I didn't test it carefully but it works.	1	1	https://issues.jboss.org/browse/JBAS-5636
1023	JBAS-5626	Look inside today CookieUnitTestCase: The failed reason is the cookie include "commented" attribute, (see the comment in CookieUnitTestCase "//RFC2109:Note that there is no Comment attribute"). The strange is I tested both on tomcat 6 and tomcat 5.5, deploy jbosstest-cookie.war, the "commented" attributes are all set .But the test can be passed on Jboss Beta4 and RC1 EncAnnotationsUnitTestCase: The test failed after Aug.14. The exception track: 14:34:22,853 ERROR [[ENCServlet]] Allocate exception for servlet ENCServlet javax.naming.NameNotFoundException: jboss not bound at org.jnp.server.NamingServer.getBinding(NamingServer.java:564) at org.jnp.server.NamingServer.getBinding(NamingServer.java:572) at org.jnp.server.NamingServer.getObject(NamingServer.java:578) at org.jnp.server.NamingServer.lookup(NamingServer.java:317) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:669) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:629) at javax.naming.InitialContext.lookup(InitialContext.java:351) at org.jnp.interfaces.NamingContext.resolveLink(NamingContext.java:1251) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:760) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:629) at org.jboss.ejb3.JndiUtil.lookup(JndiUtil.java:44) at org.jboss.injection.JndiPropertyInjector.lookup(JndiPropertyInjector.java:75) at org.jboss.injection.JndiPropertyInjector.inject(JndiPropertyInjector.java:99) at org.jboss.web.tomcat.service.TomcatInjectionContainer.processInjectors(TomcatInjectionContainer.java:354) at org.jboss.web.tomcat.service.TomcatInjectionContainer.newInstance(TomcatInjectionContainer.java:239) at org.apache.catalina.core.StandardWrapper.loadServlet(StandardWrapper.java:1006) at org.apache.catalina.core.StandardWrapper.allocate(StandardWrapper.java:777) at org.apache.catalina.core.StandardWrapperValve.invoke(StandardWrapperValve.java:129) at org.apache.catalina.core.StandardContextValve.invoke(StandardContextValve.java:191) at org.jboss.web.tomcat.security.SecurityAssociationValve.invoke(SecurityAssociationValve.java:189) at org.jboss.web.tomcat.security.JaccContextValve.invoke(JaccContextValve.java:90) at org.jboss.web.tomcat.security.SecurityContextEstablishmentValve.invoke(SecurityContextEstablishmentValve.java:96) at org.apache.catalina.core.StandardHostValve.invoke(StandardHostValve.java:127) at org.apache.catalina.valves.ErrorReportValve.invoke(ErrorReportValve.java:102) at org.jboss.web.tomcat.service.jca.CachedConnectionValve.invoke(CachedConnectionValve.java:157) at org.apache.catalina.core.StandardEngineValve.invoke(StandardEngineValve.java:109) at org.apache.catalina.connector.CoyoteAdapter.service(CoyoteAdapter.java:325) at org.apache.coyote.http11.Http11Processor.process(Http11Processor.java:828) at org.apache.coyote.http11.Http11Protocol$Http11ConnectionHandler.process(Http11Protocol.java:601) at org.apache.tomcat.util.net.JIoEndpoint$Worker.run(JIoEndpoint.java:447) at java.lang.Thread.run(Thread.java:595) It seems some code changed (in org.jboss.web.tomcat.service) caused failing. I will continue looking them.	0	0	https://issues.jboss.org/browse/JBAS-5626
1024	JBAS-5625	What should we do with this JIRA? I can see the tests passing on Hudson, but they fail for me locally in WinXP. Should I close or reschedule?	1	1	https://issues.jboss.org/browse/JBAS-5625
1025	JBAS-5625	The question is do we want to bring in another VFS release in CR1 just for this? I think not.	1	1	https://issues.jboss.org/browse/JBAS-5625

#	Requirement	Questions	Answered	Successfully Answered	URL
1026	JBAS-5625	Ok, looking at the 867 server log I see there is a race between the HDScanner seeing the testEjb3xDeployment.jar and the test removing the jar. Its happening between stop of the deployment, and its removal. During this period it should not be exposed to the HDScanner, so there is a bug in the profile service repository/profile.getModifiedDeployments(). 2008-09-01 01:40:55,515 DEBUG [org.jboss.profileservice.management.upload.remoting.DeployHandler] (WorkerThread#0[10.18.34.175:49212]) invoke, payload: {DeploymentTargetID=names=[testEjb3xDeployment.jar]phase=APPLICATIONcopyContent=truedescription=null, clientAddress=/10.18.34.175}, parameter: stop2008-09-01 01:40:55,515 INFO [org.jboss.profileservice.management.upload.remoting.DeployHandler] (WorkerThread#0[10.18.34.175:49212]) Stop, [testEjb3xDeployment.jar] ... 2008-09-01 01:40:55,667 DEBUG [org.jboss.deployers.plugins.deployers.DeployersImpl] (WorkerThread#0[10.18.34.175:49212]) Fully Undeployed vfszip:/qa/services/hudson/hudson_workspace/workspace/JBoss-AS-5.0.x-TestSuite-sun15/trunk/build/output/jboss-5.0.0.CR2/server/profileservice/deploy/testEjb3xDeployment.jar ... 2008-09-01 01:40:55,701 DEBUG [org.jboss.system.server.profileservice.repository.SerializableDeploymentRepository] (HDScanner) Created deployment: AbstractVFSDeployment(testEjb3xDeployment.jar) ... 2008-09-01 01:40:55,716 DEBUG [org.jboss.profileservice.management.upload.remoting.DeployHandler] (WorkerThread#0[10.18.34.175:49214]) invoke, payload: {DeploymentTargetID=names=[testEjb3xDeployment.jar]phase=APPLICATIONcopyContent=truedescription=null, clientAddress=/10.18.34.175}, parameter: undeploy 2008-09-01 01:40:55,716 INFO [org.jboss.profileservice.management.upload.remoting.DeployHandler] (WorkerThread#0[10.18.34.175:49214]) Undeploy, [testEjb3xDeployment.jar] 2008-09-01 01:40:55,718 INFO [org.jboss.profileservice.management.upload.remoting.DeployHandler] (WorkerThread#0[10.18.34.175:49214]) Undeployed: testEjb3xDeployment.jar ... 2008-09-01 01:40:55,728 DEBUG [org.jboss.deployment.OptAnnotationMetaDataDeployer] (HDScanner) Error during deploy: vfszip:/qa/services/hudson/hudson_workspace/workspace/JBoss-AS-5.0.x-TestSuite-sun15/trunk/build/output/jboss-5.0.0.CR2/server/profileservice/deploy/testEjb3xDeployment.jar org.jboss.deployers.spi.DeploymentException: Cannot process metadata at org.jboss.deployers.spi.DeploymentException.rethrowAsDeploymentException(DeploymentException.java:49) at org.jboss.deployment.AnnotationMetaDataDeployer.deploy(AnnotationMetaDataDeployer.java:181) at org.jboss.deployment.AnnotationMetaDataDeployer.deploy(AnnotationMetaDataDeployer.java:93) at org.jboss.deployers.plugins.deployers.DeployerWrapper.deploy(DeployerWrapper.java:169) ... 1027	JBAS-5624	I'm re-opening this issue to discuss it. There are still some cluster-related tests failing every now and then. Lately the JBoss-AS-5.0.x-TestSuite-sun15 run shows 2 tests-jbossmessaging-cluster failures one of which has failed 4 time in a row (so maybe that one is not really transient?) http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15/888/testReport/ Brian, how you want to deal with those? As things are now, the clustering tests are the last ones that worry me (we have another 3-4 persisting failures to deal with). I know you have created a couple of other JIRAs to improve the predictability of the testsuite runs. Do you want to close this issue and deal with transient failures later as time permits? Do you want to have a look at: http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15/888/testReport/org.jboss.test.jbossmessaging.clustertest/ClusteredTestCase(tests-jbossmessaging-cluster)/testSimpleCluster/ ?	0	0	https://issues.jboss.org/browse/JBAS-5624
1028	JBAS-5594	The deployment is working now and 7 out of 8 tests are passing. But there is still a CORBA failure: Testcase: testTeller took 0.846 sec Caused an ERROR CORBA BAD_INV_ORDER 4 No; nested exception is: org.omg.CORBA.BAD_INV_ORDER: vmcid: 0x0 minor code: 4 completed: No java.rmi.RemoteException: CORBA BAD_INV_ORDER 4 No; nested exception is: org.omg.CORBA.BAD_INV_ORDER: vmcid: 0x0 minor code: 4 completed: No at com.sun.corba.se.impl.javax.rmi.CORBA.Util.mapSystemException(Util.java:298) at javax.rmi.CORBA.Util.mapSystemException(Util.java:83) at org.jboss.proxy.ejb.DynamicIIOPStub.invoke(DynamicIIOPStub.java:149) at org.jboss.test.bankiiop.interfaces._Teller_Stub.getCustomer(Unknown Source) at org.jboss.test.bankiiop.test.BankStressTestCase.testTeller(BankStressTestCase.java:80) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) Caused by: org.omg.CORBA.BAD_INV_ORDER: vmcid: 0x0 minor code: 4 completed: No at org.jacorb.orb.ORB.work_pending(Unknown Source) at org.jacorb.orb.ORB.perform_work(Unknown Source) at org.jacorb.orb.Delegate.request(Unknown Source) at org.omg.CORBA.portable.ObjectImpl._request(ObjectImpl.java:449) at org.jboss.proxy.ejb.DynamicIIOPStub.invoke(DynamicIIOPStub.java:120) ... 23 more	1	1	https://issues.jboss.org/browse/JBAS-5594
1029	JBAS-5591	I looked at these tests a while ago, they will pass with one-test but not in the entire suite. Did you run only these tests on Windows or the suite?	0	0	https://issues.jboss.org/browse/JBAS-5591
1030	JBAS-5583	Done?	1	1	https://issues.jboss.org/browse/JBAS-5583
1031	JBAS-5580	Does that mean I win a beer?	1	0	https://issues.jboss.org/browse/JBAS-5580
1032	JBAS-5576	Fernando, are you looking after the current console changes?	0	0	https://issues.jboss.org/browse/JBAS-5576
1033	JBAS-5560	The Seam team already has work underway to test Seam in a number of environments before doing a release. However, we need something on the AS side that runs from the AS testsuite so we can always verify that the latest GA version of Seam runs on the latest nightly build of AS. My current thinking is that we would take a few of the Seam sample applications and test them against AS using JSFUnit. So we would simply pull down the release versions of the Seam examples and run them. Currently, only the Booking, DVD Store, and Numberguess examples are being published to the Maven repo. Will these three examples be sufficient for a good test? The only other issue I see with this is that we should go through these examples and make sure that the markup has the ID attribute set for all the JSF components. That will make them testable with JSFUnit.	0	0	https://issues.jboss.org/browse/JBAS-5560
1034	JBAS-5560	"Will these three examples be sufficient for a good test?" Booking tests EJB3, JSF, Facelets, Seam Security DVDStore adds in JBPM Others to consider - seamspace, mail, itext We can easily publish others to maven if you need it, create an issue in JBSEAM	0	0	https://issues.jboss.org/browse/JBAS-5560

#	Requirement	Questions	Answered	Successfully Answered	URL
1035	JBAS-5560	I would add in the JPA example as it will also cover WAR deployment, POJO components, Hibernate JPA, and seam managed transactions. Since it is based on the booking example it should be easy to adjust if needed. There are so many examples based on the booking application that we should try to make all of them testable (in the long run) using the same tests. If we make the IDs match across them it should not be difficult. WDYT? There should probably also be a set of manual tests as part of the AS release process. This could be based on the $SEAM/release-process.txt, although it could be simplified for this purpose.	0	0	https://issues.jboss.org/browse/JBAS-5560
1036	JBAS-5560	> There are so many examples based on the booking application that we should try to make all of them testable (in the long run) using the same tests. If we make the IDs match across them it should not be difficult. WDYT? I think that's a good goal. Creating the JSFUnit test classes that run against different versions of the Booking example should be easy. But keeping the xhtml files in sync will be difficult because there are copies in each different example app. With Maven, you can make a WAR depend on a WAR. This feature is very useful for this sort of thing because you just have to maintain the differences between the main WAR and the derived WAR. So we would only need to keep most of the xhtml files in the main booking example. But for now, I guess we will have to keep them in sync manually.	1	1	https://issues.jboss.org/browse/JBAS-5560
1037	JBAS-5558	Is there more work to it, or can we close this?	0	0	https://issues.jboss.org/browse/JBAS-5558
1038	JBAS-5558	Can we create subtasks to track individual changes needed to the metadata creators? Otherwise this task is too generic to be useful.	0	0	https://issues.jboss.org/browse/JBAS-5558
1039	JBAS-5541	Is there something to do here? The latest jboss-integration artifacts used in AS contain the new jboss-transaction-spi classes (XAResourceRecovery, XAResourceRecoveryRegistry).	0	0	https://issues.jboss.org/browse/JBAS-5541
1040	JBAS-5529	The WebServer, connector and thread pool have been added. I don't see an mbean that provides the vhosts that are available. The vhosts show up as mbeans in a pattern of: host=xxx,type=Host and this has an alias property. Is this what your looking for, all Hosts?	0	0	https://issues.jboss.org/browse/JBAS-5529
1041	JBAS-5529	> The vhosts show up as mbeans in a pattern of:host=xxx,type=Host >and this has an alias property. Is this what your looking for, all Hosts? Yep, exactly.	0	0	https://issues.jboss.org/browse/JBAS-5529
1042	JBAS-5527	There is no plan to release JBoss-4.0.5.SP1. The fix will be in JBoss-5.0.0.CR1 and JBoss-4.2.3.GA. Thanks for the patch!	1	1	https://issues.jboss.org/browse/JBAS-5527
1043	JBAS-5503	Jeff, is this still the case? If so I suppose you can increase the memory in 64m increments until the problem is solved.	1	1	https://issues.jboss.org/browse/JBAS-5503
1044	JBAS-5482	So can we implement the workaround mentioned in the sun bug? Try something like this as a workaround: Context ic = new InitialContext(); ccc = NamingManager.getInitialContext(ResourceManager.getInitialEnvironment(null)); where ccc is a static field Currently it is causing several failures in both AS 5 and EAP 4.2/4.3.	1	0	https://issues.jboss.org/browse/JBAS-5482
1045	JBAS-5467	I don't think it's the SARDeployer to decide to file order. Have you looked at the DeploymentSorter used by the deployment scanner?	0	0	https://issues.jboss.org/browse/JBAS-5467
1046	JBAS-5467	This issue caused us a problem again. We have a deployer script which instead of replacing files, renames them ".backup...". JBoss had been loading both the new file and the .backup file in the lib directory. I.e., lib/hibernate.jar; lib/.backup-hibernate.jar. This problem remained hidden until the JBoss server was copied to another directory. After being moved, it started loading the older files first. Should we have multiple copies of jars in our lib directory? No, obviously this is a problem on our part. Should moving the directory cause a working deployment to stop working? In my opinion, no, the app server should function in a consistant manner regardless of hardware or the physical ordering of the files. Unfortunately, we don't build our JBoss servers, but instead insist on running a version for which a support contact is available. As such, we can't just patch our own copy and ignore the issue. I might be wrong about the class, but I'm pretty sure the micro-kernel uses it when it load the jars in the server's lib directory. Files in the deploy directory do get loaded in a defined order, but not those in the lib directory. Here's the specific method, for which the patch applies. protected File[] listFiles(final String urlspec) throws Exception { URL url = Strings.toURL(urlspec); // url is already canonical thanks to Strings.toURL File dir = new File(url.getFile()); File[] files = dir.listFiles(new java.io.FileFilter() { public boolean accept(File pathname) { String name = pathname.getName().toLowerCase(); return (name.endsWith(".jar") || name.endsWith(".zip")); } }); return files; }	1	0	https://issues.jboss.org/browse/JBAS-5467
1047	JBAS-5422	Ran tests on AS 4.0.4.GA, JBC 1.4.0.SP1, JGroups 2.2.9.2, testing UDP, TCP and TCP_NIO with bundling on and off, REPL_ASYNC and REPL_SYNC. 4 node cluster, no buddy replication. Results are attached. The basic JBC config files are also attached. The versions used for no-bundling tests looked like the attached, except "enabled_bundling" was "false". The versions used for REPL_SYNC tests looked like the attached except for CacheMode being REPL_SYNC and the FC protocol was commented out of the protocol stack. Test app basically puts an 8Kb payload in a single attribute for each request. Both SESSION and ATTRIBUTE granularity were tested. Since the session only has a single attribute, the payload size difference between the two granularities is not great. A big difference is SESSION does not use a TX during replication (it just does a single put, so no need), while ATTRIBUTE does use a TX. Interesting points: 1) TCP_NIO is by far the fastest transport, consistent with what I've seen previously. 2) Disabling bundling actually *hurts* TCP_NIO performance. 3) For UDP and TCP, disabling bundling has only a minor effect (< 1.5%), in most cases negative. This is actually good news, since with the multiplexer a REPL_ASYNC cache may share a channel with a synchrononous HAPartition. It is important that an optimization for one does not harm the other. 4) With SESSION + SYNC, the benefit of turning of bundling is largest. This is interesting, as this combination uses no TX, so the costly 2PC protocol doesn't get involved. 5) Turning off bundling actually hurts a bit in the ATTR + SYNC case. This is odd, as this case uses the full 2PC protocol.	0	0	https://issues.jboss.org/browse/JBAS-5422
1048	JBAS-5408	Who said we need to fix this now?	0	0	https://issues.jboss.org/browse/JBAS-5408
1049	JBAS-5388	Alexey, can you take a look? This testcase must be in the WS testsuite.	1	1	https://issues.jboss.org/browse/JBAS-5388
1050	JBAS-5387	Could you please attach the deployment unit the test is deploying?	1	0	https://issues.jboss.org/browse/JBAS-5387

1052	JBAS-5370	Scott, are all the features described at the beginning of that thread currently available? 1) List deployed apps (ears/wars), 2) Deploy apps (ears/wars), 3) Undeploy apps(ears/wars), 4) Get the availability status of the deployed app Where do we stand with the win32 issues? I'm going to close JBAS-5522 so we just have one issue to track. We can spin off any remaining issues as subtasks of JBAS-5246	0	0	https://issues.jboss.org/browse/JBAS-5370
1053	JBAS-5370	When attempting to deploy a war using the following code: DeploymentProgress progress = manager.distribute(tempFile.getName(), ManagedDeployment.DeploymentPhase.APPLICATION, tempFile.toURL()); progress.addProgressListener(this); progress.run(); I get the following NPE: 14:16:29,155 ERROR [ProfileJBossServerComponent] java.lang.RuntimeException: java.lang.NullPointerException at org.jboss.profileservice.management.upload.remoting.StreamingDeploymentTarget.transferDeployment(StreamingDep loymentTarget.java:268) at org.jboss.profileservice.management.upload.remoting.StreamingDeploymentTarget.distribute(StreamingDeploymentT arget.java:108) at org.jboss.profileservice.management.upload.DeploymentProgressImpl.distribute(DeploymentProgressImpl.java:169) at org.jboss.profileservice.management.upload.DeploymentProgressImpl.run(DeploymentProgressImpl.java:82) at org.rhq.plugins.jbossas5.ProfileJBossServerComponent.deployArchive(ProfileJBossServerComponent.java:318) at org.rhq.plugins.jbossas5.ProfileJBossServerComponent.createContentBasedResource(ProfileJBossServerComponent.j ava:283) at org.rhq.plugins.jbossas5.ProfileJBossServerComponent.createResource(ProfileJBossServerComponent.java:138) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:623) at org.rhq.core.pc.inventory.ResourceContainer$ComponentInvocationThread.call(ResourceContainer.java:450) at java.util.concurrent.FutureTask$Sync.innerRun(FutureTask.java:334) at java.util.concurrent.FutureTask.run(FutureTask.java:166) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:713) Caused by: java.lang.NullPointerException at org.jboss.profileservice.management.upload.remoting.DeployHandler.handleStream(DeployHandler.java:106) at org.jboss.remoting.ServerInvoker.handleInternalInvocation(ServerInvoker.java:1785) at org.jboss.remoting.ServerInvoker.invoke(ServerInvoker.java:895) at org.jboss.remoting.transport.local.LocalClientInvoker.invoke(LocalClientInvoker.java:106) at org.jboss.remoting.Client.invoke(Client.java:1708) at org.jboss.remoting.Client.invoke(Client.java:612) at org.jboss.remoting.Client.invoke(Client.java:1492) at org.jboss.profileservice.management.upload.remoting.StreamingDeploymentTarget.transferDeployment(StreamingDep loymentTarget.java:259) ... 16 more 14:16:29,155 INFO [DeployHandler] Begin start, [valid.war], phase: APPLICATION I'm using an AS5 build from late last week.	1	1	https://issues.jboss.org/browse/JBAS-5370
1054	JBAS-5370	The org.jboss.test.profileservice.test.DeployUnitTestCase are still passing. The line of the NPE in DeployHandler indicates that the DeploymentManager bean in profileservice/deploy/profileservice-jboss-beans.xml does not have a repositoryFactory injected. How is the profileservice config setup?	1	1	https://issues.jboss.org/browse/JBAS-5370

#	Requirement	Questions	Answered	Successfully Answered	URL
1055	JBAS-5370	Thanks, adding the call to DeploymentManager.loadProfile() did the trick. Could you possibly add some more javadoc on that method? If the DeploymentManager is a singleton, then how does one prevent threads from interfering with each other by loading different profiles via loadProfile()?	0	0	https://issues.jboss.org/browse/JBAS-5370
1056	JBAS-5318	Stefan, has you checked if the cts config needs updating?	1	0	https://issues.jboss.org/browse/JBAS-5318
1057	JBAS-5307	We rolledbacked the maven transition for now, so can you put xerces in the legacy repo and switch to it?	1	1	https://issues.jboss.org/browse/JBAS-5307
1058	JBAS-5298	I did not maintain an individual changelog for those CRs (I did not think I would have to produce that much; in the future I'll do a separate changelog entry in future releases). As for AS5 CR1, I was planning to tag a GA this week. It's not a problem as most things are aligned with Tomcat 6, which is stable, Beyond CR1, what is the strategy for including bugfixes in AS 5 ? (given the advancements of the TCK, it looks like GA is not 4 weeks away) I should not have many hugely important fixes to put in, obviously, but most likely some "nice to have" ones. Would starting to work on a JBoss Web 2.1.1 GA (and include it if needed) be the right way ?	1	1	https://issues.jboss.org/browse/JBAS-5298
1059	JBAS-5289	Currently using 0.1.5 (Beta, CR, GA? who knows :-)	0	0	https://issues.jboss.org/browse/JBAS-5289
1060	JBAS-5288	I released the 5.0.0.CR1 version, and updated the app server build. Dimitris, can this issue be closed?	0	0	https://issues.jboss.org/browse/JBAS-5288
1061	JBAS-5286	Who'll be taking over this?	0	0	https://issues.jboss.org/browse/JBAS-5286
1062	JBAS-5269	Why are you raising bug reports as subtasks of closed issues in old releases? 1) Check whether it is fixed in the latest version before raising bug reports 2) Raise a top level bug report against the latest release, not as a subtask of a closed issue. 3) Show relevant information (config, logs, etc.) 4) While an NPE is always a bug (it should give a proper error message telling you what is wrong) it usually means missing configuration. Use the forums to ask for help.	0	0	https://issues.jboss.org/browse/JBAS-5269
1063	JBAS-5265	Is it safe now to assume the upgrade is over?	1	1	https://issues.jboss.org/browse/JBAS-5265
1064	JBAS-5252	Has someone looked more into this? AFAICT, the leaks are coming and going from run to run. E.g. from a relatively recent one: org.jboss.test.classloader.leak.test.Ejb3ClassloaderLeakUnitTestCase.testSimpleEjb org.jboss.test.cluster.classloader.leak.test.FieldGranularityClassloaderLeakUnitTestCase(ClusteredClassLoaderLeak).testSimpleReplicableWar org.jboss.test.cluster.classloader.leak.test.ReplicableClassesClassloaderLeakUnitTestCase(ClusteredClassLoaderLeak).testNoCacheNoReplicableWar org.jboss.test.cluster.classloader.leak.test.ReplicableClassesClassloaderLeakUnitTestCase(ClusteredClassLoaderLeak).testNoCacheReplicableWar org.jboss.test.cluster.classloader.leak.test.ReplicableClassesClassloaderLeakUnitTestCase(ClusteredClassLoaderLeak).unknown	1	1	https://issues.jboss.org/browse/JBAS-5252
1065	JBAS-5249	Why bsf and bsh need to be upgraded together? Does bsf 2.4.0 work with the older bsh 1.3.0?	1	1	https://issues.jboss.org/browse/JBAS-5249
1066	JBAS-5240	I'm not sure I understand what you mean Dimitris. If you see the wiki I pointed out in the description, you'll I've added the following: "By default, command line parameters passed to JBoss Application Server on startup are only logged in the console output. Within the scope of remote support, this leads to users/customers being asked to provide these options explicitly, as console output is often lost. This can be avoided by adding the following line to java execution in run.sh/bat: -Djboss.java.opts="$JAVA_OPTS" \ to make the script look something like this: ... if ["x$LAUNCH_JBOSS_IN_BACKGROUND" = "x"]; then # Execute the JVM in the foreground "$JAVA" $JAVA_OPTS \ -Djava.endorsed.dirs="$JBOSS_ENDORSED_DIRS" \ -Djboss.java.opts="$JAVA_OPTS" \ -classpath "$JBOSS_CLASSPATH" \ org.jboss.Main "$@" JBOSS_STATUS=$? else # Execute the JVM in the background "$JAVA" $JAVA_OPTS \ -Djava.endorsed.dirs="$JBOSS_ENDORSED_DIRS" \ -Djboss.java.opts="$JAVA_OPTS" \ -classpath "$JBOSS_CLASSPATH" \ org.jboss.Main "$@" & JBOSS_PID=$! ... On startup, ServerInfo class prints all system properties set on startup to boot.log and so, by adding this new system property, we're effectively forcing boot.log to print command line parameters passed on startup: 00:18:50,045 DEBUG [ServerInfo] jboss.java.opts: -Dprogram.name=run.sh -server -Xms128m -Xmx512m -Dsun.rmi.dgc.client.gcInterval=3600000 -Dsun.rmi.dgc.server.gcInterval=3600000 -Xdebug -Xrunjdwp:transport=dt_socket,address=8787,server=y,suspend=y" This solution worked fine for me. Am I missing something?	1	1	https://issues.jboss.org/browse/JBAS-5240
1067	JBAS-5240	I've commited the changes in both run.sh and run.bat. Can you check it works for you and also update the wiki?	1	1	https://issues.jboss.org/browse/JBAS-5240
1068	JBAS-5240	In general both posix and windows scripts are broken if JAVA_OPTS contains quoted param. > export JAVA_OPTS=-Djboss.foo="some param" > ./run.sh Exception in thread "main" java.lang.NoClassDefFoundError: value Caused by: java.lang.ClassNotFoundException: value at java.net.URLClassLoader$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:276) at java.lang.ClassLoader.loadClass(ClassLoader.java:251) at java.lang.ClassLoader.loadClassInternal(ClassLoader.java:319) This is caused by -Djboss.java.opts="$(JAVA_OPTS)" so if JAVA_OPTS contains quoted string one has invalid command line cause its evaluated to: -Djboss.java.opts="-server -Djboss.foo="some value"" So you have value" as main class, and that sucks :) The solution would be to escape the $JAVA_OPTS for usage in -Djboss.java.opts.	1	1	https://issues.jboss.org/browse/JBAS-5240
1069	JBAS-5235	Pushing to GA. Jonathan will you do that after CR2?	0	0	https://issues.jboss.org/browse/JBAS-5235
1070	JBAS-5235	Can Jesper or Jeff add to example datasource descriptors an explanatory comment about usage of local datasources in transactions?	0	0	https://issues.jboss.org/browse/JBAS-5235
1071	JBAS-5234	The new params to Main (post 5.0 Beta4) contains the param -Djboss.java.opts="%JAVA_OPTS%" Now this is broken because if any JAVA_OPTS has quoted string there will be double quoting issue resulting in the following error when starting JBoss java.lang.NoClassDefFoundError: Files Caused by: java.lang.ClassNotFoundException: Files at java.net.URLClassLoader$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:276) at java.lang.ClassLoader.loadClass(ClassLoader.java:251) at java.lang.ClassLoader.loadClassInternal(ClassLoader.java:319) Exception in thread "main" Shutdown service	1	1	https://issues.jboss.org/browse/JBAS-5234
1072	JBAS-5233	When implementing this, make sure that any potential code for JBAS-5647 does not log "expected" non-received responses at DEBUG.	1	0	https://issues.jboss.org/browse/JBAS-5233
1073	JBAS-5224	Stale, I've created JBVFS-26 to optimize frequently called vfs methods. From what you've seen in your analysis, who are the callers of the vfs methods where we can look to reduce the number of calls to vfs? We need to create JIRA to other projects so their parts can be optimized, too. Thanks	0	0	https://issues.jboss.org/browse/JBAS-5224
1074	JBAS-5221	Is that a profile service issue?	0	0	https://issues.jboss.org/browse/JBAS-5221

#	Requirement	Questions	Answered	Successfully Answered	URL
1075	JBAS-5216	Kabir, is this issue still current? If so, can you revert the fix/hack?	1	1	https://issues.jboss.org/browse/JBAS-5216
1076	JBAS-5203	The necessary code changes were applied. The following wiki pages were modified with the notes about the changes in the configuration. Should the documentation team be notified to propagate the info further? Or how is it supposed to get into the docs?	0	0	https://issues.jboss.org/browse/JBAS-5203
1077	JBAS-5163	FAO Dimitris: Head has been based in Java 5 for quite a while now, so as part of this JIRA, I should be able to convert reflection calls to JDK 5 methods into type safe ones, correct? Obviously, I would use reflection for JDK 6 classes/methods. Thoughts?	1	1	https://issues.jboss.org/browse/JBAS-5163
1078	JBAS-5163	Also, I'd like to see what would the extra jdk6 info be in the output (some example).	1	1	https://issues.jboss.org/browse/JBAS-5163
1079	JBAS-5163	Re: Also, I'd like to see what would the extra jdk6 info be in the output (some example). Yeah, definitely. In facf, not just that, I'm creating 2 deadlock examples (one with synchronised monitors and one with java.util.concurrent Lock class impl) so that you can also see how we can print out deadlocks both JDK5 and JDK6. We could do already print synchronized monitor deadlock with JDK5 already, but was not implemented. One thing I'm changing for all thread dumps is the following: Thread: JBossLifeThread : priority:5, demon:false, threadId:58, threadState:WAITING, lockName:java.l ang.Object@10cff6b java.lang.Object.wait(Native Method) java.lang.Object.wait(Object.java:474) Rather than "lockName: java.lang.Object@10cff6b" in the title, it makes more sense to put it in the stack itself, in the same way that any standard thread dump output does, i.e: Thread: JBossLifeThread : priority:5, demon:false, threadId:58, threadState:WAITING - waiting on java.lang.Object@10cff6b java.lang.Object.wait(Native Method) java.lang.Object.wait(Object.java:474) The closer we are to real non JMX-console thread dumps, the easier for any of us to read them.	1	1	https://issues.jboss.org/browse/JBAS-5163
1080	JBAS-5158	Sorry if I forgot. Is there a corresponding Forum post with this patch? If not, would you mind to start one there? I will also need some additional documentation and also unit test cases so I can check them in properly. Thanks, -Ben	1	0	https://issues.jboss.org/browse/JBAS-5158
1081	JBAS-5154	Brian would you like anything to go to the guides in relation to the examples?	1	0	https://issues.jboss.org/browse/JBAS-5154
1082	JBAS-5147	How those tests are supposed to run?	1	1	https://issues.jboss.org/browse/JBAS-5147

1084	JBAS-5147	I still can't reproduce. Did you update your workspace copy? What OS are you on?	1	1	https://issues.jboss.org/browse/JBAS-5147
1085	JBAS-5139	Heiko a) Is EJB3 team aware of the SPI change? b) AS Branch_4_2 and trunk are now on jboss-native snapshots. When are we moving out of them?	1	1	https://issues.jboss.org/browse/JBAS-5139
1086	JBAS-5135	I've released the GA version http://repository.jboss.org/maven2/org/hibernate/hibernate-annotations/3.3.1.GA/ be careful the ejb3-persistence dependency has changed to 1.0.1.GA as well http://repository.jboss.org/maven2/org/hibernate/ejb3-persistence/1.0.1.GA/ (downgrade in the version, but the right one) can you take it from here and update EJB3 and AS deps?	1	1	https://issues.jboss.org/browse/JBAS-5135
1087	JBAS-5135	I've added HA 3.3.1.GA to the legacy repo, until we switch to maven: https://svn.jboss.org/repos/repository.jboss.org/hibernate-annotations/3.3.1.GA/ What is the story with ejb3-persistence and the legacy repo? Where is it specified? I don't see an entry in the central build/build-thirdparty.xml.	0	0	https://issues.jboss.org/browse/JBAS-5135
1088	JBAS-5134	I've released the GA version http://repository.jboss.org/maven2/org/hibernate/hibernate-entitymanager/3.3.2.GA/ be careful the ejb3-persistence dependency has changed to 1.0.1.GA as well http://repository.jboss.org/maven2/org/hibernate/ejb3-persistence/1.0.1.GA/ (downgrade in the version, but the right one) can you take it from here and update EJB3 and AS deps?	1	1	https://issues.jboss.org/browse/JBAS-5134
1089	JBAS-5133	I am running into issues with the maven release plugin. I'd like to get you jars from a reproducible build. When is the drop dead date for me to get you this release? Otherwise, I'll just manually build you the jars.	1	1	https://issues.jboss.org/browse/JBAS-5133

#	Requirement	Questions	Answered	Successfully Answered	URL
1090	JBAS-5133	two questions dimitris: 1) are y'all using maven now for building? I am trying to figure out where to put these jars for you. Is just in the maven repo good enough? 2) I am past the issues with the release plugin per se. I am still having issues with generating an assembly which is what is used to create a dist bundle for upload to sourceforge. so basically there means that currently there is a 100% chance this CR will not simply clock over to be GA. Is that kosher for you for the time being?	0	0	https://issues.jboss.org/browse/JBAS-5133
1091	JBAS-5133	Assigning to Paul to make the necessary changes to pull that new release into AS. Couple of points: 1) Due to splitting Hibernate out into modules, we will need to account for Hibernate features actually utilized within the AS. AFAIK, we should only need the following 2 artifacts: a) org.hibernate:hibernate-core b) org.hibernate:hibernate-jbosscache2 2) a dependency on the hibernate-core artifact is going to transitively pull in a dep on cglib/asm. should those be excluded?	0	0	https://issues.jboss.org/browse/JBAS-5133
1092	JBAS-5133	I updated the hibernate dependency. The hibernate3 jar seems to have been replaced by hibernate-core and hibernate-jmx. With those two jars, the build seems to run ok. I didn't try a full testsuite, but it seems to compile and start ok. Should any of the other core hibernate components (cache, connection, etc) be included in the build?	0	0	https://issues.jboss.org/browse/JBAS-5133
1093	JBAS-5133	TCK complains about a missing org/slf4j/LoggerFactory class which is a dependency on hibernate-jbosscache. Should this also be installed?	0	0	https://issues.jboss.org/browse/JBAS-5133
1094	JBAS-5120	Am using JBOSS5.0 Beta4 and can see this exception during start up. Is this fixed ? This is what I have done (basically I was trying to achive cluster setup with Beta4) 1. create profile node_1 (copy all directory from all). 2. create profile node_2 (copy all directory from all) 3. deployers/profileservice-beans.xml.bak to deployers/profileservice-beans.xml for node_1 , node_2 and all profile. 4. Start node_1 , node_2 and all I see the above exception in startup of all three profile.	0	0	https://issues.jboss.org/browse/JBAS-5120
1095	JBAS-5117	I've flipped trunk to this new Beta5 version. I had to move the release to the legacy position. Was that on purpose? Added: jboss/metadata/1.0.0.Beta5/ Removed: jboss/jboss-metadata/1.0.0.Beta5/ We don't have a consistent naming convention. Some modules are jboss/xxx others jboss/jboss-xxx, yet others jboss/jbossxxx: <componentref name="jboss/aop" version="2.0.0.CR1"/> <componentref name="jboss/cache" version="2.1.0.CR2"/> <componentref name="jboss/common-core" version="2.2.3.GA"/> <componentref name="jboss/common-logging-jdk" version="2.0.2.GA"/> <componentref name="jboss/common-logging-log4j" version="2.0.2.GA"/> <componentref name="jboss/common-logging-spi" version="2.0.2.GA"/> <componentref name="jboss/integration" version="5.0.0.Beta4"/> <componentref name="jboss/jaxr" version="1.2.0.GA"/> <componentref name="jboss/jboss-ejb3-cache" version="0.11.1"/> <componentref name="jboss/jboss-ejb3-ext-api" version="0.1.2.Beta1"/> <componentref name="jboss/jboss-ejb3-impl" version="0.1.2.Beta1"/> <componentref name="jboss/jboss-ha-client" version="1.0.0.BETA1"/> <componentref name="jboss/jboss-ha-server-api" version="1.0.0.BETA2-SNAPSHOT"/> <componentref name="jboss/jboss-jaspi-api" version="1.0-BETA1"/> <componentref name="jboss/jboss-javaee" version="5.0.0.Beta3Update1"/> <componentref name="jboss/jboss-security-spi" version="2.0.2.Beta3"/> <componentref name="jboss/jbosssx" version="2.0.2.Beta3"/> <componentref name="jboss/jbosssx-client" version="2.0.2.Beta3"/> <componentref name="jboss/jbossts" version="4.3.0.BETA2"/> <componentref name="jboss/jboss-vfs" version="2.0.0.Beta6"/> <componentref name="jboss/jbossws-native50" version="2.0.2.GA"/> <componentref name="jboss/jbossxb" version="2.0.0.CR5"/> <componentref name="jboss/jms-integration-tests" version="1.0.1.GA"/> <componentref name="jboss/messaging" version="1.4.0.SP3"/> <componentref name="jboss/metadata" version="1.0.0.Beta5"/> <componentref name="jboss/microcontainer" version="snapshot"/> <componentref name="jboss/profiler/jvmti" version="1.0.0.CR5"/> <componentref name="jboss/remoting" version="2.2.2.SP3-brew"/> <componentref name="jboss/serialization" version="1.0.3.GA"/> <componentref name="jboss/test" version="1.0.4.GA"/> <componentref name="jboss/web" version="2.1.0.CR11"/>	0	0	https://issues.jboss.org/browse/JBAS-5117
1096	JBAS-5078	With the proper unlimited strength crypto files installes, all SRPLoginModuleUnitTestCase tests pass successfully. I can see only one error in the SRPUnitTestCase's testEchoArgs() method: java.lang.IllegalStateException: Security Context is null" type="java.rmi.ServerException">java.rmi.ServerException: RuntimeException; nested exception is: java.lang.IllegalStateException: Security Context is null at org.jboss.ejb.plugins.LogInterceptor.handleException(LogInterceptor.java:421) at org.jboss.ejb.plugins.LogInterceptor.invokeHome(LogInterceptor.java:136) at org.jboss.ejb.plugins.ProxyFactoryFinderInterceptor.invokeHome(ProxyFactoryFinderInterceptor.java:107) at org.jboss.ejb.SessionContainer.internalInvokeHome(SessionContainer.java:640) at org.jboss.ejb.Container.invoke(Container.java:1045) at org.jboss.mx.interceptor.ReflectedDispatcher.invoke(ReflectedDispatcher.java:157) at org.jboss.mx.server.Invocation.dispatch(Invocation.java:96) at org.jboss.mx.server.Invocation.invoke(Invocation.java:88) at org.jboss.mx.server.AbstractMBeanInvoker.invoke(AbstractMBeanInvoker.java:264) at org.jboss.mx.server.MBeanServerImpl.invoke(MBeanServerImpl.java:668) at org.jboss.invocation.jrmp.server.JRMPInvoker$MBeanServerAction.invoke(JRMPInvoker.java:815) at org.jboss.invocation.jrmp.server.JRMPInvoker.invoke(JRMPInvoker.java:416) at sun.rmi.server.UnicastServerRef.dispatch(UnicastServerRef.java:294) at sun.rmi.transport.Transport$1.run(Transport.java:153) at java.security.AccessController.doPrivileged(Native Method) at sun.rmi.transport.Transport.serviceCall(Transport.java:149) at sun.rmi.transport.tcp.TCPTransport.handleMessages(TCPTransport.java:466) at sun.rmi.transport.tcp.TCPTransport$ConnectionHandler.run(TCPTransport.java:707) at java.lang.Thread.run(Thread.java:595) Caused by: java.lang.IllegalStateException: Security Context is null at org.jboss.ejb.plugins.SecurityInterceptor.process(SecurityInterceptor.java:229) at org.jboss.ejb.plugins.SecurityInterceptor.invokeHome(SecurityInterceptor.java:199) at org.jboss.ejb.plugins.LogInterceptor.invokeHome(LogInterceptor.java:132) I am now investigating why this is happening.	1	1	https://issues.jboss.org/browse/JBAS-5078
1097	JBAS-5073	How this problem manifestred itself, i.e. what was the problem exactly? :-) BTW, nice to see you back in JIRA Andy!	1	1	https://issues.jboss.org/browse/JBAS-5073
1098	JBAS-5073	the <condition> element was not inside of the target. look at the patch. It meant that if you supplied a user/password ... it was ignored. IT is a one line fix. I don't know why ant lets you randomly stick <condition> tags outside of where they are interpreted but apparently it does. well I have a little consulting side business and do subcontracting for RH among others so it often involves JBoss and building JBoss stuff on frustrating networks with frustrating proxies. You can't imagine the joy of building JBoss behind an NTLM authenticated proxy. I even had to patch ntlmaps which is defunct but has a buffering bug that makes it not work on slow networks... BTW is 4.4 an active branch? Should I have applied it there?	1	1	https://issues.jboss.org/browse/JBAS-5073

#	Requirement	Questions	Answered	Successfully Answered	URL
1099	JBAS-5065	Does this mean converting the .rpm's to .deb?	1	1	https://issues.jboss.org/browse/JBAS-5065
1100	JBAS-5065	Is anyone working on this? Also, I cannot find any information about MEAD that Clive is talking about... I am interested in creating a package for Ubuntu, I will work on doing this, and keep people posted, if no one has allready started this.	0	0	https://issues.jboss.org/browse/JBAS-5065
1101	JBAS-5060	Have you tested that it works? Start jboss, point to http://localhost:8080/web-console/, navigate to 'System', 'JMX MBeans', 'jboss.system', 'jboss.system:type=ServerInfo". Right click on the 'FreeMemory' attribute and choose to create a graph. It hangs, with this StackTrace: Exception in thread "AWT-EventQueue-2" java.lang.NullPointerException at org.jfree.chart.labels.StandardXYSeriesLabelGenerator.createItemArray(StandardXYSeriesLabelGenerator.java:119) at org.jfree.chart.labels.StandardXYSeriesLabelGenerator.generateLabel(StandardXYSeriesLabelGenerator.java:102) at org.jfree.chart.renderer.xy.XYLineAndShapeRenderer.getLegendItem(XYLineAndShapeRenderer.java:1100) at org.jfree.chart.plot.XYPlot.getLegendItems(XYPlot.java:3675) at org.jfree.chart.title.LegendTitle.fetchLegendItems(LegendTitle.java:393) at org.jfree.chart.title.LegendTitle.arrange(LegendTitle.java:464) at org.jfree.chart.JFreeChart.drawTitle(JFreeChart.java:1134) at org.jfree.chart.JFreeChart.draw(JFreeChart.java:1025) at org.jfree.chart.ChartPanel.paintComponent(ChartPanel.java:1275) at javax.swing.JComponent.paint(Unknown Source) at javax.swing.JComponent.paintToOffscreen(Unknown Source) at javax.swing.BufferStrategyPaintManager.paint(Unknown Source) at javax.swing.RepaintManager.paint(Unknown Source) at javax.swing.JComponent._paintImmediately(Unknown Source) at javax.swing.JComponent.paintImmediately(Unknown Source) at javax.swing.RepaintManager.paintDirtyRegions(Unknown Source) at javax.swing.RepaintManager.paintDirtyRegions(Unknown Source) at javax.swing.RepaintManager.seqPaintDirtyRegions(Unknown Source) at javax.swing.SystemEventQueueUtilities$ComponentWorkRequest.run(Unknown Source) at java.awt.event.InvocationEvent.dispatch(Unknown Source) at java.awt.EventQueue.dispatchEvent(Unknown Source) at java.awt.EventDispatchThread.pumpOneEventForFilters(Unknown Source) at java.awt.EventDispatchThread.pumpEventsForFilter(Unknown Source) at java.awt.EventDispatchThread.pumpEventsForHierarchy(Unknown Source) at java.awt.EventDispatchThread.pumpEvents(Unknown Source) at java.awt.EventDispatchThread.pumpEvents(Unknown Source) at java.awt.EventDispatchThread.run(Unknown Source)	1	1	https://issues.jboss.org/browse/JBAS-5060
1102	JBAS-5054	The reason there were so many errors existed is explained here: http://www.jboss.com/index.html?module=bb&op=viewtopic&t=125466 EJBMethodPermission(String EJBName, String methodName, String methodInterface, String[] methodParams) methodParams being an empty array implies method with zero args whereas a null methodParams implies all overloaded method signatures. Who would have thought things would be so subtle in the JACC jungle?	1	1	https://issues.jboss.org/browse/JBAS-5054
1103	JBAS-5054	Scott, what this means is that you are duplicating the hudson situation. Can you please provide me the trace log for the entire JACC run? The security error is because the security checks have not been able to derive the policy context from the policy.	1	1	https://issues.jboss.org/browse/JBAS-5054
1104	JBAS-5054	I had a quick look and the test looks badly written, e.g.: org.jboss.test.security.test.EJBSpecUnitTestCase:614 log.debug("Sent msg to queue/QueueA"); queueConn.start(); QueueReceiver recv = session.createReceiver(queB); msg = recv.receive(5000); log.debug("Recv msg: "+msg); String info = msg.getStringProperty("reply"); recv.close(); session.close(); queueConn.close(); If for some reason recv.receive(5000) times-out, then it returns null and you get an NPE so the session is not closed properly as in: http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15/837/testReport/org.jboss.test.security.test/EJBSpecUnitTestCase(tests-security-basic-unit)/testMDBRunAs/ Can you improve the test so the timeout is increased and proper cleanup is made in all cases?	0	0	https://issues.jboss.org/browse/JBAS-5054
1105	JBAS-5044	Rescheduling to CR1. Is this issue really critical? It hasn't been touched in Months.	0	0	https://issues.jboss.org/browse/JBAS-5044
1106	JBAS-5041	HI , We have the default Jboss Transaction Timeout set to 3 hours. We have a MDB that has CMT , and want to set the Transaction Timeout for this MDB to 6 hours. How can this be done?? We are using JbossAS-4.2.2GA, and EJB2 When will this issue be fixed? Anuja	1	0	https://issues.jboss.org/browse/JBAS-5041
1107	JBAS-5035	It looks the same, did you attach the correct one? :-) I've deleted both the attachments can you try again.	1	1	https://issues.jboss.org/browse/JBAS-5035

1109	JBAS-5031	Can we close it now?	1	1	https://issues.jboss.org/browse/JBAS-5031
1110	JBAS-5023	Jeff, can you take 2 look at those 2 failing tests?	0	0	https://issues.jboss.org/browse/JBAS-5023
1111	JBAS-5023	The patch looks right to me. Do you want to check it in once you have commit rights, Jeff? That way we do justice to you for finding out the location in the code.	0	0	https://issues.jboss.org/browse/JBAS-5023
1112	JBAS-5023	What is left here?	1	1	https://issues.jboss.org/browse/JBAS-5023
1113	JBAS-5022	Remy, can you take a look of this case? I don't think the provided patch is really related.	0	0	https://issues.jboss.org/browse/JBAS-5022
1114	JBAS-5007	Stefan are you looking into this?	1	1	https://issues.jboss.org/browse/JBAS-5007
1115	JBAS-4996	With the "old" jbossws versioning scheme is jbossws-3.0.1-native-2.0.4.GA equivalent to 2.0.4 or 3.0.1?	1	1	https://issues.jboss.org/browse/JBAS-4996
1116	JBAS-4993	Need to investigate this failure too: org.jboss.test.tm.test.TxTimeoutUnitTestCase: Pass: 1 Fail: 0 Error: 1 javax.ejb.EJBException: Should be marked rolled back: STATUS_ACTIVE at org.jboss.test.tm.ejb.TxTimeoutBean.testOverriddenTimeoutExpires(TxTimeoutBean.java:71)	0	0	https://issues.jboss.org/browse/JBAS-4993
1117	JBAS-4992	Stefan, can you comment on this behavior?	1	1	https://issues.jboss.org/browse/JBAS-4992
1118	JBAS-4956	what does "any more" mean in terms of jbossas, tck5 SVN revisions	0	0	https://issues.jboss.org/browse/JBAS-4956
1119	JBAS-4939	The other issue of server start-up being very slow because messages sent are not seen by the sender I think that is somehow related to the above one issue and the change in behavior after RHEL 4U4. So one of the above hopefully fix that: 1. not bind the multicast socket to specific interface or bind to the interface which multicast route is set through 2. set the socket option IP_MULTICAST_LOOP if not already set My feeling is that we should not try to guess correct interface but rather let OS choose the default one or the user use a start-up option to specify one. That will safe us from many issues.	0	0	https://issues.jboss.org/browse/JBAS-4939
1120	JBAS-4939	Dimitris, could you re-enabled the regular noip run for a day? Want to see if my JBAS-4966 fix took care of the problem; expect it will.	1	1	https://issues.jboss.org/browse/JBAS-4939
1121	JBAS-4926	This fails to identify deployments that should fail as failing. What is the real issue with this exception? Why shouldn't the ear deployment be failing?	0	0	https://issues.jboss.org/browse/JBAS-4926
1122	JBAS-4926	If I do not have the juddi-service.sar deployed i.e. there is no failed deployment because of [JBAS-4929] then the ear deployment does not fail either. Also, the junit output contains a list of all failed deployments for every test. This prevents junit-reports because of the xml volume to process. Is it not enough to list the deployment as failed when it actually is deployed for the first time?	0	0	https://issues.jboss.org/browse/JBAS-4926
1123	JBAS-4926	Hi, I allways get this error ("LifecycleException: Pipeline has not been started"), when I deploy my ear derived from Netbeans6.0/JBoss4.2.2. How can I solve this problem?	0	0	https://issues.jboss.org/browse/JBAS-4926

1128	JBAS-4906	How would autodiscovery work if different servers are using different multicast addresses and ports?	1	1	https://issues.jboss.org/browse/JBAS-4906

#	Requirement	Questions	Answered	Successfully Answered	URL
1129	JBAS-4891	There is a usage of such qname type elments in the EjbJar3xUnitTestCase.java, and this is parsing correctly. https://svn.jboss.org/repos/jbossas/projects/metadata/trunk/src/test/java/org/jboss/test/metadata/ejb/EjbJar3xUnitTestCase.java https://svn.jboss.org/repos/jbossas/projects/metadata/trunk/src/test/resources/org/jboss/test/metadata/ejb/EjbJar3x_testServiceRefs.xml <ejb-jar xmlns="http://java.sun.com/xml/ns/javaee" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://java.sun.com/xml/ns/javaee http://java.sun.com/xml/ns/javaee/ejb-jar_3_0.xsd" version="3.0" id="ejb-jar-service-refs"> <enterprise-beans> <session id="session1"> <description>A secured trival echo session bean</description> <ejb-name>StatelessSession1</ejb-name> <home>org.jboss.test.security.interfaces.StatelessSessionHome</home> <remote>org.jboss.test.security.interfaces.StatelessSession</remote> <local-home>org.jboss.test.security.interfaces.StatelessSessionLocalHome</local-home> <local>org.jboss.test.security.interfaces.StatelessSessionLocal</local> <ejb-class>org.jboss.test.security.ejb.StatelessSessionBean</ejb-class> <session-type>Stateless</session-type> <transaction-type>Container</transaction-type> <service-ref id="session1-service-ref"> <!-- JNDI name bound to the service interface in the client's environment context --> <service-ref-name>session1/Hello</service-ref-name> <!-- service interface class --> <service-interface>org.jboss.test.security.interfaces.HelloWorldService</service-interface> <service-ref-type>org.jboss.test.security.interfaces.HelloWorldRef</service-ref-type> <!-- placeholder for published WSDL file --> <wsdl-file>session1-wsdl-file</wsdl-file> <!-- Java<->XML mapping file --> <jaxrpc-mapping-file>META-INF/jaxrpc-mapping.xml</jaxrpc-mapping-file> <service-qname xmlns:session1="http://www.jboss.org">session1:Session1Qname</service-qname> <port-component-ref> <!-- service endpoint interface class --> <service-endpoint-interface>org.jboss.test.security.interfaces.HelloEndPoint</service-endpoint-interface> </port-component-ref> <handler-chains> <handler-chain id="session1-chain1"> <service-name-pattern>*</service-name-pattern> <handler id="sesion1-chain1-handler1"> <handler-name>session1.Handler1</handler-name> <handler-class>session1.Handler1</handler-class> <init-param> <param-name>param1</param-name> <param-value>value1</param-value> </init-param> <soap-header xmlns:session1="http://www.jboss.org">session1:soap-header</soap-header> <soap-role>session1:soap-role</soap-role> <port-name>session1:soap-role</port-name> </handler> </handler-chain> </handler-chains> </service-ref> </session> What is an example descriptor that is failing?	0	0	https://issues.jboss.org/browse/JBAS-4891
1130	JBAS-4891	The problem seems to be related jboss descriptors that use a dtd. Generally, dtd based descriptors don't seem to support namespace attributes. Currently schemas are not available for jboss-client.xml, jboss-web.xml that can also contain <service-qname> elements Another point is backwards compatiblity. Folks might have AS-4.2 descriptors that use dtd based descriptors with qname elements. If we go back to supporting the <service-qname>{http://some-namespace}Foo</service-qname> syntax, we would have different syntaxes in the standard vs. the proprietary descriptors. What do you think?	0	0	https://issues.jboss.org/browse/JBAS-4891
1131	JBAS-4882	Thomas, can you or someone from the ws team review this document? It probably needs updating to reflect the switch to jbossws-2.0.x.	0	0	https://issues.jboss.org/browse/JBAS-4882
1132	JBAS-4877	Are we going for the upgrade or not?	1	1	https://issues.jboss.org/browse/JBAS-4877
1133	JBAS-4869	Is there a link we can point to for supported Operating System/Databases etc?	1	0	https://issues.jboss.org/browse/JBAS-4869
1134	JBAS-4868	Verify the following content in this chapter: 1. Console output on server start up 2. Do we have a production profile? 3. Image snapshot	1	0	https://issues.jboss.org/browse/JBAS-4868
1135	JBAS-4867	Verify the following content in this chapter: 1. Do we have a GUI installer? 2. Installer Filename - jboss-4.2.2.GA.zip 3. Major Installation Steps 4. Shortcuts / XDG Menu applicable?	1	0	https://issues.jboss.org/browse/JBAS-4867
1136	JBAS-4851	Carlo, can you or someone from EJB3 review this document? I made a first pass with some minor changes.	1	1	https://issues.jboss.org/browse/JBAS-4851
1137	JBAS-4850	Should I close the issue now?	1	1	https://issues.jboss.org/browse/JBAS-4850
1138	JBAS-4842	Samson, in the respective subtasks, I see the wrong document attached to the tasks (e.g. the microkernel task has the naming document). Can you please check?	0	0	https://issues.jboss.org/browse/JBAS-4842
1139	JBAS-4834	Brian, Looking at the full AS 4.2.2 beta documentation, it looks as if the HA Singleton topics were included inside HTTP services: 5. HTTP Services 5.1. Configuring load balancing using Apache and mod_jk 5.2. Download the software 5.3. Configure Apache to load mod_jk 5.4. Configure worker nodes in mod_jk 5.5. Configuring JBoss to work with mod_jk 5.6. Configuring HTTP session state replication 5.7. Enabling session replication in your application 5.8. Using FIELD level replication 5.9. Monitoring session replication 5.10. Using Clustered Single Sign On 5.11. Clustered Singleton Services 5.11.1. HASingletonDeployer service 5.11.2. Mbean deployments using HASingletonController 5.11.3. HASingleton deployments using a Barrier 5.11.4. Determining the master node Was this intended? http://labs.jboss.com/file-access/default/members/jbossas/freezone/docs/Clustering_Guide/beta422/html/index.html	0	0	https://issues.jboss.org/browse/JBAS-4834
1140	JBAS-4832	What does "Out of Date" mean for this task? Clearly this document requires some work although it should be included in the installation guide. Installing a datasource in JBossAS is a typical task	0	0	https://issues.jboss.org/browse/JBAS-4832
1141	JBAS-4828	index.xhtml has a header like this: Seam POJO . Should it not be something like JSF-EJB3 example .	0	0	https://issues.jboss.org/browse/JBAS-4828
1142	JBAS-4822	HI, a few point made in this chapter: 1. There are 3 links under the Chapter header are these really necessary? The chapter is only 2 pages long 2. It is mentioned in 4.1 that the ZIP can be downloaded from http://labs.jboss.com/jbossas/downloads/ but the same document in chapter 2 it is talking about installation types for the EAP. Should we explain that this is also available from https://network.jboss.com? 3. 4.3. Post Installation Security Configuration - I found that both JMX & Web Console do not actually, in 4.2.2 ,require authentication when the installation guide says they do - It is mentioned that no user accounts exist, but the JBossAdmin account is present - The section in creating accounts/authentication is not straight forward to a new user (I propose new structure and addition of enabling <security-domain> JAAS, not mentioned) I hope this is of help	0	0	https://issues.jboss.org/browse/JBAS-4822
1143	JBAS-4811	Sure, we should move to SP2. How you propose to incorporate the WS tests in AS releases? Wouldn't the easiest thing be to replicate your hudson configuration in the QA environment?	1	1	https://issues.jboss.org/browse/JBAS-4811
1144	JBAS-4811	The hudson job is configured here. http://hudson.qa.jboss.com/hudson/view/JBoss%20AS/job/JBossWS-2.0.1.SP2-testsuite-AS4.2.x/ There are 3 test failures due to java.lang.ClassNotFoundException: org.apache.ws.scout.registry.ConnectionFactoryImpl Where is this class located?	1	1	https://issues.jboss.org/browse/JBAS-4811

#	Requirement	Questions	Answered	Successfully Answered	URL
1145	JBAS-4811	Shouldn't the tests be such so they run on a out-of-the box AS? Or if they require a different configuration, create it, as part of the test?	1	1	https://issues.jboss.org/browse/JBAS-4811
1146	JBAS-4811	Setting release version back to 2.2.2.GA I've also recreated the tag: https://svn.jboss.org/repos/jbossas/tags/JBoss_4_2_2_GA/ All the testsuites pass, as far as I can see. Rajesh, can we release today (Oct/22nd) ?	1	1	https://issues.jboss.org/browse/JBAS-4811
1147	JBAS-4811	Since you had a look at the hudson script, currently i unzip the juddi-service.sar in the default/deploy directory. unzip thirdparty/juddi-service.sar -d $WORKSPACE/$DIST_NAME/server/default/deploy/juddi-service.sar/ instead if i just copy the sar, the tests fail. cp thirdparty/juddi-service.sar $WORKSPACE/$DIST_NAME/server/default/deploy/ Do you know why that happens?	1	1	https://issues.jboss.org/browse/JBAS-4811
1148	JBAS-4806	Deepak, can you look at this task?	1	1	https://issues.jboss.org/browse/JBAS-4806
1149	JBAS-4795	The JBDOCS-108 task and its subtasks are a dependency of the 4.0.3 guide updates.	1	1	https://issues.jboss.org/browse/JBAS-4795
1150	JBAS-4752	I am working on JBOSS 4.2.3. I am having one issue. I deploy my application on JBOSS. I use spnego protocol for Single Sign On. I am running into an issue where the application is running out of memory. I took heap dumps at regular intervals. I open every dump in Eclipse Memory Analyzer. I open the dominator_tree. I see a big percentage of entries (it grows from small percentage to a bigger one) occupied by class org.jboss.util.TimedCachePolicy. There one entry for each https request to the application. I think they should not get accumulated. My question is if this fix (JBAS-4752) would resolve this issue? Any suggestions / recommendations / questions / details you need? Thanks	0	0	https://issues.jboss.org/browse/JBAS-4752
1151	JBAS-4743	Sorry Eric, can you also add those 3 dtds from here: https://svn.jboss.org/repos/jbossas/trunk/mbeans/src/resources/dtd/	1	0	https://issues.jboss.org/browse/JBAS-4743
1152	JBAS-4743	Eric, there is one more schema file attached (jboss_5_0.xsd) that for some reason is not included with the other dtds/schemas. Can you add this as well, please?	1	0	https://issues.jboss.org/browse/JBAS-4743
1153	JBAS-4706	Scott, you are doing the merging deployer. Can you please align this JIRA issue with whatever issue that you have open for the merging deployer?	0	0	https://issues.jboss.org/browse/JBAS-4706
1154	JBAS-4696	Mark, was there any feedback from Joshua?	1	1	https://issues.jboss.org/browse/JBAS-4696
1155	JBAS-4696	Okay, Mark, I'm on it. Step 1: Move JBEAP4.2 forked content (x6 languages) back into upstream Target is 28 Sept and branch as Enterprise. Step 2: Create test branch and rearchitect to build with Maven2 Step 3: Have AS team examine test branch and if good to go, move to content to head	1	1	https://issues.jboss.org/browse/JBAS-4696
1156	JBAS-4696	Status Update: ========== Step 1: Move JBEAP4.2 forked content (x6 languages) back into upstream Target is 28 Sept and branch as Enterprise. |_DONE: Enterprise branch is JBEAP42CP01. Note will only build on linux with the documentation-devel package Step 2: Create test branch and rearchitect to build with Maven2 |_IN PROCESS: Content in trunk is being rearchitected. Giving myself 2 days to complete this. I have requested some additional help from MarkN. re: using maven. my upstream maven plugin is unstable and I need a baseline to work from. Hopefuly, Mark can give me an example. ETA: COB Oct 2nd, for Installation Guide. Step 3: Have AS team examine test branch and if good to go, move to content to head |_NOT DONE	0	0	https://issues.jboss.org/browse/JBAS-4696
1157	JBAS-4694	Is this already done? I am not sure if this introduced 200+ failing tests in cmp2 in both the AS 4.2 and 5.0 testsuites from around the same time this JIRA was created.	1	1	https://issues.jboss.org/browse/JBAS-4694
1158	JBAS-4694	Either this, or a change by Adrian. Can you look more into that, or simply rollback the hsqldb in a local copy and re-test?	1	1	https://issues.jboss.org/browse/JBAS-4694
1159	JBAS-4688	Where does the transaction-spi live ?	1	1	https://issues.jboss.org/browse/JBAS-4688
1160	JBAS-4688	Pointing trunk to Beta2. I see the integration project currently at 5.0.0.Beta3. Is an update to that necessary, as well?	1	1	https://issues.jboss.org/browse/JBAS-4688
1161	JBAS-4675	It's ok to disallow transaction local delegate construction if the status is not ACTIVE, similar to you cannot create the synchronization. It's NOT ok to disallow retrieval of the delegate if it is was previouslly allowed to be constructed (assuming the transaction hasn't completed - rollback, heuristic or otherwise). It's virtually the same rules as transaction synchronization. i.e. You register the synchronization, setRollbackOnly() and still the afterCompletion() gets invoked. I imagine this also affects the TransactionSynchronizationRegistry implementation of JavaEE5 which has a simpler "TransactionLocal" put/getResource notion?	1	1	https://issues.jboss.org/browse/JBAS-4675
1162	JBAS-4672	Is there any discussion what needs to be done for this task?	1	1	https://issues.jboss.org/browse/JBAS-4672
1163	JBAS-4657	For the AS project we need subtasks (like this) for any jboss/thirdparty component that needs updating, so we know what's left and were we stand. Also, JBossWeb need to be tracked somewhere, no? Looking into it's JIRA there hasn''t been any recorded release in 2007 http://jira.jboss.com/jira/secure/project/ViewProject.jspa?pid=10054 How do we know what feature/fix got into what release, especially now that jboss web is becoming a fork of tomcat? Can this info be found somewhere else?	1	1	https://issues.jboss.org/browse/JBAS-4657
1164	JBAS-4644	3 failures are still there: org.jboss.test.webservice.jbws309.JBWS309TestCase(JACC).testBasicSecuredServiceAccess org.jboss.test.webservice.jbws309.JBWS309TestCase(JACC).testBasicSecuredDIIAccess org.jboss.test.webservice.jbws309.JBWS309TestCase(JACC).testRoleSecuredServiceAccess All fail similarly with: junit.framework.AssertionFailedError: Security exception expected at org.jboss.test.webservice.jbws309.JBWS309TestCase.testRoleSecuredServiceAccess(JBWS309TestCase.java:179) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	1	1	https://issues.jboss.org/browse/JBAS-4644
1165	JBAS-4644	Anil is away on vacation, can you take a look Alessio? This has dragged on for a long time and it makes up 3 of the remaining 21 failures of the main testsuite.	1	1	https://issues.jboss.org/browse/JBAS-4644
1166	JBAS-4644	Dimitris, I've looked at this but did not come to a solution. I've just wrote some comments on the linked forum thread. Is Anil still on vacation? I might go on digging this, but don't know how much time this could take me, may be someone with more knowledge on this could speed up the process.	0	0	https://issues.jboss.org/browse/JBAS-4644
1167	JBAS-4644	Anil is coming back on the 27th. Who would be more appropriate to help? If the jbossws endpoint servlet is not called then it's a deployment problem, right?	1	1	https://issues.jboss.org/browse/JBAS-4644
1168	JBAS-4644	> Who would be more appropriate to help? Well, don't know, may be someone from the security project Still looking at this anyway.	0	0	https://issues.jboss.org/browse/JBAS-4644
1169	JBAS-4644	So who's looking at this Stefan or Anil?	0	0	https://issues.jboss.org/browse/JBAS-4644

#	Requirement	Questions	Answered	Successfully Answered	URL
1170	JBAS-4644	Stefan, I am wondering if you can do the following. 1) Create a jacc instance by running the "ant tests-jacc-security" target once. 2) Then start the jacc instance. 3) Now try running this JBWS test as" ant -Dtest=org.jboss.test... one-test" 4) Place break points in the AbstractSecurityDeployer (and sub security deployers), tomcat deployer etc. What I want to know is when does the WS layer attach the web metadata as an attachment into the deployment unit (so you may have to trace log the mc layer etc). The way to fix this is that after the ws layer creates a JBossWebMetaData and attaches it to the deployment unit, we need to send the meta data via the security deployers such that the jacc permissions can be created.	1	1	https://issues.jboss.org/browse/JBAS-4644

1177	JBAS-4636	I still see this issue intermittently in 5.0.0.CR1 when attempting to hot deploy my ear. Ales' last comment is not clear. Is this something that the application implementation needs to do or is the fix embedded in JBAS? Our application deployed fine in JB 4.0.2 and does not use a jboss-app.xml file in its manifest. By 'intermittently' I can get this failure 2, 3 sometimes 6 times in a row, then, for whatever reason, deployment succeeds. Also, when am I going to be able to NOT have to use hot-deployment. There still appears to be deployment ordering issues in CR1. Thanks.	0	0	https://issues.jboss.org/browse/JBAS-4636
1178	JBAS-4635	Shelly, can you make sure we have subtasks to cover all testsuite failures, grouped together as much as possible?	0	0	https://issues.jboss.org/browse/JBAS-4635
1179	JBAS-4591	Were is this the discussion thread for this? If you do it, don't change the MDB to enable this by default. I deprecated this whole feature in JBoss4 and disabled in JBoss5. Not because it is JBossMQ specific but because it leads to broken behaviour. See where this has been discussed it before in the JCA and EJB design forums for why this is a bad idea!	1	0	https://issues.jboss.org/browse/JBAS-4591
1180	JBAS-4586	Hey Troy, are you still out there? I'm sorry this issue's been flying under the radar for so long. I think I know what was happening. The standard EJB3 configuration uses the Remoting "socket" transport, which has a default limit of 300 worker threads on the server side. Once a worker thread is connected to a client, it will keep listening for further invocations from that client until either (1) the socket times out, or (2) the client disconnects. So it's likely that most of the delay experienced by your users was spent waiting for worker thread to free up. The number of worker threads can be increased by changing the EJB3 configuration: <mbean code="org.jboss.remoting.transport.Connector" name="jboss.remoting:type=Connector,name=DefaultEjb3Connector,handler=ejb3"> <depends>jboss.aop:service=AspectDeployer</depends> <attribute name="InvokerLocator">socket://${jboss.bind.address}:3873/?maxPoolSize=600</attribute> <attribute name="Configuration"> <handlers> <handler subsystem="AOP">org.jboss.aspects.remoting.AOPRemotingInvocationHandler</handler> </handlers> </attribute> </mbean> Here I've added the "maxPoolSize" parameter to the "InvokerLocator" attribute. An alternative would be to reduce the timeout value, so worker threads return to the thread pool sooner: <mbean code="org.jboss.remoting.transport.Connector" name="jboss.remoting:type=Connector,name=DefaultEjb3Connector,handler=ejb3"> <depends>jboss.aop:service=AspectDeployer</depends> <attribute name="InvokerLocator">socket://${jboss.bind.address}:3873/?timeout=1000</attribute> <attribute name="Configuration"> <handlers> <handler subsystem="AOP">org.jboss.aspects.remoting.AOPRemotingInvocationHandler</handler> </handlers> </attribute> </mbean> Here I've set the "timeout" parameter to "1000". If you're still interested in pursuing this issue, let me know. Otherwise, I'll assume it's a configuration problem and close the issue.	1	1	https://issues.jboss.org/browse/JBAS-4586

1181	JBAS-4572	I created "depends" links to the EJB3 issue that *must* be solved, and "related" links to the known failures, according to Carlo's input: > > org.jboss.ejb3.test.clusteredsession.unit.NestedBeanUnitTestCase(BR-enabled).testStatefulPassivation EJBTHREE-1053 + EJBTHREE-1054 (to some extend) > > org.jboss.ejb3.test.ejbthree832.unit.EntityTestCase.test1 EJBTHREE-832: known issue > > org.jboss.ejb3.test.iiop.unit.IiopRemoteUnitTestCase(jacorb).testTxPropegation EJBTHREE-892: known issue > > org.jboss.ejb3.test.interceptors2.unit.InterceptorsTestCase.testOverrideOrdering EJBTHREE-896: known issue > > org.jboss.ejb3.test.jacc.unit.JaccTestCase.testSomeEntity EJBTHREE-894: known issue > > org.jboss.ejb3.test.jaxws.unit.ContextEJBTestCase.testClientAccessRPC EJBTHREE-757: is sessionContext.getMessageContext supposed to work? It's for JAX-RPC which is obsolete, right? Rephrase: do we do JAX-RPC with EJB 3? > > org.jboss.ejb3.test.webservices.unit.JSR181TestCase.testWebServiceRef3 > > org.jboss.ejb3.test.webservices.unit.JSR181TestCase.testWebServiceRef4 EJBTHREE-899: web service ref injection via dd I've added a test for the post construct issue: EJBTHREE-1055.	0	0	https://issues.jboss.org/browse/JBAS-4572
1182	JBAS-4568	Is 2.2.0.beta still the target AOP release? (currently on snapshot)	0	0	https://issues.jboss.org/browse/JBAS-4568
1183	JBAS-4567	Is the target 2.1.0 or 2.0.1 ?	1	1	https://issues.jboss.org/browse/JBAS-4567
1184	JBAS-4565	Hibernate Validator was implicitly included into Hibernate Annotations 3.2.x, it is now an independent package. Should we include it or not?	1	1	https://issues.jboss.org/browse/JBAS-4565
1185	JBAS-4565	Currently we'll have the following libs on the server/xxx/lib dir: hibernate-annotations.jar hibernate-commons-annotations.jar hibernate-entitymanager.jar hibernate3.jar jboss-hibernate.jar I will be adding hibernate-validator.jar, too. On the client side we have hibernate-annotations.jar hibernate-client.jar Is any other library needed on the client side?	1	1	https://issues.jboss.org/browse/JBAS-4565
1186	JBAS-4564	Yes hibernate-commons-annotations is required. Another problem may arise. Hibernate Validator (the component) is now separate from hibernate-annotations Do we consider it part of the JBoss AS distro, or is it safe to not include it (ie let the user add it if needed)?	1	1	https://issues.jboss.org/browse/JBAS-4564
1187	JBAS-4563	Is this the latest version we can use?	1	1	https://issues.jboss.org/browse/JBAS-4563
1188	JBAS-4562	Ideally, I would like to integrate a CR release of JBoss Web 2.1 in the beta 3 build. This should not be an issue, but there will be a small update needed since this new version slightly updates the annotation integration interface. Would this be acceptable, or would you prefer sticking with a JBoss Web 2.0.1 GA and upgrading post beta 3 ?	1	1	https://issues.jboss.org/browse/JBAS-4562
1189	JBAS-4533	Do we want a different tag than the current "5.0.0.Beta3" one?	0	0	https://issues.jboss.org/browse/JBAS-4533
1190	JBAS-4501	Can we please get 4.2.1.GA building with JDK 1.6?	1	1	https://issues.jboss.org/browse/JBAS-4501
1191	JBAS-4499	Dimitris.. I have assigned this to you.. for your evaluation first.	1	1	https://issues.jboss.org/browse/JBAS-4499
1192	JBAS-4496	Is that ok to reschedule this for 4.2.2 ? I don't want more changes in Branch_4_2 before we release a community 4.2.1.GA	1	0	https://issues.jboss.org/browse/JBAS-4496
1193	JBAS-4438	Please don't shoot the messenger! I filed this in response to Weston Price's suggestion to file a JIRA for it (see http://www.jboss.org/index.html?module=bb&op=viewtopic&t=105141) If the container handles redelivery by NACKing back to the destination, then I can see this doesn't actually make a lot of sense, although could still be useful for JMS providers that don't implement any kind of redelivery delay themselves. Feel free to reject it. (Aside: Is NACKing back to the queue really the correct way to handle rollback? The JMS spec says that session rollback should cause *recovery* of the session (Sec 4.4.7). Session recovery (Sec. 4.4.11) is supposed to stop and restart delivery of the last unacknowledged in that session. If you NACK on rollback then the message will go back to the queue and if there is *another* session consuming from the same queue, then the other session may receive the NACKed message, which would be contrary to the JMS spec which is pretty clear the message should be delivered back to the same session. For this reason, JBoss Messaging (unlike JBossMQ) always triggers session recovery (not NACK) on rollback, to ensure the correct session gets the rolled back messages.)	0	0	https://issues.jboss.org/browse/JBAS-4438
1194	JBAS-4423	Anil, what is the status on this task. The EJB3 team urgently needs this to properly re-factor and stabilize their work. What's your ETA for this to be done. Thanks.	1	1	https://issues.jboss.org/browse/JBAS-4423
1195	JBAS-4401	What release is this reported against?	0	0	https://issues.jboss.org/browse/JBAS-4401
1196	JBAS-4392	Is there more work to it?	0	0	https://issues.jboss.org/browse/JBAS-4392
1197	JBAS-4388	JBPAPP-327 is not related to this issue. JBPAPP-327 concerns security domains. This issue concerns the web context root of current and future administrative services. SecureTheInvokers does not resolve the issue. Placing an authentication requirement on the invokers, console, etc does not prevent dictionary or brute force attacks, or abuse from leaked passwords or ex-employees. In my experience, most major enterprise environments have policies that prohibit public access to administrative login interfaces. All such interfaces are only accessible from the private network, requiring VPN access (usually with two-factor authentication) from remote sources.	1	1	https://issues.jboss.org/browse/JBAS-4388
1198	JBAS-4383	Are there any docs or info on how this works now? Thanks.	0	0	https://issues.jboss.org/browse/JBAS-4383
1199	JBAS-4383	How can I achieve the same with AS 6. I am currently working on deploying an app using JSF 1.2 to AS 6. Thanks	1	1	https://issues.jboss.org/browse/JBAS-4383
1200	JBAS-4378	What's the status of this issue? All the subtasks are not scheduled at all.	1	1	https://issues.jboss.org/browse/JBAS-4378
1201	JBAS-4373	The following permission needs to be added ---------- 12:05:36,760 INFO [TomcatDeployer] deploy, ctxPath=/class-loading, warUrl=.../tmp/deploy/tmp42192class-loading-exp.war/ 12:05:37,081 ERROR [[ClasspathServlet2]] Servlet.service() for servlet ClasspathServlet2 threw exception java.security.AccessControlException: access denied (java.lang.RuntimePermission getClassLoader) at java.security.AccessControlContext.checkPermission(AccessControlContext.java:264) at java.security.AccessController.checkPermission(AccessController.java:427) at java.lang.SecurityManager.checkPermission(SecurityManager.java:532) at java.lang.Class.getClassLoader(Class.java:588) at org.jboss.test.util.Debug.displayClassInfo(Debug.java:43) at org.jboss.test.web.servlets.ClasspathServlet2.processRequest(ClasspathServlet2.java:77) at org.jboss.test.web.servlets.ClasspathServlet2.doGet(ClasspathServlet2.java:50) at javax.servlet.http.HttpServlet.service(HttpServlet.java:690) at javax.servlet.http.HttpServlet.service(HttpServlet.java:803) at sun.reflect.GeneratedMethodAccessor222.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at org.apache.catalina.security.SecurityUtil$1.run(SecurityUtil.java:244) ---------- The permission should be: permission java.lang.RuntimePermission "getClassLoader"; Try adding that and see if the test cases pass.	1	1	https://issues.jboss.org/browse/JBAS-4373

#	Requirement	Questions	Answered	Successfully Answered	URL
1202	JBAS-4359	Ron... I'm assigning this to you.. You have the fix attached to this issue. All you need to do is to patch jboss-remoting 2.2 (maybe create a SP2?) with the fix. I tried to commit this myself on remoting branch, but I was confused about what branch to use, since I didn't recognize what branch to use based in your naming standard.	1	1	https://issues.jboss.org/browse/JBAS-4359
1203	JBAS-4359	Thank you for catching this, Clebert. I'm running the Remoting test suite with your changes, and as soon as it's done. I wll put a 2.2.0.SP2 jboss-remoting.jar in the repository. Clebert, can you think of a unit test? FYI: - Remoting HEAD is basically Remoting 3 - Remoting_2_x is "HEAD" for Remoting 2.x - Remoting_2_2_0_GA is for patches to Remoting 2.2.0	0	0	https://issues.jboss.org/browse/JBAS-4359
1204	JBAS-4359	Do you guys think this has performance implications? Looks like a local 'flush' after every write?	1	1	https://issues.jboss.org/browse/JBAS-4359
1205	JBAS-4355	Paul, not really a maven issue, but can you look into it?	0	0	https://issues.jboss.org/browse/JBAS-4355
1206	JBAS-4355	I think I"ve fixed it. Can you verify on Unix?	0	0	https://issues.jboss.org/browse/JBAS-4355
1207	JBAS-4320	Hi Dimitris, Thanks for replying. I've put it under feature request, since it works with HSQLDB. Is this a bug or a misconfiguration? Thanks in advance	0	0	https://issues.jboss.org/browse/JBAS-4320
1208	JBAS-4317	With various jbossws tests I was getting IllegalStateException("Security Context in invocation is null"); Please validate the change below. First throwing an ISE and then further down calling seems not logical //Place on the invocation if(mi.getSecurityContext() == null) mi.setSecurityContext(SecurityActions.getSecurityContext()); [tdiesler@tddell trunk]$ svn diff server Index: server/src/main/org/jboss/ejb/SessionContainer.java ==========...=== --- server/src/main/org/jboss/ejb/SessionContainer.java (revision 62601) +++ server/src/main/org/jboss/ejb/SessionContainer.java (working copy) @@ -620,9 +620,9 @@ public Object internalInvokeHome(Invocation mi) throws Exception { - //Validate that there is a security context on the invocation + //Place on the invocation if(mi.getSecurityContext() == null) - throw new IllegalStateException("Security Context in invocation is null"); + mi.setSecurityContext(SecurityActions.getSecurityContext()); String securityDomain = SecurityConstants.DEFAULT_APPLICATION_POLICY; if(sm != null) @@ -633,9 +633,6 @@ mi.getCredential(), securityDomain, null); } SecurityActions.pushCallerRunAsIdentity(mi.getSecurityContext().getRunAs()); - //Place on the invocation - if(mi.getSecurityContext() == null) - mi.setSecurityContext(SecurityActions.getSecurityContext()); Method method = mi.getMethod(); if (method != null && method.getName().equals("remove")) @@ -672,9 +669,9 @@ */ public Object internalInvoke(Invocation mi) throws Exception { - //Validate that there is a security context on the invocation + //Place on the invocation if(mi.getSecurityContext() == null) - throw new IllegalStateException("Security Context in invocation is null"); + mi.setSecurityContext(SecurityActions.getSecurityContext()); String securityDomain = SecurityConstants.DEFAULT_APPLICATION_POLICY; if(sm != null) @@ -685,9 +682,6 @@ mi.getCredential(), securityDomain, null); } SecurityActions.pushCallerRunAsIdentity(mi.getSecurityContext().getRunAs()); - //Place on the invocation - if(mi.getSecurityContext() == null) - mi.setSecurityContext(SecurityActions.getSecurityContext()); try {	1	1	https://issues.jboss.org/browse/JBAS-4317
1209	JBAS-4317	Thomas, the security context either comes over the wire (remote calls) or comes from the thread local (Local EJB invocations). So where-ever the Invocation object is created on the server side, the security context needs to be set on the Invocation object. The IllegalStateException thrown in the containers was one way of validating that whoever was creating the Invocation object has set the security context (just the way they would have done with .setPrincipal, setCredential etc). The primary issue is that there are various integration layers constructing the Invocation object rather than a central place. Some of the examples where the Invocation object is created on the server side include the BaseLocalProxyFactory, ProxyFinderFactory, CMPFieldBridgexxxx. So I will need to revert back the IllegalStateException and need your stack trace so that I can understand where your Invocation is being created. Once the containers have established that the invocation does contain a security context, they set it on the thread local so that the JACC PolicyContext get Subject call always takes care of the RunAsIdentity that came into the specific container.	0	0	https://issues.jboss.org/browse/JBAS-4317

1218	JBAS-4236	Stan, is the update worth it?	1	1	https://issues.jboss.org/browse/JBAS-4236
1219	JBAS-4215	Is this a duplicate of JBAS-5153 ?	0	0	https://issues.jboss.org/browse/JBAS-4215
1220	JBAS-4211	Updated version. Works well! But the solution is a little bit dirty. Does anyone have got an idea how to make it "clean"? The output of the memory checks is in appropriate reports/*.xml file.	1	1	https://issues.jboss.org/browse/JBAS-4211
1221	JBAS-4211	How dirty it is?	0	0	https://issues.jboss.org/browse/JBAS-4211
1222	JBAS-4211	So, it takes the whole junit ant task, changes some classes and put one more class to it. What do you think about that?	1	1	https://issues.jboss.org/browse/JBAS-4211
1223	JBAS-4211	Martin, this issue appears outdated and Ryan no longer here. Does QA plan to implement this feature? Do you need input from dev?	1	0	https://issues.jboss.org/browse/JBAS-4211
1224	JBAS-4209	Shall I supply a patch? If so what should the flag be called? Regards Felix	1	0	https://issues.jboss.org/browse/JBAS-4209
1225	JBAS-4180	Summary of chat with Brian: - A general refactor of stuff that extends HAServiceMBeanSupport such that HA classes can be POJOs, with JMX behavior an added feature. - Similar fashion to the work you done with JBossCache 2.0 where JMX was decoupled. - Examine all the use cases, see what makes sense. E.g. HASingletonController emits JMX notifications, so is a non-JMX-aware version sensible?	0	0	https://issues.jboss.org/browse/JBAS-4180
1226	JBAS-4175	Could you attach the file to this issue so I can check what I have done wrong ?	1	0	https://issues.jboss.org/browse/JBAS-4175
1227	JBAS-4174	Maybe I see what you are saying. Are you talking about the Sun versions of these libraries? Sun forked these libraries and changed the package names to com.sun.org.apache. There is no way we could safely use the standard versions of these libraries. Stan	1	0	https://issues.jboss.org/browse/JBAS-4174
1228	JBAS-4165	This already exists; was added two years ago. Even uses jnp.discoveryTTL as the name. But it, along with several other configurable properties, is not in the documentation. Will open a new JIRA to fix that.	0	0	https://issues.jboss.org/browse/JBAS-4165
1229	JBAS-4152	The last bug I see mentioning a HSQL upgrade was JBAS-1618 which ended up with 1.8 RC9. However, this bug mentions that we were upgrading from 1.8.0.2 to 1.8.0.7. When did 1.8 RC 9 get upgraded and where is it tracked/documented?	0	0	https://issues.jboss.org/browse/JBAS-4152
1230	JBAS-4152	Ok, I don't recall every detail aymore :-) What I did was a <dbindex/> tag in the relationships (as well as for fields) as most DBs don't automatically put indexes on fks (as oposed to what hsql did). Now I put an index on one side of the relation and not on the 2nd one. That 2nd one is now failing, as the test code detects an index, which should not be there. I *guess* that hsqldb is now putting in an index there that does not start with "pk_idx" (those get filtered) which gets detected by the failing test, as it does not expect it. Is there a "preconfigured" jboss as with the new hsqldb and the test(suite) soewhere available?	1	1	https://issues.jboss.org/browse/JBAS-4152
1231	JBAS-4151	Is there *any* integration test for that?	1	1	https://issues.jboss.org/browse/JBAS-4151
1232	JBAS-4148	Can you help us with this?	0	0	https://issues.jboss.org/browse/JBAS-4148
1233	JBAS-4148	Dimitris, who could d this change?	0	0	https://issues.jboss.org/browse/JBAS-4148
1234	JBAS-4148	Can you please commit that to trunk, as well?	1	1	https://issues.jboss.org/browse/JBAS-4148
1235	JBAS-4127	Weston will you include this in CR1 or defer it?	1	1	https://issues.jboss.org/browse/JBAS-4127
1236	JBAS-4100	I've synched the dtds in Branch_4_2 with HEAD, introducing new 4_2 ones in both branches. I did some minor changes where one of them was outdated. The xml schemas were ok, so I just copied over ejb-jar_3_0.xsd & web-app_2_5.xsd from HEAD to Branch_4_2. One discrepency is security-config_4_1.xsd in Branch_4_2 and HEAD. They contain different packages names for the jbxb bindings: org.jboss.security.auth.* (Branch_4_2) org.jboss.security.config (HEAD) Are we supposed to synch them?	0	0	https://issues.jboss.org/browse/JBAS-4100
1237	JBAS-4085	Is this possibly another manifestation of JBAS-4060? Turned out that's what JBAS-4064 was -- similar symptom of getting a 503. Key thing to see is if an earlier test that undeployed the same war shows the JBAS-4060 NPE; if so the first request following deploying the war again gets a 503.	1	1	https://issues.jboss.org/browse/JBAS-4085
1238	JBAS-4085	Brian, can you take this?	1	1	https://issues.jboss.org/browse/JBAS-4085

#	Requirement	Questions	Answered	Successfully Answered	URL
1239	JBAS-4085	It fails again :-(This and the 2 variations of it with JACC and/or security manager enabled: testUnauthorizedAccess Error Expected reply code:403, actual=400 java.io.IOException: Expected reply code:403, actual=400 at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:137) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:108) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:96) at org.jboss.test.web.test.WebIntegrationUnitTestCase.testUnauthorizedAccess(WebIntegrationUnitTestCase.java:445) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	1	1	https://issues.jboss.org/browse/JBAS-4085
1240	JBAS-4082	Scott, can you look into this? I've fixed all tests except for ExternalContextUnitTestCase Some change in the packaging causes a ClassCastException here: static Context createProxyContext(Context ctx) { ClassLoader loader = Thread.currentThread().getContextClassLoader(); Class[] interfaces = ctx.getClass().getInterfaces(); InvocationHandler handler = new CachedContext(ctx); Context proxyCtx = (Context) Proxy.newProxyInstance(loader, interfaces, handler); <=== here return proxyCtx; } 20:37:09,907 WARN [ServiceController] Problem starting service jboss.test:servi ce=ExternalContext,jndiName=external/SubMockNamingContext java.lang.ClassCastException: $Proxy67 at org.jboss.naming.ExternalContext$CachedContext.createProxyContext(Ext ernalContext.java:527) at org.jboss.naming.ExternalContext.rebind(ExternalContext.java:307) at org.jboss.naming.ExternalContext.startService(ExternalContext.java:23 0) at org.jboss.system.ServiceMBeanSupport.jbossInternalStart(ServiceMBeanS upport.java:289) at org.jboss.system.ServiceMBeanSupport.jbossInternalLifecycle(ServiceMB eanSupport.java:245) If you run the test a second time against the same server it passes.	1	1	https://issues.jboss.org/browse/JBAS-4082
1241	JBAS-4081	Anil, can you have a look? Only fails with JRockit.	1	1	https://issues.jboss.org/browse/JBAS-4081
1242	JBAS-4076	???? Why are these test using org.jboss.cache.transaction.DummyBaseTransactionManager from JBoss Cache? These tests use: TransactionManagerLocator.getInstance().locate() inside the test client. i.e. they expect to setup a local TM, the old TxManager by default. So it looks to me like the JBossCache tests are doing naughty things?	1	1	https://issues.jboss.org/browse/JBAS-4076
1243	JBAS-4073	8 tests fail with: Failure WEBAPP classloader unregistered junit.framework.AssertionFailedError: WEBAPP classloader unregistered at org.jboss.test.classloader.leak.test.ClassloaderLeakUnitTestCase.warTest(ClassloaderLeakUnitTestCase.java:222) at org.jboss.test.classloader.leak.test.ClassloaderLeakUnitTestCase.testSimpleWar(ClassloaderLeakUnitTestCase.java:144) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) Both sun & jrockit jdks.	0	0	https://issues.jboss.org/browse/JBAS-4073
1244	JBAS-4066	Somewhere in between 1.5.0_04 and 1.5.0_09, the exception thrown when completing class loaders try to load the same class has changed from a ClassCircularityError to the more general LinkageError: 13:42:52,920 INFO [RecursiveCCETests$MyUCL] Unexpected error during load of:org.jboss.test.classloader.circularity.support.HARMIServerImpl_Stub java.lang.LinkageError: org/jboss/test/classloader/circularity/support/HARMIServer at java.lang.ClassLoader.defineClass1(Native Method) at java.lang.ClassLoader.defineClass(ClassLoader.java:620) at java.security.SecureClassLoader.defineClass(SecureClassLoader.java:124) at java.net.URLClassLoader.defineClass(URLClassLoader.java:260) at java.net.URLClassLoader.access$100(URLClassLoader.java:56) at java.net.URLClassLoader$1.run(URLClassLoader.java:195) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at org.jboss.mx.loading.RepositoryClassLoader.findClassLocally(RepositoryClassLoader.java:672) at org.jboss.mx.loading.RepositoryClassLoader.findClass(RepositoryClassLoader.java:652) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at org.jboss.mx.loading.RepositoryClassLoader.loadClassLocally(RepositoryClassLoader.java:190) at org.jboss.mx.loading.ClassLoadingTask$ThreadTask.run(ClassLoadingTask.java:131) at org.jboss.mx.loading.LoadMgr3.nextTask(LoadMgr3.java:399) at org.jboss.test.classloader.circularity.test.RecursiveCCETests$MyUCL.loadClass(RecursiveCCETests.java:199) The logic for retrying the load after competing class loading tasks have been retried depends on the ClassCircularityError being thrown. There are several LinkageError subclasses, and only the ClassCircularityError would seem to have retry semantics. If we are to change to catch a LinkageError, additional logic to avoid repeated errors due to the alternate, non-retryable forms would be needed.	0	0	https://issues.jboss.org/browse/JBAS-4066
1245	JBAS-4064	Stan can you have a look? Could this be due to the http-client update also?	1	1	https://issues.jboss.org/browse/JBAS-4064
1246	JBAS-4042	The timers table name (and optionally schema) can be configured through the deploy/ejb-deployer.xml descriptor: ... <!-- A persistence policy that persists timers to a database. The 2 supported db persistence plugins are: org.jboss.ejb.txtimer.GeneralPurposeDatabasePersistencePlugin org.jboss.ejb.txtimer.OracleDatabasePersistencePlugin The table name defaults to "TIMERS". It can be overriden using the 'TimersTable' attribute if the persistence plugin supports it. When overriding the timers table, an optional schema can be specified using the syntax [schema.]table --> <mbean code="org.jboss.ejb.txtimer.DatabasePersistencePolicy" name="jboss.ejb:service=EJBTimerService,persistencePolicy=database"> <!-- DataSourceBinding ObjectName --> <depends optional-attribute-name="DataSource">jboss.jca:service=DataSourceBinding,name=DefaultDS</depends> <!-- The plugin that handles database persistence --> <attribute name="DatabasePersistencePlugin">org.jboss.ejb.txtimer.GeneralPurposeDatabasePersistencePlugin</attribute> <!-- The timers table name --> <attribute name="TimersTable">TIMERS</attribute> </mbean> ...	0	0	https://issues.jboss.org/browse/JBAS-4042

1247	JBAS-4031	One test fails for me (winXp), but seems to pass in cruisecontrol? <testcase classname="org.jboss.test.jacc.test.WebIntegrationUnitTestCase" name="testBadEarRedeploy" time="0.932"> <error message="Expected reply code:200, actual=503" type="java.io.IOException">java.io.IOException: Expected reply code:200, actual=503 at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:137) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:108) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:96) at org.jboss.test.web.test.WebIntegrationUnitTestCase.testBadEarRedeploy(WebIntegrationUnitTestCase.java:422) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) </error>	1	1	https://issues.jboss.org/browse/JBAS-4031
1248	JBAS-4031	The test actually passes with jrockit, but fails with sun jdk5, both on winxp and linux, so I'm re-opening the case. testBadEarRedeploy Error Expected reply code:200, actual=503 java.io.IOException: Expected reply code:200, actual=503 at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:137) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:108) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:96) at org.jboss.test.web.test.WebIntegrationUnitTestCase.testBadEarRedeploy(WebIntegrationUnitTestCase.java:422) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	1	1	https://issues.jboss.org/browse/JBAS-4031
1249	JBAS-4025	I only found one other instance of this problem. There is a server.xml file for the tests-webservice-ssl target. However, no tests actually get executed when you run this target. According to build.xml in testsuite, here are the tests it is trying to pull in: <patternset id="webservice-ssl.includes"> <include name="org/jboss/test/webservice/secure/**/*TestCase.class"/> <exclude name="org/jboss/test/webservice/secure/noenv/**/*TestCase.class"/> </patternset> So I guess the tests-webservice-ssl target is obsolete? Can someone from the Web Services team comment? As far as JBoss 5 goes, there are many problems with that right now and I can't run the test. I'm going to open a separate jira task and link to here so it doesn't get lost.	1	1	https://issues.jboss.org/browse/JBAS-4025
1250	JBAS-4025	Thomas. Can someone on your team clean up the tests-webservice-ssl test if it is no longer being used?	1	1	https://issues.jboss.org/browse/JBAS-4025
1251	JBAS-4024	Yes fine, so we can basically drop the test since it doesn't make sense any more. Is there a link to a forum discussion on this? Will you do the code cleanup and track it with another JIRA issue? Thanks.	0	0	https://issues.jboss.org/browse/JBAS-4024
1252	JBAS-4023	Same tests fails here: org.jboss.test.web.test.WebIntegrationUnitTestCase testENCServletViaInvoker Error Expected reply code:200, actual=500 java.io.IOException: Expected reply code:200, actual=500 at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:137) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:108) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:96) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:82) at org.jboss.test.web.test.WebIntegrationUnitTestCase.testENCServletViaInvoker(WebIntegrationUnitTestCase.java:98) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	1	1	https://issues.jboss.org/browse/JBAS-4023
1253	JBAS-4023	And here: org.jboss.test.web.test.UserInRoleUnitTestCase(JACC+SecurityMgr) testConflictingUserInRoleJaccVersion Error Expected reply code:200, actual=500 java.io.IOException: Expected reply code:200, actual=500 at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:137) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:108) at org.jboss.test.util.web.HttpUtils.accessURL(HttpUtils.java:96) at org.jboss.test.web.test.UserInRoleUnitTestCase.testConflictingUserInRoleJaccVersion(UserInRoleUnitTestCase.java:144) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	1	1	https://issues.jboss.org/browse/JBAS-4023
1254	JBAS-4019	I can't understand why it is not included by default since the law has changed to not restrict crypto (AFAIK). Could someone tell Sun? ;)	0	0	https://issues.jboss.org/browse/JBAS-4019
1255	JBAS-4011	Thanks. If you want to be really picky about this you could throw an InvalidStateException if you attempt to set the attribute twice. And while there, I'm seeing also those failures somewhat related to try to set the tx timeout (but on a DummyTxMgr): JBAS-4079. Is this supported in jbossTS ?	1	1	https://issues.jboss.org/browse/JBAS-4011

1258	JBAS-3983	It's for 4.0.4.GA, not 4.0.5.GA. Can you re-test?	1	1	https://issues.jboss.org/browse/JBAS-3983
1259	JBAS-3949	Is it possible to have the procedure to upgrade to log4j1.2.14 and commons logging 1.1 for jboss 4.0.5GA ?	0	0	https://issues.jboss.org/browse/JBAS-3949
1260	JBAS-3942	what do you guys think about a "scripts.conf" which is similar to run.conf but centralized for twiddle, shutdown and any scripts that follow.	1	0	https://issues.jboss.org/browse/JBAS-3942
1261	JBAS-3939	Should we try CR8?	1	1	https://issues.jboss.org/browse/JBAS-3939
1262	JBAS-3928	Is this going to happen for AS 5 GA? I'm now having some issues with jmx-invoker-service.xml and wonder if some changes has been made.	1	0	https://issues.jboss.org/browse/JBAS-3928
1263	JBAS-3914	Clive, Fernando mentioned that you and Jon will be working on console related JIRAs. Can you or Jon look into this? Thanks	1	0	https://issues.jboss.org/browse/JBAS-3914
1264	JBAS-3891	I'm updating the thirdparty build to point to JBC 1.4.1.GA. There are 2 binaries in jbc lib. jboss-cache.jar jboss-cache-jdk50.jar What's the difference?	1	1	https://issues.jboss.org/browse/JBAS-3891
1265	JBAS-3888	EJB3 should be refactored to support ejb3 effectively on both platforms (jbossAS 4.2 / 5.0). Link to the corresponding task.	1	1	https://issues.jboss.org/browse/JBAS-3888

#	Requirement	Questions	Answered	Successfully Answered	URL
1266	JBAS-3886	Can we also use jboss-test 1.0.1.GA ? The one we are using does not even have a tag and there are multiple different code versions named "CR1".	1	1	https://issues.jboss.org/browse/JBAS-3886
1267	JBAS-3858	OK, couple things need to happen here: 1. We should deprecate the org.jboss.web.tc5.session.AopMarker (and InstanceOfAopMarker). They are there for JDK1.4 annotation and annoc. And PojOCache 2.0 don't support JDK1.4 anymore. 2. Now that we use JDK5.0, I'd also propose we just use the annotations in PojoCache, e.g., org.jboss.cache.pojo.PojoCacheable (but please also be aware of that I may need to change the annotation name before this Friday, see http://www.jboss.com/index.html?module=bb&op=viewtopic&p=3986033#3986033). 3. Originally, we need Oberserver and Obervable pattern to subscribe to POJO field change event. We won't need that anymore since now PojoCache 2.0 provides PojoCacheListener event that can emit field changes. tc6 can subscribe to the event directly. 4. As a result, we would need tc6-cluster.aop to only consist of jboss-aop.xml. That jboss-aop.xml will be a copy of pojocache-aop.xml in the distro (similar to *-service.xml convention). Another question will then be how can a user run "aopc" to pre-process the POJO? He will need: 1. put the classes under all/lib in the classpath. Or maybe just jboss-cache.jar, pojocache.jar, and jboss-aop-jdk50.jar is enough, I haven't verified. 2. put tc6-cluster.aop (or equivalently, pojocache-aop.xml) in the classpath 3. User class lib (can also include additional 3rd party one as well) to generate the byte code weaving. Maybe we can provide a script to do that.	1	1	https://issues.jboss.org/browse/JBAS-3858
1268	JBAS-3846	This is a 30 second fix. Could someone please take care of it?	1	1	https://issues.jboss.org/browse/JBAS-3846
1269	JBAS-3834	In JBoss 5.0.1 GA, when a plain String with some national characters is the output of a method in the @Management interface of a @Service POJO, then JMX console displays nothing. I mean plain String, no HTML tags in the string. This is even more annoying when the method is a getter for an attribute. Then the web page for the @Service bean shown nothing (HMTL source->nothing) in the JMX console. Try a @Service with method: String getLocalizedString() { return ?š??žýáié; } Also, the java Date.toString() may result sometimes in the non-english characters, and then then again the web page for the @Service bean is nothing.	0	0	https://issues.jboss.org/browse/JBAS-3834
1270	JBAS-3802	Can this be tagged? So i can build and upload to the repository. The build.xml has to be updated to build the zip and the src distributions. The tag can be updated later when releasing on sourceforge.	1	1	https://issues.jboss.org/browse/JBAS-3802
1271	JBAS-3769	Weston, can you please re-apply this in Branch_4_0, and marked done also for 4.0.5.SP?	1	1	https://issues.jboss.org/browse/JBAS-3769
1272	JBAS-3765	Important: Consider the related EJB3 issue as part of it. Be aware Carlo wants to extract EJB3 from the AS code base and use the same code for 4.2.x and 5.x, with pluggable adapters to deal with API differences in the AS integration. Stuff has to be backward compatible. So we'll need to think about that.	1	1	https://issues.jboss.org/browse/JBAS-3765
1273	JBAS-3726	Are you doing this for GA?	1	1	https://issues.jboss.org/browse/JBAS-3726
1274	JBAS-3726	Yes. But unless I can quickly arrange to work on someone's RHEL/Fedora box it might be a no-op on non-Windows environments. What is the absolute deadline on this?	1	1	https://issues.jboss.org/browse/JBAS-3726
1275	JBAS-3726	Wouldn't the next CC build pick it up? We'd like to have work done by Friday.	1	1	https://issues.jboss.org/browse/JBAS-3726
1276	JBAS-3715	Remember the "Unlimited Strength Crypto" that needs to be downloaded for the VM? We did for Sun VM?	1	1	https://issues.jboss.org/browse/JBAS-3715
1277	JBAS-3715	http://java.sun.com/products/jce/index-14.html#UnlimitedDownload This is for JDK4. Should work on JRockit also as per http://dev.project.net/trac/pnet/wiki/InstallationGuides (Q. Where do I get the unlimited strength encryption JCE Policy files for JRockit? A. Use the Sun ones for the appropriate version of JRockit (e.g. 1.4.2 policy files))	1	1	https://issues.jboss.org/browse/JBAS-3715
1278	JBAS-3704	The description is not very clear to me... Lets say there would be ant task <server:addresses prop="jboss.server.iface." env="MYTESTIP_" ifaces="2">. This task would work as follows: x = 1; while (MYTESTIP_x <> "") { jboss.server.iface.(x - 1) = MYTESTIP_x; x++; } while (x <= ${ifaces}) { jboss.server.iface.(x - 10) = fetch_next_interface_from_NetworkInterface(); x++; } Do you imagine it like this?	0	0	https://issues.jboss.org/browse/JBAS-3704
1279	JBAS-3683	Thanks! Why you changed some counters to Gauge32 and left 2 of them as INTEGER?	1	1	https://issues.jboss.org/browse/JBAS-3683
1280	JBAS-3676	What is the SVN branch for this? I need to check if my changes are going to make it in 4.0.5	1	1	https://issues.jboss.org/browse/JBAS-3676
1281	JBAS-3659	Brian, we've started getting OOMEs in the testsuite runs, could this be related?	1	1	https://issues.jboss.org/browse/JBAS-3659
1282	JBAS-3658	Per forum: Seems to me should be handled at the invoker level (i.e. UnifiedInvoker) and use a service like the org.jboss.web.WebService we currently have. The WebService actually looks fairly good to me to what is needed (i.e. downloading classes). Maybe add another configuration attribute for what type of class files can be downloaded (i.e. "com.acme.domain.*") and should be sufficient? Also, where is the client code for downloading classes from the WebService?	1	1	https://issues.jboss.org/browse/JBAS-3658
1283	JBAS-3658	Tom we only have a few days to complete this. What's the status?	1	1	https://issues.jboss.org/browse/JBAS-3658
1284	JBAS-3658	Ok, I"ll defer this task for a next release. Can you fix the test?	1	1	https://issues.jboss.org/browse/JBAS-3658
1285	JBAS-3656	Brian, do we need to re-apply this in Branch_4_0, and tag fixed for 4.0.5.SP1 instead of 4.0.5.GA?	1	1	https://issues.jboss.org/browse/JBAS-3656
1286	JBAS-3652	Just the text file should be added? what about doc and pdf? they are all the same. Should this go in HEAD as well?	1	1	https://issues.jboss.org/browse/JBAS-3652
1287	JBAS-3651	Ryan, could you assign this to somebody that would record testsuite failures on Solaris10?	1	1	https://issues.jboss.org/browse/JBAS-3651
1288	JBAS-3651	What's the latest update?	1	1	https://issues.jboss.org/browse/JBAS-3651
1289	JBAS-3644	Modified version of compiler works as follows: 1. visiting ASTWhere node sets wherePath=true in all ASTWhere's child paths. 2. visiting ASTOr, ASTNullComparison or ASTIsEmpty causes their child paths to have forceLeftJoin=true 3. When visiting ASTPath compiler checks if wherePath is true and adds join based on forceLeftJoin field. If wherePath is false compiler works as before. 4. If some path has forceLeftJoin set, it cannot be reset to innerjoin Otherwise the compiler works as before. Is there something i'm missing or can this be added to default JBoss? This really boosted performance for us.	0	0	https://issues.jboss.org/browse/JBAS-3644
1290	JBAS-3641	Thanks John. I'll commit this to all brances, but can you please verify it works with the latest jboss-4.0.5.CR1 ?	1	1	https://issues.jboss.org/browse/JBAS-3641
1291	JBAS-3615	Sun don't think it is a bug to be fixed because the result meet the JMX spec 1.2, so could you update the test case to the right asseration to avoid misundertsanding?When we run the JBoss AS testsuite 4.0.5,it is reported errors and failed,we must pay much attention to this test case.	1	1	https://issues.jboss.org/browse/JBAS-3615

#	Requirement	Questions	Answered	Successfully Answered	URL
1292	JBAS-3613	Franscisco, the test shows the same error on my machine (WinXP/SunJDK1.5) even after the jacorb 2.3.0.jboss.patch1 update. I even tried 2.2.4.jboss.patch2 without luck. The error still is: test_getException Error Invalid indirection to offset 1704 java.io.IOException: Invalid indirection to offset 1704 at com.sun.corba.se.impl.io.IIOPInputStream$ActiveRecursionManager.getObject(IIOPInputStream.java:2684) at com.sun.corba.se.impl.io.IIOPInputStream.inputClassFields(IIOPInputStream.java:2218) at com.sun.corba.se.impl.io.IIOPInputStream.inputObject(IIOPInputStream.java:1221) at com.sun.corba.se.impl.io.IIOPInputStream.simpleReadObject(IIOPInputStream.java:400) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValueInternal(ValueHandlerImpl.java:327) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValue(ValueHandlerImpl.java:293) at org.jacorb.util.ValueHandler.readValue(Unknown Source) at org.jacorb.orb.CDRInputStream.read_untyped_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_typed_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_value(Unknown Source) at com.sun.corba.se.impl.io.ValueHandlerImpl.read_Array(ValueHandlerImpl.java:756) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValueInternal(ValueHandlerImpl.java:325) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValue(ValueHandlerImpl.java:293) at org.jacorb.util.ValueHandler.readValue(Unknown Source) at org.jacorb.orb.CDRInputStream.read_untyped_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_typed_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_value(Unknown Source) at com.sun.corba.se.impl.io.IIOPInputStream.inputObjectField(IIOPInputStream.java:1989) at com.sun.corba.se.impl.io.IIOPInputStream.inputClassFields(IIOPInputStream.java:2213) at com.sun.corba.se.impl.io.IIOPInputStream.inputObject(IIOPInputStream.java:1221) at com.sun.corba.se.impl.io.IIOPInputStream.simpleReadObject(IIOPInputStream.java:400) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValueInternal(ValueHandlerImpl.java:327) at com.sun.corba.se.impl.io.ValueHandlerImpl.readValue(ValueHandlerImpl.java:293) at org.jacorb.util.ValueHandler.readValue(Unknown Source) at org.jacorb.orb.CDRInputStream.read_untyped_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_typed_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_value(Unknown Source) at org.jacorb.orb.Any.read_value(Unknown Source) at org.jacorb.orb.CDRInputStream.read_any(Unknown Source) at com.sun.corba.se.impl.javax.rmi.CORBA.Util.readAny(Util.java:401) at javax.rmi.CORBA.Util.readAny(Util.java:92) at org.jboss.iiop.rmi.marshal.CDRStream$ObjectReader.read(CDRStream.java:618) at org.jboss.iiop.rmi.marshal.strategy.StubStrategy.readRetval(StubStrategy.java:226) at org.jboss.proxy.ejb.DynamicIIOPStub.invoke(DynamicIIOPStub.java:126) at org.jboss.test.iiop.interfaces._StatelessSession_Stub.getException(Unknown Source) at org.jboss.test.iiop.test.ParameterPassingStressTestCase.test_getException(ParameterPassingStressTestCase.java:355) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25)	1	1	https://issues.jboss.org/browse/JBAS-3613
1293	JBAS-3613	I don't see the error with JacORB 2.3.0.jboss.patch. JacORB 2.2.4jboss.patch1 gives me the error above, but the error goes away when I switch to JacORB 2.3.0.jboss.patch1. I am running Sun's Java 1.5.0_06-b05 on Linux, though, so the VM might behave differently on Windows XP and on Linux. (Possible, but unlikely.) Dimitris: Are you sure you replaced jacorb.jar in all places (build/output/jboss-x.y/client/jacorb.jar, build/output/jboss-x.y/server/all/lib/jacorb.jar and thirdparty/jacorb/lib/jacorb.jar)?	0	0	https://issues.jboss.org/browse/JBAS-3613
1294	JBAS-3613	What changed?	1	1	https://issues.jboss.org/browse/JBAS-3613
1295	JBAS-3613	I don't know. The only thing I've noticed is that this branch is using JacORB 2.3.0.jboss.patch4, so maybe this patched version fixed the problem. Do you want me to try this with HP JDK?	1	1	https://issues.jboss.org/browse/JBAS-3613
1296	JBAS-3603	I am assuing JRockit 1.4. This works fine for me on Windows. What platform are you testing on?	1	1	https://issues.jboss.org/browse/JBAS-3603
1297	JBAS-3580	Am I duplicating JBAS-3221 ?	0	0	https://issues.jboss.org/browse/JBAS-3580
1298	JBAS-3577	We have 2.0.0.Beta - thanks. Are we closing this issue, or moving to Beta2?	1	1	https://issues.jboss.org/browse/JBAS-3577
1299	JBAS-3546	Why can't you just change your appender for this category?	1	1	https://issues.jboss.org/browse/JBAS-3546
1300	JBAS-3524	Is there a way that we can get this to work in the mean time. Or if you can give some pointers on how to implement it that would fantastic.	1	0	https://issues.jboss.org/browse/JBAS-3524
1301	JBAS-3450	How can I reproduce this?	0	0	https://issues.jboss.org/browse/JBAS-3450
1302	JBAS-3434	Closing this in the JBoss JIRA, it is tracked in the installer and qa jira projects. Creating the Installer is on track and will be released immediately after the .zip distro.	0	0	https://issues.jboss.org/browse/JBAS-3434
1303	JBAS-3415	It's not clear from the description what work is left for RAR deployments. Is the missing part the datasource management view? Can Adrian look at it, since Weston is not with us?	1	1	https://issues.jboss.org/browse/JBAS-3415
1304	JBAS-3400	Is Sohil working on this?	1	1	https://issues.jboss.org/browse/JBAS-3400
1305	JBAS-3385	Patched EntityTable in package org.jboss.ejb.plugins.cmp.jdbc2 that used the following for table cache naming: 1. datasource jndi name (':' will be stripped) 2. ejb name 3. abstract schema name The patch is generated by diff -u	0	0	https://issues.jboss.org/browse/JBAS-3385
1306	JBAS-3343	In which release will this issue be fixed? The fix is very important because no JCA RA can be properly configured except with cracking the rar and overwriting the default props.	1	1	https://issues.jboss.org/browse/JBAS-3343
1307	JBAS-3324	Anil, is this done for JB5? If so, please close it, thanks.	1	0	https://issues.jboss.org/browse/JBAS-3324
1308	JBAS-3306	It seems there is a Version 1.1.4-SNAPSHOT version. Should we try this one?	1	1	https://issues.jboss.org/browse/JBAS-3306
1309	JBAS-3280	Is there a common usage of defining serialVersionUID? Your version count or serialver from JDK? If serialvar - what's the easies way to get all the necessary classes into classpath of serialvar tool? I've seen your post (http://www.jboss.com/index.html?module=bb&op=viewtopic&t=76117&postdays=0&postorder=asc&start=0), is this Ant script - build.properties file - available in cvs?	1	1	https://issues.jboss.org/browse/JBAS-3280
1310	JBAS-3272	Tom, will you have a remoting 2 version in the next couple of weeks? (at least a CR)?	1	1	https://issues.jboss.org/browse/JBAS-3272
1311	JBAS-3257	Jerry, can you assign a Fix Version to this? If the answer is "no time in the next 9 months", please set Fix Version to "No Release".	0	0	https://issues.jboss.org/browse/JBAS-3257
1312	JBAS-3235	Rajesh, can you make those tests conditionally excluded from the testsuite?	1	1	https://issues.jboss.org/browse/JBAS-3235
1313	JBAS-3215	Somewhat related: JBAS-3118. (tell the scanner to temporarily ignores a URL while you make modifications to it).	0	0	https://issues.jboss.org/browse/JBAS-3215
1314	JBAS-3215	Will something be done about this? It keeps occuring at the most inconvenient times, mostly when my boss is breathing down my neck.	0	0	https://issues.jboss.org/browse/JBAS-3215
1315	JBAS-3215	Nice idea, we just don't have cycle for it. Do you want to help?	0	0	https://issues.jboss.org/browse/JBAS-3215
1316	JBAS-3193	Where in the codebase this needs fixing?	1	0	https://issues.jboss.org/browse/JBAS-3193

1318	JBAS-3190	I see the same symptom here, as well: Class org.jboss.test.pooled.test.SSLSocketsUnitTestCase testClientCertSSLAccess Error StatelessSessionWithPooledSSL not bound javax.naming.NameNotFoundException: StatelessSessionWithPooledSSL not bound at org.jnp.server.NamingServer.getBinding(NamingServer.java:529) at org.jnp.server.NamingServer.getBinding(NamingServer.java:537) at org.jnp.server.NamingServer.getObject(NamingServer.java:543) at org.jnp.server.NamingServer.lookup(NamingServer.java:296) at sun.rmi.server.UnicastServerRef.dispatch(UnicastServerRef.java:261) at sun.rmi.transport.Transport$1.run(Transport.java:148) at java.security.AccessController.doPrivileged(Native Method) at sun.rmi.transport.Transport.serviceCall(Transport.java:144) at sun.rmi.transport.tcp.TCPTransport.handleMessages(TCPTransport.java:460) at sun.rmi.transport.tcp.TCPTransport$ConnectionHandler.run(TCPTransport.java:701) at java.lang.Thread.run(Thread.java:534) at sun.rmi.transport.StreamRemoteCall.exceptionReceivedFromServer(StreamRemoteCall.java:247) at sun.rmi.transport.StreamRemoteCall.executeCall(StreamRemoteCall.java:223) at sun.rmi.server.UnicastRef.invoke(UnicastRef.java:133) at org.jnp.server.NamingServer_Stub.lookup(Unknown Source) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:625) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:587) at javax.naming.InitialContext.lookup(InitialContext.java:347) at org.jboss.test.pooled.test.SSLSocketsUnitTestCase.testClientCertSSLAccess(SSLSocketsUnitTestCase.java:85) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23)	0	0	https://issues.jboss.org/browse/JBAS-3190
1319	JBAS-3190	The following 3 tests should pass: org.jboss.test.jrmp.test.SSLSocketsUnitTestCase Reason: The handshakecompleted listener had no time to populate the cipherSuites because the test would proceed to check for the cipherSuite. Added a 2 sec sleep to give the listener time to populate the test instance variable - cipherSuites. org.jboss.test.jrmp.test.SSLFailuresSocketsUnitTestCase Reason: JASSIST-18 did the trick org.jboss.test.pooled.test.SSLSocketsUnitTestCase Reason: was missing a verifier option in the BaseCertLoginModule config	1	1	https://issues.jboss.org/browse/JBAS-3190
1320	JBAS-3190	The following test anyway passes on CC. I need to revert back the following fix made. org.jboss.test.pooled.test.SSLSocketsUnitTestCase Reason: was missing a verifier option in the BaseCertLoginModule config	1	0	https://issues.jboss.org/browse/JBAS-3190
1321	JBAS-3183	We'll try to push more to get the MQ server installed. In the meantime, have you tried installing MQ locally? This is really a blocker for this 4.0.5.CR1 release, so let's say that the end of the next week (Aug/11th) is the absolute deadline.	0	0	https://issues.jboss.org/browse/JBAS-3183
1322	JBAS-3183	Well, if it's that critical, then I suggest we open a support account (unless we already have one) with IBM. I am not sure what type of 'workaround' you expect to be delivered for an IBM related defect especially in the time frame. Can someone tell me why this can't be delivered to this client as a patch after the 4.0.5CR1 release and why an issue with IBM's MQ code has to hold up our release?	1	1	https://issues.jboss.org/browse/JBAS-3183
1323	JBAS-3183	Hi Weston, Thanks for all your efforts to make it happen What we need now is very simple. We need a standalone test case that we can provide IBM support with. Would you be able to produce such code or does it have to be executed within JBossAS?	0	0	https://issues.jboss.org/browse/JBAS-3183
1324	JBAS-3162	This is done in 4.2, but not 5.0. I should be able to finish up today.	0	0	https://issues.jboss.org/browse/JBAS-3162
1325	JBAS-3158	Stan, do you want to schedule this for 4.2.0.CR1 ?	1	1	https://issues.jboss.org/browse/JBAS-3158
1326	JBAS-3156	Could you post instructions on how to run the tests for portal-2.2? A lot of the errors I mentioned above come from deployment errors of forums and missing Database connectors.	0	0	https://issues.jboss.org/browse/JBAS-3156
1327	JBAS-3142	Clebert, will you have this withing the next 2 weeks?	1	1	https://issues.jboss.org/browse/JBAS-3142
1328	JBAS-3142	Clebert, this issues seems out-of-date. Is there something you plan to do?	0	0	https://issues.jboss.org/browse/JBAS-3142
1329	JBAS-3133	What about the other discussion thread - attached? Why isn't this discussed in JBoss/JCA forum rather than the Mail forum?	0	0	https://issues.jboss.org/browse/JBAS-3133

#	Requirement	Questions	Answered	Successfully Answered	URL
1330	JBAS-3124	I see... Isn't it possible to get server address from java.naming.provider.url property on client (to strip port number, of course)? Then some clients may use an IP-address, other clients may use a host name.	1	0	https://issues.jboss.org/browse/JBAS-3124
1331	JBAS-3104	Weston, can you validate this and apply what makes sense?	0	0	https://issues.jboss.org/browse/JBAS-3104
1332	JBAS-3066	Any idea, who can validate the examples?	1	1	https://issues.jboss.org/browse/JBAS-3066
1333	JBAS-3052	The linked issue is fixed, so can we close this?	0	0	https://issues.jboss.org/browse/JBAS-3052
1334	JBAS-3029	This is unnecessary because you can simply change your query: SELECT * FROM (SELECT 'User', 'Roles' FROM USERS UNION SELECT 'Administrator','Roles' FROM ADMINISTRATORS) WHERE username=? The query optimizer of any sane database will notice the where clause and apply it to each select statement so there is no perfomance impact. I vote against this issue and suggest it is closed. Regards Felix	1	0	https://issues.jboss.org/browse/JBAS-3029
1335	JBAS-3012	Scott, could you clarify what you think the cause is here? We are running into this as well. A long running server had over 100K login modules plus 400K SimplePrincipals and 100K SecurityAssociationHandlers, SimpleGroups, etc. which eventually brought it to its knees. I've posted a screen shot from jprofiler at https://trac.openmicroscopy.org.uk/omero/ticket/818 , and confirmed that calling DynamicLoginConfig's flushAuthenticationCaches does free almost everything up. Not, however, the SecurityAssociation$SubjectContext instances. I'm still looking into that. My planned work-around is to periodically call flushAuthenticationCaches. Any thoughts? Many thanks, Josh Moore Glencoe Software, Inc. The Open Microscopy Environment From: jboss-service.xml <mbean code="org.jboss.security.auth.login.DynamicLoginConfig" name="omero:service=LoginConfig"> <attribute name="AuthConfig">META-INF/jboss-login.xml</attribute> <depends optional-attribute-name="LoginConfigService"> jboss.security:service=XMLLoginConfig </depends> <depends optional-attribute-name="SecurityManagerService"> jboss.security:service=JaasSecurityManager </depends> </mbean> From: jboss-login.xml <policy> <application-policy name="OmeroSecurity"> <authentication> <login-module code = "ome.security.JBossLoginModule" flag = "required"> <module-option name = "unauthenticatedIdentity">guest</module-option> <module-option name = "dsJndiName">java:/omeroDS</module-option> <module-option name = "hashAlgorithm">MD5</module-option>	0	0	https://issues.jboss.org/browse/JBAS-3012
1336	JBAS-2975	Jerry, from the forum discussion, etc., I believe this test issue is fixed. If so, can you resolve this issue? Thanks.	1	1	https://issues.jboss.org/browse/JBAS-2975
1337	JBAS-2972	The problem is caused by this change: http://fisheye.jboss.org/changelog/JBoss?cs=Branch_4_0:tdiesler:20060107001625 There is no annotationsCL = null; in cleanup(); This also shows a problem in EJBModuleFactory.destroy() in that deploymentToModuleNameMap() just accumulates DeploymentInfo references. Nothing ever removes things from it.	1	1	https://issues.jboss.org/browse/JBAS-2972
1338	JBAS-2951	I see the commit in HEAD. Are you going to do the same in Branch_4_0?	1	1	https://issues.jboss.org/browse/JBAS-2951
1339	JBAS-2921	Hany, I've forgotten where this stands. Can you remind me?	1	1	https://issues.jboss.org/browse/JBAS-2921
1340	JBAS-2904	Vicky, have you progressed with this?	1	1	https://issues.jboss.org/browse/JBAS-2904
1341	JBAS-2904	Can you port this to Branch_4_0 (again in SVN)? Then I'll have a look on the test undeployment issue	1	1	https://issues.jboss.org/browse/JBAS-2904
1342	JBAS-2899	Does this need to be re-implemented for Tomcat6?	1	1	https://issues.jboss.org/browse/JBAS-2899

1344	JBAS-2861	Brian, can this make it for 4.0.5.CR1?	0	0	https://issues.jboss.org/browse/JBAS-2861
1345	JBAS-2861	I would like to know the plans for delivering this change in terms of time. Could someone post that information here?	0	0	https://issues.jboss.org/browse/JBAS-2861
1346	JBAS-2861	Is the intent still to include in 4.2.0 or will this only be available in the 5 family?	0	0	https://issues.jboss.org/browse/JBAS-2861
1347	JBAS-2861	What are the latest plans for this in terms of planned releases and timeframes? THis issue is of very high importance to our efforts. TIA!	0	0	https://issues.jboss.org/browse/JBAS-2861
1348	JBAS-2861	This issue keeps getting pushed and pushed and pushed. What does it take for this to be resolved?	0	0	https://issues.jboss.org/browse/JBAS-2861
1349	JBAS-2861	I see that this is assigned to the "backlog" for fix version. Is there any intent to implement this functionality?	0	0	https://issues.jboss.org/browse/JBAS-2861
1350	JBAS-2861	Hello, Is there an update on this? is this something that can be done in any way with jboss-5.1.0.GA-jdk6? Thank you for your answer. Luis	1	0	https://issues.jboss.org/browse/JBAS-2861
1351	JBAS-2860	If you want table name to not be checked for reserved words then use quotes in jbosscmp-jdbc.xml. What exactly is wrong with the current approach? The bug you refered to has already been fixed in HEAD.	0	0	https://issues.jboss.org/browse/JBAS-2860
1352	JBAS-2860	>What exactly is wrong with the current approach? The problem is that the quote character is different for different database engines and can even vary depending on configuration settings. For MySQL it could be either a backquote or a double quoute depending on the ANSI setting. Having the quotes in jbosscmp-jdbc.xml forces you to create different EAR's for different databases. >The bug you refered to has already been fixed in HEAD. OK, didn't know since it is still open.	1	0	https://issues.jboss.org/browse/JBAS-2860
1353	JBAS-2853	I see the trunk moved to 2.0.0.GA. Are we updating JGroups, too? (2.5)	0	0	https://issues.jboss.org/browse/JBAS-2853
1354	JBAS-2846	I don't see how this version of tomcat is usable due to the new behavior described in this bug: http://issues.apache.org/bugzilla/show_bug.cgi?id=38579 The tomcat WebappClassLoader is walking over private static and private static final field contents in classes that it has not loaded. Either a tomcat 5.5.16 is needed, or this change needs to be incorporated into a patched tomcat: http://svn.apache.org/viewcvs?rev=378251&view=rev	0	0	https://issues.jboss.org/browse/JBAS-2846
1355	JBAS-2846	Tomcat upgraded to v5.5.17 in Branch 4.0 and HEAD.	0	0	https://issues.jboss.org/browse/JBAS-2846
1356	JBAS-2831	Great! It's a useful feature. Does it mean that the caller identity propagation across servers is already available?	0	0	https://issues.jboss.org/browse/JBAS-2831
1357	JBAS-2737	Was this backported to 4.0.x or 4.2..x? Where is this new parameter documented?	0	0	https://issues.jboss.org/browse/JBAS-2737
1358	JBAS-2699	Is this the same thing as JBAS-2802?	0	0	https://issues.jboss.org/browse/JBAS-2699
1359	JBAS-2699	I just added tests on JBser per JBAS-3102. As 4.0.4 GA is the first release with UnifiedInvokers available, I don't think it would make sense to add these tests into MatrixTestSuite now. Because of that I've created JBAS-3142. I guess I could consider this task solved.	1	1	https://issues.jboss.org/browse/JBAS-2699
1360	JBAS-2696	This looks done. Can we close this?	0	0	https://issues.jboss.org/browse/JBAS-2696

#	Requirement	Questions	Answered	Successfully Answered	URL
1361	JBAS-2655	Are there any other scenarios in which the Clustered SSO valve may have issues when deployed on hosts on multiple services? If you think there are none, please close this JIRA issue. In the future, when customers report problems, this JIRA issue can be reopened for investigation.	0	0	https://issues.jboss.org/browse/JBAS-2655
1362	JBAS-2652	Scott, can you elaborate on this? Is this for checking the jsr77 names follow the spec?	0	0	https://issues.jboss.org/browse/JBAS-2652
1363	JBAS-2652	org.jboss.test.management.test.JSR77SpecUnitTestCase checks for ejb/web/rar names, what else is needed?	1	1	https://issues.jboss.org/browse/JBAS-2652
1364	JBAS-2647	Brian, can you please update this dated task (and the parent task)?	1	1	https://issues.jboss.org/browse/JBAS-2647
1365	JBAS-2634	Anil, is this a requirement for JavaEE5 ?	0	0	https://issues.jboss.org/browse/JBAS-2634
1366	JBAS-2607	Is this work finished?	1	1	https://issues.jboss.org/browse/JBAS-2607
1367	JBAS-2604	4.0.4.CR2 will go out with 1.4.1_final. Do we require the same for jboss-serialization, which is at 1.0.0.CR4, or the issue should be closed?	0	0	https://issues.jboss.org/browse/JBAS-2604
1368	JBAS-2575	Was this issue recreated in messaging? I could not find it int he messaging category. It appears that tim Fox reported JBMESSAGING-1172 http://jira.jboss.org/jira/browse/JBMESSAGING-1172. Is this the same issue or has it been resolved already?	0	0	https://issues.jboss.org/browse/JBAS-2575
1369	JBAS-2574	Hello Dimitris, Thanks for looking into this. We have a few quick questions: 1) Is the jboss_init_hpux.sh added to the 4.0.X branch of the JBoss AS: The message below indicates that the fixed JBoss versions are: Fix Version: JBossAS-3.2.8.SP1 JBossAS-5.0 Alpha However, further below it indicates the fixed versions are: Fix For: JBossAS-5.0 Alpha, JBossAS-4.0.4.GA, JBossAS-3.2.8.SP1 2) I haven't seen the name JBossAS-4.0.4.GA before. What does the "GA" at the end of the release name refer to? Cheers, - John	1	0	https://issues.jboss.org/browse/JBAS-2574
1370	JBAS-2566	Genman, is this still issue pending or can you finish it off? We'd like to be over with the enclosing task, thanks.	1	1	https://issues.jboss.org/browse/JBAS-2566
1371	JBAS-2545	Actually, let's skip 2.2.9 and go to 2.2.9.1 straight. My goal is to have JBoss 5.0 ship with JGroups 2.3 (in beta right now), or even with 2.4 (not likely though)	1	0	https://issues.jboss.org/browse/JBAS-2545
1372	JBAS-2545	What is the status on this task? Are we ready to test JGroups 2.3 yet?	0	0	https://issues.jboss.org/browse/JBAS-2545
1373	JBAS-2545	I upgraded repository.jboss.com to JGroups 2.3 (final). I also updated jboss-head to use 2.3. Can you run the tests one more time and - if they are successful - resolve this task ? Thanks, Bela	1	0	https://issues.jboss.org/browse/JBAS-2545
1374	JBAS-2519	Ok, Chris. Can you attach a test war to this JIRA issue and continue discussion at the forum thread, with some new concerns I have.	1	1	https://issues.jboss.org/browse/JBAS-2519
1375	JBAS-2510	The retrocheck utility I wrote showed that the retrotranslator was incomplete. There are parts of JBossWS where it will throw NoSuchMethodError Besides the fact that retrotranslator is very new and unsupportable, and also potentially conflicts with Hibernate on tested versions of cglib/asm. Why are we releasing an obsolete version in the candidate only to change it for final (which will then not be tested in the wider community)?	0	0	https://issues.jboss.org/browse/JBAS-2510
1376	JBAS-2494	Jerry, we have discussed this before. When you have the bandwidth, can you propose a fix?	0	0	https://issues.jboss.org/browse/JBAS-2494
1377	JBAS-2481	In which version is this solved?	1	1	https://issues.jboss.org/browse/JBAS-2481
1378	JBAS-2481	How is this solved? I want to use it in jboss 5.1.0.GA! Gunnar	1	0	https://issues.jboss.org/browse/JBAS-2481
1379	JBAS-2480	Is this being worked on? On which branch?	0	0	https://issues.jboss.org/browse/JBAS-2480
1380	JBAS-2466	Hi. I just downloaded version 3.2.8 SP1 and all the listed *.java files from the last comment still contain the proprietary license ... can we re-open this bug? The license text in the header is really restrictive. Thanks a lot & best regards, Daniel	1	1	https://issues.jboss.org/browse/JBAS-2466
1381	JBAS-2440	Jerry, do you have time to do this as part of the conversion of DRM to use JBoss Cache?	1	1	https://issues.jboss.org/browse/JBAS-2440
1382	JBAS-2423	Hi, Would it be possible to upgrade HttpClient to its latest stable version (3.0.1) or the current version 3.1-rc1? I am porting over code where I've used standalone with HttpClient and the following call is not supported when using jbossall-client.jar since the HttpClient class it packages is too old: httppost.setRequestEntity (new ByteArrayRequestEntity (ba)); where httppost is of type PostMethod. This is fairly standard code but the API is only available starting from 3.0 on. Even with this bug fix I would still have this problem since it only updates it to version 2.0.2, which is fairly old now. I see this bug was originally filed in November 2005 so a lot of changes have gone into HttpClient since then. It'd be nice to update it to the latest version if possible. Thanks, Jonathan Huang	1	1	https://issues.jboss.org/browse/JBAS-2423
1383	JBAS-2411	I've have some junit tests I written for a xml util library that could easily be modified to support this kind of testing. What is the scope of testing that is required.	1	1	https://issues.jboss.org/browse/JBAS-2411
1384	JBAS-2400	Brian, can you do this ? This should be a script probe.sh/probe.bat in the ./bin directory of JBoss. Thanks !	0	0	https://issues.jboss.org/browse/JBAS-2400
1385	JBAS-2369	Luc, will you be working on this?	1	1	https://issues.jboss.org/browse/JBAS-2369
1386	JBAS-2352	I'd like this functionality as well -- is there no other way to add a "remember me" cookie when using form-based auth? (I'm using JBAS 4.2.3GA).	1	0	https://issues.jboss.org/browse/JBAS-2352
1387	JBAS-2299	Is it possible that the following configuration within jboss-app.xml is the problem? I ask as there are quite a few log entries mentioning the HierarchicalLoaderRepository3 as shown subsequently below <jboss-app> <loader-repository loaderRepositoryClass="org.jboss.mx.loading.HeirarchicalLoaderRepository3"> xMP:type=HeirarchicalClassRepository, service=VXE1_ContentTestService, version=1.0 <loader-repository-config configParserClass="org.jboss.mx.loading.HeirarchicalLoaderRepository3ConfigParser"> java2ParentDelegaton=false </loader-repository-config> </loader-repository> </jboss-app> 2005-09-23 23:58:08,727 DEBUG [org.jboss.mx.loading.RepositoryClassLoader] setRepository, repository=org.jboss.mx.loading.HeirarchicalLoaderRepository3@6ab811, cl=org.jboss.mx.loading.HeirarchicalLoaderRepository3$CacheClassLoader@7daf5b{ url=null ,addedOrder=0} 2005-09-23 23:58:08,727 DEBUG [org.jboss.mx.loading.UnifiedClassLoader] New jmx UCL with url null 2005-09-23 23:58:08,727 DEBUG [org.jboss.mx.loading.RepositoryClassLoader] setRepository, repository=org.jboss.mx.loading.HeirarchicalLoaderRepository3@6ab811, cl=org.jboss.mx.loading.UnifiedClassLoader3@18380a4{ url=null ,addedOrder=0}	0	0	https://issues.jboss.org/browse/JBAS-2299

#	Requirement	Questions	Answered	Successfully Answered	URL
1388	JBAS-2299	Common-BeanUtils is broken: org.jboss.web.tomcat.tc5.WebAppClassLoader@6455597 !--- class org.apache.struts.action.ActionServlet !--- !--- [Ljava.lang.Class;@15889588 !--- !--- !--- java.lang.reflect.Method@2653351 !--- !--- !--- !--- [Ljava.lang.reflect.Method;@14422877 !--- !--- !--- !--- !--- java.util.Hashtable$Entry@23818829 !--- !--- !--- !--- !--- !--- [Ljava.util.Hashtable$Entry;@18693832 !--- !--- !--- !--- !--- !--- !--- java.util.Hashtable@17102985 !---!---!---!---!---!---!---!--- StaticFieldReference private static java.util.Hashtable org.apache.commons.beanutils.MappedPropertyDescriptor.declaredMethodCache Detail There is a list of declaredMethods (Reflection) being referenced inside of MappedPropertyDescriptor. BeanUtils is now being bundled with JBoss/JSF at this point. If you want to avoid this bug for this specific application, having BeanUtils deployed within the application + classLoader isolations will make BeanUtils to keep circular references inside the classLoader what would avoid the contention. We should look for a way to contribute a fix for apache. Besides this reflection cache, it looks also they have a circular reference on their WeakHashMap, having the classLoader on the value. (but I'm not sure about that one). But I know for sure BeanUtils is broken. Dimitris, since this is a Beanutils bug, what should we do here? Close, postpone? It's your call now.	1	1	https://issues.jboss.org/browse/JBAS-2299
1389	JBAS-2299	Clebert, can you please check if this has been fixed in beanutils 1.7.0 we use in Branch_4_2 ? If not we should consider contributing a fix.	1	1	https://issues.jboss.org/browse/JBAS-2299
1390	JBAS-2278	In order to derive the Principal i do this: setIdentity(SimplePrincipal(rs.getString(1))); where rs.getString(1) is the value of company certificate (DN) in users table of JAAS. If fact i mean employee instead of user, i only need use the employee certificate to check which company this employee belongs, after this i need the company identity to inherit the company role(s).	1	0	https://issues.jboss.org/browse/JBAS-2278
1391	JBAS-2278	Doesn't works because i don't have the company certificate to pass into CertificatePrincipal i just have the DN of the company. My problem in other words is, once the user is validated and this user (CEO) belongs to an company that has a DN in the system i need replace the user principal by company principal because this user will only use the company role to perform your tasks in the system. CertificatePrincipal uses and array of X509Certificates as parameter and i only have the DN string of the company at this point because the certificate presented to the JAAS was the user certificate and not the company certificate.	0	0	https://issues.jboss.org/browse/JBAS-2278
1392	JBAS-2251	Can we close this?	1	1	https://issues.jboss.org/browse/JBAS-2251
1393	JBAS-2243	What is an example client context that is exposing this info? The behavior of the login module itself is a feature request to use an alternate msg.	0	0	https://issues.jboss.org/browse/JBAS-2243
1394	JBAS-2235	Ok, I'm hijacking this issue. Did this forced shutdown ever worked? The http://dev45.qa.atl.jboss.com:8585/hudson/view/JBoss%20AS/job/JBoss-AS-5.0.x-TestSuite-sun15-noip run that hungs because of wrong multicast settings on the testing host is never shutdown properly. Who can look into this?	0	0	https://issues.jboss.org/browse/JBAS-2235
1395	JBAS-2235	I have looked at the Ant task source code and related classes in JBossAS test project. What you want is the ServerController throws an Exception (let's say InvalidStateException) when the server proccess must been killed. This exception is handled in StopServerTask and it show appropriate warning. Correct?	1	1	https://issues.jboss.org/browse/JBAS-2235
1396	JBAS-2235	So if we allow test suite to continue execution, then how will we notice that a server failed to shutdown? I think we should do one of: 1. fail the build 2. generate a simple junit xml report file indicating what's wrong	1	1	https://issues.jboss.org/browse/JBAS-2235
1397	JBAS-2235	I've committed the check if any server failed to shutdown in trunk r69559 Now jboss-test needs to be released and included in AS thirdparty. How is that done?	0	0	https://issues.jboss.org/browse/JBAS-2235
1398	JBAS-2233	Can you take a look at this?	1	1	https://issues.jboss.org/browse/JBAS-2233
1399	JBAS-2189	What value do think the default timeout should have? I just used the same one as the PooledInvoker. Also, changed the error message to be: java.rmi.ConnectException: Socket timed out. Waited 3000 milliseconds for response while calling on InvokerLocator [socket://127.0.0.1:8899/?socketTimeout=3000]; nested exception is: java.net.SocketTimeoutException: Read timed out	1	1	https://issues.jboss.org/browse/JBAS-2189
1400	JBAS-2189	I was going to change the default timeout to 30 minutes, but see you beat me to it in the jboss-service.xml and set to 10 min. I did set the default value within remoting to 30 minutes, but the config in jboss-service.xml will over ride it. As for keep alive ping, can't support on all transports, but can have for some (actually some will have this). What exception do you suggest that I throw? I don't want to throw IOException (or anything that inherits from it, such as SocketTimeoutException), since I can not include the cause by, which I want to keep for debugging. If throw original IOException, then can't add on extra information such as the timeout value or the locator was calling on. Why did you change tcp/ip no delay to true. While this will reduce latency, but will cause unneeded network traffic as won't buffer the data. Do you think the default will be that the data is that small as to not need buffering of the packets? Just curious if you already had info on why this was better?	0	0	https://issues.jboss.org/browse/JBAS-2189
1401	JBAS-2156	Would it be okay to back port (for 4.0.4 perhaps) a subset of the functionality that does not alter the public interfaces for the IL/Invoker stuff? The pooling changes (TimeoutFactory) then would only be for supporting the async expiration feature. I'll leave it to somebody else to work out the details for integrating a single pool for the UIL2 stuff, which I don't know much about. It sounds like you're not firm on what you want to do about it either. I don't know what DLQ dependency you're talking about. What was your end-to-end conception of how this feature is deployed?	1	1	https://issues.jboss.org/browse/JBAS-2156
1402	JBAS-2155	There are 2 bundles at http://www.apache.org/dist/xml/xalan-j/ xalan-j_2_7_0-bin.zip xalan-j_2_7_0-bin-2jars.zip Both of the them contain the same big (3Mb) xalan.jar ?	1	1	https://issues.jboss.org/browse/JBAS-2155
1403	JBAS-2155	So the default build does indeed produce the combined: interpretive-xalan + xsltc + xsltc dependencies (bcel, etc.) So what do we want here? a) interpretive-xalan b) interpretive-xalan + xsltc (withouht dependencies) The dependencies are: - java_cup(runtime) 0.10k - apache bcel 5.0rc1 - apache regexp 1.2 I can see jboss 4.0.3 uses: - apache bcel 5.1 - gnu-regexp 1.1.14	1	1	https://issues.jboss.org/browse/JBAS-2155
1404	JBAS-2153	The sprint deployer is released independenly of jboss, so I removed the JB5 release fix. It would be nice to have this done along with the 4.0.5 release though.	1	1	https://issues.jboss.org/browse/JBAS-2153
1405	JBAS-2153	Since Spring deployer is released independenly of JBossAS, should my unit test even be in testsuite? I'll write something similar to ejb3 tests. Ok?	1	1	https://issues.jboss.org/browse/JBAS-2153
1406	JBAS-2148	I don't really see the need for this? If you want programmatic access, why can you just use the platform MXBeans directly?	0	0	https://issues.jboss.org/browse/JBAS-2148
1407	JBAS-2146	Will this issue affect the codebase, or is it simply a doc?	1	1	https://issues.jboss.org/browse/JBAS-2146

#	Requirement	Questions	Answered	Successfully Answered	URL
1408	JBAS-2142	This seems like a special case. I presume also that cache is "optional" depending on whether you run in a clustered config? Since Tomcat5 is the one who controls the lifecycle and is responsible also for starting/stopping the connectors, he is the one who should signal (either explicitly or through a JMX notification) a cache start/stop. So I propose the following: Tomcat5 will have an <depends optional-attribute-name="CacheService>....</depends> on the Cache service mbean. This mbean should have a normal createService()/destroyService(), but an empty startService()/stopService(). Instead you'll implement 2 equivalent startCache()/stopCache() to do the state transfer. Tomcat5, at create() will check if the CacheService attribute is set, in order to locate the cache mbean and do whatever with it later in the start phase. Then just before the connectors are started(or stopped) (during Tomcat5 start) it will also issue a startCache()/stopCache() (again if the cache service is configured). Make sense?	0	0	https://issues.jboss.org/browse/JBAS-2142
1409	JBAS-2132	I think the installer only works with 1.5 to ensure that the user knows that some of the installable features require 1.5. I think the installer should technically be able to run under a 1.4 jre. Scott, can you comment on this? Norman or I could fix this.	1	1	https://issues.jboss.org/browse/JBAS-2132
1410	JBAS-2131	Weston, do you want to have a go with this, for the next release?	1	1	https://issues.jboss.org/browse/JBAS-2131
1411	JBAS-2109	Also, now I had to deploy jbosstestadapter.rar instead of jbosstestadapter.jar to add needed classes to the server's classpath. Local test in the default configuration fails for me with the following exception Testcase: testFailoverLocalMCF took 61.018 sec Caused an ERROR Failed to communicate. Problem during marshalling/unmarshalling; nested exception is: java.net.SocketTimeoutException: Read timed out java.rmi.ConnectException: Failed to communicate. Problem during marshalling/unmarshalling; nested exception is: java.net.SocketTimeoutException: Read timed out at org.jboss.remoting.transport.socket.SocketClientInvoker.transport(SocketClientInvoker.java:264) at org.jboss.remoting.RemoteClientInvoker.invoke(RemoteClientInvoker.java:112) at org.jboss.remoting.Client.invoke(Client.java:226) at org.jboss.remoting.Client.invoke(Client.java:189) at org.jboss.invocation.unified.interfaces.UnifiedInvokerProxy.invoke(UnifiedInvokerProxy.java:111) at org.jboss.invocation.InvokerInterceptor.invokeInvoker(InvokerInterceptor.java:227) at org.jboss.invocation.InvokerInterceptor.invoke(InvokerInterceptor.java:167) at org.jboss.proxy.TransactionInterceptor.invoke(TransactionInterceptor.java:46) at org.jboss.proxy.SecurityInterceptor.invoke(SecurityInterceptor.java:55) at org.jboss.proxy.ejb.StatelessSessionInterceptor.invoke(StatelessSessionInterceptor.java:97) at org.jboss.proxy.ClientContainer.invoke(ClientContainer.java:87) at $Proxy2.testHaLocalConnection(Unknown Source) at org.jboss.test.jca.test.HAConnectionFactoryUnitTestCase.testFailoverLocalMCF(HAConnectionFactoryUnitTestCase.java:55) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) Caused by: java.net.SocketTimeoutException: Read timed out at java.net.SocketInputStream.socketRead0(Native Method) at java.net.SocketInputStream.read(SocketInputStream.java:129) at java.io.BufferedInputStream.fill(BufferedInputStream.java:218) at java.io.BufferedInputStream.read(BufferedInputStream.java:235) at java.io.ObjectInputStream$PeekInputStream.peek(ObjectInputStream.java:2200) at java.io.ObjectInputStream$BlockDataInputStream.peek(ObjectInputStream.java:2490) at java.io.ObjectInputStream$BlockDataInputStream.peekByte(ObjectInputStream.java:2500) at java.io.ObjectInputStream.readObject0(ObjectInputStream.java:1267) at java.io.ObjectInputStream.readObject(ObjectInputStream.java:339) at org.jboss.remoting.marshal.serializable.SerializableUnMarshaller.read(SerializableUnMarshaller.java:73) at org.jboss.invocation.unified.marshall.InvocationUnMarshaller.read(InvocationUnMarshaller.java:32) at	1	1	https://issues.jboss.org/browse/JBAS-2109
1412	JBAS-2107	Scott, can you retest this. If it still fails, can you look at the server.log for the real error message.	1	1	https://issues.jboss.org/browse/JBAS-2107

1419	JBAS-2085	I changed OTSServant.get_txcontext() to throw CORBA::BAD_INV_ORDER if the transaction is not in the active state. This seems to be the reasonable thing to do, even though the OTS spec does not say a word on it. Other related changes: - TransactionImpl.getPropagationContext() and TransactionImpl.getOTSPropagationContext() now return null if the transaction is not in the active state. - TransactionInactiveException was added to the throws list of Coordinator.getTransactionContext(). - DTMServant.getTransactionContext() now throws that exception if the transaction is not in the active state. - TxServerClientInterceptor now uses !TxUtils.isActive(tx) (instead of TxUtils.isCompleted(tx)) as the condition for not propagating the OTS context. All calls to getTimeLeftBeforeTimeout() are now passing true in the errorRollback parameter. As an aside: the RollbackException currently thrown by this method is a bit misleading, as the transaction might have been committed rather than rolled back. Wouldn't it be better to throw java.lang.IllegalState or org.jboss.tm.remoting.interfaces.TransactionInactiveException?	0	0	https://issues.jboss.org/browse/JBAS-2085

#	Requirement	Questions	Answered	Successfully Answered	URL
1420	JBAS-2073	The entry point is javax.xml.transform.TransformerFactory.newInstance() that tries to instansiate the class stored at property: "javax.xml.transform.TransformerFactory". When the property is not set if fall back to: org.apache.xalan.processor.TransformFactoryImpl (jdk1.4) com.sun.org.apache.xalan.internal.xsltc.trax.TransformerFactoryImpl (jdk5) The problem is org.apache.xalan.* is included with jdk1.4 so unless you use the lib/endorsed overriding mechanism, the jdk1.4 provided xalan 2.4.1 classes will be loaded. They solved the problem in jdk5 by renaming the provided xalan implementation. I don't see how we can go around this, without using the lib/endorsed mechanism, especially if code is trying to access the org.apache.xalan classes directly. As a side note, in the UCL model, how the system classes take precedence in the default UCL repository?	0	0	https://issues.jboss.org/browse/JBAS-2073
1421	JBAS-2050	The first date tested is ambiguous as it has no timezone info. Is that the comparison that is failing? Looking at the problem is the setup of the expected answers: // The expected instance for each inputData value calendar.set(2005, 0, 4, 0, 0, 0); calendar.set(Calendar.MILLISECOND, 0); calendar.setTimeZone(TimeZone.getTimeZone("PST")); Date date1 = calendar.getTime(); calendar.set(2005, 0, 4, 23, 38, 21); Date date2 = calendar.getTime(); calendar.set(2005, 0, 4, 23, 38, 48); Date date3 = calendar.getTime(); The date1 value should not being using the PST timezone since the DateEditor will be using whatever the default is. Try changing this to: // The expected instance for each inputData value calendar.set(2005, 0, 4, 0, 0, 0); calendar.set(Calendar.MILLISECOND, 0); Date date1 = calendar.getTime(); calendar.setTimeZone(TimeZone.getTimeZone("PST")); calendar.set(2005, 0, 4, 23, 38, 21); Date date2 = calendar.getTime(); calendar.set(2005, 0, 4, 23, 38, 48); Date date3 = calendar.getTime();	1	1	https://issues.jboss.org/browse/JBAS-2050
1422	JBAS-2042	>> Use the template files on JIRA for consistency. Where to find them in JIRA? >> Template files for other IDEs(IntelliJ-IDEA, NetBeans should be available here soon. Any progress? I'm an IntelliJ-IDEA user. >> Also, it should not use printStackTrace(), In current version, there is no such usage. >> nor should it use the horrible log.error and throw paradigm Spring deployer followed the idea of AspectDeployer, which includes such stuff. What to do?	1	1	https://issues.jboss.org/browse/JBAS-2042
1423	JBAS-2019	Why doesn't the ClientAddress and various "JMS client properties for the UIL2 transport" address this? See, http://wiki.jboss.org/wiki/Wiki.jsp?page=ConfigUIL2	0	0	https://issues.jboss.org/browse/JBAS-2019
1424	JBAS-2019	is it possible to use a dns name with ConnectAddress ?	0	0	https://issues.jboss.org/browse/JBAS-2019
1425	JBAS-2004	Is the idea here to not throw an exception if the timeout kicks in, e.g. make a sort of REPL_SEMI_SYNC? Otherwise the existing JBC SyncReplTimeout already does this.	1	1	https://issues.jboss.org/browse/JBAS-2004
1426	JBAS-2004	JBC exposes the syncReplTimeout configuration property to control this. With the AS 5 CacheManager different webapps could use different cache configs and thus have separate values, so I don't see much benefit in pushing the config for this up to jboss-web.xml. Is there anything else you were thinking of here, Bela?	1	1	https://issues.jboss.org/browse/JBAS-2004
1427	JBAS-2002	I can't say I'm very familiar with this code, but this look wrong to me. Why have you modified all those constructors to pass the MBeanServer around? Besides breaking the api and lifecycle contract, is should be unnecessary. As far as I can see these are all MBeans and most are extensions to ServiceMBeanSupport. It should be using the MBeanRegistration interface to get the MBeanServer (ServiceMBeanSupport does this for you). And either that interface or the ServiceMBean interface for state changes. There should be no side affects in constructors for MBeans. Can you explain in more detail what you are fixing? There is obviously some problem with stop() and start() not being symmetrical, but that should be fixed by making them symmetrical (internal state machine fixes) rather than changing public api signatures.	1	1	https://issues.jboss.org/browse/JBAS-2002
1428	JBAS-2002	Also, is it possible you can provide patches againt the latest CVS? http://wiki.jboss.org/wiki/Wiki.jsp?page=CVSRepository There have been a number of fixes/changes in the deployers in 4.0.3 so it is pretty difficult for me to apply your patches - or even figure out what you changed in some cases:-(	1	1	https://issues.jboss.org/browse/JBAS-2002
1429	JBAS-2000	Follow-up : should we also remove hibernate-specific jars from the base distro and just dropping jboss-hibernate.jar into the client directory. This would allow each deployed application to more easily use their own copy/version of hibernate3 (provided ejb3 is not deployed).	0	0	https://issues.jboss.org/browse/JBAS-2000
1430	JBAS-1992	So, to summarize: Improvements done (they'll be out with 4.0.3RC2) - org.jboss.util.propertyeditor.StringEditor added, to reduce failed editor lookup in jboss editors package - the ServiceBindingManager is now properly plugable, it won't be called if it hasn't registered with the ServiceController - DeploymentInfo & TomcatDeployer won't try to open .xml files as zip files. Not done - I don't like the changes proposed by ServerConfig/ServerLoader. If I understand correctly it hacks the jboss bootclasspath (libraries in ./lib) by adding commonly used libraries from ./server/xxx/lib. This seems against the current design, so no change there. - I don't see any of the AbstractMBeanInvoker, AbstractWebContainer files attached to evaluate them. Cheers /Dimitris	1	1	https://issues.jboss.org/browse/JBAS-1992
1431	JBAS-1992	Can a blacklist clear mechanism be implemented similar to the existing JBoss blacklist clear algorithms?	0	0	https://issues.jboss.org/browse/JBAS-1992
1432	JBAS-1992	To the submitters: could you please provide more info as to why the classloading patches in case JBAS-2166 are needed? Please add any information on that particular case, this one is now closed.	0	0	https://issues.jboss.org/browse/JBAS-1992
1433	JBAS-1980	I'm wondering if the way we do is correct though, i.e. if invoking on attributes is supported, are we supposed to show in the metadata those attributes appearing both as attributes and operations?	1	1	https://issues.jboss.org/browse/JBAS-1980

1435	JBAS-1973	Done, you can now use "-g whatever" or "--partition=whatever" to set the partition name. adrian@adrian-srv01:~/jboss-4.0/workspace/build/output/jboss-4.0.3RC1/bin> ./run.sh --help ========== JBoss Bootstrap Environment JBOSS_HOME: /home/adrian/jboss-4.0/workspace/build/output/jboss-4.0.3RC1 JAVA: /home/adrian/downloads/j2sdk1.4.2_08/bin/java JAVA_OPTS: -server -Xms128m -Xmx128m -Dprogram.name=run.sh CLASSPATH: /home/adrian/jboss-4.0/workspace/build/output/jboss-4.0.3RC1/bin/run.jar:/home/adrian/downloads/j2sdk1.4.2_08/lib/tools.jar ========== usage: run.sh [options] options: -h, --help Show this help message -V, --version Show version information -- Stop processing options -D<name>[=<value>] Set a system property -d, --bootdir=<dir> Set the boot patch directory; Must be absolute or url -p, --patchdir=<dir> Set the patch directory; Must be absolute or url -n, --netboot=<url> Boot from net with the given url as base -c, --configuration=<name> Set the server configuration name -j, --jaxp=<type> Set the JAXP impl type (ie. crimson) -B, --bootlib=<filename> Add an extra library to the front bootclasspth -L, --library=<filename> Add an extra library to the loaders classpath -C, --classpath=<url> Add an extra url to the loaders classpath -P, --properties=<url> Load system properties from the given url -b, --host=<host or ip> Bind address for all JBoss services -g, --partition=<name> HA Partition name (default=DefaultDomain)	1	1	https://issues.jboss.org/browse/JBAS-1973
1436	JBAS-1970	I don't see why we need a new dom4j-jboss thirdparty entry. What does the thirdparty directory name have to do with the dom4j.jar artifact name? This is simply a new version of dom4j that I don't see as any different from a 1.6.1 version. We have no dependency on jaxen. The only reason it was added was because of the binding of theses classes to the root dom4j.jar by the bootstrap classloader, and this resulted in problems with loading jaxen from app level deployments. If people want to use the dom4j/jaxen integration they simply deploy a full dom4j.jar and jaxen.jar as the server config/app deployment level.	0	0	https://issues.jboss.org/browse/JBAS-1970
1437	JBAS-1970	So once this is complete the end result will be that the current dom4j.jar retrieved by checking out the 4.0 branch of JBoss4.0 will not contain the xpath package. If this breaks people's code, then they will need to deploy a full dom4j.jar, but where will they get the complete jar from? Haven't we just overwritten it with an incomplete one? My assumption was that two versions of this jar would need to be present in cvs, an incomplete one, and a complete one. Because both versions need to have the same filename they would have to reside in different directories.	0	0	https://issues.jboss.org/browse/JBAS-1970
1438	JBAS-1970	the new problem is how can I load the full dom4j jar in app(ear) level?I mean the dom4j.jar(jboss) is in the top level class loader,if I use dom4j's xpath function,it must be put in the same folder with jboss version dom4j.jar.	0	0	https://issues.jboss.org/browse/JBAS-1970
1439	JBAS-1965	What is an example test that is failing currently because of this? The jbossxb classes where synched with the latest changes from head, and there is an example of any processing working in the org.jboss.test.naming.test.JNDIBindingUnitTestCase.	1	1	https://issues.jboss.org/browse/JBAS-1965
1440	JBAS-1965	Can we take discussions and random speculations to the forums. This at least is a bug in that it should be giving you a more meaningful error message: java.lang.NullPointerException at org.jboss.beans.metadata.plugins.StringValueMetaData.getValue(StringValueMetaData.java:80) like "I have no idea what types you want me to insert into this list".	1	1	https://issues.jboss.org/browse/JBAS-1965
1441	JBAS-1965	Where does it say you want a started/installed pool in your bean? This says you want a configured pool: <property name="poolService"> <inject bean="PoolService" state="Configured"/> </property> which is not the same thing.	1	1	https://issues.jboss.org/browse/JBAS-1965
1442	JBAS-1955	Just in case Fabiano - can you get me one single .zip containing the latest version of those files? Or do I need to use all 3 zip files to reproduce it?	1	1	https://issues.jboss.org/browse/JBAS-1955
1443	JBAS-1925	I noticed a JMSContainerInvokerMessageDrivenUnitTestCase class in the test suite which just test the JMSContainerInvoker implementation against a Queue using the SimpleMessageDrivenUnitTest. Is it better to implement the testStopDelivery & testStartDelivery in there or Extends this class? How I see the implementation is something like this public void testStopDelivery() throws Exception { Properties props = (Properties) defaultProps.clone(); //set some default props runTest(getStopOperations(), props); } public void testStartDelivery() throws Exception { Properties props = (Properties) defaultProps.clone(); //set some default props runTest(getStartOperations(), props); } with getStartOperations() and getStoptOperations() working the same as SimpleMessageDrivenUnitTest. I guess a few new operations will need to be created to invoke the stopDelivery and startDelivery methods on the JMSContainerInvoker. Also I could be way off the mark here....	1	1	https://issues.jboss.org/browse/JBAS-1925

#	Requirement	Questions	Answered	Successfully Answered	URL
1444	JBAS-1900	Was the customer using FORM authentication? There is any issue with FORM authentication where Tomcat stores login credentials in a transient map in the session. This map is not being replicated (which we need to fix, at least for these values). Without these values, Tomcat can't authenticate the user from the session when redirected. ClusteredSSO fixes this by providing another source for the login credentials, but we need to make them available from the session itself. With BASIC and CERT authentication, the browser presents the credentials with each request, so I expect this to only affect FORM authentication.	0	0	https://issues.jboss.org/browse/JBAS-1900
1445	JBAS-1871	Scott, this issue appears out-of-date. Do you still need these tests written?	1	0	https://issues.jboss.org/browse/JBAS-1871
1446	JBAS-1865	Okay, here it is. Do you want me to add the JIRA list for 2.2.8 as well ? Fast Message marshalling ---------- - Replaced Externalizable for Message with Streamable, resulting in much faster marshalling and reduced size of marshalled messages, allowing for more messages to be sent / second - org.jgroups.tests.MessageSerializationTest2 can be used to compare Externalizable with Streamable: - For 50000 messages, size reduction is almost 50%, marshalling 150% faster and unmarshalling 650% faster flags="-Xmx500M -Xms500M -XX:NewRatio=1 -XX:+AggressiveHeap -verbose:gc -XX:+DisableExplicitGC -XX:ThreadStackSize=32 -XX:CompileThreshold=100" java $flags org.jgroups.tests.MessageSerializationTest2 -num 100000 -add_headers false serialized size=8588935, streamable size=5788899, streamable is 48 percent smaller serialized write=831, streamable write=331, streamable write is 151 percent faster serialized read=1352, streamable read=180, streamable read is 651 percent faster Performance numbers ---------- - Real tests will be produced in 2.2.9, using org.jgroups.tests.perf.Test - With JGroups/conf/fc-fast-minimalthreads.xml, I got ca 5000 1K messages on my laptop: (2 members, 1 sender, 1 receiver, 1 CPU laptop, 20000 1K msgs, 100Mbps switch) - April 20 2005: **5006** msgs/sec (on 192.168.5.1): -Xmx500M -Xms500M -XX:NewRatio=1 -XX:+AggressiveHeap -verbose:gc -XX:+DisableExplicitGC -XX:ThreadStackSize=32 -XX:CompileThreshold=100: combined: num_msgs_expected=20000, num_msgs_received=20000 (loss rate=0%), received=20MB, time=3995ms, msgs/sec=5006.26, throughput=5.01MB/sec UDP ---------- - bind_to_all_interfaces="true" now allows to listen for multicast messages on *all* available interfaces. This requires 1.4, under 1.3 the default interface will be selected MPING ----- - MPING allows for a combination where node discovery in a cluster uses multicast, but the real transport uses TCP. This is an addition to TCP:TCPPING and TCP:TCPGOSSIP. Example (short version of JGroups/conf/mping.xml): <config> <TCP bind_addr="192.168.5.1" start_port="7800" sock_conn_timeout="500" loopback="true"/> <MPING timeout="2000" bind_to_all_interfaces="true" mcast_addr="228.8.8.8" mcast_port="7500" ip_ttl="8" num_initial_members="2" num_ping_requests="1"/> <FD timeout="2000" max_tries="3"/> <pbcast.NAKACK gc_lag="50" retransmit_timeout="600,1200,2400,4800" max_xmit_size="60000"/> <pbcast.STABLE stability_delay="1000" desired_avg_gossip="20000" down_thread="false" max_bytes="0" up_thread="false"/> <pbcast.GMS print_local_addr="true" join_timeout="5000" join_retry_timeout="2000" shun="true"/> </config> Concurrent startup ---------- - When multiple members are started simultaneously, and no other member is running yet, they form singleton groups, and merge after some time. The new version avoids this merge, so merging occurs only after network partitions now, never on concurrent startup of initial members	0	0	https://issues.jboss.org/browse/JBAS-1865
1447	JBAS-1864	I am going to revert this change. I already parameterized this using the spec defined mechanism, i.e. using a system property when ant is invoked. <sysproperty key="java.naming.provider.url" value="${node0.jndi.url}"/> Please, can we avoid doing script/template type rubbish. I am trying my best to get the testsuite into a state where you can run it without having to go through a 50 minute build to run a three line change in a test. Ideally from inside eclipse where it doesn't even need to go through the ant build script if you are not changing the deployment. Where else has this ant template rubbish been done? As a general rule, we should support things using first class notions, not workaround things with code generation, templates, scripting or any other stupid code.	0	0	https://issues.jboss.org/browse/JBAS-1864
1448	JBAS-1839	There should be no whitespace in the hostname or urls so whitespace could simply be another delimiter. What was an example of the whitespace plagued usage?	1	1	https://issues.jboss.org/browse/JBAS-1839
1449	JBAS-1836	Summary of changes in the transaction module ---------- TransactionImpl: added getAssociatedThreadCount(), call out to TransactionSynchronization handler before/after commit/rollback, restore the interrupted status of the thread TransactionManagerService: new SynchronizationService attribute TxManager: holds TransactionSynchronization instance when registered, disassociateThread on tm.suspend() TransactionLocal: Add lock()/unlock() to allow clients to optionally synchronize access to the transaction local TransactionLocalDelegateImpl: se TransactionLocal instead of 'this' as the key to the TransactionLocalSynchronization map TxUtils: added String getStatusAsString(int status) Summary of additions in the transaction module ---------- --- TransactionSynchronization: new interface for a jboss specific singleton synchronization callback with access to TransactionImpl TransactionSynchronizationService: new service encapsulating a TransactionSynchronization implementation of a simple policy that rollback the tx if more than one threads are still associated at commit time. It includes a ForcedRollbackCounter and a setting to enable/disable the policy at runtime. TransactionSynchronizationServiceMBean: the interface of the service SynchronizedTransactionLocal: new Helper for automatic synchronization Summary of addition for transaction tests ---------- MTTest, MTTestMBean: server side driver for multithreaded tests MTOperation: tasks that can be combined in multithread tests MTTransactionManagerUnitTestCase: the test cases	1	1	https://issues.jboss.org/browse/JBAS-1836
1450	JBAS-1824	The reason why we originally wanted "*" to be understood as a "any role mapping" was that the container will only do a (basic) authentication if we have specified an <auth-constraint>, for which we wanted to add "*". The actual problem though is that the container does not perform an authentication on an unprotected resource. So what we really want to have is authentication in the web container, and later an authorization in an ejbs. So it would be really nice if we could configure (on a web app or even resource base), that the web container should do an authentication even if no authorization is required. Shall we add this as new feature request? Regards, Simon	1	1	https://issues.jboss.org/browse/JBAS-1824
1451	JBAS-1824	Anil, will you be working on this?	1	1	https://issues.jboss.org/browse/JBAS-1824
1452	JBAS-1820	<quote> I don't know if this is what A. Brock means by "...this does not give the full semantics of what you want." </quote> The spec says nothing about being able to redeploy the rar without also redeploying the MDB. Which is obviously required because of classloading considerations. Just adding a <depends> does not force a full redeployment of the MDB container. It only controls the ordering of startup and shutdown between the two components Hence this a feature request to get the "full semantics of what you want".	1	1	https://issues.jboss.org/browse/JBAS-1820

#	Requirement	Questions	Answered	Successfully Answered	URL
1453	JBAS-1818	Correct. It's just simpler and more accurate to produce the descriptor from the live metadata. Maybe a flag to control this would do? But this needs to make sure the replaced entries in the descriptor fully match the entity declaration in the DTD, plus it'll have to be changed whenever they change. Do you want to contribute this? :)	0	0	https://issues.jboss.org/browse/JBAS-1818
1454	JBAS-1809	Why isn't this using the default syntax ${jboss.server.lib.url:lib} ?	0	0	https://issues.jboss.org/browse/JBAS-1809
1455	JBAS-1783	Hi Adrian, First of all, thanks for the quick feedback - that was one of the quickiest I ever got on an OSS project :-) Now, back to the new feature, I can provide 2 new patches against the cvs (using jboss-core and Branch_3_2 - please correct me if I'm wrong). But before I do so, I have a few questions: - instead of using AssertionError - which is dependent on JDK 1.4 - we should either choose another JDK RuntimeException or create a new one. I would prefer to create a new one (such as ConnectionNotClosedException), so we can handle it better. - if we opt for creating a new one, should it be connection-specific or resource-generic? In other words, should we call it ConnectionNotClosedException or ResourceNotClosedException? I think it's the latter, but I'm not sure. - also, in which package/module should we add this new Exception? Could it go to the common module and in the org.jboss.util package? Regards, -- Felipe	1	1	https://issues.jboss.org/browse/JBAS-1783
1456	JBAS-1770	What are the immediate requirements for this task ? Is it correct to consider altering the build/packaging process to include the testsuite and its dependencies into the distribution as the primary objective ? Which of the enhancements above are required and which should be added to the wish list ? Do we have to include some kind of documentation about the details on running the different tests ? Those questions might seem stupid to you but, please, bear with me since I am a newcomer and it is not obvious for me.	1	0	https://issues.jboss.org/browse/JBAS-1770
1457	JBAS-1768	Ryan, is there someone from QA that could help with this type of tasks?	0	0	https://issues.jboss.org/browse/JBAS-1768
1458	JBAS-1768	Adrian, do you mean that some of the tests in the JBossAS testsuite are by other projects as well ? If this is true - am I correctly interpreting you comment that you want those common tests moved to a separate project (cvs/svn module) so that everyone who depends on them can use them in a clean way and share the same codebase ?	0	0	https://issues.jboss.org/browse/JBAS-1768
1459	JBAS-1747	The backport as needed by ejb3 is done. There are a couple of changes in head such as the jbxb:addMethod, and a dicussion of how to improve the namespace to xsd resolution. Is there anything missing for the bean deployer?	1	1	https://issues.jboss.org/browse/JBAS-1747
1460	JBAS-1747	Just what needs to be done before we can tag this for incorporation into the 4.0 branch so that the tests can be incorporated and testing can start. The StringBuilder is a jdk5 class. Does the bean deployer also require jdk5 for its base behavior? We can't introduce a jdk5 dependency at the common module level though.	1	1	https://issues.jboss.org/browse/JBAS-1747
1461	JBAS-1713	SourceForge Username: ioparra . Logged In: YES user_id=812998 It appears that the problem is the MANIFEST declaration. You have: application.xml deploying ejb.jar that has 1 classpath entry. JBoss will add that one classpath entry, but will not recursively check each child. Work around: If you want to include lib2.jar in your classpatch, add lib2.jar to MANIFEST.MF for ejb.jar. That'll fix the problem. Solution: Is an EAR container supposed to recursively run through ALL jars that are added to the classpath and add there MANIFEST.MF class-path entries? JBoss is assuming only the top level. The Spec says: If the by-reference approach is used, the ejb-jar file producer does not duplicate the content of the ejb-client JAR file in the ejb-jar file, but instead uses a Manifest Class-Path entry in the ejb-jar file to specify that the ejb-jar file depends on the ejb- client JAR at runtime. The use of the Class-Path entries in the JAR files is explained in the Java 2 Platform, Enterprise Edition specification [9]. Neither the j2EE or the ejb spec talks about recursively solving all jar dependencies.	1	1	https://issues.jboss.org/browse/JBAS-1713
1462	JBAS-1713	SourceForge Username: adrianprice . Logged In: YES user_id=580837 Many thanks for the response. However, I beg to differ: the J2EE spec. does require recursive resolution of bundled jar file Class-Path entries, as does the jar file specification. "J2EE.8.2.1 Assembling a J2EE Application", j2ee-1_3-fr- spec.pdf, page 106: "d. Make sure that each component in the application properly describes any dependencies it may have on other components in the application. A J2EE application should not assume that all components in the application will be available on the ???classpath??? of the application at run time. Each component might be loaded into a separate class loader with a separate namespace. If the classes in a JAR file depend on classes in another JAR file, the first JAR file should reference the second JAR file using the Class-Path mechanism. A notable exception to this rule is JAR files located in the WEB- INF/lib directory of a web application. All such JAR files are included in the class path of the web application at runtime; explicit references to them using the Class-Path mechanism are not needed." Recursive Class-Path resolution is the only approach that makes sense. Unless dependencies are declared locally by Class-Path attributes in the jar files containing the referencing classes and resolved recursively, all such dependencies would have to be understood and surfaced by top-level ejb-jar files. This problem is newly introduced between JBoss-3.0.4 and 3.2.1. My application runs perfectly on the older version, and on other app. servers. HOWEVER, I must have been tired last night and accidentally deployed the ejb.jar instead of the .ear, because when I tried again this morning I discovered that there was an error in the application.xml file and the .ear itself wouldn't deploy. I fixed the error, redeployed, and hey presto - the test case works correctly!!! There's still a problem with my application, but I finally diagnosed the cause as related to jar file indexes. Deleting the META-INF/INDEX.LIST files from all the jars cured the problem and allowed the class loader to use the Class-Path attributes correctly. MORAL: don't use jar file indexes unless there's a 1:1 mapping from package to jar, across all packages.	1	1	https://issues.jboss.org/browse/JBAS-1713
1463	JBAS-1711	18 months since last comment. Can we add this back on the roadmap, please, it's a trivial fix.	0	0	https://issues.jboss.org/browse/JBAS-1711
1464	JBAS-1706	Can you be more specific about the use-case you want to implement? Maybe, provide an example.	0	0	https://issues.jboss.org/browse/JBAS-1706
1465	JBAS-1691	This is your basic deploy the classes in two different classloaders and then do pass by reference problem, which worked fine until we decided to switch to Servlet spec classloading (JBAS-1691) in 4.0.2 rather than the JBoss flat classloading model. e.g. add the following code to your servlet: Object objRef = initial.lookup("gogis/tutorial/slsb/servlet/HelloWorld"); +out.println(HelloWorldHome.class.getClassLoader()); +out.println(objRef.getClass().getInterfaces()[0].getClassLoader()); The other fix is to enable call by value semantics: http://wiki.jboss.org/wiki/Wiki.jsp?page=ClassLoadingConfiguration P.S. It is a good idea to provide an example than actually works out-of-the-box. If we have to fix your example to even compile it (e.g. where is your classpath in build.xml?), it is likely to be ignored/rejected	1	1	https://issues.jboss.org/browse/JBAS-1691
1466	JBAS-1610	Implemented the ability to run jboss using the 'platform MBeanServer' on jdk1.5+ runtimes. Attribute ServerConfig.getPlatformMBeanServer() has been added to indicate if we are using the platform MBeanServer as the main jboss server. Both the 'jboss.platform.mbeanserver' property must be set, and the jvm must be jdk1.5+. to enable this feature. MBeanServerLocator will instead return the platform MBeanServer, in this case. To enable this feature use: './run -Djboss.platform.mbeanserver' and see the 'java.lang' and 'java.util.logging' domains appearing in the jmx-console	0	0	https://issues.jboss.org/browse/JBAS-1610

#	Requirement	Questions	Answered	Successfully Answered	URL
1469	JBAS-1598	_____ From: Scott M Stark Sent: Monday, April 11, 2005 1:00 PM To: Clebert Suconic; 'qa@jboss.com' Subject: RE: Create a compatibility matrix which tracks JBoss client vs. server class versions Serialization should be mostly covered by the SerialVersionUIDUnitTestCase in the bundled testsuite. There needs to be basic testing of all j2ee interfaces by running a subset of the existing testuite modules against the current jboss server. This is not hard. 1. For each release of jboss there is a build of the release source. 2. The current jboss server branch is obtained and built. 3. The current jboss server branch binary is run as with the all configuration. 4. For each release of jboss: a. Run a subset of the testsuite unit tests from within the release build so that the release build binaries are used. 5. Merge the testsuite runs into a cross version compatibility matrix. The toplevel view is a simple pass/fail matrix which indicates whether all of the tests run using the x.y.z binaries passed. _____ From: Clebert Suconic Sent: Monday, April 11, 2005 10:52 AM To: Scott M Stark; 'qa@jboss.com' Subject: RE: Create a compatibility matrix which tracks JBoss client vs. server class versions We will need to test Serialization across versions or functionalities across version as well? I'm afraid about the answer you would have, as if we have to test functionality, the amount of work will be huge. What if the Serialization works, but it the interceptor on 4.0.1 puts something different on the Marshalling that the stubs are not prepared to receive. (Just wondering some breaking in the functionality) But If it's serialization only, we can do it fast. Clebert _____ From: Scott M Stark Sent: Monday, April 11, 2005 12:42 PM To: Clebert Suconic; 'qa@jboss.com' Subject: RE: Create a compatibility matrix which tracks JBoss client vs. server class versions No, that is not enough. We need an independent test matrix that is run as part of the nightly qa process that runs the testsuite using the x.y.z release jars against the current 4.0 branch to validate actual functional behavior. Serialization version ids are only one small part of version interop. Addition/removal of classes, and changes in implementation are the other big factors that break interop. The serialization version uid test is the only one that should be part of the normal development testsuite. The cross version matrix needs to be external and not part of the testuite cvs module so as not to bloat the download. _____ From: Clebert Suconic Sent: Monday, April 11, 2005 9:49 AM To: Scott M Stark; 'qa@jboss.com' Subject: RE: Create a compatibility matrix which tracks JBoss client vs. server class versions I can extend what you did into http://jira.jboss.com/jira/browse/JBAS-1584 Do you think that if I compare SerialUID from previous versions against actual version would be enough to keep this compatibility matrix, or should we be doing something beyond that? Also... I created a simple testcase that verifies if classes are defining UIDs. As cruisecontrol is broken for 4.0 now, I think people haven't look at the results. I think we still have classes not defining SerialUUID. My understanding is that this matrix is dependent of clearing SerialUUIDs first. Is that right? Clebert _____ From: Scott M Stark Sent: Monday, April 11, 2005 12:08 AM To: qa@jboss.com Subject: Create a compatibility matrix which tracks JBoss client vs. server class versions What is the status of this issue? http://jira.jboss.com/jira/browse/JBAS-1598	0	0	https://issues.jboss.org/browse/JBAS-1598
1470	JBAS-1598	For web service interoperability. All ws4ee-foo-client.jars must be deployed on a node of the same version as the testsuite running the tests. For that we could modify JBossTestCase to take a node identifier for the deploy(String nodeId, String deployments), undeploy(String nodeId, String deployments) methods. As an optimization for the non-interop scenario the client node does not need to be started and it's Id is simply assigned to that of the server node. I know we have the feature of starting up nodes from the testsuite. Can we do this optionally depending on client/server versions? How do we deploy to a specific node?	1	1	https://issues.jboss.org/browse/JBAS-1598
1471	JBAS-1595	Bill, do you want to reopen this task and talk to Ryan about JDK 5 build requirements? Is retroweaver not an option for JDK 1.4? Ivelin	1	1	https://issues.jboss.org/browse/JBAS-1595
1472	JBAS-1595	This has nothing to do with build requirements. It has to do with release requirements. Do we have a specific JDK 5 release of JB4?	0	0	https://issues.jboss.org/browse/JBAS-1595
1473	JBAS-1595	OK, Ryan is notified. Scott let's clarify the requirements: You want 2 builds for JBoss 4 - one compiling with JDK 1.4 and another one requiring JDK 5. The first one will skip the EJB3 module, the second one will include it. Is this correct? Should we version the one that includes EJB3 JBoss AS 4.5? Ivelin	1	1	https://issues.jboss.org/browse/JBAS-1595
1474	JBAS-1595	Is this really still a "critical" issue?	0	0	https://issues.jboss.org/browse/JBAS-1595
1475	JBAS-1585	Flow control needs a lot more thought than my off the cuff trivial test. e.g. The requests should not just be throttled they should be prioritized so a throttled request can give up its threads to others that can do work. For example a sender that wants to add a message gives up its thread to allow a receiver to clear some memory. This requires co-operation from the invoker framework. i.e. I am about to do perform a send, can I proceed? The link about message serialization is there because ideally during the same process, the sender can write the message body directly into persistent store using buffers, rather than hogging memory with a full read and deserialiation.	0	0	https://issues.jboss.org/browse/JBAS-1585
1476	JBAS-1525	We also see a problem if the userDN cannot directly be used to authenticate and check the pasword using the LDAP bind operation. We have LDAP entries which are aliases and they cannot be used to perform a bind. An extra technical user is needed to perform the bind and that user needs read access on the password field. The login module then can read the password hash the given user password and compare the two hashes. We created an "AdvancedLdapLoginModule" from the 4.0.1 src which is doing the job. This is something we would like to contribute. How can we do that?	1	1	https://issues.jboss.org/browse/JBAS-1525
1477	JBAS-1525	Marcus, why does the bind user option trigger pulling in the user password for validation inside the server rather than simply binding to the ldap server as the as the user with their credentials for authentication as currently done. I'm not inclined to introduce this ldap server specific password processing and userPassword attribute notion. The only point of the bind user for me was to allow for querying of the roles under a context that the user does not have rights to.	1	1	https://issues.jboss.org/browse/JBAS-1525
1478	JBAS-1525	So can you query for the user with referral resolution enabled and bind to the resulting ldap url for the user?	1	1	https://issues.jboss.org/browse/JBAS-1525
1479	JBAS-1475	Can you ping me on Yahoo IM (belaban@yahoo.com) so we can talk ?	1	1	https://issues.jboss.org/browse/JBAS-1475
1480	JBAS-1458	What do you mean by not being able to bind to any port? To bind to an anonymous port use an RMIObjectPort of 0, otherwise specify the desired port.	0	0	https://issues.jboss.org/browse/JBAS-1458
1481	JBAS-1458	We recently have been bitten by this. Our customers run our software (which bundles JBoss) with multiple instances on one *NIX server. They also run other third-party software to which they assign ports explicitly per instance. Because JBoss was picking up a handful random ports from the OS based on the default server config, we hit conflicts where JBoss was holding a port to be used by another service. Since we truly have no need for any remote access to these JBoss instances, we set about trying to disable all port bindings except port 80 for HTTP. We have been able to eliminate all of them except for the RMIObjectPort, and only because the EJB container can't seem to run without it. I see this issue has been in limbo for 3 years... any chance this could be addressed? Is it a trivial change? Would you accept a patch for this?	1	0	https://issues.jboss.org/browse/JBAS-1458

#	Requirement	Questions	Answered	Successfully Answered	URL
1482	JBAS-1458	This issue is out-of-date, so I'm closing it. As of 4.2.x EJB2 doesn't use the JRMP invoker, it uses the UnifiedInvoker (JBAS-3950) which can be changed to use some other protocol e.g. as per the feature request an "in memory transport". The only thing that does use it is the jmx-invoker-service.xml which can be removed or changed to use a different invoker, e.g. the "web" configuration in JBoss5 uses the http invoker instead. What is left of this feature request is now on JBAS-6071which would remove the legacy invokers by default (they are only required for backwards compatibility when talking to older versions of JBoss).	0	0	https://issues.jboss.org/browse/JBAS-1458
1483	JBAS-1443	I think an extra interceptor could work out nicely, any hints on how to implement this interceptor? Is there an interceptor we could use or use as a good base? We would need some kind of waiting/signaling to implement this. I'm not into developing interceptors, so I'm not sure how to do this best?	1	0	https://issues.jboss.org/browse/JBAS-1443
1484	JBAS-1436	While looking for a way to get wait times for connections logged I stumbled across this one. From the activity log it's unclear to me whether there is actually work in progress besides PreparedStatementPool. Is there a chance that we will be able to see logging of how long a thread waited for a connection in JB 4.2.0? I looked at InternalManagedConnectionPool but it seems there is logging of wait time only in case the thread is interrupted (via the exception) but not in the standard case.	0	0	https://issues.jboss.org/browse/JBAS-1436
1485	JBAS-1429	Does "Reauthentication Support" in this feature request mean support by application server or by JCA connection factory? It seems not to be distinguished here. Changes 1-3) are server specific and 4) is JCA provider specific. Changes 1-3 affects more than JDBC only, but any other JCA implementation as well. If you are going to solve the issue by introducing a new interface like ReauthenticationMachanism I doubt that any third-party JCA vendor will implement it; it would be a solution for JBoss' JCA implementation for JDBC only. For us it is important to have the server-side re-authentication support first (1-3), which will allow to use re-authentication provided by the other JCA vendors.	0	0	https://issues.jboss.org/browse/JBAS-1429
1486	JBAS-1426	Actually, after thinking about this is a bigger problem then I thought. Moving checkState() above setAutoCommit() won't help if the underlying connection's autoCommit==true. That would mean the solution on your side would be to: setAutoCommit(true); change readonly status; setAutoCommit(false); which looks more like a special C-JDBC hack. What do you think? In the mean time I'm going to lobby C-JDBC for a better transaction detection system. Mike	0	0	https://issues.jboss.org/browse/JBAS-1426
1487	JBAS-1402	Adrian, can we close this whole task & subtasks out-of-date, or do we keep the JCA tasks as still current?	1	0	https://issues.jboss.org/browse/JBAS-1402
1488	JBAS-1391	I was asked to look into this. Wouldn't it be easier to have a logical DataSource that would maintain a list of target datasources? The logical one would choose a target ds from the list and try to get a connection. If that one fails, it will choose another target, etc. This way we also don't have connections to different databases in the same pool.	1	1	https://issues.jboss.org/browse/JBAS-1391
1489	JBAS-1391	First, it is better to discuss the design in the dev forums. To answer your question Alex, it can be done both ways. The DataSource of DataSources idea is lot more consistent (you don't get a mixture of connections in the pool) in the event of failover, however it has a number of technical problems. 1) It cannot be extended easily to introduce load balancing later 2) Identifying that a DataSource is down is harder, versus the rar that can look at the real connection failures. e.g. maybe you can't get a connection because all the connections are checked out and you hit the timeout or some other temporary failure that should not cause failover of the DataSource? 3) Configuring mulitple datasources is a pain 4) How do you manage the dependencies of the DataSource, i.e. how does it wait for the sub DataSources, does it get undeployed if one of them goes away? 5) How do you manage the dependees of the DataSource? There are a number of services that depend upon the DataSourceBinding getting injected across JMX so they don't try to use the DataSource until it is available.	1	1	https://issues.jboss.org/browse/JBAS-1391
1490	JBAS-1325	I don't see the usecase for allowing the type to be externalized via a system property. Your not using this feature in the example. Is that really a desired feature?	0	0	https://issues.jboss.org/browse/JBAS-1325
1491	JBAS-1313	Hi, I've implemented this change request. A notification is installed into all subdeployers (the listeners are dynamically added/removed from/to the SubDeployers using the notifications from the MainDeployer). It seeks META-INF/log4j.xml / .prop in the classpath (using localCl), and configure the logger for the given deployment. It uses ClassLoaders to track deployments. It needs no code changes in any of the existing JBoss code. (Tested on 4.0.3, with EARs, WARs and spring deployer) One problem though, in an EAR deployment all subdeployments receives the classloader thus, one cannot create seperate logger for sub deployments. (eg. one for the whole EAR and a seperate for the WAR inside) Or a logger in a subdeployment would be used for the whole application. That's why this service is limited for 'root' deployments only at the moment. What's next? Cheers, Tamas	0	0	https://issues.jboss.org/browse/JBAS-1313
1492	JBAS-1310	Michael, I've tried your solution but I've run into some issues. Would you like to discuss this trough direct email or should I use the bug tracker for WfmOpen?	1	0	https://issues.jboss.org/browse/JBAS-1310
1493	JBAS-1292	Is this issue still current, or outdated?	0	0	https://issues.jboss.org/browse/JBAS-1292

Server shutdown may take a while - check logfiles for completion [starksm@banshee9100 bin]$	0	0	https://issues.jboss.org/browse/JBAS-1279
1495	JBAS-1279	Is this fixed in 4.0.5? I see this issue when JBoss Portal 2.6 is deployed in JBoss and I try running "shutdown.sh -S -u admin". I've used a custom security realm and updated jmx-invoker-service.xml accordingly.	0	0	https://issues.jboss.org/browse/JBAS-1279
1496	JBAS-1107	Any progress on this issue? It's just a matter of adding a few lines to jboss-app.dtd and doesn't hurt anybody. So why not just do it?	1	1	https://issues.jboss.org/browse/JBAS-1107
1497	JBAS-1091	You are kidding, aren't you? If JBoss does not persist timers across shutdowns and you do not consider this a bug, I'll switch to another AS for J2EE 1.4 immediately. From the ejb 2.1 spec: "The timer service is intended for the modelling of long-lived business processes. Timers survive container crashes and the activation/passivation and load/store cycles of the enterprise beans that are registered with them." Now, wouldn't you agree that the shutdown of the AS implies a "passivate/store" of the EJB associated with the timer? And that the restart of the server implies a "activate/load"? This logically implies that the timers must be persisted across shutdowns. Anything else would be ridiculous.	0	0	https://issues.jboss.org/browse/JBAS-1091
1498	JBAS-1091	I took the statement in the tutorial as a reason to write to Sun. I got an answer written by Kenneth Saks (EJB engineering lead) and confirmed by Linda DeMichiel (EJB specification lead). Kenneth says: "... While the spec doesn't explicitly use the phrase "on server shutdown", that was certainly my understanding of the intent. What's the purpose of timers surviving crashes only and not regular shutdowns? If the deployer can't rely on the existing timers being active until they naturally expire or are explicitly removed then they're not useful. ..." Of course, neither the section in the tutorial nor the quoted anser is normative. But the JBoss team seems to allow reason to prevail after all anyway.	0	0	https://issues.jboss.org/browse/JBAS-1091
1499	JBAS-1091	Have you tried with the .zip distro?	1	1	https://issues.jboss.org/browse/JBAS-1091
1500	JBAS-1091	Yes, I have tried full .zip(well, really .tar.bz2) version of RC1 with EJB3-RC8 applied, because it had not ejb3 support by default. But do Timer classes intersect with ejb3 distro jars? Is it important that I am using simple .ejb3 instead of complex .ear packaging? By the way, I have also tried modified version of ejb3_tutorial/timer sample modified to have 5e+6 msec timeout - same result: the item from "timers" table is deleted on server shutdown.	1	1	https://issues.jboss.org/browse/JBAS-1091
1501	JBAS-1091	Well, I'll be thankful if you could give me a link to your code to patch 4.0.4-GA with so I could recompile it. How long could it take to build jboss ejb3 profile on athlon64 3800+ x2 ? Thanks.	1	1	https://issues.jboss.org/browse/JBAS-1091
1502	JBAS-1091	I thought TimerService -related classes themselves are responsible for timer persistence, isn't it so? If not - I'll try to contact ejb3 developers how to sync their code with base profile accordingly. Could you please point out what classes you have worked on to make timer persistent. Thanks.	1	1	https://issues.jboss.org/browse/JBAS-1091
1503	JBAS-1010	SourceForge Username: smapjb . Logged In: YES user_id=559447 I didn't make myself clear.. I meant resource-ref (a URL resource ref) that is not specific to a component.. and the deployment descriptors that I refer to are the jboss ones. I know that you don't define URLs in the J2EE ones. The matter still stands.. All other resource references are defined outside the EAR.. but the URL *resource ref* has to be defined inside the *jboss* deployment descriptors and hence inside the EAR.. this is not consistent and other app servers (specifically Websphere) don't do it that way. Please reread my original post ignoring 'environment'. Apologies for the confusion.	1	1	https://issues.jboss.org/browse/JBAS-1010

#	Requirement	Questions	Answered	Successfully Answered	URL
1504	JBAS-1010	Logged In: YES user_id=175228 I still don't know what your talking about. How would websphere map the following ejb-jar resource-refs to the deployment environment JNDI location? <ejb-jar> <display-name>ENC Tests</display-name> <enterprise-beans> <session> <!-- JDBC DataSources (java:comp/env/jdbc) --> <resource-ref> <description>The default DS</description> <res-ref-name>jdbc/DefaultDS</res-ref-name> <res-type>javax.sql.DataSource</res-type> <res-auth>Container</res-auth> </resource-ref> <!-- JavaMail Connection Factories (java:comp/env/mail) --> <resource-ref> <description>Default Mail</description> <res-ref-name>mail/DefaultMail</res-ref-name> <res-type>javax.mail.Session</res-type> <res-auth>Container</res-auth> </resource-ref> <!-- URL Connection Factories (java:comp/env/url) --> <resource-ref> <description>The JBoss Web Site HomePage</description> <res-ref-name>url/JBossHomePage</res-ref-name> <res-type>java.net.URL</res-type> <res-auth>Container</res-auth> </resource-ref> </session> </enterprise-beans> </ejb-jar>	1	1	https://issues.jboss.org/browse/JBAS-1010
1505	JBAS-1010	SourceForge Username: smapjb . Logged In: YES user_id=559447 Apologies for reopening this but I submitted a patch and noone noticed!! I have written the URLResource service that compliments this feature.. you can now register your URLs in a url-service.xml file and hot deploy them.. finishing off this RFE. If you close this RFE then you will probably also want to close this patch http://sourceforge.net/tracker/index.php?func=detail&aid=1069543&group_id=22866&atid=376687	1	1	https://issues.jboss.org/browse/JBAS-1010
1506	JBAS-855	SourceForge Username: jim_b_o . Logged In: YES user_id=960535 What tools do you use for creating diffs? The reason for setting the identity per statement is that we cannot do it on getConnection(). The third party tools that we use do not request the connection under the identity that is actually going to use the connection. At least that is how it appears from the callkback events which it raises. I'd be happy to try what you're recommending, to check if it's actually do something different under the covers.	1	1	https://issues.jboss.org/browse/JBAS-855
1507	JBAS-855	Logged In: YES user_id=9459 cvs diff -u 5 Will produce a universal diff against the code you checked out with a context of 5 lines either side of the changes. I'm not sure I understand your comment about the thirdparty tool. Can you give an example of the use case? With managed connections, there is a real connection and a handle (the connection object you actually use). The handle is only valid for the time you have a connection checked out from the pool. Doesn't the identity remain the same for the lifetime of that checked out handle, probably the duration of the transaction. Regards, Adrian	1	1	https://issues.jboss.org/browse/JBAS-855
1508	JBAS-855	SourceForge Username: jim_b_o . Logged In: YES user_id=960535 If there's anybody watching... Is the latest attachment OK? Is it likely this will be incorporated in a future release? Can I do anything else to assist?	1	1	https://issues.jboss.org/browse/JBAS-855
1509	JBAS-826	SourceForge Username: pilhuhn . Logged In: YES user_id=217112 The posting of scott were the relese notes btw. See: http://sourceforge.net/docman/display_doc.php?docid=20433&group_id=22866	1	0	https://issues.jboss.org/browse/JBAS-826
1510	JBAS-804	SourceForge Username: drmlipp . Logged In: YES user_id=731113 I'm sorry, but what kind of argument is this? Because some developer might not implement the container/EJB contract correctly, JBoss is entitled to violate the client/container contract? You acknowledge that the client must act differently depending on the kind of problem that has caused the exception. Of course, I have implemented looking at the cause as a workaround. But this is highly JBoss specific (and really, while looking at an exception's cause may help to decide what to do next in some cases, this is clearly a situation where you should be able to distinguish the problem cause "first-hand", i.e. without having to dig down). We maintain an application for both JBoss and Bea WLS here and WLS acts exactly as I had excpected (i.e. throws java.rmi.noSuchObjectException) while JBoss throws an exception that -- from the documentation -- is simply not appropriate. Why should I have to implement workarounds when using JBoss just because some developer cannot implement his finder methods properly?	1	0	https://issues.jboss.org/browse/JBAS-804
1511	JBAS-763	SourceForge Username: pilhuhn . Logged In: YES user_id=217112 This should (at least in theory) be adressed at the Xdoclet guys. Gavin has access to the Xdoclet CVS; so we might try :-)	1	1	https://issues.jboss.org/browse/JBAS-763
1512	JBAS-714	Logged In: YES user_id=175239 Why do you need this? The libraries under jboss/lib should be a fixed set necessary to bootstrap the server. Each configuration can have their own specific set of libraries added to the classloader repository by adding them either to jboss/server/<configname>/lib (where all libraries are added) or jboss/server/<configname>/deploy (in case the library should be hot deployable).	0	0	https://issues.jboss.org/browse/JBAS-714
1513	JBAS-714	SourceForge Username: rmcauble . Logged In: YES user_id=378285 The reason is because in order to workaround the ClassCircularityError which comes up from time to time when using the UnifiedClassLoader, I've had to move everything from jboss/server/<configname>/lib to jboss/lib and move all the jars from all the sars to jboss/lib. (It's safe to leave the jars in the wars since they use WebClassLoader instead of UnifiedClassLoader). Obviously it would be preferable to fix the ClassCircularityError, but there is no way to fix that until Sun fixes the JVM. In the meantime anyone who uses this workaround just won't be able to hot-deploy any sars. Obviously hot-deploy is a nice convenience, but we were seeing the ClassCircularityError pretty frequently. It's just nice to have a simple workaround as an alternative. For more information, see the email thread associated with this message: http://www.mail-archive.com/jboss- user@lists.sourceforge.net/msg32109.html Note that I've also submitted a patch for this: 813664.	1	1	https://issues.jboss.org/browse/JBAS-714
1514	JBAS-664	SourceForge Username: elfring . Logged In: YES user_id=572001 How do you think about a cooperation with the "Open Service Gateway"? http://en.wikipedia.org/wiki/OSGi	1	0	https://issues.jboss.org/browse/JBAS-664
1515	JBAS-590	SourceForge Username: rombergc . Logged In: YES user_id=808269 Hi, the specification of container managed security was done unintentionally, after removal of the security related element your descriptor worked fine. Much thanks! I've attached the final descriptor version. One additional question: Is it possible to include the descriptor into the RAR-file itself? Best regards, Christian Romberg	1	1	https://issues.jboss.org/browse/JBAS-590
1516	JBAS-460	SourceForge Username: d_jencks . Logged In: YES user_id=60525 I don't understand the problem you describe. There is no mixed content in the depends or depends-list-element elements that I can see. depends can have one object name or one embedded mbean config, and so can depends-list-element. If I misunderstand please give a concrete example of the mixed content. The problem I was originally referring to is not related to depends elements. You can have an mbean attribute of type Element (or dom4j element, in jboss 4). Since the structure of the element depends on what the mbean expects, the jboss service.dtd can't validate it. Do you know what happens if an element is wrapped in CDATA? Would this fix the problem?	1	1	https://issues.jboss.org/browse/JBAS-460

#	Requirement	Questions	Answered	Successfully Answered	URL
1517	JBAS-434	SourceForge Username: ikar . Logged In: YES user_id=742459 Basicly what we need is the unpacked SAR+WebDAV deployment, (other types of archives also, but later) so that one could change some attribute/add mbean or whatever and this was understood by several JBosses running on remote boxes. Changing something in the packed SAR is something beyond the level of expertise of our tech support guys. I'll probably take a closer look whether it's a bug or not, but I've only a week of experience with JBoss so don't count on me much. Could you tell me one thing - is SARDeployer capable of deploying the URL like http://whatever/webdav/deploy/my.sar/ ? This means that SARDeployer must be WebDAV-aware, it must know what to do if it realizes that '/' at the end indicates that it's a web folder and it must use WebDAV.. URLDeploymentScanner is made webdav-aware, what about SARDeployer?	1	0	https://issues.jboss.org/browse/JBAS-434
1518	JBAS-351	SourceForge Username: mattmunz . Logged In: YES user_id=340814 Bill, Cool. I'm thinking of using this in the process of development. At the moment, I'm working on MBean Persistence, so I don't really need all the EJB and .Net stuff, just MBeans and the JMX Console. Would your tool work for this purpose? If so, is it only available through the subscription? Also, I imagine that this feature would be useful in an administrative scenario, used as a package management tool. Could it be used for this purpose as well? - Matt	1	1	https://issues.jboss.org/browse/JBAS-351
1519	JBAS-351	SourceForge Username: mattmunz . Logged In: YES user_id=340814 Igor, Thanks for pointing out the lego script for me. It's a great start, and I'm finding it really useful right away. Perhaps it should be used to generate the minimal and default configurations as well? Is there any plan to do this? - Matt	1	1	https://issues.jboss.org/browse/JBAS-351
1520	JBAS-286	SourceForge Username: dsundstrom . Logged In: YES user_id=251431 Ok, so you want to limit the number of guys put in the read-ahead cache. Are you sure you wan to limit this on a pre relationhship basis? I would guess a per bean basis is more desireable. Maybe a configurable (optional) shared cache, so we can say no more then n across all beans readahead per tx. Do you just want to cap it at x or should we use an LRU rule?	1	1	https://issues.jboss.org/browse/JBAS-286
1521	JBAS-182	SourceForge Username: mkotsbak . Logged In: YES user_id=366650 Have you checked jboss.net? It provides support for webservices for beans almost without any extra effort. I think it lacks some security-features, and UDDI, but it works.	1	1	https://issues.jboss.org/browse/JBAS-182
1522	JBAS-156	SourceForge Username: d_jencks . Logged In: YES user_id=60525 Could you go into more detail about what you have in mind? Are you talking about the jboss-jdbc.rar wrapper? XADataSourceImpl?? I think it is unlikely that any changes would be made to the XADataSourceImpl from the 2.4 series since that has been completely eliminated from 3.0. What is LINTER RDMS (link, please)	1	0	https://issues.jboss.org/browse/JBAS-156
1523	JBAS-112	SourceForge Username: nobody . Logged In: NO How does one register for this task - I'd like to have a crack at it!	1	1	https://issues.jboss.org/browse/JBAS-112
1524	JBAS-104	SourceForge Username: khollund . Logged In: YES user_id=316655 For what server .. the jnp - or are you thinking about the webservice/containter you are running ? Knut Erik	1	1	https://issues.jboss.org/browse/JBAS-104
1525	JBAS-98	SourceForge Username: schaefera . Logged In: YES user_id=70434 Where is the problem on the Server Side (where the connector is conntected to) or on the Client Side where you use the connector ? Is the JNDI naming or MBean naming the problem ? Please send your code to me at: aschaefer@ebuilt.net and I will look at your changes and if OK upload to CVS.	1	1	https://issues.jboss.org/browse/JBAS-98
1526	JBAS-70	Is this already part of the security auditing features the security team has added?	1	1	https://issues.jboss.org/browse/JBAS-70
1527	JBAS-59	What other work relates to this task? The only subtask is scheduled for CR1.	0	0	https://issues.jboss.org/browse/JBAS-59
1528	JBAS-29	Perhaps so.. but then why not apply the same logic to mail, datasource and jms resources. I should be able to configure my URL resources outside of my EAR as I can with other app servers.. I'll include a screenshot of websphere. Can you include this patch now and worry about the more general case later. I have followed the same pattern as for the mail resource. At the mo I am having to distribute a patched jboss to our customers which is untidy.	1	1	https://issues.jboss.org/browse/JBAS-29
1529	JBAS-29	Just for clarity... Generalize it to include non trivial urls? or Generalize it as per your comment on 21 Feb? If the latter, then can you elaborate the requirements? they are a little succinct.	1	1	https://issues.jboss.org/browse/JBAS-29
1530	AS7-6776	Maybe the ServletContainerInitializerDeploymentProcessor is not using the service loader the way it should. Can you reassign ?	0	0	https://issues.jboss.org/browse/AS7-6776
1531	AS7-6776	Looks like I have a fix. I just remove the attachment in ServletContainerInitializerDeploymentProcessor and the problem goes away. public void undeploy(final DeploymentUnit context) { context.removeAttachment(ScisMetaData.ATTACHMENT_KEY); } I don't know if this is really fixing the root problem though. What do you think?	0	0	https://issues.jboss.org/browse/AS7-6776
1532	AS7-6755	Hi Stuart, I've submitted the PR here: https://github.com/jbossas/jboss-eap/pull/88/files Could you please help to check if my modifications are enough? Thanks!	0	0	https://issues.jboss.org/browse/AS7-6755
1533	AS7-6548	Can you define what you mean by "unstable" and also post precise steps to reproduce the issue? I don't understand what the problem is.	0	0	https://issues.jboss.org/browse/AS7-6548
1534	AS7-6548	This doesn't seem to be a clustering issue, but rather a domain controller issue. Have you tried this with the latest 7.1.x release?	0	0	https://issues.jboss.org/browse/AS7-6548

1535	AS7-6511	Sample stack trace looks like this (the assertion that bundle is ACTIVE fails): --- java.lang.AssertionError: expected:<32> but was:<4> at org.junit.Assert.fail(Assert.java:93) at org.junit.Assert.failNotEquals(Assert.java:647) at org.junit.Assert.assertEquals(Assert.java:128) at org.junit.Assert.assertEquals(Assert.java:472) at org.junit.Assert.assertEquals(Assert.java:456) at org.jboss.as.test.embedded.osgi.bootstrap.StandaloneBootstrapTestCase.testRestartTwoHostsOneFragment(StandaloneBootstrapTestCase.java:78) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.junit.runners.model.FrameworkMethod$1.runReflectiveCall(FrameworkMethod.java:45) at org.junit.internal.runners.model.ReflectiveCallable.run(ReflectiveCallable.java:15) at org.junit.runners.model.FrameworkMethod.invokeExplosively(FrameworkMethod.java:42) at org.junit.internal.runners.statements.InvokeMethod.evaluate(InvokeMethod.java:20) at org.junit.internal.runners.statements.RunBefores.evaluate(RunBefores.java:28) at org.junit.runners.ParentRunner.runLeaf(ParentRunner.java:263) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:68) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:47) at org.junit.runners.ParentRunner$3.run(ParentRunner.java:231) at org.junit.runners.ParentRunner$1.schedule(ParentRunner.java:60) at org.junit.runners.ParentRunner.runChildren(ParentRunner.java:229) at org.junit.runners.ParentRunner.access$000(ParentRunner.java:50) at org.junit.runners.ParentRunner$2.evaluate(ParentRunner.java:222) at org.junit.runners.ParentRunner.run(ParentRunner.java:300) at org.apache.maven.surefire.junit4.JUnit4Provider.execute(JUnit4Provider.java:234) at org.apache.maven.surefire.junit4.JUnit4Provider.executeTestSet(JUnit4Provider.java:133) at org.apache.maven.surefire.junit4.JUnit4Provider.invoke(JUnit4Provider.java:114) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.apache.maven.surefire.util.ReflectionUtils.invokeMethodWithArray(ReflectionUtils.java:188) at org.apache.maven.surefire.booter.ProviderFactory$ProviderProxy.invoke(ProviderFactory.java:166) at org.apache.maven.surefire.booter.ProviderFactory.invokeProvider(ProviderFactory.java:86) at org.apache.maven.surefire.booter.ForkedBooter.runSuitesInProcess(ForkedBooter.java:101) at org.apache.maven.surefire.booter.ForkedBooter.main(ForkedBooter.java:74)	0	0	https://issues.jboss.org/browse/AS7-6511
1536	AS7-6489	Was the username and password the same from installation to installation?	1	1	https://issues.jboss.org/browse/AS7-6489
1537	AS7-6481	Won't this cover your request https://github.com/aloubyansky/jboss-as/commit/55bd9ea33ae4e8bf7580810ea8baa19ac5a445dc ? It can be configured in jboss-cli.xml with connection-timeout element and/or specified as the launching script argument --timeout=xxx.	1	1	https://issues.jboss.org/browse/AS7-6481
1538	AS7-6481	Ahh yes that does indeed address it. Sorry about that, I was doing find usages on the wrong method in the ModelControllerClient.Factory. What's the policy on closing jiras, is that something that I should do?	0	0	https://issues.jboss.org/browse/AS7-6481
1539	AS7-6481	How about we resolve it as Done, so it shows up as such in the release notes, searches etc? Since there's no other JIRA for the work. The URL for the commit in upstream master is https://github.com/jbossas/jboss-as/commit/55bd9ea33ae4e8bf7580810ea8baa19ac5a445dc, so people interested in the actual patch can find it via the comments in this issue.	1	1	https://issues.jboss.org/browse/AS7-6481
1540	AS7-6423	[~rafaelliu]: Can you open a support case about this so that we can get this fixed in a future release? This JIRA tracker is not the correct location. In the support case, you can tell them that Jimmy Wilson asked you to do this.	1	0	https://issues.jboss.org/browse/AS7-6423
1541	AS7-6386	Unassigned? Blocker for the release?	1	1	https://issues.jboss.org/browse/AS7-6386
1542	AS7-6377	Is this also true for a deployed war on a specific server instance? For the operation "/host=master/server=lunar12/deployment=jboss-as-login.war/subsystem=web:read-resource" the URL should be unambiguous?	0	0	https://issues.jboss.org/browse/AS7-6377
1543	AS7-6377	Ok, I see. How about adding a sub resource with the available URLs? Does that make sense for you? We have already some views in the admin console where the user can follow links and it would definitely make sense if the user can browse the deployed web applications. What do you think?	1	1	https://issues.jboss.org/browse/AS7-6377
1544	AS7-6377	There are so many case where the url could be wrong that I would prefer not to have this feature. Looking to my previous comment how do you provide the url if the user is starting AS with bin/standalone.sh -b myhost? How do I get myhost? In case of an AJP connector how to guess the httpd server name?	1	0	https://issues.jboss.org/browse/AS7-6377
1545	AS7-6350	Paul, what's the scenario? Wouldn't it be easier to rename the jboss-as-* dir at the end of the build and integration test process?	1	1	https://issues.jboss.org/browse/AS7-6350
1546	AS7-6346	Isn't this done?	1	1	https://issues.jboss.org/browse/AS7-6346
1547	AS7-6303	Will this make it until Friday?	1	1	https://issues.jboss.org/browse/AS7-6303
1548	AS7-6264	I guess the fact that i can loads classes from my deployment and i can't load the same classes from the netty handler i would have considered as an issue which could be a bug. Or is this normal that two parts of a deployment are seeing different class pathes?	0	0	https://issues.jboss.org/browse/AS7-6264
1549	AS7-6179	{quote} <hardy> also here https://github.com/jbossas/jboss-as/blob/master/jpa/core/src/main/java/org/jboss/as/jpa/validator/JPALazyValidatorFactory.java#L80 <hardy> the other thing I am wondering is whether it is correct to always initialise Hibernate Validator <smarlow> hardy: should I do that as part of the upgrade? removing the config.addMapping(new ConstraintMapping()); <hardy> this one you can do as part of the upgrade for sure <hardy> this line is no good for anything really {quote}	1	1	https://issues.jboss.org/browse/AS7-6179
1550	AS7-6179	What are the module dependencies for jsoup?	1	1	https://issues.jboss.org/browse/AS7-6179

1551	AS7-6152	{noformat} java.lang.NullPointerException at org.jboss.as.console.client.domain.groups.deployment.ContentRepositoryView$3.getValue(ContentRepositoryView.java:134) at org.jboss.as.console.client.domain.groups.deployment.ContentRepositoryView$3.getValue(ContentRepositoryView.java:1) at com.google.gwt.user.cellview.client.Column.render(Column.java:165) at com.google.gwt.user.cellview.client.AbstractCellTableBuilder.renderCell(AbstractCellTableBuilder.java:206) at com.google.gwt.user.cellview.client.DefaultCellTableBuilder.buildRowImpl(DefaultCellTableBuilder.java:129) at com.google.gwt.user.cellview.client.AbstractCellTableBuilder.buildRow(AbstractCellTableBuilder.java:87) at com.google.gwt.user.cellview.client.AbstractCellTable.buildRowValues(AbstractCellTable.java:2347) at com.google.gwt.user.cellview.client.AbstractCellTable.replaceAllChildren(AbstractCellTable.java:2148) at com.google.gwt.user.cellview.client.AbstractHasData$View.replaceAllChildren(AbstractHasData.java:245) at com.google.gwt.user.cellview.client.HasDataPresenter.resolvePendingState(HasDataPresenter.java:1351) at com.google.gwt.user.cellview.client.HasDataPresenter.access$3(HasDataPresenter.java:1062) at com.google.gwt.user.cellview.client.HasDataPresenter$2.execute(HasDataPresenter.java:984) at com.google.gwt.core.client.impl.SchedulerImpl$Task$.executeScheduled$(SchedulerImpl.java:50) at com.google.gwt.core.client.impl.SchedulerImpl.runScheduledTasks(SchedulerImpl.java:228) at com.google.gwt.core.client.impl.SchedulerImpl.flushFinallyCommands(SchedulerImpl.java:327) at com.google.gwt.core.client.impl.Impl.exit(Impl.java:266) at com.google.gwt.core.client.impl.Impl.entry0(Impl.java:257) at sun.reflect.GeneratedMethodAccessor67.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at com.google.gwt.dev.shell.MethodAdaptor.invoke(MethodAdaptor.java:103) at com.google.gwt.dev.shell.MethodDispatch.invoke(MethodDispatch.java:71) at com.google.gwt.dev.shell.OophmSessionHandler.invoke(OophmSessionHandler.java:172) at com.google.gwt.dev.shell.BrowserChannelServer.reactToMessages(BrowserChannelServer.java:293) at com.google.gwt.dev.shell.BrowserChannelServer.processConnection(BrowserChannelServer.java:547) at com.google.gwt.dev.shell.BrowserChannelServer.run(BrowserChannelServer.java:364) at java.lang.Thread.run(Thread.java:680) {noformat}	0	0	https://issues.jboss.org/browse/AS7-6152
1552	AS7-6136	Perfect. Do you know if that will make 7.1.4?	1	0	https://issues.jboss.org/browse/AS7-6136
1553	AS7-6120	Jeff, could you have a look at the various 'entries' attributes in messaging? In a standalone server it looks like those could support expressions (and we allow them from jndi names elsewhere in the AS). Biggest question is how big of a PITA it would be to add the transformation and testing thereof.	0	0	https://issues.jboss.org/browse/AS7-6120
1554	AS7-6084	Why is this jar part of public API javadoc?	0	0	https://issues.jboss.org/browse/AS7-6084
1555	AS7-6084	Have you tracked down how the faulty jar was generated as faulty in the first place? If we have a problem with the HTTP Server build that should be fixed as well otherwise this may come back on the next release.	1	1	https://issues.jboss.org/browse/AS7-6084
1556	AS7-6002	why did you unset the fix version?	1	1	https://issues.jboss.org/browse/AS7-6002
1557	AS7-5980	The current JBoss http connector is not useful for high load environments. Tunable KeepAlive timeout is required, as are all of the other parameters mentioned (and more). This is why all other web servers allow them to be tuned. Did all of these other web server maintainers get it wrong? Apache, nginx, tomcat, glassfish, ... You should send these guys an email to let them know that their implementations are needlessly complex and could be solved with one size fits all defaults like 15s for KeepAlive. I'm sure they would be happy to learn of this wisdom.	1	0	https://issues.jboss.org/browse/AS7-5980
1558	AS7-5960	Hi Pete, I'm not an Eclipse user so I'm not sure what kind of filter you are talking about. Can you post a screen shot that shows the problem in CLI-GUI? Then we can talk about how the filter might work. Thanks, Stan	1	1	https://issues.jboss.org/browse/AS7-5960
1559	AS7-5960	Thanks Pete. One problem we have is that the tree is updated dynamically. So when you first open CLI GUI, we only know about the root and its children. A filter could not do a search beyond what is currently displayed unless we cache the whole tree. I really don't want to make a change like that right now. Do you think a filter that is limited to the root's children would be useful?	1	1	https://issues.jboss.org/browse/AS7-5960
1560	AS7-5960	Here is the simple filter. What do you think? !cli-gui-filter.png! It's only filtering the children of the root. I thought of ways to make it more robust, but it gets too complicated. I think this did turn out to be a big usability improvement. Thanks for the suggestion! Stan	1	1	https://issues.jboss.org/browse/AS7-5960
1561	AS7-5952	Than obvious question is: Why this issue hasnt been assigned to someone?	1	1	https://issues.jboss.org/browse/AS7-5952
1562	AS7-5923	I replaced the JBoss version of Mojarra with the latest regular Mojarra version and I still see the problem. I think it's probably a Weld issue. Jozef, can you take a look?	1	1	https://issues.jboss.org/browse/AS7-5923
1563	AS7-5923	While debugging this I found - https://issues.jboss.org/browse/WELD-909 Stan did you test against 7.1.1 which would have had Weld 1.1.5?	1	1	https://issues.jboss.org/browse/AS7-5923
1564	AS7-5844	Ondra: {quote} When I use JUnit's categories for Arq tests, then the class needs to be added to the deployment. jar.addPackage(CommonCriteria.class.getPackage()); Is there some more convenient solution? E.g. could I somehow instruct arq to wrap certain package to any deployment it does? {quote} Aslak: {quote} You can do this today if you want to, same as the weld core tests do. Create a little AuxiliaryArchiveAppender that packages the categories. As long as that is registered in a LoadableExtension and register as SPI and on Classpath when you run, the produced Archive will be bundled with the deployment. AuxiliaryArchiveAppender example: https://github.com/weld/core/blob/master/tests-arquillian/src/test/java/org/jboss/weld/tests/CategoryArchiveAppender.java LoadableExtension example: (only the service AuxiliaryArchiveAppender is needed in this case) https://github.com/weld/core/blob/master/tests-arquillian/src/test/java/org/jboss/weld/tests/WeldCategoryExtension.java SPI registration: https://github.com/weld/core/blob/master/tests-arquillian/src/test/resources/META-INF/services/org.jboss.arquillian.core.spi.LoadableExtension {quote}	0	0	https://issues.jboss.org/browse/AS7-5844

#	Requirement	Questions	Answered	Successfully Answered	URL
1565	AS7-5844	The idea/requests behind this is that packages only allow to divide tests into a tree. But sometimes, as Stuart wrote, there are some cross-cutting concerns, see the suggested categories. It's not supposed to replace package-based fine-grained division, but to complement it, to allow define groups of tests they need to run, instead of creating and maintaining list of packages or even classes. Another example where current model has some flaws are smoke tests: Separating the tests physically to different module is artificial and not much semantic: If any tests starts being considered as smoke test, what we do? Move it to different module and change package name. Does that make sense? Wouldn't it be better to just add `@Category(Smoke.class)` ? It also collides with the technical solution of separating tests by type of server setup (multinode, ...). If we decided to include a multinode test as smoke, what would we do? Move it to smoke module and create another surefire execution? Doesn't make much sense. Just adding the `Smoke` category and filtering the tests to be run using categories is way better. Last but not least: These categories are totally optional, no one has to go through the tests and add them. It's a tool for use cases when this categorization is necessary, like, security-related tests, it's subset Common Criteria tests, JPA-related tests, "performance smoke tests", etc. Summary: Tests have some cross-cutting concerns, facetes, which can't be covered by a tree structure, by principle. Also, we are bound by technical solutions coming from Maven's and Arquillian's limitations. Having additional way to categorize can only help, without doing any harm.	0	0	https://issues.jboss.org/browse/AS7-5844
1566	AS7-5800	Chris, can you paste the stack trace or log message you are getting now?	0	0	https://issues.jboss.org/browse/AS7-5800
1567	AS7-5800	I agree on the possible leak of information by outputting the value. Thinking more about it, it's also unneeded to have the value. However, having the value *class name* is quite useful, so how about outputting that instead of the the value?	1	1	https://issues.jboss.org/browse/AS7-5800
1568	AS7-5800	How about the attribute name and the type of the value? That doesn't help much if it's a collection and the problem is in an element. Hmm, I have a vague memory of long ago writing some utility to analyze a value and help track this kind of thing down -- walk through a collection or something. Rado -- does that ring a bell? I have a vague feeling it wasn't ever part of any actual release though; just something someone could hack in somehow.	0	0	https://issues.jboss.org/browse/AS7-5800
1569	AS7-5797	Can you have the edit button at the top, and then that goes away once you get into edit mode? Just the save and cancel move to the bottom. Like mentioned, you might want to keep an "easy cancel" towards the top if the user clicked edit by accident.	0	0	https://issues.jboss.org/browse/AS7-5797

1572	AS7-5758	Home many password prompts are you seeing? I would be expecting additional 401 responses as that is our protection against replay attacks - however the additional 401 responses should be telling the browser that the password is valid but the nonce is no longer valid. It also may be that related to this Safari is not re-using the existing connection which would also contribute to so many challenges in a short space of time.	1	1	https://issues.jboss.org/browse/AS7-5758
1573	AS7-5758	Does this problem only occur when the server is bound to a loopback device?	1	1	https://issues.jboss.org/browse/AS7-5758
1574	AS7-5758	By chance do you have any special safari plugins installed. Does google chrome work for you?	0	0	https://issues.jboss.org/browse/AS7-5758
1575	AS7-5758	Ok the reason I ask is they are both built on the webkit engine. My wire dump looks nothing like yours, which has some really strange things happening. The most interesting is the 40 packets from port 51543. The client repeating the same request, and each time being told it requires auth, and yet it never provides auth info. A later connection tries to send a user of "admin", but that makes no sense unless you have cached credentials somewhere. Here is another experiment; Can you try creating a new clean user on your mac, and login as that clean user, and see if the same thing happens?	0	0	https://issues.jboss.org/browse/AS7-5758
1576	AS7-5729	Do you think this is a question of implementing more logic in mod_cluster itself? In my opinion, the problem of balancer itself being a single point of failure should be addressed on DNS (DNS balancing) level. Hmm... I would advocate for KISS principle whenever possible :-)	0	0	https://issues.jboss.org/browse/AS7-5729
1577	AS7-5578	can you elaborate?	1	0	https://issues.jboss.org/browse/AS7-5578
1578	AS7-5544	What is the bare minimum of bundles that need to be deployed to make the console available? Authentication needs to integrate with the security subsystem. If possible I suggest to leave that out of the picture for now.	0	0	https://issues.jboss.org/browse/AS7-5544
1579	AS7-5544	If opening an SSH socket on the server is the only option, we need to clear that one up first. Do we have alternatives?	1	1	https://issues.jboss.org/browse/AS7-5544
1580	AS7-5544	[org.apache.aries.blueprint.container.BlueprintContainerImpl] (Blueprint Extender: 3) Unable to start blueprint container for bundle org.apache.karaf.jaas.config: org.osgi.service.blueprint.container.ComponentDefinitionException: Unable to intialize bean proxyLoginModuleInitializer at org.apache.aries.blueprint.container.BeanRecipe.runBeanProcInit(BeanRecipe.java:640) at org.apache.aries.blueprint.container.BeanRecipe.internalCreate(BeanRecipe.java:726) at org.apache.aries.blueprint.di.AbstractRecipe.create(AbstractRecipe.java:64) at org.apache.aries.blueprint.container.BlueprintRepository.createInstances(BlueprintRepository.java:219) at org.apache.aries.blueprint.container.BlueprintRepository.createAll(BlueprintRepository.java:147) at org.apache.aries.blueprint.container.BlueprintContainerImpl.instantiateEagerComponents(BlueprintContainerImpl.java:631) at org.apache.aries.blueprint.container.BlueprintContainerImpl.doRun(BlueprintContainerImpl.java:337) at org.apache.aries.blueprint.container.BlueprintContainerImpl.run(BlueprintContainerImpl.java:230) at java.util.concurrent.Executors$RunnableAdapter.call(Executors.java:439) [rt.jar:1.6.0_39] at java.util.concurrent.FutureTask$Sync.innerRun(FutureTask.java:303) [rt.jar:1.6.0_39] at java.util.concurrent.FutureTask.run(FutureTask.java:138) [rt.jar:1.6.0_39] at java.util.concurrent.ScheduledThreadPoolExecutor$ScheduledFutureTask.access$301(ScheduledThreadPoolExecutor.java:98) [rt.jar:1.6.0_39] at java.util.concurrent.ScheduledThreadPoolExecutor$ScheduledFutureTask.run(ScheduledThreadPoolExecutor.java:206) [rt.jar:1.6.0_39] at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:895) [rt.jar:1.6.0_39] at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:918) [rt.jar:1.6.0_39] at java.lang.Thread.run(Thread.java:662) [rt.jar:1.6.0_39] Caused by: java.lang.NoClassDefFoundError: org/apache/karaf/jaas/boot/ProxyLoginModule at org.apache.karaf.jaas.config.impl.ProxyLoginModuleInitializer.init(ProxyLoginModuleInitializer.java:32) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) [rt.jar:1.6.0_39] at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) [rt.jar:1.6.0_39] at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) [rt.jar:1.6.0_39] at java.lang.reflect.Method.invoke(Method.java:597) [rt.jar:1.6.0_39] at org.apache.aries.blueprint.utils.ReflectionUtils.invoke(ReflectionUtils.java:225) at org.apache.aries.blueprint.container.BeanRecipe.invoke(BeanRecipe.java:838) at org.apache.aries.blueprint.container.BeanRecipe.runBeanProcInit(BeanRecipe.java:638) ... 15 more Caused by: java.lang.ClassNotFoundException: org.apache.karaf.jaas.boot.ProxyLoginModule from [Module "deployment.org.apache.karaf.jaas.config:2.2.9" from Service Module Loader] at org.jboss.modules.ModuleClassLoader.findClass(ModuleClassLoader.java:190) at org.jboss.modules.ConcurrentClassLoader.performLoadClassUnchecked(ConcurrentClassLoader.java:468) at org.jboss.modules.ConcurrentClassLoader.performLoadClassChecked(ConcurrentClassLoader.java:456) at org.jboss.modules.ConcurrentClassLoader.performLoadClassChecked(ConcurrentClassLoader.java:423) at org.jboss.modules.ConcurrentClassLoader.performLoadClass(ConcurrentClassLoader.java:398) at	0	0	https://issues.jboss.org/browse/AS7-5544

#	Requirement	Questions	Answered	Successfully Answered	URL
1581	AS7-5448	Sorry for the misunderstanding, yes I was referring to the threads subsystem. as defined in the jboss-threads-2.0.0.GA.jar packaged in the jboss 7.1.2.Final distribution org.jboss.threads.JBossThreadPoolExecutor implements org.jboss.threads.management.ThreadExecutorMBean, I think the getQueueSize() method should be added here. org.jboss.threads.JBossThreadPoolExecutor extends java.util.concurrent.ThreadPoolExecutor, so the BlockingQueue I was talking about is available, making the getQueueSize() method a snap to implements. should the issue be filled instead in the jboss-threads jira ?	0	0	https://issues.jboss.org/browse/AS7-5448
1582	AS7-5448	I have done locally all modifications for AS7-5448 and JBTHR-22 though I'm getting the following error inside Java Visual VM: "java.util.MissingResourceException: Cant't find resource for bundle java.util.PropertyResourceBundle, key threadpool.common.queue-size" which is effectively the new attribute that I've added. I guess this is related to a certain .properties file packaged within jboss that I still need to modify. Can someone help me with this one, then I'll be able to send all the code ? Thanks !	0	0	https://issues.jboss.org/browse/AS7-5448
1583	AS7-5405	Does Enterprise OSGi JPA need to be be active at the same time as the EE JPA container/subsystem in AS?	1	1	https://issues.jboss.org/browse/AS7-5405
1584	AS7-5405	{quote} Can OSGi Enterprise JPA use EE JPA (container) support or do we need a new subsystem for OSGi JPA? {quote} I expect the JPA integration to live here: https://github.com/tdiesler/jboss-as/tree/master/osgi/integration/src/main/java/org/jboss/as/osgi {quote} Does OSGi require a dynamic implementation of PersistenceProviderResolver (that could change Hibernate/EclipseLink/OpenJPA/other providers on the fly)? {quote} That won't be necessary.	0	0	https://issues.jboss.org/browse/AS7-5405
1585	AS7-5380	Is Weld 2 an EE7 technology? Which AS release should we target EE7 changes towards?	0	0	https://issues.jboss.org/browse/AS7-5380
1586	AS7-5380	The idea is not to replace Weld 1.x with Weld 2 but rather to host the Weld 2 integration code (which has been hosted in a fork of JBoss AS so far and this represented an additional effort to mantain) in the upstream repository. Ideally, a build profile would be used that would allow AS7 to be built with either Weld 1.x (by default) or Weld 2. We would use this for special AS7 releases that we do along with Weld 2 releases.	1	1	https://issues.jboss.org/browse/AS7-5380
1587	AS7-5315	Why was this issue rejected? Session fixation is possible on AS7 exactly the way Endrigo described it. A new session id needs to be generated just before authentication after the form has been submitted to j_security_check.	1	0	https://issues.jboss.org/browse/AS7-5315
1588	AS7-5315	So you are saying to use the "Disable URL rewriting" option. Is it possible on JBOSS? I made a search on the documentation and didn't found nothing. If you are saying that this is the solution, please tell me where is the documentation or how can i find it.	1	1	https://issues.jboss.org/browse/AS7-5315
1589	AS7-5315	Are you talking about a custom authentication login-module for the security-domain?	1	0	https://issues.jboss.org/browse/AS7-5315
1590	AS7-5306	Is the ApplicationRealm relevant to this test? It's something untidy we should clean up (and we should understand and maybe fix why things behave differently between 7.1 and master as far as configuring it goes) but IIRC the "New missing/unsatisfied dependencies" thing doesn't really prevent tests working. It would only matter if the ApplicationRealm was accessed, and this test shouldn't be doing that.	1	1	https://issues.jboss.org/browse/AS7-5306
1591	AS7-5251	howard, is there anything do for this in AS7 /EAP 6? All HornetQ user credentials attributes allow expressions and can be stored in the vault and are resolved appropriately. Are there other requirements?	1	1	https://issues.jboss.org/browse/AS7-5251
1592	AS7-5251	On what version does this work? It doesn't appear to work for me on 7.1.1.Final (or 7.2.0.Alpha.SNAPSHOT). I started a discussion that includes the exceptions I'm getting at https://community.jboss.org/thread/204759	1	0	https://issues.jboss.org/browse/AS7-5251
1593	AS7-5251	Jeff, thanks clarifying. What workarounds would you suggest in the near-term if we need to mask our SSL keystore passwords on 7.1.1.Final? I'm not sure how long it will be before we can move to 7.2 once the fix become available.	1	0	https://issues.jboss.org/browse/AS7-5251
1594	AS7-5216	Gernot - do you have an option to click on 'Edit' on that page? If so may be quicker to apply the change rather than report it in a Jira.	1	1	https://issues.jboss.org/browse/AS7-5216
1595	AS7-5160	Hello, is there any workaround for this at the moment?	0	0	https://issues.jboss.org/browse/AS7-5160
1596	AS7-5157	In jboss-cli.sh, the following commands seemed to work after deploying 2lc.jar: cd /deployment=2lc.jar/subsystem=jpa/hibernate-persistence-unit=2lc.jar#TEST_PU/ :read-resource(include-runtime=true,recursive=true) Is there DEBUG/TRACE logging that I can enable to see what commands are currently being sent from the admin console? We can probably compare the debug output of what the admin console is trying to do, with the above.	1	1	https://issues.jboss.org/browse/AS7-5157
1597	AS7-5157	scott, can you check why the enabled attribute is set anymore?	1	1	https://issues.jboss.org/browse/AS7-5157
1598	AS7-5145	Can you be more specific? Some attributes already accept expressions - and this is enabled on a per-attribute basic.	0	0	https://issues.jboss.org/browse/AS7-5145
1599	AS7-5140	@Akram Could you post the link to the ResourceURLFactory ? Thanks Marco nevermind. Found Could you explain how to use it ? Thanks Marco	1	1	https://issues.jboss.org/browse/AS7-5140
1600	AS7-5135	Can we make sure that the node identifier is validated to make sure nodeName.getBytes().length is <24 as I don't think that validator is on there atm.	1	1	https://issues.jboss.org/browse/AS7-5135
1601	AS7-5135	what's the status of this patch?	0	0	https://issues.jboss.org/browse/AS7-5135
1602	AS7-5120	I presume that you'd ideally want to run a maven command like: mvn clean package jboss-as:start jboss-as:deploy Where 'jboss-as:start' will look to see if there is a running instance of the AS and then try and deploy your war/ear?	0	0	https://issues.jboss.org/browse/AS7-5120
1603	AS7-5112	I had debate with Emanuel on this topic and we came to conclusion that best way to address this would be not to over complicate things. Aka we do not need to provide "text" info on why this deprecated in DMR as this would just cause us problems with localization. Instead of wording on why and how this was deprecated we could just provide "replacement" property that would tell us what to use instead. Also we do not need info on when this operation was deprecated as current state is deprecated as in "this is the version when it is/was deprecated" more important information would be when this resource would be removed. so my current idea about meta data would be something like this: (example for attribute) {noformat} name: old-attribute type: OBJECT deprecated: true deprecated-replacement: new-attribute deprecated-removed: 1.3.0 (or if we go with version of AS, 7.2.0.Final) {noformat} wdyt?	0	0	https://issues.jboss.org/browse/AS7-5112
1604	AS7-5112	Does it fail if "roles.deprecated" does not exist? It shouldn't. For AS 8 we should change the ResourceDescriptionResolver interface and the standard impl to properly handle this. With the standard impl doing the "roles.deprecated" behavior we'd already introduced.	1	1	https://issues.jboss.org/browse/AS7-5112
1605	AS7-5110	Another easier way to reproduce this bug. Start up with ./domain.sh Create a user. check out the host.xml file and note the following comments: <server name="server-one" group="main-server-group"> <!-- Remote JPDA debugging for a specific server <jvm name="default"> <jvm-options> <option value="-Xrunjdwp:transport=dt_socket,address=8787,server=y,suspend=n"/> </jvm-options> </jvm> --> </server> Change server-three to auto start and then save it. look at the host.xml file. <server name="server-one" group="main-server-group" auto-start="true"/> Now the comments are gone.	0	0	https://issues.jboss.org/browse/AS7-5110

#	Requirement	Questions	Answered	Successfully Answered	URL
1606	AS7-5108	Out of interest how would you suggest we identify all support -D parameters? On the basis that these are just set as system properties not only would we need the list of properties supported by the core of AS we would also need to identify every property defined to be resolved within the configuration, many of these could be user defined - we would also need to identify any properties set in deployment descriptors which would probably be all user defined and then we would need to identify every call to System.getProperty in every single module and in every deployment - some of these items not being available until late in the deployment process. Even if we did that there is always the case that the user wants to set a property that may be used by a future deployment which is not present at boot time.	0	0	https://issues.jboss.org/browse/AS7-5108
1607	AS7-5108	When the object/String that represents the passed in flag is used/injected, can't we increment a counter on that object, and increment it on every use, and then at the end of booting make sure every object at least has a count of 1 or greater. If not then we error out or at least output an error before continuing to boot. That would take care of any random new parameters, our's and any other use case. It would enable people to easily see the custom parameter they thought they were using/injecting is in fact not working as they expected. Of course if they are passing a parameter to their application, then this would generate an error at boot time, hmmm. Thoughts?	1	1	https://issues.jboss.org/browse/AS7-5108
1608	AS7-4965	Your right, I have a old document 'Enterprise JavaBeans 3.1, Proposed Final Draft' between all other final documents by accident. There is an additional paragraph which describe exactly this alternative. I think we should reject the Jira, or do you mean that this should not be deployable?	1	0	https://issues.jboss.org/browse/AS7-4965
1609	AS7-4929	What is the deployed app that is being tested here?	0	0	https://issues.jboss.org/browse/AS7-4929
1610	AS7-4929	Is that the problem? Long story short: It should have been protected.	0	0	https://issues.jboss.org/browse/AS7-4929
1611	AS7-4929	I would suggest if you detect a possible vulnerability in your own site that you should refrain from publicly posting the URL to that site along with any report of the vulnerability. Do you have the details of the full request that is sent to trigger this? Trying the URL in your original comment does not result in an error page with the word DEFACED highlighted however any escaping my have been lost in the conversion to Jira - ideally attach a text file containing the full request that is reported to reproduce this.	0	0	https://issues.jboss.org/browse/AS7-4929
1612	AS7-4929	I will abide by your suggestion. The text in JIRA is the same that we have in the vulnerability report. We have a pdf report tha I can make available to you. Can I email it to you? I looked for an upload button to no avail.	0	0	https://issues.jboss.org/browse/AS7-4929
1613	AS7-4929	Thanks for the attachment - I still can not reproduce anything here. Do you have support for the tool you are using? I think really you are going to need to follow up with the supplier of the scanning utility to verify exactly how it is identifying the failure. The report itself is actually for a specific web server which is not JBoss AS - when I test this myself the contents of the URL are appropriately escaped in the error message so the do not form any type of HTML injection into the error message which is displayed.	0	0	https://issues.jboss.org/browse/AS7-4929
1614	AS7-4929	My Systems Administrator is going to get in touch wiht the makers of the tool. I will post here what they tell us. We appreciate your help. Could this just be a "false positive"?	0	0	https://issues.jboss.org/browse/AS7-4929
1615	AS7-4925	One curiosity of mine is translation - If an application logs with Log4J, is there any translation between that log event and the log4j appender in JBoss (as managed by the log manager after this bug is fixed)? I can understand a translation occurring if the log event comes from JUL, Commons, or SLF - but if Log4J is the logging API and the Handling API - I'm hoping we can get the original event object. Reason I ask is we have a couple of APIs that would like to use Log4J's Object parameter to pump in special objects - and Log4J retains these objects in the LoggingEvent that gets sent to the Appender. However if this is not possible and the message gets converted to a String - we'll understand this as one of the unfortunate side effects of the logmanager subsystem. Our work-around would be to include a special appender in log4J's root logger that would hopefully not get closed or otherwise managed by JBoss - and from that appender we can perform our special logging. Overall this is probably the only EAP 5 to 6 transitional item we have a no-alternative for.	0	0	https://issues.jboss.org/browse/AS7-4925
1616	AS7-4917	IRC log about this issue: [16:49:36] <jmesnil> kkhan, before leaving, brian asked me to look at AS7-4917 [16:49:37] <jbossbot> jira [AS7-4917] paths need to allow expressions in its 'path' attribute [Open (Unresolved) Feature Request, Major, Jeff Mesnil] https://issues.jboss.org/browse/AS7-4917 [16:50:32] <jmesnil> kkhan, afaict, the fix is easy, just allow expressions for the path attribute and I check it works both in standalone and domain mode [16:51:22] <jmesnil> kkhan, but brian told me that there were things to discuss about this. Am I missing something about allowing expression for the paths? [16:51:27] * kkhan looks [16:52:04] <emuckenhuber> perhaps about the implications for backwards compatibility [16:52:42] <jmesnil> emuckenhuber, yeah, we'd need to bump up the management version if we allow expressions for paths [16:53:16] <jmesnil> emuckenhuber, but if it was not allowed before, I don't see how we could break existings paths by allowing it now [16:53:35] <ctomc> jmesnil: maybe it is also how attributes are beeing read, you need to use resolveModelAttribute(context,model)... [16:53:46] <kkhan> ctomc/emuckenhuber: How do expressions work with transformers [16:53:53] <emuckenhuber> kkhan: that is the main problem :) [16:53:55] <kkhan> e.g. DC's version allows expressions [16:54:05] <emuckenhuber> basically they can't be resolved properly [16:54:06] <kkhan> and then the legacy HC does not [16:54:23] <emuckenhuber> i mean we can resolve them against domain properties [16:54:30] <emuckenhuber> however not against host / server properties [16:54:33] <ctomc> kkhan: currently we have no special handling for this, but it will be added as part of "default transformer" [16:55:04] <kkhan> So DC would call resolveExpression on legacy HC and massage the op or something? [16:55:33] <kkhan> jmesnil: ^^ is what I felt it could break :-) [16:55:43] <emuckenhuber> it can't [16:56:00] <emuckenhuber> since there might be multiple server-groups on the legacy HC [16:56:20] <emuckenhuber> so it won't have the information any longer when it starts the server [16:56:36] <emuckenhuber> i mean as it is now... i was thinking adding that information somewhere [16:57:13] <emuckenhuber> we could do it for runtime operations though - although not sure if that makes sense [16:57:53] <kkhan> emuckenhuber: ok, could you not resolve per server group? [16:58:36] <kkhan> I'm just throwing out ideas without looking in case that is not clear :-) [16:58:43] <emuckenhuber> profiles can be shared, so i guess not [17:02:29] <ctomc> jmesnil: from my point of view, fix for this issue should be trivial, except for maybe transformation stuff :| [17:03:56] <kkhan> jmesnil: Nothing springs to mind about what would be bad apart from transformations for me either so go ahead. Surely this will not be the only thing introducing expressions [17:04:44] <jmesnil> kkhan, ok, thanks! :) [17:05:42] <kkhan> jmesnil: Add more stuff to org.jboss.as.controller.services.path.PathsTestCase and if there is stuff we can't see now it will hopefully make it clear [17:06:05] <jmesnil> kkhan, +1	1	1	https://issues.jboss.org/browse/AS7-4917
1617	AS7-4853	can you elaborate on the initial description? do you mean the filesystem location?	1	1	https://issues.jboss.org/browse/AS7-4853

#	Requirement	Questions	Answered	Successfully Answered	URL
1618	AS7-4853	This came out of an issue that I have also filed in that the quickstarts deploy applications via the API, they do not end up in the deployments directory, but as a hashed name in some other folder. The deployments directory has things in it, it would be nice to know where an application is loaded from. Indicating that you will not see it in the deployments directory or something along those lines. I hope that helps. Let me know if it does not?	1	1	https://issues.jboss.org/browse/AS7-4853
1619	AS7-4828	Did 7.1.2 actually not support expressions at all? My understanding is it did, but not properly, i.e. the expressions were resolved by the JGroups system property replacement logic. And there was a bug related to that. That improper support isn't ideal, but it may have worked for a lot of use cases. Rejecting the expression now would break those use cases. In particular it would make a rolling upgrade of a cluster problematic, perhaps impossible. Apologies in advance if my understanding of the situation in 7.1.2 is incorrect.	1	1	https://issues.jboss.org/browse/AS7-4828
1620	AS7-4821	David I agree with you, my idea was just to simplify the way we register operations, so users do not need to write DescriptionProvider's we have done this for resources and attributes with ResourceDefinition & AttributeDefinition but operations ware left out :-(in spirit of converting all subsystems to ResourceDefinition/AttributeDefinition it would be nice to present users friendlier api also for operations. my current idea is implemented here: https://github.com/ctomc/jboss-as/commit/b5a23ab5c70a67f37c644aa5811f6fad00127c74 it adds OperationDefinition (so it is similar to RD and AD) and four methods to ManagementResourceRegistration two for simpler adding of operation by name and attribues and two that enable usage of OperationDefinition {code:java} void registerOperationHandler(String operationName, OperationStepHandler handler, ModelType replyType, ModelType replyValueType, AttributeDefinition ... attributes); void registerOperationHandler(String operationName, OperationStepHandler handler, AttributeDefinition ... attributes); void registerOperationHandler(OperationDefinition definition,OperationStepHandler handler); void registerOperationHandler(OperationDefinition definition, OperationStepHandler handler,boolean inherited); {code} this i think can be added without to much disturbance and will allow to write prettier management code :) wdyt?	1	1	https://issues.jboss.org/browse/AS7-4821
1621	AS7-4800	Are there other references besides https://community.jboss.org/wiki/SubsystemDevelopmentConventions + https://community.jboss.org/message/730384#730384 that I should look at?	1	1	https://issues.jboss.org/browse/AS7-4800
1622	AS7-4720	Brian Should this be removed from AS 7.1.3 (on the 7.1 branch) as well?	1	1	https://issues.jboss.org/browse/AS7-4720
1623	AS7-4713	Randall, Are you able to test against the changes in https://github.com/scottmarlow/jboss-as/tree/AS7-4713_movehibernatecommonjar? Scott	1	1	https://issues.jboss.org/browse/AS7-4713
1624	AS7-4687	Why don't we flip the default ThreadLocal used to be non inheritable? Rather than relying on a system property being set - at the moment I have not seen a valid reason for using an InheritedThreadLocal and this is not the first time it has caused us problems.	1	1	https://issues.jboss.org/browse/AS7-4687
1625	AS7-4646	Why exactly is DIGEST non compliant?	1	1	https://issues.jboss.org/browse/AS7-4646
1626	AS7-4646	At what point do your requirements regarding storage actually apply? Is it that it needs to be irreversible or just a level of encryption that is applied? As I said above we do have an option to use the vault to store the passwords to work with Digest authentication.	1	0	https://issues.jboss.org/browse/AS7-4646
1627	AS7-4580	Your configuration looks correct. The root exception is: Cannot assign requested address. Could you check that your 225.3.2.3 is correctly configured for UDP?	1	1	https://issues.jboss.org/browse/AS7-4580

1629	AS7-4580	I don't think setting the netty port is related, Netty is not used at all for UDP communication. Could you try to run HornetQ with -Djava.net.preferIPv4Stack=true and then a 2nd time with -Djava.net.preferIPv6Addresses=true to see if it makes any difference? http://docs.oracle.com/javase/6/docs/technotes/guides/net/properties.html	1	1	https://issues.jboss.org/browse/AS7-4580
1630	AS7-4567	* Where can I find the spec? * What's the correct location to put jars which are shared across the whole AS7 server (accessible for all deployed artifacts)?	1	1	https://issues.jboss.org/browse/AS7-4567
1631	AS7-4567	Gernot, Do you have a sample of your war to attach? Just to try to reproduce the problem, I'm not saying that it will be implemented since there is no plans to this.	0	0	https://issues.jboss.org/browse/AS7-4567
1632	AS7-4567	I am testing this with EAP 6.1 Alpha and apparently it works only partially. The beans packaged in a module can be injected, but it looks like the annotations in those beans are not processed. I have a bean that looks like this inside a module: {code:java} @ApplicationScoped public class MyBean { @PostConstruct public void init() { System.out.println("init"); } } {code} I added this to the {{jboss-deployment-structure.xml}} file of a {{.ear}} where I have EJB that need this bean injected: {code:xml} <dependencies> <module name="org.mymodule" export="true" meta-inf="import"/> </dependencies> {code} Then I have something like this in the EJB: {code:java} @Singleton public class MyEjb ... { @Inject private MyBean myBean; } {code} What happens then is that the injection works, but a new instance of MyBean is created for each call to the EJB. In addition the method marked with {{@PostConstruct}} is never executed. Is this the expected behavior?	1	0	https://issues.jboss.org/browse/AS7-4567
1633	AS7-4566	Remy, would you please provide the name of the system property? I was unable to find it.	1	0	https://issues.jboss.org/browse/AS7-4566

#	Requirement	Questions	Answered	Successfully Answered	URL
1634	AS7-4547	Could the performance loss actually be due to JVM CodeCache exhaustion? Default Java CodeCache size is quite low (48M/96M) and the JIT compiler switches off *permanently* once usage nears the ceiling. We have a large system & needed to up our CodeCache to 256m minimum (now running with 400m as our default recommendation). Our symptoms were subtle & initially misattributed, this is a tricky issue. -XX:ReservedCodeCacheSize=400m Tiered compilation should not cause performance loss, but can contribute to the above exhaustion & subsequent performance loss. See a few references: - http://blogs.atlassian.com/2012/05/codecache-is-full-compiler-has-been-disabled/ -- (don't follow their tip to turn on CodeCache Flushing, there are actually major bugs there that can, on their own, cause severe degraded JVM performance.) - https://blog.codecentric.de/en/2012/07/useful-jvm-flags-part-4-heap-tuning/ - https://www-304.ibm.com/connections/blogs/wcs/entry/performance_roadblock_full_jit_cache?lang=en_us Hope this helps.	0	0	https://issues.jboss.org/browse/AS7-4547
1635	AS7-4508	Yeah, I noticed that part while looking at the code although I didn't mention that as a workaround to the user since it really looked like something that happens to work but probably wasn't intended that way (should we be ignoring duplicate URLs in that comma separated list?). The other thing that I'm working as part of this change is to cleanup HaRemotingNamingStore a bit to make sure that it uses the NamingStoreCache so that appropriate cleanup of channel and connection takes place whenever necessary.	1	1	https://issues.jboss.org/browse/AS7-4508
1636	AS7-4508	with which build is this fix available ??	1	1	https://issues.jboss.org/browse/AS7-4508
1637	AS7-4407	Should this issue be marked out of date? It looks like it was resolved a while ago	1	0	https://issues.jboss.org/browse/AS7-4407
1638	AS7-4390	stan, can you take a look at this?	1	1	https://issues.jboss.org/browse/AS7-4390
1639	AS7-4342	Same applies to maven, if you dont set, you get "build.sh: Could not locate Maven; check $MVN or $MAVEN_HOME." Wasnt this solved back in AS5 days?	1	1	https://issues.jboss.org/browse/AS7-4342
1640	AS7-4342	Are you sure? I don't have $MVN or $MAVEN_HOME set and build.sh works fine for me.	0	0	https://issues.jboss.org/browse/AS7-4342
1641	AS7-4324	Still an issue, if I deploy a bunch of bundles where one dependency is missing, of course the bundles fail to deploy. But when I deploy that one missing dependency the container should detect that the missing dependency is now present and refresh the other bundles which should start as a result? Can we have a feature to turn back on, or make configurable, automatic refresh of bundles as it was in JBoss 7.1?	1	0	https://issues.jboss.org/browse/AS7-4324
1642	AS7-4324	Could you please point me in the direction of the part of the OSGi specification that says bundles must be installed, resolved and started as a set and that automatic refreshing is not allowed when a new bundle is hot deployed? I took a look at v5 and was unable to find anything like that.. although I could have easily missed it.	0	0	https://issues.jboss.org/browse/AS7-4324
1643	AS7-4296	This is a particularly important issue for me in relation to my cloud related projects. We need total automation over the configuration of target containers across development, test, and UAT environments and we also need automation of the overriding of application servers within deployed clusters. Can anyone provide advice on the process to get this issue assigned to a target release?	1	1	https://issues.jboss.org/browse/AS7-4296
1644	AS7-4287	Its network latency, it can not be significantly lower over Europe->USA because electric field travels in wire slightly lower then 300k km/sec and every router on way is adding few milliseconds delay. Look at other web applications. Do they needs minutes to load? Using https://developers.google.com/web-toolkit/doc/latest/DevGuideClientBundle helps	1	0	https://issues.jboss.org/browse/AS7-4287
1645	AS7-4279	Closing, as it contains no useful information. Please ask these sorts of questions on the forums, and actually provide some information that will allow people to answer your questions. We are not familiar with your application and your setup, and we are not mind readers. e.g: Is your server running out of memory? Is your server leaking file handles? Are there any errors in the logs? etc	0	0	https://issues.jboss.org/browse/AS7-4279
1646	AS7-4268	Should this really be its own subsystem? Wouldn't it make more sense to add it to the messaging subsystem, but have it configured outside the <hornetq-server> element?	1	1	https://issues.jboss.org/browse/AS7-4268
1647	AS7-4268	Jeff, just noticed that you began work on AS7-4268. When you complete this, is it something we could just pull the latest and get your update?	0	0	https://issues.jboss.org/browse/AS7-4268
1648	AS7-4268	Is this done since the 2 pull requests have been merged?	1	1	https://issues.jboss.org/browse/AS7-4268
1649	AS7-4268	Hi, I was trying to configure the JMSBridge based on the doc of AS72, but couldn't figure out where would I download the dependency jars from (acmemq-1.2.3.jar and mylogapi-0.0.1.jar) ? A google search didnt help actually. Could anyone help on this ?	1	1	https://issues.jboss.org/browse/AS7-4268
1650	AS7-4268	I understand the documentation refers to non-existent JARs. Can you give a specific example for connecting to prior versions of JBoss, for example, if HornetQ is running in JBoss AS 7.x, how to bridge a topic from a JBoss 4.2 / JBossMQ environment? Which JBossMQ JARs have to be copied, where to put them, etc?	0	0	https://issues.jboss.org/browse/AS7-4268
1651	AS7-4265	Do we have provision to edit an existing module ? For example let's say if i already have a module in place and if i want to add one module dependency to it, can i do so ?	0	0	https://issues.jboss.org/browse/AS7-4265
1652	AS7-4265	This works well for me, however, there's one thing which I had to manually change before it would work: I have a properties file which needs to be outside the WAR file, but yet accessible by the WAR file. I read the instructions on how to do this using the "modules" approach (https://developer.jboss.org/wiki/HowToPutAnExternalFileInTheClasspath), and so using the CLI module "add" command would be perfect. This is what I did: module add --name=com.mycompany.myproject.configuration --resources=myproperties.properties (where the myproperties.properties file is in the same folder where I issue this command) Everything worked well, except that the module.xml file created looked like this: <?xml version="1.0" ?> <module xmlns="urn:jboss:module:1.1" name="com.mycompany.myproject.configuration"> <resources> <resource-root path="myproperties.properties"/> <!-- THIS IS THE LINE WHICH I NEED CHANGED. --> </resources> </module> But what I need is: <?xml version="1.0" ?> <module xmlns="urn:jboss:module:1.1" name="com.mycompany.myproject.configuration"> <resources> <resource-root path="."/> <!-- THIS IS WHAT I NEED. --> </resources> </module> Otherwise the WAR file can't find the properties file. How do I do this? Thanks,	1	1	https://issues.jboss.org/browse/AS7-4265
1653	AS7-4194	Do you know if this be pulled in for 7.1.2.Final-redhat1?	1	1	https://issues.jboss.org/browse/AS7-4194
1654	AS7-4179	How does one go around to adding one category to get only logs from that one category? If you add it as <logger> with a lower level than threshold the logs are ditched, if you lower the threshold you get unwanted logs as well.	0	0	https://issues.jboss.org/browse/AS7-4179
1655	AS7-4151	I would like to see this feature add too, is it on the roadmap?	1	1	https://issues.jboss.org/browse/AS7-4151

#	Requirement	Questions	Answered	Successfully Answered	URL
1656	AS7-4140	I have confirmed with Andy Taylor that for the standalone-full-ha.xml messaging configuration, the broadcast-group and the discovery-group: - should be using the same multicast channel (i.e. same address and port) - work correctly when using the same multicast channel At present, standalone-full-ha.xml is not used for testing in the AS71 testsuite, as far as I can tell. However, in case it is used in furture, we should update the config generation so that it is properly processed. Therefore, we need to add the messaging configuration to the list of XSL transformations in changeIPAddresses.xsl so that the multicast addresses are replaced by -Dmcast, whether -Dipv6 is true or not. Because the ports used are not used by any other multicast channels, this should work for testing. Ondra, can you set this up? Once this is set up and tested, we can close this issue, I believe.	0	0	https://issues.jboss.org/browse/AS7-4140
1657	AS7-4140	I'll get to this at the end of this week, is that ok? I'll include it in a bunch of other updates.	0	0	https://issues.jboss.org/browse/AS7-4140
1658	AS7-4140	Ondra, did you forget about this? I still see hardcoded addresses in standalone-ha-full.xml.	0	0	https://issues.jboss.org/browse/AS7-4140
1659	AS7-4140	Ondro Can you resubmit and link the PR now? Or is there some outstanding issue?	0	0	https://issues.jboss.org/browse/AS7-4140
1660	AS7-4088	Do you mean add expression support to the various attributes in ModeClusterConfigResourceDefinition? If so this is done and this can be resolved against 7.1.2.	1	1	https://issues.jboss.org/browse/AS7-4088
1661	AS7-4084	Implemented the code that Tristan provided into the Infinispan subsystem recently refactored into resources. Encountered the following problem: <quote> Infinispan and JGroups gather statistics in certain associated services (e.g. TransactionManager, RpcManager,...). These services are installed at boot time, but not started until someone deploys a clustering application which uses them. So, if I try to read one of their read-only attributes before a deployment has occurred, I throw an OperationFailedException with a message saying that the required service has not been started. This works fine and seems to be the right way to proceed. On the other hand, there is a smoke test case BasicOperationsUnitTestCase.testRecursiveReadIncludingRuntime() which seems to assume that all reads of runtime-only resources will succeed. </quote> Is it really the case that every read of a read-only attribute should always succeed? If so, what is the best way to work around this? Can I somehow return an informational message instead of throwing an exception? Checking these issues with Emanuel M.	1	1	https://issues.jboss.org/browse/AS7-4084
1662	AS7-4084	In that case, you seem to be activating whole child resources by conditionally returning resources in response to getChild() calls. In what we had set up so far, we need to turn on a subset of attributes for a specific resource; e.g. /susbsystem=infinispan/cache-container=X // always available attributes A B C // attributes available when a particular MSC service is running D E Can the method used in the Messaging case also be used to cater to the above? In other words, what mechanism can be used to "turn-on" and "turn-off" the visibility of the attributes, as opposed to children?	1	1	https://issues.jboss.org/browse/AS7-4084
1663	AS7-4075	Are you certain other components depend on this? I'm not seeing it. In the poms I see some exclusions. But maven dependencies are complex beasts. Luckily, however, we have a modular classloading setup where dependencies have to be explicitly declared. And a "git grep commons.pool" shows me that the only spots in modules where that appears are: build/src/main/resources/modules/org/apache/commons/pool/main/module.xml:<module xmlns="urn:jboss:module:1.1" name="org.apache.commons.pool"> build/src/main/resources/modules/org/infinispan/cachestore/jdbc/main/module.xml: <module name="org.apache.commons.pool"/> build/src/main/resources/modules/org/infinispan/client/hotrod/main/module.xml: <module name="org.apache.commons.pool"/>	1	1	https://issues.jboss.org/browse/AS7-4075
1664	AS7-4075	Right, my bad, I was just only looking at maven -- but looking at JBoss modules is very exact. We should definitely upgrade then. Then, I also think we should upgrade 7.1 branch -- do you agree?	1	1	https://issues.jboss.org/browse/AS7-4075
1665	AS7-4057	Is this worked on? Can we commit for EAP 6.1?	1	1	https://issues.jboss.org/browse/AS7-4057
1666	AS7-4051	{quote}But if this transparent failover fails in our tests unless we change the cookie domain, then why would it pass in a real failover scenario without resetting the cookie domain?{quote} If I understand the question correctly, in real life you store cookies with domain of the load-balancer (its hostname) which makes the failover transparent. Our tests dont use loadbalancer as it would be OS specific.	1	1	https://issues.jboss.org/browse/AS7-4051
1667	AS7-4022	Yuck. Why are these properties and not proper attributes?	0	0	https://issues.jboss.org/browse/AS7-4022
1668	AS7-4022	Also, why are hibernate properties on an infinispan config?	0	0	https://issues.jboss.org/browse/AS7-4022
1669	AS7-4022	And if they are proper attributes, are they stable and supportable for many years? I realize this last question argues in an opposite direction from my previous question. The overall point is how does this feature request fit into an overall long-term supportable management contract for this subsystem?	0	0	https://issues.jboss.org/browse/AS7-4022
1670	AS7-4006	How about using reverse lookup? {code} ::1 {code} becomes {code} 1.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.0.ip6.arpa. {code} So it might work if we set the cookie hostname to "0.0.0.0.ip6.arpa" But it needs a IPv6 capable DNS server...	1	1	https://issues.jboss.org/browse/AS7-4006

1684	AS7-3850	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-3850
1685	AS7-3848	Could you please let us know how did you verify with some sample program..thanks	1	1	https://issues.jboss.org/browse/AS7-3848
1686	AS7-3848	{quote} Could you please let us know how did you verify with some sample program..thanks {quote} You don't have to do anything. Just deploy the @Clustered beans on the server side and invoke them from a client. Here's one example of the client invoking on remote beans https://docs.jboss.org/author/display/AS71/EJB+invocations+from+a+remote+client+using+JNDI. That example isn't specific to @Clustered beans though.	1	0	https://issues.jboss.org/browse/AS7-3848
1687	AS7-3842	It doesn't look like this project has been progressing recently. Is there any chance of an official version?	1	1	https://issues.jboss.org/browse/AS7-3842
1688	AS7-3842	I agree this would be nice to have, but does this issue belong in the AS7 project JIRA? Seems like this is an external effort.	1	1	https://issues.jboss.org/browse/AS7-3842
1689	AS7-3816	Expansion of variables in web.xml and jboss-web.xml do not appear to be supported in JBoss 7.1 either (and were in JBoss 5.x). Will expansion of variables in web.xml and jboss-web.xml be supported too in 7.1.2? For details please see: http://stackoverflow.com/questions/10032095/references-to-systemproperties-in-web-xml-and-jboss-web-xml-works-in-jboss5-but	0	0	https://issues.jboss.org/browse/AS7-3816
1690	AS7-3816	Expansion wasn't working for jboss-service.xml for a SAR deployment (Jboss AS 7.1.1). Would this be supported with this fix?	1	0	https://issues.jboss.org/browse/AS7-3816
1691	AS7-3809	Hi, can someone explain why was this commit reverted?	1	1	https://issues.jboss.org/browse/AS7-3809
1692	AS7-3807	Can this be resolved? The dependent issue is fixed and the fixed JBoss TS is incorporated in AS 7 master.	1	1	https://issues.jboss.org/browse/AS7-3807
1693	AS7-3793	What is the use case for this?	1	0	https://issues.jboss.org/browse/AS7-3793
1694	AS7-3793	<stuartdouglas> opalka: That is not a real world requirement <stuartdouglas> appclient is not supposed to act as a server <opalka> stuartdouglas, of course it isn't. It's just for our testing purposes. <stuartdouglas> opalka: can you redesign the test so it actually runs inside the appclient JVM? <opalka> stuartdouglas, I think yes. But this is exactly I wanna avoid (it's about 200+ tests) <stuartdouglas> If you really want to use the appclient as a server can you just use a custom appclient.xml in your tests? <opalka> stuartdouglas, yes, this is workable for us too <stuartdouglas> opalka: does having the remoting subsystem in appclient actually allow remote naming to work? <opalka> stuartdouglas, yes, it works for me <opalka> stuartdouglas, I verified the proof of concept last week <opalka> stuartdouglas, If you will say no remoting protocol in appclient I'm fine with it. In that case I'll provide either custom appclient.xml for our tests or XSLT <opalka> stuartdouglas, I just wanna know the decision :) <opalka> stuartdouglas, to open or not to open remoting protocol on appclient, that's the question :) <stuartdouglas> opalka: I'm not going to add remoting to appclient just for your test suite <opalka> stuartdouglas, ok, NP. The decision have been taken. I'm fine with it. <stuartdouglas> as it is something that most real world users would then want to remove <opalka> stuartdouglas, +1 <opalka> stuartdouglas, I'm going to remove it from my pull request <stuartdouglas> ok <opalka> stuartdouglas, removed - https://github.com/jbossas/jboss-as/pull/1548	0	0	https://issues.jboss.org/browse/AS7-3793
1695	AS7-3789	Hi Jeff, Could you review this HQ patch?	0	0	https://issues.jboss.org/browse/AS7-3789
1696	AS7-3789	tomaz, did you attach a patch? I can only see your compiled hornetq-core.jar in the attachments...	1	1	https://issues.jboss.org/browse/AS7-3789
1697	AS7-3789	Are we waiting for a new HornetQ release with a fix?	1	1	https://issues.jboss.org/browse/AS7-3789
1698	AS7-3789	How is the testing going Tomaz?	1	1	https://issues.jboss.org/browse/AS7-3789
1699	AS7-3789	Thanks Tomaz. BTW, is this fixed now? I don't see the delay in booting standalone-full.xml anymore?! (win7/32b)	1	1	https://issues.jboss.org/browse/AS7-3789
1700	AS7-3789	dimitris, yes the fix has been merged into HornetQ 2.2.15.Final. That's why you don't see the delay anymore. There is still room for performance improvements (do not use reflection, etc.) but the main bottleneck has been fixed. Does the current boot time is fast enough to downgrade the priority of this issue (or close it)?	0	0	https://issues.jboss.org/browse/AS7-3789
1701	AS7-3789	Just tried standalone-full.xml at 2855ms, so that looks pretty competitive to me. Maybe leave some optimizations for later releases? :)	1	1	https://issues.jboss.org/browse/AS7-3789
1702	AS7-3770	In order to cherrypick this in the EAP ER2 build, we would need a resolution by Feb/27th. Is this doable?	1	1	https://issues.jboss.org/browse/AS7-3770
1703	AS7-3739	Do we want to preload the cache on server startup? Since file store is not the fastest persistence mechanism in the world, IMO it will be sufficient to load the sessions when they are requested.	0	0	https://issues.jboss.org/browse/AS7-3739
1704	AS7-3715	Actually, it is indeed byte array that i used internally. Could this even be represented in a different way? If no then just reject.	1	1	https://issues.jboss.org/browse/AS7-3715
1705	AS7-3696	Can this JIRA be resolved with today's testsuite commit?	0	0	https://issues.jboss.org/browse/AS7-3696
1706	AS7-3692	This could be made better, perhaps, but IMHO it's not a critical issue. Better == optional params to the top-level resource :add operation that provide the info needed to build the child resources. Reduces things to one op. In this specific case though that would be fairly useless, since a human would never type such a command in the interactive CLI -- just too much data is needed. They would end up using a script. In which case, why not use the batch commands?	1	1	https://issues.jboss.org/browse/AS7-3692
1707	AS7-3659	Will this only be in EAP, as a manual test?	1	1	https://issues.jboss.org/browse/AS7-3659
1708	AS7-3659	Vladimir, Ironjacamar 1.0.8 is in: https://github.com/jbossas/jboss-as/commit/9872ebdf9c6a7cfff14c1d7f01510fcaeba5a844#L9R150 Can you please rebase and send a pull request?	1	1	https://issues.jboss.org/browse/AS7-3659
1709	AS7-3633	Should this be a Blocker? Major issues for 7.1.0.Final are in danger of being pushed out at any time, so bump the priority if that shouldn't happen.	0	0	https://issues.jboss.org/browse/AS7-3633
1710	AS7-3633	Is this still an issue?	1	0	https://issues.jboss.org/browse/AS7-3633
1711	AS7-3607	Can someone from the JBoss Web team take look please?	0	0	https://issues.jboss.org/browse/AS7-3607
1712	AS7-3607	This handles the opposite case - if I prefer an IPv6 stack and i'm given an IPv4 address, convert it to an IPv6 mapped address. But even with this fix, if I do prefer an IPv6 stack and I do pass in an IPv4 address, it still comes out as an IPv4 socket. The problem is further down. I tried locating the code for AprEndpoint to insert some debugging statements to confirm my suspicions. J-F, where is it located (i.e. which source repo and which jar?) I see JBoss Web 7.0.10.Final included in the pom; when I go to JBoss Web page, no hint of any version called 7.0.10.Final, as far as I could tell.	1	1	https://issues.jboss.org/browse/AS7-3607

#	Requirement	Questions	Answered	Successfully Answered	URL
1713	AS7-3561	Hello, This change broke IDEA support of JBoss 7 (http://youtrack.jetbrains.com/issue/IDEA-81489) In IDEA, we have used 'validate-address' operation in 2 cases: 1) check whether server is ready for remote administration - call to 'validate-address' without address 2) check whether deployment is registered on the server - call to 'validate-address' with 'deployment=<artifact name>' as the address As I can see from the AS7-3561 and from the actual CLI of the JBoss 7.1.0 final, now, validate-address: - could be executed without address only (execution with 'deployment=<artifact name>' fails with JBAS014739: No handler for validate-address at address [("deployment" => "=<artifact name>")] - requires the 'value' attribute But, 'value' attribute seems not to expect address or just broken itself, since every value I've passed as the 'value' fails with JBAS014749: Operation handler failed: null (I've tried empty string, "/", "/deployment=<deployed artifact name>/"...) Could you please describe what is expected as 'value' or confirm 'validate-address' is broken now? Regards, Michael	1	0	https://issues.jboss.org/browse/AS7-3561
1714	AS7-3556	Thomas, could you please list the test classes involved so I can be sure we're talking about the same thing?	1	1	https://issues.jboss.org/browse/AS7-3556
1715	AS7-3556	These unit tests are actually quite valuable. They test the inner workings of these classes and therefore mock out their environment. However I do see value in providing additional system tests for the OSGi subsystem management. Shall we rename this bug to 'Add system tests for OSGi subsystem model'?	1	1	https://issues.jboss.org/browse/AS7-3556
1716	AS7-3510	Have you tried any 7.1.0 release candidate?	1	0	https://issues.jboss.org/browse/AS7-3510
1717	AS7-3489	I don't think we have the best coverage of the HTTP interface at the moment - doesn't this set of ignores completely remove all testing of the HTTP interface?	1	1	https://issues.jboss.org/browse/AS7-3489
1718	AS7-3488	That doesn't make sense to me. At this point "wilma" is not a valid cache name. Why is that better than leaving default-cache undefined?	1	1	https://issues.jboss.org/browse/AS7-3488
1719	AS7-3488	Also, relying on batch mode is awkward from a usability standpoint. Can't we solve the chicken and egg problem? What if you add a required "default-cache-type" parameter to the add operation? Then the add operation would just create a cache for the default-cache. The user would probably need to go back and configure the new cache. But at least you would always maintain a valid configuration. So this would execute successfully: {noformat}/subsystem=infinispan/cache-container=fred:add(default-cache=wilma,default-cache-type=LOCAL){noformat} And read-resource would immediately look like this: {noformat}/subsystem=infinispan/cache-container=fred/:read-resource(recursive=true,proxies=false,include-runtime=false,include-defaults=true) { "outcome" => "success", "result" => { "aliases" => undefined, "default-cache" => "wilma", "distributed-cache" => undefined, "eviction-executor" => undefined, "invalidation-cache" => undefined, "jndi-name" => undefined, "listener-executor" => undefined, "replicated-cache" => undefined, "replication-queue-executor" => undefined, "start" => undefined, "transport" => undefined, "local-cache" => {"wilma" => { "batching" => false, "cache-mode" => "LOCAL", "eviction" => undefined, "expiration" => undefined, "file-store" => undefined, "jdbc-store" => undefined, "locking" => undefined, "name" => "wilma", "remote-store" => undefined, "store" => undefined, "transaction" => undefined }} }, "response-headers" => {"process-state" => "reload-required"} }{noformat}	1	1	https://issues.jboss.org/browse/AS7-3488
1720	AS7-3488	It's impossible for the cache to be present. You can't create the cache until you create the cache container. Is my proposed solution workable?	1	1	https://issues.jboss.org/browse/AS7-3488
1721	AS7-3488	Was this completed?	0	0	https://issues.jboss.org/browse/AS7-3488
1722	AS7-3419	Tomaz, could you look at this? Basically this means providing proper expression support for this attribute. This subsystem isn't using AttributeDefinition. For 7.1.0 I absolutely don't want to try and change it to that (too late). If changing this one element to use AttributeDefinition is the efficient way to fix this, it's ok by me. It will look a bit odd having just one AttributeDefinition, but c'est la vie. AttributeDefinition isn't required for proper expression support though; it just has most of the code already there.	1	1	https://issues.jboss.org/browse/AS7-3419
1723	AS7-3419	What does not work? I have tested it and it work properly... i have tested with this configuration and all expressions resolved properly: {code:xml} <connector name="https" protocol="HTTP/1.1" scheme="https" socket-binding="https" secure="true"> <ssl name="ssl.name" key-alias="alias" password="${ssl.keystore.password:defaultPassword}" certificate-key-file="${jboss.server.config.dir}/keystore.p12" verify-client="true" ca-certificate-file="${jboss.server.config.dir}/megapos.jks" ca-certificate-password="${my.custom.sysprop:password}" keystore-type="PKCS12" truststore-type="JKS"/> </connector> {code} I didn't test with vault expression but other then that all expressions resolved properly	1	1	https://issues.jboss.org/browse/AS7-3419
1724	AS7-3371	What exactly is that stress test, testing? I haven't taken a look. But without that detail, I don't think this will be assigned to the right person.	0	0	https://issues.jboss.org/browse/AS7-3371
1725	AS7-3371	Tomas, Can you try setting native="false" in the web config?	1	1	https://issues.jboss.org/browse/AS7-3371
1726	AS7-3371	I don't know much about thread pool size settings. I tried to follow http://www.masterthebos.com/jboss-application-server/341-jboss-as-7-performance-tuning.html?start=3, but I am not really sure about that numbers. I tried to double values for core-threads and max-threads, but didn't see any change. Can somebody tell me more or point me to some doc?	0	0	https://issues.jboss.org/browse/AS7-3371
1727	AS7-3363	Jan,what are allowed socket bindings ? Is this a fix set of values or do they change in runtime ?	1	1	https://issues.jboss.org/browse/AS7-3363
1728	AS7-3359	Mirek, can you create a pull request for this? You might have to wait until a ha profile is available upstream (JBCTS-1230)	1	1	https://issues.jboss.org/browse/AS7-3359
1729	AS7-3357	Is this planned to be exposed in metadata?	0	0	https://issues.jboss.org/browse/AS7-3357
1730	AS7-3347	So was the driver list command added?	1	0	https://issues.jboss.org/browse/AS7-3347
1731	AS7-3322	Darran: I was going to explain some details for Tomaz, but now I'm confused. The schema for the <management-interfaces><http-management-interface> type is: <xs:complexType name="http-management-socket-binding-refType"> <xs:annotation> <xs:documentation> Reference to the configurations of the sockets to be used by a standalone server's exposed HTTP and HTTPS management interface. </xs:documentation> </xs:annotation> <xs:attribute name="http" type="xs:string" use="optional"> <xs:annotation> <xs:documentation> Name of a socket-binding configuration declared in the server's socket-binding-group to use for a HTTP socket. </xs:documentation> </xs:annotation> </xs:attribute> <xs:attribute name="https" type="xs:string" use="optional"> <xs:annotation> <xs:documentation> Name of a socket-binding configuration declared in the server's socket-binding-group to use for a HTTPS socket. </xs:documentation> </xs:annotation> </xs:attribute> </xs:complexType> There are 2 attributes, one for HTTP one for HTTPS. What's missing?	1	1	https://issues.jboss.org/browse/AS7-3322

#	Requirement	Questions	Answered	Successfully Answered	URL
1732	AS7-3322	I really don't think this is still the issues. as configuration that I use for quite a while looks like this: {code:xml}<connector name="https" protocol="HTTP/1.1" scheme="https" socket-binding="https" secure="true">{code} and under socket-binding I have: {code:xml}<socket-binding name="https" port="443"/>{code} Am I missing something?	1	1	https://issues.jboss.org/browse/AS7-3322
1733	AS7-3309	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-3309
1734	AS7-3290	<smarlow> galderz: which code module contains the code for constructing the global component registry (that gets Infinispan core to load the Hibernate Infinispan service entries)? <ttarrant> smarlow, the module that constructs that is org.jboss.as.clustering.infinispan <ttarrant> smarlow, the gcr is constructed with that module's classloader <ttarrant> smarlow, you probably need to add hibernate-infinispan to that module <ttarrant> with services exported <ttarrant> smarlow, can you try ? <smarlow> ttarrant, galderz: org.jboss.as.clustering.infinispan doesn't really know about the Hibernate Infinispan module, but even if org.jboss.as.clustering.infinispan had a dependency on Hibernate Infinispan, I'm not sure what that would do but I can try it as a hacj <ttarrant> smarlow, you are consuming caches created by the infinispan clustering subsystem are you not ? <smarlow> ttarrant: yes <smarlow> I believe that is the case <ttarrant> smarlow, the infinispan GlobalConfigurationRegistry is initialized by that subsystem with its module's classloader <ttarrant> smarlow, therefore the ServiceLoader will find only the services "exported" at that level <ttarrant> and visible to that classloader * smarlow is adding <module name="org.hibernate.infinispan" services="export"/> to org.jboss.as.clustering.infinispan <smarlow> ttarrant, galderz: ^ worked! :)	1	1	https://issues.jboss.org/browse/AS7-3290

1736	AS7-3251	Even though ConfigAdmin is now an OSGi-independent subsystem, will we keep the console GUI part under OSGi? Or should we introduce an independent ConfigAdmin subsystem in the Console too?	1	1	https://issues.jboss.org/browse/AS7-3251
1737	AS7-3251	The latter. The reasoning is that the OSGi subsystem may get removed completely, which should then also happen (by itself) in the console. Could you please check that the console can react adequately to subsystem availability?	1	1	https://issues.jboss.org/browse/AS7-3251
1738	AS7-3241	Hi Kurt, Do you plan to do this before Feb 7? (My guess is no)	0	0	https://issues.jboss.org/browse/AS7-3241
1739	AS7-3229	Scott, are you still getting this error? SFSB serialization has changed a bit since this jira was opened - and I wonder if this is jira isn't obsolete.	0	0	https://issues.jboss.org/browse/AS7-3229
1740	AS7-3229	Can this be closed, or is there still something outstanding?	0	0	https://issues.jboss.org/browse/AS7-3229
1741	AS7-3203	Hi Stuart, I can't find anywhere in the class loading guide (https://docs.jboss.org/author/display/AS71/Class+Loading+in+AS7) that mentions the <module .. export="true" />. Can you quote in detail where I can find it? Thanks. John Wu	1	0	https://issues.jboss.org/browse/AS7-3203
1742	AS7-3195	Is this fix expected to ship with 7.1.2, or is there more work required?	1	1	https://issues.jboss.org/browse/AS7-3195
1743	AS7-3195	My app was defining properties in an external .properties file, then loading them into system properties for later use. They seemeed to be available in time for expansion into persistence.xml with 7.0.2, but that behavior seems to be different for 7.1.1. Defining the property directly in standalone.xml seems to work, and make the values available for substitution during deployment. Properties were externalized so that deployables could ship with their config files in a 'hot' directory, and deployed to different as7 servers as needed. This let us define one hot directory in standalone.xml, and drop deployable .properties files there, instead of having to mangle standalone.xml for each deployable. For properties that need to be available when a deployable is being deployed, is standalone.xml the right place to put those? Is there an approved way to externalize those? The admin guide (https://docs.jboss.org/author/display/AS7/General+configuration+concepts) doesn't mention any alternatives. Thanks	1	1	https://issues.jboss.org/browse/AS7-3195
1744	AS7-3195	This bug is now present in EAP 6.1 on OpenShift. Is it slated for fix there?	0	0	https://issues.jboss.org/browse/AS7-3195

#	Requirement	Questions	Answered	Successfully Answered	URL
1745	AS7-3174	Would it make sense to make this even more generic? AFAICT only top-level stuff can be excluded.	1	1	https://issues.jboss.org/browse/AS7-3174
1746	AS7-3166	Rado, Is this reproducible on master? This issue was opened when Infinispan was at 5.1.0.CR1 - Infinispan is now at 5.1.0.CR4.	0	0	https://issues.jboss.org/browse/AS7-3166
1747	AS7-3159	Thanks Stuart, but what about Hibernate Search? does it have the same reason to reject?	0	0	https://issues.jboss.org/browse/AS7-3159
1748	AS7-3148	"If D has a dependency on B and they are deployed at the same time I'll get:" .... Do you mean, if they're *not* deployed at the same time? If the scanner picks up both in the same run you shouldn't be getting this error.	1	1	https://issues.jboss.org/browse/AS7-3148
1749	AS7-3148	At the time of writing I was receiving the error in the description when A and D were picked up in the same scan. I hadn't tried this in a while as my deployment script currently waits on the creation of E.ear.deployed. I just tried it again and now get a different error that looks more like a race condition. This might not be the right JIRA for it though if what I am requesting is already the expected behaviour. In my case B.jar that contains entities and my persistence unit which provides an EntityManagerFactory via JNDI. D.war contains various seam2 components and its ManagedPersistenceContext tries to look up the EMF when the seam application starts. If both A and D are deployed in the same run the EMF is not available when D is starting. Is this intended or a bug? I will attach a log showing a deployment run where both are picked up at the same time and fail and then when they are deployed sequentially and succeed. The error when they are deployed concurrently is below: Caused by: java.lang.IllegalArgumentException: EntityManagerFactory not found in JNDI : java:/PlutoMainEntityManagerFactory at com.britensw.pluto.web.seam.ManagedPersistenceContext.getEntityManagerFactoryFromJndiOrValueBinding(ManagedPersistenceContext.java:188) [classes:] at com.britensw.pluto.web.seam.ManagedPersistenceContext.createContext(ManagedPersistenceContext.java:91) [classes:] at com.britensw.pluto.web.seam.ManagedPersistenceContext.create(ManagedPersistenceContext.java:84) [classes:] at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) [:1.6.0_30] at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) [:1.6.0_30] at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) [:1.6.0_30] at java.lang.reflect.Method.invoke(Method.java:597) [:1.6.0_30] at org.jboss.seam.util.Reflections.invoke(Reflections.java:22) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at org.jboss.seam.util.Reflections.invokeAndWrap(Reflections.java:144) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at org.jboss.seam.Component.callComponentMethod(Component.java:2283) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at org.jboss.seam.Component.callCreateMethod(Component.java:2198) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at org.jboss.seam.Component.newInstance(Component.java:2158) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] ... 37 more Caused by: javax.naming.NameNotFoundException: Error looking up PlutoMainEntityManagerFactory, service service jboss.naming.context.java.PlutoMainEntityManagerFactory is not started at org.jboss.as.naming.ServiceBasedNamingStore.lookup(ServiceBasedNamingStore.java:126) at org.jboss.as.naming.ServiceBasedNamingStore.lookup(ServiceBasedNamingStore.java:74) at org.jboss.as.naming.NamingContext.lookup(NamingContext.java:177) at org.jboss.as.naming.InitialContext.lookup(InitialContext.java:113) at org.jboss.as.naming.NamingContext.lookup(NamingContext.java:213) at javax.naming.InitialContext.lookup(InitialContext.java:392) [:1.6.0_30] at com.britensw.pluto.web.seam.ManagedPersistenceContext.getEntityManagerFactoryFromJndiOrValueBinding(ManagedPersistenceContext.java:186) [classes:] ... 48 more	0	0	https://issues.jboss.org/browse/AS7-3148
1750	AS7-3147	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-3147
1751	AS7-3142	Same problem on our side (see stacktrace)! Can someone help us ? {code} 10:54:05,428 ERROR [org.jboss.msc.service.fail] (MSC service thread 1-3) MSC00001: Failed to start service jboss.deployment.unit."XXX.war".STRUCTURE: org.jboss.msc.service.StartException in service jboss.deployment.unit."XXX.war".STRUCTURE: Failed to process phase STRUCTURE of deployment "XXX.war" at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:121) [jboss-as-server-7.1.0.CR1b.jar:7.1.0.CR1b] at org.jboss.msc.service.ServiceControllerImpl$StartTask.startService(ServiceControllerImpl.java:1824) [jboss-msc-1.0.1.GA.jar:1.0.1.GA] at org.jboss.msc.service.ServiceControllerImpl$StartTask.run(ServiceControllerImpl.java:1759) [jboss-msc-1.0.1.GA.jar:1.0.1.GA] at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:886) [:1.6.0_29] at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:908) [:1.6.0_29] at java.lang.Thread.run(Thread.java:680) [:1.6.0_29] Caused by: java.lang.IllegalArgumentException: Given parent is not an ancestor of this virtual file at org.jboss.vfs.VirtualFile.getPathNameRelativeTo(VirtualFile.java:116) at org.jboss.vfs.VirtualFile.getPathNameRelativeTo(VirtualFile.java:122) at org.jboss.vfs.VirtualFile.getPathNameRelativeTo(VirtualFile.java:110) at org.jboss.as.server.deployment.module.ManifestClassPathProcessor.createAdditionalModule(ManifestClassPathProcessor.java:193) [jboss-as-server-7.1.0.CR1b.jar:7.1.0.CR1b] at org.jboss.as.server.deployment.module.ManifestClassPathProcessor.handlingExistingClassPathEntry(ManifestClassPathProcessor.java:185) [jboss-as-server-7.1.0.CR1b.jar:7.1.0.CR1b] at org.jboss.as.server.deployment.module.ManifestClassPathProcessor.deploy(ManifestClassPathProcessor.java:162) [jboss-as-server-7.1.0.CR1b.jar:7.1.0.CR1b] at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:115) [jboss-as-server-7.1.0.CR1b.jar:7.1.0.CR1b] ... 5 more {code}	0	0	https://issues.jboss.org/browse/AS7-3142
1752	AS7-3116	Can you open a new JIRA for this as it is a different issue.	1	1	https://issues.jboss.org/browse/AS7-3116
1753	AS7-3114	Another factor in the equation is that whether or not to have the console needs to be a configurable attribute, probably on the http management interface element. It's quite reasonable that people using AS 7 / EAP will want to use the HTTP management connector but not run a console. So you have a matrix: One access: Is the console available? (yes/no) Other access: Does user want console? (yes/no/didn't say)	1	1	https://issues.jboss.org/browse/AS7-3114

#	Requirement	Questions	Answered	Successfully Answered	URL
1754	AS7-3114	Tomaz, can you look into this one? There are two aspects: 1) Add a non-required boolean config attribute the the <management-interfaces><http-interface> element to allow users to disable the console. Default is true. 2) Detect the absence of the module that provides the console, and deal with that absence appropriately. How to deal with the absence of the console is an open question. One thought I had was to throw an exception if the config attribute was actually set to "true". If the config attribute is undefined or false then deal with it using ConsoleMode.NO_CONSOLE.	1	1	https://issues.jboss.org/browse/AS7-3114
1755	AS7-3036	Thanks for reply! But, where can I find the bundle files? Can I get from the original project repos and then deploy into AS7?	1	1	https://issues.jboss.org/browse/AS7-3036
1756	AS7-3030	I see the jacorb build (2.3.1.jboss-1) in the JBoss repository: https://repository.jboss.org/nexus/content/repositories/thirdparty-releases/org/jacorb/jacorb/ Should there also be a matching version of jacorb-idl-compiler?	1	1	https://issues.jboss.org/browse/AS7-3030
1757	AS7-2999	Hi, what is the current status of this bug? I was told that it should be ready in the beginning of this week ... and that my pull request will be hold off until then. Thanks for the info.	1	1	https://issues.jboss.org/browse/AS7-2999
1758	AS7-2999	If I remove @Ignore(AS7-2999) for example in InjectionAnnSFSBtoSFSBTestCase, I get an exception like this: javax.ejb.NoSuchEJBException: Could not find SFSB InjectionSFSBtoSFSB with {[-32, 80, 121, 29, -10, 122, 68, 78, -87, 114, -8, 77, -101, -123, -17, -11]} at org.jboss.as.ejb3.component.stateful.StatefulComponentInstanceInterceptor.processInvocation(StatefulComponentInstanceInterceptor.java:62) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.as.ejb3.tx.CMTTxInterceptor.invokeInOurTx(CMTTxInterceptor.java:228) at org.jboss.as.ejb3.tx.CMTTxInterceptor.required(CMTTxInterceptor.java:304)	1	1	https://issues.jboss.org/browse/AS7-2999
1759	AS7-2991	Is there any documentation explaining how to enable gzip compression in jboss as 7.1.1 (or maybe before the official release?)?	1	1	https://issues.jboss.org/browse/AS7-2991
1760	AS7-2991	Any chance this regression is related to your change? AS7-4124 Which repo is the change you made at?	0	0	https://issues.jboss.org/browse/AS7-2991
1761	AS7-2991	So is this actually resolved? I added -Dorg.apache.coyote.http11.Http11Protocol.COMPRESSION=true to the vm properties but my pages are not being compressed.	0	0	https://issues.jboss.org/browse/AS7-2991
1762	AS7-2991	How to enable this ? I'm using JBoss AS 7.1.1 and compression is not enabled by default.	1	1	https://issues.jboss.org/browse/AS7-2991
1763	AS7-2991	Can GZIP compression be enable on the HTTP connector in standalone.xml?	1	0	https://issues.jboss.org/browse/AS7-2991
1764	AS7-2991	It seems that JBoss AS 7.1.1 HTTP compression only compress the document itself and not static files (e.g., *.js, *.css, ...). Is there a way to define which the compressible MimeTypes are?	1	0	https://issues.jboss.org/browse/AS7-2991
1765	AS7-2984	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Prabhat Jha <prabhat.jha@jboss.com> made a comment on jira ISPN-1799 Can this be fixed so that it gets fixed in next ER build for JDG?	0	0	https://issues.jboss.org/browse/AS7-2984
1766	AS7-2984	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Tristan Tarrant <ttarrant@redhat.com> made a comment on jira ISPN-1799 Dan could you please try and get it in 5.1.4.CR1 ?	0	0	https://issues.jboss.org/browse/AS7-2984
1767	AS7-2984	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Tristan Tarrant <ttarrant@redhat.com> made a comment on jira ISPN-1799 Dan could you please try and get it in 5.1.4.CR1 or at least a patch for JDG	0	0	https://issues.jboss.org/browse/AS7-2984
1768	AS7-2984	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] dex chen <dex80526@yahoo.com> made a comment on jira ISPN-1799 we saw this error in our 3 node cluster in which the network connectivity to one of nodes is not reliable and has high latency. Does this exception have anything to do with the network connectivity and high latency?	0	0	https://issues.jboss.org/browse/AS7-2984
1769	AS7-2958	Misty Stanley-Jones <misty@redhat.com> made a comment on [bug 831442|https://bugzilla.redhat.com/show_bug.cgi?id=831442] Sande, I think you might be a good fit for this topic. Maybe something like the following: About HA Singleton Differences from the EAP 5 Implementation Configure the HA Singleton Dummy Interface Use HA Singleton Can you give the above links a quick read through within the next week or so, and give Rich an estimate of how long it will take to write these topics? You can work with Tom to get an asynchronous addition to the Development Guide. In fact this might be a good candidate for a rough draft in Confluence for the developers and community to help with.	0	0	https://issues.jboss.org/browse/AS7-2958
1770	AS7-2954	Is there a reason why this is a bad idea? I mean all assert does is throw an exception? Are you trying to limit the usage of junit to allow usage of testng?	0	0	https://issues.jboss.org/browse/AS7-2954
1771	AS7-2954	What is the reasoning behind this?	0	0	https://issues.jboss.org/browse/AS7-2954
1772	AS7-2954	That was my question as well :) Ondrej, could you explain this?	0	0	https://issues.jboss.org/browse/AS7-2954
1773	AS7-2891	I don't know where it was configured in AS 6, also. Was it using a realm element in server.xml (or context.xml) ?	0	0	https://issues.jboss.org/browse/AS7-2891
1774	AS7-2881	Shouldn't this JIRA be assigned to youself Max?	0	0	https://issues.jboss.org/browse/AS7-2881
1775	AS7-2881	Thanks Max (y) When you say codefreeze next week you mean of 7.1.0.final? Should we expect to have the release that was planned to Tuesday, Feb7th, to be next week?	0	0	https://issues.jboss.org/browse/AS7-2881
1776	AS7-2871	Won't Fix {code} (07:42:38 PM) tdiesler: Nihility, I guess this attribute is special in the sense that no other subsystem is activated lazily. The attr pertains to subsystem startup and is not a configuration of the subsystem itself. WDYT? (07:45:01 PM) Nihility: tdiesler: yeah i think you have a good point that this could be a generic notion, i really need bstansberry's thoughts on this though (07:45:21 PM) Nihility: bstansberry: hey what do you think about ^ (07:46:00 PM) ***bstansberry looks (07:49:08 PM) bstansberry: Nihility: I don't particularly object to attributes on the subsystem element (07:49:19 PM) bstansberry: and I now see 5 open JIRAs to fix them (07:49:59 PM) Nihility: bstansberry: yeah i was never really against them. I know David had some reasons, but I dont remeber what they were or if I ever agreed completely :) (07:50:00 PM) bstansberry: I don't really believe those are going to be fixed (07:50:23 PM) bstansberry: Nihility: the basic reason is readability (07:50:32 PM) bstansberry: AIUI (07:51:06 PM) bstansberry: tdiesler: I'm fine with leaving that attribute (07:51:14 PM) Nihility: yeah i guess in some cases we had some bad attributes on the susbsytem level, activation does seem to belong there though, i mean i buy tdiesler's argument on this one {code}	0	0	https://issues.jboss.org/browse/AS7-2871
1777	AS7-2848	Tomaz, can you take a look at this? I think this should be a matter of registering ReloadRequiredWriteAttributeHandler for all the attributes. This subsystem has 1 resource with a big long list of attributes. Potentially some attributes could be immediately changed in the runtime service (I have no idea which, and quite possibly none could be) but looking into that is a post-7.1.0.Final task If possible it would be nice to convert this subsystem to use ResourceDefinition, but that's better done after 7.1.0.Final since we have much more critical things to do.	1	1	https://issues.jboss.org/browse/AS7-2848

#	Requirement	Questions	Answered	Successfully Answered	URL
1778	AS7-2792	Rosta This question is best placed for Brian, but i'll present my understanding of it as it applies to the JGroups subsystem. If I understand correctly, this issue is not particular to socket-binding definitions, but to any model attribute whose value is an expression. When an attribute whose value is an expression is viewed from the management interface, the unresolved expression is displayed, not the resolved value, as it reflects the value of the attribute in the persistent model, and the persistent model needs to be server-instance neutral. Such expressions are resolved when services are started in a particular server context, but those resolved values are generally not available for viewing. The option include-runtime does not cause the resolved value of the attribute to be displayed, but rather displays attributes which are defined as runtime attributes (i.e. are not part of the persistent configuration, which is server instance neutral) - not the same thing. It would be possible to define a runtime attribute which read and made observable the resolved multicast address, but that would be one particular solution to a more general problem. I expect that you would like to have an option where you may connect to a server and see the model with all expressions resolved in the context of that server's environment; like: {noformat} :read-resource(resolve-expressions=true) {noformat} so that the resolved model can be viewed. Is that correct?	0	0	https://issues.jboss.org/browse/AS7-2792
1779	AS7-2787	What would you prefer the flow to be? I can add support for 'y' or do you think I should just keep repeating "Is this correct yes/no?" until they say "no"?	0	0	https://issues.jboss.org/browse/AS7-2787
1780	AS7-2770	In the past there were the same issue with GWT opened check here: http://code.google.com/p/google-web-toolkit/issues/detail?id=1898 and since GWT 1.5 there has been added a method ensureDebugId()for UIObject We need to change current implementation somewhat in following way... 1. Create new button ToolButton button = new ToolButton("Remove", new ClickHandler() { @Override public void onClick(ClickEvent event) { Feedback.confirm("Remove Module", "Really remove module?", new Feedback.ConfirmationHandler() { @Override public void onConfirmation(boolean isConfirmed) { if(isConfirmed) { Module module = ((SingleSelectionModel<Module>) modules.getSelectionModel()).getSelectedObject(); presenter.onRemoveModule(form.getEditedEntity(), module); } } }); } }); 2.Set Debug Id button.ensureDebugId("RemoveButtonEEView"); 3. Add to Panel moduleTools.addToolButtonRight(button);	0	0	https://issues.jboss.org/browse/AS7-2770
1781	AS7-2763	can anybody please have an update on this ? Since Hibernate Multi-tenant is not fully supportive due to the conflict with second level caching we can't think about Hibernate Multi-tenant. So the only way in front of us is to use one SessionFactory per tenant by registering SessionFactory using "hibernate.session_factory_name" configuration property. Since JBoss AS 7 is not supporting JNDI binding, we are really in trouble.	1	0	https://issues.jboss.org/browse/AS7-2763
1782	AS7-2763	Hi Stuart, Can you please tell the implementation details ?	0	0	https://issues.jboss.org/browse/AS7-2763
1783	AS7-2756	Is the same strength check applied to management user? I would assume management user passwords have more stringent requirement, at least should be the same as app user. But I can create a management user using password that consists of all letters (more than 8 letters). Can we validate the password immediately after the password is entered, before asking the user to enter a potentially useless password a second time, and before asking the user to assign a role. Currently the validation kicks in after adding role: Realm (ApplicationRealm) : Username : user1 Password : Re-enter Password : What roles do you want this user to belong to? (Please enter a comma separated list, or leave blank for none)[ ]: * Error * JBAS015266: Password must not have atleast one digit. The above error message is confusing, and that issue is tracked in AS7-5631	1	1	https://issues.jboss.org/browse/AS7-2756
1784	AS7-2751	we do basically need all of it? but why is your resource description different from mine? are you using the latest AS7 master?	1	1	https://issues.jboss.org/browse/AS7-2751
1785	AS7-2751	I used [domain@localhost:9999 /] /profile=full-ha/subsystem=modcluster:read-resource-description(recursive=true) vs. [domain@localhost:9999 /] /profile=full-ha/subsystem=modcluster:read-resource(recursive=true) The read-resource operation gives me the same list as you posted but read-resource-description operation gives a bit more attributes, which looks strange. Shouldn't it be only detailed description of the same sets of attributes ? Not sure if we need all of them, it depends what we want to manage through UI config IMO. Yes I do use the latest master jboss-as SNAPSHOT, have updated yesterday	1	1	https://issues.jboss.org/browse/AS7-2751
1786	AS7-2746	yes, the "wrong credentials" approach is what I had in mind. do you think that's feasible? does it works across browsers?	0	0	https://issues.jboss.org/browse/AS7-2746
1787	AS7-2729	Stuart, is this issue still valid?	0	0	https://issues.jboss.org/browse/AS7-2729
1788	AS7-2703	Pull request?	0	0	https://issues.jboss.org/browse/AS7-2703
1789	AS7-2703	Whether we create new interceptors or reassemble them, we need to replicate enough information for that to happen. For example, the SFSBDestroyInterceptor constructor is passed the SFSBXPCMap to be used. Currently, I'm serializing the applicationDeploymentBagKeyName so that the (per deployment) SFSBXPCMap can be looked up (https://github.com/scottmarlow/jboss-as/commit/bce74f9775efe37977e1ad2be8aac0ff3530cfcc#L2R93). Which class would we recreate the interceptors from? This also needs to work for passivation/activation as well. Do we have a passivation/activation test case already? I just pushed an update to https://github.com/scottmarlow/jboss-as/tree/cluster7 that includes a basic cluster failover test change to include an extended persistence context. Its not really ready to be shared yet though as I'm using a Hibernate 4.0.1 snapshot build.	1	1	https://issues.jboss.org/browse/AS7-2703
1790	AS7-2695	where does the lib/name1-name2/libxxx.so, name1? name2? module which module? Did you look to http://downloads.jboss.org/jbossnative//2.0.10.GA/jbossweb-native-2.0.10.jar at least the jbossweb code could load libraries from those location.	1	1	https://issues.jboss.org/browse/AS7-2695
1791	AS7-2695	"System.loadLibrary() will automatically look there first." What? How? and there is where?	1	1	https://issues.jboss.org/browse/AS7-2695
1792	AS7-2695	{quote} "System.loadLibrary() will automatically look there first." What? How? and there is where? {quote} System.loadLibrary() always uses the caller's class loader first to locate native libs. "There" is the "lib" directory in the module which executes that method. {quote} There are few technical reasons why having product/lib/${platform}-${arch}/native.so would create some issues. {quote} For #1, correct, you should either link statically or rely upon the operating system to provide dependencies. For #2, you have it backwards - by having arch-specific directories we allow a single distribution which works on any operating system. For #3, I don't see this as any different than an OS distributing Java JARs. We don't use the OS for this case, so we shouldn't use the OS for the JNI case either, especially given that a JNI library is so tightly bound to its JAR counterpart. If you want to do it this way then you certainly can, but we don't normally support the distribution of some components separately from the AS because it's a bit of a pain from the user's perspective. If we can find a way to get around that then fine.	1	1	https://issues.jboss.org/browse/AS7-2695

#	Requirement	Questions	Answered	Successfully Answered	URL
1793	AS7-2695	What does ${os}-${arch} expand into?	1	1	https://issues.jboss.org/browse/AS7-2695
1794	AS7-2695	I put the latest jboss-native into the jboss web module, using the naming convention outline here, but I don't see anything in the log telling its using the native connector? Is there anything that is supposed to spit out?	1	1	https://issues.jboss.org/browse/AS7-2695
1795	AS7-2695	What if you have multiple modules using the same native component? Since the .os/.dll can be loaded only once per VM instance second invocation will always fail because JNI methods have already been bound to a different class loader. Next what if multiple native components have the same dependency. Static linkage of dependencies means that dependency fix would cause fixing all components using it. Anyhow, setting LD_LIBRARY_PATH to a whatever location you have installed jboss-native/native before starting AS works equally well, so I see no reason why would this be something mandatory.	1	1	https://issues.jboss.org/browse/AS7-2695
1796	AS7-2695	Jean-Frederic - you said you tested this successfully on linux. I get the following after putting the native libraries in: <jboss-as>/modules/org/jboss/as/web/main/lib/$<os>-$<arch> 07:24:39,236 INFO [org.apache.catalina.core.AprLifecycleListener] (MSC service thread 1-3) The Apache Tomcat Native library which allows optimal performance in production environments was not found on the java.library.path: /usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/lib/amd64/server:/usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/lib/amd64:/usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/../lib/amd64:/usr/java/packages/lib/amd64:/usr/lib64:/lib64:/lib:/usr/lib I also noticed in my boot.log that os was Linux, and arch was amd64, so I tried linux-x86_64, Linux-amd64, and linux-amd64, but none of them worked for me. I did notice that linux-x86_64 is working for HornetQ though, but so far no luck in this getting picked up. I also looked at the schema for jboss web, and native-true is the default for the configuration, so I shouldn't need to do anything in the configuration xml. What was your setup that worked?	0	0	https://issues.jboss.org/browse/AS7-2695
1797	AS7-2695	{quote} What if you have multiple modules using the same native component? Since the .os/.dll can be loaded only once per VM instance second invocation will always fail because JNI methods have already been bound to a different class loader. Next what if multiple native components have the same dependency. Static linkage of dependencies means that dependency fix would cause fixing all components using it. Anyhow, setting LD_LIBRARY_PATH to a whatever location you have installed jboss-native/native before starting AS works equally well, so I see no reason why would this be something mandatory. Well, since everybody seems to be 'module' oriented why not creating a separate module for all native components a. Native component can be loaded only once per VM b. In that case they could be shared among different modules c. It would solve module redeployment cause they would be loaded by parent class loader. d. User could safely deploy his native component into that module and be sure it'll be loaded by a correct classloader {quote} What are you talking about? Modules can't be redeployed. Modules are loaded once per VM, that's it. Anyway, there are no parent class loaders in AS 7. None of this makes any sense... I think you must have some wrong assumption.	1	1	https://issues.jboss.org/browse/AS7-2695
1798	AS7-2695	{quote} What are you talking about? Modules can't be redeployed. Modules are loaded once per VM, that's it. Anyway, there are no parent class loaders in AS 7. None of this makes any sense... I think you must have some wrong assumption. {quote} OK, my bad, wrong assumption. So if they are fixed why is so important to have them inside module/lib directory? This is not technical reason, its just convention you are imposing.	1	1	https://issues.jboss.org/browse/AS7-2695
1799	AS7-2695	What do you meany by: "Either the library is there and it's loaded, or it's not and it's skipped" Loaded by whom and when? I still do not understand what are you talking about. AS works out of box on my Fedora using tomcat-native rpm without any setup. Are you saying we should refuse to load anything outside module/lib?	1	1	https://issues.jboss.org/browse/AS7-2695
1800	AS7-2695	Heretics should be burnt at the stake, don't you know that ? :)	1	1	https://issues.jboss.org/browse/AS7-2695
1801	AS7-2695	Mladen, Why should we have inconsistent mechanisms for jni library loading?	1	1	https://issues.jboss.org/browse/AS7-2695
1802	AS7-2695	David, Where is the code that intercepts System.loadLibrary	1	1	https://issues.jboss.org/browse/AS7-2695
1803	AS7-2695	Jean-Frederic forwarded me your explanation for findLibrary Thanks. Now, how can we make that not hard coded? It would be nice to have some configuration file which would be used to construct different layouts.	0	0	https://issues.jboss.org/browse/AS7-2695
1804	AS7-2676	Hello. Looks like it is not working as expected. Example: script.properties: test=aaa my-script.cli: /subsystem=security/security-domain=SomeDomain:add() /subsystem=security/security-domain=SomeDomain/authentication=classic:add(login-modules=[{"code"=>"org.picketbox.datasource.security.SecureIdentityLoginModule","flag"=>"required","module-options"=>[("username"=>"someUsername"),("password"=>"${test}")]}]) And the result is: <security-domain name="SomeDomain"> <authentication> <login-module code="org.picketbox.datasource.security.SecureIdentityLoginModule" flag="required"> <module-option name="username" value="someUsername"/> <module-option name="password" value="${test}"/> </login-module> </authentication> </security-domain> Example 2: my-script.cli: /subsystem=security/security-domain=${test}:add() Result is: <security-domain name="aaa" /> What am I missing here? It is working only when I change <resolve-parameter-values> to true in jboss-cli.xml.	1	0	https://issues.jboss.org/browse/AS7-2676
1805	AS7-2676	You are commenting on a resolved issue, I would suggest first a forum post, your question is "What am I missing here?" so haven't quite reached the point to confirm as a bug. If there is a bug here it will need raising under the WFCORE project.	0	0	https://issues.jboss.org/browse/AS7-2676
1806	AS7-2667	Scott, what's the type of the context on which you're invoking getChildTarget() ? Could you please post a larger code snippet ? Thank you.	0	0	https://issues.jboss.org/browse/AS7-2667
1807	AS7-2667	I would like to bind my remote object from external JVM to Jboss AS 7 and use its JNDI as central Naming Directory. How is that possible to create/get org.jboss.msc.service.StartContext from a standalone application?	0	0	https://issues.jboss.org/browse/AS7-2667
1808	AS7-2664	I need more convincing arguments here. '=' are appended after request parameters and node types. Is it missing somewhere else? ':' is a separator between the node path (address part) and the operation name. How would the CLI know when you finished the node path and want to start an operation? I mean all these are valid ':read-resource', '/subsystem=datasources:read-resource', /subsystem=datasources/data-source=myds:read-resource'. '(' is a start of the parameter list. It's not required if the operation doesn't have parameters or does have but can be executed w/o them. So, it's questionable. Adding it automatically could be annoying.	1	1	https://issues.jboss.org/browse/AS7-2664

#	Requirement	Questions	Answered	Successfully Answered	URL
1809	AS7-2664	There would be a difficulty here in using the Tab completion to open the optional arguments, such as adding a "(" character. For many of the existing operations, the operation name can be filled with Tab completion, but another operation contains the same string of words. For example: bq. [standalone@localhost:9999 subsystem=datasources] :read-resource If you then hit Tab, you get the following: bq. read-resource read-resource-description The read-resource operation, however, also has some optional arguments. If you open the "(" bracket: bq. [standalone@localhost:9999 subsystem=datasources] :read-resource(And then hit Tab to show the options: bq. include-runtime= proxies= recursive= This would make it difficult to differentiate between the user's intention to fill the name of the operation, or add arguments. Jim, what would you think about having a {{--help}} wrapper, as raised in [AS-1758|https://issues.jboss.org/browse/AS7-1758]? This would allow the user to use the existing tab compeltion to fill out the operation name, and then use the {{operation-name --help}} option to effectively shortcut to running the {{read-operation-description(name=NameOfOperation)}}. The advantage I see here is a nice compromise between the existing Tab completion, and being able to query the use of optional arguments without interupting the workflow of the existing operation (in other words, not having to undo the Tab completion of the operation name, and retype the read-operation-description, read it, and then type out the original operation again). Thoughts?	1	1	https://issues.jboss.org/browse/AS7-2664
1810	AS7-2663	Can you update this ticket with the duplicate issue.	1	0	https://issues.jboss.org/browse/AS7-2663
1811	AS7-2653	Emanuel, there's still an @Ignore("AS7-4653") test in this class. Was that an oversight?	1	0	https://issues.jboss.org/browse/AS7-2653
1812	AS7-2649	I'm reluctant to require the client of this API to add a jboss-modules dependency in the manifest. It would be equally wrong to generate a hard dependency on apache scout in a DUP. A possible solution would be to generate a dependency on an intermediary module (i.e. org.jboss.jaxr.provider) which reexports the impl and such provides a configurable indirection layer. Another option would be to add the value of the generated dependency as a config option to the jaxr subsystem.	0	0	https://issues.jboss.org/browse/AS7-2649
1813	AS7-2640	What if I make a typo can I up arrow and make a fix and "replay" the command like I can in a Linux/Dos Shell? Are these '\' added automatically on long lines? Did you look at the MySQL client which I think has behavior that is close to this?	1	0	https://issues.jboss.org/browse/AS7-2640
1814	AS7-2624	Is "bin/standalone.sh -v" sufficient for this?	1	1	https://issues.jboss.org/browse/AS7-2624
1815	AS7-2536	Another vote. Saving to alternative locations and changing the length of history were two in my topic spec for CLI docs. If you have a separate config file for CLI, what else might it cover?	1	1	https://issues.jboss.org/browse/AS7-2536
1816	AS7-2531	Rado, can you suggest a better wording for this error message?	1	1	https://issues.jboss.org/browse/AS7-2531
1817	AS7-2530	When this test case is launched, has the AS instance already been started with Byteman? http://community.jboss.org/wiki/ABytemanTutorial	1	1	https://issues.jboss.org/browse/AS7-2530
1818	AS7-2480	brian, you commented the @Ignore some times ago (https://github.com/jbossas/jboss-as/commit/53c5582650180fa1c0d167c3b07afc0ba9a90118). Have you seen these failures again?	1	1	https://issues.jboss.org/browse/AS7-2480
1819	AS7-2469	Hi all, does this change mean the end for sub-profiling idea. What a pity! A profile extending by means of sub-profiles would be a very useful approach. Imagine hundred applications running in the same domain, which would be using the same default profile. But each application would like to have e.g. different logging configuration: levels, appenders etc. Without sub-profiling we need to create a separate profile for all applications requiring even small differences to the default profile and these profile will have up to 99% the same content as default. Assume we did so. On a profile update we have to change all hundreds profiles. That's why we are unhappy to resign sub-profiling idea. Regards	1	1	https://issues.jboss.org/browse/AS7-2469
1820	AS7-2437	I want to lock down requirements for this. Can we confirm that a maven command that removes the code is ok? You would call it like: {code}mvn clean -Pblank{code} and we could offer this as an option when generating: {code} mvn archetype:generate \ -DarchetypeArtifactId=jboss-javaee6-webapp \ -DarchetypeGroupId=org.jboss.spec.archetypes \ -DarchetypeVersion=7.0.2.Final -Dblank=true {code} (see the last line). Burr, please approve this, and I will add it.	0	0	https://issues.jboss.org/browse/AS7-2437
1821	AS7-2419	can you add the sample deployment?	1	1	https://issues.jboss.org/browse/AS7-2419
1822	AS7-2415	Jakiran any thoughts on this?	0	0	https://issues.jboss.org/browse/AS7-2415
1823	AS7-2392	What happens is that the JSR88 layer generates a tmp file and passes the URL to which to the AS7 management API. During the building of the ADD step an InputStream for that URL is opened and stored as content to the ADD step. When deployment is done, the JSR88 layer attempts to delete the tmp file, which fails on w2k8 presumably because the associated input stream is not closed. See the client [test log file|https://hudson.qa.jboss.com/hudson/view/JBossOSGi/job/jboss-as7-as2392/ws/testsuite/integration/smoke/target/workdir/target/test.log] and search for deployment-app.ear. {code} 03:19:18,396 INFO [org.jboss.as.ee.deployment.spi] (Thread-179) JBAS016101: End deploy: [target=http://org.jboss.as.ee.deployment/jsr88?targetType=as7,parent=null,type=ear,id=file:/C:/DOCUME~1/hudson/LOCALS~1/Temp/deployment-app.ear] 03:19:18,397 WARN [org.jboss.as.ee.deployment.spi] (Thread-179) JBAS016103: Cannot delete deployment file C:\DOCUME~1\hudson\LOCALS~1\Temp\deployment-app.ear, will be deleted on exit {code} This particular test fails because it tries to deploy the same EAR twice, but cannot use the same tmp file name. In branch [as2392|https://github.com/tdiesler/jboss-as/tree/as2392] I implemented a workaround that assigns a different tmp file name when the tmp file already exists and cannot be deleted. The underlying issue IMHO is however in the AS7 deployment layer and its handling of input streams associated with user provided URLs. This should be a general issue for all management clients running on w2k8	1	1	https://issues.jboss.org/browse/AS7-2392
1824	AS7-2380	How do we distribute jars that are not intended to be used by the server? Should they still go into the modules hierarchy?	1	1	https://issues.jboss.org/browse/AS7-2380
1825	AS7-2361	Also, how do you do external JNDI lookups? Or what is the recommended way?	1	1	https://issues.jboss.org/browse/AS7-2361
1826	AS7-2360	Shouldn't this happen by default?	1	1	https://issues.jboss.org/browse/AS7-2360
1827	AS7-2360	"The command line switches do not appear to be going into the server or boot logs at all. It does scroll by at startup, but is not durably stored for support to have a chance to trouble shoot." Isn't this clear....if not.. Then currently in EAP 5/AS 5 the command line switches are written to the log, this seems like a regression and hurts supports ability to quickly ascertain what is going on in an environment. Do you not agree this is a regression?	0	0	https://issues.jboss.org/browse/AS7-2360
1828	AS7-2360	I am not even sure what you are asking..by default out of the box..java_opts should to into the boot server log....is that clear enough?	0	0	https://issues.jboss.org/browse/AS7-2360
1829	AS7-2360	"By default out of the box" really needs to be defined. The option is already there as a TRACE level message. We can add the JAVA_OPTS to print, as David suggests, as a DEBUG message like the system properties do. We would likely not want it at any lower level than that. Is that what you are looking for?	0	0	https://issues.jboss.org/browse/AS7-2360

#	Requirement	Questions	Answered	Successfully Answered	URL
1830	AS7-2353	Is this available in the console? I did not see anything that mentioned https in the drop downs around connectors....so I am confused...	1	0	https://issues.jboss.org/browse/AS7-2353
1831	AS7-2350	But shouldn't there be ways to edit view the settings in it, or are the "hidden" in some of the other metaphors that are in the current console? I would think the values of the host.xml need to be exposed somehow, or am I just missing something. Please help me understand why host settings should not be exposed in the console... For example the hosts, IP address, management port, creating serves, ie related to the cloning comment earlier....I do not think we can discount host file "editing" in spirit, but I of course do agree we should be editing XML in the console, but values need to be exposed.	0	0	https://issues.jboss.org/browse/AS7-2350
1832	AS7-2345	Do you mean they should be within the table?	1	1	https://issues.jboss.org/browse/AS7-2345
1833	AS7-2344	What is the branch/tag for this issue?	0	0	https://issues.jboss.org/browse/AS7-2344
1834	AS7-2339	Do you mean two instances of the same server configuration? or simply duplicating a given server configuration under a different name?	1	1	https://issues.jboss.org/browse/AS7-2339
1835	AS7-2336	I personally like that we have these services marked as lazy. After all why enable those services if nothing uses it? What's the advantage of making these eager?	0	0	https://issues.jboss.org/browse/AS7-2336
1836	AS7-2336	I am a server admin, I do not have a war file, how do I test out...see a cluster....in the past I just did about 10 mins of stuff and then I had a cluster. With AS 7.X I would have to find some docs, find a setting that is not documented, is not in the console, and then I am kinda lost. From a end user perspective out of the box, changing behavior that is several years old is challenge for people being great quickly.	1	1	https://issues.jboss.org/browse/AS7-2336
1837	AS7-2334	What does this relate to? Can you elaborate?	1	1	https://issues.jboss.org/browse/AS7-2334
1838	AS7-2327	This really should be a separate config though. The HTTP API != management console. It should be possible to have the former without the latter. For example if you want to ensure that your admins use JON.	1	1	https://issues.jboss.org/browse/AS7-2327
1839	AS7-2324	Can you provide a list of contents that should into the report?	0	0	https://issues.jboss.org/browse/AS7-2324
1840	AS7-2320	What do you mean interim values?	0	0	https://issues.jboss.org/browse/AS7-2320
1841	AS7-2318	That sounds good to me. Does that would mean "Log Level" combo box would have an empty or none entry?	1	1	https://issues.jboss.org/browse/AS7-2318
1842	AS7-2318	{quote} Does that would mean "Log Level" combo box would have an empty or none entry? {quote} Doug, I haven't checked how the admin console displays that information. But it would be the same as what it would display for any other handler, when the threshold (which is an optional field) is not set.	1	1	https://issues.jboss.org/browse/AS7-2318
1843	AS7-2317	Curent problem or challenge is the embedded logger editor only allows for the creation/managing of one logging results file. How do I create multiple log files that are specific to needs. One request from the field is how do I log security related events in one specific file. This is a big deal for security conscious use cases ie like in government agencies. Hope that makes more sense.	1	0	https://issues.jboss.org/browse/AS7-2317
1844	AS7-2280	Is this still relevant? Cache configuration can be modified by the management API, is there anything else that is required to resolve this issue?	1	1	https://issues.jboss.org/browse/AS7-2280
1845	AS7-2272	Isn't this better explained in a README? Where do you draw the line? Should we have 100 XML files that existed in AS6 with a message that says "use this standalone.xml instead"? Should we have twiddle.sh launch jboss-admin.sh? So this will either be inconsistent, or we will have a ridiculous amount of clutter	1	1	https://issues.jboss.org/browse/AS7-2272
1846	AS7-2272	What came out of a quick but pretty thorough discussion of this at the usability workshop is: I'm an AS7 newbie, perhaps a JBoss AS newbie, but not at all a "try out new stuff" newbie. I download, unzip and do one of two things: 1) Read README.txt in the root 2) or, since it's a server I downloaded, it should start and do something. It's a web server so it probably has an http accessible welcome page with helpful information on it. So I look in bin and try to run the start script. A start script usually has a name that indicates it starts or runs something, so that's what I look for. The goal is to immediately get such people on the right path, without forcing them to right off the bat go download docs to figure out what to do. (IMO any output from the script should reference the README.txt, not "See the documentation...") The README.txt should include a brief explanation of running a standalone server versus running a managed domain. Any run.sh/bat should not actually attempt to launch a server, because the configuration and behavior of the server will be different from previous AS releases.	1	1	https://issues.jboss.org/browse/AS7-2272
1847	AS7-2239	{noformat} java.lang.IllegalArgumentException: Can not set java.net.URL field com.sun.ts.tests.ejb30.bb.session.stateless.annotation.resource.ResourceFieldBean.url to java.lang.String {noformat}	1	1	https://issues.jboss.org/browse/AS7-2239
1848	AS7-2239	Will this be fixed today? If not, please push to CR1.	1	1	https://issues.jboss.org/browse/AS7-2239
1849	AS7-2222	What is this actually used for? The issue is, we don't have References for these objects. We may need to create references for this, but I am curious how the reference is used by the Referencable objects.	1	1	https://issues.jboss.org/browse/AS7-2222
1850	AS7-2179	Maybe hide inherited operations by default? Actually I find it counter-intuitive that I have to specify operations=true to find out about the local operations. Maybe read-resource-description should include local operations by default and then you also have :read-resource-description(inherited-operations=true) or something like that...	0	0	https://issues.jboss.org/browse/AS7-2179
1851	AS7-2172	Heiko, can this be scheduled for 7.1.1? Thanks.	1	1	https://issues.jboss.org/browse/AS7-2172
1852	AS7-2169	{quote} 1. Call System.getenv("X") and if it exists, use it as expression value 2. else, call System.getProperty("env.X") and if it exists, use it as expression value {quote} Isn't it usually the other way around? Developers usually use the system properties to override the environment entries (for example by passing -Denv.X). Would it be more consistent if we did: 1. Call System.getProperty("env.X") and if it exists, use it as expression value 2. else, call System.getenv("X") and if it exists, use it as expression value	0	0	https://issues.jboss.org/browse/AS7-2169
1853	AS7-2164	Stuart, I'm creating CdiAnnotationProcessor, CdiAnnotations and CdiDeploymentMarker classes that will act as Jaxrs equivalent classes: JaxrsAnnotationProcessor, JaxrsAnnotations and JaxrsDeploymentMarker respectively. The differnce will be of course in the CdiAnnotations that will contain the CDI annotations of JSR 299. Is that right?	1	1	https://issues.jboss.org/browse/AS7-2164
1854	AS7-2127	RESTEasy 2.2.3.GA is now released. Does stuart want to bump the version?	0	0	https://issues.jboss.org/browse/AS7-2127
1855	AS7-2115	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-2115
1856	AS7-2113	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-2113
1857	AS7-2101	Can this be resolved?	1	1	https://issues.jboss.org/browse/AS7-2101

#	Requirement	Questions	Answered	Successfully Answered	URL
1858	AS7-2096	I have a hard time getting explanations and details ... So it was the opposite setting then ;) I am not sure about the usefulness about 100 as the default. It has been used because it is the httpd default, but I don't really see how it could help prevent bad things from happening. I'll review that, because I find it odd. On the other hand, the default is relatively big, which implies a low impact. Generally, if this is about adding a setting which would only be useful for configs which are bad in production, then why should it be put in ? You have a means to configure it as is.	1	1	https://issues.jboss.org/browse/AS7-2096
1859	AS7-2074	[--controller=host:port] [--connect] [--file=file_path] [--commands=command_or_operation1,command_or_operation2...] [--command=command_or_operation] [--user=username --password=password] --help (-h) - prints (this) basic description of the command line utility. --version - prints the version info of the JBoss AS release, JVM and system environment. --controller - the default controller host and port to connect to when --connect option. (described below) is specified or when the connect command is issued w/o the arguments. The default controller host is localhost and the port is 9999. --connect (-c) - instructs the CLI to connect to the controller on start-up (to avoid issuing a separate connect command later). --file - specifies a path to a file which contains commands and operations (one per line) that should be executed (in a non-interactive mode). The CLI will terminate the session immediately after the last command has been executed or if some command or operation failed. --command - specifies a single command or an operation that should be executed in the CLI session. The CLI will terminate the session immediately after the command or the operation has been executed. Note: --command argument is optional in a sense that any word (or phrase without whitespaces in it) will be assumed to be a command (or an operation). --commands - specifies a comma-separated list (the list must not contain whitespaces) of commands and operations that should be executed in the CLI session. The CLI session will be automatically terminated as soon as the last command or operation has been executed or after the first error. Note: --commands argument is optional in a sense that any comma-separated list at the end of the argument list will be assumed to be the list of commands and operations. --user - if the controller requires user authentication, this argument can be used to specify the user name as a command line argument. If the argument isn't specified and the authentication is required the user will be prompted to enter the user name when the connect command is issued. --password - specifies the password for authentication while connecting to the controller as a command line argument. If the argument isn't specified and the authentication is required the user will be prompted to enter the password when the connect command is issued. During the command line session for a list of commands available in the current context execute help --commands The resulting listing may depend on the current context. E.g. some of the commands require an established connection to the controller (standalone or domain). These commands won't appear in the listing unless the connection has been established. Other commands may depend on the availability of specific subsystems. E.g. if the messaging subsystem is not available, messaging-related commands will not be listed. Here are some of the most basic supported commands: cn (or cd) - change the current node path to the argument; connect - connect to the specified host and port; deploy - deploy an application; help (or h) - print this message; history - print or disable/enable/clear the history expansion. ls - list the contents of the node path; pwn (or pwd) - prints the current working node; quit (or q) - quit the command line interface; undeploy - undeploy an application; version - prints the version and environment information. For a more detailed description of a specific command, execute the command with '--help' as the argument. Tab-completion is supported for the commands, just press the tab key to start. Operation requests start with './' or '/' and follow the format: [node-type=node-name (, node-type=node-name)*] : operation-name ['('[name=value [, name=value]*]')'] e.g. /subsystem=web/connector=http:read-attribute(name=protocol) If the operation request doesn't require a node path then the request can start with ':' followed by an operation name and the property list if	0	0	https://issues.jboss.org/browse/AS7-2074
1860	AS7-2053	Could we at least update to 1.7.3? Version which we distribute is not compatible with the one Hibernate Search 4 uses, leading to problems with applications wishing to use JAX-RS and HSEARCH together.	1	1	https://issues.jboss.org/browse/AS7-2053
1861	AS7-2052	What do you think about this John?	1	1	https://issues.jboss.org/browse/AS7-2052

1862	AS7-1994	discussion, and our needs. I'm sending this email mainly as reminder for me to discuss these points with Brian after his and mine vacations regard S. * pferraro_ (~pferraro@adsl-99-97-30-7.dsl.wlfrct.sbcglobal.net) has joined #jboss-as7 <emuckenhuber_> maeste: pong * emuckenhuber_ is now known as emuckenhuber <maeste> emuckenhuber_: Hi, I'm trying to implement our metrics. Just to recall we need this issue Brian has resolved to implement them: AS7-772 <jbossbot> jira [AS7-772] Allow operation handlers to register child ModelNodeRegistrations [Resolved (Done) Feature Request, Critical, Brian Stansberry] https://issues.jboss.org/browse/AS7-772 <maeste> emuckenhuber: what I'm trying to do is: * bbrowning (~bbrowning@redhat/jboss/bbrowning) has joined #jboss-as7 * ChanServ gives voice to bbrowning <maeste> emuckenhuber: https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78 <jbossbot> git [jboss-as] d08f758.. Stefano Maestri stats prototype <maeste> emuckenhuber: but I'm getting this exception <maeste> emuckenhuber: https://gist.github.com/1111413 <maeste> emuckenhuber: have you an idea what I'm doing wrong? <emuckenhuber> maeste: yes <maeste> emuckenhuber: sorry to ask you for a Brian's issue, but AFAIK Brian is away until 11 August <maeste> emuckenhuber: cool <emuckenhuber> maeste: basically you would need to register the handlers inside that operation <maeste> emuckenhuber: yup, moreover after a service activated by this operation has been started <maeste> emuckenhuber: it's the reason because I've added a listener <maeste> emuckenhuber: line 91 <emuckenhuber> maeste: no, i'm saying operations have to be registered as part of operation handler itself <emuckenhuber> which is basically the exception <maeste> emuckenhuber: you have lost me <emuckenhuber> actually all operation handlers should be registered as part of the Extension <maeste> emuckenhuber: oki, but it's what AS7-772 try to solve <jbossbot> jira [AS7-772] Allow operation handlers to register child ModelNodeRegistrations [Resolved (Done) Feature Request, Critical, Brian Stansberry] https://issues.jboss.org/browse/AS7-772 <maeste> emuckenhuber: at least AFAI understood <maeste> emuckenhuber: this is our original problem <emuckenhuber> hmm, imho that does not make any sense <maeste> emuckenhuber: we have to register operation (metics in this case) after a datasource have been created <emuckenhuber> well perhaps a bit <emuckenhuber> anyway - you would have to register that as part of populateModel() * asoldano is now known as asoldano_lunch <maeste> emuckenhuber: because metrics are dynamic for us and need a concrete instance of ResourceAdapter/DS <emuckenhuber> yeah, but it basically does not really comply with how the management model works <maeste> emuckenhuber: there was a discussion on ML in May about that, and then Brian created 772 <emuckenhuber> you remember the subject? <maeste> emuckenhuber: discussion subject was "access to the ModelNodeRegistration during handling of an operation and during deployment" * kevinpollet (~kevinpoll@217.112.54.72) has joined #jboss-as7 * abstractj (~abstractj@186.202.49.66) has joined #jboss-as7 * hbraun (~hbraun@ppp-93-104-112-69.dynamic.mnet-online.de) has joined #jboss-as7 * hbraun has quit (Client Quit) * miclorb_ has quit (Remote host closed the connection) <emuckenhuber> maeste: hmm, ok that's an issue then <maeste> emuckenhuber: so, basically you are saying it's not implented <maeste> emuckenhuber: oki, I'll put down in my todo list <maeste> emuckenhuber: better to wait for Brian, since I've discussed about that a lot with him <emuckenhuber> maeste: well i would not say 'not implemented' - we actually have a check to prevent exactly this <maeste> emuckenhuber: oki much stronger <maeste> emuckenhuber: <emuckenhuber> maeste: well perhaps you want to do a single operation handler which gives you all the metrics for now? <emuckenhuber> not sure how critical that is for the console work <maeste> emuckenhuber: not possible, it was already done, but it doesn't work <emuckenhuber> why? <maeste> emuckenhuber: or better it works, but not as expected <maeste> emuckenhuber: because sometimes some metrics are not available <maeste> emuckenhuber: to be	1	1	https://issues.jboss.org/browse/AS7-1994
1863	AS7-1994	For the Datasource case, does StatisticsPlugin have a field that forms a natural key? Looking at https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78, the concern I have is it appears you are modifying a generic resource registration by adding instance-specific metrics. So, the management interface for /subsystem=datasources/datasource=* has one set of attributes and ops, /subsystem=datasources/datasource=myDS has another set (a superset if we could make that work) and /subsystem=datasources/datasource=anotherDS has a 3rd set. It's almost like an abstract superclass and concrete subclasses. That might be possible, but I don't much like the idea that a resource's definition changes. Something like /subsystem=datasources/datasource=myDS/statistics-provider=oracle and /subsystem=datasources/datasource=myDS/statistics-provider=postgres sounds nicer. The statistics-provider level works like "subsystem" works.	1	1	https://issues.jboss.org/browse/AS7-1994
1864	AS7-1963	Can anyone comment on how jboss (or the webapp in question) knows to use the valve defined in jboss-web.xml? how does it know it is any different from any non-security related valve?	0	0	https://issues.jboss.org/browse/AS7-1963

#	Requirement	Questions	Answered	Successfully Answered	URL
1865	AS7-1932	IST) Jaikiran: ? (09:47:50 IST) jbossbot: jira [AS7-1934] EJB client context configuration and management ops [Open (Unresolved) Sub-task, Blocker, jaikiran pai] https://issues.jboss.org/browse/AS7-1934 (09:48:32 IST) kpiwko_afk is now known as kpiwko (09:49:13 IST) dmlloyd: sure (09:49:47 IST) Jaikiran: a part of it ties into AS7-1932 (09:49:49 IST) jbossbot: jira [AS7-1932] Remoting outbound connection service [Open (Unresolved) Sub-task, Blocker, Unassigned] https://issues.jboss.org/browse/AS7-1932 (09:50:03 IST) dmlloyd: yeah there's two pieces (09:50:19 IST) dmlloyd: basically we first need a way to configure outbound connections in the remoting subsystem configuration (09:50:53 IST) dmlloyd: they need to be named, and have some base set of configuration parameters to facilitate authentication (think data sources) as well as configuring the socket itself (09:51:14 IST) dmlloyd: the connections would be established in the context of a source endpoint so they would reside within the endpoint configuration (09:51:41 IST) dmlloyd: then our EJB client configuration in the EJB subsystem would declare client contexts and have a listing of connections to associate with them (09:52:36 IST) dmlloyd: an important note though - the connection service lifecycle cannot be tied to the connection lifecycle (09:52:38 IST) Jaikiran: so ultimately the deployment descriptor would just be a named ref to that connections (09:52:45 IST) dmlloyd: right (09:53:02 IST) Jaikiran: isn't it the other way round? (09:53:16 IST) dmlloyd: it's both ways around (09:53:23 IST) Jaikiran: i mean the connection is destroyed on service destroy? (09:53:25 IST) dmlloyd: a service lifecycle cannot be controlled by external factors (09:53:41 IST) dmlloyd: so it can't wait for the connection to be up before starting for example (09:53:47 IST) dmlloyd: and killing the connection cannot bring down the service (09:54:07 IST) Jaikiran: oh ok i see what you mean (09:54:25 IST) Jaikiran: so typically, the named ref dependency doesn't guarantee a connection that is UP (09:54:39 IST) dmlloyd: right (09:54:55 IST) dmlloyd: we need a way to get a connection from the ref if it's up - probably best to return an IoFuture<Connection> always (09:55:05 IST) dmlloyd: the connection is either up or in the process of being created/restored (09:55:21 IST) dmlloyd: and anything which uses it has to be able to go back for a new connection in the event of a failure (09:55:38 IST) dmlloyd: this will take some thinking when it comes to EJBReceiver since we don't want the EJBReceiver disappearing (09:55:47 IST) dmlloyd: also, we should have a way to designate a client context as the "default" which is applied to deployments if none is specified for that deployment (09:55:55 IST) dmlloyd: (once we're at that part) (09:56:08 IST) lfryc [~lfryc@cst-prg-121-2.cust.vodafone.cz] entered the room. (09:56:35 IST) Jaikiran: although we don't "configure" the default context we do have the necessary setup ready to allow that default to be made available to the deployments currently (09:56:47 IST) stliu left the room (quit: Quit: Leaving). (09:57:11 IST) Jaikiran: btw, i was looking at the remoting subsystem xsd and it appears that the source endpoint is just 1? (09:57:24 IST) Jaikiran: i mean all connections would thus be in the scope of the endpoint? (09:58:00 IST) dmlloyd: yeah I'm not sure how it's set up, but one endpoint per VM is a reasonable policy (09:58:23 IST) Jaikiran: ok (09:58:41 IST) Jaikiran: in terms of specifying the destination for those connections (09:58:56 IST) Jaikiran: i believe we can rely on the outbound-socket-binding support that we added recently (09:59:04 IST) Jaikiran: which allows for specifying a host and a port (09:59:16 IST) Jaikiran: is there more that needs to be considered? (09:59:17 IST) dmlloyd: yes and no - remoting accepts a URI for the destination (09:59:34 IST) dmlloyd: which includes protocol as well, and basically supports anything a URI supports (09:59:57 IST) dmlloyd: for example, "local:" is a valid destination (10:00:05 IST) Jaikiran: so the outbound-client-socket would just be one type of the destination then (10:00:12 IST) dmlloyd: at some point "http:" may be as well (10:00:46 IST) dmlloyd: yeah we'd need some way of referencing it (10:01:25 IST) dmlloyd: e.g. "theproto://#{host}:#{port}/blah?foo" (10:01:31 IST) dmlloyd: which is really ugly :) (10:01:36 IST) dmlloyd: but I can't think of anything better (10:01:43 IST) dmlloyd:	1	1	https://issues.jboss.org/browse/AS7-1932
1866	AS7-1928	Hi David, I think you might misunderstand my intention. What I'm trying to do is to *access the resources in META-INF/ in a JAR (defined as a module) from a class in that same JAR*. I tried tweaking the module.xml and jboss-deployment-structure.xml in various ways but no luck. Did I miss anything?	1	1	https://issues.jboss.org/browse/AS7-1928
1867	AS7-1928	Are you using the current classes class loader to try and access META-INF or are you trying to use the TCCL?	1	0	https://issues.jboss.org/browse/AS7-1928
1868	AS7-1920	So how did this end up working ? I would expect myfile.xml myfile.xml.dodeploy to work or how ?	1	1	https://issues.jboss.org/browse/AS7-1920
1869	AS7-1920	okey - is there a jira for Part 2 ? btw. does this mean .xml is special and .dodeploy will just be ignored ? i.e. we currently apply this to all files we deploy (.jar, .war, .ear, .xml etc.) and just wondering if that will be hurtful for this kind of deploys ? (I assumed these would be symmetric, but sounds like they aren't)	1	1	https://issues.jboss.org/browse/AS7-1920
1870	AS7-1917	Wouldn't it be much better solution to make it possible to set URIEncoding and useBodyEncodingForURI on the connector element instead of using system properties? Connector element: <Connector name="http" ... URIEncoding="UTF-8" useBodyEncodingForURI="true"/> Like it's done for JBossWeb 3.0.x http://docs.jboss.org/jbossweb/3.0.x/config/http.html http://docs.jboss.org/jbossweb/7.0.x/config/http.html System properties: org.apache.catalina.connector.URI_ENCODING org.apache.catalina.connector.USE_BODY_ENCODING_FOR_QUERY_STRING	1	0	https://issues.jboss.org/browse/AS7-1917
1871	AS7-1917	Okay. So is it official to use these properties I've found in the code? Are they documented anywhere?	1	0	https://issues.jboss.org/browse/AS7-1917
1872	AS7-1908	Planning to make a management function available: {noformat} /subsystem=jgroups/stack=udp:export-native-configuration {noformat} which returns a String containing the XML JGroups configuration. Would that satisfy this request?	1	1	https://issues.jboss.org/browse/AS7-1908
1873	AS7-1893	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	0	0	https://issues.jboss.org/browse/AS7-1893
1874	AS7-1893	Richard, there are integration clustering tests which use jdbc cache store and their config (https://github.com/jbossas/jboss-as/blob/master/testsuite/integration/clust/src/test/config/ispn/cache-container-with-jdbc-store.xml) is currently out of date. Can you please fix this?	1	1	https://issues.jboss.org/browse/AS7-1893
1875	AS7-1893	One more thing.. I'm looking at https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L0R589 and https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L1R539 and I see a problem. When we have XSD types for all three jdbc cache stores (string-keyed-jdbc-store, binary-keyed-jdbc-store and mixed-keyed-jdbc-store), I would suppose that when I use mixed-keyed-jdbc-store, I can really only create mixed jdbc cache store from it. However, from the code logic it seems that when a user specifies mixed-keyed-jdbc-store and inside that only binary-keyed-table, they will actually get binary jdbc cache store (the same for string-based one when they specify only string-keyed-table). I would suppose here that the XSD will say that binary-keyed-table has minOccurs=1 and maxOccurs=1 as well as string-keyed-table (they have "0" now): https://github.com/rachmatowicz/jboss-as/blob/9fed5aad5faacde351966d15f117b04ebf16b896/build/src/main/resources/docs/schema/jboss-as-infinispan_1_2.xsd#L589 WDYT?	1	1	https://issues.jboss.org/browse/AS7-1893
1876	AS7-1833	Hi All Does this bug really fix in EAP 6.1?I also had the bug on JBoss EAP6.1 final version. My environment is :Linux 5.3 + JBoss EAP 6.1.0 + JDK 1.6.0_26 Here are the log : [standalone@localhost:9999 /] :reload Communication error: java.util.concurrent.ExecutionException: Operation failed: Operation failed: Channel closed [disconnected /] Please correct me if I have any misunderstanding. Regards Xin	1	1	https://issues.jboss.org/browse/AS7-1833
1877	AS7-1830	Emanuel, this ties in with the "flattening" thread we had with Heiko Rupp. Where do things stand with that? Basically a VALUE_TYPE for an interface criteria attribute is impossible if we allow arbitrary nesting.	0	0	https://issues.jboss.org/browse/AS7-1830

#	Requirement	Questions	Answered	Successfully Answered	URL
1878	AS7-1809	Just curious - Can't this library jar (of any version of your choice) be just packaged within the application and start using it? Or is JBoss AS adding this as an implicit dependency to your deployments (which would require some additional jboss-deployment-structure.xml configurations, to use a different version of that module)?	0	0	https://issues.jboss.org/browse/AS7-1809
1879	AS7-1807	The parts that we customized for EAP 6 so far include: (1) The log messages (JBPAPP-6831) (2) The welcome pages (JBPAPP-6838) (3) The admin console - logos, colors, etc (JBPAPP-7111, JBPAPP-7031) (4) The config profiles (JBPAPP-7032) A single jar containing this content/configuration sounds like a good idea. Could this be configured by changing standalone.conf and domain.conf?	0	0	https://issues.jboss.org/browse/AS7-1807
1880	AS7-1807	David - does your suggestion avoid the .bat/.sh scripts being the place this is defined ? See above why we should not make .bat/.sh's the place to control product disto settings. basically any settings controlled by .bat/.sh is ignored by any launches done via IDE's, arquillian and other "jboss launchers" because of the non-portability of control over processes started via .bat/.sh.	1	1	https://issues.jboss.org/browse/AS7-1807
1881	AS7-1796	Is this happening by Final? If not please punt to 7.1.1	1	1	https://issues.jboss.org/browse/AS7-1796
1882	AS7-1786	Hi Kabir, What is the current status of this on master? Thanks, David	1	1	https://issues.jboss.org/browse/AS7-1786
1883	AS7-1784	Any update? Should this be reassigned?	0	0	https://issues.jboss.org/browse/AS7-1784
1884	AS7-1782	Isn't more clear with subresources? See AS7-923, and let me know what other informations you need	0	0	https://issues.jboss.org/browse/AS7-1782
1885	AS7-1781	Marcus, can you provide the relevant information.	0	0	https://issues.jboss.org/browse/AS7-1781
1886	AS7-1781	Thanks Marcus, that's already a good starting point. Can you provide some examples for " /subsystem=security/security-domain=other:add()"?	1	1	https://issues.jboss.org/browse/AS7-1781
1887	AS7-1781	Can someone update the resource description? it's still empty and practically not usable for us to move forward. although some examples for the child resources would be good.	0	0	https://issues.jboss.org/browse/AS7-1781
1888	AS7-1780	Hi Paul, What is the status on this one?	1	1	https://issues.jboss.org/browse/AS7-1780
1889	AS7-1780	Richard, will there be a possibility to change the infinispan subsystem for the whole domain or server group so that all servers in the domain/server group are affected? I'm just trying to find out what we'll be able to test around EDG running in the domain mode. Thanks	1	1	https://issues.jboss.org/browse/AS7-1780
1890	AS7-1776	I think this is already done for the English language - the only thing that needs to be done is the German translation (the message bundle contains 'TRANSLATE ME' messages). Or did I miss anything?	1	1	https://issues.jboss.org/browse/AS7-1776
1891	AS7-1772	Where does this stand? Perhaps it's done? Andy did some commits a week or so back that may have wrapped it up. Either way, please let QE (Rajesh) know where it stands, if you haven't already.	0	0	https://issues.jboss.org/browse/AS7-1772
1892	AS7-1772	Is the configuration that is needed for this in the XML schema? I opened another JIRA against the XML schema because I couldn't find it there? Isn't that missing too, which would be critical, since they wouldn't be able to configure it.	0	0	https://issues.jboss.org/browse/AS7-1772
1893	AS7-1772	Hi Andy, seems like this functionality is done and AS7 is able to handle HQ in collocated topology. Is it truth? Thank you, Mirek	1	1	https://issues.jboss.org/browse/AS7-1772
1894	AS7-1772	Hi, I've managed to start AS7/HQ in collocated topology. Great work. :-) There is only question whether jms client is able to failover to backup when remote jndi is not ready yet. Do we have any update? Thank you, Mirek	0	0	https://issues.jboss.org/browse/AS7-1772
1895	AS7-1772	Hi Andy, I've noticed that '<ha>true</ha>' cannot be parsed in configuration. Could you add it please? Thank you, Mirek	0	0	https://issues.jboss.org/browse/AS7-1772
1896	AS7-1772	Can this be closed? I believe the HA issue is fixed.	0	0	https://issues.jboss.org/browse/AS7-1772
1897	AS7-1752	The second issue... {quote} 2) The launch script directly references the standalone/configuration/logging.properties and standalone/log/boot.log files. So, if those files aren't present the server doesn't boot properly, and both, e.g. serverA and serverB will use the standalone/log/boot.log as their boot log file (where logging goes until the boot process starts the logging subsystem.) {quote} ...is still present in 7.1.2.Final when using Mac OS X. Should i create a new Jira Issue on this or can someone reopen this one?	0	0	https://issues.jboss.org/browse/AS7-1752
1898	AS7-1751	The idea would be the following to have the standalone.xml having ${VAR} for every variable that makes sense to be defined at run-time. standalone.conf - is the configuration file not only for standalone.sh BUT can also for the standalone.xml via environment variables. Then one would have to take care to configure one place and it get's pushed to the xml file. AS7 already overwrites the standalone.xml file every time it starts at min. It also provides a history. So it can be a 'nice' fit - in my opinion. Think a bash shell managing an xml file	0	0	https://issues.jboss.org/browse/AS7-1751
1899	AS7-1735	I tried to set the cause of the StartException but it is not taken into account anyway in its toString() method. I checked the code and if I understand it correctly, it is up to the messaging system to provide a description with the error inside the StartException. Wouldn't it be simpler to let StartException print out the inner cause l10ned message (if there is one) rather than do this many times in the messaging subsystem (and likely other systems)?	1	1	https://issues.jboss.org/browse/AS7-1735
1900	AS7-1730	Pavel, can you check AS7-2616 and see if it satisfies your requirements?	0	0	https://issues.jboss.org/browse/AS7-1730
1901	AS7-1730	I'm closing it, it is verified and resolved. Currently available impl. satisfies my requirements.	1	1	https://issues.jboss.org/browse/AS7-1730
1902	AS7-1724	Is this a good candidate for "Assign to Community?"	1	1	https://issues.jboss.org/browse/AS7-1724
1903	AS7-1709	Does this issue include remote JNDI look up for JMS objects (queues, factories ...)?	1	0	https://issues.jboss.org/browse/AS7-1709
1904	AS7-1701	I don't understand the description. What would you like to see as the result of jboss-admin.sh --help? Would what is printed as the result of "jboss-admin.sh help" do?	0	0	https://issues.jboss.org/browse/AS7-1701
1905	AS7-1674	According to the JAX-RS spec there are three ways to activate a restful endpoint. These three methods are specified in the JAX-RS 1.1 specification in section 2.3.2. 1) Not including an application class and using web.xml as described above 2) subclassing javax.ws.rs.core.Application and using web.xml 3) subclassing javax.ws.rs.core.Application and using the ApplicationPath annotation. See https://docs.jboss.org/author/display/AS7/JAX-RS+Reference+Guide The idea that resteasy should be activated if there happens to be a JAX-RS annotation in the deployment does not really work. For one thing, where would you map it to? For another, this means that if a 3rd party app library includes a class with a JAX-RS annotation then resteasy would be activated wether you wanted it or not.	0	0	https://issues.jboss.org/browse/AS7-1674
1906	AS7-1666	What are you interested in seeing? That was a feature request to list it like that. BTW, before opening new issue, consider discussing them first.	1	1	https://issues.jboss.org/browse/AS7-1666
1907	AS7-1652	Brian, can you comment on this?	0	0	https://issues.jboss.org/browse/AS7-1652
1908	AS7-1652	Are you looking for a date? Let me know if it's blocking you.	1	1	https://issues.jboss.org/browse/AS7-1652
1909	AS7-1640	Clebert can you comment on this one? Brian spent a lot of effort on getting everything mapped, so most of the work is done, but we still need a hornetq expert to scan for major problems.	0	0	https://issues.jboss.org/browse/AS7-1640

#	Requirement	Questions	Answered	Successfully Answered	URL
1910	AS7-1633	Was this already completed?	1	1	https://issues.jboss.org/browse/AS7-1633
1911	AS7-1614	I believe with the commits that we made as part of AS7-2134 this issue should now be covered. Brian, do we want to keep this JIRA open to track the system property substitution (if at all we plan to do it)?	1	1	https://issues.jboss.org/browse/AS7-1614
1912	AS7-1590	Needs work on "What are RESTful Web Services"	0	0	https://issues.jboss.org/browse/AS7-1590
1913	AS7-1554	You can check the jiras documented here https://github.com/tdiesler/org.apache.felix.webconsole/commits/3.1.6.SP1/ Why is this still relevant? I thought we were removing that console.	1	0	https://issues.jboss.org/browse/AS7-1554
1914	AS7-1545	Does this issue still occur? I tried "./build.sh -X clean install" and "mvn -X clean install" from the root directory, and both comleted without error.	1	1	https://issues.jboss.org/browse/AS7-1545
1915	AS7-1531	Hi Anil, What's left to do on this (uf anything at all)?	1	1	https://issues.jboss.org/browse/AS7-1531
1916	AS7-1500	Hey all, There are several other paths that's needed for my application. <path name="sun/security"/> <path name="sun/security/krb5"/> <path name="com/sun/jndi/url"/> <path name="com/sun/jndi/url/dns"/> Can these be added as well? Thank you, Oved	1	1	https://issues.jboss.org/browse/AS7-1500
1917	AS7-1489	Why is this needed?	1	1	https://issues.jboss.org/browse/AS7-1489
1918	AS7-1484	not working in 7.1.0.Beta1 anymore :(. Can you reopen this issue ?	0	0	https://issues.jboss.org/browse/AS7-1484
1919	AS7-1459	The changes to standalone.sh is not working for me. + (-d|--debug) ... + (--) ... + (*) What's this opening bracket in lines 13, 20 and 23? Never saw this syntax in shell-scripts. Bourne- and Korn-shell on Solaris do not like them.	1	1	https://issues.jboss.org/browse/AS7-1459
1920	AS7-1459	Hi Frank, Is it working whithout the opening brackets ? Guillaume.	1	1	https://issues.jboss.org/browse/AS7-1459
1921	AS7-1426	What do I need to do to get {code} @Stateless @LocalBean public class SimpleStatelessSessionBean implements Echo { @Resource private BundleContext context; {code} to work (i.e. lookup by type).	0	0	https://issues.jboss.org/browse/AS7-1426
1922	AS7-1411	Could you give a little more information than this? What are the errors? Do you have a branch I can look at?	1	1	https://issues.jboss.org/browse/AS7-1411
1923	AS7-1407	There's another issue with our Naming store :(I have the following piece of code in our web.xml DD: --- <env-entry> <env-entry-name>jaxws/entry1</env-entry-name> <env-entry-type>java.lang.String</env-entry-type> <env-entry-value>web</env-entry-value> <injection-target> <injection-target-class>org.jboss.test.ws.jaxws.enventry.EnvEntryBeanJSE</injection-target-class> <injection-target-name>strValue</injection-target-name> </injection-target> </env-entry> <env-entry> <env-entry-name>jaxws/entry2</env-entry-name> <env-entry-type>java.lang.Integer</env-entry-type> <env-entry-value>8</env-entry-value> </env-entry> --- This results in the following output in the CLI: --- ... "jaxws-enventry-jse.war" => { "modules" => {"jaxws-enventry-jse" => {"java:module" => { ... "env" => { "class-name" => "javax.naming.Context", "children" => { "entry1" => { "class-name" => "org.jboss.as.naming.context.ModularReference", "value" => "web" }, "entry2" => { "class-name" => "org.jboss.as.naming.context.ModularReference", "value" => "8" } } }, }}} } ... --- Note the missing 'jaxws' prefix? And at the end when I was debugging our JNDI naming store, I noticed that missing 'jaxws' context is present in the debugger. It's just not displayed. Another thing that I noticed is when I'm doing the following lookup: --- new InitialContext().lookup("java:comp/env/"); --- then for above web.xml DD configuration "env/jaxws" is returned instead of expected "env/" context :(	1	1	https://issues.jboss.org/browse/AS7-1407
1924	AS7-1393	Can you be more specific as to what problem this is causing? Currently, if the user sets property "hibernate.cache.infinispan.cachemanager", we add a dependency on the specified value (in which case the cache manager will be started). If an application isn't using a 2lc, they wouldn't set this property (which means the cache isn't started). I don't think that we want the Infinispan cache to be started by default.	1	1	https://issues.jboss.org/browse/AS7-1393
1925	AS7-1381	For the records: "what about resource-adapter/connection-definition/config-property or resource-adapter/admin-object/config-property?" How can these be made accessible?	1	1	https://issues.jboss.org/browse/AS7-1381
1926	AS7-1379	What "attributes" ? If you mean the resource adapter config-property's, then they are only writeable if the resource adapter is version 1.6, and supports dynamic updates. That should already be supported.	1	1	https://issues.jboss.org/browse/AS7-1379
1927	AS7-1379	Hi Jesper, Currently transaction-support is readonly. [standalone@localhost:9999 resource-adapter=xmpp-ra.rar] :write-attribute(name=transaction-support,value=Notransaction) { "outcome" => "failed", "failure-description" => "Attribute transaction-support is not writeable", "rolled-back" => true } This should be modifiable from cli or console? So far, we have some RWHandler to support read-write properties about pool. Should we make every properties modifiable?	1	1	https://issues.jboss.org/browse/AS7-1379
1928	AS7-1365	If this one is rejected, what still needs to happen for mod_proxy and mod_jk support?	1	1	https://issues.jboss.org/browse/AS7-1365
1929	AS7-1365	Remy, Are you talking about the automagic logic in the mod_cluster subsystem? There are a couple issues with this: * The autogenerated jvm-routes are UUIDs. While the generated values are indeed consistent (i.e. not random), they aren't really known until the server starts. Since mod_jk/mod_proxy needs to define these explicitly (e.g. in workers.properties), this becomes a little awkward to setup. * mod_jk/mod_proxy users may not realize that they need the mod_cluster subsystem for jvm-route autogeneration (it's not obvious). This is more of a documentation issue, really.	1	1	https://issues.jboss.org/browse/AS7-1365
1930	AS7-1365	Is there an expectation that the jvmRoute won't be configurable at all in the future? If so, I understand not adding a config option for it to our management API. If not, IMHO forcing people to use a system property to make a common configuration change is poor. However it gets sets, we should definitely at least expose a read-only attribute for it.	0	0	https://issues.jboss.org/browse/AS7-1365
1931	AS7-1365	Wouldn't the mod_cluster service in AS 7 display that actual jvmroute ? I don't quite know.	0	0	https://issues.jboss.org/browse/AS7-1365
1932	AS7-1365	A user asked about this on the AS7 forum http://community.jboss.org/message/632900#632900. I see that this issue is marked as resolved. Just to be sure, the system property is currently available and the open item is to find a suitable name for this? Should this JIRA be marked as re-opened to reflect this pending task?	1	0	https://issues.jboss.org/browse/AS7-1365
1933	AS7-1358	Chaps, this change doesn't appear to have made it into jboss-as master yet, as of now. {{git blame transactions/src/main/java/org/jboss/as/txn/TransactionSubsystemAdd.java}} reveals Chris's commit, but the line to add the alias "java:/jboss/UserTransaction" is missing (despite showing up when you check {{git show 919c16e2}}). Is this by design? If not, can we get it in?	1	1	https://issues.jboss.org/browse/AS7-1358
1934	AS7-1358	I checked the jboss admin console. The value of jndi java:jboss/UserTransaction is listed as unknown. Maybe this is the problem? I read Seam transaction 3.1.0's code, it does look up this jndi. What's the value for that jndi in your jboss admin console?	0	0	https://issues.jboss.org/browse/AS7-1358
1935	AS7-1356	ISnt this done?	0	0	https://issues.jboss.org/browse/AS7-1356

#	Requirement	Questions	Answered	Successfully Answered	URL
1936	AS7-1338	How come this issue got rejected? Can't find another issue regarding accessing the JNDI from a client (or other server) - or am I missing something?	0	0	https://issues.jboss.org/browse/AS7-1338
1937	AS7-1338	Thanks, that's what I'm looking for. Guess you can't say when in time the preview build will contain it?	0	0	https://issues.jboss.org/browse/AS7-1338
1938	AS7-1338	Was previously rejected: <opalka> wolfc, dmlloyd I'm not able to connect to JNDI on AS7. in the AS7 config I see it should be running on 1099, but I'm getting http://fpaste.org/wgy8/ :(<opalka> wolfc, dmlloyd in the config I see the following ports defined <opalka> --- <opalka> <socket-binding name="jndi" port="1099"/> <opalka> <socket-binding name="jmx-connector-registry" port="1090"/> <opalka> <socket-binding name="jmx-connector-server" port="1091"/> <opalka> --- <dmlloyd> we don't do JNDI over RMI anymore <dmlloyd> that listing is an error <opalka> dmlloyd, So we're not able to do JNDI lookups to AS7 anymore and don't plan to? <opalka> dmlloyd, or we'll be doing JNDI over different binary protocol? <dmlloyd> no, we will be able to, it'll just work somewhat differently <opalka> dmlloyd, ok, I'm excluding the tests then ... <opalka> dmlloyd, Is there a JIRA covering this issue so I can use it in my excludes comment? <dmlloyd> not that I'm aware of, it's just an outstanding task <dmlloyd> remote invocation is not planned to be covered in next months' beta release <opalka> dmlloyd, ok, thx for info ;) But now it's back :)	1	1	https://issues.jboss.org/browse/AS7-1338
1939	AS7-1338	Hi all, I'm just adding some brief info from John about newly implemented remote jndi support and how to use it. As I understood everything what should be reachable in jndi from outside the server must be registered under "java:jboss/exported/" context. As an example I used it in standalone jms client to get connection factory and queue from jndi: {code} // jms client code // initialize context final Properties env = new Properties(); env.put(Context.INITIAL_CONTEXT_FACTORY, "org.jboss.naming.remote.client.InitialContextFactory"); env.put(Context.PROVIDER_URL, "remote://localhost:4447"); Context context = new InitialContext(env); // do lookups ConnectionFactory cf = (ConnectionFactory) context.lookup("jms/RemoteConnectionFactory"); Queue queue = (Queue) context.lookup("jms/queue/test"); // do whatever you want {code} How are jms objects registered to jndi in messaging subsystem in standalone-ha.xml: {code} <jms-connection-factories> ... <!-- configuration for connection factory --> <connection-factory name="RemoteConnectionFactory"> <connectors> <connector-ref connector-name="netty"/> </connectors> <entries> <entry name="java:jboss/exported/jms/RemoteConnectionFactory"/> <!- this is the important part --> </entries> </connection-factory> ... </jms-connection-factories> <jms-destinations> ... <jms-queue name="testQueue"> <entry name="java:jboss/exported/jms/queue/test"/> <!- this is the important part --> </jms-queue> ... </jms-destinations> {code} Used libraries (in my simple client): hornetq-core-2.2.11.Final.jar hornetq-jms-2.2.11.Final.jar jboss-as-naming-7.1.0.Final-SNAPSHOT.jar jboss-jms-api_1.1_spec-1.0.0.Final.jar jboss-logging-3.1.0.GA.jar jboss-marshalling-1.3.6.GA.jar jboss-marshalling-river-1.3.6.GA.jar jboss-modules.jar jboss-msc-1.0.2.GA.jar jboss-remote-naming-1.0.0.Beta4.jar jboss-remoting-3.2.0.CR9.jar jboss-sasl-1.0.0.Beta9.jar netty-3.2.6.Final.jar xnio-api-3.0.0.GA.jar xnio-nio-3.0.0.GA.jar Note: I had to add static block to my class so I could connect to server through remoting: {code} static { Security.addProvider(new JBossSaslProvider()); } {code} Hopefully I didn't forget anything and this info will help. Thanks for this cool feature, Mirek	1	1	https://issues.jboss.org/browse/AS7-1338
1940	AS7-1338	I have followed these instructions and have successfully sent a remote message. However, after each message, I see the following logs on the server. Is there something else I need to do? ERROR [org.jboss.remoting.remote] JBREM000200: Remote connection failed: java.io.IOException: An existing connection was forcibly closed by the remote host INFO [org.jboss.as.naming] JBAS011806: Channel end notification received, closing channel Channel ID 58ff39c8 (inbound) of Remoting connection 01889fce to null	1	1	https://issues.jboss.org/browse/AS7-1338
1941	AS7-1338	Ed what does your code look like? And when you say after each "message" what kind of message do you mean? Also is this an Windows OS? And do those log messages affect any functionality? Just trying to understand what the problem might be.	1	1	https://issues.jboss.org/browse/AS7-1338
1942	AS7-1338	@Ed when you say "after each message". Is this a java test class, which you are running each time, so creating a new process/VM for each message? We see this on VM shutdown, but not per request.	1	1	https://issues.jboss.org/browse/AS7-1338
1943	AS7-1338	@Jason, you had posted some example code on this thread, to illustrate how to connect to a remote queue. Where did that code go? I am having problems with this after downloading 7.1.0.Final, and I just want to make sure I am following the steps correctly. Can you please point me to a link where those directions are?	1	1	https://issues.jboss.org/browse/AS7-1338
1944	AS7-1338	Hello. I have the experience of 11 years with JBOSS. Recently we wanna to migrate from JBOSS 6 to JBOSS 7.1.0 final Here is a part of my code final Hashtable jndiProperties = new Hashtable(); jndiProperties.put(Context.PROVIDER_URL, "remote://localhost:4447"); jndiProperties.put(Context.INITIAL_CONTEXT_FACTORY, "org.jboss.naming.remote.client.InitialContextFactory"); jndiProperties.put("remote.connection.default.username","usera"); jndiProperties.put("remote.connection.default.password","passa"); Context context; try { context = new InitialContext(jndiProperties); I may put username and password, I may not put it - all the time I got ERROR: JBREM000200: Remote connection failed: javax.security.sasl.SaslException: Authentication failed: all available authentication mechanisms failed javax.naming.NamingException: Failed to create remoting connection [Root exception is java.lang.RuntimeException: javax.security.sasl.SaslException: Authentication failed: all available authentication mechanisms failed] at org.jboss.naming.remote.client.ClientUtil.namingException(ClientUtil.java:36) at org.jboss.naming.remote.client.InitialContextFactory.getInitialContext(InitialContextFactory.java:117) at javax.naming.spi.NamingManager.getInitialContext(NamingManager.java:684) at javax.naming.InitialContext.getDefaultInitCtx(InitialContext.java:307) at javax.naming.InitialContext.init(InitialContext.java:242) at javax.naming.InitialContext.<init>(InitialContext.java:216) JBoss is of course running and the user added to application users. Any help? Is JBoss 7.1.0 robust enough to port the system from Jboss 6 to it?	1	1	https://issues.jboss.org/browse/AS7-1338
1945	AS7-1338	Hi, Can someone please summarize what is the final resolution for this bug? As I understand from the bug, "JBAS011806: Channel end notification received, closing channel Channel ID 72d0f3d7 (inbound) of Remoting connection 67ffa9c7 to null" - this message in logs is fine and will come on Windows and currently no way to suppress it for this OS. We are testing with JBoss 7.1.1.Final and see this message at INFO level in JBoss console. Also it seems that this statememnt is logged via System.err.println also from code. We just need to know what is the final stance on this one. Thanks, Himanshu	1	0	https://issues.jboss.org/browse/AS7-1338
1946	AS7-1301	How is the client supposed to calculate the system loader paths? Internally I see JDKPaths being used. public static DependencySpec createSystemDependencySpec(final PathFilter importFilter, final PathFilter exportFilter, final Set<String> loaderPaths)	1	1	https://issues.jboss.org/browse/AS7-1301

#	Requirement	Questions	Answered	Successfully Answered	URL
1947	AS7-1301	The client won't normally want to do this as it incurs an expensive computation at boot. What is the use case here? Normally in AS you'd simply add a dependency on javax.api, and maybe sun.jdk and org.jboss.modules.	1	1	https://issues.jboss.org/browse/AS7-1301
1948	AS7-1301	Thinking about it ... I always have an explicit import filter, so the set of paths does not need to be greater than what the filter accepts. So I could derive the paths from the filter. WDYT?	1	1	https://issues.jboss.org/browse/AS7-1301
1949	AS7-1293	Is there anyway to get documentation on how to use this? Specifically on what NameSpace these entries are bound into? I am trying to use this, but can't as I can't get a read on how to reference them from my code and/or jboss-web.xml for resource references.	0	0	https://issues.jboss.org/browse/AS7-1293
1950	AS7-1236	What about the marking of the jar files as *.failed? Is that correct behavior?	0	0	https://issues.jboss.org/browse/AS7-1236
1951	AS7-1236	Okay I guess on the .failed markers, but I have to ask a question, so if we are deploying just things likes .war, .ear, .sar, and a host of other well known extensions, why would this even happen. In the past I thought there was a "deployable" list of extensions JBoss AS/EAP would look at what changed requirement/need wise, or was this just some oversight? Also curious does stuff like this end up in unit tests? How would I look at those if they exist?	1	1	https://issues.jboss.org/browse/AS7-1236
1952	AS7-1236	Yeah I get that a jar file is a standard deployment, but it is usually in the context of a war/ear/etc....just found it odd that something in a directory that did not end in the well known types (war, ear, sar, etc) would be scanned, and then that it would be crawled it, and .failed file would be created in the exploded directory..just odd to me. Are there cases where other "things" could be done to an exploded directory?	1	1	https://issues.jboss.org/browse/AS7-1236
1953	AS7-1190	Hi Jim, What kind of class loader isolation are you looking for? Typically, in AS7 users can package the libraries of their choice within their application and have it picked up by the server. Some documentation is here https://docs.jboss.org/author/display/AS7/Class+Loading+in+AS7 and also in this forum thread http://community.jboss.org/message/608887#608887. Is that what you are looking for?	1	0	https://issues.jboss.org/browse/AS7-1190
1954	AS7-1177	Should a new subsystem be created ?	1	1	https://issues.jboss.org/browse/AS7-1177
1955	AS7-1177	Hi, i am already working on mail subsystem https://github.com/ctomc/jboss-as/tree/mail but I am not done yet... As for your configuration goes, what would be the purpose of multiple mail-sessions? my idea for config was something similar to what was in as4/5/6 like this: {code:xml} <subsystem xmlns="urn:jboss:domain:mail:1.0"> <jndi-name>java:/Mail</jndi-name> <properties> <property name="mail.store.protocol" value="pop3"/> <property name="mail.transport.protocol" value="smtp"/> </properties> </subsystem> {code} wdyt?	1	1	https://issues.jboss.org/browse/AS7-1177
1956	AS7-1177	Tomaz, I would like to help you on implementing this. Is that possible ?	1	1	https://issues.jboss.org/browse/AS7-1177
1957	AS7-1177	See my comments on AS7-1375 - once you have this solved then why don't you go ahead with a pull request and we'll start the first round of code review. Thanks!	1	1	https://issues.jboss.org/browse/AS7-1177
1958	AS7-1163	This top-level license.txt file is showing LGPL v3. Is that deliberate or should it be v2.1?	1	0	https://issues.jboss.org/browse/AS7-1163
1959	AS7-1136	Last time I booted up AS it seemed to pick up the host name and node name properly. Can I close this?	1	1	https://issues.jboss.org/browse/AS7-1136
1960	AS7-1095	Does this JIRA cover restart of the host controller without having to restart the servers? This is an important use case when we want a host controller to take over the responsibilities of a failed domain controller from another host (same domain).	1	1	https://issues.jboss.org/browse/AS7-1095
1961	AS7-984	Is this issue going to be assigned to an AS7 version and component?	0	0	https://issues.jboss.org/browse/AS7-984
1962	AS7-967	From email discussion and AS7-1465, it sounds like we need to add joda time module and have HV 4.2 depend on it. See email discussion on http://lists.jboss.org/pipermail/hibernate-dev/2011-August/006863.html Also, should this jira be closed, since we upgraded to HV 4.2 already?	1	1	https://issues.jboss.org/browse/AS7-967
1963	AS7-936	<bstansberry> darranl: when you do, can you do a general cleanup on the interface configs? get down to 2 interface definitions, management and ???public??? and no example configs etc, just boilerplate	1	1	https://issues.jboss.org/browse/AS7-936
1964	AS7-931	Could you please add some coverage to the wiki on the set of supported operations/attibutes that manage the osgi subsystem? There is an important distinction between the OSGi subsystem already being activated or not. Some of the configuration affect boot time only (i.e. activation, modules). How do changes of these properties affect the subsystem? Generally, should boot time config even be writeable? How is adding/removing a module that effects system classpath packages supposed to work? I believe that framework properties are read-only by spec. Is this reflected in the management operations? I realize and assume that much of the existing code is part of a learning exercise. Following this I suggest to go back to the drawing board and define a concise set of mgmnt operations that make sense for the OSGi subsytem. A discussion on the ml (referenced from here) would also be cool.	0	0	https://issues.jboss.org/browse/AS7-931
1965	AS7-928	{quote} and model the new module after one of the current modules listed there (perhaps org.javassist). org.javassist is in as7/build/src/main/resources/modules/org/javassist/main). {quote} i don't get this.... {quote} 5. Next, add the "org.hibernate.envers" dependency to the "org.hibernate" module (in as7/build/src/main/resources/modules/org/hibernate/main.xml) {quote} iirc, "org.hibernate" should be a dependency of "org.hibernate.envers" and, envers also has a hibernate-tools dependency, should it be a module too?	1	1	https://issues.jboss.org/browse/AS7-928
1966	AS7-925	This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.	1	1	https://issues.jboss.org/browse/AS7-925
1967	AS7-911	Is there any more work that needs to be done on this?	1	1	https://issues.jboss.org/browse/AS7-911
1968	AS7-909	Hi Clebert, I see there is a 2.2.3-SNAPSHOT at the repo site https://repository.jboss.org/nexus/content/groups/public/org/hornetq/hornetq-core/ There is no 2.2.3-Final. Should the snapshot be used? Howard	0	0	https://issues.jboss.org/browse/AS7-909
1969	AS7-909	Can we validate this?	1	0	https://issues.jboss.org/browse/AS7-909
1970	AS7-887	We are using Jboss EAP6.0.1 and used foo-commonj workmanager.sar that implemented on ServiceMBean and ServiceMBeanSupport. It received same exception as reported here and included previous version supported jars. Can I use your fix that is 6.1.0 jars to resolve this issue. Please help me in this. -Rajesh	1	1	https://issues.jboss.org/browse/AS7-887
1971	AS7-887	Pl kindly tell me which corrected jars i can use for Jboss EAP 6.0.1. Can you pl send any nightly build link if you have. Thanks Rajesh	1	1	https://issues.jboss.org/browse/AS7-887

#	Requirement	Questions	Answered	Successfully Answered	URL
1972	AS7-887	>> Sorry I am bothing you as I dont have support and I have to stick to EAP 6.0.1. EAP 6.0.1 binary is a paid product and you are entitled to support. Where did you get it from? You might want to check with your team to see who has access to the customer service portal. >> We are migrating app from Websphere to Jboss 6.0.1 EAP. We have websphere's workmanager feature which needs to be migrate using commonj. I tried to foo-commonj.sar to make use of workmanager features from ejb in Jboss 6.0.1 EAP. I used previous versions support jars to register commonj jndi in Jboss 6.0.1 EAP. You already created 2 other JIRAs to ask that question. Please do use the JIRAs for such questions. The user forums are the place where this should be discussed.	0	0	https://issues.jboss.org/browse/AS7-887
1973	AS7-838	I'm trying to stand up a SecurityDomainService with a custom LoginModule during app deployment on AS7. Have a look at the code excerpt here: https://gist.github.com/991956 I've pored over it a few times and it looks like it should do what I want, but when I try to authenticate against it, I get errors about no users.properties files as though it doesn't load my custom login module and instead defaults to UsersRolesLoginModule. 17:05 lanceball: asaldhan: hey anil - I have a question about standing up a SecurityDomainService with a custom LoginModule during app deployment on AS7 17:05 lanceball: if you have a sec, can you take a look at this gist? https://gist.github.com/991956 17:06 lanceball: I've pored over it a few times and it looks like it should do what I want, but when I try to authenticate against it, I get errors about no users.properties files 17:06 lanceball: as though it doesn't load my custom login module and instead defaults to UsersRolesLoginModule 17:07 asaldhan: lanceball: not sure we have actually figured it out on AS7 17:07 asaldhan: lanceball: is this as7 or as6 17:07 lanceball: as7 17:08 lanceball: asaldhan: I've tried to walk the jaas code but had a hard time figuring out where you load up login modules 17:09 asaldhan: lanceball: doubt it works yet. We still figuring out stuff. https://issues.jboss.org/browse/AS7-838 17:09 jbossbot: ┐jira┐☆ [└3AS7-838☆] Allow individual security domains to be deployed [└10Open (Unresolved) Feature Request☆, └7 Major☆, └6 Marcus Moyses☆] https://issues.jboss.org/browse/AS7-838 17:09 asaldhan: lanceball: marcus and I were just broaching this topic. Plan is to work on it either tomorrow (Marcus) or Monday(I) depending on who finishes the current item 17:09 lanceball: asaldhan: thanks - I'll add my gist and comments to the Jira! 17:10 asaldhan: lanceball: there is a method to create security domains tho 17:10 asaldhan: lanceball: let me get it for u 17:10 lanceball: asaldhan: I'm successfully creating security domains on the fly with existing jboss LoginModules 17:11 lanceball: it's just a problem when I want to use a custom login module 17:11 asaldhan: lanceball: not sure if we have tested against custom LM yet. I will defer it to Marcus tomorrow morn. I will ask him once he is online	1	1	https://issues.jboss.org/browse/AS7-838
1974	AS7-838	We do have a unit test for custom login modules (CustomLoginModuleTestCase currently in teststuite2/internals) that was created for this purpose. It tests for the most basic scenario which is including the custom login module in a web app and trying to use it. Where is this TorqueBoxLoginModule class included?	1	1	https://issues.jboss.org/browse/AS7-838
1975	AS7-834	maybe we should introduce something like Phase.java for configurations, so we have one place that we set the Configurator order [09:56:06] <Jaikiran> it would help with readability but other than that probably won't make much of a difference [09:56:07] <Jaikiran> would it/ [09:56:08] <Jaikiran> ? [09:56:12] <stuartdouglas> because I think as we start adding more interceptors etc figuring out the order is just going to turn into a mess [09:56:26] <Jaikiran> yeah, I agree with that [09:59:09] <stuartdouglas> how hard is it to add the transaction interceptor back in? because I think that would fix all the EPCPropagationTestCase failures [09:59:10] *** jamezp_afk has quit IRC [10:00:06] <Jaikiran> the tx interceptors are already in [10:00:12] <stuartdouglas> and other than that there is only really the weld failures I mentioned before, and the multiple bindings failures, which I think dmlloyd is working on [10:00:24] <Jaikiran> the EPCpropagation tests are failing due to this EJBContext issue that i'm fixing [10:00:43] <Jaikiran> yeah, the multiple bindings thing is affect the persistencecontext/unit test [10:00:58] <stuartdouglas> I see those tests failing with javax.persistence.TransactionRequiredException [10:01:09] <stuartdouglas> I don't think the transaction interceptor is actually enabled [10:01:10] * Jaikiran looks again [10:01:38] <stuartdouglas> that is after my changes, so your problem is probably hiding the transaction one [10:02:23] <Jaikiran> oh might be [10:02:27] <Jaikiran> because mine is failing with http://pastebin.com/k4BDxyhY [10:02:39] <Jaikiran> i'll take a look at those tests while i work on this fix [10:02:42] *** rmaucher has joined #jboss-as7 [10:02:51] <Jaikiran> can you pastebin your log [10:03:03] <Jaikiran> just to see what i might have missed with tx interceptors [10:04:18] *** rawbdor has quit IRC [10:04:21] <stuartdouglas> http://pastebin.com/jqp9cMXA [10:05:23] <stuartdouglas> actually it could be something else [10:05:28] * stuartdouglas looks at test again [10:06:18] *** AndyTaylor has joined #jboss-as7 [10:06:18] *** ChanServ sets mode: +v AndyTaylor [10:09:09] <stuartdouglas> I'm not really sure what is going on, I will try and debug it [10:09:54] *** wolfc has joined #jboss-as7 [10:09:54] *** ChanServ sets mode: +v wolfc [10:10:14] *** davidbos has joined #jboss-as7 [10:11:09] <Jaikiran> brb after lunch [10:11:13] *** Jaikiran is now known as Jaikiran|Lunch [10:23:42] *** alesj has joined #jboss-as7 [10:26:06] <stuartdouglas> Jaikiran|Lunch: It seems to be an ordering issue the transaction interceptor and the SessionInvocationContextInterceptor appear after the ComponentDispatcherInterceptor, and so never get invoked [10:26:51] *** aslak has quit IRC [10:27:22] *** aslak has joined #jboss-as7 [10:27:22] *** ChanServ sets mode: +v aslak [10:27:40] *** aslak has quit IRC [10:28:02] *** stalep has joined #jboss-as7 [10:31:30] *** hardy has joined #jboss-as7 [10:31:46] *** Nihility has quit IRC [10:41:04] *** galderz has joined #jboss-as7 [10:41:04] *** ChanServ sets mode: +v galderz [10:41:45] *** zroubali has joined #jboss-as7 [10:41:45] *** ChanServ sets mode: +v zroubali [10:54:47] *** kkhan has joined #jboss-as7 [10:54:47] *** ChanServ sets mode: +v kkhan [11:01:45] *** davidbos1 has joined #jboss-as7 [11:02:24] *** galderz has quit IRC [11:02:35] *** davidbos has quit IRC [11:05:20] <stuartdouglas> Jaikiran|Lunch: You there? 1980	AS7-772	task needs to be opened. Stefano Maestri also posted about the missing aspects on the dev list in July. Here's an IRC snippet with Scott Marlow that illustrates the issue: [1:08pm] smarlow: if the /deployment=foo.ear/subsystem-jpa/... structure is going to change, as I evolve the support, that would probably break the cli users, I would think [1:08pm] bstansberry: correct; the structure should be nailed down [1:09pm] smarlow: so, might need to build more long term support now but I'm conflicting with doing more than is needed [1:09pm] smarlow: okay, good to know [1:09pm] bstansberry: but I don't think you can really do that across JPA providers [1:09pm] bstansberry: there's no contract of what people are supposed to expose [1:10pm] bstansberry: I could see /deployment=foo.ear/subsystem-jpa/provider=hibernate/session-factory=xxx [1:10pm] smarlow: I was thinking that it would be nice to allow people to do hibernate 4 stuff, eventually, someone will want to see hibernate 3 stuff possibly also. And OGM [1:11pm] bstansberry: so /deployment=foo.ear/subsystem-jpa/provider=hibernate -- anything under that should be stable [1:12pm] bstansberry: but /deployment=foo.ear/subsystem-jpa/provider=ogm -- whatever under that is provided by the ogm guys [1:12pm] bstansberry: and whether /deployment=foo.ear/subsystem-jpa/provider=hibernate exists or not depends on whether hibernate is the provider [1:12pm] bstansberry: which is fine [1:13pm] smarlow: If I start out with only support for /deployment=foo.ear/subsystem-jpa/provider=hibernate and later have other things, I think that is locked down enough [1:13pm] bstansberry: BTW, see org.jboss.as.webservices.dmr.WSExtension for how they register their stuff under /deployment=foo.ear/subsystem=webservices [1:13pm] bstansberry: right [1:15pm] bstansberry: https://github.com/jbossas/jboss-as/blob/master/webservices/server-integration/src/main/java/org/jboss/as/webservices/dmr/WSExtension.java#L72 [1:17pm] smarlow: hmm [1:17pm] smarlow: final ManagementResourceRegistration deployments = subsystem.registerDeploymentModel(new DescriptionProvider() { [1:18pm] smarlow: this is subsystem start time code? [1:18pm] smarlow: or app deployment time? [1:18pm] smarlow: I guess the method name tells registerDeploymentModel [1:19pm] bstansberry: this is Extension initialization code; so normally boot time [1:19pm] bstansberry: it's the same as your JPAExtension [1:20pm] bstansberry: but instead of just registering resources for the /subsystem=webservices part of the tree, the subsystem.registerDeploymentModel will make them available for use use /deployment=*/subsystem=webservices/ [1:21pm] bstansberry: the tricky part for you is you don't know what providers to register [1:22pm] bstansberry: how are providers integrated? [1:23pm] smarlow: sound like I need to register this management code statically for all known providers that I want to manage [1:23pm] bstansberry: you could do a ServiceLoader thing [1:24pm] bstansberry: if the modules for the providers are going to be visible to the JPA extension module when JPAExtension is called [1:24pm] smarlow: currently, the provider can be packaged with the app (picked up via ServiceLoader thing) or can be an AS7 module (org.hibernate:3 or org.hibernate:main currently) [1:24pm] bstansberry: ah, ok [1:24pm] smarlow: or org.hibernate:ogm [1:25pm] smarlow: there could be a eclipsement provider someday [1:25pm] smarlow: there could be a EclipseLink provider someday [1:25pm] • bstansberry looks at modules.xml for org.jboss.as.jpa [1:25pm] smarlow: but I'm not worried about that this year [1:26pm] bstansberry: ok, org.jboss.as.jpa has no dependency on org.jboss.as.jpa.hibernate.3 or hibernate.4 [1:27pm] bstansberry: so you couldn't use a ServiceLoader to pull in an SPI impl those modules would provide [1:27pm] smarlow: right, its all dynamically done at deployment time now [1:29pm] smarlow: we could include it in the org.jboss.as.jpa.hibernate:3 or org.jboss.as.jpa.hibernate:4 integration classes [1:29pm] smarlow: that is where the integration spi implementation classes are [1:29pm] bstansberry: https://issues.jboss.org/browse/AS7-772 [1:29pm] bstansberry: which only partly solves the problem [1:30pm] bstansberry: https://github.com/jbossas/jboss-	0	0	https://issues.jboss.org/browse/AS7-772
1981	AS7-771	My question about going back and forth between ASYNC and SYNC logging. This is really a number of steps. If there is no ASYNC logger defined, we would need to add one and attach all the handlers to it and update the root logger to use the ASYNC. Should this really be a single op, or should we just make sure we have all the supporting ops available to perform the task?	0	0	https://issues.jboss.org/browse/AS7-771
1982	AS7-753	Jaikiran, yes correct. Is that functionality available through the detyped API?	0	0	https://issues.jboss.org/browse/AS7-753
1983	AS7-738	Is this just a console issue now? I doubt anything more will be done on this for AS 7.1 on the server side, other than fixing any bugs that come up.	1	1	https://issues.jboss.org/browse/AS7-738
1984	AS7-737	/subsystem=datasources/data-source="java:/H2DS":test-connection-in-pool { "outcome" => "success", "result" => [true], "compensating-operation" => undefined } means that we have sucessefully opened a connection with H2DS. Isn't it enough? This operation is already there.	1	1	https://issues.jboss.org/browse/AS7-737
1985	AS7-712	Should we raise a helpdesk ticket for this one, so that Mark Newton and his team and take a look at this?	1	1	https://issues.jboss.org/browse/AS7-712
1986	AS7-705	Can we use i18n resource bundles to customise the look and feel of gwt consoles for the platforms? The projects could then provide a default bundle and the platforms could replace it with another.	0	0	https://issues.jboss.org/browse/AS7-705
1987	AS7-705	Can you elaborate on that? The look and feel consists of - css files - images resources I don't really see how this relates to i18n bundles.	0	0	https://issues.jboss.org/browse/AS7-705
1988	AS7-680	How come this is not targeted for Beta 4? Waiting until the CR seems like a big risk for such a highly used feature as this.	1	1	https://issues.jboss.org/browse/AS7-680
1989	AS7-672	What is the action item for this issue?	0	0	https://issues.jboss.org/browse/AS7-672
1990	AS7-659	Just got hit by the same issue while testing changes on JSPs. As I can understand you don't want to enable dev mode by default, how about triggering that dev mode by an environment variable on startup? We could then adjust the default environment settings directly in JBoss Tools' runtime launch configuration. WDYT?	1	0	https://issues.jboss.org/browse/AS7-659
1991	AS7-650	Does straight dependency mean a jar which users can add to their classpath (even where maven isn't involved)? That would be pretty useful, like the 4.x versions of jbossall-client.jar (ofcourse a better assembled version of it).	0	0	https://issues.jboss.org/browse/AS7-650
1992	AS7-650	Where should hybrid (testing spec features mixed with public API) tests go? org.jboss.as.testsuite.integration.jpa.hibernate.SessionFactoryTestCase is a hybrid test that consists of "spec" API use and non-spec API use also. SessionFactoryTestCase checks that legacy applications can still inject a PersistenceContext into a Hibernate session and a PersistenceUnit into a Hibernate session factory.	1	1	https://issues.jboss.org/browse/AS7-650
1993	AS7-643	So is this done?	0	0	https://issues.jboss.org/browse/AS7-643
1994	AS7-642	Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.	1	1	https://issues.jboss.org/browse/AS7-642
1995	AS7-623	This is not an issue with respect to CDI 1.0: in that version of the specification, extensions are per-container and not per-BeanManager (cf. 11.5 of the spec). Leaving this open in case a later version of a CDI spec will provide a more granular extension model.	1	1	https://issues.jboss.org/browse/AS7-623
1996	AS7-623	Mark, are you saying my initial assumption is correct? Should it be detected and scoped to the webapp inside the EAR?	0	0	https://issues.jboss.org/browse/AS7-623
1997	AS7-623	See here for people with related issues all over Weld / Seam 3: SEAMFACES-76 SEAMFACES-114 WELD-888 WELD-889 This is a pretty serious issue. It affects more or less each non-trivial EAR-deployment, and certainly almost everyone using Seam 3 (e.g. how should one use Seam Solder / I18N / Config ... in WAR _and_ EJB-Modules?). In my opinion it's not an option to wait for JBoss 7.	1	1	https://issues.jboss.org/browse/AS7-623
1998	AS7-623	Marius, please take care of this issue. It's really a blocker. Do you see a realistic chance to get a 6.1 release containing this bug fix in the near future?	0	0	https://issues.jboss.org/browse/AS7-623

#	Requirement	Questions	Answered	Successfully Answered	URL
1999	AS7-620	What do you think about this Alexey?	1	1	https://issues.jboss.org/browse/AS7-620
2000	AS7-612	Is this really still open? I can build (and run) master (7.1.0.Alpha2-SNAPSHOT) on F-15 with the shipped Maven 3 and OpenJDK. {code}[cbredesen@monza jboss-as]$ java -version java version "1.6.0_22" OpenJDK Runtime Environment (IcedTea6 1.10.4) (fedora-60.1.10.4.fc15-i386) OpenJDK Server VM (build 20.0-b11, mixed mode) [cbredesen@monza jboss-as]$ mvn3 -version /usr/lib/jvm/java Apache Maven 3.0.3 (rNON-CANONICAL_2011-06-28_15-20_mockbuild; 2011-06-28 20:50:31+0530) Maven home: /usr/share/maven Java version: 1.6.0_22, vendor: Sun Microsystems Inc. 2004	AS7-582	Happy to help :) Perhaps we could add some CSS. Do we have some for Javadoc? I've also asked James Cobb.	0	0	https://issues.jboss.org/browse/AS7-582
2005	AS7-580	is there a reason we can't house those javadoc resources inside the AS javadoc aggregate project, rather than attempting to deal with file collisions during dependency-source aggregation? At least then we could be more explicit WRT which resources are used, and which are not. I would think file collisions would be common in this case.	1	1	https://issues.jboss.org/browse/AS7-580
2006	AS7-580	How close does this get you: http://maven.apache.org/plugins/maven-javadoc-plugin/examples/aggregate-dependency-sources.html Pay special attention to the bottom example, which is focused on making javadoc resources available from dependency projects for use in the aggregation step...	0	0	https://issues.jboss.org/browse/AS7-580
2007	AS7-560	Did some of the prep work (isolated Hibernate specific details into org.jboss.as.jpa.hibernate package.	0	0	https://issues.jboss.org/browse/AS7-560
2008	AS7-548	@javax.ejb.Remote annotation scanning support is available since Beta2 http://community.jboss.org/wiki/EJB3supportinJBossAS700Beta2 : {quote} @Remote view: Currently, the @Remote annotation is processed and a view is created out of it. However, remote view semantics don't apply and it works the same as a @Local. {quote} Is this JIRA still valid?	1	1	https://issues.jboss.org/browse/AS7-548
2009	AS7-524	What's left on this task is to: 1) Add in handling of any schema elements that are ommitted in what I've done. 2) Get proper testing. 3) Update the ServerMaker class as mentioned in previous comment.	1	1	https://issues.jboss.org/browse/AS7-524
2010	AS7-514	What's the status on this? It says "Pull Request Sent" but there's no link.	0	0	https://issues.jboss.org/browse/AS7-514
2011	AS7-514	Is there any docs for this? I can't find any in confluence: https://docs.jboss.org/author/display/AS71/Logging+Configuration Here are few bits I have extracted from few discussions - no guarantees: Configured in your app in WEB-INF/classes/logging.properties or log4j.properties or log4j.xml You can turn it off with sysprop {{org.jboss.as.logging.per-deployment = false}} - see http://middlewaremagic.com/jboss/?p=1458 See the commit diff, https://209.132.182.49/message/749989 and http://jboss-as7-development.1055759.n5.nabble.com/logger-config-per-deployment-app-td5709805.html	0	0	https://issues.jboss.org/browse/AS7-514
2012	AS7-514	i created a logging.properties and put it in META-INF folder for the .jar file and deployed, the specific log file is being created ,but app is not logging anything into it..can you point out what am i missing please?	1	0	https://issues.jboss.org/browse/AS7-514
2013	AS7-504	Can we get a yes/no on this issue? If it's a "no" at this point, let's just close it out.	1	0	https://issues.jboss.org/browse/AS7-504

#	Requirement	Questions	Answered	Successfully Answered	URL
2014	AS7-501	time. Following is the discussion we had where we discussed an approach, and outlined its benefits. Perhaps could be useful if someday we decided to pursue this: <maeste2> bstansberry: I wonder if these undocumented generic properties (that JBossTS map to system propeerties) have to be specified in tx subsystem or if we can make anew subsystem for generic properties (not only for tx) <maeste2> bstansberry: in second case we have 2 plus IMHO <maeste2> bstansberry: an xsd documenting the xml sturcture and a subsystem to manage via console <maeste2> bstansberry: #2 the ability to add here some special properties also during EAP phase <maeste2> bstansberry: sincee we are going to use a generic API for this properties/values <maeste2> bstansberry: JBossTS (or other services needing special props) can just depends on this subsystem's service <maeste2> bstansberry: opinion? * bstansberry is pondering this a bit <bstansberry> maeste2: the entire use case goes beyond subsystems though, so this would almost be a core item <bstansberry> maeste2: so to register a handler, that would really be another high-level part of what an Extension does bstansberry> maeste2: so we'd add something in SubsystemRegistration? <bstansberry> maeste2: I'd been thinking to just use system properties, but your ideas have gotten me intrigued <bstansberry> maeste: looking at <property-group subsystem="blah"><property name="blah">value</property><property-group> ... <bstansberry> I see two theoretically benefits over simple system properties <bstansberry> one is if "value" had some more structure, wasn't just a string <bstansberry> but TBH I doubt that's practical, since this needs to be generic <maeste> bstansberry: yup <bstansberry> the other is the subsystem="blah" bit <bstansberry> which is an example of providing some scope to the property <maeste> bstansberry: even if we can use an attribute called type and we can validate against it <maeste> bstansberry: it's not more structure, but it still a plus against system property <maeste> bstansberry: another benefit is that they are manageable (at least theoretically) <bstansberry> maeste: well, system properties are manageable too <maeste> bstansberry: but they haven't custom handlers <bstansberry> maeste: right <bstansberry> that was the intriguing part <maeste> bstansberry: theoretically they could be runtime manageble <maeste> bstansberry: why can't be an OperationStepHandler? <bstansberry> maeste: I guess it can be <bstansberry> maeste: there's an ordering issue <bstansberry> any OSH will only be registered after the relevant extension is added <bstansberry> but all the extension properties have to be evaluated before any subsystem is added <bstansberry> otherwise the subsystem can start without knowing the value <maeste> sure <bstansberry> maeste: so that just means 1) this would have to be a core thing, not a subsystem and 2) in the boot handling its operations have to come before the subsystem ones <bstansberry> maeste: so that's solvable <bstansberry> maeste: we'd also need to add that outside subsystems <maeste> it's a different approach in model, but we are still saying that there are properties scoped at subsystem level <bstansberry> e.g. for core stuff bstansberry> TBH I really dislike adding that to every subsystem though <maeste> oki <bstansberry> I've had way too much experience with what it takes to add some new capability to every subsystem <maeste> returning to ordering issue <bstansberry> that's solvable pretty easily <maeste> oki <bstansberry> just put this new element in the xsd after extension and before subsystem <bstansberry> before profile <maeste> gotcha <bstansberry> maeste: it just took me a bit to realize that <maeste> a bit more for me <bstansberry> maeste: so the advantages of this are 1) runtime handling and 2) scoping <bstansberry> i.e. a finer scope than the entire server <bstansberry> which is the scope of a system property <bstansberry> how about <property-group scope="subsystem=datasource/datasource=blah"><property name="blah">value</property><property-group> ? <bstansberry> scope or "address" or something <maeste> bstansberry: cool <bstansberry> maeste: that starts to make scoping a real benefit <maeste> bstansberry: where type reflect DMR ones and make possible to add a validator on the property? <bstansberry> maeste: so it	0	0	https://issues.jboss.org/browse/AS7-501
2015	AS7-500	What's the status on this one?	1	1	https://issues.jboss.org/browse/AS7-500
2016	AS7-494	Hi Brian, Is there anything wrong with HARMIClient and HARMIServer, other than the fact that they depend on RMI? -Ron	1	1	https://issues.jboss.org/browse/AS7-494
2017	AS7-493	Carlo, is this an issue in the HornetQ integration or the Jacamar integration or elsewhere?	1	1	https://issues.jboss.org/browse/AS7-493
2018	AS7-492	Is this done? We have a contract; seems any remaining task would just be to review it and check if it's complete and well polished.	0	0	https://issues.jboss.org/browse/AS7-492
2019	AS7-485	Is this still valid? I don't see where any integration tests are using JSFUnit right now. As far as I know JSFUnit is only in the smoke tests and that uses a WAR.	0	0	https://issues.jboss.org/browse/AS7-485
2020	AS7-476	Thomas, this issue does not have seem to have a specific corresponding deliverable. If you do have a specific deliverable, can you note it and assign this issue to a release? Otherwise it should be closed or moved to another project. Thanks.	0	0	https://issues.jboss.org/browse/AS7-476

2037	AS7-389	Is this available in AS7 upstream?	0	0	https://issues.jboss.org/browse/AS7-389
2038	AS7-389	Is this complete John?	1	1	https://issues.jboss.org/browse/AS7-389
2039	AS7-388	Any update, or can we drive this to conclusion?	1	1	https://issues.jboss.org/browse/AS7-388
2040	AS7-385	Scott, Brian indicated that you were looking into this. Can you give an update?	1	1	https://issues.jboss.org/browse/AS7-385
2041	AS7-383	Is this something you want to do? Assign back if not. Should be a very minor change.	0	0	https://issues.jboss.org/browse/AS7-383
2042	AS7-367	From tooling I'm more interested to knowing *actual* status of deployments such as: Is it running ? Did it deploy - any warnings? any errors ? stacktraces ? Inner/nested details that arquillian is asking for is nice but i'm much more interested in getting status for deployment overall first with access to error info.	1	1	https://issues.jboss.org/browse/AS7-367
2043	AS7-364	Brian, did you have a specific approach in mind for this?	1	1	https://issues.jboss.org/browse/AS7-364
2044	AS7-364	Brian, is the EAP distinction done by appending -redhat? Or could the information that shows up in boot log at 22:13:52,235 INFO [org.jboss.as] JBoss EAP 6.0.0.Alpha2 (AS 7.1.0.Beta1-redhat-1) starting be the version string returned -- meaning "EAP 6... (....)" ?	0	0	https://issues.jboss.org/browse/AS7-364
2045	AS7-354	What does this mean?	0	0	https://issues.jboss.org/browse/AS7-354
2046	AS7-328	has this been merged?	1	0	https://issues.jboss.org/browse/AS7-328
2047	AS7-318	Aren't we done here? I'd like to close all of these generic holder tasks. If there is any commands we need for usability reasons we should just have a specific issues for them.	1	1	https://issues.jboss.org/browse/AS7-318
2048	AS7-311	Emanuel, could you have a look and see if this is still valid?	0	0	https://issues.jboss.org/browse/AS7-311

#	Requirement	Questions	Answered	Successfully Answered	URL
2049	AS7-308	Hi, I tried to use this fix to solve issue JBAS-7882 on Jboss AS 7.1.0 Final. But it does not seem to work. I put all my security jars in ear/lib and mentioned in ear/META-INF/jboss-deployment-structure.xml like below: <jboss-deployment-structure xmlns="urn:jboss:deployment-structure:1.1"> <ear-subdeployments-isolated>true</ear-subdeployments-isolated> <deployment> <resources> <resource-root path="entbase.jar" use-physical-code-source="true"/> <resource-root path="entarchive.jar" use-physical-code-source="true"/> ... </resources> </deployment> ... But still i am getting Self-Integrity Check FAILED: java.lang.SecurityException: java.security.PrivilegedActionException: java.util.zip.ZipException: zip file is empty: java.lang.SecurityException: Self-Integrity Check FAILED: java.lang.SecurityException: java.security.PrivilegedActionException: java.util.zip.ZipException: zip file is empty at com.entrust.toolkit.security.provider.JCEVerifierImpl.checkIntegrity(Unknown Source) [entbase.jar:7.1.0 build 941 "Jul 25 2005" "03:44:15"] at com.entrust.toolkit.security.provider.Entrust.<init>(Unknown Source) [entbase.jar:7.1.0 build 941 "Jul 25 2005" "03:44:15"] Am i missing something? Please guide. Thanks	0	0	https://issues.jboss.org/browse/AS7-308
2050	AS7-308	I confirm that use-physical-code-source is working with a recent version (7.2) I added it in the jboss-deployment-structure.xml of a war to solve the zip file is empty error about a bouncycastle jar It's working if I deploy the war directly in the application server deployments directory but sadly it doesn't work if I put it in an EAR. I tried to define it as subdeployment of the ear but it didn't help. Do you think that it is normal or I should report a new issue ?	0	0	https://issues.jboss.org/browse/AS7-308
2051	AS7-306	IRC discussion for reference: {quote} (06:56:39 IST) dmlloyd: EE.8.3.2 (06:57:00 IST) dmlloyd: portable applications must not depend on having or not having access to these classes or resources: The content of any EJB jar files included in the same ear file. dmison_a` dmlloyd (06:58:09 IST) Jaikiran: dmlloyd: indeed! (06:58:16 IST) Jaikiran: i wasn't aware that wasn't portable (06:58:24 IST) Jaikiran: but would be really useful to enable that in AS& (06:58:26 IST) Jaikiran: AS7 (06:58:33 IST) Jaikiran: assuming there's no technical issue (06:58:34 IST) dmlloyd: well if you weren't aware I imagine most of our users aren't either (06:58:41 IST) dmlloyd: so perhaps it should be a configurable default (06:59:23 IST) Jaikiran: from what i have seen, users (and even maven?) just creates the top level ejb jar and expects the classes in ejb deployment to be visible in web (06:59:29 IST) fbricon: last time I checked, my sample project ran on glassfish 3.x (06:59:50 IST) hardy [~hardy@81-235-238-123-no92.tbcn.telia.com] entered the room. (07:00:02 IST) dmlloyd: Jaikiran: you mean, in an EAR right? dmison_a` dmlloyd (07:00:07 IST) Jaikiran: dmlloyd: yes (07:00:18 IST) Jaikiran: both war in EJB jar in the .ear (07:00:46 IST) fbricon: dmlloyd: Jaikiran: ^that's my setup (07:00:58 IST) dmlloyd: sounds like a config param for the EE subsystem: <isolate-ear-contents value="true"/> (07:01:12 IST) Jaikiran: that "sounds" different (07:01:18 IST) dmlloyd: can one of you guys open a JIRA for that? assign it to CR1 or something? (07:01:27 IST) Jaikiran: given our usage of ear isolation in previous AS version (07:01:39 IST) dmlloyd: I think the more strict behavior should be the default though. That will encourage people to move towards better spec compliance in their deployments (07:01:50 IST) fbricon: dmlloyd: ok I can create the issue and attach my sample project (07:01:53 IST) Jaikiran: basically, isolate-ear in previous releases meant that each ear would have a separate cl and wouldn't see each other (07:02:03 IST) Jaikiran: so it might be better to use a different term for this attribute (07:02:06 IST) dmlloyd: true, we may want to choose better wording (07:02:09 IST) Jaikiran: yeah (07:02:14 IST) Jaikiran: but yes, a JIRA would be a starting point (07:02:30 IST) Jaikiran: fbricon: yes, please do attach a app for easy testing {quote}	1	1	https://issues.jboss.org/browse/AS7-306

2055	ARQ-2051	How are you downloading the liberty instance from Maven? If you're using the liberty:create-server goal it already provides an option for a configFile like we packaged it in our wlp-managed-85 test. Why is this more useful than that? I would think that if we start adding this, we will need further changes to support other features as well and at that point it just might be easier to include the server.xml as part of the test in the first place anyway; What do you think?	1	1	https://issues.jboss.org/browse/ARQ-2051
2056	ARQ-2051	I've now created a new docker container that works with the current wercker environment and I also moved to the 1.2 version of the liberty-maven-plugin. The bad news is that at least for me the ApplicationMBean is never shown over the localConnector with the versions I tested with from the public maven repositories. I see a few other WebSphere:* MBeans, but not the ApplicationMBean. [~atijms] are you seeing this MBean? Can you tell me which exact JDK and liberty version you're using? tnx!	1	1	https://issues.jboss.org/browse/ARQ-2051
2057	ARQ-2047	[~cthorburn8], I have tried to reproduce this issue as per steps mentioned by you. But I couldn't reproduce your mentioned behavior for lambda expression. You can look for my test project [here|https://github.com/dipak-pawar/ARQ-2047-test] Can you please share your project where this issue is reproducing? Maybe something is missing in my project.	1	0	https://issues.jboss.org/browse/ARQ-2047
2058	ARQ-2040	[~stefanutti] Hi Antonin, if you really mean JTA then this has been already fixed in https://github.com/arquillian/arquillian-container-weld/issues/25 [~mjobanek] [~bmajsak] I can't assing issue to myself. Can you please update my permissions?	1	1	https://issues.jboss.org/browse/ARQ-2040
2059	ARQ-2032	[~thomas.diesler], I do not understand how is this issue connected with Wildfly... I just wanted to track issue somewhere. Shall I rather use github issues?	0	0	https://issues.jboss.org/browse/ARQ-2032
2060	ARQ-2017	[~thomas.diesler] : I notice that the "org.jboss.arquillian.osgi" package is listed both under <Private-Package> and also under <_exportcontents>. I assume that you would prefer one or the other. Let me know which one is appropriate and I will remove the duplicate from the other element. I am also curious why you have declined to inline the embedded dependencies, but to embed them as jars instead. There may be classloader improvements, among other things, if they are inlined instead. Are there licensing issues that require you to embed the jars? Otherwise, I would like to try inlining them instead. Please let me know. Thanks!	0	0	https://issues.jboss.org/browse/ARQ-2017
2061	ARQ-2016	I don't see the "Assign to me" option in your JIRA. Is there a way that I can assign this story, and sub-tasks that I create, to myself?	1	1	https://issues.jboss.org/browse/ARQ-2016
2062	ARQ-2016	I'm asking specifically about the AuxiliaryArchiveAppender. When the auxiliary archive is created, what's the process by which it is deployed? And is it a bundle or is it only intended as a library to go into a web archive? I'm using a jar archive for my test, so I'm trying to understand the best way to make Spock available within the container.	0	0	https://issues.jboss.org/browse/ARQ-2016
2063	ARQ-2016	Hello!, We have adapt the Arquillian OSGi Extension so it can use custom extensions, now we are using it sucessfully in the Arquillian Liferay Extension. The idea that we have implemented is: 1. The Arquillian OSGi Bundle is automatically generated (with all the extensions that are declared in the classpath). (This is done only once) 2. For every test: 2.1. The Arquillian OSGi Bundle is installed. 2.2. The test deployment is installed without any enhacement. 2.3. A fragment for the Arquillian OSGI Bundle that contains only the test class is generated and installed. 2.4 The tests are executed 2.5 All the previously installed bundle are uninstalled. We have created a pull (https://github.com/arquillian/arquillian-container-osgi/pull/51) were you can check the changes. We think that this maybe can be usefull for someone. Maybe it would be interesting try to merge it with the current Arquillian OSGi Container. What do you think? If you need more information, please, let us know. Thanks!	1	1	https://issues.jboss.org/browse/ARQ-2016
2064	ARQ-2008	java.lang.RuntimeException: Could not create new instance of class org.jboss.arquillian.test.impl.EventTestRunnerAdaptor at org.jboss.arquillian.test.spi.SecurityActions.newInstance(SecurityActions.java:165) at org.jboss.arquillian.test.spi.SecurityActions.newInstance(SecurityActions.java:102) at org.jboss.arquillian.test.spi.TestRunnerAdaptorBuilder.build(TestRunnerAdaptorBuilder.java:52) at org.jboss.arquillian.junit.Arquillian.run(Arquillian.java:113) at org.eclipse.jdt.internal.junit4.runner.JUnit4TestReference.run(JUnit4TestReference.java:86) at org.eclipse.jdt.internal.junit.runner.TestExecution.run(TestExecution.java:38) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.runTests(RemoteTestRunner.java:459) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.runTests(RemoteTestRunner.java:675) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.run(RemoteTestRunner.java:382) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.main(RemoteTestRunner.java:192) Caused by: java.lang.reflect.InvocationTargetException at sun.reflect.NativeConstructorAccessorImpl.newInstance0(Native Method) at sun.reflect.NativeConstructorAccessorImpl.newInstance(Unknown Source) at sun.reflect.DelegatingConstructorAccessorImpl.newInstance(Unknown Source) at java.lang.reflect.Constructor.newInstance(Unknown Source) at org.jboss.arquillian.test.spi.SecurityActions.newInstance(SecurityActions.java:161) ... 9 more Caused by: java.lang.RuntimeException: Could not create new instance of class org.jboss.arquillian.core.impl.ManagerImpl at org.jboss.arquillian.core.spi.SecurityActions.newInstance(SecurityActions.java:165) at org.jboss.arquillian.core.spi.SecurityActions.newInstance(SecurityActions.java:102) at org.jboss.arquillian.core.spi.ManagerBuilder.create(ManagerBuilder.java:77) at org.jboss.arquillian.test.impl.EventTestRunnerAdaptor.<init>(EventTestRunnerAdaptor.java:62) ... 14 more Caused by: java.lang.reflect.InvocationTargetException at sun.reflect.NativeConstructorAccessorImpl.newInstance0(Native Method) at sun.reflect.NativeConstructorAccessorImpl.newInstance(Unknown Source) at sun.reflect.DelegatingConstructorAccessorImpl.newInstance(Unknown Source) at java.lang.reflect.Constructor.newInstance(Unknown Source) at org.jboss.arquillian.core.spi.SecurityActions.newInstance(SecurityActions.java:161) ... 17 more Caused by: java.lang.NoClassDefFoundError: org/jboss/arquillian/container/test/impl/enricher/resource/OperatesOnDeploymentAwareProvider at java.lang.ClassLoader.defineClass1(Native Method) at java.lang.ClassLoader.defineClass(Unknown Source) at java.security.SecureClassLoader.defineClass(Unknown Source) at java.net.URLClassLoader.defineClass(Unknown Source) at java.net.URLClassLoader.access$100(Unknown Source) at java.net.URLClassLoader$1.run(Unknown Source) at java.net.URLClassLoader$1.run(Unknown Source) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(Unknown Source) at java.lang.ClassLoader.loadClass(Unknown Source) at sun.misc.Launcher$AppClassLoader.loadClass(Unknown Source) at java.lang.ClassLoader.loadClass(Unknown Source) at org.jboss.arquillian.protocol.servlet.ServletExtension.register(ServletExtension.java:40) at org.jboss.arquillian.core.impl.loadable.LoadableExtensionLoader.load(LoadableExtensionLoader.java:79) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(Unknown Source) at java.lang.reflect.Method.invoke(Unknown Source) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at	1	1	https://issues.jboss.org/browse/ARQ-2008
2065	ARQ-2008	What does your POM file look like now?	1	1	https://issues.jboss.org/browse/ARQ-2008
2066	ARQ-2008	What happens when you run "mvn clean install" from command line?	1	1	https://issues.jboss.org/browse/ARQ-2008
2067	ARQ-1975	Hi, is this the same feature as this one? https://developer.jboss.org/message/935605 If so, there is already a jira for that: ARQ-540	1	1	https://issues.jboss.org/browse/ARQ-1975

#	Requirement	Questions	Answered	Successfully Answered	URL
2068	ARQ-1968	So I don't quite understand. Are you saying that Arquillian already works for Fuse and it's just a matter of RH saying it's a tested framework like Arquillian on EAP (https://access.redhat.com/solutions/275433)?	1	0	https://issues.jboss.org/browse/ARQ-1968
2069	ARQ-1954	How can this be used? I'm running Arquillian Tests inside a remote WildFly instance and I cannot get it to work. :-(	0	0	https://issues.jboss.org/browse/ARQ-1954
2070	ARQ-1921	[~aslak] you mean like you get it in lookup method in "Annotation... qualifiers" parameter? How these annotations would be called? I can look at it.	1	1	https://issues.jboss.org/browse/ARQ-1921
2071	ARQ-1902	I assume you would want to skip the whole Before|Test|After phase? Not just Test? Do you want it 'marked' as Skipped in report?	1	1	https://issues.jboss.org/browse/ARQ-1902
2072	ARQ-1887	I have run into another issue that is related to how the scripts are split before execution. This time I'm trying to insert a simple JavaScript script into my table and all script's content between curly braces is cut out, which causes the test failure, since the script cannot be parsed by the Nashorn engine - example below. {code:title=script.sql|borderStyle=solid} INSERT INTO SCRIPT(ENGINE, BODY) VALUES('JavaScript', 'function execute(context) {var Result = Java.type("xx.xxxxxx.xxxx.xxxxx.Result"); var result = new Result(); if (context.service === undefined) {result.code = 100;} else { result.code = 0;} return result;}'); {code} Result: {code:title=output.log|borderStyle=solid} INSERT INTO SCRIPT(ENGINE, BODY) VALUES('JavaScript', 'function execute(context) else return result;}'); {code} The question is: shall I make a separate issue for this or maybe this comment will be enough? Thanks!	1	1	https://issues.jboss.org/browse/ARQ-1887
2073	ARQ-1887	Please go ahead with dedicated issue. Would you be interested in contributing the fix for this issue or the other one? It's rather straightforward and you can count on my full support :)	1	1	https://issues.jboss.org/browse/ARQ-1887
2074	ARQ-1883	tests/src/test/java/org/jboss/arquillian/integration/persistence/cucumber/SeedingStrategyTest.java]) but its failing (i think its a detail) because persistence unit is not found. I've changed the deployment from *jar* to *war* cause i think cukespace doesn't work in jar project (in fact I didnt tried to flat the jar so changed to war) but the [@PersistenceContext inside test|https://github.com/rmpestano/arquillian-extension-persistence/blob/master/int-tests/src/test/java/org/jboss/arquillian/integration/persistence/cucumber/SeedingStrategyTest.java#L52] isn't working, here is test output: {noformat} org.jboss.arquillian.container.spi.client.container.DeploymentException: Cannot deploy: test.war at org.jboss.as.arquillian.container.ArchiveDeployer.deployInternal(ArchiveDeployer.java:83) at org.jboss.as.arquillian.container.ArchiveDeployer.deployInternal(ArchiveDeployer.java:64) at org.jboss.as.arquillian.container.ArchiveDeployer.deploy(ArchiveDeployer.java:46) at org.jboss.as.arquillian.container.CommonDeployableContainer.deploy(CommonDeployableContainer.java:146) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController$3.call(ContainerDeployController.java:161) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController$3.call(ContainerDeployController.java:128) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController.executeOperation(ContainerDeployController.java:271) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController.deploy(ContainerDeployController.java:127) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.invokeObservers(EventContextImpl.java:99) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:81) at org.jboss.arquillian.container.impl.client.container.DeploymentExceptionHandler.verifyExpectedExceptionDuringDeploy(DeploymentExceptionHandler.java:50) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createDeploymentContext(ContainerDeploymentContextHandler.java:78) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createContainerContext(ContainerDeploymentContextHandler.java:57) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at	1	1	https://issues.jboss.org/browse/ARQ-1883
2075	ARQ-1852	CommandService is part of Core already. Every Protocol has it's own implementation of it to allow InContainer to communicate with Client side: https://github.com/arquillian/arquillian-core/blob/master/container/test-spi/src/main/java/org/jboss/arquillian/container/test/spi/command/CommandService.java E.g. the ServletCommandService from the Servlet Protocol: https://github.com/arquillian/arquillian-core/blob/master/protocols/servlet/src/main/java/org/jboss/arquillian/protocol/servlet/runner/ServletCommandService.java After re-reading, you want the opposite direction? Client to send commands to Container at any point?	1	0	https://issues.jboss.org/browse/ARQ-1852
2076	ARQ-1852	At which points do the Client know? The normal execution flow in Arquillian is to for each @Test on client side execute the full In Container cycle(BeforeSuite/BeforeClass/Before/Test...), then take the result from container and move on. This is per say single threaded, so the Client can't really send anything at 'random' points to the container. It only sends one 'command'; run the complete test. It's from within the container side you can send fine grained commands back to the client within any of the events(BeforeSuite, BeforeClass..).. If you can explain in more detail what you're trying to do.	1	0	https://issues.jboss.org/browse/ARQ-1852
2077	ARQ-1842	I think this is related to https://issues.jboss.org/browse/ARQ-1807 Could you verify with arquillian-core upstream master branch?	1	1	https://issues.jboss.org/browse/ARQ-1842
2078	ARQ-1842	@Aslak Knutsen: Could you please where can we find the last 2.0.0.CR1 version? Is there any maven repository to download it from?	1	1	https://issues.jboss.org/browse/ARQ-1842
2079	ARQ-1842	Please, is there any estimate on when it is going to be available on maven repos? I would like to use this extension on my project but I keep getting this error. Btw: I am using 1.1.10.Final	1	1	https://issues.jboss.org/browse/ARQ-1842
2080	ARQ-1842	Partial fix based on [~dashorst] work has been already rolled out with version 1.0.2.Final. Is that the one you are using? There is one additional improvement awaiting with this [pull request|https://github.com/arquillian/arquillian-extension-transaction/pull/12]. I will wrap it up this week.	1	1	https://issues.jboss.org/browse/ARQ-1842
2081	ARQ-1842	[~bmajsak] Sorry to ask: is there anywhere I can check if this was released? Is there anything I can do to help this matter?	1	1	https://issues.jboss.org/browse/ARQ-1842

#	Requirement	Questions	Answered	Successfully Answered	URL
2082	ARQ-1809	I cannot reproduce this behaviour, but I have improved sorted and filtered sets so that they have now proper metadata. As for the suggested fix : both YAML and JSON implementation are based on FlatXML data sets, where datatype is also set to unknown. If I understand DBUnit right, the real types are then extracted from underlying db and conversion is applied. But this might be wrong reasoning :) I will take a closer look. In the meantime, could you try to run your test against [latest master|https://github.com/arquillian/arquillian-extension-persistence] and let me know? Does this error occurs each and every time you run the test?	0	0	https://issues.jboss.org/browse/ARQ-1809
2083	ARQ-1800	Thanks for the feature request. Of course this will be handy feature. Shall we consider UTF-8 as a default? Moreover would you be interested in contributing this improvement? That would be simply awesome.	0	0	https://issues.jboss.org/browse/ARQ-1800
2084	ARQ-1797	What kind of strategy do you want to use here when you put @Screenshot annotation on a method? That screenshot annotation has to have some default values. It is clear that specified parameter to that annotation overrides settings in arquillian.xml. In case that property is not specified there, what setting should "win"? Annotation one which is not specified explicitly or property in arq.xml ?	1	1	https://issues.jboss.org/browse/ARQ-1797
2085	ARQ-1789	Have you tried running the Managed/Remote 7 against a 8 Container?	1	1	https://issues.jboss.org/browse/ARQ-1789
2086	ARQ-1756	Thanks for opening this feature request! What would this feature do exactly? Do other arquillian adapters provide this function already? Please also look at the section at http://arquillian.org/guides/getting_started/#test_across_containers and see how this is documented to work for jboss-as artifacts. I think this should also work with Liberty. What do you think?	1	1	https://issues.jboss.org/browse/ARQ-1756
2087	ARQ-1751	This is a _almost_ working prototype from DevNation hackfest; https://github.com/aslakknutsen/arquillian-recorder/tree/ARQ-1751 The missing parts; * probably integrate bowler with Maven to build the UI JS parts automatically * some missmatch in URL used by the UI and backend atm * possible some missmtach in the format used General improvements require some more changes in recorder core. e.g.; * Should the same JAX-B model be used on Client and Container side? * JAX-B in general generates XML, XML is hell'ish in a JS client ** Currently worked around by XML from Test client to Server, and Gson converted jax-b model from Server to JS client * The full report is pushed to server for each @Test * Missing image upload.	1	0	https://issues.jboss.org/browse/ARQ-1751
2088	ARQ-1750	I would've assumed that we use the configuration mechanisms used by liberty itself such as the ones documented in http://pic.dhe.ibm.com/infocenter/wasinfo/v8r5/index.jsp?topic=%2Fcom.ibm.websphere.wlp.nd.doc%2Fae%2Ftwlp_tun.html to set mx and debug parameters; what is the added value of having this as part of the arquillian.xml configuration? Do other container implementations already support this?	1	1	https://issues.jboss.org/browse/ARQ-1750
2089	ARQ-1744	[~kpiwko] [~tkriz] Is it possible to have this in 2.0.0.Alpha1? Having this particular JIRA done, it would simplify Droidium code tremendously and I would move with other things as well for which this one being resolved is very needed prerequisity. Waiting for Alpha2 is just time blocker for me.	1	1	https://issues.jboss.org/browse/ARQ-1744
2090	ARQ-1741	Are you trying to handle a TypeNotPresentException?	1	0	https://issues.jboss.org/browse/ARQ-1741
2091	ARQ-1716	Would it be possible to just bind to Arquillian Events? This is a long term maintenance nightmare - JUnit, TestNG, Cukespace, Spock, etc...	1	1	https://issues.jboss.org/browse/ARQ-1716
2092	ARQ-1572	This will work nicely for JARs and WARs, but not for EARs, as there is no 'global classloader' for the ear package as far as I can say. I will keep it as jar in the lib/ folder with the fixed name, eg. 'arquillian-persistence-datasets.jar'. Would it work for you?	1	1	https://issues.jboss.org/browse/ARQ-1572
2093	ARQ-1572	So the conclusion will be: * JAR and WAR will have it flattened (included in the test archive), so that JRebel works out of the box * For EAR we have {{arquillian-persistence-datasets.jar}} as regular (not exploded) archive in the {{lib/}} folder in the root of the archive. Does it sound good enough?	1	1	https://issues.jboss.org/browse/ARQ-1572
2094	ARQ-1567	[~smikloso], would it be possible to check system property java.home as well? While this might point to JRE in some cases, it might make setup easier.	0	0	https://issues.jboss.org/browse/ARQ-1567
2095	ARQ-1555	Actually, think I found a way to leverage @ArquillianResource. Since it uses a class, the class provided could be the @ApplicationPath annotated class. If you did @ArquillianResource(JaxRSActivator.class) MyInterface restClient; REST extension could look for that application path (as found on that class) and leverage that as the base URI. If your JAXRSActivator was annotated @ApplicationPath("/rest") it would use rest. Otherwise it should default to /, since this is the default behavior of JAX-RS. WDYT?	0	0	https://issues.jboss.org/browse/ARQ-1555
2096	ARQ-1555	Are we still thinking this is not easily fixable to use ArquillianResource? Seems like it shouldn't be that difficult. What am I missing?	0	0	https://issues.jboss.org/browse/ARQ-1555
2097	ARQ-1461	How does this effect arquillian-extension-ios?	1	1	https://issues.jboss.org/browse/ARQ-1461
2098	ARQ-1453	Could you define 'Drone-like'?	0	0	https://issues.jboss.org/browse/ARQ-1453
2099	ARQ-1444	I have created a pull request for this issue [1]. Can anyone review it? Thanks in advance. [1] https://github.com/arquillian/arquillian-extension-persistence/pull/38	1	1	https://issues.jboss.org/browse/ARQ-1444
2100	ARQ-1444	Hi guys, is this issue really resolved? im trying to clean a oracle db using @CleanupUsingScript or @ApplyScriptAfter/Before and still having ORA-00911: invalid character in Alpha. My scripts are simple DELETE from TABLE; my arquillian.xml is as follows: <extension qualifier="persistence-dbunit"> <property name="schema">TR_DETRAN_RED_AD</property> <!-- <property name="datatypeFactory">org.dbunit.ext.oracle.Oracle10DataTypeFactory</property>--> <property name="filterTables">true</property> <!--<property name="filterForeignKeysEnabled">false</property>--> <!--<property name="customTableFilter">org.jboss.arquillian.persistence.dbunit.filter.OracleDatabaseSequenceFilterProvider</property>--> </extension> <extension qualifier="persistence"> <property name="defaultDataSource">java:jboss/datasources/RedTesteDS</property> <!--<property name="defaultDataSeedStrategy">CLEAN_INSERT</property> --> <!-- <property name="defaultCleanupPhase">NONE</property> --> <property name="dumpData">false</property> </extension> <!-- <extension qualifier="persistence-script"> <property name="sqlStatementDelimiter">;</property> </extension> --> thanks in advance.	1	1	https://issues.jboss.org/browse/ARQ-1444
2101	ARQ-1419	Yes, it's HTTP only. With regard to the descriptor deployment - the only relevant documentation I found is this: https://docs.jboss.org/author/display/ARQ/Descriptor+deployment. However I checked the AS7/WildFly container adapter and it seems it does not support this either. So I think we can live without this feature for now and add the support later. WDYT?	1	1	https://issues.jboss.org/browse/ARQ-1419
2102	ARQ-1388	Do you get the same even if you don't cache the ear and the jar between tests?	1	0	https://issues.jboss.org/browse/ARQ-1388

2106	ARQ-1385	[~lfryc] What's the proper SPI lifecycle event in your opinion?	0	0	https://issues.jboss.org/browse/ARQ-1385
2107	ARQ-1384	Thank you very much for your effort Tamás. Would you be so kind and create pull request out of it?	0	0	https://issues.jboss.org/browse/ARQ-1384
2108	ARQ-1370	Sure, you're welcome. Regarding your proposed solution (referenced in the description): without admittedly knowing Warp's internals, this looks more like a workaround than a solution. The root cause of this problem seems to be that {{Alpha3}} requires a dedicated custom SSL context (or TrustManager, respectively) while {{Alpha2}} was able to make use of the container's existing SSL context as described in ARQ-1365 and the forum thread (referenced above). The question is: why is that and would it be possible to let {{CommandService}} reuse the existing SSL context as well? Just ignore my comment if I'm totally mistaken ;-)	1	0	https://issues.jboss.org/browse/ARQ-1370
2109	ARQ-1370	Great, thanks for the doc pointers! The Arquillian GitHub wiki at [2] would have been the last place for me to look for such Warp details ;-) {quote} I actually think that any SSL communication wouldn't work in Warp in Alpha2, beucase Warp is a Man in the Middle from the SSL handshake perspective {quote} Well, as described earlier, it does - at least for client-side tests in a test class annotated with {{@WarpTest}}. That's why this issue seemed like a Alpha2->Alpha3 regression from a user's (my) perspective: for some reason Warp-enriched _client-side_ tests do fail with Alpha3 while they work with Alpha2 (via SSL). You know better than me whether that kind of client-side tests is also affected by the new {{CommandService}} infrastructure/workflow. I guess the major difference compared to Alpha2 is the _additional_ request in Alpha3 you describe: while Alpha2 (enriched) client-side tests, issuing requests via Drone/WebDriver, simply run in JBoss's configured SSL context, Alpha3 (enriched) client-side tests involve {{CommandService}} creating a new request _itself_, somehow outside the container's SSL context...? If my assessment is correct the question should be, can you tap into the container's SSL context or adopt it somehow? If not, you most likely need to establish your own, as suggested by your proposed workaround, if Warp's architecture itself can't be changed/improved in that regard. IMHO, such a workaround would be less optimal, however, because a functional JSF test naturally involves the web app's container, including potential security measures in place (like SSL or authentication). Thus it would be nice to run such tests in their actual environment, without the need for a parallel security setup that (potentially) needs to be kept in sync with the container's setup in order to produce meaningful test results (without superfluous artefacts). After all, this is what makes Arquillian such a great tool, right? What do you reckon? Seems like an interesting problem :-)	1	0	https://issues.jboss.org/browse/ARQ-1370
2110	ARQ-1370	Hey Oliver, I agree that Warp should be able to work with SSL. {quote} Well, as described earlier, it does - at least for client-side tests in a test class annotated with @WarpTest. That's why this issue seemed like a Alpha2->Alpha3 regression from a user's (my) perspective: for some reason Warp-enriched client-side tests do fail with Alpha3 while they work with Alpha2 (via SSL). {quote} The thing is that Warp needs to be able to intercept the request flowing through proxy from client to server - it basically needs to know request/response headers (in order to be able select particular request which should be intercepted). I'm not sure whether LittleProxy current supports SSL handshake - it seems so, however as I said, we are not interested just in transporation level (HTTP-over-SSL), but rather in presentation layer (details of HTTP request). It seems that LittleProxy team recently added support for SSL interception (Man in the Middle - MITM) [1] to 0.6.0-SNAPSHOT (Warp currently uses 0.5.3). {quote} I guess the major difference compared to Alpha2 is the additional request in Alpha3 you describe: while Alpha2 (enriched) client-side tests, issuing requests via Drone/WebDriver, simply run in JBoss's configured SSL context, Alpha3 (enriched) client-side tests involve CommandService creating a new request itself, somehow outside the container's SSL context...? If my assessment is correct the question should be, can you tap into the container's SSL context or adopt it somehow? If not, you most likely need to establish your own, as suggested by your proposed workaround, if Warp's architecture itself can't be changed/improved in that regard. {quote} That's interesting, what have happened in Alpha2: {code} client --HTTPS--> proxy --HTTPS with payload--> server {code} * on the proxy, we had to have access to HTTP headers * in order to add additional request header (which contains payload) How it works in Alpha3: {code} client --HTTPS--> proxy --HTTPS with flag--> server proxy --CommandService--> server {code} * we still need to have access to request headers (adding a flag (serialId of the message) * but proxy needs to be able to connect independently to server You are talking about SSL contexts, but I think it actually stands for SSL certificates setup for {{client}} (browser?) and {{proxy}} (test JVM) and in Alpha3, the {{test}} itself (CommandService, test JVM). Any chance you could look at this issue more closely? I can provide you with guidance. [1] https://github.com/adamfisk/LittleProxy/commit/8cb5b470ad3368badc15d6da67f8c8ffe6fe94f6	1	1	https://issues.jboss.org/browse/ARQ-1370
2111	ARQ-1370	Hi Lukáš, Thanks for getting back to this! How do you want me to help? Would it be sufficient to somehow replace the current version of LittleProxy with 0.6.0-SNAPSHOT and see if it works. I hope I can find some time over the weekend but it's somewhat hard to come by right now.	1	0	https://issues.jboss.org/browse/ARQ-1370
2112	ARQ-1364	Karel, could you please review this pull request?	0	0	https://issues.jboss.org/browse/ARQ-1364
2113	ARQ-1363	Karel. could you please review this pull request?	0	0	https://issues.jboss.org/browse/ARQ-1363
2114	ARQ-1362	Which Arquillian Protocol are you using? Servlet or JMX(default) ?	1	0	https://issues.jboss.org/browse/ARQ-1362

#	Requirement	Questions	Answered	Successfully Answered	URL
2115	ARQ-1341	As Aslak [pointed out|https://community.jboss.org/message/809204#809204], the REST extension would be better fit for separate module: {quote} We could put this in the arquillian-extension-rest. What's there now is just an early prototype with very little movement. We could 'move' the master branch to a branch, replace master with warp-rest, then retro fit the old master branch if needed. {quote} What do you think, [~jmnarloch]?	1	1	https://issues.jboss.org/browse/ARQ-1341
2116	ARQ-1341	Ok, thanks. Quick question since we are moving the extension to repository *arquillian-extension-rest* how do you want me to name the packages? At the moment I had used *arquillian-warp-jaxrs* prefix.	1	1	https://issues.jboss.org/browse/ARQ-1341
2117	ARQ-1341	org.jboss.arquillian.extension.rest.warp ? org.jboss.arquillian.extension.rest.warp.jaxrs ?	1	1	https://issues.jboss.org/browse/ARQ-1341
2118	ARQ-1330	I'll admit that there might be a few edge cases where it makes sense to use a behavior-driven, mock-style approach. But I still hesitate to add a mock framework to JSFUnit. This is partially because I don't often see those theoretical edge cases. But mostly it's because a mock approach is a completely different style of testing. I'm not saying it's invalid, but it causes you to think about your tests in a completely different way. The classic paper on this is by Martin Fowler. If you haven't read it, I'd highly recommend it. It looks like he updated it since I last studied it so maybe I need to re-read it as well: http://martinfowler.com/articles/mocksArentStubs.html To address the use cases the two of you have presented thus far: * For the one about analyzing generated html, I think this is solved with the speed and ease of Arquillian. If I understand your requirements correctly, I'd argue that it's easier to set up a JSFUnit test for this than to set up a mock environment. * For testing if an attribute is set only once per phase, I'm not sure I understand why you need that. What is the actual use case? Can you use a java assert statement to achieve the same thing? * For testing exceptions, that's pretty straightforward. You just create the conditions that throw the exception and see what happens. If that can't be done with a live application then you need to question your design because perhaps you are testing something that can't happen in the real world. Some of the above use cases might stem from the fact that JSFUnit tests aren't fine-grained enough. You are required to wait until the lifecycle completes and there is no opportunity to peek at the live object until rendering is done. To make fine-grained tests easier, I've thought of implementing JSFUNIT-59. This feature would call back into your tests before and after each phase. Then you could examine the live object at different points during the JSF lifecycle. You could even call its methods from your test, but I'd discourage that most of the time. The only tricky part to implementing JSFUNIT-59 would be to figure out how to register the callback with a PhaseListener. But it's quite doable. It would be great if one of you wants to take that on. I think it would make some of the above use cases even easier.	1	1	https://issues.jboss.org/browse/ARQ-1330
2119	ARQ-1319	Hey Aris, great job with investigations! The initial intention was to verify that Warp-based tests coverage is reported correctly. Configuring Warp's code coverage is actually nice consequence and I will merge it once it will work correctly. The problem here is that even in the ant-generated reporting, I can't see coverage of e.g. TestingServlet ({{ftest}} project, {{org.jboss.arquillian.warp.ftest}} package), which should be actually hit several times - this is what fundamentally Warp users wants. I guess there is some problem with reporting from Warp-based tests, e.g. does the command service does not work correctly? Does it provide correct data?	1	1	https://issues.jboss.org/browse/ARQ-1319
2120	ARQ-1319	It is possible to decouple response's writing and closing from {{WarpFilter}} {{doFilterWarp}} method, but this means that I should have to do the following changes: * Make {{RequestContextHandler}} observe {{BeforeSuite}} & {{AfterSuite}} instead of {{BeforeRequest}} & {{AfterRequest}} events. This way requestContext will be active throughout Arquillian's event lifecycle. * Add two observer methods on {{HttpRequestProcessor}}. The first one will observe {{BeforeSuite}} event (with precedence 100) and replace {{HttpServletResponse}} with a {{NonWritingResponse}}. The second one will observe {{AfterSuite}} event (with precedence -100) and will write and close the {{ServletOutputStream}}. Do you think that this is a good approach?	1	1	https://issues.jboss.org/browse/ARQ-1319
2121	ARQ-1319	Interesting approach. Do you plan on starting the implementation soon, or would you like me to give it a try? I believe it might take me some time, since I cannot commit to it full-time. ARQ-934 seems like a good starting point	1	1	https://issues.jboss.org/browse/ARQ-1319
2122	ARQ-1315	Fabian, do you have a proposal how it should look like in the configuration file?	1	1	https://issues.jboss.org/browse/ARQ-1315
2123	ARQ-1313	[~lfryc] [~jpapouse] isn't this done via http://search.maven.org/#artifactdetails%7Corg.jboss.arquillian.extension%7Carquillian-phantom-driver%7C1.1.0.Beta1%7Cjar ? And who actually manages arquillian-phantom-driver now?	1	0	https://issues.jboss.org/browse/ARQ-1313
2124	ARQ-1307	Okay, I will release them. [~jpapouse], what do you think about moving those projects to https://github.com/qa/ repo?	1	1	https://issues.jboss.org/browse/ARQ-1307
2125	ARQ-1307	Jan, I find the configuration quite cumbersome for end-user (all the profiles which need to setup). ---- I did a proof of concept that we could resolve the artifact with ShrinkWrap Resolver for Maven: {code:java} @Test public void test() { Maven.resolver().resolve("org.jboss.arquillian.phantomjs:phantomjs-binary:jar:unix_amd64:1.8.1") .withoutTransitivity().as(JavaArchive.class); } {code} With {{org.jboss.shrinkwrap.resolver:shrinkwrap-resolver-depchain:2.0.0-beta-2}} I was able to get local resolution in ~0.5sec. I consider it quite fast, but we should still leverage local binary cache as you did already. ---- Could you re-implement it using the technique mentioned above?	0	0	https://issues.jboss.org/browse/ARQ-1307
2126	ARQ-1303	Ok, But in such case, how can I use that in my test? I would have to 'lookup' the bean that is being test each time from the application context. You won't be able to inject you configured beans into the the tests directly. I was thinking about different aproach. How about resigning from class level annotations in favor of 'factory method'. Something like: {code} public class TestCase { @SpringApplicationContext public static ApplicationContext createApplicationContext() { return ... // the application context could be created fully programticly } public void test() { } } {code} In such way we could just @Autowire the beans in to the test class afterwards. Also we would have access to the ApplicationContext by simply adding @Autowired ApplicationContext field. It would work out of the box (likely this feature has been added somewhere in Spring 2.5.x version). The other thing I was thinking was using the same convention as in Spring Test 3.1. You are able to define static inner class annotated with @Configuration and define your beans there. Something like: {code} @SpringAnnotationConfiguration public class TestCase { @Configuration static class ContextConfiguration { @Bean public SomeBean create() { } } public void test() { } } {code}	1	1	https://issues.jboss.org/browse/ARQ-1303
2127	ARQ-1303	Does this make sense?	1	1	https://issues.jboss.org/browse/ARQ-1303

#	Requirement	Questions	Answered	Successfully Answered	URL
2128	ARQ-1303	You don't need to lookup the bean, we can provide a feature to autowire beans in a test class by using reflection. please take a look at AbstractSpringInjectionEnricher.java registerBean method. in my point of view, it might be better to keep away the developer from complexity of creating spring context and let Arquillian take care of it so having a prepared context and controlling it by annotation is more convenient than creating it. second approach sounds cool but you only will be able to use it in Spring 3.x and it does not work with static application context. another problem that thanks to Arquillian it is solved now is to use your test context in server. it is really cumbersome specially if you are using Grizzly (jersey) but it is not our concern in this case. WDYT ?	1	0	https://issues.jboss.org/browse/ARQ-1303
2129	ARQ-1292	Hi Aslak and Andrew This looks very interesting. Shall I do some investigations?	0	0	https://issues.jboss.org/browse/ARQ-1292
2130	ARQ-1269	Hey, can I take this over? I have a pull request ready to go.	1	1	https://issues.jboss.org/browse/ARQ-1269
2131	ARQ-1262	Hey Pavol, could you please setup browser-compatibility tests for Warp? They could use CloudBees/OpenShift and SauceLabs (I can provide all required accounts). This issue does not have high priority for Beta1.	0	0	https://issues.jboss.org/browse/ARQ-1262
2132	ARQ-1261	Hey Pavol, could you please setup container-compatibility tests for Warp? They could use CloudBees and mock-browser (htmlUnit now, phantomjs if available). This issue has high priority for Beta1.	0	0	https://issues.jboss.org/browse/ARQ-1261
2133	ARQ-1260	[~lfryc] how you want to figure out what is the last deployment? Should you mark it somehow on the filesystem?	1	1	https://issues.jboss.org/browse/ARQ-1260
2134	ARQ-1247	Hey John, could you please update to latest master and try full build? Tests seem to work fine on continuous integration: https://buildhive.cloudbees.com/view/My%20Repositories/job/arquillian/job/arquillian-extension-warp/ The latest Warp builds were published to Maven repo today.	0	0	https://issues.jboss.org/browse/ARQ-1247
2135	ARQ-1237	Hey Bartosz, do you have difficulties with implementing it? Any insight you would like to share?	1	1	https://issues.jboss.org/browse/ARQ-1237
2136	ARQ-1216	Most important - you should avoid breaking what currently works on developers/testers. This will ease migration to the new way. Everything old can be marked as deprecated, and only drive new features in to the new setup. *Do not break the old setup.* The first issue that needs to be addressed is why you can only have one container on the classpath at a time. I'm assuming there is some marker interface that Arquillian uses to determine this is a container (probably the local implementation of LoadableExtension that's in every container). Once that's done, couldn't you start by adding some new tags to arquillian.xml, allowing the selection of which container to run and set each of these with an ID? Then setup some kind of JVM argument or something indicating which arquillian test set to run based on these IDs? Then make sure it allows you to run multiple (either serial or parallel). Maybe.. mvn test -DarquillianContainer=weld_ee -DarquillianContainer=jbossas_managed_7 I would almost argue that these need to be two different issues, one covering containers and the other covering extensions (though they are essentially both extensions...)	1	0	https://issues.jboss.org/browse/ARQ-1216
2137	ARQ-1213	Do we still consider this issue relevant?	1	0	https://issues.jboss.org/browse/ARQ-1213
2138	ARQ-1212	Is this issue still relevant?	0	0	https://issues.jboss.org/browse/ARQ-1212
2139	ARQ-1176	Karel, would you prefer to have this implemented in Arquillian Drone?	0	0	https://issues.jboss.org/browse/ARQ-1176
2140	ARQ-1176	+1 reject it wdyt [~kpiwko]?	1	0	https://issues.jboss.org/browse/ARQ-1176
2141	ARQ-1169	is this related to ARQ-483 ?	0	0	https://issues.jboss.org/browse/ARQ-1169
2142	ARQ-1169	Seems related. But Lincoln's POC there handles simply the embedded case. Sounds like 483 would really be incorporated by this, which would aim to provide a target runtime. And could have a remote, managed, and embedded container to accompany it. What do you say we link this as "incorporates" 483?	0	0	https://issues.jboss.org/browse/ARQ-1169
2143	ARQ-1166	[10:53] <aslak> http://pastebin.com/bQP8rJiS line:50 [10:53] <aslak> the original file name is linked in. the Asset might have a different name in the Archive then on the Filesystem [10:54] <aslak> in this case we're setting up rebel.xml to monitor test-web.xml, but does rebel know that that is our web.xml ? [10:55] == jharting [jharting@redhat/jboss/jharting] has joined #jbosstesting [10:56] <aslak> most of those shouldn't be linked under "web". [10:57] <blabno> aslak, sorry, but i don't understand [10:57] == kpiwko [kpiwko@redhat/jboss/kpiwko] has joined #jbosstesting [10:57] <blabno> i think jrebel will not know that test-web.xml is web.xml in archive [10:58] <aslak> but it should ? [10:58] <blabno> well, would be nice for use [10:58] <blabno> for us, but I don't think they have forseen this [10:58] <blabno> and I would not expet them to support this [10:59] <aslak> blabno, mm, I can't seem to find any 'rename/redirect' type element [11:00] <aslak> we basically want to say: as / in web, link from src/test/resources/ file test-web.xml as web.xml [11:00] <blabno> i think that we will need to copy all resources that have different name in archive then in filesystem to jrebel temp [11:01] <aslak> mm yea, rebel should still be able to detect the changes when you run so. the user shouldn't notice [11:02] <aslak> i'll add it to my 'jrebel-feature-request' list [11:02] <blabno> :) yes and let's gather bunch of people to vote for it :D	1	0	https://issues.jboss.org/browse/ARQ-1166
2144	ARQ-1143	Hi Bartosz, I tried to update the runner to use Groovy 2.1 and Spock 0.7, but for some reason I haven't figured out yet AuxiliaryArchiveAppender is not picking groovy classes into arquillian-spock.jar even if groovy-all is on the classpath no matter of the scope. One of the workarounds I came with was to include groovy-all and 0.7-spock-${groovy-version} fetched by ShrinkWrapMavenResolver based on what groovy/spock version user specifier/transitively depends on in his pom.xml. How does it sound to you?	1	1	https://issues.jboss.org/browse/ARQ-1143
2145	ARQ-1096	Do you suggest supporting both these variants or full migration to <default-container>foo</default-container>?	0	0	https://issues.jboss.org/browse/ARQ-1096
2146	ARQ-1096	Using default=true + arquillian.launch with Maven Resource Filtering works. Does not seem nice but still works with current infrastructure. Do we want to change the behavior somehow in future?	0	0	https://issues.jboss.org/browse/ARQ-1096
2147	ARQ-1089	I don't think this is actually critical and I would leave the fix for future. I can assess it again if you will provide more info about use case? Is that integration issue?	0	0	https://issues.jboss.org/browse/ARQ-1089
2148	ARQ-1082	This is awesome! Does that mean that we could use persistence on the client side?	0	0	https://issues.jboss.org/browse/ARQ-1082
2149	ARQ-1077	Guys, I think this issue can be fixed if: * Drone extension could be enabled in IN_CONTAINER mode or * Persistence extension could be enabled in AS_CLIENT mode or * Test run in IN_CONTAINER mode, however Drone tests are forced to run AS_CLIENT So, I think following scenario should work without any code modifications required: {code} @RunWith(Arquillian.class) @DataSource("java:jboss/datasources/ExampleDS") @UsingDataSet("OneUserAccount-Admin.yml") public void CombinedTest { // notice testable=true, hence run in container by default @Deployment(testable=true) public static Archive<?> deployment() { // return full archive for Drone here } @Test @RunAsClient public void droneTest(@Drone WebDriver driver) { driver.XYZ(); } {code} Bryan, can you try this approach and let us know?	0	0	https://issues.jboss.org/browse/ARQ-1077

#	Requirement	Questions	Answered	Successfully Answered	URL
2150	ARQ-1077	Bryan, At least in my case I"m getting failures due to graphene not being in the archive. Did you have to add anything to your WAR file for that?	0	0	https://issues.jboss.org/browse/ARQ-1077
2151	ARQ-985	Now corect me if I'm wrong, but will this have any chance to work with embedded container? Assuming that the XmlClientApplicationContextProducer will create the instance of TestScopeApplicationContext and then the XmlRemoteApplicationContextProducer will be run and create in CDI context new TestScopeApplicationContext, will that completly overide the previouse one?	1	1	https://issues.jboss.org/browse/ARQ-985
2152	ARQ-985	Could I try to define different CDI scopes for the created TestScopeApplicationContext to make that working with the embedded containers?	1	1	https://issues.jboss.org/browse/ARQ-985
2153	ARQ-970	Where can these tests be found?	0	0	https://issues.jboss.org/browse/ARQ-970
2154	ARQ-967	images, scripts, css, etc. <lfryc> that's the time when we expect AJAX request, but request for those evil resources come :-) <lfryc> so it's time to define smart filters which decides what request to enrich <aslak> client multi threads the resource request ? <lfryc> but it can't be written generally enough, since you can't simply map request URL to content-type or so <lfryc> yeah, browsers usually loads up to 5 resources at time <lfryc> it is not issue with htmlunit (that's why unit tests pass just fine) <lfryc> but real browsers have cause issues <aslak> lfryc, you can't look at the accept header ? <lfryc> aslak: it's not silver-bullet <lfryc> browser may not need to send that header <aslak> true <lfryc> I think we have two options: <lfryc> 1) smart heuristics <lfryc> 2) framework-dependent filters <aslak> you have control over the proxy, so you should be able to sync up at that level how ever you want it <lfryc> you mean I can force client to send accept-header? :-) <aslak> lfryc, hehe no, as in race conditions i mean <lfryc> race condition - I mean, request fighting in what will be enriched :-) <aslak> lfryc, you could in theory throttle the request <aslak> aa ok <aslak> there should be multiple types of filters.. accept headers, url pattern etc <lfryc> hmm but browsers usually sents correct accept-headers for images/icons/etc. <lfryc> for resource types they know what to expect <aslak> depending on the use case, not all will work. if browsers don't sent accept headers, that filter migh tbe more useful in a REST request <lfryc> yes, we could provide multiple types of filters <lfryc> thinkinga bout framework-specific and smart ones <lfryc> user may decide which to use for given use case <aslak> yea <lfryc> use the most appropriate one for the use case <lfryc> and choose/configure default one in arquillian.xml <aslak> i think you can provide in warp core http based filters * jharting has quit (Quit: Leaving.) <aslak> i guess that would be, request content, url and headers * alesj has quit (Quit: Leaving.) <lfryc> that's going to be huge :-) <lfryc> and then framework specific filters, which can be easier to use <aslak> where does arq.xml come in? * rmannibucau has quit (Remote host closed the connection) * ge0ffrey has quit (Ping timeout: 240 seconds) <lfryc> configure defaults <lfryc> like, I want to use JSF filter with FacesServlet mapping on /xyz <aslak> default what? fitler ? <lfryc> yep <lfryc> when no filter specified, default can be used <aslak> arn't filters on a .execute() level ? <lfryc> yep, they are <lfryc> oh, no, they are on the proxy level * DavideD has quit (Ping timeout: 245 seconds) <aslak> ok, so basically via arq.xml you can say that only ever enrich jsf requests in this suite, what ever i might be calling <lfryc> which is on client-side <lfryc> but evaluated after client action <aslak> lfryc, sure, but i mean you don't need global filters. the individual .execute methods would define them <aslak> (not saying you can't have global) <lfryc> yes, but main use case for Warp is verifying request pages <aslak> eh, to rephrase.. a Filter is active from .execute start til end <lfryc> not resources <lfryc> so global might be handy <lfryc> but still you can define per Warp execution * #jbosstesting :End of Channel Ban List <aslak> and it work now based on just selecting the first request within the execute block <lfryc> yep <lfryc> first come, first served <aslak> so unless you wanted to enrich resources, you could really just split up the requests in two executes <lfryc> yep * qmx is now known as qmx|away <aslak> HTTP filters should work with Resources and AJax request, by either headers or url <aslak> a JSF filter would basically be a URL filter no? <lfryc> yes, it will be URL pattern filter <aslak> yea <aslak> what was the issue ? <aslak> :) <aslak> known how to filter? <aslak> or the browser doing multi threaded requests that potentially create multiple enriched requests ? <lfryc> know what reuqest to filter :-) <lfryc> know what to filter because browser may request pages/resources in parallel <aslak> does the parallel matter ? <lfryc> it matters, because without filtering, you can't choose what request to enrich/verify <lfryc> so you can either enrich first or enrich all * ge0ffrey (~ge0ffrey@174.195-241-81.adsl-dyn.isp.belgacom.be) has joined #jbosstesting * ge0ffrey has quit (Changing host) * ge0ffrey (~ge0ffrey@redhat/jboss/ge0ffrey) has joined #jbosstesting * balunasj is now known as balunasj|lunch <lfryc> when enriching all requests, you can always wait	1	1	https://issues.jboss.org/browse/ARQ-967
2155	ARQ-967	What's missing: * user-centric API * relation between filters and requests * integrity checks ** a filter is used ** how many requests user expects (at overall / per each filter) * standard set of common filters (TBD) * framework-specific filters * default filters configuration / SPI * groups of filters	0	0	https://issues.jboss.org/browse/ARQ-967
2156	ARQ-957	Guys, could you please review and comment what needs to be improved to stay aligned with other demos?	0	0	https://issues.jboss.org/browse/ARQ-957
2157	ARQ-932	We could solve the issue by forcing client to use only APIs of client tools (like selenium-api) and package them to the WAR. Is it possible to make anonymous classes static? -> No http://stackoverflow.com/questions/758570/is-it-possible-to-make-anonymous-inner-classes-in-java-static	1	1	https://issues.jboss.org/browse/ARQ-932
2158	ARQ-932	Would it be possible to rewrite the Anonymous Inner Class to a Static class on 'deploy', assuming of course the Inner class doesn't reference any object instances from the parent. Using e.g. javasist or similar ?	1	1	https://issues.jboss.org/browse/ARQ-932
2159	ARQ-928	What's this all about? :)	0	0	https://issues.jboss.org/browse/ARQ-928
2160	ARQ-924	What did you have in mind? I'm thinking of something similar, allowing you to build tests that run against servicemix/jboss fuse using the OSGi runtime of karaf.	1	1	https://issues.jboss.org/browse/ARQ-924
2161	ARQ-924	I'm curious how this works, or maybe we just need to wait for some docs to come out. Can I point to KARAF_HOME to run tests, and the container will start up for me?	0	0	https://issues.jboss.org/browse/ARQ-924

#	Requirement	Questions	Answered	Successfully Answered	URL
2162	ARQ-918	The following suggestions indicate to me I need to clarify what behavior we're attempting to control. * testMode = TestMode.CLIENT etc... * runMode = ArquillianRunMode.IN_CONTAINER|CLIENT|CLIENT_ENRICHED * Do the 'supports' and 'testing' bookends reinforce the meaning of 'inContainer' that much? A deployment is "in container" by definition. We aren't trying to control whether or not it's deployed to the container. Otherwise, we wouldn't be defining a deployment in the first place. What we are trying to control is whether Arquillian adds its own infrastructure to the deployment (effectively repackaging it). That infrastructure adds extra services to the deployment that become available once the deployment is deployed. Those services are (as of now): * a service to run tests in-container * a service to monitor, analyze or execute callbacks on the server-side code We are not trying to control how the tests are run. That behavior is controlled on the test class or test method using the @RunAsClient annotation. When absent, the default is to run the test "in-container" if the deployment supports in-container testing or "as client" if the deployment does not. (If there are multiple deployments, @OperateOnDeployment tells Arquillian which deployment to use for that test). I'll summarize the three ways a deployment is packaged and the behavior it provides: * Add the test infrastructure to the deployment - capable of running tests in-container (white box testing) * Add instrumentation to the deployment - supports client testing w/ knowledge of internal state (gray box testing) * Use the deployment exactly as it's defined - supports purely client testing (black box testing) With that in mind, I have another proposal for how to control the packaging of these services: {code} @Deployment(testingServices = ALL | INSTRUMENTATION_ONLY | NONE) {code} or as a separate annotation {code} @Deployment @TestingServices(NONE) {code} ALL could be IN_CONTAINER instead.	1	1	https://issues.jboss.org/browse/ARQ-918
2163	ARQ-918	Do we want to continue supporting "mixed-mode"? Currently, this is possible doing something like this: {code} @RunWith(Arquillian.class) public class ExampleIT { @Deployment public static WebArchive createDeployment() { // ... } @Test public void inContainerTest() { // ... } @Test @RunAsClient public void clientTest(@ArquillianResource URL baseURL) { // ... } } {code}	1	0	https://issues.jboss.org/browse/ARQ-918
2164	ARQ-917	In what container have you tested this? It being a field, won't it be initialized when accessing/loading the class and fail to execute shrinkwrap in a managed/remote container?	0	0	https://issues.jboss.org/browse/ARQ-917
2165	ARQ-912	Done -> Create a JIRA component to track issues and releases Component: "Extension - REST" Version: rest_1.0.0.next Done -> Create a new repository: arquillian-extension-rest https://github.com/arquillian/arquillian-extension-rest Done -> Add the repository to the enlistments on http://ohloh.net/p/arquillian	0	0	https://issues.jboss.org/browse/ARQ-912
2166	ARQ-898	Aha, now I see where the disconnect in my logic is. I suspected that the name attribute on the @Deployment annotation determined the middle segment (the deployment name), but I didn't realize that the first segment came from the @TargetsContainer annotation (the target name). I had thought that the target name came from the qualifier in arquillian.xml. If there is no @TargetsContainer annotation, is it possible to use the qualifier of the active configuration, if any? Or are these orthogonal things?	1	0	https://issues.jboss.org/browse/ARQ-898
2167	ARQ-892	Aslak, last time we've talked about this you mentioned that jrebel doesn't pick up some resources. Could you give me more detailed description? I've retested the pull request and everything seems to work.	0	0	https://issues.jboss.org/browse/ARQ-892
2168	ARQ-846	Hi, The status is resolved in 1.1.0.Beta1, where can I find this version please? Regards	1	0	https://issues.jboss.org/browse/ARQ-846
2169	ARQ-835	reset history and push with force ?	1	1	https://issues.jboss.org/browse/ARQ-835
2170	ARQ-809	Which source are you using? arquillian-testenricher-cdi should depend on Weld Core 1.1.5 which is in central	0	0	https://issues.jboss.org/browse/ARQ-809
2171	ARQ-798	Lol, duplicating my own. How come goggle didn't find it for 'Arquillian "+httpd"' ? :)	0	0	https://issues.jboss.org/browse/ARQ-798
2172	ARQ-796	Deleted the {{GlassFishRestDeploymentAppender}}. Aslak, I've not deleted the older SPI file referenced in the comment - the {{glassfish-embedded-3}} artifact is no longer built, since it is not registered as a Maven module in the project. Would it be wise to delete the {{glassfish-embedded-3}} and {{glassfish-remote-3}} directories, seeing that they're not built anymore ? I think we should test the current adapter against GF 3.0 (we test against 3.1 currently) and then proceed to delete the older unused ones. NB - The modules built in CI currently are {{glassfish-managed-3.1}}, {{glassfish-remote-3.1}}, {{glassfish-embedded-3.1}} and {{glassfish-common}}.	0	0	https://issues.jboss.org/browse/ARQ-796
2173	ARQ-782	Is this supported? I'm looking to use this feature and it doesn't look like my profile properties are being picked up, instead it reads ${var} as a string literal.	1	0	https://issues.jboss.org/browse/ARQ-782
2174	ARQ-733	Does it currently not do that? Or.. If so that's a bug	1	0	https://issues.jboss.org/browse/ARQ-733
2175	ARQ-710	Aslak: {quote} Not sure how to attack this.. in theory the stream that is wrapped in the managed container should be able to tell you which server it's from, so hench could be redirected somewhere, but not sure how to get 'client'. In AS4-6 CONSOLE was just another logger, i'm sure AS7 is similar. Wouldn't setting server1, server2 to log to specific file get you what you want? If no server logs to CONSOLE, then the assumption is the rest is 'client' ? {quote} I thought about that, but that would only separate by server. I believe it would be very convenient if separated by server _and_ test.	1	1	https://issues.jboss.org/browse/ARQ-710
2176	ARQ-710	David Lloyd about implementing Appender-like logging: {quote} (17:16:59) OndrejZizka: Hi David, where can I find some Appender class in JBoss logging? (17:17:09) OndrejZizka: in sources (17:19:27) dmlloyd: JBoss Logging has no appenders, it's just a log frontend (17:19:39) dmlloyd: unless you're talking about the older stuff from AS 5 (17:22:24) OndrejZizka: No, AS 7 (17:22:37) OndrejZizka: So, if I want some rolling appender used in AS 7, (17:22:51) OndrejZizka: how would I do it - like in log4j.properties? (17:24:43) OndrejZizka: logging.properties goes directly to the underlying framework or is somehow processed by jboss logging? (17:29:35) dmlloyd: the logging backend in AS7 is jboss-logmanager (17:29:44) dmlloyd: it's a java.util.logging.LogManager implementation (17:29:54) dmlloyd: but it also has extensive compatibility APIs (17:30:13) dmlloyd: jboss-logmanager is what processes logging.properties (17:43:30) OndrejZizka: I haven't worked with JUL much; if I wanted to implement an appender, and set it to be used in AS7, where would I start? (17:45:30) dmlloyd: if it's specifically for AS7, the best thing to do is implement org.jboss.logmanager.ExtHandler or one of its subclasses (17:48:19) OndrejZizka: Yes, it's for AS 7 + arquillian - to separate log lines per test case. {quote}	1	1	https://issues.jboss.org/browse/ARQ-710
2177	ARQ-690	What's left to do: Add {{-Djava.security.debug}} See http://docs.oracle.com/javase/1.5.0/docs/guide/plugin/developer_guide/debugger.html {code} -Djava.security.manager -Djava.security.policy==xxx.policy -Djava.security.debug=access,failure {code} To ignore the JDK's default policy which merges with the specified as default behavior, the policy path is prepended with '='.	0	0	https://issues.jboss.org/browse/ARQ-690

#	Requirement	Questions	Answered	Successfully Answered	URL
2178	ARQ-666	Implementation note: No warning are issue. Configuration is hidden from tests, so user will see no warnings based on implementationClass value. This leads to following situation: {code} @Drone HtmlUnitDriver driver; {code} {code:xml} <property name="implementationClass">...FirefoxDriver</property> {code} This will use HtmlUnitDriverFactory to get instance of FirefoxDriver. This is incorrect and will fail (because HtmlUnitDriverFactory has specific instantiation). Following must be specified in order to pass, however than implementation specific details are no triggered, e.g. no ChromeSwitches will be executed. {code} @Drone WebDriver driver; {code} Is that generic approach enough?	1	1	https://issues.jboss.org/browse/ARQ-666
2179	ARQ-653	Hey Aslak, would it be possible for you to review this pull request? Thanks!	0	0	https://issues.jboss.org/browse/ARQ-653
2180	ARQ-639	Which information are you looking for specifically ?	1	1	https://issues.jboss.org/browse/ARQ-639
2181	ARQ-638	I see there are some bits in WildFly about this functionality, but mainly around embedded container. Shall we keep the issue open? /cc [~aslak]	0	0	https://issues.jboss.org/browse/ARQ-638
2182	ARQ-633	The problem is, which module should it be in? This started as a archive.toURL extension that I wanted in ShrinkWrap, but it was refused at the time. We should probably revisit what it does and move it to ShrinkWrap.	1	0	https://issues.jboss.org/browse/ARQ-633
2183	ARQ-600	{code:java}org.jboss.arquillian.container.tomcat.managed_6.TomcatManagedConfiguration{code} contains a serverName attribute that does not appear in the other container configurations. Should I remove this or propagate it to the other managed container configurations?	1	1	https://issues.jboss.org/browse/ARQ-600
2184	ARQ-600	I've just had a go at adding tomcat-managed-8 to this source base. And now I can see that the remaining code in tomcat-managed-5.5 and tomcat-managed-6 is effectively identical - they both use "Servlet 2.5" protocol. tomcat-managed-7 and tomcat-managed-8 both use "Servlet 3.0" protocol and use the same (overridden) deploy/undeploy/list commands. ie. There's only two different flavours of tomcat-managed-N arquillian container integrations: * 5.5 and 6 * 7 and 8 I'm thinking of moving all the java code into tomcat-managed-common and just leaving the unit tests in the tomcat-managed-N modules and building tomcat-managed-N.jars that just contain the appropriate org.jboss.arquillian.core.spi.LoadableExtension file. What do you think?	1	1	https://issues.jboss.org/browse/ARQ-600
2185	ARQ-597	Is this container still needed? I'm hoping to drop support for it going forward per ARQ-1853. If there are any objections please comment on that issue.	0	0	https://issues.jboss.org/browse/ARQ-597
2186	ARQ-567	Hello Bernard, thank you for pinpointing the suite extension and your and aslaks work on that. I've tested extension and the suite alone is working properly, but we are using persistence extension (1.0.0.Alpha5) and then following exception occurs: java.lang.RuntimeException: Could not create new instance of class org.jboss.arquillian.test.impl.EventTestRunnerAdaptor at org.jboss.arquillian.persistence.core.deployment.PersistenceExtensionArchiveAppender.requiredLibraries(PersistenceExtensionArchiveAppender.java:81) Unfortunately the real exception is eaten and i can't debug within persistence extension. Thanks, Peter	1	0	https://issues.jboss.org/browse/ARQ-567
2187	ARQ-567	Hi, Is there any news on this issue? I find it pretty interesting as we have more than 60 test cases per app and a part from build time we need big infrastructure to handle them. How do you do that in other projects? Thanks in advance. Regards. Esteve	1	0	https://issues.jboss.org/browse/ARQ-567
2188	ARQ-567	Hi, Is there a way to run multiple tests with a single Deployment?	0	0	https://issues.jboss.org/browse/ARQ-567
2189	ARQ-561	Aslak, this workaround is useful only in a limited set of use cases. Here are the problems I've encountered: 1/ @Rule enricher is triggered before the Arquillian one...I was not able for example to do the following: {code} @Inject HelloService service1; @Inject HelloService service2; HelloService ruleService; @Rule public MethodRule dataProvider = new ParameterRule("ruleService", service1, service2); {code} It is clear the only way how to change that is to have a @Rule annotated method, which is not possible in JUnit currently 2/ Test method is reported as a single execution although it actually contains multiple tests 3/ MethodRule is deprecated Open question: Why do the sample implementation skip parameter enrichement while not running in container?	1	1	https://issues.jboss.org/browse/ARQ-561
2190	ARQ-561	> Open question: Why do the sample implementation skip parameter enrichement while not running in container? It would be executed both incontainer and on the client side if not one of them were skipped. We could have enhanced that with support for e.g. @RunAsClient. If we had executed the Client side multiple times for a Remote call, the Remote side would be invoked multiple times as well	1	1	https://issues.jboss.org/browse/ARQ-561
2191	ARQ-556	Hi guys. Is there any update to this feature request?	0	0	https://issues.jboss.org/browse/ARQ-556
2192	ARQ-521	Karel, could you use the right URL if it's available (configured or obtained from Container based events) and if not, use the default?	1	0	https://issues.jboss.org/browse/ARQ-521
2193	ARQ-517	[~alrubinger] [~aslak] Shall we pay this technical debt? Or is it already sorted out? :)	0	0	https://issues.jboss.org/browse/ARQ-517
2194	ARQ-474	I was thinking more in the line of @DependsOn("otherMethodName"). What do you mean by does not mean anything? Are you talking the annotation name "InOrder"?	0	0	https://issues.jboss.org/browse/ARQ-474
2195	ARQ-474	How about providing an annotation, lets say, @Ordered with which a whole test class could be annotated and then the test methods would be ordered according to the order in which they are written in the test class (from top->down). Do you think it would be possible?	0	0	https://issues.jboss.org/browse/ARQ-474
2196	ARQ-474	What about the non ordered ones? executed before or after? Default order is 0, then you can order as you like + or - ?	0	0	https://issues.jboss.org/browse/ARQ-474
2197	ARQ-467	Got any details here? pom, stack trace etc..	1	0	https://issues.jboss.org/browse/ARQ-467
2198	ARQ-448	I've made the changes locally to implement ARQ-448. I'm not so familiar with git. Can you please advise me on what I need to do to submit them? Thanks	1	1	https://issues.jboss.org/browse/ARQ-448
2199	ARQ-437	Lukas, If was thinking about this: You can't configure this via an annotation as during the BeforeSuite event you have no idea what files are in the suite and thus you can't go through source code creating appropriate browser instances. It is difficult to get this added to Arquillian runners, as JUnit has no {After,Before}Suite events. So only thing actually available in BeforeSuite event is configuration from arquillian.xml. So I can create a Drone Extension, which if activated, creates all instance in BeforeSuite and TestEnricher will later inject all field instances from SuiteScope context. If no browser instance is found, it will safely fail. This means that you will have possibility to use either BEFORE_SUITE + BEFORE_METHOD or BEFORE_CLASS + BEFORE_METHOD browsers, latter being the default. Do you find this usable? Proposed extension: {code:xml} <extension qualifier="drone-lifecycle"> <property name="browser-lifecycle">suite|class</property> </extension> {code} WDYT?	1	1	https://issues.jboss.org/browse/ARQ-437
2200	ARQ-437	One more important note: With SuiteScoped browsers you become dependent on class ordering. You can add a TestClass, thus changing order leading to unexpected failures. I'm not sure if class ordering is preserved on different platforms, afaik Surefire uses filesystem ordering as default. Are the advantages of this future bigger than drawbacks?	1	1	https://issues.jboss.org/browse/ARQ-437
2201	ARQ-436	Seems to me that new Arquillian Core is logging testng to console. Lukas, can you check Ajocado ftest example, which uses TestNG module if there is enough logging?	1	1	https://issues.jboss.org/browse/ARQ-436

#	Requirement	Questions	Answered	Successfully Answered	URL
2202	ARQ-435	Did I got right that idea of this is to make a screenshot and log actual state of the application (e.g. generated HTML) if test fails? Can you please elaborate on how this should be used? Do you want something like following? {code} @FailureLogging @RunWith(Arquillian.class) public class Test { ... } {code} and {code} @RunWith(Arquillian.class) public class Test { @Test @FailureLogging public void test() { ... } } {code}	0	0	https://issues.jboss.org/browse/ARQ-435
2203	ARQ-433	The tests pass from the old https://github.com/arquillian/arquillian.git repo. A notable difference is in the old repo the Servlet 2.5 protocol is being used, whereas in the new repo it's the Local protocol. The {{org.jboss.arquillian.protocol.servlet.v_2_5.ServletProtocolDeploymentPackager}} adds auxiliary archives such as {{arquillian-tomcat-testenrichers.jar}} [to the web application archive|http://community.jboss.org/message/551100]: {noformat} . ./META-INF ./META-INF/context.xml ./WEB-INF ./WEB-INF/beans.xml ./WEB-INF/classes ./WEB-INF/classes/org ./WEB-INF/classes/org/jboss ./WEB-INF/classes/org/jboss/arquillian ./WEB-INF/classes/org/jboss/arquillian/container ./WEB-INF/classes/org/jboss/arquillian/container/tomcat ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6 ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestBean.class ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestServlet.class ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TomcatEmbeddedInContainerTestCase.class ./WEB-INF/classes/org/jboss/arquillian/protocol ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions$1.class ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions$GetTcclAction.class ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions.class ./WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/ServletTestRunner.class ./WEB-INF/lib ./WEB-INF/lib/arquillian-core.jar ./WEB-INF/lib/arquillian-junit.jar ./WEB-INF/lib/arquillian-tomcat-testenrichers.jar ./WEB-INF/lib/weld-servlet-1.0.1-Final.jar ./WEB-INF/web.xml {noformat} The {{org.jboss.arquillian.container.test.impl.client.protocol.local.LocalDeploymentPackager}} does not: {noformat} ./META-INF ./META-INF/context.xml ./WEB-INF ./WEB-INF/beans.xml ./WEB-INF/classes ./WEB-INF/classes/org ./WEB-INF/classes/org/jboss ./WEB-INF/classes/org/jboss/arquillian ./WEB-INF/classes/org/jboss/arquillian/container ./WEB-INF/classes/org/jboss/arquillian/container/tomcat ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6 ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestBean.class ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestServlet.class ./WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TomcatEmbeddedInContainerTestCase.class ./WEB-INF/lib ./WEB-INF/lib/weld-servlet-1.0.1-Final.jar ./WEB-INF/web.xml {noformat} Was the change to the Local protocol intentional, and if so any tips on how test enrichment should work with it? Also are there any immediate plans to switch Hudson to the new repo?	1	1	https://issues.jboss.org/browse/ARQ-433
2204	ARQ-433	Can we make this for 1.0.0.Final? this/next week? :)	0	0	https://issues.jboss.org/browse/ARQ-433
2205	ARQ-417	Are we still interested in this feature?	0	0	https://issues.jboss.org/browse/ARQ-417
2206	ARQ-414	Thanks for your input guys! Shall we move issues to GitHub so that they are closer to the code and use this one as an umbrella?	1	0	https://issues.jboss.org/browse/ARQ-414
2207	ARQ-397	I was interrested in testing it so I checkouted your branch and tryed to install it localy. First I had the following error : {quote}{color:red}'dependencies.dependency.version' for org.jboss.shrinkwrap:shrinkwrap-extension-glassfish:jar is missing. @ line 43, column 19{color}{quote} I just added the version to pom.xml (1.0.0-alpha-12) and now I cannot install because the "IntegrationWarTestCase" fails on : {quote} Failed tests: shouldBeAbleToInjectEJBAsInstanceVariable(org.jboss.arquillian.container.glassfish.embedded_3_1.app.IntegrationWarTestCase) {quote} It seems that the test case in error was not able to inject the referenced EJB : {code:java} @EJB private NoInterfaceEJB bean; @Test public void shouldBeAbleToInjectEJBAsInstanceVariable() throws Exception { Assert.assertNotNull("Verify that the Bean has been injected", bean); Assert.assertEquals("Arquillian", bean.getName()); } {code} Having no clue why this could happend, I just installed it skipping the tests, and tried the installed snapshot on my project. The sun-resources.xml is deployed correctly : {quote} INFO: command add-resources result: PlainTextActionReporterSUCCESSDescription: add-resources AdminCommandnull JDBC connection pool jdbc/wakwi-pool created successfully. JDBC resource jdbc/wakwi-ds created successfully. {quote} However ... I have the problem that the ejb is not injected in my test. My test code : {code:java} @RunWith(Arquillian.class) public class TestFileManagementServiceTest { @Deployment public static WebArchive createDeployment() { return ShrinkWrap.create(WebArchive.class, "testFileManagementService.war").addClasses(FileManagementService.class, File.class, Category.class, FileStore.class, CurrentFileStore.class, DefaultFileStore.class). addAsResource("test-persistence.xml", ArchivePaths.create("META-INF/persistence.xml")). addAsResource(EmptyAsset.INSTANCE, "WEB-INF/beans.xml"); } @EJB private FileManagementService service; @Test public void testSaveFile() { assertNotNull("Service should have been injected.", service); } } {code} Do you have the same problem injecting an EJB using the branch ARQ-397 ? Is it related ?	1	1	https://issues.jboss.org/browse/ARQ-397
2208	ARQ-395	I got this message. What does this mean? How to resolve it?	0	0	https://issues.jboss.org/browse/ARQ-395
2209	ARQ-395	Hi, I also get this error-msg: "DeploymentScenario contains targets not maching any defined Container in the registry". @Aslak --- re. "no container integration module on classpath"... I have this in my pom-file: <dependency> <groupId>org.jboss.arquillian.container</groupId> <artifactId>arquillian-jbossas-embedded-6</artifactId> <version>1.0.0.Alpha5</version> <scope>test</scope> </dependency> <dependency> <groupId>org.jboss.jbossas</groupId> <artifactId>jboss-as-depchain</artifactId> <version>6.0.0.Final</version> <type>pom</type> </dependency> Isnt that enough? Anything else I need to do to launch JBoss from Arquillian? (I do not have any @TargetsContainer annotation in my code)	1	1	https://issues.jboss.org/browse/ARQ-395
2210	ARQ-395	The dependencies looks right, it's basically the arquillian-jbossas-embedded-6 dep it's complaining missing. Do you have it setup in a Maven Profile? And if so, are you sure it's activated?	0	0	https://issues.jboss.org/browse/ARQ-395
2211	ARQ-359	"envy" is the server hostname? Can the server resolve "envy" to it self ? What is your configuration ? this sounds similar to the localhost ubuntu resolve issue..	0	0	https://issues.jboss.org/browse/ARQ-359

2213	ARQ-351	How is this related to ARQ-456? Does it mean that @Before annotated method can be used if whole test is marked as @RunAsClient?	0	0	https://issues.jboss.org/browse/ARQ-351
2214	ARQ-351	This issue just bit me now when trying to restructure part of WFLY testsuite. Aslak, where is this on the roadmap? How hard would it be for a contributor to fix this?	0	0	https://issues.jboss.org/browse/ARQ-351
2215	ARQ-348	Hi Aslak, is it possible to get byteman support to Arquilian for AS7. I was just informed in AS7-2530 that current implementation is in experimental phase. This thing seems to be needed for us. Thank you, Mirek	1	1	https://issues.jboss.org/browse/ARQ-348
2216	ARQ-347	Is this issue "dead"?	0	0	https://issues.jboss.org/browse/ARQ-347
2217	ARQ-337	<aslak> pbakker, we will create a common arq 'ContextController' you can inject, since all of this is non standard between cdi impls and containers.. with a common api exposed by Arq your tests can be portable between impls pbakker, if you want to help prototype that your more then welcome.. :) <pbakker> what else should the contextcontroller be able to do? because request and session are part of the test already <aslak> pbakker, session/req shouldn't be auto in the test case(maybe with some annotations but..). it just works by chance currently by chance between embedded vs remote container that is <pbakker> hehe ok i wasn't aware of that <aslak> it works basically because the remote test execution currently use HTTP to execute, so when in cdi, you will have req and session there.. but when you move to e.g. ejb protocol for execution then you only have request the scopes should be controlled by the test, not 'randoms' in the environment.. ;) <pbakker> ok than a ContextController makes a lot of sense so i guess step one would be to get it working consistently over types of containers step 2 to look at other cdi impl <aslak> pbakker, yea, start with weld-ee weld-se and jboss remote probably the easies let CDI manage the ContextController as a bean, and only use CDi to inject it as well <pbakker> i agree <aslak> possible we could do something like @Scopes(Request, Session) @Test as a 'around invoke style, but that is a abstraction over the ContextController that would be step 3/4 or so <pbakker> yeah that would be good i guess we just have to write different implementations for each container because different way of executing the tests if there is a real http request you probably want to run the test in that same request, not in a simulated one <aslak> i think one for weld based containers should be ok, since weld works the same in all, but need different impl between openweb beans / reisin etc resin <pbakker> but in a remote test it now uses a http request to execute the test right, and not in an embedded container (lots of assumptions here, haven't really looked at the code yet...) <aslak> hmm.. not quite sure. you might be able to reuse the one there, depends a bit on how strict the container is.. weld allow you to stop and start new requests within a reques etc.. as pete commented, don't do that if you want it to work.. hehe pbakker, correct <pbakker> lol, that sounds extremely hacky, but it might be a way around it and work glassfish-remote and jboss-remote in a similar way? <aslak> yes	1	0	https://issues.jboss.org/browse/ARQ-337
2218	ARQ-336	how to hard kill a embedded server ?	1	1	https://issues.jboss.org/browse/ARQ-336
2219	ARQ-336	All the functionality is implemented already but not yet pushed. A user will be able to inject a ContainerController: {code:java} @ArquillianResource ContainerController controller; {code} and start/stop/kill server instances like this: {code:java} @Test public void killTest() throws Exception { //CONTAINER2 variable corresponds to container's name specified via qualifier arquillian.xml // ... <container qualifier="container2" managed="false"> controller.start(CONTAINER2); //do some test controller.stop(CONTAINER2); //do some test controller.start(CONTAINER2); //do some test controller.kill(CONTAINER2); //do some test } {code} The kill method has a default implementation called DefaultServerKillProcessor (implements org.jboss.arquillian.container.spi.ServerKillProcessor) which is used if no other impls are available. These can be shipped with DeployableContainer implementations or directly within a test. The default implementation does the same as stop() so when there is a need to hard kill a server instance, the concrete implementation for the target container has to be supplied. There are certain limitations, though. When running in a Client mode (@RunAsClient), all servers can be started/stopped/killed. To run in InContainer mode only containers other than the one running the test can be stopped/killed.	1	1	https://issues.jboss.org/browse/ARQ-336
2220	ARQ-336	This is starting to tie into this issue a bit: ARQ-236 Maybe we simple should call it "mode"/"controlmode". Where possible values are: suite|class|manual	1	1	https://issues.jboss.org/browse/ARQ-336
2221	ARQ-336	We already had a two state logic in Arquillian - RunAs(CLIENT, INCONTAINER) and it was replaced in Alpha5. Couldn't we move this to the class directly? Something like: {code} @ContainerSuiteLifecycle class FooTest { ... } {code} or {code} @ContainerManualLifecycle("jboss1") @ContainerClassLifecycle("jboss2", "jboss3") class Foo2Test { @Deployment @TargetsContainer("jboss1") ... } {code} In XML/XSD, this mapping would correspond rather to an element than attribute, so user can easily provide his own implementation and not depend on suite/class/manual possibilities, similar to protocols.	0	0	https://issues.jboss.org/browse/ARQ-336
2222	ARQ-336	What happens when: @ContainerSuiteLifecycle public class Foo1Test {} and @ContainerClassLifecycle public class Foo2Test {} exist in the same Suite ?	1	1	https://issues.jboss.org/browse/ARQ-336
2223	ARQ-336	Could this be pushed to Arquillian and then to AS7 soon? We (QE) really need such functionality for our test development. Thanks.	0	0	https://issues.jboss.org/browse/ARQ-336
2224	ARQ-336	Yep, Martin what's the status of this?	0	0	https://issues.jboss.org/browse/ARQ-336
2225	ARQ-336	This feature looks like exactly what we need to test crash recovery in XTS. However, I have one question... We need to be very precise about when the server crashes. To achieve this we use Byteman to inject some crash code into the server at an exact time and place. Will this feature work when the server has killed itself? This is roughly what our usage would look like: {code} @ArquillianResource ContainerController controller; @Test public void killTest() throws Exception { controller.start(CONTAINER1); //start a test scenario //Wait for byteman to kill the server controller.start(CONTAINER1); //Wait for recovery to complete //Verify correct recovery outcome } {code}	1	1	https://issues.jboss.org/browse/ARQ-336
2226	ARQ-336	This won't work because the "start" method will start the container only if it's not started yet. When you don't call stop() or kill(), the container will be still marked as "started": https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8fdbf/container/impl-base/src/main/java/org/jboss/arquillian/container/impl/client/container/ContainerLifecycleController.java . We would need to reconsider the approach again. However, you can provide your own implementation of a https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8fdbf/container/spi/src/main/java/org/jboss/arquillian/container/spi/ServerKillProcessor.java and do the waiting for byteman to kill the server in its kill() method (an example can be found here: https://github.com/mgencur/edg-tests/blob/master/failover/src/main/java/org/arquillian/edg/failover/extension/JBossAS7ServerKillProcessor.java). Then you would normally call controller.kill(CONTAINER1). Is that clear?	1	1	https://issues.jboss.org/browse/ARQ-336

#	Requirement	Questions	Answered	Successfully Answered	URL
2227	ARQ-336	Martin, Thanks for the info. Looks like writing our own impl of ServerKillProcesor shouldn't be too difficult. We should be able to use the example in edg-tests to figure out how to specify our own impl of ServerKillProcesor. Does this make sense?	1	1	https://issues.jboss.org/browse/ARQ-336
2228	ARQ-332	i do see your point. At least in my mind, Arquillian should be able to provide the Switzerland of configuration injection though, at least from my perspective. how would the testng stuff work with @Deployment in an Arquillian test? i never got in to testng, so i'm not sure at what point the config parameters are available; but they look like they're available in the equivalent of @Before.	0	0	https://issues.jboss.org/browse/ARQ-332
2229	ARQ-328	org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.AbstractDeployment.configureServices(AbstractDeployment.java:67) at org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.FlatDeployment.configureServices(FlatDeployment.java:32) at org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.AbstractDeployment.<init>(AbstractDeployment.java:50) at org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.AbstractDeployment.<init>(AbstractDeployment.java:55) at org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.FlatDeployment.<init>(FlatDeployment.java:26) at org.jboss.arquillian.container.weld.ee.embedded_1_1.mock.TestContainer.<init>(TestContainer.java:212) at org.jboss.arquillian.container.weld.ee.embedded_1_1.WeldEEMockContainer.deploy(WeldEEMockContainer.java:93) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController$3.call(ContainerDeployController.java:148) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController$3.call(ContainerDeployController.java:115) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController.executeOperation(ContainerDeployController.java:258) at org.jboss.arquillian.container.impl.client.container.ContainerDeployController.deploy(ContainerDeployController.java:114) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:90) at org.jboss.arquillian.core.impl.EventContextImpl.invokeObservers(EventContextImpl.java:99) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:81) at org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createDeploymentContext(ContainerDeploymentContextHandler.java:78) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:90) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createContainerContext(ContainerDeploymentContextHandler.java:57) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:90) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.container.impl.client.container.DeploymentExceptionHandler.verifyExpectedExceptionDuringDeploy(DeploymentExceptionHandler.java:50) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:90) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.core.impl.ManagerImpl.fire(ManagerImpl.java:134) at	1	1	https://issues.jboss.org/browse/ARQ-328
2230	ARQ-322	In follow-up to your other commands: ---- *deploying glassfish-resources.xml* I agree that ideally we should wait on the fix in GlassFish. If that stalls, I think we could probably hit most of the use cases by parsing the XML file ourselves and issuing the individual delete-* commands in reverse. Let's open a separate tracking issue for that. *setting the debug port* I also agree that the start-domain command should accept a debug port. I did, however, look into what it would take to change the port in the container adapter. In a nutshell, you can only change the debug port when the DAS is running (or you have to edit the domain.xml file manually). Here's the command: {code} asadmin set server.java-config.debug-options=-Xdebug -Xrunjdwp:transport=dt_socket,server=y,suspend=y,address=9009 {code} There is another issue at hand here. In order for the developer to make use of debugging w/ the managed container, it must be possible to set the suspend flag on the jdwp option. So --debug alone isn't sufficient (again, probably something start-domain should support). Here's the code that would be required to do this today: {code:title=GlassFishServerControl#start()} if (config.isDebug()) { result = executeAdminCommand("Setting debug options", "set", Arrays.asList(config.getTarget() + ".java-config.debug-options=" + "-Xdebug -Xrunjdwp:transport=dt_socket,server=y,suspend=y,address=" + config.getDebugSocketPort())); if (result > 0) { executeAdminDomainCommand("Stopping container", "stop-domain", new ArrayList<String>()); throw new LifecycleException("Could not set debug options"); } // NOTE we can't use restart-domain with suspend=y because connecting the debugger // does not resume startup result = executeAdminDomainCommand("Stopping container", "stop-domain", new ArrayList<String>()); if (result > 0) { throw new LifecycleException("Could not stop container to restart in debug mode"); } result = executeAdminDomainCommand("Starting container in debug mode", "start-domain", Arrays.asList("--debug")); if (result > 0) { throw new LifecycleException("Could not restart container in debug mode"); } } {code} {code:title=GlassFishServerControl#stop()} if (config.isDebug()) { result = executeAdminCommand("Restoring debug options", "set", Arrays.asList(config.getTarget() + ".java-config.debug-options=" + "-Xdebug -Xrunjdwp:transport=dt_socket,server=y,suspend=n,address=" + config.getDebugSocketPort())); if (result > 0) { logger.warning("Could not reset debug options, you may need to change them manually"); } } {code} and of course the configuration property: {code:title=GlassFishManagedContainerConfiguration} /** * Socket port to use for debugging */ private int debugSocketPort = 9009; public int getDebugSocketPort() { return debugSocketPort; } public void setDebugSocketPort(int debugSocketPort) { this.debugSocketPort = debugSocketPort; } {code} *add support for JVM flags* If setting the debug port wasn't complex enough, the JVM arguments are just crazy. Again, JVM options can be set with the DAS is running. However, it only supports deleting or appending, not replacing. To do this reliably, you have to read in the JVM options, figure out if the ones you want to add overlap, etc, etc. Here's the asadmin command set to set an option: {code} asadmin --echo create-jvm-options -Xmx512m {code} This is really where I think manually editing the domain.xml would make sense, because working with the available commands is like having your hands tied. ---- There is one other option to all of this. We could support creating a domain configuration to set custom properties such as the debug port and jvm options, then restart into that configuration. The configuration is created using the copy-config command [1]. The benefit to this approach is that it would also side step the issue of having to revert any changes we make for the test run (such as the debug port). [1] http://docs.oracle.com/cd/E18930_01/html/821-2433/copy-config-1.html#scrolltoc	0	0	https://issues.jboss.org/browse/ARQ-322

#	Requirement	Questions	Answered	Successfully Answered	URL
2231	ARQ-322	Aha!!! The REST API no longer allows you to request XML as a response type. If you change the "accepts" from MediaType.APPLICATION_XML to MediaType.APPLICATION_JSON, you'll see that it's trying to return this string: {"message":"","command":"server","exit_code":"SUCCESS","extraProperties":{"commands":[],"methods":[{"name":"GET"},{}],"childResources":{"server":"http:\/\/localhost:4848\/management\/domain\/servers\/server\/server"}}} Can you gut out the XML parsing and replace with JSON parsing? Then we'll be in good shape. Btw, I'm pretty sure the admin REST API has always support JSON responses. For some reason, Jason picked XML when we wrote the first prototype.	0	0	https://issues.jboss.org/browse/ARQ-322
2232	ARQ-322	Ah, right, I should have guessed there was another issue based on the fact that we've discussed it in the past. Thanks for the pointer. As for XML vs JSON, I wonder which would be faster. I would imagine that the developer would prefer speed over one less dependency, since parse speed affects every test execution. I could see the extra dep as a problem if it had to be packaged, but in this case it's purely for client-side usage. Should we at least do an analysis of the speed? If so, I can open a separate issue.	1	1	https://issues.jboss.org/browse/ARQ-322
2233	ARQ-315	Is there a way to do this with JBoss 4.2?	1	0	https://issues.jboss.org/browse/ARQ-315
2234	ARQ-315	Hi Dan, any updates on this? Will this be working for all JBoss AS containers?	0	0	https://issues.jboss.org/browse/ARQ-315
2235	ARQ-311	where is this commit?	1	1	https://issues.jboss.org/browse/ARQ-311
2236	ARQ-297	What Thomas did could be replaced with: mvn clean install -pl container/osgi-embedded/,containers/osgi-remote -am The same goes for the ppl that are interested in only one container: mvn clean install -pl containers/jbossas-remote-6,junit -am	0	0	https://issues.jboss.org/browse/ARQ-297
2237	ARQ-297	I've updated the build page accordingly: https://www.jboss.org/arquillian/build.html We may need a docs update too (I can't remember if we have build instructions there). Should we still move forward with creating some basic profiles? Do we want to get rid of the OSGi profile?	1	0	https://issues.jboss.org/browse/ARQ-297
2238	ARQ-286	Hi, I would like to take a look at this issue. In the end the behavior for the @Rule annotation should be the same as for @Before/@After (execute the rule only on the container if we are in Client mode). Is that correct?	0	0	https://issues.jboss.org/browse/ARQ-286
2239	ARQ-286	It seems to me that it is still failing in RunAsClient scenario. Consider this: {code} @RunWith(Arquillian.class) @RunAsClient public class TestCase { @Rule public ExpectedException e = ExpectedException.none(); @Test public void test() { e.expect(RuntimeException.class) throw new RuntimeException(); } } {code} Observing org.jboss.arquillian.test.spi.event.suite.After and org.jboss.arquillian.test.spi.TestResult still tells me that result.getStatus() == Status.FAILED is true. I am using {code} <dependency> <groupId>org.jboss.arquillian.junit</groupId> <artifactId>arquillian-junit-container</artifactId> <scope>test</scope> </dependency> {code} in the test project. Should I file related jira or client mode was not treated yet? Thanks	0	0	https://issues.jboss.org/browse/ARQ-286
2240	ARQ-286	I'm triing arquillian 1.1.7 with the same code in mode 'in container' so: {code:java} @RunWith(Arquillian.class) public class TestCase { @Rule public ExpectedException e = ExpectedException.none(); @Test public void test() { e.expect(RuntimeException.class) throw new RuntimeException(); } } {code} I see that the rule is executed anyhow in the client side. Should it run in the container side?	1	0	https://issues.jboss.org/browse/ARQ-286
2241	ARQ-286	Do you have the code/pom example somewhere?	1	0	https://issues.jboss.org/browse/ARQ-286
2242	ARQ-286	Ok I reproduced the problem I met. In the RuleTest there is a runtime exception that is throwed if the test is not in the server side, so the rules.Container class starts only once and my test fail. Only a question. Can I choose if run the test only in a mode instead of both leaving the exception inside the instantiation of the rule? I updated the git project with the issue	0	0	https://issues.jboss.org/browse/ARQ-286
2243	ARQ-271	Hi Thomas, are you still working on this? What is the current status? Thanks	0	0	https://issues.jboss.org/browse/ARQ-271
2244	ARQ-271	Any update on this? It looks like it didn't make it into 1.0.0-Final. Is there a work around? Can I force the enricher to execute manually from within my test's @BeforeClass method?	0	0	https://issues.jboss.org/browse/ARQ-271
2245	ARQ-269	Do we know 100% that this will always be the case? GlassFish has a notion of DomainAdminServer, which is responsible for Deploying to the Nodes. Will the Deployer IP and the 'Testing' Node IP always be the same ? ARQ-153 will move the removeServerAddress out of the GlassFish container configuration as a Protocol Configuration as well..	1	1	https://issues.jboss.org/browse/ARQ-269
2246	ARQ-261	(01:08:32) ozizka-here: jweiss: So, did you work with CLI? (01:08:43) jweiss: ozizka-here: a tiny bit (01:08:51) jweiss: cswiii is more experienced with it (01:09:27) ozizka-here: FWIK, it's for a client side, (01:09:27) ozizka-here: so my idea is to get agent to think it's registered, so it doesn't hang on start, (01:09:42) ozizka-here: and then connect through CLI and just operate the objects available (01:10:03) jweiss: that may work, like i said i was guessing	1	1	https://issues.jboss.org/browse/ARQ-261
2247	ARQ-248	Are there API changes that need to be covered by the upgrade? or is this just a examples/docs/default compile v update?	1	1	https://issues.jboss.org/browse/ARQ-248
2248	ARQ-244	Spring cleaning - how relevant is this issue after 6y? Can we close it?	0	0	https://issues.jboss.org/browse/ARQ-244
2249	ARQ-238	do you have a jndi.properties file on your classpath? alla: http://github.com/aslakknutsen/arquillian/blob/ARQ-238/containers/jbossas-remote-4.2/src/test/resources/jndi.properties	1	1	https://issues.jboss.org/browse/ARQ-238
2250	ARQ-238	I cloned the branch but it seems that now there are some compilation errors because of recente changes on upstream. Are you planning to work on this one any time soon? I think I can help on this since it's needed for the project I'm working right now. Thanks for the great work, Davide	1	1	https://issues.jboss.org/browse/ARQ-238
2251	ARQ-238	Brilliant! Here's my prototype: https://github.com/DavideD/arquillian/commits/ARQ-238 I've created the managed and the remote container following the wiki about JSR88 at http://community.jboss.org/wiki/JSR88Client I saw that you were using a different approach...is there any particular reason? I have to clean it but it seems to work. Cheers	1	1	https://issues.jboss.org/browse/ARQ-238
2252	ARQ-197	Hi, Is there a way to run multiple tests with a single Deployment?	1	0	https://issues.jboss.org/browse/ARQ-197
2253	ARQ-197	Hi [~huangdihu], Thank you so much for taking your time to reply to my questions patiently. I currently have a project that has a deployment class Deployments with the extension @ArquillianSuiteDeployment added and two test classes Greeter and Greeter2 both JUnit Tests Running the Tests gives an exception and tests fail. Could you let me know what I am missing in the Test Classes? Or is it possible to provide ur mail ID so that I could send a snippet of my classes?	1	0	https://issues.jboss.org/browse/ARQ-197
2254	ARQ-197	Hi [~huangdihu] That was really helpful. Thank you for the link. Is it possible to use ArquillianSuiteExtension in Arquillian with JUnit tests running in Apache Tomcat Container?	0	0	https://issues.jboss.org/browse/ARQ-197

#	Requirement	Questions	Answered	Successfully Answered	URL
2255	ARQ-197	Hi [~aslak] I've been following this for well over half a year now. I was also trying out the [arquillian-suite-extension|https://www.google.ch/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0ahUKEwjv1oS21NTJAhXImw4KHcfvBxgQFggdMAA&url=https%3A%2F%2Fgithub.com%2Fingwarsw%2Farquillian-suite-extension&usg=AFQjCNFGF2kTBjM9wZt16f2NuDZHCT15zQ] from ingwarsw, but it wouldn't fit my needs. Any update on this? Read something on Twitter that it might be ready in January? Thanks Martin	1	0	https://issues.jboss.org/browse/ARQ-197
2256	ARQ-197	A very quick update on this would be really appreciated. Is there hope that this will be released or should we assume it has been dropped? After all, this is the second most voted for issue in this JIRA... (!)	0	0	https://issues.jboss.org/browse/ARQ-197
2257	ARQ-197	Hi and thank's to all who are working on Arquillian and especially on this issue. I really appreciate this great work. Is there a planned release date for Version 1.2.0?	1	0	https://issues.jboss.org/browse/ARQ-197
2258	ARQ-194	where is the code for this?	1	1	https://issues.jboss.org/browse/ARQ-194
2259	ARQ-187	To be 'true' to what we show, we need to be able to put Arquillian into a dry-run mode, a Profile where the defined container is overridden with a ExportContainer that can export this format on deploy. We should reuse as much of the same Arq core / setup as possible but without touching a live container. We of course also need to exclude the @Test from execution. (note to self, if we use use the DeployableContainer SPI for exporting, how do we deal with Manual deployment which are only happening under @test)	0	0	https://issues.jboss.org/browse/ARQ-187
2260	ARQ-166	Two open questions remain: 1. Should XML be all uppercase in the configuration properties domainXml and resourcesXml? 2. Should we provide the configuration defaultDataSourceName that sets up an org.apache.derby.jdbc.EmbeddedDataSource? The reason for #2 is that the default data source in GlassFish (named jdbc/__default) connects to a remote Derby instance, which will not likely be available to an embedded GlassFish instance.	1	1	https://issues.jboss.org/browse/ARQ-166
2261	ARQ-155	On the other hand, isn't it more intuitive to bring up GF on the standard port, which the user would be expecting? Seems this is more common than the need to avoid conflicts with a running instance, which of course a user shouldn't do anyway. Think of it like this: if they were bringing up two instances on their own, they'd have to configure the 2nd to avoid a port conflict, not expect that as a default.	1	0	https://issues.jboss.org/browse/ARQ-155
2262	ARQ-148	If done on a container level, groups, protocols and extensions won't profit of this, is that a correct assumption?	0	0	https://issues.jboss.org/browse/ARQ-148
2263	ARQ-148	Where can I find this change? I'm pulling in Arquillian 1.0.0.Final-SNAPSHOT and the change is not getting picked up: > mvn dependency:tree [INFO] org.jboss.as.test.clustering:my-arquillian-testsuite:jar:1.0-SNAPSHOT [INFO] +- org.jboss.spec.javax.servlet:jboss-servlet-api_3.0_spec:jar:1.0.0.Final:provided [INFO] +- org.jboss.arquillian.junit:arquillian-junit-container:jar:1.0.0.Final-SNAPSHOT:compile [INFO] | +- org.jboss.arquillian.junit:arquillian-junit-core:jar:1.0.0.Final-SNAPSHOT:compile [INFO] | +- org.jboss.arquillian.test:arquillian-test-api:jar:1.0.0.Final-SNAPSHOT:compile [INFO] | +- org.jboss.arquillian.test:arquillian-test-spi:jar:1.0.0.Final-SNAPSHOT:compile [INFO] | | +- org.jboss.arquillian.core:arquillian-core-spi:jar:1.0.0.Final-SNAPSHOT:compile [INFO] | | \- org.jboss.shrinkwrap:shrinkwrap-api:jar:1.0.0-beta-5:compile ... <container qualifier="jboss" default="false"> <configuration> <property name="jbossHome">target/clustering-udp-0</property> <property name="javaVmArguments">${ip.server.stack}</property> <property name="bindAddress">192.168.0.103</property> <property name="serverConfig">standalone.xml</property> <property name="startupTimeoutInSeconds">30</property> <property name="outputToConsole">true</properties> </configuration> </container> and i'm passing in <systemPropertyvariables><ip.server.stack>-Djava.net.prefer.IPv4Stack=true</ip.server.stack></systemPropertyVariables> Running TestSuite Sep 12, 2011 10:33:07 AM org.jboss.as.arquillian.container.managed.ManagedDeployableContainer startInternal INFO: Starting container with: [java, ${ip.server.stack}, -Djboss.home.dir=target/clustering-udp-1, -Dorg.jboss.boot.log.file=target/clustering-udp-1/standalone/log/boot.log, -Dlogging.configuration=file:target/clustering-udp-1/standalone/configuration/logging.properties, -Djboss.modules.dir=target/clustering-udp-1/modules, -jar, /home/nrla/maven/my-arquillian-testsuite/target/clustering-udp-1/jboss-modules.jar, -mp, target/clustering-udp-1/modules, -logmodule, org.jboss.logmanager, -jaxpmodule, javax.xml.jaxp-provider, org.jboss.as.standalone, -server-config, standalone.xml] Sep 12, 2011 10:33:07 AM org.jboss.remoting3.EndpointImpl <clinit> INFO: JBoss Remoting version 3.2.0.Beta2 Exception in thread "main" java.lang.NoClassDefFoundError: ${ip/server/stack} Caused by: java.lang.ClassNotFoundException: ${ip.server.stack} at java.net.URLClassLoader$1.run(URLClassLoader.java:202) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:247) Could not find the main class: ${ip.server.stack}. Program will exit.	1	0	https://issues.jboss.org/browse/ARQ-148
2264	ARQ-141	Is this documented anywhere? I don't see it here: https://docs.jboss.org/author/display/ARQ/Reference+Guide especially here where I'd expect to: https://docs.jboss.org/author/display/ARQ/Servlet+3.0 . A Google search for "deploymentExportPath site:docs.jboss.org/author/display/ARQ/" doesn't find it.	1	1	https://issues.jboss.org/browse/ARQ-141
2265	ARQ-141	When tested with Arquillian 1.0.0.Final as per: https://github.com/arquillian/arquillian-examples/blob/master/jpa2/src/test/resources/arquillian.xml and: https://community.jboss.org/thread/155043 no deployment archive appears to be produced anywhere within the target/ tree. Is this still supported? Has usage changed?	1	1	https://issues.jboss.org/browse/ARQ-141
2266	ARQ-141	Does it find your arquillian.xml at all ? It's normally located in src/test/resources, but anywhere on the classpath should do. Depends on your IDE I guess if non .java files are actually moved to classpath from src/test/java	0	0	https://issues.jboss.org/browse/ARQ-141
2267	ARQ-138	This looks alpha/beta/release quality now. Submitting the pull request to make an initial release. Tests have been written for * EAR and WAR deployments, * Injection of dependencies into tests using @Resource, @Ejb and @Inject annotations, What might need review - * The project POMs. Since this is a Java EE 5 container, the artifacts from the JBoss repo have been used. * Use of the WebLogic JMX classloader within the project. What is not yet supported (or might not work yet): * Deployment and execution of tests against WLS clusters	0	0	https://issues.jboss.org/browse/ARQ-138

#	Requirement	Questions	Answered	Successfully Answered	URL
2268	ARQ-136	(02:25:06 PM) ALR@Freenode: It cannot get this transitively through the jbossas-embedded-60 container (02:25:11 PM) ALR@Freenode: As import is not transitive. (02:25:16 PM) aslak: aa.. right (02:25:23 PM) ALR@Freenode: But the more overarching problem: (02:25:34 PM) ALR@Freenode: Is that we shouldn't be leaking out everything in compile scope. (02:25:37 PM) ALR@Freenode: Because we did. (02:25:56 PM) aslak: is test transitive ? (02:25:57 PM) ALR@Freenode: And since import scope wasn't transitive, we missed out on the exclusions defined by depchain. (02:26:01 PM) ALR@Freenode: aslak: No. (02:26:10 PM) ALR@Freenode: aslak: It's not our job to define transitive deps. (02:26:13 PM) aslak: that means we have to push it to the user (02:26:21 PM) ALR@Freenode: Once APIs are locked, everything should play nice. (02:26:23 PM) ALR@Freenode: ie: (02:26:39 PM) ALR@Freenode: Using a specific version of Arquillian should not dictate a specific version of a target container. (02:26:52 PM) ALR@Freenode: If that's the case, we're not helping users. (02:26:59 PM) ALR@Freenode: We're actually limiting their ability to choose. (02:27:06 PM) aslak: no, but a specific v. of a DeployableContainer will (02:27:08 PM) ALR@Freenode: And leaking stuff onto their classpath in the process (02:27:14 PM) ALR@Freenode: aslak: Nope. (02:27:21 PM) ALR@Freenode: aslak: We can't do that either. (02:27:29 PM) jharting [~jharting@r11de73.net.upc.cz] entered the room. (02:27:35 PM) jharting left the room (quit: Client Quit). (02:27:45 PM) ALR@Freenode: aslak: The client must make the dependencies upon their container. (02:27:48 PM) aslak: i mean v. as in DeployableContainer impl (02:27:56 PM) ALR@Freenode: aslak: I know. We can't do that. (02:28:50 PM) ALR@Freenode: The user must declare the dep on their target container. (02:29:00 PM) aslak: ok..... maybe i'm not following but.. how do you propose you run a DeployableContainer that is build for Jboss 4 on a jboss 6 ? (02:29:18 PM) ALR@Freenode: 4 and 6 are different APIs, so we should have different impls sure. (02:29:34 PM) ALR@Freenode: Let's take AS 6.0.0.M2 vs. M3. (02:29:39 PM) ALR@Freenode: They have similar APIs (02:29:47 PM) ALR@Freenode: But very different runtime components. (02:29:57 PM) ALR@Freenode: Or a better example is GFv3 vs. 3.0.1 (02:29:59 PM) ALR@Freenode: Same API. (02:30:13 PM) aslak: that's what i'm saying. a deployable is limited to a specific v. of a target container. whether you want to make that implicit or not is different (02:30:30 PM) ALR@Freenode: aslak: No, it's can't be limited. (02:30:41 PM) ALR@Freenode: We abide by a container's deployment API. (02:30:47 PM) aslak: yea, jboss m2 and m3 are different enought to need impl changes.. same with 5.0 to 5.1 (02:31:24 PM) ALR@Freenode: If the deployment API of the backing container changes, yes, we need to change too. (02:31:26 PM) ALR@Freenode: BUT (02:31:39 PM) ALR@Freenode: M2 and M3 aren't locked APIs. (02:31:43 PM) ALR@Freenode: They're milestone releases. (02:31:51 PM) ALR@Freenode: GFv3 vs. 3.0.1 (02:32:00 PM) ALR@Freenode: Should be the same Arquillian DeployableContainer impl (02:32:09 PM) aslak: your not limiting the user by implicid defining the v. your saying, this is tested and build against this v. if you want to try it with a newer v. you may do so, but keep in mind that it might not work. use exclude and include your own (02:32:33 PM) ALR@Freenode: aslak: I know you're trying to help the user. (02:32:44 PM) ALR@Freenode: But you're stepping into their responsibility/ (02:32:53 PM) ALR@Freenode: They must define their runtime CP. (02:32:54 PM) ALR@Freenode: Not us. (02:33:09 PM) ALR@Freenode: This is a symptom of Maven compile scope by default. (02:33:30 PM) ALR@Freenode: They don't need the backing container for compilation, therefore we should not be exporting compile scope. (02:33:38 PM) ALR@Freenode: If we do, then we leak out that version. (02:33:39 PM) aslak: whats the point of a build system if you have to define all your dependencies ? :) (02:33:49 PM) ALR@Freenode: aslak: To build. (02:34:01 PM) ALR@Freenode: aslak: Don't mistake convenience for doing too much. (02:34:08 PM) ALR@Freenode: Try to follow me here. (02:34:18 PM) ALR@Freenode: It took me a long time to come around to understand this. (02:34:31 PM) ALR@Freenode: We export GFv3. (02:34:38 PM) ALR@Freenode: Say the user wants 3.0.1 (02:34:44	1	1	https://issues.jboss.org/browse/ARQ-136
2269	ARQ-127	Hi, can you provide some update on this? It would be a big good-to-have for my usage of arquillian-testng-standalone + graphene2. Right now I'm getting this error: {noformat} java.lang.IllegalStateException: No TestRunnerAdaptor found, @BeforeSuite has not been called at org.jboss.arquillian.testng.Arquillian.verifyTestRunnerAdaptorHasBeenSet(Arquillian.java:246) at org.jboss.arquillian.testng.Arquillian.arquillianBeforeClass(Arquillian.java:101) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:601) at org.testng.internal.MethodInvocationHelper.invokeMethod(MethodInvocationHelper.java:84) at org.testng.internal.Invoker.invokeConfigurationMethod(Invoker.java:564) at org.testng.internal.Invoker.invokeConfigurations(Invoker.java:213) at org.testng.internal.Invoker.invokeConfigurations(Invoker.java:138) at org.testng.internal.TestMethodWorker.invokeBeforeClassMethods(TestMethodWorker.java:175) at org.testng.internal.TestMethodWorker.run(TestMethodWorker.java:107) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:615) at java.lang.Thread.run(Thread.java:722) ... {noformat}	1	0	https://issues.jboss.org/browse/ARQ-127
2270	ARQ-127	Do you have a test project to point to?	1	0	https://issues.jboss.org/browse/ARQ-127
2271	ARQ-127	Hi Aslak (and others), today I came back to this issue after some time as it's still seems to be a critical thing which we would appreciate with arquillian-testng-stangalone library. I still used the same example just with updated dependencies. I tried some hacking at Arquillian.class and it seems like the usage of ThreadLocal is breaking this TestNG parallelism feature... {noformat} ... Running TestSuite BEFORE SUITE, runner:null Going to set test runner:org.jboss.arquillian.test.impl.EventTestRunnerAdaptor@266c6ce1, threadLocal:java.lang.ThreadLocal@18603b7c BEFORE CLASS, runner:null BEFORE CLASS, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER CLASS, runner:null AFTER CLASS, runner:null AFTER SUITE, runner:org.jboss.arquillian.test.impl.EventTestRunnerAdaptor@266c6ce1 {noformat} It's initialized once at the suite level, but none of the class/test methods are able to access it and it ends up with same message: {noformat} java.lang.IllegalStateException: No TestRunnerAdaptor found, @BeforeSuite has not been called at org.jboss.arquillian.testng.Arquillian.verifyTestRunnerAdaptorHasBeenSet(Arquillian.java:252) at org.jboss.arquillian.testng.Arquillian.arquillianBeforeClass(Arquillian.java:104) {noformat} [~aslak] - can you please confirm that there is any chance that Arquillian will be sometime able to handle this kind of parallelism (at least on class level)? Or maybe there is some quick hint you can provide... or should I just forget this requirement or workaround it at "ugly way"? Thanks a lot for your help! And I also thanks [~lfryc] for his help and support :)	0	0	https://issues.jboss.org/browse/ARQ-127
2272	ARQ-127	[~tremes] adding arquillian to the test groups is required, but does NOT resolve the TestRunner & Nullpointer exceptions. link to my post [https://developer.jboss.org/thread/266910]	0	0	https://issues.jboss.org/browse/ARQ-127
2273	ARQ-123	Don't we have one, or at least the info is there in the docs. Do we still need this issue?	1	1	https://issues.jboss.org/browse/ARQ-123
2274	ARQ-103	Should we name this something more then just reloaded ? - jbossas-reloaded - mc-reloaded ?	1	1	https://issues.jboss.org/browse/ARQ-103
2275	ARQ-40	Do we have enough for Alpha1?	0	0	https://issues.jboss.org/browse/ARQ-40

#	Requirement	Questions	Answered	Successfully Answered	URL
2276	ARQ-25	via DeployableAppender SPI any module can provide a Archive<?> at runtime, but we're missing a 'smart' way to merge/decide what archive type to deploy.. hardcoded as EnterpriseArchive atm.	1	1	https://issues.jboss.org/browse/ARQ-25
2277	ARQ-13	Isn't this done already? Or we have it in the docs?	0	0	https://issues.jboss.org/browse/ARQ-13
2278	ARQGRA-500	Why won't I go via normal means like a user would, arrive to this parameterized page through other pages? Sometimes this path is too complex, the pages involved are too heavy - they have their own tests, other teams support those pages. Sometimes there may not be such a path at all, because some pages are linked directly with parameters by 3rd party applications.	1	0	https://issues.jboss.org/browse/ARQGRA-500
2279	ARQGRA-500	Then again, some parameter provider class wouldn't know the context to decide on parameters. Only the test does. Some location decider probably can get the current test instance and call some callback on it. The test just needs to implement the interface ParameterProvider - this would be the trigger. No need to alter the \@Location annotation. Upd: it's probably not possible to "get the current test instance" without hardcoding some specific test framework like JUnit. Upd2: it should be possible! Otherwise how would Graphene's annotations work. They know the test object, see org.jboss.arquillian.test.spi.TestEnricher.	1	0	https://issues.jboss.org/browse/ARQGRA-500
2280	ARQGRA-500	Dumping some additional concerns that bother me. -- Generalize to dynamic path manipulation (DPM)? "Parameters" only make sense for the HTTP scheme currently. The linked SO's OP also wanted more than that. But generalize too much and it looks like another LocationDecider. Might as well check if the test object implememts the LocationDecider interface. No, I think the generalized DPM should be an implementation helper for Deciders. E.g. the HTTP decider would use it to implement the parameter provider functionality and path substitution functionality ("http://static/\{dynamic\}") - 2 different interfaces. But how to expose this functionality in Graphene.goTo? Either be content with some generic DPM interface argument, or refactor goTo to return a specific builder somehow. Make goTo return a builder? Nasty breaking change - goTo now doesn't trigger navigation. Some new method (arguments like goTo) returns a builder, and an argumentless goTo triggers navigation? This could work. -- Need to descriminate the pages. Problem: LocationDecider only knows a String location. Needs to know pageClass too. --- Annotated parameters could accept it as {{\@LocationParameters(for = MyPage.class)}}.	1	0	https://issues.jboss.org/browse/ARQGRA-500
2281	ARQGRA-485	Interesting reading [~asotobu]. Do you have some API in mind? It would be worth to start a discussion with API snippets on http://discuss.arquillian.org/.	1	0	https://issues.jboss.org/browse/ARQGRA-485
2282	ARQGRA-446	Hey Chris, nice catch. Any suggestion how to avoid this issue? Is that just metaclass property that needs to be avoided in Groovy ecosystem or are we facing bigger issue?	1	1	https://issues.jboss.org/browse/ARQGRA-446
2283	ARQGRA-440	We can upgrade to Core 1.1.4 in 2.0 branch, but imho Drone 2.x upgrade should happen in 2.1 branch.	0	0	https://issues.jboss.org/browse/ARQGRA-440
2284	ARQGRA-440	[~jhuska] does it make sense to upgrade to Drone 2.0 from RichFaces tests perspective? We should really help Drone test the compatibility. At least we could enable a profile that would help test Drone 2.0 compatibility.	0	0	https://issues.jboss.org/browse/ARQGRA-440
2285	ARQGRA-439	What do you think about prototyping this in 2.1 branch and if the complexity of the fix will be low, we can include it in 2.0 as well?	0	0	https://issues.jboss.org/browse/ARQGRA-439
2286	ARQGRA-431	+1 adding .equalsIgnoreCase(String), .matches(regexp) Karel, could you look into adding this capabilities?	1	1	https://issues.jboss.org/browse/ARQGRA-431
2287	ARQGRA-425	[~lfryc] Please, what do you think about this addition ?	1	1	https://issues.jboss.org/browse/ARQGRA-425
2288	ARQGRA-420	Does it makes sense to place it into {{impl}} under {{org.jboss.arquillian.graphene.integration}} package? It would need to make sure that extension won't try to register itself unless appropriate API artifacts are on classpath.	0	0	https://issues.jboss.org/browse/ARQGRA-420
2289	ARQGRA-411	Emil, afaik GrapheneElement should wait for an element to be present, could you please provide more details, i.e. stacktrace?	0	0	https://issues.jboss.org/browse/ARQGRA-411
2290	ARQGRA-409	+1 we can do that for both of frameworks, I just don't know Ember.js internals. Angular wraps all XHR objects and timeouts in order to be able run its model/view synchronization process. Ember doesn't have to allow similar mechanism at all. So let's go ahead and research whether there is a way. :-) ---- On side note, for AngularJS, it is very handy to have special selectors based on ng- attributes such as ng-click, ng-model, etc, such as: {code} @FindByNg(model = "username") WebElement usernameInput; @FindByNg(action = "search()") WebElement searchButton; {code} Is there anything similar for Ember? ---- I would love to have extensions for Graphene and certain frameworks in place. so you could just add artifact on classpath and you will be all setup: {code} graphene-ember graphene-angular {code}	1	0	https://issues.jboss.org/browse/ARQGRA-409
2291	ARQGRA-409	[~smikloso] [~kpiwko] I believe this extension is not requires at this point? Can I resolve this and see whether there will be a need for that in the future?	1	0	https://issues.jboss.org/browse/ARQGRA-409
2292	ARQGRA-408	[~jhuska] [~lfryc] Do you have any particular requirements how this should be done? I would go for similar style as implemented in that smart url mini extension (1) which was heavily inspired from (2). Talking concretely, it could be like {code} @Location(scheme = Scheme.HTTP) // http:// @Location(scheme = Scheme.HTTPS) // https:// @Location(scheme = Scheme.FILE) // file:// @Location(scheme = Scheme.RESOURCE) // resource:// @Location(scheme = Scheme.DROIDIUM) // and-activity:// {code} where HTTP would be default. (1) https://github.com/smiklosovic/arquillian-smart-url (2) https://issues.jboss.org/browse/ARQ-1321	1	1	https://issues.jboss.org/browse/ARQGRA-408
2293	ARQGRA-408	Sounds good. 1) Wouldn't Droidium users appreciate that they won't need to configure scheme on each location? I.e. they should be able to configure scheme globally: {code} <extension name="graphene"> <!-- use HTTPS everywhere --> <property name="scheme">org.jboss.arquillian.graphene.location.Scheme.HTTPS</property> </extension> {code} 2) Shouldn't we make Scheme an extensible concept? As you said, having extensible set of schemes {HTTP,HTTPS,FILE,RESOURCE} that could e.g. Droidium extend with Scheme.DROIDIUM. There should be SPI for registration new schemes. Wdyt?	1	1	https://issues.jboss.org/browse/ARQGRA-408
2294	ARQGRA-406	Hey Juraj, could you please take care of this update?	0	0	https://issues.jboss.org/browse/ARQGRA-406
2295	ARQGRA-392	Linking a pull request where I have submitted the changes. Ready for review.	0	0	https://issues.jboss.org/browse/ARQGRA-392
2296	ARQGRA-382	Yes, it was intentional. I just forget to remove {{Field}} literal from annotation declaration. But now I am thinking of following enhancement: One test class is often used for testing one page, or often we need to load the same page in each test, and then redirect to another. What if it would be possible to have {{@InitialPage}} over field, which would result in automatic loading of the page URL before each test execution? Usage of {{@InitialPage}} in test parameter would override this global setting. Can I change this to Enhancement ?	1	1	https://issues.jboss.org/browse/ARQGRA-382
2297	ARQGRA-382	Given that *initial ~ existing or occurring at the beginning*, this can be both understood as BeforeClass (my understanding) and Before (your understanding). However, all other fields in tests preserve the state among tests, so Before would be an exception. That said, I would either prefer to remove the possibility of annotating a field or making a paramater to @InitialPage, which would additionally alter it's behavior - e.g. where do you want URL to be fired, which some reasonable default identified by broader audience. Nice Enhancement for post 2.0.0.GA release?	0	0	https://issues.jboss.org/browse/ARQGRA-382

#	Requirement	Questions	Answered	Successfully Answered	URL
2298	ARQGRA-382	Agree, let's make this issue opened for post-2.0 development and make the annotation work only for --fields-- method parameters. Juraj, could you please take this over? ^	0	0	https://issues.jboss.org/browse/ARQGRA-382
2299	ARQGRA-381	Juraj, could you please explain what's your use case of browser detection? This issue might be relevant to ARQGRA-135.	1	0	https://issues.jboss.org/browse/ARQGRA-381
2300	ARQGRA-380	[~jhuska], could you please provide a stack trace so it will be evident where is the issue?	0	0	https://issues.jboss.org/browse/ARQGRA-380
2301	ARQGRA-377	Few points: 1. for determining whether an element is enabled, you should use the simplest API possible: {code} WebElement#isEnabled() {code} http://selenium.googlecode.com/git/docs/api/java/org/openqa/selenium/WebElement.html#isEnabled() 2. (y) +1 for being able to build assertions and waiting conditions in unified manner (if statements doesn't apply afaik) ---- 3. we could leverage interceptors to wrap instances and wait on conditions specified in closing word (method), e.g.: {code} element.isEnabled(); waitGui().until().element(element).isEnabled(); assertThat(element, isEnabled()); {code} the problem is that {{WebElement#isEnabled}} returns false, but it should return {{FluentBase<?>}} otherwise. One of the solutions comes from extending capabilities of {{WebElement}} interface and transform it to fluent API, consumed later by e.g. {{GrapheneElement}}. Say we have interface: {code} public interface ElementOperation<B, T> { B isEnabled(); T getText(); ... } {code} then we can: {code} public class GrapheneElement implements WebElement, ElementOperation<Boolean, String> { Boolean isEnabled(); String getText(); ... } {code} Based on a returned type, you could leverage that same API in assetions/waiting conditions: {code} public class FluentElement implements ElementOperation<FluentBoolean, FluentString> { FluentBoolean isEnabled(); FluentString getText(); } {code} ---- Do you have another ideas? I think re-implementation is not possible at this stage, as we are approaching 2.0 Final release. I would rather take it as suggestions for improvement in 3.0 or alternative API in 2.Future.	1	0	https://issues.jboss.org/browse/ARQGRA-377

2309	ARQGRA-299	There was a problem with parallel browsers. When I fixed it, the number of failed/error tests reduced to 6: {code} Results : Failed tests: testWithTimeout(org.jboss.arquillian.graphene.ftest.wait.WebDriverWaitTest): The waiting time shouldn't be much bigger than 500 MILLISECONDS, but was 1050 ms. Tests in error: testDroneInPageFragments(org.jboss.arquillian.graphene.ftest.parallel.TestPageFragments): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#getCurrentUrl(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@3943f337': object is not an instance of declaring class testJavaScriptExecutorInPageFragments(org.jboss.arquillian.graphene.ftest.parallel.TestPageFragments): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#executeScript(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@3943f337': java.lang.ClassCastException@47c87a55 testDroneInPageObjects(org.jboss.arquillian.graphene.ftest.parallel.TestPageObjects): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#getCurrentUrl(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@117a5f43': object is not an instance of declaring class testJavaScriptExecutorInPageObjects(org.jboss.arquillian.graphene.ftest.parallel.TestPageObjects): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#executeScript(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@117a5f43': java.lang.ClassCastException@5cd974e0 test(org.jboss.arquillian.graphene.ftest.javascript.TestCustomJSInterface): Can't invoke the javacript org.jboss.arquillian.graphene.ftest.javascript.TestCustomJSInterface$Document#getElementsByTagName() Tests run: 245, Failures: 1, Errors: 5, Skipped: 0 {code}	1	1	https://issues.jboss.org/browse/ARQGRA-299
2310	ARQGRA-296	Jan, what does this issue mean /wrt implementation?	1	1	https://issues.jboss.org/browse/ARQGRA-296
2311	ARQGRA-294	Is there any reason why Selenium WebElement can't be injected by web element wrappers?	0	0	https://issues.jboss.org/browse/ARQGRA-294
2312	ARQGRA-294	Couldn't we rather get those changes upstream?	0	0	https://issues.jboss.org/browse/ARQGRA-294
2313	ARQGRA-294	[~jhuska], could you please open a new issue addressing the mentioned requirements ^?	1	1	https://issues.jboss.org/browse/ARQGRA-294
2314	ARQGRA-293	Jan, could you please list some cases where it is necessary to fire a DOM event manually instead of using WebDriver?	1	1	https://issues.jboss.org/browse/ARQGRA-293
2315	ARQGRA-283	Could you start with an outline which we can brain-storm about?	1	0	https://issues.jboss.org/browse/ARQGRA-283
2316	ARQGRA-283	First proposal: # Introduction ## Testing difficulties in general: _unreliable waits_, ## _testing of ajax behavior_, ## _coupling of HTML and test code_ # Introducing Graphene ## Coolest features: _request guards_, ## _Page Objects_ - support for {{@Page}}, nested pages, {{@FindBy}}, _JQuery_ locators, locators from field names, enriching of other injection points like {{@Drone}}, {{@Location}} mechanism ## _Page Fragments_ - rooting mechanism, reference to RichFaces page fragments, dynamically creatable ## _fluent API_ for waits - example ## _JS interfaces_ - example ## _Interceptors_ - example for resolving {{Stale..}} exceptions ## highly extendable and usable with {{Arquillian}} life cycle # Wrap-up ## nice table which summarizes all the features in comparison to {{WebDriver}} General notes: * Where it is possible I will reference to {{WebDriver}} to showcase the difference. So for example when I will be speaking about waits I will also show how it is done in {{WebDriver}}. What do you think Lukas ?	1	0	https://issues.jboss.org/browse/ARQGRA-283
2317	ARQGRA-283	Could you please update a proposal with the current thoughts on the subject? On a sprint planning meeting you have mentioned some FAQs: * Page Abstractions initialization * Select injection	0	0	https://issues.jboss.org/browse/ARQGRA-283
2318	ARQGRA-282	Could you start with an outline so we could discuss publicly what should be included?	1	1	https://issues.jboss.org/browse/ARQGRA-282

#	Requirement	Questions	Answered	Successfully Answered	URL
2319	ARQGRA-282	IMHO it can be done in this way: * change the feature reference _Drive the Browser_ from [here|http://arquillian.org/features/], to contain _Graphene_ reference. It would be nice to have there also Graphene logo (ARQGRA-69)(together with Drone logo) * reuse and alter the already existing [functional testing using drone|http://arquillian.org/guides/functional_testing_using_drone/], because IMHO there are valuable parts, which are needed (_Assumptions_, _Introducing Client Mode_, _Enabling Client Mode_, _Drone Overview_). So dropping the whole guide is not a good option for me. * it can be done in a similar way as the [guide for JPA testing|http://arquillian.org/guides/testing_java_persistence/] is done. So _Introducing the application we are going to write tests for_, _Preparation for testing with Graphene_, _Developing tests_, _Running the tests_ * basically I have not recognized other candidates from Lukas's ones, I just ordered them in the outline. The guide outline itself can look like: # Assumptions # Introducing Client Mode # Enabling Client Mode # Drone Overview ## There are mentioned all the browsers drivers Drone currently has support for, we can emphasize _Graphene_ here and say that we are going to setup a test suite project with use of it from now on. # Introducing the application we are going to write tests for ## We can show how to develop a simple _HTML 5_ page, which will use _AJAX_ calls to retrieve backend data from _JAX-RS_ endpoints. ## *Or* we can reuse again the _JSF_ sample which is already there, logging fragment, and to add some parts to easily showcase _Graphene_ features on it. My concert here is the _JSF_. I would like to showcase that _Graphene_ can be used with all front end frameworks and most importantly with now most coolest POH5 applications. By this IMHO we can get much bigger audience. ## It does not have to be all in this guideline. There can be just snippets from whole Graphene showcase, which will be developed as well. (ARQGRA-174) # _Graphene_ scaffolding # Senium server setup, remote reusable, chrome browser -> fast development turnaround # Developing tests ## Showcasing some of the _Graphene_ features: _request guards_, _fluent waitings_, _Page Ojects_, _Page Fragments_ ## This should be probably the biggest part of the guideline. My concern here is that it will be too big. On the other side I do not have a major problem with it. IMHO the navigation which is used in arquillian.org is quite clear and that the platform is suitable for long posts as well. # Running and debugging the test in IDE # Best practices from developing and running tests What do you think guys ?	1	1	https://issues.jboss.org/browse/ARQGRA-282
2320	ARQGRA-282	+(really big number). Existing guide should be rewritten to show Graphene2 primarily. Other Drone supported Selenium/WebDriver could be handled by infobox saying something like: _Not starting a new test suite from scratch? Do you already have Selenium 1 and WebDriver (and Graphene1 :-P) tests? See Drone reference documentation how to run those instead of Graphene 2_ No reason why to keep existing content.	0	0	https://issues.jboss.org/browse/ARQGRA-282
2321	ARQGRA-282	Jura, can you please sent this as PR against arquillian.org repository? Much easier to comment that way.	0	0	https://issues.jboss.org/browse/ARQGRA-282
2322	ARQGRA-282	Hey Juraj, could you please review the guide from the grammar perspective?	1	1	https://issues.jboss.org/browse/ARQGRA-282
2323	ARQGRA-282	[~bleathem], could you please check a grammar of the guide?	0	0	https://issues.jboss.org/browse/ARQGRA-282
2324	ARQGRA-280	How would you solve a problem of cache invalidation in case of stale reference?	1	1	https://issues.jboss.org/browse/ARQGRA-280
2325	ARQGRA-279	I don't get why we have this {{element(By)}} version. Couldn't you use {code} WebElement el = driver.findElement(By) Graphene.waitAjax().until().element(el).is().present(); {code} [~jpapouse], doesn't the Alpha4 feature ensure that the element does not have to be present during invocation of {{#findElement}}?	1	1	https://issues.jboss.org/browse/ARQGRA-279
2326	ARQGRA-267	Jan, do we still need to upgrade HtmlUnit manually? It's version is specified by version of Selenium.	1	0	https://issues.jboss.org/browse/ARQGRA-267
2327	ARQGRA-265	I don't like to introduce own solution - could we discuss if it is really necessary? https://issues.jboss.org/browse/ARQGRA-258?focusedCommentId=12753402&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12753402	1	1	https://issues.jboss.org/browse/ARQGRA-265
2328	ARQGRA-264	I looked through the pull request and I have 2 questions: * Is it possible to switch to default frame? It seems that either {{index}} or {{nameOrId}} should be specified. Is it needed at all, or elements without {{@InFrame}} are always looked up in default frame? * What about adding possibility to specify {{@InFrame}} on class for the whole fragments which live in a frame?	1	1	https://issues.jboss.org/browse/ARQGRA-264
2329	ARQGRA-264	You are right Aliaksei, it would not work for all cases. It is not supporting nested structure of iframes, only one level of iframes. The nested functionality if needed can be IMHO implemented as I described [here|https://github.com/arquillian/arquillian-graphene/pull/81#discussion_r4743171]. Is there a real life scenario where this multiple iframe levels are needed ? Otherwise, well documented feature would be sufficient IMHO. The {{@InFrame}} annotation can not be used to switch to the default iframe. IMHO the legacy tests should be rewritten to use this annotation. Another option is to implement such {{@InFrame}} which would be capable doing so. What do you think Lukas ?	1	1	https://issues.jboss.org/browse/ARQGRA-264
2330	ARQGRA-261	Hey Jan, I believe this is already possible, have you tried that?	1	0	https://issues.jboss.org/browse/ARQGRA-261
2331	ARQGRA-258	Hey Jan, would it be possible to inject a proxy of WebElement, which will be initialized later?	1	1	https://issues.jboss.org/browse/ARQGRA-258
2332	ARQGRA-258	Have you associated any commits with this issue since it is Done? Should we resolve it with other Resolution?	1	1	https://issues.jboss.org/browse/ARQGRA-258
2333	ARQGRA-258	We doesn't have to inject *a proxy for the Select*, we can rather inject *the Select with a proxy to the WebElement.* Could we?	1	1	https://issues.jboss.org/browse/ARQGRA-258
2334	ARQGRA-255	Hey Jura, could you please drive an incorporation and improvements of documentation for new features in these releases?	1	1	https://issues.jboss.org/browse/ARQGRA-255
2335	ARQGRA-230	Hey Jan, if we don't have time to improve it in scope of Alpha3, could you please create request for improvement and resolve this? Note that Alpha3 code-freeze is Fri Jan 4th.	1	1	https://issues.jboss.org/browse/ARQGRA-230
2336	ARQGRA-228	Hey Jan, could you please comment what do you think about my proposal?	1	1	https://issues.jboss.org/browse/ARQGRA-228
2337	ARQGRA-219	Hey Lukas, we scheduled first meeting for this on Monday (October 29, 2012). Should we reschedule it so you can be there Lukas ? Or it is enough to send pull request and you can review it there ? Thanks.	1	1	https://issues.jboss.org/browse/ARQGRA-219
2338	ARQGRA-200	Jiri, could you please clarify where guards aren't enough in your use case?	1	1	https://issues.jboss.org/browse/ARQGRA-200
2339	ARQGRA-200	Thanks for the informations. So, should I (always) use some explicit waiting after guarded request? What are the use-cases of the guards now?	1	1	https://issues.jboss.org/browse/ARQGRA-200
2340	ARQGRA-199	Hey Juraj, could you please provide more details? I consider this report quite incomplete.	1	1	https://issues.jboss.org/browse/ARQGRA-199
2341	ARQGRA-195	Juraj, could you please propagate exception and add information about field which is being enriched?	1	1	https://issues.jboss.org/browse/ARQGRA-195
2342	ARQGRA-193	Karel, what is prefered way to configure via system properties then?	0	0	https://issues.jboss.org/browse/ARQGRA-193
2343	ARQGRA-193	_arq.extension.name...._ system properties are already available from descriptor, am I right?	0	0	https://issues.jboss.org/browse/ARQGRA-193
2344	ARQGRA-191	Jan, could you please file an issue for Drone that it could be initialized without having {{@Drone}} directly in test case?	1	1	https://issues.jboss.org/browse/ARQGRA-191
2345	ARQGRA-190	Hey Juraj, we would like to support inner classes with Page Abstractions. Could you please look at it and tell us if it's feasible?	1	1	https://issues.jboss.org/browse/ARQGRA-190
2346	ARQGRA-186	Hey Juraj, I think this was rather misuderstanding. I don't think it';s necessary to rename those interfaces to *PageFragment. I would leave them as *Component or remove the suffix completely. WDYT?	1	1	https://issues.jboss.org/browse/ARQGRA-186

#	Requirement	Questions	Answered	Successfully Answered	URL
2347	ARQGRA-186	Removing the suffix completely can lead to some conflicts with class names, e.g. {{Calendar}} vs. {{java.util.Calendar}}. Suffix also sounds good for me because it tells me what that classes really are, and what they are good for. Page Fragment is little bit long but personally I do not mind. Do you find this justifying reasonable ? Let me know if I should let it with Component suffix. Thanks.	1	1	https://issues.jboss.org/browse/ARQGRA-186
2348	ARQGRA-170	Hey Jan, could we use following entry points? * {{GrapheneContext.getDriverProxy();}} * {{GrapheneContext.getDriverProxyWithInterfaces(Class<?>[] interfaces);}} * {{GrapheneContext.getDriverProxyByImplementation(Class<? extends WebDriver> implClass);}} * {{GrapheneContext.getConfiguration();}} * {{GrapheneContext.getProviders();}} ** returns {{ProviderHolder}}	1	1	https://issues.jboss.org/browse/ARQGRA-170
2349	ARQGRA-160	Great idea, could you please elaborate which configuration options we should start with? For now, I can think just about wait timeouts, right?	1	1	https://issues.jboss.org/browse/ARQGRA-160
2350	ARQGRA-156	Hi Jan, could you please look at this issue? It should be simple one.	0	0	https://issues.jboss.org/browse/ARQGRA-156
2351	ARQGRA-155	[~okiss], could you please share the code what you have so we can take a look? Let's open a branch on your fork of Graphene, please.	0	0	https://issues.jboss.org/browse/ARQGRA-155
2352	ARQGRA-152	Karel, how critical is this issue? Does it mean instantiation of browser makes serious delays in tests, so thus it is blocking the machine where the test runs?	1	1	https://issues.jboss.org/browse/ARQGRA-152
2353	ARQGRA-132	Karel, could you please clarify what is the reference usage of BOM? Since {{arquillian-graphene}} depchain brings you all the dependencies, there is no need for BOM, or is it?	1	1	https://issues.jboss.org/browse/ARQGRA-132
2354	ARQGRA-131	If I read this correctly, Arquillian Drone can handle configuration, creation and destruction of multiple AjaxSelenium instances. However, it would be up to user to switch to correct context manually by his own. Suppose following: {code:java} @Drone AjaxSelenium b1; @Test public void test(@Drone AjaxSelenium b2) { // we can't switch to b2, as the first method might be b1.click(...); // no way how to check method body } {code} The only other idea I got so far is that AjaxSelenium will set correct context in each call, e.g. {code:java} public class AjaxSelenium { public void click(...) { AjaxSeleniumContext.setContext(this); // do the click() } } {code} Lukas, what do you think?	1	0	https://issues.jboss.org/browse/ARQGRA-131
2355	ARQGRA-114	Should we create a sub space on Arquillian community site ? or just reuse the Arquillian one? I guess we can reuse for now, non of them is flooded with blogs so.. ;)	1	0	https://issues.jboss.org/browse/ARQGRA-114
2356	ARQGRA-84	Hi Juraj, could you please look at it once Page Extensions will be implemented (ARQGRA-71)? We can discuss the implementation if that would not be familiar - e.g. JavaScript part.	1	1	https://issues.jboss.org/browse/ARQGRA-84
2357	ARQGRA-84	The pull request is not ready for merging, since tests does not pass on buildhive. Juraj, could you please take a look into failing tests?	1	1	https://issues.jboss.org/browse/ARQGRA-84
2358	ARQGRA-76	I have moved configuration of plugins needed for Jenkins profile into parent pom.xml. However, there is need for support for two different paths, from where the arquillian.xml is copied. One for parent pom: ${basedir}/../qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml and second for all child poms: ${basedir}/../../qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml I have solve this with defining property in parent pom, with the value of path which satisfy parent pom, and also overwritten this property with value which satisfy child poms. Can this be right solution ? Another solution which works is to define only path which satisfy child poms and to disable enforcer plugin, which just not copy arquillian.xml for parent. Which one will be more suitable please ?	0	0	https://issues.jboss.org/browse/ARQGRA-76
2359	ARQGRA-76	Karel, isn't there any way to point to the top-level pom such as use parent.relativePath? Jura, you can simulate this for you and add property topLevelProject.relativePath to each module and use it after basedir path: ${basedir}/${topLevelProject.relativePath}/qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml	1	0	https://issues.jboss.org/browse/ARQGRA-76
2360	ARQGRA-76	Great, Karel, thanks for your insight. Jura, could you please adapt this property for your needs?	0	0	https://issues.jboss.org/browse/ARQGRA-76
2361	ARQGRA-76	Pavol, could you look at this issue?	0	0	https://issues.jboss.org/browse/ARQGRA-76
2362	ARQGRA-74	Perfect, could you create some functional tests for {{element(...)}} and {{attribute(...)}}? I assume methods {{initElement/s}} should be aligned with Juraj's Component Objects ARQGRA-40.	1	1	https://issues.jboss.org/browse/ARQGRA-74
2363	ARQGRA-67	(1) As commented on pull request - could you change that to {{window.Graphene}}? (2) could we just extend DefaultExecutionResolver instead of replacing? (3) why it should be exposed publicly? I don't have strong objections, just GrapheneProxy was intented to be used by internal implementation. How does interception matches with ARQGRA-79?	0	0	https://issues.jboss.org/browse/ARQGRA-67
2364	ARQGRA-45	Karel, I suppose there is no need for object encapsulation of request headers? Do you want to contribute some code around authorization to Ajocado utilities? I can imagine to have encodeCredentials there.	1	1	https://issues.jboss.org/browse/ARQGRA-45
2365	ARQGRA-45	Can you please elaborate and API you have suggested? You propose to use following to add authorization? {code:Java} String credentials = URLUtils.encodeBase64Credentials(username, password); Header authorizationHeader = new Header("Authorization", "Basic " + credentials); selenium.addCustomRequestHeader(authorizationHeader); {code} I propose to introduce utility class for manipulation with common request like: {code:Java} Header authorizationHeader = HeaderUtils.createBasicAuthorization(username, password); {code}	0	0	https://issues.jboss.org/browse/ARQGRA-45
2366	ARQGRA-40	Juraj, could we work on incorporating the Components Objects into Graphene?	1	1	https://issues.jboss.org/browse/ARQGRA-40
2367	ARQGRA-37	Jura, could you please create separated JIRAs for issues you have mentioned? Add them to doc component.	0	0	https://issues.jboss.org/browse/ARQGRA-37
2368	ARQGRA-33	Juraj, it's good point, could you please provide pull request for this feature?	1	1	https://issues.jboss.org/browse/ARQGRA-33
2369	ARQGRA-28	Karel, could you please elaborate more on this issue - it is affecting compatibility between Se1 and Se2?	0	0	https://issues.jboss.org/browse/ARQGRA-28
2370	ARQRUSH-38	Could you move those checkboxes to main panel of ProjectManager? So it will be immediately clear what filters are applied? Additionally, could you add Show Differs quick filter similar to Show All?	1	1	https://issues.jboss.org/browse/ARQRUSH-38
2371	ARQRUSH-28	Hey Jan, could you please send pull request for those changes? Right now, we are basing development on Jakub's repository: https://github.com/cube88/arquillian-rusheye	1	1	https://issues.jboss.org/browse/ARQRUSH-28
2372	ARTIF-748	[~eric.wittmann], thanks again for the help. Am I missing anything here?	1	1	https://issues.jboss.org/browse/ARTIF-748
2373	ARTIF-748	Thanks [~eric.wittmann]. [~csa], any thoughts on that? See my comment on KEYCLOAK-1539. Essentially, a call to JSON REST using Errai's Caller may be unauthorized. But instead of returning a 401 (or anything helpful), KeyCloak returns a login page's HTML. GWT's JSON marshallers, of course, fall over themselves. However, I was a little surprised that the error didn't hit the Caller's ErrorHandler *at all*. Should it? I'll need to play with it again to come up with a stacktrace. But regardless, if a GWT marshaller throws an exception on a REST call, could that bubble up to the ErrorHandler somehow? Or, is there a way to deal with this with some sort of Interceptor, like Eric suggested?	1	1	https://issues.jboss.org/browse/ARTIF-748

#	Requirement	Questions	Answered	Successfully Answered	URL
2374	ARTIF-748	[~brmeyer], I agree with your summary. Since the response code is 200 OK, Errai will try to demarshall the response which it expects to be JSON-based, as specified in @Consumes and @Produces. So, the server is really returning an invalid response and you will see an unhandled exception. Interceptors are probably not an ideal solution here as you don't know which REST call will fail after the token expired, so you'd have to intercept them all. I could easily add error handling for this case to Errai 3.2, if needed. BTW, did you already upgrade to 3.2 and GWT 2.7?	1	0	https://issues.jboss.org/browse/ARTIF-748
2375	ARTIF-730	Completed in https://github.com/brmeyer/s-ramp/tree/wildfly9. But, for now, holding. The server overlay from ARTIF-739's Keycloak upgrade no longer supports WF 8, so we'd have to follow suit and drop it. Also, WF 9 upgraded to Hibernate Search 5.2, which is really different than the 4.x in EAP 6 and WF 8. Supporting both with the distro *might* be possible, but it'll be horrifically complex to do so in the actual repo module (some packages are different, etc.). So, this might imply dropping EAP 6.4 as well. Not sure if 1.1.0.Final is the place to do all that -- how soon is too soon?	1	1	https://issues.jboss.org/browse/ARTIF-730
2376	ARTIF-674	Can't the extension support be added without breaking compliance?	1	1	https://issues.jboss.org/browse/ARTIF-674
2377	ARTIF-659	On hold. At least guava-gwt, and therefore Errai 2, require Java 6-7 and fail with Java 8.	1	1	https://issues.jboss.org/browse/ARTIF-659
2378	ARTIF-659	Hey [~csa]! Quick question: Has anyone had success building against Errai 2 with Java 8? guava-gwt:14.0.1 appears to require 6 or 7, so at least errai-data-binding is an issue. Can I safely upgrade guava-gwt, etc., or is stepping up to Errai 3 the only option?	1	1	https://issues.jboss.org/browse/ARTIF-659
2379	ARTIF-659	Where did you get that info from? I think that's outdated. To my knowledge 2.8 will have support for Java 8. In fact, you can already use a JDK8 now as long as you don't use features that won't translate to JS.	1	0	https://issues.jboss.org/browse/ARTIF-659
2380	ARTIF-645	Like the idea of a pluggable architecture - especially in respect of the UI. The current UI is very much a generic browser to navigate around a wide range of artifacts and view their metadata and relationships. However the information held within the repository could be idea for business specific views - so this pluggable approach could be one way in which organisations could define their build specific views, presenting the key information they are interested in, and allowing users to navigate through the relevant subsets of information they are interested in. For example, one usecase I heard related to the deployment lifecycle information being stored in SRAMP, was having service reports that showed how long it took to progress though the various stages of the lifecycle, and who (i.e. which teams) delayed the deployment. Although with custom views, it may also be good to look at this capability in the context of fine grained access control, to potential enable only some of these custom views to be offered/presented to specific users - e.g. a business user may not be presented with the generic browser and instead may only see a specific set of the custom views, to restrict (a) the information they see (presented at a suitable high level) and (b) the way in which they can navigate around the model.	1	0	https://issues.jboss.org/browse/ARTIF-645
2381	ARTIF-601	[~eric.wittmann], this will be similar to the updateContent discussion. And really, same question for deleting an artifact itself. Presumably, updateContent and deleteContent will both delete the derived artifacts in some fashion. What should happen if relationships *target* something that's deleted or swapped out? Should the relationships automatically get deleted? Should we throw some sort of constraint exception and block the delete? I'd vote for the latter -- less risky and *far* less complicated. Thoughts?	1	1	https://issues.jboss.org/browse/ARTIF-601
2382	ARTIF-583	I think is good to have a maven tree view depending on trhe complex situations we can reach to. I thought the current implementation was complete and it displayed the artifacts included in a group and listed correctly the groups. What are the key areas that are being missed? And what are the complex situations maybe we have to deal in the future? Just for my understanding. I imagine the artifact grouping could be one situation. Just as the user view, I think having a view like this is useful. As this url will be added as maven repository, I like the idea of having access to the artifacts. What would be good also, is to have a kind of tree organized view in s-ramp.	0	0	https://issues.jboss.org/browse/ARTIF-583
2383	ARTIF-578	Hey [~virchete], did you have anything specific in mind for this?	1	1	https://issues.jboss.org/browse/ARTIF-578
2384	ARTIF-578	You were so confident that there'd be issues, that you opened a ticket in advance?! Just kidding ;)	1	1	https://issues.jboss.org/browse/ARTIF-578
2385	ARTIF-573	Shouldn't Ctrl-U and Ctrl-K clear the text (from cursor to the start and end of the line, respectively)? Ctrl-C is SIGINT - shouldn't that exit the shell?	1	1	https://issues.jboss.org/browse/ARTIF-573
2386	ARTIF-506	Having spent ages having to meddle with this metadata on a previous project - I should mention that it can be extremely tricky to get the results you would expect (unless maven metadata is available). For instance, in my experience the following aren't uncommon in externally provided JARs: - `META-INF` directory to be missing entirely (essentially not a valid JAR) - Manifest data often doesn't correspond with what you would expect, because the user decided can some arbitrary value in there (e.g. Bundle-Version => 2.1.0.201209190230-r instead of 2.1.0, presumably someone decided it'd be nice to have date and time in there). [1] - There may be correct data available, but it might not be stored in the key you'd expect (sometimes people put them in Bundle-Version other times in Specification-Version) - If there is a 'meta jar' (i.e. Jar wrapping a whole load of other Jars), it may not even have a `properties.pom`/maven metadata which is useful. Ultimately for the worst cases I ended up having to use a heuristic based approach, with regexp for the ultimate fallback if all other methods failed (would we just reject completely malformed ones?). While I was developing the aforementioned tooling, I wrote a little program which will scan through a directory tree, cracks open all of the jars and builds a set of keys (and values) from all the manifest files. This gives you a very good idea of which fields you may want to look at to derive the data you need, in addition to the sort of rubbish data it may contain you'll have to try to avoid! Sample output (huge set): https://gist.github.com/msavy/cefc9c9b01416176128f Note format is: key => { v0, v1, ..., Vn } I'll post a source link as a priv comment as I haven't put any copyright headers and whatnot on it.	1	0	https://issues.jboss.org/browse/ARTIF-506
2387	ARTIF-506	For now, rejecting this. However, note that some semblance of this is now available in the Maven facade. When you configure Artificer as a repo in your pom, you can add "?artifactType=FooType" to the URL. This sets the type for the *primary* artifact only. Since this entire discussion revolves around primary types, I'm calling that "good enough" for now. I'd rather keep it to something simple, rather than require users to add custom metadata (and have Artificer parse it).	0	0	https://issues.jboss.org/browse/ARTIF-506
2388	ARTIF-490	Thanks [~ncross] -- that's in SRAMP-489. Am I correct that it's limited to the WAR projects?	1	1	https://issues.jboss.org/browse/ARTIF-490
2389	ARTIF-488	Does this duplicate SRAMP-412?	1	1	https://issues.jboss.org/browse/ARTIF-488
2390	ARTIF-487	From [~eric.wittmann]: {quote} Consider: don't allow updates for non-SNAPSHOT artifacts. For SNAPSHOT artifacts add a new one (do not update). So in other words, *never* update the s-ramp artifact. Instead, either fail (non-SNAPSHOT) or create new (SNAPSHOT). The latter should never be done, but can be supported anyway (users probably shouldn't be putting snapshot artifacts in s-ramp). {quote}	0	0	https://issues.jboss.org/browse/ARTIF-487
2391	ARTIF-450	Another question - is the commons installer going to setup the 'admin' user, with the password entered by the user?	0	0	https://issues.jboss.org/browse/ARTIF-450

#	Requirement	Questions	Answered	Successfully Answered	URL
2392	ARTIF-448	Futhermore, the attribute nameInSource is applicable for the relational tables, not for the whole TeiidModel (*.xmi), or am I wrong?	1	0	https://issues.jboss.org/browse/ARTIF-448
2393	ARTIF-447	Instead of splitting the installers back up, I'm wondering if we could do something simpler/smarter. At least with respect to S-RAMP, really the only *runtime* difference between EAP 6.1 and 6.3 was the ModeShape distro that the installer pulls down. Everything else, including compile time, IDP, etc. can stay the same. Knowing that, could we attempt to simply decide, during the installation, what ModeShape distro to grab, based on the EAP instance's full path (assuming it's not renamed and still contains the version within the dir name)? If that fails, fall back on the latest? Theoretically, that *should* allow S-RAMP to simultaneously support both, but not splitting up the installers in overlord, overlord-commons, and s-ramp. [~eric.wittmann]/[~objectiser], thoughts?	1	1	https://issues.jboss.org/browse/ARTIF-447
2394	ARTIF-447	Can you both review https://github.com/Governance/s-ramp/pull/430? Comments appreciated. The only thing I don't like about it is that the s-ramp-distro-assembly now has to include both versions of ModeShape, but not sure if there's a way around that.	0	0	https://issues.jboss.org/browse/ARTIF-447
2395	ARTIF-434	Is there any example of this in our current code? I tried to search about this in all the java files and no result.	1	0	https://issues.jboss.org/browse/ARTIF-434
2396	ARTIF-433	I would defer to those with more eventing/JMS experience than me. However, it does seem like a serialized java object isn't ideal. I would also think that each event would at least need a small set of standard properties such as 'type' - no? I'm wondering what a typical CEP system would need to see. Does anyone have experience with Drools CEP? I did some Esper a long time ago. I think those are the types of things we'd want to leverage to react in interesting ways to the events.	1	1	https://issues.jboss.org/browse/ARTIF-433
2397	ARTIF-433	Gary, thanks for all that -- makes sense. > have a default queue name configured in properties (not with a dtgov specific name, so could potentially be used by any consumer) My only concern with that is shouldn't it be reserved solely for dtgov? What happens if dtgov is running, but a user attempts to pop messages off the "default queue" at the same time? Unless the other clients use a JMS session rollback (as I understand it), dtgov won't receive it, right? That was the intention behind using a dtgov-specific queue. Or am I missing something there? I hadn't intended for the topic(s) to be configurable at all, but I suppose that might make sense in certain situations. > if you use destinations, then you won't need to worry about whether the jndi name refers to a topic or queue Great point -- will do.	1	1	https://issues.jboss.org/browse/ARTIF-433
2398	ARTIF-433	What are we trying to avoid by installing S-RAMP with a default "dtgov" queue? Is it hard to configure queues? Will the DTGov installer not be able to set up its own queue in S-RAMP? Just trying to understand. Logically I would expect S-RAMP to be configured with a default notification topic and a simple way to support multiple named queues (for each of the consumers, of which dtgov is one). A named queue should be relatively easy to create, such that the DTGov installer would add it to the S-RAMP config during DTGov install time.	1	1	https://issues.jboss.org/browse/ARTIF-433
2399	ARTIF-431	Can't auto-download EAP though, right? Do we use wildfly instead? Also, why not use the embedded containers? (question from an Arquillian n00b)	1	1	https://issues.jboss.org/browse/ARTIF-431
2400	ARTIF-431	"As the selenium tests would be just junit tests, they would be located in the src/test folder of every ui project." As they need to be run within the scope of a running target server, won't it just be easier to include these as part of the integration test infrastructure? QE also use selenium, so may be easier to exchange tests.	1	1	https://issues.jboss.org/browse/ARTIF-431
2401	ARTIF-431	Re-wrote the description, after scraping off my Arquillian rust ;) All, take a look at https://github.com/brmeyer/s-ramp/compare/integration-tests and let me know your thoughts. So far, it downloads Tomcat, unpacks it, and runs the full S-RAMP installer on it. Arquillian runs Tomcat in a managed-mode, then runs a simple client test (passes). EAP setup will be identical, minus the downloading (unpack the distro zip from a known location or support $JBOSS_HOME). Arquillian does not currently have a Jetty 8 container. Since there is Jetty 7 & 9, I may look into contributing one for 8. However, note that *none* of them support managed-mode -- all require embedded. Do we want to try that for Jetty, or look into writing a managed one?	1	1	https://issues.jboss.org/browse/ARTIF-431
2402	ARTIF-382	[~objectiser], could we simply rename (or deprecate) s-ramp-server-eap61 and create s-ramp-server-eap6? Looking through it, that should work for 6.1.0 through 6.3.0 (and possibly 6.4.0, if there is one). Unless I'm missing something, I don't see anything in s-ramp-server-eap61 that would need to be changed for 6.3. Thoughts?	1	1	https://issues.jboss.org/browse/ARTIF-382
2403	ARTIF-382	[~objectiser], stupid question: where do the docs live? For the life of me, can't find the src...	1	1	https://issues.jboss.org/browse/ARTIF-382
2404	ARTIF-309	NOTE: This network/graph based representation could also form the basis of the static representation that underpins the 'service dependency' graph used in the runtime governance project, which currently is dynamic, based upon dynamic service interactions that have occurred within a configurable timeframe. Therefore when implementing this task, co-ordination with the runtime governance project should occur to ensure that the relevant common functionality can be factored out into share components - while at the same time not making either project dependent upon the other (e.g. at build, deployment or runtime).	0	0	https://issues.jboss.org/browse/ARTIF-309
2405	ARTIF-303	After discussing with the UX team, creating a new unique URL for every change made to the filters would result in too many items added to the browser history. Instead, we decided to solve this issue by doing the following: 1) Remember the "last" value of the filter settings, so that when the user navigates back to the Artifacts page from the Artifact Details page (for example) we can show the old filter settings (note: this includes the page #) 2) Offer a "share this" feature on every page in the UI - this allows the user to bookmark the page. Ideally the "share this" link generated by this feature will be to a permalink servlet which contains all of the query parameters needed by the page. The permalink URL will not contain a # - the permalink servlet will process the URL and redirect the user to an "application" url that *does* include the #. This also solves the problem of SSO redirects breaking application URLs.	1	1	https://issues.jboss.org/browse/ARTIF-303
2406	ARTIF-303	[~eric.wittmann], should this have been resolved?	1	0	https://issues.jboss.org/browse/ARTIF-303
2407	ARTIF-260	[~rhauch], any thoughts/caveats on this? We're interested in full-text search, both for node properties as well as file content. But, concerned about scalability, as we have a few Artificer uses on the table that involve 10+ million primary artifacts, the bulk of which would have binary content. 1.) Am I correct that MS 4 does not currently support a query index on the file content itself? 2.) Would we be better off using a combination of MS full-text queries on metadata, then an external Lucene/ElasticSearch instance on the file contents (we use the filesystem for binary storage)? Would we be able to use the file's binary storage pathname (looks to be a UUID) to then lookup the associated nodes that reference it?	1	1	https://issues.jboss.org/browse/ARTIF-260

#	Requirement	Questions	Answered	Successfully Answered	URL
2408	ARTIF-250	Andrej Podhradsky <apodhrad@redhat.com> made a comment on [bug 1014005|https://bugzilla.redhat.com/show_bug.cgi?id=1014005] Unfortunately, pastebin at http://pastebin.test.redhat.com/167242 is empty :(So, I add errors which I see. After importing the quickstart 's-ramp-demos-switchyard-multiapp' there are the following errors: Required Capability Missing: The "Bean" capability should be configured on the project when using this type of implementation. Required Capability Missing: The "Bean" capability should be configured on the project when using this type of implementation. Required Capability Missing: The "Camel Core (SEDA/Timer/URI)" capability should be configured on the project when using this type of binding. Required Capability Missing: The "Camel Route" capability should be configured on the project when using this type of implementation. Required Capability Missing: The "SOAP" capability should be configured on the project when using this type of binding. Required Capability Missing: The "SOAP" capability should be configured on the project when using this type of binding. Unresolvable Bean Class: "org.switchyard.quickstarts.demo.multiapp.service.InventoryServiceBean" cannot be resolved for "InventoryService". Unresolvable Bean Class: "org.switchyard.quickstarts.demo.multiapp.service.OrderServiceBean" cannot be resolved for "OrderService". Is this fixed or is it a new bug?	0	0	https://issues.jboss.org/browse/ARTIF-250
2409	ARTIF-209	Stefan Bunciak <sbunciak@redhat.com> made a comment on [bug 979958|https://bugzilla.redhat.com/show_bug.cgi?id=979958] I've installed FSW 6.0.0.ER4 (using the installer). The configuration/standalone.xml still doesn't contain srampDS neither is sramp cache configured to use jdbc-store instead of file-store. Do I miss something or why is it still not fixed?	0	0	https://issues.jboss.org/browse/ARTIF-209
2410	ARTIF-196	I think ModeShape already has the contentHash, would it make sense you use that?	0	0	https://issues.jboss.org/browse/ARTIF-196
2411	ARTIF-189	Hey [~kcbabo], any info available on this? I'm not having any luck finding details. Thanks!	0	0	https://issues.jboss.org/browse/ARTIF-189
2412	ARTIF-159	Can this task be extended to enable auditing data to be recorded through the REST API. Usecase: the governance workflow defines multiple approval steps before an artifact can be promoted into production. The actual audit change to the artifact, once that decision has been made, will potentially only be associated with the last person to approve the artifact, whereas for compliance purposes, it may be necessary for all people who approved the decision to be recorded in the audit logs. Therefore in straightforward cases we can rely on the actual modifications made to the artifacts in the repository to be enough of an audit. However in cases where this is not sufficient, we need the workflow to be able to explicitly add extra audit entries.	0	0	https://issues.jboss.org/browse/ARTIF-159
2413	ARTIF-117	[~eric.wittmann], do you still think this is necessary, since we're using ModeShape's query indexing?	0	0	https://issues.jboss.org/browse/ARTIF-117
2414	ARTIF-113	We should probable default to looking for "artifact in the repository" by checking the name, file size, version (if available) and hash key. If all three match, then link to that artifact rather then adding a new one. Do we need to propose hash key to be on the baseArtifactType in the spec?	1	1	https://issues.jboss.org/browse/ARTIF-113
2415	ARTIF-113	Yes DocumentType: http://governance.github.com/s-ramp/spec/s-ramp-v1.0/documentation/coremodel.html#Link11 The same place where we store fileSize and contentType. Does that mean we need an extendDocumentType? Or else we won't store with fileSize and fileHash and contentType for extended Artifacts.	1	1	https://issues.jboss.org/browse/ARTIF-113
2416	ARTIF-86	Are the derived artifact handlers pluggable?	1	1	https://issues.jboss.org/browse/ARTIF-86
2417	ARTIF-47	The name is left blank now if the slug is not provided. Should we default it to 'newfile'? We can guess an extension based on the mimeType and s-ramp model used for the upload?	1	1	https://issues.jboss.org/browse/ARTIF-47
2418	ARTIF-47	If the Slug is not present, a reasonable name (e.g. newartifact.wsdl) will be generated for it.	0	0	https://issues.jboss.org/browse/ARTIF-47
2419	ARTIF-40	Can this be closed? I think this all works no?	1	1	https://issues.jboss.org/browse/ARTIF-40
2420	ARTIF-16	Hi [~brmeyer]! Could you please have a look and provide a feed-back on the UI Mockup? Thank you!	1	1	https://issues.jboss.org/browse/ARTIF-16
2421	ARTIF-16	(CC [~eric.wittmann] & [~objectiser]) [~bouskaj], hello! Glad to have your help! The approach looks like a great start! You've encompassed the 2 main use cases: uploading an artifact to S-RAMP, and downloading artifacts from S-RAMP and incorporating them into your project. Here's a few comments: - When you upload an artifact, it would be useful to use a popup screen where the user could provide artifact metadata (name, artifact type, properties, etc.). - Your S-RAMP repo screen currently has 1 "Query" box. Definitely keep that -- that will allow developers to use the S-RAMP query language. However, we might also need a sidebar with an advanced search form, really similar to what the web UI has. That way, users can still filter the artifacts, even if they don't know the full query language. Other than that, you're on the right track! Thanks again for the help!	1	1	https://issues.jboss.org/browse/ARTIF-16
2422	ARTIF-16	Hello [~brmeyer]. I made changes according to your advice. Could you have a look on the new UI Mockup? Thank you.	1	1	https://issues.jboss.org/browse/ARTIF-16
2423	ARTIF-16	Hi [~brmeyer]! The 2 main use cases for the Eclipse plugins are basically finished - you can give it a try https://github.com/bouskaJ/-S-RAMP_repository_browser/tree/master/PoC. However, we are struggling with dependencies inclusion. As you will notice, the only dependency is s-ramp-client, but it's transitive deps. makes the final plugin jar quite big (including almost 40 other jars). My suggestion is to create a s-ramp-client plugin that could be installed into the target platform/eclipse and S-RAMP IDE plugin could just reference it in its MANIFEST as required bundle. Any hints on this? Thanks!	1	1	https://issues.jboss.org/browse/ARTIF-16
2424	ARTIF-16	Apologies for the delayed response! {quote} My suggestion is to create a s-ramp-client plugin that could be installed into the target platform/eclipse and S-RAMP IDE plugin could just reference it in its MANIFEST as required bundle. {quote} I guess I'm not quite following as to why that would be an improvement. Doesn't that simply introduce another installation step and maintain the same overall download size (between the 2 plugins)? That being said, I'm sure I could trim down the size of s-ramp-client. It currently pulls in s-ramp-common and s-ramp-atom in their entirety -- both have fairly large transitive trees. I'll take a look under SRAMP-626.	1	1	https://issues.jboss.org/browse/ARTIF-16
2425	ARTIF-16	Can you bump sramp.version up to 0.6.0.Final or, even better, 0.7.0-SNAPSHOT?	1	1	https://issues.jboss.org/browse/ARTIF-16
2426	ARTIF-16	I did finally have a chance to build and install the plugin. Very, very impressive for a proof of concept! Once polished, this is going to be a huge win for the project and a really useful tool. Good work! Are you guys interested in any feedback, yet? Really, it's just a few nitpicky improvements for the look and feel. Functionality wise, this is great. Once you're satistifed with where it's at, I'd say let's go ahead and integrate it as a module in the actual project, but within a branch until it's "finished".	1	1	https://issues.jboss.org/browse/ARTIF-16

#	Requirement	Questions	Answered	Successfully Answered	URL
2427	ARTIF-16	SRAMP-626 is going to be a big deal of help. Thanks! {quote} Can you bump sramp.version up to 0.6.0.Final or, even better, 0.7.0-SNAPSHOT? {quote} Sure. {quote} Are you guys interested in any feedback, yet? Really, it's just a few nitpicky improvements for the look and feel. Functionality wise, this is great. {quote} Of course we are ;-) {quote} Once you're satistifed with where it's at, I'd say let's go ahead and integrate it as a module in the actual project, but within a branch until it's "finished". {quote} I suppose we could consider it finished later this month. It depends on how much feedback will you give us, but basically from functionality perspective I think we are done for now. So, once we incorporate your feedback we can send a pull request.	1	1	https://issues.jboss.org/browse/ARTIF-16
2428	ARTIF-16	Sounds good. Can you guys bump the version up to 0.7.0-SNAPSHOT and re-test? I hit at least one error -- attempting to download a WSDL and import it into a project resulted in an exception on the server. When you're satistifed, I'll give it another in-depth go. Thanks!	1	1	https://issues.jboss.org/browse/ARTIF-16
2429	ARTIF-16	Version updated, wsdl issue fixed (problem was when importing derived artifacts). You can give it another try ;-) Do you have some estimate when SRAMP-626 could be fixed? I suppose you target it to 0.7.0, right?	1	1	https://issues.jboss.org/browse/ARTIF-16
2430	ARTIF-16	[~sbunciak] / [~bouskaj], do you guys have any desire to do a demo webcast with me and other members of the team? Would love to give you the chance to show off your hard work. In the meantime, in the middle of reviewing the pull request. This looks great!	1	1	https://issues.jboss.org/browse/ARTIF-16

Tom, can you config the job to archive the jboss-as/standalone/logs/*.log ? I just close the issue as there are two success builds with no changes. feel free to reopen it if this happens again and hope to find more details with the jboss-as log.	1	0	https://issues.jboss.org/browse/BLACKTIE-440
2432	BLACKTIE-434	Hi Amos, Please can you take a look at this, for some reason nothing is working any more! Thanks, Tom	1	1	https://issues.jboss.org/browse/BLACKTIE-434
2433	BLACKTIE-434	Tom, can you dropbox the last failing jobs logs ? Amos	1	1	https://issues.jboss.org/browse/BLACKTIE-434
2434	BLACKTIE-434	[~zhfeng], {quote} can you dropbox the last failing jobs logs ? {quote} Do you still need the logs? I have put them on dropbox for you anyway. Thanks, Tom	1	1	https://issues.jboss.org/browse/BLACKTIE-434
2435	BLACKTIE-434	Thanks Tom, It looks like linux32 build is still failing, http://172.17.131.2/job/blacktie-linux32/898/ can you dropbox it ? Amos	1	1	https://issues.jboss.org/browse/BLACKTIE-434
2436	BLACKTIE-414	Great work Amos, are you going to try a pull request and check the output and see what we get? It might be worth rdesktoping onto taco and launching an old JBoss first to make sure it gets killed?	1	1	https://issues.jboss.org/browse/BLACKTIE-414
2437	BLACKTIE-414	Tom, can we add the build parameter "pullNumber" both on btny-pulls-blacktie and btny-pulls-blacktie-windows2008 ? also btny-pulls-blacktie-poller need to "wget btny-pulls-blacktie and wget btny-pulls-blacktie-windows2008" ?	0	0	https://issues.jboss.org/browse/BLACKTIE-414
2438	BLACKTIE-402	Hi Mike, Please can you comment on whether you think this will be quicker than REST-TX? I am trying to reduce the complexity of the client library. Wondering about the 5kloc of mongoose.c we have in our repo and maintainance of it. Assuming you think its viable, please can you hand it over to Amos? Tom	1	1	https://issues.jboss.org/browse/BLACKTIE-402
2439	BLACKTIE-402	Hi Tom, what is a binary protocol your thinking ? does it use between client and server or between blacktie and TM ? Amos	1	0	https://issues.jboss.org/browse/BLACKTIE-402
2440	BLACKTIE-399	Thanks Amos, much appreciated. Can you link to a git hub branch so we can see this work evolve?	1	1	https://issues.jboss.org/browse/BLACKTIE-399
2441	BLACKTIE-399	Hi Amos, How is this coming along? Do you have a feel for how much longer it may take, if so, please can you update the Jira with an estimate? Thanks! Tom	1	1	https://issues.jboss.org/browse/BLACKTIE-399
2442	BLACKTIE-399	Tom, 1. finish the work on SocketServer 2. working on the socket endpoint to send/recv messages both on client and server 3. working on the socket session to alert corba endpoint with socket endpoint 4. alert HybridConnectionImpl to use socket session 5. test with xatmi I think 1w on (2) and 1w on (3,4) but not sure on (5). I notice your comment on BLACKTIE-402 with the binary protocol. does it use in the socket endpoint ? currently, I just simply learned some pack/unpack codes from Mike's transport/src/main/cpp/HttpSessionImpl.cxx Amos	1	1	https://issues.jboss.org/browse/BLACKTIE-399
2443	BLACKTIE-399	1.update session to use socket endpoint to send/recv messages. 2.fight with memory issues and try to pass hybrid tests 3.test with xatmi 4.I'm thinking about the similar alternative implementation in jatmibroker-xatmi to remove the use of corba Tom, do you have any idea about point 4 ?	1	1	https://issues.jboss.org/browse/BLACKTIE-399
2444	BLACKTIE-399	Great! Please can you squash the commits into a single commit? If you don't feel comfortable with doing it I can take a look but it is usually easier for you to do it! Thanks again!	1	1	https://issues.jboss.org/browse/BLACKTIE-399
2445	BLACKTIE-360	In 64bit system, how can we deal with long ? man 3 endian #include "endian.h" ... uint64_t htobe64(uint64_t host_64bits); uint64_t htole64(uint64_t host_64bits); uint64_t be64toh(uint64_t big_endian_64bits); uint64_t le64toh(uint64_t little_endian_64bits); but these functions are not available on all UNIX systems even on WINDOWS.	1	1	https://issues.jboss.org/browse/BLACKTIE-360
2446	BLACKTIE-294	Hi Mike, Would it be possible for you to take a look at this for me please? Tom PS It could be the case that this is something we don't need to support but can you update the Jira with details why?	1	1	https://issues.jboss.org/browse/BLACKTIE-294
2447	BLACKTIE-255	I have added valgrind to our core build on Linux (unfortunately it is not available on windows so I had to leave that). Now, when you run a standard build (e.g. mvn install) the tests are executed under valgrind. If the tests fail, then as before the mvn process will also fail. Unfortunately this has had the not unexpected result of increasing the time of the build, on my machine it has gone up from approx 25 minutes to 50 minutes now! - I did have to increase the timeout value of a couple of tests to cope with the slow down. The other "disadvantage" is that now memory certain errors do not cause the build to fail as valgrind can cope with certain types of memory mismanagement. In order to run the build without valgrind, all you do is pass -Duse.valgrind=false (or anything other than True, true, TRUE or 1) What this does mean is that we are now in a position whereby we can easily keep track of the memory issues in the product so long as after your fixes you run the build with valgrind enabled (the default) and take a look at the outputted valgrind log (e.g. <BLACKTIE_SRC_DIR>/<PROJECT_NAME>/target/cpp-test-classes/<PROJECT_NAME>-valgrind.log to check for any new issues.	0	0	https://issues.jboss.org/browse/BLACKTIE-255

#	Requirement	Questions	Answered	Successfully Answered	URL
2448	BGBUILD-375	The systemd/systemctl issue is a much more difficult problem than it first appeared. After investigating and speaking with rwmj, due to the way libguestfs boots the images none of the system's services and/or daemons are running. This renders systemctl useless and it doesn't seem to be possible to start systemd in any useful way after booting (it generally expects to be PID#1). So, for now I shall continue to simply do the task manually by symlinking the relevant directories, but hopefully a solution might be possible (or emulable via something akin to) virt-sysprep {quote} 22:22 msavy: yeah, haven't had any success with that. i suppose the best solution for boxgrinder would be fully booting the VM independently and somehow piping the commands through to it ala libguestfs' sh/command. i realise that's outside of guestfs' purpose though. 22:22 msavy: so that "everything is there", so to speak 22:24 rwmjones: msavy: firstboot right? we added that to virt-sysprep recently 22:24 rwmjones: (although with the big caveat that it doesn't yet work for windows) 22:24 rwmjones: https://rwmj.wordpress.com/2012/08/18/new-in-virt-sysprep-add-firstboot-scripts/ 22:24 rwmjones: http://libguestfs.org/virt-sysprep.1.html#firstboot- 22:25 msavy: well, presently BG only does Fedora, RHEL and various derivatives 22:25 msavy: so the windows element wouldn't matter 22:25 rwmjones: should work for that subset then 22:25 msavy: although i am presently looking for a way to use something such as lorax instead of venerable (and badly breaking) appliance-creator 22:26 msavy: and cursing the frequent language mismatches that make life so difficult :) 22:26 rwmjones: btw I'm not necessarily suggesting using virt-sysprep; you can add the equivalent functionality to bg after examining what virt-sysprep does 22:27 msavy: indeed, thanks. {quote}	1	1	https://issues.jboss.org/browse/BGBUILD-375

2450	BGBUILD-347	What's the current state? Can we build Fedora 17 appliances? And another thing: can we use BG on a Fedora 17 host?	1	1	https://issues.jboss.org/browse/BGBUILD-347
2451	BGBUILD-346	I'll take care about the spec file, it needs to be rewritten a bit, have a proposal locally, but waiting for two deps (httparty and crack) to push it. Which spec fails?	1	1	https://issues.jboss.org/browse/BGBUILD-346
2452	BGBUILD-272	Caveat: according to the documentation, the aws-sdk gem it only works on Ruby 1.8.7. This means that it will not work on Fedora 13, which only has 1.8.6. I don't really think this should block us, as we technically dropped Fedora 13 support for the 0.9.3 release due to EOL status.	1	1	https://issues.jboss.org/browse/BGBUILD-272
2453	BGBUILD-271	I can't find the host parameter in the history anywhere? Am I missing something here?	1	1	https://issues.jboss.org/browse/BGBUILD-271
2454	BGBUILD-267	Please use the branch BGBUILD-267 to replicate, it was trivially easy to add the basics (yay BoxGrinder!) I can't find the CentOS GRUB SRPM on their mirrors to take a look :(http://mirror.centos.org/centos/6/. The error seems to emanate from the GRUB RPM itself when installing, so I don't see how we can easily interfere with appliance creator to solve it (e.g. if we created and symlinked the mismatched directories it might work, but can we do that _before_ appliance-creator tries to install the RPMs?). Edit: Just to confirm, the shipped CentOS ISO has the directory structures as described above, and they work fine. So need to look elsewhere.	1	1	https://issues.jboss.org/browse/BGBUILD-267
2455	BGBUILD-267	Good job! Do you need intervention from my side?	1	1	https://issues.jboss.org/browse/BGBUILD-267
2456	BGBUILD-257	Do we see the time difference also for appliances built for other than EC2 formats? If yes - we need to think about more general solution, like NTP for all platforms.	0	0	https://issues.jboss.org/browse/BGBUILD-257
2457	BGBUILD-246	Could we also improve performance by allocating more memory for bigger instances?	1	1	https://issues.jboss.org/browse/BGBUILD-246
2458	BGBUILD-224	Could you please attach at least the hardware section of your appliance definition file? Thanks!	1	1	https://issues.jboss.org/browse/BGBUILD-224

#	Requirement	Questions	Answered	Successfully Answered	URL
2459	BGBUILD-222	Done including tests, just needs to be merged in from the 'force' branch. Simply use 'overwrite' to force an overwrite (latest build for a snapshot is the one overwritten) in EBS or S3 plugins. For EBS there are some special considerations and an additional option: - The plugin will terminate (fail) if you have any instances still running, in order to allow you to rescue any important transient data before clobbering the EBS volume. - The associated snapshot *will be deleted* unless you enable 'preserve_snapshots: true' in the EBS plugin config - We simply look for an EBS device on the registered EBS image we wish to overwrite called /dev/sda1 (this is where the EBS plugin created and mounted the volume initially). Do *NOT* manually replace /dev/sda1 with your own important data volume and then use overwrite. It *WILL* delete it as BoxGrinder has no way of knowing the UUID of the device between sessions, it simply uses the known device path. - The image will be deregistered for you, and the new one created with an identical name.	1	1	https://issues.jboss.org/browse/BGBUILD-222
2460	BGBUILD-221	We should allow to specify 32 bit packages. The question is - how will be the dependency resolution look like? If some package requires glibc 32 bit and we'll have 64 bit - dependency resolution will pass, but the app will not work. This needs some testing.	0	0	https://issues.jboss.org/browse/BGBUILD-221
2461	BGBUILD-211	My first idea is to upload image to selected host using SFTP plugin to /var/lib/libvirt/images/{appliance_path} and then use virt-install command to actually register the image. Is this what you guys want or you think about different process?	1	1	https://issues.jboss.org/browse/BGBUILD-211
2462	BGBUILD-211	Yeah, that would definitely satisfy what I was thinking. My goal would be to deploy appliance to a KVM/Xen box and be able to start it with either Virtual Machine Manager or virsh. As I'm looking more closely at the documentation, did I completely misunderstand how much support there is for stuff like this in VMWare/VirtualBox?	1	1	https://issues.jboss.org/browse/BGBUILD-211
2463	BGBUILD-201	After all of this effort I think I might have screwed up :-(. @mgoldmann should I have set the delete_on_termination: true in delivery options?	1	1	https://issues.jboss.org/browse/BGBUILD-201
2464	BGBUILD-166	We can set a mandatory requirement for all users like this: {code} gconftool-2 --direct --config-source xml:readwrite:/etc/gconf/gconf.xml.mandatory -s /apps/nautilus/preferences/media_automount --type bool false {code} But it'll not affect current logged in users, so it's useless. I think the right solution for this would be add the solution to [FAQ|http://boxgrinder.org/faq/] and do not modify the code because it would be one big hack. Do you agree?	0	0	https://issues.jboss.org/browse/BGBUILD-166
2465	BGBUILD-148	14:50 skvidal: gholms: okay wanna try something fun? 14:50 mgoldmann: created a placeholder for BG: https://issues.jboss.org/browse/BGBUILD-148 14:50 gholms: skvidal: What is it? 14:50 skvidal: gholms: on the Fedora system run 14:51 skvidal: db_dump /var/lib/rpm/Packages > myrpmdb.out 14:51 skvidal: that will be a BIG file 14:51 skvidal: then inside the chroot, running on el5's rpm do this 14:51 skvidal: cd /var/lib/rpm 14:51 skvidal: mv Packages Packages.bak 14:52 skvidal: cat myrpmdb.out | db_load Packages 14:52 skvidal: rpm --rebuilddb 14:52 skvidal: rpm -qa 14:52 skvidal: see if that works 14:52 gholms needs to install db4-utils in the chroot 14:55 gholms: skvidal: Yeah, that works. Do you suppose I have to do the same thing for the rest of the DBs there as well? 14:55 skvidal: no 14:55 skvidal: packages is the only db 14:55 skvidal: everything else is more or less an inde 14:55 skvidal: x 14:56 gholms: Can I just nuke the rest before I db_load it? 14:56 skvidal: rpm --rebuilddb recreates the rest of them 14:56 gholms: Ah, ok. 14:56 skvidal: so it matters not 14:56 gholms: It apparently doesn't recreate them when they already exist since it complained about bad hash versions in the Pubkeys db. 14:56 skvidal: oh 14:56 skvidal: pubkeys 14:57 skvidal: is different 14:57 skvidal: :) 14:57 skvidal: pubkeys is the gpg pub keys database 14:57 gholms: Completely separate from the rpmdb? 14:57 skvidal: sort of 14:57 skvidal: you can just do the same thing with that db, too 14:57 skvidal: but that really should be it 14:57 jhford has left IRC (Excess Flood) 14:58 gholms: If I just nuke that db then it just makes me re-import the keys later, right? 14:58 skvidal: should, yep 14:58 zooz has joined (~zooz@host86-163-127-233.range86-163.btcentralplus.com) 14:58 zooz: hi people 14:58 nirik sighs at his 6rd tunnel. POS. I guess I will stop trying to get it working again for now. 14:58 skvidal: but I've not actually tested that	1	1	https://issues.jboss.org/browse/BGBUILD-148

2467	BGBUILD-77	@Bright - I'm aware of the post section capabilities. We use it pretty extensively for our SteamCannon appliances (http://github.com/steamcannon/steamcannon-appliances). However, when the work that needs to be accomplished in the post section is a bit more complex, the post section is a little limiting. Also possible that you can do more with YAML block literals than I am aware of. I'd like to be able to use conditionals, set variables, etc. Is it possible for example to have something like this? {code} post: base: -| if [-e /path/to/file] ; then $RUBY_CMD $RUBY_ARGS else $OTHER_CMD $OTHER_ARGS fi {code}	0	0	https://issues.jboss.org/browse/BGBUILD-77

#	Requirement	Questions	Answered	Successfully Answered	URL
2468	BGBUILD-73	Defaults can be set for many things but there is still problem with OS name and version. There is no section in kickstart files that describes the operating system we're installing. Or at least I'm not familiar with such one. I'm using in every plugin OS name/version combination for creating paths, etc. What options we have? 1. Comments in .ks files, like this: # bg_os_name: fedora # bg_os_version: 14 Seth - take a look at every init.d script - it has chkconfig control structures in comments. 2. Try to parse repo sections and read the OS version and name. But this approach may be fragile, because sometimes we'll not have the OS name included in repo path and sometimes we'll have more than one. 3. Other?	1	1	https://issues.jboss.org/browse/BGBUILD-73
2469	BGBUILD-69	Is this a dupe of BGBUILD-60?	1	0	https://issues.jboss.org/browse/BGBUILD-69
2470	BGBUILD-47	Sanne, Yah, I'm considering adding selection for filesystem type. What do you mean by mount options? You want to add custom entries to /etc/fstab? How it should look? What is the use case?	1	1	https://issues.jboss.org/browse/BGBUILD-47
2471	BGBUILD-47	Thanks for clearing this.The problem with the full line is that you cannot be sure what will be the device name, for one platform it'll be /dev/sda1, for other /dev/xvda1. Another approach could be that you can specify values for partitions, like this for example: "/": size: 10 type: "ext4" options: "barrier=0,nodelalloc,nobh,noatime,data=writeback,commit=60,nouser_xattr,noacl,max_batch_time=30000" If you want add additional entries (mount external filesystems) manually you can use post section: post: base: - "echo '/dev/something /mnt ext4 defaults,ro 0 0' >> /etc/fstab" WDYT?	1	1	https://issues.jboss.org/browse/BGBUILD-47
2472	BGBUILD-46	Does this mean that the resulting image will be the same arch as the host operating system atm? This seems to be implied, but is not mentioned in the existing documentation.	0	0	https://issues.jboss.org/browse/BGBUILD-46
2473	BGBUILD-28	20:40 bobmcw: generally speaking, I think I'd like the example to pull from the s3-delivery or fedora-os plugins that exist 20:40 bobmcw: reading the page, I see I need execute() but don't quite grok what I'd put there 20:40 bobmcw: then again, I'm code ignorant of BG 20:40 bobmcw: but even if psuedo-code 20:40 bobmcw: replace_kernel_with_xen() 20:41 bobmcw: or s3_upload(appliance.artifact) 20:41 bobmcw: or whatever, just to give me an idea 20:41 bobmcw: the page tells me "how", but examples of what and why I'd access @config and @appliance_config would be good 20:41 bobmcw: would light my imagination of what could be done 20:42 bobmcw: (I know we have code in github, so links might suffice)	0	0	https://issues.jboss.org/browse/BGBUILD-28
2474	BPMC-83	Kanchan Desai <kadesai@redhat.com> made a comment on [bug 958393|https://bugzilla.redhat.com/show_bug.cgi?id=958393] Hi Ivo, Doc Text has been added. Can you please review the CCFR.	0	0	https://issues.jboss.org/browse/BPMC-83
2475	BPMC-70	After working with suspend/resume for a while during testing, I found that I had to always think about what the words "true/false" in the "Suspended" column mean. Is it possible to use the words "active" and "retired" instead to avoid confusion?	0	0	https://issues.jboss.org/browse/BPMC-70
2476	BPMC-63	as far as I can see in the code it is not yet fixed. Perhaps good idea would be to make it even more flexible - for instance allow to set it as JVM parameter (-Dorg.jbpm.report.data.dir) instead of relying on catalina.home. That could make it a bit more server independent. What do you think about it?	0	0	https://issues.jboss.org/browse/BPMC-63
2477	BPMC-63	yes, you're right, it's a good idea to use a JVM parameter. I think a good name could be : -Dorg.jbpm.report.engine.dir. Is there currently a workaround ? it's quite annoying not having reports on my Linux install.	0	0	https://issues.jboss.org/browse/BPMC-63
2478	BPMC-63	I am fine with these changes. Can somebody provide a patch? That would greatly simplify my life.	0	0	https://issues.jboss.org/browse/BPMC-63
2479	BPMC-58	Which versions are the patches supposed to work with?	1	0	https://issues.jboss.org/browse/BPMC-58
2480	BPMC-37	Thanks, I've applied your patches to both codebases. Can you verify everything works as expected? If that's successful you can close this issue.	1	1	https://issues.jboss.org/browse/BPMC-37
2481	BPMC-8	Hi Heiko, Could you please help me review apply if it looks good. ;-) Thanks Jeff	1	1	https://issues.jboss.org/browse/BPMC-8
2482	BUILDTRK-230	If we have multiple jars to test, can we have a batch process for this as well? For example, upload text file with name and checksum of jars, return list of jars with their releases. The text file could be (e.g) XML, or could be sent via REST, and the return could be a web page, or REST data.	1	1	https://issues.jboss.org/browse/BUILDTRK-230
2483	BUILDTRK-204	Why should we do it? Fill the description, please.	0	0	https://issues.jboss.org/browse/BUILDTRK-204
2484	BUILDTRK-178	I think, this method could be only overloaded. Is there any reason to not let there this method?	0	0	https://issues.jboss.org/browse/BUILDTRK-178
2485	BUILDTRK-159	Couldn't Deltaspike @ConfigProperty be used?	0	0	https://issues.jboss.org/browse/BUILDTRK-159
2486	BUILDTRK-91	Can you describe this issue more?	1	1	https://issues.jboss.org/browse/BUILDTRK-91
2487	BUILDTRK-81	Can somebody reproduce it?	0	0	https://issues.jboss.org/browse/BUILDTRK-81
2488	BUILDTRK-40	Could you describe it more?	0	0	https://issues.jboss.org/browse/BUILDTRK-40
2489	BUILDTRK-35	Which tab in UI do you have in mind? Project->Release->Dependent Releases? I saw there some code, which looks good to me. Maybe some bug in backend? I remeber, that it worked - in past there were 2 dependent releases for Hibernate 4.2.3, but now when I run it in debugger the DAO method (ReleaseDAOImpl: findDependentReleases) returned 0 instances. I don't understand the DAO method... Why are there these conditions d1.releaseArtifact = true, d2.releaseArtifact = false?	1	1	https://issues.jboss.org/browse/BUILDTRK-35
2490	BUILDTRK-29	This methods are used just for projects, statuses and licenses. getAllProjects() is used for title page - Me and jsenko thinks that it shouldn't be paginated. Currently it looks like for licenses and statuses pagination is not needed, but can be added in future Pagination was creasted for list of releases (in projects page)	0	0	https://issues.jboss.org/browse/BUILDTRK-29
2491	BUILDTRK-12	Kuba, can you please comment on this?	0	0	https://issues.jboss.org/browse/BUILDTRK-12
2492	BUILDTRK-8	Would it possible to open a REST API to list all components, for each component, with the information: {name, version, groupId}, groupId should be available if the component is NOT a native component? Thank you. :-)	1	1	https://issues.jboss.org/browse/BUILDTRK-8
2493	BUILDTRK-8	All data in BuildTracker can be accessible via REST API. We just need to gather requirements for it to design it. => Yes, we can provide you any information you want. To your requirement (we need more precise specification) : Would you like to list all projects with groupId and artifactId? To every project get all releases and to every release get all artifacts?	1	1	https://issues.jboss.org/browse/BUILDTRK-8
2494	BXMSDOC-1613	Is it ok to close this or will there be an update with the examples that I should review?	1	1	https://issues.jboss.org/browse/BXMSDOC-1613

#	Requirement	Questions	Answered	Successfully Answered	URL
2495	BXMSDOC-1613	Ah, very helpful, [~Rikkola]! Thanks. I think these examples are actually worth including in the doc. I'll work on that and send back to you one last time for final OK. However, meanwhile, I'm not quite clear how Resolved Hit works in reality. You say it's the same as First Hit, but you can mix the order of rows. And in the description in the doc, we say for example you can give priority to row 10 over row 5, or whatever. But how do you actually give that priority? Just with a separate rule somewhere that you can create to determine that? Or is it a setting with the table itself? Thanks, Stetson	1	1	https://issues.jboss.org/browse/BXMSDOC-1613
2496	BXMSDOC-1613	Okay [~Rikkola], so I've updated the doc with a new "Hit Policy Examples" section based on what I've understood from your excellent examples. I went a simpler route that I hopefully is still accurate. Here's the link: http://file.rdu.redhat.com/~sterobin/BXMSDOC-1366/#hit_policies_concept Could you please review that Examples section and let me know two things in particular: - Is it all technically accurate? - How does the user specify row/hit priority with the Resolved Hit policy? What I've written about this is still incomplete because I myself don't know. See my comment above. Here's the specific section related to my Resolved Hit question: --- First Hit/Resolved Hit: With both First Hit and Resolved Hit policies, only one of the discounts can be applied. For First Hit, the discount that is satisfied first in the list is applied and the others are ignored. Example: A senior citizen who is also a student and a military veteran will receive only the senior citizen discount of 10%, since that is listed first in the table. For Resolved Hit, the discount that you give priority to, regardless of listed order, will be applied first. *+<How do you set this priority? A separate rule somewhere? In the table itself somehow?>+* Example: If military discounts are prioritized higher than age or student discounts, despite the listed order, then a senior citizen who is also a student and a military veteran will receive only the military discount of 10%, regardless of age or student status. Key difference: With First Hit, the listed order of rules is significant, while with Resolved Hit, listed order is irrelevant. ---	1	1	https://issues.jboss.org/browse/BXMSDOC-1613
2497	BXMSDOC-1579	[~rbarrius] [~nmirasch] Could you please review the changes I have incorporated from Maciej's community docs? You can find the diff here: https://gitlab.cee.redhat.com/red-hat-jboss-bxms-documentation/bxms-docs/commit/ef595325e6310341d2a6c413c3b3b3dc9e02bf08 and view in jenkins here: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Administration_And_Configuration_Guide-branch-BXMSDOC-1430Reopened/lastSuccessfulBuild/artifact/index.html#chap-execution-error-management Thanks, Gemma.	1	1	https://issues.jboss.org/browse/BXMSDOC-1579
2498	BXMSDOC-1579	Hi Gemma, if you are done incorporating the review comments, can we close this sub-task? I see that the main Jira BXMSDOC-1430 is marked to resolved.	1	1	https://issues.jboss.org/browse/BXMSDOC-1579
2499	BXMSDOC-1485	[~ksuta] thank you. Is it simply a matter of replacing executeCommands() with executeCommandsWithResults() or do the examples need further changes?	1	1	https://issues.jboss.org/browse/BXMSDOC-1485
2500	BXMSDOC-1485	[~ksuta] I've updated the example. Would you please confirm. This command is still in the second example: public void executeCommands() { Is that right?	1	1	https://issues.jboss.org/browse/BXMSDOC-1485
2501	BXMSDOC-1462	I guess we can mention also about multi-module projects [1] point 3. What do you think [~emmurphy], [~tkobayashi]? [1] https://github.com/kiegroup/kie-wb-common/pull/836#issuecomment-299555115	1	1	https://issues.jboss.org/browse/BXMSDOC-1462
2502	BXMSDOC-1452	[~marek.winkler]- I think, and maybe [~cwatkins] can correct me if I am wrong, that Prakasha had mentioned that BBVA, for whom this LA is planned at, is a fresh BxMS customer and won't be using 6.x and hence won't need migration. Did we miss something?	1	0	https://issues.jboss.org/browse/BXMSDOC-1452
2503	BXMSDOC-1447	Thank you [~ksuta], 1. Incorporated (together with other comments in the MR - you can re-check the MR and the 7.0 backport too) 2. The payload has the following line: {{<scanner poll-interval="5000" status="CREATED"/>}}. Do I need to add further ruleconfig config? (see the docs for the full XML payload) I just feel strange putting scanner with status "CREATED" into the payload and then seeing {{<scanner poll-interval="0" status="STOPPED"/>}} in the response in the official documentation...	1	1	https://issues.jboss.org/browse/BXMSDOC-1447
2504	BXMSDOC-1379	Hello [~vidya_iyengar], regarding your question about BPMS and BRMS distinction: in BPMS we need all points 1-5 mentioned in the description. in BRMS we only need points 1, 3 and 5 (NOT 2 and NOT 4), because there are no "jBPM Runtime"-related perspectives in BRMS (Process instances, tasks, dashboard). Moreover the login-module configuration *must not* be included in the standalone.xml because it would be impossible to even login to BRMS business-central (because the implementation for the login-module is only included in BPMS). Why is login-module needed in BPMS? Because those runtime perspectives are using the *currently logged in user* to load data from kie-server (it must be checked, that this user actually has access to see process definitions/instances/tasks from given container on kie-server etc). It ensures that currently logged in user in business central gets automatically logged into kie-server as well (just by virtue of being logged into business-central), so he can retrieve data from it.	1	1	https://issues.jboss.org/browse/BXMSDOC-1379
2505	BXMSDOC-1379	Hi [~jhrcek], Can you tell me if this fix if for 7.0-LA or 7.0-GA?	1	1	https://issues.jboss.org/browse/BXMSDOC-1379
2506	BXMSDOC-1346	Hi [~ksuta], did you mean the first endpoint in the [Unmanaged Intelligent Process Server Environment|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Development_Guide-branch-BXMSDOC-1297/lastSuccessfulBuild/artifact/index.html#unmanaged_intelligent_process_server_environment] (updated). [~anton.giertli], Check out [Unmanaged Intelligent Process Server Environment|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Development_Guide-branch-BXMSDOC-1297/lastSuccessfulBuild/artifact/index.html#unmanaged_intelligent_process_server_environment]. I have: * Linked to Chapter 16. The REST API for Intelligent Process Server Execution, where we explain using curl. * Updated Chapter 16 so as to mention the X-KIE-ContentType header. * In [POST] /config, provided examles of curl commands that work with each marshaller type. WDYT?	1	1	https://issues.jboss.org/browse/BXMSDOC-1346
2507	BXMSDOC-1346	[~ksuta], my apologies, should have added it before. How about [now|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Development_Guide-branch-BXMSDOC-1297/lastSuccessfulBuild/artifact/index.html#unmanaged_intelligent_process_server_environment]?	1	1	https://issues.jboss.org/browse/BXMSDOC-1346
2508	BXMSDOC-1238	[~ksuta], please check the updated docs; I added the information into the section _Persistence Setups - Troubleshooting_ of the Installation Guide: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Installation_Guide-branch-BXMSDOC-1238/lastSuccessfulBuild/artifact/index.html#special_setup_for_ibm_db2_database Let me know if everything is correct. Also, should this be available in the BRMS version of the Installation Guide, or is this applicable only to BPMS?	1	1	https://issues.jboss.org/browse/BXMSDOC-1238
2509	BXMSDOC-1238	BPMS is enough, this is a jBPM issue. Just a question about point 4 - why do you specifically mention there those insert statements? They are part of postgresql-jbpm-lo-trigger-clob.sql script.	1	1	https://issues.jboss.org/browse/BXMSDOC-1238

#	Requirement	Questions	Answered	Successfully Answered	URL
2510	BXMSDOC-1214	[~ksuta]- Will fix version for this be 6.4.3?	1	1	https://issues.jboss.org/browse/BXMSDOC-1214
2511	BXMSDOC-1183	[~vidya_iyengar]- Could you please add all deets here? TIA!	1	1	https://issues.jboss.org/browse/BXMSDOC-1183
2512	BXMSDOC-1113	Vidya, thank you for trusting me with the review. Here are my suggestions, and again, feel free to ignore them if you do not find them helpful: * _KIE Server and Container Migration_, _the KIE server templates_ -> are you sure that it should be "KIE server"? Shouldn't it be Intelligent Process Server or Realtime Decision Server? Please let me know, I am very curious about this since I though we should not use "KIE server" at all (?) * _system git repository_ -> capitalization: +Git+ repository * _6.1 to 6.3 (or above)_ -> avoid using brackets as much as possible. I think saying _6.1 to 6.3 or above_ without them is fine. * _So to retain the container data while migrating from Red Hat JBoss BPM Suite 6.1 to 6.3 (or above) , you must first_ -> I have more suggestion to this sentence. I would omit the word "so" (it sounds too informal to me in this context) and I think it is superfluous to repeat again the phrase "migrating from Red Hat JBoss BPM Suite 6.1 to 6.3 (or above)", because the exactly same wording is there before. Also, I think it is superfluous to say "you must", instead of that, I would just say "upgrade to". There is a spare space before one comma too. So, the sentence would be: _To retain the container data, upgrade to Red Hat JBoss BPM Suite 6.2 and then to Red Hat JBoss BPM Suite 6.3._ It is much shorter and it says the exactly same thing. That's all, I hope it is helpful! Klara	1	1	https://issues.jboss.org/browse/BXMSDOC-1113
2513	BXMSDOC-1075	Hi [~mczernek], I have a few minor comments: 1)I'd suggest not to use WIH abbreviation at all for WorkItemHandler. Also, it is not the first occurrence of "WorkItemHandler" in this topic. If u meant Work Item Handler, then it is ok. 2)With the following pom.xml: It is a split sentence but acting like an independent sentence. Can we say "Use the following pom.xml" instead? 3)Also, if the context of 'Asynchronous' is not command, then it should be "+a+synchronous" and not "+A+synchronous". For example in the first sentence, When the workflow reaches an Asynchronous WorkItemHandler (WIH). Here, it should be "asynchronous work item handler" -Same for Work Item Definition. If you mean it as the name of the editor, and it it appears as "Work Item Definition" in the UI, it is fine. Otherwise, it should be "work item definition". 4)" In the same project, create a Business Process. Click New Item → Business Process to do so. " Can simply say Click New Item → Business Process to create a create a Business Process. 5)Step 8: b) is not something that you are entering. It is a save button. You can get rid of a) and b) and just say "Enter the value of CommandClass as ..... and click Save". 6)Step 9 : Save your process in the process designer. Click Save. SImply say Click Save to save your process.	1	1	https://issues.jboss.org/browse/BXMSDOC-1075
2514	BXMSDOC-1073	Also is "Authorization: Bearer 123" literal value of the property to be set, or should 123 be replaced by some placeholder? How should user know what to use instead of that "123"?	1	1	https://issues.jboss.org/browse/BXMSDOC-1073
2515	BXMSDOC-1073	Hi Jan, could you re-check the link above? I have re-written the note (in fact, it is not a note any longer). Do you think it's clearer now?	1	1	https://issues.jboss.org/browse/BXMSDOC-1073
2516	BXMSDOC-1057	Hi, I deleted the REST API from [User Guide|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BRMS/job/doc-BRMS-User_Guide-branch-BXMSDOC-1057/lastSuccessfulBuild/artifact/index.html]. Can we merge and close this issue?	1	1	https://issues.jboss.org/browse/BXMSDOC-1057
2517	BXMSDOC-1038	bq. Chapter 14. Integration with Aries Blueprint bq. bq. This section explains the integration elements of Red Hat JBoss BPM Suite specific to Apache Aries Blueprint. section --> chapter bq. The <kie:kmodule> element defines a collection of KieBase and associated KieSessions. The id parameter is required. and associated KieSessions --> and it's associated KieSessions bq. Set scope to singleton to use the same bean instnace every time the bean is called. instnace --> instance bq. Specifies the reference to the event listeners group. For more information, see the section called “Defining a Group of Listeners”. see the section called "Defining.." --> see the "Defining.." section, or even just "see .." bq. Scanning Interval in milli seconds. milli seconds --> milliseconds bq. ...only KIE objects identified by referenced releaseId element are inicialized and imported into the Blueprint context. inicialized --> initialized referenced releaseId element --> a referenced releaseId element bq. You can enable the KIE scanning feature, that is enableScanner,... bq. The tags have identical names to the listener interfaces, that is: you can afford to drop "that is" bq. The kie-aries-blueprint module allows you to configure the loggers using XML tags using identical names, that is: replace second "using" with "with"? bq. Anonymous bean. :)	0	0	https://issues.jboss.org/browse/BXMSDOC-1038
2518	BXMSDOC-1026	Assigning to [~marek.winkler] Hi Marek, could you please confirm links to the correct version of Integration Stack for BxMS 6.3: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Getting_Started_Guide-branch-BXMSDOC-987/lastSuccessfulBuild/artifact/index.html#installing_the_jboss_developer_studio_plug_ins http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BRMS/job/doc-BRMS-Getting_Started_Guide-branch-BXMSDOC-987/lastSuccessfulBuild/artifact/index.html#installing_the_jboss_developer_studio_plug_ins And 6.4: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Getting_Started_Guide-branch-BXMSDOC-987-6.4/lastSuccessfulBuild/artifact/index.html#installing_the_jboss_developer_studio_plug_ins http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BRMS/job/doc-BRMS-Getting_Started_Guide-branch-BXMSDOC-987-6.4/lastSuccessfulBuild/artifact/index.html#installing_the_jboss_developer_studio_plug_ins Thanks, Gemma.	1	1	https://issues.jboss.org/browse/BXMSDOC-1026
2519	BXMSDOC-1013	Hi [~jschwan], Can you please take a look at the changes? Thanks again!	1	1	https://issues.jboss.org/browse/BXMSDOC-1013
2520	BXMSDOC-1013	hi [~jschwan], I have fixed the first two feedback that you gave, however I am not sure what you meant by "If scanner is started for a container and is deployed the new version of your deployment, then your container will be automatic update by scanner." Can you please explain/elaborate a bit more on this? Thanks!	1	1	https://issues.jboss.org/browse/BXMSDOC-1013
2521	BXMSDOC-986	Hi, I have added the following section into the docs: Asynchronous WorkItemHandler Hello World Implementation. Before we make any further changes, could you please check and go through the new section?	1	1	https://issues.jboss.org/browse/BXMSDOC-986
2522	BXMSDOC-986	Hi [~mczernek], great job! Just some minor things: {noformat} 2. Package your implementation into a JAR file, upload it in the Business Central, and add into your project dependencies. {noformat} Maybe something like "Build your maven project, upload resulted JAR to Business Central and add it into your project dependencies." will be better. {noformat} 8. Enter the following values: a. Task name: async. b. CommandClass: docs.command.HelloWorldCommand. {noformat} "TaskName" - is property name, the same as "CommandClass" in point b. so in my opinion it's better to write it in consistent way. And I guess periods are little bit dangerous in this place (some one may use copy-paste method to test how it's work). {noformat} 10. Register AsyncWorkItemHandler in Business Central: b. Click Add under the Work Item handlers category and add the following: async: new org.jbpm.executor.impl.wih.AsyncWorkItemHandler(org.jbpm.executor.ExecutorServiceFactory.newExecutorService(null)) {noformat} I guess it's will be easier to understand when this part will be like "set Name to 'async' and identifier to 'new org.jbpm.executor.impl.wih.AsyncWorkItemHandler(org.jbpm.executor.ExecutorServiceFactory.newExecutorService(null))'"	1	1	https://issues.jboss.org/browse/BXMSDOC-986

2523	BXMSDOC-981	Hi [~psiroky], we have a clustering section in our Install Guide. Now, because BxMS for EAP 7.0 won't have a JAR installer, afaik, I have done the following change--see the docs [here|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20BPMS/job/doc-BPMS-Installation_Guide-branch-BXMSDOC-981/lastSuccessfulBuild/artifact/index.html#clustering_custom_configuration], ctrl+f -> "Furthermore, when deploying on EAP 7.0," That's the small addition I made. Is this correct and sufficient in your opinion?	1	1	https://issues.jboss.org/browse/BXMSDOC-981
2524	BXMSDOC-981	Could you re-check the link above to see the changes? It should now be more explicit. I didn't think it that important before so I didn't include the original value but as per request, it's now in the draft.	1	1	https://issues.jboss.org/browse/BXMSDOC-981
2525	BXMSDOC-870	Hello [~mmacik], could you please doublecheck this? The doc text added seems OK, but I'm not really sure if this shouldn't go to WLS guide instead of WAS guide. Searching in the community sources I only found a mention of "org.uberfire.start.method" in the [README of weblogic assembly| https://github.com/droolsjbpm/kie-wb-distributions/blob/6.5.x/kie-wb/kie-wb-distribution-wars/src/main/assembly/weblogic12/README.md#jvm-custom-properties] and nothing for WAS.	1	1	https://issues.jboss.org/browse/BXMSDOC-870
2526	BXMSDOC-849	I have tweaked the table formatting. Does it look better now? I'm afraid I can't make it much better without a major overhaul.	0	0	https://issues.jboss.org/browse/BXMSDOC-849
2527	BXMSDOC-822	Marek, very good job! My suggestions are as follows, feel free to ignore them if you don't find them helpful: * which is called kie-spring-VERSION-redhat-MINORVERSION.jar. --> should be _VERSION_ and _MINOR_VERSION_ (italics and with underscore) * "How you intend to use the Spring modules in your application affects how you configure them." --> for some reason, I don't like this sentence. I would rewrite it to: "You can configure the Spring modules in the following ways:" or something similar. * "single runtime manager instance use" --> comma is missing? --> "single runtime manager instance, use" * "the jBPM services." --> is that correct? Can we use the term jBPM? * "include following factory beans" --> "include _the_ following factory beans"? * "TaskServiceFactoryBean is required only for Shared Task Service." --> I would put this note on the same line as the org.kie.spring.factorybeans.TaskServiceFactoryBean bean, or into a separate NOTE below. Now it seems like it is some part of the org.kie.spring.factorybeans.TaskServiceFactoryBean bean. * "Shared Task Service" --> I would write "shared task service", because you are not capitalizing task service anywhere in the section. * "suitable for manual population." --> is really "population" a correct term? If so, an article is missing. * "taken from KJAR identified by releaseID or GAV (Group, Artifact, Version)." --> KJAR is "tagged" here, but I don't see why (and also, I would say kJAR, but I don't know if KJAR is a literal or not). I would write "taken from kJAR +and+ identified by +`releaseID`+ or GAV (Group, Artifact, Version)." Also, what is releaseId? I would definitely tag that and maybe specify. * "Built from classpath that consists of kmodule.xml descriptor." --> class path is correct (see IBM Style Guide). And missing articles? * "TaskServiceFactoryBean creates TaskService instances based on given properties. Creates a single instance only." I am not completely sure about this one, but I feel like these two sentences conflicts. In the first one, you are saying that it creates instances, but in the second that it creates a single instance. Maybe I just don't understand the topic, but I recommend rewriting this. * "List of TaskLifeCycleEventListener." --> what does that mean? List of TaskLifeCycleEventListener instances? I would try to be more specific. * "Setup entity manager factory and transaction manager" --> set up + missing articles? * "process is included from the classpath." --> class path * "jBPM services" --> again, is that correct? Maybe it is, let me know. * "spring application:" --> Spring application, missing article * "Configure security provides:" --> providers? * "Configure runtime manager factory:" --> missing article? * "with Spring container." --> missing article? I am not very sure about the articles because that is something I am not very good at, so please make sure that none are missing in the text and that they are correct. :)	1	1	https://issues.jboss.org/browse/BXMSDOC-822
2528	BXMSDOC-818	Vidya, could you please list all the changes that were made? I see only the ones in Table 2. Custom JVM Properties, but nothing new in the section Creating JMS Connection Factories.	1	1	https://issues.jboss.org/browse/BXMSDOC-818
2529	BXMSDOC-810	Hi [~tlivora], Just noticed that the section "3.4. Setup JMS Resources" in the IBM Websphere guide has the following note: If you will be installing the Intelligent Process Server later, add the KIE.SERVER.REQUEST and KIE.SERVER.RESPONSE with the corresponding JNDI names: jms/conn/KIE.SERVER.REQUEST and jms/conn/KIE.SERVER.RESPONSE respectively. Does this also need correction? jms/conn/KIE.RESPONSE instead of jms/conn/KIE.SERVER.RESPONSE AND jms/conn/KIE.REQUEST instead of jms/conn/KIE.SERVER.REQUEST? Regards, Vidya	1	1	https://issues.jboss.org/browse/BXMSDOC-810
2530	BXMSDOC-809	Hi [~vidya_iyengar], thanks, it looks good! I have a couple of comments: - I am not sure if a developer who wants to find some information about embedding Drools/jBPM engine into their own application would check the User Guide - this was the reason why I thought that Dev guide might be more appropriate. On the other hand, the information also can be useful in User Guide, would it make sense to add a reference to the Dev Guide (alternatively, maybe better, the other way around, i.e. add the content to Dev Guide and reference it from User guide)? - the part {{Only if you are using an already compiled kjar}} might be a bit misleading, since you need to add the dependencies even in case when you compile the kjar in your application and then you are using it. My understanding of the sentence is that I need to add the dependencies only when I use a kjar which had already been compiled (and the reader might think that it applies only for a previous kjar compilation by {{kie-maven-plugin}}). Maybe it is just my understanding, what do you think? - looking at the User Guide, I realized that the same applies for other asset types, namely {{Guided Scorecards}} and {{Guided Rule Templates}}, the Maven dependencies for these are as follows: {code} <dependency> <groupId>org.drools</groupId> <artifactId>drools-workbench-models-guided-scorecard</artifactId> </dependency> <dependency> <groupId>org.drools</groupId> <artifactId>drools-workbench-models-guided-template</artifactId> </dependency> {code}	1	1	https://issues.jboss.org/browse/BXMSDOC-809
2531	BXMSDOC-801	Hi Vidya, I can't seem to open this link for some reason. Is there somewhere else I can review the changes? Thanks, Gemma.	1	1	https://issues.jboss.org/browse/BXMSDOC-801
2532	BXMSDOC-748	Hi, is there only one merge request?	1	1	https://issues.jboss.org/browse/BXMSDOC-748
2533	BXMSDOC-728	After a discussion with Maciej, I have changed the matrix. I'm not sure about the stars, could you please check whether everything is ok? Edit: re-check the link above to see the changes.	1	1	https://issues.jboss.org/browse/BXMSDOC-728

#	Requirement	Questions	Answered	Successfully Answered	URL
2534	BXMSDOC-728	# Why do we distringuish between {{\-}} and {{_}}? It is really hard to see the difference since these characters are very similar. I would suggest to unify them under one character {{\-}} with the description: * _indicates that the user role may not do the specified operation or it is not an operation that matches the user's role ("not applicable")._ # Why is *_task stakeholder_* only allowed to execute *_start_* operation? # How can actual owner activate a task? Task can be activated when it is in Created state (see [task lifecycle|http://docs.jboss.org/jbpm/release/6.4.0.Final/jbpm-docs/html/ch07.html#jBPMTaskLifecycle]). This means it cannot have any actual owners. It can have potential owners but that does not necessarily mean they can execute this operation. # I would suggest to remove all those {{*}} because all the operations depend on the state in which the task is. This just makes the table more complicated and does not add any value. Other parts of the table seems to be correct. You can compare it with *_section 7.1.5_* of [WS-HumanTask Specification|http://docs.oasis-open.org/bpel4people/ws-humantask-1.1-spec-cs-01.html]. The only thing that is different is *_MAY_* value from the specification which depends on our implementation. Note that [community documentation|http://docs.jboss.org/jbpm/release/6.4.0.Final/jbpm-docs/html/ch07.html#d0e4794] which was probably the basis for the product one is all wrong when it comes to task permissions. It should also be fixed.	1	1	https://issues.jboss.org/browse/BXMSDOC-728
2535	BXMSDOC-723	The system property org.jbpm.designer.perspective=ruleflow has been added to the example box, but in opposite to other system properties mentioned there, this one lacks any description above the example box. Could you please describe it briefly? Thanks.	1	1	https://issues.jboss.org/browse/BXMSDOC-723
2536	BXMSDOC-723	Hi Radovan, I have added the description for this property based on one that was previously mentioned in Bugzilla 1130466 from a couple of years ago. Could you please confirm this is still the correct description? Jenkinscat link: http://jenkinscat.gsslab.pnq.redhat.com:8080/job/doc-BRMS-Oracle_Weblogic_Installation_and_Configuration_Guide-6.3%20(html-single)/lastSuccessfulBuild/artifact/tmp/en-US/html-single/index.html#Setting_Environment_Variables	1	1	https://issues.jboss.org/browse/BXMSDOC-723
2537	BXMSDOC-714	[~mczernek], looks good! A couple of comments: - Example 3.2. Red Hat JBoss BPM Suite Project Dependencies - {{jbpm-human-task-jpa}} is not mentioned there, although {{jbpm-human-task-core}} and some other *-jpa artifacts are. If a user wants to use jBPM with human task with persistence, this artifact should be there. - Example 3.5 JUnit dependencies - I would mention that the user does not need all of them. It depends on what they want to test (e.g. do they want to test persistence? If not, hibernate, btm and h2 would be redundant.). From my point of view, the current description creates impression that you need all of them for testing with Drools/jBPM.	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2538	BXMSDOC-714	[~ksuta], would you mind taking a look at {{Example 3.3. Intelligent Process Server Dependencies}}? Thanks!	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2539	BXMSDOC-714	sry for barging in, but here are my few notes: Example 3.2 - doesn't mention jbpm Service API at all - it still imports the old API, i.e. jbpm-runtime-manager. I think engineering recommends to use Service API, instead of old RuntimeEnvironment/RuntimeManager API Why there is this note for slf4j dependency? "<!-- slf4j is not suitable for production purposes --> " Who are we to claim this, and why are we claiming this? Isn't it up to customer which logging provider he uses? Also note that if you do not import some implementation (beside importing API) you will see this in the logs: SLF4J: Failed to load class "org.slf4j.impl.StaticLoggerBinder". SLF4J: Defaulting to no-operation (NOP) logger implementation SLF4J: See http://www.slf4j.org/codes.html#StaticLoggerBinder for further details. That's why I also import slf4j-simple to my projects. Example 3.3 - Intelligent Process Server Dependencies - these are dependencies for client app interacting with Intelligent Process Server - I think the name of this section should reflects this. Example 3.5 - why is jbpm-shared-services included? Isn't it more convenient to just import whole jbpm-test? It usually has everything I need to perform my tests. I still believe, that we should have these poms suggested by engineering.. because we may have quite some mistakes in these pom examples, even with SME reviews. Wdyt [~alessandrolt] ? Just to mention one example of what has been overlooked: There is no mention of jbpm-workitems anywhere. I have checked all the dependencies from Example 3.2 and none of those artifacts brings transitively jbpm-workitems - which means your RestWorkItemHandler et all would fail with CNFE. I think jbpm-workitems is a dependency present in most projects for example.	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2540	BXMSDOC-714	I have made the following changes: * Example 3.1 was containing one example dependency. This was removed since it did not make sense in view of the example dependencies we provide below it. * _jbpm-human-task-jpa_ was added. * Example 3.3 - Title was changed. * Example 3.5 - comments were added so that it's not clear users may not need all the dependencies * Mention of _jbpm-test_ was added. I need clarification on: * _slf4j_ - should we remove the production suitability comment? * Should we change _jbpm-runtime-manager_ to the new api? (that is _jbpm-services-api_ if I understand it correctly) * Should we add _jbpm-workitems_ into example 3.2? Any other dependencies missing? Once this Jira is done, I'll make a PR for upstream to update upstream pom.xml examples, if necessary and desirable.	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2541	BXMSDOC-714	[~tlivora], would you mind taking a look at jBPM part? Thanks!	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2542	BXMSDOC-714	Thanks [~tlivora]! [~mczernek], do we have something similar for BRMS? There could be *Application with embedded Drools engine* containing the following dependencies: - {{org.drools:drools-compiler}} - it will bring in other transitive dependencies, such as {{org.drools:drools-core}}, {{org.kie:kie-api}}, etc. - {{org.drools:drools-persistence-jpa}} - if you want to have persistence support (to persist KieSession using JPA). - {{org.kie:kie-ci}} - if your application needs to load kJARs from a Maven repository using KieScanner. - {{org.kie:kie-ci-osgi}} - if your application needs to load kJARs from a Maven repository using KieScanner *in an OSGi environment* (e.g. Fuse). - {{org.drools:drools-decisiontables}} - if you want to use decision tables (xls or csv) (does not cover Guided Decision Tables - gdst). - {{org.drools:drools-templates}} - if you want to use Drools templates. - {{org.drools:drools-scorecards}} - if you want to use Drools scorecards. - for using other asset types at runtime, import appropriate {{org.drools:drools-workbench-models-*}} artifacts (e.g. {{org.drools:drools-workbench-models-guided-dtable}}). - for building a kJAR as a part of your application, consider using {{kie-maven-plugin}}.	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2543	BXMSDOC-714	Thank you all! [~marek.winkler], I have made desired changes. Can you review the doc again?	1	1	https://issues.jboss.org/browse/BXMSDOC-714
2544	BXMSDOC-1613	Ah, I see. Okay, that makes sense. Thanks [~Rikkola]! One last question: For the "Has priority over row" column, to specify two rows, can I say "1 and 2" or "1, 2"? In my example, I want row 3 to take priority over rows 1 and 2, and I wasn't sure if there's a strict formatting protocol for that. I'll make some adjustments and send you one last ping when it's up to just make sure finally that all's well in your eyes. Thank you!	1	1	https://issues.jboss.org/browse/BXMSDOC-1613

#	Requirement	Questions	Answered	Successfully Answered	URL
2545	BYTEMAN-281	Hi Radim, I think it's a very good idea to be able to add rules at points where objects are allocated.I'll leave this issue open while I push release 2.2.2 and the try to address it ASAP by confirming a syntax for the location (AT) specifier and special variables and then either implementing it myself or try to get someone else to implement it (you are welcome to post your own patch :-). I am surprised that you were not able to inject into java.lang.Object METHOD <init> AT ENTRY. There is no reason why injection into java.lang.Object should not work. Are you sure you remembered to set -Dorg.jboss.byteman.transform.all when you tested it? (if you install the agent using bmsubmit.sh then this is set automatically). I will set up my own test to see if I can get this to work.	1	0	https://issues.jboss.org/browse/BYTEMAN-281
2546	BYTEMAN-281	Ah, ok. thanks for spotting this. I think I know what this is now! I believe it's to do with ensuring that injection into a constructor does not place any code in front of a call of to a parallel constructor or super constructor (that's disallowed by the verifier). Of course the one place you don't ever see another constructor call is in Object.<init>. AT RETURN works because it si the only location-specific checker/transformer which does not bother to look for a prior constructor call (it just injects when it see a return bytecode). Could you please raise this as a separate JIRA (can only inject into Object.<init> AT RETURN). I'll pick it up from there.	0	0	https://issues.jboss.org/browse/BYTEMAN-281
2547	BYTEMAN-273	"Is this an OSGi related limit? Am I doing something wrong?" Yes, I am fairly sure that you are doing something wrong. Specifically, the following step almost certainly accounts for the behaviour you are seeing: "I have deployed Byteman jar as a wrapped OSGi bundle, so that a proper class loader for that .jar was created and made available to all the other bundles." Unfortunately, the JVM does not know or care about your Byteman bundle. When the JVM loads any agent, Byteman included, the jar which contains its implementation (i.e. byteman-2.1.0.jar or whatever version you ave used) is added to either i) the system classpath or ii) the bootstrap classpath and the JVM then loads the agent code via the associated loader. So, the agent initialization is all done using code which is not located in your bundle. Just as an aside, option i is the default. If you install the agent from the command line then you can select option ii by adding boot:/path/to/byteman-X.Y.Z.jar as an option to the -javaagent argument to the java command. If you use bminstall to install the agent then flag -b will select option ii. Whatever way you do the agent load your Byteman rules get loaded into a rule database which is indexed from a class (static) variable of class Transformer. That's the version of class Transformer as loaded into the system or bootstrap loader. This class will be the one which injects rules into your application code. Whether they are provided at boot time or uploaded via the Transformer's agent listener it is the version of the Tranformer class loaded by the JVM that gets asked if it would like to transform your application class's bytecode. If it finds rules in its rule database whose name matches your app class's name it transforms them so that they call Rule.execute. The class in your bundle never gets asked to install rules or transform bytecode. However, when the transformed bytecode is linked that is done using the OSGi linkage of the transformed class. Now, you added the byteman agent jar as a module and made this module visible to your app. So, the transformed bytecode will be linked against the copy of of Byteman classes in your bundle. The call to Rule.execute will use the version of class Rule in this bundle and it, in turn, will search the rule database associated with the copy of class Transformer in this bundle. Which will be *empty*. Rule.execute gets called, finds no rule definition and so completes without doing anything. Why is this not flagged as an error! I hear you ask? Well, that's because triggering a rule which is no longer present is a perfectly legitimate outcome. A rule may be in the process of being deleted by the agent while another thread is triggering it concurrently. The agent has to remove the rule from the database to disable it atomically then schedule retransformation of the bytecode to remove the call to Rule.execute. It cannot do it the other way around and maintain consistency. Ok, so how *do* you get your application classes to be able to see the correct version of class Rule -- the one the JVM has placed in either the system or bootstrap classpath. What you need to do is tell OSGi that any class whose name starts with prefix "org.jboss.byteman." should be looked up by delegating to the JVM's system loader. I am not an OSGi expert but I believe you need to add this prefix to the package list specified by OSGi property org.osgi.framework.bootdelegation (n.b. you may or may not want to include a final trailing "." in the prefix). See http://wiki.osgi.org/wiki/Boot_Delegation for more details of how to override delegation.	1	1	https://issues.jboss.org/browse/BYTEMAN-273
2548	BYTEMAN-268	Seems this issue is caused by targeting hadoop bytecode version to 1.7, following change involved in pom.xml of hadoop project: {code} <!-- ProtocolBuffer version, used to verify the protoc version and --> <!-- define the protobuf JAR version --> <protobuf.version>2.5.0</protobuf.version> <protoc.path>${env.HADOOP_PROTOC_PATH}</protoc.path> <zookeeper.version>3.4.5-gphd-2.1.0.0-SNAPSHOT</zookeeper.version> +<javac.source>1.6</javac.source> This line is added. +<javac.target>1.7</javac.target> This line is added <plugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-compiler-plugin</artifactId> <version>2.5.1</version> <configuration> -<source>1.6</source> This line is deleted -<target>1.6</target> This line is deleted +<source>${javac.source}</source> This line is added +<target>${javac.target}</target> This line is added </configuration> </plugin> {code} So previously hdfs can be started with jdk1.6.0_21 and byteman works well with this version of HDFS. After the change involved, hdfs can't be started with jdk1.6 with the following error info. and byteman also doesn't work any more: {code} Exception in thread "main" java.lang.UnsupportedClassVersionError: org/apache/hadoop/hdfs/server/namenode/NameNode : Unsupported major.minor version 51.0 at java.lang.ClassLoader.defineClass1(Native Method) at java.lang.ClassLoader.defineClassCond(ClassLoader.java:632) at java.lang.ClassLoader.defineClass(ClassLoader.java:616) at java.security.SecureClassLoader.defineClass(SecureClassLoader.java:141) at java.net.URLClassLoader.defineClass(URLClassLoader.java:283) at java.net.URLClassLoader.access$000(URLClassLoader.java:58) at java.net.URLClassLoader$1.run(URLClassLoader.java:197) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:307) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:248) Could not find the main class: org.apache.hadoop.hdfs.server.namenode.NameNode. Program will exit. {code}	1	0	https://issues.jboss.org/browse/BYTEMAN-268
2549	BYTEMAN-268	"So previously hdfs can be started with jdk1.6.0_21 and byteman works well with this version of HDFS. After the change involved, hdfs can't be started with jdk1.6 with the following error info. and byteman also doesn't work any more" I don't understand what you are saying here. Your pom is targeting 1.7. So, why are you trying to start hdfs with jdk1.6? The error above says that your compiled class file for class NameNode has a 1.7 major/minor version. That is what would be expected if your pom sets target 1.7. It is also expected that jdk1.6 will not run code compiled with target 1.7. Can you explain why you think Byteman is responsible for this problem rather than the specification in your pom?	1	1	https://issues.jboss.org/browse/BYTEMAN-268

#	Requirement	Questions	Answered	Successfully Answered	URL
2550	BYTEMAN-268	Hi Andrew, Thanks for the response and sorry for the misunderstanding. I will make it more clear about this issue: Let's say there are two HDFS version A and B. The compiler target of A is 1.6, while the compiler target of B is 1.7. For HDFS version A, I have been using Byteman to do fault inject testing well on it. However for HDFS version B, since the target is 1.7, I have to start the namenode with jdk1.7, otherwise it will hit the error listed above, which is also explained by you as the expected error. My point is that currently byteman doesn't work with HDFS version B, which will hit the VerifyError during rule bmsubmit. The reason why I listed the namenode start error is that I searched one issue https://issues.jboss.org/browse/BYTEMAN-211 and thought that this issue occurred again. Please ignore namenode start error, which do confused you. Sorry about that. Now I suspect that it's the compiler target change from 1.6 to 1.7, which blocks byteman to be used in HDFS. Could you please help take a look at this scenario? Any additional debug information you need, please just let me know. Thanks again. Thanks, Zhenglin	1	0	https://issues.jboss.org/browse/BYTEMAN-268
2551	BYTEMAN-268	Hi Zhenglin Thanks for the explanation. I now understand the situation you are describing. Can you provide me with more information about the byteman tests which are failing? Maybe you can provide me wit the rules you are loading. Is there a repo I can check out and use to build HDFS and instructions on how to run the Byteman tests? regards, Andrew Dinn	1	1	https://issues.jboss.org/browse/BYTEMAN-268
2552	BYTEMAN-268	Hi Zhenglin, "1.Go to http://pan.baidu.com/disk/home and download HDFS file hadoop-2.2.0.tar.gz Login Username/Password: sztao1987@163.com/welcome1 Hopefully it works in US." Well, I am not actually in the US but in the UK. Anyway, I am afraid I cannot access your code via this link. Is there a Hadoop project repository where I can access the Hadoop 2.2.0 code you are using? Have you made changes to Hadoop 2.2.0 which are not available in that repository?	1	1	https://issues.jboss.org/browse/BYTEMAN-268
2553	BYTEMAN-268	Hi Andrew, Do you have a chance to download the binary attached in this jira? Thanks, Zhenglin	1	0	https://issues.jboss.org/browse/BYTEMAN-268
2554	BYTEMAN-261	I am not exactly clear about the problem scenario. Could you give a concrete example of something you are tryng to do that is broken? Without fully understanding your requirements I don't know whether this will help but perhaps you need to attach your Byteman rule to the class initializer for your Main class (or some other class, perhaps). To do that use a rule like the following: RULE trigger side effect at Main class init CLASS org.my.Main METHOD <clinit> IF TRUE DO trace("id", filename") ENDRULE	0	0	https://issues.jboss.org/browse/BYTEMAN-261
2555	BYTEMAN-260	Could you explain what you want in more detail? In particular, how does what you need involve some form of nesting? Can you give a sketch of how a nested set of rules for the use case you are proposing would look?	1	1	https://issues.jboss.org/browse/BYTEMAN-260
2556	BYTEMAN-249	Hi Andrew, sorry to answer so late. And excuse me for missing the getObjectSize of Helper class. My custom Helper (MyHelper) extends Helper, so I can use the Helper.getObjectSize method. So this request can be closed.Thanks to point it. This method gives the shallow size of the object, so could you add a method getDeepSize or getRetainedHeap in Helper class that add the size of the objects tree referenced by an object? At github site there are 2 examples of implementation : - https://github.com/afeinberg/sizeof this class uses Instrumentation to get the size of each objet referenced, but you can replace this call by Helper.getObjectSize - https://github.com/dweiss/java-sizeof more sophisticated and more recent and no need of Implementation. But javac 7 complains because of using sun.** packages The retained heap is very usefull, when running stress tests to know the retained heap at Http Session Level, at JPA EntityManager Session (for example with Hibernate). What do you think about it? If you agree, I can add this new request.	1	1	https://issues.jboss.org/browse/BYTEMAN-249
2557	BYTEMAN-248	Hi Tom, Thanks for reporting this issue. Could you also please post the rule which is being injected -- the contents of the script file if you are using a BMScript annotation or the annotation field values if you are using a BMRule annotation. Thanks. regards, Andrew Dinn	1	1	https://issues.jboss.org/browse/BYTEMAN-248
2558	BYTEMAN-248	Hmm, that doesn't seem to tally with the error message: "org.jboss.byteman.agent.Transformer : possible trigger for rule Throw SQLException in WCMHelper on 2nd write in class com.maginatics.raptor.metadata.dbfs.DatabaseFs" Byteman says it is injecting code into a class called DatabaseFs. Can you explain to me what this class is and how it relates to the classes mentioned in your annotations, Class1 and Class2?	1	1	https://issues.jboss.org/browse/BYTEMAN-248
2559	BYTEMAN-245	I tested this code and runs as expected. Sorry i don't know how to correctly indent ;-\. Edit it to cut/paste. Could it be committed on master-branch at Github repo ? for (String scriptPath : scriptPaths) { try { FileInputStream fis = new FileInputStream(scriptPath); byte[] bytes = new byte[fis.available()]; fis.read(bytes); String ruleScript = new String(bytes); scripts.add(ruleScript); } catch (IOException ioe) { // take a new chance with system ClassLoader => ClassLoader.getSystemResourceAsStream(scriptPath); try { InputStream in = ClassLoader.getSystemResourceAsStream(scriptPath); byte[] bytes = new byte[in.available()]; in.read(bytes); String ruleScript = new String(bytes); scripts.add(ruleScript); } catch (IOException e) { System.err.println("org.jboss.byteman.agent.Main: unable to read rule script file : " + scriptPath); // throws original ioe throw ioe; } } }	1	1	https://issues.jboss.org/browse/BYTEMAN-245
2560	BYTEMAN-245	I am not really convinced this is a good idea (not that I am thereby convinced it is a bad idea but the onus is on you to sway me to put this into the release version). First, your use of getSystemResourceAsStream means that the scriptPath can be resolved against any jar in the system classpath, not just the Byteman jar. That's a much wider remit than the functionality you have stated you want/need and probably has a lot more room for security issues to arise (although, to be fair, once the java command line is prejudiced I guess all bets are off anyway :-) Secondly, I am not sure about the full implications of trying to load a resource from the system classpath. I try to do as little work as possible in Main and you may notice that I never let any other Byteman classes be resolved in that class. That's because the "boot:xxx" option in the -javaagent arguments list may be used to relocate the agent jar into the bootstrap classpath. Main is doubly special because nothing in the Byteman code references it. That's why this relocation is safe. So, before making any changes here I'd want to be sure that any accesses to the agent jar from Main don't prejudice resolution against the jar in the bootstrap loader. They probably won't but this needs checking. Finally, let's cut to the chase and ask the $64,000,00 question as I am not sure I really appreciate this idea of bundling everything into the agent jar itself. What is your motive for doing this? Indeed, for another $64,000,000: what benefits do you think this provides? Is there a deployment management issue here that it is really important to allow for? Or something else?	1	1	https://issues.jboss.org/browse/BYTEMAN-245
2561	BYTEMAN-239	Is the ThreadID not mandatory also ?	1	1	https://issues.jboss.org/browse/BYTEMAN-239
2562	BYTEMAN-237	Great news! Btw., is there any way to influence how the rule bindings are nested (for a multiple matching rules)?	1	1	https://issues.jboss.org/browse/BYTEMAN-237
2563	BYTEMAN-236	I have tried to bind the variable using class name of the interface (java.lang.Runnable) but the problem from BYTEMAN-235 was still there. Do you expect to fix it in order to let it work at least with the specific binding?	1	0	https://issues.jboss.org/browse/BYTEMAN-236

#	Requirement	Questions	Answered	Successfully Answered	URL
2564	BYTEMAN-233	I'm not certain exactly what to do here. I'm working on the assumption that the agent startup code needs to i) employ a clone of class ModulesPolicy renamed as, say, BytemanPolicy ii) during agent installation execute Policy.setPolicy(new BytemanPolicy(Policy.getPolicy())); Is that all that is needed to ensure that Byteman code accesses are validated using BytemanPolicy? If so then I propose to add a -javaagent option setPolicy:true which will cause the agent to call this code. A few observations which might qualify any answer to that last question: a) The JVM installs the agent Main class in the system classloader. b) The agent entry routines Main.premain and Main.agentmain() may, depending upon configuration, install the byteman agent jar (which contains Main and all other agent classes) into the bootstrap class path, thereby allowing other agent classes to be loaded via the bootstrap loader. c) These two agent main routines use reflection to create a Transformer instance which does all the rest of the startup using reflection, ensuring that all subsequent load resolution can go via the bootstrap loader if so configured. This is fine because no agent classes refer to Main. So, I am not certain what the implications of this are for i) when to execute the getPolicy call ii) when to create the BytemanPolicy instance iii) when to execute the setPolicy call I suspect the BytemanPolicy instance needs to be created by the Transformer object so it can be loaded via the bootstrap loader (where bootstrap loading is configured). If not then we risk seeing two versions of the class, one in the system loader and one in the bootstrap loader. That implies the Transformer will also have to make the call to setPolicy. I could call getPolicy in the main routine and pass it to the Transformer in the reflective call or create it in the Transformer code. Any idea whether this matters in terms of what permissions are granted? I would guess that creating it in a bootstrap-loaded class is better but I don't know for sure.	1	1	https://issues.jboss.org/browse/BYTEMAN-233
2565	BYTEMAN-217	Hi Andrew, thanks for the detailed explanation. I always thought, the compiler already handled these details when compiling the code to be instrumented. {quote} it can be hard to decide which monitorexit a rule is supposed to be injected before or after. This problem arises because when you consider both normal and exception control flow there is more than one way for control to flow out of a synchronized block. Each exit needs to go through a monitorexit. Exceptions which cross several monitor regions give rise to multiple monitorexits, one per region crossing. {quote} Would it not be possible, to inject code for each of these monitorexists? I would expect my injected code to be called whenever the synchronized block is exited, no matter whether an exception was thrown or the block finished normally.	1	0	https://issues.jboss.org/browse/BYTEMAN-217
2566	BYTEMAN-190	Andrew, This issue seems rather general. Can it be focused on just the Maven plugin aspect? Alternatively, I could create a sub-issue for the Maven plugin bit.	1	1	https://issues.jboss.org/browse/BYTEMAN-190
2567	BYTEMAN-189	Hi James, Thanks for the suggestion and the patch. However, I don't think this is going to be quite as easy as it looks. My first concern is that the model you have implemented is counting catch regions as they appear in bytecode. That's not necessarily going to work because bytecode catch regions are not necessarily going to tally 1:1 with catch blocks as they appear in source code. In particular, there is a very complicated interaction between catch regions and synchronization regions which needs to be taken into account. The situation which complicates things occurs when a (or possibly several) thrown exception(s) propagates through a synchronized region. In this case the bytecode compiler has to insert a (or possibly several) 'synthetic' catch region(s) at the end of the synchronized region (i.e. just after the primary monitorexit), catch the thrown exception(s), execute a corresponding monitorexit in the synthetic catch handler and then rethrow the exception. This is complicated enough to spot and decipher when there are no try catch regions either inside or wrapped around the synchronization region. In the presence of such try catch regions it becomes very difficult to decide whether a catch region is synthetic, original to the source code or some combination of the two (the bytecode compiler may merge other handler code in). As if that is not complicated enough there is also the problem of finally code to consider. Finally blocks are normally implemented using catch-all regions (i.e. a catch region with a null type). However, these regions may also occur because the source code includes a catch block for a Throwable (also, if these are used in combination -- bizarre but possible -- the bytecode compiler might legitimately merge them). So, it is not clear how to classify these (do they count as a catch block?). Finally (no pun intended), there is another issue with finally. Prior to JDK6 the code in the finally block would usually be executed via a JSR in order to allow it to be entered from parallel catch regions as well as from a catch-all region. Since JDK6 JSR has been banned so the finally code is generated multiple times (n.b. this actually means that injection into finally blocks is currently a little iffy as there may be multiple candidate trigger points even if the source only has one apparent trigger point). This does not necessarily add any further grief to the above but it may do if the finally block code itself introduces the possibility of extra exception control flow. I would need to think about this very hard before I can be sure that all these problems can be resolved. Also, it's not just making sense of the semantics of the count argument to AT CATCH type count. There is also the meaning of the type argument. I am not sure whether the trigger injection code can actually identify the necessary type relationships in the exception superclass hierarchy to handle every possible choice of value for the type argument to the AT CATCH location. At injection time it is not possible to load and check the superclass hierarchy for the resolved target class (recursive entry into the transformer code is prohibited so recursive loads would mean no transformation of the relevant superclass). I have worked round this in a few places but there are limits to how I can use this capability. Analysing the exception flow to handle the problems above may require knowing about which exceptions shadow other exceptions so this also needs investigation. If you want to understand more about this second problem I already have a long-standing issue wrt it -- see BYTEMAN-113. But be warned, the relevant code (in and under class CFG) is the scariest piece of the Byteman puzzle. So, expect to take a long time to understand it -- I usually spend a week or two each time I have to fix a bug in it :-) Anyway, nice try and most definitely nothing stupid about your idea or your patch. However, much as I would like to add this capability to Byteman I think it is going to need a lot more thinking and probably some very careful programming before it can be made safe for all cases.	1	1	https://issues.jboss.org/browse/BYTEMAN-189
2568	BYTEMAN-141	Script files now use .btm as the extension. All scripts in the release use this convention and the docs also use it for example script names.	0	0	https://issues.jboss.org/browse/BYTEMAN-141
2569	BYTEMAN-114	Hi Andrew, good reasoning. Still, there is a valid use case: instrumenting many or even unknown classes. So how about clearly documenting that using wildcards is slow and going for the combined way of first performing a hash lookup or two and then checking expressions? If there are no wildcard patterns for CLASS and/or METHOD, this should be as fast as before, but if I need this feature, it would be available, although slower? Regarding implementing this as a contribution, do you have any pointers, where to put this? Cheers, Wolfgang	1	1	https://issues.jboss.org/browse/BYTEMAN-114
2570	BYTEMAN-114	Hello, I would also like this functionality in Byteman, especially to quickly add traces in some unknown code. Was any work on this done? If not I might have a look...	1	0	https://issues.jboss.org/browse/BYTEMAN-114
2571	BYTEMAN-103	The syntax for referring to the INVOKEd method's arguments needs to be unambiguous wrt local and parameter variables of the triggering method which propels us into the realm of punctuation characters. I propose $@ which will only be available in an AT INVOKE method and will bind the arguments passed to the invoked method along similar lines to $* i.e. if the invoked method has N >= 0 parameters $* will be bound to an Object array of size N + 1. Entries 1 .. N will be the N argument values on the stack. Entry 0 will be the recipient for the method call if it is an instance method/null if the invoked method is static.	0	0	https://issues.jboss.org/browse/BYTEMAN-103

#	Requirement	Questions	Answered	Successfully Answered	URL
2572	BYTEMAN-70	uh-oh: } else if (binding.isReturn()) { // at some point we will allow reference to the current return value so we need // to be sure that the method has a non-void return type and that the location // specifier is AT RETURN but for now we do nothing } Looks like $! isn't implemented? I tried to use it and got some parsing errors. Perhaps this JIRA issue is more than just for documentation - I would like $! to be an implemented feature.	1	1	https://issues.jboss.org/browse/BYTEMAN-70
2573	BYTEMAN-29	Andrew, isn't such a plugin partially done? - I've seen somewhere on the internet something what was an eclipse plugin for byteman. Do you have any project(some diagrams or sth) for such a plugin - what describes more precisely how it should exactly work? Kind regards, Lukasz	0	0	https://issues.jboss.org/browse/BYTEMAN-29
2574	CAPEDWARF-168	How does "com.pagecrumb.client.local.Footer" look like? (and its whole super class hierarchy)	1	1	https://issues.jboss.org/browse/CAPEDWARF-168
2575	CAPEDWARF-168	You clearly have what the error states -- 2 scope annotations. I suggest in the future you first open forum post with the issue, and only *after* we determined this is a CD bug, should you open a CD JIRA, OK?	1	1	https://issues.jboss.org/browse/CAPEDWARF-168
2576	CAPEDWARF-166	Kerby, can you attach a .war with the issue?	1	1	https://issues.jboss.org/browse/CAPEDWARF-166
2577	CAPEDWARF-166	I don't get this stack-trace: https://gist.github.com/alesj/5527634 How did you start app. server? Either: ./capedwarf.sh or ./standalone.sh -c standalone-capedwarf.xml	1	1	https://issues.jboss.org/browse/CAPEDWARF-166
2578	CAPEDWARF-75	o) If you login and logout. Then the login screen should display the email you used in the last login session but it uses the default. o) authDomain and userId should be set Using the dev login, calling User currentUser = UserServiceFactory.getUserService().getCurrentUser(); returns {code} currentUser = {com.google.appengine.api.users.User@9969}"foo@bar.com" email = {java.lang.String@9974}"foo@bar.com" authDomain = "" userId = null federatedIdentity = null {code} where in the case of Google's Dev server it returns {code} currentUser = {com.google.appengine.api.users.User@4849}"foo@bar.com" email = {java.lang.String@5526}"foo@bar.com" authDomain = {java.lang.String@5527}"gmail.com" userId = {java.lang.String@5528}"12431731640520613711" federatedIdentity = null {code} Note the authDomain and userId are set. The userId is preserved over logins.	1	1	https://issues.jboss.org/browse/CAPEDWARF-75
2579	CAPEDWARF-31	Is this done?	0	0	https://issues.jboss.org/browse/CAPEDWARF-31
2580	CAPEDWARF-23	Is there a list of supported attributes? (not just this single one ...)	1	0	https://issues.jboss.org/browse/CAPEDWARF-23
2581	CDI-703	What part exactly would you like to clarify? As a part of CDI-441 (2.0) we enhanced the wording making it clear that the relation is *transitive*. And that, in my opinion, should have quite clear implications in this regard.	1	1	https://issues.jboss.org/browse/CDI-703
2582	CDI-702	The description of this issue is unclear. Are you seeing all events being fired or only certain events? Where in the archive is the extension registered, a JAR within the EAR's lib folder? Within the WAR file? Within a library within the WAR file?	1	1	https://issues.jboss.org/browse/CDI-702
2583	CDI-702	My view is that the observable should follow the classloading visibility rules. Why extensions are special? This violent the classloading rules.	1	0	https://issues.jboss.org/browse/CDI-702
2584	CDI-702	[~meetoblivion] The issue is that the CDI extension does something different from other classes in the ear. e.g. {noformat} myApp.ear lib\myLib.jar (LibExtensionA.class, LibOne.class) myWarA.war (WarAExtension.class, myWarAServlet.class) myWarB.war (WarBExtension.class, myWarBServlet.class) {noformat} The myWarAServlet will not be able to see classes in myWarB.war. Why are the CDI extensions special? How come all extension classes can see everything in the ear. Basically, my argument is that CDI extensions should follow the same classloading criteria instead of defining itself visibility rules with even being documented.	0	0	https://issues.jboss.org/browse/CDI-702
2585	CDI-701	Thanks [~mkouba] for pointing me to that issue. The interesting fact is that it didn't work on TomEE either (with OpenWebBeans). That what led me to think it was not supported by the spec. I was aware of the trimmed discovery mode, but I'm still relying on Java EE 7 application servers and for people like me, there's unfortunately still a journey before we can use CDI 2. But anyway, what I'm trying to do is a library that would be put into the classpath of a war, so I wouldn't be in control of the discovery mode of the war itself. Since this is required to work by the spec, could a test be added to the TCK? I understand that would put us in a complicated situation, where the RI wouldn't pass it, but the fact is that the absence of that test makes it difficult to know whether it's expected to work or no (to the point that the other certified implementation doesn't work either). Would a disabled test do the trick? It wouldn't hurt certifications, but users looking at it (like me in this case) would be alerted that there's a bug.	1	1	https://issues.jboss.org/browse/CDI-701
2586	CDI-701	Thanks everyone for so fast respones! [~manovotn] my original conclusion was exactly that (feature not supported by spec). Maybe the spec could incorporate a note regarding this, saying "Implementations are NOT MANDATED to treat stereotypes added by this method as bean defining annotations. Implementations are ALLOWED to do it in a non portable manner". That would clarify the situation and avoid confusions. A way to add annotations to the set of "bean defining annotations" was what I was really looking for. I just wanted to clarify that the addStereotype() was not the way to go before creating a feature request. Has that been already discussed in the past?	1	1	https://issues.jboss.org/browse/CDI-701
2587	CDI-701	bq. That would clarify the situation and avoid confusions. Perhaps, but that would have to be added in 2.1 I think. You cannot expect a change to 1.2 spec at this point. bq. Has that been already discussed in the past? I don't recall a CDI issue regarding that. If you wish to see a non-portable Weld option working in CDI 1.2 (Weld 2.x), I think it would be proper to file a Weld feature request issue.	0	0	https://issues.jboss.org/browse/CDI-701
2588	CDI-700	The title of this ticket mentions "AfterDeploymentValidation" - this should be allowable. The body of this ticket mentions "AfterBeanDiscovery" - this should not be allowable. Agree?	0	0	https://issues.jboss.org/browse/CDI-700
2589	CDI-697	Good question. We don't call it out, but I would assume it should. How do others feel? Martin? Mark? Antoine?	0	0	https://issues.jboss.org/browse/CDI-697
2590	CDI-695	IMO, I think it would bring more confusion than useful: * A Stereotype is usually created to be used on many elements. What would be the interest to apply same priority in different places? * {{@Priority}} is used and activate Interceptors and Alternatives and not having this info directly on the element can be source of confusion IMO. Could you give a use case where it could be interesting to have this?	0	0	https://issues.jboss.org/browse/CDI-695
2591	CDI-688	Right now, this is undefined, i.e. it's completely up to the implementations (assuming the requirements for normal scopes are met: "6.3. Normal scopes and pseudo-scopes"). What kind of pluggability do you have in mind?	1	0	https://issues.jboss.org/browse/CDI-688
2592	CDI-686	Hmm, isnt one of the goals of this factory to make custom beans (Bean<>) easily integrated with CDI interceptors? If so it is common to have java.lang.reflect based proxies there (see deltaspike ones for instance) and it is very nice and smooth to be able to reuse cdi there. Here a trivial but obvious example: take a repository like proxy based implementation, don't you want to integrate it with jcache which has its own interceptor without coding more than the factory itself? Today it requires to either be bound to a jcache implementation or reimplement the interceptor chain logic from the container which is a pain.	1	1	https://issues.jboss.org/browse/CDI-686
2593	CDI-686	[~antoinesabot-durand] how is it supposed to work with an API which doesn't use @Produces and doesn't have a concrete implementation but just a Proxy instance?	1	1	https://issues.jboss.org/browse/CDI-686

#	Requirement	Questions	Answered	Successfully Answered	URL
2594	CDI-686	is that so hard? I mean, I don't think we need a CDI rule but just a standard java one where you can "cast" the instance since it is out of CDI matching rules world, no? Or do you want to limit to the "injected" generic type?	1	1	https://issues.jboss.org/browse/CDI-686
2595	CDI-686	What's the _"injected" generic type_?	1	1	https://issues.jboss.org/browse/CDI-686
2596	CDI-682	Hi [~saasira] Could you be please more specific?	1	1	https://issues.jboss.org/browse/CDI-682
2597	CDI-682	"CDI was designed to create the bean graph once at boot time giving us performance and limiting runtime exception on DI to the maximum." -- i agree that was primary purpose of CDI, and that is achieved with excellence. now, having reached a stable state of the stated goal, can't we scale to the next step? protective defaults are good for most of the cases, but it is those few cases which require adaptive flexibility to build "extra-mile" features. EJB provides UserTransaction besides Container Managed Transactions -- to let the developers handle specialized situations that cannot used CMT (of course, EJBContainer is also monolithic). for a start, you can leave the responsibility of validating bean-injection-point-interceptor-decorator-qualifier graph to the application developer; after all, it is his/her code is triggering registration/unregistration of beans at runtime, so he/she should be having all the details while processing bean registration requests (on installation of a module, for example). let the application developer face the consequences of using this API wrongly with well defined exceptions. or if it is possible to validate the bean graph in CDI container itself (if no time or resource constraints), that would be a great thing to happen to Java EE -- a modular web application platform that was missing for several years. at least we should learn from the success of PHP CMS like Drupal which were modular for more than a decade now. Apache Deltaspike (a CDI implementation) provides some convenient API, though not to the extent of individual beans. ContextControl contextControl = BeanProvider.getContextualReference(ContextControl.class); // stoping the request context will dispose all the @RequestScoped beans contextControl.stopContext(RequestScoped.class); // and now restarting the request context, request scoped beans get reloaded by CDI container contextControl.startContext(RequestScoped.class); possibly some time in future they may also implement BeanManager.register(XYZBean.class), and BeanManager.unregister(XYZBean.class) on popular demand. why lose the opportunity (before the next CDI spec) to make this a standard feature (that may be made optional for CDI containers to implement or ignore)? as a side note : even the API for starting & stopping CDI container is non-standard and left to implementations.	1	1	https://issues.jboss.org/browse/CDI-682
2598	CDI-682	another argument in support of registering & unregistering beans, interceptors, decorators, producers etc at runtime could be "micro-services" - each module (with cdi beans & interceptors, injection-points, etc) being deployed & undeployed (or installed & uninstalled) at run time - each module providing a subset of the functionality that a monolithic web application provides in entirety. isn't microservices the hot topic that is being targeted for javaee 8?	0	0	https://issues.jboss.org/browse/CDI-682
2599	CDI-659	Would it make sense to leverage this ticket as the intro to specifying servlet container support?	1	0	https://issues.jboss.org/browse/CDI-659
2600	CDI-650	+1 for the idea. How user would access to an implementation of this {{NotificationOption}} class?	0	0	https://issues.jboss.org/browse/CDI-650
2601	CDI-650	On event receiving side, how an user can get hold of this NotificationOption, which is an interface? Will this be part of observation such as EventMetaData? After getting hold of it, what the receiver is supposed to do?	1	1	https://issues.jboss.org/browse/CDI-650
2602	CDI-632	I am not a fan of implicit bean archives, but wouldn't it be better if SE worked the same?	0	0	https://issues.jboss.org/browse/CDI-632
2603	CDI-626	well a bit more than taste cause it implies how an application can test if CDI is there: is getCdi() enough or should it tries to call one CDI method too? Also not sure what "container" means in your comment, I see CDI as the CDI container handle so anything before is not really CDI (= the CDIProvider is a bridge to CDI but doesn't require CDI). That said agree we just need to make it clear. One point can maybe be to check the api jars out there and see if changing the impl isn't easier since people will maybe not upgrade their API :s. Also it viciously brings the question of the contextuality of CDIProvider which is maybe not something we want to "spec" yet (ie is the provider bound to an impl and one context once the lookup is done or is CDI only contextual?).	1	1	https://issues.jboss.org/browse/CDI-626
2604	CDI-625	Firing such an explicit pre-destroy event for the application context is probably ok. But please lets not introduce this in a generic way ;) What speaks for not being a problem to move it generally to 'When the Application Context is about to be destroyed": Where can yo observe any @Destroyed(AppllicationContext.class) event if it would only get fired after the ApplicationContext gets shut down? For sure not in an @ApplicationContext scoped bean. Nor in any other CDI bean ;)	1	1	https://issues.jboss.org/browse/CDI-625
2605	CDI-625	This is interesting idea but I am not sure this "interceptor" concept fits well to this situation. What would happen in the case you have multiple observers of this kind? I guess you cannot call {{ctx.proceed()}} multiple times. I am also not sure whether this is doable with this new payload type. It would mean to fire the event twice to stay at least little bit compatible.	1	1	https://issues.jboss.org/browse/CDI-625
2606	CDI-625	How about extending {{@Destroyed}}? {code:java} public @interface Destroyed { Class<? extends Annotation> value(); boolean beforePhase() default false; } class Test { void observeAfter(@Observes @Destroyed(ApplicationScoped.class) Object object) { } void observeBefore(@Observes @Destroyed(value = ApplicationScoped.class, beforePhase = true) Object object) { } } {code}	1	1	https://issues.jboss.org/browse/CDI-625
2607	CDI-625	I checked OWB and we always fire it after destroying the beans right now. What does Weld do?	1	1	https://issues.jboss.org/browse/CDI-625
2608	CDI-625	[~mkouba] being said today the behavior is uniform and the predestroy issue you describe actual it is always possible to use predestroy merging them in a bean (or more commonly having an orchestrator bean intended for the destruction) is beforeshutdown defined in this shutdown lifecycle? if not shouldnt it be the solution? I know it has been prevented but supporting it in any bean would work I think	1	1	https://issues.jboss.org/browse/CDI-625
2609	CDI-625	bq. ...it is always possible to use predestroy merging them in a bean... Not really. If you have application scoped Bean1 and Bean2 you cannot simply create Bean3 and destoy them there... in other words, this "merging" is not always possible. bq. is beforeshutdown defined in this shutdown lifecycle? {{BeforeShutdown}} is a container lifecycle event and is fired after all contexts are destroyed.	0	0	https://issues.jboss.org/browse/CDI-625
2610	CDI-625	You can always remove @PreDestroy in an extension and call it in Bean3 but was more thinking this way: since the user hits this issue the workaround is to not use @PreDestroy when it is an issue or order is important (which is not that common compared to @PreDestroy cases). Right about BeforeShutdown, know early OWB versions needed to move it before the actual destruction in some cases (could check the details and current state if needed) cause BeforeShutdown extensions are often accessing app scoped beans which was not possible in the mentionned order, maybe no more an issue with this new @BeforeDestroyed. About the semantic if we introduce @BeforeDestroyed we should likely introduce @AfterDestroyed for the consistency and do the same for @Initialized which would let us with two events doing the same in term or API (but easily collapsable in the implementation so no perf issue, just an API issue). Is that possible to deprecate not prefixed events? Or maybe @AfterXX should be a @Stereotype which would auto document the new API?	0	0	https://issues.jboss.org/browse/CDI-625

#	Requirement	Questions	Answered	Successfully Answered	URL
2611	CDI-623	Are you talking about the spec doc or javadoc? It seems to me that the [javadoc|https://github.com/cdi-spec/cdi/blob/2.0-EDR2/api/src/main/java/javax/enterprise/inject/spi/AfterBeanDiscovery.java#L82] is pretty clear on this. The configuration is not reusable and that was talked through a thousand times. The idea is that every call of {{abd.add*()}} gives you a new configurator and once you exit the observer method call, it will create a respective bean or observer method. I cannot really see any 'dangling' configuration in this flow. Could you elaborate a bit please?	1	1	https://issues.jboss.org/browse/CDI-623
2612	CDI-621	I am also unsure of what the ambiguity is in this case. Do you mean you would rather rename the method to something like {{removeAllAnnotations}}? In that case you might say that all the methods are ambiguous...	1	1	https://issues.jboss.org/browse/CDI-621
2613	CDI-621	[~meetoblivion] as Martin and Matej already said, your ambiguity is... ambiguous ;). Could you detail please.	1	0	https://issues.jboss.org/browse/CDI-621
2614	CDI-621	Well, the point is the {{AnnotatedTypeConfigurator}} and friends ({{AnnotatedMethodConfigurator}}, etc.) can ONLY be used to modify/configure annotations. So it's implicit. Also the javadoc is clear.	1	1	https://issues.jboss.org/browse/CDI-621
2615	CDI-621	Today the only thing you can remove is annotations. Maybe at a later point you can change other things. When you can, what does {{removeAll}} mean?	1	0	https://issues.jboss.org/browse/CDI-621
2616	CDI-616	Are you referencing: {code} @Inject private transient Foo foo; {code} Or the {{@TransientReference}} from Mark?	0	0	https://issues.jboss.org/browse/CDI-616
2617	CDI-616	Are we talking about a real java 'transient' field? Of course adding transient to an injected CDI field is utter rubbish ^^. Or are we talking about InjectionPoint#isTransient() and the CDI @TransientReference annotation? That is the one I was basing my explanation on.	1	1	https://issues.jboss.org/browse/CDI-616
2618	CDI-616	> Do nothing but add clarification in the spec : Injection in transient field is not supported. We probably are talking about thesame thing, but the wording is not quite as discussed on the ML as far as I interpret it. Why should the injection itself not be supported? I think what we agreed on is that we just don't do anything for RE-injecting it in case of deserialisation. At least that was I understood during our discussion. Not sure we need to clarify anything as this is standard Java behaviour: the developer is responsible to get back any transient fields himself by default.	0	0	https://issues.jboss.org/browse/CDI-616
2619	CDI-610	bq. For the Bean<T> case this would surely work as well... Which other cases do you have in mind? I wouldn't add this to the {{BeanManager}}. I think it's bound to the lifecycle of a {{@Dependent}} bean. bq. It should be as much aligned with injecting the InjectionPoint in a producer method. Not only producer methods but any {{@Dependent}} bean is allowed to obtain the injection point. bq. I don't know from the top of my head... Yes, it's a definition error.	1	0	https://issues.jboss.org/browse/CDI-610
2620	CDI-608	What's the type of {{cdiEventEndpoints}}?	1	1	https://issues.jboss.org/browse/CDI-608
2621	CDI-608	Not sure, what type does it need to be to support this?	1	0	https://issues.jboss.org/browse/CDI-608
2622	CDI-601	If I'm already subscribed via a `@PreDestroy` method, shouldn't that continue to work?	1	0	https://issues.jboss.org/browse/CDI-601
2623	CDI-601	From your point of view, does observer method ordering also take into account dependencies of beans that the observers will use?	0	0	https://issues.jboss.org/browse/CDI-601
2624	CDI-601	But doesn't this imply that a new {{@Dependent Worker}} bean would then be _created_ in order to handle this {{ApplicationStopped}} event? This seems like "non-obvious" behaviour when I'm trying to destroy existing beans and shut the application down.	0	0	https://issues.jboss.org/browse/CDI-601
2625	CDI-590	I'm not sure I understand the use case. Do you want to declare a producer method whose set of bean types will not be derived from the return type? A more general description would be great.	1	0	https://issues.jboss.org/browse/CDI-590
2626	CDI-590	I don't really like this idea. It feels 'hacky' and it could also contradict the type-safe approach. If I got it right, the idea is to have this producer: {code} @Produces @MyProducerQualifier // this Qualifier has some annotation saying it is 'generic' public Object create() { // do some work and return Object } {code} and then for this one producer to have the following injections: {code} @Inject @MyProducerQualifier String string; @Inject @MyProducerQualifier Integer int; {code} Could you give a more specific use-case showing where this would make sense (or even better, be neccessary)?	1	1	https://issues.jboss.org/browse/CDI-590
2627	CDI-590	bq. it doesn't support a lot of types I thought a custom producer for any type [can be implemented|https://github.com/apache/deltaspike/blob/master/deltaspike/core/api/src/main/java/org/apache/deltaspike/core/api/config/ConfigProperty.java#L78]. bq. Just use PropertyEditor API... I don't know what do you mean. Probably {{java.beans.PropertyEditor}}? bq. Tamaya has its own coercing system which wouldnt fit CDI very well... For Tamaya I think it would be more meaningful to create a producer for {{org.apache.tamaya.Configuration}}. But I understand that it would be nice to leverage {{PropertyConverter}} and produce configuration properties directly. Look, I'm not against this feature! I'm just trying to identify all pros and cons ;-)	0	0	https://issues.jboss.org/browse/CDI-590

#	Requirement	Questions	Answered	Successfully Answered	URL
2628	CDI-584	To that I could answer, "what's the use of ProcessBean if you can't do anything about the bean tied to the event" ;) ? But I have an example. I was asked to build a prototype extension to create an injection point when a given annotation ({{@CacheContext}}) is found on a field. Here's the portable code I had to wrote to create the feature : * An AnnotatedType [implementation|https://github.com/antoinesd/CDI-Sandbox/blob/fb18eb718ab93f68dcef6b934d70589b789d251b/auto-inject/src/main/java/org/cdisandbox/autoinject/Extension/AutoInjectingAnnotatedType.java] * An AnnotatedField [implementation|https://github.com/antoinesd/CDI-Sandbox/blob/fb18eb718ab93f68dcef6b934d70589b789d251b/auto-inject/src/main/java/org/cdisandbox/autoinject/Extension/AutoInjectingAnnotatedField.java] * and the [Extension|https://github.com/antoinesd/CDI-Sandbox/blob/fb18eb718ab93f68dcef6b934d70589b789d251b/auto-inject/src/main/java/org/cdisandbox/autoinject/Extension/AutoInjectExtension.java] Extension code is small but {{AnnotatedType}} and {{AnnotatedField}} impls are verbose and the whole is cumbersome to read and maintain (3 classes and 178 lines of code) If we only target OWB, the extension code is: {code} package org.cdisandbox.autoinject.Extension; import org.cdisandbox.autoinject.CacheContext; import javax.enterprise.event.Observes; import javax.enterprise.inject.spi.*; import java.util.HashSet; import java.util.Set; /** * Extension looking for the @CacheContext annotation to transform it in an InjectionPoint */ public class AutoInjectExtension implements Extension { private Set<AnnotatedType<?>> atWithCacheContext = new HashSet<>(); /** * This Observer captures all AnnotatedType containing @CacheContext */ public void CreateInjectionPoint(@Observes @WithAnnotations(CacheContext.class) ProcessAnnotatedType<?> pat) { atWithCacheContext.add(pat.getAnnotatedType()); } /** * This observer add an injection point in all bean having @Cachecontext annotaion on some field */ public <T> void CheckBeansForCacheContext(@Observes ProcessManagedBean<T> pmb, BeanManager bm) { AnnotatedType<T> beanAT = pmb.getAnnotatedBeanClass(); if(atWithCacheContext.contains(beanAT)) { Bean<T> bean = pmb.getBean(); Set<InjectionPoint> ips = new HashSet(bean.getInjectionPoints()); for (AnnotatedField<? super T> f : beanAT.getFields()) { if(f.isAnnotationPresent(CacheContext.class)) { ips.add(bm.createInjectionPoint(f)); } } } } } {code} One class, 42 lines.	1	1	https://issues.jboss.org/browse/CDI-584
2629	CDI-580	[~mkouba] Missing default constructor or why? Wouldn't that be the same issue as when applying a normal scope to the product.... WELD-001435: Normal scoped bean class com.knitelius.NonDefaultConBean is not proxyable because it has no no-args constructor	1	1	https://issues.jboss.org/browse/CDI-580
2630	CDI-580	That would be solved by defining the interceptors for the product as an attribute of the produces annotation. {code} @Produces(interceptors={MyInterceptor.class}) {code} Or am I missing something else?	0	0	https://issues.jboss.org/browse/CDI-580
2631	CDI-580	We discussed this feature during last F2F meeting. My suggestion was to introduce a {{BeanInstanceBuilder}} interface to generate an unmanaged instance for a given {{AnnotatedType}}. This is inspired by the existing {{UnManaged}} helper class for injecting and calling lifecycle callbacks unmanaged instances. {{UnManaged}} only uses a class (containing @Inject, @PostConstruct and @Presdetroy annotations) to create instances, {{BeanInstanceBuilder}} would use an {{AnnotatedType}} allowing the use of a synthetic {{AnnotatedType}} containing annotations added by the user like interceptor bindings or {{@Inject}} mentions not present in the original class. We should forbid or ignore other annotations (scope, qualifier on class This would allow applying interceptor on a produced class but also interceptor on method in the produced class. And finally it could also be used to have interceptor on custom beans. Code would look like this {code} public class MyAdvancedProducerBean { public BeanInstanceProducer<MyClass> bip = Builders.beanInstanceProducer(); @Produces @RequestScoped public MyClass produceTransactionalMyClass() { AnnotatedTypeBuilder<MyClass> atb = Builders.annotatedType(Myclass.class) .read(MyClass.class) .addToType(new TransactionalLiteral()); return bip.read(atb.build()).inject().postConstruct().intercept().decorate().get(); // injection, callbacks and proxies creation } public void disposeMyClass (@Disposes Myclass td) { bip.dispose(td); } } {code} The important point is that BeanInstanceProducer is an interface so implementation will use specific proxy feature of Weld or OWB. wdyt?	0	0	https://issues.jboss.org/browse/CDI-580
2632	CDI-580	Can't the disposal part be implicit? The container knows it destroys the produced instance and that it is an intercepted one so it should be able to destroy it alone, no?	0	0	https://issues.jboss.org/browse/CDI-580
2633	CDI-580	What about extensions adding {{Bean<T>}} instances via {{AfterBeanDiscovery.addBean}}? The above proposal looks like it could work for them, but not sure. Is there any existing way really to add interceptors to manually created {{Bean<T>}} instances?	1	1	https://issues.jboss.org/browse/CDI-580
2634	CDI-574	Sorry Emily. I understand roughly your question, but could you detail your use case. You're talking about producer, there is not code for them. I don't understand where the CounterProducerConsumerModified2 bean is defined. From here it looks like a corner case, but I may be wrong. Could you format your code and add your whole example. Thx.	1	1	https://issues.jboss.org/browse/CDI-574
2635	CDI-574	Imo OWB is spec conform as well. It's all a matter of how you interpret the term BDA in the CDI spec. The inconsistency in Weld is a direct consequence of Weld interpreting the term 'BDA' as per-jar (section 12 interpretation option) and not as per-module (section 5 interpretation option). See CDI-18 and other issues for the discussion. In OWB the alternative is 'per ee module' by default. So the whole EE module (e.g. a single WAR) either has the alternative enabled or not. And thus the whole specialized bean is enabled for the whole ee module or not. That way we are a.) much faster (as we don't need to check the invoker chain each proxy invocation) and b.) more consistent. EE-modules usually are 1:1 to ClassLoaders and BeanManagers. Thus for each BeanManager a bean is clearly either enabled or not. It's an old story that the bda-per-jar interpretation is inconsistent within itself. How should that be solved? Will the observer method in the specialized away bean get invoked or not? What if I just add a SINGLE jar which don't have this Alternative enabled? Will the observer method then get invoked again? What about implicit bean archives? Those are almost always present, Just add a single slf4j api or whatever other util jar. In practice this will render disabling beans via specialisation useless. etc, .	1	1	https://issues.jboss.org/browse/CDI-574
2636	CDI-574	I agree that the spec is not perfectly accurate. And yes, OWB solves this black spot by merging beans.xml files internally. I am working with big CDI projects since 6 years and I _never_ had the urge to have a bean enabled in one jar and disabled in another. Nor does any of the 5k++ conference listeners I asked in the many talks I gave around the globe. Actually the per-jar enablement of alternatives and interceptors is the No1 most-hated behaviour of CDI ;) Anyway, lets get back to the original question with @Alternative @Specializes (which is also a prominent example in the spec since CDI-1.0) and 2 jars where in 1 the alternative is enabled and in the other it isn't. What is the expected outcome?	0	0	https://issues.jboss.org/browse/CDI-574
2637	CDI-574	bq. What is the expected outcome? The specializing bean is enabled in one bean archive and disabled in the second bean archive. And you will probably get unsatisfied dependency because the specialized bean is completely ignored.	1	1	https://issues.jboss.org/browse/CDI-574

#	Requirement	Questions	Answered	Successfully Answered	URL
2638	CDI-574	You both ignored my question: what happens with an observer in there? How to disable them effectively? In Weld it is simply not possible it seems.	0	0	https://issues.jboss.org/browse/CDI-574
2639	CDI-574	bq. what happens with an observer in there? Sorry, I'm not sure I understand your question. However, if there is an observer declared on the specialized bean, then this observer is ignored. See also 4.3. Specialization: _"Even if the second bean defines a producer or observer method, the method will never be called."_	0	0	https://issues.jboss.org/browse/CDI-574
2640	CDI-573	PR sent. Code was simplified relying on JDK {{ServiceLoader}} class. We could simplify more since the only provider used is the first found (see {{configuredProvider}} initialization in {{getCDIProvider()}} method). Question is, as we didn't had tests for this code, how can we make sure that the behavior stays the same ?	1	1	https://issues.jboss.org/browse/CDI-573
2641	CDI-573	Hi Antoine. If I read these comments correctly, will CDI.getCDIProvider() visibility be back to public in Weld 3.0.0.Alpha17? Because I just tried updating to Weld 3.0.0.Alpha16 and ran into getCDIProvider() no longer being visible. Thanks!	0	0	https://issues.jboss.org/browse/CDI-573
2642	CDI-572	Also what should happen if a validation fails?	1	0	https://issues.jboss.org/browse/CDI-572
2643	CDI-572	[~mkouba] yes, @Inject might be needed. But one could also use @PostConstruct to init this field. Or use Method injection. All that doesn't matter. Point is that _after_ all the injection was done and the instance is fully initialized it could be useful to invoke JSR-303 on it. > Also what should happen if a validation fails? Well that's a good question. What happens if there is some Exception in @PostConstruct? Guess the same should happen here as well. Or even throw a nice validation Exception. I agree with [[~Sven Linstaedt] that those checks only make sense at runtime. It might as well be that it fails for one request but passes for another one... If you think about business data producers this also makes perfect sense.	1	0	https://issues.jboss.org/browse/CDI-572
2644	CDI-570	This has not much to do with the CDI spec. It's imo a container implementation detail. How long should the shutdown wait on an async event? What if an async event hangs? Should the server still shut down?	1	1	https://issues.jboss.org/browse/CDI-570
2645	CDI-567	Sorry but I don't understand much. I am not really sure what you would like to achieve. Can you elaborate please (some code example might be helpful)? Can you point me to some extension (as an example) which uses ThreadLocal?	1	0	https://issues.jboss.org/browse/CDI-567
2646	CDI-565	erm, now that I think of it. Changing the behavior such that {{null}} is injected instead of having the deployment crash isn't breaking backward compatibility. All old applications deployed has obviously resolved all their unsatisfied dependencies, right? Question is what type of behavior do we want to see for future applications (deployments)? I have talked to several Java developers at this point. They all agree with my comments made about {{null}} earlier. The most intuitive thing is to inject {{null}}, leaving the application a fair chance to actually manage this situation which provingly, is a good feature to have from time to time without complex workarounds using "guru" API:s like {{Instance}}. To turn things around, which issue are we trying to solve, or how exactly are we trying to "help" developers by failing the deployment for unsatisfied dependencies? I can only see the down sides of this behavior. If we know what's right, then as men (and women for some of us!), we are obliged to do the right thing without paying attention to the "fear of change". I cannot stress enough that Java EE is a complex technology stack and if we are to stand a chance in a competitive environment, we have to stop looking for quick fixes and workarounds. Isn't it possible to cast a vote on the JBoss forum or something, asking people that don't already know the answer, what they think should happen to an unsatisfied dependency? That is what I asked my developers. All but one new guy said {{null}}.	1	1	https://issues.jboss.org/browse/CDI-565
2647	CDI-565	What do we expect to happen here: {code} Person person = new Person(); String name = person.getName(); {code} Yeah, only a problem if we try to dereference the name! =) CDI is one huge "getter". No difference. Most if not all getter methods we write every day return {{null}} and let the client deal with it. If the client require a value and rather have his application blow up with a more specialized exception, then he probably call a more niche method: {code} String name = person.requireName(); {code} I.e, here's what I believe we should do if and only if we want the deployment to fail: {code} @Inject @Required String name; {code} Or maybe even more straight forward: {code} @Inject @DeploymentRequired String name; {code} This way, we can even configure a bit how we want the deployment to fail: {code} @Inject @Required(throwClass=MySuperAwesomeException.class) String name; {code} This "issue" really comes down to what we think is the most intuitive behavior and, whether or not it really brake backward compatbility and if so, how bad would that actually be. I believe 1) {{null}} is the most intuitive thing to do here and it is a good thing leaving the application to deal with it. 2) We don't brake backward compatibility at all. Let me know what you think.	1	1	https://issues.jboss.org/browse/CDI-565
2648	CDI-565	Or {{java.util.Optional}} since JDK 8. Yeah, I think we all agree that the ideal world make a minimal use of {{null}}. But I sure don't think we can ever manage without {{null}}. In fact, {{null}} has some really good use cases. What would you think if {{Map.get(Object)}} threw an exception instead of returning {{null}} when the mapping doesn't exist? Well, the CDI container is one huge map. I ask for a mapped value given a set of types and/or qualifiers - the keys. What is the difference? Even if you do think {{null}} is absolute evil, then it is with us already for better or worse. Convenience, or what we together believe is the most intuitive approach, has to take precedence. Fail-fast is a good practice, but having it implemented just because one can may be a brutal way of enforcing dogma upon others. I see this "fail-fast" approach as both braking intuition and reducing the service offer. I'm not saying I am right. I am trying to find out why some of us developers has to pay the price, for what benefit, for what gain? You say it "helps developers" by "avoiding surprising NPE:s at runtime". All exceptions not handled is a surprise, whether that happens during deployment or runtime. But let me point out that if anything is a surprise, then it is the exception types CDI define and all vendor-specific messages the application servers output in the log file, and you know I am right on this point. New developers in particular will have to walk though a lot of struggles until they have a solid understanding of the CDI vocabulary like "ambiguous" and "unsatisfied". Compare that with a a {{java.lang.NullPointerException}} in the log file with a clear stack trace to the exact source code line where the reference was dereferenced. What a NPE is and how to deal with it is probably what all new developers learn on their very first day. Non-developers like to praise programmers as being some kind of super humans. What I often find myself saying in response to my friends, and experiences I think you share with me, is that I am lazy. I am not really a problem solver. I am not really smart. I'm trying to find the best architecture such that the design can do the thinking for me. I am trying to reduce complexity, trying to simplify and automate everything. Most importantly, I will not try to fix a problem before I have one. And that is super important. By trying to fix a problem before I have it, I might end up introducing one instead. Been there done that many times over. Recognize the situation? That's why we are having this discussion. "Premature optimization is the root of all evil" and ya'll know it =) Least you can do is {{@Optional}}.	1	1	https://issues.jboss.org/browse/CDI-565

#	Requirement	Questions	Answered	Successfully Answered	URL
2649	CDI-565	I'm not sure I fully understood you on that "dropping behavior"-thing. NPE:s is kind of what I try to advertise here =) {{null}} is and will always be a valid candidate to represent the absence, or lack of, a value. *YES*, we all agree that it is easy to misuse {{null}} and {{null}} should be avoided if we so can. My point is definitely not that {{null}} is a god sent gift. Please reread my comments and see if you can answer the questions I asked, for example, what is the difference between {{Map}} and the CDI container (when it comes to dependency lookup)? Also compare {{EntityManager.find()}} from the JPA specification which I believe is another comparable interface. Everything is an API. I don't understand this notion really or how it relates to the topic of discussion. I googled the CDI specification, {{null}} return values are used everywhere. Would you like to advocate that we setup tens of new exception types into our type system instead? Speaking of API:s, I would appreciate an {{Optional}} return type from a service only if it is conceivable and often enough the case that no return value is present. For example: {{tryCatchAFish()}}, {{getLotteryWinner()}}. Or, if it is conceivably so that the client doesn't bother about the presence of the value. For example: {{myDataSource.getSomeData().ifPresent(someValueContainer::setThatField)}}. I myself overused {{Optional}} once it was out in JDK 8, singing praise to Jesus every minute of the day. Only to discover that my overuse of it introduced complex boilerplate code. Eventually I got so lazy that I dereferenced those optionals anyway ({{Optional.get().doSomething()}} and so it was only a matter of time before I found myself back in square one. But this time, not only did I have NPE:s, all my clients had to make an extra method call all over the place for no apparent gain. More than anything else, I learnt by my own mistake that if a parameter is optional for the client, then accept {{null}}. Don't force the clients to type {{Optional.empty()}} instead of the oh so simple blueish keyword {{null}}. Null as parameters make the life easier for the implementations too. Also, if you know a "modern language" that had any success avoiding {{null}}, please let me know. That would be interesting. For example, how would I create a new 10 element array? Am I required to have all ten elements right of the bat? Guys, what is the most intuitive thing to do here? Why do you believe that the dependency lookup should have different semantics than {{Map.get()}}?	1	1	https://issues.jboss.org/browse/CDI-565
2650	CDI-563	bq. I'm not sure to follow him there, especially when CompletionStage has a dependency on CompletableFuture with the toCompletableFuture() method It's kind of a strange dependency, intended probably as a compatibility/interoperation feature. However, implementations are not required to support this conversion. bq. Martin Kouba, you're probably the best person to know if this default Executor is the best for us or if we should use our own Executor... I don't think {{ForkJoinPool.commonPool()}} is a good fit for Java EE. But it's ok for Java SE. I'm for: * having {{CompletionStage}} in the CDI API * declaring explicitly that *the stage's default asynchronous execution facility is not defined*, in other words it is implementor and environment specific * declaring explicitly that *the context propagation is not guaranteed for ANY execution* (default execution, default async execution and custom async via a supplied Executor) What do you think?	1	1	https://issues.jboss.org/browse/CDI-563
2651	CDI-563	{quote}bq. I'm not sure to follow him there, especially when CompletionStage has a dependency on CompletableFuture with the toCompletableFuture() method It's kind of a strange dependency, intended probably as a compatibility/interoperation feature. However, implementations are not required to support this conversion.{quote} I'm not sure, but I think we should, since it's the only way to access the {{get()}} method to allow user to wait for the outcome... {quote} I don't think {{ForkJoinPool.commonPool()}} is a good fit for Java EE. But it's ok for Java SE. {quote} +1 {quote}I'm for: * having {{CompletionStage}} in the CDI API{quote} Yes we also agree here. {quote}* declaring explicitly that *the stage's default asynchronous execution facility is not defined*, in other words it is implementor and environment specific {quote} My favorite option as well ;). I'm just not sure where to add it in the chapter {quote}* declaring explicitly that *the context propagation is not guaranteed for ANY execution* (default execution, default async execution and custom async via a supplied Executor) {quote} Regarding propagation, I thought that the mention in [10.5.3. Observer method invocation context|http://docs.jboss.org/cdi/spec/2.0.EDR1/cdi-spec.html#observer_method_invocation_context], was explicit enough: bq. If the observer method is asynchronous, it is called in a new lifecycle contexts, a new transaction context but the same security context as the invocation of Event.fireAsync(). What do you think we should add?	1	1	https://issues.jboss.org/browse/CDI-563
2652	CDI-563	bq. My favorite option as well . I'm just not sure where to add it in the chapter I would add a new paragraph in 10.2.3. The Event interface... something like "The fireAsync() methods return a CompletionStage whose default asynchronous execution facility is specific to the container implementation." bq. What do you think we should add? I don't like the wording "called in a new lifecycle contexts". What exactly does it mean? Maybe we should just rephrase this.	1	1	https://issues.jboss.org/browse/CDI-563
2653	CDI-563	{quote}bq. What do you think we should add? I don't like the wording "called in a new lifecycle contexts". What exactly does it mean? Maybe we should just rephrase this.{quote} I'm not a big fan of this wording either. But it came from discussion with Jozef, and the fact that for the sake of non-denormalize the spec we shouldn't repeat what is said in [6.7|http://docs.jboss.org/cdi/spec/2.0.EDR1/cdi-spec.html#builtin_contexts]: bq. The context associated with a built-in normal scope propagates across local, synchronous Java method calls. The context does not propagate across remote method invocations or to asynchronous processes. Perhaps we could find a way to have a clearer phrase pointing to this assertion. It lets the possibility for a third party to create a normal scope supporting propagation.	1	1	https://issues.jboss.org/browse/CDI-563
2654	CDI-562	I think there are two similar open issues which might offer a better solution for this use case: # CDI-515 - allow to obtain Bean metadata from {{javax.enterprise.inject.Instance}}, so that if a user wants to get the metadata the programmatic lookup would help # CDI-10 - if we introduce a marking interface for client proxies, e.g. {{BeanProxy}}, we could also probably add {{getBean()}} method I'm not so sure it's a good idea to add a method to the BeanManager. Let's have the following producer: {code:java} clas FooProducer { @Alpha // qualifier @Produces Foo produceAlphaFoo() { ... } @Bravo // qualifier @Produces Foo produceBravoFoo() { ... } } {code} How to identify a bean for any {{Foo}} instance? We would have to use some internal construct even for contextual instances of dependent beans with no interceptors/decorators. And that's not possible - such a bean does not have to be proxyable. Or am I missing something?	0	0	https://issues.jboss.org/browse/CDI-562
2655	CDI-558	We should do this for all SPI metadata in the spec. That would bring us: * {{AnnotatedTypeBuilder}} * {{BeanAttributesBuilder}} (Ancestor of BeanBuilder to be used in ProcessBeanAttributes) * {{InjectionPointBuilder}} * {{ObserverMethodBuilder}} Less sure about: * {{InjectionTargetBuilder}} (we already have a factory) * {{ProducerBuilder}} (Factory here as well) The question is how should we retrieve these builders. I don't think it's a good idea to restrict their access to lifecyle event since we could need them outside an extension. {{BeanManager}} seems the obvious place but there are already too much method in it. Perhaps it's time to create an interface for such service method, that the BeanManager would implement and that could be injected as well to provide access to these builders. WDYT ?	0	0	https://issues.jboss.org/browse/CDI-558

#	Requirement	Questions	Answered	Successfully Answered	URL
2656	CDI-558	bq. The question is how should we retrieve these builders For {{BeanBuilder}}, {{BeanAttributesBuilder}} and {{ObserverMethodBuilder}} I think it is a good idea to restrict the access to container lifecycle events (or [CDI SE builder|https://github.com/weld/core/blob/master/environments/se/core/src/main/java/org/jboss/weld/environment/se/Weld.java#L488] respectivelly). Maybe we should create a table and for each SPI add some description, purpose and/or use-case, possible implementation problems, etc.	0	0	https://issues.jboss.org/browse/CDI-558
2657	CDI-558	{quote}CDI SE builder may allow to access these builders - see my previous comment.{quote} Sorry, I missed that. {quote} bq. or if we decide later to allow addition of some meta data at runtime Well, if we decide later we could add this later. I think it's a good start to have it only accessible where it's needed ATM. {quote} Ok, but that doesn't solve the place for {{AnnotatedTypeBuilder}}. Should it be one of the few helpers classes of our API in {{javax.enterprise.util}} package beside {{AnnotationLiteral}}?	1	1	https://issues.jboss.org/browse/CDI-558
2658	CDI-558	Wrt {{AnnotatedTypeBuilder}} what do you mean by "from outside CDI"? What about to introduce {{AnnotatedTypeBuilder}} as a built-in bean?	1	1	https://issues.jboss.org/browse/CDI-558
2659	CDI-552	Isn't this what DeltaSpike provides already with {{BeanProvider.injectFields(myObject)}}? https://deltaspike.apache.org/documentation/core.html#_beanprovider This method clearly only injects the dependencies, it does not invoke any lifecycle methods and does not add the object to any scope. It would be useful to make this into the CDI spec, such as {{CDI.current().injectDependencies(Object o)}}. It might also make sense to execute the lifecycle methods by {{CDI.current().invokePostConstruct(Object o)}} and {{invokePreDestroy(Object o)}, although they may be executed as directly on the object.	0	0	https://issues.jboss.org/browse/CDI-552
2660	CDI-547	Yes maybe the third option looks as the best one to me. Because when you introduce new method then there is a question: What all should it return in case of ASYNC version? It would make sense to return all ASYNC + SYNC observers but I think this will bring only more confusion.	0	0	https://issues.jboss.org/browse/CDI-547
2661	CDI-540	I fully agree with this. Why developer needs to ask {{CDIProvider}} whether {{CDI}} is initialized? And what does it mean actually? I think {{CDIProvider.isInitialized()}} method would make more sense as method on {{CDI}} and named like {{isRunning}} (since we have shutdown method).	0	0	https://issues.jboss.org/browse/CDI-540
2662	CDI-535	This is really interesting and useful. Can this make it to CDI 2.0 ?	1	1	https://issues.jboss.org/browse/CDI-535
2663	CDI-535	Good point. Can we enhance the Priority annotation or would that take ages to be accepted?	1	1	https://issues.jboss.org/browse/CDI-535
2664	CDI-535	Why? Isn't that what priority is for? Or are you referring to implementing Comparable in this object?	1	1	https://issues.jboss.org/browse/CDI-535
2665	CDI-535	I think {{@Priority}} must be extended to support producer methods and fields, but for now I believe it´s fine to support it in a type-level usage only, WDYT?. For example, how different would a bean be from an interceptor (or an Alternative) that uses this same approach?	1	1	https://issues.jboss.org/browse/CDI-535
2666	CDI-535	[~marembo2008], I agree, so in order to avoid instantiating the objects and comparing against each other, I think using {{@Priority}} or another kind of comparison (eg. annotation) in the type declaration would be a better choice.	1	1	https://issues.jboss.org/browse/CDI-535
2667	CDI-535	I would say more than anything, my concern is on the reuse/misuse of {{Priority}} and using something new like {{OrderBy}} would not be an issue. Priority introduces misuse in my opinion. Even then, if you have multiple beans, all from the same field (all dependent scoped for example), how would you order them?	1	0	https://issues.jboss.org/browse/CDI-535
2668	CDI-535	[~meetoblivion] [~gastaldi] I don't think {{@Priority}} would introduce a misuse here: {quote} The Priority annotation can be applied to classes to indicate in what order the classes should be used. The effect of using the Priority annotation in any particular instance is defined by other specifications that define the use of a specific class. {quote} But as I said we would not be able to add priority to producer methods and fields. So it's -1. A new annotation might work as well. {{OrderBy}} would be mixed up with {{javax.persistence.OrderBy}}. bq. Even then, if you have multiple beans, all from the same field... How could that happen?	0	0	https://issues.jboss.org/browse/CDI-535
2669	CDI-527	+1. This would simplify CDI integration in a lot of cases. Do we have the same issue with / should talk about interceptors too?	1	1	https://issues.jboss.org/browse/CDI-527
2670	CDI-527	{quote}EJB does allow this.{quote} Can you elaborate on how EJB allows that? Based on the following: {quote}Only private methods of the bean class and any superclasses except java.lang.Object may be declared final{quote} I interpret the EJB spec as explicitly prohibiting this.	1	1	https://issues.jboss.org/browse/CDI-527
2671	CDI-527	[~jharting] I digged a bit deeper. Seems EJB-3.2 introduced this (non backward compat) restriction. But *only* for NIVs! Previously this restriction was only for 'Business Methods'. Which always have been only public methods (this is what is different to CDI).	1	1	https://issues.jboss.org/browse/CDI-527
2672	CDI-527	I still fail to see how EJB "allows this". Can you provide a code sample of a session bean with non-private final method that is valid according to EJB 3.2?	1	1	https://issues.jboss.org/browse/CDI-527
2673	CDI-527	@Jozef: just use a parent class with a protected final method. This is not forbidden. That said 3.2 should remove this constraint since that's a regression from 3.1. last point: why do we care about EJB at all? CDi just allow an integration with EJB but EJB shouldn't be the first model (in particular because it defines this contract definition which is not the case in CDI where internal methods are seen as well).	1	1	https://issues.jboss.org/browse/CDI-527
2674	CDI-527	I am not sure I follow on this. On the NIV's it's explicitly stated in {{4.9.8 Session Bean's No-Interface View}} that: {quote} Only private methods of the bean class and any superclasses except java.lang.Object may be declared final. {quote} There is no problem from CDI point of view AFAIK. In the case of interface view types I can't see any problem as well because the proxy instance is created for the interface type (not impl) which has all methods public and not final. What's the reason for CDI to behave differently? In fact I think we can't supress EJB validations anyway.	1	1	https://issues.jboss.org/browse/CDI-527

#	Requirement	Questions	Answered	Successfully Answered	URL
2675	CDI-527	I wrote down a summary of the problem and possible solutions for proxying with final fields: Java8 introduced a few final methods to existing classes. This now leads to a javax.enterprise.inject.UnproxyableResolutionException at bootstrap if you have a producer method or field for those classes. EJB also seemingly allows this. But it's specced on a completely different level. EJB disallows final 'business methods'. That means that whenever you have an interface only those methods will get proxied. The methods of the implementation do not matter at all. With NIV all methods are 'business methods' and must be proxyable imo (can someone verify this?). I personally like the non-proxyable rule. It really prevents tons o user errors. As you all know CDI heavily relies on subclassing proxies. Means we override all methods from the proxied type. But we obviously cannot override (and thus proxy) static, private and final methods. While static and private methods do not really matter, all non-private non-static final methods do. The problem appears when people invoke such a final method on the proxy. In that case they will just hit the proxy and not the Contextual Instance. To prevent the user from making this error we throw the UnproxyableResolutionException at bootstrap. We now have a few options to deal with that: A.) no it's not a problem at all. - We often got the report for ConcurrentHashMap. But people can already just use the ConcurrentMap interface as return type in their producers. - Also the report that this only makes a problem since Java8 is plain wrong imo. ConcurrentHashMap has the following method since at least Java7: final V put(K key, int hash, V value, boolean onlyIfAbsent) - There are a few situations where it hurts though. E.g. extending ConcurrentHashMap with own functionality. This would require introducing an own interface for this new functionality. B.) Generally allow proxying of beans with final methods. - I'm rather -1 for this. The current behaviour was introduced exactly because people made too many errors and blew up at runtime. Removing this rule would really make things worse. Because people might then add new final methods. And if you call those then you will only hit the proxy class and not the Contextual Instance. C.) Introduce an annotation to explicitly declare Beans to be proxyable - Something like @AllowProxying Can be applied to producer methods, producer fields and managed beans. - That would make it explicit for programmers that they leave the sunshine path. People will blow up with the UnproxyableResolutionException and can then decide whether they want to provide that bean anyway or not. - Con: Only the author of the Producer or managed bean knows that he added it. Thus other users will first need to look at the producer to become aware. But that might not be so much of a problem in most cases as it's only a matter of JavaDoc. D.) Introduce an exclude list for knowingly 'bad' classes. - We could e.g. introduce that all classes from java.* and javax.* are proxyable by definition. - Con: hard to know what's going on and why the code doesn't work if a user calls such a final method.	1	1	https://issues.jboss.org/browse/CDI-527
2676	CDI-527	[~emilyj] never has really been supported on CDI side, JDK broke some API (in a more vicious way than this jira) but doesnt mean CDi has to do anything. Do you have an example of a broken application cause of *application* code (and not JVM)?	1	1	https://issues.jboss.org/browse/CDI-527
2677	CDI-527	[~emilyj] Also remember that CDI-1.2 is only specified for Java7. Also note that EJB doesn't support this neither for NIVs... How would D look like in practice? System properties and excludes can be done in a non-portable way anyway. But adding system properties to any spec is in 99% a sign of a broken design. -1 for B. Just added it for completeness ;) We also could have another option E.) introduce some class excludes via beans.xml But that would have the same issues like D imo. Imo C is the most explicit and easiest for users to grasp.	1	1	https://issues.jboss.org/browse/CDI-527
2678	CDI-527	Option A is easy but it does not help the customers with legacy applications. It is not their fault in the first place. The JDK change is beyond their control. If we want to make CDI popular, we should help the customers who are stuck if they are unable to update their legacy applications. Option D: Support proxy on all java.x or javax... classes. Since the system property does not sell well, how about introduce a method setAllowProxyingOnUnProxyable(boolean allowProxying) on CDI.java? If not set, false is the default.	1	1	https://issues.jboss.org/browse/CDI-527
2679	CDI-527	[~french_c] Imo a perfectly valid use case. In the case you described only the option with the excludes or with the special Annotation would be possible. [~emilyj]] Not sure about this. Most of this classes already have final protected methods as of Java7. Which class do you have in mind?	1	1	https://issues.jboss.org/browse/CDI-527
2680	CDI-527	>>Not sure about this. Most of this classes already have final protected methods as of Java7. Which class do you have in mind? HashMap#initHashSeedAsNeeded, as mentioned in your description.	1	1	https://issues.jboss.org/browse/CDI-527
2681	CDI-519	what do you suggest? # to forbid this or, # to explicitly state that {{Instance<T>}} can be used to destroy any dependent scoped bean instance of T. In your example if we go for 1, there will be no solution to destroy the instance you requested thru {{CDI}}	0	0	https://issues.jboss.org/browse/CDI-519
2682	CDI-518	Do you mean "8.3 Class Loading Requirements"? If so then don't forget that ServletContext is not an application class. Therefore, this needs to be defined explicitly.	1	0	https://issues.jboss.org/browse/CDI-518
2683	CDI-518	Oki, getting tricky now. I think we should take a step back and finally do our homework regarding EAR handling. * What classes are seen where. * How do we handle/deal with isolation and visibility constraints of CDI running in EARs. * How does Extension visibility look like * Which classes should get delivered to which Extension * getBeans in EARs * @Named in EARs (thats a TOTAL mess right now) * getInterceptors, decorators etc in EARs ... After that the observer resolution will solve itself pretty quickly.	0	0	https://issues.jboss.org/browse/CDI-518
2684	CDI-515	That would be way more complicated if possible at all. Let's assume you have two producers for dependent {{Foo}} and each specifies a different qualifer. Then you inject {{Instance<Foo>}} and select Instance for qualifier {{@A}} and get instance of Foo, and select Instance for qualifier {{@B}} and get instance of Foo. How would you differentiate these instances? What happens if you pass Foo {{@B}} reference to the Instance for Foo {{@A}}? You would have to track all the instances provied by each Instance.	1	1	https://issues.jboss.org/browse/CDI-515
2685	CDI-515	I don't see that limited to instances provided by a given Instance<>. Like you can use Instance.destroy() to destroy any instance today. A use case could be: obtaining metadata for a bean defined by a class you don't own. Today we store all bean instances to manage their lifecycle, so how difficult would it be to compare a given instance with these stored instances and retrieving the bean used to generated it. It's probably costly but could be very useful.	1	0	https://issues.jboss.org/browse/CDI-515
2686	CDI-514	Right, for CDI 2.0 this will need to be revisited. As for the performance impact I don't really buy this. How much time does it take to do a instanceof or class identity check? Especially given that method is usually called with 0, 1 or 2 qualifiers? We should prefer correctness over dubious performance optimizations.	1	1	https://issues.jboss.org/browse/CDI-514
2687	CDI-513	{quote} Passivating scopes must be explicitly declared @NormalScope(passivating=true). {quote} This would effectively render the whole addScope Extension method useless... How would you add a scope for the JSF @ViewScoped annotation in that case? (This annotation is neither @NormalScoped nor @Scope). I suggest we remove this whole sentence as it contradicts other spec parts.	1	0	https://issues.jboss.org/browse/CDI-513

#	Requirement	Questions	Answered	Successfully Answered	URL
2688	CDI-513	Let's approach it from a different angle: does the combination non-normalscope AND passivating make sense? Imo it does. This are all the use cases where CDI does not handle the lifecycle (nor applies a proxy) but we would like to get the Serializable check. If anyone comes up with a blocker for this case then I'm perfectly happy to add a check that addScope(Xxx.class, false, true) is an illegal situation. If not then it must get supported.	1	0	https://issues.jboss.org/browse/CDI-513
2689	CDI-504	What's wrong with {{java.lang.System.getProperty()}} and {{java.lang.System.getenv()}}? I mean the main advantage of DS Configuration is IMO the resolution mechanism and the ability to extend the set of {{ConfigSource}} s. If you only need system properties and env variables a simple producer method and qualifier (or even a simple util method) would be sufficient. In other words I see no reason to standardize this.	1	1	https://issues.jboss.org/browse/CDI-504
2690	CDI-504	+1 with few minors notes: - @Env and @SystemProperty maybe (instead of EnvProperty) to match JVM naming (@Property would be less meaningful IMO) - conversion should be defined on a close set of types (primitives, wrapper + few java.lang/java.util + Collection + Map only) to ensure portability - not sure it is matre enough to support a good SPI ATM and if then it shouldnt be in config spec tamaya tries to prepare. wdyt?	1	1	https://issues.jboss.org/browse/CDI-504
2691	CDI-504	{quote}So we open the door to include a converter SPI in the spec. I'm worried about the out of scope and anti-diet aspect of the spec here...{quote} Maybe it's [high time to standardize Java EE converters?|http://arjan-tijms.omnifaces.org/2014/08/high-time-to-standardize-java-ee.html] ;) Not particularly looking forward to add CDI to the list I jotted down above.	1	0	https://issues.jboss.org/browse/CDI-504
2692	CDI-502	{quote} An actual type is a type that is not a wildcard nor an unresolved type variable. There is therefore no rule in 5.2.4 where a wildcard would be considered on the bean type side. {quote} Thanks, now I understand. It would be nice if legal bean types would be the types you can instantiate in Java (That doesn't covers all types a variable can have(eg. `List<? extends Optional<?>>`), but covers types, like `List<Optional<?>>`). And assignability to be exactly the same what in Java is with the exception for raw generic types. I guess I could report feature request. {quote} Correct. Not sure why it is so. {quote} Should I report it as a clarification or bug?	1	0	https://issues.jboss.org/browse/CDI-502
2693	CDI-499	{quote}For backward compatibility reason the possibility to invoke an observer asynchronously should be let to the observer{quote} What exactly are the reasons for this? I can think of one: - observer method injecting a @RequestScoped (or similar) bean Are there other arguments for this? {quote}3. Observer bound to a transaction phase these observer will be invoked in the right transaction phase but asynchronously{quote} How's that different from Event.fire()?	1	1	https://issues.jboss.org/browse/CDI-499
2694	CDI-499	{quote} - So to be notified asynchronously an observer should have {{asyncSupported}} member to true. otherwise it will be called synchronously. I think a call to fireAsync() should be processed asynchronously by all observers. But I have the feeling that it is in contradiction with this statement {quote} ... {quote} {color:blue} For backward compatibility reason the possibility to invoke an observer asynchronously should be let to the observer {color} What exactly are the reasons for this? I can think of one: - observer method injecting a @RequestScoped (or similar) bean Are there other arguments for this? {quote} I'm not very happy with this approach as well : It could bring confusion for end user. This possible backward compatibility issue was raised by [~meetoblivion] or [~struberg] during last IRC meeting. I'd be glad to have a better solution here. {quote} {color:blue} 3. Observer bound to a transaction phase these observer will be invoked in the right transaction phase but asynchronously {color} How's that different from Event.fire()? {quote} probably none ;). How did you handle that in Weld Alpha [~jharting]?	1	1	https://issues.jboss.org/browse/CDI-499
2695	CDI-499	Easy to add, huge impact on the world. If you want "basic tasks", then why do we want to add an asynchronous feature to begin with? Josés point about being true to the nature of asynchronous Java API:s are undoubtedly a good one. Either don't implement the feature, or go all the way and deliver a great product. Time to step up our game if we want to compete with other technologies available on the market. I don't think {{asyncSupported()}} should default to {{false}}. It should default to {{true}}. Firstly, backward compatibility must not stand in the way of technology advances. That's kind of why the major release version become a number "2". And if I'm thinking clearly here, then {{true}}, which is without doubt (?) the most natural fit, does not break backward compatibility. Legacy code already call {{Event.fire()}}. If I write new and modern code and call {{Event.fireAsync()}}, then isn't it it my responsibility to make sure that if I use old event container types and thus target old observer methods, that the observer can handle asynchronicity? To put things in another perspective: An observer method that does *not* support asynchronicity is knowledgeable and dependent on who fired the event, how and where. He is dependent on a particular context. That sounds like a design smell to me. But, the one firing the event should have a saying if he want the call to be blocking or not. But imagine the confusion a default false would produce: calling {{fireAsyn()}} is most likely to actually block. Depends on the observer methods! Simply put it, the developer must scan through the entire code base every time to make sure his asynchronous request really will be honored. Even worse, he can never be sure that will always be the case. 5 minutes later, another developer add an observer method and will *by default* make all unknowingly asynchronous events of this type in the system turn synchronous. At best, this will have such an enormous impact on user experience and create large enough bottlenecks to be discovered. At worst, the application will slowly die a painful death as the number of parallell tasks going down the serialized lane increase. Simply put it, don't fix what's not broken. Letting the observer methods have a saying smells bad. Having a method be called {{fireAsync()}} but who in fact work nondeterministically smells even worse and can create all kinds of drama. I think {{asyncSupported}} should be dropped. If it must be in place, then let it by default be {{true}}. If so, it will be the one implementing the observer method that might destroy the application, not the unknowing poor guy who wrote the world's most beautiful code, thinking a method called {{fireAsync()}} actually work as advertised. As an example, I don't use {{@Asynchronous}} from EJB because of the nondeterministic behavior. I am not guaranteed that the container actually run my task. He might reject the task. And the way exception handling work in EJB (which is contrary to the spec's own design goal), I can never be sure that my portable application code can determine why the EJB call crashed. So basically, I must use {{ManagedExecutorService}} and be prepared to catch a {{RejectedExecutionException}}. So, EJB asynchronicity is dead and of no use for serious application code that want to be portable. Please don't make the same mistake with CDI. Oh you should also specify that fireAsync() might throw RejectedExecutionException? h2. {{asyncSupported}} To continue my "ranting" - or improvement ideas =) .. I see what might be a problem if asynchronous observer methods are prioritized, submitted before synchronous observers are called. Today, if a non-transactional observer method crash, then the event processing is aborted - no more observers called. But what if we already submitted asynchronous tasks to a queue somewhere, are they aborted? Are they guaranteed to be aborted if execution of the tasks has not begun when a synchronous observer crash? If we want to keep the "feature" that an observer method should be able to stop propagation, then asynchronous observers should be called ??after?? all synchronous observers has been called. OR be very clear in JavaDoc and in the new specification that it is *not defined* whether or not synchronous observers that crash stop event propagation to asynchronous observers. I understand that it is more pleasing to have the asynchronous tasks be submitted as fast as	0	0	https://issues.jboss.org/browse/CDI-499
2696	CDI-497	I'm not sure to understand your issue. Can you give a use case?	1	1	https://issues.jboss.org/browse/CDI-497
2697	CDI-496	Isnt the issue just the fact "contract" of Beans is not exlpicit? contract of an EJB is its API (Local, Local Bean or Remote), for a ManagedBean it is its explicit or implicit @Typed, etc...In summary it is bean.getTypes() no?	1	0	https://issues.jboss.org/browse/CDI-496

#	Requirement	Questions	Answered	Successfully Answered	URL
2698	CDI-496	excepted the CDI container doesnt have to know the EJB actual impl type so how can it validate it? I think it should be done in EJB container - anyway it should be done in EJB container anyway and lifecycle between EJB and CDI container doesnt say today which one would fail first	0	0	https://issues.jboss.org/browse/CDI-496
2699	CDI-495	I am just wondering if it's worth of specifying. Wasn't there any special case when it is problematic?	1	1	https://issues.jboss.org/browse/CDI-495
2700	CDI-492	[~edburns] I understand those concerns, but I think there are solution for most of them. The points given don't take into account evolutions that could be done in CDI and JSR 330 to make it possible. To take all the points and give first ideas to solve them : *backward compatibility* : introducing a qualifier for these beans (like it's done in Deltaspike to work with CDI 1.0 and 1.1) is a first lead like {{@Servlet}} to tell that these beans are owned by Servlet spec. *Dependency on CDI* ; as you know we're going to work on a new AtInject version. We could imagine having the servlet impl only be dependent on AtInject (which will stay very small : around 10 interfaces / annotations). The only thing that is missing in AtInject today is the concept of {{@Producer}} that could be added to this new version (dagger want to move its {{@Provides}} annotation to AtInject. The integration can off course be done at spec level (the worse case would be to have a dependency on CDI API). So I really don't understand Greg point. For CDI 2.0 our approach is to talk with other specs to see what they need to improve their CDI integration. So let's talk about these needs before deciding it's not doable.	1	1	https://issues.jboss.org/browse/CDI-492
2701	CDI-486	Hi, This JEP(http://openjdk.java.net/jeps/176) proposes a new way of enforcing the security permissions. Does this mean that the SPI methods will be annotated with @ CallerSensitive How does one update the issues list with these types of queries assuming it is valid ? I am still learning the ropes. Thanks, Mohan On Thu, Oct 2, 2014 at 12:44 PM, Jozef Hartinger (JIRA) <issues@jboss.org>	1	0	https://issues.jboss.org/browse/CDI-486
2702	CDI-485	And what about {{INSTANCE}} for annotations having members like {{@New}}, {{@Typed}}, {{@Destroyed}} or {{@Initialized}} ?	1	1	https://issues.jboss.org/browse/CDI-485
2703	CDI-480	Can we mark this as resolved now?	0	0	https://issues.jboss.org/browse/CDI-480
2704	CDI-479	I've found this. # We have {{org.jboss.cdi.tck.tests.event.broken.observer.beanNotManaged.ObserverMethodOnIncorrectBeanTest}} where we check that observer is disabled (not resolved) at non-managed bean and at abstract class with abstract method observer which is overriden in extending class. # We have {{org.jboss.cdi.tck.tests.event.observer.ObserverNotificationTest#testObserversNotified}} where we check that observer is disabled at bean which is not selected alternative. I think we can expand both cases in TCK and probably close this issue. What do you think [~antoinesabot-durand]?	0	0	https://issues.jboss.org/browse/CDI-479
2705	CDI-475	How is this different from CDI-472?	1	0	https://issues.jboss.org/browse/CDI-475
2706	CDI-473	Indeed, {{@Startup}} may be a candidate. I see two questions in order to determine the best way to capture that: * Does that apply to {{ApplicationScoped}} bean only? * It that worth enough to depend on an other specification for that purpose only?	1	1	https://issues.jboss.org/browse/CDI-473
2707	CDI-473	There are some downsides to using Initialized, if not done safely. For one, you don't want to do the initialization logic in there unless you're ok with it being done multiple times (since anyone can fire this event). It's better to still put it in PostConstruct, and leave this method as is. Which begs the question, is there a benefit to having empty methods just to declare observers?	1	1	https://issues.jboss.org/browse/CDI-473
2708	CDI-471	[~antoinesabot-durand] I think this should be one of the issues with highest priority for upcoming CDI F2F meeting. WDYT?	1	1	https://issues.jboss.org/browse/CDI-471
2709	CDI-470	Hum... not that clear to me, but well. Shall it stay like that ? I tend to add a package-level {{@Veto}} on my entities ({{org.mystuff.model}})... but in big projects my model is usually spllitted into sub packages ({{org.mystuff.model.customer}}, {{org.mystuff.model.order}}, ...). Recursive veto would be interesting. Any thoughts ?	0	0	https://issues.jboss.org/browse/CDI-470
2710	CDI-469	[~meetoblivion] I'm sorry but I don't follow you. Could you be more specific about what "nonbinding producer method" means? Simple example would be helpful as well ;-)	1	1	https://issues.jboss.org/browse/CDI-469
2711	CDI-457	BTW, @TransientReference would work in the producer method solution, if it were allowed on methods/fields, rather than params only. WDYT about allowing @TransientReference on producer methods? Allowing the producer to control the behavior of the injected reference, rather than the injection point controlling it?	1	1	https://issues.jboss.org/browse/CDI-457
2712	CDI-457	Please let me ask one question: why should the container know about dependent scoped beans which are _not_ injected into some normalscoped bean? We do not spare any resources for them (at least in OWB). Even if they have interceptors or decorators applied. Btw, there is kind off such a mechanism already. All you need to do is to keep the Bean<T> and the CreationalContext you used to create the contextual instance. Then just use Bean.destroy(T, cc);	1	1	https://issues.jboss.org/browse/CDI-457
2713	CDI-457	[~meetoblivion] Well, I still don't understand why the new interface is needed. {quote} @UnManaged would be a new annotation indicating that the returned object is not contextual {quote} IMO does not make sense, if you inject dependent SomeClass into some normal-scoped bean, it's not non-contextual. {quote} Disposable object goes out of scope. {quote} What does it mean? How would this work? {quote} I suspected that OWB didn't wrap them into contextuals, whereas weld seems to (at least in the 1.1.x line). {quote} Weld returns a subclass if an interceptor or decorator is associated. Did you mean this by "wrapping into contextuals"?	1	1	https://issues.jboss.org/browse/CDI-457
2714	CDI-452	[~edburns] I just want to confirm. Your expectation here is that you can bridge the existing request context/session context from the servlet request in to the new async thread, allowing the same instances of the beans (and in turn, their data) to be accessed in both threads. If so, what synchronization would you expect, if any, to be provided by the CDI container? Or would you prefer to leave it to the developer to handle synchronization concerns?	0	0	https://issues.jboss.org/browse/CDI-452
2715	CDI-447	Thanks for the clarification. Do you agree that it's not clear in the spec that this only applies to embeddable EJB containers?	1	0	https://issues.jboss.org/browse/CDI-447
2716	CDI-427	To be consistent with the decision that's been chosen in CDI-408, I think we should stick to what was decided in CDI-377, CDI-404 and 406 (Normal Scope type, Interceptor, Decorator and Stereotype). Anyway, here's my POV on class level annotation not in Bean defining annotation set. * Qualifiers (built-in or user defined). As @Qualifier are defined in JSR 330, we shouldn't take them to avoid the same issue than in CDI-377 * @Alternative : could bring a lot of issue regarding if the bean this alternative replace has been detected as a bean. And since activating an alternative requiers using beans.xml, it's not very far to switch the bean-discovery-mode to all * @Specialize : same remark about the specialized bean being considered as a bean * @Typed : the only class level annotation that would be easily added to the set. But is it necessary ?	0	0	https://issues.jboss.org/browse/CDI-427
2717	CDI-425	This means we should enrich Javadoc for all initialization event. Do you propose a modification in the spec as well ?	1	1	https://issues.jboss.org/browse/CDI-425

#	Requirement	Questions	Answered	Successfully Answered	URL
2718	CDI-420	bq. The only difference in practice is to create the AnnotatedType + fire the PAT events... Well, if a bytecode scanning lib such as [jandex|https://github.com/wildfly/jandex] is used then a user may supply a pre-built index and you only need to load the index from the jar to be able to skip irrelevant classes. But you're right that the difference probably will not be significant. bq. But the huge benefit is that most CDI Extensions would work... Maybe we should build a list of extensions not working with {{annotated}} and add a FAQ entry on [http://cdi-spec.org/]? bq. Regarding using @WithAnnotations as input for the scanner. Imo that would be a chicken-egg problem. Well, even now an extension is allowed to add a bean defining annotation, see for example {{BeforeBeanDiscovery.addStereotype()}}. But you're right that it's problematic (Weld does not support this in all environments atm). bq. How about bean-discovery-mode = 'scanning'... Sounds better. Let's continue with ideas. What about {{activated}} in the sense that a type is activated if it has a bean defining annotation after the type discovery finished?	1	1	https://issues.jboss.org/browse/CDI-420
2719	CDI-420	you were faster than me [~mkouba] ;). So behavior of type discovery in annotated mode is well defined. The question is: is it better to introduce a new mode (and confusion) or change the behavior of {{annotated}} mode (what would be the real side effect).	1	1	https://issues.jboss.org/browse/CDI-420
2720	CDI-420	I am a bit confused. I thought this discussion is to include some classes that are not beans in the implicit bean archives. In Martin's suggestion, it is to exclude classes. Do you mean "include" or I might have missed something?	1	1	https://issues.jboss.org/browse/CDI-420
2721	CDI-420	Martin, can you elaborate a bit more on how to achieve the requirement of processing all classes with the exclude filter?	1	1	https://issues.jboss.org/browse/CDI-420
2722	CDI-420	I fear it's confusing for the user. Please remember that the whole ticket is mostly for fixing a behaviour which is imo broken since the very early days: to prevent automatically pick up all classes as @Dependent scoped beans, even if they have no single CDI annotation at all. Those are in 99.9999% cases just pure waste in our memory. Otoh we cannot enable this for all classes as there might be some jars which depend on it. Thus we need to activate this per classpath entry. There was a first attempt to fix this behaviour with the bean-discovery-mode="anotated". And it didn't work out because of the aforementioned problems. I thought about Martins proposal for two days now. It is certainly interesting but I don't yet see any benefit in having a second configurable exclude mechanism which exceeds this basic rules. Are there any other use cases you have in mind? Because if the above reason is the only one then I find it overreaching.	1	1	https://issues.jboss.org/browse/CDI-420
2723	CDI-420	I had a further thought on this: We could introduce 'include'. {code:java} <beans xmlns="http://xmlns.jcp.org/xml/ns/javaee" bean-discovery-mode="annotated"> <!-- These filters are applied before type discovery --> <scan> <include name="my.packages.no.beans.*" /> </scan> </beans> {code} This will cause the classes to be scanned and opted in for type discovery. It is similar to Martin's approach. Is this easier to be understood? just my 2cents.	1	1	https://issues.jboss.org/browse/CDI-420
2724	CDI-420	Why not {{<turn-off-beans-if-they-dont-have-bean-defining-annotations />}} (I'm kidding)? It needs a good term. I like the idea, but the naming needs to be better for it to be usable I think.	0	0	https://issues.jboss.org/browse/CDI-420
2725	CDI-409	Antonio, how would the underlying runtime environment know which DataSource to load? And why would only one alternative be enough? Certainly, developers will want to have more options (integration, qa, pre-production).	0	0	https://issues.jboss.org/browse/CDI-409
2726	CDI-408	Thanks [~jason.greene] and [~pmuir] . That means that we should enhanced the list of _bean defining annotations_ by adding {{@Observes}} and {{@Produces}} to them and introduce the fact that _bean defining annotations_ can be *inside* a class. Is it ok for everyone?	1	1	https://issues.jboss.org/browse/CDI-408
2727	CDI-408	extending the bean defining annotations with annotations from the class itself is no problem. But having to go into the class and define producer methods or fields, etc as bean defining would be much more work. You should also think about what happens with a producer method which is contained in a super class. Does that mean we should pick up the child class as dependent scoped? Imo we should have a few very clear rules. Not too many rules and not too complex ones. If a user expects a class to get picked up is only a matter the learning curve ;)	1	1	https://issues.jboss.org/browse/CDI-408
2728	CDI-408	Honestly I don't understand [~struberg]. Today in CDI 1.0 and in CDI 1.1 with {{bean-discovery-mode=all}} mode we do these deep class analysis. So the code is already there in implementations. Ok, it probably has to be adapted but I don't see where is the "much more work" in term of dev. Solution at the impl level are multiple : * Start as if we where in {{bean-discovery-mode=all}} and use the same mechanism that reject non eligible class (after finding no default constructor for instance) or that {{@Vetoed}} it, if it doesn't contain bean defining annotation * Use annotation processing to decide at compile time. My understanding of the {{annotated}} bean discovery mode is not about optimization, it's about CDI automatic activation. If it's optimized it's better but the first goal is to provide CDI implicitly. For me it's not important if the {{annotated}} bean discovery mode take the same amount of time at boot time than {{all}} bean-discovery-mode and that's the only risk we take here in term of "much more work". IMO The real question is "does this feature is interesting for the end user ?" and then "how much does it costs in terms of dev and perf ?". In this particular case I won't say the feature is awesome but the lack of it is very not user friendly. We have zillion forum post and stack exchange "bug" out there about CDI 1.0 users forgetting {{beans.xml}} in their app. Now that we provide the mean in CDI 1.1+ to get rid of this file I really think we should do it as complete as possible. Regarding the producer method in superclass, I'm not sure to totally understand your use case. Can you give an example ?	1	1	https://issues.jboss.org/browse/CDI-408
2729	CDI-407	{quote} @Named public class A @Named @Alternative public class B extends A What should acutally happen if B is activated via beans.xml? {quote} I think this is already covered in [4.1. Inheritance of type-level metadata|http://docs.jboss.org/cdi/spec/1.2/cdi-spec.html#type_level_inheritance], [5.3.1. Ambiguous EL names|http://docs.jboss.org/cdi/spec/1.2/cdi-spec.html#ambig_names] and other related sections. Note that bean names are not inherited unless specialization is used! Regarding your example: * bean A has a bean name "a" * bean B has a bean name "b" * so the names do not collide and even if you declare B as a selected alternative for a bean archive, EL expressions like #{a.foo} will not be affected, "a" will be resolved to bean A * bean name "b" will only be resolved to bean B if it's selected If we modify the example to: {code:java} @Named("a") public class A @Named("a") @Alternative public class B extends A {code} * both beans have the same bean name * if you declare B as a selected alternative, the name "a" will be resolved to bean B	1	1	https://issues.jboss.org/browse/CDI-407
2730	CDI-407	Yep, thats what i expected. In this case, is there any reason to still install/configure A as active bean? As there is no qualifier or stereotype available, it would be possible to automatically install B as @Named("a") without explicity giving it a name. Or do i miss something here? @Named("a") is a workaround but feels "ugly" and you always have to synchronize the names.	1	1	https://issues.jboss.org/browse/CDI-407
2731	CDI-407	[~tandraschko] {quote} In this case, is there any reason to still install/configure A as active bean? {quote} I'm not sure. Probably not in this very special scenario. But this is how it is defined right now and changing the behaviour wouldn't be backwards compatible. {quote} @Named("a") is a workaround but feels "ugly" and you always have to synchronize the names. {quote} You can still use String constants to avoid error-prone sync :-)	1	1	https://issues.jboss.org/browse/CDI-407

#	Requirement	Questions	Answered	Successfully Answered	URL
2732	CDI-407	[~struberg] Mark, I'm not following the example with interfaces. Could you try to describe it in another way? :-)	1	1	https://issues.jboss.org/browse/CDI-407
2733	CDI-392	Maybe a magic formula "non-portable behavior results" would be more consistent with the spec. than "in order to prevent random behaviour" as it is used throughout the whole text. WDYT? Otherwise good for me as well.	1	1	https://issues.jboss.org/browse/CDI-392
2734	CDI-392	If you know upfront that the container throws an exception, how is that random?	1	1	https://issues.jboss.org/browse/CDI-392
2735	CDI-392	Thanks for the input [~jharting]. What do you think of this wording guys ? {quote} Most operations of BeanManager may be called at any time during the execution of the application. However calling some BeanManager operations before the AfterDeploymentValidation event is fired will cause the container to throw an IllegalStateException (The container is permitted to define a non-portable mode in which these operation may be called from an observer of the AfterBeanDiscovery event) {quote}	1	1	https://issues.jboss.org/browse/CDI-392
2736	CDI-392	Even if it looks like a common statement after negotiations between 2 political party ;-) What do you think [~struberg] ?	1	1	https://issues.jboss.org/browse/CDI-392
2737	CDI-392	{quote} Well, there is nothing in the API which says that this is optional for the BeanManager. {quote} If I look at the javadoc of {{getBeans(Type beanType, Annotation... qualifiers)}} at the end I read {quote} *Throws :* *IllegalStateException* - if called during application initialization, before the AfterDeploymentValidation event is fired The container is permitted to define a non-portable mode in which getBeans(Type, Annotation...) may be called from an observer of the AfterBeanDiscovery event. {quote} My understanding was that it's not allowed but that an implementation is allowed to define a non-portable behavior by allowing the call after AfterBeanDiscovery event is fired. From what you say [~struberg], I understand that I misunderstood that point. So why don't we forbid definitively call to these operations before AfterDeploymentValidation event to avoid junior developers to create futur bugs ?	1	1	https://issues.jboss.org/browse/CDI-392
2738	CDI-392	Do we have an updated version of the change?	1	1	https://issues.jboss.org/browse/CDI-392
2739	CDI-392	I can't honestly remember why it is there. Have you checked the commit log?	1	1	https://issues.jboss.org/browse/CDI-392
2740	CDI-392	Since the behavior of these extension is not predictable on Weld 2.x, wouldn't be a better idea to remove the mention and the support (don't even know if Weld 2.x implement this non portable behavior) to make things clear ? Correct me if I'm wrong but Seam Solder is deprecated ?	1	1	https://issues.jboss.org/browse/CDI-392
2741	CDI-392	As we agree that those sentences make no sense: should we remove those?	1	1	https://issues.jboss.org/browse/CDI-392
2742	CDI-382	Thx. Yes the new workflow is only applied on "bug" and "feature request". I'm going to investigate why.	0	0	https://issues.jboss.org/browse/CDI-382
2743	CDI-370	Shouldn't the web socket initiate an HTTP request to emulate this? or is this a sign that the CDI spec is too closely tied to the Servlet spec WRT scope maintenance.	0	0	https://issues.jboss.org/browse/CDI-370
2744	CDI-370	What is the status on this? Will there be an errata or something?	0	0	https://issues.jboss.org/browse/CDI-370
2745	CDI-370	Is there any alternate solution till this get's fixed?	1	0	https://issues.jboss.org/browse/CDI-370
2746	CDI-370	Just wondering, could CDI-30 be used to solve cases like this?	0	0	https://issues.jboss.org/browse/CDI-370
2747	CDI-352	I've tried to make it clearer that this is wrong. Is there a CDI TCK issue for this?	0	0	https://issues.jboss.org/browse/CDI-352
2748	CDI-348	Please clarify "inherits a scope from a stereotype". Does this mean that if there's a scope defined as part of the stereotype that it is not applied to the bean that is annotated with the stereotype?	0	0	https://issues.jboss.org/browse/CDI-348
2749	CDI-323	Isn't it treated by 6.5.3? {quote} The container must ensure that every injection point of type InjectionPoint and qualifier @Default of any dependent object instantiated during this process receives: * an instance of InjectionPoint representing the injection point into which the dependent object will be injected, or * a null value if it is not being injected into any injection point. {quote}	1	0	https://issues.jboss.org/browse/CDI-323
2750	CDI-320	Your quote of the spec seems a bit old. The current spec says {quote} The container must fire an event, before it processes a type, for: • every Java class, interface or enum discovered • each Java class, interface or enum that must be delivered to a ProcessAnnotatedType observer, where the event parameter is annotated with @WithAnnotations. {quote} I think the use case of adding an annotation thru an {{AnnotatedType}} in {{BeforeBeanDiscovery.addAnnotatedType()}} or {{AferTypeDiscovery.addAnnotatedType()}} is very unlikely, but we could change the previous wording by {quote} The container must fire an event, before it processes a type, for: • every Java class, interface or enum discovered • *every {{AnnotatedType}} representing a Java class, interface or enum added by {{BeforeBeanDiscovery.addAnnotatedType()}} or {{AferTypeDiscovery.addAnnotatedType()}}* • each Java class, interface or enum that must be delivered to a ProcessAnnotatedType observer, where the event parameter is annotated with @WithAnnotations. {quote} Wdyt ?	1	1	https://issues.jboss.org/browse/CDI-320
2751	CDI-319	Is splitting a package between the WEB-INF/classes directory of a war and a directory in the JVM classpath portable, then?	0	0	https://issues.jboss.org/browse/CDI-319
2752	CDI-304	Per JLS 5.1.9 "Use of an unchecked conversion generates a mandatory compile-time warning" (this is a unchecked conversion), therefore, I think CDI should do just the same. It should work, but generate a warning. WDYT?	1	1	https://issues.jboss.org/browse/CDI-304
2753	CDI-304	Mark, I don't follow your comment. What do you mean with "ambiguous situations"? If you have multiple producer methods "which map to different generic types of the same base type" each PM has a different bean type (e.g. Foo<String> and Foo<Integer>), or not? I also found this sentence in 3.3 Producer methods: "If a producer method return type contains a wildcard type parameter the container automatically detects the problem and treats it as a definition error." This seems a little bit inconsistent to me. We would allow raw return type and disallow type with wildcard... but there is probably some reason I don't see.	1	1	https://issues.jboss.org/browse/CDI-304
2754	CDI-304	Just for the record, there are other combinations of required/bean type where CDI assignability rules are different from Java assignability rules. However, I do not have a strong argument against the proposed solution. Pete, you originally mentioned that a warning should be generated in such a case. Will this be a spec requirement?	1	1	https://issues.jboss.org/browse/CDI-304
2755	CDI-304	5.2.4. "Assignability of raw and parameterized types" now says {quote}A raw bean type is considered assignable to a parameterized required type if the raw types are identical.{quote} 8.3.1. "Assignability of raw and parameterized types for delegate injection points" says: {quote}A raw bean type is considered assignable to a parameterized delegate type if the raw types are identical *and all type parameters of the delegate type are either unbounded type variables or java.lang.Object.*{quote} Wouldn't it make sense to make these two assertions coherent? Note that the fact that the spec mentions this specifically in 8.3.1 indicates that the current wording of 5.2.4 (changed as a result of this issue) had not been originally intended in CDI 1.0!	1	1	https://issues.jboss.org/browse/CDI-304
2756	CDI-294	What do people think should happen instead if a Servlet class is injected? Options I can see: (a) UnsatisfiedResolutionException (b) return the instance the Servlet container is currently using I prefer (a). Also note that the Java EE EG is discussing this problem.	0	0	https://issues.jboss.org/browse/CDI-294
2757	CDI-289	Where is the FAQ? I would like to know how to proceed in such cases	1	0	https://issues.jboss.org/browse/CDI-289

#	Requirement	Questions	Answered	Successfully Answered	URL
2758	CDI-282	In fact I was thinking of something like this: {code} @Vetoed @Target({ TYPE, METHOD, PARAMETER, FIELD }) @Retention(RUNTIME) @Documented @Qualifier public @interface Predator { } /** * Predator annotation is vetoed. Does it mean the Tiger bean has Any and Default qualifiers only? */ @Predator public class Tiger { } {code}	1	1	https://issues.jboss.org/browse/CDI-282
2759	CDI-282	Martin, should we support @Vetoed on annotations at all? We don't fire ProcessAnnotatedType for them neither, isn't? It just sounds crazy to use a veto annotation on a CDI annotation. You could simply comment out the @Qualifier and get the same effect ;)	0	0	https://issues.jboss.org/browse/CDI-282
2760	CDI-282	package annotations are broken by design anyway. Didn't we drop that already?	0	0	https://issues.jboss.org/browse/CDI-282
2761	CDI-280	I won't go back in terminology war. I'm the newbie here and understand my user / usage oriented pov is not widely shared ;). Anyway, I think we're too late to produce a quality work on this. I propose we postpone this lexical dispute for 2.0 where most of the spec will more deeply reviewed. So I think we should remove this ticket from 1.2. WDYT?	0	0	https://issues.jboss.org/browse/CDI-280
2762	CDI-280	bq. The proxy for a Contextual Instance should be referred to as 'Contextual Reference' Or why not just call the proxy a proxy? If the origin of the proxy is not clear, call it a CDI proxy. In either way, I find that "contextual reference" is confusing.	1	0	https://issues.jboss.org/browse/CDI-280
2763	CDI-280	What is a "tenant proxy"? You mean a proxy written by the application developer himself? If so, then I'd not worry about it at all. Half of the rest is related to EJB and JPA. If CDI enforce different proxy types, then it should be clarified (but it doesn't right?). "CDI proxy" would be a valid term that encapsulate all types (but again, there are no different CDI proxy types?), or just "proxy" for short. The bottom line is that if we deal with a proxy, why not just call it that? Everything in the spec is "contextual" already. The word feels a bit bloated. Actually, I think that the word "proxy" is one of those things that is quite clear without semantic noise. Now you want to replace all references made to a proxy with "contextual reference"? I just don't get it why.	0	0	https://issues.jboss.org/browse/CDI-280
2764	CDI-277	On event1 I would expect to be called: observer1 of BeanA on an instance of BeanB observer1 of BeanA on an instance of BeanC observer1 of BeanB on an instance of BeanB observer1 of BeanC on an instance of BeanC observer1 of BeanA is NOT called on an instance of BeanA because it is specialized On event2 I would expect to be called: observer2 of BeanB on an instance of BeanB observer2 of BeanC on an instance of BeanC observer2 of BeanA is NOT called because BeanB and BeanC override it and no instance of BeanA exists, because BeanC specializes it. On event3 I would expect to be called: observer3 of BeanB observer3 of BeanC observer3 of BeanA is NOT called because BeanA is specialized On event4 I would expect to be called: observer4 of BeanB observer4 of BeanC observer4 of BeanA is NOT called because BeanA is specialized wdyt?	1	1	https://issues.jboss.org/browse/CDI-277
2765	CDI-277	~jharting ok, let me rephrase: A non-activated @Alternative is _never_ target of a CDI event. The @Alternative must be enabled to get a CDI event. What I meant is that just having another @Alternative class B implements X for class A implements X will NOT disable any observer method in class A!	0	0	https://issues.jboss.org/browse/CDI-277
2766	CDI-277	What's X?	0	0	https://issues.jboss.org/browse/CDI-277
2767	CDI-276	That brings another point [~petemuir], In the spec we define a very binary behavior : either the container accept the defined state or the container "treats this as definition error". Shouldn't we also have "the container should raise a definition warning" for case like this one?	1	1	https://issues.jboss.org/browse/CDI-276
2768	CDI-276	Java EE specifications rarely contain as many error conditions as CDI, nor do they specify what happens in these situations as much as CDI does. So we could discuss with the EG introducing this warning requirement, but it's diverging a lot from other specs. Also, it would be very hard to test that it actually happens AFAICT.	0	0	https://issues.jboss.org/browse/CDI-276
2769	CDI-275	oki, in other words if I have a {code} @RequestScoped @Stateful public class MyBean { ... } {code} Then what happens with the lifecycle? Will it get destroyed at the end of the request or not?	0	0	https://issues.jboss.org/browse/CDI-275
2770	CDI-275	yes this part explains it but something is still not very clear IMO: should a remove method be mandatory or does it work without any @Remove method? there is nothing blocking to make it optional technically since it was needed only to be able to run the remove hook but since we manage the lifecycle now we can do it internally so i think a sentence should be added to clarify it wdyt?	0	0	https://issues.jboss.org/browse/CDI-275
2771	CDI-271	Arne: What do you think about my proposal for CDI-20? Maybe this can be used here too.	1	1	https://issues.jboss.org/browse/CDI-271
2772	CDI-271	look like good additions. Could you make it to the next weekly EG meeting on monday 18:00 CEST ?	0	0	https://issues.jboss.org/browse/CDI-271
2773	CDI-271	I'm not sure that it's right to reuse InjectionPoint, as it has other stuff on it that perhaps doesn't make sense (e.g. what do getMember() return, getAnnotated() , isDelegate() and isTransient() return)? And also, the case of doing the fire via BeanManager would not fit well. How about introducing {code} public interface EventCaller { public Set<Annotation> getEventQualifiers(); public Type getEventType(); } Which could be injected into an event observer?	1	1	https://issues.jboss.org/browse/CDI-271
2774	CDI-271	Just saw, that section 5.5.7 already is changed so that Instance.get() is an injection point. For this issue it would suffice to add Event.fire() here and to clarify that for Instance.select(...).get() and Event.select(...).fire(...) the InjectionPoint.getType() returns the selected type and InjectionPoint.getQualifiers() contains the selected qualifiers. We don't have to touch the Annotated then. WDYT? Shall I write a proposal?	1	1	https://issues.jboss.org/browse/CDI-271
2775	CDI-271	Arne, can you write a patch on the spec? I can review and apply then...	1	1	https://issues.jboss.org/browse/CDI-271
2776	CDI-271	Where's the link to the pull request?	1	1	https://issues.jboss.org/browse/CDI-271
2777	CDI-271	What happens when an observer defines an InjectionPoint parameter but the event was fired using BeanManager instead of Event? The spec does not currently seem to define this.	0	0	https://issues.jboss.org/browse/CDI-271
2778	CDI-271	I like CallerAttributes, but would this be just for Events? If so wouldn't EventAttributes make sense? @Arne - why would getMember and getAnnotated return null? Wouldn't getMember be the BeanManager and getAnnotated also be the BeanManager?	1	1	https://issues.jboss.org/browse/CDI-271
2779	CDI-271	At this point, I don't want to add new features like supporting BeanManager here. So Arne, can you create a new issue for that?	0	0	https://issues.jboss.org/browse/CDI-271
2780	CDI-265	I'm not sure I'm following. Provided we have an EAR with two web modules. What is the payload of an @Initialized(ApplicationScoped.class) event? Object?	0	0	https://issues.jboss.org/browse/CDI-265
2781	CDI-259	Pete, do you know if this is still needed? I think we have the same by simply observing the @Initialized(ConversationScoped.class) and injecting a Context which can then be asked for .isTransient(); So you can tell apart whether someone really did hit the Conversation#begin() or if it will end at the Request boundary	1	0	https://issues.jboss.org/browse/CDI-259

#	Requirement	Questions	Answered	Successfully Answered	URL
2782	CDI-255	h3. Proposal The Java EE container should create a producer for every resource available to the application, following these rules: * If there is more than one resource of that type available to the container, a producer is not created, and should be aliased using a resource producer * If the application already defines an enabled bean of that type, the container should not create the producer. OPEN QUESTION: Should the container create a qualified producer in this case? * The qualifiers should be {{@Default}} and {{@Any}} * The bean types should be the transitive closure of the type hierarchy of the type of the resource * The scope should be {{Dependent.class}} h3. Implementation Notes * The Java EE container can register each producer using the {{AfterBeanDiscovery.addBean()}} event * The Java EE container can create the bean by: *# Implementing the {{Producer}} interface, simply returning the relevant resource (e.g. using a JNDI lookup) in {{produce()}} and doing nothing in {{dispose()}}. The set of injection points can be empty. *# Calling BeanManager.createBean(), passing in an implementation of {{BeanAttributes}} that implements the requirements described above (with null for name, an empty set for stereotypes, and false for alternative and nullable), the producer created in (1) and the type of the resource for the bean class *# Calling {{AfterBeanDiscovery.addBean()}} passing in the bean created in (2)	0	0	https://issues.jboss.org/browse/CDI-255
2783	CDI-255	Yes you're right, sorry for the mistake. Anyway don't you think this should be in EE 8 spec not CDI ?	1	0	https://issues.jboss.org/browse/CDI-255
2784	CDI-248	do you fire customers for any other reason? I'm thinking you can use [EventMetadata|http://docs.jboss.org/cdi/api/1.1/javax/enterprise/inject/spi/EventMetadata.html] to find out if an appropriate qualifier is on there.	0	0	https://issues.jboss.org/browse/CDI-248
2785	CDI-245	I would prefer to explicitly allow extensions to use BeanManager.getExtension(). WDYT?	0	0	https://issues.jboss.org/browse/CDI-245
2786	CDI-245	> Today, the only thing you can inject in a portable fashion is the BeanManager. In CDI-1.0 it's just undefined what you can inject at bootup. We can only exclude what explicitely is forbidden or defined to get started afterwards. But there is currently no wording that specifies that e.g. @Stateless beans cannot be @Injected. For Extensions I looked at 11.5: {quote} The container instantiates a single instance of each extension at the beginning of the application initialization process and maintains a reference to it until the application shuts down. The container delivers event notifications to this instance by calling its observer methods. For each service provider, the container must provide a bean of scope @ApplicationScoped and qualifier @Default, sup- porting injection of a reference to the service provider instance. The bean types of this bean include the class of the service provider and all superclasses and interfaces. {quote} Thus a.) all Extensions get loaded before the first container lifecycle event gets fired b.) all Extensions are beans which are available for injection c.) all Extensions are @ApplicationScoped. I guess the problem is that the ApplicationContext only gets started after AfterDeploymentValidation, right? In DeltaSpike we currently use the Extension injection for runtime communication between an Interceptor and it's Extension and not at boot time.	1	1	https://issues.jboss.org/browse/CDI-245
2787	CDI-245	I pondered for a while over that same paragraph, when I came to my conclusion that extensions aren't defined as beans. Typically, when the spec wants something to be a bean, it says "is a ... bean" e.g. 3.1.1 (Managed beans) {quote} A top-level Java class is a managed bean if it is defined to be a managed bean {quote} or 3.2 (Session beans) {quote} A session bean is a bean that is implemented by a session bean with an EJB 3.x client view. {quote} On the other hand, when the spec wants the container to provide a bean which provides access to an externally managed resource it says "must provide a bean" e.g. 3.7 (Additional built-in beans) {quote} A Java EE or embeddable EJB container must provide the following built-in beans, all of which have qualifier @Default: a bean with bean type javax.transaction.UserTransaction, allowing injection of a reference to the JTA UserTransaction, (etc) {quote} To me, it's fairly clear that the spec isn't saying "UserTransaction is bean", but is saying "There must be a bean that represents the UserTransactions". Here, the spec clearly uses the second form, so my reading is that "the container must provide a bean that represents the extension". I think this reading is backed by the spec saying "An extension is a service provider..." and "For each service provider,...", and then going on to refer to the "extension", and not the "extension bean". Firstly, because it clearly says "an extension *is a* service provider" and not "an extension is a bean implemented by a service provider" (or better written words to that effect). Secondly, because the spec is quite clear about when something is a bean or not elsewhere, and here it makes no effort to say "an extension is a service provider". WDYT? Do you see why I came to this conclusion? Regarding field injection into a service provider, I don't believe that has ever been allowed specifically by the specification (it always talked about injection into the observer method only), and I think that this makes sense. The "If other beans are injected into a service provider" was something I added to EDR1, that I think was a mistake now. I also choose not to address defining anything other than the container firing lifecycle events as non-portable, as I don't believe I have a good answer to that question right now. I would actually much prefer we restrict it by defining something on observer methods such as "an extension observer method need only to respond to container lifecycle events fired by the container and need not respond to events fired by an application" or something like that. WDYT?	0	0	https://issues.jboss.org/browse/CDI-245
2788	CDI-233	Sorry, I meant bundled library, not shared library. However it looks we're on roughly on the same level here. Mark, do you have another proposal?	0	0	https://issues.jboss.org/browse/CDI-233
2789	CDI-232	I doubt there is an implementation that would be following this. What can be implied from the spec is that if you obtain the Bean<?> object for the built-in Instance bean and call Bean.getTypes() you should get a huge set of Instance<X> and Provider<X> where X is every possible Java type that matches "2.2.1. Legal bean types". I think that this would not even be a finite set most of the time so typesafe resolution cannot clearly work this way for the Instance bean.	1	1	https://issues.jboss.org/browse/CDI-232
2790	CDI-232	yes [~jharting], that's why I was starting to propose a new way to define the behaviour. Saying that the container doesn't provide all the Instance for all bean type but only check that the Instance you injected is related to a valid bean type. Do you mean that the current behaviour allow me to put a non valid bean type (inject Instance<Foo> where no beans exist with Foo type) ?	1	1	https://issues.jboss.org/browse/CDI-232
2791	CDI-232	So now what doe getBeanTypes return?	1	1	https://issues.jboss.org/browse/CDI-232
2792	CDI-229	Wdyt about naming it @Propagate? Because that's what it does basically...	0	0	https://issues.jboss.org/browse/CDI-229
2793	CDI-229	Definitely useful. However, note that this does not match the existing SPIs as nicely as it could because CDI currently does not expect stereotypes to have members and thus works with annotation classes instead of annotation instances. For example: BeanManager: Set<Annotation> getStereotypeDefinition(Class<? extends Annotation> stereotype) BeanAttributes: Set<Class<? extends Annotation>> getStereotypes()	0	0	https://issues.jboss.org/browse/CDI-229
2794	CDI-228	folks, this is still not clarified but an important point for CDI-1.1 Are method parameters for producer methods now assumed 'Transient' or 'Keep' ? The CDI-1.1 draft completely ignores this new 'Transient' stuff by now, thus all our serialisation rules are a bit broken atm as well...	1	1	https://issues.jboss.org/browse/CDI-228

#	Requirement	Questions	Answered	Successfully Answered	URL
2795	CDI-228	Can someone please change the title of this ticket.	1	1	https://issues.jboss.org/browse/CDI-228
2796	CDI-228	Would it make sense to expose the fact that @DestroyedAfterBlock is present (or whatever the annotation name is) through the InjectionPoint interface?	0	0	https://issues.jboss.org/browse/CDI-228
2797	CDI-228	Hmm, still not sure what to call this. @Independent is just too weird for me. It sounds like the opposite of @Dependent, so therefore it's a new pseudo scope, but of course it's not. I understand that it doesn't feel like your FacesContext is destroyed after the block, but your reference to it would be (it won't be disposed, it will be destroyed). A better version might be @ReleaseAfterBlock? Which is still indicating that you are changing the scope of the reference from the class to the block. WDYT?	0	0	https://issues.jboss.org/browse/CDI-228
2798	CDI-228	Hmm, I agree with your objections about @Independent, but annotations like @DestroyedAfterBlock or @ReleaseAfterBlock really don't fit into the spirit of CDI annotations. CDI annotations describe attributes (i.e. @Red as qualifier, @Transactional as an interceptor binding). The annotations proposed here describe behavior, which is something completely new for the CDI spec What about @IndependentReference or @TransientReference ?	0	0	https://issues.jboss.org/browse/CDI-228
2799	CDI-226	Thanks for picking this up from the discussion on the list! It's really better to have this here in the tracker. Pete, is there a way to link to a jboss mail archive? Or should we just copy the gist of the discussion over here?	0	0	https://issues.jboss.org/browse/CDI-226
2800	CDI-224	[~antoinesabot-durand] That does make life more difficult, but would it really hurt if the Decorator would also be applied in case of "helper class extension". Since those are highly unlikely to be injected? [~thenovot] Yes, however I don't see how the user error risk outways the benefit, it would also be true if a different annotation would be introduced or adding a new element to @Decorator. Alternatively, the type could be inferred from the @Delegate injection in case of extension. Another option which pops to mind, not my favorite, is declaring the to be decorated type in the annotation @Decorator(MyRealBean.class). This could then override the interface type inference and be mandatory for extension.	0	0	https://issues.jboss.org/browse/CDI-224
2801	CDI-223	@Stateful + @EJB User may turn the use-case into something rigid/theoretical, don't you think? Back to to the example, @Remote can't marry with CDI's jurisdiction boundaries. It's obvious and at the same time I feel there's going to be a lot of questions on user forums. It kind of reminds me of the lazy loading issue on detached JPA entities. Well, so, logically (though it will require careful documenting), the only option is to pass a reference to the content you want to use within your EJB. Either you ask developpers to create an intermediate cdi-free "copy" of User(sounds oldschool to me), or take the road Mark outlined. Unless there are so few Remote-EJB/CDI users that this issue is pointless (for this CDI revision at least), I think we have no choice.	0	0	https://issues.jboss.org/browse/CDI-223
2802	CDI-220	Well Martin, I fear the CDI spec is not 100% clear as it says that session beans also must be treated as managed beans... It would be more clear if it would state 'Managed CDI bean' or anything like that. Look at "3.1.1. Which Java classes are managed beans?" > A top-level Java class is a managed bean if it is defined to be a managed bean by any other Java EE specification, Which a session bean certainly is, isn't? hmm but it also states: > It is not annotated with an EJB component-defining annotation or declared as an EJB bean class in ejb-jar.xml. The confusion gets deeper because EJBs must also be held as Bean<T> in the BeanManager as required by the spec. JSR-316 (EE umbrella) btw seems to catched that as well and explicitly ranted about it ;) > "CDI-style managed beans" > We use this term to refer to classes that become managed beans per the rules > in the CDI specification (JSR-299), thus excluding managed beans declared using > the @ManagedBean annotation as well as EJB session beans, both of which would > be managed beans even in the absence of CDI. *scratches his head*	0	0	https://issues.jboss.org/browse/CDI-220
2803	CDI-219	I actually don't have strong arguments for @PreDestroy, the main one is symmetry, which is not completely fool since it's common to use the same resources in @PreDestroy as in @PostConstruct. Joe, I'm afraid I don't understand 2), (and I coudn't find Martin's comment): my suggestion is that in @Singleton @PostConstruct (and eventually @PreDestroy) the current RequestContext, if any, is "suspended" and "resumed" upon exit of the callback. Does this contradict 6.3? This would be coherent with transactional behaviour; otherwise we end up with a new transaction opened on the @Singleton @PostConstruct invocation, suspending the current one, all within the same RequestContext which could lead to weird side effects I think.	0	0	https://issues.jboss.org/browse/CDI-219
2804	CDI-219	Doesn't the TransactionContext (see CDI-121) already violate this principle? I suppose that, if a transaction is suspended and a new one is begun, the corresponding context is suspended as well and a new one is created/activated. I'm just guessing here about TransactionContext so maybe I'm wrong, but it seems to me that the threading semantics of CDI 1.0 is a bit limiting.	0	0	https://issues.jboss.org/browse/CDI-219
2805	CDI-219	Saying (a) "Contexts must always be joined if they are alive" and (b) "There aren't two alive at the same point in time on the same thread" are different things, right? My proposal for @Singleton @PostConstruct (and @PreDestroy) is that the RequestContext should behave exactly like the TransactionContext, that is, to suspend the current context and activate a new one; this does violate (a) but not (b), just like TransactionContext. Reading 6.3, it seems to me that (b) is clearly implied, but I cannot find (a), both in CDI 1.0 and in the current draft of 1.1. Am I missing something?	0	0	https://issues.jboss.org/browse/CDI-219
2806	CDI-213	Tom Jenkinson says {quote} Would it make sense to maintain the same restrictions as JMS? In JMS you can initiate a new transaction from onMessage, analogous to a method decorated with @Observes. If the method returns without completing the transaction then an error is logged and the transaction rolled back. Flowing a transaction from an event producer to an event consumer isn't a great idea (it doesn't work in JMS either). But allowing a consumer to control their own transaction does seem to make sense to me. Admittedly this is a gut reaction, I read through the Jira and the doc you linked to though, and used my JEE experience to draw analogies, do let me know if I got the wrong end of the stick please! {quote} So it sounds like it's sensible to specify as non-portable, as people might want to experiment with this. I'll raise a new issue for TBD to consider specifying how TX control works in observer methods.	1	1	https://issues.jboss.org/browse/CDI-213

#	Requirement	Questions	Answered	Successfully Answered	URL
2807	CDI-213	As far I can tell we can remove the current non portable statement and refer to the JTA spec instead. IN_PROGRESS observers are covered by http://java.net/jira/browse/JTA_SPEC-5, BEFORE_COMPLETION/AFTER_COMPLETION observers are covered by http://java.net/jira/browse/JTA_SPEC-6. How do you refer to a possibly clarified behavior in a future spec? ;) It looks like JTA_SPEC-5 is on it's way, JTA_SPEC-6 (that I created) shouldn't be to difficult after reading Marina's and Paul's comments on that topic (at least it could be declared non portable). ---------- Paul Parkison wrote: I would agree with the general approach/alignment that "CDI should rely on what's already specified for the platform especially for container and bean managed transactions and JTA synchronization callbacks" and that any ambiguous, etc. factors should be addressed in the JTA group/spec. [...] The CMT/EJB/CDI @Transactional/TransactionScopeaspect is being covered here: http://java.net/jira/browse/JTA_SPEC-5 I think that may still leave the finer clarification of what is legal in beforeCompletion. The introduction of the TransactionSynchronizationRegistry resulted in elaborating on the specification of Synchronization behavior (and of course beforeCompletion) as so the chapter 5 API ref is a better place to look, but indeed things like the ability to suspend/resume in a beforeCompletion method are not specified (the spec would actually seem to suggest that would not be legal/portable but at the same time I know it is possible, and likely used, in most if not all appservers).	1	0	https://issues.jboss.org/browse/CDI-213
2808	CDI-213	Jens. Can you tell me exactly what changes I need to make to the CDI spec, if any? Thanks!	0	0	https://issues.jboss.org/browse/CDI-213
2809	CDI-212	I'm somewhat confused. @Decorator cannot be applied to a sterotype. Wouldn't it be better to have an explicit createDecorator method?	1	1	https://issues.jboss.org/browse/CDI-212
2810	CDI-207	Any ideas what the payload should be? Object?	1	1	https://issues.jboss.org/browse/CDI-207
2811	CDI-207	Interesting. Should we actually use the Conversation id as the payload always?	1	1	https://issues.jboss.org/browse/CDI-207
2812	CDI-203	What are the bean types and qualifiers of the MDB?	1	1	https://issues.jboss.org/browse/CDI-203
2813	CDI-197	Jozef, what section of the spec does this relate to?	1	1	https://issues.jboss.org/browse/CDI-197
2814	CDI-196	erm, what do you like to tell us? This issue doesn't contain any issue report nor change request... Please insert .) what is fishy currently .) how do you like it to get changed.	1	0	https://issues.jboss.org/browse/CDI-196
2815	CDI-195	Does the spec state explicitely that instances can hold DIRECT references to the metadata. The container could inject serializable proxies of the metadata and restore the underlying metadata on deserialization.	0	0	https://issues.jboss.org/browse/CDI-195
2816	CDI-194	Do you have a good use case for this? I tempted to defer it.	1	1	https://issues.jboss.org/browse/CDI-194
2817	CDI-194	I worked around the issue Stuart described by observing the ProcessBean event and building up my own registry of annotated types. What do you think about this approach?	1	1	https://issues.jboss.org/browse/CDI-194
2818	CDI-194	Sorry, I'm not sure about this. I'm just utilizing ProcessBean events for "classpath scanning" (well correctly said "bean archive scanning", right;). In fact, as you mentioned, if there's a concrete class subclassing the abstract type you can traverse up the type hierarchy and find out the abstract one. However, to get the AnnotatedType representation of the identified abstract type, I'm utilizing Solder's AnnotatedTypeBuilder which of course isn't aware of any XML configuration. So if one could retrieve a Bean for the abstract type and if there was a Bean.getAnnotatedElement() method, this issue could be fixed nicely. Does my explanation make sense to you?	1	1	https://issues.jboss.org/browse/CDI-194
2819	CDI-194	My use case is the following: my framework operates on @Component annotated classes (@Component is a custom annotation). I want to rely on AnnotatedType infrastructure for two reasons: * CDI/the container does classpath scanning, why should I scan it with some other library again (additional bootstrap time/additional JAR libraries required for scanning etc.)? * I want to gain XML configurability through Solder XML without re-implementing it {code} public <X> void processBean(final @Observes ProcessBean<X> event, final BeanManager beanManager) { final Annotated annotated = event.getAnnotated(); // detect @Component annotated types as managed types if (annotated instanceof AnnotatedType && annotated.isAnnotationPresent(Component.class)) { log.debug("Processing {}", annotated); final Type type = annotated.getBaseType(); // remember annotated type's super types (e.g., for the detection of abstract super classes, which are not // detected by CDI) typeClosureLoop: for (final Type superType : annotated.getTypeClosure()) { if (type.equals(superType)) continue typeClosureLoop; Class<?> superClass = null; if (superType instanceof Class) superClass = (Class<?>) superType; else if (superType instanceof ParameterizedType) superClass = (Class<?>) ((ParameterizedType) superType).getRawType(); // only classes and parameterized types, Object.class is ignored if (superClass != null && !superClass.equals(Object.class) && !discoveredComponentTypes.containsKey(superType)) { discoveredComponentTypes.put(superType, asAnnotated(superClass)); } } // remember annotated type itself discoveredComponentTypes.put(type, (AnnotatedType<?>) annotated); } } private <X> AnnotatedType<X> asAnnotated(Class<X> type) { return new AnnotatedTypeBuilder<X>() .readFromType(type) .create(); // how to do this with BeanManager? } {code} So, all @Component types discovered through @Observes ProcessBean<X> event are enriched with XML config annotations. However, as ProcessBean isn't fired for abstract types, and as there isn't another way to obtain an annotated type from BeanManager, I have to use AnnotatedTypeBuilder which doesn't honor XML configurations. When I was able to retrieve a properly Xml enriched annotated type from Bean or BeanManager, this issue was solved. PS: I use ProcessBean to ensure that Solder's XML config already wrapped the AnnotatedType with XML specified annotations. I cannot specify a dependency on Solder's extension being processed before mine, right?	1	1	https://issues.jboss.org/browse/CDI-194
2820	CDI-194	As Stuart points out, we need to return {{AnnotatedField}} for a producer field, {{AnnotatedMethod}} for a producer method, and {{AnnotatedType}} for managed and session beans. We also want to provide requirements for custom beans. {{Annotated}} is the only supertype of all these types, so should we add {{Annotated<?> getAnnotated()}} to {{BeanAttributes}}?	1	1	https://issues.jboss.org/browse/CDI-194
2821	CDI-184	Mathieu, would you be able to work up a proposal for CDI?	0	0	https://issues.jboss.org/browse/CDI-184
2822	CDI-180	>> However it doesn't cover various invocation scenarios. For example it's >> possible to do in-VM invocation (via remote interface) from the same >> deployment or from a different deployment. > >I don't see why the spec implies this is treated any differently. I think the real question here is that if you have 2 CDI applications, and they communicate via in-vm method calls, does the bean in the second application live for a single invocation, or does it last for the life of the calling request scope. I would assume the former.	0	0	https://issues.jboss.org/browse/CDI-180
2823	CDI-180	I think we need the exact definition of a remote method invocation lifespan from EJB to clear this up properly. Does anyone have this?	1	1	https://issues.jboss.org/browse/CDI-180

#	Requirement	Questions	Answered	Successfully Answered	URL
2824	CDI-180	I'm not sure if this falls under this category, but do we generally like to define what happens with remote and also with _async_ parts? E.g. if I have a bean which starts an async EJB task. At first it sounds very tempting to just promote the current RequestContext and SessionContext also over to this async task. But now think a bit about it. The user starts an async EJB method which needs 30 minutes (or even longer) to succeed. Immediately after kicking off the task (long before it finishes), the user logs out and the logOutHandler therefor destroys the Session. What will happen? Also please be aware that the methods to programmatically access a Session with a given Id got removed from the Servlet spec long time ago. Plus there are serialization issues. Back to your original problem (which is different, but the effect is pretty much the same): whenever we cross boundaries (threads, servers), this might work in some situations, but we will fail to support it in a generally valid manner.	1	1	https://issues.jboss.org/browse/CDI-180
2825	CDI-177	Would it not be cleaner to generally discuss how @Named qualifiers are defaulted, and then make the EL Name use that?	0	0	https://issues.jboss.org/browse/CDI-177
2826	CDI-169	I still don't understand where the bug is. Does spec forbid use of parametrized type as an event payload or not? Right now Weld detects problems on user-defined events only (not container lifecycle events). It's confusing but I'm not sure it is bug.	0	0	https://issues.jboss.org/browse/CDI-169
2827	CDI-164	Multiple reasons for reopening: h3. Bean Manager The spec says: Any decorators associated with BeanManager will not be applied. It is not clear whether this means that decorators are not applied to BeanManager objects injected into Extensions during bootstrap only or whether it means that injected BeanManager objects are never ever decorated. h3. The extension problem For each extension there is a bean that allows the extension to be injected into other beans. Should the injected extension support decoration? We can only support this at runtime (no decorators would be applied to extension instances at bootstrap). If we decide to support decoration of injected extension we should think about whether extension instances obtained via BeanManager.getExtension() should support decoration or not. h3. Consistency The spec says: "Decorators may be associated with any managed bean that is not itself an interceptor or decorator, with any EJB session bean or with any *built-in* bean." The spec currently defines a set of container-provided beans out of which a subset is referred to as "built-in" beans. For example, the injected InjectionPoint is not explicitly labeled as "built-in bean". The same applies for injected Bean, Interceptor, Decorator (5.5.8), Validator, ValidatorFactory, ConstraintValidator and extension beans. We should either say that decorators may be associated with any container-provided bean or we should explicitly label all the container-provided beans as "built-in". h3. Passivation Most of the built-in beans are passivation capable dependencies. We should required decorators of built-in beans to be passivation capable. Otherwise the container cannot store a decorator's state when it passivates e.g. an Event instance.	0	0	https://issues.jboss.org/browse/CDI-164
2828	CDI-162	Would the extended persistence context be bound to a scope (like the seam managed PC) or to a component (like a SFSB)? Personally I think a Extended PC bound to a scope would be much more useful than an extended PC bound to a component.	0	0	https://issues.jboss.org/browse/CDI-162
2829	CDI-162	What would the obstacles be from a CDI point of view? I think that handling extended persistence context inheritance across different component types would be possible (in theory). Since clustering an extended persistence context, isn't defined by any specifications, it probably isn't a blocking requirement to figure out how that would be done. However, serializing/deserializing the component chain when a managed bean is the top level component, would be good to consider (with regard to how that could work for implementations that support clustering of extended persistence contexts).	1	1	https://issues.jboss.org/browse/CDI-162
2830	CDI-162	Also would be good to consider what happens when a managed bean inherits the extended persistence context from a stateful bean and the stateful bean is passivated. * Does the managed bean also get passivated? * Or does the managed bean stay in memory and what about its reference to the extended persistence context (does the xpc stay in memory or is the reference cleared?)	1	1	https://issues.jboss.org/browse/CDI-162
2831	CDI-162	I think it would need to be bound to a scope, not to a component. I don't particularly see any obstacles from a CDI perspective. As Mark points out, trying to serialize the EntityManager isn't possible, so defining this for non-passivating scopes only is really our only option, in a clustered environment (or any other environment which tries to serialize the session). Scott, can you elaborate on what you mean about "serializing/deserializing the component chain when a managed bean is the top level component" - what do you need concretely?	1	1	https://issues.jboss.org/browse/CDI-162
2832	CDI-162	The extended persistence context (EntityManager) could be serializable. If the extended persistence context is not serializable the stateful bean will not be serializable as well. I'm not sure if this helps [with the concern raised here|https://struberg.wordpress.com/2012/04/25/is-there-a-way-to-fix-the-jpa-entitymanager]. From EJB3 core: {quote} 4.2 Conversational State of a Stateful Session Bean The conversational state of a stateful session object is defined as the session bean instance's field values, its associated interceptors and their instance field values, plus the transitive closure of the objects from these instances' fields reached by following Java object references. To efficiently manage the size of its working set, a session bean container may need to temporarily transfer the state of an idle stateful session bean instance to some form of secondary storage. The transfer from the working set to secondary storage is called instance passivation. The transfer back is called activation. In advanced cases, a session object's conversational state may contain open resources, such as open sockets and open database cursors. A container cannot retain such open resources when a session bean instance is passivated. A developer of a stateful session bean must close and open the resources in the A container may only passivate a stateful session bean instance when the instance is not in a transaction. A container must not passivate a stateful session bean with an extended persistence context unless the following conditions are met:[9] * All the entities in the persistence context are serializable. * The EntityManager is serializable. A stateless session bean is never passivated. [8] PrePassivate and PostActivate lifecycle callback interceptor methods. [9] The container is not permitted to destroy a stateful session bean instance because it does not meet these requirements. {quote} What I mean concretely about the top level component, is as follows. The extended persistence context is created at the time that a stateful bean is created (injection or jndi lookup) and that stateful bean is the "top most" stateful bean. When the "top most" stateful bean, injects or lookups another stateful bean that also has the same named extended persistence context, the additional bean inherits the extended persistence context. For the concrete example, please consider two cases, where the managed bean is the top most bean that has looked up a stateful session bean. I'm not quite sure what it would mean for the stateful session bean instance to be passivated (since the top most managed bean will still reference the persistence context (keeping the xpc pinned in memory). Even worse, would be if we are clustering and we failover the stateful session bean to another cluster node. I think for both of these respective cases, the managed bean would need to also be passivated or failed over to the same cluster node as the stateful bean. Does this make any sense?	1	1	https://issues.jboss.org/browse/CDI-162

#	Requirement	Questions	Answered	Successfully Answered	URL
2833	CDI-162	Actually, the EntityManager bean that is produced by Arne's code sample is passivation capable. As defined by 3.6.1, the bean is a "resource bean". And from 6.6.2 "all resources are passivation capable dependencies". So the CDI container will not choke on this definition. However, the real problem is the one Arne outlines in the last paragraph. Scott, the clustering team @ JBoss always planned to do some work on this. Do you know the status?	1	1	https://issues.jboss.org/browse/CDI-162
2834	CDI-162	I agree on the CDI problems and I state that this is even broken in EJB. Yes, I know the old answer that EJB container vendors might implement this as Serializable. But what about the users? How can a user ever implement a portable feature based on this non-reliable functionality? IF the JPA entities used are only using optimistic locking and have a way to transport id+version+state info _then_ it would be possible to auto-reattach via a Serializable EM. But that is beyond the business of this very JSR.	1	1	https://issues.jboss.org/browse/CDI-162
2835	CDI-160	Sure it would be a great solution but is it realistic to have this in a future CDI 1.1 MR or should we aim next release	0	0	https://issues.jboss.org/browse/CDI-160
2836	CDI-158	Are you talking about 'beans' in the sense of Bean<T> or in the sense of Contextual Instances?	0	0	https://issues.jboss.org/browse/CDI-158
2837	CDI-158	Are you taking about modifying all EJB and EE metadata via PAT events? This would be a very major change. From an AS7 perspective this would require a fairly big re-work of all affected subsystems, and would also have a negative performance impact as all services would end up with a dependency on weld bootstrap. I imagine other app servers would also require fairly major changes to support this.	0	0	https://issues.jboss.org/browse/CDI-158
2838	CDI-157	I know we talked about this on IRC, but where would an ordinal come into play for an extension? You won't have the same extension loaded twice. We're talking about executing extensions with a higher ordinal first, correct?	1	0	https://issues.jboss.org/browse/CDI-157
2839	CDI-154	{quote} we currently only check for Serializable and completely ignore Externalizable in the spec {quote} Isn't that because Serializable is a superinterface of Externalizable and therefore every class implementing Externalizable also (indirectly) implements Serializable?	1	0	https://issues.jboss.org/browse/CDI-154
2840	CDI-151	That's a pitty because I already spent some time creating TCK tests - e.g. {{org.jboss.cdi.tck.tests.context.jms.MessageListenerContextTest}} - and even filed an issue - see AS7-3107. Anyway where is this defined, JMS spec? It would be nice to have it referred...	0	0	https://issues.jboss.org/browse/CDI-151
2841	CDI-151	I talked to Nigel Deakin, JMS spec lead about this. Here is our correspondence: {quote} On 24/08/2012 22:51, Pete Muir wrote: > Thanks. > > On 24 Aug 2012, at 18:27, Nigel Deakin wrote: > >> Pete, >> >> On 24/08/2012 15:12, Pete Muir wrote: >>> Nigel, >>> >>> Could you cast your eye over https://issues.jboss.org/browse/CDI-151 and check that it does make sense? >>> >>> Related spec section is at http://docs.jboss.org/cdi/spec/1.0/html/contexts.html#d0e5377 >> >> I spotted this the other day and wondered about it. Are you ok with me > pasting this conversation into the issue? Yes, that's fine. > I'll resolve it by just deleting that text :-) Yes, I agree that's the most appropriate thing to do. Nigel {quote}	1	1	https://issues.jboss.org/browse/CDI-151
2842	CDI-151	So you're not allowed to consume JMS messages in EE container unless you use MDBs? Sounds a little bit limiting. {quote} However applications running in the Java EE web or EJB containers are forbidden from doing this (this prohibition is in the platform spec). {quote} Where is this defined? Cannot not find it in the EE 6 platform spec...	0	0	https://issues.jboss.org/browse/CDI-151
2843	CDI-144	Since I have been running into this issue lately: JPA does not recommend EntityManager interactions within JPA lifecycle callbacks*. Shouldn't we add a note somewhere that injected resources require special attention regarding JPA compliance? And because of that firing CDI events from a JPA entity listener is particularly dangerous? In my case I tried to implement global available created/updated/deleted entity events which turned out to be an bad idea if implemented on EntityListener level. * JPA Spec 3.5.2: In general, the lifecycle method of a portable application should not invoke EntityManager or Query operations, access other entity instances, or modify relationships within the same persistence context.[45] A lifecycle callback method may modify the non-relationship state of the entity on which it is invoked.	1	1	https://issues.jboss.org/browse/CDI-144
2844	CDI-142	here is an example of such a problematic scenario * EAR with webapp1 and webapp2 * EAR contains @ApplicationScoped MailService (in a shared ejb-jar) * webapp2 contains @Specializes MyOtherMailService extends MailService * we have proper ClassLoader isolation between webapp1 and webapp2 now we use @Inject MailService in webapp1 and webapp2, * what do they get? * what if we shutdown webapp2 programmatically? No impl specifics around here, just pure specc issues imo...	1	1	https://issues.jboss.org/browse/CDI-142
2845	CDI-139	I think we don't need anything like that. It happens that all (non EG) people I talked about this very problem (using Instance<T> for creating @Dependent beans) did not even understand that they created a memory leak! What can we do against it? We could of course add a destroy(Object) instance, but this might be hard to use. Of course, users would really need to use it and old code would still be broken. My solution: the injected Instance<T> itself is a managed contextual instance as well, and it has Scope @Dependent. Thus it is possible to add a @PreDestroy to it which will automatically get called by the container whenever the containing contextual instance will get destroyed. If we now in Instance#get() check if the created contextual instance is @Dependent and then store it in a List inside the respective Instance<T> instance, then we can also easily cleanup them in the @PreDestroy of Instance<T> which got used to create all the Dependent contextual instances. Thus we would not create any mem leaks anymore.	0	0	https://issues.jboss.org/browse/CDI-139

#	Requirement	Questions	Answered	Successfully Answered	URL
2846	CDI-139	> I think we don't need anything like that. Yes, we should certainly clarify that this is the behavior required, and this is actually what creates the "memory leak" in the first place. The issue is most apparent you associate the Instance with an application scoped bean, it means the memory won't be released until the application is undeployed. This is correct, but has unfortunate side effects. Weld implements this today, not via the impl you propose, but it has the same effect. There are a few optimisations we can do - if there is no @PreDestroy callback on the dependent bean, there is no need to hold a reference to it at all. We could also offer a mode where only a weak reference is held by Weld, so that when the app drops a reference, it can be gc'd. We could of course suggest people don't use Instance with application scoped beans, but this seems a bad restriction. I think offering a mode where people can manually clean up their Instances is useful. It won't affect the functionality of an app if you don't use it, but it can offer an optimisation people can use. > Additionally we need to specify, when @Dependent instances that are obtained via CDI.current() or > BeanManager.getReference(...) are destroyed. At least this should be happen on container-shutdown. Beans obtained via BeanManager must be manually cleaned up using Contextual.destroy(). We should add that instances obtained via CDI.current() will be treated as belonging to the lifecycle of the application, and so automatically cleaned up when the application is stopped. Can you file an issue for that? IMO this latter point also emphasises the need for a Instance.destroy() method, most of the time people will want their beans cleaned before the application is stopped.	0	0	https://issues.jboss.org/browse/CDI-139
2847	CDI-139	The proposal has been updated to account for CDI-89. Open issue is OPEN ISSUE: What name should the AlterableContext interface be given?	1	1	https://issues.jboss.org/browse/CDI-139
2848	CDI-132	things get more complicated. I think the current AnnotatedType maintains no 'relation' to it's parent class. Instead it contains the 'effective' model only. But this is imo not enough. It also doesn't say anything about modifiers public/protected/private. What should the AnnotatedType of the following class provide?: @ApplicationScoped public class MyBaseSvc { private @Inject EntityManager; ... } @ApplicationScoped public class DongService extends MyBaseSvc { ... }	1	1	https://issues.jboss.org/browse/CDI-132
2849	CDI-129	It might well be that the spec is contradicting. But however we turn this, the fact remains that there are 2 different scopes needed. 1 Webapplication scope and 1 ear scope. I doubt that the original intention of @ApplicationScoped was for EAR usage! It got added way later, but the historic evolution of the spec, and the fact that it heavily and easily integrates with EJBs allows that we just use EJBs for those cases you mentioned. We can still use EJBs for those things. If we would interpret @ApplicationScoped your way, then it would behave *heavily* different depending if the war gets used/tested standalone or as part of an EAR. That sounds just plain wrong imo. Btw, it IS possible to fulfil the the spec. In OWB we handle JMS, and quartzed jobs, etc as own 'applications' inside the EAR. So they get an own BeanManager and can even have their own Extensions. See what I mean?	1	1	https://issues.jboss.org/browse/CDI-129
2850	CDI-129	{quote} It might well be that the spec is contradicting. But however we turn this, the fact remains that there are 2 different scopes needed. 1 Webapplication scope and 1 ear scope. {quote} I think that there's a general agreement on that ;). It just remains to decide which direction should we head into. {quote} I doubt that the original intention of @ApplicationScoped was for EAR usage! It got added way later, but the historic evolution of the spec, and the fact that it heavily and easily integrates with EJBs allows that we just use EJBs for those cases you mentioned. We can still use EJBs for those things. {quote} Unless we have a clear record that @AppScoped was intended to be used in a way or another, any discussion about the original intent is purely conjectural. An @ApplicationScoped singleton and a @Singleton EJB are not even remotely the same thing. I can only read it clearly from the spec that the intent was to create a scope shared by all the components of an application. We are discussing now what exactly "application" means, and I cannot see any reason why would it mean something different than the Java EE application/module/component breakdown, especially since components outside a "web application" are called out explicitly. {quote} If we would interpret @ApplicationScoped your way, then it would behave heavily different depending if the war gets used/tested standalone or as part of an EAR. That sounds just plain wrong imo. {quote} How different exactly? If you are deploying two WARs as part of the same EAR or independently you are expected to see differences anyway, starting with the behaviour of the "java:app" namespace, CDI or not. {quote} Btw, it IS possible to fulfil the the spec. In OWB we handle JMS, and quartzed jobs, etc as own 'applications' inside the EAR. So they get an own BeanManager and can even have their own Extensions. See what I mean? {quote} So each EJB is an application by itself, or all EJBs share the same 'application' context? Because the latter is what the specification requires - see above.	1	1	https://issues.jboss.org/browse/CDI-129
2851	CDI-129	I can say with 99.9% certainty that Gavin (at least) intended the @ApplicationScoped to be "ear scoped" when deploying inside an EAR. Unfortunately we can't easily go back and check. Mark, can you explain what you mean by it behaving differently in this situation. As I see it, it actually is more consistent to make it work like this. Regarding {quote} Btw, it IS possible to fulfil the the spec. In OWB we handle JMS, and quartzed jobs, etc as own 'applications' inside the EAR. So they get an own BeanManager and can even have their own Extensions. See what I mean? {quote} this does seem somewhat orthogonal to the question. In Weld an EJB jar would also get it's own BeanManager (and it should get it's own extensions, this is a bug in Weld right now) but it shares the Application context with all other modules in the application. So unless you can clarify what you mean here, I think we can ignore this. Marius, thanks for digging up those references, I think with those we can be quite confident that that the spec intends @ApplicationScoped to be "ear scoped" and that the reference to the Servlet spec was a mistake. In particular the comment "in an application deployed as an ear" indicates that the CDI spec regards an EAR as an application, and that coupled with the comment "the application context is shared ... within the same application" does indicate that the context spans the entire ear. To me, this is a stronger statement than "represent the standard scopes defined by the Java Servlets specification" which seems somewhat more descriptive. Mark, happy to consider adding an @WebApplicationScoped, and we should definitely clarify what @ApplicationScoped means.	1	1	https://issues.jboss.org/browse/CDI-129

#	Requirement	Questions	Answered	Successfully Answered	URL
2852	CDI-129	Mark, it's *not* "absolutely clear" from the CDI specification that this was the intent, if it were we wouldn't even be having this discussion ;-) We also can't base decisions on you saying "it's absolutely clear to me", we need to base them on facts ;-). So we have to leave aside such subjective statements. I understand the concerns about the behaviour changing between war and ears for some who have interpreted the spec one way, however this runs both ways. So this argument is essentially nullified in this discussion (an app which assumed one will stop working when we require the other). So far, I believe the case for it being interpreted as war scoped are a) 2.4.1 "The @RequestScoped, @ApplicationScoped and @SessionScoped annotations defined in Section 6.7, "Context management for built-in scopes" represent the standard scopes defined by the Java Servlets specification." b) That other specs in Java EE (namely JSF, JAX-RS, JAX-WS) refer to the "application scope" as scoped to the war (could you provide references to their specs for this) and as ear scoped a) that the spec describes an ear as an application, and says that the application context is shared across an application So to summarize: * the spec is clear that the application context should be shared across the "application" * the confusion is around what "application" means in the context of an ear * in one place the CDI spec mentions that the scopes "represent" those from the servlet spec, implying that the application means war scoped * in another place the CDI spec mentions that the ear represents the application. I think we need to gather two more opinions: * what was the original intent (I'll ping Gavin) * how does Java EE define "application" in an ear (I'll ping Linda and Bill) Mark, is this a fair summary from your side of the argument? I want us to agree on a summary so that we can move forward with a discussion about which course to take, rather than get stuck in debating the spec ;-)	1	1	https://issues.jboss.org/browse/CDI-129
2853	CDI-129	Over all checking for discrepances, I completely skipped the points we already seem to agree: a) the current @ApplicationScoped is not enough (no matter how we interpret it) b) we need at least one more Scope for EAR scenarios. This could either be b.1) @EnterpriseScoped (if we interpret the current @ApplicationScoped as Webapp singleton) b.2) @WebApplicationScoped (if we interpret the current @ApplicationScoped as EAR-singleton) agree?	1	1	https://issues.jboss.org/browse/CDI-129
2854	CDI-129	Bill Shannon points out that we also need to consider visibility of the bean when clarifying this. For example, if you have the same bean class specified in two separate wars, both of which are application scoped, you can't share the state between the two (as you would get a CCE). In fact, this makes me wonder if there isn't an "obvious" solution staring us in the face? If we clarify that @ApplicationScoped means "shared across the ear" and also that the same bean class packaged in two locations which are not visible to one another (e.g. warA and war B) and cannot share state. Now we provide both options of ear scoped state and war scoped state, and the state is only shared if the bean class is packaged in a shared library or shared module (e.g. ejb module). This seems like a good solution: a) it means we don't need to proliferate the number of "application scoped" annotations b) it makes logical sense (if a user wants per-war state, package the bean in a war, if the user wants shared-ear state, then package it as a shared lib). WDYT?	1	1	https://issues.jboss.org/browse/CDI-129
2855	CDI-129	Can you point me at where @Singleton is defined like this? Or help me understand how you are interpreting the definition like this?	1	1	https://issues.jboss.org/browse/CDI-129
2856	CDI-129	Probably because of the heavily underspecified classloader behaviour in EE in this area? I was really confused about this too also. Because the Servlet spec (which the EE umbrella spec references prominently) imo _exactly_ defines that WebApplications must not interfere with other WebApplications but must be isolated well from each other. But most old EE servers (JBoss4 and 5 are perfect examples for this, as are the old WebLogics) ship with almost no isolation at all it seems! I actually never understood why they behave this way as _default_! @Marius: A Bean can only be used in a shared library if it's type is available on the shared classpath too. E.g. in a ejb-jars lib. And even if one webapp uses an @Alternative which is only available in this very one webapp, then there is no problem. Because injecting an @ApplicationScoped bean will still give you the contextual reference (the proxy). They simply refer to different contextual instances. There is really not much difference to a @SessionScoped bean of which it's class is in a shared ejb-jars lib. Or am I overlooking something?	1	1	https://issues.jboss.org/browse/CDI-129
2857	CDI-129	You are right, if the EE container does not implement the suggestions of the first paragraph of JSR-316 EE.8.3.1 but decides to use reduced or no classloader isolation at all then 'non-portable behaviour occurs'. I personally consider this an insane scenario, and the EE-7 spec should find very clear words that this is crap and should only be used in exceptional cases, e.g. for backward compatibility with old projects ;) For the (web) @ApplicationScoped only applying to one webapp - this is also possible if there is no classloader isolation at all. For handlig this case in OpenWebBeans, we are just setting the 'one' @ApplicationScoped for a certain request to a ThreadLocal (See OWBs WebContextsService - we are doing this via a RequestListener subsequently via initRequestContext()). Remember that we have plugable lifecycle handlers in OWB. This would not be necessary if there is a well defined ClassLoader isolation in place (as suggested - we could then just use the ContextClassLoader in this case) but this works really well with very old WebLogic servers in a big swiss bank already ;)	1	1	https://issues.jboss.org/browse/CDI-129
2858	CDI-129	{quote} But most old EE servers (JBoss4 and 5 are perfect examples for this, as are the old WebLogics) ship with almost no isolation at all it seems! I actually never understood why they behave this way as default! {quote} Believe it or not, older versions of JBoss AS (than 4) did provide more isolation by default, but by user request the isolation was downgraded. Also worth pointing out that JBoss AS 4 and 5 did support much stronger isolation if you enabled it (we always recommended you did with Seam, and enabled it automatically with Weld so I always forget this was the default!). {quote} @Marius: A Bean can only be used in a shared library if it's type is available on the shared classpath too. E.g. in a ejb-jars lib. And even if one webapp uses an @Alternative which is only available in this very one webapp, then there is no problem. Because injecting an @ApplicationScoped bean will still give you the contextual reference (the proxy). They simply refer to different contextual instances. There is really not much difference to a @SessionScoped bean of which it's class is in a shared ejb-jars lib. {quote} I'm a little lost in this sentence... What are you trying to say? Jens/Marius, I think your point is a very reasonable one for the spec. Of course, we would need an FAQ explaining the details of this ;-) Mark, please take this comment to the EE expert group, as you know we can only decide on CDI here ;-) This proposal is certainly implementable, no concerns there. Gerhard, we all agree with this rhetoric here (no real need to repeat it), we just need to find a solution that (a) makes sense technically and (b) works in the environment we are in. What is proposed does make sense (to me) and does work technically except in the case that people use non-isolated classloading, which EE keeps as an option for backwards compatibility. IOW what we have is a solution that makes sense with the recommended deployment model (isolated classloading), but we need to include, in the spec, a note about non-portability for the backwards compatible non-isolated classloading case.	1	1	https://issues.jboss.org/browse/CDI-129
2859	CDI-129	Gerhard, please can you clarify how we can change the current proposal in order to remove the non-portability clause. We can't make changes to the EE spec here.	1	1	https://issues.jboss.org/browse/CDI-129

#	Requirement	Questions	Answered	Successfully Answered	URL
2860	CDI-129	There is a similar issue related to events. I am not sure if the proposed solution for the @ApplicationScoped issues fixes the events issue implicitly or a clarification of the Events chapter is needed. The issue follows: Should a web application bundled within an ear should be notified of an event fired by another web application bundled within the same ear? The observer resolution algorithm should take bean visibility into account and notify only those observer methods from whom the event firer is visible.	1	1	https://issues.jboss.org/browse/CDI-129
2861	CDI-129	Oki to pick up that stuff again @StuartDouglas: > ... beans that execute within the same application. Too bad it's neither in the CDI nor the EE spec defined what they mean with application. Both sometimes refer to web-applications and sometimes to enterprise-applications. It's just not clear. @PMuir From the historical perspective. I read through the very early mails in the webbeans dev mailing list and the original intention seems to have been to glue together JSF and EJB. And as such the CDI scopes were meant as replacement for JSF scopes. All the EAR stuff finds a first mentioning in spec drafts in middle 2008. Now guess how JSF ApplicationScoped behaves? Exactly, 1 per JSF Application == 1 per webapp. With other words. There exists a defined behaviour for ApplicationScoped beans in Java EE since 10 years, and it is 1 per webapp! Oki, lets take aside how we name that baby. The real problem is not how to cope with @ApplicationScoped, but how injecting into anything which has a scope bigger than some class visibility would work. The biggest unique visibility area is a single web-application. Thus we are talking about any scope 'bigger' than 1 per webapp. It doesn't matter if this is @EnterpriseApplicationScoped or a @Statefuf EJB which is shared across the whole EAR - the underlying problem is the same! And just to be clear: the containers I tested so far just blow up with the above mentioned scenario. Oki here it goes. The scenario is as following * A shared jar with interface X and @EnterpriseApplicationScoped public class A implements X and an @EnterpriseApplicationScoped public class MailService { @Inject X;. * webapp1 with @SessionScoped public class BackingBean1 { @Inject X x; * webapp2 with @Specializes public class B extends A and @SessionScoped public class BackingBean2 { @Inject X x; a.) I've now talked with lots of different folks, including JSR spec leads, and NO ONE did expect that behaviour. b.) what proxy will be used for the injection point in MailService#x ? Most containers atm just inject a proxy with the Bean of the first request. If webapp2 gets accessed first, then it will create a contextual instance of MailService and the injection point will be filled with the proxy for B. If now a request from webapp1 arrives then the proxy will return an instance of B which will cause a ClassNotFound exception or similar. Because webapp1 cannot see class B. In the best case you will 'only' randomly end up with the wrong class... This is btw the same if you inject a @SessionScoped or @RequestScoped bean into a bean with a larger scope than 1 per webapp. @Specializes and @Alternative beans will be randomly broken for any injection point of a bean with a broader scope than 1 per webapp. So there are 2 broken situations with most implemented proxies atm 1. some webapps might get classes/impls which dont belong to them 2. some webapps might get NO @Alternative or @Specializes despite being configured This could perfectly get fixed by such proxies by just implementing the injection point type and do getBeans(injectionPointType) + resolve the instance. But this is not defined that way in CDI as Jozef pointed out. Currently the proxies contain the Beans, so we have no chance to do this properly in a spec conform way for CDI beans. The easiest solution would be to just interpret @ApplicationScoped as 1 per webapp and we are done. Jozef, could you please also describe your preferred way? Afair it was 2 options: Option a.) just disallow @Specializes and @Alternatives for all beans defined in a shared jar. Regardless of it's scope. Option b.) inject only beans defined in the shared jar into another bean of a shared jar. E.g. MailService would always get an instance of A injected. Imo this is pretty crucial as @Inject X x; in a JSF backing bean would give you a different contextual instance (even of a totally different type) than the same code @Inject X x; in the MailService.	1	1	https://issues.jboss.org/browse/CDI-129
2862	CDI-129	> Firstly, here is how the modularity work in CDI: Let's say this is your view and is one of n possible interpretations of the spec wording. Due to the well defined TCCL behaviour in the EE umbrella spec it is perfectly viable that A might see B IF it is invoked in a request of the webapp containing A. So technically from the EE spec there is NO such restriction you mentioned. It's just easier for a container vendor to implement. And your example is also _perfectly_ broken from a user experience pov! If you inject X in a shared jar you would get another contextual instance than injecting X in a JSF backing bean that way! Hell, this is SICK SICK SICK! No user would be able to use that stuff! I have a ┼@Inject User usr; in my MailFormular backing bean and the same code in my MailService and would get 2 DIFFERENT users? You're kidding me, right? The are only 2 practical ways to do this properly for users: 1.) restrict any @Specializes or @Alternative of an interface to the visibility area it got defined in. In other words if you have a User interface in a shared jar in your EAR we disallow @Specializes or @Alterative in any WAR. But again, this is NOT defined in CDI-1.0 yet! 2.) use a proper proxy which only proxies the injection point type (in our case X) and not only resolve the contextual instance but also the proper Bean<X> dynamically on each invocation IF it got injected into a 'broader scoped bean'. And here we come back to my first argument: by keeping the specified behaviour of CDI-1.0 as 1 per webapp we would not have any 'broader' scope in CDI and thus we dont need to deal! We could introduce all the necessary handling in CDI-1.1 together with the broader @EnterpriseApplicationScoped. Another point: who likes to go to all the other spec leads like JPA and most important JSF and confess that we messed up? Especially who gonna tell Ed that he cannot drop JSF ManageBeans because we have no replacement for his ┼┼┼JSF @ApplicationScoped which exists since 10 years and he finally agreed to get rid of?	1	1	https://issues.jboss.org/browse/CDI-129
2863	CDI-129	> In other words, CDI contexts are never isolated between bean archives. I don't get that. Where do you read that I like to do that? What I was talking about was that you always see only exactly 1 'slice' of a context for each Thread. All users share the same SessionContext, but still each request can only see the contextual instances of the single currently active session of each request. The same would happen for webapplications. Each request knows to which webapp it belongs. And a single request can only belong to exactly one single webapp! So he will only see the @ApplicationScoped contextual instances of this very webapp the request is for.	1	1	https://issues.jboss.org/browse/CDI-129
2864	CDI-129	Sorry Jozef, you are a pretty clever dude in general and you did hit quite some nails. But in this case you started to drop "it is that way" sentences but missed the most important part of it: the actual argument! I had expected something like "I think it is that way BECAUSE ${argument}, ${quote}, etc" ;) And no, it is not unrelated to cdi-1.0. Another argument why we need further clarification. If you get the BeanManager from JNDI then according to your interpretation you would like to get different results for getBeans() depending on what? How would that ever work? Please shed some light, I don't get it. I think we would need to add some BeanManager#getBeans(injectionclass, type, qualifiers) + resolve with the same + getReference ... We do not have all that currently.	1	1	https://issues.jboss.org/browse/CDI-129
2865	CDI-129	Pete, afair we just agreed that most containers implement it that way currently and that this is basically broken. Please think about the consequences! That would render CDI almost useless! Also please comment on my BeanManager clarification questions. What will a BeanManager#getBeans() return you? On that very meeting I told you that I will write up concrete examples and here we go.	1	1	https://issues.jboss.org/browse/CDI-129

#	Requirement	Questions	Answered	Successfully Answered	URL
2866	CDI-129	Mark says: {quote} Due to the well defined TCCL behaviour in the EE umbrella spec it is perfectly viable that A might see B IF it is invoked in a request of the webapp containing A. So technically from the EE spec there is NO such restriction you mentioned. It's just easier for a container vendor to implement. {quote} I don't believe the TCCL is relevant here, it's only ever used explicitly to load classes, not implicitly if you instantiate via the new keyword, which is the model we are trying to follow. {quote} Another point: who likes to go to all the other spec leads like JPA and most important JSF and confess that we messed up? Especially who gonna tell Ed that he cannot drop JSF ManageBeans because we have no replacement for his ┼┼┼JSF @ApplicationScoped which exists since 10 years and he finally agreed to get rid of? {quote} I'm quite happy to take on any tasks that involve discussions with other spec leads. As JSF is prepared to deprecate scopes, and move people over to standard CDI scopes, there is a code change required anyway. Therefore, if we were to introduce a @ModuleScoped or similar, I think JSF apps could move from JSF application scope to this.	1	1	https://issues.jboss.org/browse/CDI-129
2867	CDI-129	Proposed question for the poll is {quote} Should @ApplicationScoped bean instances be shared between all modules (web apps, ejb modules etc), or be per web application? {quote} Mark, wdyt?	1	1	https://issues.jboss.org/browse/CDI-129
2868	CDI-129	Do you have the code somewhere? What I observed in JBossAS and Glassfish is that the WebApp which touches the shared MailService the first time will do all the injection based on the active beans in this very webapp. Regardless if the resolved Bean<X> is visible in the other webapps or not. This is not only wrong but might in some cases even create the obvious NoClassDefFound and similar (great candidate: serialisation time). Of course one could argue this is an impl bug, but otoh how to implement that correctly? And now we are back to the 3 listed ways to do it: 1.) injecting only other beans of the shaed-lib and completely ignore anything defined in the webapps. Jozefs way is technically valid, but a no-go from a user perspective imo as it would lead to having different contextual instances for the same injection points across your application. 2.) restricting @Specializes and @Alternatives to only shared libs. This is technically valid as well but this restriction is certainly not covered by the spec. 3.) make @ApplicationScoped 1 per WAR and thus remove the problem with scopes over multiple isolation levels. All our classloader slices would always see exactly 1 well defined scenario. We should nonetheless think about any scope broader than 1 per war in CDI-1.1, but for CDI-1.0 it would perfectly work (And to repeat again: this is also what is explicitly stated in the spec 2.4.1).	1	1	https://issues.jboss.org/browse/CDI-129
2869	CDI-129	{quote} Should @ApplicationScoped bean instances be shared between all modules (web apps, ejb modules etc), or be per web application? {quote} again the term 'bean' which is so highly ambiguous I guess you fear that the public audience is not yet fully aware of 'Contextual Instance'? :) I'd rather try it a bit more sluggish: {quote}What would you expect to get from an @ApplicationScoped CDI bean in an EAR? 1 instance per each Web-Application or 1 instance for the full EAR?{quote} Regarding the Bill quote: I've now read through the EE6 spec and it appears to me that they mostly refer to EARs as "Java EE Application" (in older spec versions it was "J2EE Application"), see e.g. EE.2.11.3, EE.2.4, EE.2.12.2, EE.5.5.2 and 185 more references. There is other prominent mentioning of "JSF Application", "Web Application", even "Desktop Application" and "Java Application" amongst a dozen others.	1	1	https://issues.jboss.org/browse/CDI-129
2870	CDI-129	> The same thing would happen for a @Dependent scoped bean > or a @Request scoped bean. Although Mark thinks that restricting > @ApplicationScoped per war fixes this it actually does not. Again Jozef, this is JUST NOT TRUE for CDI! The problem is not the scope of the bean which gets injected, but the scope of the bean you inject into. Are we d' accord on this part? It just doesn't friggin depend whether the injected bean is @Dependent, @SessionScoped or any other scope. So we are just talkin about the scope of the bean which helds the injection point. And here comes the clue: By not providing a scope bigger than 1 per WAR, we DO NOT HAVE THOSE AFOREMENTIONED PROBLEMS IN CDI. We could go on and define the behaviour for scopes larger than 1 per WAR in CDI 1.1. The EJB EG would probably need to clarify the restrictions for injecting into shared stateful EJBs, but indeed that is not so much a problem of CDI. > I disagree. on which part? On the 'unusable' or the 'multiple contextual instances per Injection Point for the same call stack'?	1	1	https://issues.jboss.org/browse/CDI-129
2871	CDI-129	{quote} By not providing a scope bigger than 1 per WAR, we DO NOT HAVE THOSE AFOREMENTIONED PROBLEMS IN CDI. {quote} OK, assume there is a shared @RequestScoped bean R in the shared library injected both into a Servlet in your web app and into the MailService in the shared lib. No alternatives nor specialization this time. What you say is that assuming the Servlet invokes MailService, the Servlet would operate on a different instance of the same R Bean (Bean<R>) than the MailService? In the same call stack during processing of the single same request? How is that consistent? Maybe we could do a poll if this is what people want ;-) This is not CDI. {quote} on which part? On the 'unusable' or the 'multiple contextual instances per Injection Point for the same call stack'? {quote} I disagree that it is unusable.	1	1	https://issues.jboss.org/browse/CDI-129
2872	CDI-129	what is 'shared mail service' ? If we assume {code} @ApplicationScoped public class MailService { @Inject R r; ... } {code} then each webapp would get it's own contextual instance. Thus the MailService instance of your very webapp inoking r.someMethod() would work on an instance of S. For another webapp you might end up with an instance of R if this webapp doesn't specialize and not provide an alternative for S. > S, however S is not accessible from the MailService so this is wrong Dude, who is creating the instance of MailService? It is the BeanManager which uses the TCCL of your webapp. Also: this BeanManager of your webapp knows all enabled Bean<?> of your webapp, so it will perfectly be able to resolve Bean<S>.	1	1	https://issues.jboss.org/browse/CDI-129
2873	CDI-129	here is the original quote from pete {quote}I don't believe the TCCL is relevant here, it's only ever used explicitly to load classes, not implicitly if you instantiate via the new keyword, which is the model we are trying to follow.{quote} That doesn't sound like 'it is definitely that way'. Indeed you almost NEVER do do 'new SomeClass()' in dependency injection frameworks at all! That's the whole idea of DI containers to always do this dynamically. Imagine we do all this by hand: step 1: create a MailService mailService = new MailService() step 2: create a S s = new S; // S extends R step 3: mailService.setR(s); What is the problem with that? I cannot see any classloading issue! Btw: Weld 1.x and 2.x implement it EXACTLY THAT WAY ALREADY! Of course, the MailService cannot have a @Inject S s; but only a @Inject R r; But that doesn't restrict us to only inject instances of type R into it if we ONLY go on using those beans in our very own webapp!	1	1	https://issues.jboss.org/browse/CDI-129
2874	CDI-129	Can you tell me which part of Section 5.1, which describes how modularity works in CDI, allows you to inject S into MailService?	1	1	https://issues.jboss.org/browse/CDI-129
2875	CDI-129	Jozef, thanks for your input so far. There are some valid points in your argumentation and we need to clarify those. I guess we now have a pretty clear picture that EAR scenario is broken in CDI 1.0 if we use scopes broader than 1 contextual instance per war. We also outlined 3 different approaches to treat such scopes. We will schedule an EG meeting to discuss this in the EG. Pete, do you have the example app somewhere so we can look at the sources?	1	1	https://issues.jboss.org/browse/CDI-129

#	Requirement	Questions	Answered	Successfully Answered	URL
2876	CDI-129	Gosh Jozef, please don't drive me nuts! just read the thread above to find it! a.) It is not clear what the term 'Bean' used in 5.1 means b.) Pete was not sure about the TCCL, go on read the TCCL paragraph again please. Imo it is relevant. c.) your interpretation is contradicted by the example shown in "2.2. Bean types" d.) the whole BeanManager API design contradicts your arguments what else? The spec is just not clear. I f***n don't care on which end. If A contradicts B then there are 3 ways to fix that: fix A, fix B or fix both. To me the only sure thing is that we need to fix something as no possible interpretation closes all the gaps. Although the interpretation with the 1 per WAR would imo be the closest one and is also the only interpretation EXPLICITLY defined in the spec. All other interpretations are just indirect consequences of other definitions.	1	1	https://issues.jboss.org/browse/CDI-129
2877	CDI-129	There is a lot of stuff here, but firstly: a) Bean is quite well defined in CDI. If it gets a ProcessBean event thrown then it is a bean. b) You are correct and TTCL is irrelevant here. Class loading is actually pretty irrelevant here, the EE platform spec defines class loading in terms of classes that must and must not be visible, and allows vendors to implement that with whatever class loading arrangement works So from what I see the problem is that there is a conflict in the spec to do with how injection point resolution works with scoping. 5.2.1 makes it pretty clean that every injection point must resolve to one and only 1 bean. In Mark's example, it actually resolves to different beans, due to scoping issues, and this is a problem that we need to sort out in the spec. Making ApplicationScoped be a per web application thing however is not a solution to this problem. This would mean that different beans resolve to the same injection point depending on the current context, which completely destroys static wiring, and we get back to a Seam 2 style resolution at injection time. It also makes the CDI deployment dependent on the current web app. What happens when there is no web app in an ear? What happens with a standalone jar? what happens with a SE app? Mark, from what I am reading it sounds like you are trying to bring back the worst of Seam 2 (I know you probably did not use Seam 2, but the approach was pretty much exactly what you are describing, and it had a lot of problems). IMHO we should just add @WebApplicationScoped and tighten up the spec to remove the scope problems, so if a bean ends up resolving injection points differently depending on the current archive it is a deployment error.	1	0	https://issues.jboss.org/browse/CDI-129
2878	CDI-129	that's also not "more objective", because it isn't only mark who has this opinion. since openwebbeans handles it that way, the owb team agreed on it as well. i know a lot of big projects which (have to) use EARs as "deployment-bundles" for huge applications, but every web-app has to be independent, but they share e.g. portable cdi extensions like deltaspike, codi, seam3, ... if you don't follow his recommendation in this case, you break them all (for weld based servers).	1	1	https://issues.jboss.org/browse/CDI-129
2879	CDI-129	Yesterday Gerhard, David and I had a really good late night discussion. I think I now understand a bit better where you guys are coming from conceptually. The isolation rules Jozef proposed are the ones from EJB. But CDI beans are not EJBs! CDI introduced the notion of Contexts and proxying. With EJBs you don't have cross-scope injection abilities, etc. A lot concepts are fundamentally more open and different in CDI. Thus I fear we also cannot apply EJB rules 1:1 to CDI beans. Now think about it again: you basically like to define @ApplicationScoped as alias for (EJB) @Singleton, right? That's what it boils down to if I read your proposal. Now the question is: why the hack do we need that? Just use an @Singleton EJB if you like to share state between different WAR files, MDB and stuff! So we do not even need to introduce any new scope because a thinkg like "@EnterpriseApplicationScoped" already exists: @Singleton. Maybe that was the reason why Gavin explicitly specified @ApplicationScoped web-app/servlet centric as 1-per-WAR by writing "The @RequestScoped, @ApplicationScoped and @SessionScoped annotations defined in Section 6.7, “Context management for built-in scopes” represent the standard scopes defined by the Java Servlets specification." The argument with the TCK is also not the strongest one. The JCP defines the following rule when resolving ambiguous definitions: 1.) JavaDoc 2.) Spec Wording 3.) TCK We (OWB) already reported 30++ bugs in the TCK and I guess others did the same. If you consider how many tests there are then this is only a small part, but still. Btw, it *really* rocks that the TCK is open sourced! This allows us to easily fix shortcomings, add more use cases and most importantly: talk about scenarios! With closed TCKs we would not even be allowed to talk about TCK use cases in a public bug tracker! @Jozef your argumentation with semi-static wiring is not quite right. This is perfectly allowed and even necessary in CDI 1.0. Please look at Bean<T> and InjectionPoint. Then look at Bean#getInjectionPoints(). This doesn't return a list of Bean<?> to be injected but only a list of InjectionPoints. And those just contain the Type and not the resolved Bean<?>. So upon creating the Contextual Instance via T Bean<T>#create(); a CDI container has to first do getInjectionPoints() and then for each InjectionPoint RESOLVE the correct Bean<?>. This is *not* defined in a static way in CDI 1.0 but fully dynamic!	1	1	https://issues.jboss.org/browse/CDI-129
2880	CDI-129	"Now the question is: why the hack do we need that? Just use an @Singleton EJB if you like to share state between different WAR files, MDB and stuff!" The problem with this is that this only works for EE applications. So if you want a singleton bean, you have to use @javax.ejb.Singleton for EE apps, and @ApplicationScoped for non EE apps, which I don't think is that great.	0	0	https://issues.jboss.org/browse/CDI-129
2881	CDI-129	I am not sure which part of my comment does your argumentation relates to. I assume you accept that there are the two possible approaches. I assume you accept that the first approach does not conflict with CDI 1.0 (Talking about the wiring only. Nothing about the @ApplicationScoped yet). Can we both agree up to this point? What I guess you are arguing about is whether the semi-static approach is valid or not.	1	1	https://issues.jboss.org/browse/CDI-129
2882	CDI-129	Note that this approach actually solves some other problems as well, such as what happens when an extension in a war modifies a shared bean? At the moment this change will be visible everywhere, which violates the 'wars are isolated' principle. If you set the war to be an isolated deployment then this will not longer be an issue, as the war will only modify its own copy of the bean.	0	0	https://issues.jboss.org/browse/CDI-129
2883	CDI-129	I would not say "vertical approach is implemented". It is probably a side effect of specialization never being properly implemented in Weld 1.x. This has other unexpected side effects. Can you try your test with alternatives?	0	0	https://issues.jboss.org/browse/CDI-129
2884	CDI-129	+1 for @ApplicationScoped == "@EARScoped" Q: If no common agreement arises, could this be configured via a property? By default @ApplicationScoped == @EARScoped but you can configure it to be @WARScoped via a property?	0	0	https://issues.jboss.org/browse/CDI-129

#	Requirement	Questions	Answered	Successfully Answered	URL
2885	CDI-129	I have quite a few questions / remarks about it (some of which are already mentioned in CDI-129, but don't have definite answers). # both @ApplicationScoped and @ModuleScoped visibility are needed (see [DELTASPIKE-335|https://issues.apache.org/jira/browse/DELTASPIKE-215]) Unlike https://issues.jboss.org/browse/CDI-129?focusedCommentId=12602519&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12602519, I don't think we should automatically share @ApplicationScoped depending on whether the bean archive is packaged in EAR or in WAR (i.e. some cdi extension could use @ModuleScoped for JSF phase listeners and @ApplicationScoped for another purpose, so automatically sharing @ApplicationScoped would result in an artificial jar split for such extensions and packaging difficulties for the end-user). # What happens if a @ApplicationScoped bean is packaged in WEB-INF/lib for EAR applications ? IMO it should result in an exception, otherwise for EAR containing multiple WARs it will lead to inconsistencies. # What happens if a @ApplicationScoped bean is packaged in WEB-INF/lib for WAR application (no EAR) ? IMO it should be fine otherwise, we won't be able to use CDI in tomcat or with simple wars on JBoss otherwise. # What happens for EAR with multiple WARs if a CDI bean with same name is packaged in WEB-INF/lib of each wars ? With JBoss 7.1.x this leads to DeploymentException: WELD-001414 Bean name is ambiguous. This means that CDI bean archives must absolutely be packaged at the EAR level on JBoss 7.1.x (and for JSF webapp, JSF libs must be packaged in WEB-INF/lib in order for JSF to scan faces-config.xml - this leads to some difficulties if I package JSF artifacts and CDI beans in the same archive). This leads to the question : can CDI bean archives be packaged in WEB-INF/lib and still be portable (not in Java EE 6) ? IMO, it shouldn't result in an exception. # Same question if the a bean of the same class is packaged in WEB-INF/lib ? IMO, it shouldn't result in an exception. # What happens if a @ApplicationScoped bean of an EAR is Specialized or has an Alternative in a WEB-INF/lib ? Discussed previously : https://issues.jboss.org/browse/CDI-129?focusedCommentId=12602718&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12602718 IMO, CDI impl should raise an exception (if we agree for 2. that @ApplicationScoped beans can only be defined at the EAR level for an EAR).	1	0	https://issues.jboss.org/browse/CDI-129
2886	CDI-128	{quote} In CDI, the meta-data will likely exist in an annotation, but it could exist in an XML file (Candi, and Seam XML Extension for CDI). {quote} The same applies for EJB3, by the way. EJB3 can be completely driven by deployment descriptor (ejb-jar.xml) or annotations or a combination of both. {quote} For example, I am working on creating a standard interceptor for JCache 107. I can read the annotation from the getMethod of the InvocationContext, {quote} Note that the getMethod will return null for lifecycle interceptors. So if the annotation is on a lifecycle method of the bean, then this won't work either. {quote} I propose we have an extension interface that extends InvocationContext called CDIInvocationContext that has a getAnnotated. This way if someone annotates in an XML file, then it is available to implementors for interceptors. {quote} Sorry, I don't fully understand that last part. Could you please elaborate on what annotation in a XML file means? Maybe I am misunderstanding this feature request, but, I am not too sure if we need this CDI specific invocation context. For example, in EJB3 land too, the intercepted method can have various spec specified annotations on it and at the same time each of those annotations has a corresponding deployment descriptor based XML equivalent.	1	0	https://issues.jboss.org/browse/CDI-128
2887	CDI-127	h1. Notes Enums are somewhat different to normal classes, as Java guarantees that any instances are singletons. Therefore we cannot treat them as classes. Furthermore, do we want to support them as beans, allowing them to be injected? Differences are: * No callback on instantiation, when do we inject? * Shared between deployments as singletons, how do we handle dependent scoped injections? * We do not control instantiation, cannot perform constructor injection h1. Proposal We should support enums as non-contextual objects, performing field and method injection only. Enums should be assumed to be injected only after the application is fully initialized for portability. If an enum is on a shared classloader, any injections should correctly resolve to the deployment of the calling context. In other words, if a shared library or installed library has an enum A: {code} enum A { FOO, BAR; @Inject B b; String getName() { return b.name; } } {code} where B is a class defined in the shared library {code} @ApplicationScoped class B { String name; } {code} Then assuming that the name has been set to Pete in deployment 1, and Marius in deployment 2, when the enum A is used in deployment 1, the method getName() should return Pete, and in deployment 2 it should return Marius.	1	1	https://issues.jboss.org/browse/CDI-127
2888	CDI-123	What's the status? I'm tempted to set this to "won't fix". I've now used CDI in lots of real world projects and customers for more than 2 years and I know no single user who actually used it at the end of the day. There were 2 customers who moved from Spring to CDI and originally intended to use it. But both ended up either using the Spring-CDI bridge or migrating parts to native annotation based CDI because re-doing all the configuration as CDI-xml was way too much work. Much more than just moving the Services to plain CDI.	1	0	https://issues.jboss.org/browse/CDI-123
2889	CDI-121	I'm not sure how you can handle the "downgrade" to "per-bean-method-invocation" scope without requiring that the bean have an interceptor. Without an interceptor to let you know when the invocation is finished, how will you know when to destroy the bean?	0	0	https://issues.jboss.org/browse/CDI-121
2890	CDI-121	What do we think the status of this is? I am interested in moving this forward. I think this is particularly important now with JMS 2 in early draft and Java EE 7 introducing @javax.transaction.Transactional separate and apart from EJB (applaud!).	1	1	https://issues.jboss.org/browse/CDI-121
2891	CDI-121	We should make a detailed list of which Annotations/Interfaces we need for implementing the support in CDI. Imo those are * @Transactional * @TransactionAttribute * TransactionAttributeType * @TransactionScoped anything missing? Would those all fit to javax.transaction? Is there any use-case where we like to use @TransactionScoped etc _without_ the need for the rest of the javax.transaction stuff? In this case we would need an own package/spec for it, isn't? Linda, I guess you can answer this best I fear that @TransactionScoped would clash because it requires the @NormalScope meta-annotation from the CDI spec api :/ xCan we make it just a JSR-330 @Scope and define in the CDI-1.1 spec that it must be handled like a non-passivating NormalScope?	0	0	https://issues.jboss.org/browse/CDI-121
2892	CDI-120	Mark, would you be able to take a stab at this issue?	0	0	https://issues.jboss.org/browse/CDI-120
2893	CDI-120	Do we have an update for this? I'm sure Ken would also be interested in this.	0	0	https://issues.jboss.org/browse/CDI-120
2894	CDI-117	This is very useful for non-servlet environment (plain JavaSE, or frameworks like Play! that does not use Servlet). Wouldn't it be better if the spec specified a "BeanManagerFactory" factory class that could return the proper BeanManager regardless of environment? Implementation would check JNDI, then Servlet Context, then fallback on singleton or custom lookup service. CDI is just too useful to be constrained on JEE/Servlet only environments.	1	0	https://issues.jboss.org/browse/CDI-117
2895	CDI-114	Do you mean generally adding support for dynamic languages such as Groovy?	0	0	https://issues.jboss.org/browse/CDI-114

#	Requirement	Questions	Answered	Successfully Answered	URL
2896	CDI-114	Hi Vincent! Maybe we need to clarify further what we both understand under the term 'dynamic Bean' What I meant is: dynamically adding Bean<T> metainformation to the container at runtime. E.g. disabling a class or adding a Bean<T> under load which would completely change the behaviour of the container. I think this is very dangerous. What will perfectly work already is the following: Have a Bean<T> which gets parsed and scanned on startup and which behaves differently in Contextual<T>#create() depending on the situation and it might even change it's behaviour at runtime (to some degree). Currently it will be a bad idea to e.g. change the EL name of a bean at runtime. This will produce crap if the EL-Resolver caches the name-> bean mapping for example. We could introduce a Bean<T>#isDynamic() to prevent the container from applying caching in CDI-1.1. But a fundamental design decision as of today is that the rules which lead to finding that Bean<T> do not change. Maybe you could explain what kind of 'dynamics' you have in XWiki?	1	0	https://issues.jboss.org/browse/CDI-114
2897	CDI-114	Btw, OSGi is a perfect sample why to NOT allow _all_ things to get changed dynamically. How often did you manage to install/update a new plugin without having to restart Eclipse? Most of the times you update Eclipse 10 times and it even doesn't start anymore...	1	0	https://issues.jboss.org/browse/CDI-114
2898	CDI-114	Hi Vince! Will need to sleep over it, but currently this looks more like a 'hot redeploy' than a real 'dynamic Bean' change. The problem with allowing to add dynamic Beans is that they e.g. can also 'disable' other Beans, change Interceptors, Decorators, etc. So by adding one Bean, you might in the worst case change the behaviour of all the application. Another area which we need to clarify: what happens if a definition error occurs as result of adding such a new bean? It would also be very hard (or close to almost impossible) to guarantee the behaviour of previously serialized beans. I'm not saying that it's impossible, but we must really think about the consequences and how to cope with them.	1	0	https://issues.jboss.org/browse/CDI-114
2899	CDI-114	Hi guys. I was wondering if there was now a recommended way of supporting the main use case I listed above back in 2011, namely: If you have a CDI application, how can you add support for installing extensions at runtime for this application (for example by adding JARs containing beans to the classloader), and tell the Bean Manager to take into account those news beans? I suspect this is a common need for apps as they grow (i.e. the ability to dynamically add extensions). As I mentioned back then, we've been supporting this in XWiki for about 10 years now with our custom handmade solution but I hate using custom solutions when there exists standard solutions so I'm always on the lookout for such solutions. I've been wanting to try to use CDI for years now but have dropped it in 2011 because of the lack of a solution. The only option I've heard so far would be to tell the Bean Manager to "restart" and thus re-run the process of creating/resolving the Bean graph. Is that still the only solution? However, I'm worried that this would take too long for our needs since XWiki has thousands (possibly tens of thousands) of Beans running, coming from hundreds of JAR files. Is this "restart"/"reload" already implemented and optimized so that there's no rescanning of JAR files for example? Does anyone have any experience with this? Thanks a lot!	1	0	https://issues.jboss.org/browse/CDI-114
2900	CDI-114	What is your exact use case? Usually the bean graph and Classpath per application is pretty much static once booted. Except during development. If it's just for development then you might look at https://github.com/HotswapProjects	1	0	https://issues.jboss.org/browse/CDI-114
2901	CDI-114	[~atijms] That is totally up to the container. It's simply not defined, so you cannot be sure. [~vmassol] I see. So you allow that your users upload some jar which you then dynamically add to you Classpath? Or how does the XWiki container become aware of that new functionality? Does XWiki use OSGi (which would be suited for such a dynamic reload)? Or do you roll your own ClassLoader system?	1	0	https://issues.jboss.org/browse/CDI-114
2902	CDI-114	{quote}So you allow that your users upload some jar which you then dynamically add to you Classpath? Or how does the XWiki container become aware of that new functionality? Does XWiki use OSGi (which would be suited for such a dynamic reload)? Or do you roll your own ClassLoader system?{quote} Yes admin users (or any user having the right permission) can install JAR extensions. XWiki doesn't use OSGI. We asked ourselves the question initially but it was way too compex and heavy so we decided that we wouldn't be able to have several versions of the same class with different versions in XWiki. We have a simple custom Component system to manage this (the main class is here if you're curious: https://github.com/xwiki/xwiki-commons/blob/master/xwiki-commons-core/xwiki-commons-component/xwiki-commons-component-default/src/main/java/org/xwiki/component/embed/EmbeddableComponentManager.java). We do have our own classloader (we have one per namespace - XWiki supports multiple wikis and a namespace is for example one wiki, to provide isolation per wiki). When a JAR extension is uninstalled, we recreate the classloader, removing the JAR URL. FYI: https://github.com/xwiki/xwiki-platform/blob/master/xwiki-platform-core/xwiki-platform-classloader/xwiki-platform-classloader-xwiki/src/main/java/org/xwiki/classloader/xwiki/internal/ContextNamespaceURLClassLoader.java and and https://github.com/xwiki/xwiki-commons/blob/master/xwiki-commons-core/xwiki-commons-classloader/xwiki-commons-classloader-api/src/main/java/org/xwiki/classloader/URIClassLoader.java (this later one is just there to overcome JDK bugs/limitations).	1	0	https://issues.jboss.org/browse/CDI-114
2903	CDI-114	I see. So you have multiple 'apps' already running as each of your Wiki-namespace is essentially an own 'app' from a CDI pov, right? Would it be possible to bootstrap a new namespace instance and then just swapping out the original one with the freshly booted one? Looks much cleaner to me.	0	0	https://issues.jboss.org/browse/CDI-114
2904	CDI-114	I do that in an app (except I have a single plugin but design is reusable for that case) starting N children CDI context inheriting from the parent one (which would be xwiki webapp). Child having access to the parent they can register services etc and still use CDI. Limitation is children are isolated but it can be a nice thing too for plugins. Would it be an option? CDI 2 with its se API should enable that since the managed instance (EE/Servlet) will start several SE contexts.	1	0	https://issues.jboss.org/browse/CDI-114
2905	CDI-114	[~vmassol] don't you mix xwiki component and cdi bean? a macro is not a Bean generally until you generate a custom class at runtime which in any case doesn't need CDI no? The producer option would still work but is still overkill to handle wiki macros since there is a manager in xwiki, no?	1	0	https://issues.jboss.org/browse/CDI-114
2906	CDI-114	[~rmannibucau] If we need to keep our XWiki Component Manager then there's little interest in moving to CDI since (if I understand correctly) we would be able to use the CDI features only for core components that are registered statically at application boot time (and thus have two distinct Component models depending on whether you're coding a core extension or a non-core one). We're also reducing our number of core components to the maximum as time progresses to have the smallest possible core and all the rest are extracted into extensions. We currently have hundreds of extensions and this will grow even more in a very near future. So having 2 models is not a good idea IMO :) {quote}but producers generally means 'do it yourself'{quote} I don't understand this part. AFAIK you can use CDI constructs in producers, using injections, qualifiers, etc. Aren't there plenty of CDI apps that use producer constructs too without requiring to implement a Component Manager that would handle instantiation/injection? If the object created in the producers requires to be injected other beans, CDI doesn't provide any helper for that? Thanks	1	0	https://issues.jboss.org/browse/CDI-114

#	Requirement	Questions	Answered	Successfully Answered	URL
2907	CDI-114	Hmm, does it means xwiki is leaking cause previously injected values can be unregistered ("remove extension")? Or did you mean you never inject the component by type but always Provider<X> everywhere? If so you also do lazy validation which means you accept to start a not functional app cause of a missing component - CDI prevents it. Is that right? If so I fear you need something to "mock" until you can inject an actual component. Means you can refactor your code but not change it drastically cause of these rules.	0	0	https://issues.jboss.org/browse/CDI-114
2908	CDI-114	{quote}Hmm, does it means xwiki is leaking cause previously injected values can be unregistered ("remove extension")?{quote} Actually I don't know how we would behave if you remove at runtime a component that's been previously injected in another component. In theory yes there should be a problem.In practice in 12 years of XWiki I've never seen this happen. {quote}Or did you mean you never inject the component by type but always Provider<X> everywhere? {quote} No we don't do that systematically, although we recommend it. It's done mostly at places where it's important to be able to use the latest registered component for a given role. {quote}If so you also do lazy validation which means you accept to start a not functional app cause of a missing component - CDI prevents it. Is that right?{quote} Yes we do allow this. Thanks	1	0	https://issues.jboss.org/browse/CDI-114
2909	CDI-114	let me put this issue in a different context: (1) let us say an application is deployed with three CORE modules that are essentials and cannot be disabled or removed, each having their own named CDI beans, which may depend on other such beans from the other two core modules. this setup works perfectly as all the modules (and CDI beans, interceptors, qualifiers, decorators, etc) are always loaded , and at deployment (2) a new module is installed into this system at runtime - with the following CDI usage: inject existing CDI beans, supplied by one or more of the always present core modules, into its own injectable classes like Servlets, JSF backing beans, transaction Services, etc. i suppose this should not be an issue at all, since the new module is only trying to use existing CDI components. if for example for Events that need to be fired, the newly registered CDI components from the installed module (plugin, for clarity) can be added as EventListeners or interceptors during bean registration. the core modules shall never depend on the additional modules. it is only the CDI components from additional modules that may listen to or intercept the events and method invocations of CDI components from core modules. ---- what is the problem in supporting this feature? (3) let us say module-x and module-y are deployed as additional modules, and module-y specified dependency on module-x because one or more of the CDI component in module-y is using or listening or intercepting one or more of the CDI components from module-x. in this case - the module framework will not let the installation of module-y if module-x is not installed; similarly, the framework will not let the uninstallation of module-x without the uninstallation of module-y. so, we can always be sure that the CDI components required by module-y are always present in the application because when module-y is there, the module-x shall always be there. at no point in time, a CDI component in module-x can refer to (depend on) a CDI component of module-y. that dependency management is the responsibility of the module framework, if it fails there, it is not the problem of CDI. why can't this be supported? (4) i guess you could be thinking about a scenario where one CDI component from module-x depends on other CDI compoent of module-y while another CDI component of module-y depends on yet another CDI component of module-x.... i.e. cyclical dependency of modules... i agree that makes it much more complex, and require checking boundaries too often-- but why can't a well-defined dependency graph be supported? all that is needed is registering the CDI components (by component, i mean bean/interceptor/qualifier/producer/etc) at runtime, and broadcasting the events (including method invocation - for interceptors) to runtime registered CDI components. what is so dangerous in this? as a realistic use case : suppose a web app is deployed with some core set of JPA Entities, JSF backing beans, JSF pages, CDI Transaction beans that may offer REST services too (because EJB container do not allow dynamic adding of beans, we rely solely on CDI) . now into this system, a new module gets installed that brings in new JPA entities, JSF backing beans, JSF pages, its own CDI transactional components, etc. now, any of the CDI components (including backing beans) may like to listen for or depend or intercept any of CDI components deployed at startup (or installed before). why can't this be achieved since the previously installed CDI components can never depend on the newly installed CDI components? what problems do you see in this? in fact, we can easily uninstall this newly installed module and remove all of its CDI components with out any impact to the core web app system that was deployed initially. — all that is needed is to track what came in new, and which new ones are listening to or intercepting around which old ones. refusing to implement this feature because improper usage may cause unpredictable errors is like saying synchronized key word cannot be supported because its improper use leads to deadlocks in multi-threaded systems.	0	0	https://issues.jboss.org/browse/CDI-114
2910	CDI-113	>> However, these cases are well specified. They are well specified for runtime but not for tools. How should tools recognize BeanManager implementations? What if there are a few classes that implement this interface? Only particular CDI container knows what to load to provide spec required services. And one more problem. CDI container don't have to look in jars without beans.xml at all. So no beans.xml no any need to scan such jars. But for tools it's not the case. Tools have to look in all the jars in class path if they want to find all BeanManager implementations. Otherwise they need to know all the available CDI-implementations to work around this problem using hard-coded names/paths.	1	1	https://issues.jboss.org/browse/CDI-113
2911	CDI-113	bq. Nothing limits CDI container to have a few implementation in class path but use the only one (at least at once). bq. For runtime it's not a problem. You know that you must provide a BeanManager and you provide it. But what if the developer added the following class in the classpath (I don't know why he might do it): bq. public class MyNotUsedBeanManagerImplimentation implements BeanManager { ... } bq. Runtime still works since this dead code is not used by CDI container but how tools can know that there is some difference between those BeanManager implementations? bq. Agree that may be this example is too tricky. And for 99.9% there will be the only implementation for every required service. But I just wanted to show that what is obvious for runtime is not so for design time. Alexey, can you give example of why tools needs to know this - how would it represent this info to the user? bq. Second problem may be more important. Even if we know for sure that there is the only one BeanManager implementation, the only one UserTransaction implementation, etc. we should scan every jar in the class path since we don't have any marker like beans.xml to skip not-CDI jars. It may be too long I don't understand this problem, why do you need to do this?	1	1	https://issues.jboss.org/browse/CDI-113
2912	CDI-113	bq. Alexey, can you give example of why tools needs to know this - how would it represent this info to the user? @Inject BeanManager manager; JBoss Tools used to complain that no bean is eligible for "@Inject BeanManager manager;" until we hardcoded BeanManagerImpl (for Weld) as a special bean. bq. I don't understand this problem, why do you need to do this? How we can find actual bean classes without scanning the entire class path? So far we just hardcoded weld-*.jars name template and scan such jars along with jars which contain beans.xml.	1	1	https://issues.jboss.org/browse/CDI-113

#	Requirement	Questions	Answered	Successfully Answered	URL
2913	CDI-113	{quote} {quote}Alexey, can you give example of why tools needs to know this - how would it represent this info to the user?{quote} @Inject BeanManager manager; JBoss Tools used to complain that no bean is eligible for "@Inject BeanManager manager;" until we hardcoded BeanManagerImpl (for Weld) as a special bean. {quote} I don't think you should be making BeanManagerImpl available for injection, just BeanManager (which all impls *must* provide). So hardcode BeanManager, not BeanManagerImpl. {quote}{quote}I don't understand this problem, why do you need to do this?{quote} How we can find actual bean classes without scanning the entire class path? So far we just hardcoded weld-*.jars name template and scan such jars along with jars which contain beans.xml.{quote} Why do you need to find actual bean classes? All that you should be making available is the interfaces provided by the spec. I think we need to talk about this offline as there is clearly a misunderstanding here, which I think may stem from the way we did things in Seam 2.	1	1	https://issues.jboss.org/browse/CDI-113
2914	CDI-112	Not sure what ordering has to do with this? What would ordering enablements achieve? I think we should just fold this into CDI-18.	1	1	https://issues.jboss.org/browse/CDI-112
2915	CDI-112	RE: The <first> <others> turned out to be not flexible enough for lots of situations. Thus I prefer an ordinal with a float value. Hmmm.. Ok.	1	0	https://issues.jboss.org/browse/CDI-112
2916	CDI-110	Then what would be the difference between a ServiceHandler and an Interceptor ? As stated before, the goal of a ServiceHandler is to provide an implementation to an abstract class or an interface. I believe that allowing multiple ServiceHandler(s) would lead to confusion, as when to create an Interceptor and when to create a ServiceHandler. Thoughts welcome	1	1	https://issues.jboss.org/browse/CDI-110
2917	CDI-110	Maybe we should require Service Handler implementations to implement the InvocationHandler interface. WDYT ? See: http://docs.oracle.com/javase/7/docs/api/java/lang/reflect/InvocationHandler.html Or even better: Rename ServiceHandler to InvocationHandler feature	0	0	https://issues.jboss.org/browse/CDI-110
2918	CDI-110	Could work, do you want to explore that in the spec changes?	0	0	https://issues.jboss.org/browse/CDI-110
2919	CDI-109	Can we expand on this? I am not sure I understand. Is there some supporting document blog, email thread? This is not clear.	0	0	https://issues.jboss.org/browse/CDI-109
2920	CDI-108	same here, no clue, the JSR-330 EG list is quiet. Where is this info from?	0	0	https://issues.jboss.org/browse/CDI-108
2921	CDI-106	More details. I like the ideas of JMS support for CDI. But where should it live. Can we release extensions like JMS in a separate jar file? Or somehow make it modular so as not to preclude CDI from being used in non-Java EE environments. Can we spin off other specifications for JMS CDI Extension? Should a CDI JMS extention be part of the JMS spec.?	0	0	https://issues.jboss.org/browse/CDI-106
2922	CDI-105	Why can't the extension just load the xml file from classpath? Can you state a use case for this?	0	0	https://issues.jboss.org/browse/CDI-105
2923	CDI-105	Will this allow access to the beans.xml at a time when it is possible to add beans and annotated types CDI?	1	1	https://issues.jboss.org/browse/CDI-105
2924	CDI-104	From my understanding, this need has been addressed with [{{UnmanagedInstance}}|http://docs.jboss.org/cdi/api/1.1/javax/enterprise/inject/spi/Unmanaged.UnmanagedInstance.html] as documented in [Obtaining non-contextual instance|http://docs.jboss.org/cdi/spec/1.2/cdi-spec.html#bm_obtain_unmanaged_instance] in CDI 1.1. Isn't it?	1	1	https://issues.jboss.org/browse/CDI-104
2925	CDI-102	Is this a Spec feature or just an extra Weld feature? I think this is bad either way. We are introducing more coupling between Weld and Servlet. The relationship here should be inverted IMO. This is causing bugs with apps that already wrote producers for Http**** artifacts.	0	0	https://issues.jboss.org/browse/CDI-102
2926	CDI-102	This is a spec feature. Weld is already coupled to Servlet, so I'm not concerned about that. But the point about conflicting with existing extensions is relevant. Do you want to reopen?	0	0	https://issues.jboss.org/browse/CDI-102
2927	CDI-102	+1 for conflict, couldn't it be a kind of alternative to avoid to activate it when an extension is already here? (the feature is good btw but out of the box will break too much IMO)	0	0	https://issues.jboss.org/browse/CDI-102
2928	CDI-102	org.jboss.weld.exceptions.DeploymentException: WELD-001409 Ambiguous dependencies for type [HttpServletRequest] with qualifiers [@Default] at injection point [[UnbackedAnnotatedField] @Inject private org.jboss.solder.servlet.http.HeaderParamProducer.request]. #	Requirement	Questions	Answered	Successfully Answered	URL
2929	CDI-102	Any solution to this issue? I got error when deploy application with Solder-impl.3.2.0.Final: Exception 0 : org.jboss.weld.exceptions.DeploymentException: WELD-001409: Ambiguous dependencies for type HttpServletRequest with qualifiers @Default at injection point [BackedAnnotatedField] @Inject private org.jboss.solder.servlet.http.CookieParamProducer.request at org.jboss.solder.servlet.http.CookieParamProducer.request(CookieParamProducer.java:0) Possible dependencies: - WELD|AbstractSyntheticBean|epen-login-1.4.30-SNAPSHOT.war/WEB-INF/lib/solder-impl-3.2.0.Final.jar|HttpServletRequest, - Producer Method [HttpServletRequest] with qualifiers [@Any @Default] declared as [[BackedAnnotatedMethod] @Produces @Typed @RequestScoped protected org.jboss.solder.servlet.http.ImplicitHttpServletObjectsProducer.getHttpServletRequest()] at org.jboss.weld.bootstrap.Validator.validateInjectionPointForDeploymentProblems(Validator.java:369) at org.jboss.weld.bootstrap.Validator.validateInjectionPoint(Validator.java:282) at org.jboss.weld.bootstrap.Validator.validateGeneralBean(Validator.java:133) at org.jboss.weld.bootstrap.Validator.validateRIBean(Validator.java:164) at org.jboss.weld.bootstrap.Validator.validateBean(Validator.java:507) at org.jboss.weld.bootstrap.ConcurrentValidator$1.doWork(ConcurrentValidator.java:68) at org.jboss.weld.bootstrap.ConcurrentValidator$1.doWork(ConcurrentValidator.java:66) at org.jboss.weld.executor.IterativeWorkerTaskFactory$1.call(IterativeWorkerTaskFactory.java:60) at org.jboss.weld.executor.IterativeWorkerTaskFactory$1.call(IterativeWorkerTaskFactory.java:53) at java.util.concurrent.FutureTask$Sync.innerRun(FutureTask.java:334) at java.util.concurrent.FutureTask.run(FutureTask.java:166) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:722)	0	0	https://issues.jboss.org/browse/CDI-102
2930	CDI-99	The spec covers what happens if there is no instance for a given class but the result may as well be ambiguous. Should we specify what happens in that case?	1	1	https://issues.jboss.org/browse/CDI-99
2931	CDI-99	Don't we fear about security issues? Giving an end-user access to all runtime Extensions might be a bit too much...	1	1	https://issues.jboss.org/browse/CDI-99
2932	CDI-99	while chatting with jozef and ales, we had the following idea: What about just allowing to inject Extensions at bootup (as we already do with BeanManager)? public doThaTrick(@Observes BeforeBeanDiscovery bbd, MyOtherExtension otherExtension) {...}; or even: public doThaTrick(@Observes BeforeBeanDiscovery bbd, Instance<Extension> allExtensions) {...}; We would need to clarify 6.7.3 that Extensions, BeanManager, Event, ...(what else being @ApplicationScoped and available at bootup?) must be available for injection into SystemEvent methods.	1	1	https://issues.jboss.org/browse/CDI-99
2933	CDI-99	Jozef, how can this be ambiguous? There is one extension per extension class.	1	1	https://issues.jboss.org/browse/CDI-99
2934	CDI-92	It is hard to even consider this without some further explanation. Can you clarify? I went to the link. This needs more discussion.	0	0	https://issues.jboss.org/browse/CDI-92
2935	CDI-92	Reopening, since multiple implications are not handled by this change. 1.) The qualifiers (@Intercepted, @Decorated) are missing from the API and from the specification document. 2.) Similarly to the Injection point metadata section, the Bean metadata section should name possible invalid scenarios and required the container to treat them as a definition error. These include: * Interceptor<?> injection point in a non-interceptor bean * @Intercepted Bean<?> injection point in a non-interceptor bean * Decorator<?> injection point in a non-decorator bean * @Decorated Bean<?> injection point in a non-decorator bean 3.) The spec should define what happens in the following scenatio: {code:JAVA} class Foo { @Inject Bean<Bar> metadata; } {code} Should the container validate the generic type of a bean metadata injection point? Should the abovementioned example be treated as a definiton error? 4.) The spec should perhaps explicitly state that it is possible to inject bean metadata into a disposer method and that this metadata always refers to the producer field/method that created the instance being destroyed.	0	0	https://issues.jboss.org/browse/CDI-92
2936	CDI-86	Jozef, could you review the changes I've made and check you feel it sufficiently specifies your scenario?	1	1	https://issues.jboss.org/browse/CDI-86
2937	CDI-86	John, take a look at section 6.7.1 in the 1.0 spec and you will see that CDI requires the request scope is active for JMS message listener message delivery. If the request context is initialized specifically for this, then we will will fire a CDI event with qualifiers @Request @Initialized, and the event should have a payload (in servlet it's a ServletRequestEvent which allows the observer access to the context of the request). What should it be for JMS message listeners, if anything?	1	1	https://issues.jboss.org/browse/CDI-86
2938	CDI-86	Hmmm I missed that in 1.0. Do you mean MDB's or any message listener within a CDI enabled JMS object? E.g. a message listener created that is bound using addMessageListener on a consumer? Also, would you be referring to a CDI enabled message listener (e.g. @Inject @MessageType("A") MessageListener ml;) ? This one I know doesn't work in AS7.	0	0	https://issues.jboss.org/browse/CDI-86
2939	CDI-86	I have updated the pull req with Jozef's suggestion. Jozef, can you spin the idea about extending this to non-built-in scopes to a new issue please?	0	0	https://issues.jboss.org/browse/CDI-86
2940	CDI-86	{quote}Jozef, can you spin the idea about extending this to non-built-in scopes to a new issue please?{quote} CDI-165	1	1	https://issues.jboss.org/browse/CDI-86
2941	CDI-85	What happened to this issue? The pull request is not available any more and the wording in the spec still seems to be wrong.	1	1	https://issues.jboss.org/browse/CDI-85
2942	CDI-82	Marius, where is this defined as an error?	1	1	https://issues.jboss.org/browse/CDI-82
2943	CDI-80	Why is the conversation propagation limited to *GET* request parameter only? If I got it right this rule prevents form-processing servlet-only applications from using the conversation scope.	1	1	https://issues.jboss.org/browse/CDI-80
2944	CDI-78	[~antoinesabot-durand] This is still unclear to me what should happen when I inject {{InjectionPoint}} in decorator. Section {{6.5.4. Contextual reference for a bean}} states: {quote} The container must ensure that every injection point of type InjectionPoint and qualifier @Default of any dependent object instantiated during this process receives: • an instance of InjectionPoint representing the injection point into which the dependent object will be injected, or • a null value if it is not being injected into any injection point. {quote} Will I get null or instance of {{InjectionPoint}} for the IP injected into decorator?	1	1	https://issues.jboss.org/browse/CDI-78

#	Requirement	Questions	Answered	Successfully Answered	URL
2945	CDI-78	2 scenarios here. h2. InjectionPoint relates to the decorator bean itself As a decorator can't be injected directly since it's not available for injection as stated in 5.1.4, so {{InjectionPoint}} of a decorator should always return null. h2. InjectionPoint relates to the decorated bean It could be nice to have information about {{InjectionPoint}} of the decorated bean in the decorator, but it can be confusing to deal with it: decorator can decorate dependent and non-dependent beans at the same time. So, if we don't want to break the spec, we should forbid it if at least one decorated bean is not dependent. h2. My proposal {{InjectionPoint}} with @Default qualifier injected in decorator (or interceptor BTW), should be considered as scenario 1 and always return null. To support injection of decorated bean's {{InjectionPoint}} we should use the {{@Decorated}} qualifier ({{@Inject @Decorated InjectionPoint}}) allowing to have the IP instance if decorated bean is dependent or null if it is not. It won't violate the spec and be less confusing for users (we can assume that a user adding such a qualifier probably knows what he's doing). Again this proposal is also interesting for Interceptors. WDYT ?	0	0	https://issues.jboss.org/browse/CDI-78
2946	CDI-77	Hmm, if we don't talk about constructor injection, this is not a problem at all. So I don't think, we should forbid this. And for constructor injection we could create a proxy. We already create proxies for Dependent beans (i.e. when they have interceptor bindings). So why should we not create a proxy in this situation?	1	0	https://issues.jboss.org/browse/CDI-77
2947	CDI-77	Hmm, but why (but of a technical point of view) should the spec differentiate between normal scoped beans and dependent beans? Either we feel that circular injection is not a good way to design applications and want to forbit it in either situation or we allow it and maybe document behavior where it simply does not work. By the way, how does the spec treat situations where a dependent bean has an interceptor-binding or decorator and is not proxiable?	1	0	https://issues.jboss.org/browse/CDI-77
2948	CDI-75	From my mail to cdi-dev: Initially I thought it would be a good idea to ignore an observer method if a scope is not active and notifyObserver is IF_EXISTS. But now I believe this is partially wrong. There is a difference between A) the observer bean scope is active without an active bean in scope and B) the observer bean scope is not active IF_EXISTS refers to A) only, I believe. Because if IF_EXISTS applies to A) and B) I am unable to support ALWAYS for active scopes while being ignored if a scope is not active. Why would someone need that? Very often we initialize our application during startup. During startup request and application scope are active. Usually a session scoped observer should be ignored during startup. But at runtime - with an active session scope - I need ALWAYS semantics for those observers. So I would vote for: - ALWAYS observer methods will throw an ContextNotActiveException(?) if scope is not active. - IF_EXISTS observer methods will throw an ContextNotActiveException(?) if scope is not active. - IF_EXISTS observer methods will be ignored if scope is active but no active bean is in scope. - (The newly created) IF_ACTIVE observer method (naming TBD) will be ignored if scope is inactive. If scope is active it will be treated as ALWAYS. - There might be a need for IF_ACTIVE_AND_EXISTS;). This might break backwards compatibility though.	1	1	https://issues.jboss.org/browse/CDI-75
2949	CDI-75	From the CDI 1.1 EG meeting, 19th Sept {quote} Mark argued that this isn't 100% clear either way - it's arguable both ways. All agreed that it shouldn't be thrown by default. Will clarify that it isn't thrown, and possibly add a new state in which it is thrown (e.g. Reception.Strict or something somewhat less horribly named ;-) {quote} Jens, WDYT? Do you need this new state?	1	1	https://issues.jboss.org/browse/CDI-75
2950	CDI-74	Marius, I think we need to specify effects, not impl. Can you do this?	0	0	https://issues.jboss.org/browse/CDI-74
2951	CDI-70	Where is your problem here? Should we add a second part to the second sentence like "The container must not directly call the Java Reflection API to discover them." We are just talking of discovery here and that perfectly fits with the javadoc. We are able to discover that the developer has not added any constructor to a class by retrieving an empty set from javax.enterprise.inject.spi.AnnotatedType.getConstructors().	0	0	https://issues.jboss.org/browse/CDI-70
2952	CDI-58	Basically ok, but don't we need an information about it's ID in the AnnotatedType itself? That could be useful for Extensions, isn't? Otherwise an Extension like Seam-XML could not differentiate between the built-in and the external AnnotatedType.	0	0	https://issues.jboss.org/browse/CDI-58
2953	CDI-51	Do we want to do this? What are the use cases?	0	0	https://issues.jboss.org/browse/CDI-51
2954	CDI-50	To be honest: I for one am not so fond about @Veto and @Requires yet ... @Veto: completely underspecified! * How can it be modified via Extensions? * In which phase does it get applied? Directly at startup? Or only after ProcessAnnotatedType? * all corner cases and exceptional behaviour, e.g. how does it fit together with @New? @Requires: not user friendly * against JSR-250 * adds tons of NoClassDefFound pitfalls * how to prevent @Requires("wrongString") People should rather modularize their apps a bit better.	0	0	https://issues.jboss.org/browse/CDI-50
2955	CDI-50	Our preface still mentions @Requires. Plus it's not clear in 11.5.6 what happens if there are package-info.java @Vetoed for the same package in different JARs. Do we need to scan all jars for those first and merge the packages upfront? That could slow down scanning. It' also not clear from the Java Lang Spec what happens if you don't use package-info.java but annotate the package in a single class file. package-info.java is recommended, but the spec allows other ways as well: http://docs.oracle.com/javase/specs/jls/se5.0/html/packages.html#7.4.1.1	0	0	https://issues.jboss.org/browse/CDI-50
2956	CDI-45	From my understanding, that need is met with [{{javax.enterprise.inject.Instance}}|http://docs.oracle.com/javaee/7/api/javax/enterprise/inject/Instance.html]: {code} @Inject Instance<MyBean> bean; if (!bean.isUnsatisfied()) bean.get(); {code} What would be the added value of the {{@Optional}} approach compared to the {{Instance}} concept? Besides, that approach would lead to having potential NPE or to check against nullity which is not very elegant. That being said, with the CDI 2.0 / Java 8 enhancement stream, [{{java.util.Optional}}|http://docs.oracle.com/javase/8/docs/api/java/util/Optional.html] could be automatically supported: {code} @Inject Optional<MyBean> bean; bean.isPresent(); bean.orElse(...); {code}	0	0	https://issues.jboss.org/browse/CDI-45
2957	CDI-45	I think there could be an interface between Provider<T> and Instance<T>, which will have method isUnsatisfied(). So that way backward compatibility will be preserved. The question is not only of how we declare, but also if the dependecy is ambiguous, should resolution fail for "optional" dependecy?	0	0	https://issues.jboss.org/browse/CDI-45
2958	CDI-45	Then one potential compromise would be to enrich the existing abstractions, either {{Instance}} or {{Provider}} with the equivalent semantic that of {{Optional}}. For example: {code} @Inject Provider<MyBean> bean; if (bean.isPresent()) bean.get(); {code} Or if we think {{Optional}} is a convenient abstraction: {code} @Inject Provider<MyBean> bean; bean.getOptional(); {code} In any case, I think that a {{isSatisfied()}} / {{isResolvable()}} method is missing on the {{Instance}} interface when alternatives are enabled for example and that would avoid writing {{!isUnsatisfied() && !isAmbiguous()}}. As per backward compatibility for these interfaces, are they really meant to be implemented aside from the implementations? That would avoid introducing another interface. If not maybe default method in Java 8 could help.	0	0	https://issues.jboss.org/browse/CDI-45

#	Requirement	Questions	Answered	Successfully Answered	URL
2959	CDI-45	I guess there will be a way to toggle this property using a CDI-Extension? How would this look like? {code} void processInjectionPoint(@Observes ProcessInjectionPoint pit) { ... pit.getInjectionPoint().setOptional() } {code}	0	0	https://issues.jboss.org/browse/CDI-45
2960	CDI-45	How about we implement this by allowing Java 8 Optional? {code} @Inject private Optional<MyBean> myBean; {code} Would also be a nice Java 8 alignment.	1	0	https://issues.jboss.org/browse/CDI-45
2961	CDI-45	[~sknitelius] What's wrong with {{Instance}}? We're going to introduce {{Instance.isResolvable()}} within CDI-589.	1	0	https://issues.jboss.org/browse/CDI-45
2962	CDI-45	-1 for adding those methods on {{Instance}} and -1 for introducing {{Optional}} built-in bean (mainly due to serialization issues and the need for special handling, e.g. disallow programatic lookup). {{Instance.getOptional().ifPresent(...)}} etc. is imho easier to understand.	1	0	https://issues.jboss.org/browse/CDI-45
2963	CDI-45	[~meetoblivion] On F2F we decided to add {{isResolvable()}} (is satisfied and not ambiguous), it's already part of the [Weld API|https://github.com/weld/api/blob/2.4/weld/src/main/java/org/jboss/weld/inject/WeldInstance.java#L53]... I suppose this is basically what {{isPresent()}} does. Do you find the name acceptable? Also I quite like {{asOptional()}}.	0	0	https://issues.jboss.org/browse/CDI-45
2964	CDI-43	{quote} I think that should should also apply to ProcessBean, ProcessProducer etc. In this case the even is only delivered if the declaring class (i.e. Bean.getBeanClass()) meets these requirements. {quote} Can you elaborate on why? Also, if we specify this as a filter, I'm concerned that operating on the bean class is inconsistent, as a user would properly expect it to take into account modified type information from AnnotatedType.	0	0	https://issues.jboss.org/browse/CDI-43
2965	CDI-37	OK, I understand, what he means, but I don't understand why it is needed. In what way does an @ApplicationScoped bean not fulfill the mentioned requirements	1	0	https://issues.jboss.org/browse/CDI-37
2966	CDI-30	[~meetoblivion] [First PR|https://github.com/cdi-spec/cdi/pull/291/files] looks good! Would it be an idea to set a wrapped (or decorated) context controller? What I'm looking for is a way to start contexts possibly earlier than a specific container implementation normally starts them, and stop them possibly later. If the context is started earlier in say a request, then eventually the container will also start that same context later in the request. If that will throw an exception the request will not proceed, which is of course not intended. Likewise, when the container stops the context this will thus be too early. With a wrapped context controller, the {{startContexts}} and {{stopContexts}} calls can be ignored for those contexts the application (extension/library) wanted to start earlier and stop later. This does of course assume that the container itself will also use this context controller instead of the current proprietary code. Additionally, the PR does not contain the check anymore to see if the context is already active or already stopped. Is that still intended to be added? This would be particularly useful for code that needs to be portable between different containers, where one container may already have started the context at a given point, where another container has not (catching the exception would be an alternative here but is obviously not so nice). Another point, what about letting the caller of the {{startContexts}} method optionally pass in the objects (or a lambda to obtain them) on which that context primarily depends (if any). E.g. for the request scope, pass in an {{HttpServletRequest}} instance.	1	1	https://issues.jboss.org/browse/CDI-30
2967	CDI-27	Pete, does this issue mean to support EJBs @TransactionAttribute and stuff out of the box? This would require a very deep integration with the EJB container and the support of various transaction models. Not sure if we really like to dig that deep. This is workwise basically a duplication of the EJB spec in this area. But technically it would be different because in EJB transactions are auto-on whereas in CDI they would still need to get applied automatically.	1	1	https://issues.jboss.org/browse/CDI-27
2968	CDI-27	> This was not my intention. I'd rather see the CDI spec just providing the basic mechanisms to make such an Interceptor possible (which it already does). But I'd not specify such complex and history-bloated things in the CDI spec itself, but maybe in the EJB spec? Could you please clarify? If you do not intend to introduce an additional annotation, then I'm o.k. with that. You could easily re-implement EJB 3.1 transactions with CDI 1.0.	0	0	https://issues.jboss.org/browse/CDI-27
2969	CDI-26	The more I think about it, the more I'm sure that we need to push this to the EE7 umbrella spec. Booting the CDI container alone is nice, but by far not sufficient. EJB has already an API to boot the container (javax.ejb.embeddable.EJBContainer), CDI might get one too. But still the user will end up not being able to start his whole environment! Imagine a situation where a user likes to use openejb or JBossAS7-embedded in a SE environment. Starting the container alone would not be enough. Otoh one could argue that in those cases a user might easily use the containers native implementation specific classes directly. Wdyt?	0	0	https://issues.jboss.org/browse/CDI-26
2970	CDI-21	I would also favor this. Have a use case where I observe "ProcessAnnotatedType<T>" events and I don´t want to reinit a variable each time.	0	0	https://issues.jboss.org/browse/CDI-21
2971	CDI-20	Good point, Antoine. And even with ordered event observers: What would be the meaning of "propagate = false" for transactional event observers?	0	0	https://issues.jboss.org/browse/CDI-20
2972	CDI-18	Can you be more specifc Rick as to what elements you are thinking of?	1	1	https://issues.jboss.org/browse/CDI-18
2973	CDI-18	> RE: The <first> <others> turned out to be not flexible enough for lots of situations. Thus I prefer > an ordinal with a float value. Hmmm.. Ok. My comment was targeted at the mechanism used in the faces-config.xml which I assume has the same mechanism (need to re-read the servlet 3.0 spec though). Problem there is that the ordering is for the whole config file, isn't? So you could only define the order of all the stuff in the beans.xml. Not sure if we need that, but in case of the faces-config.xml I definitely regretted it already: I did want to have the EL-order in a different way than the facelets resource order which doesn't work.	1	1	https://issues.jboss.org/browse/CDI-18
2974	CDI-18	>> Folks, introducing any hierarchy is exactly the same way broken as BDA itself. Let's just get rid of that piep! I would say having that *piep* is not so *piep* at all, as it allows you to abstract away diff CL rules. Who's to say which CL rules are right. ;-) e.g. JBossAS pre-7 was doing well with that big-ball-o-mud, until that bbom become unmanageable (via JEE expansion ...). And even if we went directly to modularity / CL, you still need a mechanism to "visit" things API way. Since CL doesn't expose that, you need a custom layer -- here enter BDA. ;-)	1	1	https://issues.jboss.org/browse/CDI-18
2975	CDI-18	Ales, fact is that lots of applications I know which must get deployed to Glassfish or JBossAS6 (not sure yet about AS7) currently just *unpack* all their dependencies to WEB-INF/classes, BECAUSE BDA IS COMPLETELY FUUUU UP.... Have you ever worked with big customers to get their _big_ CDI apps working? I did, and trust me, BDA is really a nightmare! This is really the worst part of CDI-1.0, and it's _very_ easy to get rid of it! Just look at what seam-solder does with @DefaultBean to make parts of this undone with some dirty tricks... @DefaultBean disables the BDA by emulating other mechanism - but at a pretty high performance and complexity cost. And then look at how many parts of Seam are using @DefaultBean? 80%? 90%? Even more?	1	1	https://issues.jboss.org/browse/CDI-18
2976	CDI-18	Do you see problems with resolution around BDAs as well?	1	1	https://issues.jboss.org/browse/CDI-18

#	Requirement	Questions	Answered	Successfully Answered	URL
2977	CDI-18	I don't know BDA. What is it? I do like JBoss modules (but it can't change the language like Jigsaw will). Mark Reinhault's devoxx presentation about Jigsaw is really worth seeing.	0	0	https://issues.jboss.org/browse/CDI-18
2978	CDI-18	I'm not saying BDA impls are perfect :-), but I do think we need some abstraction like BDA. It's easy to say we don't need it, and let's then make everything flat. Which is - as you say - probably how big JEE apps look like, but not everything is JEE. ;-) e.g. we had a big customer with MicroContainer (AS5/6 kernel), which used custom CL rules, and having BDA would make it possible for them to use CDI, if they wanted (this was pre-CDI). btw: how do you then follow bean visibility rules in OWB in hierarchy .ears?	1	1	https://issues.jboss.org/browse/CDI-18
2979	CDI-18	>> @Ales: In fact, JBossAS7 already killed the BDA partly! You already contradict the spec by allowing definitions in WEB-INF/beans.xml to count for all jars in WEB-INF/lib. Please go back and read the spec - this is clearly defined different! As per the CDI-1.0 spec, any definitions in WEB-INF/beans.xml must ONLY affect WEB-INF/classes/** and MUST NOT have any effect on jars in WEB-INF/lib! I don't think that's true for AS7. Are you 100% sure? It was true for AS6, but that was a mistake / bug. And what do you mean by "affect"?	1	1	https://issues.jboss.org/browse/CDI-18
2980	CDI-18	The whole BDA discussion is also important for Beans added via Extensions. Such Beans do not have any BDA. Same question applies if AnnotatedType gets modified or added freshly via Extensions. What BDA are they assigned to?	1	1	https://issues.jboss.org/browse/CDI-18
2981	CDI-18	issue to allowing default/global enablement of interceptors, decorators and alternatives was to provide a global ordering solution. We discussed the three proposals: (1) Relative ordering of individual interceptors, decorators and alternatives using either a name or an ordering qualifier (2) Ordinal/magic number based ordering of individual interceptors, decorators and alternatives (3) Ordinal/magic number based ordering of lists of interceptors, decorators and alternatives (i.e. the ability to specify an order of beans.xml, which themselves specify a partial ordering of interceptors, decorators and alternatives) We discussed the merits of each. In general, we didn't feel any solution is excellent, however this is a problem we must solve, so we must pick the best, even if it isn't perfect. Pete expressed concerns over the understandability of the merge of partial orders done in (3). Consider an application which has 10 libraries, each of which specify 10 interceptors in an order. There is some overlap between the lists. For a user to comprehend the overall order is not trivial in this case, it requires a tool to tell you the order. We discussed (1) and Mark expressed concerns that you can't easily express some well know use cases using it, without explicitly specifying the interceptor by name. For example, consider a TransactionInterceptor, which needs to be "outside all". This must specify "outside all". However, any other interceptor which wants to be outside everything should specify "outside all, inside TransactionInterceptor". This gets complex quite quickly. Its a less complex algorithm to comprehend than (3), but still requires quite a bit of thought to understand the overall order. Finally, we discussed (2). We agreed that it has some good precedents (e.g. httpd, SYS-V init) that have worked well for a long time. It's trivial to comprehend, and also quick to compute. It does require a knowledge of the position of other algorithms, but so do all other approaches considered. We agreed to recommend approach (2). A lower number indicates the interceptor or decorator should appear earlier in the call stack, a higher number indicates it should appear later in the call stack. A higher number alternative takes precedence over a lower number alternative (OPEN ISSUE: how does this interact with class hierarchies?). Two interceptors, decorators and alternatives with the same number have the same precedence, and their order is not defined. We discussed that we should use recommended ranges for the magic numbers. For example: 1-100: System interceptors, decorators and alternatives (interceptors specified by CDI or the Java EE platform specs) 100 - 1000: Extension interceptors, decorators and alternatives (interceptors provided by extension libraries such as Deltaspike) 1000 - 2000: Application interceptors, decorators and alternatives (interceptors provided by an application or internal extension) 2000 - 3000: Extension interceptors, decorators and alternatives 3000 - 3100: System interceptors, decorators and alternatives Note that we need to allow system interceptors to go before (e.g transaction) or after (e.g. validation). Using this "pyramid" of ranges allows for this. Next, we discussed that this needs to be overridable by the SPI, and that the SPI should present a merged view of all interceptors, decorators and alternatives. This should be delivered once, for the whole application. The extension can mutate the list, to change which interceptors, decorators and alternatives are enabled, and the ordering. We looked at the events, and agreed that deferring it as late as possible is good, to allow extensions to have as much info as possible. AfterBeanDiscovery is as late as it can go, as we need this info to perform validation. Next, we discussed where the ordinal number can be placed, and said that: * A bean archive which declares an interceptor (alternative or decorator) can set the ordinal, by adding an entry in beans.xml like: <beans> <interceptors> <class priority="1001">com.acme.FooInterceptor</class> </interceptors> </beans> OPEN ISSUE: Is priority the right attribute? * The application can override the ordering, by specifying the interceptor class, and providing another ordinal. It can able disable an interceptor, decorator or alternative, by adding the enabled="false" attribute. OPEN ISSUE: Can other libraries disable interceptors and change the precedence? If so, which one wins? Finally, we decided to remove the	1	1	https://issues.jboss.org/browse/CDI-18
2982	CDI-18	Maybe we define that you can use one style or the other?	1	1	https://issues.jboss.org/browse/CDI-18
2983	CDI-18	"a default priority for interceptors. I proposed 1000, the lowest priority for application interceptors." If negative numbers are allowed too, is there a specific reason not the default to 0? High priority => use positive number (for example +10). Low priority => use a negative number (for example -10). Normal priority => leave it at 0.	0	0	https://issues.jboss.org/browse/CDI-18
2984	CDI-18	Hi together, as the follow-up to the thread https://community.jboss.org/thread/200853. INTERCEPTORS The specification says that the "beans.xml" is valid per beans archive. But as a specification user I would prefer to have the validity of registered interceptors hierarchically. That means following: IN CONTAINER 1. The first level where the beans.xml file must appear is the bean archive (jar file) if and only if the classes in jar utilize CDI. Already there the first interceptors can be defined. In other words - I CAN say which interceptors I want to use per default for my interception bindings. Defined interceptors will be active only if this definition is not overridden on upper level. AND - if within the jar I declare interceptors I MUST create META-INF/beans.xml where I CAN register my interceptors. My registered interceptors will be active for all binding and not only in this particular jar only in case my jar is together with other jars in class path and my interceptors are not overridden in upper layers or in jar which use interceptor bindings itself. 2. The second and third level are the web/service/resource and enterprise applications respectively. On these levels the application assembly must be able to override the interceptors defined on lower level. Means: if I have registered interceptor for @Foo @Default in jar, the application which have this jar in class path can override registered interceptor by registering another interceptor for the same binding and qualifier in own beans.xml file. DESKTOP 1. The first level as in container. 3. The desktop applications which utilize CDI instantiating implementation directly must be able to provide top-level beans.xml to the implementation. Ddefinitions in this beans.xml will override existing interceptor registrations on class path. ---------- PROVIDERS I think it is necessary to clarify the situation with providers also. what happens so far if I have two providers of the same type in class path????	0	0	https://issues.jboss.org/browse/CDI-18
2985	CDI-18	Jozef, can you file new issues for errors in the PRDas it is now released	1	1	https://issues.jboss.org/browse/CDI-18
2986	CDI-18	{quote}Even JBossAS nor GlassFish are NOT following the strict CDI-1.1 rules right now because they are unusable!{quote} Alternatives are enabled as required by the spec (per bean archive) in JBoss AS (not sure about GF). Could you provide evidence supporting your statement?	0	0	https://issues.jboss.org/browse/CDI-18

#	Requirement	Questions	Answered	Successfully Answered	URL
2987	CDI-18	{quote} Alternatives are enabled as required by the spec (per bean archive) in JBoss AS {quote} Bean Archive is defined as each JAR being an own Bean Archive in CDI-1.0. As far as my tests showed an enabled alternative in WEB-INF/beans.xml is available in all jars in WEB-INF/lib/*.jar. I agree that this makes more sense than having each jar being an own BDA - but it's clearly against CDI-1.0 if implemented that way. Can you verify this please? I tested this with JBossAS-7.0.1 and 7.1.0 back then afair.	1	1	https://issues.jboss.org/browse/CDI-18
2988	CDI-16	Pete: do you know what happened to http://java.net/projects/javaee-spec/lists/jsr342-experts/archive/2012-03/message/74 ? At some point I stopped following. I personally would hope that @ManagedBean would be deprecated, and CDI would ignore this spec.	1	0	https://issues.jboss.org/browse/CDI-16
2989	CDI-16	Currently I dislike CDI treat all classes(which has a constructor with no arguments) as CDI managed bean, I know Jboss Solder provides a @Veto to resolve this issue. I think the matrix 2 is clear. I like the two classes solution. 1. the first level, the bean is injectable, has own scope. such EJB, basic Pojo(annotated with @ManagedBean), @Named etc. And other bean such as EJB can improve the lifecyle support transaction, security etc. Compare to spring framework, it provides @Component, and @Controller, @Service etc. but the later are refined from the @Component. Why the @Named, @EJB can not be refined to use @ManagedBean(JEE)? ... @ManagedBean ..... interface @Named{ } ... @ManagedBean ..... interface @Stateful{ } 2. such as entity listener, faces converter, faces validator, bean validator, servlet & servlet listener, filter, etc, can inject other beans. For example, it should allow us inject EmtityManager in faces conventer. But it can NOT be injected in other bean, and can NOT be defined in its own scope. In fact, as a developer I only want to simplify programming, but do not want to change their lifecyle. But besides the CDI interceptors, decorators, I think it should be optional, developer can select if use CDI to manage it. For the 2, is there a better solution to make it managed? Spring provides another @Configurable. In JEE 7, the jee7 expert group can consider a similar solution, for example, provides a @Managed annotation to improve the lifecyle. @WebServlet @Managed class MyServlet extends HttpServlet{ //you can use @Inject now, } if it is not annotated with @Managed...it is no relation to CDI, only a generic servlet. @WebServlet class MyServlet extends HttpServlet{ //@Inject is NOT supported, } This maybe force the different spec providers leave some space for the CDI hooks in their lifecycle. In summary, I hope all JEE specs looks smooth and seamless to developers. Regards Hantsy	1	1	https://issues.jboss.org/browse/CDI-16
2990	CDI-15	Also, the spec currently contradicts itself when it says: {quote} A qualifier type is a Java annotation defined as @Target(\{METHOD, FIELD, PARAMETER, TYPE\}) and @Retention(RUNTIME). {quote} and then uses {code:JAVA} @Qualifier @Target(PARAMETER) @Retention(RUNTIME) public @interface Role { String value(); } {code} in 10.2.2 of CDI 1.0	0	0	https://issues.jboss.org/browse/CDI-15
2991	CDI-14	To clarify this a bit: Currently we need * BeanManager#getBeans * BeanManager#resolve * BeanManager#getReference I don't think Instance<Object> instance(); is enough. It should be more like Instance<T> instance(T, Annotation<? extends Qualifier>); right? But to be honest: imo we should not make too much functionality available in the BeanManager and bloat our interface if it is easily doable already. This is really only used in situations where you cannot @Inject your Instance object (means in unmanaged instances like a JPA EntityListener or similar). But in those rare cases, it's easily doable already. Maybe we just add an own section to the spec and explain how this 3 methods work together for getting the contextual reference?	1	1	https://issues.jboss.org/browse/CDI-14
2992	CDI-14	At first I roared on the fact a convenience method wasn't available. As everyone else, I wrote a utility class with the 3 lines needed (resolve/createCreationalContext/getReference). It was actually longer to understand the difference between these and InjectionTarget#produce() because the documentation chapter 16.4 was confusing me. Then I realized you can almost always find a way to work properly, so getting bean refs by hand becomes very, very rare (eg: phaselisteners, components you really have to new() yourself). What bothered me much more was the lifecycle of such beans. I aksed myself questions like: "If the bean instance was actually instantiated via getReference, will its lifecycle be still respected?" Eventually, I thought the only thing needed would be extra documentation. I actually shared Mark's point sometimes. Now I'd say it's useless to let every EE developper write the exact same 3 lines of code, so it's better to have a couple of convenience methods (Rick's proposal sounds neat)...BUT I already see deviant behaviors coming amongst the developpers, so I'd be extremely clear on the spec, in the javadoc and in the reference doc about what getting bean refs by hand implies.	1	1	https://issues.jboss.org/browse/CDI-14
2993	CDI-14	Rick, George, why do you want to create a new API for programmatic lookup when we already have Instance? What is your motivation for adding methods to BeanManager over exposing/enhancing the existing API?	1	1	https://issues.jboss.org/browse/CDI-14
2994	CDI-14	Yes as previously commented I was saying simply that if we made it available outside of a managed object it would be via the same mechanisms that we use for all other artifacts from CDI you can look up like this (i.e. currently BM). I'm not in love with the idea that we expose Instance directly, as I think requiring extension authors to write: {code} Foo foo = beanManager.dynamic().select(Foo.class).get(); {code} (or whatever else this method get's called) is not that onerous given this is extension authors only. With hindsight I would have preferred to split up BeanManager more than was done in 1.0 but we can't got back and do that now!	1	1	https://issues.jboss.org/browse/CDI-14
2995	CDI-10	Stuart, can you clarify (perhaps with some code) what you are asking for here (I suspect your terminology may be wrong?).	1	1	https://issues.jboss.org/browse/CDI-10
2996	CDI-10	{quote}If an Extension hacker really needs such a hardcore hack, then he might as well take the direct route:{quote} Given an unknown proxy, how do you know the scope, type and qualifiers? I think the original request is stall valid, for instance for those case where you need to take action based on a bean's class (it's class name may be a key into some map for instance) but all you got is the proxy. The workaround seems a bit circular, but maybe I misunderstood. If you want to find out the original bean type of a proxy, you need the type to obtain a Bean instance via which you can obtain the original type. But if I had the type already, I wouldn't need to obtain a Bean instance in the first place. See also http://stackoverflow.com/questions/14511433/original-class-name-of-a-proxy-without-manual-string-manipulation	1	0	https://issues.jboss.org/browse/CDI-10
2997	CDI-4	One thing we could pretty easily do is to add a Float value representing an ordinal. But that really doesn't fit well to the general observer/observable pattern. What is your exact use case? From a quick think-through I don't see anything which cannot be done in a different way also.	1	1	https://issues.jboss.org/browse/CDI-4

#	Requirement	Questions	Answered	Successfully Answered	URL
2998	CDI-4	A few points of contention here: _"the @Before doesn't scale out in practice. You cannot always change your event if someone adds a jar into the classpath which needs that event"_ Can you give a solid example of this? I mean, one the reasons why I am proposing this, is that the sorting _can_ deal with the addition of new beans which have ordered observers. The solution that you're proposing -- which is to use a sort of "marathon pattern" -- seems to suffer greatly from a coupling problem, because you're relying there being a discretely defined event type for each step. That, in itself, almost entirely precludes the adding of new beans to the container that change the ordering -- at all. I'm struggling to see how my proposal introduces coupling. Having both {{@Before}} and {{@After}} is, for the very reason of dealing with potentially unseen model, very necessary. Say I have an event {{BusEvent}}. And it has qualifiers like {{@Initialize}} and {{@PostInitialize}}. If I add a jar in the future which contains a bean which has say, something like this: {code} public void beforeInit(@Observes @Before(Initialize.class) BusEvent event) { ... } {code} ... I would get _exactly_ the kind of behavior I would expect. So I fail to see the problem you're referring to. There'd be no guarantee of ordering for all the @Before(Initialize.class) events, but I somehow doubt that would be any trouble in such a use case. --- _"The service could be something like javax.enterprise.inject.spi.ObserverComparator, applied after the ProcessObserverMethod event."_ I think this is actually a really good idea. But it's really orthogonal to the problem I'm trying to solve. For the very example I point out above. It seems to me that event ordering is not something which violates decoupling of events, and is a concept which is purely a component-container contract issue. Simply having say, a framework like Forge implement comparators, doesn't help readability of the model at all. In fact, it sort of suffers from the same problem that putting the configuration in an XML file suffers from: you can't get any sense of the ordering just by looking at any given observer.	1	1	https://issues.jboss.org/browse/CDI-4
2999	CDI-4	> I'm struggling to see how my proposal introduces coupling. If I understood correctly, then your proposal relies that you have to know the other/all the other observer(s) in your 'before' Observers. If you don't call this coupling, well... *edit*: ah I see now, your @After and @Before references a qualifier and not the other obserer class. Well then there might be no direct coupling, but this most probably wont work with the currently defined qualifier pattern (depending how we fix CDI-7). > If I add a jar in the future which and what if you add another jar with another bean having another @Observes BusEvent? How to make sure your beforeInit also runs _before_ this new observer? Let's go back to the Portland Pattern Repository or the GoF Design Patterns book and check the Observer/Observable pattern. The whole idea/mechanism is built based on the paradigma that all the involved parties know NOTHNING about each other.	1	1	https://issues.jboss.org/browse/CDI-4
3000	CDI-4	This problem is very acute for a few people, but doesn't affect a majority. Jason's solution may well be the sweetspot as it allows custom solutions to be implemented. Mike, can you impl your solution on top of Jason's proposal?	0	0	https://issues.jboss.org/browse/CDI-4
3001	CDI-4	_Mike, can you impl your solution on top of Jason's proposal?_ Most likely. However, it's probably not something we could target in our own client CDI stuff. So if the {{@Before}} {{@After}} stuff was not standardized, we'd be forced to couple our stuff to a specific extension. That's the only downside for us. It seems to me that, while not necessarily a problem for the majority, we should strongly consider if this is a minority we should ignore. My opinion is that, while at any given time this is a minority problem, the majority will probably run into it at some point or another. My personal preference would be for _both_ an SPI and an standard for ordering in the programming model.	1	1	https://issues.jboss.org/browse/CDI-4
3002	CDI-4	I have a comment about the syntax.I quite like the idea of using @Before and @After coupled with qualifiers for ordering event handlers and IMO partial ordering can go a pretty long way in solving the issues that we have. But, rather than using @Before and @After with the event qualifiers, I think that qualifiers should be placed on event handlers themselves. So, this may work: {code} public void myFirstObserver(@Observes @After(Initialization.class) MyEvent event) { ... } public void mySecondObserver(@Observes @Initialization MyEvent event) { ... } {code} but what if I want to order two observers for @Initialization MyEvent ? I can do: {code} public void myFirstObserver(@Observes @Initialization @After(Initialization.class) MyEvent event) { ... } public void mySecondObserver(@Observes @Initialization MyEvent event) { ... } {code} but that does not do a great favour to readability. On the other hand, what do we do with observers that do not have any qualifier at all? Mike suggested an @OrderingQualifier, but mixing it up with the rest of the qualifiers does not improve readability. On the other hand, ordering is relative to the method not to the event being observed, so why not qualify observer methods themselves (note how I stole the idea of placing the @Before annotation from Christian)? {code} @Initialization public void myFirstObserver(@Observes MyEvent event) { ... } @Before(Initialization.class) public void mySecondObserver(@Observes MyEvent event) { ... } {code} @Initialization can be a special type of annotation, or can be a simple @Qualifer. I also think that the idea can be reused in scenarios such as interceptor/decorator ordering, if we ever consider automatic interceptor/decorator enablement.	0	0	https://issues.jboss.org/browse/CDI-4
3003	CDI-4	And now that we have {{@Priority}}, can't we just use it ? {code} public class MyBean public void myFirstObserverInPriority(@Observes @Priority(1000) MyEvent event) { ... } } public class MyBean public void mySecondObserverInPriority(@Observes @Priority(42) MyEvent event) { ... } } {code}	1	1	https://issues.jboss.org/browse/CDI-4
3004	CDI-4	If we have something at the same priority level, is it just unspecified behavior?	1	1	https://issues.jboss.org/browse/CDI-4
3005	CDI-3	see my comment in CDI-58. All this is depending on our understanding of AnnotatedType: Is there 1 per Class or do we allow 'artificial' AnnotatedTypes?	1	1	https://issues.jboss.org/browse/CDI-3
3006	CDI-1	Add a note to clarify that the PC's should propagate as defined by JPA specs. Stuart if I do this, is it sufficient from your understanding?	1	1	https://issues.jboss.org/browse/CDI-1
3007	CDITCK-592	[~sameer-pandit] I think it should be available [here|https://repository.jboss.org/nexus/content/repositories/snapshots]. Can you please check it?	1	1	https://issues.jboss.org/browse/CDITCK-592
3008	CDITCK-486	Thank you, will you be excluding for the 1.2.4 as that is what the licensee is currently using. The description, that we provided you with is what we received from the Java EE licensee. Certainly happy to get more info as needed and please do not hesitate to ask if you need more clarity and we can follow up with the licensee.	1	0	https://issues.jboss.org/browse/CDITCK-486
3009	CDITCK-467	Which another tests do you mean? If you are talking about VerifyValuesTest#testManagedBeanAttributes there is the @Alternative selected in the beans.xml of test deployment archive.	0	0	https://issues.jboss.org/browse/CDITCK-467
3010	CDITCK-467	{quote}The posted algorithm will create random results depending on the processing order{quote} I cannot see how it creates random results. Can you explain?	1	0	https://issues.jboss.org/browse/CDITCK-467
3011	CDITCK-463	Hi Romain, Can you please elaborate why do you think it is not portable? The test appears to me ok.	1	1	https://issues.jboss.org/browse/CDITCK-463
3012	CDITCK-463	[~tremes] yes, sorry of the brief description. 1) I didnt find any reference to this field in the spec - did I miss it? 2) geronimo spec jar doesnt use it (https://svn.apache.org/repos/asf/geronimo/specs/trunk/geronimo-jcdi_1.1_spec/src/main/java/javax/enterprise/inject/spi/CDI.java)	1	1	https://issues.jboss.org/browse/CDITCK-463

#	Requirement	Questions	Answered	Successfully Answered	URL
3013	CDITCK-436	Mark, could you please describe the problem in more detail? {{WithAnnotationsAppliedToIllegalContainerLifecycleEventParameterTest}} does not try to use the BeanManager. I suppose the problem is with the injection point on the {{org.jboss.cdi.tck.AbstractTest}} (each TCK test class extends this class) - but AFAIK {{CDIInjectionEnricher}} always tries to lookup the {{BeanManager}} and inject the test class, no matter whether it has some injection points or not. Maybe there's a problem in a way Arquillian/{{BeanManagerProducer}} looks up the BM. If it doesn't find the BM via JNDI, it's using a {{CDIExtension}} and this class holds a BM reference in a static field. In this particular case weld-embedded is not affected because Weld is validating extensions before any container lifecycle event is delivered. Also this shouldn't be a problem for managed and remote containers, because {{@ShouldThrowException}} will force the client test run mode (the test archive is not enhanced).	1	1	https://issues.jboss.org/browse/CDITCK-436
3014	CDITCK-436	inject members at org.jboss.arquillian.testenricher.cdi.CDIInjectionEnricher.injectClass(CDIInjectionEnricher.java:135) at org.jboss.arquillian.testenricher.cdi.CDIInjectionEnricher.enrich(CDIInjectionEnricher.java:78) at org.jboss.arquillian.test.impl.TestInstanceEnricher.enrich(TestInstanceEnricher.java:52) at org.jboss.arquillian.container.test.impl.ClientTestInstanceEnricher.enrich(ClientTestInstanceEnricher.java:51) at sun.reflect.GeneratedMethodAccessor33.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.invokeObservers(EventContextImpl.java:99) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:81) at org.jboss.arquillian.container.test.impl.client.ContainerEventController.createContext(ContainerEventController.java:142) at org.jboss.arquillian.container.test.impl.client.ContainerEventController.createBeforeContext(ContainerEventController.java:124) at sun.reflect.GeneratedMethodAccessor32.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.test.impl.TestContextHandler.createTestContext(TestContextHandler.java:102) at sun.reflect.GeneratedMethodAccessor9.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.test.impl.TestContextHandler.createClassContext(TestContextHandler.java:84) at sun.reflect.GeneratedMethodAccessor8.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.test.impl.TestContextHandler.createSuiteContext(TestContextHandler.java:65) at sun.reflect.GeneratedMethodAccessor7.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94) at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at org.jboss.arquillian.core.impl.ManagerImpl.fire(ManagerImpl.java:135) at org.jboss.arquillian.core.impl.ManagerImpl.fire(ManagerImpl.java:115) at org.jboss.arquillian.test.impl.EventTestRunnerAdaptor.before(EventTestRunnerAdaptor.java:95) at org.jboss.arquillian.testng.Arquillian.arquillianBeforeTest(Arquillian.java:130) at sun.reflect.GeneratedMethodAccessor31.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.testng.internal.MethodInvocationHelper.invokeMethod(MethodInvocationHelper.java:84) at	1	1	https://issues.jboss.org/browse/CDITCK-436
3015	CDITCK-427	Where in the spec we can read, that the incomplete instance should be used?	0	0	https://issues.jboss.org/browse/CDITCK-427
3016	CDITCK-416	The tests in PR should pass now. Can someone verify that and merge the PR?	1	1	https://issues.jboss.org/browse/CDITCK-416
3017	CDITCK-359	Should it implement support for patterns (e.g TestCircle#test*) or multiple methods (e.g TestCircle#testOne+testTwo) also?	1	1	https://issues.jboss.org/browse/CDITCK-359
3018	CDITCK-277	Could you expand on why EarSpecializationTest is not needed? It this covered by an existing CDI TCK test already?	1	1	https://issues.jboss.org/browse/CDITCK-277
3019	CDITCK-277	EarSpecializationTest differs only by using the @WebListener. Is that a special case that needs to be tested? I didn't find anything covering this concern in the specification.	1	1	https://issues.jboss.org/browse/CDITCK-277
3020	CDITCK-209	Ales, does this apply to the Application context only? In other words, is it safe to destroy other contexts besides Application (Request, Session) explicitly in the test?	1	1	https://issues.jboss.org/browse/CDITCK-209
3021	CDITCK-118	The maven repositories are declared since that check-in. If artifacts are missing, that is a different problem. Is this still a problem? I have succeeded in running the TCK on a platform using 1.0.1 final without any problems.	1	0	https://issues.jboss.org/browse/CDITCK-118
3022	CDITCK-114	Jozef, could you take a look at this?	1	1	https://issues.jboss.org/browse/CDITCK-114
3023	CDITCK-81	Pete, could you provide more information pls?	1	0	https://issues.jboss.org/browse/CDITCK-81
3024	CDITCK-41	Pete, could you provide more info pls?	1	1	https://issues.jboss.org/browse/CDITCK-41
3025	CDITCK-29	Do we need tests for this? The isn't that clear on how this is treated...	0	0	https://issues.jboss.org/browse/CDITCK-29
3026	CDITCK-20	Jozef, would you be able to write a quick test for this on Monday? If you can't find an assertion, mark it implied.	1	1	https://issues.jboss.org/browse/CDITCK-20
3027	CIRRAS-46	Another alternative, perhaps not exactly what's being asked for, but.. I think we're already passing YAML. We could add a field which points to a URL (or S3 bucket) containing the on-boot script(s). We wouldn't face the 8k limit, and URL/bucket referencing might be easier to handle than passing full shell scripts around. Just a thought.	1	0	https://issues.jboss.org/browse/CIRRAS-46
3028	CIRRAS-46	Hello Bob, what do you think about the possible solution I tried to briefly explain in the description? I believe that will be most straightforward for the users to use and understand. Without any need to encode the data in some complicated way. It should be something like this: 1. user wants to only set JBoss instance configuration: param1=1 param2=2 ... 2. user wants to set JBoss configuration but also wants a custom script: #!/bin/bash # JBoss instance specific config cat > /etc/jboss.conf << EOF param1=1 param2=2 ... EOF # User custom script yum install net-snmp passwd --stdin root <<< mypassword cat > /tmp/my.storage.example.com.crt << EOF <CA certificate data here> EOF curl --cacert /tmp/my.storage.example.com.crt https://my.storage.example.com/my/long/cool/setup/script.ps | perl	0	0	https://issues.jboss.org/browse/CIRRAS-46
3029	CIRRAS-34	Not sure I understand this issue. Brett, could you please tell me more? What components you mean?	1	1	https://issues.jboss.org/browse/CIRRAS-34
3030	CLOUD-1844	[~goldmann]: [~porcelli] wanted to be able to track this with a guvnor sprint too... Can't we have both sprints included here?	1	1	https://issues.jboss.org/browse/CLOUD-1844
3031	CLOUD-1616	I see INFO in black, WARN in yellow, and ERROR in red. Could this be a difference in our environments?	1	1	https://issues.jboss.org/browse/CLOUD-1616

#	Requirement	Questions	Answered	Successfully Answered	URL
3032	CLOUD-1616	Yeah, I see product messages also colorized in ocp web console, but I meant eg. message: "WARNING: Environment variable OPENSHIFT_KUBE_PING_NAMESPACE undefined. Clustering will be unavailable. Please refer to the documentation for configuration." Do you see that message also in yellow?	1	0	https://issues.jboss.org/browse/CLOUD-1616
3033	CLOUD-1592	I propose we add a parameter so the user can specify which tag they want to use for the DB (e.g.5.5 for mysql). I think we should also decide which versions we should use as the default (e.g. 5.5 or 5.6 for mysql). [~rettori], do you have any opinions here? Also, there's a related issue around the client versions included in the eap images. I'll link that to this issue.	1	1	https://issues.jboss.org/browse/CLOUD-1592
3034	CLOUD-1592	How about we default to latest but add the param so the user can lock-in a major.minor version?	0	0	https://issues.jboss.org/browse/CLOUD-1592
3035	CLOUD-1536	[~jpechanec], could you please provide more details? I'm not quite sure what you're suggesting.	1	0	https://issues.jboss.org/browse/CLOUD-1536
3036	CLOUD-1534	The Hawkular agent is configured through the following environment variables: * AB_HAWKULAR_REST_URL - the URL of the Hawkular service (required, if not set, Hawkular agent will not be configured) * AB_HAWKULAR_REST_USER - the user for authenticating with the Hawkular service * AB_HAWKULAR_REST_PASSWORD - the password for authenticating with the Hawkular service * AB_HAWKULAR_REST_FEED_ID - the feed ID, defaults to autogenerate, must be globally unique to Hawkular service * AB_HAWKULAR_REST_TENANT_ID - the tenant ID, defaults to hawkular * AB_HAWKULAR_REST_KEYSTORE - the keystore file name, used to configure truststore for the Hawkular service (required if Hawkular service is using https) * AB_HAWKULAR_REST_KEYSTORE_DIR - the directory in which the keystore file is located * AB_HAWKULAR_REST_KEYSTORE_PASSWORD - the password for the keystore file * AB_HAWKULAR_AGENT_SUBSYSTEM_SNIPPET - the full path to a subsystem xml snippet which should be used to configure the Hawkular subsystem; defaults to JBOSS_HOME/modules/system/add-ons/hawkular-agent/org/hawkular/agent/main/subsystem-snippet.xml	1	1	https://issues.jboss.org/browse/CLOUD-1534
3037	CLOUD-1534	[~mazz], thanks for the explanation. For eap, we're currently configuring the agent through the subsystem and simply mimicking the logic of the eap installer (i.e. we add the modules, add the extension, subsystem and security realm to standalone.xml). By default, we use the subsystem-snippet.xml that's included with the module. That said, are you saying that none of this is necessary and that all we need to do is add something like -javaagent=hawkular.jar to the command line and supply a yaml config?	1	1	https://issues.jboss.org/browse/CLOUD-1534
3038	CLOUD-1534	What is the difference between using the java agent and the eap subsystem? Which mechanism are we going to recommend to customers? It also seems like there are some tweaks that need to be made to eap to make the java agent work (adding modules to system packages), which I'm guessing are not necessary if going the subsystem route.	1	1	https://issues.jboss.org/browse/CLOUD-1534
3039	CLOUD-1534	Last I heard, [~kconner] wants all our product images (including EAP) to try to use the same agent mechanism - which in this case means the Java Agent. I would talk to [~kconner] and [~pgier] about this as I'm not the right person to talk to about productizing and packaging. But to answer your questions: Question 1. "are you saying that none of this is necessary and that all we need to do is add something like -javaagent=hawkular.jar to the command line and supply a yaml config?" Answer 1: If you are using the Java Agent, yes. You just do that and no need to mess with subsystem stuff because the agent in that mode doesn't run "inside" the wildfly container. Question 2. "What is the difference between using the java agent and the eap subsystem?" Answer 2: One runs inside the WildFly container as a subsystem extension and thus follows its lifecycle (its part of the WildFly server). The java agent is simply attached to the WildFly JVM as a java agent and isn't directly affected by it (e.g. when you "reload" the WildFly server, the java agent doesn't get reloaded along with it since it isn't a subsystem that is affected by things like that). The other difference is the subsystem agent is configured directly in standalone.xml and the java agent is configured in its own yaml config. Question 3: "Which mechanism are we going to recommend to customers?" Answer 3: Not really a question for me as I'm responsible for supporting both :) [~jdoyle] can give you the official answer. But as I say [~kconner] wants all our images to support a single way of attaching the agent (this includes things like Fuse that aren't necessarily EAP-based) so that would probably mean we are going to recommend using the Java Agent. Question 4: "also seems like there are some tweaks that need to be made to eap to make the java agent work (adding modules to system packages), which I'm guessing are not necessary if going the subsystem route." Answer 4: To get the Java Agent to run properly in EAP, you have to add jboss logging to the EAP base classloader due to some known limitations that EAP/WildFly imposes on java agents (I don't have links handy to explain that - but suffice it to say the WildFly dev team knows about this but there isn't much that can be done about it at this time short of what I document in the README found at https://github.com/hawkular/hawkular-agent/tree/master/hawkular-javaagent) Question 5: " if subsystem is the way to go, can you configure the subsystem to read from a yaml config too?" Answer 5: No. If the agent is run as a subsystem, you have to configure it like all the other WildFly subsystems - via standalone.xml. It cannot read an external yaml file. The good thing about this is when running as a subsystem, you can read its config and change its config via the Jboss CLI (which you cannot do if using the Java Agent because, as I say, the agent in that case is not running inside WildFly as a subsystem extension).	0	0	https://issues.jboss.org/browse/CLOUD-1534
3040	CLOUD-1534	[~rcernich] BTW. Why the "AB_" prefix?	1	1	https://issues.jboss.org/browse/CLOUD-1534
3041	CLOUD-1482	Do we also need to modify assembly to use scl enable?	0	0	https://issues.jboss.org/browse/CLOUD-1482
3042	CLOUD-1482	Just quick heads up, maven 3.5 was released last week. We could even consider moving to 3.5 right away, as otherwise it might take another 5 years to update maven in builder images again.... Btw, couldn't maven be installed simply by unpacking tar.gz file in right location of image?	1	1	https://issues.jboss.org/browse/CLOUD-1482
3043	CLOUD-1482	{quote}We could even consider moving to 3.5 right away, as otherwise it might take another 5 years to update maven in builder images again....{quote} With SCL we will be moving faster than we do currently. That's the promise os SCL, in fact :) {quote}Btw, couldn't maven be installed simply by unpacking tar.gz file in right location of image?{quote} No, everything needs to come out of Brew.	0	0	https://issues.jboss.org/browse/CLOUD-1482
3044	CLOUD-1476	* Added, processed, and tagged PR in openshift-kieserver. * Removed WIP prefix from jboss-dockerfiles and application-templates PRs. * Once we have a brew build of openshift-kieserver 1.2.0.Final-redhat-1, the jboss-dockerfiles and application-templates PRs can be processed. * Added a PR in openshift-quickstarts, which updates them to latest KIE version. Although the current 1.3 quickstarts work fine (I regression tested), I would like to process the quickstarts upgrade and tag them (1.4?). Then another PR for application-templates using the new tag should be created. (I have already also tested with the new version, so this will be easy.) * ce-testsuites is still WIP, however.	0	0	https://issues.jboss.org/browse/CLOUD-1476
3045	CLOUD-1389	{quote}The assumption has been that the majority of the artifacts should be coming from our production repositories, i.e. built and shipped by ourselves, rather than from maven central.{quote} So, we (did) assume most of artifacts from users' apps running on top of our (java, eap) images are present on our mirrors? Is it safe to make such (audacious) assumption? Or did I get it wrong?	1	1	https://issues.jboss.org/browse/CLOUD-1389

3052	CLOUD-1382	Should we move this to Sprint 7?	0	0	https://issues.jboss.org/browse/CLOUD-1382
3053	CLOUD-1355	[~jpechanec]How did you configure the resource adapter? Are you specifying RESOURCE_ADAPTERS?	0	0	https://issues.jboss.org/browse/CLOUD-1355
3054	CLOUD-1354	[~jpechanec] How did you configure the resource adapter? Are you specifying RESOURCE_ADAPTERS?	0	0	https://issues.jboss.org/browse/CLOUD-1354
3055	CLOUD-1327	[~filippe.spolti] Is there any reason why the value is hardcoded to 600000? (Why exactly 10 minutes and why is it not configurable?)	1	1	https://issues.jboss.org/browse/CLOUD-1327
3056	CLOUD-1327	[~rcernich] [~maschmid] Agreed, I'll make it configurable so user can define which configuration type to use. [~maschmid] Did you get this issue only with postgresql? Can you share the steps to reproduce it? Thanks.	0	0	https://issues.jboss.org/browse/CLOUD-1327
3057	CLOUD-1292	Thanks Jiri! [~rcernich] [~bdecoste] Can you guys take a look at it? Please schedule, approve an link MR if it's OK.	1	1	https://issues.jboss.org/browse/CLOUD-1292
3058	CLOUD-1233	[~kconner] this was related to the EAP 64 image. Does this mean the EAP 64 image will start using the Java S2I image?	0	0	https://issues.jboss.org/browse/CLOUD-1233
3059	CLOUD-1180	So, I went through all our images and created list of files added to these images to the bin folder (wherever it is located). I do not see anything unusual here. In almost all images the only thing living in root bin/ directory is the launch script itself and readiness/liveness probes. The only difference is the kieserver image which has 4 files added additionally besides this, but no launch directory at all. [~kconner] How would you like to proceed me here? I do not see anything wrong at the first glance. Did I miss something?	1	1	https://issues.jboss.org/browse/CLOUD-1180
3060	CLOUD-1170	Shouldn't this be closed as duplicated and JBIDE-23628 pointed to original issue? CLOUD-940 was reopened and reopening this issue with it just doubles the work with tracking same issue. Another solution could be adding EAP component and then this issue could be verified against only EAP templates	1	0	https://issues.jboss.org/browse/CLOUD-1170
3061	CLOUD-1146	Is this an RH-SSO issue or an EAP issue?	1	1	https://issues.jboss.org/browse/CLOUD-1146
3062	CLOUD-946	I tested it with jboss-eap-6/eap64-openshift:1.5-5 and it seems these fixes are not included because i don't see <!-- ##EXTENSION_RESOURCE_ADAPTERS## --> in /opt/eap/standalone/configuration/standalone-openshift.xml. Can you check [~goldmann] if these fixes are included?	0	0	https://issues.jboss.org/browse/CLOUD-946
3063	CLOUD-944	I have some questions about the resource adapter configuration: # It seems that module slot / module id is required, how can I configure resource adapter not from a module, but deployed in deployments/foo.rar ? # according to https://access.redhat.com/documentation/en-US/JBoss_Enterprise_Application_Platform/6/html/Administration_and_Configuration_Guide/Configure_a_Deployed_Resource_Adapter1.html#Configure_a_Deployed_Resource_Adapter1 there are two separate kinds of <config-property/> elements (either for configuring resource adapter, and separate for the connection) .. According to the scripts/os-eap-launch/added/launch/resource-adapters-common.sh we are using FOO_PROPERTY_ as a connection config property, with no way to specify resource adapter config properties... (it should perhaps be FOO_PROPERTY_... and FOO_CONNECTION_PROPERTY_ as separate kinds of env...)	0	0	https://issues.jboss.org/browse/CLOUD-944
3064	CLOUD-927	Closing again because it was done in CLOUD-994. My fault.	1	1	https://issues.jboss.org/browse/CLOUD-927
3065	CLOUD-906	I merged your MR. Should this change be also applied to EAP 7? I think we want to keep them configured the same way. If yes, please clone this ticket. Yes, these tests should be moved to EAP 7 in case we do not want to update EAP7 image with this change. Otherwise these should be removed. Since this change introduces new way of adding datasources we need to add new tests that use new environment variables, please add them.	0	0	https://issues.jboss.org/browse/CLOUD-906
3066	CLOUD-893	The products already have the version information available, this can be inspected by docker. Can you please clarify what you are asking for here?	0	0	https://issues.jboss.org/browse/CLOUD-893
3067	CLOUD-877	[~jonh.wendell], can you please add release notes to this describing the new variables?	1	0	https://issues.jboss.org/browse/CLOUD-877

#	Requirement	Questions	Answered	Successfully Answered	URL
3068	CLOUD-865	Here are the published documentation references related to proxy environment variables and s2i builds. The gist is that it looks like the xPaas images bring in 5 additional env vars not used in other non-xpaas images in Openshift. The additional env vars are: HTTP_PROXY_HOST HTTP_PROXY_PORT HTTP_PROXY_USERNAME HTTP_PROXY_PASSWORD HTTP_PROXY_NONPROXYHOSTS The common Openshift proxy env vars are: HTTP_PROXY HTTPS_PROXY NO_PROXY These difference may lead to customers encountering failed builds of xpaas image related applications. We can KCS this and clearly explain what is required. Should we look to make any changes around these proxy env vars? Documentation references: Openshift Installation and Configuration (https://access.redhat.com/documentation/en/openshift-enterprise/3.2/single/installation-and-configuration/#s2i-builds) 18.5. CONFIGURING S2I BUILDS FOR PROXIES The following are the supported proxy environment variables with example values: HTTP_PROXY=http://USERNAME:PASSWORD@10.0.1.1:8080/ HTTPS_PROXY=https://USERNAME:PASSWORD@10.0.0.1:8080/ NO_PROXY=master.hostname.example.com ---------- Openshift Developers Guide (https://access.redhat.com/documentation/en/openshift-enterprise/3.2/paged/developer-guide/chapter-10-builds) 10.4.5. Environment Variables For example, defining a custom HTTP proxy to be used during build and runtime: dockerStrategy: ... env: - name: "HTTP_PROXY" value: "http://myproxy.net:5187/" ---------- xPaas EAP image doc (https://access.redhat.com/documentation/en/red-hat-xpaas/0/paged/red-hat-xpaas-eap-image/chapter-3-reference-information) 3.6.4. Environment variables HTTP_PROXY_HOST Hostname or IP address of a HTTP proxy for Maven to use. Example: 192.168.1.1 HTTP_PROXY_PORT TCP Port of a HTTP proxy for Maven to use. Example: 8080 HTTP_PROXY_USERNAME If supplied with HTTP_PROXY_PASSWORD, use credentials for HTTP proxy. Example: myusername HTTP_PROXY_PASSWORD If supplied with HTTP_PROXY_USERNAME, use credentials for HTTP proxy. Example: mypassword HTTP_PROXY_NONPROXYHOSTS If supplied, a configured HTTP proxy will ignore these hosts. Example: some.example.org|*.example.net ---------- KCS article offering solution to ENV var differences (https://access.redhat.com/solutions/2194751) You can set HTTP_PROXY_HOST and HTTP_PROXY_PORT environment variables under the sourceStrategy in BuildConfig. Raw spec: strategy: sourceStrategy: env: - name: HTTP_PROXY_HOST value: <host> - name: HTTP_PROXY_PORT value: <port>	1	1	https://issues.jboss.org/browse/CLOUD-865
3069	CLOUD-865	At this point, I don't think there is anything to change outside of maybe documentation. [~edrich] - Do we replicate this openshift.com documentation in Red Hat docs anywhere? If not, do you have a preference on whether this needs to be reflected in any other docs?	1	1	https://issues.jboss.org/browse/CLOUD-865
3070	CLOUD-865	Hey [~trogers-rh] - if these are xPaaS specific environment variables, then they should be updated in xPaaS docs only. If you want them updated, could you please file a bug report? https://bugzilla.redhat.com/enter_bug.cgi?product=Red%20Hat%20xPaaS (you can just link to this JIRA). Eric is right: OSE docs are published here: https://docs.openshift.com/enterprise/latest/welcome/index.html and here: https://access.redhat.com/documentation/en/openshift-enterprise/ docs.openshift.com gets updated nightly, while the portal gets updated every 12 hours. xPaaS docs are only published here: https://access.redhat.com/documentation/en/red-hat-xpaas/	1	1	https://issues.jboss.org/browse/CLOUD-865
3071	CLOUD-865	[~trogers-rh], [~jdowland] The redirect was set up when the new name was made live. It is redirecting for me from https://access.redhat.com/documentation/en/red-hat-xpaas/ to https://access.redhat.com/documentation/en/red-hat-jboss-middleware-for-openshift/ correctly. Is it not working for you guys?	1	1	https://issues.jboss.org/browse/CLOUD-865
3072	CLOUD-865	[~trogers-rh] [~jdowland] The docs tooling team pushed the Akamai rules that control the redirects again. They have mentioned that it should be working correctly now, as per their tests. Can you please verify if the redirects are working correctly now?	1	1	https://issues.jboss.org/browse/CLOUD-865
3073	CLOUD-818	Not sure if we should be writing to SSO_TRUSTSTORE_DIR (would it work if the secret was mounted as readOnly?)	1	0	https://issues.jboss.org/browse/CLOUD-818
3074	CLOUD-794	Could you please be more specific? What template do you mean? is this template a part of application being deployed?	0	0	https://issues.jboss.org/browse/CLOUD-794
3075	CLOUD-794	What to communicate to the customer? Will this be implemented?	0	0	https://issues.jboss.org/browse/CLOUD-794
3076	CLOUD-792	Can you please point out where did you find that this option is disabled? If this option is not on the configuration file means that it is enabled, since its default value is true. You can check in the container: http://<TOMCAT_CONTAINER_ADDRESS/docs/config/host.html	0	0	https://issues.jboss.org/browse/CLOUD-792
3077	CLOUD-792	Any updates for this request? Do you require any further information at this time?	0	0	https://issues.jboss.org/browse/CLOUD-792
3078	CLOUD-792	Any updates for this request? Do you require any further information at this time?	0	0	https://issues.jboss.org/browse/CLOUD-792
3079	CLOUD-788	The current image restricts access to "127\.\d+\.\d+\.\d+|::1|0:0:0:0:0:0:0:1" which if I understand correctly boils down to localhost | localhost | localhost. So I don't think there is anything to do there. What is the issue with 404.jsp? This is part of the standard tomcat distro	0	0	https://issues.jboss.org/browse/CLOUD-788
3080	CLOUD-786	I am not sure about this one either. when container is created it runs some command inside and when this command exits container itself is destroyed. There cannot be a container which does not run anything. What are these shutdown.sh and catalina.sh? Are these scripts usually triggered by administrator to stop tomcat or they are called by the tomcat itself when it received a terminating signal?	1	1	https://issues.jboss.org/browse/CLOUD-786
3081	CLOUD-786	[~trogers-rh], [~rhn-support-akokshar], should the implementation be changed to remove the shutdown port completely?	0	0	https://issues.jboss.org/browse/CLOUD-786
3082	CLOUD-785	Could you please provide me with an example how we can add necessary property in production environment? This all is about docker image, so we cant modify its content. we can pass parameters to the application through environment variables and possibly through command line parameters, but "command line" is not always the option in case we deploy application on OpenShift.	1	1	https://issues.jboss.org/browse/CLOUD-785
3083	CLOUD-785	Do we not support customizing the docker image to change configuration (either by using Dockerfile to replace the default configuration, or using openshift docekrbuild or s2i build to replace configuration files)?	0	0	https://issues.jboss.org/browse/CLOUD-785
3084	CLOUD-784	Are you suggesting to give the permissions only for the jboss user? The description is a little bit confusing.	0	0	https://issues.jboss.org/browse/CLOUD-784
3085	CLOUD-784	There are write privileges for group, is it really ok?	0	0	https://issues.jboss.org/browse/CLOUD-784
3086	CLOUD-717	Is this a dupe of CLOUD-743?	0	0	https://issues.jboss.org/browse/CLOUD-717
3087	CLOUD-693	Doesn't seem to work with jboss-webserver-3/webserver30-tomcat8-openshift:1.3-2 {code} oc start-build ews-sti-build --from-file=ROOT.war {code} Note the build logs about the paths... copying from /home/jboss and /home/jboss/source/deployments .. .should it be from /home/jboss/source instead of /home/jboss ? {noformat} Receiving source from STDIN as file ROOT.war Copying all war artifacts from /home/jboss directory into /opt/webserver/webapps for later deployment... Pushed 6/7 layers, 86% complete Pushed 7/7 layers, 100% complete Push successful {noformat}	1	1	https://issues.jboss.org/browse/CLOUD-693

#	Requirement	Questions	Answered	Successfully Answered	URL
3088	CLOUD-693	Does it work with the tomcat7 image (code is the same)? Looks like the copy_artifacts command is being invoked with $(pwd) as the source, with the assumption that the assemble script is being invoked from the source directory (/tmp/...). I wonder if there is a difference of behavior between a regular source build and a binary build?	1	1	https://issues.jboss.org/browse/CLOUD-693
3089	CLOUD-528	[~bdecoste] I'm pretty sure we're adding this for jdv. If so, could you please link those issues to this one and close this one out?	1	1	https://issues.jboss.org/browse/CLOUD-528
3090	CLOUD-528	Was this included in tomcat as well in the end? (is there any related JWS JIRA for this issue?)	0	0	https://issues.jboss.org/browse/CLOUD-528
3091	CLOUD-528	OK... can we remove it from the Components list from this JIRA then>	1	1	https://issues.jboss.org/browse/CLOUD-528
3092	CLOUD-498	We already configure the following on our datasources, what else do you think is missing? {quote} <validate-on-match>true</validate-on-match> <valid-connection-checker class-name=\"$8\"></valid-connection-checker> <exception-sorter class-name=\"$9\"></exception-sorter> {quote}	0	0	https://issues.jboss.org/browse/CLOUD-498
3093	CLOUD-430	[~rcernich] or [~kconner], could you approve this so that I can proper tag it as 'pull request sent'? Meanwhile, here are the links: https://ce-gitlab.usersys.redhat.com/ce/jboss-dockerfiles/merge_requests/1127 https://github.com/jboss-openshift/application-templates/pull/122	1	1	https://issues.jboss.org/browse/CLOUD-430
3094	CLOUD-106	I just tried and didn't work. I opened [this issue|https://issues.jboss.org/browse/ENTMQ-2115] to track it. IMHO, we could use the JVM wide configuration, [~rcernich], what do you think?	1	1	https://issues.jboss.org/browse/CLOUD-106
3095	DASHBUILDE-237	Regarding individual chart filters (see example => !chartfilter.png|thumbnail!) I think both "master" toolbar and individual chart filters can co-exist. A toolbar at the top of the dashboard screen could be implemented as another displayer component which allows for filtering on any of the properties of a given data set. Dashboard designer users can decide which approach to take. For toolbar, a toolbar filter component is dropped at the top of the page and filtering is disabled for every single chart. [~uxdlc] [~mstevens1] wdyt?	1	1	https://issues.jboss.org/browse/DASHBUILDE-237
3096	DASHBUILDE-237	[~davidredhat] I see these filter tags used mostly with big data, faceted/complex filtering. I believe the use case there is that there is so much criteria (and objects) that you're filtering for you really need this kind of visual summary. But for individual chart filters I'm not sure the use case exists, perhaps a slightly more complex filter control would be enough, like a multi-select dropdown: http://dotansimha.github.io/angularjs-dropdown-multiselect/docs/#/main Wdyt?	1	1	https://issues.jboss.org/browse/DASHBUILDE-237
3097	DASHBUILDE-237	There are some cases where individual chart filters control might make sense. See attached exampleB & exampleC. These are simple scenarios where we do not require a full featured filter toolbar as they are quite simple uses cases. A filter toolbar is more suitable for full dashboard scenarios, see exampleA. Anyway, users can always choose whether to use individual chart filters or a global toolbar. [~uxdlc] We do already have selector dropdowns for single column filtering, unlike the filter toolbar which is multi-column. [~mstevens1] 1) As per each icon's tooltip: "Export to CSV", "Export to Excel", "Show/hide columns" 2) +1. The string is a hard coded literal 3) What are you trying to build? Can you elaborate on this please?	1	1	https://issues.jboss.org/browse/DASHBUILDE-237
3098	DASHBUILDE-237	I seem to be losing the thread here a bit. A quick conversation might help. Some stray questions (none of which are directly related to the project Metrics page anymore)... 1) A filter at the top of the screen (a global filter) - does that data column need to be present in every chart on the screen? I can only globally filter by _time_, for example, if every chart has a time value. 2) When filtering one chart on the screen (local filter), should you also filter other charts that have the same data column? I filter one chart by "David" and the other charts with people update? 3) If answering yes to #2, should you then show the "tags" on the other charts to make it clear that the chart is filtered? 4) Have I gathered correctly that Dashbuilder uses NVD3? 5) Does the user get to choose whether the chart displays a legend? And, further, whether that legend is clickable / filters the chart? 6) Are all of these things customizable by the user anyway and my questions are moot?	1	0	https://issues.jboss.org/browse/DASHBUILDE-237
3099	DASHBUILDE-237	Hello [~davidredhat] do you have time to chat on Thursday or Friday? [~uxdlc] Thank you, Matthew	1	0	https://issues.jboss.org/browse/DASHBUILDE-237
3100	DASHBUILDE-237	The following screenshot shows the toolbar implemented in RedHat's BPMS => !bpms_toolbar.png|thumbnail! The first dropdown ("Id") shows a set of predefined columns that support text based search. The rest of the dropdowns ("State", "Errors", "Name" and "Last update") are extra filters for specific columns. They have been expanded in the toolbar to make it easier to operate with them as well as to provide custom filter controls depending on the column type. Notice, for example, the "Last update" column is an advanced control for selecting a date range. In order to support the features above the following requirements must be also considered: 1.- The toolbar requires a list of columns to display in the generic column dropdown 2.- It also requires a sublist of the columns to be expanded in the toolbar 3.- Each expanded column may optionally have a divider element. This enables the concept of column groups in the expanded section The main goal is to provide a generic toolbar able to support different toolbar configurations, including the one used in BPMS. Regarding the discussion in previous comments about having individual chart filters. The best option is to remove them and rely only in either the toolbar component or the existing selectors components (dropdown, label set and slider). Whenever a filter is required in a dashboard, a filtering component needs to be dropped into the page. Charts will no longer provide filtering functionality. That will not only reduce the codebase but it will also keeps the filtering approach, Patternfly and the UXD on the same page. [~uxdlc] [~mstevens1] wdyt?	0	0	https://issues.jboss.org/browse/DASHBUILDE-237
3101	DASHBUILDE-232	Hi Team, It would be a great help if a workaround is provided to have default ascending sort of category. Currently. there is no sorting and category axis appears in random order,	1	1	https://issues.jboss.org/browse/DASHBUILDE-232
3102	DASHBUILDE-230	This is the old implementation => [^dashbuilder_filter_labels.mp4] This is how it looks the new version => [^dashbuilder_filter_labels_new.mp4] [~uxdlc] wdyt? :-)	1	1	https://issues.jboss.org/browse/DASHBUILDE-230
3103	DASHBUILDE-230	[~davidredhat] I sent my comments to a design related jira, next time will just post them here directly. The visual styling of the labels themselves looks more like PF, but some of the interaction aspects aren't aligned. * For future iterations/enhancements: The PF filters are typically used in conjunction with a global [toolbar control|http://www.patternfly.org/pattern-library/forms-and-controls/toolbar/]. It's presented at the top of the screen (or content view) to indicate that everything on that screen is being filtered. The filter labels are shown there to help users to know at a glance which filters have been applied. I haven't seen an example where they are applied out of that context. * Usability concerns with the current dashboard presentation are: _Because the labels are visually associated with one widget, an assumption will be made that the filters have only be applied to that widget. _Users need to hunt around the screen to find the labels to figure out which filters have been applied, whereas in the PF toolbar design they are all presented in one location at the top of the screen. To align the interaction with PF (in addition to the styling) could we look into the options for picking up the toolbar? Of it that can't be used for some reason, perhaps we could look into some alternative design solutions. Let me know what you think, thanks!	0	0	https://issues.jboss.org/browse/DASHBUILDE-230

3104	DASHBUILDE-229	Initial implementation done. Preview video => [^dashbuilder_perspective_component.mp4] As the video shows, there are issues with the layout rows. The logic behind the calculation of the row height seems not to be working very well. [~ederign] any ideas?	0	0	https://issues.jboss.org/browse/DASHBUILDE-229
3105	DASHBUILDE-228	[~davidredhat] or [~porcelli], can you guys please put this on Sprint5?	0	0	https://issues.jboss.org/browse/DASHBUILDE-228
3106	DASHBUILDE-226	This issue is a bit tricky. The purpose of having a fixed with for a label set is mostly to expand its size (see !selectorlabelswidth.png|thumbnail!). Even in this example there might be cases where one item's name is still too large. Also, it does not make sense to set a very small width since the item's name won't fit in the button. So, what's the solution? I think a good one could be as follows: 1.- Expand If the total width is larger than the selector width then all the items shall be displayed without cuts and the remaining width should be split and added up evenly to every item. The total width is the sum of all items width whereas an item's width is calculated as a function based on its number of chars. For example, if we have the following items: "Red", "Green" and "Blue", the total length is 12 chars and the total width 120px (provided we set 1 char=10px). If, for instance, the selector width is set to 210 then the width of each item will be: 210-120 = 90px excess width => we split evenly 90/3 = 30px => Red=3chars*10+30=60px, Green=5chars*10+30=80px, Blue=4chars*10+30=70px As a result, every button is expanded 30px. 2.- Reduce If the width set is smaller than the total width then we need to reduce each item so that they fit into the button reduced space. Given the example above and a selector width=90. then 90-120= -30px to reduce overall, -10px each item => Red=30-10=20px, Green=50-10=40px, Blue=40-10=30px. The buttons will show as "Re", "Gree", "Blu" with their corresponding tooltip showing the full name. [~jhrcek] wdyt?	1	1	https://issues.jboss.org/browse/DASHBUILDE-226
3107	DASHBUILDE-218	[~uxdlc], [~jhrcek], the current implementation is ready to push. I've implemented two alternatives: 1.- Item's menu attached to the type icon on the left => [^dashbuilder_navitem_actions2.mp4] 2.- Item's menu separated into a new icon on the right => [^dashbuilder_navitem_actions.mp4] Option #2 makes more explicit the presence of a menu since the icon shows up only when the mouse is over the item. Which do you like the most?	1	1	https://issues.jboss.org/browse/DASHBUILDE-218
3108	DASHBUILDE-218	[~jhrcek][~davidredhat] Cool! And I like Option #2 better as well. Couple of ideas: - I noticed that the cog icon turns blue on hover. For consistency, could we have all of the action icons (on the right) turn blue on hover? - Except, wdyt of having the delete (trash can) icon turn red on hover to indicate that it's a "destructive" action? For example: !Screen Shot 2017-05-24 at 10.40.20 AM.png|thumbnail!	1	1	https://issues.jboss.org/browse/DASHBUILDE-218
3109	DASHBUILDE-93	Hello [~davidredhat], I'm looking at latest kie-wb and dashbuilder showcase webapps, but I don't see any effect of this setting (nor in the chart preview in dataset editor, nor in the created perspectives). For which charts is this setting expected to work? For every that has it in the Display tab? I tried with Bar/Area/Line charts and I didn't see any effect on the axis labels.. Could you please verify that it works?	0	0	https://issues.jboss.org/browse/DASHBUILDE-93
3110	DASHBUILDE-70	I cannot reproduce it yet. I have tried it using the dashbuilder's showcase and the whole kie-wb, both webapps tested in Chrome, Firefox and Safari (on mac), and the text alignment is fine... any ideas?	1	1	https://issues.jboss.org/browse/DASHBUILDE-70
3111	DASHBUILDE-28	Ok Roger. Talking about Patternfly , could you please share a short info on this initiative? I saw the webpage [https://www.patternfly.org/], but I have no idea what's the connection to our projects. Does it mean using some additional library of widgets or something, or is it just a set of design recommendations to make the apps more user friendly / unified?	1	1	https://issues.jboss.org/browse/DASHBUILDE-28
3112	DASHBUILDE-10	Questions about this issue: - The project already depends on resteasy (2.3.7). It is a dependency of Uberfire. Should I keep this version? - Is there a code formatter, to decrease merge needs? - I think that the rest-api should reside on module 'dashbuilder-webapp'. Is it ok? - Any consideration about packages structure/names?	1	0	https://issues.jboss.org/browse/DASHBUILDE-10

3114	DBZ-252	Hi [~anton_nazaruk], I think we already largely ignore those definitions (at least on master). Could you provide an example for the problematic definitions you encounter? Thanks!	1	1	https://issues.jboss.org/browse/DBZ-252

#	Requirement	Questions	Answered	Successfully Answered	URL
3115	DBZ-248	Taking a step back, couldn't this also be handled at the level of a management platform such as Kubernetes? Which would monitor the container running Connect and restart it if a task failed. I.e. when running within such environment, we'd get that functionality for free. I haven't formed an opinion really, I can see advantages to both approaches, solving restarts within the connector or pushing it to some outer layer.	0	0	https://issues.jboss.org/browse/DBZ-248
3116	DBZ-232	Added a [pull request|https://github.com/debezium/debezium/pull/229] that removes the recommenders. It's not clear how valuable these recommenders actually are. First, it's not clear about the expected semantics: can the user use values that don't appear in the recommended values? Second, the recommenders that return large numbers of values can be slow and can result in very large REST API responses. Debezium was using recommenders to return the database and table/collection names, but these lists can be very large for large databases. Rather than cap the number of recommended values and have the recommender return a subset of all potential values, we will instead remove the recommenders altogether.	1	1	https://issues.jboss.org/browse/DBZ-232
3117	DBZ-222	[~gunnar.morling], shouldn't this be targeted to 0.5.1 if it is already merged?	1	1	https://issues.jboss.org/browse/DBZ-222
3118	DBZ-211	On the decoderbufs end adding filtering is easy. In fact I already hacked this in for my database, as 99.9% of all updates are from unmonitored tables, and it improves performance substantially. The main question there is how the filter should be specified, eg should the client provide a list of the tables it is interested in, or should it pass in some whitelist/blacklist regexp filter expressions, eg the same as those used to configure the connector in the first place? I think I prefer the explicit list of tables, but the regexp expressions would likely be easier to implement.	1	0	https://issues.jboss.org/browse/DBZ-211
3119	DBZ-211	There may be a flaw in this scheme of only outputting data for rows in the relevant table: if the output plugin doesn't output anything, will the client still get the LSN? If it doesn't, it can't tell the server that it reached that LSN, so the server won't understand that WAL can be discarded, and WAL will build up until one of the monitored tables gets an update. In a busy database where the monitored tables are not updated much this could lead to a huge WAL buildup (which is what I'm seeing in my testing - not 100% sure that this is the cause yet though).	1	0	https://issues.jboss.org/browse/DBZ-211
3120	DBZ-209	[~rahulravindran0108], thanks for logging this. Perhaps I'm missing something, but does the Debezium PostgreSQL connector need to do something different to handle this case? And I thought Amazon RDS doesn't currently allow you to add your own logical decoding plugin, which means that the Debezium PostgreSQL connector can't currently be used with Amazon RDS running PostgreSQL.	0	0	https://issues.jboss.org/browse/DBZ-209
3121	DBZ-199	I'm not ready to say "no", but I think I need more convincing before "yes". :-) Specifically, I'm not clear about the advantages of a _separate_ repository, probably because we're using it very simply and within the same repo. I understand you'd like to reuse it, but do you need to support multiple Kafka versions, and you'd like to have a separate artifact per Kafka version?	1	0	https://issues.jboss.org/browse/DBZ-199
3122	DBZ-199	I guess I still don't understand the benefits of a separate repo over the current approach. What would having it in a separate repo buy you?	1	0	https://issues.jboss.org/browse/DBZ-199
3123	DBZ-196	[~p5k6], I've marked this issue on the MySQL connector. Just to clarify, can you confirm that you've not run into something similar with the PostgreSQL connector?	1	1	https://issues.jboss.org/browse/DBZ-196
3124	DBZ-177	[~hchiorean], can you provide a PR that changes the PostgreSQL connector to do what this PR did for the MySQL connector?	1	1	https://issues.jboss.org/browse/DBZ-177
3125	DBZ-175	[~anton_nazaruk], have you tried updating any other properties? The problem with updating {{table.whitelist}} is that currently the connector does not support performing anything but a snapshot upon connector creation with the _initial_ list of filtered tables. IOW, if you change the filters (either via whitelist of reducing scope of the blacklist) to add more tables than the initial set, the connector will _not perform additional snapshots_. Additionally, whether or not the connector "sees" the table(s) newly-included by the filter changes depends a lot on when the tables' {{CREATE TABLE}} statements were in the database history. If not, then they're essentially missing from the history and no subsequent changes on the tables will be processed. If the connector configuration update is specific to the above limitation not handling the newly-included tables, then we can rescope this issue to enhance the connectors to support secondary snapshots. However, if there are still connector configuration update issues, then we can keep this issue and probably have a different issue to track the new feature for performing additional snapshots when needed.	1	1	https://issues.jboss.org/browse/DBZ-175
3126	DBZ-175	I didn't try to touch other props, *white* list tables manipulation was the main target. I should probably have named this issue differently, exactly like you explained with "inability to perform secondary snapshots". Thanks for pointing to DBZ-165, looks like we ended up with similar workarounds)) I agree this functionality shall be treated as an "improvement". Anyway, it will be very useful one. We have thousands of tables (in dozens of databases), and only small fraction of them will go through debezium (20-25%). Anyway, when we move forward with materialized views usage (built from CDC events) more and more use cases appear and new tables are needed there. And we can't load all of them with initial snapshot because of many restrictions. Can you roughly estimate time efforts you need to get it done? Also, what is a policy for code contribution? Thanks in advance.	1	1	https://issues.jboss.org/browse/DBZ-175
3127	DBZ-175	[~anton_nazaruk], thanks for responding. I concede that this would be a useful feature and that it should be possible to do. Perhaps the biggest challenge is going to be coming up with the desired functional behavior. For example, is it acceptable/sufficient to perform a complete snapshot whenever new tables are needed, or is it necessary that the connector only perform incremental snapshots on the newly-visible tables? The latter is more attractive and makes more sense, but it's harder to implement such that the output change events are entirely consistent. {quote} Also, what is a policy for code contribution? {quote} We accept contributions from anyone, so any help with this would be really appreciated. See http://debezium.io/community/ for details.	1	1	https://issues.jboss.org/browse/DBZ-175
3128	DBZ-175	I think the described algorithm is sound, i've got one question, though. Do we actually have to converge to one joint binlog reader in steps 4 and 5? Or would it be possible to simply let the binlog reader set up in step 2 run for the time the connector is running and let it continue to process the tables from S1? And after step 3, another, separate binlog reader would be set up for processing S2. When the connector is restarted eventually, and there's no further change to the set of tables, a single binlog reader would be started for S3. This could be a bit less complex. But I'm not sure whether it's possible (or perhaps possible but resulting bad performance) to have multiple binlog readers?	1	1	https://issues.jboss.org/browse/DBZ-175
3129	DBZ-175	One question - cannot we have a BinlogReader running an conssuming all elevents but the events that belongs to S2 would be directed into a temporary topic. When the snapshot is completed events taken between snapshot and current time would be moved from temporary topic into the final destination and then thhe BinLogReader would be redirected to the final destination again?	1	0	https://issues.jboss.org/browse/DBZ-175

#	Requirement	Questions	Answered	Successfully Answered	URL
3130	DBZ-175	I have a slightly modified version of the proposal in [randall's comment|https://issues.jboss.org/browse/DBZ-175?focusedCommentId=13418488&page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#comment-13418488] for how to handle the new table snapshots. Instead of attempting to immediately calculate S2 on startup, which is complicated[1], I propose we in-line snapshot generation during binlog reading. When we encounter a (non-create) event for some table A that we should deal with that we don't have schema history for, we can run a snapshot of the table. This snapshot will occur in a new thread. This snapshot will get a transaction on the table it is snapshotting which will be at some offset O1. -The binlog reader will continue, ignoring any A events until it reaches or exceeds O1. If the binlog reader reaches O1, it will begin storing any events for A in a queue. Once the snapshot for A completes, the binlog reader will run through all the events in the queue before processing events normally again, but now including events for A normally.- Edit: I realize that this approach would force the binlog reader to block until the snapshot is able to start a transaction, which is unideal. Sticking with the idea of re-processing some events as needed once the snapshot completes is better. It is possible that multiple tables will be added at the same time. In this case, we will only begin snapshotting the second table once the first is completed. I can think of 2 ways to do this: 1. while a snapshot for table A is running, ignore any events of any other new table B. Once snapshot A is completed, the next event for table B we see will kick off a snapshot for table B. 2. while a snapshot for table A is running, if we see an event for a new table B, we can put table B in a queue. Once table A's snapshot is completed, we can look at the queue to see if any tables are due to be snapshotted. [1]Why is calculating S2 on startup complicated? It isn't always complicated, but there are some edge cases that would force a heavyweight process to try to calculate S2 on each startup. I'll describe one such edge case. Lets say we have a config that uses blacklists to enumerate the tables we want to capture in DBZ. Now imagine the connector goes down for some long period of time. During this time, a new table A is added to the database, but the CREATE event for it falls off the binlog. When the connector starts back up again, no config changes have occurred, but we will need to snapshot the new table A. The only way to discover this is by querying the database and re-calculating the set of tables we are expected to cover. Since we want to be able to snapshot at the same time as we read the binlog, there does not seem like a strong reason to make sure the snapshots occur at startup, since they will be occurring in parallel to binlog reading anyway. The primary risk I can see from this approach is that if some table is added that has no or very few events related to it, it may take a long time (or, possibly never) for a snapshot to get triggered. However, I feel like this is a very unlikely event. Additionally, if this is a well-documented issue, it would be very easy to trigger a snapshot simply by adding a dummy row (and then deleting it) or "modifying" an existing one. Are there any issues that this proposal overlooks? Feedback would be welcome. Edit: Looking more into it, I'm more confused about, what, exactly needs to be done on startup (it seems like something needs to be done on startup...?)	1	0	https://issues.jboss.org/browse/DBZ-175
3131	DBZ-175	Thanks, [~mtagle], for the proposal! I have a few comments/questions: Schema history includes tables that don't satisfy the filter. Why? It's complicated, but for the most part boils down to the fact that we might need that schema history later. For example, if table {{bar}} doesn't satisfy the filters, we might come across {{CREATE TABLE foo AS SELECT FROM bar}}, at which point we need the schema for {{bar}} just to know what table {{foo}} looks like. One of the challenge as I see it is how a connector can determine when it restarts that its filters now include tables that weren't included the last time it was running. I think we may be able to solve this by simply adding the 2 database and 2 table filter properties to the offset. I was just looking through the Kafka Connect code to verify that it does very little with the offset map until it comes time to flush the most recent offset per partition. So adding more fields to that offset map is really not much overhead whatsoever, but it does give the connector the ability when starting up to know what the filters were the previous startup. With that info, we can compare the previous and current filters, and: * continue as-is if they are identical, or * use the previous filters to calculate S1, the new filters to calculate S3, and then calculate S2. Now, you make a good point about edge cases making the computation of S2 difficult. Rather than store the 4 filter properties, would could instead store in the offsets one additional property that contains the names of the actual tables. When the connector starts, it could calculate the set of tables that satisfies the current filter (S1) and generate a single string containing all of the fully-qualified table names. It could then pass that string in all of the offsets, and as mentioned before there is little overhead to this. Upon restart, the connector can read that string and parse into fully-qualified table names for S1, use the new filters to calculate S3, and then determine S2 and snapshot as needed. The only real disadvantage of this approach is that this string could get long, though that's not really that big a deal. One significant advantage, though, is that this is very backward compatible. Upon restart, if the connector doesn't see this property it simply skips the check to determine if snapshots are needed, but then always generates this new property in the offsets. The *next* time the connector restarts, any changes in the sets of tables will be discovered correctly. This does require that people upgrade before changing any filters, but from then on they could change filters at any time. Now, I do like your idea about watching during binlog reading for "new" tables that satisfy the filter and then snapshotting them. This could get fairly complicated, so we'll have to watch that. Hopefully we can use the same snapshot mechanism to do this. What do you think?	1	1	https://issues.jboss.org/browse/DBZ-175
3132	DBZ-175	[~rhauch] that general approach for calculating S2 sounds good to me. When you talk about the "4 filter properties" do you mean database whitelist/blacklist and table whitelist/blacklist?	1	0	https://issues.jboss.org/browse/DBZ-175
3133	DBZ-164	[~tanooren], what do you think about just catching and handling the exception for a database and skipping it? I'm hesitant to exclude tables from the DDL step because the connector currently always processes all DDL statements, even if the databases and tables are excluded.	1	1	https://issues.jboss.org/browse/DBZ-164
3134	DBZ-164	Here's a bit more detail. Although databases are excluded as a whole, it is still possible for some tables in one database to be defined using tables in another database, such as: {code} CREATE TABLE a LIKE b; {code} where tables {{a}} and {{b}} can be in different databases. Right now, the connector processes all database- and table-related DDL statements (e.g., view and procedure definition statements are skipped), and so when this situation occurs the connector still knows what the definition of of table {{b}} might be, even if it is in a database that has been filtered out. I'd rather not add yet-another-configuration-property that controls the behavior, so my proposal is to continue look for the tables in all databases but to instead better handle any error with each database and simply skip everything to do with that database in the rest of the snapshot. We'd still log that we're skipping the database name and include the SQL exception message (but not stack trace). [~tanooren], thoughts?	1	1	https://issues.jboss.org/browse/DBZ-164

#	Requirement	Questions	Answered	Successfully Answered	URL
3135	DBZ-151	h3. 1. Execution of the tests We have to determine how to run individual tests locally (from the Maven command line and from an IDE) and how to run all of the integration tests using Maven's Failsafe. I expect that the best/easiest way to do this is to require a separate test method in a JUnit test class that specifies the directory and runs the connector test. This should require very little code, but it would work very nicely with the Maven build and IDEs using current approaches. As long as we keep each method implementation to at most a few lines, this does not seem to be much of a burden. h3. 2. Organization of the test classes So if we do this, then where should this test class (or test classes) be placed? If we follow current conventions, we'd simply place them inside the connector Maven module. However, this makes it much harder when wanting to run the integration tests against multiple DBMS containers. For example, when running the MySQL build with the {{-Passembly}} argument, the build starts the integration test phase of the build by starting _all Docker containers_ that will be required by the tests, and then runs the integration test suite multiple times (once for each DBMS topology). Overall this works pretty well, and despite the {{pom.xml}} complexity all of the container's are built using shared artifacts (e.g., SQL files, config files, etc). A major disadvantage, however, is that as the number of containers increases this becomes harder to maintain and requires more local resources during the build to run all of the containers at once. An alternative is to create one or more test modules for each connector, where each test module would apply to a single DBMS topology. So a connector with tests for 5 DBMS topologies would mean 5 separate test modules for the connector. Each {{pom.xml}} file becomes simpler, but each test module for a connector has a lot of duplicate code: the {{pom.xml}} would largely be the same, the DBMS config files, the connector configuration files, the expected results. However, this may actually be a good thing, since different DBMS topologies may have subtly different config files, connector config files, and expected results. h3. 3. Output Our current integration build results in significant output, even at the INFO level, simply because of the number of test runs of the connectors. Normal builds shouldn't need any of this output, but developers should be able to easily enable logging when running the tests individually. h3. 4. Configuration and expected results If we use a separate directory for each test, then we could place in the directory: * a properties file (with a well-known name) holding connector's configuration; and * a file containing the expected output of the connector, perhaps in JSON format. It is likely the test framework can read in the expected events and compare sequence of output and expected events. We may have to provide a way to ignore certain event fields (e.g., the timestamp that the event was generated or that the row was changed), but the goal would be that this could be automated completely and require very little customization for each connector. Another benefit of having expected results stored in a file is that Git can manage the history of the output, so any changes to the connector output is captured. A nice feature would be for the test framework to _output_ the expected results file if it does not exist. This will save the developer from having to hand-code the expected results. This would also be great if coupled with the ability to *generate* larger volumes of data in the source databases, as the expected outputs can be generated and manually inspected. It is often useful to test the stopping and restarting of the connector. Could this be accomplished by having special _control statements_ in the expected output file? For example, this line in the expected output file: {code} { "connector" : "restart" } {code} might instruct the connector to stop and restart after the change event on the previous line were output, after which the output should continue with the change events that follow. This might make it theoretically very easy to verify that connector restarts do not lose/miss/duplicate any output events.	1	1	https://issues.jboss.org/browse/DBZ-151
3136	DBZ-151	[~hchiorean], are you far enough with the PostgreSQL connector to have any feedback or input?	1	1	https://issues.jboss.org/browse/DBZ-151
3137	DBZ-151	Hopefully PG will remain that straightforward. Might there be a need to run tests against multiple PG topologies, for example to test failing over a connector from one PG server to another and verifying no data is lost? This is the case for MySQL (e.g., single w/o GTIDs, single w/ GTIDs, master & slave, multi-master slave, etc.) and MongoDB (e.g., simple replica set, sharded cluster).	1	1	https://issues.jboss.org/browse/DBZ-151
3138	DBZ-147	Awesome! Do the docs get updated automatically?	1	0	https://issues.jboss.org/browse/DBZ-147
3139	DBZ-143	Note: this was tested with MySQL 5.7.12 community edition	1	1	https://issues.jboss.org/browse/DBZ-143
3140	DBZ-140	[~rhauch] I'm running into this issue as well, but I was wondering why acquiring a global lock with {{FLUSH TABLES WITH READ LOCK}} is needed here. Would it not be sufficient to acquire locks on only the tables we're interested in by first looking at the whitelist/blacklist configs, regardless of whether or not RDS is being used? This way we could avoid the weirdness with checking {{@@basedir}} altogether.	1	1	https://issues.jboss.org/browse/DBZ-140
3141	DBZ-140	[~konstantin.zadorozhny], do you have any thoughts about this? In particular, what might we change in the connector to keep the strict consistency logic when talking to MySQL but allow it to work for RDS?	1	1	https://issues.jboss.org/browse/DBZ-140
3142	DBZ-140	[~richoconnell], thanks for using Debezium and for reporting the connector's problem using RDS as well as providing a patch. Your fix should absolutely work and looks great. Do you have any interest in creating a pull request with the change? While a patch is perfectly acceptable, the history in Git doesn't show you as contributing that fix. I do think it's great if contributor's changes _are_ reflected in the history, and creating a PR would do that. But it's up to you.	1	1	https://issues.jboss.org/browse/DBZ-140
3143	DBZ-137	Hi Randall, [~everton.portela] : Nice. I am very interested in Oracle CDC and have been long awaiting the successor for DataBus from LinkedIn, I understand LinkedIn is working on an update to Databus. Glad to finally see an Open-Source solution for Oracle CDC. It may be a while before I get a chance to get my hands dirty with this. Can you keep us updated as you progress. I started looking into the StreamSets' Oracle CDC implementation on GitHub : [OracleCDCSource.java|http://bit.ly/2oeMZXp]. Up until now, I thought Redo Logs mining was difficult and due to complexity it wasn't easy to even get a handle on a mechanism to read it. Thanks to [DBZ-137|https://issues.jboss.org/browse/DBZ-137] I got introduced to LogMiner. Is it something that will support Oracle RAC?, wonder what performance overhead of enabling LogMiner on the database would be. From reviewing Oracle 12c LogMiner [documentation |https://docs.oracle.com/cd/B28359_01/server.111/b28319/logminer.htm#i1014380], there are special considerations for Oracle RAC enabled databases and some [concerns |http://www.freelists.org/post/oracle-l/CDC-using-LogMiner-in-RAC-environment,1]: # [Explicitly specifying log files|http://docs.oracle.com/database/122/SUTIL/oracle-logminer-utility.htm#SUTIL1605] for each redo thread. There does appear to be queries that can help query the log files. I'm not an Oracle Expert as you can probably tell, but I do appreciate if someone with Oracle expertise can help clarify these options for RAC and how [V$LOGMNR_LOGS|https://docs.oracle.com/html/E10643_07/rcmsubcl002.htm] works in RAC. # Continuous Mine option to avoid explicitly specifying log files. Option is allowed for Oracle RAC only if redo threads are not enabled. : See [Example LogMiner session without specifying logfiles explicitly|https://docs.oracle.com/cd/B28359_01/server.111/b28319/logminer.htm#i1027809] and [Future query values|https://docs.oracle.com/cd/B28359_01/server.111/b28319/logminer.htm#i1028809] From just a glance I have been able to take of the [OracleCDCSource.java|http://bit.ly/2oeMZXp] I see they use the Continuous Mine option. Yet to determine if that is sufficient for Oracle RAC. Thanks, Pavan	1	0	https://issues.jboss.org/browse/DBZ-137

#	Requirement	Questions	Answered	Successfully Answered	URL
3144	DBZ-137	Hey [~jjose2004], interesting, hadn't heard about dbms_change_notification before. Do you have a pointer to what the "CQ" is? On dbms_change_notification, do you know whether there's any performance implication of this? I.e. would it'd be suitable for implementing CDC on large number of tables? Also would we be able to capture old and new state of a modified row?	1	0	https://issues.jboss.org/browse/DBZ-137
3145	DBZ-134	[~vhorodchuk], do you have any specific metrics in mind?	1	1	https://issues.jboss.org/browse/DBZ-134
3146	DBZ-133	There can be scenario where previous snapshot failed during taking data snapshot and connector was restarted with schema snapshot mode. What should be the behaviour ? Just throw an error message and stop or continue ? and this should include check for row level bin logs too ?? } else if (taskContext.isSchemaSnapshotOnly() && rowBinlogEnabled) { this.snapshotReader.includeData(false); }	1	1	https://issues.jboss.org/browse/DBZ-133
3147	DBZ-133	{quote} and this should include check for row level bin logs too ?? {code} } else if (taskContext.isSchemaSnapshotOnly() && rowBinlogEnabled) { this.snapshotReader.includeData(false); } {code} {quote} Okay, good point. This logic needs a bit of refactoring to handle the various cases more clearly. How about changing this entire if-block to: {code:java} if (taskContext.isInitialSnapshotOnly()) { logger.warn("This connector will only perform a snapshot, and will stop after that completes."); this.snapshotReader.onSuccessfulCompletion(this::skipReadBinlog); } else { // We're expecting to read the binlog ... this.snapshotReader.onSuccessfulCompletion(this::transitionToReadBinlog); if (!rowBinlogEnabled) { throw new ConnectException("The MySQL server is not configured to use a row-level binlog, which is " + "required for this connector to work properly. Change the MySQL configuration to use a " + "row-level binlog and restart the connector."); } } {code} IOW, if we're performing an initial snapshot only, then stop after the snapshot; otherwise, always try to follow up by reading the binlog and fail if that is not the case. Then rather than {{SnapshotReader}} exposing the boolean flag, change the {{SnapshotReader}}'s constructor to then do this: {code:java} this.includeData = !taskContext.isSchemaSnapshotOnly(); {code} The benefit is that the {{includeData}} boolean field can then be {{final}}, which is a huge plus since immutable is much better.	1	1	https://issues.jboss.org/browse/DBZ-133
3148	DBZ-133	@rhauch ..for schema based snapshot, what i wanted to know was that suppose i start connector in snapshot.mode = initial while taking data snapshot it went off or restarted or config was modified..now it was restarted with snapshot.mode = schema, it will again add create tables and all this is fine, but this time it will not take data snapshot , so my kafka queues will have some old data snapshot (incomplete) and now will start reading from current binlog position. Is this behaviour fine ?	1	1	https://issues.jboss.org/browse/DBZ-133
3149	DBZ-133	[~prannoymittal], any progress on this? Do you want to create a pull request for review? You can always update the PR if needed.	1	1	https://issues.jboss.org/browse/DBZ-133
3150	DBZ-126	Will this require that [com.github.shyiko:mysql-binlog-connector-java|https://github.com/shyiko/mysql-binlog-connector-java] need to be updated to support this?	1	1	https://issues.jboss.org/browse/DBZ-126
3151	DBZ-126	{quote} Will this require that com.github.shyiko:mysql-binlog-connector-java need to be updated to support this? {quote} No, that library allows for some customizations that we're already using. If that means we need to duplicate some logic, then we may want to contribute an enhancement to the library. Either way, we can make it work.	1	1	https://issues.jboss.org/browse/DBZ-126
3152	DBZ-121	[~renwu58], can you share an example of a regex that you're using. The above samples for the source tables are great, but it's not clear how they map to topic names. For example, I can imagine some mappings between source tables and topics to be like these: ||Source Table Pattern||Topic Name Pattern|| | {{\{base_table\}_\{tenant\}_\{YYYYMM\}}} | {{\{base_table\}_\{tenant\}}} | | {{\{base_table\}_\{tenant\}_\{YYYYMM\}}} | {{\{base_table\}}} | | {{\{base_table\}_\{seqno\}}} | {{\{base_table\}}} | | {{\{base_table\}_\{tenant\}_\{seqno\}}} | {{\{base_table\}_\{tenant\}}} | Is this close? Can you give a few more specific examples? Would a single regex-based mapping be able to identify all of the source tables that need to be merged, or do we need to allow multiple regex-based mappings?	1	1	https://issues.jboss.org/browse/DBZ-121
3153	DBZ-121	[~renwu58], do the different shards have overlapping primary keys? If so, then the events key (which currently consists only of the table's primary key) may need to be changed to include a "shard ID" or "shard name". BTW, properly merging sharded tables affects a few more things than just using the same topic for a set of matching (sharded) tables, and we may need a bit more time to make sure it's done properly and that it will be useful. It's currently scheduled for 0.3.2, but I was hoping to get 0.3.2 out this week so I may push this into 0.3.3 so that I can release 0.3.2 on Monday. There is not currently a timeframe for 0.3.3, so we could do it relatively quickly after this feature is completed (and perhaps after DBZ-126 with JSON data type).Thoughts?	1	1	https://issues.jboss.org/browse/DBZ-121
3154	DBZ-121	[~renwu58], with this new approach, it should be possible to achieve your goal by specifying one or more regular expressions and replacement patterns. Note that the regular expressions must match the _entire fully-qualified table name_, not just the table name. For example, you could specify the new configuration property like this: {code} topic.naming.strategy=^(\w*?)[.](\w*?)(?=(?:_(?:\d+)|$)+$)(_(?:21|22|51|52|91))?.* = $1$2, table {code} Note this defines two strategies: # The first uses the regular expression {{^(\w*?)\[.\](\w*?)(?=(?:_(?:\d+)\|$)+$)(_(?:21|22|51|52|91))?.*}} to match _fully-qualified table names_, and when they match capture groups 1 and 2 are used to construct the topic name; and # If no previous strategy matches for a given table, then the {{table}} strategy is used as a default Or, if it's easier you could write and specify a class that implements the {{TopicNamingStrategy}} interface with custom logic. What do you think?	1	1	https://issues.jboss.org/browse/DBZ-121
3155	DBZ-115	[~uchouhan], the "Marking coordinator ... dead" is a signal that the Kafka Connect process has lost (or never had) a connection to the Kafka broker. Are there other messages in either the Kafka broker or Kafka Connect processes?	1	1	https://issues.jboss.org/browse/DBZ-115

#	Requirement	Questions	Answered	Successfully Answered	URL
3156	DBZ-115	[~uchouhan], can you please confirm that you're using a single broker and a single Kafka Connect process with a single connector? The log messages you mention are similar to [https://issues.apache.org/jira/browse/KAFKA-2985|KAFKA-2985], so you might try looking at some of the [optional Kafka Connect worker settings|http://docs.confluent.io/3.0.0/connect/userguide.html#configuring-workers] or [overriding the Kafka producer and consumer settings|http://docs.confluent.io/3.0.0/connect/userguide.html#overriding-producer-consumer-settings], both of which can be set on the Kafka Connect docker image via {{-e CONNECT_{property_name_using_underscores}}}. For example, do any tables have large numbers of columns and/or columns with very large values? The value of the {{max.partition.fetch.bytes}} Kafka consumer setting controls the maximum size of each response, which may contain one or more messages. However, if one event message is large enough, it might be greater than this maximum size. The [http://kafka.apache.org/documentation.html#newconsumerconfigs|Kafka documentation] says of this property: {quote} The maximum amount of data per-partition the server will return. The maximum total memory used for a request will be {{#partitions * max.partition.fetch.bytes}}. This size must be at least as large as the maximum message size the server allows or else it is possible for the producer to send messages larger than the consumer can fetch. If that happens, the consumer can get stuck trying to fetch a large message on a certain partition. {quote} The default value for this property is 1048576 bytes, or 1Mi. So, you may try to bump up this value if any of your rows are large enough to be serialized (along with the schema) to be larger than 1Mi. I'm guessing that you didn't change the converter, so this serialized format would be in terms of JSON (which can get pretty verbose). There is a similar {{max.request.size}} configuration property for the Kafka producer, and it also defaults to 1Mi.	1	1	https://issues.jboss.org/browse/DBZ-115
3157	DBZ-115	[~uchouhan] and [~rjharmon0316], can both of you explain the process with every step? For example, when are you stopping the connector, when are you restarting the connector, is the MySQL server stopped or restarted, etc. And, it'd be helpful to attach the log output for each time the connector (obviously with any sensitive information redacted/removed) is started; I'm particularly interested in the number of tables, rows found in each table, and the binlog positions at various points as captured during the snapshot phase and binlog reading phases.	1	1	https://issues.jboss.org/browse/DBZ-115
3158	DBZ-115	[~uchouhan], thanks for the info. The {{Error registering AppInfo mbean}} is actually a WARNING, so it can be ignored. I'm not sure why Kafka Connect is doing this, but I'll see if that's something we can fix (see DBZ-124). {quote} Also, notice that the binlog filename and position are blank, whereas I suppose that should be valid. I have run into the same issue with no events on the kafka topic even when there was a binlog filename/position in this log ... {quote} Do you have the row-level binlog enabled on MySQL? The connector will output some related MySQL server properties, like: {code} ... 2016-09-16 09:24:55,786 INFO MySQL|myServer|snapshot MySQL server variables related to change data capture: [io.debezium.connector.mysql.SnapshotReader] 2016-09-16 09:24:55,795 INFO MySQL|myServer|snapshot binlog_cache_size = 32768 [io.debezium.connector.mysql.SnapshotReader] 2016-09-16 09:24:55,796 INFO MySQL|myServer|snapshot binlog_checksum = CRC32 [io.debezium.connector.mysql.SnapshotReader] 2016-09-16 09:24:55,796 INFO MySQL|myServer|snapshot binlog_direct_non_transactional_updates = OFF [io.debezium.connector.mysql.SnapshotReader] 2016-09-16 09:24:55,796 INFO MySQL|myServer|snapshot binlog_error_action = ABORT_SERVER [io.debezium.connector.mysql.SnapshotReader] 2016-09-16 09:24:55,796 INFO MySQL|myServer|snapshot binlog_format = ROW [io.debezium.connector.mysql.SnapshotReader] ... {code} This will indicate whether you're using the binlog format. Please verify that it is {{ROW}} and that you've properly set up permissions according to http://debezium.io/docs/connectors/mysql/	1	1	https://issues.jboss.org/browse/DBZ-115
3159	DBZ-115	Yes, it is row and I'm not sure if it does not show that information because I'm using snapshot.mode 'never'. I'm using 0.3.1, should I be trying out the latest from git? If so, is there a README I can follow to run the latest code?	1	1	https://issues.jboss.org/browse/DBZ-115
3160	DBZ-115	I think that might be the problem. I purged the mysql logs before a certain date and so its likely that the create table statements do not exist. Do you have any suggestions on how I can go about fixing this?	1	1	https://issues.jboss.org/browse/DBZ-115
3161	DBZ-115	{quote} I think that might be the problem. I purged the mysql logs before a certain date and so its likely that the create table statements do not exist. Do you have any suggestions on how I can go about fixing this? {quote} It is very likely that _any_ MySQL server that's been running a while will have some part of its binlog purged, and this is exactly why the connector supports taking a snapshot and _then_ reading the binlog from the time at which the snapshot was started. Getting a connector to perform a snapshot after it's already completed a snapshot is a bit challenging, but IIRC you're using Kafka in a Docker container, so this will easier for you to try. Or, just start a new connector with a different logical name and snapshot mode. BTW, [our tutorial|http://debezium.io/docs/tutorial/] goes through this exact process, talks about the log output and what each step is doing, and even walks you through stopping and starting the MySQL connector. Be careful trying to stop and restart the MySQL server running in a Docker container, though -- our tutorial doesn't persist the data outside the container, so once the MySQL container stops all data is lost.	1	1	https://issues.jboss.org/browse/DBZ-115
3162	DBZ-115	[~rjharmon0316], what version of MySQL are you using? What version of Debezium? Several things could be causing the problem. First, please check whether the MySQL user is properly configured to be able to read all of the binlog information; see the [documentation|http://debezium.io/docs/connectors/mysql/] for specifics. The MySQL connector outputs information about the related system variables and the user (with their grants) used for snapshot and binlog reading, so that should help. Have you verified that the offsets reported by the connector are valid offsets in the binlog? If not, that would take this in a very different direction. Did you look to see the changes at or near that point in the binlog to see if there's anything interesting? Also, you might want to double check that changes are being made to your table after that point. Third, have you tried running the connector without the database filter? The filtering logic should be the same for both snapshot and binlog modes, but there may be some subtle differences such that a bug in the filtering is causing the binlog mode to ignore events from all the tables. Fourth, you did get it to work using the Docker images? If so, I presume that was using the JSON converter, or did you rebuild the Docker image to support the Avro Converter? Fifth, the Debezium community to my knowledge doesn't test with the Confluent Platform. You may talk to them to find out what if any differences their are between their Platform and the Kafka Connect that's released with Kafka. For example, have they patched anything? Our 0.3.1 release uses Kafka Connect 0.10.0.1, but IIUC only Confluent Platform 3.0.1 uses this same Kafka Connect version.	1	1	https://issues.jboss.org/browse/DBZ-115
3163	DBZ-115	[~rjharmon0316], one more thing. Can you provide the properties that specify your database and table filters? (Change the names if you want to sanitize them.) The more I think about it, the more I wonder if the filtering is a problem.	1	1	https://issues.jboss.org/browse/DBZ-115

#	Requirement	Questions	Answered	Successfully Answered	URL
3164	DBZ-115	{quote} FYI, I used these dbz settings when creating the Connect service: {code} database.server.name=db database.whitelist=inventory database.history.kafka.bootstrap.servers=kafka:9092 database.history.kafka.topic=dbh.inventory {quote} I thought you said earlier that you're setting a table filter. If so, did you take that out? (Or perhaps I was mistaken.) {quote} The "my_connect_offsets" topic reflects new binlog offsets (with a ~30s delay) after ALTER TABLE in the single whitelisted database, but is never updated on INSERT, UPDATE or DELETE. {quote} Okay, so the {{my_connect_offsets}} topic is where Kafka Connect is _periodically_ recording the MySQL connector's "source offsets", which contains the most recently recorded binlog filename and position (among other things). You can control the frequency at which Kafka Connect records these with the {{offset.flush.interval.ms}} worker configuration property (see [Confluent's documentation for Kafka Connect|http://docs.confluent.io/3.0.0/connect/userguide.html#configuring-workers]). There are a couple of possible causes for not seeing any INSERT, UPDATE or DELETE events for your table: # The connector may be incorrectly skipping the binlog events associated with that row if the table filter or database filter are not specified correctly or if there's a bug in the binlog reading logic. Debug logging will output more information if this is the case. You can turn on debug logging on the Kafka Connect process in Docker by setting the {{LOG_LEVEL}} environment variable to {{DEBUG}}; if you're using Confluent then just crank up the debug logging for {{io.debezium.connector.mysql}} or if that's too verbose then debug for just {{io.debezium.connector.mysql.BinlogReader}}. You can see the [{{handleInsert}} method|https://github.com/debezium/debezium/blob/v0.3.1/debezium-connector-mysql/src/main/java/io/debezium/connector/mysql/BinlogReader.java#L342] outputs either "Recorded {n} insert records for event ..." or "Skipping insert row event ..." messages for INSERTs, and similar messages for DELETE and UPDATE. # The connector may be getting confused about the structure of the table. Presumably this is not the case since you get events from the snapshot, meaning the connector has an internal model of the table and its columns. It is possible that an ALTER screwed up this internal model, however, though in the past that has always resulted in an exception about failing to parse DDL. Regardless, if this is the case you would see "Skipping ..." debug log messages as mentioned above. # The connector is not able to actually parse the binlog events for MySQL 5.5. We've done testing with 5.6 and 5.7, but not with 5.5. If this is the case, then if you use TRACE logging then the connector is calling the [{{ignoreEvent}} method|https://github.com/debezium/debezium/blob/v0.3.1/debezium-connector-mysql/src/main/java/io/debezium/connector/mysql/BinlogReader.java#L186] and you would see messages like "Ignoring event due to missing handler...". Either way, it seems like the next step is to turn up logging to DEBUG to see if 1 or 2 are more likely, or if that's not clear turn up logging to TRACE to see if 3 is more likely. BTW, thanks a lot for your patience trying to figure this out and working with me to hopefully resolve the situation!	1	1	https://issues.jboss.org/browse/DBZ-115
3165	DBZ-115	{quote} {code} 2016-09-20 23:16:37,767 INFO MySQL|db|binlog Connected to MySQL binlog at 192.168.1.132:3306, starting at binlog file 'mysql-bin.000208', pos=107, row=0 [io.debezium.connector.mysql.BinlogReader] 2016-09-20 23:16:37,768 DEBUG || Nothing to send to Kafka. Polling source for additional records [org.apache.kafka.connect.runtime.WorkerSourceTask] 2016-09-20 23:16:37,786 DEBUG MySQL|db|binlog Rotating logs: Event{header=EventHeaderV4{timestamp=0, eventType=ROTATE, serverId=1, headerLength=19, dataLength=24, nextPosition=0, flags=32}, data=RotateEventData{binlogFilename='mysql-bin.000208', binlogPosition=107}} [io.debezium.connector.mysql.BinlogReader] 2016-09-20 23:16:37,788 DEBUG MySQL|db|binlog Clearing table converters [io.debezium.connector.mysql.RecordMakers] 2016-09-20 23:16:43,119 DEBUG || Received successful heartbeat response for group 1 [org.apache.kafka.clients.consumer.internals.AbstractCoordinator] {code} {quote} This is interesting. The {{Rotating logs...}} message signals that a [ROTATE event|https://dev.mysql.com/doc/internals/en/rotate-event.html] was found, which is usually the last event written to a binlog file before switching to a new one (e.g., {{mysql-bin.000208}}). Considering that this is the last event mentioned in the log, my guess is that the connector is not able to find this log and for some reason we're either spinning or we're blocked waiting for something to happen. I'd love to know where it is stuck so we can prevent this from happening again. Would you mind checking the binlog files to see if {{mysql-bin.000208}} is still there? Then, if you're still willing to help track this down, could you get a [stack dump|http://stackoverflow.com/questions/10756105/how-to-get-a-complete-stack-trace-of-a-running-java-program-that-is-taking-100] of the Kafka Connect process? Unfortunately, if Kafka Connect is running in a Docker container, you'll have to connect to it with a shell first: {code} docker exec -it connect /bin/bash {code} where {{connect}} is the Kafka Connect container name. Much appreciated!	1	1	https://issues.jboss.org/browse/DBZ-115

#	Requirement	Questions	Answered	Successfully Answered	URL
3166	DBZ-115	restarting connect container (see second stack). Finally, I used a shell loop to capture a series of 60 traces during connect startup, and another one to grep -A 20 -B 20 'ebezium' from those stacks; results in 3rd code block. Please let me know if you want any specifically-numbered trace from that series. kafka@35eea237734d:~$ jstack 1 {code} 2016-09-21 15:19:48 Full thread dump OpenJDK 64-Bit Server VM (25.92-b15 mixed mode): "Attach Listener" #47 daemon prio=9 os_prio=0 tid=0x00007fdfc80b3000 nid=0x246 runnable [0x0000000000000000] java.lang.Thread.State: RUNNABLE "blc-keepalive-192.168.1.132:3306" #46 prio=5 os_prio=0 tid=0x00007fdfd4da7000 nid=0x229 waiting on condition [0x00007fdfc1ce6000] java.lang.Thread.State: TIMED_WAITING (sleeping) at java.lang.Thread.sleep(Native Method) at com.github.shyiko.mysql.binlog.BinaryLogClient$3.run(BinaryLogClient.java:555) at java.util.concurrent.Executors$RunnableAdapter.call(Executors.java:511) at java.util.concurrent.FutureTask.run(FutureTask.java:266) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) "blc-192.168.1.132:3306" #45 prio=5 os_prio=0 tid=0x00007fdfe00f3000 nid=0x228 runnable [0x00007fdfc1fe9000] java.lang.Thread.State: RUNNABLE at java.net.SocketInputStream.socketRead0(Native Method) at java.net.SocketInputStream.socketRead(SocketInputStream.java:116) at java.net.SocketInputStream.read(SocketInputStream.java:170) at java.net.SocketInputStream.read(SocketInputStream.java:141) at com.github.shyiko.mysql.binlog.io.BufferedSocketInputStream.read(BufferedSocketInputStream.java:51) at com.github.shyiko.mysql.binlog.io.ByteArrayInputStream.readWithinBlockBoundaries(ByteArrayInputStream.java:202) at com.github.shyiko.mysql.binlog.io.ByteArrayInputStream.peek(ByteArrayInputStream.java:175) at com.github.shyiko.mysql.binlog.BinaryLogClient.listenForEventPackets(BinaryLogClient.java:692) at com.github.shyiko.mysql.binlog.BinaryLogClient.connect(BinaryLogClient.java:462) at com.github.shyiko.mysql.binlog.BinaryLogClient$5.run(BinaryLogClient.java:623) at java.lang.Thread.run(Thread.java:745) "kafka-producer-network-thread | 45604805-72b7-49c7-a60f-3035074d2d3a" #44 daemon prio=5 os_prio=0 tid=0x00007fdfe0262800 nid=0x227 runnable [0x00007fdfc1de7000] java.lang.Thread.State: RUNNABLE at sun.nio.ch.EPollArrayWrapper.epollWait(Native Method) at sun.nio.ch.EPollArrayWrapper.poll(EPollArrayWrapper.java:269) at sun.nio.ch.EPollSelectorImpl.doSelect(EPollSelectorImpl.java:93) at sun.nio.ch.SelectorImpl.lockAndDoSelect(SelectorImpl.java:86) - locked <0x00000000fcb069b0> (a sun.nio.ch.Util$2) - locked <0x00000000fcb069a0> (a java.util.Collections$UnmodifiableSet) - locked <0x00000000fcb06888> (a sun.nio.ch.EPollSelectorImpl) at sun.nio.ch.SelectorImpl.select(SelectorImpl.java:97) at org.apache.kafka.common.network.Selector.select(Selector.java:454) at org.apache.kafka.common.network.Selector.poll(Selector.java:277) at org.apache.kafka.clients.NetworkClient.poll(NetworkClient.java:260) at org.apache.kafka.clients.producer.internals.Sender.run(Sender.java:229) at org.apache.kafka.clients.producer.internals.Sender.run(Sender.java:134) at java.lang.Thread.run(Thread.java:745) "kafka-producer-network-thread | 45604805-72b7-49c7-a60f-3035074d2d3a" #43 daemon prio=5 os_prio=0 tid=0x00007fdfe00f6000 nid=0x226 runnable [0x00007fdfc1ee8000] java.lang.Thread.State: RUNNABLE at sun.nio.ch.EPollArrayWrapper.epollWait(Native	1	1	https://issues.jboss.org/browse/DBZ-115
3167	DBZ-115	[~rjharmon0316], thanks for those stack traces. When reading the binlog, the connector uses a 3rd party library to talk to MySQL and read/fetch the binlog events, and this {{com.github.shyiko.mysql.binlog.BinaryLogClient}} class uses two separate threads. One of these is a thread that keeps the connection alive even if there is infrequent activity: {code:java} "blc-keepalive-192.168.1.132:3306" #46 prio=5 os_prio=0 tid=0x00007fdfd4da7000 nid=0x229 waiting on condition [0x00007fdfc1ce6000] java.lang.Thread.State: TIMED_WAITING (sleeping) at java.lang.Thread.sleep(Native Method) at com.github.shyiko.mysql.binlog.BinaryLogClient$3.run(BinaryLogClient.java:555) at java.util.concurrent.Executors$RunnableAdapter.call(Executors.java:511) at java.util.concurrent.FutureTask.run(FutureTask.java:266) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) {code} The second thread is actually polling MySQL for the next set of MySQL events and handing them off to Debezium logic for converting them into Debezium events and enqueuing them in an in-memory queue: {code:java} "blc-192.168.1.132:3306" #45 prio=5 os_prio=0 tid=0x00007fdfe00f3000 nid=0x228 runnable [0x00007fdfc1fe9000] java.lang.Thread.State: RUNNABLE at java.net.SocketInputStream.socketRead0(Native Method) at java.net.SocketInputStream.socketRead(SocketInputStream.java:116) at java.net.SocketInputStream.read(SocketInputStream.java:170) at java.net.SocketInputStream.read(SocketInputStream.java:141) at com.github.shyiko.mysql.binlog.io.BufferedSocketInputStream.read(BufferedSocketInputStream.java:51) at com.github.shyiko.mysql.binlog.io.ByteArrayInputStream.readWithinBlockBoundaries(ByteArrayInputStream.java:202) at com.github.shyiko.mysql.binlog.io.ByteArrayInputStream.peek(ByteArrayInputStream.java:175) at com.github.shyiko.mysql.binlog.BinaryLogClient.listenForEventPackets(BinaryLogClient.java:692) at com.github.shyiko.mysql.binlog.BinaryLogClient.connect(BinaryLogClient.java:462) at com.github.shyiko.mysql.binlog.BinaryLogClient$5.run(BinaryLogClient.java:623) at java.lang.Thread.run(Thread.java:745) {code} The Kafka Connect thread that is running the task polls the connector for the latest events (which are dequeued from the in-memory queue) and writes them to Kafka and (periodically) updates the offsets. (Note that since the queue is bounded so that any latency or problems writing the events to Kafka creates back pressure on the MySQL binlog client thread by preventing additions to the queue. Also, Kafka Connect records the offsets of those events actually written to Kafka, so if anything bad happens upon restart the connector will start reading the binlog from the last offset recorded by Kafka Connect.) Anyway, it's interesting that this {{blc-192.168.1.132:3306}} thread is at the same position in all of the thread dumps (after restarting the connector). That may just be a coincidence, but it may also be stuck trying to read the next byte from the socket (to MySQL). Have you seen any other stack for this thread in any of the stack traces (perhaps any that you didn't upload)?	1	1	https://issues.jboss.org/browse/DBZ-115
3168	DBZ-105	{quote} I don't think the connector has access to the producer configs {quote} I was assuming that you were creating an out of band KafkaProducer for the history topic. Is that not the case?	1	1	https://issues.jboss.org/browse/DBZ-105

#	Requirement	Questions	Answered	Successfully Answered	URL
3169	DBZ-99	Version 0.4 of the MySQL Binlog client library [is available|https://gitter.im/debezium/dev?at=57b2370c1a7d02075681c97d] with SSL support. Thanks, Stanley! Per the [documentation|https://github.com/shyiko/mysql-binlog-connector-java#using-ssl], it is configured exactly like the [MySQL Connector/J TLS support|https://dev.mysql.com/doc/connector-j/5.1/en/connector-j-reference-using-ssl.html] by either setting system properties in the JVM process: {code} -Djavax.net.ssl.keyStore=<path_to_keystore_file> -Djavax.net.ssl.keyStorePassword=<password> -Djavax.net.ssl.trustStore=<path_to_truststore_file> -Djavax.net.ssl.trustStorePassword=<password> {code} or set via System properties within the code: {code:java} System.setProperty("javax.net.ssl.keyStore","path_to_keystore_file"); System.setProperty("javax.net.ssl.keyStorePassword","password"); System.setProperty("javax.net.ssl.trustStore","path_to_truststore_file"); System.setProperty("javax.net.ssl.trustStorePassword","password"); {code} I think it's better if we use the first approach where the system properties are to be set on the JVM: they're generic and set up the JVM for accessing the keystore & trust store, plus I think it's a bad idea to deal with the passwords via configuration properties. So when it comes to the MySQL connector using SSL, we probably still need to have an explicit {{use.ssl}} configuration property that tells the MySQL JDBC driver and Binlog client library to use the keystore & truststore and connect using TLS. Auto detecting is possible, but it doesn't distinguish the case when a _different_ connector is set up to use TLS but one of the MySQL connectors should not use it. [~criccomini], what do you think?	1	1	https://issues.jboss.org/browse/DBZ-99
3170	DBZ-99	Given DBZ-105 needs configuration properties to set the MySQL connector's database history producer and consumer, I wonder if we should define a single set of these four SSL configuration properties and then use the same values for MySQL connections and the Kafka producer & consumer. We'd still need two additional properties: * {{database.ssl.mode}} for the MySQL connections, with values {{disabled}}, {{preferred}}, {{required}}, {{verify_ca}}, and {{verify_identity}}; and * {{database.history.kafka.ssl.mode}} for whether to use these for the database history producer & consumer, with values {{required}} and {{disabled}}. [~criccomini], thoughts? It doesn't make sense to use different keystore & truststore properties for MySQL and Kafka, does it?	1	1	https://issues.jboss.org/browse/DBZ-99
3171	DBZ-98	[~hchiorean], isn't this very similar to the [pull request|https://github.com/debezium/debezium/pull/84] you created for DBZ-97? [~mvj3], it seems like you approve of that pull request. Is there something else this issue addresses that DBZ-97 does not?	1	1	https://issues.jboss.org/browse/DBZ-98
3172	DBZ-95	[~mvj3], the above error seems to be in {{SourceInfo.java}}, which in the [current {{master}}|https://github.com/debezium/debezium/blob/a589d9ea8468ceb338c6b365c71845c1125d3679/debezium-connector-mysql/src/main/java/io/debezium/connector/mysql/SourceInfo.java#L230] is: {code:java} result.put(BINLOG_FILENAME_OFFSET_KEY, binlogFilename); {code} That error implies that the {{binlogFilename}} is null, and that it actually has nothing to do with the schema in your test database. Can you describe the configuration of the connector and MySQL server? The {{binlogFilename}} should not be null, and I'd like to figure out how it became null.	1	1	https://issues.jboss.org/browse/DBZ-95
3173	DBZ-95	But I think dbz should detects and points out which keys that passed in are invalid? would it be better? Usually, it is done by `MySqlConnectorConfig`.	1	1	https://issues.jboss.org/browse/DBZ-95
3174	DBZ-92	[~mvj3], can you provide more information about your environment? What version of MySQL are you using? Is row-level binary logging enabled? Does the user provided to the connector have the [proper privileges|http://debezium.io/docs/connectors/mysql/#create-a-mysql-user-for-the-connector], namely {{GRANT SELECT, RELOAD, SHOW DATABASES, REPLICATION SLAVE, REPLICATION CLIENT ON *.* TO ...}}? The reason I ask about the latter is the connector was unable to even see any tables as evidenced by this output in your log: {code} 2016-08-02 09:27:15,543 INFO MySQL|mysql_host_192_168_99_100_port_3307|snapshot Step 8: scanning contents of 0 tables [io.debezium.connector.mysql.SnapshotReader] 2016-08-02 09:27:15,543 INFO MySQL|mysql_host_192_168_99_100_port_3307|snapshot Step 8: scanned contents of 0 tables in 00:00:00.0 [io.debezium.connector.mysql.SnapshotReader] {code} Although there may be other causes for this, in the past this has happened to me when I neglected to add the proper {{SELECT}} and/or {{SHOW DATABASES}} privileges for the user. However, this and other error messages in the log your provided above is also a problem, signaling that either Kafka Connect or the connector's own consumer is not able to communicate properly with Kafka: {code} Error while fetching metadata with correlation id 0 : {schema-changes.dp-test=LEADER_NOT_AVAILABLE {code} BTW, the reason that 0.3.0 has not been released is that I've also been having problems with Kafka connectivity performing tests of the whole system. That may be a bug in our Docker images, but as of right now I'm not solved it. (Our unit and integration tests work fine, but don't involve Kafka.)	1	1	https://issues.jboss.org/browse/DBZ-92
3175	DBZ-92	[~mvj3], glad to hear it works now. In the interest of trying to make sure that others don't run into the same problems, would you care to elaborate? Since the connector doesn't use a URL for connection, was your connector configured to use database and/or table filters?	1	1	https://issues.jboss.org/browse/DBZ-92
3176	DBZ-52	Some possible fields for the top-level container structure might include: * {{op}} - Required? Defines the type of event via constants for the operation (e.g., insert, update, delete, read (?), and other future event types) * {{before}} - Optional. Holds a {{Struct}} with the state of the row _before_ the change was made. The {{Schema}} of this structure is connector-specific. * {{after}} - Optional. Holds a {{Struct}} with the state of the row _after_ the change was made. The {{Schema}} of this structure is connector-specific. * {{patch}} - Optional. Holds a description of the individual changes to the record. The format of this description is TBD. * {{source}} - Optional. Holds a {{Struct}} with the connector-supplied source information. The {{Schema}} of this structure is connector-specific. * {{offset}} - Optional. Holds a {{Struct}} with the connector-supplied offset information. The {{Schema}} of this structure is connector-specific. * {{gen-id}} - Optional. Holds a monotonically-increasing integer value representing the snapshot generation in which the event was produced. For example, when a connector needs to generate a consistent snapshot of the contents of a database, it determines the next generation id, and produces a _read_(?) event for each record (including the generation id in each event). Much of these were derived from the discussions on DBZ-31 and DBZ-45, although wWe don't have to lock many of these down to complete this issue. Of course, feedback is welcome.	1	1	https://issues.jboss.org/browse/DBZ-52
3177	DBZ-52	[~xmlking5], it is worth considering. What in particular are you wanting to use that value for? The database's notion of its _logical timestamp_ is already represented in the offset (e.g., for MySQL this would be the binlog filename, position in the binlog, and row within each binlog event).	1	1	https://issues.jboss.org/browse/DBZ-52
3178	DBZ-52	[~xmlking5], wouldn't it be better to filter based upon something in the original database, such as the binlog position in the case of MySQL? Clocks are unreliable, inaccurate, and not even monotonically increasing. And, if problems occurred in the connector, upon restart the same event might be rewritten with a different timestamp.	1	1	https://issues.jboss.org/browse/DBZ-52

#	Requirement	Questions	Answered	Successfully Answered	URL
3179	DBZ-52	Few thoughts: # A version field would be useful. Not sure if it should be at the message level, or the op level (i.e. can operators evolve protocol versions independently?). I lean toward protocol-level version. # Should think about how backwards incompatible changes are to be made. Should we always allow for emission of various version of the protocol, and expose a config that allows end-users to define which version they receive? # Another version of a timestamp that might be useful is simply the timestamp that the connector wrote the message to Kafka. This would be useful for debugging purposes. It's a slightly different ask from [~xmlking5]'s, though. # Adding documentation for these should be exposed in the Debezium docs. (might go without saying, but just saying :)) In general, I agree that these fields can be formalized and added over time. The main thing is getting the barebones stuff set up, and an agreed-upon container structure.	1	1	https://issues.jboss.org/browse/DBZ-52
3180	DBZ-52	{quote} 1. A version field would be useful. Not sure if it should be at the message level, or the op level (i.e. can operators evolve protocol versions independently?). I lean toward protocol-level version. 2. Should think about how backwards incompatible changes are to be made. Should we always allow for emission of various version of the protocol, and expose a config that allows end-users to define which version they receive? {quote} I don't think we need a schema version, since most fields will be optional anyway as few will appear in all messages. That means that we can add other optional fields without consequence; any consumers that don't know about a recently-added optional field will never use it. And I don't think we should reinvent the wheel: simply using the Confluent Avro converters (serialization/deserialization) means we get much of the rest for free, including having consumers be able to choose which "version" of the schema they use. The requirement, though, is that evolution needs to proceed in a manner compatible with [Avro schema evolution|https://martin.kleppmann.com/2012/12/05/schema-evolution-in-avro-protocol-buffers-thrift.html] (namely prevent backward-incompatible changes). {quote} 3. Another version of a timestamp that might be useful is simply the timestamp that the connector wrote the message to Kafka. This would be useful for debugging purposes. It's a slightly different ask from Sumanth Chinthagunta's, though. {quote} Unfortunately, we have no insight or access to when the message is written to Kafka by Kafka Connect. {quote} 4. Adding documentation for these should be exposed in the Debezium docs. (might go without saying, but just saying :-)) {quote} Absolutely. {quote} In general, I agree that these fields can be formalized and added over time. The main thing is getting the barebones stuff set up, and an agreed-upon container structure. {quote} +1. The minimum structure IMO is a single-level envelope with the following fields: {{op}}, {{before}}, {{after}}, {{source}}, and {{offset}}. Other things can be added over time as needed. For example, the {{gen-id}} might be added as part of DBZ-31. Or we might decide that a general purpose {{metadata}} field containing a map of name-value pairs is sufficient for customization.	0	0	https://issues.jboss.org/browse/DBZ-52
3181	DBZ-52	{quote} Unfortunately, we have no insight or access to when the message is written to Kafka by Kafka Connect. {quote} I just meant System.currentTimeMillis() in the Kafka connector. Something approximately correct, so I know if things go wrong, when a message was sent to Kafka by the connector. {quote} The minimum structure IMO is a single-level envelope with the following fields: op, before, after, source, and offset {quote} +1 One nit: could we name it something other than {{offset}}, given that "offset" means something very specific in Kafka-land?	0	0	https://issues.jboss.org/browse/DBZ-52
3182	DBZ-52	This looks awesome. What will the before/after look like for reads? Both set to the same thing? {quote} Notice how the Schema is significantly larger {quote} Personally, not concerned about this, since we will be running with the Confluent schema registry. The schema won't be embedded in the message for us.	1	1	https://issues.jboss.org/browse/DBZ-52
3183	DBZ-50	Your second example has maxLength and masked. Does this make sense? Also, what about {{truncateLength}} just to keep it from getting confused with the length of the VARCHAR?	1	1	https://issues.jboss.org/browse/DBZ-50
3184	DBZ-50	{quote} Your second example has maxLength and masked. Does this make sense? {quote} Yes. The {{maxLength}} parameter comes from the fact that the column's type is {{VARCHAR(255)}}, and thus the column length is 255. Of course, in this case the masking value might be 12 asterisks, and so the {{maxLength}} of the {{email}} in any change events will always be {{************}} and will never have a length approaching 255. We could easily have the {{MaskStrings}} column mapper reset the {{maxLength}} to 12 (for example), but since the masking value is a constant its length really should be {{length}}. Unfortunately, once a parameter is set, it cannot be unset. {quote} Also, what about {{truncateLength}} just to keep it from getting confused with the length of the VARCHAR {quote} This gets to the heart of the issue: what exactly are the semantics of such Schema parameters? Now that I think more about this, it seems to me that _*the Schema parameters should pertain what the Schema describes: the values of the fields in the Struct objects*_. In this case, I think {{length}} and {{maxLength}} are no longer appropriate, since the length can obviously be determined directly from each field value, while the possible lengths of values is dictated and described by the database schema. On the other hand, because the _column mappers_ are altering the field values (relative to the values in the upstream source), it is very appropriate for them to add metadata parameters in the Schema. So, I might propose {{masked=true}} for masked fields, and something like {{truncateLength=N}} for fields that are truncated to specific lengths (only truncation is even possible, namely when _N_ is smaller than the length of the original column).	1	1	https://issues.jboss.org/browse/DBZ-50
3185	DBZ-45	[~criccomini], I think you're right that since most of the popular DBMSes have the ability to include differences, the connector should be able to include the old values in the update event. Should we always do this, or should it be a configuration option? Adding a configuration option adds complexity, but including old+new values in the updates will produce larger messages and may require placing more load on the source DBMS. We do need to think about how to incorporate the old values into the update event. A simple approach is to "reserve" a field name that can hold the old values (in a Kafka Connect {{Struct}}), though this field name (e.g., "{{$old-values}}") can't conflict with any of the field names in the column. {code} { "customerId" : 1234, "customerName" : "Janie Anne Doe", "$old-values" : { "customerId" : 1234, "customerName" : "Jane Doe", } } {code} Alternatively, we rethink the whole structure of the event so that the top level of the event is a "container" struct with fields for new values, old values, type of event/operation, and other metadata not included in the record per se: {code} { "before" : { "customerId" : 1234, "customerName" : "Janie Anne Doe", }, "after" : { "customerId" : 1234, "customerName" : "Jane Doe", }, "op" : "u" } {code} This approach is a bit more like the MongoDB events, although rather than "before" and "after" fields MongoDB events might have a "patch" field containing a description of what changed. I currently believe this is the most flexible and will actually allow a common top-level structure for nearly all connectors, and is worth the additional overhead. Thoughts? What do we do about delete events? Should they contain the old values as well?	1	1	https://issues.jboss.org/browse/DBZ-45

#	Requirement	Questions	Answered	Successfully Answered	URL
3186	DBZ-45	{quote} Should we always do this, or should it be a configuration option? {quote} Config option, but I think the schemas should always look the same. In cases where it's disabled, the "before" should be left empty (see below). {quote} Alternatively, we rethink the whole structure of the event so that the top level of the event is a "container" struct with fields for new values, old values, type of event/operation, and other metadata not included in the record {quote} +1 {quote} What do we do about delete events? Should they contain the old values as well? {quote} This is a little tricky. On the one hand, it's very useful to have the "before" in some cases. On the other hand, if the value of the message is non-null, then Kafka log compaction won't delete it. Need to think about this a bit.	1	1	https://issues.jboss.org/browse/DBZ-45
3187	DBZ-45	I agree that it is promising. Plus I like that the top-level structure for all message is very similar, except for the hard delete. Are these options orthogonal and thus require multiple configuration options, or are they highly-related such that they should be controlled via a single configuration option?	1	1	https://issues.jboss.org/browse/DBZ-45
3188	DBZ-45	{quote} Are these options orthogonal and thus require multiple configuration options, or are they highly-related such that they should be controlled via a single configuration option? {quote} Can you be specific about which options you're referring to?	1	1	https://issues.jboss.org/browse/DBZ-45
3189	DBZ-45	[~konstantin.zadorozhny] wrote: {quote} Also switching between {{minimum}} and {{normal}} or {{full}} will might result in non compatible Avro schema change. {quote} This is a great point: {{minimum}} would change the schema, so it's probably not worth it. Let's drop the {{minimum}} idea. {quote} Based on our experience evolving our CDC schema, it will be very useful to have freedom to extend metadata information sent with every message without breaking backward compatibility. ... I don't think that omitting any metadata is viable option. I have trouble to come up with the scenario when consumers will not need source (binlog in MySQL case) timestamp. {quote} Can you clarify the last sentence? Are you suggesting we include the binlog filename _and_ position (what the connector uses as Kafka Connect offsets) be included as metadata?	1	1	https://issues.jboss.org/browse/DBZ-45
3190	DBZ-45	{quote} Can you clarify the last sentence? Are you suggesting we include the binlog filename and position (what the connector uses as Kafka Connect offsets) be included as metadata? {quote} What we found that, is that having binlog metadata is very useful. This is our metadata field: {code:c} /** Cache record meta data information */ struct MetaData { /** The timestamp of cache update event emitted by binlog replicator */ 1: i64 timestamp; /** The server id of binlog event */ 2: optional i64 binlog_server_id; /** The binlog file name */ 3: optional string binlog_file_name; /** The position in the binlog file */ 4: optional i64 binlog_position; /** The timestamp binlog event */ 5: optional i64 binlog_timestamp; } /* The cache record that represents user table update */ struct User { 1: ... 2: ... ... 9999: optional MetaData meta_data; } {code} Our cache consumers use {{metadata.timestamp}} and {{metadata.binlog_timestamp}} field to tell how far they are behind with the binlog and Kafka topic. (I'm not suggesting Debezium support following use case). In case of the "widespread" client regression, we have an option to reset binlog reader to the last known good position and replay. The point I was trying to make is that, once Debezium user base will grow, the need to extend record metadata will become more apparent. Different databases have their own quirks. Having Kafka Connect record model that could accommodate db specific metadata will be beneficial.	1	1	https://issues.jboss.org/browse/DBZ-45
3191	DBZ-45	This is really interesting. What version of MySQL is this?	1	0	https://issues.jboss.org/browse/DBZ-45
3192	DBZ-45	[~criccomini], I guess I only tested MySQL 5.7. If you're interested in an earlier version of MySQL, would you mind investigating the behavior and reporting back?	0	0	https://issues.jboss.org/browse/DBZ-45
3193	DBZ-41	Is something like this sufficent - https://github.com/jpechane/mysql-for-debezium ?	0	0	https://issues.jboss.org/browse/DBZ-41
3194	DBZ-38	{quote} Sorry, what does "even if they are applied to the definitions inside `Tables`" mean? It's a little technical that related to Debezium's class type system. {quote} Well, I corrected and elaborated that comment. {quote} Thanks, and support rename table would be helpful. {quote} I was afraid of this. The current listener design isn't really able to handle multiple targets (e.g., the old table and the new table). Actually, this helps show that the current design, while being simple, is actually fairly limiting and provides the bare minimum of information with each statement. There are a couple of ways to go about addressing this: 1. Allow multiple TableId objects to be passed to the listener's method. The benefit is that the listeners still can be fairly simple, but unfortunately the listener won't have much detail (e.g., you will not really know which table was old and which was new, unless we use a convention and that becomes fairly brittle). 2. Expand the listener interface to have more specific methods, like createTable, renameTable, alterTable, etc. The benefit is that this is much more explicit and much easier to understand what is going on. The disadvantage is that it is verbose. 3. Change the listener to use an event model, where the listener basically just has a single method and the type of action is described by various event classes. This keeps the API simple, is able to easily handle new types of events, and each event can have different data associated with it. The downside is that it adds complexity to the framework, and it complicates the listener implementation a bit. Thoughts? I'm tempted to use option 3 since IMO it offers the best combination of pros & cons.	1	1	https://issues.jboss.org/browse/DBZ-38
3195	DBZ-38	[~mvj3], can you take a look at the pull request? If it makes sense, I'd like you to try it out before I merge it. Thanks!	1	1	https://issues.jboss.org/browse/DBZ-38
3196	DBZ-37	GTID is only available after MySQL5.6, is there a plan for previous versions of MySQL?	0	0	https://issues.jboss.org/browse/DBZ-37
3197	DBZ-37	{quote} GTID is only available after MySQL5.6, is there a plan for previous versions of MySQL? {quote} Is it possible to replicate from a MySQL <5.6 server into a MySQL 5.6 slave? If so, you could replicate into a 5.6 slave, and use Debezium against the slave.	1	1	https://issues.jboss.org/browse/DBZ-37
3198	DBZ-37	[~criccomini], is there anything else we can/need to do to support HA MySQL clusters other than what's in this issue's description? Do we also need to set a list of host:port pairs and use this ordered list to connect?	1	1	https://issues.jboss.org/browse/DBZ-37
3199	DBZ-37	{quote} is there anything else we can/need to do to support HA MySQL clusters {quote} As far as I know, no. I can't really tell you for sure, until we try it for real, but I believe GTIDs should get us there. {quote} Do we also need to set a list of host:port pairs and use this ordered list to connect? {quote} This would probably be useful for some folks. In our case, we run behind a VIP (or HA Proxy), so we always talk to the same IP/DNS entry. Kafka uses the host:port,host:port model with some success for their bootstrap configs--seems like a reasonable pattern to copy. Like us, at LinkedIn, they use a VIP with a single bootstrap host, though (for legacy reasons).	1	1	https://issues.jboss.org/browse/DBZ-37

#	Requirement	Questions	Answered	Successfully Answered	URL
3200	DBZ-37	[~criccomini], I do have one question, though. The BinlogClient library requires that we either turn on GTIDs if it's going to be aware of them. That's a bit unfortunate, since it would have been nice if it figured it out from the server. But perhaps I'm missing something, and it is useful to be able to run the connector without GTIDs even when the server has them enabled. Does this make sense? If so, then we might need to explicitly enable GTID-awareness on the connector. OTOH, if it only makes sense to be aware of GTIDs when the server uses them, then the connector can figure this out automatically. We actually get the GTIDs via {{SHOW MASTER STATUS}} when running an initial snapshot, but don't yet do anything like this when (re)starting and just reading the binlog. Thoughts? [~konstantin.zadorozhny], do you have any input?	1	1	https://issues.jboss.org/browse/DBZ-37
3201	DBZ-37	IMO, we should default to GTID if it's available. Don't see why not.	1	1	https://issues.jboss.org/browse/DBZ-37
3202	DBZ-37	[~rhauch], thanks for the work on this. It's really appreciated. One question: do these tests include a test that actually fails over from a GTID master to a GTID slave?	1	0	https://issues.jboss.org/browse/DBZ-37
3203	DBZ-31	Looks like you can get the binlog location: http://stackoverflow.com/questions/12025193/mysql-is-there-a-way-to-include-the-bin-log-position-in-the-dump-file-without Based on some cursory browsing, it doesn't sound like mysqldump can produce files that adhere to the binlog protocol. It sounds like it does CSV or SQL DDL/DML. Do you have the ability to parse those commands into Structures?	1	1	https://issues.jboss.org/browse/DBZ-31
3204	DBZ-31	{quote} Based on some cursory browsing, it doesn't sound like mysqldump can produce files that adhere to the binlog protocol. It sounds like it does CSV or SQL DDL/DML. Do you have the ability to parse those commands into Structures? {quote} We should be able to easily parse the DDL/DML form -- we already parse/consume the DDL statements, and the DML (mostly INSERTs?) should be pretty straightforward. And when we do, we can just create the corresponding binlog events and pass them to the same handler methods we already have.	1	1	https://issues.jboss.org/browse/DBZ-31
3205	DBZ-31	If you did (1), would Debezium always read from the replica? Or would Debezium switch back to the master after bulk loading the table? And on a related note, regardless of master vs replica, have you thought about what you would do if the MySQL server you are listening explodes and gets replaced with a new instance? The binlog coordinates that Debezium remembers would no longer apply to the new MySQL instance. Are you using binlog coordinates or GTIDs?	1	1	https://issues.jboss.org/browse/DBZ-31
3206	DBZ-31	{quote} If you did (1), would Debezium always read from the replica? Or would Debezium switch back to the master after bulk loading the table? {quote} As of right now, it would continue using the replica. IMO, that's another reason why #1 is not preferred. {quote} And on a related note, regardless of master vs replica, have you thought about what you would do if the MySQL server you are listening explodes and gets replaced with a new instance? The binlog coordinates that Debezium remembers would no longer apply to the new MySQL instance. Are you using binlog coordinates or GTIDs? {quote} This was just brought up in the mailing list on [this topic|https://groups.google.com/forum/#!topic/debezium/9OWmxcr-Kk4] about HA clusters. It does need to be addressed, but probably via another issue (or several).	1	1	https://issues.jboss.org/browse/DBZ-31
3207	DBZ-31	[~konstantin.zadorozhny], I have a question about your description of what `mysqldump` does. You suggest that the read lock is released before the data from the tables are dumped. Because the read lock is kept for a shorter period of time, the database use by other clients can resume more quickly. On the other hand, keeping the read lock until the dump is complete will give you a perfectly clean snapshot, but at the cost of preventing writes for a longer period of time. I'm trying to work out in my head if releasing the lock before dumping the table data could ever be a problem for downstream consumers. Once the read lock is removed, then the data in a table (or even the table itself) can be changed while the table's data is being dumped. Depending upon where the data dump process is, it may be past the modified rows (in which case the change will not be seen in the snapshot, though the change will still be recorded correctly in the binlog) OR otherwise the snapshot will include the newly committed changes. So while this definitely won't *miss* data changes, it might cause downstream consumers to see change events that were already effectively applied to the data. I can imagine most scenarios would find this perfectly acceptable (the end state of the data will be the same either way), I could imagine a few where this is not ideal. Am I making this more complex than it needs to be?	1	1	https://issues.jboss.org/browse/DBZ-31
3208	DBZ-31	[~rhauch], for [~konstantin.zadorozhny]'s approach, would we *stop* tailing the bin log until the load has completed, or would be reading the binlog WHILE the load is happening?	1	1	https://issues.jboss.org/browse/DBZ-31
3209	DBZ-31	{quote} ... for [~konstantin.zadorozhny]'s approach, would we *stop* tailing the bin log until the load has completed, or would be reading the binlog WHILE the load is happening? {quote} [~criccomini], if snapshotting were enabled, I don't think the connector would start reading the binlog until after the snapshot was completed. When configuring the connector you'd have the option of either: # starting from the beginning of the binlog (possible in Debezium 0.1); or # starting from a specific point in the binlog (possible in Debezium 0.1); or # creating a snapshot (using [~konstantin.zadorozhny]'s approach, including getting the position in the binlog where the snapshot occurred) that would probably (?) appear as INSERT/UPDATE events in the log, and then once that is complete starting reading from the binlog at the measured point. (If the connector had been running, but then was down for longer than the binlog is kept, the only way to recover might be to start it with option 3 so that the snapshot results in new INSERT/UPDATE events.) From a consumer's perspective, a Kafka topic for a particular table would contain an INSERT/UPDATE for each row as read during the snapshot, followed by any INSERT, UPDATE, and DELETE events describing changes committed _after_ the snapshot was started (after the read lock is released). Recall that events from an INSERT and UPDATE look the same, since the event includes a representation of the row *after* the change took effect. If we go with this approach, then the one connector task would do everything, including starting up multiple threads to read the various tables (which are independent from each other). This is simple and would work correctly. (Ideally, the connector could reconfigure itself to start up additional tasks to do that work, but I don't think that will work because of the need to do the work within a single transaction to ensure a consistent snapshot. This could be attempted at a later time.) Does that help?	1	1	https://issues.jboss.org/browse/DBZ-31
3210	DBZ-31	Agree that it's complex. One thing that I've never been able to figure out - and Chris you worked at LinkedIn so maybe you have more experience with this - if you delete the topic, then don't you need to tell all your downstream consumers to dump their datasets and reconsume the topic from scratch? Otherwise, their data may diverge from the stream (like I described above). Or is the small amount of divergence acceptable in some cases? That would be use-case dependent, so if it can happen, it should probably pointed out in the docs somehow.	1	1	https://issues.jboss.org/browse/DBZ-31

#	Requirement	Questions	Answered	Successfully Answered	URL
3211	DBZ-31	{quote} If we going to have generation ID in each record, emitting deletes will be quite easy. Once we have finished publishing snapshot we can read the topic from the beginning, zip the keys, emit tombstones for all the keys with max(GenID) = Current GenID - 1. After that we can safely resume reading from the binlog. {quote} Are you suggesting the connector consume the topics (for each table) and generate the tombstones after it completes a snapshot and before it starts processing the binlog? Where does the list of tables come from, and what if some tables that once existed don't appear in the snapshot?	1	1	https://issues.jboss.org/browse/DBZ-31
3212	DBZ-31	I don't recall us covering how we might trigger these backfills. For use case number (2) in my original list (trigger bootstrap after corruption), how might we trigger Debezium to re-bootstrap?	1	1	https://issues.jboss.org/browse/DBZ-31
3213	DBZ-31	[~konstantin.zadorozhny] wrote: {quote} The [task list endpoint|http://docs.confluent.io/2.0.0/connect/userguide.html#get--connectors-(string-name)-tasks] could be used to monitor the state of the refresh. Once there are no active tasks, the connector config could be changed back to the normal mode. {quote} Are you suggesting the transition from refresh/snapshot mode to normal mode be _manual_? Also, Kafka Connect does not appear to know when a task has _completed_. Even in Kafka 0.10, the task will always remain running (even if it does not do anything) unless the task throws an {{InterruptedException}} (in which case the task will stop running but will commit any remaining offsets) or any other Exception (in which case the exception is logged as an error and the task will commit any offsets). [~criccomini], I think we need an enhancement to Kafka Connect. I think that if the {{SourceConnector}} context provided the {{OffsetStorageReader}}, then we could do everything we need. Luckily that's a non-breaking change, and connector implementations wouldn't have to use it. I'll probably submit an issue and create a PR, but since Kafka 0.10 just came out it will have to wait for the next release. (I don't think they were taking many changes during the past 3 weeks anyway.)	1	1	https://issues.jboss.org/browse/DBZ-31
3214	DBZ-31	[~wushujames] wrote: {quote} We need a way to indicate when a task is "done". Or alternatively, a way for a Task to communicate state back to the Connector. {quote} James, what did you come up with?	1	1	https://issues.jboss.org/browse/DBZ-31
3215	DBZ-31	[~ewencp], first, thanks for taking the time to respond here! This discussion in this issue touches on a number of subjects, but only today have we discussed exactly how to map this to Kafka Connect's concepts. I'm not sure I agree that the offset is simply the state of the snapshot. What happens when you're 99.9% complete on a snapshot when a rebalance or failure occurs? Upon restart, you have to disregard the previously-incomplete snapshot and instead start all over with a new snapshot. To get around that problem, we can use the fact that obtaining a consistent snapshot in MySQL requires first obtaining a write lock. As long as you have the lock, then each table can be read independently -- IOW, once you've completed reading a table and recorded this in an offset, that table doesn't have to be read again. This provides much more favorable recovery behavior, but now the challenge becomes how to start a potentially large number of table names in the offsets for that one partition -- for lots of database tables, this becomes very inefficient. An alternative we talked about above was to instead consider each "independent table" to be a separate snapshot partition, distinct from the original partition that was put on hold. When we completed reading a table, we'd record with the last SourceRecord an offset that denoted that this table was complete. We could then move to the next table. Once all tables are completely read, then the snapshot process terminates, and we record this in the normal partition offset and continue the "normal" reading of the binlog. Essentially it comes down to whether or not these "snapshot source partitions" are a valid concept. IMO, they are since they actually would exist forever and would be reused with future snapshots, should they every be needed (see above for discussion of this). Of course the only way to get this to work (whether one source partition or with "snapshot source partitions") is to still use a single task that handles all of these "source partitions", simply because there's no way for connector instances to monitor or communicate with tasks. That's acceptable, though as mentioned above we would very likely have to manage our own threads rather than rely upon the parallelization of Kafka Connect tasks. See [my email on the Kafka Dev list|http://mail-archives.apache.org/mod_mbox/kafka-dev/201605.mbox/%3cetPan.5744ba0d.6d87b0fa.162@Randalls-MacBook-Pro.local%3e] about a proposal to enable connectors to be able to read the offset storage so they can monitor the progress of tasks (even if they don't ever stop) and to be smarter about the task configurations they create.	1	1	https://issues.jboss.org/browse/DBZ-31
3216	DBZ-31	[~ewencp], [~rhauch], I can talk more about the Kinesis scenario and why it may need "tasks that end". Should I move that discussion to the dev mailing list?	1	1	https://issues.jboss.org/browse/DBZ-31
3217	DBZ-31	Okay, so here's a minor setback. The only way to give Kafka Connect an offset is via {{SourceRecord}} objects produced by the connector. This means that the only way to record that the snapshot has completed is to either: # Change the offset after the snapshot is complete so that the first non-snapshot related {{SourceRecord}} persists this offset information. The disadvantage of this is it requires an update to have occurred in the database since the snapshot started, and while probably common it cannot be guaranteed. *This is not really an option.* # Change the offset on the very last {{SourceRecord}} associated with a table row read during the snapshot. Of course, this will not work if there are no rows read, which can happen if database & table filters are set up and those tables happen to be empty. *This is not really an option.* # Change the offset after the snapshot is complete and _always_ write an additional {{SourceRecord}} to some topic. Database history is out, since we're using our own producer and thus never writing to it via Kafka Connect. We also don't always write to the schema change topic (see above), so that's out, too. However, *this is an option if we always write to a topic*, regardless of whether we find table rows. So the question is, to what topic should we write? One possibility is to have an additional topic that the connector always writes some kind of status and/or state transitions for the connectors. In fact, this could be the same topic for all Debezium connectors, in which case we might name it something like {{debezium.status}}. If multiple Debezium connectors are writing to this topic, then we'd have to be careful about its messages by probably using something very generic like flat JSON messages. However, I'd rather use as few meta-topics as possible, and one for all Debezium has some advantages and potential. This is the best idea I have. Anybody have any thoughts or other ideas? Again, I am going to request that the Kafka Connect API be changed to allow explicit recording of offsets as well as flushing, but that may or may not be desired by others. And in the meantime, we have to work around it as discussed above.	1	1	https://issues.jboss.org/browse/DBZ-31

#	Requirement	Questions	Answered	Successfully Answered	URL
3218	DBZ-31	{quote} the connector always begins by taking a consistent snapshot and then continues reading the binlog from the point in time of the snapshot. {quote} One concern that I do have about this approach is that the bootstrap could take quite a long time. In such a case, if something goes wrong, and a bootstrap is (improperly) triggered (perhaps due to a temporary blip), I'm not sure you'd be able to stop the bootstrap once it's started. Put another way: if a bootstrap starts, must you complete it, if a prior bootstrap has run? If so, perhaps some form of a deadman switch is in order to prevent an unintentional bootstrap from triggering, and causing hours (or days) of "downtime" where you have to rebootstrap a large table (or tables) for no real reason. I don't really have a proposal on what the deadman switch might look like, but it does seem like making the bootstrap a manual process (or require a manual switch flip) might be desirable. {quote} There is a previously-recorded offset, but the binlog coordinates in that offset are no longer available in the MySQL server/cluster's binlog. {quote} Can an offset translate between MySQL machines by accident? This gets into the LSN vs GTID discussion a bit, but is it possible that a fail over to another MySQL machine might just magically line up with the file name/LSN, and Debezium wouldn't do a full bootstrap, but might lose/duplicate data if it ends up in another part of the log? {quote} SET AUTOCOMMIT = 0 {quote} Why set auto commit to false? {quote} tables that exist in the connector's schema model but not in the current databases are dropped using DROP TABLE IF EXISTS <table>; {quote} What's the connector's schema model? Kind of curious about this. {quote} Therefore, if the connector is stopped after before Step 11 completes and the offsets are flushed {quote} Pretty sure this is a typo. Should just be _before_. {quote} When the connector starts up for the first time against a specific logically-named MySQL server/cluster {quote} Can you decsribe how the logical naming will work (or does work)? I'm thinking about this from a fail over perspective. We have some SQL machines behind a load balancer. The fail overs happen fairly transparently (i.e. we'd point Debezium at the load balancer). In such a case, does Debezium think it's talking to one server? This is related to my question above about LSNs translating between machines by accident. {quote} Therefore, this change will remove the ability to specify the binlog coordinates. {quote} +1 {quote} Chris Riccomini, how about changing the focus of this issue to "Connector should start by making snapshot" and then logging a different issue for "Add support for ad hoc snapshots"? {quote} +1 Perhaps we can come up with a work-around for how to handle ad hoc rebootstrapping in the short-term, though? Does renaming the MySQL server/cluster solve the problem (albeit very heavy handedly)? I think it might, though it would require a full re-bootstrap of every table in ever DB in the cluster. {quote} Anybody have any thoughts or other ideas? {quote} Can we just double write the last row? The second time (when we know there are no more records), remove the snapshot flag? Results in a duplicate in the topic. Not great, but an idea nonetheless. {quote} in which case we might name it something like debezium.status {quote} We have a very similar topic in Samza, called the control stream. We used it to store offsets, store config, and send signals to the Samza jobs (e.g. restart, change config, etc). It worked pretty well, but you basically have to treat it like a full-blown protocol. It can get very complicated and messy, so documenting every message, the semantics, etc is really important.	1	1	https://issues.jboss.org/browse/DBZ-31
3219	DBZ-31	perform snapshot | perform snapshot | read from beginning of binlog | | Offsets specify valid binlog position | read binlog from position | read binlog from position | read binlog from position | | Offsets specify binlog position MySQL no longer has | error | perform snapshot | error | | Previous snapshot incomplete | perform snapshot | perform snapshot | error | I think this provides the most control over how the connector starts up, especially in non-nominal situations. {quote} One concern that I do have about this approach is that the bootstrap could take quite a long time. In such a case, if something goes wrong, and a bootstrap is (improperly) triggered (perhaps due to a temporary blip), I'm not sure you'd be able to stop the bootstrap once it's started. Put another way: if a bootstrap starts, must you complete it, if a prior bootstrap has run? {quote} If a bootstrap has started but did not complete, then the connector had already written events to the Kafka topics but those events allow consumers to reconstruct only some of the data. Either a new snapshot is started, or you have to clean up those consumers, topics, and offsets manually -- and you would have that option with the {{never}} snapshot mode described above. If you need or want to stop an ongoing snapshot, simply stop the connector and deal with the Kafka topics, consumers, and offsets. BTW, when a new snapshot is started, the connector writes messages to the schema change topic that contain DDL statements that drop all tables and databases (including any that the connector thought existed prior to the snapshot but that are no longer in the database) and then create the databases and tables that will be in the snapshot. These messages will have the same {{source}} structure as the CREATE events for each row in the tables, giving a consumer everything required to coordinate reading from the normal table streams and the schema change stream. You can read more about the schema change topic [here|http://debezium.io/docs/connectors/mysql/index.html#schema-change-topic]. {quote} Can an offset translate between MySQL machines by accident? This gets into the LSN vs GTID discussion a bit, but is it possible that a fail over to another MySQL machine might just magically line up with the file name/LSN, and Debezium wouldn't do a full bootstrap, but might lose/duplicate data if it ends up in another part of the log? {quote} The purpose of DBZ-37 is to add support for GTIDs so that the connector can recover by using the last GTID to obtain the correct binlog coordinates for the current server. To achieve this, the connector will write in each offset the GTID, the binlog filename, and binlog position; then, upon restart, if a GTID is in the most recently-recorded offset, the connector will use this to start reading the binlog from the correct location. (The MySQL binlog client library we use already supports this, so the connector simply needs to track GTID to the offsets and pass it to the client library when reconnecting.) So, this should also help when connecting to MySQL via a single hostname for the entire cluster resolved via DNS. {quote} Why set auto commit to false? {quote} Because the connector performs multiple operations during the one transaction used in a snapshot. We don't want each of those operations to be in a different transaction, which is what auto commit would do. {quote} Can you decsribe how the logical naming will work (or does work)? I'm thinking about this from a fail over perspective. We have some SQL machines behind a load balancer. The fail overs happen fairly transparently (i.e. we'd point Debezium at the load balancer). In such a case, does Debezium think it's talking to one server? This is related to my question above about LSNs translating between machines by accident. {quote} The 0.1 MySQL connector also used logical name, which is specified with the {{database.server.name}} configuration property and described in the [connector documentation|http://debezium.io/docs/connectors/mysql/index.html#topic-names]. Basically, it allows you go assign a meaningful name to the connector and use that as a prefix for all Kafka topics. Since this does not correspond to anything physical, you have full control over what this is. IIUC, when you're using a load balancer to front the whole MySQL cluster, you'd configure the connector to use the hostname that would resolve to the load balancer. It's pretty clear how a load balancer will help	1	1	https://issues.jboss.org/browse/DBZ-31
3220	DBZ-31	{quote} IOW, this should work as expected as long as the connector is able to establish and use a connection to a specific MySQL server instance. {quote} But didn't we establish that binlog coordinates don't translate between MySQL servers? This was is why we're moving to GTIDs. If the binlog coord don't translate, then don't you run the risk of duplicating/losing data when the failover occurs behind the load balancer, as described above, since the binlog coordinates might go to a different spot in the log? Or would it just fail outright because binlog coords never translate between machines (even inaccurately). [This|https://issues.jboss.org/browse/DBZ-31?focusedCommentId=13247169&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13247169] comment is really fantastic. Is it documented on the website somewhere? Lastly, I'm really curious how this is going to perform on large tables, or many tables. Since it's single threaded, I could imagine bootstrapping taking many days.	1	1	https://issues.jboss.org/browse/DBZ-31

#	Requirement	Questions	Answered	Successfully Answered	URL
3221	DBZ-31	[~criccomini], sorry I misunderstood you point. Yes, I think you're right -- _automatic failover_ to a different MySQL instance pretty much requires a HA MySQL cluster configuration where GTIDs are enabled and some sort of load balancer/proxy on top of the MySQL cluster. But the connector can still _recover_ from failures without a MySQL cluster using GTIDs. In these cases, MySQL replication is used for [backup reasons|https://dev.mysql.com/doc/refman/5.7/en/replication-solutions-backups.html] or [scale out|https://dev.mysql.com/doc/refman/5.7/en/replication-solutions-scaleout.html], and can even use [deeper replication topologies|https://dev.mysql.com/doc/refman/5.7/en/replication-solutions-performance.html] or [multi-source replication|https://dev.mysql.com/doc/refman/5.7/en/replication-multi-source.html], where a single follower tracks multiple distinct masters and is useful for merging multiple shards, backing up multiple servers to a single server, or to consolidating data from multiple servers. In all these cases, if GTIDs are not use then the connector should be configured to use a single specific instance in that cluster. If that instance goes down, the connector becomes unavailable; to recover, either bring up the target MySQL instance (in which case the connector automatically recovers) or explicitly change the connector configuration to point to a different machine. This is not _automatic_ failover, but the connector still recovers quite easily and the resulting event streams remain consistent. Does that help?	1	1	https://issues.jboss.org/browse/DBZ-31
3222	DBZ-31	{quote} Does that help? {quote} Yea, I think it does. Thanks! To paraphrase, I think the guidance is, if you aren't using GTID, then point Debezium at a *specific* machine, rather than the load balancer. {quote} or explicitly change the connector configuration to point to a different machine {quote} When this is done, we'll have to trigger a full snapshot again (presumably by using a different logical name), correct?	0	0	https://issues.jboss.org/browse/DBZ-31
3223	DBZ-29	I don't understand option (C). Can you provide an example?	1	1	https://issues.jboss.org/browse/DBZ-29
3224	DBZ-29	I'm guessing that you can't have: {noformat} column.truncate.server.users.dsecription=100 {noformat} Because it can be a regex, right? IMO, this would be the most intuitive. If we can't do it that way, then I agree, using slightly more words (as in your .chars example) seems prudent. > such as column.truncate.to.100.chars. What about byte arrays? Can we truncate them as well? Not quite sure if that's useful.	1	1	https://issues.jboss.org/browse/DBZ-29
3225	DBZ-29	{quote} I'm guessing that you can't have: {code} column.truncate.server.users.dsecription=100 {code} Because it can be a regex, right? IMO, this would be the most intuitive. If we can't do it that way, then I agree, using slightly more words (as in your .chars example) seems prudent. {quote} I think including the name pattern in the property _name_ is less useful, and it's harder to see what is part of the name vs part of the prefix. And, yes, they could be regex, so that can't be done in a property name. {quote} > such as column.truncate.to.100.chars. What about byte arrays? Can we truncate them as well? Not quite sure if that's useful. {quote} We can truncate byte arrays, but I don't see how that truncated value could be used.	1	1	https://issues.jboss.org/browse/DBZ-29
3226	DBZ-29	One more thing to consider: should anything be included in the generated record written to Kafka when column values are truncated? In other words, is it important for downstream consumers that information has been truncated? For truncated values we could append the ellipsis character (&\#8230; or '…') to signify that the value was truncated. Consider a column truncated to 100 characters, in which the resulting record might contain a value for the column with an ellipsis at 1-based position 101. This approach would allow clients to determine whether a value's length is smaller than or equal to the limit (e.g., 100 characters in our example), versus a value that has been truncated to the limit. As for blacklisted columns, I would suggest we generate records as if those blacklisted column values were not there.	1	1	https://issues.jboss.org/browse/DBZ-29
3227	DBZ-29	> We can truncate byte arrays, but I don't see how that truncated value could be used. Yea, pretty much the only thing I can think of off the top of my head is someone using a BINARY field, but stuffing chars into it. Even then, it'd have to be ASCII so truncating doesn't cause malformed UTF8 (or whatever). > One more thing to consider: should anything be included in the generated record written to Kafka when column values are truncated? In other words, is it important for downstream consumers that information has been truncated? This seems interesting, but I can't think of a concrete use case off the top of my head. > For truncated values we could append the ellipsis character (… or '...') Not so crazy about this idea. Would prefer a flag in the message payload. I suppose string parsing isn't that expensive if you're just doing an indexed lookup, but it seems a bit clunky. Just a personal taste, though. :) > As for blacklisted columns, I would suggest we generate records as if those blacklisted column values were not there. Yea, we faced this issue recently. There are some use cases to keep the columns, but mask the values (e.g. so people can see what the source schema looks like, even if they can't see the data). The three we came up with were: # Mask the values, but keep the column. # Hash the values (SHA3, or something), and keep the column. # Remove the column entirely. (2) is the most useful, but opens you up to dictionary/rainbow attacks. We opted not to do that. (1) is useful for the reason that I mentioned above--people can write queries that will work against "production" (real source) data, even if they can't see the fields. The trade off that we're worried about with this approach is filling masked integer/boolean/whatever with random or zero'd values is a little non-obvious to users; they have to be told that the data is masked, or risk assuming that it's real when it's not. (3) is the safest/cleanest, though.	1	1	https://issues.jboss.org/browse/DBZ-29
3228	DBZ-29	{quote} Perhaps this is acceptable behavior after all, since the user can always properly escape the . characters if the "literal" matches more than expected. {quote} I agree with this statement. {quote} Added a pull request that changes the MySQL connector to use regular expressions in the database {quote} As you move forward with Postgres and others, do you have any thoughts on how to share this generically? It seems like it should be shared amongst all MySQL connectors. Can the regexes be applied across multiple DBs/tables? (e.g. .*email) Overall, this sounds pretty useful to me. Thanks for adding it.	1	1	https://issues.jboss.org/browse/DBZ-29

#	Requirement	Questions	Answered	Successfully Answered	URL
3229	DBZ-29	{quote} As you move forward with Postgres and others, do you have any thoughts on how to share this generically? It seems like it should be shared amongst all MySQL connectors. {quote} The code that does all the work is in {{debezium-core}} in the {{io.debezium.relational}} package. The {{Selectors}} class makes it easy to build a {{Predicate<TableId>}} based upon the table and database whitelists, and a {{Predicate<ColumnId>}} based upon the column blacklist. Creating them is quite easily done in the connector's task initialization code: {code} Predicate<TableId> tableFilter = Selectors.tableSelector() .includeDatabases(config.getString(MySqlConnectorConfig.DATABASE_WHITELIST)) .excludeDatabases(config.getString(MySqlConnectorConfig.DATABASE_BLACKLIST)) .includeTables(config.getString(MySqlConnectorConfig.TABLE_WHITELIST)) .excludeTables(config.getString(MySqlConnectorConfig.TABLE_BLACKLIST)) .build(); {code} and {code} Predicate<ColumnId> columnFilter = Selectors.excludeColumns(config.getString(MySqlConnectorConfig.COLUMN_BLACKLIST)); {code} Likewise, the `ColumnMappers` class makes it easy to register various mappers when the connector's task initializes. Here's what the MySQL connector does, relying upon some utility lambda logic inside the core `Configuration` object to find matching property names using a regular expression, extract the integer value using the regex's group, and then for each matching property name/value call a `ColumnMapper`'s builder method to register the column mapper based upon the regular expression list in the property value: {code} ColumnMappers.Builder columnMapperBuilder = ColumnMappers.create(); config.forEachMatchingFieldNameWithInteger("column\\.truncate\\.to\\.(\\d+)\\.chars", columnMapperBuilder::truncateStrings); config.forEachMatchingFieldNameWithInteger("column\\.mask\\.with\\.(\\d+)\\.chars", columnMapperBuilder::maskStrings); ColumnMappers columnMappers = columnMapperBuilder.build(); {code} {quote} Can the regexes be applied across multiple DBs/tables? (e.g. .*email) {quote} Yes.	1	1	https://issues.jboss.org/browse/DBZ-29
3230	DBZ-20	[~rhauch] Using Oracle CDC in any way is a bad idea... it's completely deprecated and really shouldn't be considered. However... what CDC and OGG have in common is their use of the Log Miner package... it's a built in PL/SQL package that can be used to programmatically mine changes from an Oracle Database. Log Miner pulls changes out of Oracle REDO logs... the logs that are there for recoverability. This is the route most CDC-like approaches take. http://docs.oracle.com/database/121/ARPLS/d_logmnr.htm#ARPLS022 The other possibility is using Oracle Flashback functionality. Oracle is at it's core a multi-version database... it manages completely different versions of the database for different sessions due to transaction isolation modes. It does this using what's called the UNDO space... it's the "Time Travel" capabilities that exist in the database for managing what my version of the DB looks like, what your version of the DB looks like, etc. Flashback provides the ability to query the DB in "meta" mode... and ask questions like "What are all the rows and all the different versions of those rows that existed between these two timestamps?" Flashback is rarely used as a source for CDC, but in my mind it should be. Most users are not aware of the VERSIONS BETWEEN syntax, which gives us access to the complete list of changes between to timestamps. We would need to manage the current window when querying, and managing what window to use to select the next time, etc. Similar to how Kafka manages offsets. http://docs.oracle.com/database/121/ADFNS/adfns_flashback.htm#ADFNS01004	1	1	https://issues.jboss.org/browse/DBZ-20
3231	DBZ-3	> If we add support for [{{BIT(N)}} and {{BIT VARYING(N)}}], they should be represented as Schema.STRING according to the Postgres docs for these types. Wouldn't it be better to match the behavior of the existing MySQL connector? Seems like the best representation in change events is as a {{byte[]}} value with our {{io.debezium.data.Bits}} semantic schema type.	1	1	https://issues.jboss.org/browse/DBZ-3
3232	DEVEX-92	{quote} Introspecting the box itself seems also pretty difficult {quote} Have you tried? I am wondering whether there is already something one could inspect. If not something should be added and probably reported via the {{adbinfo}} plugin.	1	1	https://issues.jboss.org/browse/DEVEX-92
3233	DEVEX-92	Thanks for the info. That the VM is not running at the time of runtime detection is of course a bummer. Not sure what do say about this. Something else I was wondering is the .cdk file itself. IMO it does not really belong to the openshift-vagrant repo. Instead the installer should create the file and put it at the right location. Would you agree?	1	1	https://issues.jboss.org/browse/DEVEX-92
3234	DEVEX-82	The design was provided on this wireframe. Is there something else that you needed from UX for this? https://projects.invisionapp.com/d/main#/console/4496779/129434259/preview	1	1	https://issues.jboss.org/browse/DEVEX-82

#	Requirement	Questions	Answered	Successfully Answered	URL
3235	DEVEX-57	[~gercan] and I met earlier this morning to discuss how to start spiking this issue. We broke off for lunch/other meetings, and plan to continue. As we were exploring the concepts, there were some things that I didn't get down. I think it would serve us well if I asked a few questions to refine my understanding of the task at hand. I'll do my best to seek out the answers, and when I find answers, I'll update this JIRA comment: 1. In more detail, what are the basic use cases of this story? * Want to support `rsync` behaviour, such that updating deployed JavaScript files is seen by Node.js. Developer should be able to use `oc rsync` updated files from local directory to deployed OpenShift instance without restarting corresponding containers. Developer should also not be required to push local changes to GitHub and rebuild image in order to see changes. * Developers should be able to use grunt and gulp to watch specific directories, which execute `oc rsync` as part of the `watch` task. Once the files are copied into OpenShift, the developer should be able to see their changes immediately. 2. What sorts of boundary cases are we aware of? (This seems ambiguous right now. As I start to gather more answers, I'll have a better picture of the answer to this question.) * Developers will naturally want to deploy their code for production. We should see if OpenShift has a 'development mode' that we can hook into, and only provide debugging support if the developer is in 'development mode'. * 3. More explicitly, what is meant by 'existing command line tools'? Simply grunt and gulp, which execute `oc rsync` as a `watch` task. 4. Concretely, what does the final product look like? What repositories does it affect? * sti-nodejs. There will be a PR such that nodemon (or the like) will be installed on the corresponding docker file, the `run` script will npm install production if the user is not currently in development mode, the `run` script will also ensure that nodemon works correctly. * Red Hat Developer blog explaining how to do code sync to OpenShift v3 using grunt and gulp. 5. Can we expand the definition of both acceptance criteria? At this point, I think I've whittled them down far enough. 6. What tool should we use to let developers see their local changes immediately using `oc rsync`? Nodemon has been suggested by [~gercan]. 7. Under the assumption that Nodemon is the used tool, should we allow Nodemon to be deployed along with a developers application? Two questions to keep in mind are: what overhead does Nodemon incur? What security issues exist with doing this? ... 8. There already seems to be a hot deploy scenario for sti-nodejs [here](https://github.com/openshift/sti-nodejs/tree/master/0.10#hot-deploy). Is this exactly the development scenario we're trying to avoid? Should the PR also modify this doc, and perhaps link to the developer blog? Yes, the developer shouldn't need to put in this much work to get 'hot deploy' functionality. This issue is all about making it easier for the developer. I think that the doc should be modified, and should in some way link to the blog. 9. The sti-nodejs repository doesn't appear to have any _real_ tests. Is it possible to add in tests? This may be a bigger change to the repository, but better now or never rather than later. 10. To keep in mind: We may need/want to throttle how often Nodemon reloads on OS. === Current todo: -Get familiar with Grunt-: http://gruntjs.com/getting-started -Get familiar with Gulp-: https://github.com/gulpjs/gulp/blob/master/docs/getting-started.md -Get familiar with rsync-: http://linux.die.net/man/1/rsync -Get familiar with Nodemon-: https://github.com/remy/nodemon	0	0	https://issues.jboss.org/browse/DEVEX-57
3236	DEVEX-56	In a meeting with [~gercan] the other day, we mentioned that we want to be able to pick up the debug port in the sti `run` script, and run the corresponding node scripts with the specified debug port. The constraint is the the debug port that the docker container knows about (to run node-inspector/a node debugger) must be the same as the debug port that node is running with. As of npm 2.0.0, we can pass arguments using this: https://github.com/npm/npm/pull/5518. We can let the user specify the debug port environment variable in the Dockerfile, and choose 5858 if the user doesn't do this. We can then pick up the environment variable in the `run` script. One caveat is that the user needs to modify the Dockerfile if they wish to use a different debug port. Is this something that we're OK with? Another caveat is that this may conflict with the debug port specified in the `package.json`. I'm not certain what the best thing to do in this situation is, but we can address this when we come to it. Perhaps the best solution is to dissuade developers from specifying the debug port in the `package.json` file. Really, I guess the first thing is to decide where the truth lies - an environment variable, or the package.json. The former is much easier implementation wise. Any thoughts on this [~gercan]?	1	1	https://issues.jboss.org/browse/DEVEX-56
3237	DEVEX-56	[~gercan] It looks like I may not be able to setup node in debug mode in the run script. The run script invokes "npm start", and it doesn't look like the "--debug" option can be passed through the npm command. I could write something that accesses the package.json file and inserts the "--debug" argument and executes the new command, but that may be more convoluted than necessary. The alternative is to instruct the user to add the --debug option in their start command in their package.json. So, to rephrase in a more inquisitive manner: * Do you know of any way to pass in the --debug option using npm start? * Should I access the package.json and insert the argument into the command manually, or instruct the user to do so before building/deploying their image? Thoughts?	0	0	https://issues.jboss.org/browse/DEVEX-56
3238	DEVEX-49	why was the acceptance criterias removed or rather reduced ?	1	1	https://issues.jboss.org/browse/DEVEX-49
3239	DEVEX-22	[~crobson], can you comment on a recommended place to put a cancel button based on the current mocks?	0	0	https://issues.jboss.org/browse/DEVEX-22
3240	DMR-9	How is the test buggy? It's checking how the CLI handles escaped text and represents that escaped text correctly per the CLI syntax. Even if it is, if ModelNode.fromString() is returning a different answer now than it did before, that's a problem. [~aloubyansky] fyi.	1	1	https://issues.jboss.org/browse/DMR-9
3241	DMR-9	{quote}Unfortunately the test unintentionally doesn't test this bug,{quote} Why do you conclude it's unintentionally? {quote}because it contains invalid DMR string in second argument,{quote} Strangely, that's the point. {quote}The problem in this case is also how StringValueOperand behaves in its constructor. It ignores IllegalArgumentExceptions thrown by DMR parsers and sets the value to the provided one if DMR parser chokes on broken input. This design decision is bad one IMO.{quote} Perhaps it's a bad design. This is not the only place for this kind of parsing though. Any command and operation argument is parsed this way. The CLI supports two syntaxes, i.e. it accepts values in a DMR format (which is not really a user-friendly one to type in values manually) and a simplified one (which is supposed to remedy help). We can't make DMR syntax not supported. And we can't support only the DMR. So there needs to be a way to determine the format of the value while handling it. The way it's done (it's officially documented too) the parser will first try the DMR syntax. If it worked, the value is assumed to be in a DMR format. If the DMR parser failed, the simpler format parser will be chosen instead. Which also may fail. And if it fails, the user will get an error. If it passed, it passed. {quote}Old DMR parser (based on CookCC) reported it properly as error. New DMR parser (based on new streaming API) doesn't detect this problem because it will finish string processing once first quote is found close to the end.{quote} Why the new doesn't then? What happens with the ending quote?	1	1	https://issues.jboss.org/browse/DMR-9

#	Requirement	Questions	Answered	Successfully Answered	URL
3242	RHDEVDOCS-520	{quote} For our internal purposes, using Bundler and Rake would be overkill. {quote} Why, I would argue repeatable builds are always a good thing. How do you ensure the version of asciidoctor? Setting up a proper build is not only useful for "external" contributions, but it makes internal hand-overs easier as well. Setting up a simple build with Bundler and Rake is not really hard and has a lot of benefits. {quote} Anyway, up until now, all people who accessed the repo a cloned it to their local computers used Linux workstations where all that was required to build the docs was to install AsciiDoctor. {quote} How do you version asciidoctor or all of its dependencies? {quote} And, more importantly, the docs are usually built and tested using an internal tool called 'ccutil' -- that's a specialized tool that builds docs for the Customer Portal. {quote} What does it do? Should that be the build tool of choice? Can this run on any machine? If not maybe one needs a container build? {quote} On top of that, we have set up automated builds through Jenkins. It rebuilds the docs whenever new stuff is pushed to any branch. New build jobs for new branches are created automatically. You can access all those builds at http://ccs-jenkins.gsslab.brq.redhat.com:8080 {quote} I's argue that this feedback cycle is way to slow and remote. Having to push to a remote and then having to wait until I see the changes does not seem to favor quick developer/author feedback. Reallyo one wants to see changes locally the moment the file is saved. I think docs are no different here than actual code.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-520
3243	RHDEVDOCS-520	bq. Why, I would argue repeatable builds are always a good thing. We're not missing out on repeatable local builds. Building and viewing the docs is as simple as executing a single command. In fact, on my machine, I have a hook set up that automatically rebuilds the docs for me whenever I do a local commit. And because no external people have ever been interested in working directly with the repo, there was no pressure to do anything more in this regard. That said, I'm happy to accommodate your requests if it makes your work with the repo easier. I just wanted to explain that for our internal purposes, we have had no need for anything of the sort you suggest (so far). bq. How do you version asciidoctor or all of its dependencies? We don't because we have no need to (AFAICS). AsciiDoctor has only been used for review builds, and the way it renders the docs has not been changing to any appreciable degree in between versions. bq. What does it do? Should that be the build tool of choice? Can this run on any machine? If not maybe one needs a container build? ccutil builds the docs the same way they're built for publishing on the Customer Portal. So yes, for the docs team, it must be the build tool of choice because it's the only way to locally simulate the exact build conditions of the Customer Portal. AFAIK, ccutil only runs on Linux. It shouldn't be difficult to containerize it -- there has just never been any need for that. Only documentation writers need to run it. For content review purposes, AsciiDoctor builds are sufficient. bq. Having to push to a remote and then having to wait until I see the changes does not seem to favor quick developer/author feedback. Reallyo one wants to see changes locally the moment the file is saved. As I mentioned in the previous comment and again now, we _do_ have the possibility of doing local builds, and we use it for local viewing. The Jenkins set-up I described is for sharing the built docs with colleagues, reviewers, and basically anyone interested in seeing the (WIP) docs.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-520
3244	RHDEVDOCS-511	Work on this will begin Monday with research into the correct hardware prerequisites. I'll be checking past mailing list discussions and pinging developers for input if I can't find them quickly. Should we default to reusing the 2.4 prereqs? That seems like it might lead to them being too low or outdated by a few months.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-511
3245	RHDEVDOCS-511	What are the current requirements? I don't really make any statements about this for Minishift, but I guess in terms of the CDK we can go with what we had for CDK 2.x.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-511
3246	RHDEVDOCS-510	I've removed references to vagrant from this section. I then created a merge request, altho I think there may be some problems. * Is the 90-day entitlement still correct? * Do Docker images use the credentials given as `minishift start --username <rhn user> --password <rhn passwd>` ?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-510
3247	RHDEVDOCS-508	In the pull request you seem to only include {code} include::content/module-using-docker-service.adoc[] {code} what are the actual changes you want us to review. Also, would the pull request not include the changes needed for _module-using-docker-service.adoc_. It would be much easier to give feedback, if you would get the ability to review the pull request. On the JIRA issues there is a lot of context missing and looking at the HTML makes it hard to provide comments. IMO we should try to get to a model, where a change to the docs is made, a pull request created and people requested for the review are cc'ed in the pull request. Then we can go through several review cycles on the pull request and in the end merge it.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-508
3248	RHDEVDOCS-507	[~hardy.ferentschik] [~kumarpraveen] [~lalatendum] [~arout] [~agajdosi] I've updated the GSG's introductory section to include a description with as much depth as the 2.4 documentation. Can you please check this out for technical review to be certain that it's accurate? I'm particularly concerned about outdated content. [~psargent] I'm looking for peer review for this section. Do you have a moment? I've asked in IRC but no response yet. http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Getting_Started_Guide-branch-3.1-master-topic_RHDEVDOCS-507/lastBuild/artifact/index.html#introducing_red_hat_container_development_kit	1	1	https://issues.jboss.org/browse/RHDEVDOCS-507
3249	RHDEVDOCS-507	{quote} The Container Development Environment is provided in the form of a Red Hat Enterprise Linux virtual machine. The Container Development Environment itself can also be installed in a virtual machine. {quote} What does that mean, especially "The Container Development Environment itself can also be installed in a virtual machine. Makes not a lot of sense to me. Are you saying I can install the CDK on a VM itself? First of all this would require nested virtualization and secondly, you would have such a bad performance that it would be impossible to work with.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-507
3250	RHDEVDOCS-507	bq. Are you saying I can install the CDK on a VM itself? First of all this would require nested virtualization and secondly, you would have such a bad performance that it would be impossible to work with. Off topic: Just stumbled upon this. [~hardy.ferentschik], I used CDK 2.x all the time in a nested virt. environment, and the performance was quite good -- I mean, I didn't notice any performance problems at all. Has the situation changed with the switch to Minishift? I know a number of people (internal and external) also asked about using CDK within a VM. Thanks.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-507
3251	RHDEVDOCS-507	{quote} Much of the content that's not in the minishift docs is from 2.4 and was requested, {quote} From? {quote} I'll have more time to address the general problems with the docs next sprint when I've closed most of the open Jira. {quote} So here you loose me. You rather just put patches on things and close JIRAs, instead of tackling the root cause of the problem? Is this not wasted effort?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-507

#	Requirement	Questions	Answered	Successfully Answered	URL
3252	RHDEVDOCS-505	[~budhrg] I've added an explanation of the flags. http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-3.0-master/lastSuccessfulBuild/artifact/index.html#skip-registration The section needs to be reviewed for technical accuracy before being published. Would you mind doing that and letting me know if it appears correct? Thanks in advance for your time.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-505
3253	RHDEVDOCS-505	[~psargent] I reworded it to say "disconnected" instead of offline. Would you mind having another look when you get a change, to see it this way is clearer?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-505
3254	RHDEVDOCS-498	Need to do draft diagrams next, and then setup meeting with Jess and Emma.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-498
3255	RHDEVDOCS-493	Looks like relevant docs for OpenShift containing the same / similar content was released yesterday (July 12). I need to add links to that content (or an earlier version). [~lalatendum][~rkratky] Also, we need scoping for this. Where should I draw the line, and refer users to the OpenShift Online docs rather than covering it inside this document? I'm leaning toward doing so with the least content possible, to prevent outdated content like Hardy spoke of earlier today in a meeting we had with him. When I've got that question answered, I can begin writing this content. I don't see anything in minishift docs about it (yet).	1	0	https://issues.jboss.org/browse/RHDEVDOCS-493
3256	RHDEVDOCS-493	bq. refer users to the OpenShift Online docs OpenShift Container Platform bq. Where should I draw the line For starters, let's stick only with the get started that's in upstream, i.e. no additions. Then the additional get starteds can be added (for example the GSS-requested article on Maven+Wildfly).	0	0	https://issues.jboss.org/browse/RHDEVDOCS-493
3257	RHDEVDOCS-492	Need more information. How are clusters controlled (oc commands)?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-492
3258	RHDEVDOCS-492	[~lalatendum][~hardy.ferentschik][~kumarpraveen][~arout][~agajdosi] We still need information on technical details, we have none in this Jira. The best that I can find is an email thread from March, describing what the feature might look like. Are the details for this ready (has the devel work been completed well-enough to document)? What's the scope of this work? Is there a clear line where content for this should end, or should I document everything because it's minishift? If and when related content lands in the minishift docs repo, I will rebase again and pull in that content. If we know that's going to happen early enough in the current or next sprint, then I'll wait for it.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-492
3259	RHDEVDOCS-489	[~hardy.ferentschik][~lalatendum][~kumarpraveen][~arout][~agajdosi] How is the UX in minishift changed? Are the current minishift docs (or similar) correct wrt those changes, or are there still more changes coming?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-489
3260	RHDEVDOCS-462	What are the conflicts that users have seen? I need a little more information to know how to set requirements for this and make the docs correct.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-462
3261	RHDEVDOCS-462	[~rkratky] Do we need to document how to avoid overwriting the `oc` and `minishift` executables installed to ~/.minishift/cache? What's the recommended way to handle that? My first thought is something like move the executables to ~/bin/minishift-${version} and ~/bin/oc-${version}, with a symlink pointing to the most recent version from ~/bin/minishift and ~/bin/oc. Does that sound reasonable, or am I misunderstanding?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-462
3262	RHDEVDOCS-462	This predates the new workflow using merge requests. The content is not in a topic branch on gitlab. I have a topic branch locally on my desktop, but it's got extra bits in it. I can create a good topic branch with cherry-picked commits or a fast-forward of the split from HEAD if that's useful, but I can see that might potentially cause problems. [~rkratky][~hardy.ferentschik] Would you like me to clean up the topic branch, push it to gitlab, and create a new merge request?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-462
3263	RHDEVDOCS-460	So here is the thing I am wondering regarding the CDK docs. Why don't you not literally take the Minishift docs and modify/extend from there? I think they are in a pretty good shape by now and cover really most of the relevant aspects. I thought that was the plan from the beginning. It would then also be easier to move shared content upstream to Minishift.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-460
3264	RHDEVDOCS-460	{quote}There's not a direct mapping, as there are even different documents and sections to address the different user needs. {quote} Why are there different user needs. I think the whole of the existing Minishift documentation makes sense for CDK users as well. Biggest difference is probably the installation. Also what are these different documents and sections? Why not trying to align? {quote} There were significant modifications required within the sections copied from minishift docs, {quote} Could you provide some concrete examples. This would help to understand better why the docs (have to) differ so much.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-460
3265	RHDEVDOCS-460	The documentation plan has been reviewed and I don't know of anything else that needs to be completed. I set the state to "pull request sent" earlier to reflect that it had been submitted for review. [~rkratky] Can this be resolved as complete?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-460
3266	RHDEVDOCS-455	https://developers.redhat.com/products/cdk/overview/ *Get started with containers on macOS, Microsoft Windows, or Linux* * talks about Vagrant -- not used in 3.0 *Want to try OpenShift 3 Platform-as-a-Service?* * talks about Vagrantfiles *New easy setup for Windows and macOS users* * fails to mention devsuite for RHEL https://developers.redhat.com/products/cdk/hello-world/ *Linux* * talks about and links to CDK 2.4 * says that devsuite isn't available for Linux *macOS* and *Windows* * links to devsuite1.3 * links to old OpenJDK (shouldn't link at all; devsuite install OpenJDK) * contains outdated screenshots *Linux*, *macOS*, and *Windows* * contains instructions for Vagrant-based installation * links to CDK 2.4 docs * links to outdated "Build your first..." tutorials https://developers.redhat.com/products/cdk/help/ * links to outdated discussions https://developers.redhat.com/products/cdk/community/ * talks about Project Atomic -- wouldn't Minishift and OpenShift Origin be more appropriate? https://developers.redhat.com/products/cdk/updates/ * "interactying"	0	0	https://issues.jboss.org/browse/RHDEVDOCS-455

3267	RHDEVDOCS-453	The Docs team has the following comments on dev.rh.com: *Overview:* * Add that devSuite is available on RHEL7 using the standard package management system as a Technology Preview feature *Download* * Group the downloads together by operating systems: Online installer Windows Installer Windows Online installer macOS Installer macOS *Hello World* * In the Windows tab, update to +Red Hat Development Suite 1.4+ instead of Red Hat Development Suite 1.3; also state if this is the online installer or the installer (bundled) * update screenshots for step 5 and step 6 for Windows; vagrant is not available in devSuite 1.4; Kompose is available * In the macOS tab, update to +Red Hat Development Suite 1.4+ instead of Red Hat Development Suite 1.3, also state if this is the online installer or the installer (bundled) * update screenshots for step 5 and step 6 for MacOS; vagrant is not available in devSuite 1.4; Kompose is available * include a tab for RHEL * include the installation steps for RHEL *Help* * This tab says "See our most popular forum discussions related to Red Hat Development Suite". I don't see a link to the discussions. Should there be a link to the discussions under Community Q&A? *Update* * under May 2017, include additional components: OpenJDK 1.8.0_131. Kompose 0.6.0; see Table 3.1 Component Details for version updates given by operating system in devSuite 1.4 Installation Guide.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-453
3268	RHDEVDOCS-452	Hi [~rick_wagner], We would like to clarify a couple of items in the devSuite IG and have a couple of questions: What is needed other than a Red Hat Subscription for all of the different components in devSuite? Does CDK require a separate Red Hat subscription? Thank you !	0	0	https://issues.jboss.org/browse/RHDEVDOCS-452
3269	RHDEVDOCS-444	Hi [~mhusnain] where can I find the updated doc? The one at http://ccs-jenkins.gsslab.brq.redhat.com:8080/job/doc-Red_Hat_JBoss_Developer_Studio_Integration_Stack-Installation_Guide-branch-master/lastSuccessfulBuild/artifact/index.html still contains the warning and wrong links in chapters 6 and 8.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-444
3270	RHDEVDOCS-442	Hi [~mhusnain], please fix the component versions for 10.3 as follows | BPEL | 1.1.0.Final_1.3.200.Final | | BPMN2 | 1.3.3.Final_1.3.1.Final | Then, the the following statement in Chapter 2 is not true _"Red Hat JBoss Developer Studio Integration Stack 10.3.0 does not include any bug fixes or updates to the product. This goal for this release is to synchronize with the Red Hat JBoss Developer Studio 10.3.0 release. "_ There are bug fixes for Fuse and SwitchYard tooling. Section 3.1 - some issues are twice, such as FUSETOOLS-2318, FUSETOOLS-2319, FUSETOOLS-2320, FUSETOOLS-2325 - two issues are missing - FUSETOOLS-2377 and FUSETOOLS-2378 Section 3.2 - please add the following bug fix https://issues.jboss.org/browse/SWITCHYARD-2999 Section 4.2 - issue RHBRMS-1416 should be ncluded in section 4.4 since it is Drools related issue	1	1	https://issues.jboss.org/browse/RHDEVDOCS-442
3271	RHDEVDOCS-442	Hi [~mhusnain] it is ok now. Btw it would be good to mention in the chapter 4 that there is a list of most important issues (critical and blockers issues). Or maybe it is not necessary and it is obvious since there is no reason to list all issues (minor, trivial,...). What do you think?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-442
3272	RHDEVDOCS-439	[~psargent], do you already know what this involves? What will need to be documented about Kompose from the devsuite perspective? Let me know if you need anything in this regard.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-439
3273	RHDEVDOCS-404	Sure, Petra. My comments: * 3.1. VERSION UPDATES - This part should IMO be renamed Component versions or something like that. Updates suggests a comparison between the old and new versions but the actual contents appear to just be a list of components. Additionally, the table could just be a list of components with a note about the one component that is only in the one installer. The table seems overkill to present mostly the same information, but that's my opinion. * 3.2. INSTALLER UPDATES - minor changes: - 'Detection is in progress' - if this is the literal label for the indicator, it should be marked up as something from the GUI. - "Cygwin installs with hidden window." - needs and article. "... with a hidden window"? - "The login-in window" - I assume this an accidental hybrid when looking up whether to use login or log in? :) * 4.2. CLOSED ISSUES - just a link to a filter. Shouldn't this be a list of the JIRAs? I wondered if it was because there were too many issues but it shows just 17 (to me). HTH :)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-404

I thought that yum/RPM should resolve all dependencies automatically, shouldn't it? Are all dependencies defined correctly? (I don't know how RPM internally works.) CC: [~nickboldt]	1	1	https://issues.jboss.org/browse/RHDEVDOCS-398

#	Requirement	Questions	Answered	Successfully Answered	URL
3275	RHDEVDOCS-398	rpm install/update SHOULD pull in all the compatible dependencies as defined in the spec file. HOWEVER, if we don't state minimum versions, or we don't state enough items, then the update won't necessarily pull in everything that's needed. Here's the spec file [1]. This might be something we should fix for 11.0. Can you open a JIRA requesting that we add more Requires to the devstudio rpm spec file for plugin dependencies (eg., jgit 4.6.1, google gson [2.2.4,3.0.0)). [1] https://github.com/jbdevstudio/jbdevstudio-product/blob/master/rpm/devstudio.spec.template#L48 ---------- Another known issue is that if a user installs EVERYTHING from central (including both the Tycho m2e connector 0.8.1 and Fuse Tools 9.1, remediation will be called because Fuse Tools 9.1 requires Tycho m2e 0.9, not 0.8.1. Once Fuse Tools 9.2 is released in a couple week, this problem will go away as 9.2 depends on 0.8.1 OR 0.9.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-398
3276	RHDEVDOCS-395	[~rkratky] This isn't getting attention, after tagging stakeholders. Can this safely be closed, given its age?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-395
3277	RHDEVDOCS-385	This was fixed in the patches: https://gitlab.cee.redhat.com/red-hat-developers-documentation/red-hat-container-development-kit/commit/5d9f72ec9934ef8685dd937fbad1779ad1476b09 https://gitlab.cee.redhat.com/red-hat-developers-documentation/red-hat-container-development-kit/commit/e4b3969758fc29d7d4d49b344f83ff8eb4a7c685 A recent jenkins build of the document containing the changes can be found at: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-2.4-master/lastSuccessfulBuild/artifact/index.html [~arout] [~agajdosi] Can one of you check out the versions in the jenkins build above, to be certain they're correct?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-385
3278	RHDEVDOCS-384	[~lalatendum] I know that you're busy, but could you look at the document again, to see if the templates section is correct? http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Getting_Started_Guide-branch-2.4-master/lastSuccessfulBuild/artifact/index.html#_using_openshift_from_the_command_line Skip to section 8.2.6 for the relevant content. I've only added templates that are shown in `oc get templates -n openshift`. I also looked under /opt/adb/openshift/templates/common, and saw those templates. Two templates listed are in /opt/adb/openshift/templates/cdk. But I don't see /opt/adb/openshift/templates/cdk/image-streams-rhel7.json in the output of `oc get templates -n openshift`. Should that template (image-streams-rhel7) be included in the list of templates? Do I need to perform some task to import that template, to have an accurate description in the document? I'm not sure how to compare the templates in /opt/adb/openshift/templates with output from `oc get templates -n openshift`, or if one should be a reflection of the other. Can you clear up the relationship between `oc` output and the .json files? Also, is there any other content that needs updating around that section on templates?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-384
3279	RHDEVDOCS-383	[~bbrock], did you ask (for peer review) someone specifically? I suggest tagging that person from this issue, so that it's clear even to other people.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-383
3280	RHDEVDOCS-383	Hi [~bbrock]. I'd be happy to, but am not sure where I can view the changes. I did a quick search for that commit hash in various branches (2.4 master, 2.4 stage, master) but can't find it. Could you provide a link to either the commit diff or a rendered version with specifics of which parts have changed for a focused review?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-383
3281	RHDEVDOCS-381	Thanks, [~apodhrad] - is this new version better? --- From Red Hat JBoss Developer Studio Integration Stack 10.1.0.GA onward, SwitchYard 1.x is deprecated in the Fuse Tooling component and SwitchYard 2.x should be used. ---	1	1	https://issues.jboss.org/browse/RHDEVDOCS-381
3282	RHDEVDOCS-376	[~bbrock], how's it looking with this? In case you haven't received any feedback, please, ping Lala again and add also Praveen and Kumar.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-376
3283	RHDEVDOCS-376	[~bbrock], have you contacted the SMEs again? If not, let's close this.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-376
3284	RHDEVDOCS-373	[~rkratky] [~budhrg] I've updated the source for the document with a comment containing the fix (2.4-master). I can update it quickly and push live, if that's the plan. Should this be fixed, or dropped because of age?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-373
3285	RHDEVDOCS-370	Relevant? RHDEVDOCS-373 (Update install-cli '--path' option value to use folder).	1	1	https://issues.jboss.org/browse/RHDEVDOCS-370
3286	RHDEVDOCS-370	[~bbrock] Sorry for late reply, missed it last week in mails. I am not sure if I understand your comment well: "I need to verify the version of docker that CDK installs when a user specifies one version." Could you give me some hints or steps I can follow? Will work on it later today and give you needed information.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-370
3287	RHDEVDOCS-369	Is there a description of the changes from cdk 2.3 -> 2.4 ?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-369
3288	RHDEVDOCS-369	There will most likely be only the following changes between 2.3 and 2.4: * version number * component versions (OCP, Docker, Kubernetes) * supported version of Vagrant * bugfixes (probably only for some vagrant-service-manager issues) [~hardy.ferentschik], could you confirm or provide details, please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-369
3289	RHDEVDOCS-369	{quote} could you confirm or provide details, please? {quote} sounds reasonable. At least this is the plan afaiu. However, I am not doing the actual release engineering. [~kumarpraveen] would be in a better position to confirm this.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-369
3290	RHDEVDOCS-368	The doc needs to include an explanation of the 2.4 vs 3.0 dichotomy -- what's what, what's the support status for both, etc.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-368
3291	RHDEVDOCS-368	I don't see any information on the etherpad linked in the description. Is there somewhere that I can get the background, myself?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-368
3292	RHDEVDOCS-368	[~arout] [~agajdosi] 2.4 release notes and known issues documents have all new content. Could you review the documents for technical accuracy? Are there any 2.3 issues which were not resolved in 2.4? From the looks of the etherpad, there are none. But that's not canonical.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-368
3293	RHDEVDOCS-368	Quick review notes: 1.1: * "Guide guide" 2.4.2: * Is the v in "OpenShift Container Platform v3.4.0.40" required for the product? I haven't seen this version scheme before so calling attention to it. 3.1.1: * "Per-user" seems an awkward term to use here. I would suggest changing the focus to the file, so "Vagrantfile for Individual Users..." or some such instead of per-user. * "does not use [recommended: the] supplied username" * Minor quibble, avoid latin root words, problematic for potential translation. Instead of via, I'd recommend "using the" or something of that sort. * "In use without a proxy, the username and password supplied in ~/.vagrant.d/Vagrantfile is used, and the user is not prompted to enter a username or password." Would recommend changing the phrasing in the first few words and removing the redundant information at the end, also active phrasing would be better. Example: "If no proxy is set, <CDK> uses the username and password in <filepath and name>." 3.2: * "users using" sounds awkward. I'd recommend something like s/"that only affect users"/"relevant to". 3.2.1: * the markup on "Cygwin" confuses me. If this is the name of a component, it should probably be "cygwin" since we rarely find uppercase letters in naming components. Alternatively, this would be the name of the product and probably doesn't need marking up, but would indeed be Cygwin, not cygwin. * Should C:\tmp be C:\temp? Just checking. 3.3: * 3.3. Issues on Red Hat Enterprise Linux appears to not have any issues in it. 4: * Additional resources seems like a repeat of the information in the understanding the documentation chapter. Is it necessary? If so, would it be easier to just link to the cdk docs splash page instead of the many duplicated links that must be updated every release?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-368

#	Requirement	Questions	Answered	Successfully Answered	URL
3294	RHDEVDOCS-368	[~mhusnain] I've edited the documents to reflect your review. A document built in jenkins with those changes is at: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Release_Notes-branch-2.4-master/13/artifact/index.html A couple of things I want to clarify, please let me know if these make sense: "Cygwin" is the name of a project and application, so I originally capitalized it. Also, in at least one case "Cygwin" is capitalized, even on the command line: https://cygwin.com/cygwin-ug-net/ov-ex-win.html - Is that correct? C:\tmp is not a preexisting directory in windows, so using "tmp" instead of "temp" won't break anything. Windows OS tends to use "temp" internally, and windows apps (including cygwin) frequently use "tmp" directories. I clarified that by making the directory C:\tmp as part of the instructions.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-368
3295	RHDEVDOCS-368	[~mhusnain], thanks for the thorough review. One comment: bq. Additional resources seems like a repeat of the information in the understanding the documentation chapter. Is it necessary? If so, would it be easier to just link to the cdk docs splash page instead of the many duplicated links that must be updated every release? I believe the links are good to have there, especially in a RN doc. We want to make access to more specific info as straightforward as possible for users. Also, if the user opens the doc in the 'paged' format, they won't have immediate access to the 'Understanding' section from the KI chapter. As far as keeping the links up-to-date, that's not a problem because they're included as attributes, so the maintenance is all done in the attributes.adoc file -- in fact, we only need to update the product-version attribute, and the links will be automatically updated.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-368
3296	RHDEVDOCS-362	Use http://awestruct.org?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-362
3297	RHDEVDOCS-359	[~mhusnain] [~supriya.bharadwaj], 1. N&N - if you look here, there is also an item for Hibernate and Central: http://tools.jboss.org/documentation/whatsnew/jbosstools/4.4.3.Final.html#central Can you add it? 2. Wayland workaround - it seems a bit strange to just describe a workaround without describing an existing problem. Workaround to what? So I would prefer if the title was something like "Running JBoss Developer Studio on Fedora 25 with Wayland" and then starting the chapter by stating the problem: There is a problem when running JBoss Developer Studio with Wayland on Fedora 25. For details, see JIRA_URL... However, there is a workaround for this: ... The rest of the chapter is ok except for this subtle detail: "$DEVSTUDIO_INSTALL_DIR/devstudio-wayland.sh where DEVSTUDIO_INSTALL_DIR" - the dollar sign should either be in both places or none. I would go with no dollar sign personally. You may argue that the wayland issue is listed in the known issues section, but if we're already dedicating an article to this problem, I think it's a good idea to briefly describe the problem here. In fact, I would be in favor or removing the JIRA from that list of known issues, because we would already have it here and the title says "customer-reported known issues" which is not really entirely true AFAIK. (But if you want to keep it there I'm fine with that.) Other than that, all else seems ok.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-359
3298	RHDEVDOCS-359	No problem, @mmalina. 1. Added items for Hibernate and Central and also some items missing from the OpenShift part. 2. Agreed. Added context and link to JIRA and removed the dollar sign. Could you have a look quickly and confirm this looks okay now, Martin? If so, I'll push this to readiness for release right away.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-359
3299	RHDEVDOCS-352	The 2.4 content of course uses install-cli. There's not an equivalent minishift command that I can find (although I'll check again, maybe I'm missing something). The link to the mailing list in the description points to one post asking to define our stance on how to do this, but offers no solutions. This is different from using different versions of the executables after installation. This Jira is about how to install other versions of those binaries in the first place. I'm still looking how to install a different version of `oc` and `docker` without use the vagrant install-cli command, but it's difficult to be efficient about it. [~hardy.ferentschik] you posed the original question on the mailing list. Do you remember how or when / where that question was resolved? If you can give me a pointer, that would be very helpful.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3300	RHDEVDOCS-352	[~hardy.ferentschik] I've got a version of the Getting Started Guide that adds the info for using `minishift start --ocp-tag`. Can you review the section contain the new info, 3.2.2 (Choosing the Version of OpenShift Container Platform Tools to Install with minishift)? http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Getting_Started_Guide-branch-3.1-master/lastSuccessfulBuild/artifact/index.html#flags If I'm incorrect, please point me in the right direction. I was basing this off information I found on various mailing lists, so I may simply have been looking in the wrong direction or misunderstanding the intent of this issue.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3301	RHDEVDOCS-352	I was afraid of that. What's the actual procedure I should use? If this were RHEL, I'd simply do `yum install @virtualization` against the RHEL repo, or reuse the repo listed in the install guide for `oc`. Is that correct?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3302	RHDEVDOCS-352	{quote} I've got a version of the Getting Started Guide that adds the info for using `minishift start --ocp-tag`. Can you review the section contain the new info, 3.2.2 (Choosing the Version of OpenShift Container Platform Tools to Install with minishift)? {quote} Hmm, I think there are several issues here: {quote} The command minishift start automatically installs supported versions of utilities, including docker and oc. Users may which to install custom versions of those utilities. To specify a version of OpenShift Container Platform tools to install during initial startup, use the --ocp-tag option like this: {quote} * We are neither "installing" oc nor docker. We download/cache _oc_ on the host, but in this context "installing" is not the right term. Regarding _docker_, the statement is plain wrong. We are not installing any Docker client. * --ocp-tag is not about the version of the client tools to install, it specified the OCP version (tag) to provision. It is the OpenShift version you want to have running in the end.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3303	RHDEVDOCS-352	Thanks, Hardy. When you say this: When it comes to the oc binary the version matching your requested OpenShift version will be downloaded and cached. Do you mean the version given with --ocp-tag? (sorry, replied to soon... catching up)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3304	RHDEVDOCS-352	bq. Regarding docker, the statement is plain wrong. We are not installing any Docker client. [~hardy.ferentschik], one question about the 'docker' client binary: Do you mean that it's not possible to use a 'docker' client on the host system to interact with the Docker daemon running within CDK like it was in CDK 2.x? Thanks.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-352
3305	RHDEVDOCS-352	OK, I'm unclear about the use case and it sounds like I've been getting it wrong. I'd like to clear that up. My idea was that users may have (or want to install and then have) the docker client on their host desktop communicate with the docker containers inside the rhel VM. To do that, we want to explain installation of docker on their host desktop, from the same environment where they user would also run `minishift start`. That seems like the point of `minishift docker-env`, similar to the reason for `minishift oc-env`. Is that everyone else's understanding, or do I have something wrong? This is completely separate from running `docker` from the shell a user gets with `minishift ssh`.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352

#	Requirement	Questions	Answered	Successfully Answered	URL
3306	RHDEVDOCS-352	bq. Why? This is not really a requirement for working with the CDK. Just trying to understand where this is coming from? Hi [~hardy.ferentschik], it's not a requirement, but it's one of the main use cases that have been promoted since the beginning of CDK -- the ability to use its Docker engine/daemon directly from your host system (that and the same thing with 'oc'). In fact, it was always preferred to SSH'ing into the VM. I have not heard about any change in this regard. Is there any reason we wouldn't want users doing that?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-352
3307	RHDEVDOCS-352	Yes, that section is already included in the CDK docs. It sounds like you're saying that for docker (docker-env) you want only that section on reusing the docker daemon and no other usage for docker-env. Is that correct?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3308	RHDEVDOCS-352	{quote} Yes, that section is already included in the CDK docs. It sounds like you're saying that for docker (docker-env) you want only that section on reusing the docker daemon and no other usage for docker-env. Is that correct? {quote} Yes.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-352
3309	RHDEVDOCS-350	[~bbrock] I don't see this in the [Installation guide|http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-3.0-master/lastSuccessfulBuild/artifact/index.html#hypervisor-requirement], where is it?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-350
3310	RHDEVDOCS-345	[~bbrock], CDK 3.0 will use CIFS for shared folders. Have you discussed it with SMEs, so that you know how to document it? If not, please, reach out to the developers (Hardy, Praveen) to get their input.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-345
3311	RHDEVDOCS-344	I might have missed it, but I could not find the _setup-cdk_ command explained. The CDK stays unusable until this command was run. It does not exist in Minishift and hence has no counterpart in the documentation there. Also, the devsuite installer makes sure to call it, for the case that the installer is used. However, for manual install, _setup-cdk_ is required. [~bbrock], is this on your radar?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-344
3312	RHDEVDOCS-343	[~mhusnain], tagging you as the reviewer for this. Have I missed any occurrence of "2.0"?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-343
3313	RHDEVDOCS-339	[~psargent], could you please specify which parts of the doc changed? Or is really a review of the entire guide called for?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-339
3314	RHDEVDOCS-339	[~psargent], here it is: ch. 1: * "One or more of the products that Red Hat Development Suite installs may have a separate Red Hat subscription." // this is vague and should be clarified * "Development support for any of the installed products requires an active Red Hat subscription for that product." // what's "Development support"? * info about support for RHEL install. needs to be added to this chapter ch. 2: * info about RHEL needs to be added * "OpenJDK, Cygwin, VirtualBox and Kompose" // use serial comma * "If some components in the list are not detected, they are installed." // this is ambiguous; should clarify what 'detected' means in this context (it can be read as 'if you have it installed but the installer is unable to detect it') * "macOS-only Installers (Alpha)" // it's not alpha any more * "The default path for Windows is c:\DevelopmentSuite and the default path for macOS is /Applications/DevelopmentSuite." // comma before 'and' * "Red Hat Development Suite allows the user to enable Hyper-V without exiting the installer." // untrue, unless I'm mistaken ch. 6: * link should be provided to ch. on uninstallation ch. 8: * info about RHEL needs to be added	1	1	https://issues.jboss.org/browse/RHDEVDOCS-339
3315	RHDEVDOCS-336	[~dgolovin] I have a question on one of your comments: 8. Also, this issue has been closed in JIRA. Should we still include in the troubleshooting section?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-336
3316	RHDEVDOCS-335	Do you still need review on this, [~psargent]? I can have a look and add any minor comments tomorrow if you like (and that's not too late). Also, I'd recommend making any comments with internal links restricted to Red Hat Employees. I tried to edit your comment to set that (better immediately with security stuff) so that should be okay for now. For future reference, you should see a little lock icon when writing a comment next to "Viewable by All Users". You can use this to change it to Red Hat Employees for sensitive information (GA dates, etc.) and internal links.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-335
3317	RHDEVDOCS-334	[~psargent] In our [Carnation Release Train Deliverables Deck | https://docs.google.com/a/redhat.com/presentation/d/17LcyBOiRL3nYHRWrM3O_jEBI2HiGlTlgF4r9V_3GKXk/edit?usp=sharing] slide #11 comments [~mikgue] asked for 'What's New' section in release-notes. That sounds like a good Idea if we can add it and include in it that paragraph with version updates and add couple more explaining UI changes. Then mention in the end that more details are available in 'New and Noteworthy Issues' section below. WDYT?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-334
3318	RHDEVDOCS-334	[~dgolovin] It sounds like a good idea. The draft has a section called Updates. I could change the name from Updates to What's New. Here is a possible outline of the What's New section: 3. What's New in DevSuite 1.3? 3.1 Version updates Explain the version updates here Cygwin 2.6.0 -> 2.6.1 DevStudio - 10.2.0.GA -> 10.3.0.GA CDK 2.3 GA to CDK 2.4 GA OpenJDK 1.8_111 to 1.8.0_121 3.2 Installer Changes Explain the Installer changes here An Installer that includes most of the required components and their dependencies for installation. Vagrant and Virtualbox are not included in the installer and have to be downloaded during the installation. How does that sound?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-334
3319	RHDEVDOCS-334	Sure [~psargent]. Notes below: 2. Installation Options * I have a nitpick with calling the bundled installed "An Installer" while we have a name for the "Online Installer". I'd say that giving them separate names helps distinguish elsewhere in the text which installer is being referred to, instead of just generic installer = bundled and Online = the online one. But that's my little nitpick. * The warning about support status seems repeated and redundant. Specifically this text: "The Online and Bundled Installers for macOS are Alpha Technology Preview features. For more information on Red Hat Technology Preview features support scope, see http://access.redhat.com/support/offerings/techpreview/." WARNING The macOS online and bundled installers are Alpha Technology Preview features and are not supported by Red Hat. As a result, they must not be used in production environments. I would combine the text into one IMPORTANT or WARNING admonition and keep it succinct. This seems like we're saying the same thing twice, once in an admonition, but once it is not important enough to be in an admonition, which may be confusing. 3. What's new in Red Hat Development Suite? * Not sure we want question marks in the titles at all. Any thoughts, [~rkratky]? * "The following components and their dependencies have been updated to the latest versions:" - I'd remove the latest versions bit because CDK 3.0 is technically the "latest" version, which is not included here. I'd recommend something like "Red Hat Development Suite includes the following components:" 3.2. Installer Updates * Another nitpick: s/The installer/The installers, since there are multiple installers. * The last two points here seem very similar. I'd combine them to just one point about whether the component is selected or deselected instead of a separate point about selected and a separate one about deselected. 4.2. Noteworthy Issue * Not sure what a Noteworthy issue would be. I'd prefer just calling it resolved if it's closed or known is it's open. The terminology of noteworthy may be unfamiliar and confusing. Hope that helps!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-334
3320	RHDEVDOCS-329	Do I need to wait for some time to see the changes? I'm asking because I don't see the changes in the doc.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-329
3321	RHDEVDOCS-325	Hi [~mhusnain]. Thanks for this. Just FYI, the content is now at: * https://developers.redhat.com/products/cdk/get-started/#fndtn-macos * https://developers.redhat.com/products/devsuite/get-started/#fndtn-macos	0	0	https://issues.jboss.org/browse/RHDEVDOCS-325

#	Requirement	Questions	Answered	Successfully Answered	URL
3322	RHDEVDOCS-316	On a related note, do you think your devsuite IG content about the mac installer could be repurposed to create a page similar to this one: https://developers.redhat.com/products/cdk/get-started/#fndtn-windows -- except for mac?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-316
3323	RHDEVDOCS-316	Thanks, Robert. I noticed this is reopened. Are we still tracking this issue for our dept?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-316
3324	RHDEVDOCS-314	[~mhusnain], how's this coming along? Can I help?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-314
3325	RHDEVDOCS-314	I should be able to get Mike Guerette's attention if needed, but I believe we don't need him for this. I have an account in the Developers Blog, and I can publish stuff, so we're OK in that regard. Do you have an idea about the expected content of the blog?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-314
3326	RHDEVDOCS-314	I was going to blog a bit about the new mac installers (and reiterate that the windows ones are available & fully supported, etc.) and point users to our docs for the full procedure. The real objective is to get exposure for the access.redhat.com docs and hopefully feedback. WDYT?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-314
3327	RHDEVDOCS-314	[~mhusnain], HTML would be ideal, but not necessary. I'm not sure what you mean by the 'blog part of the repo'. What repo?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-314
3328	RHDEVDOCS-314	Hi [~mhusnain], I noticed your note about this -- deciding what should or shouldn't be included. Do you have a draft somewhere? I'd be happy to offer some input. (If there's no draft, I'll just add it here.)	1	0	https://issues.jboss.org/browse/RHDEVDOCS-314
3329	RHDEVDOCS-314	Hi [~mhusnain], why did you close this? Are you not going ahead with the blog and the survey?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-314
3330	RHDEVDOCS-312	[~rkratky] What style conventions need to be applied? Should we be doing this in 2.4 or in 3.x instead?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-312
3331	RHDEVDOCS-304	Fixed in http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#_setting_up_container_development_kit_for_use_behind_an_http_proxy [~budhrg], could you please have a look?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-304
3332	RHDEVDOCS-303	Documented in CDK Installation Guide. See, for example: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#starting_cdk_vagrant_box_on_rhel [~lalatendum], could you please have a quick look?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-303
3333	RHDEVDOCS-302	Hi [~budhrg], bq. '--cli-version' : 'Specify the version of the binary as value to be installed' (These are the valid origin oc binary versions like 1.2.0, 1.2.1, 1.3.0, 1.3.1 etc) Two questions about this option: # Will all of these `oc` versions work correctly with the OS server in CDK? # What versions of the `docker` binary are supported? bq. More in this link (Note: here --path description mentions relative path which is an issue being tracked here) Will the problem with relative path be fixed in the VSM that will ship with CDK 2.3?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-302
3334	RHDEVDOCS-302	[~rkratky], > 1. Will all of these `oc` versions work correctly with the OS server in CDK? Yes, as far we come to know after having discussion in mailing list. Valid versions are listed [here|https://github.com/openshift/origin/tags]. But recommand to use latest one like 1.2.1, 1.3.0, 1.3.1. However, default is 1.2.0 at the moment. > 2. What versions of the `docker` binary are supported? Any versions listed [here|https://github.com/docker/docker/tags] but recommended one will be installed by default without specifying '--cli-version' > Will the problem with relative path be fixed in the VSM that will ship with CDK 2.3? Unfortunately, it may not be part of CDK 2.3.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-302
3335	RHDEVDOCS-302	[~budhrg], in view of [1] (_"With my new weekly cdk, I found strange errors testing openshift tools. I was using oc 1.2.x, and got random errors. I was told to upgrade to newest. I switched to 1.4.1. Version 1.4.1 also failed against recent weekly cdk build."_), should the docs mention something to keep users from installing a wrong version? In other words, is there a list of versions that don't work? [1] http://post-office.corp.redhat.com/archives/devtools-devsuite/2016-December/msg00000.html	1	1	https://issues.jboss.org/browse/RHDEVDOCS-302
3336	RHDEVDOCS-302	[~budhrg], could you please review the new docs? Added to sections about Docker and OpenShift: http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Getting_Started_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#_preparing_host_system_for_using_docker_from_the_command_line http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Getting_Started_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#_using_openshift_from_the_command_line	1	1	https://issues.jboss.org/browse/RHDEVDOCS-302
3337	RHDEVDOCS-298	I agree. I suspect the current descriptions are just some "can't leave it empty, but don't have time to really think about it now" placeholders I put there when I was creating the links -- and then forgot about it. As for *including* vs *with*, I find both a bit hard to understand in this context. How about we just spell it out outright? Something like: _Starting development of container and cloud-based applications using Red Hat JBoss Developer Studio with the help of Red Hat CDK, OpenShift, and Docker._	1	1	https://issues.jboss.org/browse/RHDEVDOCS-298
3338	RHDEVDOCS-298	[~mmalina], if you have a few minutes today, could you have a look at the comment earlier where I've tagged you and give us your thoughts on which is more technically accurate? Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-298
3339	RHDEVDOCS-292	[~mhusnain] Could you please add these two TD issues to known issues? https://issues.jboss.org/browse/TEIIDDES-2940 https://issues.jboss.org/browse/TEIIDDES-2880 Thank you	0	0	https://issues.jboss.org/browse/RHDEVDOCS-292
3340	RHDEVDOCS-290	Hi [~mhusnain], just making sure: is this supposed to be version "10.1", or "10.1.0"? I suppose the 'x.y.z' format would be better to keep it consistent...	1	1	https://issues.jboss.org/browse/RHDEVDOCS-290
3341	RHDEVDOCS-290	Thanks. Created new branch "10.1.0-stage" and set up corresponding jobs in Pantheon. Get it on local by running: {code} git checkout --track origin/10.1.0-stage {code} Btw, isn't it weird that there won't be any 10.0.1 version?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-290
3342	RHDEVDOCS-290	Hi [~rkratky], I noticed you didn't make a 10.1.0 master this time, unlike last release. Did this change and I just missed it? Also, re: 10.0.1, there may well be, it usually ties in with the tooling product releases and the plan is usually to look at the upcoming release plus the next one.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-290
3343	RHDEVDOCS-290	bq. I noticed you didn't make a 10.1.0 master this time, unlike last release. Did this change and I just missed it? That's intentional. 10.1.0 is -- at this moment -- the latest we've got, so 'master' is the place to work on 10.1.0 docs. For staging, merge/cherrypick from 'master' to '10.1.0-stage'. As soon as one of the following two things happens, we'll create '10.1.0-master': * docs for an even newer version need to be started * 10.1.0 docs get published to prod.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-290
3344	RHDEVDOCS-283	[~budhrg], [~agajdosi], I modified the instructions to include RHEL Workstation specifics. Could you please have a quick look? file:///home/rkratky/Documents/rh/work/books/cdk/installation_guide/master.html#_installing_software_and_configuring_the_host_system_2	1	1	https://issues.jboss.org/browse/RHDEVDOCS-283
3345	RHDEVDOCS-277	[~apodhrad], can you confirm that the SOA 5.x information should be removed for 10.0, since this should now be deprecated?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-277
3346	RHDEVDOCS-277	[~apodhrad], same as other doc, could you have a look or tag someone from your team if you're busy today? Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-277

#	Requirement	Questions	Answered	Successfully Answered	URL
3347	RHDEVDOCS-267	I thought the main issue with Release Notes was an objection to the current practice of just adding a query in there instead of a list of some sort of of the known and resolved issues. Is that included in this JIRA?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-267
3348	RHDEVDOCS-259	[~eng.praveenkum], is this happening for CDK 2.3?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-259
3349	RHDEVDOCS-254	[~agajdosi], [~arout], could you please review Known Issues for CDK *2.2* [1] and identify the ones that are still relevant for CDK *2.3*? Thanks! [1] https://access.redhat.com/documentation/en/red-hat-container-development-kit/2.2/paged/release-notes-and-known-issues/chapter-3-known-issues	1	1	https://issues.jboss.org/browse/RHDEVDOCS-254
3350	RHDEVDOCS-254	[~agajdosi], [~arout], could you please review the statement about VirtualBox Compatibility [1] and confirm that it's valid for CDK 2.3? Likewise, could you please review the Vagrant Compatibility Matrix [2] and confirm that it's correct for CDK 2.3? [1] http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Release_Notes-branch-master/lastSuccessfulBuild/artifact/index.html#_virtualbox_compatibility [2] http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Release_Notes-branch-master/lastSuccessfulBuild/artifact/index.html#_vagrant_compatibility_matrix	1	1	https://issues.jboss.org/browse/RHDEVDOCS-254
3351	RHDEVDOCS-254	Hello [~rkratky], I updated some known issues in ehterpad. Results of 2.2 KI on 2.3, mostly tested by [~arout], are lower: 3.1.1. DNS service provided by xip.io only works with an Internet connection - Found in 2.3 3.1.2. Red Hat Subscription Delay - succeeded in 5 minutes after registration, however with less luck or faster vagrant up it can be still there, good to mention this general problem in KI I think 3.1.3. The nodejs-4-rhel7 Container Image Does Not Work Behind Proxy - Fixed in 2.3 3.1.4. Credentials Defined in Global Vagrantfile Ignored by vagrant-registration - Fixed in 2.3 3.1.5. Certificate Error upon Log in to OpenShift - Fixed in 2.3 3.1.6. Vagrant Reload Does Not Work behind Proxy - Found in 2.3 3.1.7. Invalid URL Offered upon Registration Fail - Fixed in 2.3 3.1.8. Specifying Path for Installation of Client Binaries Does Not Work as Expected - Fixed in 2.3 3.1.9. The vagrant-registration Plugin Does Not Work with Proxy and Self-Signed TSL Certificate - Needs to be tested 3.2.1. vagrant-registration Plugin on Cygwin Bash Does Not Hide Password - Found in 2.3 3.3.1. The docker command Cannot Communicate with Container Development Kit - Fixed in 2.3 3.3.2. libvirt Fails to Unlink Virtual Machine Image - Fixed in 2.3 Talking about support matrix, I can confirm that CDK 2.3 was tested with Vagrant 1.8.1. on all platforms. We will do more about 1.7.4. tomorrow. About VB - Win7 and Win10 were tested with VirtualBox 5.0.26. On Win7 with VB 5.0.30 I tested vagrant up + OpenShift sanity only now - is ok.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-254
3352	RHDEVDOCS-254	Excellent, thank you [~agajdosi]! One question: bq. 3.1.8. Specifying Path for Installation of Client Binaries Does Not Work as Expected - Fixed in 2.3 In my testing of the latest builds, I was still running into this issue. Could you please confirm or offer more details about the scope of the fix?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-254
3353	RHDEVDOCS-251	[~dgolovin], a few questions about the Mac OS X installer: * does the mac installer also have the Microsoft Visual C++ 2010 SP1 Redistributable Package (x86) as a prerequisite? * does a mac also require the BIOS virtualization option enabled? * where can i download the latest working version of the mac installer at the moment (I'll test this tomorrow on a local mac)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-251
3354	RHDEVDOCS-251	Thanks, [~dgolovin]. Do we support Sierra (10.12) yet, or plan to?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-251
3355	RHDEVDOCS-251	Thanks, [~dgolovin]. I'm adding a draft for you to have a look at if you have time shortly, but have a question about uninstalling on the mac. The current instructions are: * use the command prompt (*cmd*) to run the file. * use the Powershell with the following command: + ---- powershell -ExecutionPolicy bypass -File ${target-folder}\uninstaller\uninstall.ps1 ---- What are the ways to run the file, or powershell (or equivalent) command to run the script) on max os x?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-251
3356	RHDEVDOCS-250	[~dgolovin], can you confirm if the online installer for win (tech preview for 1.1) is now fully supported, or if it remains TP? Same for the Mac OS X version of the online installer?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-250
3357	RHDEVDOCS-250	Thank you, [~dgolovin]. I've fixed it up and the new version without that one JIRA is staged at the same link as before. Are there any other changes or are you happy to ACK this for release?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-250
3358	RHDEVDOCS-249	[~supriya.bharadwaj], I noticed that there is no Mac listed in 8. JBoss Developer Studio 9.0. What happened there? Otherwise it looks good.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-249
3359	RHDEVDOCS-248	Hi [~mhusnain], will it be possible for you to take this up? If I am done with the other release tasks earlier than expected, I'll take care of this. Please let me know. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-248
3360	RHDEVDOCS-248	Hi [~supriya.bharadwaj], 1.3. About this Release JBoss Developer Studio 10.2 is an upgrade of JBoss Developer Studio 10.1. The upgrade has the following purposes: - I know that we've been using this phrasing for a long time now. But I'd suggest to change this. It sounds really a bit strange to say that the purpose of the upgrade is to include Eclipse Neon or EAP 7, when those are not new things in this upgrade. Also, I would suggest saying update instead of upgrade in the first sentence. So how about this? JBoss Developer Studio 10.2 is an update of JBoss Developer Studio 10.1. It has the following features: 1.4. Eclipse Automated Reporting Interface (AERI) - it talks about JBoss Tools CAT being suspended. Maybe it's time to drop it and simply talk about AERI? What do you think? 1.6. Issues - the queries look ok. But what about the issues you added: JBDS-4179 - this was reported by Marian (i.e. not a customer), but there was a duplicate reported by a user, so I guess that's ok - assuming this is what we want. [~mhusnain], where did you get the list of "customer reported issues" in the past? I would expect this to be issues that are reported via our customer portal and not just any user, no? JBDS-4181 - reported by Marian, this shouldn't be there JBDS-4180 - again, reported by Marian JBDS-4204 - reported by a user, but again, it's not clear if this qualifies as a "reported by a customer" Maybe the key thing is whether or not there is a Help Desk Ticket Reference in the JIRA? If that's the case, none of the new issues qualify. But at the same time, there may actually be new JIRAs to add.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-248
3361	RHDEVDOCS-248	[~rkratky] thanks for adding the info! [~mhusnain] and [~mmalina], Robert and I discussed about adding this info to the 1.8 Apply this Release section and decided NOT to add it because that section talks about installing devstudio through 1) Eclipse Marketplace and 2) universal installer. It does not mention anything about other ways to install. So, there is no point adding this to a list that could have also had at least three more ways of installation. Would you two agree? (Also, I think the info is apt where Robert placed it.) Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-248
3362	RHDEVDOCS-247	Supriya, could you find text like "10.1" or "10.1 GA" and replace it with 10.2, please? Please review also chapter 7.2. there is wrong path to DevStudio jar. Build produces file named like this "*devstudio-10.2.0.GA-v20161128-1220-installer-standalone.jar*" and you can find it in this folder */path/to/jbdevstudio-product/installer/target*.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-247

#	Requirement	Questions	Answered	Successfully Answered	URL
3363	RHDEVDOCS-247	When will the new 10.2 docs be live? I only see the 10.1 docs here [0]. [0] https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/10.2/ Marketing announcement of devstudio 10.2 is tomorrow so it'd be good to get this page updated [1] today. [1] https://developers.redhat.com/products/devstudio/docs-and-apis/ See also https://issues.jboss.org/browse/RHD-1808	1	1	https://issues.jboss.org/browse/RHDEVDOCS-247
3364	RHDEVDOCS-247	[~supriya.bharadwaj], can we close this, or is there still some work to do?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-247
3365	RHDEVDOCS-234	gitlab repo created and populated with skeleton.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-234
3366	RHDEVDOCS-234	Ah, got it. I misunderstood when you said you created a new repo. Actually, making it a subdirectory like you did, instead of a whole new repo, makes a lot of sense. Only thing is, this isn't happening for 2.4, so, could you please move it from '2.4-master' to 'master'? (No rush though.)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-234
3367	RHDEVDOCS-234	[~rkratky] This was created a while ago. We have branches for 3.0- and 3.1- master and stage. For 3.1-master, I have topic branches for each jira. I'm going to be importing them into 3.0, wherever I haven't already. Can this be closed? It seems outdated and complete.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-234
3368	RHDEVDOCS-233	Questions for [~lalatendum]: # Can we set up a repo for this doc alongside other docs repos in internal RH Gitlab? (I.e. will devels be able and willing to contribute in that way?) Or is there a more suitable place? # Where would we want to publish this doc? The RH Customer Portal? The RH Developer Portal? (If so, where? How would it fit into the current structure?) Elsewhere?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-233
3369	RHDEVDOCS-233	[~rkratky] +1 to the internal gitlab repo for collaboration. I am sure everyone in CDK team will be willing to participate. Yes, it should somehow be part of landing page of CDK in developers.redhat.com . Can we also release it as a blog? I think blog will get immediate attention.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-233
3370	RHDEVDOCS-233	what information can be removed from the guide? Should it be entire sections, or just reduce the verbiage but leave the sections intact?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-233
3371	RHDEVDOCS-233	Should this be in 3.1, or pushed off further?	0	0	https://issues.jboss.org/browse/RHDEVDOCS-233
3372	RHDEVDOCS-233	[~lalatendum] Do we need another guide, that would be a concise version of the CDK Getting Started Guide? Today in the minishift/CDK docs sync meeting, we briefly discussed how there's a difference between the CDK docs and the minishift docs, but we'd like to move to a common format as much as possible. Is it time to revisit what documents are required, for the 3.2 time-frame? If we simply don't need this kind of document, I'd like to close this request. Thanks.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-233
3373	RHDEVDOCS-233	I think we can close for this. However I have a question, do we have any plan to add manual installation steps for CDK without Devsuite?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-233
3374	RHDEVDOCS-224	[~supriya.bharadwaj], could you please bump this up in your priority list? There is a lot of conversation about this issue on the mailing lists, so we should try to have this documented for users as soon as we can.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-224
3375	RHDEVDOCS-218	[~jrichter1], can you review, please? Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-218
3376	RHDEVDOCS-218	"This article is only valid for Red Hat Development Suite 1.0 and 1.1." Does that mean all the info should be valid for both versions? (even something specific, like the component versions)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-218
3377	RHDEVDOCS-217	[~dgolovin1], would you mind reviewing the doc ? I don't have a Windows machine so I can't verify the steps that Misha documented.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-217
3378	RHDEVDOCS-217	Hi [~dgolovin], Did you mean to add a link to the docker tools in devstudio where we say users should install docker separately? I feel adding a link to our docker tooling may be confusing, as if we are implying a connection between the docker tooling in devstudio and installing docker outside of devstudio. I don't see docker mentioned anywhere else. What do you think?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-217
3379	RHDEVDOCS-216	[~lalatendum], will this be in Banksia? I expect it won't, but just checking.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-216
3380	RHDEVDOCS-214	[~mhusnain], I wonder, you point me to a stage server for the release notes, but release notes is already up live here: https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/?version=10.1/ Are you aware?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-214
3381	RHDEVDOCS-214	I briefly tried to compare http://tools.jboss.org/documentation/whatsnew/jbosstools/4.4.1.Final.html to https://doc-stage.usersys.redhat.com/documentation/en/red-hat-jboss-developer-studio/10.1/single/release-notes/ And I noticed that Hibernate N&N were missing in your document (the release notes). Can you check?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-214
3382	RHDEVDOCS-202	Thanks for the clarification, [~mmalina]. There was some confusion because we had a separate thread about this and then [~rkratky] logged RHDEVDOCS-208 for this. Apologies for the confusion. I'll change the Fedora versions back, and everything else is the same as for 10.0. Does that seem correct to you? (same link as before for review after a few minutes).	1	1	https://issues.jboss.org/browse/RHDEVDOCS-202
3383	RHDEVDOCS-200	[~mhusnain], is the version referred to as 10.0 or 10.0.0?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-200
3384	RHDEVDOCS-200	[~rkratky] do you mean within the docs or on the splash page? We have the full x.y.z format in things like Release Notes titles and within the docs where necessary (such as the support doc). On the splash page itself, the versions rarely go beyond x.y since maintenance releases are included within the y-stream version rather than having their own separate docs version on the splash page. Does that answer the question or did you mean some other context?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-200
3385	RHDEVDOCS-199	[~pleacu], can you confirm which versions (if any) of DV, Fuse and BPM Suite/BRMS are supported for 10.0.0?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-199
3386	RHDEVDOCS-199	[~apodhrad], could you have a quick look at the above today please, or flag someone from your team to have a look if you're busy please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-199
3387	RHDEVDOCS-196	[~mhusnain] now I noticed that the link refers to Release Notes. Could you provide a link which refers to the Configuration Support, please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-196
3388	RHDEVDOCS-195	[~apodhrad], does this looks okay to you now, or should we wait for more issues for the release notes?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-195
3389	RHDEVDOCS-182	Hi [~jrichter1], can you please confirm that there are no changes to the Install instructions at [1] other than the URLs from where the users will download the product (the URLs should now show 10.1 instead of 10)? Thanks! Hi [~akashche], can you please confirm that there are no chnages to be made to the OpenJDK section in [1]? Thanks! [1]: https://access.redhat.com/articles/2358611	1	1	https://issues.jboss.org/browse/RHDEVDOCS-182
3390	RHDEVDOCS-179	Thanks [~mhusnain]. There's one discrepancy. I believe that according to the gdoc, "configuring_devstudio_for_use_with_jboss_eap_and_jboss_web_framework_kit.adoc" should be in "Getting Started with Devstudio Tools": {quote}Chapter 2b: Start Developing Your First Applications with JBoss Developer Studio Tools EAP + WFK (pointer back to the Maven intro for introductory instructions for setting up Maven, if needed){quote} Am I understanding it correctly? To avoid more misunderstandings, could you please sort the topics as well? I think I got it right, but to make sure. You can also see my latest version here: https://gitlab.cee.redhat.com/red-hat-developers-documentation/red-hat-devstudio/tree/topic_fix-get-started-org	1	1	https://issues.jboss.org/browse/RHDEVDOCS-179
3391	RHDEVDOCS-176	[~rkratky], since you have a clone of this one for CDK, do you know who, if anyone, will be giving us a rough timeline to provide to users for new accounts to be picked up by the sub management system?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-176
3392	RHDEVDOCS-176	[~newtonm], pinging again. Could you please provide us with a number that can be used in docs?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-176
3393	RHDEVDOCS-176	WFM, [~rkratky]. Do you want me to keep this issue open while we wait for a definitive answer (and set it to 10.x for post-GA) or are you logging a new JIRA to track the actual answer later?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-176

#	Requirement	Questions	Answered	Successfully Answered	URL
3394	RHDEVDOCS-169	[~mhusnain], do we actually have instructions on Uninstallation? Can I see them? Because you refer to uninstall here and I'm not sure what that involves. And I'm not sure what exactly the installer is capable of detecting now. {quote} If a Vagrant version older than 1.8.1 is installed, uninstall this component before you upgrade. {quote} - This sounds like vagrant is detected during installation. But what if I have vagrant 1.8.1? {quote} If a VirtualBox version older than 5.0.26 is installed, uninstall this component before you upgrade. {quote} - This sounds like VirtualBox is detected during installation. But what if I have version 5.0.26 (or newer)? [~jrichter1], can you review this, please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-169
3395	RHDEVDOCS-169	[~jrichter1], you say: {quote}The supported versions are: * 1.8.1 and newer for Vagrant{quote} I thought QE tests _only_ 1.8.1, not higher (I believe there was a problem with 1.8.5). [~optak], could you comment, please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-169
3396	RHDEVDOCS-169	[~jrichter1], what should we be recommending to users, that specific version and nothing older or newer, or that version plus newer with a cautionary note?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-169
3397	RHDEVDOCS-168	[13:46] <amit_> rkratky, Devsuite installer uses virtualbox 5.0.26 for CDK RC3 [13:54] <agajdosi> rkratky, I used VB 5.0.26 for testing at win7 as dev suite 1.1 recomends it [13:55] <rkratky> amit_, agajdosi, thanks - but is this the only supported version, or .26 and higher? [14:00] <amit_> rkratky, we have no idea if devsuite is going to use the higher version. would you please confirm with devsuite team denis ("Denis Golovin" <degolovi@redhat.com>) [14:01] <rkratky> amit_, yes, I'll do that. But are higher version supported for standalone CDK? [14:14] <lalatenduM> rkratky: we will support the version Devsuite is using , we had some discussion with Denis and team about it in th epast	1	1	https://issues.jboss.org/browse/RHDEVDOCS-168
3398	RHDEVDOCS-168	[~dgolovin1], could you please confirm the supported version(s) of VirtualBox for devsuite 1.1? Is it only 5.0.26 (higher?), or other versions as well?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-168
3399	RHDEVDOCS-168	{quote}Denis Golovin: Vagrant 1.8.1 cannot detect latest VirtualBox 5.1.X installed during vagrant up and starts download for VirtualBox 5.0.10 in order to proceed. If you let it finish it will downgrade installed VirtualBox 5.1.X to 5.0.10 and continue with 'vagrant up'. Should we mention that somewhere in release notes?{quote} [~dgolovin1], I assume this is only true on Windows. Is that correct?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-168
3400	RHDEVDOCS-167	[~optak], could you please confirm (or deny) that QE tested starting CDK with the following option set in the Vagrantfile? config.registration.skip = true Thank you.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-167
3401	RHDEVDOCS-164	Can you [~pavanbhat] check also fedora? I expect there will be ruby-devel from default repo, but it need to be checked for compatibility (and s/yum/dnf for fedora).	1	0	https://issues.jboss.org/browse/RHDEVDOCS-164
3402	RHDEVDOCS-162	Are we good to resolve this issue, [~rkratky]?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-162
3403	RHDEVDOCS-162	Hi [~rkratky], thanks for the fix! I had a look at the changes you made here: https://gitlab.cee.redhat.com/red-hat-developers-documentation/red-hat-devstudio/commit/cab282f980982068cc5cf8b09eda82169a723167. I understood most of it but there are a few that I did not understand may be because I am not used to looking at these files for changes. Will it be too much for you to run me through the changes you made so that, going forward, I can keep these in mind? May be a quick bjn whenever you have time?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-162
3404	RHDEVDOCS-155	Thanks, [~pleacu]. Fixed the formatting issue. I'll also be requesting a redirect from the old support page to this one since we've just moved to this new toolchain. I anticipate no issues, but just FYI. Could you have a look at that and let me know if you're happy for me to close this issue off now?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-155
3405	RHDEVDOCS-155	Thanks, [~tsedmik]! Could you have a look (same URL) now and let me know if this is okay/if there are any other changes required?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-155
3406	RHDEVDOCS-130	[~supriya.bharadwaj] - how is this looking for release?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-130
3407	RHDEVDOCS-122	Hi [~budhrg], I added a section [1] about using CDK behind a proxy to the CDK Installation Guide. Could you please review it? I'm unsure about the configuration using the VSM plugin. I used the Vagrantfile syntax from [2]: {code:ruby} config.servicemanager.http_proxy = '<proxy-server>:<port>' config.servicemanager.http_proxy_user = '<username>' config.servicemanager.http_proxy_password = '<password>' config.servicemanager.services = 'docker, openshift' {code} but when I look at the rhel-ose Vagrantfile supplied in the cdk.zip file, I see the following: {code:ruby} ENV['PROXY'] ? (config.registration.proxy = PROXY = ENV['PROXY']) : PROXY = '' ENV['PROXY_USER'] ? (config.registration.proxyUser = PROXY_USER = ENV['PROXY_USER']) : PROXY_USER = '' ENV['PROXY_PASSWORD'] ? (config.registration.proxyPassword = PROXY_PASSWORD = ENV['PROXY_PASSWORD']) : PROXY_PASSWORD = '' {code} This looks as if the vagrant-registration plugin is used to set the proxy environment variables within CDK. So, which is the preferred way? ---- Also, there's the following in the default Vagrant file: {code:ruby} # prevent the automatic start of openshift via service-manager by just enabling Docker config.servicemanager.services = "docker" {code} However, the example you included in the PR comment on GitHub starts both Docker and OpenShift. Does this mean that the fourth line (config.servicemanager.services = 'docker, openshift') should be removed from the VSM proxy instructions? Thanks! [1] http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#_setting_up_container_development_kit_for_use_behind_an_http_proxy_3 [2] https://github.com/projectatomic/vagrant-service-manager/pull/400#issuecomment-251665902	1	1	https://issues.jboss.org/browse/RHDEVDOCS-122
3408	RHDEVDOCS-122	Hi [~budhrg]. Thank you for the detailed explanation -- much appreciated. I modified the doc to reflect this information. Could you please check it again at [1]? I have one follow-up question: Do I understand it correctly that in order for the the _registration process_ to work behind a proxy, the proxy-related environment variables need to be set manually before 'vagrant up'? I.e. the VSM proxy settings don't work for the reg. process. [1] http://ccs-jenkins.gsslab.brq.redhat.com:8080/view/Topic%20branches%20-%20CDK/job/doc-Container_Development_Kit-Installation_Guide-branch-master/lastSuccessfulBuild/artifact/index.html#_setting_up_container_development_kit_for_use_behind_an_http_proxy_3	1	1	https://issues.jboss.org/browse/RHDEVDOCS-122
3409	RHDEVDOCS-122	[~budhrg], again, thanks for the detailed explanation. I have one additional follow-up question: Based on what you wrote in the gist, I expect that if the user wants to use VSM to set up proxy and, at the same time, wants to use the k8s Vagrantfile (i.e. not the rhel-ose Vagrantfile you described in the gist), then the following lines need to be removed from that Vagrantfile: {code:ruby} # prevent the automatic start of openshift via service-manager by just enabling Docker config.servicemanager.services = "docker" # Explicitly enable and start kubernetes config.vm.provision "shell", run: "always", inline: <<-SHELL PROXY=#{PROXY} PROXY_USER=#{PROXY_USER} PROXY_PASSWORD=#{PROXY_PASSWORD} /usr/bin/sccli kubernetes echo "kubernetes single node cluster setup successfully" SHELL {code} Is that correct? Or is the VSM proxy solution only valid for the rhel-ose Vagrantfile?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-122

#	Requirement	Questions	Answered	Successfully Answered	URL
3410	RHDEVDOCS-120	Two questions: a) we have some known issues with installation of 3rd party software INTO devstudio when it's been installed via RPM. These are NOT a problem when installed into devstudio installed via installer/updatesite/Marketplace, only when using the devstudio rpm. From devstudio integration stack: * Teiid Designer 10.0.x (fixed in 11.0) * SwitchYard 2.2.0 Other 3rd party tools: * Spring IDE 3.7.3 to 3.8.2 (fixed in 3.8.3.CI) * ZeroTurnaround JRebel 7.0.0 (fixed in 7.0.1.CI) * Atlassian connector for Eclipse (fix possible if I can fork their code and run their Ant build successfully) How should this be documented? I can help with screenshots and steps to reproduce the problem, or URLs to provide workarounds (nightly sites that work rather than release sites that don't). b) How should I label the rpm download page so it's clear the rpm is technology preview? Should this label also be in the rpm's metadata so a yum search will state that information too? Currently: {code} Name : rh-eclipse46-devstudio Arch : x86_64 Epoch : 0 Version : 10.2 Release : 0.20161122.1325.el7 Size : 373 M Repo : @System From repo : rh-eclipse46-devstudio-snapshot-10.2 Summary : Red Hat Developer Studio URL : http://developers.redhat.com/products/devstudio/overview/ License : EPL Description : Red Hat Developer Studio. {code} I can change the Summary or Description [2] fields as you'd like. [1] https://github.com/jbdevstudio/jbdevstudio-product/blob/master/rpm/devstudio.spec.template#L11 [2] https://github.com/jbdevstudio/jbdevstudio-product/blob/master/rpm/devstudio.spec.template#L53-L54	1	1	https://issues.jboss.org/browse/RHDEVDOCS-120
3411	RHDEVDOCS-120	re: labelling the rpm, I've been told: {quote}(2016-11-24 12:39:49) mbenitez: nboldt, fwiw I don't remember any rpms being built with tech preview metadata when I used to do productization work, everything was explained in rel notes / mktg announcements (2016-11-24 12:45:07) mbenitez: nboldt, yes, I just talked to a couple of the top prod people in EAP prod team and they confirmed{quote} and{quote}(2016-11-24 12:56:39) nboldt: mbenitez: so I should stick "Technology Preview" into the HTML on a /stable/ URL? (2016-11-24 12:59:19) mbenitez: nboldt, I don't think it's necessary, unless you want to add an extra layer of information{quote} re: how to *unbreak your install* if you accidentally do so via installation of a 3rd party feature/plugin, I put comments in the google doc. re: workarounds for how to install stuff previously available in Central ... I can provide links for installation alternatives if we want to suggest people use nightly builds in place of GA releases. Do we want to suggest that? Or is it better to tell people, "Sorry, there's no supported version of Teiid Designer 10.x for Devstudio 10.2 rpm; if you want Teiid Designer 10.x in Eclipse on RHEL, use the installer jar [1] instead of the rpm." ?? [1] http://developers.redhat.com/products/devstudio/download/	1	1	https://issues.jboss.org/browse/RHDEVDOCS-120
3412	RHDEVDOCS-120	bq. I can provide links for installation alternatives if we want to suggest people use nightly builds in place of GA releases. Do we want to suggest that? No, we definitely don't want to suggest anything of the sort. bq. Or is it better to tell people, "Sorry, there's no supported version of Teiid Designer 10.x for Devstudio 10.2 rpm; if you want Teiid Designer 10.x in Eclipse on RHEL, use the installer jar [1] instead of the rpm." ?? Exactly -- that's what we need to do. GSS would have our hides if we did otherwise.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-120
3413	RHDEVDOCS-116	Hi [~mhusnain], could you please contact the people from "your" docs plans and request their final approval? I did so for CDK, and I indicated that unless they voice any complaints by the end of this week, I'll consider the plan approved. Note: All four plans (CDK, devsuite, devstudio, devstudio-is) were formally presented to the whole group last week during the program call.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-116
3414	RHDEVDOCS-112	[~rkratky], if you have time, could you upload this adoc file to the devstudio-is repo so I can get back to work directly in there on Tue?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-112
3415	RHDEVDOCS-112	[~rkratky], can you ping [~apodhrad] here when you have merged the changes and this is ready to review?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-112
3416	RHDEVDOCS-112	[~apodhrad], Misha has updated the following two docs for devstudio-is 9.0.1: * Components and Supported Configurations - http://jenkinscat.gsslab.pnq.redhat.com:8080/view/Devtools/job/doc-devstudio-is_Components_and_Supported_Configurations%20(html-single)/lastSuccessfulBuild/artifact/index.html * Release Notes - http://jenkinscat.gsslab.pnq.redhat.com:8080/view/Devtools/job/doc-devstudio-is_Release_Notes%20(html-single)/lastSuccessfulBuild/artifact/index.html Could you please review them and let us know whether any other changes are required?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-112
3417	RHDEVDOCS-112	[~mhusnain], could you update the versions to 9.0.1.GA, please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-112
3418	RHDEVDOCS-112	Thanks, Robert. [~apodhrad], are you happy to consider these two documents ok for release at this point?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-112
3419	RHDEVDOCS-111	[~dgolovin1], during today's program call, you mentioned that the devsuite installer detects Cygwin. Does this mean that the issue mentioned in JBDS-3862 has been resolved? The JIRA doesn't seem to state that clearly.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-111
3420	RHDEVDOCS-109	[~mhusnain], this seems kinda stale... Is it still relevant? Also, can you offload it on Supriya?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-109
3421	RHDEVDOCS-102	[~mmalina], [~ldimaggio], do you remember this? Did we actually publish an installer for this?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-102
3422	RHDEVDOCS-101	[~gercan], I'm clearing out some of the lower priority issues we've had open for some time. Could you comment on whether this issue is still relevant, and if it is, I'll document it, otherwise we'll just close it as outdated. Thank you in advance!	1	0	https://issues.jboss.org/browse/RHDEVDOCS-101
3423	RHDEVDOCS-101	Hey [~gercan], the link to the docs is included above. Could you have a look and let me know if this is still required, please? Thanks!	1	0	https://issues.jboss.org/browse/RHDEVDOCS-101
3424	RHDEVDOCS-100	[~mmurray] should this JIRA be moved to TOOLSDOC? Is there a section in the install guide or GSG about multi-user windows installs ?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-100
3425	RHDEVDOCS-100	This is potentially worth documenting in the new Forge doc if it is still valid. [~supriya.bharadwaj], since you recently worked on Forge, can you touch base with the relevant SMEs about whether this is still valid for devstudio or if we can just close this as outdated?	1	0	https://issues.jboss.org/browse/RHDEVDOCS-100
3426	RHDEVDOCS-100	Hi [~nickboldt], is this still valid for Devstudio 10? Thanks!	1	0	https://issues.jboss.org/browse/RHDEVDOCS-100
3427	RHDEVDOCS-84	Hi [~ldimaggio], [~mmalina], [~omajid], [~akashche] I have incorporated your feedback in the doc [1]. Can you all please go through it once before I can publish it on the Portal. Thanks for your review on this! [1]: https://docs.google.com/document/d/1fpz8zvDQAh8YMobyKvJVmP8Vk58B_69keYa-2IJK0BM/edit#	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84

#	Requirement	Questions	Answered	Successfully Answered	URL
3428	RHDEVDOCS-84	Hi Martin, _At the top, you start with Install OpenJDK 8. I understand that we want to promote our own OpenJDK for Windows, but we still support OracleJDK just the same. We don't want users that already have (or prefer) OracleJDK 8 installed to think that they need OpenJDK 8._ I was told that OpenJDK should be the preferred option. Is that not the case? Also, the section about installing OpenJDK starts with: _"Red Hat JBoss Developer Studio 10 requires Java 8 to run. Before commencing the installation of devstudio, make sure that Java 8 is installed on your system. Unless you already have Java 8 installed on your system, use the OpenJDK distribution provided by Red Hat."_ I would say that this makes it clear that OpenJDK isn't required -- but it's there for those who don't have any Java yet. _I actually think that we shouldn't have a specific Install OpenJDK/Java chapter - we should just start with the requirements. Most installation guides start with requirements. The requirements chapter link the support matrix document and it does mention java also, so we could just expand this to say that if you wish to install OpenJDK 8, you can check http://developers.redhat.com/products/openjdk/overview/ - that includes all the information._ Historically, it hasn't been possible to rely on info on dev.rh.com. Also, I'd argue that "official" docs should contain _all_ instructions. It's nice to have some whittled down version for quick start on dev.rh.com, but it's not a full substitute. So, I think we should keep the instructions (though we might want to further improve and reorganize the doc as you suggested).	0	0	https://issues.jboss.org/browse/RHDEVDOCS-84
3429	RHDEVDOCS-84	_I was told that OpenJDK should be the preferred option. Is that not the case?_ I'm not sure. Who told you that? :) I assume that Red Hat want to promote open source technologies, so in that sense we probably want to encourage users to use OpenJDK. But from the point of view of testing and what we support, there shouldn't be any difference for the user - it shouldn't really matter if a user chooses to use Oracle JDK or OpenJDK, both are equally supported. I agree now that it's clear that OpenJDK is not required from this paragraph: {quote} Red Hat JBoss Developer Studio 10 requires Java 8 to run. Before commencing the installation of devstudio, make sure that Java 8 is installed on your system. {quote} But perhaps that text should be above Install OpenJDK 8? Because it's not really part of OpenJDK 8 installation. I get your argument for including all instructions in this doc, so that's fine. I wanted to check what other products do and these are my findings: It varies from product to product. For example the EAP installation guide only specifies Java as a requirement, but doesn't say how to install it: https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/installation-guide/ "Ensure that a supported Java Development Kit (JDK) has been installed." On the other hand, JBoss Web Server install guide does include that: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Web_Server/3/html-single/Installation_Guide/index.html#chap-Installing_JBoss_Web_Server_on_Microsoft_Windows JBoss ON only points to their support matrix document: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Operations_Network/3.3/html-single/Installation_Guide/index.html {quote} The list of supported platforms, databases, and other requirements such as Java, are listed at https://access.redhat.com/knowledge/articles/112523. {quote} So both approaches are probably fine. But in any case the information has to be correct, which it currently is not :)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84
3430	RHDEVDOCS-84	bq. I'm not sure. Who told you that? I asked about it specifically during one of the program calls before the Summit ("So, when the official OpenJDK builds become available, should the docs say that it's the preferred way to run devstudio?" -- "Yes, that's correct."). I don't remember who supplied the answer though. bq. But perhaps that text should be above Install OpenJDK 8? Because it's not really part of OpenJDK 8 installation. Agreed. bq. I wanted to check what other products do and these are my findings: It varies from product to product. Ideally, all our docs should be consistent, but we're mostly trying to hang in there... bq. But in any case the information has to be correct, which it currently is not Right.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-84
3431	RHDEVDOCS-84	Summary ([~supriya.bharadwaj], could you please look at this when working on RHDEVDOCS-98?): * Move the following text above "Install OpenJDK 8" because it's not really part of OpenJDK 8 installation. "Red Hat JBoss Developer Studio 10 requires Java 8 to run. Before commencing the installation of devstudio, make sure that Java 8 is installed on your system." * Instructions about openjdk installation need fixing in a similar way that RHDEVDOCS-97 suggests. For example you cannot have a paragraph that says "to install openjdk, install devsuite" and then right below say "install the msi installer". * Information that this is all 64-bit Windows only is missing from the text.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84
3432	RHDEVDOCS-84	Hi [~mmalina], I have incorporated your feedback. Can you please have a look at https://docs.google.com/document/d/1fpz8zvDQAh8YMobyKvJVmP8Vk58B_69keYa-2IJK0BM/edit?pli=1#heading=h.utrct4nxovxn? Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84
3433	RHDEVDOCS-84	[~supriya.bharadwaj], I looked at the current version and it looks good. Good job! I have one small suggestion. In the note about devsuite ("Note: You can also install Devstudio as part of Red Hat Development Suite.") - perhaps we should also mention up front that this is 64-bit Windows 7,8 and 10 only? You can read that information from the linked devsuite install guide, but I think it would be nice to mention it here also. WDYT?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84
3434	RHDEVDOCS-84	Hi [~mmalina], I have added the 64-bit Windows sentence to the note. Can you please have a look so that we can wrap this up. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-84
3435	RHDEVDOCS-82	Attaching a screenshot in case someone is unable to view the draft, but this is where I think it makes sense to add a note about making sure the env variable is correctly set. The change is also visible here: https://access.redhat.com/node/2388671/draft [~mmalina], would you mind reviewing this?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3436	RHDEVDOCS-82	I'm afraid it's not correct: 2. Press the Ctrl and 3 keys and in the Quick Access bar, type Launch CDE (for Container Development Environment). 3. From the results, click Launch CDK Server. - it's inconsistent now. Step 3 needs to change also. Also, are you sure about the need for $VAGRANT_HOME? [~rob.stryker], can you confirm?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3437	RHDEVDOCS-82	_I'm afraid it's not correct:_ _2. Press the Ctrl and 3 keys and in the Quick Access bar, type Launch CDE (for Container Development Environment)._ _3. From the results, click Launch CDK Server._ _it's inconsistent now. Step 3 needs to change also._ [~mmalina], I know it appears inconsistent, but does the UI really say "Launch CDE Server"? I cannot test this at the moment.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3438	RHDEVDOCS-82	[~rkratky], are you implementing the changes yourself? Feel free to assign this issue to yourself if you are, it gets it off my to-do list. :)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3439	RHDEVDOCS-82	Thanks, [~mmalina], that's really good feedback! I've changed the text to this: _____ If an error appears about the {rhcdk} adapter not being able to find the Vagrant metadata and plugins, ensure that the VAGRANT_HOME variable is pointing to a non-default location (the default location is ~/.vagrant.d). To change the environment variable value, use the CDK Launch Configuration > Environment Variables tab. _____ Does this seem okay to you now?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82

#	Requirement	Questions	Answered	Successfully Answered	URL
3440	RHDEVDOCS-82	[~mhusnain], I'm sorry, but "ensure that the VAGRANT_HOME variable is pointing to a non-default location" sounds to me like asking users to point it to a non-default location. Is my understanding of English wrong here? I thought that's how the word "ensure" is usually used, no? And we want the exact opposite - make sure the variable is either not set at all or set to the default location. Instead of "ensure that" I would put "check if". And add: "If set, it needs to be pointed to the default location."	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3441	RHDEVDOCS-82	Sorry, [~mmalina], I misunderstood your comment from before and thought that is what we wanted to advise. How is this: _____ If an error appears about the Red Hat Container Development Kit adapter not being able to find the Vagrant metadata and plugins, check whether the VAGRANT_HOME variable is pointing to the default location (~/.vagrant.d). To change the environment variable value, use the CDK Launch Configuration > Environment Variables tab. _____	1	1	https://issues.jboss.org/browse/RHDEVDOCS-82
3442	RHDEVDOCS-75	[~rkratky], can you provide a quick note on where you got to with this issue so that I know where to pick it up again? At the moment, it looks like a lot of discussion across article comments, emails, and possibly in IRC.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-75
3443	RHDEVDOCS-75	Thanks, [~dgolovin]. I've fixed the social accounts thing and the recurring link. The registration delay issue is an open issue and being tracked for devsuite here: https://issues.jboss.org/browse/RHDEVDOCS-176 As you can see in the JIRA, we're waiting to hear about a definitive interval to recommend to users, so I'll add that when we get a response on that JIRA. For the rest, does the text now look okay to you (same link)? If so, I'll set this issue to resolved. Thanks again!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-75
3444	RHDEVDOCS-75	[~dgolovin], [~mmalina], can one of you review this please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-75
3445	RHDEVDOCS-73	Hi [~mlabuda] and [~fbricon], can you please review the article at: https://docs.google.com/document/d/15D17sS76YyS59_tIovgYI5YP0Iyw0iMGq3ri2r7Ift4/edit#? I have followed the video that Fred suggested (his Microservices demo) and have not yet tested the steps (shall do that tomorrow when I procure a Windows machine). So, it'll be great if you can let me know of any detail that I may have missed out on. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-73
3446	RHDEVDOCS-73	Hi [~fbricon], I have incorporated your feedback and have also made some minor changes in the document based on your feedback. Can you please have a look at it [1] and let em know if the doc is okay now? Thanks! [1]: https://docs.google.com/document/d/15D17sS76YyS59_tIovgYI5YP0Iyw0iMGq3ri2r7Ift4/edit#	1	1	https://issues.jboss.org/browse/RHDEVDOCS-73
3447	RHDEVDOCS-73	Hi [~mhusnain], can you please peer review this doc [1]? Please note, that after trying my best, I could not test the entire procedure due to a CDK issue that I am facing. But, the article is reviewed by Fred, Ondrej, Radim, and Marian and they have all okay'd it for accuracy of content. Thanks! [1]: https://docs.google.com/document/d/15D17sS76YyS59_tIovgYI5YP0Iyw0iMGq3ri2r7Ift4/edit#	1	1	https://issues.jboss.org/browse/RHDEVDOCS-73
3448	RHDEVDOCS-72	[~supriya.bharadwaj], today is release day, can you let me know the status and if the changes are updated in the repo?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-72
3449	RHDEVDOCS-72	Yes, Misha. One of the articles (RHDEVDOCS-73) is with the QE for review and that's the same article that I am testing. I am waiting for the QE (Marian) to get back on this (I pinged Marian y'day to check if he has gotten to review it, but it seems he was busy with something). The other two articles: - RHDEVDOCS-74: Has one section complete; I and Fred have been working on what more needs to be added to the article - RHDEVDOCS-72: I had an IRC chat with Marian about this article because Fred, who suggested for this use case being documented, couldn't provide any video/doc that I can have a look at to begin work on this. Marian will get back about this after GA. Does that clarify things? Please let me know if it doesn't.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-72
3450	RHDEVDOCS-65	[~mhusnain][~supriya.bharadwaj] Scope is a tricky word, I noticed that one of our key/focal mobile docs has no mention of "Red Hat Mobile (aka Feed Henry)". https://access.redhat.com/articles/1295913 Can you provide me with URLs to the docs you mention in the comment? It could be that all we need to do is link one doc to the other.	1	0	https://issues.jboss.org/browse/RHDEVDOCS-65
3451	RHDEVDOCS-65	What is the status on this? Please follow up with Burr.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-65
3452	RHDEVDOCS-65	Hi Supriya, can you follow up on this with Burr or Alexey one last time to see if you can determine the required use case for this. If not, we'll just close it because we don't have enough information to do anything else with it.	0	0	https://issues.jboss.org/browse/RHDEVDOCS-65
3453	RHDEVDOCS-65	Hi [~akazakov], I see that you had asked [~gercan] for his input on this. If this is no longer relevant, we may want to close this issue. WDYT? -Thanks	1	0	https://issues.jboss.org/browse/RHDEVDOCS-65
3454	RHDEVDOCS-55	I reviewed the section and commented in the doc. BTW, do we have any documentation of the different vagrantfiles? I can see that there is a README file in components/rhel/misc/shared_folder/rhel-ose/README.rst, but that doesn't say anything about the shared folders / sshfs. Do we have anything in the overall cdk documentation online?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-55
3455	RHDEVDOCS-55	BTW, [~rkratky], I cannot access https://access.redhat.com/articles/2361631 ATM - access denied. Is it not yet published?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-55
3456	RHDEVDOCS-55	One more thing, [~mhusnain], I don't quite understand this at the beginning: {quote} There are two ways to install the Red Hat Container Development Kit with JBoss Developer Studio: Installation and configuration in one of two ways: 1. a. Automatically install and configure the Red Hat Container Development Kit and Red Hat JBoss Developer Studio using the Red Hat JBoss Developer Studio Platform Installer. b. Manually download, install, and configure the Red Hat Container Development Kit and Red Hat JBoss Developer Studio. 2. Use the installed components for Container-Based Development. {quote} Which are the two ways? I would think that the two ways are automatic or manual installation, i.e. 1.a. and 1.b. So what is 2. then? If it's about using docker and openshift, then that's surely not one of the ways to install it, no?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-55
3457	RHDEVDOCS-52	[~mlabuda], can we call this doc complete or are we looking at more edits please. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-52
3458	RHDEVDOCS-52	Hi [~mhusnain], can you please publish these upstream. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-52
3459	RHDEVDOCS-49	[~optak], is sshfs replacing all sync methods (NFS, VirtualBox shared folders), or only rsync? Even if the other methods remain available, do we want docs to mention them, or only mention sshfs?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-49
3460	RHDEVDOCS-49	Also, rsync was used during the provisioning phase in 2.0, i.e. rsync needed to be installed (Vagrant wouldn't start on Win without rsync.exe in PATH). Is this still the case, or is rsync now not needed at all?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-49
3461	RHDEVDOCS-44	Hi [~mlabuda], can you please review the artilce at: https://docs.google.com/document/d/1Nq7DogBtqVhPqxYFwER-CfzU2uK0dZHBFeNAO2Nf_xw/edit#heading=h.7o8zpk6u9vhw. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-44
3462	RHDEVDOCS-44	> WIP: Incorporating Marian's feedback	1	1	https://issues.jboss.org/browse/RHDEVDOCS-44
3463	RHDEVDOCS-44	Hi [~mlabuda], do you think this article looks good now? Or are we looking at more edits? Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-44
3464	RHDEVDOCS-44	Hi [~mhusnain], can you please publish these in the community. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-44

#	Requirement	Questions	Answered	Successfully Answered	URL
3465	RHDEVDOCS-41	[~ldimaggio] good question and I'm not sure. Can you tag the person who would have the information for Hibernate versions for the 9.x and 10 release?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3466	RHDEVDOCS-41	Wouldn't this be Nick? [~nickboldt]	0	0	https://issues.jboss.org/browse/RHDEVDOCS-41
3467	RHDEVDOCS-41	[~nickboldt], can you let me know the Hibernate versions please, or we'll have to release as-is without this information. Thanks! :)	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3468	RHDEVDOCS-41	[~mhusnain], right now we cannot view neither https://access.redhat.com/node/427493/ nor https://access.redhat.com/node/427493/draft. Both give access denied. This is a big issue, because the former is live document that is linked from many places. Have you accidentally made the document inaccessible? Update: This is now fixed and the old version is now published again and viewable without logging in.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3469	RHDEVDOCS-41	Regarding the hibernate versions. [~mhusnain], can you check the previous versions to see why/when were the hibernate versions removed? Or did we never have them listed for devstudio 9?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3470	RHDEVDOCS-41	Thanks Martin and Rastislav! [~kaerts], could you confirm the above please?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3471	RHDEVDOCS-41	Thanks, Koen. Since we had some unexpected behaviour with customer portal articles not displaying at all when in draft state, I've saved the 10 version here instead: https://access.redhat.com/articles/2377301 I'll copy the contents from this article to the original one for GA to prevent breaking any links to the old doc. [~mmalina], is the content at the new link looking ok?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-41
3472	RHDEVDOCS-40	Copied over and updated document here: https://access.redhat.com/articles/2360061 [~mmalina], could I get you to review the updates, which are as follows: * the "Update a JBoss Developer Studio 10.x Installation" section is entirely new * the table in the "Update the Version of Eclipse Used with JBoss Developer Studio BYOE" section has a new row for 10.0	1	1	https://issues.jboss.org/browse/RHDEVDOCS-40
3473	RHDEVDOCS-40	Can we add a note to the document informing the users that while they cannot update from DevStudio 9 to 10, they are able to use workspaces created with DevStudio 9 with DevStudio 10? Thx!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-40
3474	RHDEVDOCS-40	[~ldimaggio] no problem. Added the bold line to the paragraph: Each major version of JBoss Developer Studio is based on a different version of Eclipse. As a result, it is not possible to update an older major version of JBoss Developer Studio to a newer major version. For example, it is not possible to update a devstudio 8.x installation to 9.x, nor is it possible to update a 9.x installation to 10.x. *However, it is possible to use the workspaces created using JBoss Developer Studio 9.x with JBoss Developer Studio 10.x.* Does this look OK to you as well now? Edit: Link to verify - https://access.redhat.com/articles/2360061	1	1	https://issues.jboss.org/browse/RHDEVDOCS-40
3475	RHDEVDOCS-39	Is this just for CDK 2.1, or does it apply to 2.0 as well?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-39
3476	RHDEVDOCS-38	I was given this bit of (unverified) info by one of ADB devs: "Apparently docker-1.10 and docker-1.9 can both pull containers without regard to which version built the container as long as the pull is done by tag. If you pull by SHA-256 digest, images built with docker-1.10 cannot be pulled by docker-1.9. I have not independently verified this information yet." Could you confirm that this is the case, please? [~optak]	1	1	https://issues.jboss.org/browse/RHDEVDOCS-38
3477	RHDEVDOCS-33	[~mmalina], could you or someone on your team have a look at this and review please. I have a couple of things in particular to confirm with QE: - In the **About This Release** section: a. "It includes Eclipse Neon" - Formerly, this was Eclipse Mars.1 for 9.1. Do we need to state anything other than Eclipse Neon for 10? b. "t requires a minimum of Java 8 to run." - Is this still true? I'll fill in the N&N content once that is available, but I'd like to get review on the rest earlier, if possible.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-33
3478	RHDEVDOCS-33	I have another comment: While it's true that we still require Java 8 to run devstudio, I wonder if we need this mentioned in the About This Release article. Because it says: {quote}The upgrade has the following purposes: ... It requires a minimum of Java 8 to run.{quote} I don't think it makes sense to say that the java 8 requirement is one of the purposes of the new version. Another issue is here: Apply This Release To install JBoss Developer Studio BYOE 10.0 in Eclipse Mars ... - this needs to be updated to say "Eclipse Neon" Another thing I was wondering about: Do we need to keep repeating all that stuff in About Red Hat JBoss Developer Studio and Use Cases for JBoss Developer Studio ? Especially since it's just copy&paste from the previous release. Maybe the first short overview would be enough? [~ldimaggio], what do you think? And now the usual thing - JIRA queries :) Resolved Issues Right on the first sight I can see that it's wrong - the versions simply don't match: {code} (project in (JBDS) AND affectedVersion < 10.0.0.GA AND fixVersion in (10.0.0, 10.0.0, 10.0.0.Alpha2, 10.0.0.Alpha3, 10.0.0.Alpha4, 10.0.0.Alpha5, 10.0.0.Alpha6, 10.0.0.Beta1, 10.0.0.Beta2, 10.0.0.CR1, 10.0.0.CR2, 10.0.0.CR3, 10.0.0.CR4, 10.0.0.CR5, 10.0.0.Final, 10.0.0.GA) OR project in (JBIDE) AND affectedVersion < 4.4.0.GA AND fixVersion in (4.4.0.Alpha1, 4.4.0.Alpha1-TP, 4.4.0.Final, 4.4.0.GA)) AND type in (Bug) AND resolution in (Done) {code} Can you fix that? Thanks! Likewise for the Known Issues query - please fix the versions, there is no 4.4.0.GA.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-33
3479	RHDEVDOCS-33	Thanks for the feedback, [~mmalina] 1. "This upgrade has the following purposes" - You're right, this sounds odd. I've changed it to features. 2. s/Mars/Neon in one instance 3. For the introductory matter, we include it because we have to provide such context for releases. I've removed the extra matter such as style and legal information, if you compare to the previous ones. 4. Sorry, I'm not sure I understood the problem with the query. Is it just that there isn't a 4.4.0.GA version, or is there something else wrong in there?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-33
3480	RHDEVDOCS-33	[~mmalina], could you let me know what the issue is with the query please? And any other issues, please let me know so I can lock this down for GA.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-33
3481	RHDEVDOCS-26	[~rkratky], I can't seem to access the devtools-team list archives. Can you paste the subject of the thread in question so I can look it up, since I am subscribed to the list in my inbox anyway.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-26
3482	RHDEVDOCS-26	[~rkratky], ping - have you heard any more about this?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-26
3483	RHDEVDOCS-18	Hi [~supriya.bharadwaj], How does it look with the images? Anything I can help with?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-18
3484	RHDEVDOCS-18	Hi [~rkratky], I am afraid I have not been able to work on those. Was busy filling my Compass on Friday and on Monday was trying to get the OpenShift 3 things sorted for the devstudio 10 release. I'll work on the images today and tomorrow, so that I can send them to you by tomorrow EOD (June 08). Is that okay?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-18
3485	RHDEVDOCS-16	> Completed conversion to adoc [~mhusnain], can you please post these upstream. Thanks!	0	0	https://issues.jboss.org/browse/RHDEVDOCS-16
3486	RHDEVDOCS-16	Hi [~mhusnain], I don't think you created a PR for this article for upstream. Can you please do that so that I can resolve this issue (or we ca do this when you walk me through creating a PR as we discussed y'day). The doc's published downstream for the 10.0 release. Thanks!	0	0	https://issues.jboss.org/browse/RHDEVDOCS-16

#	Requirement	Questions	Answered	Successfully Answered	URL
3487	RHDEVDOCS-14	Found the following issues that may affect documentation: JBIDE-22146 - OpenShift - Create Resource wizard = automated way to "oc create" JBIDE-21806 - OpenShift - Create OS service adapted from service/route context menu JBIDE-21524 - OpenShift - deploymet view added JBIDE-21519 - OpenShift (related to above) - builds tab for deployment view JBIDE-21328 - OpenShift - Create Server Adapter for OpenShift 3 applications JBIDE-20990 - CDK - Add "CDK Server" for start/stop for the CDK JBDS-3846 - CDK - Create container oriented perspective (not done yet, but a good one to plan on for later) Added for Platform Installer: JBDS-3787 Installer - Installation of each component should be optional JBDS-3666 - Back off and retry if download fails	0	0	https://issues.jboss.org/browse/RHDEVDOCS-14
3488	RHDEVDOCS-13	Hi [~supriya.bharadwaj], can you add the status for this here and whether it will be ready for GA.	1	1	https://issues.jboss.org/browse/RHDEVDOCS-13
3489	RHDEVDOCS-13	Hi [~mhusnain], can you please post the article upstream. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-13
3490	RHDEVDOCS-13	Hi [~mhusnain], can you please create a PR for this to be published upstream? The doc's published downstream for the 10.0 release. Thanks!	1	1	https://issues.jboss.org/browse/RHDEVDOCS-13
3491	RHDEVDOCS-10	[~rkratky], what is the scope for these changes? * Just for devsuite docs * devsuite + devstudio 10 * devsuite + devstudio <currently released version, possibly 9.1> onwards	1	1	https://issues.jboss.org/browse/RHDEVDOCS-10
3492	RHDEVDOCS-10	[~rkratky], I was looking into the devstudio docs and it looks like all instances of naming should be covered by the common content definitions now. Do you think this is still worth combing through the docs?	1	1	https://issues.jboss.org/browse/RHDEVDOCS-10
3493	RHDEVDOCS-2	Thanks Robert for link .. yes it fulfills the requirement There is one thing to update in doc vagrant is showing as "vafrant" starting from : 2.4.1. Initializing Vafrant boxes with Hyper-V 2.4.2. Initializing Vafrant boxes with VirtualBox 2.4.3. Registering and Checking the Vafrant Box	1	0	https://issues.jboss.org/browse/RHDEVDOCS-2
3494	JBDOCS-323	Hi Mark Should we move this over to JDOCBOOKSTYLE? I know it doesn't relate specifically to the XSLT for the community base styles, but it might be something we can manage as part of the offering under PressGang? Cheers J	1	0	https://issues.jboss.org/browse/JBDOCS-323
3495	JBDOCS-303	Why is this assigned to me?	0	0	https://issues.jboss.org/browse/JBDOCS-303
3496	JBDOCS-279	Mark, I have a feeling you use Windows? If so, can you take a look? As I don't have Windows. Jay can provide more details I think - he says it is bad enough we should fix it for the next release.	0	0	https://issues.jboss.org/browse/JBDOCS-279
3497	JBDOCS-177	Added docbook-xsd to docbook-support. You can link to the schema like this: (obviously using the correct relative path) <article xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:noNamespaceSchemaLocation="../../docbook-support/support/docbook-xsd/docbook.xsd"> <!-- ... --> </article> This should allow full validation by your editor while being compatible with the existing docbook-support tools. I haven't thoroughly tested it, but it does appear to be working. I'll probably migrate the admin guide over as a test. Until we get more experience, this should be considered purely experimental.	0	0	https://issues.jboss.org/browse/JBDOCS-177
3498	JBDOCS-38	These are supposed to be updates to the admin-devel/adminguide in cvs right? I could see only the following missing: throw-runtime-exceptions <!-- Should runtime exceptions be thrown when unexpected exception occurs ? The throw-runtime-exceptions element must be one of the two following: <throw-runtime-exceptions>true</throw-runtime-exceptions> <throw-runtime-exceptions>false</throw-runtime-exceptions> --> <!ELEMENT throw-runtime-exceptions (#PCDATA)> This is used when getting a connection from the datasource to create or find EJB instances. If DataSource.getConnection() failed and throw-runtime-exceptions is true then EJBException will be thrown. If throw-runtime-exceptions is false then CreateException will be thrown in case of instance creation and FinderException will be thrown in case finder.	1	1	https://issues.jboss.org/browse/JBDOCS-38
3499	JBDOCS-30	SourceForge Username: ejain . Logged In: YES user_id=474829 +1 This would seem trivial to set up, is there any specific reason why this has not been done yet?	1	1	https://issues.jboss.org/browse/JBDOCS-30
3500	JBDOCS-28	To be clear what this asks for is a simple page explaining: 1. What is an MBean notification 2. How do you create a listener for one 3. How do you get a notification that the JBAS server is done starting up. With liberal code samples. The referenced page does not really answer that.	0	0	https://issues.jboss.org/browse/JBDOCS-28
3501	JBDOCS-22	(sorry about the truncated note) The above link contains docs that were last maintained August 9 2009. Is it possible to use them as a starting point?	0	0	https://issues.jboss.org/browse/JBDOCS-22
3502	TOOLSDOC-734	Hi Nick, If I've understood the requirement, what normally happens with a branding change is that the old versions of the products docs remain under the old name (https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/) and the new versions of the combined product will be a brand new product called Red Hat Developer Studio and would be under the url https://access.redhat.com/documentation/en/red-hat-developer-studio/ I'm adding [~rkratky] to this so that he has visibility on this request and because he's working on merging the old docs for the new product, etc.	0	0	https://issues.jboss.org/browse/TOOLSDOC-734
3503	TOOLSDOC-726	Hi [~ldimaggio], from the email, I see that the requested information was this: I see the following use cases: 1. Installing CDK on Win/Mac/Linux manually without our all-in-one installer. As far as I understand it will be covered by the CDK get started guide. 2. Using manually installed CDK in JBDS. Users have to do a few additional but not obvious steps in JBDS to set up a CDK (create a CDK server adapter, set up oc cli tool, etc). 3. Using our all-in-one windows installer. Some info about how to use the installer. 4. Getting started with CDK in JBDS after using our all-in-one win installer. In that case the installer does set up a CDK in JBDS for you and you don't need to do steps from #2. So, this case is the next step for #2 and #3. I think we've covered all of this in the CDK tooling article here: https://access.redhat.com/articles/2388671 What do you think, Len? I think we can probably close this issue.	0	0	https://issues.jboss.org/browse/TOOLSDOC-726
3504	TOOLSDOC-720	[~ldimaggio] I'm not familiar with how to do this for Windows. Is it sufficient to just tell users to enable virt in the BIOS or provide the steps?	1	1	https://issues.jboss.org/browse/TOOLSDOC-720
3505	TOOLSDOC-718	[~fbricon] - I sent a following up question to others forgetting that you responded to this for me, so maybe you're the one to ask: Is the server adapter the only real use case we want to talk about for CDK? Basically: does it do anything else we want to document?	1	1	https://issues.jboss.org/browse/TOOLSDOC-718
3506	TOOLSDOC-702	Hi [~mhusnain], I'm sorry I made one mistake in the list. In JBDS-IS 8.0.4.GA the Drools plugin was updated to 6.3.0.Final (the other components are correct). Could you update the version of Drools plugin to 6.3.0.Final, please? Thank you!	1	1	https://issues.jboss.org/browse/TOOLSDOC-702
3507	TOOLSDOC-697	[~psrna], can you please check if the version of Apache Cordova in the list are correct for Beta1? Or possibly other versions where you are familiar with what's included. Thanks!	1	1	https://issues.jboss.org/browse/TOOLSDOC-697
3508	TOOLSDOC-697	[~supriya.bharadwaj], can you order the numbers by their value? It's strange to have 3.9.2 between 4.0.1 and 3.5.0.	1	1	https://issues.jboss.org/browse/TOOLSDOC-697
3509	TOOLSDOC-694	[~ldimaggio], what do you think about the idea of not having an article at all? The page on CSP has enough details already. And now there is the blog post at http://tools.jboss.org/blog/ga-cve-for-mars.html so we can just link to it if necessary.	1	1	https://issues.jboss.org/browse/TOOLSDOC-694
3510	TOOLSDOC-694	+1 Yes - let's keep this simple - can we simply refer to the blog post? Thx!	1	0	https://issues.jboss.org/browse/TOOLSDOC-694

#	Requirement	Questions	Answered	Successfully Answered	URL
3511	TOOLSDOC-687	Hi [~mhusnain], I started looking at the release notes and I have one question. Where are the RNs from 9.0.0.CR1? Looking at https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/ the CR1 version is there, but no docs. Shouldn't it be there? (For the record, I find it easier to have a previous version of RNs open when reviewing a new version, so that I can easily see what is actually changed and what is just carried over from the past.)	0	0	https://issues.jboss.org/browse/TOOLSDOC-687
3512	TOOLSDOC-684	Downloaded Eclipse Mars We must change Chapter 1. Beta Release (@Misha, where can I get this info from?) Install JBDS BYOE when Online (https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Developer_Studio/9.0/html/Install_Red_Hat_JBoss_Developer_Studio/Install_JBoss_Developer_Studio_BYOE_when_Online.html): Fig. 2 must be changed; but, we wouldn't have this SS ready until GA is released on Tuesday. ^ step 1: Changed Beta 1 to GA	1	1	https://issues.jboss.org/browse/TOOLSDOC-684
3513	TOOLSDOC-684	> Spoke to Jan and he isn't sure if they will release GA or CR2 next week. [~mhusnain], wherever necessary, wdyt should the version of JBDS be in the Install guide, CR2 or GA? > I have taken the SS to be included in the Install JBDS BYOE Online chapter with "CR1". I will not be able to take a CR2/GA SS until the product is released next week and is available to be installed through the eclipse marketplace (right now since it isn't released it is not available through marketplace)	1	1	https://issues.jboss.org/browse/TOOLSDOC-684
3514	TOOLSDOC-679	Hi [~ldimaggio], in case you want to have a look at the instructions, here's the link to it: https://docs.google.com/document/d/16Glf94lJVrdZbV5NUEBw8AN0DgHoP7i48_3J9UA_NTQ/edit#heading=h.z46fmakmdrhm Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-679
3515	TOOLSDOC-679	Hi [~ldimaggio], the link that you have mentioned in your comment speaks of the same steps that I have documented in the Prerequisites section of the doc. Do you mean that I must let the existing pre-req steps be as-is and also explicitly mention the link in the introduction to the section? Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-679
3516	TOOLSDOC-679	I see that now - thanks - but the actual steps on how to do that - where are they?	0	0	https://issues.jboss.org/browse/TOOLSDOC-679
3517	TOOLSDOC-679	[~mlabuda], I have made changes to the doc as discussed with you. Can you please have a look at it an dlet me know if it needs anymore edits? Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-679
3518	TOOLSDOC-677	Hi [~ldimaggio], tagging you in case you wish to have a look at the doc. Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-677
3519	TOOLSDOC-677	Hi [~rawagner], can you please review this?	0	0	https://issues.jboss.org/browse/TOOLSDOC-677
3520	TOOLSDOC-677	Hi [~rawagner] and [~ldimaggio], I have incorporated the feedback and also added a few sentences and a screenshot for webhooks in the article. Can you please have a look at it and let me know of any edits? Location: https://docs.google.com/document/d/1mevNqMkYVe41Lc_-NcfvYC8lcbD-FFJqoSZaxUzr7-s/edit#heading=h.lqc95xrzxc31 Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-677
3521	TOOLSDOC-677	[~mlabuda], thanks for the detailed review! I have incorporated your feedback in the article. Can you please have a look at it and let me know of any more edits? - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-677
3522	TOOLSDOC-676	Update: added this to add a procedure about adding OSv3 tooling to JBDS. Ready for review.	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3523	TOOLSDOC-676	Few comments: - instead of "OpenShift 3 is not included in JBoss Developer Studio but is instead available as a Technology Preview feature." I would use "OpenShift 3 is not installed by default in JBoss Developer Studio but is instead available as a Technology Preview feature.", because saying it is not included may make felling that it is not available - i don't see there "JBoss Tools EGit Integration", I think it is bundled together with JBoss OpenShift 3 Tools, my guess. Do you really see also EGit integration feature in software update tab? - connect to an OpenShift 3 instance has step "3 a. Ensure that is selected from the Connection drop down menu." I think there is missing something. Shouldn't it be "a. Ensure that <New Connection> is selected from the Connection drop down menu."? - how is it with terminology? There are on several places used term "field", but the server type and connection are combo boxes. Is it desired? Term field is more likely to be used for text fields instead, I think - step "e. Click Finish to complete the connection configuration." - completing configuration of connection? I would say we are created a new connection to an OpenShift 3 instance or establishing a new connection, but not configuring connection, what do you think? :)	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3524	TOOLSDOC-676	Re: the field question - I've used field to talk about text boxes where the user must type in a value and combo boxes and other items where users need to select one value out of several included, etc. Re: Completing connection configuration - Agreed, thank you! I've made this change as well. [~mlabuda], could you have a look now and let me know if you have any further feedback?	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3525	TOOLSDOC-676	I still see "e. Click Finish to complete the connection configuration." in there. And there are 2 comments from Rastislav Wagner, could you please incorporated them as well? Thanks.	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3526	TOOLSDOC-676	Ok. The article looks fine. Last comment: the screenshot of a New Connection wizard - wouldn't it be better to have a valid credentials for localhost instead of invalid URL on a screenshot? E.g. using https://localhost:8443. To show users how it really could look like.	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3527	TOOLSDOC-676	Updated here: https://access.redhat.com/articles/1609003 And created a PR for this change in JBT docs here: https://github.com/jbosstools/jbosstools-website/pull/490 If these are now OK, we can set this to resolved. What do you think, [~mlabuda]?	1	1	https://issues.jboss.org/browse/TOOLSDOC-676
3528	TOOLSDOC-674	Is this ready to close off, [~supriya.bharadwaj]?	1	1	https://issues.jboss.org/browse/TOOLSDOC-674
3529	TOOLSDOC-673	Hi [~mhusnain], the QE review for this how-to (https://docs.google.com/document/d/1W24dw5V3FReluKwT03286CmFqnMcsIvYkC08HBGLiP0/edit#) is complete (JBQA-12366). Can you please have a look at it so that I can then convert it to MarkDown and ASCIIDOC. Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-673
3530	TOOLSDOC-673	[~mhusnain], can you please post these in the community. Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-673
3531	TOOLSDOC-670	Added/changed the info. Sent .adoc file and screenshot to [~mhusnain] as part of another JIRA (TOOLSDOC-608)	0	0	https://issues.jboss.org/browse/TOOLSDOC-670
3532	TOOLSDOC-669	Hi [~mmalina], could you review the added note here and let me know if you have any feedback? Once the text is finalized, I'll add it to the JBT version of this article as well: https://access.redhat.com/articles/1515503	1	1	https://issues.jboss.org/browse/TOOLSDOC-669
3533	TOOLSDOC-650	[~supriya.bharadwaj], it occurs to me that in the future it may reduce the margin for error by having you locate the appropriate adoc file in the jboss tools docs git repo and copy it locally, then make the changes/insertions required, test it locally by viewing it and then adding that file as an attachment. The benefits of this approach are: * You have greater control over the placement and formatting of the changes/insertions * You test it as you write the content, so this means I can just paste the exact changes you require in and let you know they are available. This occurs to me because while you got the image::<name of image> part correct this time, the formatting of the image is not correct: Select the Android SDK Location image::first_hybrid_app_android_preferences.png[Select the Android SDK Location] . Click `Apply` and then click `OK`. This would not render corrected upon testing. This should be: .Select the Android SDK Location image::first_hybrid_app_android_preferences.png[Select the Android SDK Location] What do you think about the new approach?	1	1	https://issues.jboss.org/browse/TOOLSDOC-650

#	Requirement	Questions	Answered	Successfully Answered	URL
3534	TOOLSDOC-650	[~mhusnain], I agree with you on this approach. It would be great if you could help me, if the need be, in understanding how to do this the first time around. I have worked in Git just once so I am not very sure how to go about with this. Is this doable?	1	1	https://issues.jboss.org/browse/TOOLSDOC-650
3535	TOOLSDOC-647	[~mhusnain], can you please set the metadata for the issue? Thanks - Supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-647
3536	TOOLSDOC-647	> Nick has confirmed that both the zips are required for the offline install (JBDS-3491). The section "http://docbuilder.usersys.redhat.com/23020/#Install_JBoss_Developer_Studio_BYOE_when_Offline" states this already. [~mhusnain], I think we are good to publish the guide now. WDYT? thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-647
3537	TOOLSDOC-646	This information does not replace the important information, which warns users about a separate issue. Prerequisites sounds good, but this information was in two articles. Which one did you mean, or is it both?	1	1	https://issues.jboss.org/browse/TOOLSDOC-646
3538	TOOLSDOC-645	Hi [~rawagner], can you please review the maven how to? I briefly looked at it, but it will be better if someone with better knowledge of the maven tooling takes a look. Regarding the note from Misha: {quote} <!-- Note for Martin: If I understand it correctly, m2 is now included in JBDS and therefore there is no extra step to configure this beyond this unlike in JBDS 7.1 (https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Developer_Studio/7.1/html/Maven_Tools_Reference_Guide/adding_maven_support.html) -> {quote} m2 is included, but I think it was included even in JBDS 7.1. What the linked article is about is how to add maven support to an old-style faceted project - when you use the new maven project wizard, you don't have to do this. Am I correct, [~rawagner] ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-645
3539	TOOLSDOC-645	Changes: * P1: Removed "ensure" from the SNAPSHOT instructions to add instructions about using a unique value that may or may not be the same as the example. * P2: Updated the text so that it is less restrictive about the value of *SNAPSHOT * s/Project Explorer tab/Project Explorer view in the entire document * P3: Updated name and explanation for Procedure 3 to hopefully address the fact that the previous procedures tell us how to create a maven supported project and module from scratch while the third is to add maven support to an existing application without maven support. * P3: Regarding the right click on a new project, click configure and in the menu, select "convert to maven project", the problem is that I can't spot any option for maven projects (in 8.1). in 8.1, would there be an alternate way to do this configuration through the right click project name > Maven> <some option>? And in 9.0, is it going to be right-click project name>configure>convert to maven project? <-- [~rawagner]	1	1	https://issues.jboss.org/browse/TOOLSDOC-645
3540	TOOLSDOC-645	[~rawagner] - I also wrote up a small procedure at the end of this page, could you please review that as well if you have the time: https://docs.google.com/a/redhat.com/document/d/13L561ZsVvhqMyVM4AJHgGZ8xgR2IqIjz4KX-b2_mlvQ/edit?usp=sharing	1	1	https://issues.jboss.org/browse/TOOLSDOC-645
3541	TOOLSDOC-643	Hi [~burrsutter] - I would actually like to get a basic How To for Maven done for 8.1.0. i was looking at JBDS-3279 and trying to get some ideas. For a first basic How To, what kind of tasks are users looking to do? Create a Maven project + ... For a more advanced How To, what kind of tasks? Import an existing Maven project + ... I definitely need some help with ideas here! I'm about as good as your average JBDS user who can't figure out what to do with Maven in JBDS :)	1	1	https://issues.jboss.org/browse/TOOLSDOC-643
3542	TOOLSDOC-643	[~fbricon] Fred, I would be interested in your comments as well my comments 2. "Install Maven in JBDS" - it should already be pre-installed b. Create a maven module - does this mean a multi-module project? how to enable auto download of source & javadoc - this is a great idea explain autoconfiguration of plugins - this is a great idea How about "how to recover when things get screwed up"? when "clean", "build", "compile", "install" are simply not good enough the magic of "Update Project" and "Select Maven Profiles"	1	1	https://issues.jboss.org/browse/TOOLSDOC-643
3543	TOOLSDOC-641	Thanks, [~apodhrad] - I did have a couple of questions: 1. I'm trying to develop information about why a user would set up a remote server as an intro for this article. My general impression is that it is to have the web application and its data stored in a location that is not corrupted if the local data is corrupted or lost, and it allows users to interact remotely with applications and change and update things as required. Can you tell me if I'm on the right track or completely off? 2. For the limited functionalities in step 4 above, I have included them because that seemed to be the direction we pointed users to in the 7.1 edition of these instructions. If these are not necessary, I am happy to replace it with something more open-ended, such as for example, telling users to select either "Filesystem and shell operations" or "Management operations" depending on their remote server requirements. Would this be better? I'll implement the input above tomorrow, and if you can find the time to add some quick answers to the above, I'd appreciate it, Andrej. :)	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3544	TOOLSDOC-641	[~mmalina], could you help at all with this? Thank you for your help, Andrej! :)	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3545	TOOLSDOC-641	Hi [~mhusnain], I reviewed the current draft and have a few comments: 4.b Note: If you select Management Operations for the Controlled by field, you must set up an admin user on the server by editing the $SERVER_HOME/bin/add-users.sh file and enter the same credentials in the server editor or during the server start. - this is not correct. You're not supposed to edit the shell script. The shell script is used to add the user. (And also, it's add-users.bat on windows, but I'm not sure how much detailed you want to be.) So instead of "by editing" I would say "by using" 4.c The Server is externally managed. Assume server is started field is used when the user wants to deploy the server but does not want the IDE to stop or start the server for them. - "deploy the server" -> "deploy to the server" 4.d - it's good except for the end: "or leave the box unselected as a default" - this is not true - default is that it is checked (and a new runtime will be created in the next step if there is none existing) 5.a - I suggested that we could say something like "You may need to create a new host." Do you not agree? 5.c.d This location is within the directory specified in the Remote Server Home field. - while technically it is true that it is within the directory, it's not directly there, it's deeper - it's in SERVER_HOME/BASE_DIRECTORY/configuration/ - maybe it would be better explicitly say that?	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3546	TOOLSDOC-641	All of the above seem reasonable, Martin. I've implemented them in suggestion mode here: https://docs.google.com/document/d/1sd5_RaThCjbRxeA4D-YcYjXLYXl3U3zEzpxyjARXk18/edit Suggestion mode provides an inline diff in green so hopefully this makes it easier to review the changes. If you are OK with all of the changes, I'll apply them to the enterprise and community docs and push them public. Could you have a look at your earliest convenience, please [~mmalina]?	1	1	https://issues.jboss.org/browse/TOOLSDOC-641

#	Requirement	Questions	Answered	Successfully Answered	URL
3547	TOOLSDOC-641	Hi [~mhusnain], Thanks for the update, but it's still not complete ;) In 4.b you changed "by editing" to "by using", but it would be good to also change "file" to "script" - "by using the $SERVER_HOME/bin/add-users.sh script" - this is a minor thing, but since there are still more changes necessary, I thought I'd include it as well. But this is the only thing that is changed. What about all the rest? None of them are fixed: 4.c The Server is externally managed. Assume server is started field is used when the user wants to deploy the server but does not want the IDE to stop or start the server for them. "deploy the server" -> "deploy to the server" 4.d it's good except for the end: "or leave the box unselected as a default" this is not true - default is that it is checked (and a new runtime will be created in the next step if there is none existing) 5.a I suggested that we could say something like "You may need to create a new host." Do you not agree? 5.c.d This location is within the directory specified in the Remote Server Home field. while technically it is true that it is within the directory, it's not directly there, it's deeper - it's in SERVER_HOME/BASE_DIRECTORY/configuration/ - maybe it would be better explicitly say that? BTW, how does the suggestion mode work? I can only see View -> Show Spelling Suggestions, but that doesn't seem to do anything.	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3548	TOOLSDOC-641	[~mhusnain], these two are still not done: 4.d it's good except for the end: "or leave the box unselected as a default" - this is not true - default is that it is checked (and a new runtime will be created in the next step if there is none existing) 5.a I suggested that we could say something like "You may need to create a new host." Do you not agree?	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3549	TOOLSDOC-641	Thanks, [~mmalina]. Comments: 4.d: The default part is removed, so I'm not sure what you mean here. Did you mean 4.c.? What I see in 4d at the moment: A remote server can now be created without assigning a runtime to it. Depending on the requirements, select the Assign a runtime to this server check box (and select an existing runtime or create a new one) or leave the box unselected. 5.a: I added the new host line in 5 (intro) rather than 5a, but I've fixed it now.	1	1	https://issues.jboss.org/browse/TOOLSDOC-641
3550	TOOLSDOC-628	Hi [~mhusnain], could you a link to the approprite doc which should be reviewed? Btw, the following issues from [1] should not be included in release notes (they were reopened) RH Bugzilla * 454749 * 459209 Eclipse Bugzilla * 1178839 * 1184422	1	1	https://issues.jboss.org/browse/TOOLSDOC-628
3551	TOOLSDOC-628	Hey [~mhusnain] - Was there any closed Jira info from Drools/jBPM6 ? Looks fine otherwise. --paull	1	1	https://issues.jboss.org/browse/TOOLSDOC-628
3552	TOOLSDOC-622	Hi Misha, I looked at http://docbuilder.usersys.redhat.com/23017/#Known_Issues and tried to compare it to CR1 and there is no difference in the JIRAs listed under Known Issues - it's exactly the same as in CR1. Can you specify what you added? I have replied to your email about the queries - let's wait for Michelle's feedback on the Known Issues query. But for Resolved Issues, I believe we can use this: {code} (project in (JBDS) AND affectedVersion < "8.1.0.Beta1" AND fixVersion in (8.1.0.Beta1, 8.1.0.CR1, 8.1.0.CR2, 8.1.0.GA) OR project in (JBIDE) AND affectedVersion < "4.2.3.Beta1" AND fixVersion in (4.2.3.Beta1, 4.2.3.CR1, 4.2.3.Final)) AND type in (Bug) AND resolution in (Done) {code} Also, I have a question. I wanted to view the 8.1.0.CR1 Release Notes, but they are nowhere to be found. I looked here: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Developer_Studio/ I'm pretty sure they were there under Beta1 last week when I reported TOOLSDOC-618. I understand that we might want to remove them once GA is released, but that hasn't happened yet. Do you know what happened? I used this for the comparison: http://docbuilder.usersys.redhat.com/23055/#Known_Issues	1	1	https://issues.jboss.org/browse/TOOLSDOC-622
3553	TOOLSDOC-612	Thanks, Andrej. In order: Section 2: Amended list to *updated* and removed early access text. Section 3: Amended and it should now have 7.1 issues only. (Update: Paul responded as well while I was writing this, so I have incorporated only the three he pointed out) Section 5: Removed former Section 5 about Drools. (New) Section 5: Added Fuse section with the one issue specified above. Section 6: Waiting to hear. Section 7: Former section 7 is excluded. For BPMN2 issues: *Added section for BPMN2 Modeler * Added issues from 1.0.3, 10.4 (nothing for 1.0.5). Did not separate these by version, but can do if needed. [~apodhrad], could you have a look at the fixed issues above while we wait for teiid feedback please?	0	0	https://issues.jboss.org/browse/TOOLSDOC-612
3554	TOOLSDOC-610	Hi [~mhusnain], can you please post these upstream? Thanks - Supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-610
3555	TOOLSDOC-609	What is the status for this and is there a link to the draft?	1	1	https://issues.jboss.org/browse/TOOLSDOC-609
3556	TOOLSDOC-609	Hi [~supriya.bharadwaj] - what's the status for this issue? This needs to be done for GA so please update here.	1	1	https://issues.jboss.org/browse/TOOLSDOC-609
3557	TOOLSDOC-609	Hi [~mhusnain], this issue is similar to the icon change one (JBDS-3270). I have documented the steps and got them reviewed from Pavol (instructions at: https://docs.google.com/document/d/124ptroykZasftYjSQTGCd3rSYRibWABUfqqDlVTwV30/edit). But, since we have been unable to get the app to show on the emulator (JBDS-3454), I have not tested the steps. Thanks - Supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-609
3558	TOOLSDOC-608	[~mhusnain], can you please post these upstream? thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-608
3559	TOOLSDOC-595	[~supriya.bharadwaj], could you comment with an update on this issue please?	1	1	https://issues.jboss.org/browse/TOOLSDOC-595
3560	TOOLSDOC-595	Updated info for JBDS 9.0Beta2 in the install guide and published the guide. Location: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Developer_Studio/9.0/html/Install_Red_Hat_JBoss_Developer_Studio/Install_JBoss_Developer_Studio_BYOE_when_Offline.html Info yet to be edited for JBDS IS; shall check when can this be completed and will add a comment as needed.	1	1	https://issues.jboss.org/browse/TOOLSDOC-595
3561	TOOLSDOC-583	we don't really have docs grouped by components. maybe we should "tag" the docs and generate a page with those related to openshift ? it won't be a "get from A to B" kind of page though ...is that usable ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-583
3562	TOOLSDOC-576	what does DYK mean? :) Btw I'd rather add info that livereload will not work with java 7 if web engine is javaFx. Why - see [FAQ|http://tools.jboss.org/documentation/faq/browsersim.html#main-features]	1	1	https://issues.jboss.org/browse/TOOLSDOC-576
3563	TOOLSDOC-521	[~mmurray], sorry for the delay. As for the "Resolved" query. I can see the new "fixVersion not" in there - what's the purpose? Is that to avoid listing JIRAs that have been fixed in the maintenance (4.1.x) as well as in 4.2? Otherwise, I still don't like the "affectedVersion" there - if I remove it, the list gets from 180 JIRAs to more than 1000. If I search only for JIRAs which have affectedVersion empty, I get 128 JIRAs - these are JIRAs that could have been reported for any version at all, we don't know. But ok, the majority of JIRAs has this set. Still, the fact that a JIRA has "affects 4.2.0.Beta3" does not necessarily mean that 4.1 is not affected - I would estimate that more often than not, 4.1 will be affected as well. But I'm not sure what the right query should be then. Personally I would like it better if we just removed the "affectedVersion" from it. [~ldimaggio], [~maxandersen], what do you think about this? What kind of query should we have in the release notes? The Known issues filter looks ok to me.	1	0	https://issues.jboss.org/browse/TOOLSDOC-521
3564	TOOLSDOC-521	Is there a way in JIRA to save a static set of query results?	1	0	https://issues.jboss.org/browse/TOOLSDOC-521
3565	TOOLSDOC-521	A few comments: affectedVersions is not reliably set - I would not rely on it. < and > in jira queries does not work reliably - thus I would not use that either. One should use fixversion and even if it is fixed in two versions at the same time that just mean we back or forward ported a fix. Is the resolved query only about CR2/GA and not about all the fixes done from Alpha to GA for JBDS 8 ? Then the resolved one is fine.	1	0	https://issues.jboss.org/browse/TOOLSDOC-521

#	Requirement	Questions	Answered	Successfully Answered	URL

Article name: Establish an IDE Connection to OpenShift Online Link: https://docs.google.com/a/redhat.com/document/d/1a2tXP8JKWbhoesw7rKzkBROFWWyadjWRHz_geBbiRbA/edit#) Thanks, Supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-516
3567	TOOLSDOC-515	[~nids1409] and [~nidis], can you two please review the article at: https://access.redhat.com/articles/1160993 As part of the peer review please also do the following: * Perform the steps listed in the article so as to ratify them * Let me know if the article would be more useful for the end user with/without the screen captures Thanks!	1	1	https://issues.jboss.org/browse/TOOLSDOC-515
3568	TOOLSDOC-498	{quote} True we don't audit our GA for security vulnerabilities but saying we don't audit for Beta isn't actually inaccurate. {quote} When a user reads this information, I think it's pretty easy for them to imply that JBDS GA is audited. I sure would think that if I didn't know better. Sure, mathematically speaking it is a true statement, but so would be saying "This beta release does not allow you to make unicorns" ;) But overall I don't think it's a big deal and agree that for simplicity it's probably better to leave the same message here as everywhere else. So I'm fine with leaving it as it is.	0	0	https://issues.jboss.org/browse/TOOLSDOC-498
3569	TOOLSDOC-494	See TOOLSDOC-576: "Btw I'd rather add info that livereload will not work with java 7 if web engine is javaFx. Why - see FAQ"	0	0	https://issues.jboss.org/browse/TOOLSDOC-494
3570	TOOLSDOC-493	[~maxandersen], can you provide an update on this? Is GTK3 still an issue for JBDS 8 and does it need this work around?	1	1	https://issues.jboss.org/browse/TOOLSDOC-493
3571	TOOLSDOC-485	New text layer was hidden when I exported the PNG. My fault. Have fixed this. Version 1.4 is listed on the screencap.	1	1	https://issues.jboss.org/browse/TOOLSDOC-485
3572	TOOLSDOC-482	Should I mention in DId You Know Section or we should include it only when we productize the How to Article for Enterprise? * You can download EAP server through JBDS/JBoss Tools, Click Windows > Preferences > Server > Runtine Environments. Click Add and search for EAP.	0	0	https://issues.jboss.org/browse/TOOLSDOC-482
3573	TOOLSDOC-477	[~ldimaggio], [~mmalina]: is this still an issue for the latest Luna release?	1	1	https://issues.jboss.org/browse/TOOLSDOC-477
3574	TOOLSDOC-477	[~ldimaggio], can you check? I never got this because I never run Eclipse directly from command line. And I tried now and didn't see it on OS X. But I see this regularly when running e.g. WildFly 8.1 with java 8. I think there was another JIRA for this and the conclusion was that it will have to be left as is for now. So yeah, we could document this. But first Len will have to confirm that it still happens for him.	1	1	https://issues.jboss.org/browse/TOOLSDOC-477
3575	TOOLSDOC-477	[~ldimaggio] can you comment on this? Is this issue even relevant anymore?	1	1	https://issues.jboss.org/browse/TOOLSDOC-477
3576	TOOLSDOC-460	"All the project wizards" -> it is not all (i.e. openshift won't create a maven project if you create php app type and once mobile tools get there it most likely won't have maven out of box either). maybe "Many of the project wizards" ? or most or some. Besides that if you have jboss central installed you automatically get these two. What is more interesting is that each project can state it works best with a specific plugin (for example GWT example linked to the GWT plugins) and that gets to be an option to download when running the example. That workflow is worth documenting.	0	0	https://issues.jboss.org/browse/TOOLSDOC-460
3577	TOOLSDOC-446	[~maxandersen], is there a reason you picked out the 6.0 OpenShift reference guide and not the 7.1 User Guide - OpenShift Tools chapter [1]? [1] https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/7.1/html-single/User_Guide/index.html#chap-OpenShift_Tools	1	1	https://issues.jboss.org/browse/TOOLSDOC-446
3578	TOOLSDOC-446	[~maxandersen], [~adietish], [~burrsutter]: Is 8787 specifically a debug port of EAP/AS or OpenShift or both?	1	1	https://issues.jboss.org/browse/TOOLSDOC-446
3579	TOOLSDOC-446	[~maxandersen], sometimes it's good to be pedantic ;) So how would a user identify which port is the one being used for debugging? Is there a way to tell from within the IDE? To me the port forward window just show a list of port numbers and I have no idea how to find out which ones do what. I know that there is info in the server editor stating ports for port offset, web and management.	1	1	https://issues.jboss.org/browse/TOOLSDOC-446
3580	TOOLSDOC-446	Thanks for the clarification [~maxandersen]. I need some further info, please. When making a debug configuration (in the video), in the sources tab you added the JBoss Maven Source Container. Why is this necessary? I've looked at the explanation in [1] but I need it in plainer language please. [1] https://community.jboss.org/en/tools/blog/2012/05/21/jboss-tools-and-developer-studio-beta-3	1	1	https://issues.jboss.org/browse/TOOLSDOC-446
3581	TOOLSDOC-446	[~maxandersen], need one tiny bit of further clarification. "That is where jboss maven source container helps since it will use the various indexes available from maven repositories to try and locate the proper source jar." What is the container? * Is it a list of references to online JBoss Maven repositories? e.g., Red Hat Maven Online Repository (tech preview) * Is it using information from the users' settings.xml file? * Why is it called 'JBoss'? Is this because the JBoss Maven Source Container is just looking up EAP and JBoss AS Maven repositories?	0	0	https://issues.jboss.org/browse/TOOLSDOC-446
3582	TOOLSDOC-445	We can explain the project structure so that users can be more informed when making decisions about which files/dirs to place under version control. Since JBDS does not have it's own version controls actions we can't document exactly what to put under version control. As part of JBQA-8565, I stated: {quote} Gorkem Ercan, about "need to explain the different directories and what they do". This would be best included in the context of a description of standard Cordova projects and how JBDS produced Cordova projects vary. Standard/basis of Cordova projects are given in '8.2.1. About Apache Cordova'. If you think there should be more details please provide me with some pointers of what's missing. JBDS Cordova project distinctions can be given in '8.2.2. About Hybrid Mobile Tools', where the project wizard is detailed. Again, please provide any specifics of how JBDS Cordova projects differ. From the info above one distinction seems to be the absence of a platforms directory. {quote} Let's enact this for JBDS 8.0.0 (JBT 4.2.1). Information I have is as follows: 1. Cordova (CLI) project structure [1] = config.xml, hooks/, merges/, www/ with index.html, platforms/, plugins/ 2. Hybrid Mobile Tools Cordova project structure = .cordova/ with config.json, merges/, plugins/, .project, .settings/, www/ with config.xml and index.html *What info do I have wrong or am I missing?* [1] https://github.com/apache/cordova-cli#project-directory-structure	1	1	https://issues.jboss.org/browse/TOOLSDOC-445
3583	TOOLSDOC-440	You seem to have been looking at two sets of docs there. The first link was for 7.1 version but second link is for 7.0. This has probably happened because you are viewing in html format and each page has to be Ctrl+F5'ed to clear the cache. Alternatively you could change to the html_single version and then you just need to do Ctrl+F5 once. As to defining BYOE, * 1.1 About JBDS states 'For developers already running Eclipse, JBoss Developer Studio can also be installed through Eclipse Marketplace. For distinction, this latter JBoss Developer Studio installation is called JBoss Developer Studio BYOE (Bring Your Own Eclipse).' * 3.1 Install Options states 'Alternatively, if you already have Eclipse on your system you may prefer to install JBoss Developer Studio BYOE. This option installs JBoss Developer Studio in Eclipse.' I don't want to have to explain at every instance of mentioning JBDS BYOE what it is. But I could expand the info in section 1.1 with another sentence to add more BYOE detail. What info specifically do you think is missing or it should say? [Any fix would only be released as part of 7.1.1 or 8.0 - the 7.1.0 ship has sailed.]	1	1	https://issues.jboss.org/browse/TOOLSDOC-440
3584	TOOLSDOC-426	[~nickboldt], can you answer the description Qs please.	1	1	https://issues.jboss.org/browse/TOOLSDOC-426

#	Requirement	Questions	Answered	Successfully Answered	URL
3585	TOOLSDOC-426	Latest version is here: http://download.jboss.org/jbosstools/targetplatforms/jbtcentraltarget/4.31.0.CR1-SNAPSHOT/ But we'll have a new version soon as there's more stuff going into JBT 4.1.1 Central soon. See JBDS-2710 for the overall issue listing all the changes / updates / additions. I guess really we should pull the latest zip off there and push it up onto devstudio.jboss.com for archival and ease-of-use purposes. WDYT?	1	1	https://issues.jboss.org/browse/TOOLSDOC-426
3586	TOOLSDOC-426	For JBDS, it needs to have a JBDS URL, like the update zip. So yes, a zip should be pulled from jbt site and pushed elsewhere. Info I have about the update site is: "You can download the update .zip from https://access.redhat.com on the Customer Portal website or https://devstudio.jboss.com/updates/7.0/ on the Red Hat JBoss Developer update website." Can we duplicate this for central zip? so have it on access.redhat and devstudio.blah?	1	1	https://issues.jboss.org/browse/TOOLSDOC-426
3587	TOOLSDOC-425	Hi [~xcoulon], I am adding info about AsciiDoc ability to LiveReload chapter in JBDS User Guide. 2 questions: 1) I haven't used LiveReload for a while so am trying to remind myself how it works. Couldn't get it to work with xhtml files but is that because it only works with html files (and now asciidoc)? 2) I think the AsciiDoctor.js is just rendering the asciidoc file in the browser. And LiveReload (and/or LiveReload browser extensions) does all of the LiveReload work. Is that right? If so and LiveReload Server in IDE is doing all of the work, why is the AsciiDoctor.js necessary?	0	0	https://issues.jboss.org/browse/TOOLSDOC-425
3588	TOOLSDOC-411	{quote} Is there a silent install for JBoss Developer Studio (JBDS)? User needs to roll out the JBDS installation across multiple developer workstations. {quote} Yes - from the JBT/JBDS update site zip (or the JBDS installer jar, which can be treated as an update site zip too): https://www.jboss.org/tools/download/installation/update_4_1#fromscript See also JBDS-2768, which involved me writing scripts for headlessly performing the izpack install, but hasn't yet been +1'd by [~maxandersen] as being "ready for consumption" yet. Code lives here: https://github.com/jbdevstudio/jbdevstudio-website/tree/master/content/updates/scripted-installation But is not live on devstudio.jboss.com yet.	1	1	https://issues.jboss.org/browse/TOOLSDOC-411
3589	TOOLSDOC-409	Additional features as per Gorkem's email: {quote} * Export wizard for native project (Xcode and/or Android projects) * Export wizard for "ready to sign" applications (Xcode and Android) What will be released to Beta1 today * Cordova Plugin Discovery wizard * Extensions to Project explorer regarding Cordova plugins * JS library container for Cordova {quote}	0	0	https://issues.jboss.org/browse/TOOLSDOC-409
3590	TOOLSDOC-402	Generated a skeleton doc in CCMS but still need to populate new features, fixed and known issues. Also, should it refer to 7.1.0.Beta rather than simply 7.1.0? Something to think on.	1	1	https://issues.jboss.org/browse/TOOLSDOC-402
3591	TOOLSDOC-396	[~nickboldt], need your input. In the Release Notes for 7.0.1 I've written: {quote} Chapter 2. About this Release JBoss Developer Studio 7.0.1 is an update to JBoss Developer Studio 7.0.0. The update has two purposes: * It resolves issues identified in JBoss Developer Studio 7.0.0. * It contains an Eclipse Kepler update, SR1, for JBoss Developer Studio 7.0.0 packaged with Eclipse. Users of JBoss Developer Studio BYOE must apply the Eclipse Kepler SR1 update independently. {quote} Is the bit about JBDS BYOE needing to apply Kepler SR1 independently correct? Or is is part of the JBDS update they will get too? If the latter, what happens if they have already applied SR1?	1	1	https://issues.jboss.org/browse/TOOLSDOC-396
3592	TOOLSDOC-390	Made PRs based on 4.1.1.x branches thinking they could be applied to 4.1.1.x and 4.1.x. Alexy found conflicts with applying to 4.1.x (no surprising since I built off 4.1.1.x! lesson learnt). Lead to this discussion: {quote} (07:41:01 PM) maxandersen: akazakov: whats the question ? :) (07:41:57 PM) akazakov: maxandersen, https://github.com/jbosstools/jbosstools-javaee/pull/177 (07:41:57 PM) jbossbot: git pull req [jbosstools-javaee] (open) michellemurray TOOLSDOC-390: Doc versions updated for 4.1 and 7.1 https://github.com/jbosstools/jbosstools-javaee/pull/177 (07:41:58 PM) jbossbot: jira [TOOLSDOC-390] Update book versions for 7.1.0/4.1.1 [Open (Unresolved) Task, Major, Michelle Murray] https://issues.jboss.org/browse/TOOLSDOC-390 (07:42:06 PM) akazakov: is it ok to push to 4.1.1.x? (07:42:25 PM) maxandersen: akazakov: doc changes into 4.1.1.x ? hmm.... murraym remind me if did we do that in past ? I *thought* it was just built from master.....in any case, probably simpler if go into 4.1.x instead imo. (07:44:03 PM) murraym: 4.1.1.x will have wrong version numbers in docs (07:44:50 PM) murraym: maxandersen: I don't think we did anything before, hence why the doc version numbers are so outdated (07:45:16 PM) murraym: master will be for 4.2 and 8.0 - right? (07:45:51 PM) murraym: i was making PRs to update version numbers in docs in 4.1.1.x and 4.1.x branches (07:48:18 PM) jbossbot: git [jbosstools-base] push master 4e09f7e.. Fred Bricon JBIDE-16176 : use proper stacks archetype id during lookup... (07:48:18 PM) jbossbot: jira [JBIDE-16176] Wrong archetype id used to lookup stacks archetypes [Resolved (Done) Bug, Critical, Rob Stryker] https://issues.jboss.org/browse/JBIDE-16176 (07:48:18 PM) jbossbot: git [jbosstools-base] push master URL: http://github.com/jbosstools/jbosstools-base/commit/4e09f7e85 (07:50:13 PM) murraym: maxandersen: if you want me to make changes in 4.1.x only then say so, I think I can cherry-pick the commits i have onto 4.1.x branch and make new PRs for 4.1.x branches (07:50:29 PM) murraym: would like to get this done tonight (07:55:33 PM) maxandersen: murraym: just do it for 4.1.x. 4.1.1 train has left the building for noncritical fixes ;) (07:56:06 PM) murraym: maxandersen: ok, will do - will go close my existing PRs for 4.1.1.x so please disregard {quote} So original PRs requesting merging with 4.1.1.x and 4.1.x closed with being applied by me. Made the following new PRs just for 4.1.x branch: https://github.com/jbosstools/jbosstools-birt/pull/16 https://github.com/jbosstools/jbosstools-bpel/pull/20 https://github.com/jbosstools/jbosstools-central/pull/192 https://github.com/jbosstools/jbosstools-esb/pull/46 https://github.com/jbosstools/jbosstools-hibernate/pull/34 https://github.com/jbosstools/jbosstools-javaee/pull/178 https://github.com/jbosstools/jbosstools-portlet/pull/23 https://github.com/jbosstools/jbosstools-server/pull/182 https://github.com/jbosstools/jbosstools-webservices/pull/102 These set the JBDS doc version to 7.1 and JBT doc version to 4.1.x. Going with 4.1.x rather than 4.1.1 so won't need to be updated if there is a 4.1.blah. This brings the docs numbering in line with JBDS - so new set of docs for each minor version only (x.y) and not maintenance (x.y.z). Need to update Jenkins job to reflect this.	1	0	https://issues.jboss.org/browse/TOOLSDOC-390
3593	TOOLSDOC-388	Source info: (12:34:11 PM) mmurray: so JBDS 7.1, the universal installer will be shipped with Eclipse Kepler SR1 (12:34:43 PM) mmurray: could a user use JBDS BYOE 7.1 with Eclipse Kepler without the SR1 update? (12:35:06 PM) mmurray: or do we only support JBDS BYOE 7.1 with SR1 applied? (01:35:46 PM) nboldt: pretty sure the 4 options will work: Kepler R + JBDS 7.0, Kepler SR1 + JBDS 7.1, Kepler R + JBDS 7.1, Kepler SR1 + JBDS 7.0 (01:35:49 PM) nboldt: mmurray: ^ (01:36:27 PM) nboldt: traditionally we support the release on all three equivalent Eclipse platforms: Kepler R, SR1, SR2 (Eclipse 4.3.0, 4.3.1, 4.3.2) (01:37:25 PM) mmurray: nboldt: great, that's what I wanted to know (01:37:28 PM) nboldt: and since 7.0 and 7.1 should be upgrade compatible, the 2x2 matrix (3x3 matrix in March 2014) should all be supported: {4.3.0, 4.3.1, 4.3.2} x {7.0.0, 7.1.0, 7.x} (01:40:03 PM) nboldt: usually with JBDS we "strongly recommend" users grab the latest the latest SR2 because of the fixes and updates	1	1	https://issues.jboss.org/browse/TOOLSDOC-388

#	Requirement	Questions	Answered	Successfully Answered	URL
3594	TOOLSDOC-388	Also from email conv with nick: 7.1 will be released to the same Marketplace entry (and backing URL) so I'll only need to update the entry to say "7.1.0.GA" instead of "7.0.0.GA". As it should work with Kepler as well as SR1 and the forthcoming SR2 (Feb 2014), it will still have "(Kepler)" on it, but we might update the copy [1] to state that SR1 (and later SR2) is recommended due to performance/bug fixes, like we did for 6.0.1 [2]. [1] https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-kepler [2] https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-juno On 09/10/2013 09:21 PM, Michelle Murray wrote: > Hi Nick, > > Trying to plan all the changes that I will need to make for the docs for > 7.1 and I have a question. > > Currently on marketplace (screen cap at end), the two JBDS versions are > clearly distinguishable by '(Kelper)' or '(Juno)' after the product > name. In smaller text it also specifies the exact JBDS version (7.0.0.GA > or 6.0). > > How will the 7.1 release on Kepler be distinguished for users viewing > the marketplace to avoid confusion with the existing JBDS Kepler release? > * Will it be titled 'Red Hat JBoss Developer Studio (Kepler SR1)'? > * Will the only difference be in the smaller text where the specific > JBDS version is stated? > * Will this not matter as the 7.0.0 version will be replaced on the > marketplace by the 7.1.0 version? > > Thanks, > Michelle >	1	1	https://issues.jboss.org/browse/TOOLSDOC-388
3595	TOOLSDOC-388	I've already made changes in the 4.1.x/7.1.x branch so that references within JBDS to its update site (located at https://devstudio.jboss.com/updates/7.0/) refer to it as the 7.x site, not the 7.0 or 7.1 site. That way I won't have to update it again from 7.1 to 7.[whatever is decided*] later, when we do a maintenance release to pick up Kepler SR2. You might want to consider updating docs similarly to "7.x" so that you too won't need to change explicit refs in docs to "7.1" to "7.1.1" or "7.2" in 6 months when Kepler SR2 is out.	1	1	https://issues.jboss.org/browse/TOOLSDOC-388
3596	TOOLSDOC-367	Question for us all (especially Burr and Jiri P.) - which set of resolved bugs do we want to highlight in the 7.0.GA release notes? Right now - we're only showing the (82) bugs with the affected version equal to the final builds: (project in (JBIDE) AND affectedVersion in ("4.0.0.Final", "4.0.1.Final") AND fixVersion >= "4.1.0.Alpha1" OR project = JBDS AND fixversion in ("6.0.0.GA", "6.0.1.GA") AND fixVersion >= "7.0.0.Alpha1") AND type in (Bug) AND resolution in (Done) Don't we want to show all the 700+ bugs fixed since the 6.0 release? (project = JBIDE AND fixVersion >= "4.1.0.Alpha1" OR project = JBDS AND fixVersion >= "7.0.0.Alpha1") AND type in (Bug) AND resolution in (Done)	0	0	https://issues.jboss.org/browse/TOOLSDOC-367
3597	TOOLSDOC-359	Thanks [~nickboldt]. I think it is all pretty much as you said. Regards Jenkins jobs, as I see it: * Not sure how often 4.0 will need to be rebuilt. The docs are so flawed that I am just leaving them alone. But having a jenkins job won't do any harm for the eventuality that something does need fixing or someone else is wanting to take on the job of fixing (as in TOOLSDOC-316). * Will need a job for developing docs (from master). As soon as 4.1 is released then this branch will be developing towards 4.2. * Once 4.1 is released and branch 4.1 created, will need a job for this so we can fix bugs in docs and applying changes that I didn't get time for prior to GA. Creating the 4.1.x branch should coincide with GA rather than be done in advance, since as far as I can see docs doesn't need stabilized docs for Betas and leaving until GA negates the need to apply changes to master and 4.1 branch continually.	0	0	https://issues.jboss.org/browse/TOOLSDOC-359
3598	TOOLSDOC-345	[~rob.stryker], more questions: * In the server editor, what's the difference between 'Publishing' and 'Application reload behavior'? Does one outrank the other or are they doing different things? I guess the answer is the latter but I don't understand why. * Also, why is this .. {quote}The "Process Terminated" polling mechanism should not be used for servers operating with a Remote System Explorer behavior.{quote} * {quote}JBoss Server Tools provides the ability to customize default filesets added to new servers based on the application server type.{quote} I get part of this, for example it could be a config file. But what happens to the fileset when it is add to the server? Does it get copied to a folder of the local application server? What happens to the files when the application server is remote? * {quote}JBoss Server Tools provides the ability to customize classpath filesets based on the application server type.{quote} What are classpath files? What are they used for? What happens after you specify the classpath filesets? Are the class files physically added somewhere? Or are we just stating class files that are available to the server?	1	1	https://issues.jboss.org/browse/TOOLSDOC-345
3599	TOOLSDOC-345	1) Publishing is moving an app into a location for the app server to read. "Application reload behavior" is on what patterns we FORCE the server to redeploy the app. This is because our incremental publisher only copies changed files. If you change a .html, it already will be read live from your deployment. But if you change a .class, or if change a .jar file inside your app, the server will not recognize it needs to redeploy your application. So, we let you set a pattern where, if any file that matches it is changed, we force the server to 'redeploy' the app. 2) Filesets are a completely local construct and are simply meant to give you quick access to local files. It is a very old part of astools and has never been updated for remote servers. The files are not copied anywhere. When you create a fileset, those files are just shown in the view, and, if you double-click on one, it will open the file in the editor so you can modify it or look through it. Since most people do not keep their actual app-server inside eclipse, this is juts a handy mechanism to quickly browse your server's config files. 3) When you create a project, like a dynamic web project, there is a classpath container added to your project. The files aren't copied anywhree, but rather, eclipse adds these jars to your project's classpath so that you can properly code your application. Different users want different things on their classpath. We automatically add about 10 default filesets for things like ejb-api and other javaee api jars, but we always get new requests by a user. Can you add the mail jar? can you add this? Can you add that? After a while, which jars to add became a big debate. We only wanted to automatically add whatever everyone would use, but some users wanted pretty obscure jars added to their project's classpath. We couldn't in good conscience do this, so we added this mechanism for users to customize paths that should be added. Hope this helps!	1	1	https://issues.jboss.org/browse/TOOLSDOC-345

#	Requirement	Questions	Answered	Successfully Answered	URL
3600	TOOLSDOC-345	During a publish, changed files in the workspace will be moved to your deployment. So for example, {workspace}/project1/webcontent/myhtml.html will be copied over to {jbossasroot}/standalone/deployments/project1.war/myhtml.html. Any changes will now be visible. The server itself, the running JBoss server, will not 'redeploy' the module. This is because html files are served directly without changes by the app server. HTML files aren't run or interpreted or executed on teh server at all. They're simply served as regular files. So an updated html file will be completely ignored by the app server, and the server will serve out the new updated one the same as it served out the old one. If you change a .class file somewhere though, the server ALSO will not 'redeploy' the application. This is because the server is not scanning EVERY file in your module for updates. Class files *are* used by the server's logic, but, the server team has decided that checking the timestamps on all files in a deployment is a big waste of time for the server. If a user wants a module to be re-deployed, they should use one of the re-deploy mechanisms. The server will not note that the .class file has been changed and respond to that with a redeploy of the application. SO... when you modify a .html file and republish the app, the server doesn't redeploy, but the new .html file is able to be served out to clients. If you modify a .class file and republish, though, the server ALSO doesn't redeploy, but the new .class file will NOT take effect in teh server. The server will only SEE the new .class file if the module is properly undeployed and redeployed. Users will complain about this behavior. I changed an html file and can see the results immediately, but I changed a System.out.println line in my .java file and published the changes and the server is not printing anything. Yes, this is intended. The server did not scan for timestamp changes on the .class file and did not redeploy the application. On disk, the new .class file is inside your deployments folder, but, the server only loaded those classes when it initially deployed the application. The updated .class file you published has so far been completely ignored by the running server. To fix this, when modifying .java (and thus .class) files, you need to use FULL PUBLISH or RESTART on your module. This ensures the server actually deletes what's in running memory, and reloads your module from disk. Users would then complain, I don't WANT to have to undeploy and redeploy my app every time I make a change to a .java / .class file. Why doesn't the running server notice the change? OR at least why doesn't JBT notice the change and tell the server to redeploy FOR me. I'm waaaay too lazy to click full publish, or undeploy / redeploy. In response to this, we added application reload behavior. So now, when a user changes a .java file, and it gets changed to a .class file, and copied into a standalone/deployments folder, JBT will then ALSO check if ANY changed files match the 'application reload behavior' pattern. If one does, we will ALSO tell the server to redeploy the application, not just copy the changed files over. As I said, in the past, if you changed a .java file, you get a new .class file, the .class file gets copied to standalone/deployments/MyProject.war/some/file.class, and the running server completely ignores it. NOW, if your application reload behavior includes .class, JBT will ALSO tell your server "hey, user wants this application re-deployed from disk, so, undeploy and redeploy it for him". Of course users don't wnat this behavior on every change. Since html files are served directly, they never need a redeploy. So if we simply forced a redeploy after every single change, users who just change a line in a html file will have to wait while the server undeploys and redeploys the application. This could take any number of seconds dependign on the size of the deployment. So it makes sense as a customizable setting for the users.	1	1	https://issues.jboss.org/browse/TOOLSDOC-345
3601	TOOLSDOC-345	Thanks [~rob.stryker], great explanation. I feel like I'm up to speed now :) I think some of the things I was seeing in JBDS were adding to my confusion but *I'm not suggesting anything be changed*. So when I changed a .html file, there was action in the servers tab showing republishing but then there was also action in the console tab that appeared to state the app had been 'redeployed'. And then when I changed a .java file, I got the same two messages - servers tab showed 'republish' and the console tab stated 'redeployed'. Both changes looked like they had the same effect. I have one more question about application reload behavior. I think this works as follows, am I right? * Check box not selected, with the default '\.jar$' regex, results in automatically checking for .jar changes. * The user selects the check box if they want to further customize the reload behavior. * And they could delete '\.jar$' if they didn't want changes to .jar to result in an automatic redeloy.	1	1	https://issues.jboss.org/browse/TOOLSDOC-345
3602	TOOLSDOC-343	[~akazakov], sorry another Q relating to this. I get that the @FacesConverter validation is resolved. But are there any validation issues with JSF in general that report false warnings/errors? Or is this just a CDI issue now?	1	1	https://issues.jboss.org/browse/TOOLSDOC-343
3603	TOOLSDOC-341	Section: 1.1. About JBoss Developer Studio Text: Additionally, each of the tools comprising JBoss Developer Studio has great features to assist your application development: Comment: I think it would be better to refer to JBDS as a whole, as opposed a set of tools. Maybe this sentence can be reworded as: Additionally, JBoss Developer Studio has great features to assist your application development: ------ Section: 1.2. Use Cases of JBoss Developer Studio Text: JBoss Developer Studio assists JEE developers by integrating JBoss technology and APIs in a single development environment. Here are a few ways that JBoss Developer Studio makes the work of a developer easier. Comment: Very small point - end with a ":" not a "." ------ Section: 1.2. Use Cases of JBoss Developer Studio Text: BrowserSim allows you to view your web applications on a variety of simulated mobile devices so that you can ensure they will be correct formatted. Comment: This is a small point. Can we change this to read: "correctly formatted"? ------ Chapter 2. New Features You asked for input on this subject: JBoss Central NeedInfo: Cheat sheets for 'Start from a sample' project wizards are now automatically opened when projects are created and the cheat sheets can be subsequently accessed via the Show In option in project context menus. See the attached screenshot for an illustration on what this looks like. and: JBoss Server Tools NeedInfo: Additionally, you can choose to either stop or undeploy an application from the server via the administrative console. I'm not sure what your question is here. Users can deploy/undeploy applications to servers from either inside JBDS, or from the Admin Console provided by EAP or SOA-P.	1	1	https://issues.jboss.org/browse/TOOLSDOC-341
3604	TOOLSDOC-338	[~fbricon] and [~akazakov] can you take a look ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-338
3605	TOOLSDOC-337	[~koen.aers], just need a bit of clarification. https://issues.jboss.org/browse/JBIDE-11217 release notes text states that 'A new feature has been added that allows for a user to run the Forge Verbose command from within the Forge console, and any exceptions are recorded in the Eclipse error log.' From your comment above, I guess that bit about recording exceptions in the error log is wrong. Or is it the case that exceptions are recorded in the error log but not shown in the error log tab even it the tab is opened manually?	1	1	https://issues.jboss.org/browse/TOOLSDOC-337
3606	TOOLSDOC-336	{quote} If this feature is working, can someone please give me a workflow so that I can have a play? I have no idea how to get started with this. {quote} A cheatsheet is the standard Eclipse feature described at http://help.eclipse.org/juno/topic/org.eclipse.platform.doc.isv/guide/ua_cheatsheet.htm We have added some functionalities described in JBIDE-14331. {quote} What is the current situation with JBDS/JBT cheat sheets? {quote} There are cheatsheets for the helloworld, login, numberguess, kitchensink quickstarts and Project Examples Tutorial. There should be created cheatsheets for archetypes, other quickstarts ...	1	1	https://issues.jboss.org/browse/TOOLSDOC-336

#	Requirement	Questions	Answered	Successfully Answered	URL
3607	TOOLSDOC-336	[~snjeza] Testing with JBDS Beta1-v20130526-0839-B241. I followed the 'Start from a sample' wizards for the numberguess, kitchensink, helloworld projects. The cheat sheet did not automatically open. In the project explorer tab, I right-clicked on the project and clicked Show In > Cheat Sheets - this opened the Cheat Sheets tab but only showed a default message and not the cheat sheet. Is JBIDE-14332 and JBIDE-14334 broken or have I done something wrong?	1	1	https://issues.jboss.org/browse/TOOLSDOC-336
3608	TOOLSDOC-336	{quote} I followed the 'Start from a sample' wizards for the numberguess, kitchensink, helloworld projects. The cheat sheet did not automatically open. {quote} This is correct behaviour because no one of the quickstarts contains either cheatsheet.xml or .cheatsheet.xml. {quote} In the project explorer tab, I right-clicked on the project and clicked Show In > Cheat Sheets - this opened the Cheat Sheets tab but only showed a default message and not the cheat sheet. Is JBIDE-14332 and JBIDE-14334 broken or have I done something wrong? {quote} If you right-click the project and call the Show In > Cheat Sheets action, the Eclipse platform automatically opens the Cheat Sheets view and restores the last used cheatsheet. JBoss Tools doesn't do anything. I think we can't change this behaviour unless we create our own action. If you right-click on a cheatsheet file, JBoos Tools will show the file in the Cheat Sheet view.	1	1	https://issues.jboss.org/browse/TOOLSDOC-336
3609	TOOLSDOC-336	{quote}This is correct behaviour because no one of the quickstarts contains either cheatsheet.xml or .cheatsheet.xml.{quote} Oh? but in a earlier reply you wrote: {quote}There are cheatsheets for the helloworld, login, numberguess, kitchensink quickstarts and Project Examples Tutorial.{quote} Sorry, I'm confused :(To me these replies seem to contradict each other. Please can you clear things up for me. Let's start again. * Do the JBDS/JBT quickstarts have cheat sheets? * If yes, where do you find or how do you open the cheat sheets?	1	1	https://issues.jboss.org/browse/TOOLSDOC-336
3610	TOOLSDOC-336	{quote} There are cheatsheets for the helloworld, login, numberguess, kitchensink quickstarts and Project Examples Tutorial. {quote} Sorry for the confusion. There are cheatsheets for the helloworld, login, numberguess and kitchensink quickstarts. They are placed here: https://anonsvn.jboss.org/repos/jbosstools/workspace/snjeza/jbossas7-examples/helloworld.zip https://anonsvn.jboss.org/repos/jbosstools/workspace/snjeza/jbossas7-examples/kitchensink.zip https://anonsvn.jboss.org/repos/jbosstools/workspace/snjeza/jbossas7-examples/login.zip https://anonsvn.jboss.org/repos/jbosstools/workspace/snjeza/jbossas7-examples/numberguess.zip These quickstarts have been moved to JDF and I am not sure why the cheatsheets aren't included in it. Suppose they will be added after fixing JBIDE-14331. {quote} Do the JBDS/JBT quickstarts have cheat sheets? {quote} Not currently. {quote} If yes, where do you find or how do you open the cheat sheets? {quote} You can download the mentioned archives and import them. The helloworld, kitchensink, and numberguess cheatsheet should be opened automatically. The login cheatsheet won't be opened automatically because it is on a separate location: cheatsheet/login.xml. You can open it by right-clicking on login.xml and selecting Show in>Cheat Sheets. You have to enable opening a cheatsheet automatically when importing a project using the Window>Preferences>JBoss Tools>Project Examples preferences page.	1	1	https://issues.jboss.org/browse/TOOLSDOC-336
3611	TOOLSDOC-335	[~maxandersen], [~nickboldt], [~dgolovin] and [~fbricon]: can one or more of you please comment on this JIRA.	1	1	https://issues.jboss.org/browse/TOOLSDOC-335
3612	TOOLSDOC-333	Thanks [~xcoulon], great explanation. I had seen the video from JBoss Tools blog but never with the sound. I've got another question about the proxy server configuration. This aspect looks great - far better than having to install the LiveReload browser extension. I like that we can simplify things for users by keeping it all in the IDE with minimal installing/configuration. About proxy and web browsers ... so a user selects a file and clicks 'Show With' > 'Web Browser via LiveReload Proxy' and then the IDE browser preference is used in deciding which type of browser window to open. * With the browser extension, users were limited to chrome and firefox because of using file URLs. Is this restriction lifted with the proxy server because it is using HTTP? So if a user's IDE browser preference was 'system default' and their system default was 'Safari' then LiveReload would now work? * I typically have my IDE browser preference set to 'internal web browser' but LiveReload doesn't seem to work with this browser. Why is that?	1	1	https://issues.jboss.org/browse/TOOLSDOC-333
3613	TOOLSDOC-333	Another question: * In Servers tab, user starts LiveReload server. User double-clicks LiveReload server and opens configuration info in new tab. User selects 'Enable Proxy Server' check box and perhaps changes some other settings. User presses Ctrl+S to save the changes. Does the user then need to stop and restart the LiveReload server for changes to take effect or does the server stop&start automatically? Or is stop&start not necessary?	1	1	https://issues.jboss.org/browse/TOOLSDOC-333
3614	TOOLSDOC-317	Ah. I can perhaps see part of the issue now. The N&N says 'There is now a keyboard shortcut that brings up a pop-up with a list of commands that can be applied in the current context. By default this command is 'Ctrl+4' ' But Ctrl+4 is also used to start Forge. So once Forge is started, will Ctrl+4 bring up the list of commands?	1	1	https://issues.jboss.org/browse/TOOLSDOC-317
3615	TOOLSDOC-311	Somehow getting the manual in pdf and commenting in jira feels like splitting things that should stick together. Shouldn't we at least attach the pdf to this jira or find a way to even comment inline?	1	1	https://issues.jboss.org/browse/TOOLSDOC-311
3616	TOOLSDOC-311	*Procedure 1.2. Generate and Upload SSH Keys to OpenShift* {quote} 6. In the Private Key field, type a name for the private key file. 7. In the Private Key Passphrase field, type a passphrase for use in accessing the private key. 8. In the Public Key field, type a name for the public key file. T ypically the file name of the public key is that of the private key with .pub appended. {quote} *Private Key* and *Public Key* were relabeled to *Private Key File Name* and *Public Key File Name* in JBIDE-13447	1	1	https://issues.jboss.org/browse/TOOLSDOC-311
3617	TOOLSDOC-310	im not following you guys... why do you want users and even us self having to read a page of multiple versions of possible links to link to it ? what am I missing ? and not grokking how sftp symbolic links are a problem - everyone else seem to be using them just fine.	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3618	TOOLSDOC-310	i.e. how do I get to the latest 3.3.x docs ? which *stable* url do I use ? how about 4.0.x, 4.1.x etc. ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-310

#	Requirement	Questions	Answered	Successfully Answered	URL
3619	TOOLSDOC-310	New kick at the can for https://www.jboss.org/tools/docs/reference/ : !http://snag.gy/XioYn.jpg! Changes include: * remove all links to content which is actually located on docs.jboss.org * add links to Additional documentation and Archived documentation --- And for http://docs.jboss.org/tools/ : !http://snag.gy/rVRnb.jpg! Changes include: * stuff in OLD/ moved to archive/, then symlinked back * milestone docs in OLD/ moved to archive/milestones/ * links to 3.x docs (except for 3.3.0, the last one) removed from index page * 3.3.0.Final doc zip moved into archive/ * index page in resources/ removed as it was inaccurate (wrong dates, wrong file sizes, missing links); generated index is 100% accurate * experimental vpe_xulrunner zip renamed and moved into resources/; README updated to clarify that this is from JBT 2.0, from 2007, and is UNSUPPORTED. * link for movies relabelled as "Movies, Screencasts, and Video Walkthroughs" * fixed link to archived movies in http://docs.jboss.org/tools/archive/movies/ * fixed updated date to be ISO compliant * "nightly" watermark removed from index page * added new links to http://www.jboss.org/tools/docs/ and http://www.jboss.org/tools/ * latest/ is now a symlink to 4.0.1.Final instead of an index.html redirect to https://www.jboss.org/tools/docs/reference/ IMHO, this is much better. Does everyone agree? Here's the PR for the above changes: https://github.com/jbosstools/jbosstools-documentation/pull/51	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3620	TOOLSDOC-310	The links on https://www.jboss.org/tools/docs/reference/ still seem to use exact specific versions (i.e. http://docs.jboss.org/tools/4.0.1.Final/) instead of a "latest" link to http://docs.jboss.org/tools/4.0.x/ ? Meaning if/when we do an update of the docs we still need to update the magnolia page. Thus i'm missing where the symbolic links are setup. And wouldn't it be better to create a structure like: 3.3/latest 3.3/3.3.0.Final 4.0/4.0.1.Final 4.0/4.0.0.Final 4.0/latest -> 4.0.0.Final which removes all need for moving things to archive ? (could also just have it in one big root directory....my main concern is just not having to move things around over time; once url is used it stays. btw. I noticed you said symbolic links result in absolute paths - that should not happen if done via sftp like seam and richfaces guys do it: http://www.seamframework.org/Seam3/ModuleReleaseProcedure sftp seam@filemgmt.jboss.org sftp> cd docs_htdocs/seam/3/{module} sftp> rm latest sftp> ln 3.0.m.Q latest	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3621	TOOLSDOC-310	Other than the fact that the 4.0.0.Final folder no longer has an index page, and needs to contain one, I see your suggestions [~maxandersen] as being more effort than is justified. Here are my concerns: a) even if https://www.jboss.org/tools/docs/reference/ pointed at http://docs.jboss.org/tools/4.0.x/ instead of http://docs.jboss.org/tools/4.0.1.Final/, we'd still have to update the page when 4.1 is released. And as there's no plan for a 4.0.2 at this time, the only next time we'd have to update the page is when 4.1 is released. Your argument that there's more maintenance to be done here is only valid IFF a 4.0.2 or 3.3.3 happens for which the docs need to be rebuilt. Plus, I don't really mind using Magnolia as I have to use it once every 6 weeks to do milestone releases anyway. Changing a line of text in a field in Magnolia it is actually less work IMHO than creating a topic branch, pulling updates from origin, committing a code change, pushing to my fork, generating a PR, waiting for the PR to be approved, pushing the PR, and deleting my topic branch. b) moving things into subfolders gains exactly nothing except that we then have subfolders. What problem are you trying to solve by nesting? We can still have a symlink to "latest". Is there a usecase for 3.3/latest and 4.0/latest ? Because I can't see the need. Has anyone other than yourself requested this? (Is there a customer or community requirement?) c) First you asked for 4.0.x, then you asked for 4.0/latest. Which is your preferred approach? d) Regarding symlinks, you are welcome to do it your way (which is the way I used to until eng-ops changed stuff on the server) but when that doesn't work, read this and do it my way instead: https://engineering.redhat.com/rt/Ticket/Display.html?id=191655 :D	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3622	TOOLSDOC-310	>a) even if https://www.jboss.org/tools/docs/reference/ pointed at http://docs.jboss.org/tools/4.0.x/ >instead of http://docs.jboss.org/tools/4.0.1.Final/, we'd still have to update the page when 4.1 is >released. That is *one* time a year. >And as there's no plan for a 4.0.2 at this time, the only next time we'd have to update the page is when >4.1 is released. Your argument that there's more maintenance to be done here is only valid IFF a 4.0.2 or >3.3.3 happens for which the docs need to be rebuilt. I'm not following you. I'm talking about getting a structure that works for the future where there are plenty of releases and having one structure that works for all is to me better than a mix. >Plus, I don't really mind using Magnolia as I have to use it once every 6 weeks to do milestone releases >anyway. Magnolia is going away, it is not versionable, it is not sharable, permissions are a bitch to manage... >Changing a line of text in a field in Magnolia it is actually less work IMHO than creating a topic >branch, >pulling updates from origin, committing a code change, pushing to my fork, generating a PR, waiting >for >the PR to be approved, pushing the PR, and deleting my topic branch. No idea why this is relevant. My suggestion is about creating a symbolic link. No need for PR's every 6 weeks. (but I find it super valuable it is actually possible to do a PR so others can help and improve, with magnolia no such thing) >b) moving things into subfolders gains exactly nothing except that we then have subfolders. What problem >are you trying to solve by nesting? That we stop having to move things into "archived". i.e. less work, less changing urls. >We can still have a symlink to "latest". Is there a usecase for 3.3/latest and 4.0/latest ? Because I can't >see the need. Has anyone other than yourself requested this? (Is there a customer or community >requirement?) Yes, as mentioned before other docs link to /latest assuming it is 3.3.x docs. You can search this jira for the /latest url and find an issue like https://issues.jboss.org/browse/JBIDE-12243 Beyond that it is similar to what other projects do (seam, richfaces, infinispan and others), gives *less* work and easier to manage and use for users (stable urls) so I don't grok why you do not see the need/advantage. >c) First you asked for 4.0.x, then you asked for 4.0/latest. Which is your preferred approach? I don't care. >d) Regarding symlinks, you are welcome to do it your way (which is the way I used to until eng-ops changed >stuff on the server) but when that doesn't work, read this and do it my way instead: >https://engineering.redhat.com/rt/Ticket/Display.html?id=191655 No idea why you are having problems the existing links works fine and I just created one inside archives - it works perfectly. What I did find is that things I symbolic links in /tools directly gets a permission denied when fetching from browser, so yes something is wrong but all existing links works fine thus i'll ping helpdesk to see what is wrong.	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3623	TOOLSDOC-310	hmm - looking more into this....why is jbosstools-documentation now suddenly a partial mirror of what is on docs.jboss.org/tools ? Thats not how it was in the past (for good reasons since this repo != what is on the website) I must be missing something. In the past we published controlled parts of this to the site - what is published today ? i.e. where is the rsync scripts for publishing ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3624	TOOLSDOC-310	How about we create a docs.jboss.org folder in the root of jbosstools-documentation/ and move all the web content into there? Then I can put all the symlinks, HTML content, etc. in there and not pollute the root folder. [~mmurray] [~maxandersen] WDYT?	1	1	https://issues.jboss.org/browse/TOOLSDOC-310

#	Requirement	Questions	Answered	Successfully Answered	URL
3625	TOOLSDOC-310	[~maxandersen] If you don't like having a backup of the server's HTML content via https://github.com/jbosstools/jbosstools-download.jboss.org then I challenge you to propose a better alternative. Meanwhile, for docs.jboss.org, we ought to have a similar solution to back up the contents on the server so that a) the content can be developed offline and pushed to the server, and b) in case of accidental overwrite / server death, it can be recovered. If not a github repo, then what?	1	1	https://issues.jboss.org/browse/TOOLSDOC-310
3626	TOOLSDOC-307	Hi [~mhusnain], can you please create a PR for this? Thanks - supriya	1	1	https://issues.jboss.org/browse/TOOLSDOC-307
3627	TOOLSDOC-306	Hope this helps? Assigning back.	1	1	https://issues.jboss.org/browse/TOOLSDOC-306
3628	TOOLSDOC-303	Email from Yahor: Great job, you found and described nearly everything! Some comments regarding regarding to this doc: 1. (1.1.2 System requirements) I would add that BrowserSim work on Linux and Mac too, not Win32 only. 2. Could we use words Simulated Devices instead of Replicated Devices? For me it sounds more clear, because it is mobile simulator :-) 3. (1.2.1) There is one more way to open .html files: right click on a file and select Open With>BrowserSim 4. (1.2.3) There is also Weinre debugger in the latest builds: https://issues.jboss.org/browse/JBIDE-13338	1	1	https://issues.jboss.org/browse/TOOLSDOC-303
3629	TOOLSDOC-303	Email from Michelle to Yahor: Thanks for the feedback Yahor - very speedy. I am implementing it all now. Regarding Firebug Lite and Weinre, what's the difference? I think it is this, but am I right? Firebug Lite = local filesystem apps only, for standard web browsers and not mobile devices Weinre = deployed/remote apps, specifically for mobile devices Also, I think you guys have already implemented another function: * take a screenshot https://issues.jboss.org/browse/JBIDE-13434 Any info on this so I can add it to the documentation? Screenshots and Weinre will need news and noteworthy entries. I guess under alpha 2?	1	1	https://issues.jboss.org/browse/TOOLSDOC-303
3630	TOOLSDOC-303	Email from Yahor: >Firebug Lite = local filesystem apps only, for standard web browsers and not mobile devices Any web or local applications, but it can work only on the same device where the app is run. This means that Firebug does not support remote debugging, i.e. if an applications is run on Android device you cannot debug it from your desktop with Firebug. >Weinre = deployed/remote apps, specifically for mobile devices Weinre supports remote debugging. You can debug your applications which are run on Android or iPhone devices from your desktop browser. But from the BrowserSim's users perspective the major difference between these two debuggers is that Firebug Lite is slightly faster and its UI is similar to UI of Firebug in Firefox, and Weinre is slightly solver and the UI is similar to Chrome/Safari Developer Tools. >Also, I think you guys have already implemented another function: >* take a screenshot https://issues.jboss.org/browse/JBIDE-13434 >Any info on this so I can add it to the documentation? We just added a screenshot to this JIRA. It should be pretty self-explanatory. If you want to try it now, you may use nightly JBoss Tools build or browsersim.jar from https://hudson.jboss.org/hudson/view/JBossTools/view/JBossTools_Trunk/job/jbosstools-vpe-browsersim-standalone_master/ And then run it with the command: java -jar browsersim.jar > Screenshots and Weinre will need news and noteworthy entries. I guess under alpha 2? Yes, we are going to create these entries as usual, when a corresponding branch is created.	1	1	https://issues.jboss.org/browse/TOOLSDOC-303
3631	TOOLSDOC-303	Email Michelle to Yahor: I have downloaded the latest universal installer nightly build and had a play with the new BrowserSim functions. For Screenshot, there are three options: save, save as and copy to clipboard. I can see how the last two work but not the first one. What does 'save' do? No dialogue window appears and I cannot find the saved file. I assume it is also saving as .png but where? Is there a default save location? For Open Synchronized Window, a note in the 7.0 requirements document for this feature states that clicking on a browser will make all other browsers go to the top too. Is this something you are looking to implement or not for 7.0.0?	1	1	https://issues.jboss.org/browse/TOOLSDOC-303
3632	TOOLSDOC-303	Email from Yahor: > For Screenshot, there are three options: save, save as and copy to clipboard. I can see how the last two work but not the first one. What does 'save' do? No dialogue window appears and > I cannot find the saved file. I assume it is also saving as .png but where? Is there a default save location? Yes, it saves to a default location. You can see/change this location in preferences. > For Open Synchronized Window, a note in the 7.0 requirements document for this feature states that clicking on a browser will make all other browsers go to the top too. Is this >something you are looking to implement or not for 7.0.0? We completely forgot about this requirement :-) Thank you for reminding us!	0	0	https://issues.jboss.org/browse/TOOLSDOC-303
3633	TOOLSDOC-281	Hey Rastislav Wagner, Thanks for this info :) What's the "Convert to Maven Project" option for then? Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-281
3634	TOOLSDOC-281	Hey Rastislav, Thanks for that info :) I was wondering, when adding maven support via Facets you cannot set the packaging to 'pom', which seems weird. Is that a bug? Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-281
3635	TOOLSDOC-281	Alrighty, thanks for the extra info Fred. Rastislav and Fred, so I get this right, would it be true that the 'Facet' approach is currently they best way for JBT 3.3.x and JBDS 5.0.x streams; however in the future the "Convert to Maven Project" method will supersede the 'Facet' way?	1	1	https://issues.jboss.org/browse/TOOLSDOC-281
3636	TOOLSDOC-280	The linked issue has been resolved, verified and closed so does that make this JIRA outdated now? Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-280
3637	TOOLSDOC-280	Hey Rastlislav, Alrighty, makes sense ;) Can you please link me to the JIRA for the workspace crash issue then? If there isn't one can you please create one and link me to that so I can document it in the release notes. Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-280
3638	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Rick Wagner <rwagner@redhat.com> made a comment on jira JBDS-2046 I find it a little confusing-- is that dividing line after the first 2 items meant to divide by 'Enterprise vs. Community' or 'Get the package vs. Ala-carte'? Both seem to be true. The top 2 categories (SOA and BRMS) are our 'Enterprise' offerings. The bottom categories are 'Community' or ambiguous. But the top 2 could also be taken as aggregations, while the bottom ones are singletons you can pick from.... I'd think this could be confusing. Could we have some description 'for Enterprise users', 'for Community users', or something similar? Thanks, Rick	1	0	https://issues.jboss.org/browse/TOOLSDOC-274
3639	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Len DiMaggio <ldimaggi@redhat.com> made a comment on jira JBDS-2046 Aren't we also shipping jBPM5 with SOA-P 5.3?	1	0	https://issues.jboss.org/browse/TOOLSDOC-274
3640	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Julian Coleman <jcoleman@redhat.com> made a comment on jira JBDS-2046 I agree - that last set of screenshots above is good. What do we need to do to make this happen?	1	0	https://issues.jboss.org/browse/TOOLSDOC-274

#	Requirement	Questions	Answered	Successfully Answered	URL
3641	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Ken Johnson <kejohnso@redhat.com> made a comment on jira JBDS-2046 Comments on a few of the above entries: First on the JBDS SOA Update site above. 1. I don't think "SOA-P" means anything to customers. It's a very internal term. Suggest simply "SOA" since we've done away with the old collection named with "SOA" 2. The ModeShape tools go under JBoss Data Servcies rather than SOA Second on the most recent screenshots above. They look good and are less confusing. Couple points: 1. Do you think users get the difference between "Project Tooling" and "Product Tooling". Assuming your eyes pick up the subtle wording, does that carry significant meaning to users? Should it be "Community Project Tooling" and "Product Tooling" or a similar distinction? Or maybe it's "JBoss Tooling by Project" vs "JBoss Tools by Product"? Maybe splitting hairs a bit. 2. Under Product we have two products SOA-P and BRMS. There are actually 3 products: SOA Platform, Data Services Platform and BRMS. Rather than creating a new product category, perhaps rename the "SOA-P Tooling" to "SOA and Data Services Tooling". Since Data Services is a superset this makes more sense than breaking them out. Here the Teiid and ModeShape tools would be under "SOA and Data Services Tooling" with ESB, jBPM 3, BPEL, etc. Thoughts?	1	0	https://issues.jboss.org/browse/TOOLSDOC-274
3642	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Len DiMaggio <ldimaggi@redhat.com> made a comment on jira JBDS-2046 Just to re-re-re-cap 1) We will end up with these (2) choices: * SOA and Data Services Tooling * BRMS Tooling 2) And - these same titles will be used in both JBoss Central and the update site. Correct?	0	0	https://issues.jboss.org/browse/TOOLSDOC-274
3643	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Max Rydahl Andersen <max.andersen@redhat.com> made a comment on jira JBDS-2046 Len - BRMS is a product name - so no, that is not what it would be. "Business Rules" was my suggestion for general category name for it. Nick, and yes there are two one for JBT and JBDS and the suggestion is we use the same category names to avoid having confusion. About jbpm5 I think this issue has outgrown its ability to handle actual content questions. Open a new for that and ask Doug to work on that ?	0	0	https://issues.jboss.org/browse/TOOLSDOC-274
3644	TOOLSDOC-274	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 811977|https://bugzilla.redhat.com/show_bug.cgi?id=811977] Nick Boldt <nboldt@redhat.com> made a comment on jira JBDS-2046 To avoid further confusion, I'm going to close this and have opened to subtasks: https://issues.jboss.org/browse/JBDS-2112: should jbpm5 be included in both SOA and Business Rules connectors / categories? https://issues.jboss.org/browse/JBDS-2113: relabel categories / connectors in Central and Update sites Let's move the more focussed discussions there.	0	0	https://issues.jboss.org/browse/TOOLSDOC-274
3645	TOOLSDOC-271	BTW, another thing in the server editor should get documented: JBIDE-10319. I'm not sure what is the process here - should I add a documentation label on that JIRA?	1	1	https://issues.jboss.org/browse/TOOLSDOC-271
3646	TOOLSDOC-261	Isaac, maybe I am missing something, but where could I find this information? In official Seam3 servlet module documentation? Or we have documentation for seam3 tooling? Because as I know we haven't had it.	1	1	https://issues.jboss.org/browse/TOOLSDOC-261
3647	TOOLSDOC-261	Jaroslav: I am assuming this wasn't done in the 6.0 documentation. Please can you confirm that this is still a relevant issue? If it is then I will push it to JBT4.1/JBDS7.0 and make sure something is included.	1	0	https://issues.jboss.org/browse/TOOLSDOC-261
3648	TOOLSDOC-259	Hey Peter, I understand your sentiment here and you are correct, but there is only one of me for all of JBDS documentation. Currently the JBDS and JBT docs are built from the same source XMLs. There is also the possibility that JBDS could be used with BRMS and community bits so perhaps we can mention both - with an emphasis on BRMS? Are we talking about just mentioning BRMS whenever Drools Guvnor is mentioned, or are you looking for whole new sections or chapters on BRMS and JBDS? Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-259
3649	TOOLSDOC-259	Hey Peter, I am happy to add in information concerning the tooling working with BRMS, however considering there is about 10 days until release I am not in a position to learn BRMS. Can you provide the content for the guide at all? If not, then this will miss this release. Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-259
3650	TOOLSDOC-250	That's different. Here we're talking about project examples files - and project examples XML files for both JBoss Tools and JBDS appear at that same location - http://download.jboss.org/jbosstools/examples/ (you can see some explicitly have "jbds" in the title). We're simply moving these files to a common location so folks can find and add them quickly to the tooling. Does that help? Do you need steps to document for the user here 'cause I can do that... (added below) Let me know if you need anything else. Happy to help! ---------- To add the examples in JBDS 4.1.0 or JBDS 4.1.1, do the following: 1. Go to Windows->Preferences and look for the JBoss Tools->Project Examples page. 2. Click Add 3. Give the new example site a name and this url: http://download.jboss.org/jbosstools/examples/soa-p-5.x-samples.xml 4. Click OK to close the dialog, then apply and close the preference change. 5. Go to Help->Project Examples 6. Click "Show Experimental Sites" at the top of the dialog. 7. Select your new examples site, select one of the newly available examples: aggregator business_service custom_action fun_cbr helloworld_action helloworld simple_cbr static_router transform_XML2POJO Each of these is suffixed with "_eclipse" when imported to differentiate them from the quickstarts included with the runtime itself. Each example includes one or more deployable ESB projects and a test project. Once you have the project(s) imported, if your server was created ahead of time, the example projects should be ready to go with no additional changes. You can then deploy the non "_test" projects and run the ESB or JMS message testers from the "_test" project after a successful deployment. ----------	1	1	https://issues.jboss.org/browse/TOOLSDOC-250
3651	TOOLSDOC-250	Brian, hopefully just one final question: you mentioned this: "Once you have the project(s) imported, if your server was created ahead of time..." What happens if a user creates the server they wish to deploy the examples to after importing them?	1	1	https://issues.jboss.org/browse/TOOLSDOC-250
3652	TOOLSDOC-250	If you do it backwards (i.e. import the example and then create the server), you'd have to fix the project build path by hand (i.e. tweak the ESB and server library entries to point to the new server)... 1. Right-click on the project, select Build Path->Configure Build Path 2. Select the Libraries tab on the "Java Build Path" property page. 3. Select the JBoss Enterprise Application Platform 5.x Runtime library. 4. Click Edit... 5. Select the runtime you want from the list. 6. Click Finish. 7. Select the JBoss ESB Runtime library. 8. Click Edit... 9. Select the "Server Contained" entry in the list that matches the server picked in step 5. 10. Click Finish. 11. Click OK. That should take care of most, if not all, problems with the project so that it builds and can deploy. Does that help?	1	1	https://issues.jboss.org/browse/TOOLSDOC-250
3653	TOOLSDOC-246	Isaac on irc indicated that this was probably an eclipse error versus a docs error. If it is an easy fix, could we consider adding to 4.1.1 release?	0	0	https://issues.jboss.org/browse/TOOLSDOC-246
3654	TOOLSDOC-246	Hey Nick, could you take a look at this please. The image is there when accessing the book through a web browser so it seems to be an issue with Eclipse over being a doc issue. Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-246

#	Requirement	Questions	Answered	Successfully Answered	URL
3655	TOOLSDOC-246	1. installed jbdevstudio-product-linux-gtk-x86_64-4.1.1.v201110060056R-H730-M2.jar 2. images load fine throughout the doc, including in section 2.2.5 of Struts Tools Tutorial where the flowchart appears. Multiple other images and icons also appear. Perhaps something was fixed between the 4.0 and 4.1 docs' release? Is the path to that image relative or absolute? I thought maybe it was an absolute path to a VPN-only URL, but after dropping off VPN other docs referring to that image all loaded fine. If the images are relative paths and they're contained inside a plugin, maybe the problem was the plugin's build.properties failed to include the images when building the binary? Anyway, looks good here. Cannot reproduce your screenshot.	1	1	https://issues.jboss.org/browse/TOOLSDOC-246
3656	TOOLSDOC-192	[~irooskov] Has this JIRA already been resolve? The links for information no longer work and I have no idea what this JIRA is about. Please can you comment.	0	0	https://issues.jboss.org/browse/TOOLSDOC-192
3657	TOOLSDOC-140	Hey Maxim, is there a write-up or can you give me a quick summary and maybe an image of what the final outcome was for the new wizard please? Reading through the JIRA there seems to be a lot of back and forth on what was actually done and I'm finding it hard to nail down what should be documented. Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-140
3658	TOOLSDOC-107	If you mean "how do you use Maven to do our JBT builds?" we have a few docs about this in the wiki already: http://community.jboss.org/wiki/JBossToolsTargetPlatformProvisioningorhowtoresolvemissingdependencieswhencompilingJBossTools http://www.jboss.org/tools/docs/building http://www.jboss.org/tools/docs/testing If you have other questions, please ask specific ones and I'll wiki/faq up what you need.	1	1	https://issues.jboss.org/browse/TOOLSDOC-107
3659	TOOLSDOC-100	So I'm guessing the confusion comes from the fact that I didn't manage to complete the thought... The "Simple Web Service" wizard provides a way to handle the Bottom-up case in Chapter 3 as well as the WTP Web Service wizard. It does so more easily than the WTP wizard. You talk about that in Chapter 2. But we don't mention in Chapter 3 that you can use the "Simple Web Service" for the Bottom-up case if you provide your own annotated classes for the Class and/or Application Class fields. Is there a way to refer back to Chapter 2 from Chapter 3 suggesting that using the "Simple Web Service" is another way to handle the bottom-up case?	1	1	https://issues.jboss.org/browse/TOOLSDOC-100
3660	TOOLSDOC-90	Hi Isaac, can you have a quick look at this doc to make sure I haven't told any whopping lies?	1	1	https://issues.jboss.org/browse/TOOLSDOC-90
3661	TOOLSDOC-77	New structure: 1. Introduction 1.1. What is ESB and JBoss ESB Tools? 1.2. Key Features of the JBoss ESB Tools 1.3. Requirements and Installation 2. Tasks 2.1. Creating a ESB Project 2.2. Using ESB Project Examples 2.3. Deploying a ESB Project 2.4. Creating a ESB File 2.5. Creating a ESB Action 2.6. Configuring ESB Runtime in Preferences 2.7. Using and Configuring SOA Platform 3. Reference 3.1. JBoss ESB Editor 3.1.1. Tree View 3.1.2. Source View 3.2. ESB Editor Features 3.2.1. ESB syntax validation 3.2.2. Support for XML Schema 3.2.3. Content Assist for ESB XML file 3.2.4. OpenOn for ESB XML file 3.2.5. Synchronized Source and Visual Editing 4. Summary 4.1. Other Relevant Resources on the Topic	0	0	https://issues.jboss.org/browse/TOOLSDOC-77
3662	TOOLSDOC-76	Could you let Isaac know about where the current Teeid eclipse tooling docs are located ?	1	0	https://issues.jboss.org/browse/TOOLSDOC-76
3663	TOOLSDOC-71	Can you recommend a book that this information might be best suited to? I can only think of the 'Getting Started Guide' but that is JBDS specific so the content wouldn't reach our JBoss Tools users.	1	0	https://issues.jboss.org/browse/TOOLSDOC-71
3664	TOOLSDOC-63	The following Guide structure is provided: 1.Introduction 1.1. Guvnor Tools Key Features 1.2. What is Guvnor Tools? 1.3. Requrements and Installation. 2. Guvnor Tools Tasks 2.1 Adding new Guvnor connection 2.2 Importing Guvnor Repository Resources 2.3 Getting Local Copies of Guvnor Repository Resources 2.4 Managing Guvnor Resources 3. Reference 3.1 Guvnor Perspective 3.2 Connection Wizard 3.3 Repositories View 3.4 Resource History View 3.5 Guvnor Preferences 3.5.1 Guvnor Repository Connection Preferences 3.5.2 Local Guvnor Repository Resource Decoration Properties. 4. Summary 4.1 Other relevant resources on the topic.	0	0	https://issues.jboss.org/browse/TOOLSDOC-63
3665	TOOLSDOC-43	JSF Reference Guide contains detailed description for all fields in the wizards, but they are missing from the Help tray for some reason. Could you please check why they are not picked up?	0	0	https://issues.jboss.org/browse/TOOLSDOC-43
3666	TOOLSDOC-37	Since the installer now only uses the ALL zip as part of the assembly process, but does not publish it (in favour of the Update zip), and since this is documented in the what's new (from M2)... is this issue done?	1	1	https://issues.jboss.org/browse/TOOLSDOC-37
3667	TOOLSDOC-27	reopen for clarification. What is xmldiffpatch.exe ? Where is it from ? What is the license ? How is it to be used ?	1	1	https://issues.jboss.org/browse/TOOLSDOC-27
3668	TOOLSDOC-25	This is a very broad JIRA - can you be more specific please	0	0	https://issues.jboss.org/browse/TOOLSDOC-25
3669	TOOLSDOC-18	what's ne on the topic - http://docs.jboss.org/tools/whatsnew/hibernate/hibernate-news-3.3.0.M3.html - "Hibernate specific annotations"	0	0	https://issues.jboss.org/browse/TOOLSDOC-18
3670	TOOLSDOC-17	Svetlana that page no longer exists, can you give any more details on what needs to be added? Thanks ;)	0	0	https://issues.jboss.org/browse/TOOLSDOC-17
3671	TOOLSDOC-15	Its standard XML Catalog behavior - do we really need to mention this for *every* XML that is possible to edit in the tools ? http://www.eclipse.org/webtools/community/tutorials/XMLCatalog/XMLCatalogTutorial.html	1	1	https://issues.jboss.org/browse/TOOLSDOC-15
3672	TOOLSDOC-15	Hey Shaun, this JIRA explains that the issue occurs when: "using a newer version of hibernate than what is in the core", and max points out that this is not only related to Hibernate. However, using Hibernate as an example, are you referring to someone using a newer version of the hibernate tooling or hibernate itself? Thanks, Isaac	1	1	https://issues.jboss.org/browse/TOOLSDOC-15
3673	TOOLSDOC-14	What's new details added. Updates applied.	0	0	https://issues.jboss.org/browse/TOOLSDOC-14
3674	TOOLSDOC-3	Seam Dev Tools Reference Guide: 1.3."Installation into Eclipse -this section specific for JBT." Chapter 3."Maven Integration for Seam Projects also specific for JBT." Figure 4.3. "Changing the Seam Facet Version".Some facets on the picture is specifig for JBT and are not included into JBDS.	0	0	https://issues.jboss.org/browse/TOOLSDOC-3
3675	TOOLSDOC-3	ESB Tools Reference Guide: 1.1. What is ESB? -in this section the info that the guide will provide installation process info is mentioned. But it's not requred for JBDS guide version because ESB is already installed there.So this sentence is specific for JBT. 2.1. ESB Tools Installation -this section is specific for JBT. 2.5. "Creating a ESB File" -there is a "Note" in this section that specifies which versions of JBoss ESB Tools supports what jboss-esb.xsd versions.This info needs some refactoring in the context of JBDS guide, because a user could have no idea what version of JBDS goes with what JBT.The same problem appears in 2.2. Creating a ESB Project section(the last step in configuring the project).	0	0	https://issues.jboss.org/browse/TOOLSDOC-3
3676	TOOLSDOC-3	Drools Tools Reference Guide: 1.1. What is Drools? -describes Drools tools only as a plugin to eclipse but not as a part of JBDS.	0	0	https://issues.jboss.org/browse/TOOLSDOC-3
3677	WFKDOC-110	Suz, Do you have any migration docs as an example? I'm asking you that because intuitively https://deltaspike.apache.org/migration-guide.html makes sense for me, but I know that it could be much better for people that are starting the first contacts with DeltaSpike. Plus, I never used CODI, so my idea is to forward those questions to dev@deltaspike.apache.org and ask for contributions. Having a migration page as an example can help people to understand how it should looks like.	1	1	https://issues.jboss.org/browse/WFKDOC-110

#	Requirement	Questions	Answered	Successfully Answered	URL
3678	WFKDOC-110	Suz, I'll propose the following: Once that we have some documentation on deltaspike git repository, I'll ask at deltaspike@dev.apache.org for help. Wdyt ?	1	1	https://issues.jboss.org/browse/WFKDOC-110
3679	WFKDOC-110	Sure [~rafabene]. I'll show you what we've got so far anyway, can you view this? https://github.com/sdorfiel/deltaspike/tree/WFKDOC-103/documentation	1	1	https://issues.jboss.org/browse/WFKDOC-110
3680	WFKDOC-110	At https://github.com/sdorfiel/deltaspike/blob/WFKDOC-103/documentation/overview.adoc#background-portable-cdi-extensions - I suggest you to replace whole section for this one only: http://deltaspike.apache.org/documentation.html#what-is-a-portable-cdi-extension - At https://github.com/sdorfiel/deltaspike/blob/WFKDOC-103/documentation/overview.adoc#about-deltaspike - These capabilities can be added to projects that already -do not- have CDI enabled, -providing a method of connecting existing projects with new customization-. - -This provides a method of integrating custom and third party code to existing projects- - Users can -inject- use modules - -These capabilities are added when a user inserts a module into the classpath of their project. Injected objects can be customized and have interceptors associated to them.- - -DeltaSpike uses CDI container integration provided by Arquillian for booting and controlling context lifecycles. Containers are activated by Maven, which utilizes the profiles JBoss Weld and OpenWebBeans-	1	1	https://issues.jboss.org/browse/WFKDOC-110
3681	WFKDOC-108	{quote} Missing Seam2 and Seam 3 info - are these both still relevant? {quote} We're currently experiencing serious issues while trying to migrate Seam2 and Seam3 applications from JBoss AS7 to WildFly 8. Given the fact that Seam2/3 is discontinued and recommends DeltaSpike as migration target it would be very much appreciated to have some documentation/examples in place for that kind of migration scenarios.	1	0	https://issues.jboss.org/browse/WFKDOC-108
3682	WFKDOC-106	[~rafabene], could you describe an example application that would have CDI only, and an example of how the user might want to extend that application and how DS can assist. The links you have are great for overviews of the individual plug-ins. But we're looking for a more concrete example about an application to provide the user. For example, http://aerogear.org/docs/unifiedpush/ups_userguide/overview/#_use_cases_and_scenarios For example, in one of those links you state "One of the frequently needed features is accessing ServletRequest in a CDI bean." Suz and I don't have sufficient knowledge to be able to put this into context. Could you describe an example application / scenario where this is useful. What type of app would it be/ what functionality would it have? What would be the difficulties for the app in just using CDI and what is the effect for the developer after adding this annotation in their code? Thanks.	0	0	https://issues.jboss.org/browse/WFKDOC-106
3683	WFKDOC-105	Topic: Using DeltaSpike without Maven - We do encourage them to use the Maven Instructions even the users being able to build DeltaSpike themselves. If they decide to not use Maven, they're required to do some additional steps like placing it manually inside WEB-INF/lib or <EAR_ROOT>/lib depending the type of the project: EAR, WAR. Topic: Adding a Server or Servlet Container CDI Implementation - I couldn't find this topic at the documentation to understand the context. Can you send me the link, please ? Thanks	1	1	https://issues.jboss.org/browse/WFKDOC-105
3684	WFKDOC-105	Thanks [~rafabene]. Using DeltaSpike without Maven Can you spell the extra steps out for me here? Is it something akin to *Copy the downloaded file into a project's WEB-INF directory *Run X command ? Adding a Server or Servlet Container CDI Implementation https://deltaspike.apache.org/documentation.html#deployment-mode Additionally, are these the correct system requirements? Maven 3 Java EE (and/or SE?) Preinstalled CDI (version number?) Red Hat JBoss Enterprise Application Platform	1	1	https://issues.jboss.org/browse/WFKDOC-105
3685	WFKDOC-105	Thanks for that [~rafabene]. So... Using DeltaSpike without Maven: After the user has put the downloaded files into the locations you noted, do they have to do anything else (run any commands, restart anything) or is that it in terms of configuration? Adding a Server or Servlet Container CDI Implementation: Yeah, I see what you mean about the varience there. Makes it a bit challenging. What if we're just working in a JavaSE environment? Where does the user put the code snippet in that link? (https://deltaspike.apache.org/documentation.html#deployment-mode Start a CDI container using Java SE) Does it go in the project's pom file?	1	1	https://issues.jboss.org/browse/WFKDOC-105
3686	WFKDOC-105	Thanks [~rafabene]. And do you only need Weld and OWB when using JavaSE?	1	1	https://issues.jboss.org/browse/WFKDOC-105
3687	WFKDOC-105	Thanks [~rafabene]. We also need a DeltaSpike profile to add to Maven's settings.xml. Something a user can copy and paste into their own settings file. (Akin to the example-settings.xml file in WFK's Maven repository.) On a similar note, what is the URL the user needs to use Maven Central if they're adding it to settings.xml? For example, https://maven.repository.redhat.com/techpreview/all/ or https://repository.jboss.org/nexus/content/groups/public-jboss/	1	1	https://issues.jboss.org/browse/WFKDOC-105
3688	WFKDOC-96	[~nids1409], [~Nidhis], [~aakanksha_writer], [~nshendye], [~themjboss], [~d_michael], [~bobjboss], will one of you please pick up the Deploy and View the Application topic for a peer review? Once you have decided on reviewing the topic you must re-assign the JIRA ticket to yourself (currently, I am the assignee) before you actually start the review. DocBuilder link to the topic: http://docbuilder.usersys.redhat.com/22729/#sect-Deploy_and_View_the_Application	0	0	https://issues.jboss.org/browse/WFKDOC-96
3689	WFKDOC-77	[~manaRH] - I had a look at the links provided but can't see any Seam migration info. Do you know where the info went, if there ever was any info?	1	1	https://issues.jboss.org/browse/WFKDOC-77
3690	WFKDOC-77	[~manaRH] - need this content asap if it is to make it into the Seam doc. what's your timeline for getting it done?	1	1	https://issues.jboss.org/browse/WFKDOC-77

#	Requirement	Questions	Answered	Successfully Answered	URL
3691	WFKDOC-69	Kit" chapter as the very first chapter. See Hibernate Search Guide for instance. Make sure to add the topics that have already been created to the Explore the Examples content spec - do not create new topics. * Chapter 1. Exploring the Examples Overview ** Change chp title to match doc title "About Explore the Examples". ** This section needs simplifying and the strength of the text improving. It feels rambling and repetitive. This should be a very clear concept topic with the subject in this case the Explore the Examples doc. Remember that a good concept topic states a high level definition of the subject, the purpose of the subject, what the subject consists of and any distinguishing characteristics. So "Explore the Examples is … Its purpose is … The Guide consists of …" For example, see the "About Start Developing" topic in the WFK 2.6 Start Developing doc. * Chapter 2. The contacts-mobile-basic Example ** Please review the content specs that we set out for each of the example chps prior to commencing writing. These did not have Overview sections and specified the summary topic of the example be used as Initial Text for the chp. Please implement this as we planned. The reason I am asking you to remove the Overview topic is that it duplicates the information provided in the summary topic of the example. Likewise for chp 3. * 2.2. The contacts-mobile-basic Example ** "The example can be deployed to a desktop browser to observe in a testing environment." >> what does this mean? "deploy to a desktop browser" does not make sense - an app is deployed to a server and viewed in a browser; how does a desktop browser make a testing environment? does the app look the same on desktop browsers and mobile device browsers? ** "The framework is used to add widgets to pages, such as headers, buttons and forms. These widgets create an interactive, mobile-friendly interface that is touchscreen enabled." > would be more accurate to express as "The framework is composed of widgets that enable interactive, mobile-friendly, touchscreen enabled application pages with items including headers, buttons and forms." ** mobile-friendly > it's more than mobile-friendly, the primary design is for mobile devices ** touchscreen enabled > does jQuery Mobile provision this? ** "This chapter examines how to build and deploy the example, explore how it uses the jQuery Mobile framework, and provide details on how widgets are used." > typos * 2.3.1. System Requirements ** The system requirements for the two examples are identical so let's simplify the doc instead of presenting duplicate information. Put the System Requirements topic in the chapter with the About Explore the Examples topic. See Chp2 of the Start Developing doc as an example. ** Simplify the information in this section; we want to limit the amount of info we have to update in this section between releases so make use of the Supported Configurations page more heavily; don't list the browsers, instead point users to the Supported Configurations page for this info. See the "Start Developing System Requirements" topic in the Start Developing doc for an example and consider copying the appropriate text and style from that topic. ** "Current version of Maven with an accessible repository." > what do you mean by an accessible repository? * 2.3.2. Obtaining the Example ** "unzipped into" > extracted into; don't use unzip (see IBM pg#372) ** Proc title needs to reflect the proc task, which in this case is more than downloading ** The downloading steps of the proc need simplifying since the CP has changed - please see "Obtain the Project Source Code" topic in Start Developing doc and copy the appropriate text and style from that topic. ** "To unzip the file on the command line, navigate to the directory you saved the ZIP file in and execute the following command: unzip" > This command is insufficient to extract the contents, it would need to be: unzip filename.zip; "navigate to the directory in which you save the .zip file"; don't use execute (see IBM pg#327), instead "enter the following command:" * 2.3.3. Building the Example ** "it must be built." > replace with "the source code must be built." ** "This is accomplished by using Maven to install the example locally." > Maven does not install anything, it builds things. ** "Execute the following command to build the example:" > don't use execute (see IBM pg#327), instead "Enter the following command:" * 2.3.4. Deploying the Example ** "To	1	1	https://issues.jboss.org/browse/WFKDOC-69
3692	WFKDOC-24	I have successfully committed the changes to svn last night. Can you check again and let me know if you are still having problems viewing the updates.	0	0	https://issues.jboss.org/browse/WFKDOC-24
3693	WFKDOC-23	[~maschmid], couple of questions: # Should [1] be referencing EAP 6.1.0, 6..1.1, 6.2.0 and 6.2.1? Or just EAP 6.2.0 and 6.2.1? Or just EAP 6.2.0? # Can/should the example in [2] of spring-3.0-bom be updated to spring 4.0? f so, is there anything in the <dependencies> that needs changing? [Seems since we are deprecating 3.0 we should use newer versions in the example] # Are there any specific migration notes? Can the existing info in [3] be removed or are these relevant for users migrating from 2.4.0 to 2.5.0 too? [1] https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Web_Framework_Kit/2.4/html-single/Maven_Repository_User_Guide/index.html#chap-Installing_the_Repository [2] https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Web_Framework_Kit/2.4/html-single/Maven_Repository_User_Guide/index.html#Using_JBoss_Stacks_in_Your_Project [3] https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Web_Framework_Kit/2.4/html-single/Maven_Repository_User_Guide/index.html#Migration_Notes_for_JBoss_Stacks_from_WFK_2.3.0_and_Earlier	1	1	https://issues.jboss.org/browse/WFKDOC-23
3694	WFKDOC-23	1. Should [1] be referencing EAP 6.1.0, 6..1.1, 6.2.0 and 6.2.1? Or just EAP 6.2.0 and 6.2.1? Or just EAP 6.2.0? EAP 6.2.0 with a note that deprecated components (actually only Errai) requires both EAP 6.2.0 and 6.1.1 maven repositories. 2. Can/should the example in [2] of spring-3.0-bom be updated to spring 4.0? f so, is there anything in the <dependencies> that needs changing? [Seems since we are deprecating 3.0 we should use newer versions in the example] The best would be to update to spring-3.2-bom. All of those artifacts are in 3.2 also, so no other change is needed there. 3. Are there any specific migration notes? Can the existing info in [3] be removed or are these relevant for users migrating from 2.4.0 to 2.5.0 too? it is only relevant to users migrating from WFK 2.3 and older. I think it makes sense to keep it for such users, given the release frequency of WFK... AFAIK there are no other migration notes for WFK 2.5 specifically.	1	1	https://issues.jboss.org/browse/WFKDOC-23

#	Requirement	Questions	Answered	Successfully Answered	URL
3695	WFKDOC-22	1) Red Hat JBoss Web Framework Kit is a product that combines Suggestion: need not mention 'is a product that' 2) You can create, modify, and deploy Java applications using the framework. Suggestion: You can create, modify, and deploy Java applications using the frameworks (or probably 'Web Framework Kit') 3)It allows for the use of .... Suggestion: 'It' should be replaced with the actual thing (like frameworks or Web Framework Kit) to be explicit and clear Suggestion: ...allows the use of... ('for' can be dropped) 4) ...approach to making applications... Suggestion: ...approach to make applications.. 5) You can combine these popular frameworks... Suggestion: 'popular' can be dropped 2.1 6)....confirmed frameworks and... Suggestion: serial comma - confirmed frameworks, and 3.1 7) This task shows you how to use the former. Suggestion: 'this task' – which task 'former' – better to be specific in a technical documentation In fact we can just do without this sentence and have a meaning name for Procedure 3.1 8)Procedure 3.1. Task Suggestion: Name of the procedure should be something more meaningful than just saying 'task' maybe 'Installing Component Frameworks using Maven' or 'Installing Web Framework Kit using Maven'.... 9) Note : The source for the frameworks is available from the Red Hat Customer Service Portal for inspection. Suggestion: The information in the note is covered in the 1st sentence of section 3.1, except for the hyperlink which can be added there as well. 10)IMO sections 3.1.1 and 3.1.2 should not be subsections of 3.1 but at the same level as 3.1, because all these sections are on the same lines 11) Chapter 3 is comparatively huge and can be split into 2 chapters ---the 3 installation topics as one chapter (3.1, 3.1.1, 3.1.2) ---examples and quickstarts as another chapter (3.2, 3.3) 12) Procedure 3.1 -> step 2 Suggestion: Name of the icon should be bold --Clicking on the icon is not allowed, can click on either of the 2 buttons available so in this case – need to click the Download Software button on the icon --Complete the step by saying – log in to continue 13) Procedure 3.1 -> step 3 Suggestion: In the left pane, click Web Framework Kit. -- as you are saying 'current release of WFK' you need not mention the version number of WFK 14)When the files have been downloaded, unzip them. Suggestion: Unzip the downloaded files. 15) Procedure 3.1 -> step Suggestion: should have a link to the section about installing Maven repo (even if it is just the next section) 3.1.1. 3.1.1.1. Installing the Repository 16) There are three ways how the Red Hat JBoss Web Framework Kit Maven repository can be installed: Suggestion: There are three ways to install Red Hat JBoss Web Framework Kit Maven repository: 17) Use the option that best suits your environment. Suggestion: IMO this is obvious and can be dropped or maybe rephrased to provide more useful information to the user. 18) Instead of having 2 blocks for Important they can be clubbed into 1 block as Important 1. 2. 19) Local File System Suggestion: Installing Maven Repository on a Local File System Global Suggestion: IMO names of all section, subsections, titles, procedures....should have complete meaning 1. This ways the name will say it all, the reader need not refer the above of below text for details 2. It will also be useful while cross-referencing I am not suggesting long names or titles but names that are complete in themselves 20)This option is the most suitable for testing in a small team. Suggestion: Can we use 'method' instead of 'option'? Can this information be elaborated a bit? 21)This option is the most suitable for multi-user environments. Suggestion: Can we use 'method' instead of 'option'? Can this information be elaborated a bit? 22) Suggestion: 'the' should not be used before product names. 23) https://access.redhat.com/site/documentation/en-US/JBoss_Enterprise_Application_Platform/6.2/html-single/Installation_Guide/index.html#Installation_Methods_for_JBoss_Enterprise_Application_Platform_6 Procedure 4.1 at the above link - I personally think this is a good style of writing crisp and to the point procedures 24) Global suggestion: e.g. should be spelled out as 'for example'. 'e.g.' is actually Latin and should be avoided in technical English documentation. 3.1.1.2. 25) with JBDS, and manually Suggestion: remove comma 26) The procedure below demonstrates... Global Suggestion: avoid	1	1	https://issues.jboss.org/browse/WFKDOC-22
3696	WFKDOC-22	Excellent feedback [~snagarwa]! Make Sneha's changes, except for the following: * 1-5) Sneha will be modifying 'About WFK' in WFKDOC-49 * 9) Keep this note but make it more useful. Which files? And don't hide the link for 505 compliance - "available from <url> on the Red Hat Customer Portal" * 15) Do but add a link but as a 'Refer to' in the content spec * 17) Do - in which instance would the user choose each option? * 18) Do but use bullets instead of numbers as order is not essential * 22) can use 'the' before product name when that name is being used as an adjective, for example 'the JBoss EAP repositories' * 23) Yes and no, it is a good example in terms of succinctness but could be better, should put the 'where' first in each step so 'From the drop-down list, select blah' * 27) I disagree, using 'the' before common nouns is perfectly valid but usually not valid before proper nouns (exceptions exist, e.g. the Queen) * 35) Do but either drop 'need' or change to 'must' if it is crucial for user to do * 40) Do but either 'the .jar file' or 'the JAR file' (IBM pg#205) Make these additional changes: * 57) Don't write 'click the blah button', should be simply 'click blah' - check whole document (IBM pg#212) * 58) Procedures 3.12 and 3.13 need titles not just 'Task' - see Sneha's point 8) * 59) Section 3.2.1 Downloading the Snowdrop Example should be generalized to all examples	1	1	https://issues.jboss.org/browse/WFKDOC-22
3697	WFKDOC-22	Part of phase 2 review comments: 1)Procedure 3.1. Suggestion: It will be helpful to the users if we can add a tip/information box describing what the diferent types of downloads (demo, binary, source code) mean. 2)Procedure 3.1. -> Step 4 -> and click Download Suggestion: and click the corresponding Download link 3) Procedure 3.1. -> Step 4 -> When the files have been downloaded, unzip them. Suggestion: Unzip the downloaded files. 4) Procedure 3.1. -> Step 5 Suggestion: It is not clear which Maven repository and where it is. Either add more info here to add link to relevant section (like say – For details on Maven repository.....refer to section.....) ----Similarly for adding profile.... 5) Procedure 3.2. -> Step 2 -> ...will be ... Global Suggestion: replace with 'are' 6) Global suggestion: can we generalize the version numbers in all the procedures so that we have less version numbers to update every release? 7) Procedure 3.3. -> Step 3 Suggestion: Where is info on configuring the Apache Web Server? Are we assuming that the user should know it? 8) Procedure 3.4. -> Step 2 ->Select the Repositories section from the Views/Repositories menu to the left of your repository manager. Suggestion: Items should be in the sequence/order to be followed: -- In the left pane of the repository manager, go to Views/Repositories menu and select Repositories. 9) Procedure 3.4. -> Step 4 -> a. -> Add... Suggestion: should be 'Add' only; do not use '...' even if it is there in the UI 10)Procedure 3.4. -> Step 4 -> b. ->Give the new repository a name and ID. Suggestion: Assign a name and ID to the new repository 11) Procedure 3.4. -> Step 4 -> c. -> into Suggestion: Should be 'in' 12) Procedure 3.4. -> Step 5 ->The Nexus server is now configured to use the repositories. If you want the repositories to be available in a repository group, please follow these additional steps: Suggestion: drop 'now' -- For the repositories to be available in a repository group, execute the following steps: 13) Procedure 3.4. -> Step 5 -> a -> Suggestion: Select a repository group for the repositories and click the Configuration tab. 14) Procedure 3.4. -> Step 5 -> b -> Suggestion: -- 'drag' – the item can be moved either by dragging or by using the buttons so I think better to say 'Move the new ...' -- Move the JBoss Web Framework Kit repository from the Available Repositories list to the Ordered Group Repositories list. 15) Procedure 3.4. -> Step 5 -> Note Suggestion: -- 'Please note that' is not required inside a Note box -- The order of the repositories in the Available Repositories list determines the priority of repositories to be used when searching for Maven artifacts.	1	1	https://issues.jboss.org/browse/WFKDOC-22
3698	WFKDOC-18	[~ppitonak], is this purely about updating the enterprise docs or the community ones too?	1	1	https://issues.jboss.org/browse/WFKDOC-18
3699	WFKDOC-18	[~mmurray], I still see old link on [1]. How often is documentation generated? [1] http://documentation-devel.engineering.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Web_Framework_Kit/2.5/html/RichFaces_Component_Reference_Guide/chap-Component_Reference-Introduction.html	1	0	https://issues.jboss.org/browse/WFKDOC-18
3700	WFKDOC-15	[~mmurray], is there a suitable way to provide updated content for this guide ? Notwithstanding bug fixes, the feature could be treated complete.	1	1	https://issues.jboss.org/browse/WFKDOC-15

#	Requirement	Questions	Answered	Successfully Answered	URL
3701	WFKDOC-15	[~vineet.reynolds], not sure we have a great mechanism for updating content directly. Could you use DocBuilder to provide input? So http://docbuilder.usersys.redhat.com/16724/ is the guide that this jira is referring to. You can click the 'Report a Bug' link at the end of any of the sections and this will open semi-completed jiras in which you could provide feedback or the required text updates. I think primarily the sections you need to review are 1.4 Application in Action and 2.1 Client Source Code, and 2.2 Server Source Code if that too has changed. We'll test out the ER1 build ourselves and use it to take new screen captures as necessary.	1	1	https://issues.jboss.org/browse/WFKDOC-15
3702	WFKDOC-6	I misunderstood, I thought fixing the language was for Chapter 3 and not the entire guide. I will address this. I see the screencap you're referring to. When you say step 1 can be left within a screencap, did you mean the one originally used in step 1? (Which has now replaced the one in step 2 as requested.)	1	1	https://issues.jboss.org/browse/WFKDOC-6
3703	WFKDOC-5	Great work Suz - looks good. You were objective in picking out the important intro points in 2.3, something I was finding hard to do because I wrote one of them. Q: Was there a specific need to create the new topic for 2.1? I was thinking that you could use the existing JBDS topic [22879] but perhaps there is something I'm missing. Minor fixes in 2.3: * the condition for wfk needs to go in the <step> tag otherwise you end up with an empty but numbered step in the final copy for jbds * also spaces don't necessarily get stripped at the start and end of <phrase> tags so be sure to start the first word straight after the closing > of phrase and likewise at the end, e.g. <phrase condition="">The.</phrase> rather than <phrase condition=""> The. </phrase> * for the wfk version, we only want users to do step 2 or 3+4; you could collapse 3 and 4 into one step "To create a new SSH private-public key pair, click New and complete the fields and options as detailed:" but how can you direct the user to step 2 or 3 only? If you're not sure we can chat about it * Suggest rearranging the sentences in the intro for better reading: {quote} Secure Shell (SSH) keys are essential when working with OpenShift as *t*hey *are* used to establish the encryption between the IDE and the OpenShift server. *SSH keys* enable you to develop and access deployed applications *and they* are also used to control access of other contributors to your OpenShift applications. You can use *an* existing key *pair* or generate a new one in the IDE. SSH keys must be uploaded to the OpenShift server and, as detailed in the procedure below, OpenShift Tools can assist with both the generation and uploading of SSH keys to OpenShift. {quote}	1	1	https://issues.jboss.org/browse/WFKDOC-5
3704	WFKDOC-4	[~sdorfiel], good start with adding the conditions. I've noticed the following needs fixing: 1. The itemized list in Do you need help? is missing for wfk 2. The para following the itemized list in Do you need help? is missing for wfk 3. <application> tags in give us feedback need to surround the whole jira project title 4. jbt needs adding to the condition for 'JBoss Tools and Developer Studio (TOOLSDOC)' in give us feedback 4. space between the two conditional phrases in give us feedback needs removing else will have double space before wfk phrase when processed 5. (WFKDOC) needs adding to end of 'Documentation for WFK' phrase Also, by checking in the PressGang handbook I've learnt that when the same text is shared by multiple conditions, then the xml can be simplified. See multiple conditions on an element at the end of [1]. So for example, <phrase condition="jbds;wfk">customer portal</phrase> rather than <phrase condition="jbds">customer portal</phrase><phrase condition="wfk">customer portal</phrase>. Do you know how to preview text filled with conditional statements in PressGang? If not let me know and I can show you. I know that when there's lots of conditions it can be hard to figure out what will show up when. [1] http://docbuilder.usersys.redhat.com/13968/#Add_a_Conditional_Build_Statement	1	1	https://issues.jboss.org/browse/WFKDOC-4
3705	DROOLS-1663	A small clarification needed. Currently, DMN specification supports the following "types" of import: - DMN Import - import of decisions, BKMs, item definitions, etc. - XML Import - import of data tables defined in other XML files - XSD Import - import of XSD type definitions. This is stated in the "DMN Method and Style", B. Silver. Please, check the attached pages. !IMG_2197.jpg|thumbnail! !IMG_2198.jpg|thumbnail! !IMG_2199.jpg|thumbnail! The specification, however, does not mention any specific type (DMN, XML, XSD). Of course, you can find combination of words "XSD import" here and there in the Specs, but, again, as I said, there's nothing specific about what you can exactly import. Should we focus on DMN import only for the "beginning"?	1	0	https://issues.jboss.org/browse/DROOLS-1663
3706	DROOLS-1661	[~ge0ffrey] Is there a way to make these dependencies optional? so if the user is using the kie-server-client only for rules/process/solver he only needs the respective dependencies instead of everything?	0	0	https://issues.jboss.org/browse/DROOLS-1661
3707	DROOLS-1652	What should the URL look like in your opinion [~tirelli]? From a RESTful point of view, we're creating a new kie-container resource, so in theory it should be a PUT (create resource) on URL"/server/container/\{id\}" that accepts a DMN file. However, that URL already exist. We could provide support for different request bodies in that operation (e.g. a `KieContainerResource` and a `DmnKieContainerResource`), but that could become a bit nasty ... We can also use a POST on something like "/server/containers/\{id\}/resources" and have that create a container resource under "/server/containers/\{id\}" (the reason I don't like a PUT in this case is because we create the resource (container) under a different URL than our request URL). The reason for the name "resources" (plural) is that we could provide multiple resources in the body (e.g. multiple DMN files). Second, apart from the DMN XML file (or files), do we also want to be able to post more information in the body (e.g. like additional information we pass in `KieContainerResource`)? And finally, should this be part of the DMN extension or KIE-Server Commons? The argument for DMN would be that otherwise we would expect Commons to have DMN knowledge. On the other hand, it's just deploying a KIE Containerner based on a resource file. The fact that that's a DMN model does not really matter (in theory this could be any resource file). Personally KIE-Server Commons makes most sense.	1	1	https://issues.jboss.org/browse/DROOLS-1652
3708	DROOLS-1652	I don't think we should make this for jBPM as by nature it is stateful so once you create such resource and bounce the server it's gone while the data in db remains - kind of orphans. That in general applies to stateless/in memory stuff too, how would you deal with server restarts? Or is this intended for quick checks of resources? My vote is to include it in DMN extension or Drools if you would like to support other rule related resource types.	1	0	https://issues.jboss.org/browse/DROOLS-1652
3709	DROOLS-1652	I see two approaches to this: - if we consider it as demo only I would opt for having this to be as separate extension - so it can be deployed outside of the official distribution that way we avoid potential issues/bug reports that it won't survive server restarts - make it all the way down to survive the restarts by saving given kjar into maven repo locally and then simply register it as any other container. Not sure what is preferred as I don't know the origin of this request....	1	0	https://issues.jboss.org/browse/DROOLS-1652
3710	DROOLS-1561	Can you please check the container in the kie-server if you haven't enabled the kie-scanner by mistake? There is a configuration there to run the kie-scanner continuously or to deactivate it.	1	1	https://issues.jboss.org/browse/DROOLS-1561

#	Requirement	Questions	Answered	Successfully Answered	URL
3711	DROOLS-1561	[~tirelli] Thanks for your suggestion. The documentation is wrong. Its mentions in seconds. But its actually in millisecs. I have configured as 60000. It scans every minute now. Thats really a fantastic option. Sorry for the bug. Please close it. https://docs.jboss.org/drools/release/6.4.0.CR2/drools-docs/html/ch22.html Automatic Update: If you want a deployed Container to always have the latest version of your deployment without manually editing it, you will need to set the Version property to the value of LATEST and start a Scanner. This will ensure that the deployed provision always contains the latest version. The Scanner can be started just once on demand by clicking the Scan Now button or you can start it in the background with scans happening at a *specified interval (in seconds).*You can also set this value to LATEST when you are first creating this deployment. The Resolved Release Id in this case will show you the actual, latest version number.	1	1	https://issues.jboss.org/browse/DROOLS-1561
3712	DROOLS-1444	Implementing AutoCloseable is only useful if you're planning to use the AutoCloseable resource in a try-with-resources block, but to be honest I don't think it will be common at all to use a KieSession in that way. Do you have a use case where you may need (or want) to do that? If so can you please paste the code snippet where you tried to do this, so I could have a better idea regarding the possible implications?	1	0	https://issues.jboss.org/browse/DROOLS-1444
3713	DROOLS-1444	In that example you're showing how to use try-with-resource with the StringWriter. That makes perfectly sense to me but it is not what I was asking. I was asking for a practical example using the KieSession because in my opinion in that case it is not that useful and using a try-with-resource is more verbose and cumbersome than simply adding a dispose. I cannot add this to drools 6.x because it has to stay Java 6 compatible, but I could do this on master (drools 7) that is Java 8 based. However I really don't see the usefulness in doing so. Moreover your scenario seems to fit far better a StatelessKieSession which doesn't require any dispose. Did you give it a try?	0	0	https://issues.jboss.org/browse/DROOLS-1444
3714	DROOLS-1398	[~Rikkola] sorry, I am confused. Does this change need to be done in the workbench or in core?	1	0	https://issues.jboss.org/browse/DROOLS-1398
3715	DROOLS-1398	Ok. So for this ticket, I was just aiming at full builds and not incremental. Still if a plugin for example generates DRL or changes the code structure in a way that affects the build result. Then the incremental build would have to reflect on that. So turns out this is more complicated than I first thought. On top of this even if the KieBuilder manages the full Maven build. The workbench still has to pick up the KIE version specified in the pom.xml. Since we are now compiling against that. This can get tricky since for example our DMO currently relies on features the core did not have in the earliest 6.x versions.	0	0	https://issues.jboss.org/browse/DROOLS-1398
3716	DROOLS-1398	[~manstis] Nope, as you said we have talked about this before. I even think there is an older ticket about this. Just saw an email in drools-usage where a user edited the pom.xml and then wondered why the editing had no affect on the build. Probably where others also got the idea for the discussion. The more I think about the workbench features for example. The more it feels like having this would be the best thing the users can have. We could for example reuse Maven plugins for project management in the workbench.	0	0	https://issues.jboss.org/browse/DROOLS-1398
3717	DROOLS-1387	[~mfusco], Sorry about not having distilled the test case enough. I'll make sure to be careful about eval use. Btw, I have removed eval from the test case rules (Rule1.drl and Rule2.drl) and attached (brms-perf-comarison-02.zip). The result still tells that ReteOO is 30% faster than PHREAK in average. Am I still overlooking some eval use in the rules? Or could we say "eval" and "accumulate" and "exists" are all slow in PHREAK?	1	1	https://issues.jboss.org/browse/DROOLS-1387
3718	DROOLS-1387	Hi [~tkobayashi]. The resulting diff can be also influenced by thread contention. I see that you have some sync points in the reproducer. Could you please try to run benchmarks from my reproducer? If you use IDEA or Eclipse, there is JMH plugin for these IDEs. If you install it, you can run the benchmarks similarly as JUnit tests. If you have any questions about this, please let me know. You can find me also on IRC on #droolsdev channel. I will also try to rerun the benchmarks. We can compare the numbers then.	1	1	https://issues.jboss.org/browse/DROOLS-1387
3719	DROOLS-1385	Friends,Please comment your ideas	1	1	https://issues.jboss.org/browse/DROOLS-1385
3720	DROOLS-1378	[~tkobayashi] I don't understand why an user may want to put a text into a cell with Numeric type. Is there a valid use for this? In general we should stop trying to parse any sort of garbage thrown in by users. This sort of guesses and type coercions causes many more damages than benefit on the long term and once they are in you cannot get rid of them anymore, otherwise you'll break compatibility.	1	1	https://issues.jboss.org/browse/DROOLS-1378
3721	DROOLS-1378	[~mfusco] Sorry about not explaining the use case well. Please have a look at the attached NumericDisabled.xls. It contains a cell "6600" but it will result in "6600.000000000001" in a generated DRL. The cell is copied from customer's XLS which is generated by VBA macro. Users see "6600" as its String representation regardless of how Excel stores its value behind. Changing "Format Cells" has no effect. Does this make sense that users want to get "6600"? Another example is BasicWorkbook_with_low_values.xls which is tested by SpreadsheetCompilerUnitTest#testProcessSheetForExtremeLowNumbers() https://github.com/droolsjbpm/drools/blob/master/drools-decisiontables/src/test/java/org/drools/decisiontable/SpreadsheetCompilerUnitTest.java#L374-L389 This test intentionally asserts double values (e.g. "3.0E-4"). But this option allows users to get "0.0003" which is the as-is String representation of the cell.	1	1	https://issues.jboss.org/browse/DROOLS-1378
3722	DROOLS-1344	[~kdwivedi], I have talked to Mario about this issue (docs jira linked). We do not have any Aries BP docs in our current guides (upstream nor downstream). If this issue blocks our release, as suggested by [~rsynek], this should be addressed (and incorporated in the downstream docs) by 6.4 release. I am not sure whether Mario has the time to finish this jira on time, maybe prioritization is in order? WDYT?	0	0	https://issues.jboss.org/browse/DROOLS-1344
3723	DROOLS-1323	Here are 2 normal runs and 2 hacked (= without the notifyAll()) call runs on the benchmarker config (not the same as the one that's being profiled, running that one now): [^Selection_246.png] In this case, there is maybe a 1% improvement. Update: ON THE SMALL DATASET.	0	0	https://issues.jboss.org/browse/DROOLS-1323
3724	DROOLS-1319	Hi Edson, Could you please share me some links / sample configs so that i can try out the same in my project ? Thanks, Kavi sri K K	1	0	https://issues.jboss.org/browse/DROOLS-1319
3725	DROOLS-1270	Can you please clarify your request and provide an example?	1	1	https://issues.jboss.org/browse/DROOLS-1270
3726	DROOLS-1250	I fixed the issue by adding _*dialect "mvel" *_ at the two rules in Sample.drl. Is it a bug in the drools wizard that dialet is missing in the examples? or It supposes to work without dialet? Thanks.	1	1	https://issues.jboss.org/browse/DROOLS-1250
3727	DROOLS-1250	I am facing the same issue. But the code runs fine despite compile time error. Also the error message makes no sense. Why does it say com.sample.DroolsTest.Message resolves to a package when it clearly isn't.	0	0	https://issues.jboss.org/browse/DROOLS-1250
3728	DROOLS-1250	Hi Tianwei Chen, just followed your comment and still got the same error. Did you still use droolsjbpm tools 6.4 plugin? I have to add dialect mvel to make it work. Is it an issue of plugin or runtime?	0	0	https://issues.jboss.org/browse/DROOLS-1250
3729	DROOLS-1225	Hi [~kuniyasu], if I'm understanding correctly what you're asking here is adding those new SequentialMaxPriority and SequentialMinPriority optional fields in the "RuleSet" section of the XLS for each sheet and setting the salience of the generated rules accordingly. Can you confirm?	1	1	https://issues.jboss.org/browse/DROOLS-1225

#	Requirement	Questions	Answered	Successfully Answered	URL
3730	DROOLS-1221	Hi Youcef, Thanks for the slide set about the Italian HACEP project. It makes it much more clear. I intend to port the Italian HACEP solution to the Amazon cloud replacing Infinispan, ActiveMQ, Camel Route, etc. with Amazon equivalents. The grouping is done on Tenant (aka customer environment). The domain is Business Event Monitoring in the cloud. Are you going to use Apache Geode in your project as a replacement for Infinispan? If so, why?	1	0	https://issues.jboss.org/browse/DROOLS-1221
3731	DROOLS-1168	ok, but what can be the workaround for the problem? How can I force the execution of update (final FactHandle handle, BitMask mask, Class <?> ModifiedClass). Since you are in the development you could give me some guidance? Best Regards	1	1	https://issues.jboss.org/browse/DROOLS-1168
3732	DROOLS-1168	Did you try what I suggested in my last comment? Something like {code} DroolsUtil.completeEntity($entity, fields, $untMis); $entity.setUntMisVen($entity.getUntMisVen()); update($entity) {code}	1	1	https://issues.jboss.org/browse/DROOLS-1168
3733	DROOLS-1168	May I understand why you're insisting using property reactivity for this use case? Which advantages do you see?	1	1	https://issues.jboss.org/browse/DROOLS-1168
3734	DROOLS-1168	I'm sorry, but property reactivity doesn't fit your use case. Have you tried to disable it and see what happens? I don't see why it shouldn't work.	1	1	https://issues.jboss.org/browse/DROOLS-1168
3735	DROOLS-1137	Note that the RPM work is working around this, so RPM's shouldn't really impact the decision here. I do think it's an improvement nonetheless. In this proposal (let's call it proposal A), what are the changes? - Will it remove 1 POM (because kie-parent-with-dependencies and kie-platform-bom will become kie-third-party-bom)? - Child poms don't change, only top level multiproject parent poms.	1	1	https://issues.jboss.org/browse/DROOLS-1137
3736	DROOLS-1071	To have a line number (of the DRL source file) we'd need to do a similar trick as how JSP's stacktraces are translated back to JSP source file line numbers (thanks to Tomaz for info). {quote} The JSP compiler jastow (fork of tomcat's jasper) does this: https://github.com/undertow-io/jastow what you are looking for is "smap" generation and applying to compiler: https://github.com/undertow-io/jastow/blob/master/src/main/java/org/apache/jasper/compiler/JDTCompiler.java#L464 https://github.com/undertow-io/jastow/blob/master/src/main/java/org/apache/jasper/compiler/SmapUtil.java https://github.com/undertow-io/jastow/blob/master/src/main/java/org/apache/jasper/compiler/SmapGenerator.java {quote}	0	0	https://issues.jboss.org/browse/DROOLS-1071
3737	DROOLS-1071	Can you specify which DRL line exactly caused it? We want to improve the error message in a future version, so it mentions that exact DRL line.	0	0	https://issues.jboss.org/browse/DROOLS-1071
3738	DROOLS-1053	this has been recently added so you can set system property to enable text based date format for JSON marshaller: https://github.com/droolsjbpm/droolsjbpm-integration/blob/master/kie-server-parent/kie-server-api/src/main/java/org/kie/server/api/marshalling/json/JSONMarshaller.java#L66 though it does use certain data format pattern: https://github.com/droolsjbpm/droolsjbpm-integration/blob/master/kie-server-parent/kie-server-api/src/main/java/org/kie/server/api/marshalling/json/JSONMarshaller.java#L73 would this be sufficient or shall we have another system property to control actual date format pattern?	1	1	https://issues.jboss.org/browse/DROOLS-1053
3739	DROOLS-1052	Should I only look in the java files or in the drl files too? What should I do in this case: /** * Finds currently available server ports. * * @author Apache Directory Project * @see IANA.org */ There are a bunch of @authors in test java files, like i.e. public class StandaloneDocBuilder { public static void main(String[] args) throws FileNotFoundException, ParseException { String drl = ""; drl += "# important information\n"; drl += "# about this package\n"; drl += "# it contains some rules\n"; drl += "package org.kie.test\n"; drl += "global java.util.List list\n"; drl += "# Really important information about this rule \n"; drl += "# Another line because one was not enough \n"; drl += "# \n"; drl += "# @author: trikkola \n"; Should this be removed too?	1	1	https://issues.jboss.org/browse/DROOLS-1052
3740	DROOLS-1039	There's already a logged error message like: {code} 2016-04-14 10:36:00,259 [main] ERROR Unable to build kie service url=file:/home/mario/workspace/droolsjbpm/drools/drools-beliefs/target/classes/META-INF/kie.conf reason=[Error: unable to resolve class: org.drools.beliefs.bayes.assembler.BayesAssemblerServicex] [Near : {... assemblers' : [new org.drools.beliefs.bayes.assem ....}] ^ {code} and I'd prefer to keep it instead of throwing and Exception. What do you think?	1	1	https://issues.jboss.org/browse/DROOLS-1039
3741	DROOLS-1008	I am not sure of what you're asking here. I guess you're talking about the maven default behaviour of only fetching SNAPSHOTS once per day, but if this is the case I think you can configure maven to enforce of checking SNAPSHOTs at each request. Please let me know if this is case or try to better clarify this ticket.	1	1	https://issues.jboss.org/browse/DROOLS-1008
3742	DROOLS-1008	[~mfusco] [~andrew.collins] Any status on this. I am able to duplicate this error and have to clear out my local .m2 before the snapshot gets updated in business-central on a deployment. I have the update policy set to always in my settings.xml so I am pretty sure everything is configured correctly My scenario is slightly different but basically the same build and deploy kjar to remote nexus - using a seperate settings.xml for this build and a seprate local reposiotry as to not conflict with what BC is using deploy GAV to BC The deployment is still the old snapshot	1	1	https://issues.jboss.org/browse/DROOLS-1008
3743	DROOLS-972	Can you please send a PR adding a new example in drools-examples-cdi so I could start working from there?	1	1	https://issues.jboss.org/browse/DROOLS-972
3744	DROOLS-963	This should be fixed for 6.4.0.Final, does it sound possible?	1	1	https://issues.jboss.org/browse/DROOLS-963
3745	DROOLS-963	This will be fixed in 6.4.0.Final. It got resolved as part of Maven upgrade from 3.2.2 to 3.2.5.	0	0	https://issues.jboss.org/browse/DROOLS-963
3746	DROOLS-907	As kie-group website is not prepared for rake I have done a "short term solution" adding links to this page. Please look at the image:!kie-group.png|thumbnail! What do you think?	1	1	https://issues.jboss.org/browse/DROOLS-907
3747	DROOLS-905	Thanks for the pointers [~martenscs]. Is there any other prefix we need to worry about? Or does startsWith("bundle") cover all the needed cases?	1	0	https://issues.jboss.org/browse/DROOLS-905
3748	DROOLS-823	Hi Geoffrey, I don't know what shoud be the expected behaviour? i.e. I run in drools jdeps -jdkinternals ./drools-verifier/src/test/resources/org/drools/verifier/model.jar only for test purposes. It says: Picked up JAVA_TOOL_OPTIONS: -Dfile.encoding=UTF-8 ./drools-verifier/src/test/resources/org/drools/verifier/model.jar -> /usr/java/jdk1.8.0_20/jre/lib/rt.jar Hope thta this is OK. When an error is found, what would be the behaviour?	1	1	https://issues.jboss.org/browse/DROOLS-823
3749	DROOLS-823	I think 2) is ok and 1) is ignorable. 3) is definitely a true negative, something that we need to have an inventory of and see if we can reduce that inventory to 0. But those are sun.misc.Unsafe usages from our depended libraries (com.google.common in this case), not from ours ourself. Are there any from us directly (org.drools/org.kie/org.optaplanner/org.jbpm)? We should handle those first.	0	0	https://issues.jboss.org/browse/DROOLS-823
3750	DROOLS-729	Can you come onto irc and speak to Mario (mfusco). This will make it much easier to discuss all the related issues and for us to figure out how to integrate your changes. http://drools.org/community/chat.html	0	0	https://issues.jboss.org/browse/DROOLS-729
