7917	ISPN-3919	No need to verify, it won't work. This requires advanced externalizers which were left out of the Hot Rod client. You'd need to bring in the externalizer table and a lot of other JBoss Marshalling related components to make this work. Is it really needed?	1	0	https://issues.jboss.org/browse/ISPN-3919
7918	ISPN-3914	what events would you be interested in when it comes to groups? E.g. - entry added to the group - entry removed from the group Also there's no group-level locking, we can only lock on a per entry basis. Would be interesting to see more about your use case.	1	0	https://issues.jboss.org/browse/ISPN-3914
7919	ISPN-3905	Hi Dan. How is "reuse" of the string related to this issue?	1	1	https://issues.jboss.org/browse/ISPN-3905
7920	ISPN-3901	Deprecate in 9.0?	0	0	https://issues.jboss.org/browse/ISPN-3901
7921	ISPN-3900	Is this something we can do for 7.0?	0	0	https://issues.jboss.org/browse/ISPN-3900
7922	ISPN-3877	Hello Mircea, Thanks for your response. I have attached a small test program that can show the difference in the space usage. On my machine, a. with the original SingleFileStore version, the disk consumption reaches to around 10-11 MB and stays there. b. with the modified (patched version), the disk consumption reaches to around 10-11MB, but after the purge cycles kick-in, the file size remains below 500KB consistently. I am going to attach a pull request for this issue. So, please review the diff from there. After your review, can you also please let me know if this enhancement seems ok from your point of view? The overhead on the purge cycle because of our truncation logic is very minimal (around few tens of milli-seconds). Also, I am going to create another JIRA issue for another enhancement related to coalescing adjacent free entries. Thanks, Rajesh	1	1	https://issues.jboss.org/browse/ISPN-3877
7923	ISPN-3824	Make it "5.0.4.Final" ?	0	0	https://issues.jboss.org/browse/ISPN-3824
7924	ISPN-3808	Could we close this now and consider it resolved?	1	0	https://issues.jboss.org/browse/ISPN-3808
7925	ISPN-3807	I agree, this is a sensible step towards better performance. But there are some things we need to fix before this can work. 1. We need reliable support for parameters in the Hibernate Search HQL parser and not sure of its status now. Last time I tried using it (September) I was advised to avoid it as it was a bit too experimental. 2. Would be great if we had support for translating the 'order by'; right now it is recognized and ignored (there should be a HSEARCH jira but can't find it). Having 1,2 sorted will mean our query is going to be a fixed string + a variable map of parameter values instead of (currently) being a variable string + a list of sort criteria. Another related idea, would it be possible to cache the Lucene query object instead of caching the hql AST? Does lucene have params?	1	1	https://issues.jboss.org/browse/ISPN-3807
7926	ISPN-3792	PFER is an operation targeted for Hibernate's 2LC. Do you need this enhancement in this context or you're using it for something else? Also have you considered using the org.infinispan.Flag API on top of Cache.put?	1	1	https://issues.jboss.org/browse/ISPN-3792
7927	ISPN-3792	[~karlvr] like Mircea said, we only needed {{putForExternalRead}} in the context of Hibernate 2LC, and there it was enough to set the lifespan or maxIdle to the same values for all the entries in the cache. We're a bit reluctant to add more methods to the Cache interface, can you add some more details on why that won't work for you?	1	1	https://issues.jboss.org/browse/ISPN-3792
7928	ISPN-3792	You're right [~karlvr], an invalidation cache without {{putForExternalRead()}} wouldn't be very usable. The question in my mind was whether it makes sense in general to combine invalidation with time-based expiration, e.g. wouldn't a local cache without cluster-wide invalidation work better in your case?	1	1	https://issues.jboss.org/browse/ISPN-3792

#	Requirement	Questions	Answered	Successfully Answered	URL
7929	ISPN-3718	Yes, we need those options to bear more complex values than just a boolean. A little known aspect of protobuf options is they are very rich and can represent tuples and arrays also, even arrays of tuples or tuples of arrays. You get the idea :) So it would be perfectly doable even to completely emulate the whole HS indexing annotations. Here's a valid protobuf example of a field being annotated with an option: {code} message User { //... required string name = 3 [(infinispan.Field) = { indexed : true, analyzed : false, some_array : [111, 222, 333], /* yes! even arrays of values */ }]; //... } {code} The stuff between [ ] that follows a field declaration is the list of options attached to the field - its metadata/annotations. There can be multiple options, separated with comma. Unfortunately the protobuf syntax is not very nice and requires you to surround the option name in (). The value of the option is either a scalar value or a tuple surrounded by { }. The structure of the option has to be defined in advance (not shown here), so its usage can be validated by the protobuf schema compiler. Options values can have defaults, so the verbosity can be drastically reduced. So, would you consider this as a valid approach to define our indexing metadata?	1	1	https://issues.jboss.org/browse/ISPN-3718
7930	ISPN-3718	[~gustavonalle] The protostream library has just received support for parsing Java-like annotations from doc comments. Could you have a look please ? (https://github.com/infinispan/protostream/pull/9)	1	1	https://issues.jboss.org/browse/ISPN-3718
7931	ISPN-3668	One more question: org.infinispan.lucene.profiling.PerformanceCompareStressTest.profileInfinispanLocalDirectory() is present in both lucene-v3 and lucene-v4 Do we want the regression tests for both versions ?	0	0	https://issues.jboss.org/browse/ISPN-3668
7932	ISPN-3550	Are you using CQL or thrift in new implementation?	1	0	https://issues.jboss.org/browse/ISPN-3550
7933	ISPN-3549	What's the status of this cloud cache store implementation? Is there any particular reason why it hasn't been ported to Infinispan 6+? Is it only due to lack of interest/usage? I'd be surprised if that's the case, given today's incline to rely on the cloud for pretty much everything. Or is it related to some kind of performance issue where cloud storage in general doesn't lend itself to being used with Infinispan?? Anyway, there's [an Infinispan Github sub-repository|https://github.com/infinispan/infinispan-cachestore-cloud] that contains a 6.0.0-SNAPSHOT version (last update in September 2013). And there's also a 6.0.0.Alpha1 "infinispan-cachestore-cloud" Maven artifact available (uploaded in July 2013). So how much work would be necessary to update this implementation to at least Infinispan 6 (in case Infinispan 7 introduced more radical changes)? One thing to note is that Apache Jclouds, on which this cache store implementation is based, has also seen a lot of changes lately. From version 1.4.1 as referenced in the current WIP implementation, Jclouds is now at version 1.8.1. More important that the version number itself is the fact the Jclouds 1.8.1 has removed support for async operations (which are heavily used in the current cache store code). Jclouds 1.7.x is the last branch that contains support for async operations -- but then we loose new features like OpenStack Swift support in 1.8.x).	1	1	https://issues.jboss.org/browse/ISPN-3549
7934	ISPN-3549	[~dalbani]: great, your changes looks good to me. Would you mind me to cherry-pick your changes and continue with update to ISPN 7 and adding tests? Or you would like to do it yourself? Thanks!	1	1	https://issues.jboss.org/browse/ISPN-3549
7935	ISPN-3534	[~mlinhard], the old bundler was only a part of the issue. We also noticed that setting {{UFC.max_credits=200k}} slows things down (maybe more so with Infinispan 6.0 than 5.2). I see in the comparison you posted that the JDG 6.2 snapshots both ran with 200k, could you run the test again with 2m? And can you find the max_credits value in the JDG 6.1 run?	0	0	https://issues.jboss.org/browse/ISPN-3534
7936	ISPN-3533	Currently, HotRod client sets the protocol version and expects the server to understand it. Wouldn't it be better to include some negotiation: client connect with "I support 2.0, 2.1 and 2.2", server responds "I support 2.0 and 2.1", and then client knows he should use 2.1 instead of 2.2? Also, have you considered rather versioned "extensions" (such as querying, transactions, streaming, listeners...) to basic protocol than simple versions extending the previous one? Or is this overengineering?	1	1	https://issues.jboss.org/browse/ISPN-3533
7937	ISPN-3533	OK, I thought that adding a list of supported protocol versions/features into the ping response and client version auto-selection would be nice, rather than requiring to set the version in each client (the client does not need to send the list in ping request, in fact). Another topic: have you considered streaming data to and from server? It seems that it's a common request to be able to load the server via hotrod, and currently the user needs to spawn many threads in order to circumvent the put latency.	0	0	https://issues.jboss.org/browse/ISPN-3533
7938	ISPN-3480	Can protostream be released with the latest changes?	0	0	https://issues.jboss.org/browse/ISPN-3480
7939	ISPN-3455	Lukasz, i have just spent a week debugging the same issue. The issue is not due to Infinispan but to the usage of the Enum as keys. Infinispan to work need to be able for the key to calculate an hashcode that is consistent in the cluster, meaning if the key is Key1 then on node1,node2,node3 the hashcode produced need to be the same. When the key is an enum, that is not possible because the Java Enum generates an hashcode that is consistent only within one node, but when transported across JVM that is not guaranteed to be generated the same. You could think then to override the hashcode for the enum to generate a consistent one, sorry not possible, look at this SUN bug report: http://bugs.sun.com/view_bug.do?bug_id=6373406 In my case i end up creating a wrapper around the enum key and forcing for that wrapper a generation of a consistent hashkey. For code reference where the problem start in infinispan look at: https://github.com/infinispan/infinispan/blob/5.3.x/core/src/main/java/org/infinispan/interceptors/distribution/BaseDistributionInterceptor.java lines 127-130, there is were the troubles start. Bottom line as i said this is an issue caused by the Java ENUM design. For reference to a bugfix i have done to fix this issue in my code look at: https://git.opendaylight.org/gerrit/#/c/1292/ Hope it helps. Giovanni	1	1	https://issues.jboss.org/browse/ISPN-3455
7940	ISPN-3355	Few comments on the ClusterListeners: - Can the listener be made durable i.e. if the primary dies then the listener will be registered on the backup - Can the listener use a query api e.g. notify me of any Books having "title" like "%engine%" - Can the listener add the option to remove or modify the entry/entires its query matches.	1	1	https://issues.jboss.org/browse/ISPN-3355
7941	ISPN-3318	Interesting idea from Randall: {quote}Let's look at this from a user's perspective. Is it possible that the new file store **replaces** the old one, so that the user doesn't (really) need to know the difference? How similar are the configuration properties of each? Might it be possible to: rename and deprecate the existing one (e.g., "org.infinispan.loaders.file.LegacyFileCacheStore"), changing it to 'package' or 'protected' (iff the new one is stable enough that the old one should definitely not be used anymore), rename the new one to "org.infinispan.loaders.file.FileCacheStore" (so that existing configurations work without change), have some code in the new one detect the old file structure and automatically run a migration to convert from the old file structure to the new format (and possibly move the old files into a subdirectory) If this is possible, this is by far the best option for users since it provides a simple (perhaps even transparent) migration path with little if any changes required to configurations, but at the same time it allows the developers to get what they want: a new FCS that replaces the old one (which goes away).{quote}	1	1	https://issues.jboss.org/browse/ISPN-3318

#	Requirement	Questions	Answered	Successfully Answered	URL
7942	ISPN-3318	Hi Galder, your commit dbf63e2d4b21aaf8a7a5eda1dca1f88c72fc9070 concretely: git diff 43f82b7 dbf63e2 core/src/main/java/org/infinispan/util/logging/Log.java (on current master) made the infinispan-cachestore-rest build unfunctional http://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jdg-qe-build-infinispan60-snapshot-auto/149/console {code} [ERROR] Failed to execute goal org.apache.maven.plugins:maven-compiler-plugin:3.0:compile (default-compile) on project infinispan-cachestore-rest: Compilation failure: Compilation failure: [ERROR] Only one message with the same format parameters is allowed. [ERROR] /home_local/workspace/jdg-qe-build-infinispan60-snapshot-auto/infinispan-cachestore-rest/src/main/java/org/infinispan/persistence/rest/logging/Log.java: Only one message with the same format parameters is allowed. {code} could you please fix this in the rest cachestore as well ? (it blocks building of infinispan-server for perf regression tests)	0	0	https://issues.jboss.org/browse/ISPN-3318
7943	ISPN-3285	[~sannegrinovero] These were already made optional in ISPN-3437. Is it worth removing them altogether?	0	0	https://issues.jboss.org/browse/ISPN-3285
7944	ISPN-3242	what's the reason for enforcing this?	1	1	https://issues.jboss.org/browse/ISPN-3242
7945	ISPN-3227	Shay Matasaro <smatasar@redhat.com> made a comment on [bug 973763|https://bugzilla.redhat.com/show_bug.cgi?id=973763] the complexity for this patch is really increased due to schema changes, i dont think its worth it how about using a store with pre-load configured but no persistence will that work as a workaround?	0	0	https://issues.jboss.org/browse/ISPN-3227
7946	ISPN-3227	Shay Matasaro <smatasar@redhat.com> made a comment on [bug 973763|https://bugzilla.redhat.com/show_bug.cgi?id=973763] i have not been able to check-in my code, here is a source patch file	0	0	https://issues.jboss.org/browse/ISPN-3227
7947	ISPN-3199	{code}put(K key, EntryVersion version);{code} <- that's already in 5.3, via put(K, V, Metadata) Shouldn't we take advantage of all the work around Metadata to include the rest of methods?	0	0	https://issues.jboss.org/browse/ISPN-3199
7948	ISPN-3194	[~NadirX] - there is a bit here (https://access.redhat.com/site/solutions/221103) about JDR but it doesn't really tell you what is being captured from the runtime. It seems to be more of a tool to zip up configs and logs. Do you have any more info on JDR?	0	0	https://issues.jboss.org/browse/ISPN-3194
7949	ISPN-3157	Shay Matasaro <smatasar@redhat.com> made a comment on [bug 973763|https://bugzilla.redhat.com/show_bug.cgi?id=973763] the complexity for this patch is really increased due to schema changes, i dont think its worth it how about using a store with pre-load configured but no persistence will that work as a workaround?	0	0	https://issues.jboss.org/browse/ISPN-3157
7950	ISPN-3157	Shay Matasaro <smatasar@redhat.com> made a comment on [bug 973763|https://bugzilla.redhat.com/show_bug.cgi?id=973763] i have not been able to check-in my code, here is a source patch file	0	0	https://issues.jboss.org/browse/ISPN-3157
7951	ISPN-3140	where would the data in this cluster be persisted during the shutdown? simpler with a shared cache store, each cache persisting locally would complicate things a bit.	0	0	https://issues.jboss.org/browse/ISPN-3140
7952	ISPN-3140	Pasted from Adrian's message ([http://markmail.org/message/ns7aojy7v7su2t7p]): {quote} 1. Add a JMX writable attribute (or operation?) to ClusterTopologyManager (name it suppressRehashing?) that is false by default but should also be configurable via API or xml. While this attribute is true the ClusterTopologyManager queues all join/leave/exclude(see below) requests and does not execute them on the spot as it would normally happen. [...] When it is set back to false all queued operations (except the ones that cancel eachother out) are executed. The setter should be synchronous so when setting is back to false it does not return until the queue is empty and all rehashing was processed. 2. We add a JMX operation excludeNodes(list of addresses) to ClusterTopologyManager. [...] This operation removes the node from the topology (almost as if it left) and forces a rebalance. The node is still present in the current CH but not in the pending CH. It's basically disowned by all its data which is now being transferred to other (not excluded) nodes. At the end of the rebalance the node is removed from topology for good and can be shut down without loosing data. Note that if suppressRehashing==true operation excludeNodes(..) just queues them for later removal. We can batch multiple such exclusions and then re-activate the rehashing. The parts that need to be implemented are written in italic above. Everything else is already there. excludeNodes is a way of achieving a soft shutdown and should be used only if we care about preserving data int the extreme case where the nodes are the last/single owners. We can just kill the node directly if we do not care about its data. suppressRehashing is a way of achieving some kind of batching of topology changes. This should speed up state transfer a lot because it avoids a lot of pointless reshuffling of data segments when we have many successive joiners/leavers. So what happens if the current coordinator dies for whatever reason? The new one will take control and will not have knowledge of the existing rehash queue or the previous status of suppressRehashing attribute so it will just get the current cache membership status from all members of current view and proceed with the rehashing as usual. If the user does not want this he can set a default value of true for suppressRehashing. The admin has to interact now via JMX with the new coordinator. But that's not as bad as the alternative where all the nodes are involved in this jmx scheme :) I think having only the coordinator involved in this is a plus. {quote} We're actually going to implement only point 1 now, and point 2 will be a separate issue (or perhaps as a part of ISPN-1394).	0	0	https://issues.jboss.org/browse/ISPN-3140
7953	ISPN-3128	How can we change in spring cache to use putforexternalread instead of put. I simply want to use putforexternalread instead of put. I am not using CachePut in any other places. So I don't have issues.	0	0	https://issues.jboss.org/browse/ISPN-3128
7954	ISPN-3126	Can you please close it once you confirmed that this is not a problem?	0	0	https://issues.jboss.org/browse/ISPN-3126
7955	ISPN-3102	I've tried running this test (with all logging set to WARN) on 5.3.x, 6.0 and on the exact revision when the test was added. The results were nearly identical for all runs: 1.5 mins. So this is not a regression. Still, indexing 2000 entries in 1.5 mins is very slow...	1	1	https://issues.jboss.org/browse/ISPN-3102
7956	ISPN-3102	[~sannegrinovero] How did you determine StateRequestCommand serialization (ISPN-3103) is a CPU usage hotspot here? This test uses waitForClusterToForm before anything else happens, so state transfer simply cannot have any influence on performance here. Anyway, I did try to profile and could not find any hotspot.	1	1	https://issues.jboss.org/browse/ISPN-3102
7957	ISPN-3076	Does Infinispan 5.2.5.Final use JGroups 3.3.x?	0	0	https://issues.jboss.org/browse/ISPN-3076

#	Requirement	Questions	Answered	Successfully Answered	URL
7958	ISPN-3076	Sorry my statement had a critical typo: I meant to say {quote}But I still don't get why Log4j*2* is of any interest to us.{quote} In other words, I think JBoss Logging should be our default logger implementation, and we also support log4j (v1) because it's a popular choice in other containers. Log4j V2 is not that popular yet to make this a wise move, especially until it has proven itself more efficient: I don't think we have data to back this up, for sure it defeats the purpose of even considering Log4J which should be "going with the popular version". Very interesting of course to explore alternatives, for debugging purposes for example we could have an in memory circular buffer which skips the String formatting step: just store the parameters as they are together with the log id, the buffer content could then be "rendered" in its string form at a second time when and only if needed.	1	1	https://issues.jboss.org/browse/ISPN-3076
7959	ISPN-3076	Any news about this subject ? I'm too struggling with jboss logging and Log4J2. My classpath is supposed to be correct (log4j2 api + core + bridges + jboss logging 3.2.0.Final - and no log4j 1 jar) and the only last logs not working are those ones with the exact same message : {quote} 2015-01-08 08:56:28,421 WARN The Logger org.infinispan.remoting.transport.jgroups.CommandAwareRpcDispatcher was created with the message factory org.apache.logging.log4j.message.ParameterizedMessageFactory@59aea098 and is now requested with the message factory org.apache.logging.log4j.message.StringFormatterMessageFactory@57b18927, which may create log events with unexpected formatting. {quote} Or is there a working workaround ?	0	0	https://issues.jboss.org/browse/ISPN-3076
7960	ISPN-3051	Exactly, like _localstorage=false_ in Oracle Coherence or event better like the Coherence *Extend feature (that also exclude the node from the distributed execution env). Check this [link|http://blog.tfanshteyn.com/2009/11/extending-data-grid-localstoragefalse.html] for more info. *USE CASE* For example, if you want to use infinispan as integration channel some embedded caches will be part of the channel keeping the data, but others will interact with the channel putting and getting data only (like a client). *This is exactly what you get using hotrod + _RemoteCache_ but it will be cool to be able to do this also with embedded caches.* Thanks in advance,	0	0	https://issues.jboss.org/browse/ISPN-3051
7961	ISPN-3045	Does this JIRA make any sense since the compatibility mode has been implemented?	0	0	https://issues.jboss.org/browse/ISPN-3045
7962	ISPN-2953	FWIW we're using the canonical ObjectName. As it happens though I've just worked around it by making a custom tree UI in hawtio for infinispan. So from my perspective I'm happy for you to close this issue now. Though I do think it'd be nice for the MBeans to appear a little nicer in all other JMX tools; but personally am less bothered now we've a nice hawtio plugin :)	1	1	https://issues.jboss.org/browse/ISPN-2953
7963	ISPN-2932	> what if a key that is not present in the cache is looked up? If preload=true they are all loaded in the cache, why should it not be there?	0	0	https://issues.jboss.org/browse/ISPN-2932
7964	ISPN-2926	I don't think it's a duplicate. The ability to access all the content of a cache is not what CLI provide at the moment (ISPN-1453) as far as I understand Can you reopen this?	1	0	https://issues.jboss.org/browse/ISPN-2926
7965	ISPN-2923	Infinispan doesn't allow inserting keys with null values, how did you end up with null values in the cache? I think this makes sense as a general requirement, e.g. stop a map/reduce task if enough values have been found.	0	0	https://issues.jboss.org/browse/ISPN-2923
7966	ISPN-2916	Is this something we can do for 7.0?	1	1	https://issues.jboss.org/browse/ISPN-2916
7967	ISPN-2822	FileStore.zip - contains the jprofiler snapshots when FileCacheStore was used; JDBC.zip - is for JDBC CacheStore use; No Store - is when the eviction is enabled, but no loaders are configured.	0	0	https://issues.jboss.org/browse/ISPN-2822
7968	ISPN-2808	[~pruivo]: will do, thanks	1	1	https://issues.jboss.org/browse/ISPN-2808
7969	ISPN-2792	{quote}There are some threads that don't follow this rule, e.g. the HotRod worker threads, but it should be useful in most cases.{quote} Would be nice to have these logging the test name as well. What advantage would this have over the grepping the logs for a single test?	1	1	https://issues.jboss.org/browse/ISPN-2792
7970	ISPN-2710	What kind of information do you need?	1	1	https://issues.jboss.org/browse/ISPN-2710
7971	ISPN-2689	I've attached a very hacky proof of concept. I basically just forked the module and patched the code to build with Lucene 4, then everything magically worked! So it seems some very trivial changes can in fact make what we have now at least work with Lucene 4.0 - though not in a backwards compatible way. Question now is, what's the best way to make both a Lucene 3 and 4 compatible version (or versions) available to users?	1	1	https://issues.jboss.org/browse/ISPN-2689
7972	ISPN-2689	Hi James, I'll be back from travels tomorrow. Had a quick preview already, but the patch doesn't apply cleanly; I'll have a better look on the planes. It would be great if you could use "unified format" for patches. Lucene 4.1 will be released very soon, possibly today. Shall we target that instead?	1	1	https://issues.jboss.org/browse/ISPN-2689
7973	ISPN-2675	"So I need for the 5.2 a way to provide custom create table syntax :-|" you are allowed to create the table by hand by setting "createOnStartup" to false. Isn't that good enough?	1	0	https://issues.jboss.org/browse/ISPN-2675
7974	ISPN-2669	[~saturnism], is this JIRA still relevant given what [~gabriel_mircea] said?	1	0	https://issues.jboss.org/browse/ISPN-2669

7985	ISPN-2397	If the c3p0.properties exists in the class path it is used for configuring the connection pool. You can add testConnectionOnCheckout/testConnectionOnChecking into that file, so I don't think this is an issue. Or am I not understanding your problem?	1	0	https://issues.jboss.org/browse/ISPN-2397
7986	ISPN-2379	Could you please explain in a few words what is this all about?	1	1	https://issues.jboss.org/browse/ISPN-2379

#	Requirement	Questions	Answered	Successfully Answered	URL
7987	ISPN-2366	I have a case in a functional test for ISPN-2362 that is very hard to create unless CacheManager.getCache() returns ASAP instead of waiting for NBST to perform the transfer. I'm not saying we should make getCache() always return immediately but we could make this configurable, some users might need it, most will probably prefer the current behaviour. So this whole issue can be solved by introducing a boolean config 'waitForInitialStateTransferToComplete' in StateTransferConfiguration (and friends) that is 'true' by default and updating StateTransferManagerImpl to skip the waiting if configuration says so. I already implemented this in my t_2362_m branch if you are interested. Would you agree to include this in 5.2.0?	1	1	https://issues.jboss.org/browse/ISPN-2366
7988	ISPN-2359	Is the status still "Coding in Progress" ?	0	0	https://issues.jboss.org/browse/ISPN-2359
7989	ISPN-2359	I was not able to reproduce the issue (linked PR with a test). Is there any particular situation it happens or any mailing list thread describing the issue?	1	1	https://issues.jboss.org/browse/ISPN-2359
7990	ISPN-2355	Can't you just use L1 for making sure data is available after writing? I'm not sure how such a flag can be implemented, as it would require (unless I'm missing something) the routing table to be aware of a particular key.	1	0	https://issues.jboss.org/browse/ISPN-2355
7991	ISPN-2355	I thought the L1 is only filled at reading data, not at writing. If the putted value is always available on the local node when L1 enabled, then this would be a proper solution. Exists there a way to avoid rehashing of this entry? (Since the entry is mostly not needed on other nodes. :-)	0	0	https://issues.jboss.org/browse/ISPN-2355
7992	ISPN-2336	Hmmm, read-only would need to be defined too. I.e. do you allow removals? Which put ops do you allow (you still need to be able to populate the cache, i.e. with putIfAbsent or PFER)? If an entry is evicted, how do you control no one is going to put a newer version of the entry?	0	0	https://issues.jboss.org/browse/ISPN-2336
7993	ISPN-2332	Why not both ? Allow backup strategies to be defined globally, and override them on a per-cache basis. An empty <backups/> or <sites/> means we don't back up a named cache... This would allow for the following: - If we want almost all caches to be backed up: define the strategies in the global section and override the named caches that should not get backed up with an empty <backups/> - If we have predominantly local, non-backed up caches, don't define <backups> in the global section, but instead on a per cache basis.	1	1	https://issues.jboss.org/browse/ISPN-2332
7994	ISPN-2328	Hmm, is this cos we're missing some configuration that was present in the old configuration? Or is it to provide support for ISPN-701 or similar functionality?	1	1	https://issues.jboss.org/browse/ISPN-2328
7995	ISPN-2327	Thomas, can you check again with 5.2.0.Beta1? If you do manage to reproduce it, please attach a log here (preferably with TRACE enabled for org.infinispan).	0	0	https://issues.jboss.org/browse/ISPN-2327
7996	ISPN-2319	I'm thinking for the configuration to look like this: {code:xml} <backup> <takeOffline afterFailures="10" minTimeToWait="30000"/> </backup> {code} Wdyt?	1	1	https://issues.jboss.org/browse/ISPN-2319
7997	ISPN-2319	So the time before a site-unreachable would be "failuresUntilOffline" * "timeout" ms? By consequence, would this also handle the case where an async remote transaction fails (say, due to a node failing on the remote site)? I had implemented a brute-force method similar to: <backup retryNum="5" retryBackoff="1000"/>	1	1	https://issues.jboss.org/browse/ISPN-2319
7998	ISPN-2318	Tomas Sykora <tsykora@redhat.com> made a comment on [bug 868832|https://bugzilla.redhat.com/show_bug.cgi?id=868832] Still no luck. Setting back to ON_DEV. Attaching new TRACE log from rack test - ER5. I don't know how can I help more now. Just let me know and I will do maximum.	0	0	https://issues.jboss.org/browse/ISPN-2318
7999	ISPN-2285	Hmmm, why is this really needed?	1	1	https://issues.jboss.org/browse/ISPN-2285
8000	ISPN-2284	[~vblagojevic] - do we have the new workings of map/reduce noted down somewhere for us to compare for docs?	1	0	https://issues.jboss.org/browse/ISPN-2284
8001	ISPN-2259	We've made some improvements recently to the async store, can you test with 5.2.0.Beta2 and see if you still such slow behaviour?	0	0	https://issues.jboss.org/browse/ISPN-2259
8002	ISPN-2204	Can't remember. I think one reason was, that the local executed callable got no keys (is filed as another ticket).	1	1	https://issues.jboss.org/browse/ISPN-2204
8003	ISPN-2198	Hmmm, odd. The key should be '8Az4Ia2V5NzYzNDI=', but the exception says that the key is 'PRIMARY'? @Radim, can you replicate this in a smaller scale and generate some logs with TRACE on for org.infinispan package? Tristan/Mircea, can either of you have a look to this?	0	0	https://issues.jboss.org/browse/ISPN-2198
8004	ISPN-2198	@Radim - the attached logs files were produced with DEBUG level enabled. This is not good for me, as it doesn't highlight individual key added to the cache. Can you please reproduce with TRACE level?	1	0	https://issues.jboss.org/browse/ISPN-2198
8005	ISPN-2198	Looking at the attached logs I can see that a put takes place on the node 4 *at the same* time when the other server(number 2) is shutdown (time 12:51:17,827). My understanding of the problem is that there's no (put) activity *during* and after the shutdown - otherwise the increasing number of entries might simply be explained by the addition of more entries to the system. Can you please confirm this? I also didn't see any size() being invoked on all the caches in the cluster (e.g on node 3) - how was the size of each individual cache obtained?	1	0	https://issues.jboss.org/browse/ISPN-2198
8006	ISPN-2192	Ok I see what you mean Randall! You basically want to execute certain code on all cache entries regardless of cache mode. We could make another class that implements DistributedExecutorService, say DefaultLocalExecutorService?	0	0	https://issues.jboss.org/browse/ISPN-2192
8007	ISPN-2181	Pete, a bit more guidance please. So for step 1) I have to do something similar to [how we implement a Bean for RemoteCache|https://github.com/infinispan/infinispan/blob/master/cdi/extension/src/main/java/org/infinispan/cdi/InfinispanExtension.java#L191]? I don't think I need to capture these injection points like we do for RemoteBean? When you mention extraction from cc you mean extraction from CreationalContext? Do I need to save Producer for Cache and use it to produce Cache similar to [RemoteCache|https://github.com/infinispan/infinispan/blob/master/cdi/extension/src/main/java/org/infinispan/cdi/InfinispanExtension.java#L198]? Step 3) So I put the cache into CreationContext in onPreExecute callback? I simply use the same [BeanManager|https://github.com/infinispan/infinispan/blob/master/cdi/extension/src/main/java/org/infinispan/cdi/CDIMapReduceTaskLifecycle.java#L22], get the CreationContext and call push with the specific Cache? Anything else? What about onPostExecute, do I have to do some cleanup? For step 0, lets call this qualifier @ImpliedInputTaskCache. Do I need to make a producer for it?	1	1	https://issues.jboss.org/browse/ISPN-2181

#	Requirement	Questions	Answered	Successfully Answered	URL
8008	ISPN-2181	{quote} So for step 1) I have to do something similar to how we implement a Bean for RemoteCache? I don't think I need to capture these injection points like we do for RemoteBean? {quote} You just need one Bean, you don't need to call it in a loop or anything. {quote} When you mention extraction from cc you mean extraction from CreationalContext? {quote} Yes. {quote} Do I need to save Producer for Cache and use it to produce Cache similar to RemoteCache? {quote} I would just implement the necessary custom logic in the ContextualLifecycle. I think you don't need any producer. There, you extract the right cache from the creational context. {quote} Step 3) So I put the cache into CreationContext in onPreExecute callback? {quote} Yes. {quote} I simply use the same BeanManager, get the CreationContext and call push with the specific Cache? {quote} Hmm, I guess you can't use the default creational context. You can probably just wrap CreationalContext and add some additional field to it, and then cast it. If this breaks Weld, it's a bug in Weld, and we can look at other options {quote} Anything else? What about onPostExecute, do I have to do some cleanup? {quote} Don't think so. {quote} For step 0, lets call this qualifier @ImpliedInputTaskCache. Do I need to make a producer for it? {quote} No. Just give the bean in (1) that qualifier.	1	1	https://issues.jboss.org/browse/ISPN-2181
8009	ISPN-2181	{quote}Hmm, I guess you can't use the default creational context. You can probably just wrap CreationalContext and add some additional field to it, and then cast it. If this breaks Weld, it's a bug in Weld, and we can look at other options{quote} What do you mean exactly? How can I do this after I create CreationalContext instance using BeanManager's createCreationalContext method? Do you mean to wrap that instance with a new instance of a class I write (which implements CreationalContext and has extra cache field) and that instance I cast then in create callback of ContextualLifecycle of the bean?	1	1	https://issues.jboss.org/browse/ISPN-2181
8010	ISPN-2177	Mircea, how about removing {{backupKeyLocks}} completely and using {{affectedKeys}}/{{clusterLockedKeys}} instead? Is there any place where having a false positive is really a problem?	0	0	https://issues.jboss.org/browse/ISPN-2177
8011	ISPN-2158	@Galder - are you reviewing this pull req?	1	1	https://issues.jboss.org/browse/ISPN-2158
8012	ISPN-2152	Michal Linhard <mlinhard@redhat.com> made a comment on [bug 841894|https://bugzilla.redhat.com/show_bug.cgi?id=841894] Tristan, I'm not sure what's to verify here, I've checked both distros: jboss-datagrid-library-6.0.1.ER1.zip jboss-datagrid-server-6.0.1.ER1.zip and yes, they contain JGroups 3.0.11.Final We've also ran hotrod client stress tests and everything seems to work fine. Do you propose to check anything else ?	0	0	https://issues.jboss.org/browse/ISPN-2152
8013	ISPN-2134	Fix version?	1	1	https://issues.jboss.org/browse/ISPN-2134
8014	ISPN-2133	Another issue that is making OGM a bit less efficient than it should. Should we create a tag SLOWING_OGM?	1	1	https://issues.jboss.org/browse/ISPN-2133
8015	ISPN-2129	Out of curiosity, how do you expect to call C APIs from Java (in a plattform independent manner)? :)	0	0	https://issues.jboss.org/browse/ISPN-2129
8016	ISPN-2119	Hmmm, why does CLI need sessions? :)	0	0	https://issues.jboss.org/browse/ISPN-2119
8017	ISPN-2104	We have these methods that receive a timeout value in millis in our config builder API. Do we want to enhance all of them? I suppose we keep the existing version taking a long value. org.infinispan.configuration.cache.AsyncConfigurationBuilder.replQueueInterval( ) org.infinispan.configuration.cache.AsyncLoaderConfigurationBuilder.flushLockTimeout( ) org.infinispan.configuration.cache.AsyncLoaderConfigurationBuilder.shutdownTimeout( ) org.infinispan.configuration.cache.DeadlockDetectionConfigurationBuilder.spinDuration( ) org.infinispan.configuration.cache.ExpirationConfigurationBuilder.lifespan( ) org.infinispan.configuration.cache.ExpirationConfigurationBuilder.maxIdle( ) org.infinispan.configuration.cache.ExpirationConfigurationBuilder.wakeUpInterval( ) org.infinispan.configuration.cache.FileCacheStoreConfigurationBuilder.fsyncInterval( ) org.infinispan.configuration.cache.FileCacheStoreConfigurationBuilder.lockAcquistionTimeout( ) org.infinispan.configuration.cache.HashConfigurationBuilder.rehashRpcTimeout( ) org.infinispan.configuration.cache.HashConfigurationBuilder.rehashWait( ) org.infinispan.configuration.cache.L1ConfigurationBuilder.lifespan( ) org.infinispan.configuration.cache.L1ConfigurationBuilder.cleanupTaskFrequency( ) org.infinispan.configuration.cache.LockingConfigurationBuilder.lockAcquisitionTimeout( ) org.infinispan.configuration.cache.SingletonStoreConfigurationBuilder.pushStateTimeout( ) org.infinispan.configuration.cache.StateTransferConfigurationBuilder.timeout( ) org.infinispan.configuration.cache.SyncConfigurationBuilder.replTimeout( ) org.infinispan.configuration.cache.TransactionConfigurationBuilder.cacheStopTimeout( )	1	1	https://issues.jboss.org/browse/ISPN-2104
8018	ISPN-2085	Has this test been disabled?	1	1	https://issues.jboss.org/browse/ISPN-2085
8019	ISPN-2085	No, should we disable it? sorry not sure what the final result of the massive thread was.	1	1	https://issues.jboss.org/browse/ISPN-2085
8020	ISPN-2044	I'd avoid wrapping, that takes more memory. Taking for example PutKeyValueCommand, the Flags are transmitted to other nodes as part of {code} Object[] getParameters(){code} still the command is extending org.infinispan.commands.AbstractFlagAffectedCommand would it not be more sensible to invoke the Externalizer explicitly rather than letting River figure out the type from the Object[] stored reference?	1	1	https://issues.jboss.org/browse/ISPN-2044
8021	ISPN-2038	Great. I was not aware that single thread performs all of the RPC for a given transaction. Does this mean that even though I have async replication, with sync listeners I will get all changes within a transaction in order ? Just by my curisity, If any JMS implementation does support the above functionality for async listeners, How would it know that all messages related to a transaction have already been received ? (Since replication mode is async and listener is async) Or is this functionality only applicable for sync replication and async notification ?	1	1	https://issues.jboss.org/browse/ISPN-2038

#	Requirement	Questions	Answered	Successfully Answered	URL
8022	ISPN-2037	one off quickly <sannegrinovero> vblagoje, just read your ISPN-2037 .. good timing ! let's talk about it? <jbossbot> jira [ISPN-2037] Map/Reduce tasks should process entries in the CacheLoader as well [Open (Unresolved) Feature Request, Critical, Vladimir Blagojevic] https://issues.jboss.org/browse/ISPN-2037 <vblagoje> ok sannegrinovero <vblagoje> sure, have time now <vblagoje> ? <sannegrinovero> yes <sannegrinovero> so the problem is that you have to load all entries from the cacheloader <sannegrinovero> but you don't actually know which keys exist <vblagoje> aha i see <vblagoje> side question, does keySet return stuff in cache loader? <sannegrinovero> so you have to load "Select * from database", which will very likely kill you by OOM <sannegrinovero> I don't know that <vblagoje> hmmm, how are these caches configured to begin with? any eviction, passivation, shared/single etc? <vblagoje> shared/single cache loader <vblagoje> sannegrinovero, who is most familiar with cahceloaders on our team? <sannegrinovero> mmarkus is the leader I think.. ttarrant accumulated some experience too. <sannegrinovero> sorry was away, back now. <sannegrinovero> Does it matter how caches are configured? <sannegrinovero> for sure if it's a single shared cacheloader, you'll have the problem that you only want to load entries for the current node, skipping all the rest. <sannegrinovero> otherwise you definitely kill the purpose of map reduce.. loading the whole database from a single slow store N times where N is the number of nodes in the cluster... very bad :D <sannegrinovero> vblagoje, ^ <vblagoje> so basically the problem is when map command arrives to node where it is executed and it needs to load all local keys, right now it does not load keys in cache loader - you say, is that right? <mmarkus> vblagoje: anything I can help with? <vblagoje> this is the case of map/reduce when input keys are not specified - basically do map/reduce on all keys <sannegrinovero> vblagoje, I'm not sure. maybe it works but I don't think so. we definitely need to have tests with Map/Reduce && cacheloader interactions. <sannegrinovero> yes, and for Query I never have the keys. I think even for map/reduce it's the most common case (to not have the set of keys) <sannegrinovero> on the other hand, with non-shared cacheloaders it's even trickier. <mmarkus> vblagoje: keySet ignores the cache loader interceptor <vblagoje> yeah ok <vblagoje> aha mmarkus, thanks dude; how do we get them? <mmarkus> vblagoje: only returns what's in memory <mmarkus> you need a way to get all the keys from a cache loader? <vblagoje> exactly <sannegrinovero> this is strongly related guys: https://community.jboss.org/wiki/CacheLoaderAndCacheStoreSPIRedesign#comment-9835 <mmarkus> vblagoje: that's a hard one man <sannegrinovero> I had sketched an API proposal on the mailing list <sannegrinovero> which manik had +1'ed .. searching for a link <sannegrinovero> vblagoje: http://lists.jboss.org/pipermail/infinispan-dev/2012-May/010760.html <vblagoje> mmarkus, sanne , maybe we can use loadAllKeys on CacheLoader interface and then slowly load values for each of those keys <mmarkus> vblagoje: thinkig about it from an jdbc perspective <sannegrinovero> vblagoje, you are the map/reduce API master :) the proposal I described has a similar API in concept, that the visitor "demands" collection of entries from the CacheLoader implementation, in blocks. <sannegrinovero> so the details of how the blocks of data are loaded are delegated to the implementation, which is important <vblagoje> you mean this Processor API sanne? <sannegrinovero> but the flow control is handled by your consumer <mmarkus> sannegrinovero: +1. I was about to say the same thing :) <sannegrinovero> mmarkus, nice :) <sannegrinovero> vblagoje, yes <mmarkus> sannegrinovero: indeed, it was ur idea :) <sannegrinovero> guys am I the only one wasting my dev days by writing on design on the ML :D ? <vblagoje> No, we all are hahaha <sannegrinovero> admittedly this was assigned to Manik ;) <mmarkus> sannegrinovero: you do have a fare share though :) <vblagoje> there are so many things to do noone has time to review anyone else's design <vblagoje> so Manik was going to do these Processor callbacks? <sannegrinovero> yea I realize that, I admit I was hooked to this as I need it. <sannegrinovero> no vblagoje I think I moved it to	1	1	https://issues.jboss.org/browse/ISPN-2037
8023	ISPN-2015	@Galder so the memory consumation looks ok without your decoder ?	1	1	https://issues.jboss.org/browse/ISPN-2015
8024	ISPN-2015	@Norman, which server did you test exactly? Still Memcached? And what kind of loads did you apply? Btw, I was testing JDG, which is the data grid server, which deploys the memcached, hotrod and rest endpoints. You can build it from https://github.com/infinispan/jdg. Shouldn't be a difference.	1	1	https://issues.jboss.org/browse/ISPN-2015
8025	ISPN-2015	Ok, can you try startMemcachedAgent.sh and start the Memcached server (-r memcached)? What load are you using? By default this is 400 ops per thread, with 100 threads.	1	1	https://issues.jboss.org/browse/ISPN-2015
8026	ISPN-2015	@Galder I fixed this and deployed a snapshot which contains the fix. Could you please try this out and let me know if it works ? You can find the snapshot here: https://oss.sonatype.org/content/repositories/snapshots/io/netty/netty/3.4.5.Final-SNAPSHOT/	1	1	https://issues.jboss.org/browse/ISPN-2015
8027	ISPN-2015	MP Swift <mp-swift@outlook.com> made a comment on [bug 899966|https://bugzilla.redhat.com/show_bug.cgi?id=899966] Hi, Anyone, can help me? Can I ask the org.jboss.netty.channel.Channel support getRemoteAddress support IPv6? Hope there is someone can assist me with that =) From Swift	0	0	https://issues.jboss.org/browse/ISPN-2015
8028	ISPN-1967	Now I'm using attribute "View" at jgroups:type=channel,cluster="default" So for example, would be nice to have something like "PendingView" and "CommitedView" at jboss.infinispan:type=Cache,name="testCache(dist_sync)",manager="default",component=DistributedStateTransferManager Is such thing feasible ?	0	0	https://issues.jboss.org/browse/ISPN-1967
8029	ISPN-1959	Manik, Sane, can I assign this to me?	1	1	https://issues.jboss.org/browse/ISPN-1959
8030	ISPN-1956	to get the goal/scope of this issue specified in a more precise manner: Forge may be setup to use INFINISPAN as persistence provider: {code} persistence setup --provider INFINISPAN --container JBOSS_AS7 {code} So what kind of inifinispan projects shall be bootstrapped?	1	1	https://issues.jboss.org/browse/ISPN-1956
8031	ISPN-1956	Have you had a look at the maven archetypes we have? I would think follow something similar.	0	0	https://issues.jboss.org/browse/ISPN-1956
8032	ISPN-1956	Looking at the archetype(s) and forge intensly I started creating a simple forge plugin that would be able to create 4 different examples that match what's currently the Application class that by the archetype (basicUse, lifespans, asyncOperations, registeringListeners). I guess that from there extending stuff would be pretty easy. A first enhancement could be some options that would tune the infinispan config that you get. Does this sound right to you? I'll push this stuff to github anytime soon.	1	1	https://issues.jboss.org/browse/ISPN-1956
8033	ISPN-1956	[~adietish], with the help of [~gastaldi] and [~lincolnthree] we created a prototype infinispan-forge plugin https://github.com/infinispan/infinispan-forge/ Can we use that to host your work ?	1	1	https://issues.jboss.org/browse/ISPN-1956
8034	ISPN-1956	sure, I'll make sure I move my current code into that stub if that's ok for you. Shall we proceed in usual git manner, me forking this repo or do you want to give me write premissions?	0	0	https://issues.jboss.org/browse/ISPN-1956
8035	ISPN-1956	I'm currently have a working base structure. I'm polishing, fixing stuff and will then file a pull request. The plugin is currently named *infinispan-forge*, shouldn't it be called forge-infinispan (as all others are? ex. forge-errai, forge-plugin-primefaces, etc.)? The base package is *org.jboss.infinispan.forge*. Shouldn't it be org.infinispan.forge (as the whole infinispan source itself)?	0	0	https://issues.jboss.org/browse/ISPN-1956
8036	ISPN-1956	[~aanderson] This is integrated, what about closing the JIRA and creating new ones for bugs/other features?	1	1	https://issues.jboss.org/browse/ISPN-1956
8037	ISPN-1935	Hello - do we have a solution for this? I am particularly interested in the callback implementation.	0	0	https://issues.jboss.org/browse/ISPN-1935
8038	ISPN-1901	Shouldn't this be in 5.1.x as well?	0	0	https://issues.jboss.org/browse/ISPN-1901
8039	ISPN-1863	Does it really matter if (http://download.oracle.com/maven/com/sleepycat/je/5.0.34/je-5.0.34.pom) is unstable, because when nexus has fetched the artifact, you already have a copy in your repo.	1	1	https://issues.jboss.org/browse/ISPN-1863

#	Requirement	Questions	Answered	Successfully Answered	URL
8040	ISPN-1861	Galder, could I assign this to you?	1	1	https://issues.jboss.org/browse/ISPN-1861
8041	ISPN-1836	Mircea, can you correct this? It says the same thing on the TransactionConfigurationBuilder, which is where I took the xsd version from.	0	0	https://issues.jboss.org/browse/ISPN-1836
8042	ISPN-1835	Is this out of date?	0	0	https://issues.jboss.org/browse/ISPN-1835
8043	ISPN-1812	Thanks Bela, I noticed something was not right but I did not know what! Should we wait for alpha2?	1	1	https://issues.jboss.org/browse/ISPN-1812
8044	ISPN-1812	What do you mean: what wasn't right ? My comment was just regarding a performance improvement, otherwise this should be fine !	0	0	https://issues.jboss.org/browse/ISPN-1812
8045	ISPN-1799	Can this be fixed so that it gets fixed in next ER build for JDG?	1	1	https://issues.jboss.org/browse/ISPN-1799
8046	ISPN-1799	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Prabhat Jha <prabhat.jha@jboss.com> made a comment on jira ISPN-1799 Can this be fixed so that it gets fixed in next ER build for JDG?	1	1	https://issues.jboss.org/browse/ISPN-1799
8047	ISPN-1799	Dan could you please try and get it in 5.1.4.CR1 or at least a patch for JDG	1	1	https://issues.jboss.org/browse/ISPN-1799
8048	ISPN-1799	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Tristan Tarrant <ttarrant@redhat.com> made a comment on jira ISPN-1799 Dan could you please try and get it in 5.1.4.CR1 ?	1	1	https://issues.jboss.org/browse/ISPN-1799
8049	ISPN-1799	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] Tristan Tarrant <ttarrant@redhat.com> made a comment on jira ISPN-1799 Dan could you please try and get it in 5.1.4.CR1 or at least a patch for JDG	1	1	https://issues.jboss.org/browse/ISPN-1799
8050	ISPN-1799	we saw this error in our 3 node cluster in which the network connectivity to one of nodes is not reliable and has high latency. Does this exception have anything to do with the network connectivity and high latency?	1	1	https://issues.jboss.org/browse/ISPN-1799
8051	ISPN-1799	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759|https://bugzilla.redhat.com/show_bug.cgi?id=765759] dex chen <dex80526@yahoo.com> made a comment on jira ISPN-1799 we saw this error in our 3 node cluster in which the network connectivity to one of nodes is not reliable and has high latency. Does this exception have anything to do with the network connectivity and high latency?	0	0	https://issues.jboss.org/browse/ISPN-1799
8052	ISPN-1797	Great, thanks! Could you fork the project on GitHub, commit your changes and issue a pull request?	0	0	https://issues.jboss.org/browse/ISPN-1797
8053	ISPN-1797	Hi Andrew, did you make any progress on this? We could help finish it, as we need it soon and there are other volunteers willing to help on it.	1	1	https://issues.jboss.org/browse/ISPN-1797
8054	ISPN-1792	Ok, I can live with that. Closing the feature request?	1	0	https://issues.jboss.org/browse/ISPN-1792

8056	ISPN-1744	What is this exactly about?	1	0	https://issues.jboss.org/browse/ISPN-1744
8057	ISPN-1732	Why is this critical ? You're assuming that 3.0.2 has bad performance, which we haven't proven yet. Sanne's test (with Manik's Transactional test) actually showed no performance increase in 3.0.3 compared to 3.0.2...	1	1	https://issues.jboss.org/browse/ISPN-1732
8058	ISPN-1732	We where assuming there was a performance regression in JGroups 3.0.2, and we where assuming we could fix this in 3.0.3. But talking to Bela it seems that while it's true there is some contention in the RetransmissionBuffer, this isn't possibly a regression as it has been like this for a while. Shall I close this?	1	1	https://issues.jboss.org/browse/ISPN-1732
8059	ISPN-1636	Guys, why is this issue marked for 6.0? We should do it sooner! I made necessary changes on my fork https://github.com/vblagoje/infinispan/tree/t_1636_m and all we need to do is wire in CDI into SPI. Also issue ISPN-1634 depends on ISPN-1634 and it does not make sense to solve ISPN-1634 through a mechanism other than ISPN-1636.	1	1	https://issues.jboss.org/browse/ISPN-1636
8060	ISPN-1636	Why unrealistic Sanne?! I already did the majority of the work needed to enable the hookup! Kevin, I am moving this for 5.2! Let us know any estimates/conclusion after your initial investigation and assessment!	1	1	https://issues.jboss.org/browse/ISPN-1636
8061	ISPN-1636	Sorry to interfere but if this issue is expected for 5.2, may I still expect to have at least ISPN-1634 for 5.1?	1	1	https://issues.jboss.org/browse/ISPN-1636
8062	ISPN-1636	I've just checked what you did in the context of this issue and what is weird (functionally speaking) is the fact that in {{WordCountMapReduceCDITest}} you create a {{MapReduceTask}} on a cache called {{mapreducecache}} but what you actually inject in {{WordCountMapper}} and {{WordCountReducer}} is the default cache. I know that when we use the annotation {{Inject}}, we inject the default cache but in this context I personally found it very misleading, I believe that everybody expects to get the cache from which the {{MapReduceTask}} has been created, don't you agree?	1	1	https://issues.jboss.org/browse/ISPN-1636
8063	ISPN-1636	I do, it was an honest oversight on my part! Do we need any extra support to inject particular cache or is it already supported by our CDI extension?	1	0	https://issues.jboss.org/browse/ISPN-1636
8064	ISPN-1632	@Pete, is there any easy way to do what Manik suggests?	0	0	https://issues.jboss.org/browse/ISPN-1632
8065	ISPN-1616	It only reduces the number of RPCs if you have a pessimistically locked cache. Not otherwise.	1	1	https://issues.jboss.org/browse/ISPN-1616
8066	ISPN-1580	Isn't Sybase just a variant of MSSQL (or rather the other way round) ? So this should be fairly simple	1	1	https://issues.jboss.org/browse/ISPN-1580
8067	ISPN-1523	I don't understand - what is incorrect about this?	1	1	https://issues.jboss.org/browse/ISPN-1523
8068	ISPN-1492	maybe I'm missing something; is the thread needed for the entries inserted with a limited lifetime? I can of course disable the thread creation using reaperEnabled="false"	1	0	https://issues.jboss.org/browse/ISPN-1492
8069	ISPN-1453	We do have ispncon ... https://github.com/infinispan/ispncon Is that a valid starting point?	1	1	https://issues.jboss.org/browse/ISPN-1453
8070	ISPN-1430	Huh? This is on the current master and doesn't return any value: http://bit.ly/s7AWOU	1	1	https://issues.jboss.org/browse/ISPN-1430
8071	ISPN-1421	Guys, I've created https://docs.jboss.org/author/display/ISPN/Upgrading+from+5.0+to+5.1 with a few that came to my mind. Can you please update the document with any missing? Cheers :)	1	1	https://issues.jboss.org/browse/ISPN-1421
8072	ISPN-1416	[~manik] what kind of information would it need from the InvocationContext?	0	0	https://issues.jboss.org/browse/ISPN-1416
8073	ISPN-1413	We currently have: {code:java} Cache appCache = cacheManager.getCache("appCache").getAdvancedCache().withClassLoader(appClassLoader); //use the appCache instance which uses the specified class appClassLoader for marshalling, class loading etc. {code} Doesn't this cover the use case for this JIRA?	0	0	https://issues.jboss.org/browse/ISPN-1413
8074	ISPN-1407	So this functionality is needed in order to switch the HR clients connected to cluster A (running e.g. ISPN 5.2) to cluster B (running e.g. ISPN 5.3) when doing rolling upgrades. This involves an sys admin connecting to every client and manually updating this list. What I'm suggesting is a potentially more elegant approach to achieve this, by upgrading the HR protocol: - sys admin connects(JMX) to cluster A and marks the site as "upgraded to cluster B" - at this stage the HR endpoints on cluster A, when receiving requests from connected users, would also tell them(piggyback, same as we do with topology info) to connect to "cluster B" on next requests - this way the sys admin does not have to update the list of servers for all the users (there might be lots of them), but only update it once on the server side	1	1	https://issues.jboss.org/browse/ISPN-1407

#	Requirement	Questions	Answered	Successfully Answered	URL
8075	ISPN-1407	Why do we need HR protocol changes ? Can't we just fill the topology cache on cluster A with the addresses from cluster B and make sure all clients perform a GET to retrieve the new topology view ?	0	0	https://issues.jboss.org/browse/ISPN-1407
8076	ISPN-1394	Regarding the removal of nodes, why don't we tell the system which nodes we intend to remove beforehand, so it can actually work out if there might be inconsistencies (e.g. insufficient numOwners).	0	0	https://issues.jboss.org/browse/ISPN-1394
8077	ISPN-1391	Is this just a drop-in replacement?	0	0	https://issues.jboss.org/browse/ISPN-1391
8078	ISPN-1385	testStreamingAPIReusingStreams(org.infinispan.loaders.decorators.ChainingCacheLoaderTest) org.infinispan.loaders.CacheLoaderException: com.thoughtworks.xstream.converters.ConversionException: Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor ---- Debugging information ---- message : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor cause-exception : com.thoughtworks.xstream.converters.reflection.ObjectAccessException cause-message : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor class : org.infinispan.container.entries.ImmortalCacheEntry required-type : org.infinispan.container.entries.ImmortalCacheEntry path : /org.infinispan.container.entries.ImmortalCacheEntry line number : 1 ---------- at org.infinispan.loaders.dummy.DummyInMemoryCacheStore.fromStream(DummyInMemoryCacheStore.java:91) at org.infinispan.loaders.decorators.ChainingCacheStore.fromStream(ChainingCacheStore.java:73) at org.infinispan.loaders.BaseCacheStoreTest.testStreamingAPIReusingStreams(BaseCacheStoreTest.java:595) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:601) at org.testng.internal.MethodHelper.invokeMethod(MethodHelper.java:644) at org.testng.internal.Invoker.invokeMethod(Invoker.java:546) at org.testng.internal.Invoker.invokeTestMethod(Invoker.java:700) at org.testng.internal.Invoker.invokeTestMethods(Invoker.java:1002) at org.testng.internal.TestMethodWorker.invokeTestMethods(TestMethodWorker.java:137) at org.testng.internal.TestMethodWorker.run(TestMethodWorker.java:121) at org.testng.TestRunner.runWorkers(TestRunner.java:909) at org.testng.TestRunner.privateRun(TestRunner.java:618) at org.testng.TestRunner.run(TestRunner.java:499) at org.testng.SuiteRunner.runTest(SuiteRunner.java:332) at org.testng.SuiteRunner.access$000(SuiteRunner.java:33) at org.testng.SuiteRunner$SuiteWorker.run(SuiteRunner.java:358) at org.testng.internal.thread.ThreadUtil$CountDownLatchedRunnable.run(ThreadUtil.java:142) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:722) Caused by: com.thoughtworks.xstream.converters.ConversionException: Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor ---- Debugging information ---- message : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor cause-exception : com.thoughtworks.xstream.converters.reflection.ObjectAccessException cause-message : Cannot construct org.infinispan.container.entries.ImmortalCacheEntry as it does not have a no-args constructor class : org.infinispan.container.entries.ImmortalCacheEntry required-type : org.infinispan.container.entries.ImmortalCacheEntry path : /org.infinispan.container.entries.ImmortalCacheEntry line number : 1 ---------- at com.thoughtworks.xstream.core.TreeUnmarshaller.convert(TreeUnmarshaller.java:89) at	0	0	https://issues.jboss.org/browse/ISPN-1385
8079	ISPN-1367	And is this crucial for 5.1.0?	0	0	https://issues.jboss.org/browse/ISPN-1367
8080	ISPN-1362	Apologies, I just saw that you are using 5.0.0.Final. Just that your config file had the 4.2 XSD which is what threw me off. Can you confirm that you are in fact using 5.0.0.Final?	1	1	https://issues.jboss.org/browse/ISPN-1362
8081	ISPN-1354	Is this really the job of Infinispan? What's HornetQ there for?	0	0	https://issues.jboss.org/browse/ISPN-1354
8082	ISPN-1338	I can't reproduce the bug. Could you provide a test project?	0	0	https://issues.jboss.org/browse/ISPN-1338
8083	ISPN-1335	I now know that a cache store is made "read only" by setting ignoreModifications on <loader> element. What is not so clear is the use case - why would one use read only store.	0	0	https://issues.jboss.org/browse/ISPN-1335
8084	ISPN-1326	As the cacheName is now needed to create Command instances, the org.infinispan.commands.module.ModuleCommandFactory should pass the cacheName to the method {code} org.infinispan.commands.module.ModuleCommandFactory.fromStream(String, byte, Object[]){code} Or implementors won't be able to create any command. Unfortunately this is not covered by core's test suite, but you can have a look into the Query tests (currently doesn't compile because of the field change in _org.infinispan.commands.remote.BaseRpcCommand_	1	1	https://issues.jboss.org/browse/ISPN-1326
8085	ISPN-1308	Why do you need a separate project for this? Couldn't you include it within cdi/src/test... ? All dependencies would be marked as test scope, so you would not leak anything to production users.	1	1	https://issues.jboss.org/browse/ISPN-1308
8086	ISPN-1303	Rather than attaching src code, could you pls fork the project on GitHub, create a new topic branch on your fork and commit your changes there? That makes it easy for me to do a diff and pull in commits into the main project. :)	0	0	https://issues.jboss.org/browse/ISPN-1303
8087	ISPN-1303	Hi Robert, your patch is interesting, but it's pretty hard to understand which changes you made compared to the original one, as the FileCacheStore in Infinispan is today likely quite different than the one you started from. If you're not familiar or interested in Git, could you send a patch or diff file from the original file you edited, and add some comments? If you could apply your changes to the latest version of FileCacheStore that would be ideal.	1	1	https://issues.jboss.org/browse/ISPN-1303
8088	ISPN-1302	Can I assign this to you, Robert, since you spotted and reported the original JIRAs?	1	0	https://issues.jboss.org/browse/ISPN-1302
8089	ISPN-1300	Sorry for digging this one up but I tried setting the maximum number of buckets to 4096 (for an ext3 file system) and that made Infinispan infinitely slower. When this is configurable, could this be done in a way that's free of side-effects?	0	0	https://issues.jboss.org/browse/ISPN-1300
8090	ISPN-1297	It may not be enabled by default, but do we have the option to enable it?	1	1	https://issues.jboss.org/browse/ISPN-1297
8091	ISPN-1284	Should this be marked resolved? The linked pull request doesn't seem related.	0	0	https://issues.jboss.org/browse/ISPN-1284
8092	ISPN-1261	[~mircea.markus], [~galderz]: Could you please take a look at the following tasks: * Support all events - Done * Verify how cache and cache manager observers are registered - What exactly needs to be done? * Tests - Added for each type of event. * Doc - Added Java docs. Currently there is no information about event support in our documentation: http://infinispan.org/docs/7.0.x/user_guide/user_guide.html. Perhaps we should add it? * Remove deprecated event - Done, but not sure if we should do this... For backwards compatibility we might leave it?	0	0	https://issues.jboss.org/browse/ISPN-1261
8093	ISPN-1253	Is this still needed? IOW, would you guys still like this integration?	1	0	https://issues.jboss.org/browse/ISPN-1253
8094	ISPN-1239	Shouldn't this be closed as well?	0	0	https://issues.jboss.org/browse/ISPN-1239

#	Requirement	Questions	Answered	Successfully Answered	URL
8095	ISPN-1228	Infinispan already supports this. See this unit test that proves it: https://github.com/infinispan/infinispan/blob/master/core/src/test/java/org/infinispan/config/StringPropertyReplacementTest.java which makes use of this test config file: https://github.com/infinispan/infinispan/blob/master/core/src/test/resources/configs/string-property-replaced.xml Please try this out and reopen if it doesn't work for you, and we will investigate.	0	0	https://issues.jboss.org/browse/ISPN-1228
8096	ISPN-1212	Galder, is this issue not solved?	1	1	https://issues.jboss.org/browse/ISPN-1212
8097	ISPN-1168	Are we also going to ship with an impl that uses TransactionSyncRegistry? Or is this something that is going to be impl'd and shipped with JBoss AS?	0	0	https://issues.jboss.org/browse/ISPN-1168
8098	ISPN-1158	Manik, in the end this was implemented as throwing an exception rather than a warning. Exception seems a bit too much to me and couldn't it be a case that a user wants passivation and do manual Cache.evict() calls? WDYT? I think a WARN message would be better.	1	1	https://issues.jboss.org/browse/ISPN-1158
8099	ISPN-1149	@Jeff, thanks for this feature request. Have you discussed this on the user forums and/or developer mail list? One point of concern that I would have in auto-assigning ports on a server daemon process is how would you inform clients of this port?	1	0	https://issues.jboss.org/browse/ISPN-1149
8100	ISPN-1147	When can we expect this ?	1	0	https://issues.jboss.org/browse/ISPN-1147
8101	ISPN-1141	Not really a dupe of ISPN-871. ISPN-871 attempts to use a JNI-based heap in C. Magnus' approach above is a NIO direct buffer. Magnus, would you be interested in contributing a patch? :-)	0	0	https://issues.jboss.org/browse/ISPN-1141
8102	ISPN-1141	Can the DirectMemory project (https://github.com/raffaeleguidi/DirectMemory/wiki) be used for this?	1	1	https://issues.jboss.org/browse/ISPN-1141
8103	ISPN-1137	How is this related to ISPN-1136? Could you pls close this and use ISPN-1136 if they are duplicates? Make sure all of these notes are copied across.	1	1	https://issues.jboss.org/browse/ISPN-1137
8104	ISPN-1132	Suggested design. This feature is only available if *lockAtPrepareTime*, as defined within ISPN-1131, is enabled. It should be possible to control weather lock-reordering is enabled or not: e.g. there might be application where locks are being acquired in a ordered sequence already, so this optimization would not bring any benefit. The element that controls lock reordering is *reorderLockAcquisition*: {code:xml} <locking lockAtPrepareTime="true"> <reorderLockAcquisition enabled="true" keyComparator="extends.java.util.Comaparator"/> </locking> {code} *keyComparator* is optional. It is an {{java.util.Comaparator<K>}} implementation, with K from {{Cache<K,V>}}. If not specified defaults to a implementation that: * for each key calculates the CH value * compares the CH values of two keys in order to determine the order. Having *lockAtPrepareTime* disabled and *reorderLockAcquisition* enabled makes the system log a warning stating that lock reordering is not active. In order to support this feature {{TxInterceptor.visitPrepareCommand}} is modified as follows: * it would first invoke {{invokeNextInterceptor(ctx, command)}} and only then {code:java} if (!ctx.isOriginLocal()) { // replay modifications for (VisitableCommand modification : command.getModifications()) { VisitableCommand toReplay = getCommandToReplay(modification); if (toReplay != null) { invokeNextInterceptor(ctx, toReplay); } } } {code} * this is needed in order to have {{LockInterceptor.visitPrepareCommand}} acquire locks at once for all keys involved in the transaction Also {{PrepareTimeLockingInterceptor.visitPrepareCommand}} is enhanced as follows: * {code:java} for (WriteCommand wc : command.getModifications()) { acquireLock(wc); } {code} is replaced with {code:java} for (WriteCommand wc : reorder(command.getModifications())) { acquireLock(wc); } {code} * {{reorder(WriteCommand[] commandsToReorder)}} works as follows: ** if *reorderLockAcquisition* is disabled returns {{commandsToReorder}} ** if {{commandsToReorder}} contrains a {{ClearCommand}} it returns {{commandsToReorder}} (unmodified) ** breaks {{PutMapCommand}} in individual {{PutKeyValue}} commands ** after the step above we have a sequence of {{DataCommands}} - based on the original {{commandsToReorder}} sequence, with {{PutMapCommand}} "expanded" ** this sequence is the coalesced (a la ISPN-328), resulting in another sequence of {{DataCommands}} ** A List<K> is then determined from last {{DataCommands}} sequence by using {{DataCommands.getKey()}}. (K from Cache<K,V>) ** This list of keys is then ordered using the configured *keyComparator* ** locks are being acquired in the sequence resulted at the previous step	0	0	https://issues.jboss.org/browse/ISPN-1132
8105	ISPN-1123	Fixing ConsistentHashV1IntegrationTest too in the Hot Rod client. Why on earth was it transactional if we don't support transactions in Hot Rod yet? Also tightened the interceptor used to keep counter of calls.	1	1	https://issues.jboss.org/browse/ISPN-1123
8106	ISPN-1116	Manik, how could we solve this as it's marked depending on ISPN-1195, which is not solved ?	1	0	https://issues.jboss.org/browse/ISPN-1116
8107	ISPN-1115	Whys is applyDelta(K deltaAwareValueKey, Delta delta, Object... locksToAcquire) a method on the AdvancedCache? Is there any situation in which a user would call this method directly?	1	1	https://issues.jboss.org/browse/ISPN-1115
8108	ISPN-1115	I don't think so. How else can we invoke a method on cache from a fairly high-abstraction like AtomicHashMapProxy?	1	1	https://issues.jboss.org/browse/ISPN-1115
8109	ISPN-1115	Just thinking out loud, haven't read the design preview email on the dev list: Does the method need to be in the Cache? Couldn't the method be in a particular component which AtomicHashMapProxy gets injected?	1	1	https://issues.jboss.org/browse/ISPN-1115
8110	ISPN-1103	I completely agree that storing metadata as a JSON structure is a brilliant approach. I've added several features the list in the description. Storing the jsonObject as a string might work, especially if it is simply loaded and stored as an atomic unit. However, there are several advantages to storing it in a BSON (or BSON-like) representation, and all boil down to the fact that any schema-aware service will need to access the document contents for indexing, validation, computing differences (for DeltaAware functionality), and even applying changes (e.g., something similar to MongoDB's [atomic operations|http://www.mongodb.org/display/DOCS/Atomic+Operations]). Using a BSON representation will also make it more natural to handle binary values within the document. Now, if we did store the document internally as [BSON|http://www.bson.org], we actually don't need to store the metadata separately. For example, we can store a single document with this structure: {code} { "document" : /* user's document */ "metadata" : { "schema-ref" : blah-blah ... } {code} If represented as a [BSONObject|https://github.com/mongodb/mongo-java-driver/blob/master/src/main/org/bson/BSONObject.java], then the user's document is actually a nested BSON object stored under the "document" property name. This approach means that all the differencing, atomic operations, serialization, etc. functionality will work without having to distinguish between a user's document and a system metadata document. The resulting value class would be: {code} class SchematicValue { org.bson.BSONObject json; } {code} The downside of doing this is the increase in size of the {{SchematicValue}} class, from 2 references to a 1 reference plus an extra BSONObject implementation. The {{org.bson.BasicBSONObject}} extends {{LinkedHashMap<String,Object>}} (which is fairly substantial), but we could probably provide an optimized implementation for the top-level that still implemented the {{org.bson.BSONObject}} interface but more directly. Is it worth the apparent simplicity?	1	1	https://issues.jboss.org/browse/ISPN-1103

#	Requirement	Questions	Answered	Successfully Answered	URL
8111	ISPN-1103	What do you mean by map-reduce-based validation exactly? I guess this is not distributed at all but rather happening locallt?	1	0	https://issues.jboss.org/browse/ISPN-1103
8112	ISPN-1096	Fine by me, however what do you propose as a "correct solution" here?	0	0	https://issues.jboss.org/browse/ISPN-1096
8113	ISPN-1090	Good idea for an umbrella JIRA. Could you make sure the others are linked accordingly? These would include: * Eventing over Hot Rod * Transactions over Hot Rod * Map/Reduce over Hot Rod * Querying over Hot Rod We have JIRAs for at least some of the above. :)	1	0	https://issues.jboss.org/browse/ISPN-1090
8114	ISPN-1090	Which API would need to change for this? Just that the SuspectException would need to include the address, right? How is this API? Or are you referring to the HR protocol's error codes?	1	0	https://issues.jboss.org/browse/ISPN-1090
8115	ISPN-1090	To support virtual nodes more efficiently, the hash topology header must change: - -When virtual nodes are enabled, we're sending host:port information repeated for each of the hash ids belonging to a HotRod server. So, the protocol needs to be more efficient in v2 sending the host:port only once and then N hash ids, where N is the number of configured virtual nodes. If virtual nodes is disabled, the default is 1 virtual node, so N=1.- Actually, forget what I just said cos as Manik rightly pointed out in a chat we had earlier, it won't be atypical to configure with 500-1000 vnodes. So, even if we applied the suggested change, that'd still require, for a cluster of 10 nodes, shipping 10*1000*4bytes=~40kb which is not very optimal. During the chat it was suggested that the clients themselves generate the hash ids, but in order to do that, they need to have the same hash seed that the Infinispan server does, and currently that is org.infinispan.remoting.transport.Address which represents the cluster address. Clearly, this won't work for clients but what about if the server hashed on String UTF-8 version of org.infinispan.remoting.transport.Address? If that worked, then a hash topology update need only shipping: existing header params plus num virtual nodes, and tuples for host:port:clusterAddress(UTF-8). The key thing here is that the number of tuples to send back would be equal to the number of nodes in the cluster. The clients could then generate the hash codes for all virtual nodes themselves. At the moment, Infinispan cluster addresses are backed by JGroups address which are UUID driven, so its toString() representation seems deterministic. However, if there was ever a move back to IP based addresses that would break because toString() representations rely on DNS lookups which means the toString() representation could vary over time. @Pete, could you confirm whether this change on the key on which cluster addresses are hashed would work as expected? The hash topology header size could be further reduced if clients were assumed to be able to keep state in which case the server could just send information about nodes that have joined or left. Since nodes pick fixed positions in the hash wheel, this would in theory work cos the addition of a node would not require other nodes to recalculate hashes.	0	0	https://issues.jboss.org/browse/ISPN-1090
8116	ISPN-1084	This is a new feature - should be scheduled for 5.1.	1	1	https://issues.jboss.org/browse/ISPN-1084
8117	ISPN-1079	Dan, how much do you allocate for your RAM disk?	1	0	https://issues.jboss.org/browse/ISPN-1079
8118	ISPN-1068	Hey [~O.Bergner][~obergner] (sorry wasn't sure which account is active)! Could you tell me whether there is still an interest in this? I would love to help you with this but I'm not sure what should be the final outcome. Ping me please when you have a while (here or off-list if you prefer).	0	0	https://issues.jboss.org/browse/ISPN-1068
8119	ISPN-1065	Pete, when you write such parser, what do you do about validation of the XML? Do you delegate it to the schema? Or do you do that while parsing too? The type of validations I'm refering to is about the number of possible instances of a particular element, the allowed values for an XML attribute...etc. I see some benefit from having docs in schema and that's the fact that IDE or other tools can piggyback on that to offer information to the user while typing the XML, without having to go to the config doc.	0	0	https://issues.jboss.org/browse/ISPN-1065
8120	ISPN-1065	I'd love to be able to add structured configuration options to the Query engine, i.e. not to pass a list of properties but have a set of proper elements which users could validate via XSD. The tricky part is that this structure is defined by the query submodule, so I wonder if we can make this while still having the infinispan-query.jar optional: the parser should be able to self-register extensions for different parts, or ignore unknown elements. I don't expect the XSD to be dynamic too, so this might need to be built upfront from the aggregation of all extension modules. If not possible, what are the alternatives? shall we separate configuration files?	1	1	https://issues.jboss.org/browse/ISPN-1065
8121	ISPN-1059	Yes, I think so. It would be nice if someone with proper permissions could link to my document from the official Infinispan documentation. I can't. But otherwise, yes, this is done.	1	1	https://issues.jboss.org/browse/ISPN-1059
8122	ISPN-1014	Have you reported these issues to the RestEasy community?	1	0	https://issues.jboss.org/browse/ISPN-1014
8123	ISPN-1001	This needs to be tested once ISPN-1000 is closed. @Dan, could you pls coordinate with Bela on testing this issue once you are happy with ISPN-1000.	1	1	https://issues.jboss.org/browse/ISPN-1001
8124	ISPN-1000	Some design ideas: {code} # PUSH based rehashing The purpose behind this is to provide for a better rehashing scheme that is: * more robust * has fewer RPC messages * performs better The current rehashing scheme is RPC-heavy and attempts to be non-blocking, resulting in brittleness. ## Overview * Every node registers a view change listener * On view change, * determine if current node is affected and kick off a RehashTask * If related to a JOIN, RehashTask blocks on JOIN message to grab TopologyInfo (if config is topology-aware). * Enter READ_ONLY mode * if affected, loop through keyset in data container and non-shared cache store. For each key: * if LAST_OWNER on OLD_CH and key has a new owner in NEW_CH, add to push set * if LAST_OWNER is no longer an owner based on NEW_CH, add key to invalidation set (deals with JOINs and LEAVEs in the same way now!) * Push state to new owners * Apply NEW_CH to local node, exit READ_ONLY mode. * If successful, invalidate keys in invalidation set ### Determining if node is affected by ViewChange: * If JOIN: * If idx(JOINER) within + or - numOwners of idx(self) * Or if LEAVE: * and idx(LEAVER) within + or - (numOwners + 1) idx(self) _TODO_: HOw would this affect vnodes? LEAVER or JOINER will have multiple positions to check, and self will have multiple positions too. Can this be encapsulated in the ConsistentHash impl? ### READ_ONLY mode: I think attempting a non-blocking rehash at this stage is way too complex. We have it with the current scheme and we can see how brittle it is. IMO we should go for a blocking model for now and make sure rehashing is stable and robust, and consider non-blocking later. READ_ONLY mode is achieved by using the TransactionLogger. But we won't actually use this to *log* any transactions for now. Instead we can use it to block new transactions and non-transactional writes since it exists in all the appropriate places. ### Parallel joiners and leavers How will this work with parallel joiners and leavers? {code}	0	0	https://issues.jboss.org/browse/ISPN-1000
8125	ISPN-999	Is this still slated for Infinispan 7? I can see it's been bumped from 5.1 to 6 to 7 so far...	1	0	https://issues.jboss.org/browse/ISPN-999
8126	ISPN-996	I was thinking of a @CacheScoped new scope, so that objects may be injected by retrieving from the cache. The lifetime of an object would depend on the life of it on the cache. I implemented something alike in https://github.com/gastaldi/seam-cache WDYT ?	1	1	https://issues.jboss.org/browse/ISPN-996

#	Requirement	Questions	Answered	Successfully Answered	URL
8127	ISPN-996	Obvious issue here which is why this isn't in phase 1 is that Infinispan is not like JBoss POJO Cache and won't update the object in the cache when changes are made to the reference, the user needs to explicitly push the object back into the cache. So given {code} @CacheScoped class Foo { String name; //getters and setters } class Bar { @Inject void init(Foo foo) {foo.setName("George");} } {code} How does this updated copy of foo get back into the cache?	1	1	https://issues.jboss.org/browse/ISPN-996
8128	ISPN-994	"2nd most relevant digit" ? if you consider decimal representation, means that you won't support more then 10 nodes? You would likely need some VInt encoding to make sure you have as much bits as you need. How would you deal with nodes restarting, and so resetting their local owned counter?	1	1	https://issues.jboss.org/browse/ISPN-994
8129	ISPN-993	@Nicolas - can you wait for ISPN-1132?	1	1	https://issues.jboss.org/browse/ISPN-993
8130	ISPN-984	Galder Zamarreño added a comment on the mailing list: Hmmm, isn't that going opening a can of worms with clients expecting information that can be obtained remotely via JMX?	0	0	https://issues.jboss.org/browse/ISPN-984
8131	ISPN-961	Olaf, is this complete now?	1	1	https://issues.jboss.org/browse/ISPN-961
8132	ISPN-958	So whats the snapshot policy around ISPN? When does this get to a snapshot we could depend on (possibly)?	1	0	https://issues.jboss.org/browse/ISPN-958
8133	ISPN-950	Mircea, this has been mentioned before, see ISPN-509. I'd suggest changing ISPN-509 to focus on enabling configuration of listeners via XML, and indicating how Hot Rod servers would be a use case for it. WDYT?	0	0	https://issues.jboss.org/browse/ISPN-950
8134	ISPN-949	Shall we close this? This was an old idea of mine and I actually think now it's not very useful.	1	0	https://issues.jboss.org/browse/ISPN-949
8135	ISPN-949	Why is this not useful?	1	0	https://issues.jboss.org/browse/ISPN-949
8136	ISPN-949	you're right it might be useful in certain cases. Just not sure about a compelling enough use case vs. more API clustter. Ok let's keep it open, but I take it out 5.2	0	0	https://issues.jboss.org/browse/ISPN-949
8137	ISPN-924	Is there any chance that this will be implemented in near future? It would be a feature which certainly would be used by my company. At the moment, i implement a cluster-wide counter with the help of hard locks, i think your version will surely perform better.	1	1	https://issues.jboss.org/browse/ISPN-924
8138	ISPN-905	Patrick, could you please provide use cases for each of this operations so that we can understand better the meaning/aim of them? For example, why do you need cacheExists()/getCacheIfExists()? I assume that it'd return true only if a cache with that name has been started. If stopped it'd returned false. Whether the cache is defined or not in the config would have no bearing here. Wrt remove(), would not cache.stop() be enough for you? For example, stopping a cache removes all its contents. The only thing that cache.stop() could not do but CacheManager.remove() could, would be to update CacheManager's caches collection. Your comment wrt remove() being transaction safe is also something that should prob affect cache.stop() as well. In fact, I think this should be separated into a diff jira. FAO Manik, do you have any background information for this? For some reason it rings a bell that something related to this was discussed in dev/user forums but cannot find the link right now.	1	1	https://issues.jboss.org/browse/ISPN-905
8139	ISPN-905	I see the point for CacheManager.remove(String). There's two things that need some thought: First, how to make CacheManager.remove() wait for on-going txs to finish, within a time period of course (I think Cache.stop() should do as well. although as you said the target is different - I'll open a diff jira for this). The second is how to deal with concurrent CacheManager.remove() calls for the same cache, particularly coming from diff nodes. I don't understand the need for cacheExists()/getCacheIfExists() yet. What is the use case for this from a client's perspective? In other words, what would you do if a cache does not exist? What would you do different?	1	1	https://issues.jboss.org/browse/ISPN-905
8140	ISPN-905	The problem with listeners is that once you've closed a Cache, what is the other node gonna do? Close itself? You'll start to get some hard to deal reentrant @CacheStopped callbacks. Not nice. We avoid using listeners for internal stuff since they're quite restrictive. They're very useful for user code though. Most likely there will be some kind of RPC call. I've just finished with ISPN-915 which is key to making sure Cache.stop()/CacheManager.remove() are tx friendly. Patrick, I still don't get what cacheExists/getCacheIfExists give you even if you plan to use them as store. You're gonna have to give me a tangible example to convince me to add them. As a side note, I can see the point of getting a cache but not starting it (ISPN-627) since that would allow you to hook listeners to Cache before it's started and so receive callbacks related to rehashing/state transfer. So, to convince me, show me what you'd do with those methods, particularly, what would you do different if cacheExists() return false, or getCacheIfExists() returned null.	1	1	https://issues.jboss.org/browse/ISPN-905
8141	ISPN-899	Pete, do u expect to fix this for 4.2.0.CR2 or 5.0.0.ALPHA3?	1	1	https://issues.jboss.org/browse/ISPN-899
8142	ISPN-899	Galder, removing these methods broke the hotrod server. Can you comment if you need these methods there? (It looks to me naively like you do?).	1	1	https://issues.jboss.org/browse/ISPN-899
8143	ISPN-894	Do we wanna update 4.2.x as well?	1	1	https://issues.jboss.org/browse/ISPN-894
8144	ISPN-891	Mircea, is ClusterCacheLoaderConfig bean only used programmatically? Does it need properties?	1	1	https://issues.jboss.org/browse/ISPN-891
8145	ISPN-891	@Valdimir Not sure I understand. The config is as follows: <loaders preload="false"> <loader class="org.infinispan.loaders.cluster.ClusterCacheLoader"> <properties> <property name="remoteCallTimeout" value="20000"/> </properties> </loader> </loaders> How does this impact the ordering between singletonStoreConfig and asyncStoreConfig elements?	1	1	https://issues.jboss.org/browse/ISPN-891
8146	ISPN-872	I get the feeling that the issue here is that at read time, we don't differentiate between a pure byte[] which we shouldn't serialize as opposed one that we should: obj match { case ba: Array[Byte] => Response.ok.`type`("application/x-java-serialized-object").entity(streamIt(_.write(ba))).build case ser: Serializable => Response.ok.`type`("application/x-java-serialized-object").entity(streamIt(new ObjectOutputStream(_).writeObject(ser))).build If we send the byte[] as is, then this is not a java serialized object but it could be as shown by this example. So, if someone sends a byte[] as is, which does not come from having serialized an object, a different type is needed here, maybe "application/octet-stream" or some other pure binary MIME type? I must say that I thought that your test is a bit odd and I've wondered if it actually makes sense. If you have String, why convert it to byte array via getBytes() and then serialize it? You can just take the String and serialize it directly and the resulting object is a String on the server side. I guess what the getBytes() gives you is the confidence that it is being transformed into a particular encoding of your preference which in this case is plattform independent, i.e. UTF-8. Odd but I think deep down is a valid use case.	0	0	https://issues.jboss.org/browse/ISPN-872

#	Requirement	Questions	Answered	Successfully Answered	URL
8147	ISPN-872	Actually, the test is not correct. If you're already retrieving the byte[] from getBytes(), why pass it through ObjectOutputStream? That makes no sense at all. Even in the case that you pass getBytes() directly (which I'd add to the testsuite) currently you'd pass the byte[] as "application/x-java-serialized-object" which will probably fail cos the server side will attempt to deserialize which should fail cos it's not really a Java serialized object. So, the root cause is still present, a different type is needed for pure byte[] arrays that are not serialized such as getBytes() result.	0	0	https://issues.jboss.org/browse/ISPN-872
8148	ISPN-871	Was this ever done? If so, is it documented how to configure an off-heap Cache in a specific ISPN version? If not, I would recommend the consideration of Peter Lawrey's OpenHFT Chronocle net.openhft.collections.HugeHashMap implementation ... which is based on a off-heap MappedByteBuffer onto any/all of (/dev/shm, tmpfs, ext4) and is exceedingly high performant. https://github.com/OpenHFT/HugeCollections	1	1	https://issues.jboss.org/browse/ISPN-871
8149	ISPN-871	Hi, We want to get started w a POC build of doing this using Peter Lawreys HugeHashMap solution (details of the POC build ambition = http://infinispan-developer-list.980875.n3.nabble.com/infinispan-dev-Infinispan-embedded-off-heap-cache-td4026102.html). Any success (of course) to be immediately contributed back for ISPN's consideration to use. ROAD-BLOCK: Can't build! How do you build ISPN 7 from GIT? Tryng this: Assuming all I need is JDK 1.7 anf Maven 3 1. Fork https://github.com/infinispan/infinispan/ to my GIT repo 2. Clone from my GIT repo's ISPN origin to my desktop workspace 3. cd to the infinispan root pom.xml directory 4. Build from my workspace = `mvn clean compile` #this is the ROADBLOCK point - how do we resolve the below unresolved ' infinispan-extended-statistics'? 8150	ISPN-870	Pete, I've integrated your commit. Do you plan to continue to work under the umbrella of this JIRA, or will you create a separate jira for CR1?	1	1	https://issues.jboss.org/browse/ISPN-870
8151	ISPN-863	Are you suggesting using Runtime.freememory() and Runtime.totalMemory()? This would be dependent on GC cycles though... but yeah, interesting potential. Only, how would you know when to *stop* evicting? Calling freememory() repeatedly in a loop is no help since memory freed by evicting would only be reported after a GC cycle.	1	0	https://issues.jboss.org/browse/ISPN-863
8152	ISPN-863	@Dave - what's the status with this? Are you still working with Vladimir on contributing this patch?	1	0	https://issues.jboss.org/browse/ISPN-863
8153	ISPN-863	I would agree with Robert; I think the best solution is the Instrumentation solution. The Instrumentation solution seems much less expensive than serialization and reflection to me. Although, if you have a write behind cache enabled that is already serializing, I could see then trying to leverage the size assuming the write behind has APIs to do so. Reflection seems way too expensive. It also seems that this wouldn't really need to "kick into gear" unless the JVM heap size is running "low". Maybe consider making the eviction policy something that kicks in when memory begins to consume a configurable portion of the total heap. One idea is to have the cache heap size calculated as a background non-blocking thread, where the heap does not affect "puts" to the cache unless the heap is already running low. If the heap is running low, we switch to "agressive eviction" mode, which blocks writes to the cache until the point that the heap-to-available memory threshold clears. Just thinking out loud. Does anyone know if getObjectSize actually already transverses sub-objects? http://docs.oracle.com/javase/7/docs/api/java/lang/instrument/Instrumentation.html#getObjectSize(java.lang.Object)	1	0	https://issues.jboss.org/browse/ISPN-863
8154	ISPN-863	I am entirely unfamiliar with the implementation details and internal architecture of Infinispan that might make an instrumentation-based eviction approach desirable. That said, if a typical objective is to make it so that caches utilize as much available heap as possible, while never provoking an {{OutOfMemoryError}}, that approach sounds incredibly complicated compared to putting entry values in e.g. {{SoftReference}}s. Is there a reason why such an approach is unworkable in Infinispan, or does it represent an orthogonal potential feature (perhaps because eviction strategies have no control over the object model around cache entries, etc)? Obviously, it doesn't address the notion of providing ways to allocate percentages of the max heap to caches, but I wonder if that's actually desirable given typical use cases and the complexity associated with implementing such controls.	0	0	https://issues.jboss.org/browse/ISPN-863
8155	ISPN-848	Erik, are you aware of http://community.jboss.org/docs/DOC-15604 ?	0	0	https://issues.jboss.org/browse/ISPN-848
8156	ISPN-825	Suggestion from Manik: numInitialRemoteGets (default 1) remoteGetTimeout (default 500ms? What's our average remote GET time anyway?) So with this scheme, we'd: * Randomly select 'numInitialRemoteGets' from dataOwners * Send them the remote get * After remoteGetTimeout, send a remote get to the next data owner, until we run out of data owners * Return the first valid response.	1	1	https://issues.jboss.org/browse/ISPN-825
8157	ISPN-808	Hmm, ConfigurationProperties is not something I want to necessarily expose to user code as API. Could you give me the use cases for something like this?	1	0	https://issues.jboss.org/browse/ISPN-808
8158	ISPN-800	Luca, any news on this? Is this finished already? Or do you need to do more work on it?	1	1	https://issues.jboss.org/browse/ISPN-800
8159	ISPN-800	Luca, I managed to talk to David and he's evaluating the right approach to this problem. Is this the last stumble, or are you waiting on other libraries too?	1	1	https://issues.jboss.org/browse/ISPN-800
8160	ISPN-800	What news are you looking for?	0	0	https://issues.jboss.org/browse/ISPN-800
8161	ISPN-800	Resolution/Fix Version still says resolution is 6.0 which I see is Oct 2013 for this capability. Is this still accurate?	1	1	https://issues.jboss.org/browse/ISPN-800
8162	ISPN-800	Hey [~galder.zamarreno], I'm more than willing to help with some of this. We'd like it for hibernate-infinispan as well (see https://hibernate.atlassian.net/browse/HHH-8214). There were a few ClassLoader issues that came up. What's the status here?	1	1	https://issues.jboss.org/browse/ISPN-800
8163	ISPN-800	[~bibryam], I'm pulling in your changes. Thanks! Here are a couple of questions: 1.) Why was it necessary to make commons a fragment attached to core, rather than ensuring the imports and exports are correct and running commons as a separate bundle? Just curious. 2.) Was allowing BND to automatically define imports causing issues, or do you simply prefer to explicitly list them?	1	1	https://issues.jboss.org/browse/ISPN-800

#	Requirement	Questions	Answered	Successfully Answered	URL
8164	ISPN-800	Would that also mean creating a similar bundle for the hotrod client ?	1	1	https://issues.jboss.org/browse/ISPN-800
8165	ISPN-800	Hey, can you guys take a look at https://github.com/infinispan/infinispan/pull/2457 and the questions within it?	1	1	https://issues.jboss.org/browse/ISPN-800
8166	ISPN-764	Trustin, when you try to upgrade, could you check if ISPN-390 now works?	1	1	https://issues.jboss.org/browse/ISPN-764
8167	ISPN-755	Filip, is the maven plugin finished? Have you tried to generate documentation for Infinispan's scala classes?	1	1	https://issues.jboss.org/browse/ISPN-755
8168	ISPN-721	Once again, similar to comment to what I said on ISPN-717. Why do this? Which 'current implementation' are you talking about? There're a fair few cache store impls out there... :). And again, IIRC, the loading is done by the CacheLoaderInterceptor (CLI) unless I'm mistaken. If a particular CacheStore impl is also loading again, that shouldn't be the case. I agree that it'd be a good optimization to be able to store something and get previous value in just one roundtrip to the cache store, but how many cache stores impls can do that? And how would that work with the current CLI and CSI architecture?	1	0	https://issues.jboss.org/browse/ISPN-721
8169	ISPN-715	thinking about it not sure how that would reduce number of deadlocks? [14:57] mmarkus: or cause deadlocks [14:58] an1310: ? [14:59] an1310: You would only acquire the one lock. If node A and node B both acquired a local lock, but we hashed to node C, wouldn't that be a deadlock? [15:01] mmarkus: so we have tx1 running on A, tx2 running on B and both work on a key that's hashed to C [15:01] mmarkus: is this your scenario? [15:03] an1310: Yes, unless there's some way that I could tell my app to always go to C (since that's where the data lives). [15:04] an1310: I'm colocating all the necessary caches involved in a tx on one data node and using that "eager lock single node" feature. [15:04] an1310: ...data on a cache; typing too fast. [15:04] mmarkus: returning to the example: how does that cause a deadlock? [15:05] mmarkus: i.e. the fact that I also acquire a local lock on A and B for key "k" which is hashed to C [15:06] an1310: I may be wrong about the deadlock part. [15:08] mmarkus: I don't see the benefit of it. Actually I think it would even cause performance faults: if another tx3 runs on A and tries to acquire lock on "k" which is held by tx1 then it would have to go to C and only then to timeout. Right now it would fail fast, without need to go to C	0	0	https://issues.jboss.org/browse/ISPN-715
8170	ISPN-710	FYI - AS6 is now prepped and ready for the upgrade to jgroups 2.11.0. Can we target this upgrade for 4.2.0.CR1?	0	0	https://issues.jboss.org/browse/ISPN-710
8171	ISPN-706	Should this be marked as superseded by ISPN-2281? This issue is still referenced from https://docs.jboss.org/author/display/ISPN/Interacting+With+Hot+Rod+Server+From+Within+Same+JVM	1	0	https://issues.jboss.org/browse/ISPN-706
8172	ISPN-699	I've run the test case attached to https://jira.jboss.org/secure/attachment/12337734/infinispan-hang.tar.gz and after running it a fair few times, I finally was able to reproduce it, i.e.: 2010-10-19 11:58:17,774 ERROR [Scheduled-eviction-thread-0] (FileCacheStore.java:184) - Error while reading from file: /Users/z/Dropbox/JBoss/infinispan/jira/697/infinispan-hang/./store/Users/-202784597 java.lang.NullPointerException at org.infinispan.marshall.jboss.ConstantObjectTable.readObject(ConstantObjectTable.java:253) At this point, I've made a clone of the Users store and tried to read that particular user from another program to verify whether the issue was due to the data that is actually stored being corrupt. The test run fine which indicates that there's no storage corruption. Instead, it seems like there's a race condition at read time that ends up with wrong byte being read. As a FYI, the byte returned should always be 42 which is the id for org.infinispan.loaders.bucket.Bucket. Now, we have to remember that reading/writing to/from a bucket is lock protected, so I can't see right now how this could be the result of concurrent read and write of same bucket. Could it be the result of two concurrent reads maybe? Hmmm, sounds odd. Anyway, I'm gonna add some extra logging and try to replicate the issue again.	1	1	https://issues.jboss.org/browse/ISPN-699
8173	ISPN-699	Hmm, this is puzzling me now. Once I added more information about the exception, I see: org.infinispan.CacheException: Type of data read is unknown. Byte read ('42') is not amongst known reader indexes. at org.infinispan.marshall.jboss.ConstantObjectTable.readObject(ConstantObjectTable.java:259) What the heck? static final byte BUCKET = 42; and @Marshallable(externalizer = Bucket.Externalizer.class, id = Ids.BUCKET) public final class Bucket So, either: - The HashMap contains a null for 42 index - Or the HashMap does not contain the 42 index at all - Or the ConstantObjectTable in use is not the one initially set up This is stored in a simple HashMap, nothing fancy. Adding more logging to this.	1	1	https://issues.jboss.org/browse/ISPN-699
8174	ISPN-694	The patch doesn't seem to notify the entries purged by CacheStore.purgeExpired(). Is it intended or just missed out? If the entries purged by CacheStore.purgeExpired() should also be notified, it will also require a change in CacheStore API, which means this issue needs to be resolved in 5.0. By the way, Instead of adding CacheNotifier parameter to purgeExpired(), I'd modify it to return the set of purged entries (i.e. Set<InternalCacheEntry>).	1	1	https://issues.jboss.org/browse/ISPN-694
8175	ISPN-694	From IRC: {code} Apr 29 14:47:51 <pferraro> mmarkus: whoops - I meant, also ISPN-694 Apr 29 14:47:52 <jbossbot> jira [ISPN-694] Create Expiration Notification [Reopened (Unresolved) Feature Request, Major, Unassigned] https://issues.jboss.org/browse/ISPN-694 Apr 29 14:49:04 <pferraro> mmarkus: I'm in the process of redesigning web session clustering for wildfly, and these 2 jiras stand in the way of leveraging infinispan's native expiration and eviction support. ... Apr 29 18:12:41 <mmarkus1> pferraro: in the scope of ISPN-694, we'd need to make the CacheStore trigger expiration notifications Apr 29 18:12:42 <jbossbot> jira [ISPN-694] Create Expiration Notification [Reopened (Unresolved) Feature Request, Major, Galder Zamarreño] https://issues.jboss.org/browse/ISPN-694 Apr 29 18:13:25 * manik has quit (Quit: Leaving.) Apr 29 18:13:39 <mmarkus1> pferraro: are you using a CustomCache store or one that exists in Infinispan? ... Apr 29 18:27:34 <pferraro> mmarkus1: For my case, if the cache entry was already passivated to a cache store, I only need the expiration notification if a subsequent cache get attempts to load it, but it should have expired. ... Apr 29 18:28:21 <pferraro> mmarkus1: so - for my case, it is enough that the in-memory entries are promptly expired - stuff in the cache store can receive expiration notifications as they are discovered Apr 29 18:28:38 <pferraro> mmarkus1: does that make sense? Apr 29 18:29:55 <pferraro> mmarkus1: So, currently, I'm not using a custom cache store, but rather an existing cache store that emits an expiration notification if it is ever fetched from the store Apr 29 18:34:28 <mmarkus1> pferraro_afk: yes, thanks! {code} So, for Paul's use case, expiration notifications for entries in memory is really what's needed. Give that as discussed in this JIRA, expiration of entries in cache store would require some careful thought, this part will be deferred until the CacheStore interfaces are redesigned in the next big major API review.	1	1	https://issues.jboss.org/browse/ISPN-694

#	Requirement	Questions	Answered	Successfully Answered	URL
8176	ISPN-675	There's a problem with this. Our rhq-plugin.xml is automatically generated as per http://anonsvn.jboss.org/repos/infinispan/trunk/tools/src/main/java/org/infinispan/tools/jopr/RhqPluginXmlGenerator.java The problem is to do with org.rhq.helpers.pluginGen component used to generate the XML file. It does not support generating XML like this: <runs-inside> <parent-resource-type name="JMX Server" plugin="JMX"/> <parent-resource-type name="JBossAS Server" plugin="JBossAS"/> <parent-resource-type name="JBossAS Server" plugin="JBossAS5"/> </runs-inside> Ian, could you guys improve the XML plugin generator so that it can generate these tags? We currently use: <version.rhq.plugingen>1.4.0.B01</version.rhq.plugingen> Finally, note that the RHQ version currently used by the JOPR plugin is: <version.rhq>1.2.0.GA</version.rhq> Ian, would working against this version cause any problems?	1	1	https://issues.jboss.org/browse/ISPN-675
8177	ISPN-675	Galder, Once you release v4.2.0.Final of the plugin, would you make sure to publish it to the JBoss Maven repo? That will allow me to update the EmbJopr trunk build to include the plugin.	1	1	https://issues.jboss.org/browse/ISPN-675
8178	ISPN-658	re: problem 1 Stop C1 on N1. Guess we would also need a new notification event, something like TopologyChanged perhaps? Currently we have ViewChanged and MergeView which extends ViewChanged. Perhaps ViewChanged should extends TopologyChange?	1	1	https://issues.jboss.org/browse/ISPN-658
8179	ISPN-658	currently support asymmetric clusters, such as: NodeA [c1, c2] NodeB [c1, c2, c3] NodeC [c2, c3] where each cache (cX) is created on a single CacheManager - which in turn starts a single JGroups channel and is represented in JGroups as a single member. Note that this only pertains to cache modes DIST and REPL. Other cache modes such as LOCAL and INVALIDATION are unaffected, the former for obvious reasons and the latter since invalidation doesn't perform any logic at startup. Invalidation messages are simply discarded by the receiving transport if the cache in question does not exist on the receiving node. So the issue really only has to do with joining and leaving. Normal runtime operation for both REPL and DIST will work fine (simply discard RPCs targeted to caches that don't exist). There are 3 specific areas which are challenging: 1) REPL uses a coordinator to determine where to pull state from. 2) DIST relies on a coordinator to coordinate a JOIN process, since JOINs are serialised (concurrent JOINs not currently supported) 3) DIST relies on view changes to determine whether nodes have joined or left To get around these, and to have minimal impact on the existing codebase, here is what I think we can do (very early designs, so may well be invalid!) * Create a new event: VirtualViewChange. A VVC is specific to a named cache. * It may be delivered by the CacheManager, which upon receiving a real ViewChange, would deliver a VVC to named caches to whom this may be relevant. * Note that this is only useful for leaves. Joins handled separately. * Cache.start() and Cache.stop() should emit a broadcast RPC to the cluster informing the cluster that it has started, including the cache name. * CacheManagers, on seeing remote caches start, may deliver VVCs to matching named caches. * RpcManager.getMembers() should be specific to the named cache. Transport.getMembers() returns the entire view, as per the JGroups channel, however RpcManager.getMembers() - which is named-cache specific - should prune the list from the transport to remove members that aren't relevant to the named cache. * Based on a cache-specific member list, we'd have a cache-specific coordinator as well. {quote} and {quote} In general, I think virtual views should work. However, here are some special cases we need to handle, too: #1 Views and virtual views - There needs to be a map of associations between views and virtual views, not sure what the keys will be. Maybe a BiMap... Yes. The correlation could also me maintained on ViewID (and possibly a corresponding VVID) #2 Broadcasts of CACHE_STARTED / CACHE_STOPPED - These (*instead* of view changes) are the notifications which trigger rebalancing - Essentially what Manik discussed below Yes, but these could be triggered by REAL ViewChanges. E.g., nodes crash, and existing nodes get a ViewChange. The CacheManager should then dispatch a VirtualViewChange to all relevant caches (which are affected by this ViewChange; not others) #3 Where are the consisten hash functions located ? - We probably cannot have CHs per DistributionManager anymore, but per cache (?) The CHs are not based on views, but on virtual views DistributionManager is per-cache anyway so the ConsistentHash can still be owned by the DistributionManager. #4 Handling of left members - When we get a view change excluding node P, everybody emits *local* notifications CACHE_STOPPED for all caches associated with P. This is where we need the hashmap of #1 Yes. See my comment on #2 above. #4.1 - As an alternative to #4, we could have only the *coordinator* broadcast CACHE_STOPPED events for P. This might eliminate the need for #5... Not really, since the coordinator may not know of certain cache instances. I think the CACHE_STOPPED notification should be delivered locally, once the CacheManager detects a ViewChange. #5 Handling of new members - When a new member starts, will it need the state (of #1) copied to it ? If we do #4, then probably yes. Not nice though... This becomes tricky. We have a few options (none of which are particularly palatable ...) A. On Cache.start(), a cache broadcasts CACHE_START and in *response*, gets the Addresses of nodes which have the same named cache running (or null if not). And use this + a real View to build a VirtualView. B. On Cache.start(), broadcast CACHE_START and	1	1	https://issues.jboss.org/browse/ISPN-658
8180	ISPN-658	Does this mean that programmatically creation of cache won't work, because the new cache can be created from any node? If this is true, I guess this is a show stopper for us, as we rely on dynamically creating many distributed caches at runtime. Predefined named cache has little value for us. Is there any work around for programmatically creation of caches (in jboss AS 6)?	1	1	https://issues.jboss.org/browse/ISPN-658
8181	ISPN-658	Agree with yangju as we are very much keen on programmatically creating the cache definitions. Infact, we dont keep anything on the Infinispan configuration files and all the named caches would be created during the startup of the cache also at the same on on all the nodes N1, N2 and N3. I guess the startup is working for us. Now coming to the runtime changes to the configurations on the different nodes, we are planning to do the same programmatic config changes simulataneously on all the nodes to avoid any assymmetry. For e.g., assume N1, N2, N3 initially had C1, C2 and during runtime C3 is added simulataneouly (almost) on all the nodes. Whats you opinion on this approach. But there can be some small differnce in the timing of this parallel config change. Does this cause any impact and resulting in the same issues as mentioned above in the thread ?	0	0	https://issues.jboss.org/browse/ISPN-658
8182	ISPN-639	I tested with Infinispan 4.2.0.ALPHA2 and am getting: 2010-09-24 09:16:58,563 ERROR [org.infinispan.remoting.rpc.RpcManagerImpl] (RMI TCP Connection(4)-127.0.0.2) unexpected error while replicating: java.lang.NullPointerException at org.infinispan.atomic.AtomicHashMapDelta.merge(AtomicHashMapDelta.java:58) [:4.2.0-SNAPSHOT] at org.infinispan.commands.write.PutKeyValueCommand.perform(PutKeyValueCommand.java:94) [:4.2.0-SNAPSHOT] at org.infinispan.interceptors.CallInterceptor.handleDefault(CallInterceptor.java:71) [:4.2.0-SNAPSHOT] . . . exception call stack is at http://pastebin.com/ftfm99vW Should this be a new jira?	0	0	https://issues.jboss.org/browse/ISPN-639
8183	ISPN-636	Hmmmm, how different would that be having a separate je.properties file? In both cases you'd need an external file. I think, and I might be mistaken here, that what Supin was looking for was to be able to define all je properties via infinispan.xml file cos having a separate file was impractical, i.e. <loader class="org.infinispan.loaders.bdbje.BdbjeCacheStore" fetchPersistentState="true" ignoreModifications="true" purgeOnStartup="true"> <properties> <property name="je.log.useODSYN" value="true"/> </properties> </loader>	1	0	https://issues.jboss.org/browse/ISPN-636
8184	ISPN-627	This issue has been migrating from 4.0.0 Final till 5.1.0 Final. (Carried over many final releases - 4.0.0, 4.1.0, 4.2.0, 4.2.1, 4.2.2, 5.0.0, 5.0.1, 5.0.2 and now 5.1.0) Is the impact too huge? Its going to be a very useful enhancement for Infinispan.	0	0	https://issues.jboss.org/browse/ISPN-627
8185	ISPN-626	Perhaps start a discussion on the dev mail list?	1	1	https://issues.jboss.org/browse/ISPN-626

#	Requirement	Questions	Answered	Successfully Answered	URL
8186	ISPN-608	Manik, What is the status of this one? Just wondering since I did not see the 07/Sep/10 comment and thought I'd get the changes I submitted in the 4.2.0.ALPHA1 release. Since I did not see those changes there, I came to this JIRA and saw your comment. Are changes planned for a future release number now?	1	1	https://issues.jboss.org/browse/ISPN-608
8187	ISPN-608	Or, flush() could return an int, being the number of entries flushed? Re: the out-of-order, could you pls create a separate JIRA and detail the issue there?	1	1	https://issues.jboss.org/browse/ISPN-608
8188	ISPN-573	I'm a bit puzzled about this. I always thought that async is great but only usable in some situations, depending on what the application is doing and what kind of consistency is required. So if async is an option, you should use it for both local and wan replication, but if it's not an option, how could this be used in wan only? Could anybody explain a use case in which this might make sense? One case occurs to me, which is having a local cluster on which changes are performed, and a remote cluster which is just a readonly view to the same data - but I assume this use case could be solved by setting up an async store and storing on the remote cluster?	0	0	https://issues.jboss.org/browse/ISPN-573
8189	ISPN-556	Is this for the batching use case?	1	1	https://issues.jboss.org/browse/ISPN-556
8190	ISPN-509	Re: first option "Enable listeners to be set via configuration XML." - can't we add this to the general cache configuration? I.e. not related to hotrod.	1	0	https://issues.jboss.org/browse/ISPN-509
8191	ISPN-509	Hmmmm, is this really needed for 5.1? There is a valid workaround available and if anything, I'd tackle it once Pete has changed the XML stuff (ISPN-1065), otherwise it'd be pointless.	1	1	https://issues.jboss.org/browse/ISPN-509
8192	ISPN-509	Yes this would need to happen after ISPN-1065. Isn't the workaround a bit involved? For folks using EDG, asking them to write their own startup code within JBoss AS 7 internals is non-trivial.	1	0	https://issues.jboss.org/browse/ISPN-509
8193	ISPN-508	Some notes: Protobuf requires a model to be defined in advance and classes to be generated, so this means that from a user perspective, whatever key/value that is passed to the Hot Rod client, it'd need to be casted to MessageLite to be able to call toByteArray method (http://code.google.com/apis/protocolbuffers/docs/reference/java/com/google/protobuf/MessageLite.html#toByteArray()). In a way this reminds me a bit of what users had to with their user classes to put them into PojoCache where they had to pre-compile and aspectize their classes so that they could be woven. This could potentially generate a lot of questions in forums based on my experience of users having to do these type of things themselves. Another thing that worries me about Protobufs would be how to do the reading part. According to http://code.google.com/apis/protocolbuffers/docs/javatutorial.html, the reading requires calling parseFrom(byte[]) static method on the object class. However, this parseFrom does not appear to belong to any class. The only thing I've found is http://code.google.com/apis/protocolbuffers/docs/reference/java/com/google/protobuf/DynamicMessage.html which can parseFrom a arbitrary type given the descriptor. How would the unmarshaller know either the descriptor or class to use to return? I'll look at Avro next...	0	0	https://issues.jboss.org/browse/ISPN-508
8194	ISPN-508	I've been playing around with Avro. Reflection based marshalling, which is the one that avoids clients having to precompile their classes, still requires some kind of sending around of the class name/type before hand in order to deserialize read data which would not be portable. Specific marshalling is the same that Protobuf and Thrift do. However, it seems to rely on a static singleton class that maintains a class cache in a CHM which would cause leaks on app server environments. Although the most interesting thing with Avro would be to allow clients to parse their own byte[] using reflection based marshalling, I seriously doubt this is portable in any way. IOW, how is a python client gonna know how to read a Java object that has been marshalled based on reflection where there's no schema? I'm attaching a sample project that uses reflection based marshalling but it's use is limited.	0	0	https://issues.jboss.org/browse/ISPN-508
8195	ISPN-506	Will we ever get this ? :)	1	0	https://issues.jboss.org/browse/ISPN-506
8196	ISPN-493	Is this expected to be fixed for 4.2.x?	0	0	https://issues.jboss.org/browse/ISPN-493

8198	ISPN-465	I have published first version of prototype of Tomcat Session Manager using infinispan to distribute session state across multiple nodes. See https://github.com/zvrablik/tomcatInfinispanSessionManager Would anybody have time to discuss further work of that prototype? I am going to contact Tomcat developers too. Regards, Zdenek	1	1	https://issues.jboss.org/browse/ISPN-465
8199	ISPN-456	Which specific dependencies are you referring to? The Lucene modules seem pretty dependency-free... ?	0	0	https://issues.jboss.org/browse/ISPN-456
8200	ISPN-449	[~galderz] the title of this is a bit confusing. Is this intended as an extension of ISPN-78 over hotrod? If so mind updating the title?	1	1	https://issues.jboss.org/browse/ISPN-449
8201	ISPN-405	Just committed the first spike of this. Can I close this general issue now?	0	0	https://issues.jboss.org/browse/ISPN-405
8202	ISPN-390	Does it? Awesome!! I'll get going with this asap.	1	1	https://issues.jboss.org/browse/ISPN-390
8203	ISPN-390	Manik, how did you verify that the issue was fixed? I've tried: @Marshallable(externalizer = classOf[CacheValue.Externalizer], id = Ids.SERVER_CACHE_VALUE) class CacheValue(val data: Array[Byte], val version: Long) { And IntelliJ complains with: error: annotation argument needs to be a constant; found: Ids.SERVER_CACHE_VALUE @Marshallable(externalizer = classOf[CacheValue.Externalizer], id = Ids.SERVER_CACHE_VALUE) I've then run maven and it compiles fine. I've checked IntelliJ and is indeed compiling with Scala 2.8.1...	1	1	https://issues.jboss.org/browse/ISPN-390
8204	ISPN-375	When this will be released?	0	0	https://issues.jboss.org/browse/ISPN-375
8205	ISPN-360	hi mmarkus_ <galderz> wanted to clarify couple of things in http://community.jboss.org/message/528762 <mmarkus_> hi galderz <mmarkus_> sure <galderz> preloading is part of the startup of the cache loader, so when cache is started, the preloaded has finished, correct? <mmarkus_> yes <galderz> indeed: @Start(priority = 56) <galderz> but the state transfer is a diff thing <galderz> the cache is started already and it's having state applied to it? <mmarkus_> hmm, not sure which one comes first, i.e. state transfer or preload <galderz> http://community.jboss.org/wiki/JBossCacheNon-BlockingStateTransfer <galderz> assuming a node joining D, it's only marked as started when the state transfer has completed <galderz> not sure either about the order <mmarkus_> yes, a node is not started until state transfer is finished <galderz> @Start(priority = 55) -> @Start(priority = 56) <galderz> state trasnfer is first, the preload <galderz> then preload <mmarkus_> right, makes sense <galderz> now, what's the point of https://jira.jboss.org/jira/browse/ISPN-360 ? <mmarkus_> because you update the store and then, if you want, load it into memory <galderz> i can see maybe the use of a rehash started/completed notifications in running nodes affected by the start of a new node <mmarkus_> and that brings another thing to the forum post <galderz> and I think my last comment is what you're aiming at in 360? <galderz> the capability of other nodes to find out when a new node has joined, which would mean that any rehashing that might have happened in the running node is completed? <mmarkus_> I would like to be notified AFTER a node is started <mmarkus_> even when a remote node joined the cluster <galderz> i see ur point <mmarkus_> yes, exactly <galderz> but just bear in mind, in nodes that are affected by rehashing caused by the start of this node, that notification needs to happen after rehashing has finished, correct? <mmarkus_> this guy wants to start N nodes, and then tell the application that the cluster is started <galderz> assuming the app is running in each of these N nodes? <mmarkus_> yes. Basically the node that receives state will know that it finished receiving state, and should notify all other nodes that NodeJoined <mmarkus_> yes <mmarkus_> you've just raised another problem I wasn't aware of <mmarkus_> so if we have both preload and fetchInMemory state, then local cache store state before starting will be erased <galderz> yeah, i guess that assuming one of those nodes X, it should receive N-1 NodeJoined, but a NodeJoined from X-1, meaning that X-1 is next to X in the hash loop, X would receive NodeJoined when X-1 has started and X has done any reshahing <galderz> mmarkus_, not sure if it will erase it <galderz> it will override it <galderz> i'd assume that if you receive k=akey,v=1 via in memory and u had preloaded k=akey,v=2, v=1 would prevail <mmarkus_> yes, at the time X receives NodeJoioned from X-1, X(and all other nodes) finished rehashing	1	1	https://issues.jboss.org/browse/ISPN-360

#	Requirement	Questions	Answered	Successfully Answered	URL
8206	ISPN-359	Would it be possible to make this feature work with buddy replication in cooperation with mod_cluster? For example you have node1,node2,node3,node4. Session A is on node1 and node2. When node1 fails it would be best mod_cluster to hit deterministically node2 instead of the other nodes. I remember I have seen hints that Infinispan is looking into rehashing or rebalancing, but I am not sure how smart is the algorithm and is it working cooperatively with mod_cluster?	1	1	https://issues.jboss.org/browse/ISPN-359
8207	ISPN-359	By Buddy Replication I meant the DIST mode. I thought it is still called that way. Anyway, I will see what Brian says about mod_cluster. Other similar products use configurable affinity key independently in the cache and in the load balancers. In Mobicents we use pluggable algorithms for example and we will probably try to teach it to cooperate with this feature deterministically to cover some telco cases (some telco protocols dont have cookies or redirects to hunt down the right node). But what is still unclear on this topic is the rehashing/rebalancing. If a node fails is everything completely re-hashed to a new location (along with the huge network overhead of moving the chunks around over the network) or is there some effort to minimize the state transfer?	0	0	https://issues.jboss.org/browse/ISPN-359
8208	ISPN-328	Can we control that writes to DB is done only through one of instances and that instance might be chosen by cluster elements.	0	0	https://issues.jboss.org/browse/ISPN-328
8209	ISPN-318	Is this really necessary?	0	0	https://issues.jboss.org/browse/ISPN-318
8210	ISPN-317	Is ISPN-1539 a duplicate of this issue?	1	1	https://issues.jboss.org/browse/ISPN-317
8211	ISPN-313	[~belaban] would the new jgroups protocol configuration extension (graphic?) cover this as well?	1	0	https://issues.jboss.org/browse/ISPN-313
8212	ISPN-312	How would you handle the following case? Cache A uses a custom key class where the group is dynamically generated. Cache B's key is an unmodifiable String that needs to be grouped with the dynamic value of a key from Cache A. (Cache B's key can't be encapsulated in a custom key class since it needs to be queried from external entities that will not know the group context). The only way I can see doing this is to add a group parameter to a put() or replace() method.	1	1	https://issues.jboss.org/browse/ISPN-312
8213	ISPN-312	Erik, can you show me what you mean using a pseudo-API that you propose?	1	1	https://issues.jboss.org/browse/ISPN-312
8214	ISPN-312	I'm resolving this for 5.0 for tracking purposes. Erik can you please open a new issue for your feature request?	0	0	https://issues.jboss.org/browse/ISPN-312
8215	ISPN-303	Mazz: "Have you tried to create a "compatible group" containing your different infinspan servers? You could get some interesting aggregated metrics if you create a group containing all your servers and look at the group metrics."	0	0	https://issues.jboss.org/browse/ISPN-303
8216	ISPN-293	If I could get multiple values at once, that would be good enough for the use cases I met so far and AFAIR what Emmanuel described for OGM. Map<K,V> getAll(Key... keys) ? (assuming this simplifies the implementation)	0	0	https://issues.jboss.org/browse/ISPN-293
8217	ISPN-272	What happens right now in such a scenario? Are locks cleared? Or do we have stale locks?	1	1	https://issues.jboss.org/browse/ISPN-272
8218	ISPN-272	whilst at this also fix this todo - // TODO Couldn't affected keys be derived from modifications?	0	0	https://issues.jboss.org/browse/ISPN-272
8219	ISPN-256	Hmm; the problem with this is that it then makes infinispan a message bus. Completely not what it is designed to do, but I can see how it could aid other use cases. Anyway, what you would need is like you said an ExtensionCommand, which could contain an arbitrary payload of Serializable[], a target cache, and a mechanism to register a listener for such ExtensionCommands. And also a mechanism of dispatching such commands: dispatchExtensionCommand(ExtensionCommand ec, List<Address> recipients, boolean sync) ?	1	1	https://issues.jboss.org/browse/ISPN-256
8220	ISPN-256	I suppose this might be released before Final for community testing? If so, will it be included in Beta1?	1	1	https://issues.jboss.org/browse/ISPN-256
8221	ISPN-233	Galder: can this be closed?	1	0	https://issues.jboss.org/browse/ISPN-233
8222	ISPN-232	seems definitely useful, but if I have a traditional key, how will I be able to get() the value? should I keep my own map of originalKey->currentInfinispanKey or will the service be able to care for this? I'd like to be able to get() as usually and make use of this feature transparently. FYI this can potentially give an interesting performance boost in the way we manage the Lucene indexes.	0	0	https://issues.jboss.org/browse/ISPN-232
8223	ISPN-221	hello all, I'm going to need some more information, I have no context nor I know what the goal/purpose is. what is the meaning of "natural language" in this context? what is the object to be searched for? I don't consider JPA-QL to be natural language. Which module is this affecting? infinispan-query? why not Hibernate Search?	0	0	https://issues.jboss.org/browse/ISPN-221
8224	ISPN-193	Any suggestions for the names of the new XML elements? Where do we want to put them in schema? As a child of default configuration or any namedCache?	1	1	https://issues.jboss.org/browse/ISPN-193
8225	ISPN-162	Exclusion added, the following still needs doing: >> +1 to ensuring it does not get packaged with the test jar, but it should >> still be included in the distro (in the conf directory) as an example of >> how folks can enable logging. > > If we want to include it in the distro, it definitely must have a diff name to log4j.xml, otherwise it'll get picked up and users won't be able to get override it in any way. > > Currently we're not including a log4j.xml in the main distro at all. Hmm. Ok, then when it is copied to the conf directory of the distro it should be renamed to log4j-sample.xml, and there should be a README-logging.txt to explain how to enable this file, either by renaming it to log4j.xml or by using -Dlog4j.configuration. WDYT?	0	0	https://issues.jboss.org/browse/ISPN-162
8226	ISPN-143	Hi Manik - do we have any updates on this? Have any proposals been made regarding an infinispan security model. Like Aleksander, I work for an organisation where sensitive data will be held in the cache and securing access to it is a requirement. I'm not only talking about encrypted communication but perhaps more importantly role based api access control.	1	0	https://issues.jboss.org/browse/ISPN-143
8227	ISPN-139	I'm eager for news about this, did you publish some numbers or any thoughts to share?	1	0	https://issues.jboss.org/browse/ISPN-139

8228	ISPN-134	manik: This thread http://lists.jboss.org/pipermail/infinispan-dev/2009-July/000883.html also has info [1:36pm] manik: but basically [1:36pm] mmarkus_: also re:coherence migration, I think that will take about 3 days by itself, as I really have to understand coherence first [1:36pm] manik: Ah ok [1:36pm] manik: (the jopr stuff should take a few hrs IMO) [1:36pm] mmarkus_: I would do that together with a feature comparison with coherence (ISPN-46) [1:37pm] mmarkus_: kewl, I take your word for that [1:37pm] manik: well basically [1:37pm] manik: Heiko has already written the jopr plugin [1:37pm] manik: the only problem is that all of the JMX names and types are hard-coded in XML [1:37pm] manik: E.g., the jopr plugin refers to an XML file [1:37pm] manik: which tells it where all of the JMX attribs are [1:37pm] manik: now this sucks [1:37pm] mmarkus_: i c [1:37pm] manik: sunce every time we need to add a jmx attrib [1:38pm] manik: we need to update this XML as well [1:38pm] mmarkus_: where is the hand written xml now? [1:38pm] manik: so I think we can generate this XML [1:38pm] manik: http://fisheye.jboss.org/browse/Infinispan/trunk/jopr-plugin/src/main/resources/META-INF [1:38pm] manik: in trunk, under the jopr-plugin module [1:39pm] mmarkus_: i c [1:39pm] manik: basically most of this info is already available in our @MBean annotations [1:39pm] mmarkus_: and the code that generates it should be in jopr-plugin module as well, i think? [1:39pm] manik: well, the way I see it [1:40pm] manik: this should be generated an build-time [1:40pm] manik: and not at runtime [1:40pm] manik: I.e., when we build a release, the build process generates this XML and packages it with the jopr-plugin jar [1:40pm] manik: so we already have 3 psot-comple processes running in the 'tools' module [1:41pm] manik: 1) generate the config docs - http://infinispan.sourceforge.net/4.0/apidocs/config.html [1:41pm] manik: 2) generate the jmx docs - http://infinispan.sourceforge.net/4.0/apidocs/jmxComponents.html [1:41pm] manik: and 3) generate the XSD schema from the annotations on Configuration [1:41pm] mmarkus_: ah i c [1:41pm] manik: so I think a 4th step can be added here, to generate the jopr XML [1:42pm] mmarkus_: and how do these post-compile tools get called? [1:42pm] manik: maven has hooks for this [1:43pm] manik: e.g. [1:43pm] mmarkus_: I'm looking at pom.xml for tools [1:43pm] manik: http://fisheye.jboss.org/browse/Infinispan/trunk/core/pom.xml?r=728 [1:43pm] manik: line 88 [1:43pm] manik: Tools only builds the code that will do the generation [1:43pm] manik: tools doesnt have the build hooks [1:43pm] manik: the build hooks will be in whichever module that needs it [1:43pm] manik: e.g., core needs the XSD to be generated [1:44pm] manik: so it calls the XSD generator in core/pom.xml : 88 [1:44pm] manik: The Maven <process-classes> phase happens after <compile> [1:45pm] manik: So you could easily write something similar to generate the JOPR XML [1:45pm] manik: now here is one thing: [1:45pm] manik: the JOPR XML needs more info than we have in the @MBean annotations [1:45pm] mmarkus_: i c [1:45pm] manik: and hence my discussion in the email thread above [1:45pm] manik: do we enhance the annotations to include this extra info? Or (for now) can we just make assumptions? [1:46pm] manik: Ideally I would like to add the extra info in the annotations [1:46pm] mmarkus_: i'll have to add something similar to the pom.xml in jopr-module [1:46pm] manik: Yup [1:46pm] mmarkus_: I c [1:47pm] manik: well, have a look and a think and see what you feel - I think it should be pretty straightforward stuff. It is just reformatting metadata after all... [1:47pm] manik: metadata inannotation -> metadata in XML [1:47pm] mmarkus_: yep, much clearer to me now [1:47pm] mmarkus_: I'll update the jira with the conversation [1:47pm] manik: ok great [1:48pm] manik: also update with the link to the discssion thread on infinispan-dev [1:48pm] manik: since that has a lot of info as well [1:48pm] manik: To test the jopr plugin, you can follow these steps [1:48pm] manik: http://www.jboss.org/community/wiki/MonitoringInfinispanwithJopr [1:48pm] mmarkus_: mailing list, you mean? [1:48pm] manik: yes [1:49pm] mmarkus_: I'll paste the conversation, that includes the link [1:50pm] manik: ok	1	1	https://issues.jboss.org/browse/ISPN-134
8229	ISPN-134	<galderz> i do need a release that contains the updates to the plugin generator Oct 01 15:05:27 <galderz> so pilhuhn, we're discussing whether to add these annotations to ispn, or we should just work on the helper module on rhq? Oct 01 15:05:47 <galderz> i already need a release of plugin generator with the changes i'm implementing Oct 01 15:06:09 <galderz> so, how doable is to get a release of the annotation module at the same time? Oct 01 15:06:33 <galderz> if u could set up the module, i could start working on the annotations as I need them on ispn Oct 01 15:07:03 <galderz> if not doable, we'd have to add the annotations to ispn, but if we can start on the rhq module already, it'd be better Oct 01 15:07:59 <galderz> thoughts pilhuhn ? Oct 01 15:09:08 <pilhuhn> Howdy Oct 01 15:09:09 <pilhuhn> I think I have some uncommited code in it - but it is not in any official release anyway Oct 01 15:09:43 <galderz> what uncommited code? Oct 01 15:09:49 <galderz> annotations? Oct 01 15:10:04 <pilhuhn> I'd love to do it in RHQ, so that it gets re-usable Oct 01 15:10:15 <galderz> indeed Oct 01 15:10:17 <galderz> so? Oct 01 15:10:40 <pilhuhn> And yes, it makes sense to put them in a module within helpers, but outside the plugin generator, so that the jar file will stay small Oct 01 15:10:54 <pilhuhn> no, to discovery.ftl Oct 01 15:10:54 <galderz> +1 Oct 01 15:11:08 <galderz> the plugin generator is needed at build time by the jopr plugin Oct 01 15:11:18 <galderz> the annotations are needed by core and potentially other modules Oct 01 15:12:44 * joseph42 (n=joseph42@redhat/jboss/joseph42) has joined #infinispan Oct 01 15:12:49 <pilhuhn> yes Oct 01 15:13:04 <galderz> joseph42, summary: Oct 01 15:13:19 <galderz> i'd like to have a rhq/jopr release at some point that includes Oct 01 15:13:36 <galderz> a tiny module with jopr annotations Oct 01 15:13:46 <galderz> and an update to rhq plugin generator Oct 01 15:14:08 <galderz> these jopr annotations annotate metrics...etc in the infinispan project Oct 01 15:15:04 <pilhuhn> joseph42: Infinispan exports a lot of stuff via jmx - they use annotations, but that data is not enough to build the plugin descriptor from it. So the idea is to have a RHQ module with annotations, that projects can use - with some helper class to parse etc - to build fragments of the deployment descriptor and probably also of the component class facets Oct 01 15:16:24 <pilhuhn> So the idea is to have the annotations @RhqMetric, @RhqOperation in modules7helpers/annotations to build a very small jar and then have e.g. the plugin generator parse the classes and use the information contained Oct 01 15:16:53 <joseph42> so...that'll attempt to automate the process of building a plugin? Oct 01 15:17:19 <pilhuhn> help to automate Oct 01 15:17:26 <galderz> it will automatte the descriptor generation Oct 01 15:17:39 <pilhuhn> joseph42: e.g. in Infinispan a RHQ-resource is done via a bunch of Mbeans Oct 01 15:17:55 <pilhuhn> so the generic jmx-plugin does not apply Oct 01 15:17:57 <joseph42> but instead of a one-off solution, you want something formal that comes out of rhq/jopr Oct 01 15:18:06 <joseph42> as well as a generator youcan run over your codeto gen the plugin.xml Oct 01 15:18:27 <joseph42> did i capture that correctly? Oct 01 15:18:29 <pilhuhn> joseph42: They would do it in ispn, but I talked them into having that in RHQ, as others may want that stuff too Oct 01 15:18:37 <galderz> it's the plugin.xml that we're mostly interested in Oct 01 15:19:02 <joseph42> right, understood Oct 01 15:19:23 <joseph42> so if that module resides in ispn, you shouldn't have any deps on rhq/jopr,right? Oct 01 15:19:37 <joseph42> (assuming the xsd for plugin.xml is relatively static) Oct 01 15:19:42 <galderz> i do have a dep Oct 01 15:19:47 <galderz> the plugin generator module Oct 01 15:20:12 <galderz> i'm improving it to be able to pass in X number of metrics/ops Oct 01 15:20:24 <pilhuhn> joseph42: in an "ideal world" that module would live in RHQ for other projects to just use it Oct 01 15:20:36 <joseph42> hmm...so you want extenions to heiko's plugin generator to understand annotation-based enhancements in the ispn? Oct 01 15:21:12 <galderz> i need modifying the plugin generator to generate metric/ops dynamically Oct 01 15:21:35 <joseph42> galderz: completely understood Oct 01 15:21:46 <galderz> then, our own jopr plugin calls this, having checked the annotations, to generate the xml Oct 01 15:22:07 <galderz>	1	1	https://issues.jboss.org/browse/ISPN-134
8230	ISPN-133	----- "Philippe Van Dyck" <pvdyck at gmail dot com> wrote: > On Mon, Apr 19, 2010 at 12:36 PM, <galder at jboss dot org> wrote: > > > > Hi Philippe, > > > > So, to sum up, trying to fix > ISPN-133 won't solve your problem, > correct? Interesting. It seems like it's not only Apache's HTTP client library that did not care much about available() implementations, but also JDK classes as well. I'd rather read on 1k batches than 1 byte batches. See things like this, I'm even less inclined to urgently look into ISPN-133.	1	1	https://issues.jboss.org/browse/ISPN-133

8231	ISPN-105	Mircea - isn't this possible right now? If so, could you write a short wiki page on using/configuring the Jdbc Cache Store?	1	1	https://issues.jboss.org/browse/ISPN-105
8232	ISPN-98	So, we know that hudson show failures when using MPING but having run the testsuite in cluster10 (the slave used by Hudson) several times, the failures do not always happen. When they happen, you see stuff like this in the logs in spite of java.net.preferIpv4Stack = true: 2009-07-16 03:55:28,030 WARN [org.jgroups.protocols.MPING] (pool-1-thread-5) could not bind to /228.10.10.16 (IPv4 address); make sure your mcast_addr is of the same type as the IP stack (IPv4 or IPv6). Will ignore mcast_addr, but this may lead to cross talking (see http://www.jboss.com/wiki/Edit.jsp?page=CrossTalking for details). Exception was: java.net.BindException: Cannot assign requested address I'm trying to get TRACE on org.jgroups when it fails but no luck so far. Having compared good logs against bad logs generated in cluster10, I see the following appearing *only* when the tests fail: 2009-07-16 03:55:28,153 WARN [org.jgroups.protocols.TCP] (pool-1-thread-4) failed to join /224.0.75.75:7500 on eth2: java.net.SocketException: No such device Not sure if this is somehow cause or consequence though.	1	1	https://issues.jboss.org/browse/ISPN-98
8233	ISPN-95	@Alejandro is this complete now? Or is there more stuff you want to add to this tutorial?	1	1	https://issues.jboss.org/browse/ISPN-95
8234	ISPN-78	Would it be possible to make this a configuration option? For some applications it may make more sense to just save the object -- for example, if the object is not expected to be accessed much. T	0	0	https://issues.jboss.org/browse/ISPN-78
8235	ISPN-78	Wouldn't a non streaming API somehow defeat this feature's sole purpose? It is my understanding that it is driven by the desire to store objects the size of which exceeds that of every single JVM in the cluster, correct? If that is indeed the case, it would be *impossible* to store such an object without first fragmenting it into pieces each of which fits into a single node's heap. So we need a streaming API to read a large object from some place - think file - outside the current JVM's address space in order not to blow up that JVM's heap. It is out of the question that this approach considerably complicates matters, but I don't see a way around it. Ah, I see. Stupid me. Streaming to disk means writing a large object directly through to the cache store, without actually caching it in memory. Might make sense in some cases, though it could be argued if in this case Infinispan would really act as a "cache". We would still need a streaming API, though. Anyway, IMHO we should first concentrate on implementing the "fragmentation approach" and then check back whether streaming to disk might make sense. One step at a time.	1	1	https://issues.jboss.org/browse/ISPN-78
8236	ISPN-78	Hi Gabriel, it is my understanding that Reed-Solomon codes aide in detecting and correcting data corruption. In our scenario this equates to repairing chunks that have somehow been corrupted. I have thought about later implementing some means of doing so myself, so thanks for the hint. What I fail to see, though, is how this would help to address the problem of availability in the face of node failures. If two nodes storing the same chunk are down that chunk and thus the large object it belongs to are not available. Or would it be possible using RS codes to reconstruct a missing chunk from the information contained in the other chunks?	1	1	https://issues.jboss.org/browse/ISPN-78
8237	ISPN-75	Thanks for this. A few comments on the patch, before you check it in: 1. What is the purpose of the comparator? Exposing a comparator here implies that the entire cache is ordered - which it is not. I don't foresee this being useful until there is ordering applied to the entire cache. 2. addNewExpiry should store enough information to be able to purge on a lifespan expiry as well as an idle time expire (as per your comment in the patch). Perhaps this could be calculated to an absolute time based on lifespan + creation time or maxIdle + lastModified, whichever is sooner. 3. Why do you need to synchronize on expiryLock? From what I see, expiryTree is just another JDBM stucture and JDBM should handle concurrent access to this structure? Or have I missed something?	1	1	https://issues.jboss.org/browse/ISPN-75
8238	ISPN-58	How are we going to implement service behind this URI? Is it going to be a servlet that runs submitted Runnable/Callable?	0	0	https://issues.jboss.org/browse/ISPN-58
8239	ISPN-57	Some discussions on the subject: http://lists.jboss.org/pipermail/infinispan-dev/2009-November/001953.html and an email from Vladimir: "I think that we should give up, for the time being, trying to deploy Infinispan in GAE/j. After I have encountered the below mentioned blocker with our regular marshaling I have gone in direction recommended by Galder. I replaced river marshalling with java serialization. Although, java serialization does not really work, as Galder pointed, I wanted to jump over the first hurdle and see how far I can get with deployment. Didn't get very far. After I used java serialization instead of river I got this exception: java.security.AccessControlException: access denied (java.lang.RuntimePermission accessClassInPackage.sun.reflect) at java.security.AccessControlContext.checkPermission(AccessControlContext.java:323) at java.security.AccessController.checkPermission(AccessController.java:546) at java.lang.SecurityManager.checkPermission(SecurityManager.java:532) at com.google.appengine.tools.development.DevAppServerFactory$CustomSecurityManager.checkPermission(DevAppServerFactory.java:151) at java.lang.SecurityManager.checkPackageAccess(SecurityManager.java:1512) at java.lang.ClassLoader$3.run(ClassLoader.java:410) at java.security.AccessController.doPrivileged(Native Method) at java.lang.ClassLoader.checkPackageAccess(ClassLoader.java:408) at org.jboss.marshalling.reflect.SunReflectiveCreator$1.run(SunReflectiveCreator.java:40) at org.jboss.marshalling.reflect.SunReflectiveCreator$1.run(SunReflectiveCreator.java:38) at java.security.AccessController.doPrivileged(Native Method) at org.jboss.marshalling.reflect.SunReflectiveCreator.(SunReflectiveCreator.java:38) at org.infinispan.marshall.jboss.JBossMarshaller.start(JBossMarshaller.java:107) at org.infinispan.marshall.VersionAwareMarshaller.start(VersionAwareMarshaller.java:75) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at com.google.appengine.tools.development.agent.runtime.Runtime.invoke(Runtime.java:100) at org.infinispan.util.ReflectionUtil.invokeAccessibly(ReflectionUtil.java:170) at org.infinispan.factories.AbstractComponentRegistry$PrioritizedMethod.invoke(AbstractComponentRegistry.java:846) at org.infinispan.factories.AbstractComponentRegistry.internalStart(AbstractComponentRegistry.java:666) at org.infinispan.factories.AbstractComponentRegistry.start(AbstractComponentRegistry.java:572) at org.infinispan.factories.GlobalComponentRegistry.start(GlobalComponentRegistry.java:130) at org.infinispan.factories.ComponentRegistry.start(ComponentRegistry.java:134) at org.infinispan.CacheDelegate.start(CacheDelegate.java:303) at org.infinispan.manager.DefaultCacheManager.createCache(DefaultCacheManager.java:394) at org.infinispan.manager.DefaultCacheManager.getCache(DefaultCacheManager.java:358) at org.infinispan.manager.DefaultCacheManager.getCache(DefaultCacheManager.java:333) at guestbook.SignGuestbookServlet.doPost(SignGuestbookServlet.java:63) "	0	0	https://issues.jboss.org/browse/ISPN-57

8241	ISPN-29	When tackling this, check what Alex has done in: http://www.jboss.org/index.html?module=bb&op=viewtopic&p=4232775#4232775	0	0	https://issues.jboss.org/browse/ISPN-29

#	Requirement	Questions	Answered	Successfully Answered	URL
8242	ISPN-29	* remember jmemcached is still pre 1.0, and is under active development, so nothing is written in stone. * I inherited the code base from another author, though it has changed radically since then. Many things about the design that I don't like are products of that. * it's a side project for me, and I do not currently have it in any production systems at my Day Job (an earlier version was used at my previous job), so it gets less love that it could. Other people are using it. It's being used a lot for integration tests. Still, it is under active development and getting better. Re #1 (locking): The choice was made to do locking further up the call chain because I had intentions at the time of potentially introducing the ability to chain or sequence cache storages together, which would require one lock for the entire operation against all storage engines. Further I had some notions of adding transactional (commit/rollback) style semantics at the protocol level. Should I do that, I felt there would be some rather explicit locking behaviours required, and it would be better off managed by Cache. But the most important reason that Cache performs the locking is that some operations (incr, decr, cas, prepend, and append) combine reads and writes into one atomic operation. So in this case there are 3 possible options: * Re-implement all these operations for every storage engine. * Add "lock/unlock" methods to the storage engine. * Lose atomicity on these operations. If you have other suggestions, I'm open to them. In any case, maybe your storage would sit at the level of Cache (which could be made into an interface or abstract), not a CacheStorage implementation. #2 (String/MCElement storage): The protocol really dictates this. Firstly, in the protocol all keys are just strings and can't be anything else. Secondly, every element can have storage flags stored along with it, as well as its timeout. This basically requires that either the value be encapsulated in something or these attributes be external to the value. It's just easier to do the former. #3 (asynchronous deletes): This is incorrect, only delayed removes use the delayed asynchronous queue. Deletes with no delay time attached are removed instantaneously. #4 (hardcoded to netty): It took me one day to switch from MINA to Netty; so while I am not sure I truly see the advantage of using raw NIO or XNIO, it certainly is possible and if you know NIO well, it wouldn't take long. That said, I'm not sure why you would do this? Do you have benchmarks to backup your performance claims? And why would a JBoss product have a problem with a Netty dependency? One of my goals has been to get the protocol decoding/encoding abstracted out enough that I could do unit testing of it (right now there's just integration tests), but it's difficult and time consuming. #5 (license): The license is Apache 2.0, there's nothing unclear about it. Also since your comment, the main site has switched now to a google code project. #6 (jgroups impl of the protocol): Looking at the jgroups implementation of the protocol... It's not complete or correct. There's more to the protocol than sets and gets. You can reinvent the wheel and write the protocols yourself, but ... why? #7 Enum comparisons: The big if/else chain isn't sexy, but switch statement in Java is braindead. In particular, GET, GETS, and a number of others all take variations of the same logic; switch would be ungainly here. You could argue (as someone else has) that this should be a polymorphic method call per operation, but I think this would be overkill. #8 slf4j: What's wrong with slf4j? I hope you're not suggesting commons-logging...	1	1	https://issues.jboss.org/browse/ISPN-29
8243	ISPN-29	Also is there sense in implementing memcached's binary protocol as well? Does anyone know what the status is with existing clients using this binary proto? http://www.elctech.com/articles/memcached-1-4-released-binary-protocol http://cloud.github.com/downloads/memcached/memcached/protocol-binary.txt	0	0	https://issues.jboss.org/browse/ISPN-29
8244	ISPN-29	Question to address: what happens when a connection breaks between client and server? What sort of keepalives, etc do we have, e.g., a ping-pong protocol?	0	0	https://issues.jboss.org/browse/ISPN-29
8245	ISPN-25	When is JGroups 2.8.0.CR2 due? Is there a JGroups JIRA we can link to?	0	0	https://issues.jboss.org/browse/ISPN-25
8246	ISPN-24	This is great news. What we're invisioning is a way to slot Infinispan between HIbernate and our app. So, Hibernate would be the Cachestore if possible and we'd use JPA-like constructs to query and persist objects. This would then enable a JPA-like distributed write-behind data grid using JPA objects. Good stuff.	1	1	https://issues.jboss.org/browse/ISPN-24
8247	ISPN-2	Indeed, thought it might related to something like that. Once you've figured out locally that the value matches and you need to delete, it's a go on the other nodes and don't need to double check. How about we mark value in some way so that this is obvious for the reader? transient?	1	1	https://issues.jboss.org/browse/ISPN-2
8248	IPAAS-325	Some general thoughts which come to mind while reading the story: * What's about error handling ? Would something like offering circuit breaking for API 2 sense (i.e. using default values when connection fails) ? * What with the response of API-3 ? Should it be recorded / logged ? Or is it up to the use to add an additional step after the call to API-3 to perform actions on this response ? * If I understand right, after the mapping from API-1 (resp) to API-2 (req), the message from API-1 (resp) should still remain in the exchange so that the call to API-3 can use mappings from API-1 (resp) and API-2 (resp) ? (which would require probably some fundamental changes in the data mapper)	1	0	https://issues.jboss.org/browse/IPAAS-325
8249	IPAAS-325	{quote}What's about error handling ? Would something like offering circuit breaking for API 2 sense (i.e. using default values when connection fails) ? {quote} I think this is an interesting use case as it starts to test the balance of what's functional vs. technical from a user perspective. Does it make more sense to have a developer add circuit breaker type functionality separately when needed or is there a citizen-level representation of that possible? {quote} What with the response of API-3 ? Should it be recorded / logged ? Or is it up to the use to add an additional step after the call to API-3 to perform actions on this response ? {quote} Good call - that's my mistake. I should note that API-1 is GET and API-2 and API-3 are POST. API-3 is putting data into another system, API-2 is pulling additional data based on what we got from API-1. I guess API-2 could do that via GET with id or via POST - let's discuss and choose the option that makes the most sense. {quote} If I understand right, after the mapping from API-1 (resp) to API-2 (req), the message from API-1 (resp) should still remain in the exchange so that the call to API-3 can use mappings from API-1 (resp) and API-2 (resp) ? (which would require probably some fundamental changes in the data mapper){quote} This is something we discussed back in the early design phases of iPaaS, so I would check in with Hiram to get the low down on the technical side. I believe the plan was to stash earlier messages as exchange properties or message headers to propagate them through the route/flow. The iPaaS UI would take care of passing the appropriate data slots to the mapper, which is designed to be able to map multiple source objects to a single target object.	0	0	https://issues.jboss.org/browse/IPAAS-325
8250	IPAAS-324	A WebHook typically also receives a payload (in addition to the WebHook's URL). The format is typically defined by the system calling the WebHook (e.g. GitHub). Should Syndesis also support evaluation for WebHook payload data which then can be used e.g. for data mapping ? Use Case: We add the webhook to a GitHub repo and receive a trigger each time a commit happens in GitHub. The data from the commit could be used in an integration mapping scenario, too. Security: How do we ensure that only authorized requests trigger the integration ? Do we generate unique random WebHook URLs for each integration ? (This would require to add / remove OpenShift `Routes` dynamically)	1	0	https://issues.jboss.org/browse/IPAAS-324

#	Requirement	Questions	Answered	Successfully Answered	URL
8251	IPAAS-323	[~kcbabo] could you please give a short example what this unique id could be in the case of Twitter ? Is it the twitter handle which is stuffed in one attribute of the salesforce object ? On which action should the unique id mapping happen ? Isn't it that this mapping would need two params, one from twitter, one from salesforce, so that this cannot be directly connected with a single action only (which is specific to a connector) ?	1	0	https://issues.jboss.org/browse/IPAAS-323
8252	IPAAS-319	Do we also want/need to display Exchange properties? How much do we want to expose to the user? For example, do we want to provide the ability to specify log name, etc?	1	1	https://issues.jboss.org/browse/IPAAS-319
8253	IPAAS-319	[~iocanel], the way the log UI design is now, it prompts the user to indicate whether or not to include the Log Level in the log. Is that desired? I expect that the Log Level is a separate and different option since it is an indication of what types of information you want to send to the log. I think the Logging UI needs two parts: *What kinds of information do you want to send to the log?* With a drop down for selecting one of ERROR, WARNING, INFO, DEBUG, TRACE. And they have to be in that order since each one includes the ones before it. Probably we will want some popup help to explain that. *What information do you want to send to the log?* And then list Message Header, Message Body, Custom Text.	1	1	https://issues.jboss.org/browse/IPAAS-319
8254	IPAAS-315	Looks good to me. Tested it today works fine. What is the plan for displaying status messages while a deployment is in progress? a popup on hover over the spinner?	1	1	https://issues.jboss.org/browse/IPAAS-315
8255	IPAAS-315	Right now the only granularity available from the API is really 'Activated' and 'Deactivated', we'd need a way of fetching any additional information we'd want to show in the UI. [~sjcox] I can't recall, do we have a hover/pop up in the design for integrations that are transitioning states?	1	1	https://issues.jboss.org/browse/IPAAS-315
8256	IPAAS-315	[~chirino] Ah cool I see that. Why don't I add a popup for now with the status message when it's in progress?	0	0	https://issues.jboss.org/browse/IPAAS-315
8257	IPAAS-306	[~kcbabo] [~chirino] can you provide more details about this. The address I assume is the hostname, eg which today is named host https://github.com/redhat-ipaas/connectors/blob/master/connectors/trade-insight-buy-connector/src/main/resources/camel-connector.json#L20 And the other parts are currently hardcoded if you see further below in that JSon file. But that API key fields. Are those some custom fields that the citizen user must configure. And I think Hiram said something about it was supposed to be a HTTP Header when calling the HTTP service. Are you going to use any of that for the demo, but regardless I assume maybe in the real world there may be some API keys the user must provide as credentials or something.	1	0	https://issues.jboss.org/browse/IPAAS-306
8258	IPAAS-299	This was done last week. Have you tested on BlueJeans to see how it looks? The gray will still be light (much darker on a "regular" screen), but shouldn't be white like before, so there is more of a contrast. I am going to do a quick pass-thru to see if I missed any sections of the site. The background color is custom and not in PatternFly, it's #E1E1E1. GitHub Issue: https://github.com/redhat-ipaas/ipaas-ui/issues/393	0	0	https://issues.jboss.org/browse/IPAAS-299
8259	IPAAS-295	What do you mean by an "API icon"? Don't you want to be able to use custom icons for APIs? Isn't it the service that's important, not that it's an API? Most things are APIs of course.	1	1	https://issues.jboss.org/browse/IPAAS-295
8260	IPAAS-295	Just to close off based on our IRC discussion. While most connectors are using an API under the covers, they offer a level of indirection - the end user is not interacting with the API directly. There will be cases where we have an API connector which just takes in a Swagger definition and allows you to invoke an API through that. I think we should use an API icon for that connector. Agree?	1	0	https://issues.jboss.org/browse/IPAAS-295
8261	IPAAS-294	Hi [~kurtstam], could you add these connectors to the deployment.json ?? They don't need to be usable, just show up in the UI.	1	1	https://issues.jboss.org/browse/IPAAS-294
8262	IPAAS-293	Kurt, could you make sure all 3 actions are in the deployments.json?	0	0	https://issues.jboss.org/browse/IPAAS-293
8263	IPAAS-284	[~kcbabo] so if you select trade insight as "start" connection, then what should trigger it? Should it just run 1 time, or should it run every X period or what?	1	1	https://issues.jboss.org/browse/IPAAS-284
8264	IPAAS-284	How do you map between suggestion -> trade from https://github.com/kcbabo/ipaas-demo/blob/master/trade-insight-api/src/main/java/org/example/ipaas/Suggestion.java to https://github.com/kcbabo/ipaas-demo/blob/master/day-trade-api/src/main/java/org/example/ipaas/Trade.java The fields do not seem to match-up so intuitively.	1	1	https://issues.jboss.org/browse/IPAAS-284
8265	IPAAS-250	Thanks, SJ. Icons look good to me. I'm on the fence with the HTTP one - I don't have an alternate suggestion, however, so I'm fine to stick with the current version. :-) A few questions: * Will there be a generic icon for steps? * Looks like some of our icons are color and some are black and white - do you think that will look OK? * We might need to add a few more icons to build out the connection catalog for Sprint 11. I'm certain we'll need another one for REST API. We might be able to get away with a non-specific icon with "API" underneath?	1	1	https://issues.jboss.org/browse/IPAAS-250
8266	IPAAS-250	[~kcbabo] yeah http was a tricky one for me because I wanted to avoid using text within the icon. I can explore further designs in the time being. To address your question, there will be a generic icon for steps so I'll provide that as well. I agree with you that we need to add additional icons to build out the connection list. I was thinking of adding facebook, instagram, linked in, google+ and github. What do you think of those? Also, that will add more colors instead of just blue and gray so hoping that will look ok. Let me know what you think!	1	1	https://issues.jboss.org/browse/IPAAS-250
8267	IPAAS-245	I dont see this in the narrative. Where is this being used?	1	1	https://issues.jboss.org/browse/IPAAS-245
8268	IPAAS-244	Where should it be stored then? And I bet you may want to show **** or something in the ipaas ui as placeholders. But still know if a field is in use or not. We cannot just show **** in all fields that is marked secret=true in the Camel connector.	1	1	https://issues.jboss.org/browse/IPAAS-244
8269	IPAAS-244	bq. Where should it be stored then? I should say that they can't be stored in plain text or read by untrusted parties in the git repository. If they are encrypted, that would work too. A consideration there is how these values are actually decrypted when used outside of iPaaS (e.g. on-premise runtime with FIS). IINM, Jimmi was thinking of using secrets to store passwords. bq. And I bet you may want to show **** or something in the ipaas ui as placeholders. But still know if a field is in use or not. We cannot just show **** in all fields that is marked secret=true in the Camel connector. Yes, good point.	0	0	https://issues.jboss.org/browse/IPAAS-244
8270	IPAAS-237	I want to see them all when we go to choose an action. Twitter Mention is the one that will actually be used. Just for my own curiosity, does it take a lot of effort to add these actions? Having that info will help us schedule/plan as we'll need to consider not only the connectors we'll support for PR1, GA, etc., but also the actions on those connectors.	0	0	https://issues.jboss.org/browse/IPAAS-237
8271	IPAAS-235	[~kcbabo], which actions will you actually use?	1	1	https://issues.jboss.org/browse/IPAAS-235

#	Requirement	Questions	Answered	Successfully Answered	URL
8272	IPAAS-232	[~kcbabo], [~dongniwang], [~crobson] Here is the first pass for the landing page design. I used the branding colors and patterns used for Fuse as well as Red Hat brand styling. This is what they would see when they are logged out of iPaaS. Consequently, if they are logged in, they would not be directed to this page, rather the dashboard of iPaaS. A couple questions for you [~kcbabo]: - Is Red Hat iPaaS the legal name for it? If so, this is what the product logo would look like. If not, then this design would have to change slightly. - Could you provide us with a short description of iPaaS to put on this page? Happy to hear any feedback you may have on this design, thanks! !iPaaS_LandingPage.png|thumbnail!	1	1	https://issues.jboss.org/browse/IPAAS-232
8273	IPAAS-203	[~jdyson] If I understand the story right, its about having the Rest API call, even when there is no real backend functionality. So some sort of simulation is ok (like blocking for some seconds and maybe throw some errors for certain requests). Is this correct ?	1	1	https://issues.jboss.org/browse/IPAAS-203
8274	IPAAS-203	[~jdyson] But do we really want to have the validation on an existing conection only and not _before_ creating the connection, too ? I mean from a UI perspective, you will enter the form, try a validation and only aftter this you create / save the connection. I believe we need both: Pre-creation validation (otherwise you would have to deal with nasty rollback issues, messing up history / auditing, ...) and validation for existing connections. Even when one tries to update a connection one does the validation step before persisting changes. Even more dragons: If you persist first, then validate but then you decide not to create the connection because you have forgotten your password, nobody forces you to push "cancel". You can simply close your browser. And who is then cleaning up the stale connection in the DB ?	1	1	https://issues.jboss.org/browse/IPAAS-203
8275	IPAAS-201	Does it actually get deleted or are we marking this as resolved because the UI elements to delete it are in place? Last I checked we don't make the actual call to the REST API (but that should be a quick fix, we just didn't have time to make it for the demo).	0	0	https://issues.jboss.org/browse/IPAAS-201
8276	IPAAS-176	[~jdyson] - Can I just call this Edit Integration? Or Integration Edit View? I think it's the same thing.	0	0	https://issues.jboss.org/browse/IPAAS-176
8277	IPAAS-159	This takes care of the initial create button. Can we add additional design links which show the user selecting the Start and Finish connections as well?	1	1	https://issues.jboss.org/browse/IPAAS-159
8278	IPAAS-157	Hey - with and without configuration is great. Do we have a version of these distinct from the integration editor? Both of these look like inline configuration of a connection in the integration editor.	1	1	https://issues.jboss.org/browse/IPAAS-157
8279	IPAAS-153	This is the epic for the whole sprint - do we really want to reject it? (holding back tears of rejection)	1	0	https://issues.jboss.org/browse/IPAAS-153
8280	IPAAS-146	tech debt.. moving to github	0	0	https://issues.jboss.org/browse/IPAAS-146
8281	IPAAS-116	FWIW I vote for option c). Trying to productionise iPaaS using the same approach as traditinal JBoss libraries sounds very wrong and hopefully whatever processes, document or checkboxes that originally needed this can be avoided. If Red Hat want to be able to deliver software faster to meet both customer and product demands then this really needs to be resolved. BTW did OpenShift do the same for Jenkins? I'd imagine not as there are a lot more plugins and dependencies I'd have thought, can we just use their approach?	1	0	https://issues.jboss.org/browse/IPAAS-116
8282	IPAAS-90	[~rajdavies]- Is this a duplicate of IPAAS-87? If so, can I close it?	1	1	https://issues.jboss.org/browse/IPAAS-90
8283	IPAAS-86	What's a project in this context? Is this the thing that holds the code for a connection or integration?	1	1	https://issues.jboss.org/browse/IPAAS-86
8284	IPAAS-72	Stan I think you did this already, right? Can this issue be closed or broken up into sub-tasks?	1	1	https://issues.jboss.org/browse/IPAAS-72
8285	IPAAS-69	Hi Hiram, I've re-opened this issue as I feel it is critical to the release and so did the program team as it was deemed an MVP. I appreciate it may not be the most exciting engineering work on the planet, however, iPaaS is all about the customer perception and we have 3 tiers. 1. Will it intrigue potential users enough to look at it ad say, wow, I can use something like this! 2. How easy it is to use and 3. How easy it is to get help. 2 and 3 go hand in hand and supportability can't be an afterthought. It needs to stay on the backlog and be addressed before GA. Susan	1	0	https://issues.jboss.org/browse/IPAAS-69
8286	IPAAS-52	[~joqian] - Do we need any designs for this, btw? Or maybe just a normal confirmation modal?	1	0	https://issues.jboss.org/browse/IPAAS-52
8287	IPAAS-47	[~kcbabo] [~stlewis] - Is this the same as the 'Create an Integration' page? The designs for which are here: https://redhat.invisionapp.com/share/TJ8KKMWGX#/screens/197805926	1	1	https://issues.jboss.org/browse/IPAAS-47
8288	IPAAS-46	Does this link into ConfigMap or is it just the variables are passed into the app container?	1	1	https://issues.jboss.org/browse/IPAAS-46
8289	IPAAS-46	[~joqian] [~kcbabo] - Do we need designs for this? Is there a page for this?	1	0	https://issues.jboss.org/browse/IPAAS-46
8290	IPAAS-44	[~davsclaus] Does this command work from any project or no project? If I deploy a connector jar to nexus so that ipaas-search-connectors can find it, I can't seem to get ipaas-connector-details to show any details on it. Also, can you get ipaas-connector-details to show up in the fabric8-console forge UI? Seems it's set to be hidden, ideally I kinda want to be able to see all of these commands from our test UIs for development purposes. Thanks!	1	1	https://issues.jboss.org/browse/IPAAS-44
8291	IPAAS-44	Thanks! Hey, should I be logging ipaas command related issues in that repo BTW?	1	1	https://issues.jboss.org/browse/IPAAS-44
8292	IPAAS-42	Agree on technical limitations of just checking connection details only. Despite that fact, we need to find a sensible way of making this work for iPaaS. Can we synthesize a route with the connection as the consumer endpoint and just route to a Mock endpoint to capture the response?	0	0	https://issues.jboss.org/browse/IPAAS-42
8293	IPAAS-41	Can we clarify on the actor here when we say "build a new version of the connector"? The expert user in this case is using the iPaaS UI to edit details of a connection. How does this user build a new connector through that interface?	1	1	https://issues.jboss.org/browse/IPAAS-41
8294	IPAAS-41	What's confusing here is that there are 2 distinct parts - server side and UI. Can we not reopen - but create a new UI specific issue instead?	1	1	https://issues.jboss.org/browse/IPAAS-41
8295	IPAAS-41	I agree that it's confusing, but I think it's also confusing if we mark the user story as done when it's not done. Can we create sub-tasks or related issues for the back end and UI work instead?	1	1	https://issues.jboss.org/browse/IPAAS-41
8296	IPAAS-41	An expert user really shouldn't be writing or updating code. The bulk of their interaction with iPaaS will be through the UI. Are we saying that changing things such as the name of a connection requires code-level tasks from a developer? That seems like a pretty steep drop off in usability and pulls in multiple personas to handle relatively basic tasks.	1	1	https://issues.jboss.org/browse/IPAAS-41
8297	IPAAS-41	Same comment as above w/r/t description, available fields, and defaults. Should we consider storing this type of information in a separate data store/repository vs. cooking it into the component code?	1	1	https://issues.jboss.org/browse/IPAAS-41
8298	IPAAS-41	[~davsclaus] Does this map to ipaas-edit-connector-options? If so, do we have a way of mapping a connection that's returned from ipaas-search-connectors to the project that builds the connector? Asking as I see that ipaas-edit-connector-options only seems to be available when I create a 'connector' project, from the connection library I'd then need to be able to map an entry in the library to the connector project I guess, unless there's a better forge command to use. Thanks!	1	1	https://issues.jboss.org/browse/IPAAS-41

#	Requirement	Questions	Answered	Successfully Answered	URL
8299	IPAAS-41	Yeah, maybe changing the name would be more a matter of duplicating the connector as a new project, might be a better question for [~kcbabo] to answer? Anyhoo, thanks for the additional commands! Follow on question, for these two items am I correct then in how these map to the relevant forge commands: * Changing the available fields (add or remove) ----> ipaas-choose-connector-options * Changing the default values for available fields ----> ipaas-edit-connector-options For either of the above it seems again like I need to reference the actual connector project when I fetch the command inputs. Are we going to have a way to associate a connector discovered via ipaas-search-connectors with the project source?	1	1	https://issues.jboss.org/browse/IPAAS-41
8300	IPAAS-40	From a user standpoint, I think there will be an expectation that I can add/update/remove labels at any time. If that means the component needs to be rebuilt, we need to think about what that means from a user experience standpoint (e.g. how is it rebuilt?).	0	0	https://issues.jboss.org/browse/IPAAS-40
8301	IPAAS-40	Can we document how this would be done through the iPaaS UI and how QE can test?	0	0	https://issues.jboss.org/browse/IPAAS-40
8302	IPAAS-39	Can we describe the remote API that can be used by QE and UI to satisfy this user story? Would prefer to keep these user stories open until they are fully satisfied.	0	0	https://issues.jboss.org/browse/IPAAS-39
8303	IPAAS-34	Will there be a UI component to this and, if so, should it come before or after the Users component is implemented? I'm asking because the Users component is now a priority for Sprint 4.	1	0	https://issues.jboss.org/browse/IPAAS-34
8304	IPAAS-33	Is this considered a user story for Sprint 4? It's written in a model-oriented manner (which I prefer, but I know we're using user stories like, "As a user I can login and logout" etc.). Either way I'll assign it to Sprint 4 since we need this for integration with the CD pipeline.	1	1	https://issues.jboss.org/browse/IPAAS-33
8305	IPAAS-33	[~crobson] [~joqian] - Do we have designs for user-related pages? Just asking as I'd like to have issues opened in GitHub to track them for the UI.	1	1	https://issues.jboss.org/browse/IPAAS-33
8306	IPAAS-25	Can links to the UI be added as comment or something so we/I can find information about this ticket?	0	0	https://issues.jboss.org/browse/IPAAS-25
8307	IPAAS-25	Hey Rachel - IPAAS-25 is just a top-level tracking issue for all of the connection-related user stories. It's fine if you want to include links here, but the main place we can use them from a tracking perspective are in the detailed users stories linked from this issue. That way, at the end of a sprint we can look at our user stories for that sprint and track whether we're done, in progress, how far, etc. Does that make sense?	1	0	https://issues.jboss.org/browse/IPAAS-25
8308	IPAAS-24	Is this for Sprint 4 or 5?	1	0	https://issues.jboss.org/browse/IPAAS-24
8309	IPAAS-24	Also [~crobson] [~joqian] - Do we have designs for this already?	1	0	https://issues.jboss.org/browse/IPAAS-24
8310	IPAAS-10	Are you running this using someone who has dedicated-admin role? https://docs.openshift.com/dedicated/3.2/getting_started/dedicated_administrators.html	1	0	https://issues.jboss.org/browse/IPAAS-10
8311	IPAAS-6	Where's the picture of [~kcbabo]?	0	0	https://issues.jboss.org/browse/IPAAS-6
8312	IPAAS-6	can we mark this as closed now?	0	0	https://issues.jboss.org/browse/IPAAS-6
8313	JBJCA-1210	Where can I find the commits for that issue? I searched here: https://github.com/ironjacamar/ironjacamar.org/commits What does setting the system property to true change? Thx.	0	0	https://issues.jboss.org/browse/JBJCA-1210
8314	JBJCA-989	Thank you for the advice ;-) What about would be this discussion in this case?	1	0	https://issues.jboss.org/browse/JBJCA-989
8315	JBJCA-989	What isn't working when building - there seems to be 2 issues here. But JIRA isn't a forum	0	0	https://issues.jboss.org/browse/JBJCA-989
8316	JBJCA-704	Good job! Where should ConnectionListener implementations be placed ?	1	0	https://issues.jboss.org/browse/JBJCA-704
8317	JBJCA-637	Will this automatically disable "our" pooling so that pooling can be delegating to the underlying <datasource-class>? If not, we might want to add another option for this because some vendors' javax.sql.DataSource implementations do their own pooling.	0	0	https://issues.jboss.org/browse/JBJCA-637
8318	JBJCA-637	Tom Fonteyne <tfonteyn@redhat.com> made a comment on [bug 957175|https://bugzilla.redhat.com/show_bug.cgi?id=957175] @John Doyle: "if a datasource class is defined first, then fallback to java.sql.Driver - the opposite of today." This bit is incorrect: "the opposite of today." The situation "today" is that the datasource class can *never* be used in EAP for the simple fact that all major vendors driver have the driver class preset. @Jesper Pedersen: " The "datasource-class" element is there in order to support JDBC like drivers which doesn't implement the java.sql.Driver class." Could you please provide an example ? I mean do you have such a non-driver that can be deployed to EAP so we can see the functionality working as you state ?	0	0	https://issues.jboss.org/browse/JBJCA-637
8319	JBJCA-571	Could you update this patch against trunk/ ? Also this mvn org.apache.maven.plugins:maven-deploy-plugin:2.6-SNAPSHOT:deploy-file looks incorrect.	1	1	https://issues.jboss.org/browse/JBJCA-571
8320	JBJCA-28	Is this done?	1	0	https://issues.jboss.org/browse/JBJCA-28

#	Requirement	Questions	Answered	Successfully Answered	URL
8321	JBJCA-12	ObjectName("jboss.jca:service=XaTxCM,name=" + jndiURL); // try to remove mbean if leftover... if (server.isRegistered(cmName)) { server.unregisterMBean(cmName); } Object cmBean = server.createMBean("org.jboss.resource.connectionmanager.TxConnectionManager", cmName); assert cmBean != null : "Server never created TxConnectionManager for: " + schema; assert server.isRegistered(cmName) : "Server never registered ConnectionManager for: " + schema; //ManagedConnection Factory ObjectName mcfName = new ObjectName("jboss.jca:service=ManagedConnectionFactory,name=" + jndiURL); // try to remove mbean if leftover... if (server.isRegistered(mcfName)) { server.unregisterMBean(mcfName); } Object mbean = server.createMBean("org.jboss.resource.connectionmanager.RARDeployment", mcfName); assert mbean != null : "Server never created ManagedConnectinoFactory for: " + schema; assert server.isRegistered(mcfName) : "Server never registered ManagedConnectionFactory for: " + schema; //ManagedConnectionPool ObjectName mcpName = new ObjectName("jboss.jca:service=ManagedConnectionPool,name=" + jndiURL); // try to remove mbean if leftover... if (server.isRegistered(mcpName)) { server.unregisterMBean(mcpName); } Object pool = server.createMBean("org.jboss.resource.connectionmanager.JBossManagedConnectionPool", mcpName); assert pool != null : "Server never created Connection Pool for: " + schema; assert server.isRegistered(mcpName) : "Server never registered Connection Pool for: " + schema; ObjectName serviceControllerName = new ObjectName("jboss.system:service=ServiceController"); // anon block so I don't rename var al { AttributeList al = new AttributeList(); al.add(new Attribute("JndiName", jndiURL)); al.add(new Attribute("ManagedConnectionPool", mcpName)); al.add(new Attribute("CachedConnectionManager", new ObjectName("jboss.jca:service=CachedConnectionManager"))); final ObjectName tmsName = new ObjectName("jboss:service=TransactionManager"); al.add(new Attribute("TransactionManagerService", tmsName)); //BUG? // al.add(new Attribute("LocalTransactions", Boolean.TRUE)); al.add(new Attribute("LocalTransactions", Boolean.FALSE)); al.add(new Attribute("TrackConnectionByTx", Boolean.TRUE)); // try to set the attributes on the bean try { server.setAttributes(cmName, al); } catch (UndeclaredThrowableException e) { final Throwable cause = e.getCause(); if (cause instanceof MBeanException) { LOGGER.error("Exception setting Attribute on Server handle: " + e.getMessage(), e); throw (MBeanException) cause; } //else throw new HRNException(cause, ApplicationConstants.BASE_RESOURCE, "common.error.db.connectionfailed", new Object[] { cause.getMessage() }); } } // RARDeployment { AttributeList al = new AttributeList(); al.add(new Attribute("ManagedConnectionFactoryClass", "org.jboss.resource.adapter.jdbc.xa.XAManagedConnectionFactory")); al.add(new Attribute("ConnectionDefinition", "javax.sql.DataSource")); // al.add(new Attribute("LogWriter", ?));//PrintWriter // try to set the attributes on the bean server.setAttributes(mcfName, al); } // anon block so I don't rename vars { AttributeList al = new AttributeList(); al.add(new Attribute("PoolJndiName", jndiURL)); al.add(new Attribute("ManagedConnectionFactoryName", mcfName)); al.add(new Attribute("MinSize", new Integer(0))); al.add(new Attribute("MaxSize", new Integer(50))); al.add(new Attribute("BlockingTimeoutMillis", new Long(5000))); al.add(new Attribute("IdleTimeoutMinutes", new Integer(7))); al.add(new Attribute("Criteria", "ByNothing")); // try to set the attributes on the bean server.setAttributes(mcpName, al); } //DataSource ObjectName dsName = new ObjectName("jboss.jca:service=DataSourceBinding,name=" + jndiURL);	1	0	https://issues.jboss.org/browse/JBJCA-12
8322	JIRA-521	[~paul.robinson] what type should be 'PDD Experience Link' field? One URL, multiple URLs, something else?	1	1	https://issues.jboss.org/browse/JIRA-521
8323	JIRA-520	Is it possible to add a 'Epic Type' field, with two options: "Business Requirement", "Technical Requirement"? The default would be "Business Requirement". This would appear after the "Epic Name" in the issue editor view.	1	1	https://issues.jboss.org/browse/JIRA-520
8324	JIRA-502	Can't RHMAP have have own workflow with changed default priority? Why to change default for all the projects because of one project :) ? I thing MAJOR is the default as long as I can remember ... 7 years.	1	1	https://issues.jboss.org/browse/JIRA-502
8325	JIRA-502	Rather than changing the default for every established project wouldn't it be better to reach out to Atlassian and see if they would consider a feature request? Alternatively if for a single project couldn't an alternative triage based workflow be developed that allows for untriaged issues to be separated from the triaged issues.	1	1	https://issues.jboss.org/browse/JIRA-502
8326	JIRA-502	I don't see strong enough benefits for such a wide change. How about adding a normal/medium severity level as teh new default? Currently Jira has 6 levels and major is already at the median level. So I don't see what this change will really achieve. I think this is what Bugzilla does (having 7 levels of severity with normal as the middle default).	1	1	https://issues.jboss.org/browse/JIRA-502
8327	JIRA-502	[~rrajesh] [~jfrizell] [~lgriffin] would you be so kind to explain the initial motivation from the RHMAP side please (with already ammended knowledge from Vlastimil & others)? Tried looking at the original Jira, but couldn't find deep reasoning explained, just saw the plain request without justification as of why should this change happen and how would that help RHMAP? After reading some comments from Leigh here in the Jira, I get the feeling, but still I don't see the big picture why should this help more than the other way around. Anyway a lot of interesting points brought there. Let me say one thing: * "Major" changed to "Minor" on triage / by component lead is better, than the other way around, when a potentially important "Major"+ issue will be left unnoticed as "Minor" as triage didn't happen. Think of triage as asynchronous process, going from minor by default & raising issue priority requires active participation and has far more significant possible negative concaveness effect [1]. Read only optionally for context of the term above: (optional)[1] Convexity, Robustness, and Model Error inside the Fourth Quadrant http://www.fooledbyrandomness.com/OxfordBTLecture.pdf	1	1	https://issues.jboss.org/browse/JIRA-502
8328	JIRA-502	[~vtunka] - It's really about the fact that Major should not be the default priority for all new tickets - it looses all meaning when 75% of all tickets [1] have that priority. In reality, it's less about changing it *to* Minor as it is about changing it *from* Major. I quite like [~cfang]'s idea of a new priority level that things default to - whether it's "Normal/Medium" or "Not Set" - personally, I think defaulting Priority to "Not Set" would be a HUGE benefit - it allows people to immediately see what tickets have not yet been triaged and allows "Major" to actually mean something again. Interestingly, based on the linked chart [1] it seems there is an option to not have a priority set (741 tickets have this). Even more interesting, this does not seem to be a historical thing - there were tickets created event *today* with the priority field not set - Filter for the list of these tickets: https://issues.jboss.org/issues/?filter=12330317. Is this to do with the idea of committers are the only ones who can set priority? Is there any way to leverage this (perhaps at a project level so it does not affect everyone) to prevent priority from ever being set when a ticket is created - i.e. have a custom workflow for RHMAP that simply hides the priority field at ticket creation time? [1] https://www.dropbox.com/s/uwyqttxojhnbkje/Screenshot%202016-12-08%2012.04.48.png?dl=0	0	0	https://issues.jboss.org/browse/JIRA-502
8329	JIRA-502	[~velias] Regarding second drawback, could you show Priority in Create form only to internal people? Regarding first drawback, if the fields were named User urgency and Development priority, that would lower the confusion factor, IMO. Personally, I've been much confused by shoelaces many years ago, I am hoping that resolving Priority/Severity confusion is also just a matter of time and practice. Although, if the problem could be resolved by more apt naming of the field, either what I suggested, or something else, that would be awesome.	1	1	https://issues.jboss.org/browse/JIRA-502
8330	JIRA-462	What do you think [~mfreer], would this plugin suffice instead?	1	1	https://issues.jboss.org/browse/JIRA-462

#	Requirement	Questions	Answered	Successfully Answered	URL
8331	JIRA-462	Sounds good to me Gliffy supports imports from *.vsdx and *.vdx Diagrams so its good enough for me thanks. if we could have Gliffy by default for our profiles [~velias] in JIRA that would be great. Could you give me some pointers as how to enable / use Gliffy as I am new to JIRA. Thanks	1	1	https://issues.jboss.org/browse/JIRA-462
8332	JIRA-406	Really cool plugin. How it works in different browsers?	1	1	https://issues.jboss.org/browse/JIRA-406
8333	JIRA-389	Hi, may we better define what means "participate" on issue. There are these possibilities: - Reporter - Assignee - Created comment - Attached file If we define this, I may create simple jira report which gives you email addresses of users who do something we defined for selected versions. And maybe I may add you list of issue keys where participated. You may then send "Thanks" emails by some standard way. Second option is create more sophisticated plugin which will perform complete mailing, but this seems rather heavy for now. So is report with list of emails enough for now?	1	1	https://issues.jboss.org/browse/JIRA-389
8334	JIRA-389	Vlastimil, where is this report? I'm excited to use it for the Seam 3 release.	0	0	https://issues.jboss.org/browse/JIRA-389
8335	JIRA-386	>> 2. there are some implications for text emails sent from jira - wiki markup stays here (is not rendered). May be problem if text emails are processed by some other system. Wouldn't this be a major problem while viewing JIRA email notifications in a mail client? I have intentionally configured text notifications from JIRA, instead of HTML. Would that mean, we would have to switch it to HTML or some other format for notifications?	0	0	https://issues.jboss.org/browse/JIRA-386
8336	JIRA-382	Looks like this plugin is not maintained for over a year. I could fork the project and make it work in JIRA 6, would that be enough to migrate?	1	1	https://issues.jboss.org/browse/JIRA-382
8337	JIRA-382	It looks like someone already did that: https://bitbucket.org/badazzhindu/jira-component-watcher-plugin/src Would you be willing to test it locally?	1	1	https://issues.jboss.org/browse/JIRA-382
8338	JIRA-382	Attempting to login in a mobile devices doesn't seem to work. Could it be a CAS issue?	1	1	https://issues.jboss.org/browse/JIRA-382
8339	JIRA-369	That seems to contain enough information, there's actually no need to download full build logs. How should develop this gadget ? Is this something that can be undertaken by the jboss.org team ?	1	1	https://issues.jboss.org/browse/JIRA-369
8340	JIRA-363	Hey Vlastimil, was there a reason the project was created as WINDUPRULE not WINDUPRULES? Thanks, Lincoln	1	1	https://issues.jboss.org/browse/JIRA-363
8341	JIRA-363	Also, could you set the permissions to be the same as WINDUP? thank you.	1	1	https://issues.jboss.org/browse/JIRA-363
8342	JIRA-363	Hi [~lincolnthree], jira key has length constraint to 10 characters, so WINDUPRULE is at maximal length. I set both permission scheme and project roles to same value as WINDUP during creation, so I believe permissions are same. Do you have any problem in this area?	1	1	https://issues.jboss.org/browse/JIRA-363
8343	JIRA-363	Also, could you please make the issue edit page be just one page, without the split into tabs?	1	1	https://issues.jboss.org/browse/JIRA-363
8344	JIRA-344	Simplified screen has been implemented in production JIRA and activated for * ARQGRA * ARQRUSH * MODE who requested it. I can activate it for other projects by request (I'm going to send announcement to the community to inform it)	0	0	https://issues.jboss.org/browse/JIRA-344
8345	JIRA-338	Which is real name of project to be used and who should be configured as Project Lead?	0	0	https://issues.jboss.org/browse/JIRA-338
8346	JIRA-338	[~ozizka] any news on this? Do you need this project to be created still or not? If yes then provide me necessary info please (see previous comment)	0	0	https://issues.jboss.org/browse/JIRA-338
8347	JIRA-323	Hi Aleksandar, do you have some examples of issues or comments where wiki syntax is a problem? I don't know yet about any example of this problem. On the other side I noticed some old descriptions and comments where wiki syntax helps and shows content nicely. But this definitely depends on content. I'm not sure if this kind of bulk change is necessary now, maybe better solution is only solve cases with problems.	1	1	https://issues.jboss.org/browse/JIRA-323
8348	JIRA-318	The http://issues.jboss.org/browse/ORG project is used to track releases of services maintained by the JBoss Community Development Team so using a component wouldn't make sense. I think using a separate project is the best way forward so that you can manage your own release cycles. Do you have a working name for the project or should we simply call it Build Tracker and use the key BUILDTRK?	0	0	https://issues.jboss.org/browse/JIRA-318
8349	JIRA-317	Copying some of the IRC discussion about this on #jbossorg: 12:17:02 IST) Jaikiran: anyone around for a quick chat about the jira/jboss.org email id consolidation? (12:27:33 IST) jchochol: velias: ^^^ (12:28:01 IST) velias: Jaikiran: hi (12:28:25 IST) Jaikiran: velias: hi velias (12:28:50 IST) Jaikiran: I saw a mail on jboss-dev yesterday that the email in jira will now be the same as the one in jboss.org account (12:28:57 IST) Jaikiran: is that correct? (12:29:46 IST) velias: yep (12:30:30 IST) Jaikiran: is there any way an individual can have separate emails for them? (12:30:48 IST) Jaikiran: right now, I have set jira to my work email so that i get those important notifications (12:31:11 IST) Jaikiran: and for my jboss.org account which is used in forums, mailing list etc, i have used a non-work email (12:32:15 IST) velias: there is not possibility to have separate emails for now, but I can imagine some solution for this if necessary (12:32:41 IST) Jaikiran: i would really like to have it that way. do you want me to add a feature request? (12:32:45 IST) velias: just for now we are trying to consolidate user profile management to one place and keep it as simple as possible (12:34:19 IST) Jaikiran: yeah, i understand that part. and have no issues with that. I however believe that letting individual users have multiple emails for different activities would be a good thing (12:34:47 IST) Jaikiran: one more reason why i want to keep it separate is because, for my work email, i will require VPN access (12:35:14 IST) Jaikiran: so i can't use it for most part of the community work because I won't be able to access it from any other machine whether vpn isn't setup (12:36:01 IST) velias: ok, I understand. Add feature request into jira component of "jboss.org development" project please (12:37:26 IST) Jaikiran: ok thanks, will do (12:38:08 IST) velias: Probably simplest solution is to create some "extended" part of user profile, which allow to set separate email for jira (and maybe for other systems). If not set, then jira use main email from account. (12:39:53 IST) Jaikiran: yep, that sounds good. (12:42:51 IST) velias: Jaikiran: ok, thanks for your suggestion	1	1	https://issues.jboss.org/browse/JIRA-317
8350	JIRA-315	Hi, JIRA has no function to change project key. One workaround is described here: https://jira.atlassian.com/browse/JRA-11140?focusedCommentId=64516&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-64516 We need to create new project with new key and name, set all settings to same values as on old one, create all components and versions here, and then bulk move all issues into new project. Issue keys are changed in this case, but URL's with old issue keys still work and are redirected to new one. So process should be: # I'll create new project with settings (schemes, users in project roles etc) # You will create all necessary components and versions here (with exact same names as in old projects to be mapped automatically during move) # You will move all issues into new project # I'll create redirect from https://issues.jboss.org/browse/ARQAJO to https://issues.jboss.org/browse/ARQGRA in our WebProxy Apache to have redirect for main project page too (moved issues are redirected automatically by JIRA) # I'll delete project ARQAJO Are you OK with this Lukas?	1	1	https://issues.jboss.org/browse/JIRA-315

#	Requirement	Questions	Answered	Successfully Answered	URL
8351	JIRA-315	Ok, I have finished steps 2 and 3. Could you please finish the steps 4 and 5?	1	1	https://issues.jboss.org/browse/JIRA-315
8352	JIRA-310	1) I think your mention is about Suggestimate functionality on "Issue detail" page. What do you mean about this info on "Create issue" page, do you seem it useful here? 2) I try to negotiate with plugin provider some change in showing this info on "Issue detail" page, I see these possibilities: - disable/enable it on per project basis - disable/enable it on per user basis - move this info from main working area into tab (beside other tabs: All, Comments, History, ...) As temporary improvement I decreased max. number of shown similar issues to 5.	1	1	https://issues.jboss.org/browse/JIRA-310
8353	JIRA-307	You would need admin user pass word for Hibernate Jira to create the bidirectionality. Is there really a difference if we each set up the linking on our own side?	1	1	https://issues.jboss.org/browse/JIRA-307
8354	JIRA-287	hi [~jnunes], I looked shortly at your request and I'm not sure if I understand why do you need new "excel like" plugin. I believe that for work with issues jira provides quite powerful search API. If you switch is into "List View" mode it provides excel like table view of issues where you can control which columns are visible. https://confluence.atlassian.com/jira/using-the-issue-navigator-185729658.html#UsingtheIssueNavigator-ListView You can also use two modes of search GUI - simplified which uses selectboxes for filtering, and advanced where you can use whole power of JQL (JIRA query language) for filtering. You can also store your searches as filters for later use, and use dashboards to provide current overviews around issues in some project (https://confluence.atlassian.com/jira/customizing-the-dashboard-185729498.html). Another way is to use JIRA Agile Reports - https://confluence.atlassian.com/agile/jira-agile-user-s-guide/using-a-board/using-reports Should you somehow describe why these tools do not suit your needs please, what is missing in them so why you need some "Excel like" plugin? I really prefer to use existing JIRA features than installing extra plugins. Then we can try to install plugins you proposed into our JIRA STAGING server where you can test them to be sure they match your needs.	1	1	https://issues.jboss.org/browse/JIRA-287
8355	JIRA-287	Any news on this, or can I close it as obsolete?	1	1	https://issues.jboss.org/browse/JIRA-287
8356	JIRA-272	Hi [~NadirX] We use status called {{New}} in some other workflows for this. Is it OK for you to use it there also not to confuse users too much?	1	1	https://issues.jboss.org/browse/JIRA-272
8357	JIRA-272	Hi [~NadirX], I prepared new workflow in JIRA, see attached image. Only change against original Git workflow is "New" status at the begining, which is used when issue is created. There are three transitions from this status: * "Hand Over to Development" to switch issue into Open status * "Resolve issue" as common from other states * "Close issue" as common from other states Once I switch ISPN project to use this WF then new issues start to flow into "New" status. Old issues will stay in current statuses. Do you have some preferred time when I should switch ISPN project to this new WF so you can test new WF immediately?	1	1	https://issues.jboss.org/browse/JIRA-272
8358	JIRA-269	Vlasta, could you please also enable Epics for RF, RFSBOX and RFPL projects?	1	1	https://issues.jboss.org/browse/JIRA-269
8359	JIRA-269	Hi, RF and RFSBOX has been switched. But RFPL do not use Git workflow currently. It uses "JBoss Platforms Support Case Workflow v1" scheme which defines some special workflow for "Support Patch" issue type and common jira workflow for other issue types. Are you sure we can switch it to Git workflow?	1	1	https://issues.jboss.org/browse/JIRA-269
8360	JIRA-269	Hi bq. I can't create Epic for RF, RFPL or RFSBOX. What do you do to create Epic? I think there was some change in GreenHopper in this area. Do you follow this process? https://confluence.atlassian.com/display/GH/Creating+an+Epic bq. On the other hand, I see "Support Patch" type of issue in ARQGRA. ARQGRA project uses "Default Issue Type Scheme" which contains all issue types available in JIRA. I can switch it to some other issue types scheme with less types. Here on bottom right I can see which types you use in ARQGRA - https://issues.jboss.org/browse/ARQGRA#selectedTab=com.atlassian.jira.plugin.system.project%3Aissues-panel There is not suitable type scheme for now, but I can create it for you. Are you OK with this?	1	1	https://issues.jboss.org/browse/JIRA-269
8361	JIRA-267	It's possible to create it, but which project need this? There are many Notification schemes in our jira, many of them are clones for distinct projects due emailing to lists. So add this to all projects? And which notifications send to this role, all, only issues related, or work and worklog related too?	1	1	https://issues.jboss.org/browse/JIRA-267
8362	JIRA-267	I had the JBBUILD project in mind specifically, but I think this should be available to all projects. Is there a default "subscribers" role that come with jira? This role should email members when new issues are created, new comments are added, issues are closed, projects are released, etc. Basically any changes to the issues of that project should send a notification to the members of that role.	1	1	https://issues.jboss.org/browse/JIRA-267
8363	JIRA-267	59 sounds like a lot of different notification schemes, I bet a lot of them are very similar, can they be consolidated? So how do I use the notification scheme in JBBUILD? I only see 4 possible roles to add myself to "Administrators", "Developers", "Private Reviewers", "Users". "Private Reviewers" should be removed because it doesn't seem to apply to this project. What is the difference between "Developers" and "Users"?	1	1	https://issues.jboss.org/browse/JIRA-267
8364	JIRA-261	Hi Xavier. Last build date is not part of 'project info' returned from jenkins server REST call. http://hudson.jboss.org/hudson/job/as7-master-build/api/json Only way to obtain it is to do subsequent REST call to the jenkins server to get build details. http://hudson.jboss.org/hudson/job/as7-master-build/16181/api/json Are you interested to add date/time only for "last build", or for "Last successful build" and "Last stable build" also?	1	1	https://issues.jboss.org/browse/JIRA-261
8365	JIRA-251	It is possible to update Target Release field if release ack flag is empty or "-", or always by user with project role "CDW PM". Solution we should implement is to reset Target Release (and all acks) field during clone, hopefully it will not collide with other clone use cases, I'm not sure if and how other teams use it. WDYT? [~jpallich] [~atangrin] any comments on this?	1	1	https://issues.jboss.org/browse/JIRA-251
8366	JIRA-220	Any chance of an update on this - is it going to be done at some stage / at all / never ?	1	1	https://issues.jboss.org/browse/JIRA-220
8367	JIRA-219	I agree that it is not a good idea to automatically apply that change to all projects. Thanks for your help. Heiko	1	1	https://issues.jboss.org/browse/JIRA-219
8368	JIRA-217	Hi Pete, should you elaborate a bit how "default QE assignee" should work? Assign "component QE lead" to the Tester field only when new issue is created with filled component? Or even later when component is set first time?	0	0	https://issues.jboss.org/browse/JIRA-217
8369	JIRA-209	Hi [~velias] / [~rrajesh] - can we get some feedback on this? What do we need to do to push this forward? Thanks.	1	1	https://issues.jboss.org/browse/JIRA-209
8370	JIRA-209	good points. can you elaborate the "see multiple sprints on the one screen" - you mean the backlog view ? since for now I just have a backlog that queries everything and thus I can see it all show up.	1	0	https://issues.jboss.org/browse/JIRA-209
8371	JIRA-207	+1 for changing CSS for all PR links (in the jira field and also in the body of all comments) to reflect status. Would it not be better to know which are merged (strikethrough) vs. closed (greyed out) vs. merged AND closed (strikethrough and greyed out)? What about when the PR's topic branch has been deleted?	0	0	https://issues.jboss.org/browse/JIRA-207

#	Requirement	Questions	Answered	Successfully Answered	URL
8372	JIRA-207	Is anybody able to help me prepare javascript function for this feature? I can embed it into JIRA then. Specification of JS is: * use jQuery or plain JS only * one javascript function which accepts {{id}} of hrml {{span}} element. Then it should: ** take whole content of this span ** check if it is an url of github pull request, if yes then ** do REST call to github API to get status of PR ** add necessary style to the input span to strike it if PR is closed already It will help me a lot to bring this feature to JIRA if anybody is able to prepare this JS. Thanks in advance.	0	0	https://issues.jboss.org/browse/JIRA-207
8373	JIRA-202	Hi Ondrej, some products are migrated to bugzilla for some time. Do you know if this kind of patterns is really used in jira, so is worth to implement this feature?	1	1	https://issues.jboss.org/browse/JIRA-202
8374	JIRA-201	"is related to by" sounds really clunky I also agree that the "was cloned *" is better as "cloned *" due to fewer words	1	1	https://issues.jboss.org/browse/JIRA-201
8375	JIRA-201	In terms of trimming the sentence length, I don't think you ever see the wording on a Jira issue exactly like "foo is blocked by bar". For example, there is a "Issue links" section in this particular Jira. As you can see ORG-2283 is not actually present within the "sentence". Also, I do agree that "relates to" does not imply directionality, therefore should it be allowed on either side as if you look at a bug and it says "A relates to B" a casual observer can't necessarily infer the direction from the wording present on the actual Jira. How about "relevant to"/"is relevant to"?	0	0	https://issues.jboss.org/browse/JIRA-201
8376	JIRA-198	There is one small problem in "Seam Workflow" workflow - "Pull Request Closed" step leaves "Resolution" on bad value "Unresolved". Compared to standard "Resolve Issue" step it has no screen assigned. So solution is to assign standard "Resolve Issue Screen" screen to this step. I tested it on STAGING and seems OK. What do you mean Dan, may I add this to PROD too? Second thing we need to solve if we want reuse this workflow is to map "Git Pull Request" field to other projects, because now seems to be mapped only in "Seam Field Configuration". So we need to enable it in "Default Field Configuration" too.	1	1	https://issues.jboss.org/browse/JIRA-198
8377	JIRA-198	bq. So solution is to assign standard "Resolve Issue Screen" screen to this step. I tested it on STAGING and seems OK. What do you mean Dan, may I add this to PROD too? Go for it. bq. So we need to enable it in "Default Field Configuration" too. And we also need to modify configuration for "Git Pull Request" custom field to allow it for new projects. I had the permissions limited in scope for the purpose of prototyping. Now that we are moving forward with it, you can open it up to other projects. bq. I also noticed that "Seam Workflow Scheme" assigns "Seam Workflow" to only small subset of issue types I excluded the other issue types because frankly, I don't know why we have them. They just confuse people. The less issue types there are, the better, IMHO. bq. Dan can migrate Seam projects to this updated workflows if want That sounds like the best approach.	1	1	https://issues.jboss.org/browse/JIRA-198
8378	JIRA-181	Problem with using issue status for "need feedback" is that you may need feedback/info from some person in nearly any phase of issue processing, which means you have to be able to switch to this status from nearly all other statuses (excluding resolved and closed). But there is a problem then how to switch issue back to the relevant status after feedback/info is provided. We have "NeedInfo" field present in our jira instance, which is 'user multiselect' type. It is not clearly described how to use it, but I believe it is used to name users you want info from. It is enabled only for some screens for now (only CDW screens), I can enable it for other screens/projects also if you think it may help you. WDYT?	1	1	https://issues.jboss.org/browse/JIRA-181
8379	JIRA-158	Hi David, I just found this plugin which can solve notification requirements partially https://marketplace.atlassian.com/plugins/com.riadalabs.jira.plugins.notificationassistant Limitations: - only JIRA administrator can configure notification emails sending, not Project Admin (which is organizational limitation only) - notification emails can be send to Assignee or defined email address only - I can try to communicate with plugin author to add more flexibility here What do you think?	1	1	https://issues.jboss.org/browse/JIRA-158
8380	JIRA-158	Hi David, notification assistant plugin is deployed on production jira server now. Should you specify which projects do you want to configure for "deadline" related notifications you requested by this issue please? I do not want to configure this notifications for all projects for now. I plan to announce this new feature to the community in near future to ask other projects leads if they want this or another type of notification for their projects.	1	1	https://issues.jboss.org/browse/JIRA-158
8381	JIRA-140	Hi Xavier, I'm not sure if I understand your request correctly. Do you want these fields to be added to issue detail page even if they are not filled in? It is not possible to configure this, JIRA simply shows only fields with some value at issue detail page. You have to use Edit page to add value, and field is shown on issue detail page then. If you have problem with too much fields on Edit Issue page then you can simply use "Configure Fields" > "Custom" option on top right of the Edit page and filter out fields you never use. We should try to somehow improve order of fields on Edit issue page, or we should try to organize them a bit better by use of Tabs, but it is a bit problematic as different projects and products have very different requirements in this area.	1	1	https://issues.jboss.org/browse/JIRA-140
8382	JIRA-140	we got Epic moved up in past, can't we just move Sprint up just under it ?	1	1	https://issues.jboss.org/browse/JIRA-140
8383	JIRA-135	How can I get notified on the 'Elastic Data Grid' component in the 'JBoss Enterprise Application Platform' (JBPAPP) project? I guess I have no permission to add myself to the recipient list.	1	1	https://issues.jboss.org/browse/JIRA-135
8384	JANDEX-23	Is it acceptable that it would be limited to declaring types? Methods/Classes/Fields etc	1	1	https://issues.jboss.org/browse/JANDEX-23
8385	JANDEX-23	If you had the full line number table is that better? What would you be able to do with it? For example, it could tell you that a local variable "i" was located at bytecode offset X, which was declared in method Foo. However, in the use case of error reporting, how would you know to look for "i"?	1	1	https://issues.jboss.org/browse/JANDEX-23
8386	JANDEX-22	[~jason.greene] Any update on this? If you give me any hint how to implement it reliably I can try to make some progress. Anyway, what's the Fix Version for this issue? 1.2.0.Beta2 obviously not...	1	1	https://issues.jboss.org/browse/JANDEX-22
8387	JANDEX-4	Thanks for the patch! I made some additional changes around close handling as a zip file is not always used. Can you retest the latest master and reopen if needed? Thanks	1	1	https://issues.jboss.org/browse/JANDEX-4
8388	JANDEX-1	Awesome, could you deploy a new release or at least a SNAPSHOT?	0	0	https://issues.jboss.org/browse/JANDEX-1

#	Requirement	Questions	Answered	Successfully Answered	URL
8389	JASSIST-257	Thanks for your reactivity ! It's better but now i get this : java.lang.UnsupportedClassVersionError: javassist/CtClass : Unsupported major.minor version 52.0 at java.lang.ClassLoader.defineClass1(Native Method) at java.lang.ClassLoader.defineClassCond(ClassLoader.java:631) at java.lang.ClassLoader.defineClass(ClassLoader.java:615) at java.security.SecureClassLoader.defineClass(SecureClassLoader.java:141) at java.net.URLClassLoader.defineClass(URLClassLoader.java:283) at java.net.URLClassLoader.access$000(URLClassLoader.java:58) at java.net.URLClassLoader$1.run(URLClassLoader.java:197) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:247) at com.meilleuregestion.instrumentation.Transformer.transform(Transformer.java:33) at sun.instrument.TransformerManager.transform(TransformerManager.java:169) at sun.instrument.InstrumentationImpl.transform(InstrumentationImpl.java:365) at java.lang.ClassLoader.defineClass1(Native Method) at java.lang.ClassLoader.defineClassCond(ClassLoader.java:631) at java.lang.ClassLoader.defineClass(ClassLoader.java:615) at java.security.SecureClassLoader.defineClass(SecureClassLoader.java:141) at org.apache.catalina.loader.WebappClassLoader.findClassInternal(WebappClassLoader.java:2895) at org.apache.catalina.loader.WebappClassLoader.findClass(WebappClassLoader.java:1173)	0	0	https://issues.jboss.org/browse/JASSIST-257
8390	JASSIST-198	The Exception is : Exception in thread "main" javassist.CannotCompileException: [source error] ; is missing Caused by: compile error: ; is missing	0	0	https://issues.jboss.org/browse/JASSIST-198
8391	JASSIST-197	It's not clear what you want. Can you show an example?	1	1	https://issues.jboss.org/browse/JASSIST-197
8392	JASSIST-197	Has a way of doing this been implemented yet?	0	0	https://issues.jboss.org/browse/JASSIST-197
8393	JASSIST-197	Is there any progress on this yet?	0	0	https://issues.jboss.org/browse/JASSIST-197
8394	JASSIST-163	I am happy to fix the above and submit a patch, but need a little help making sense of ProxyFactory.makeForwarder as I am not well-versed in bytecode directives. Ideally, could someone provide a plain java or pseudo-code translation of bytecode being generated in makeForwarder - i can't quite understand what that method is doing? Specifically, what is the value of Method[] methods when find2Methods is invoked (indirectly) from makeForwarder...	1	1	https://issues.jboss.org/browse/JASSIST-163
8395	JASSIST-163	Nikita, Your patch looks good but filling Method[] eagerly may cause unnecessary memory consumption and initialization overheads. I think the real problem is a jumbo lock. So what about modifying find2Methods() as following: {code} public static void find2Methods(Object self, String superMethod, String thisMethod, int index, String desc, java.lang.reflect.Method[] methods) { // synchronized (methods) { // if (methods[index] == null) { // methods[index + 1] = thisMethod == null ? null // : findMethod(self, thisMethod, desc); // methods[index] = findSuperMethod(self, superMethod, desc); // } // } if (methods[index] == null) { Method m1 = thisMethod == null ? null : findMethod(self, thisMethod, desc); Method m0 = findSuperMethod(self, superMethod, desc); synchronized (methods) { if (methods[index] == null) { methods[index + 1] = m1; methods[index] = m0; } } } } {code} Could you check this fix also removes performance hotspot? Thanks!	1	1	https://issues.jboss.org/browse/JASSIST-163
8396	JASSIST-163	The above change doesn't look safe, since other threads would be reading methods[index] without synchronizing (methods[index] might contain non-null but methods[index+1] could be null). Would it be easier to use a different datastructure instead for holding the pair of methods? Does the Methods[] methods array need to be longer than two elements or is it always sized for two?	1	1	https://issues.jboss.org/browse/JASSIST-163
8397	JASSIST-163	I agree that it's not easy to make sure of the correctness of the code above. In this sense, the code is not very good. However, since methods[even-number] is always set after methods[odd-number], if methods[index] is non null, methods[index + 1] is also non-null. (I suppose that the JVM's memory model guarantees this fact.) Furthermore, the values of m0 and m1 are always the same no matter which thread computes them. Am I correct?	1	1	https://issues.jboss.org/browse/JASSIST-163
8398	JASSIST-163	How are the elements in methods sort of final fields? I think that final fields have to be initialized during the referencing class constructor or class static initializer. Your change looks good to me. I'll paste the additional lines (from your change) below for others to also review. {code} /** * Finds two methods specified by the parameters and stores them * into the given array. * * @throws RuntimeException if the methods are not found. * @see javassist.util.proxy.ProxyFactory */ public static void find2Methods(Object self, String superMethod, String thisMethod, int index, String desc, java.lang.reflect.Method[] methods) { /* Once methods[index] and methods[index + 1] are set to non-null, * then their values never change. */ if (methods[index] == null || methods[index + 1] == null) { Method m1 = thisMethod == null ? null : findMethod(self, thisMethod, desc); Method m0 = findSuperMethod(self, superMethod, desc); synchronized (methods) { if (methods[index] == null) { methods[index + 1] = m1; methods[index] = m0; } } } } {code} If a another thread attempts to read methods[index] or methods[index+1], they will either see one of the fields set to null or both fields initialized. If either field is null, the thread will synchronize on methods and then only set both fields if they are still null.	1	1	https://issues.jboss.org/browse/JASSIST-163
8399	JASSIST-163	Thanks for your comment. As for "sort of final fields", I mean, the elements of methods never change once they are set. My interpretation of the new code is the same as what you wrote above. But I am not sure that the Method object contained in methods[index] is up-to-date when methods[index] is non null. Is this guaranteed by the memory model? Since a reader thread may not synchronize before reading methods[index], it may see that methods[index] is non null but the Method object in methods[index] contains older values than the ones visible to the writer thread, which sets methods[index]. Any advice?	1	1	https://issues.jboss.org/browse/JASSIST-163
8400	JASSIST-163	Hi Nikita, > as typically all properties of a proxied class are proxied, and, over the lifecycle of JVM, will be invoked. Is this true in general? Not only in your particular use-cases?	1	1	https://issues.jboss.org/browse/JASSIST-163

#	Requirement	Questions	Answered	Successfully Answered	URL
8401	JASSIST-163	{quote} My interpretation of the new code is the same as what you wrote above. But I am not sure that the Method object contained in methods[index] is up-to-date when methods[index] is non null. Is this guaranteed by the memory model? Since a reader thread may not synchronize before reading methods[index], it may see that methods[index] is non null but the Method object in methods[index] contains older values than the ones visible to the writer thread, which sets methods[index]. {quote} The Method object probably came from Class.getDeclaredMethods() or maybe Class.getDeclaredMethod(). Since those calls are thread safe, the entire Method object contents should be in main working memory. {quote} Count me biased, but I maintain the approach of eagerly initializing static methods[] - submitted above is most practical: {quote} Would it be possible to support both lazy and eager initialization?	1	1	https://issues.jboss.org/browse/JASSIST-163
8402	JASSIST-163	bq. The Method object probably came from Class.getDeclaredMethods() or maybe Class.getDeclaredMethod(). Since those calls are thread safe, the entire Method object contents should be in main working memory. Yes, but being thread safe means that a thread doing synchronization (or accessing a volatile field) can safely use the method according to the memory model of the JVM. The memory model does not guarantee anything about a thread doing no synchronization. Is this correct? We can expect that some thread safety is preserved on real hardware for such a thread that does no synchronization, though. bq. Would it be possible to support both lazy and eager initialization? This is a good idea.	1	1	https://issues.jboss.org/browse/JASSIST-163
8403	JASSIST-163	Good to hear that "eager initialization" is a good idea. :) Is anyone working on adding eager initialization?	1	1	https://issues.jboss.org/browse/JASSIST-163
8404	JASSIST-163	There were a couple of commits, prior to most of the discussion here. What was the resolution? Can this be re-opened?	1	1	https://issues.jboss.org/browse/JASSIST-163
8405	JASSIST-163	I planed the GA release early this week but a problem was found in JASSIST-160. The released date will be late this week or early next week. However, the current snapshot does not contain the code for "eager" initialization. Can I extend the release date to merge the code?	1	1	https://issues.jboss.org/browse/JASSIST-163
8406	JASSIST-163	I thought that you were going to leave lazy initialization in and also add eager initialization. So, that existing code could continue to run as it used to (with lazy initialization) and with code changes, applications could switch to eager initialization. Is that possible?	1	1	https://issues.jboss.org/browse/JASSIST-163
8407	JASSIST-163	This is a bug of org.hibernate.bytecode.internal.javassist.BulkAccessorFactory.java (Javassist is no guilty!) I wrote a fix but I haven't tested it yet. Can you check BulkAccessorFactory.java.diff?	1	1	https://issues.jboss.org/browse/JASSIST-163
8408	JASSIST-163	I have updated the diff file. Could you try BulkAccessorFactory.java.diff2?	1	1	https://issues.jboss.org/browse/JASSIST-163
8409	JASSIST-163	Would it be possible to also have a release that targets Java 6? The 3.17.0-GA release appears to target Java 7.	1	1	https://issues.jboss.org/browse/JASSIST-163
8410	JASSIST-163	I see. So, which kind of binary do you think we should upload to maven, Java 6 or 7? I'm not an expert of maven...	0	0	https://issues.jboss.org/browse/JASSIST-163
8411	JASSIST-163	Is there a reason that the source and target were changed to 1.7 in the following changeset?: https://source.jboss.org/changelog/Javassist?cs=678	0	0	https://issues.jboss.org/browse/JASSIST-163
8412	JASSIST-163	I'm not sure why, but only when we are using 3.17.1, we experience a new Hibernate test regression https://hibernate.onjira.com/browse/HHH-7850. The generated test class disassembled is here http://pastie.org/5494599 and failure exception is here http://pastie.org/5494609 It seems obvious to me that we need to fix this in the Hibernate [BulkAccessorFactory|https://github.com/hibernate/hibernate-orm/blob/4.1/hibernate-core/src/main/java/org/hibernate/bytecode/internal/javassist/BulkAccessorFactory.java] class by generating the StackMapTable (as mentioned in the comments of the above jira). Why do we need to change BulkAccessorFactory with Javassist 3.17.1 but not 3.15.0?	1	1	https://issues.jboss.org/browse/JASSIST-163
8413	JASSIST-150	This is a worst case. It will however illustrate the problem. Running this takes 32s per test on my machine. Running it will a small set of changes to the code and it takes only 0.32s.	1	1	https://issues.jboss.org/browse/JASSIST-150
8414	JASSIST-150	Oh, does your patch improve the speed?	1	1	https://issues.jboss.org/browse/JASSIST-150
8415	JASSIST-150	Because Bruce's patch changes the behavior of ClassPool and the change affects all the behavior of the whole Javassist, I have modified only the compiler with the same idea. Bruce, can you kindly check this fix with your own junit tests? I will release a new version within several days. Thanks.	1	1	https://issues.jboss.org/browse/JASSIST-150
8416	JASSIST-150	Hello, I just checked out trunk (rev 626) and 'mvn clean install' periodically fails testJIRA150b (seemingly 9 out of 10 times). Is that expected? {noformat} ---------- ---------- Test set: javassist.JvstTest ---------- ---------- Tests run: 295, Failures: 1, Errors: 0, Skipped: 0, Time elapsed: 6.902 sec <<< FAILURE! testJIRA150b(javassist.JvstTest4) Time elapsed: 1.807 sec <<< FAILURE! junit.framework.AssertionFailedError at junit.framework.Assert.fail(Assert.java:47) at junit.framework.Assert.assertTrue(Assert.java:20) at junit.framework.Assert.assertTrue(Assert.java:27) at javassist.JvstTest4.testJIRA150b(JvstTest4.java:688) {noformat}	1	0	https://issues.jboss.org/browse/JASSIST-150
8417	JASSIST-150	The results really depends on your machine. What machine are you using to run the test? Maybe I should remove this performance test?	0	0	https://issues.jboss.org/browse/JASSIST-150
8418	JASSIST-144	I think I found a solution. I introduced Proxy, a super interface of ProxyObject. Proxy only provides setHandler(). Then I modified Javassist so that a proxy object will implement the Proxy interface instead of ProxyObject *if* the original object (= the super class of the proxy) has getHandler(). If not, a proxy object will implement ProxyObject and getHandler() as before. This implies slight API incompatibility but its impacts would be minimized. Can anyone check Hibernate with the latest snapshot of Javassist?	1	1	https://issues.jboss.org/browse/JASSIST-144
8419	JASSIST-144	Shigeru, sorry I missed the earlier notifications... I am not following what the expected fix is here. As I understand it, the proxy object still requires a method setHandler to inject the Javassist handler object. If the class being proxied also defines a setHandler method we still have this problem. What am I missing?	1	0	https://issues.jboss.org/browse/JASSIST-144
8420	JASSIST-134	The releases from 3.9 to 3.12 were supposed to be copied from the JBoss repo over to the Sonatype repo and, from there, to Maven Central when we started publishing to Sonatype in August. However, this appears not to have happened. I'll check with the Sonatype admins to see if this was just forgotten about or if there was a problem which meant they could not be copied. In the latter case the only options are either to obtain them from the JBoss public repo or to upgrade to the versions which are in Maven Central (3.13 and 3.14). Note that the shift to Sonatype/Maven Central required changing the groupid from javassist to org.javassist.	0	0	https://issues.jboss.org/browse/JASSIST-134
8421	JASSIST-126	What is the status of this request?	0	0	https://issues.jboss.org/browse/JASSIST-126
8422	JASSIST-126	The bundle information is not in the manifest of the the 3.16.1-GA jar on maven central. Interestingly, the POM inside this jar has the maven-bundle-plugin configuration but it does not appear to have been executed? Is there another version I need to pick up with the OSGi bundle information? If not, can you roll a new release with this bundle information in the Manifest?	0	0	https://issues.jboss.org/browse/JASSIST-126
8423	JASSIST-126	Is there an ETA for 3.17.0? I'm running into the same issue. :(	1	0	https://issues.jboss.org/browse/JASSIST-126

#	Requirement	Questions	Answered	Successfully Answered	URL
8424	JASSIST-96	I am also happy to publish Javassist to Maven central. As for b), how do I do that? Is just sending an email to Pete enough?	1	1	https://issues.jboss.org/browse/JASSIST-96
8425	JASSIST-96	Andrew/Chiba, we've been asked to not use javassist as the group id, but instead use a qualfied name. For example, org.jboss.javassist. WDYT about that?	0	0	https://issues.jboss.org/browse/JASSIST-96
8426	JASSIST-64	You can choose either Javassist or ASM for Hibernate EntityManager. So if you choose Javassist (and turn ASM off) for Hibernate, you should be able to use ASM 3.1 for Jersey without any problems.	1	1	https://issues.jboss.org/browse/JASSIST-64
8427	JASSIST-62	Hi Chiba, Have you had a chance to think about this one yet? Will $type be available in insertBefore in the future? Best regards, Yanic	1	1	https://issues.jboss.org/browse/JASSIST-62
8428	JASSIST-62	I updated insertBefore() so that $type will be available. However, why do you need $type? CtMethod.getReturnType() returns the return type. You can use this to change the source code give to insertBefore().	1	1	https://issues.jboss.org/browse/JASSIST-62
8429	JASSIST-48	Do we really need such a fine grained type hierarchy?	0	0	https://issues.jboss.org/browse/JASSIST-48
8430	JASSIST-20	This problem is that a ObjectInputStream must recreate a proxy class when it deserializes a proxy object originally created by Javassist. ObjectInputStream deals with a proxy class by the Reflection API in a special way and I could not find a trick to add a similar thing for Javassist's proxies to ObjectInputStream. Is there anybody who knows how?	1	1	https://issues.jboss.org/browse/JASSIST-20

8432	JBERET-274	Q: Some JDK APIs have disappeared… where did they go? There are two major factors which contribute to the presence of JDK APIs. The first factor is related to dependency resolution: if you are running a JDK module which does not depend on the API in question, it will not "see" it and will fail. The second factor is more complicated. Java 9 does not make all modules available by default. Certain modules, while bundled with the JDK, cannot be loaded unless a command-line argument is given to make the module available. The argument is "--add-modules module.name". The list of module names which must be added in this way is as follows: java.activation java.annotations.common java.corba java.transaction java.xml.bind java.xml.ws These modules may be upgraded with replacements by adding Jigsaw-style modular JARs to --upgrade-module-path. References http://mail.openjdk.java.net/pipermail/jigsaw-dev/2016-April/007209.html	1	1	https://issues.jboss.org/browse/JBERET-274
8433	JBERET-263	Thanks for your comments. I didn't test the CLI after the WFLY-7000 being fixed. I'll try tomorrow. I didn't totally understand the James Perkins' comment about ArchiveXmlLoader? Is there anything I can do?	1	1	https://issues.jboss.org/browse/JBERET-263
8434	JBERET-263	How do you run your integration tests? Do they start-up WildFly then just deploy the application and hit some endpoints? In your WAR, how do you start batch deployments? If you can, could you post your implementation of {{org.jberet.spi.JobXmlResolver}}? My test one was pretty basic, though maybe using JBoss Modules a better one could be implemented. {code:java} public class BatchXmlResolver implements JobXmlResolver { @Override public InputStream resolveJobXml(final String jobXml, final ClassLoader classLoader) throws IOException { return BatchXmlResolver.class.getResourceAsStream("/" + JobXmlResolver.DEFAULT_PATH + jobXml); } @Override public Collection<String> getJobXmlNames(final ClassLoader classLoader) { return Collections.singleton("simple-module.xml"); } @Override public String resolveJobName(final String jobXml, final ClassLoader classLoader) { return "simple-module"; } } {code}	1	1	https://issues.jboss.org/browse/JBERET-263

#	Requirement	Questions	Answered	Successfully Answered	URL
8435	JBERET-263	{quote} How do you run your integration tests? Do they start-up WildFly then just deploy the application and hit some endpoints? {quote} I've a Maven module called {{integration-test}} and all the integration tests related to WildFly are written in this Maven module. Yes, the [Maven Module "integrationtest" starts up the WildFly server | https://github.com/mincong-h/gsoc-hsearch/blob/JBERET-263/integrationtest/wildfly/pom.xml#L153-L160]. Once WF is started, arquillian deploys the integration test, e.g. [RestartIT.war | https://github.com/mincong-h/gsoc-hsearch/blob/JBERET-263/integrationtest/wildfly/src/test/java/org/hibernate/search/jsr352/RestartIT.java] to this managed container. Once every integration test is finished, the server will be stopped. {quote} In your WAR, how do you start batch deployments? {quote} The batch job {{massIndex}} is not part of the WAR deployment, it was installed previously by a Maven module called [{{module}} | https://github.com/mincong-h/gsoc-hsearch/tree/JBERET-263/modules]. Then the WAR deployment for integration test looks up this batch job {{massIndex}} inside the installed module. {quote} If you can, could you post your implementation of {{org.jberet.spi.JobXmlResolver}}? {quote} I don't have my own implementation of JobXmlResolver, instead, I used {{org.jberet.tools.MetaInfBatchJobsJobXmlResolver}} in my core module, you can check [here | https://github.com/mincong-h/gsoc-hsearch/blob/JBERET-263/core/src/main/resources/META-INF/services/org.jberet.spi.JobXmlResolver]: {code:title=core/src/main/resources/META-INF/services/org.jberet.spi.JobXmlResolver} org.jberet.tools.MetaInfBatchJobsJobXmlResolver {code} By the way, do I also need to implement the SPI for the integration tests? I didn't do that. I don't fully understand how your attachment {{ModuleBatchXmlResolver.java}}, but I got the idea. h4. Clarification about this issue Actually, my main question is how to start a batch job installed in a module using the CLI directly? There should have no requirement on deployment. Since the job belongs to a module but not a deployment, user should be able to start it any time using CLI or GUI without deployment. Is it possible with JSR 352? The scenario could be system maintenance plans (back up, clean up) or indexing recent inserted entities for search feature (what I'm doing). These can be scheduled at any off-hour but also be launched by the user manually using CLI / GUI.	1	1	https://issues.jboss.org/browse/JBERET-263
8436	JBERET-263	{quote} Actually, my main question is how to start a batch job installed in a module using the CLI directly? There should have no requirement on deployment. Since the job belongs to a module but not a deployment, user should be able to start it any time using CLI or GUI without deployment. Is it possible with JSR 352? The scenario could be system maintenance plans (back up, clean up) or indexing recent inserted entities for search feature (what I'm doing). These can be scheduled at any off-hour but also be launched by the user manually using CLI / GUI. {quote} The Java EE specifications are based around deployments. There is no generalized specification for CLI or management operations that would start a batch job. Modules are not scanned to see if they are some kind of EE module. In fact there is no concept of an EE module in terms of a JBoss Module. It's not only a JSR 352 issue. CDI won't generally work in a module neither with JPA. The resources can't be injected without having the context of a deployment. This means that batch jobs in a module will require a deployment just as CDI or JPA will. Consider an {{EntityManagerFactory}}. It is created explicitly for a deployment and can't be shared across other deployments.	1	1	https://issues.jboss.org/browse/JBERET-263
8437	JBERET-209	consumer config: http://kafka.apache.org/090/javadoc/org/apache/kafka/clients/consumer/ConsumerConfig.html producer config: http://kafka.apache.org/090/javadoc/org/apache/kafka/clients/producer/ProducerConfig.html both Kafka consumer and producer have long list of config properties. How to pass them to batch ItemReader and ItemWriter? We can consider the following options: * one config property corresponds to one @Inject @BatchProperty field in ItemReader or ItemWriter class. ** Pro: easy to see all config properties ** Con: when Kafka adds, removes, or changes config properties in the future, we will need to change ItemReader or ItemWriter classes ** Con: too many @BatchProperty injections * have a single @Inject @BatchProperty configPropertiesFile; and have the application create a properties file to hold all config properties. ** Pro: @BatchProperty can be the same for both ItemReader and ItemWriter classes; any future changes in Kafka config properties does not affect batch injection properties; ** Con: these Kafka properties reside in a separate file from the main job.xml file * use CDI to inject a java.util.Properties instance ** Pro: flexible ** Con: users need to write a CDI producer method * mix of the above 3 options.	0	0	https://issues.jboss.org/browse/JBERET-209
8438	JBERET-209	Looks like Kafka 0.8.2.2 server doesn't work with 0.9.0 client. Got the following exception: {code} java.lang.AssertionError: assertion failed: Version 2 is invalid for OffsetCommitRequest. Valid versions are 0 or 1. at scala.Predef$.assert(Predef.scala:179) at kafka.api.OffsetCommitRequest$.readFrom(OffsetCommitRequest.scala:35) at kafka.api.RequestKeys$$anonfun$9.apply(RequestKeys.scala:47) at kafka.api.RequestKeys$$anonfun$9.apply(RequestKeys.scala:47) at kafka.network.RequestChannel$Request.<init>(RequestChannel.scala:50) at kafka.network.Processor.read(SocketServer.scala:450) at kafka.network.Processor.run(SocketServer.scala:340) at java.lang.Thread.run(Thread.java:745) {code}	0	0	https://issues.jboss.org/browse/JBERET-209
8439	JBERET-173	Can you give more details about your use case, just to help us better understand your requirement? What is the error when trying to include batchee cdi scopes?	1	1	https://issues.jboss.org/browse/JBERET-173
8440	JBERET-139	Are there any vulnerable situation of loading job XMLs that created by a remote or malicious user? Of course I know security is important than gaining little convenience so probably we should go the opposite direction that stop setting XMLResolver and invoke xmlInputFactory.setProperty(XMLInputFactory.SUPPORT_DTD, false); . it's safest and reasonable way. I think the best solution is making configurable (enable/disable) that feature via subsystem configuration (standalone.xml or something) but it might be too much.	0	0	https://issues.jboss.org/browse/JBERET-139
8441	ENTMQ-1694	I pushed a unit test that demonstrates a way to get this to work. The idea is to configure a static bridge with dynamicOnly=false and use the BrokerAdminView (JMX) to create a durable sub on the local or forwarding broker. On a restart/recycle of the networkConnector, because dynamicOnly=false it will search in the message store for durable subs that match it "well known" clientId and sub prefix and will start forwarding them. Note: this bridge does no dynamic forwarding, so it does not listen for advisory messages at all. the staticBridge=true attribute. https://github.com/apache/activemq/commit/3c0a4d960ee99483c9160d0b6b80c27abd8f3319	0	0	https://issues.jboss.org/browse/ENTMQ-1694
8442	ENTMQ-1498	the activemq-osgi bundle has a javax.jms [1.1,3] import - so can work with either jms 1.1 or jms 2	0	0	https://issues.jboss.org/browse/ENTMQ-1498
8443	ENTMQ-1309	Is it documentation bug, or this attribute should work?	0	0	https://issues.jboss.org/browse/ENTMQ-1309
8444	ENTMQ-1093	Hi Gary, What do we need to set on configuration side? <virtualDestinations> <virtualTopic name=">" ... concurrentSend="true" Is " use implicit broker transaction for virtual topic fanout a" done automatically? Sorry if I've mis-read anything, Susan	1	1	https://issues.jboss.org/browse/ENTMQ-1093

#	Requirement	Questions	Answered	Successfully Answered	URL
8445	ENTMQ-1093	Hi Gary, Thanks for the information. I ran a few quick tests just to make sure everything was in order on my side this time: <virtualTopic name="vt.>" prefix="vt.perfTest.>." selectorAware="false" concurrentSend="true"/> Is invalid in build 19 [1]. Looking at your unit test - it seems to be in the right place? [2] [1] {quote} Caused by: org.springframework.beans.NotWritablePropertyException: Invalid property 'concurrentSend' of bean class [org.apache.activemq.broker.region.virtual.VirtualTopic]: Bean property 'concurrentSend' is not writable or has an invalid setter method. Does the parameter type of the setter match the return type of the getter? {quote} Apologies if I am missing something obvious ... [2] https://fisheye6.atlassian.com/changelog/activemq-git?cs=340728f2d1eb4c1aa74f4002c5b16bf7a70c57b7	0	0	https://issues.jboss.org/browse/ENTMQ-1093
8446	ENTMQ-1043	The following seem to be current options for message group <-> consumer mapping within the broker: SimpleMessageGroupMap CachedMessageGroupMap MessageGroupHashBucket Documentation doesn't seem to exist on these. When should someone use one and not the other? What is default if nothing specified? If someone has use-case where can't guarantee clients will always close groups, and plan to have lots and lots of (unbounded) number of dynamically created groups, what then?	0	0	https://issues.jboss.org/browse/ENTMQ-1043
8447	ENTMQ-948	Hi, I don't have an access to this KB article. Can someone attach it to this issue or look at the privileges for dejan.bosanac user?	1	1	https://issues.jboss.org/browse/ENTMQ-948
8448	ENTMQ-866	Hi Bill, Are you able to leverage producer flow control for this or perhaps implement a camel throttler?	1	1	https://issues.jboss.org/browse/ENTMQ-866
8449	ENTMQ-866	Hi Susan, Should there be a JBAMQPL jira for this issue?	1	0	https://issues.jboss.org/browse/ENTMQ-866
8450	ENTMQ-866	Hi Bill, Please re-open with additional information if you still need this as per last comments. thanks, Susan	1	1	https://issues.jboss.org/browse/ENTMQ-866
8451	ENTMQ-835	Hi Pat, I just changed the text of that admonition to: {quote} *Important:* The LevelDB store is supported only on the Red Hat Enterprise Linux (RHEL) platform (for the RHEL versions and configurations specified in Supported Configurations). If you want to store the LevelDB files on a distributed file system, the following configuration is also supported: the broker itself and the LevelDB adapter plugin run on a supported RHEL platform, while the LevelDB files are stored on an NFSv4 file system (the O/S of the server that hosts the NFSv4 file system is irrelevant). Note that the distributed file system must be NFSv4. For all other JBoss A-MQ-supported platforms, the LevelDB store is provided for technical preview only. {quote} How does that sound? Cheers, Fintan	1	1	https://issues.jboss.org/browse/ENTMQ-835
8452	ENTMQ-829	that makes sense. guess it could also be an info level message rather than warn?	0	0	https://issues.jboss.org/browse/ENTMQ-829
8453	ENTMQ-795	Hi Gary, A quick follow up on the above as we noted "So CACHE_SESSION or CACHE_CONNECTION will work fine." from 23/Dec/14 7:34 AM. Is CACHE_SESSION really ok? {code} static int CACHE_AUTO Constant that indicates automatic choice of an appropriate caching level (depending on the transaction management strategy). static int CACHE_CONNECTION Constant that indicates to cache a shared JMS Connection. static int CACHE_CONSUMER Constant that indicates to cache a shared JMS Connection and a JMS Session for each listener thread, as well as a JMS MessageConsumer for each listener thread. static int CACHE_NONE Constant that indicates to cache no JMS resources at all. static int CACHE_SESSION Constant that indicates to cache a shared JMS Connection and a JMS Session for each listener thread. {code} I just wanted to double check as CACHE_CONNECTION and CACHE_NONE make sense to me here but perhaps CACHE_SESSION has a nuance to it.	0	0	https://issues.jboss.org/browse/ENTMQ-795
8454	ENTMQ-789	From the Salesforce reference, it appears that this issue is actually for 6.1, not 6.0 (which makes more sense, because AMQP was tech preview, not supported, in 6.0). So, I am going to change the 'Affects version/s' field to 6.1.	0	0	https://issues.jboss.org/browse/ENTMQ-789
8455	ENTMQ-731	Hello [~tabish121], supplying bad credentials will result in "Not authorized to connect (5)" instead of bad username or password (4). In the fuse 6.2 ER3 log it is clear that bad credentials will raise java.lang.SecurityException instead of javax.security.auth.login.CredentialException. {code} org.apache.activemq.activemq-osgi - 5.11.0.redhat-620099 | Failed to add Connection ID:avano-ThinkPad-T430s-59300-1430387201283-6:11 due to java.lang.SecurityException: User name [admin] or password is invalid. {code} As far as I see, there is no CredentialException used in the code. Could you please take a look? Thanks	1	1	https://issues.jboss.org/browse/ENTMQ-731
8456	ENTMQ-673	that is not good. the master should shutdown within the keepAlivePeriod if the lock file is deleted. Is the lockKeepAlivePeriod specified in configuration? {code}<kahaDB ... lockKeepAlivePeriod="100" />{code}	1	1	https://issues.jboss.org/browse/ENTMQ-673
8457	ENTMQ-673	Jakub/Gary: Does this mean that it will not be fixed for GA?	0	0	https://issues.jboss.org/browse/ENTMQ-673
8458	ENTMQ-673	What about some timeout before start of slave? E.g. When lock is deleted and slave grabs the lock it could first wait for period of time T (it would be holding the lock but waiting - leaving time for previous master to shutown). After that period T the slave would become master. Would it be possible? If T will be bigger than the biggest keepAlivePeriod of all brokers. Then It would eliminate having two brokers running and keepAlivePeriod could be larger number.	0	0	https://issues.jboss.org/browse/ENTMQ-673

8460	ENTMQ-544	Hi Jane - just finished the review - can you tell me where/from whom you received the examples? I may have found a couple of bugs in the DR2 build. ;-)	1	1	https://issues.jboss.org/browse/ENTMQ-544
8461	ENTMQ-527	Hi Fintan, The fix mentioned did not appear to make it into the docs. Could you have a look? Thanks Pat	1	1	https://issues.jboss.org/browse/ENTMQ-527
8462	ENTMQ-463	JBAMQPL-139 is created to track this request. Closing this issue.	0	0	https://issues.jboss.org/browse/ENTMQ-463
8463	ENTMQ-416	Do you plan to do another release at Apache before we ship A-MQ 6.1 so that this gets picked up in 6.1?	0	0	https://issues.jboss.org/browse/ENTMQ-416
8464	ENTMQ-406	Re-opening this case to further explore larger maxPageSizes. 1. Added some logic to AbstractStoreCursor to dump the time to doFillBatch in 5.8 patches branch: protected final synchronized void fillBatch() { //LOG.trace("{} - fillBatch", this); if (batchResetNeeded) { resetSize(); setMaxBatchSize(Math.min(regionDestination.getMaxPageSize(), size)); resetBatch(); this.batchResetNeeded = false; } if (this.batchList.isEmpty() && this.storeHasMessages && this.size >0) { try { long start = System.currentTimeMillis(); doFillBatch(); System.out.println(" **** doFillBatch completed in " + (System.currentTimeMillis()-start)); } catch (Exception e) { LOG.error(this + " - Failed to fill batch", e); throw new RuntimeException(e); } this.storeHasMessages = !this.batchList.isEmpty() || !hadSpace; } With a MPS of 1000, it's quick 300-500ms. With 10K MPS, it goes to about 18 seconds. My message size is 5KB. As these page loads are slower than smaller ones, can it block consumers from committing and working already loaded messages from the cursor? We can see with similar timestamps in consumer around session.commit that commit times degrade with larger MPS. Re-ran the original use case on 5.9 for this ticket and will add results shortly.	1	1	https://issues.jboss.org/browse/ENTMQ-406
8465	ENTMQ-364	This is an interesting request. A-MQ is a preconfigured instance of karaf. One way to approach this is to use a different karaf child instance for a different configuration - http://karaf.apache.org/manual/latest-2.3.x/users-guide/child-instances.html so replace etc/activemq.xml with custom xml for the child. An alternative, and closer to the request approach, may be to modify the precanned confit to use a system property to reference the xml config. currently in etc/org.fusesource.mq.fabric.server-default.cfg (the a-mq instance config file) we have:{code} broker-name=amq openwire-port=${activemq.port} standalone=true data=${karaf.data}/amq config=${karaf.base}/etc/activemq.xml{code} We could replace:{code}config=${karaf.base}/etc/activemq.xml{code} with: {code} config=${karaf.base}/etc/${amq-xml}{code} and have a default system property config for {code}amq-xml=activemq.xml{code} Then a user could do: $ cp ~/myCustomBroker.xml ${karaf.base}/etc $ amq -Damq-xml=myCustomBroker.xml How does something like that sit?	0	0	https://issues.jboss.org/browse/ENTMQ-364
8466	ENTMQ-347	Would your proposed workaround work with springbeans?	1	1	https://issues.jboss.org/browse/ENTMQ-347
8467	ENTMQ-311	Where can we get this documentation for JBoss-AM 6.1? Thanks.	1	0	https://issues.jboss.org/browse/ENTMQ-311
8468	ENTMQ-256	Is this still an issue for 6.1?	1	1	https://issues.jboss.org/browse/ENTMQ-256
8469	ENTMQ-251	Hi Freeman, in Fuse you should use mq-web-console (branded version of console) and I think it should use a proper admin/admin credentials by default. You can try using mq-web-console profile and see how it goes. I'd keep karaf/karaf in activemq-web-console as it's easier to install it in plain karaf. Can you try it out and let me know how it works.	0	0	https://issues.jboss.org/browse/ENTMQ-251
8470	ENTMQ-155	-015 has it in extras - may need to investigate reuse of the code in the mq-client bundle for examples - can the bundle be found when in extras?	0	0	https://issues.jboss.org/browse/ENTMQ-155
8471	ENTMQ-145	@Fintan - do you have something you can share?	0	0	https://issues.jboss.org/browse/ENTMQ-145
8472	ENTMQ-83	The enterprise product is not targeted at new users. There is the simple command line producer/consumer that allows a user to validate an install. see: https://fusesource.com/issues/browse/ENTMQ-27 Is there something particular that is missing or blocking a user from progressing?	0	0	https://issues.jboss.org/browse/ENTMQ-83

8473	ENTMQ-44	also add a warning not to close the shell unless they want to shut down the server?	1	0	https://issues.jboss.org/browse/ENTMQ-44
8474	ENTMQ-43	Update thread is a little eager, it can update the broker while it is starting, so causing a stop during start and ugly errors:{code} FuseMQ:karaf@root> java.lang.IllegalStateException: PageFile is not loaded at org.apache.kahadb.page.PageFile.assertLoaded(PageFile.java:809) at org.apache.kahadb.page.PageFile.tx(PageFile.java:303) at org.apache.activemq.store.kahadb.KahaDBStore.getDestinations(KahaDBStore.java:952) at org.apache.activemq.store.kahadb.KahaDBPersistenceAdapter.getDestinations(KahaDBPersistenceAdapter.java:125) at org.apache.activemq.broker.region.DestinationFactoryImpl.getDestinations(DestinationFactoryImpl.java:68) at org.apache.activemq.broker.BrokerService.startVirtualConsumerDestinations(BrokerService.java:2510) at org.apache.activemq.broker.BrokerService.startDestinations(BrokerService.java:2339) at org.apache.activemq.broker.BrokerService.doStartBroker(BrokerService.java:651) at org.apache.activemq.broker.BrokerService.startBroker(BrokerService.java:642) at org.apache.activemq.broker.BrokerService.start(BrokerService.java:578) at org.fusesource.mq.fabric.ActiveMQServiceFactory$ClusteredConfiguration$$anon$3.run(ActiveMQServiceFactory.scala:307) Exception in thread "Startup for ActiveMQ Broker: root" java.lang.NullPointerException at org.fusesource.mq.fabric.ActiveMQServiceFactory$ClusteredConfiguration$$anon$3.run(ActiveMQServiceFactory.scala:334){code}	0	0	https://issues.jboss.org/browse/ENTMQ-43
8475	ENTMQ-36	To support recovery of the broker, we need some additional xml configuration on the esb. I think this is preferable to doing it automatically in the broker pid service factory because the pool may want to be configured and different applications may wish to use different resource names. Currently the pid factory just exports a simple vm connection factory, no pooling of wrapping. It is also consistent with 4.x esb, save that the broker config is excluded. maybe in a file called: *xa.xml* (can it just be dropped into the etc directory?) {code} <!-- Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements. 8478	JBADMCON-170	Hi All, Can we have an update on this please. Thanks in Advance. Surendra	1	0	https://issues.jboss.org/browse/JBADMCON-170
8479	JBADMCON-168	Shouldn't this be logged in AS7 JIRA? I don't think this JIRA is used for the admin console in AS7.	0	0	https://issues.jboss.org/browse/JBADMCON-168
8480	JBADMCON-134	I ran into a problem updating the mbean attributes of the existing destinations. Taking queue/DLQ as an example. The mbean name defined in jbossmq-service.xml is: jboss.mq.destination:name=DLQ,service=Queue (name 1) but the name reported by jmx-console is: jboss.mq.destination:service=Queue,name=DLQ (name 2) In order to locate the mbean through DeploymentService, name 2 must be provided. But updating of the xml file failed because name 2 cannot be found in the xml file! The quick and easy fix is to change name 1in the xml file to name 2, but we'll have to do this for each mbean as we discover them. For now, the definition of all the default destinations must be fixed (alghough most of them are commented out). Is this an acceptable solution, or is there a better one? There're also problems updating the existing data sources. Unlike destinations, data sources are NOT defined within an <mbean>...</mbean> structure, and the way the attributes are defined is different from the mbean attributes. That means we cannot use the mbean-update template to perform the update. We may be able to come up with a different template for datasource update, but it is going to take some time. Do we want to do it now?	0	0	https://issues.jboss.org/browse/JBADMCON-134

8482	JBADMCON-78	The attached admin-console.war file contains the GUI (and some services) implementation of the general JBossMQ settings. Please take a look at it and give us your comments. Some notes/questions: . In the ?Settings? tab, the mechanism behind selecting a different data source is yet to be implemented, so don?t expect the sql properties to be changed when you select a different data source. If possible, I?d like to check-in the current code before starting this implementation. . In the ?More?? tab, the ?Has security manager? attribute is a write-only attribute. I?ve figured out a way to accept the settings without displaying it (similar to what jmx-console is doing). Does this look ok? Should I change the ?Make soft references? attribute to use radio buttons as well so the boolean attributes have the same look and feel? . In the ?Read-Only? tab, the ?CacheStore? and ?MessageCache? attributes are configurable attributes for the mbean, but we?ve decided to make it read-only on the console. Is this information of any value to the user? Should we even include them at all? . The ?NextInterceptor? is a configurable attribute of the SecurityManager mbean, but we?ve decided not to include it in the console display. Should I remove the ?Interceptor? attribute from the ?Read-Only? tab as well?	1	1	https://issues.jboss.org/browse/JBADMCON-78
8483	JBADMCON-78	Chi, I've successfully deployed to JBoss4.0.3sp1 and finally can look at the pages in question. Looks very good. A couple of comments: The tabs at the top are a little less conspicuous than I'd be comfortable with (on Windows with IE, anyway). Could we make them a tiny bit larger, more conspicuous, something? Or does the style sheet control thils? I notice that the readonly tab's text is normal, whereas all the other tabs are bold. Not a big deal, just a little odd-looking. Radio-buttons for booleans seems correct to me (as long as there are only two buttons :)) I've always found it a little bit silly to type the word TRUE, or FALSE to denote something that is one bit. I sometimes worry that the text will not be interpreted correctly because the case was wrong, whatever.	0	0	https://issues.jboss.org/browse/JBADMCON-78
8484	JBADMCON-54	Create that as a method on the DeploymentService API for now. Be able to copy from either a local or remote url: /** * Upload a new library to server lib dir. A different * filename may be specified, when writing the library. * * If the target filename exists, upload is not performed. * * @param src the source url to copy * @param filename the filename to use when copying (optional) * @return true if upload was succesful, false otherwise */ public boolean uploadLibrary(URL src, String filename);	1	1	https://issues.jboss.org/browse/JBADMCON-54
8485	JBAOP-686	Flavia, Can you please update the build to use this? Ståle is already using it for the aophelper documentation, but his build file seems different from the example provided by Scott. I also don't think that the aophelper docs get included in the release.	0	0	https://issues.jboss.org/browse/JBAOP-686
8486	JBAOP-674	should i remove the 1.5.x compatibility tests?	1	1	https://issues.jboss.org/browse/JBAOP-674
8487	JBAOP-674	I want to be able to continue running the tests using one command, i.e.: $./build.sh -f build-tests-jdk50.xml tests Rather than $./build.sh -f build-tests-jdk50.xml tests $cd somewhere $ant -f compatibiity-tests.xml $cd somewhere/else $ant -f compatibility-tests2.xml etc. Since then people are a lot more likely to forget to run them. If the conditions are getting too big, do something else. A few immediate ideas that come to mind are: *Create a new _run-compatibility target for the compatibility tests in the main build file and call that rather than the target currently used *Create external files as you have now, but include and call them from the main build file	1	1	https://issues.jboss.org/browse/JBAOP-674

8488	JBAOP-642	Apparently this fix was added to the wrong place. ---------- Kabir, I think that we inadvertently committed the changes for JBAOP-642 [1] to the wrong branch. Instead of committing to the AOP CP branch [2], we committed to the AOP CP02 tag [3]. I'm not sure it really matters since CP02 is soon to become obsolete, but just for clarity, I think we need to revert the changes to the CPO2 tag [3] and make them to the CP branch [2]. Is this something you could do? I feel sure that I can undo your changes and move them to the CP branch myself, but since I am not familiar with these changes, I would feel better if you did them. Of course, I can do this if necessary. Could you do this while referencing JBAOP-642 in your commit messages as well so that we have that recorded in reference to that issue? [1] https://jira.jboss.org/jira/browse/JBAOP-642 [2] https://svn.jboss.org/repos/jbossas/branches/JBoss_AOP_1_5_5_GA_CP/ [3] https://svn.jboss.org/repos/jbossas/tags/JBoss_AOP_1_5_5_GA_CP02/ Jimmy	1	0	https://issues.jboss.org/browse/JBAOP-642
8489	JBAOP-578	Staale, can you please look at this asap? It will be called LOADS once I integrate the aop-mc-int stuff into AS 5.	1	1	https://issues.jboss.org/browse/JBAOP-578
8490	JBAOP-560	The feature is already implemented. However, the ConcurrentHashMap instances, used for storing aspect instances, are not compatible with null values.. Not storing null aspects results in extra calls to factories. Besides representing an overhead, this might introduce a bug. Suppose that a factory returns non-null instances at every 2 times it is called. If we call this factory more than once for the same scope, it will result in an inconsistent behaviour. I suggest storing an aspect that represents null in those tables. What do you say, Kabir?	1	1	https://issues.jboss.org/browse/JBAOP-560
8491	JBAOP-461	Taking another look at the memory-test ant script, I see that I was mistaken when I said that those tests were being run with loadtime-weaving. They are being run with javaagent but, before that, aopc performs an instrumentation on the test classes. AFAIK, this will result in javaagent doing nothing, since all the AOP target classes will be instrumented at that time. Kabir, what am I missing here? I don't get why we are using aopc and javaagent.	1	0	https://issues.jboss.org/browse/JBAOP-461
8492	JBAOP-431	Flavia, as discussed on MSN I have got rid of the casting for Invocation, JoinpointInfo, and Target (for around advice). Would you mind seeing if it is possible to get rid of this casting for things like Caller, Arg etc?	1	1	https://issues.jboss.org/browse/JBAOP-431
8493	JBAOP-387	Is this a dupicate of JBAOP-385?	1	1	https://issues.jboss.org/browse/JBAOP-387
8494	JBAOP-387	What would be the exception type? We could either throw a RuntimeException with a message describing the cause of invalidation, or we could throw a RuntimeException of our own, like: public class InvalidAdviceException extends RuntimeException {...}	1	1	https://issues.jboss.org/browse/JBAOP-387
8495	JBAOP-373	I'm thinking on JoinPointBean. What I don't know, if we go with it, is: - will this crash with the fact that I rever to both Invocation and JoinPointInfo hierarchies as being joinpoint beans? - should we change the name of the subtypes we have agreed before (i.e., org.jboss.aop.joinpoint.FieldRead -> org.jboss.aop.joinpoint.FieldReadBean)?	1	1	https://issues.jboss.org/browse/JBAOP-373
8496	JBAOP-373	Hi Flavia, I noticed our naming is a bit off, but please read to the end before changing anything! Part 1: Construction.getConstructor() ConstructorCall.getConstructor() ConstructorExecution.getConstructor() MethodCall.getMethod() vs FieldAccess.getAdvisedField() (I think this should be renamed getField()) MethodExecution.getAdvisedMethod() (I think this should be renamed getMethod()) Part 2: MethodCalledByMethod.getCallingMethod() and ConstructorCalledByMethod.getCallingMethod() vs MethodCalledByConstructor.getCalling() and MethodCalledByConstructor.getCalling() (I think these should be renamed getCallingConstructor()) I realise I am probably the one who came up with these names, but since you are looking at it would you mind taking a look? If these cannot be renamed, in other words if these methods exist in 1.5.x and are being called, then I think we will need to rename the methods in the interfaces and create duplicate methods in the implementing classes. For example: interface MethodExecution { Method getMethod(); } class MethodInfo implements MethodExecution { ... //keep this public Method getAdvisedMethod() { return advisedMethod; } //add this public Method getMethod() { return advisedMethod; } } I am not 100% sure if this is public API, so this might not be necessary. let's sync up tomorrow when you get online	1	1	https://issues.jboss.org/browse/JBAOP-373
8497	JBAOP-373	Which tests do you mean? This stuff hasn't really been released so far, so changing the API should be ok? I had a look through 1.5.x and could not really find much usage of this outside of the "internal" code. Some things like EJB 3 do use the XXXInfo classes though, so I think we should add this. I will take a look at this now	0	0	https://issues.jboss.org/browse/JBAOP-373
8498	JBAOP-355	Kabir Khan wrote: >> <snip> >> >>>> aopclasspath -- Huh??? >>> A folder to the annotated classes >> >> How is that different from src or classpath? > > By default we do not browse for annotations (it is time-consuming to > look inside every file), so if you have annotations you want parsed > you need to specify them. > OK, that makes sense. When I reread the doc and actually followed the link to the "Annotation Bindings" chapter I figured that was it. ;) But this is confusing: "aopclasspath - This should mirror your class path and contain all JARs/directories..." The "mirror class path" thing threw me off, as to me "mirror" implies "duplicate". Perhaps "aopclasspath -- A subset of the JARs/directories in classpath or classpathref that includes all JARs/directories that may have annotated aspects (See Chapter "Annotation Bindings"). The AOPC compiler will browse each class file in this path to determine if any of them are annotated with @Aspect. Browsing for annotations is time consuming, so only classes in the JARs/directories listed in aopclasspath will be scanned." The next sentence "This gets used for the jboss.aop.class.path optional system property which is described in the "Command Line" section." is really confusing. Is it necessary? (No need to reply to that question. Or to any of this :)) > btw src, (which I agree is craply named, but created before my time) > specifies the files that you want to transform - there may be a LOT of > other things on the classpath which you do not want to transform... > Yeah, it's pretty clear what it is and how to use it (other than the docs should say "A directory containing class files to be transformed", not just "containing files". There's just a mental disconnect because of the name that I expect affects people looking at the PojoCache examples. > IIRC you can specify multiple src entries, but I agree using > includes would be nicer Yep, you can have multiple src entries. You've got includes as well; it's just that for some reason they are at the same level as src rather than being nested.	1	1	https://issues.jboss.org/browse/JBAOP-355
8499	JBAOP-326	Need to decide: if an advice method receives a @Target parameter, and the join point context is static (i.e., there is no target available), should we call the advice with a null target, or not call the advice at all?	0	0	https://issues.jboss.org/browse/JBAOP-326
8500	JBAOP-290	there are a few .jars thats needed to compile the source/tests which we dont include in the dist. should we start to package them into the dist or use ant/buildmagic/ivy/etc?	1	1	https://issues.jboss.org/browse/JBAOP-290

#	Requirement	Questions	Answered	Successfully Answered	URL
8501	JBAOP-288	I downloaded and installed JBoss 4.0.5.GA on 11-13-2006. Our applications worked fine. Today on 11-29-2006 I downloaded and installed another copy of JBoss 4.0.5.GA on a different machine. Endless lines of "ERROR [STDERR] [error] ClassLoader has been garbage collected.. Do verbose mode if you want full stack trace." appeared in the log for this copy of JBoss, and everything in our application having to do with AOP became inoperative. I noticed that the files in the jboss-aop-jdk50.deployer changed their date - from 9-01-2006 11:59 AM to 9-22-2006 4:08 PM and various other times, some which did not agree with those found in the download of the standalone copy of AOP 1.5.2.GA. After reverting my second install to the 9-01-2006 version of AOP which was bundled with JBoss 4.0.5.GA as of 11-13-2006, the errors disappear and the application work as expected. Is it possible there is an incompatibility with AOP dated 9-22-2006 currently bundled with JBoss 4.0.5.GA?	1	1	https://issues.jboss.org/browse/JBAOP-288
8502	JBAOP-288	That is odd. I just tried a fresh download of jboss 4.0.5.GA and deployed the jboss-aop.deployer from aop 1.5.2.GA in there and it works as expected. Can you try again, and provide some more info? (Please create a new JIRA issue, link to this, and assign to me)	1	1	https://issues.jboss.org/browse/JBAOP-288
8503	JBAOP-288	I used the JEMS installer on both of these, and picked the EJB 3.0 option. Is this how you obtained your new copy, or did you use the standard download?	1	1	https://issues.jboss.org/browse/JBAOP-288
8504	JBAOP-269	Would the fix be included in AS 4.0.5? I need to run my tests against a released AS version and cannot wait for AS 5.0. Can we do that? Thanks a lot!	1	1	https://issues.jboss.org/browse/JBAOP-269
8505	JBAOP-269	Did you perform the tests?	0	0	https://issues.jboss.org/browse/JBAOP-269
8506	JBAOP-237	Kabir, Can you look into this task. Thanks.	0	0	https://issues.jboss.org/browse/JBAOP-237
8507	JBAOP-215	What is the current status of this?	1	1	https://issues.jboss.org/browse/JBAOP-215
8508	JBAOP-142	This as now been added as the 'maxmemory' property, in v1.11, Looks like it will be in the JBoss_Aop_1_3_3 release? http://anoncvs.forge.jboss.com/viewrep/JBoss/jboss-aop/src/main/org/jboss/aop/ant/AopC.java	0	0	https://issues.jboss.org/browse/JBAOP-142
8509	JBAOP-56	Bill, I am re-opening this issue since I just realized perhaps nothing has been done according to Adrian's comment. I thought I have made myself clear and the comemnts in the forum thread as well. But I will re-iterate the problem here again. Please keep in mind this has nothing to do with JBossCache. Any aop user will run into this problem when doing instrumentation. 1. For import package statements that are not used anywhere in the code. True, a user needs to clean up. But it can happen that during compile time, the package library is in the classpath, but during runtime it is not. Aop/Javassist will spew out a huge exception stack that is diccifult to trace during load time. I propose we need to re-package the exception and make it more verbose. 2. For import package statement that is actually used in the code but is not needed in particular runtime (for example, I don't need JNDI lookup when I am running outside AS). In this case, Javassist will puke if the package is not around. Now this is a legitimate use case since, for example, we package JBossCache to be run inside and outside of AS with the same jar. Solution? Offer a flag maybe to allow Javassist to continue even if the package is not found. What do you think? -Ben	1	1	https://issues.jboss.org/browse/JBAOP-56
8510	JBAOP-54	Just commited support for declare-warning and declare-error via XML, and a "visual" compile time test (I cannot see any way to automate this completely right now. The test is a separate target: $ant compiletime-declare Rather than creating a joinpoint query thing I plugged this into the Instrumentor and CallerTransformer, since they are iterating over everything anyway. You can match on type expressions (i.e. does this class implement this method) or on method/constructor calls. TBD: -Define via annotations -Loadtime tests -Once "[JBAOP-45]callfield pointcut" has been done, this should be added to this. Created new task JBAOP-57. -Create tutorial	0	0	https://issues.jboss.org/browse/JBAOP-54
8511	JBAOP-20	Added support for JDK 5.0. We may skip JDK 1.4 because of time. JDK 5.0 still needs some packaging issues as well.	0	0	https://issues.jboss.org/browse/JBAOP-20
8512	JBASMP-69	I have not tested with the patch command, but you can execute CLI commands, https://docs.jboss.org/jbossas/7/plugins/maven/latest/examples/execute-commands-example.html. Would that be viable?	1	1	https://issues.jboss.org/browse/JBASMP-69
8513	JBASMP-62	I'd prefer to leave this to CLI to handle. Would something like this work https://community.jboss.org/wiki/If-elseControlFlow? Or possibly https://community.jboss.org/wiki/Try-catch-finallyControlFlow.	0	0	https://issues.jboss.org/browse/JBASMP-62
8514	JBASMP-53	This is the definition for the `--runtime-name`. Does this fit what you'd need? {quote} optional, the runtime name for the deployment. This will form the basis for such things as default Java EE application and module names. This would typically be the same as --name, and if not specified the value used for --name will be used. In some cases users may wish to have two deployments with the same 'runtime-name' (e.g. two versions of "example.war") both available in the management configuration, in which case the deployments would need to have distinct 'name' values but would have the same 'runtime-name'. Within an individual server, only one deployment with a given 'runtime-name' can deployed. However, multiple deployments with the same 'runtime-name' can exist in the configuration, so long as only one is enabled. {quote}	1	1	https://issues.jboss.org/browse/JBASMP-53
8515	JBASMP-53	This would be a great feature to add. [edited] I see org.wildfly.plugins:wildfly-maven-plugin:1.1.0.Alpha5-SNAPSHOT implements the ability to specify the runtime-name feature. It appears to work with JBoss EAP 6. Is it a good idea to use the wildfly plugin with JBoss EAP 6?	1	0	https://issues.jboss.org/browse/JBASMP-53
8516	JBASMP-45	Do you have the {{<configuration/>}} element defined on the plugin or just the execution? The plugin won't inherit the configuration from an execution definition.	1	1	https://issues.jboss.org/browse/JBASMP-45
8517	JBASMP-45	I see. Is it possible to tell mvn jboss-as:deploy-artifact which execution to run?	1	1	https://issues.jboss.org/browse/JBASMP-45
8518	JBASMP-41	It's great to see a prompt response! Thanks! For now, would it fail also if I use CLI scripts?	0	0	https://issues.jboss.org/browse/JBASMP-41
8519	JBASMP-25	Comment Reference: https://github.com/jbossas/jboss-as-maven-plugin/issues/23#issuecomment-9693313 Ok, I thought that the run goal would not block, instead return control to maven once the server is started. If it is supposed to block then how should JBoss be shut down so that Maven would continue? BTW, {{StandaloneServer.isRunning()}} will return false if the server state is STARTING so the loop would exit rather than block if JBoss doesn't start almost immediately: {code} final ModelNode result = client.execute(Operations.createReadAttributeOperation(Operations.SERVER_STATE)); isRunning = Operations.successful(result) && !STARTING.equals(Operations.readResultAsString(result)) && !STOPPING.equals(Operations.readResultAsString(result)); {code} The scenario we are looking to support is: 1. Start JBoss from Maven, configuring datasources, queues etc. in the pre-integration-tests phase 2. Run a suite of integration tests using failsafe in the integration-tests phase 3. Shut down JBoss with the :shutdown command in the post-integration-tests phase 4. Failsure verifies the test results in the verify phase For this to work we would need the Run goal to fork JBoss once it's started rather than block. If it is supposed to block by design then can a configuration option be added to support forking? {code} <fork>true</fork> {code}	1	1	https://issues.jboss.org/browse/JBASMP-25
8520	JBASMP-25	The scenario described above is what we aimed to implement as well. Will it be supported in the near future?	1	1	https://issues.jboss.org/browse/JBASMP-25

#	Requirement	Questions	Answered	Successfully Answered	URL
8521	JBASMP-25	Finally getting around to this. Is there a reason not to use Arquillian for in container testing rather than starting the server through the maven plugin?	1	1	https://issues.jboss.org/browse/JBASMP-25
8522	JBASMP-25	Good question. I should say that before the scenario above is performed we are adding our own modules to support jsr289 and updating the javaee.api module to include the SIP Servlet API etc to the JBoss/EAP. We do this by using several maven plugins and the result is an extended EAP ready to go. Do you think we can do the same with Arquillian?	1	1	https://issues.jboss.org/browse/JBASMP-25
8523	JBASMP-25	Sounds good. Do you have an estimate when these features will be released and in what version of the plugin?	1	1	https://issues.jboss.org/browse/JBASMP-25
8524	JBASMP-2	Another feature that should also be added is checking what packaging type the project is - for example a MojoFailureException if the packaging type is pom. The other thing I noticed is that the JbossAsControlCreateConfigurationMojo doesn't seem to perform a delta copy as ALR has mentioned in places, but instead copies the entire directory every time and overwrites existing files. Is this a feature worth pursuing? It took quite a long time (at least 60 seconds) copying the config directory on every invoke for me - i.e. it appears worth it to me. It also looks like it might be worth abstracting out the other common properties / functions from the mojo's into a super class, as I have done with JbossAbstractDeploymentMojo. Maven still appears to set all the properties etc correctly and it gets rid of a lot of duplicate code.	1	1	https://issues.jboss.org/browse/JBASMP-2
8525	ASPATCH-391	To concerns need to be addressed: - 1 - The bug is a race condition so I do not have either an automated or manual test case, however the synchronisation will be minimal so AS testsuite testing should still confirm no regressions. 2 - There is no upstream, JBoss AS 4.0.3.SP1 was the last release to use JBoss WS4EE, can we consider the CP branch the most upstream now?	1	1	https://issues.jboss.org/browse/ASPATCH-391
8526	ASPATCH-363	Malik Saheb said in his email sent on the 11/28/2008: ========== The customer seems satisfied by the provided patch. We could add it to the next CP. By the way, we have convinced this customer to migrate to an EAP version (4.3). He has planned to study the migration process next year, so he is asking if the xalan correction applied for 4.0.4 will be also available for JBoss EAP 4.3. ========== The patch has not been included in CP15. It would be most appreciated if it can be included in CP16. Can we also be certain that it will be applied to EAP 4.3?	1	1	https://issues.jboss.org/browse/ASPATCH-363
8527	ASPATCH-343	The following branches have been switched to the 5.5.23.patch04-brew release of Tomcat JBoss_4_0_4_GA_CP JBoss_4_0_5_GA_CP which contains all the following fixes: ASPATCH-234 and IT #168408 (ASPATCH-346), as well as fixes for CVE-2007-2449, CVE-2007-2450, CVE-2007-3386, CVE-2007-3382, CVE-2007-3385, 2007-5342, and CVE-2007-5461.	0	0	https://issues.jboss.org/browse/ASPATCH-343
8528	ASPATCH-338	Can you provide an ETA for this? Code freeze is today, however we can wait a couple of days.	1	1	https://issues.jboss.org/browse/ASPATCH-338
8529	ASPATCH-331	The problems I see with this change are the following: 1. It jumps from 5.5.9 to 5.5.23 2. If we don't fix the vulnerability in the Tomcat 5.5.9 patch branch, we'll have to upgrade 4.0.2 to Tomcat 5.5.23 as well. We have previously agreed to maintain 5.5.9 with security errata to support JBoss AS: 4.0.3SP1 cp's 4.0.2 cp's The point is, if we swallow this for 4.0.3.SP1, We'll also have to swallow it for the 4.0.2 cp branch. Are we ready to do this?	0	0	https://issues.jboss.org/browse/ASPATCH-331
8530	ASPATCH-331	How much work is it to backport this fix to Tomcat 5.5.9?	0	0	https://issues.jboss.org/browse/ASPATCH-331
8531	ASPATCH-322	Brian, would it be possible for you to backport your fix to 4.0.1 into the 4.0.0 CP branch?	1	1	https://issues.jboss.org/browse/ASPATCH-322
8532	ASPATCH-317	In that case are we Ok to go ahead and I will commit the fix?	1	1	https://issues.jboss.org/browse/ASPATCH-317
8533	ASPATCH-239	Can we make the legacy, broken behavior the default and provide the corrected behavior if a given option is checked? This will eliminate the impact on those who depend on the broken functionality, while allowing use of the corrected behavior if desired. This will also allow inclusion into the CP. So long as the patch can be done in a form which allows inclusion into the CP, I'm fine with producing a temporary one-off. The should know they are required to upgrade to the CP once it is released.	1	1	https://issues.jboss.org/browse/ASPATCH-239
8534	ASPATCH-231	Anil, what should we do?	0	0	https://issues.jboss.org/browse/ASPATCH-231
8535	ASPATCH-207	what is the revision id of your last commit?	0	0	https://issues.jboss.org/browse/ASPATCH-207
8536	ASPATCH-204	are we going to postpone CP01 until June?	1	1	https://issues.jboss.org/browse/ASPATCH-204
8537	ASPATCH-203	are we going to postpone CP01 until June?	0	0	https://issues.jboss.org/browse/ASPATCH-203
8538	ASPATCH-203	Vivek, what's the status? Code freeze is June 1st.	0	0	https://issues.jboss.org/browse/ASPATCH-203
8539	ASPATCH-196	I merged the changes from: https://svn.jboss.org/repos/jbossas/branches/JBoss_4_0_1_JBAS-2704/ because that is what was mentioned in the JBAS-2704 Now I see that there is also a: https://svn.jboss.org/repos/jbossas/branches/JBoss_4_0_1_JBAS-2704_1/ What is this second one? Which one should have been merged? Thanks	1	0	https://issues.jboss.org/browse/ASPATCH-196
8540	ASPATCH-196	Amit, can you please clarify which is the right patch for 4.0.1.SP1.CP ? Thanks	1	0	https://issues.jboss.org/browse/ASPATCH-196
8541	ASPATCH-194	Hi Alex, Have you determined if this needs to be merged to CP? If it is then please assign to me and I will do the merge. Vivek	1	1	https://issues.jboss.org/browse/ASPATCH-194
8542	ASPATCH-190	can this be closed?	0	0	https://issues.jboss.org/browse/ASPATCH-190
8543	ASPATCH-171	Jim, what do we do with this?	0	0	https://issues.jboss.org/browse/ASPATCH-171
8544	ASPATCH-164	While committing the changes, I made two errors in the last two commits in this branch. It should refer to ASPATCH-164 not JBAS-3988, do you know how to change them?	1	1	https://issues.jboss.org/browse/ASPATCH-164
8545	ASPATCH-164	Test now passes :) I need to change the patch instructions and get those two commit messages changed. I'll do that on Monday, does that fit with the CP02 release? AFAIK, it should be released the 2nd Tuesday of the month	1	1	https://issues.jboss.org/browse/ASPATCH-164
8546	ASPATCH-157	Is this going to be comitted before march 1st (tomorrow)?	1	1	https://issues.jboss.org/browse/ASPATCH-157
8547	ASPATCH-154	At the moment, I do not have any bandwith for this task. Would it be possible to reassign it to someone else? Thanks,	1	0	https://issues.jboss.org/browse/ASPATCH-154
8548	ASPATCH-138	OK, I can't compute the source diff because the JBossXB project has a branch JBossXB-1.0.0.CR6_JBAS-3882 but there isn't a JBossXB-1.0.0.CR6 tag (only CR7 and CR8 were tagged). The only remaining solution would be to blindly replace the jboss-xml-binding.jar with the one attached to http://jira.jboss.com/jira/browse/JBAS-3882 and creating a thirdpart repository version 1.0.0.CR6.patch01 for that. Imprtant: Is this patch included in XB RC8? Or the problem does not occur there?	1	1	https://issues.jboss.org/browse/ASPATCH-138

#	Requirement	Questions	Answered	Successfully Answered	URL
8549	ASPATCH-138	Hi Alexey, I've created a new version in thirdpart for jbossxb, namely1.0.0.CR6.patch01, that is supposed to replace the buggy 1.0.0.CR6 for jbossas 4.0.5_GA_CP. I've got the JAR that you have attached to JBAS-3882 which is supposedly a fixed 1.0.0.CR6, from the sources at: https://svn.jboss.org/repos/common/jbossxb/branches/JBossXB-1.0.0.CR6_JBAS-3882/ I am just wondering if that JAR was indeed crated from these sources and how pervasive a change this has been (remember, there is no CR6 tag, so I can't compare sources). The reason I ask is because the 1.0.0.CR6 JAR in thirdpart has: 346762 Jul 13 2006 jboss-xml-binding.jar while the one you attached (1.0.0.CR6_JBAS-3882) has: 265414 Feb 1 20:26 jboss-xml-binding.jar I did a comparison of the files and they do have the same classes exactly, but the byte count of every class is significantly different (thus the large difference in the file sizes). Is this really OK? Can we ship this new JAR in a CP release?	0	0	https://issues.jboss.org/browse/ASPATCH-138
8550	ASPATCH-129	Brian just edited JBAS-3808 and added this to the description: NOTE: THIS PATCH SHOULD NOT BE INCLUDED IN ANY CUMULATIVE PATCH RELEASE However, this patch has already been committed to 4.0.3SP1_CP (but not released, yet) Brian, could you explain why this should not be included in a CP?	0	0	https://issues.jboss.org/browse/ASPATCH-129
8551	ASPATCH-129	I think we should revert this patch from the CP branch. Vivek, can you do it today?	0	0	https://issues.jboss.org/browse/ASPATCH-129
8552	ASPATCH-129	Brian, we probably don't want to leave this customer using a one-off branch forever. In which newer version the new structure is used? Is in only in 5.0 or will that be the format for 4.2? (I take as it is incompatible that it is not in any of the 4.0.x releases) Regards, Fernando	1	1	https://issues.jboss.org/browse/ASPATCH-129
8553	ASPATCH-128	Thanks Dimitris! Merged into JBoss_4_0_4_GA_CP branch: 58752. Is it possible request QA on JBoss_4_0_4_GA_CP or does the entire task have to be completed first?	1	1	https://issues.jboss.org/browse/ASPATCH-128
8554	ASPATCH-128	Dimitris, can you comment?	0	0	https://issues.jboss.org/browse/ASPATCH-128
8555	ASPATCH-127	The patch.zip contains both server/all/deploy/http-invoker.sar/invoker.war/WEB-INF/web.xml server/all/deploy/httpha-invoker.sar/invoker.war/WEB-INF/web.xml Shouldn't the first one be removed?	0	0	https://issues.jboss.org/browse/ASPATCH-127
8556	ASPATCH-127	hey Ryan, did we add any kind of reminder to CP03 release notes?	1	0	https://issues.jboss.org/browse/ASPATCH-127
8557	ASPATCH-125	The one-off branch adds jboss/axis/lib/axis-ws4ee.jar. I am not familiar with the manner in which thirdparty jars were integrated in AS 3.2.7, I didnt see a build-thirdparty.xml or another file that could tell me if there is a change in versions. Nor is there anything in the sources to suggest a change in axis-ws4ee.jar is necessary. Is this an errant jar committed to the branch or is it actually deliberate?	1	1	https://issues.jboss.org/browse/ASPATCH-125
8558	ASPATCH-124	Vicky, diff between JBoss_4_0_3_JBAS-2638 and 4.0.3.SP1 results in tons of diffs. Can you help us merge this patch into the 4.0.3.SP1_CP03 branch?	1	1	https://issues.jboss.org/browse/ASPATCH-124
8559	ASPATCH-124	Vicky, which branch did you check this in to? I made a typo in my previous comment. Correct branch URL is https://svn.jboss.org/repos/jbossas/branches/JBoss_4_0_3_SP1_CP CP releases are tagged off the CP branch, so we don't have a separate branch for each incremental CP release.	1	1	https://issues.jboss.org/browse/ASPATCH-124
8560	ASPATCH-124	not sure i understand where it was checked in since there is no 4.0.3.SP1_CP03 branch (it's a tag). will you be able to finish this by the end of this week? code freeze is on 12/01	1	1	https://issues.jboss.org/browse/ASPATCH-124
8561	ASPATCH-122	Since there isnt a seperate one-off branch for this, I cant isolate the change to Branch_3_2. Was there an actual commit made to that branch for this? I am all 'svn log'ed out... Perhaps Scott could take a quick look...	0	0	https://issues.jboss.org/browse/ASPATCH-122
8562	ASPATCH-121	Ok, but don't know what you need me to do. The jira issue links are almost impossible for me to follow, but looks like the fix for JBAS-3316 was included in patch issued under ASPATCH-3. Are you saying that same code change in the patch for JBossAS-4.0.3.SP1_CP01 (ASPATCH-3) needs to be done for JBossAS-4.0.4.GA_CP03?	1	1	https://issues.jboss.org/browse/ASPATCH-121
8563	ASPATCH-118	Changes from ASPATCH-34 seem to overlap with changes in JBoss_4_0_3_SP1_JBAS-3650 branch: svn merge --dry-run --ignore-ancestry https://svn.jboss.org/repos/jbossas/tags/JBoss_4_0_3_SP1 https://svn.jboss.org/repos/jbossas/branches/JBoss_4_0_3_SP1_JBAS-3650 Skipped 'thirdparty' A thirdparty/.project U build/build-thirdparty.xml U security/src/main/org/jboss/test/LoginModulesTestCase.java C security/src/main/org/jboss/security/auth/spi/LdapExtLoginModule.java Needs developer comment.	0	0	https://issues.jboss.org/browse/ASPATCH-118
8564	ASPATCH-118	ASPATCH-34 incorporated JBAS-3645 which appears to have been addressed by JBAS-3650. Scott, could you confirm?	1	1	https://issues.jboss.org/browse/ASPATCH-118
8565	ASPATCH-117	Weston, could you take a look at the merge conflict? thanks	1	1	https://issues.jboss.org/browse/ASPATCH-117
8566	ASPATCH-117	do you mean this is a one-off patch that doesn't apply to other customers?	1	1	https://issues.jboss.org/browse/ASPATCH-117
8567	ASPATCH-77	Requesting triage due to above comments (custom branch, special config instructions). Can we require customers to move around config files? What else will this impact?	0	0	https://issues.jboss.org/browse/ASPATCH-77
8568	ASPATCH-70	Dimitris, i assigned this to you by mistake. sorry Fernando, just create a new JIRA and link it ("is related to") to the JBAS-2866	0	0	https://issues.jboss.org/browse/ASPATCH-70
8569	ASPATCH-61	Alexey, can you respond to this? Was the fix checked it into JBoss_4_0_4_GA_JBAS-3335?	1	1	https://issues.jboss.org/browse/ASPATCH-61
8570	ASPATCH-61	Should I properly fix it in the JBoss_4_0_4_GA_JBAS-3335?	1	1	https://issues.jboss.org/browse/ASPATCH-61
8571	ASPATCH-53	Yes, which branch should it be committed to?	0	0	https://issues.jboss.org/browse/ASPATCH-53
8572	ASPATCH-39	This patch will not be included because it relies on Java5. JBoss 4.0.x must be able to run on Java 1.4	1	1	https://issues.jboss.org/browse/ASPATCH-39
8573	ASPATCH-32	should we not include this into 4.0.3.SP1_CP branch?	1	1	https://issues.jboss.org/browse/ASPATCH-32
8574	JBASM-38	thanks for reporting. If I understand your report right, you actually run the shutdown batch a 2nd time (just after running it once already) and it showed you the above stack-trace? If that is the case then you filed a bug against jboss tools whereas this is a jboss as (and not tooling) related issue. Could you please indicate what AS you're trying to stop?	0	0	https://issues.jboss.org/browse/JBASM-38
8575	JBASM-23	Hallo, Anil. First thank you for your reply. I see that the "server" property is false by default. And setServer() method makes it true. So actually here the problem is not that we want single credentials for all servers but rather different credentials for the different servers. Would you be able to explain or point me at documentation how to make certain calls with certain credentials? For example I want to invoke an mbean operation with this username/password pair then operation on another server's mbean with different credentials. [code] doAs(credsServer1); invoke(...); doAs(credsServer2); invoke(...); [/code] Or something similar? To be clear it's not guaranteed invokes will be done by a different or the same thread. I can see that if I SecurityAssociation.setServer() then I can create a controlling thread for every server and pass operations through it. But I hope there will be some more lightweight solution to the problem. Thanks again!	1	1	https://issues.jboss.org/browse/JBASM-23
8576	JBASM-6	I'm planning on at least one more release before 5.0.GA. Should this be scheduled for the next release?	1	1	https://issues.jboss.org/browse/JBASM-6
8577	JBASM-3	So is there any conclusion to the topic how should the thread dump be generated? From what I read following Galder's link I can see that only "kill -QUIT" is reliable so should I aim at that or go for the best (which is it?) pure java solution?	1	1	https://issues.jboss.org/browse/JBASM-3

8590	JBBENCH-21	Hi Clebert, Is this the latest kit that your testing with then? Deb -- Deborah Beaman Hewlett - Packard Company TSG / Solution Alliances Engineering Linux Infrastructure Portfolios Engineering 110 Spit Brook Road ZK03-2X61 Nashua, NH 03062-2698 Tel: 603-884-1812 Fax: 603-884-0627 Email: deb.beaman@hp.com	1	1	https://issues.jboss.org/browse/JBBENCH-21
8591	JBBENCH-19	Do you want to work on this task? We can give you all the support for this activity if you want to!	0	0	https://issues.jboss.org/browse/JBBENCH-19
8592	JBBENCH-14	Do we have access the sourcecode for this benchmark? I guess if we use JBossSerialization here will have something better than KaRMI It would be nice to measure it.	0	0	https://issues.jboss.org/browse/JBBENCH-14
8593	JBBENCH-12	Specj is not automatable in terms of cron-tabs. Although Specj is well automated in terms of generating server configurations. The process will have to be manual, but mostly 80% automated. (Already part of Jboss specific files distribution)	0	0	https://issues.jboss.org/browse/JBBENCH-12
8594	JBBENCH-7	This should include running the benchmark against various JVMs including: JRockit (latest) sun JVM 1.3 sun JVM 1.4 sun JVM 1.5	1	1	https://issues.jboss.org/browse/JBBENCH-7
8595	JBBOOT-89	The attached patch is generating the start-up message relying on the concrete Server implementation's toString method to produce everything before the "Started in..." portion of the message. Do we want to include the (MicroContainer) portion or would the following be better? JBoss AS [1.2.3.VersionTag (build: SVNTag=VersionCVSTag date=BuildID)] Started in 27s:158m	1	1	https://issues.jboss.org/browse/JBBOOT-89
8596	JBBOOT-89	Should we also update the MC impl to also output a similar message? It doesn't appear to have Server toString method defined.	1	1	https://issues.jboss.org/browse/JBBOOT-89
8597	JBBOOT-89	Are there some nonstandard patch instructions? Typically we make via "svn di > /path/to/file" and patch in using "patch -p0 < /path/to/file". patching file impl-as/src/main/java/org/jboss/bootstrap/impl/as/server/AbstractJBossASServerBase.java can't find file to patch at input line 382 Perhaps you used the wrong -p or --strip option? The text leading up to this was: -------------------------- |Index: impl-base/src/main/java/org/jboss/bootstrap/impl/base/server/AbstractVersion.java |=== |--- impl-base/src/main/java/org/jboss/bootstrap/impl/base/server/AbstractVersion.java (revision 92321) |+++ impl-base/src/main/java/org/jboss/bootstrap/impl/base/server/AbstractVersion.java (working copy)	1	1	https://issues.jboss.org/browse/JBBOOT-89
8598	JBBOOT-86	The only downside of this is that you can't directly copy/paste the url, but not sure how many does that ? And if you use JBOSS_HOME as the base that should be printed full, allowing you to copy paste in two sets. Maybe print the full url if log level is TRACE and otherwise relative ?	0	0	https://issues.jboss.org/browse/JBBOOT-86
8599	JBBOOT-86	Forums are down ATM, so I'll do my peer review of the patch discussion here. ;) 1) The patch fails the TestSuite with NPEs. Check the development instructions: http://www.jboss.org/community/wiki/JBossBootstrapDevelopmentandContribution 2) This line: // Log full paths when log level Trace is enabled. if (log.isTraceEnabled()) { return url.toExternalForm(); } ...I don't like due to the conditional logic depending upon this log level. Essentially this creates a case where the test output (with logging set to TRACE) is different than in other environments, and the rest of the method doesn't get tested. So I'd skip this step. Let's take another look with those two issues addressed? Awesome to see your contribution Ray, thanks for getting involved.	1	1	https://issues.jboss.org/browse/JBBOOT-86
8600	JBBOOT-56	Where are we with this one, John?	1	0	https://issues.jboss.org/browse/JBBOOT-56
8601	JBBOOT-56	Sorry, didn't see your comment. I believe the patch I attached last is sufficient for this task. It may be a good idea to create a separate JIRA to centralize some of the test classes to avoid re-use. Would you like me to commit the attached patch?	0	0	https://issues.jboss.org/browse/JBBOOT-56
8602	JBBOOT-43	After a series of tests, it is a pretty straight forward change to get full URL support. The change just requires the AbstractMCServerBase start to process all nested <url> elements with the bootstrapUrl as the context and not the bootstrapHome. The only thing that does not work is having relative URLs what begin with a slash either in the bootstrapUrl or a nested <url>. This does not work in the existing implementation either. Should this be supported, or should it continue to throw an exception when starting with a slash? I am attaching a patch that includes some tests to show the failure when the slash is present.	1	1	https://issues.jboss.org/browse/JBBOOT-43
8603	JBBOOT-43	Thanks for looking it over. I have cleaned up 1 and 3 from above. I was attempting to test multiple different configurations of bootstrapUrl and bootstrapHome in a single test, which does not seem to work even with the shutdowServer lifecycle called. The server seems to leave the system property set for the bootstrapUrl after shutdown. This causes fun issues when you attempt to start a new server with just the bootstrapHome. As for the new exception type. Is there a standard place to put this, and do we just want to check if the URL starts with a slash and throw right away?	1	1	https://issues.jboss.org/browse/JBBOOT-43

#	Requirement	Questions	Answered	Successfully Answered	URL
8604	JBBOOT-43	After second thought, I am not able to remove the additional lifecycle method in MCServerBootstrapUrlTestCase.@After. Even with the shutdownServerAndClear lifecycle, the system properties are not being removed between tests. If the system properties are not removed between tests, subsequent tests will fail if the only the bootstrapHome is set. When each test runs through the start process it runs through the property overrides and sets system properties for each of the bootstrap(Home, Name, URL) properties. So if the bootstrapUrl is set in one test, it will still be set as a system property for the next test. If the subsequent test only sets the bootstrapHome and bootstrapName, it will get the bootstrapUrl applied from the last test as part of the override properties step, and will likely fail with the wrong bootstrapUrl. This seems like something that should get cleaned up when the server is shutdown. To test this behavior, remove the clearServerProperties method and rerun the tests. You will see a failure occur and if traced through it is bases on a lingering bootstrapUrl system property. Should these system properties be cleaned up at server shutdown?	1	1	https://issues.jboss.org/browse/JBBOOT-43
8605	JBBOOT-43	Seems like the server.shutdown shouldn't be necessary for tests that successfully startup, as it is in the @After lifecycle already. As you showed in the patch, the issue was with the exception cases the shutdown was not happening because it wasn't being started. ServerInitializer.cleanup resolves the issue. Is there a reason we still need to call the server.shutdown in the test body?	1	1	https://issues.jboss.org/browse/JBBOOT-43
8606	RHBPMS-4812	I understand that it's possible to achieve the goal with some workaround; nevertheless, I've seen this use case often and I'd like to achieve this goal with a more elegant and straightforward way. I was not aware of https://issues.jboss.org/browse/JBPM-5363, so it basically address the problem! Although, I think that the parametric signalRef is a way to workaround the limitations of the correlation key. In fact, there are many situations where the business key is created during the process or comes from an external system at the first interaction. Moreover, there could be many business keys that should be used to talk with different external parties. (e.g. CRM id, ERP id, etc). What do you think?	1	1	https://issues.jboss.org/browse/RHBPMS-4812
8607	RHBPMS-4812	I wouldn't call it a workaround. That is how it was designed to keep single correlation key for process instance to allow same look up mechanism as by process instance id though it is caller defined - aka business key. So how would you like to handle situation when we allow to set the business key within active instance - what should happen to the process instance if it attempts to use already used business key? The other thing you mentioned, many business keys for given process instance - that could work as the uniqueness should be on business key cannot be shared across instances but single instance can have many business key, that could be a valid extension. Though you can achieve that by using process instance variables and then whenever needed get hold of process instance by searching by its variables.	1	0	https://issues.jboss.org/browse/RHBPMS-4812
8608	RHBPMS-4812	so what you're suggesting is to have ability to assign more correlation keys into given process instance and pretty much at anytime of its life time, correct? I would agree but with restriction you can't change it but only add new one, does it make sense?	1	0	https://issues.jboss.org/browse/RHBPMS-4812
8609	RHBPMS-4803	Dear Engineering I have accidentally set the target release to 6.4.5, but unable to remove it. Can you please remove the content I entered. Thank you Toby	1	1	https://issues.jboss.org/browse/RHBPMS-4803
8610	RHBPMS-4673	In what sense is PostgreSQL supposed to be "included in a OpenShift process server image"? We do not bundle third-party components.	0	0	https://issues.jboss.org/browse/RHBPMS-4673
8611	RHBPMS-4480	[~tirelli] [~KrisVerlaenen] I need more time to finish work on this. Would estimate 2 to 3 days. Let me know if that's ok or should we move to next release?	1	1	https://issues.jboss.org/browse/RHBPMS-4480
8612	RHBPMS-4421	Hi [~tlivora] I'm thinking about suggesting container names like this: "org.jboss:integration:2.0.0-SNAPSHOT" (and if it's an invalid name, "org.jboss:integration:2.0.0-SNAPSHOT-2" and so on). What do you think?	1	1	https://issues.jboss.org/browse/RHBPMS-4421
8613	RHBPMS-4421	I tested this with BPM Suite 6.4.1 CR1 and the name is automatically generated. I just have one problem with inconsistency of the behavior: when I have several artifacts listed as a serach result, clicking some other artifacts sets it's GAV, but leaves the container name unchanged (courtesy of [this if|https://github.com/droolsjbpm/kie-wb-common/pull/614/files#diff-cd5ac2ebd6279017c3a017bfe3433840R244]). Are we ok with this inconsistency - wouldn't it be better to regenerate the container name as well to have the same behavior as for gav? [~karreiro] See video attached and notice how GAV changes when selecting different artifact but container name remains the same.	1	1	https://issues.jboss.org/browse/RHBPMS-4421
8614	RHBPMS-4198	can we consider this as limited solution on EAP7 and provide only support for non ssl JMS connections? [~tlivora] [~KrisVerlaenen]	1	1	https://issues.jboss.org/browse/RHBPMS-4198
8615	RHBPMS-4198	[~swiderski.maciej], as this use case (JMS over SSL for task operations) has been available only for EAP 6.x so far, I think we don't need to fix it for EAP 7.0. [~paradhya2], do you agree?	1	0	https://issues.jboss.org/browse/RHBPMS-4198
8616	RHBPMS-4150	Please explain what you mean by "build fails"? Can you provide a stack trace? There's no reason I can think of for the build to *fail* (if the project the copy was taken from built OK)	1	1	https://issues.jboss.org/browse/RHBPMS-4150
8617	RHBPMS-4150	[~kgaevski] Thanks for the explanation and video.. so the second build/deploy is expected to fail because a KJAR for the GAV has already been deployed. That said I agree it'd be nice if when copying a Project the User is either prompted for new GroupId, ArtifactID and Version or we automatically set the ArtifactId to the new Project name (as is the case when a new Project is created). Which is your preference? Automatically updating the ArtifactID is much simpler but may be the less preferred solution.	1	1	https://issues.jboss.org/browse/RHBPMS-4150
8618	RHBPMS-4150	Hi [~manstis], thank you for the fast reply. In my opinion the best case is when the User is prompted for new GroupId, ArtifactID and Version. But ArtifactID will be automatically set to new value (Project name) and Version will be set to default one (Version: 1.0). What do you think, is it possible to do in this way?	1	0	https://issues.jboss.org/browse/RHBPMS-4150
8619	RHBPMS-4123	[~lpetrovicky] [~kgaevski] , since this is a minor issue, given the effort that [~manstis] estimated above, and the short term nature of the change, I tend to agree with Michael. Can we postpone this for 7.x where a different solution will be used?	1	0	https://issues.jboss.org/browse/RHBPMS-4123
8620	RHBPMS-4079	[~swiderski.maciej] you are correct, it was not designed to do that. I think it should be fine to improve the end point to also start the scanner after the server is created, if the user sets the corresponding parameter. Wdyt?	1	1	https://issues.jboss.org/browse/RHBPMS-4079
8621	RHBPMS-3980	Maciej, can you please backport this into 6.4.x?	0	0	https://issues.jboss.org/browse/RHBPMS-3980
8622	RHBPMS-3832	Cherry-picked into 6.0.x: http://github.com/droolsjbpm/kie-wb-common/compare/2921103...c2f54f4	0	0	https://issues.jboss.org/browse/RHBPMS-3832
8623	RHBPMS-3729	Hi Ivo, Doc Text has been added. Can you please review the CCFR.	1	1	https://issues.jboss.org/browse/RHBPMS-3729
8624	RHBPMS-3610	This should be possible based on the work done for deployment descriptors (https://bugzilla.redhat.com/show_bug.cgi?id=1017327) that allows to configure persistence unit name for audit and runtime separately. So configuring the persistence unit names would be sufficient when using JPA mode of audit logs. Though for JMS based separate queues are needed to be created and then configuration file (jbpm.audit.jms.properties) would need to be added to kjar to instruct the runtime what queue it should use. Would this be enough or we need more advanced support?	0	0	https://issues.jboss.org/browse/RHBPMS-3610
8625	RHBPMS-3266	We can not make these changes, as they would affect all products ... are classes that are use in many places.	0	0	https://issues.jboss.org/browse/RHBPMS-3266

#	Requirement	Questions	Answered	Successfully Answered	URL
8626	RHBPMS-3199	Hi Sona, Doc Text has been added. Can you please review the CCFR.	1	1	https://issues.jboss.org/browse/RHBPMS-3199
8627	RHBPMS-3198	Marek, there should not be possibility to add listeners via services. Please note that they operate on deployment units and as such each deployment unit can have different configuration in that regard. So services are completely independent of that thus do not expose any way of registering listeners. When using deployment service to put kjar into runtime you can use deployment descriptor to define all listeners, handlers, etc you need and they will be available on runtime. Does that make sense?	1	0	https://issues.jboss.org/browse/RHBPMS-3198
8628	RHBPMS-3041	Carmine Talpa <carmine.talpa@gmail.com> made a comment on jira JBPM-3600 Hi Maciej, How can i specify time interval for work day ? e.g.: http://docs.jboss.com/jbpm/v3/userguide/businesscalendar.html weekday.monday= 9:00-12:00 & 12:30-17:00 ... This is an example of my businesscalendar properties file: business.hours.per.week = 6 business.hours.per.day = 36 business.start.hour = 8 business.end.hour = 15 business.weekend.days = 7 business.holiday.date.format = yyyy-DD-mm business.holidays = 2013-01-01,2013-05-01,2013-06-02,2013-06-13:2013-06-16,2013-08-15,2013-12-25 Could we have an example of a new "jbpm.business.calendar.properties" file Thanks a lot	0	0	https://issues.jboss.org/browse/RHBPMS-3041
8629	RHBPMS-3040	There have been several enhancements / fixes related to data assignments for 6.0.3 and 6.0.3 roll-up 1. Could we retest what still needs to be fixed? I would recommend opening individual issues for open issues, as that is much easier to keep track. Some additional feedback: 1) Is as expected, as there are two ways you could specify a value, either by giving it an explicit value or by mapping a variable to it. In most cases, the value is probably filled in, so by default the editor shows "data input" "is equal to" and the user can type a value in "To value". 2) Once a data output is defined, it should show in when creating a data output in the "From Object" dropdown. 3) I agree, an error message or something similar that some info (like "mapped to") is missing would be useful. Note that https://bugzilla.redhat.com/show_bug.cgi?id=1152826 is still an open issue related to data assignments as well.	1	1	https://issues.jboss.org/browse/RHBPMS-3040
8630	RHBPMS-3040	Tiho or Anton, please can you tell me what is a result of this bugzilla? There was mention a lot of problems but ER3 does not contain any fix. Problems: 1) it is not a bug. The current solution is expected. An user can assign a value. If he needs to map a value from a process variable then he has to rearrange the particular assignment. (Swap from and to object) 2) it is a real issue. This issue is not fixed by ER3. Predefined assignments should contains data inputs and data outputs together. (The assignment of "Result" is missing in ER3) 3) it is not a bug. The video sequence does not fill the type of the assignment. There was the additional request (comment #4) for the error notification. Is it the part of this bz? ER3 has similar behaviour as ER2. I assign this issue for 6.1.0 ER3 BPMS. Please, close this issue if you open new issue for each problem. In case that this bugzilla will be modified than specify what should be fixed.	0	0	https://issues.jboss.org/browse/RHBPMS-3040
8631	RHBPMS-2983	Could someone provide screenshots of the what this looks like for BPMS vs. Polymita?	0	0	https://issues.jboss.org/browse/RHBPMS-2983
8632	RHBPMS-2974	Toshiya, is this something for you to organize within the Zanata teams?	0	0	https://issues.jboss.org/browse/RHBPMS-2974
8633	RHBPMS-2974	Okay, I have fixed them in Zanata. You can pull them but Neus seems to be working on Zanata for other fixes and doesn't push those changes to github master yet. Could you check with Neus?	1	1	https://issues.jboss.org/browse/RHBPMS-2974
8634	RHBPMS-2974	Neus, After the outstanding i18n issues have been localized and pushed to Zanata; could you please pull the latest back into all modules from Zanata too. Thanks, Mike	0	0	https://issues.jboss.org/browse/RHBPMS-2974
8635	RHBPMS-2558	Is there any reason to remove the jbpm ddls in product or this is just a productisation mistake? jBPM ddls has never been existed in product. I didn't see a requirement in PRD which requires to include those ddls. or I am wrong? Ryan, creating DDLs was a requirement for the release. I remember having conversation with the team on this. I agree that it was not clearly defined on where and how it should be packaged, supplemental zip makes lot more sense. Given where we are with CR2 for 6.0, I would not push for changing the bits at this point. But we should get this in for 6.0.1 Alessandro, please do me a favor. File a bugzilla issue highlighting all the DDL scripts that needs to be included. There should be scripts for most of the DBs we certify. Lets track it closely for 6.0.1	1	1	https://issues.jboss.org/browse/RHBPMS-2558
8636	RHBPMS-2501	Hi Zuzana, Doc Text has been added. Can you please review the CCFR.	1	1	https://issues.jboss.org/browse/RHBPMS-2501
8637	RHBPMS-2454	I have checked with BPMS 6.1.0.DR3 and on page http://localhost:8080/business-central can be seen a help page listing basic REST API commands. However the reported page http://localhost:8080/business-central/rest still shows the same error as in bug description. New basic help screen in exec-server profile definitely improved the situation, but is there more work to be done? What is meant by swagger-ui? Thanks, Jiri	1	0	https://issues.jboss.org/browse/RHBPMS-2454
8638	RHBPMS-2400	Can't the existing BOMs be used for this purpose already (and if so, why not)?	1	0	https://issues.jboss.org/browse/RHBPMS-2400
8639	RHBPMS-2353	Jiri, are you saying you want to restrict the captured image to the size of the editor window? The bpmn2 editor delegates to an image capture/save dialog defined in the Graphiti framework. Maybe this enhancement request should be filed with the eclipse Graphiti project, otherwise I would have to duplicate a whole bunch of Graphiti internal code in the editor, just to override the current behavior.	0	0	https://issues.jboss.org/browse/RHBPMS-2353
8640	RHBPMS-2314	Marco, is this possible using the new QueryFilter?	1	0	https://issues.jboss.org/browse/RHBPMS-2314
8641	RHBPMS-2314	Hello Marco. Does "the new query methods underwater" mean org.jbpm.services.task.impl.TaskQueryServiceImpl.java ? If this is not the one, could you point out the class for me please? Then I'll guide to our customer that "firstResult and maxResults option" will be provided by another API from 6.1. Thx	1	1	https://issues.jboss.org/browse/RHBPMS-2314
8642	RHBPMS-2314	Hisao, what would you like to do with this BZ? We could either move this to product 6.2 and see it as a feature request, or close it.	1	0	https://issues.jboss.org/browse/RHBPMS-2314
8643	RHBPMS-2314	Hello. Thank you for your updates. Our customer wants to archive what I explained as "Expected results:" with BPMS 6.1. If user can specify "firstReuslt" and "maxResults" using "getTasksByVariousFields()" comes with BPMS 6.1, could you share with me how to do it please? If it's not possible, does customer need to use the new query methods? I might not correctly understand your suggestion. So could you explain what customer can do with BPMS 6.1 to set "firstResult" and "maxResults" with some simple sudo-code please? Thx	1	1	https://issues.jboss.org/browse/RHBPMS-2314
8644	RHBPMS-2314	Hisao, Does this help? String userId = "user"; InternalTaskService internalTaskService = (InternalTaskService) taskService; List<TaskSummary> taskSumList = internalTaskService.taskQuery(userId) .offset(10).maxResults(15) .orderBy(TaskQueryBuilder.OrderBy.processInstanceId) .buildQuery().getResultList();	1	0	https://issues.jboss.org/browse/RHBPMS-2314
8645	RHBPMS-2231	this property is currently not used in parser and is set to true by default on bpmn2 level. not user configurable at this point.	0	0	https://issues.jboss.org/browse/RHBPMS-2231
8646	RHBPMS-2219	Marco, can this one be closed based on what's there currently already?	0	0	https://issues.jboss.org/browse/RHBPMS-2219

#	Requirement	Questions	Answered	Successfully Answered	URL
8647	RHBPMS-2219	I've tested this with ER7 and written several tests for this feature, see: http://git.app.eng.bos.redhat.com/jbossqe/brms.git/tree/test-jbpm-integration/src/test/java/org/jboss/qa/bpms/jbpm/integration/remote/VariableHistoryTest.java However none of them work. 1.) I cannot work with variables correctly. String values are somehow converted to Long and I don't know why: parameters.put("var1", "30"); produces: java.lang.ClassCastException: java.lang.Long cannot be cast to java.lang.String Starting the process from business-central manually works well. 2.) In other case JaxbHistoryLogList contains empty internal historyLogList, no variable "myobject" found in the log. 3.) I've also encountered this error: org.jboss.resteasy.plugins.providers.jaxb.JAXBUnmarshalException: javax.xml.bind.UnmarshalException: unexpected element (uri:"", local:"process-instance-list"). // Expected elements are <{}log-instance-list>,<{}node-instance-log>,<{}process-instance-log>,<{}variable-instance-log> All errors are commented in corresponding test methods, which reproduce them. To reproduce issues listed above: 1.) Download BPMS 6 ER7 (eap6) and setup a db (in my case PostgreSQL). 2.) Add user ibek: ibek=9143dd65119c7b733e02c5076dcf8f84 (into application-users.properties) ibek=admin (into application-roles.properties) 3.) Run the server. 4.) Run the tests: git clone git://git.app.eng.bos.redhat.com/jbossqe/brms.git cd brms mvn clean test -Pjbpm-integration -Dtest=VariableHistoryTest (it will install test projects from bpms-assets.git automatically). I think this should be fixed, as this was requested by a customer.	0	0	https://issues.jboss.org/browse/RHBPMS-2219
8648	RHBPMS-2183	Hi Sal, what kind of custom authentication are you talking about? Can you elaborate a little bit more on how exactly the customer wants to use this?	1	0	https://issues.jboss.org/browse/RHBPMS-2183
8649	RHBPMS-2055	Verified in BPM Suite 6.1.0.ER4. QE test coverage: https://gitlab.mw.lab.eng.bos.redhat.com/bxms/brms/commit/d69e38edea2a503952f313f700773f03286e7744 Created also a pull request, because the current tests did not fail properly with strict option disabled: https://github.com/droolsjbpm/jbpm/pull/235 Can you please review and pull?	0	0	https://issues.jboss.org/browse/RHBPMS-2055
8650	RHBPMS-2011	I think all the various grains of control are what you strive for: - configure it per project - configure it per deployment (then have a way for the project to select the deployment to run in) - per server such as the default is always per_instance if not defined instead of SINGLETON as is now. I guess the solutions offered in previous posts would all be possible and may be desirable depending on the above configuration needs: - configure per project (in the kjar) - configure per deployment (via UI, some xml file on server to override defaults) - configure per server (same as deployments?) If you use kjars and allow dependencies, what level wins? project or deployment or server overrides? Just my thoughts after playing with it a bit today.	0	0	https://issues.jboss.org/browse/RHBPMS-2011
8651	RHBPMS-2003	currently simulation supports only XOR and AND gateways. For OR gateways there will be a need to introduce more simulation properties as more than one can be selected. Moreover distribution of the branches to be selected needs to somehow configurable as well as then set of outgoing flows from OR gateway should change per simulation runs and not be constant. This requires quite some development effort to be properly (and useful) implemented. Thus I would opt to move that to 6.0.1. Wdyt?	0	0	https://issues.jboss.org/browse/RHBPMS-2003
8652	RHBPMS-2003	Please, can you add some error message to the BPMS 6.0.1 that "OR gateway is not supported"? Please, give this alert into validator or end simulation engine with this error if a process contains "OR" gateway. Should I create a new bugzilla issue for this request?	1	1	https://issues.jboss.org/browse/RHBPMS-2003
8653	RHBPMS-2003	(In reply to Sona Mala from comment #6) > Please, can you add some error message to the BPMS 6.0.1 that "OR gateway is > not supported"? Please, give this alert into validator or end simulation > engine with this error if a process contains "OR" gateway. > > Should I create a new bugzilla issue for this request? Sona, can you create a new bz for better error feedback? We triaged this today and agreed the request as a Feature Request which cannot be done for 6.0.1.	0	0	https://issues.jboss.org/browse/RHBPMS-2003
8654	RHBPMS-1979	I am not totally sure that this is really an unexpected behaviour. I see the business-central as a collaborative tool. If I am working in a project and I save a process in a inconsistent state I think reasonable that every logged user working in the same BPM Suite instance (and with visibility for that process) see the error. If I am working in a rule of a project, where a different user is working in a process in the same project - and I or the other user save something with errors, we need to inform all users about that or the build will not succeed. Is not that expected ?	1	0	https://issues.jboss.org/browse/RHBPMS-1979
8655	RHBPMS-1943	[~jwest] We believe this was improved in the 6.3 release, can you check and close this JIRA if that is the case?	1	0	https://issues.jboss.org/browse/RHBPMS-1943
8656	RHBPMS-1936	Can we easily make job name a configurable column in the table?	0	0	https://issues.jboss.org/browse/RHBPMS-1936
8657	RHBPMS-1829	https://gitlab.mw.lab.eng.bos.redhat.com/bxms/brms/blob/2df19b26eea173e81e774dad3f60a9c97bb61c0c/test-jbpm-regression/src/test/java/com/bpms/customer/BZ1110206LdapUserGroupCallbackSearchScopeTest.java https://gitlab.mw.lab.eng.bos.redhat.com/bxms/brms/blob/2df19b26eea173e81e774dad3f60a9c97bb61c0c/test-jbpm-regression/src/test/java/com/bpms/customer/BZ1110206LdapUserInfoSearchScopeTest.java Maciej, great job! According to the results of the tests listed above both components are working as expected. However, I am not sure if the default search scope should be OBJECT_SCOPE when it is not possible to parse the value of 'ldap.search.scope' property. If this property is not set, ONELEVEL_SCOPE is used (as it was in the previous versions). I would recommend to unify this behavior and use ONELEVEL_SCOPE in both cases. What do you think?	0	0	https://issues.jboss.org/browse/RHBPMS-1829
8658	RHBPMS-1823	Could you give some idea about the response time you are getting? If it's quick, showing a loading page might not be required? How many processes do you have and how long is it taking to load these?	1	0	https://issues.jboss.org/browse/RHBPMS-1823
8659	RHBPMS-1823	(In reply to Kris Verlaenen from comment #2) > Could you give some idea about the response time you are getting? If it's > quick, showing a loading page might not be required? How many processes do > you have and how long is it taking to load these? There are 35 processes and load out after about 10 seconds. "No process definition found" always shown in the process list page.	0	0	https://issues.jboss.org/browse/RHBPMS-1823
8660	RHBPMS-1823	Mauricio, could we just show something else in the table, like "Loading ...", or show the "Loading ..." popup while the results haven't returned yet?	1	0	https://issues.jboss.org/browse/RHBPMS-1823
8661	RHBPMS-1808	Kris, I'm not sure just process instance id is sufficient. We still need to identify the user task node - think of a process definition with multiple user tasks, we need to track every task event to a single user task. And what about process definition with a user task in a loop ? (my assumption is that the listener erasing completed tasks is active). I guess the concept of runtime table & history table does not have any performance implications - it works for process instances, am I right? Maybe I just simplified it too much, what do you think about this solution? Thanks.	1	1	https://issues.jboss.org/browse/RHBPMS-1808
8662	RHBPMS-1807	To recap the changes: 1. Java File renamed to Data Object (in both DM and Project explorer). 2. List of types to select from when adding new field no longer contains [0..N] variant for each type, replaced by "[] List" checkbox. 3. Create button kept where it was. 4. Position attribute kept. 5. Extra attributes on hover - unknown.	0	0	https://issues.jboss.org/browse/RHBPMS-1807

#	Requirement	Questions	Answered	Successfully Answered	URL
8663	RHBPMS-1794	Would we be able to use a configurable shared ssh login, one that only background processes use? I wouldn't be against enabling the git daemon again as an implementation detail, but I'd rather the user not be directed to clone from it if they can't push. That means removing the options to copy the git address from the UI.	0	0	https://issues.jboss.org/browse/RHBPMS-1794
8664	RHBPMS-1794	I guess if we provide information for the user that git is read only and ssh is read/write that should provide enough information to choose the right one. wdyt? not sure I understand your question about ssh - behavior should not change for ssh at all.	0	0	https://issues.jboss.org/browse/RHBPMS-1794
8665	RHBPMS-1752	Hi Anton, The installer has been modified to configure multiple datasources now, using the same JDBC driver. For BPMS they can seperately install a datasource for each of dashbuilder and business-central. The datasources are independent of each other with the exception of the JDBC driver. Is this what you had in mind? Thanks, Mansi	1	0	https://issues.jboss.org/browse/RHBPMS-1752
8666	RHBPMS-1751	This ticket includes that home page enhancements that depend on BS3 upgrade, so it was postponed to product 6.3. During the face to face meeting QE also indicated this will have an impact on their test suite. Rajesh, can you please nack-it for 6.2? I don't have the permissions to do it myself. Thank you.	0	0	https://issues.jboss.org/browse/RHBPMS-1751
8667	RHBPMS-1733	Isn't this a database configuration issue? What happens if/when the underlying database implementation is changed? Does the jbpm plugin need to be changed again?	1	1	https://issues.jboss.org/browse/RHBPMS-1733
8668	RHBPMS-1700	Hello, Can this issue be marked as closed?	1	1	https://issues.jboss.org/browse/RHBPMS-1700
8669	RHBPMS-1670	I don't think this is a good idea at all... the intention of help icon ("?") is to provide some levle of help/support for users, move HOME link from left hand side to right hand side is not counter intuitive in my opinium, but this is also a misuse of the `help` component. Joe, what do you think?	1	0	https://issues.jboss.org/browse/RHBPMS-1670
8670	RHBPMS-1661	Hello Jeff, What do you think about the Marco's comment, does it address your request? Can you please describe how this issue should be tested? Do you have a reproducer/test for this issue? Thanks, Jiri	1	0	https://issues.jboss.org/browse/RHBPMS-1661
8671	RHBPMS-1661	Hello, Thank you Marco! In regards to QA ... i do not have a test case handy, sorry. My recommendation is to build a test script that invokes these modified human task query APIs using a variable number of human tasks persisted in a postgresql and/or mysql database. ie: test with 1 task persisted in the jbpm database . Then test with 100 tasks --> 1K --> 10K ---> 100K . How much is the performance degredation between tests ? thanks again! jeff	1	0	https://issues.jboss.org/browse/RHBPMS-1661
8672	RHBPMS-1620	OK - The issue is date granularity. Only units bigger than days are taken into consideration. Basically the command will not delete logs older than a day from today. Could we make this configurable so an admin is able to delete also logs older then a minute or second?	1	1	https://issues.jboss.org/browse/RHBPMS-1620
8673	RHBPMS-1607	Ivo, could you attach the stack trace? Also, if you have a link to the test in the jbossqe/brms repo, that would be great.	1	0	https://issues.jboss.org/browse/RHBPMS-1607
8674	RHBPMS-1599	[~KrisVerlaenen] Can we get some update on this? Or should it be closed and replaced with RFE?	0	0	https://issues.jboss.org/browse/RHBPMS-1599
8675	RHBPMS-1513	getVariable() currently does return the actual value. I'm not sure why you would expect this to be a copy? ksession contains a lot of similar operations (startProcess, insert, getObject, getProcessInstance) al behaving the same why, would you expect all these to be changed as well then? I agree a setVariable operation on ksession is a good idea.	1	0	https://issues.jboss.org/browse/RHBPMS-1513
8676	RHBPMS-1433	FYI: I believe that fix for this issue was already implemented as a part of fix for bug #1155480 Mauricio, what do you think?	1	1	https://issues.jboss.org/browse/RHBPMS-1433
8677	RHBPMS-1426	What do you mean with process description, could you give an example? Since you're looking at the process instance list, wouldn't all process instances of the same process show the same process description? How will this help differentiating process instances?	1	1	https://issues.jboss.org/browse/RHBPMS-1426
8678	RHBPMS-1426	(In reply to Kris Verlaenen from comment #2) > What do you mean with process description, could you give an example? Since > you're looking at the process instance list, wouldn't all process instances > of the same process show the same process description? How will this help > differentiating process instances? Hi, Kris Our requirement is just to make user can differentiate the process instances clealy. Add Process Description column is one workaround, do you have any other workaround? Our idea is: Add Process Description input on each process start form by default. Then the process description input can be shown in Process Description column to make user saw the difference by different process description. Any question please feel free to let we know.	1	0	https://issues.jboss.org/browse/RHBPMS-1426
8679	RHBPMS-1426	Adding a description column is good. Can I specify more columns? For example, for a purchase process, I would like to see: Id, desc, ... | who | item | price | number | total ---------- x | John | pen | $1 | 10 | $10 ... Gererally I want a customized query here by conditions of both fixed columns (such as start/end date) and process variables (such as who=john) and I can specify which colomns are displayed on the list.	0	0	https://issues.jboss.org/browse/RHBPMS-1426
8680	RHBPMS-1416	Thanks for quick implementation. Unfortunately, customer is running BRMS on Windows where is not allowed to install 3rd party software (e.g. git). Is it possible to enable this option without git command?	1	1	https://issues.jboss.org/browse/RHBPMS-1416
8681	RHBPMS-1413	Joe, since you own the UX, can you +1 this (or give feedback in case you have other suggestions)?	1	0	https://issues.jboss.org/browse/RHBPMS-1413
8682	RHBPMS-1387	Hi Marek, Doc Text has been added. Can you please review the CCFR.	0	0	https://issues.jboss.org/browse/RHBPMS-1387
8683	RHBPMS-1330	Ryan, could you add these migration scripts we have in the installer in the community to the supplementary tools?	1	1	https://issues.jboss.org/browse/RHBPMS-1330
8684	RHBPMS-1330	I have added the following into supplementary-tools: jboss-brms-bpmsuite-6.2-supplementary-tools/ upgrade-scripts/ ├── db2 | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql ├── h2 | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql ├── mysql5 | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql ├── oracle | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql ├── postgresql | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql ├── sqlserver | ├── bpmsuite-6.0-to-6.1.sql | └── bpmsuite-6.1-to-6.2.sql └ sybase ├── bpmsuite-6.0-to-6.1.sql └── bpmsuite-6.1-to-6.2.sql Is there anything missing?	1	0	https://issues.jboss.org/browse/RHBPMS-1330
8685	RHBPMS-1330	(In reply to Kris Verlaenen from comment #26) > Both pull requests related to the second and third issue mentioned in > comment 22 were merged to 6.3.x: > https://github.com/droolsjbpm/jbpm/commit/ > 751359c9bbca1b49e850723b9f527b8cd220f7d6 > https://github.com/droolsjbpm/jbpm/commit/ > b29c4fd348b33821623930c4631db8d282ba8e35 > > Keeping it assigned to Ryan for the mysql innodb fix. OK, I have added mysql innodb into the supplementary tools. @Tibo, However, I can't find the dashbuilder sql for mysql innodb. Shoud we assign this to dashbuilder owner to add the mysql innodb? Let me mark this as MODIFIED for test on CR1 first.	1	0	https://issues.jboss.org/browse/RHBPMS-1330

#	Requirement	Questions	Answered	Successfully Answered	URL
8686	RHBPMS-1253	This issue should take high priority for Openshift, Freemodeler and cloud deployments, since the loading of a simple process over a internet connection creates great delays, which greatly hurts usability. For example, loading a process involves about 223 different HTTP requests, summarized as follows (tested in 6.0.1 version) 223 requests 2 documents 10 stylesheets 121 images 12 scripts 78 SVG and others (Errai) Of course, this creates a big server overload and also a big delay in opening the process. Can you please confirm whether this has been targeted for 6.1 ?	1	1	https://issues.jboss.org/browse/RHBPMS-1253
8687	RHBPMS-1232	Can we mark this as modified now? I believe that what is now on 6.0.x meet the basic expectations.	1	1	https://issues.jboss.org/browse/RHBPMS-1232
8688	RHBPMS-1232	(In reply to Mauricio Salatino from comment #2) > Can we mark this as modified now? I believe that what is now on 6.0.x meet > the basic expectations. I'd like to wait for the more advanced table/grid widget before you mark this as modified (unless I understood wrong and the widget is already in the code, just not in the ER2 build).	0	0	https://issues.jboss.org/browse/RHBPMS-1232
8689	RHBPMS-1217	This looks to be complete to me!?! Can we set to MODIFIED?	0	0	https://issues.jboss.org/browse/RHBPMS-1217
8690	RHBPMS-1212	David, does the above make sense? Could you please try your use-case: - without removing the repository declaration from settings.xml, - with specifying <offline/> element in the settings.xml? Thanks!	0	0	https://issues.jboss.org/browse/RHBPMS-1212
8691	RHBPMS-1212	David, to help us think of the best solution, what are you trying to achieve? Are you setting up a machine which will have no internet connection when put into production? If so, the offline mode should help. Thanks!	0	0	https://issues.jboss.org/browse/RHBPMS-1212
8692	RHBPMS-1070	Adam, could you elaborate why you would need access to the WorkItemInfo object? This is considered an internal persistence Object and should only be accessed with caution (similar to for example ProcessInstanceInfo). Note that you could get a WorkItem using: ((org.drools.core.process.instance.WorkItemManager) ksession.getWorkItemManager()).getWorkItem(id)	1	0	https://issues.jboss.org/browse/RHBPMS-1070
8693	RHBPMS-1055	Anton, could you please elaborate more on this? how would you like to see that? We have tests in code base to cover this [1] though not sure what you'd like to have here... [1] https://github.com/droolsjbpm/jbpm/blob/master/jbpm-services/jbpm-kie-services/src/test/java/org/jbpm/kie/services/test/KModuleWithDependenciesDeploymentServiceTest.java	1	0	https://issues.jboss.org/browse/RHBPMS-1055
8694	RHBPMS-1000	Looking at the JaxbProcessDefinition class [1] I would like to gather opinion if we shall expose forms via that object? Main concern is that most of the forms will be created with form modeler then it will require form modeler to actually understand the form content and render it thus making it less useful for remote clients if at all. What do you think? [1] https://github.com/droolsjbpm/droolsjbpm-integration/blob/master/kie-remote/kie-remote-jaxb/src/main/java/org/kie/services/client/serialization/jaxb/impl/process/JaxbProcessDefinition.java	0	0	https://issues.jboss.org/browse/RHBPMS-1000
8695	RHBPMS-937	The jira mentioned in comment 6 will be included in 6.1 version so the remaining part is to configure handler to use BASIC authentication. My vote is to stick with what we have now and if needed reconfigure it using deployment descriptors per kjar/project. What do you think?	1	0	https://issues.jboss.org/browse/RHBPMS-937
8696	RHBPMS-937	Ivo, do you by any change use singleton session and both processes are in the same project/kjar?	1	0	https://issues.jboss.org/browse/RHBPMS-937
8697	RHBPMS-937	We have discovered a limitation of the current solution, see BZ1209479. Http authentication method of a REST task cannot be explicitly set. It can be set only indirectly like this new org.jbpm.process.workitem.rest.RESTWorkItemHandler("ibek","ibek1234;") see [1]. This means a limitation, because imagine a process definition which has several REST tasks, where each one uses a different remote endpoint and a different auth method. One configuration of one RestWorkItemHandler cannot handle that. Documentation team, can you please document this? [1] https://github.com/droolsjbpm/jbpm/blob/6.2.x/jbpm-workitems/src/main/java/org/jbpm/process/workitem/rest/RESTWorkItemHandler.java#L128	1	0	https://issues.jboss.org/browse/RHBPMS-937
8698	RHBPMS-937	Kris, have you read the linked bugzilla description? You can set "Username" and "Password" as you say, but the problem is elsewhere. You cannot set explicitly http auth type.	1	0	https://issues.jboss.org/browse/RHBPMS-937
8699	RHBPMS-914	I am not able to reproduce this issue, since new issue is present all the time. at step 8. Process model window is opened and designer is loading but never starts. There is printed error in log: 14:27:47,677 ERROR [stderr] (http-/127.0.0.1:8080-2) context [anonymous] 6597:12 attribute includedo isn't defined Isn't it possible that fix broke something else? It seems that there was same issue many time in history: https://developer.jboss.org/thread/238296?start=0&tstart=0 returning back to Assigned	1	1	https://issues.jboss.org/browse/RHBPMS-914
8700	RHBPMS-896	@Bob, please in what version of BPMN2 Modeler is this issue fixed? I have installed BPMN2 Modeler 1.1.3.201504171557 (Luna), but in properties of User Task element were no new tabs. Is needed some more configuration? For example Window > Preferences > BPMN2 > ...	1	1	https://issues.jboss.org/browse/RHBPMS-896

#	Requirement	Questions	Answered	Successfully Answered	URL
8701	RHBPMS-896	>(UserTask)-(EndEvent) 2. Double click on (UserTask) 3. In pop-up window named 'Edit User Task' click 'Add' in section Notifications 4. Fill all fields of new Notification 5. Click Ok 6. Save process 7. Repeat step 2. Pop-up window with Properties of (UserTask) should be displayed, but it is not. 8702	RHBPMS-873	I understand that we cannot add such a method to KieSession/TaskService. ksession.getKieBase().getProcess() may not be good for Remote API, either. Hmm, how about introducing a new interface class for Remote API?	0	0	https://issues.jboss.org/browse/RHBPMS-873
8703	RHBPMS-855	Hi Everyone, Is there any new progress on this? The localization team is currently working on the QA for 6.3 atm and the fact of having 14 different Zanata links makes it very time consuming to find the strings to be modified/corrected. Let me know if I can be of any help from my end. Thanks a lot! Angela García	1	0	https://issues.jboss.org/browse/RHBPMS-855
8704	RHBPMS-813	This BZ states that Documentation is not included in PDF after exporting a process... I can reproduce it on BPM Suite 6.0.3 and 6.1.0. At the bottom of the page [1], doc states: "Note that when exporting to PDF, the output PDF file will contain also the values of the Documentation properties of the Process and its elements." Are we missing something? [1] https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_BPM_Suite/6.1/html/User_Guide/Exporting_a_Process1.html	1	0	https://issues.jboss.org/browse/RHBPMS-813
8705	RHBPMS-745	Is it still make no sense for current release? Is it reasonable to close this issue?	1	0	https://issues.jboss.org/browse/RHBPMS-745
8706	RHBPMS-734	For now you can see "Unable to import provided BPMN2" after import incorrect process instead of "Successfully imported BPMN2" and it is good. But I guess it is better to go by way proposed by Marek: *** Expected results: Only 'Unable to import provided JSON' or 'Unable to import provided BPMN2' error message will be displayed, Key word is "Only". So user will not see the "Replace existing model?" dialogue and immediately see message "Unable to import provided BPMN2". What do you think?	0	0	https://issues.jboss.org/browse/RHBPMS-734
8707	RHBPMS-718	There is also a column 'createdby_id' - it seems confusing. What should be the difference between taskinitiator_id and createdby_id ?	1	0	https://issues.jboss.org/browse/RHBPMS-718
8708	RHBPMS-703	Good catch Anton, fixed on master jbpm master: https://github.com/droolsjbpm/jbpm/commit/f39782a9c36562bbfabfb16927caf8024bc56747 do we target that for 6.0.2 or 6.1.0 as I don't know if I shall mark this bz as modified or not?	1	1	https://issues.jboss.org/browse/RHBPMS-703
8709	RHBPMS-702	Maciej, will this make into the DR4 build?	0	0	https://issues.jboss.org/browse/RHBPMS-702
8710	RHBPMS-650	this will be actually partially available in 6.1 that will come as part of the asset management work. So when repository will be managed (meaning it will be under control of gunner for branching etc) it will have enhanced capabilities when it comes to build of the project: - build only will just verify if the assets can be build - build and install will build, package and install jar into maven repository (both local and the one hosted by business central) - build and deploy will build, package install to maven and deploy to runtime - this will be valid option only for BPMS so when doing tutoring only most of the time only two first options should be used and that will eliminate problems described in this bz. We could consider if we should still provide disable auto deploy option. So that are the thoughts on this?	1	1	https://issues.jboss.org/browse/RHBPMS-650
8711	RHBPMS-650	Justin, as part of other bz () we provided option to disable auto deploy via system property. So it will be possible run with no auto deploy but still possible to deploy via deployments panel if the property is set: -Dorg.kie.auto.deploy.enabled=false Would that cover this case or there is more to it?	1	1	https://issues.jboss.org/browse/RHBPMS-650
8712	RHBPMS-650	Thanks for the update Maciej - this flag would indeed cover our case. Will this be in product version 6.1.0?	1	0	https://issues.jboss.org/browse/RHBPMS-650

#	Requirement	Questions	Answered	Successfully Answered	URL
8713	RHBPMS-650	Jiri, this is expected behavior and works as designed. Meaning whatever has been deployed into runtime environment it will be brought up after server restart. Regardless if the version is SNAPSHOT or concrete. The difference for snapshots it that only latest snapshot of given version is deployed and not all available snapshots of given version (so called timestamped versions). So in your case you deployed 3 distinct deployment - different versions - so all of them will be deployed upon server startup. Next the property org.kie.auto.deploy.enabled does not alter already deployed versions but it allows to do not deploy when you click 'Build & Deploy' button for unmanaged repositories/projects. So if you build a project with that property set to false it will not deploy to runtime but only to maven repo (artifact repository). Whenever you don't want to have deployments present at runtime any more you much explicitly undeploy it, otherwise engine itself cannot make such a decision because it will impact running instances (if any). Does it make sense?	1	1	https://issues.jboss.org/browse/RHBPMS-650
8714	RHBPMS-551	Thanks Maciej. I had to add myself to a new kiemgmt role, why a new role? Why admin role is not enough to create a managed git repository? Unfortunately there is still no option to convert existing or cloned repositories to managed repositories. As a result the managed repository does not solve the problem. My existing or cloned repositories still have only Build&Deploy button without gui option to deploy using selected session strategy. Adding also Walter to CC. As a side effect of working on this bugzilla, I have filed a new installer BZ about kiemgmt role required to do full repository management: BZ1176597	1	0	https://issues.jboss.org/browse/RHBPMS-551
8715	RHBPMS-482	Ah, sorry, Marco. Please forget my stupid comment#3. My main point is that users may want to add their own classes/interfaces to implement internal logic, not as data models. However, DynamicJaxbContext.setupDeploymentJaxbContext() picks up *all* classes/interfaces in a project to JAXBContext.newInstance() so results in the Exception. If it's expected, we would need to document guidance like: "All Java sources in a project are considered as data models so need to follow JAXB conventions." Is it fine?	0	0	https://issues.jboss.org/browse/RHBPMS-482
8716	RHBPMS-459	Since we now have retry etc., are these checkboxes never used?	1	0	https://issues.jboss.org/browse/RHBPMS-459
8717	RHBPMS-421	How to reproduce: 0) I use JDK 7 to compile my project / start JBoss EAP/BPMS, so you need to use JDK 7 if you want to use my compiled jar... 1) first I installed EAP 6.4 + BPMS 6.1 in standalone mode (for quick setup I just use the default H2 datasource) 2) so I created a new project in business-central, say, "org.acme : myartifact : 1.0-SNAPSHOT" 3) now "New Item - Business Process", give a name "TestProcess", and import my "TestProcess.bpmn2" 4) open "TestProcess", notice the "Content" field value of the UserTask, I'm not sure how you setup this as you didn't show me your code (or any bpmn2 example...)... I guess you can setup via a process variable, or using TaskService to setup this programmatically, etc.... 5) ok now assuming we have the custom model, class CustomModel , in my maven project "model", you can find compiled jar in "target" folder in the project, you want to setup this jar as project dependency (upload the jar in "Authoring - Artifact repository" first), so that you can use this class to setup the Content field. 6) build the project in business-central 7) now import another maven project "brms61" into JBDS(I use 8.1), or Eclipse, whatever, this is the REST API client, check the server URL / USER / PASSWORD settings in the class Case01442738 8) compile this project and run Case01442738 as standalone Java program 9) it will connect to REST API and call 3 APIs: start a process of "TestProcess"; then get task list using the process id; then get the task content using task id. Now you should see this printing out the content retrieved from REST API, it's serialized object. In my testings I didn't even use "CustomModel" to set the Content field, I just use a simple string and looking into the src of Content class it saves the content object as Base64Binary format and that's basically what you'll get, and it seems you need to convert it into whatever you set , by yourself . (check my "// TODO" comments in class Case01442738) Checking the src of class "JaxbContentResponse" (response object returned by REST API "/task/{taskId}/content"), it does't seem to be JSON supported Comparing to the other "JaxbTaskSummaryListResponse" (response object returned by API "/task/query") , that one has "@JsonAutoDetect" and "@JsonTypeInfo" annotations and I've tried that it can be converted into JSON format (human-readable) So I was trying to setup simple string into Content field and couldn't get it printed out when requesting that via REST API. (though I think it should, by using something like Base64Binary decode utils.)	0	0	https://issues.jboss.org/browse/RHBPMS-421
8718	RHBPMS-374	This is already solved in master with the column picker component, that as far as I know it will not be migrated back to 6.0.x it will be in 6.1. Can I mark this as modified?	1	0	https://issues.jboss.org/browse/RHBPMS-374
8719	RHBPMS-315	Verified with BPMS-6.1.0.ER6 that using custom marshalling strategy configured via deployment descriptor inside kjar, variables can be persisted outside the process instance. Maciej, may I drop there a link to your example project you pointed me to? It illustrates the usage of marshalling strategies and deployment descriptors pretty well, Anton told me he could use an example like that.	1	1	https://issues.jboss.org/browse/RHBPMS-315
8720	RHBPMS-315	Maciej, what approach would you recommend if I wanted to retrieve variable value for a process instance which has *ended* already. For running process instance I am using: ================= Map<String,Object> params = new HashMap<String,Object>(); Person p = new Person(); p.setName("name"); params.put("processVar1", p); WorkflowProcessInstance w = (WorkflowProcessInstance) ksession.startProcess("com.sample.bpmn.hello",params); Person x = (Person)w.getVariable("processVar1"); System.out.println("var name:"+x.getName()); ================= And I don't need to care about JPAPlaceholderResolverStrategy at all. But what about completed? There is no relationship between entity Person and the process instance. So why would I ever wanted to use JPAPlaceholderResolverStrategy if for running process instance I can just use the approach above and for completed process instance it doesn't help me at all - of course unless I make sure that in my Entity class I also put variable name, and process instance id as attributes. And then I implement some custom querying logic, let's say in JPQL - but that seems like huge amount of work. I guess I am confused because I don't understand the value proposition of this JPAStrategy - mainly because the entity stored in database has absolutely no relationship with the Process Instance which persisted it and there is no out-of-the-box jBPM API which can help me to get this entity. Can you please give me some use cases / scenarios (I don't mean code) where we should recommend this option to customers? I understand what this strategy does - I don't understand what it's good for. Thanks, Anton	1	0	https://issues.jboss.org/browse/RHBPMS-315

#	Requirement	Questions	Answered	Successfully Answered	URL
8721	RHBPMS-315	Anton, main use case (in general regardless of the type of the strategy) is that it shall be used when process instance is not owner of the data. That means if data can be changed outside of the process instance then you should use variable persistence strategy. Moreover process instance id or variable name should not be part of the variable you persist externally - that simply breaks the idea of decoupled data. Imagine case where you have order entity that is stored in some order management db/system. Then why would you like to "corrupt" it with some internals of process engine/process definition that uses that data? So to recap, use variable persistence strategy when you have some other systems/components that are considered master system of that data and process instance must have access to always latest version of that data to properly process it. At the same time process instance can modify that data as that is primary responsibility of process instance - produce some results. Then don't expect that you will be able o find such data from within process instance same way you would for process variables owned by process instance, this is because strategy is all about persist and load operations, it does not provide any searching capabilities. If you need those you would have to extend the logic by custom listeners that can store (in any way) relationship between process instance and given data. Though not sure that makes much sense.... Hope this helps	0	0	https://issues.jboss.org/browse/RHBPMS-315
8722	RHBPMS-271	Yeah.. Interesting use case.. we can do that and then add an extra box in the assignments configurations for the task in the UI to add the excluded owners.	0	0	https://issues.jboss.org/browse/RHBPMS-271
8723	RHBPMS-157	Could you please elaborate little bit more on this case as I don't really understand what should happen? Do you mean next task owner as the task owner of currently active human task that process instance is waiting at?	1	1	https://issues.jboss.org/browse/RHBPMS-157
8724	RHBPMS-148	Every 'New'.. dialog has "Resource Name", change that to appropriate "XXXX Name" For instance for the new project dialog call it - "Project Name' etc.	1	1	https://issues.jboss.org/browse/RHBPMS-148
8725	RHBPMS-89	Hi Jeremy, there are two options how I can create a custom task in Designer: a) import it from some Service Repository, b) create a WID file in a project where I have to reference an icon path. Description of this issue: ---------- This issue is about a referencing of an icon from a WID file (WID can be place in various packages). There should be possibility to create an custom icon. It means that a user can add, delete or change icons in project. ========== Notes: ------ I mentioned 3 problems in comment #10: 1) WID editor contains a selector of icons - scope of this issue: If I use the selector, I want to insert the right path of the icon and Designer displays the right icon in Object repository - there should be an agreement between WID Editor and Designer 2) The folder 'global' does not allow to add an icon - scope of this issue: User can add, delete or change an icon 3) The empty project does not allow to select any icon (no predefined icons) - this is not important when an user can defined and use own icon. I put all these problems here because they can be solve in one system solution. If some problem lefts I will report new issues. Please, can you write me if something is still unclear?	1	1	https://issues.jboss.org/browse/RHBPMS-89
8726	RHBPMS-89	Hi Sona, Thanks for the clarification. I am wondering whether we should mark this BZ entry as modified now that the initial bug is (almost) fixed, and create a separate Feature Request for your notes in Comment 10 / Comment 14. In particular, your note in Comment 14 "2) The folder 'global' does not allow to add an icon..." requires a change to the "New -> Uploaded File" functionality which is a Business-Central issue rather than a Designer issue, so maybe it makes sense to make a new Feature Request BZ entry for this. If you agree that a new Feature Request should be created, will you create one? Thanks. - When I say the original bug is 'almost' fixed, there's an aspect of it that I'll work on today to complete it.	1	0	https://issues.jboss.org/browse/RHBPMS-89
8727	RHBPMS-89	Thanks Sona for your response. I've completed the fix for the initial bug so that relative and absolute icon paths work in WID files. For example: "icon" : "myicon.png" (icon in same folder as .wid file) "icon" : "com/test/myicon.png" (icon relative to .wid file location) "icon" : "../test/myicon.png" (icon relative to .wid file location) "icon" : "/HR/src/main/resources/myicon.png" (absolute path to icon) master: https://github.com/droolsjbpm/jbpm-designer/commit/68b31b993f011045b89c26747f6f9f29a47a0f56 6.2.x: https://github.com/droolsjbpm/jbpm-designer/commit/808124d608ef46b1d1955c2249dba4e5dfbe4df7	1	0	https://issues.jboss.org/browse/RHBPMS-89
8728	RHBPMS-86	(In reply to Kris Verlaenen from comment #2) > sourceRef of a data association should be a valid IDREF, so strictly > speaking, it can't be something like <sourceRef>myMap.var1</sourceRef>. A > transformation element (which is an expression inside the data association) > should be used to store the expression. > > So when using BPMN2 (both Designer and Eclipse), currently the user cannot > set expressions as source for data associations. As alternative, scripts > should be used to set a variable with the right value and then use a simple > data association to map that variable to the data input. > > We will have to consider adding support for transformation expressions in > the future. we already have support for transformation from the engine point of view. I talked to both Tihomir and Bob regarding support in the tooling though not sure it has been developed. I am quite sure eclipse modeler can show it when defined in source xml.	0	0	https://issues.jboss.org/browse/RHBPMS-86
8729	RHBPMS-7	[~ghjboss] Is this still necessary? If not, can you please close it?	0	0	https://issues.jboss.org/browse/RHBPMS-7
8730	RHBRMS-2858	Hi [~manstis], can you point me a doc that explain how to set up the workbench to load the list of possible values from an external data source. This is interesting but not fully address my requirement, since the focus of my request is dealing with a long list of values that cannot be handled in a static way (e,g, thousands of values). So the "auto complete" behaviour fits better the situation, so as far as the user fills some characters, he will get back a list of possible values in an interactive way. !img_001.png|thumbnail! A step further could be provide a complex form to filter the desired value. Maybe, this could be achieved with a mashup capability leveraging external html fragment. E.g. * address will pop up a form with 4 fields: country, city, address, zip code; starting the from to top to down the previous field narrow the actual field range. * Select a point on a map (embedding google map).	1	1	https://issues.jboss.org/browse/RHBRMS-2858
8731	RHBRMS-2810	Hi [~grgrzybek]. We need to cover more details about the instructions. See an example at: https://access.redhat.com/jbossnetwork/restricted/softwareDetail.html?softwareId=38733&product=bpm.suite&version=6.1.0&downloadType=patches Could you please use a similar approach for instruction ? Probably some steps will be similar. Thanks	1	1	https://issues.jboss.org/browse/RHBRMS-2810
8732	RHBRMS-2810	[~alessandrolt] [~grgrzybek] Would it be possible to rename one-off Maven GAVs to something like "drools-karaf-features-6.5.0.Final-redhat-7-RHBRMS-2810" and "drools-karaf-features-6.4.0.final-redhat-13-RHBRMS-2810"? This kind of suffix is often used for BxMS one-offs and I think it would work also for features files. It may be a little confusing to have two different artifacts with the same GAV. It is also problem for QE automation.	1	1	https://issues.jboss.org/browse/RHBRMS-2810
8733	RHBRMS-2750	Yes, we can close this one. Could you please close it as duplicated by RHBRMS-2743 ? Thanks Tibor.	1	1	https://issues.jboss.org/browse/RHBRMS-2750

#	Requirement	Questions	Answered	Successfully Answered	URL
8734	RHBRMS-2693	[~jsoltes] Hi, can you please advise what makes you consider this a regression; do you have a failing unit test? I only ask because we generate the DRL by iterating the data rows and construct a rule per row. If there's no data AFAIK we've never attempted to generate the static component. Can you also explain the expectation when we have (for example): {code} Person(age > 10) Address(city = {param1}) Loan(amount > 1000) {code} i.e. the first and third patterns are literals; and the second uses a template key. What about a more complex example:- {code} Person(age > 10, age <= {param1}) {code} If there are no data rows, do you expect the following to be generated? {code} Person(age > 10) {code}	1	0	https://issues.jboss.org/browse/RHBRMS-2693
8735	RHBRMS-2693	[~tirelli] This is an enhancement not a bug and definitely not a regression as originally reported. Are we doing enhancements in roll-up patches?	1	0	https://issues.jboss.org/browse/RHBRMS-2693
8736	RHBRMS-2693	[~jsoltes] As Michael mentioned, templates are supposed to be generated by iterating data. If there is no data to iterate, there is no reason to generate the source code. Having said that, the only thing I would change if possible [~manstis] is to disable the source code tab and the data tab if there is no "parameter" to interpolate in the template. What do you think? In any case, lets target 7.0 for this. There is no reason to change the behavior in a patch.	1	1	https://issues.jboss.org/browse/RHBRMS-2693
8737	RHBRMS-2693	[~tirelli] I am sorry, but I don't quite like the proposed change. Although, it would give a hint to the template user that he needs to have template key for the source generation to work, I am afraid this would put an inconsistency into how asset editors work (in means, this is the only editor, that would support this kind of behavior). I would rather prefer having no change done at all and just wait for the new Drools centric Web tooling proposals to happen (https://docs.google.com/document/d/1VYcwhoIidLlEssUHjZlGd4R7dnsTplzs698dpZdyXxA). I think there is a proposal to remove this editor, since guided data tables can now fully replace it. Or if we want to keep similar UI - another idea is to merge guided rule editor with guided template editor by just adding data table column into the guided editor... And I am ok with this happening in the 7.x series as originally proposed. Having said that, I still think that it should not be possible to add data row in guided templates when there is no template keys. My video shows, that it is possible (even though it does not generate any visible table). If something is to be disabled it is the add row button for this case. And I also think, this is a bug. What do you think?	1	1	https://issues.jboss.org/browse/RHBRMS-2693
8738	RHBRMS-2610	This JIRA lacks the necessary ACKs to apply the fix for 6.4.x Product. Can you please organise QE's ACK?	1	1	https://issues.jboss.org/browse/RHBRMS-2610
8739	RHBRMS-2413	Hi Francisco, IMHO the presence of those files does not necessarily imply that another BPMS installation has already been performed. The general idea was to allow a customer to use his own keystore. That brings in another question. What will the installer do if there are already those file present? If you think that the current behavior is sufficient and the above is a new feature or enhancement then I will not dispute that and I will change the issue type. Thank you for the feedback.	1	0	https://issues.jboss.org/browse/RHBRMS-2413
8740	RHBRMS-2413	Hi Marek, I see. I think that, if it's the case that we allow the customer to use their own keystore, we should make the following changes: 1) Make the generation of a client keystore optional through a selection on the panel. a) If the selection is to use their own keystore, we will require a path and a password to confirm access to the keystore, so the generated server.keystore certificate can be imported successfully. We will support only JKS / JCEKS type keystores here (unless you advise otherwise). b) If the selection is to have the installer generate them, we do exactly what we are doing now. In b), we can check for the existence of a keystore to avoid the failed installation (keytool fails upon file existence, so this really should be checked anyway.) How does this sound for you? Thanks, Tom	0	0	https://issues.jboss.org/browse/RHBRMS-2413
8741	RHBRMS-2413	Hi Tom! your proposal sounds great. When implemented, it will look really cool :) I'm also changing this issue to a Feature request as it looks as a far better match. Thanks! Marek	1	0	https://issues.jboss.org/browse/RHBRMS-2413
8742	RHBRMS-2413	Should this be included in 6.0.2?	1	1	https://issues.jboss.org/browse/RHBRMS-2413
8743	RHBRMS-2185	Update. Currently the A and B do not need to be added to import suggestions They are automatically picked up from the jar. In the future the goal should be to make import suggestions act as a mask for import options in the editors. Benefits: * If a jar with 1000 classes are added and only few of them are needed, the editor's import tab does not show 1000 items. * The project admin has the control to declare what facts can be used in the guided editors. An user that only has access to guided editor can not break the package by using the wrong Person fact if there are more than one available * This will unify the way imports are done. Currently imports from java.lang.* need to be added using import suggestions, in order for them to show up in guided editors. * In the future we might want to use aliases for the imports. org.test.Person could be masked as "User" or "Persona" if the users are spanish.	1	1	https://issues.jboss.org/browse/RHBRMS-2185
8744	RHBRMS-2000	(In reply to Petr Siroky from comment #0) > Description of problem: > The "-Dproductized" build is now creating distribution wars for containers > that are not supported for product, namely JBossAS 7.1.1 and WildFly 8.x. In > order to make the maintenance easier and the builds faster, I think it makes > sense to remove these assemblies from the productized build. > > I already discussed this with Mike Anstis and Kris and they agree that this > is a good idea. > > This should not involve any changes in prod. process as the resulting WARs > are not used anyway. @Ryan, can you please confirm this? > > > Version-Release number of selected component (if applicable): > 6.1.0.ER4 Yes, this is good idea. Product don't use the war for JBossAS 7.1.1, wildFly 8.x. So it's good to remove them from producitzed profile.	1	1	https://issues.jboss.org/browse/RHBRMS-2000
8745	RHBRMS-1937	See https://bugzilla.redhat.com/show_bug.cgi?id=1020925#c7 It was agreed to remove the ability to delete artifacts from the repository via the UI. Should a customer need to delete rogue artifacts it should be the role of a system administrator to delete the JAR from whatever places are necessary. The places depend upon how the customer has Maven configured/deployed.	0	0	https://issues.jboss.org/browse/RHBRMS-1937
8746	RHBRMS-1900	What is a solution for this?	0	0	https://issues.jboss.org/browse/RHBRMS-1900

#	Requirement	Questions	Answered	Successfully Answered	URL
8747	RHBRMS-1900	I'm using version 6.0.1.Final and facing this issue recently. Let me know the resolution pls. Below is my test case. Simply trying to fetch a release id of artifact deployed on WAS. ---------- String url = "http://localhost:8080/kie-drools-wb-distribution-wars-6.0.1.Final-jboss-as7.0/maven2/com/creditdecision/1.0/creditdecision-1.0.jar"; KieServices ks = KieServices.Factory.get(); KieRepository kr = ks.getRepository(); UrlResource urlResource = (UrlResource) ks.getResources().newUrlResource(url); urlResource.setUsername("*******"); urlResource.setPassword("*******"); urlResource.setBasicAuthentication("enabled"); InputStream is = urlResource.getInputStream(); KieModule kModule = kr.addKieModule(ks.getResources().newInputStreamResource(is)); KieContainer kContainer = ks.newKieContainer(kModule.getReleaseId()); System.out.println("ReleaseId loaded into local Rule Engine(KieContainer) : " +kContainer.getReleaseId()); ---------- Error: java.lang.NoSuchMethodError: com.ning.http.client.Realm$RealmBuilder.setEnconding(Ljava/lang/String;)Lcom/ning/http/client/Realm$RealmBuilder; at org.sonatype.maven.wagon.AhcWagon.openConnectionInternal(AhcWagon.java:84) at org.apache.maven.wagon.AbstractWagon.openConnection(AbstractWagon.java:116) at org.apache.maven.wagon.AbstractWagon.connect(AbstractWagon.java:218) at org.sonatype.aether.connector.wagon.WagonRepositoryConnector.connectWagon(WagonRepositoryConnector.java:345) at org.sonatype.aether.connector.wagon.WagonRepositoryConnector.pollWagon(WagonRepositoryConnector.java:385) at org.sonatype.aether.connector.wagon.WagonRepositoryConnector$GetTask.run(WagonRepositoryConnector.java:571) at org.sonatype.aether.util.concurrency.RunnableErrorForwarder$1.run(RunnableErrorForwarder.java:60) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:615) at java.lang.Thread.run(Thread.java:745) ----------	0	0	https://issues.jboss.org/browse/RHBRMS-1900
8748	RHBRMS-1894	Pedro, could you please arrange for Form Builder's icon to be updated (and then re-assign to tsurdilo for Designer)? Thanks, Mike	0	0	https://issues.jboss.org/browse/RHBRMS-1894
8749	RHBRMS-1848	My apologies - What information do you need from me? If the question is weather we want to tighten the password restriction, then this question should be directed at PM (namely at Prakash Aradhya). Thank you.	1	1	https://issues.jboss.org/browse/RHBRMS-1848
8750	RHBRMS-1848	Has any more thought been given to this issue?	1	1	https://issues.jboss.org/browse/RHBRMS-1848
8751	RHBRMS-1848	I am OK to do it same as EAP. But lets think about it for a minute. EAP typically has Administrators as the users. For BRMS / BPMS we have 5 different kinds of users. Many of the users have simple roles like business user / analyst etc. The level of security imposed by EAP may be valid for EAP Admins. I am wondering if we really need to impose such restrictions for BxMS users of all types. Remember, users can still use passwords that are like EAP ones. How about making it configurable ? Have a setting in Userprofile to set using restrictive passwords like EAP. By default keep the current behaviour.	1	0	https://issues.jboss.org/browse/RHBRMS-1848
8752	RHBRMS-1848	Hi Marek, Can you clarify a little bit as to what is supposed to be done here? Did you want the password requirements to be the same as those in EAP? Thanks, Mansi	1	0	https://issues.jboss.org/browse/RHBRMS-1848
8753	RHBRMS-1848	Hi, I would like to give brief status and what is already included (6.2.0) about this BZ. Password restrictions looks same to me for both EAP admins and BxMS users (e.g. 8 chars long, one alphanumeric char, one digit and one non-aplhanumeric not including &). Second part is concerning passwords restrictions when using keystores, JMS etc. Here the only restriction is length more than 6. I can even use (& - char). So to sum it up. This RFE is to make password restrictions consistent across the installer including pwdvaults, ssl-keystores, etc. While EAP admin and BxMS users has this consistent, passwords for keystores and etc. doesn't. Thomas? Can you provide info about how much work will this need and if this is necessary to have, because user CAN use strong passwords, like in EAP, for keystores aswell, only difference is that if the password is weak Installer will let him use it. Do we need to enforce restrictons for these too?	1	0	https://issues.jboss.org/browse/RHBRMS-1848
8754	RHBRMS-1591	Ryan, did you remove .niogit folder from previous installations? As it might be it is still present there so kie-wb does not need to load it from remote and just uses what has already been there.	0	0	https://issues.jboss.org/browse/RHBRMS-1591
8755	RHBRMS-1454	This related to how metadata for files is stored in Guvnor for BRMS/BPMS6. Is metadata stored in an additional file on the file system (so it can be editor from Eclipse using for example EGit)?	1	1	https://issues.jboss.org/browse/RHBRMS-1454
8756	RHBRMS-1443	Hello, Can you please provide your complete DSL definition? Using a DSL with a single definition (see below) in the "mortgages" example repository the UI and generated source were OK (see below): *DSL* [when]There is an Applicant with the name of {name} whose CR is any of {rating:ENUM:Applicant.creditRating}=applicant:Applicant(name=="{name}", creditRating in {rating}) *Source code* > package org.mortgages; > > import java.lang.Number; > > rule "gre2" > dialect "mvel" > when > applicant:Applicant(name=="bananna", creditRating in ("AA","OK")) > then > end Thanks, Mike	1	0	https://issues.jboss.org/browse/RHBRMS-1443
8757	RHBRMS-1443	Mike, you are right, it works as you describe under normal conditions. The issue I encountered depends on specific DSL definition. The one I used is as follows: [when]There is a person with the name of {name} who likes {cheeseType:ENUM:Cheese.cheeseTypes}=person:Person(name=="{name}", cheese=="{cheeseType}") [when]There is a person with the name of {name} who likes any of {cheeseType:ENUM:Cheese.cheeseTypes}=person:Person(name=="{name}", cheese in {cheeseType}) I suspect the issue may be connected to the fact that the two sentences have a common prefix (I think there already was a bug related to sentences with common prefix). What to do now? We can a) revert the feature and postpone it to 6.2, b) accept it as is and provide further fixes later, c) include the additional fixes now. Depends on how severe the issue I hit is. I'm not sure ATM.	1	1	https://issues.jboss.org/browse/RHBRMS-1443
8758	RHBRMS-1422	Pedro, can you check if someone in your group can tackle this one? The core engine has a configuration option to define the severity of rule name duplication build result message: ERROR, WARN, INFO. Maybe all that is missing here is to properly catch that message and present to the user in the UI?	0	0	https://issues.jboss.org/browse/RHBRMS-1422
8759	RHBRMS-1422	Sorry, forgot to add: Did you check this in the 6 version? if so, could you please recheck this in a recent build and if the problem persists give a more detailed scenario to reproduce the defect?	0	0	https://issues.jboss.org/browse/RHBRMS-1422
8760	RHBRMS-1330	Maciej, The PR is for master, but we need to support for websphere in 6.0.2. Can you clarify what we need to do for 6.0.x? Is this PR supposed to be applied to both master and 6.0.x? Thanks	1	1	https://issues.jboss.org/browse/RHBRMS-1330
8761	RHBRMS-1330	Maciej, I applied the PR to master and cherry-picked it into 6.0.x as we discussed. Rajesh, This is required for the Websphere support in 6.0.2. Can you please review and set the acks? Thank you	1	1	https://issues.jboss.org/browse/RHBRMS-1330

#	Requirement	Questions	Answered	Successfully Answered	URL
8762	RHBRMS-1229	Adding Needinfo for Tomas, I have captured screen shots of each page of the GUI for advanced configuration but haven't been able to find any further information about configuring each thing specifically. In particular, SSL keystores, Business management LDAP, Security Domain, and JSSE. Is there community documentation I can use to develop a clear procedure for users wanting to enable the advanced configuration? Thanks, Gemma.	1	1	https://issues.jboss.org/browse/RHBRMS-1229
8763	RHBRMS-1199	Let's move this issue to 6.1 (and probably 6.2). There's no point in doing this analysis now if there's no bandwidth to implement it.	0	0	https://issues.jboss.org/browse/RHBRMS-1199
8764	RHBRMS-1061	Fixed all but #4. The contents of the pop-up can't be modified as this is chart library internals. (master) https://github.com/droolsjbpm/kie-wb-common/commit/f46d6713dbbfc19df914cec24bac399da1207782 (6.2.x) https://github.com/droolsjbpm/kie-wb-common/commit/a7d53beb6b027ba860531c4b32cbd0398c06e98c	1	1	https://issues.jboss.org/browse/RHBRMS-1061
8765	RHBRMS-988	Hi Jan Fixed in master: http://github.com/droolsjbpm/kie-wb-distributions/commit/716f25bab http://github.com/droolsjbpm/kie-wb-distributions/commit/0286d03cf Before also committing this to 6.2.x (this BZ is in the list of additional BZs that have to be tackled for 6.2.x), could you possibly check if the images are enough / acceptable, or changes are required? Thanks!	1	1	https://issues.jboss.org/browse/RHBRMS-988
8766	RHBRMS-857	Toshiya, I've pulled all translations for all of the BRMS related projects from Zanata. Some of these projects however lack any translations (e.g. https://translate.jboss.org/iteration/view/kie-wb-distributions/6.0.0). How can we get the Zanata community to complete translations? There is only so much that we, engineering, can do. Thanks, Mike	1	1	https://issues.jboss.org/browse/RHBRMS-857
8767	RHBRMS-857	Thanks. Could you please let me know (comment on this BZ) when translations are complete? I'll keep this BZ as "open" until we've merged the completed translations.	1	1	https://issues.jboss.org/browse/RHBRMS-857
8768	RHBRMS-857	Can you check if the latest translations have been committed for form modeler and BAM?	0	0	https://issues.jboss.org/browse/RHBRMS-857
8769	RHBRMS-857	Toshiya, we need your input here. Can we close this?	1	1	https://issues.jboss.org/browse/RHBRMS-857
8770	RHBRMS-701	Joe, could you please give a view on how to improve the popup? Thanks.	0	0	https://issues.jboss.org/browse/RHBRMS-701
8771	RHBRMS-658	Hi Sir, Can you please give an example, how to specify more than one patterns. I tried giving as below but its not classes are not imported: com.jcms.db.entity.** com.aml.**	0	0	https://issues.jboss.org/browse/RHBRMS-658
8772	RHBRMS-658	(In reply to Sona Mala from comment #0) > Describe the issue: > ---------- > Can you document the existance of a new file which name is > 'package-names-white-list' which was created by bz 1155371 see comment #9. > > The location of this file is the root directory: > + src > + package-names-white-list > + pom.xml > + project.imports > > This file is visible only in Repository view of Project Explorer in kie-wb > (of course, it is saved into git repository as well). The default content is > empty. > > An user defines facts which are visible in data model (authoring part). For > example, it filters a drop-down menu for importing a fact (Guided Rule > Editor, tab "Config", click on button "New item"). It may have an effect on > engine (for customers which build own GUI part). > > The language of file defines a packages which are allows to be displayed. > For example: > #1 org.jbpm > #2 org.jbpm.* > #3 org.jbpm.** > > > The first line allows these facts: > - org.jbpm.MyFact > - org.jbpm.MyFact2 > > The second line allows these facts: > - org.jbpm.anypackage.MyFact > - org.jbpm.anypackage2.TestFact > > The third line allows these facts: > - org.jbpm.MyFact > - org.jbpm.anypackage2.TestFact > - org.jbpm.firstpackage.secondpackage.MyTestFact > > Developers may set a group of facts which are visible for analyst (used in > rules). > > Section Number and Name: > ---------- > I am not sure which guide or section is the best for it. I suggest User > Guide, "3. Setting up a new project" chapter. Not sure, if this feature > should be present in Developer Guide as well. Hi Sir, Can you please give an example, how to specify more than one patterns. I tried giving as below but its not classes are not imported: com.jcms.db.entity.** com.aml.**	0	0	https://issues.jboss.org/browse/RHBRMS-658
8773	RHBRMS-650	Alexander, this BZ only lists commits into the master branch. Did this also land in 6.0.x, or shall I reopen?	1	1	https://issues.jboss.org/browse/RHBRMS-650
8774	RHBRMS-591	Joe, could you please give a view on how to improve the popup? Thanks.	1	0	https://issues.jboss.org/browse/RHBRMS-591
8775	RHBRMS-571	Mike, can you take a look at this issue and see if ti can be fixed in 6.0 ? The work around is a little frustrating.	1	0	https://issues.jboss.org/browse/RHBRMS-571
8776	RHBRMS-560	Zuzana, can you please be more specific about what needs to be done?	0	0	https://issues.jboss.org/browse/RHBRMS-560
8777	RHBRMS-464	(In reply to Kris Verlaenen from comment #2) > kie-tomcat-integration is already in the engine zip Not in ER5. Is this something new (as in after ER5 tag)?	1	0	https://issues.jboss.org/browse/RHBRMS-464
8778	RHBRMS-456	I have a few questions/remarks: 1. I believe that drools-karaf-features should be distributed also as the xml file in addition to the drools-karaf-features-6.2.0.Final-redhat-2.jar, i.e. we need to include the following artifact: <dependency> <groupId>org.drools</groupId> <artifactId>drools-karaf-features</artifactId> <version>${droolsjbpm.version}</version> <type>xml</type> <classifier>features</classifier> </dependency> 2. We can discuss if the drools-karaf-features-6.2.0.Final-redhat-2.jar should be there, since it contains only the drools-karaf-features xml file. 3. What about transitive dependencies, e.g. for kie-camel, should we distribute them in this zip? Now some of them are not available even in the Maven repo - please see BZ 1196257. 4. Regarding the requirement 3 from the Description: "3. Split the build script for said components to allow this bundle to have an independent release lifecycle. This means that the version number for theses components will be different from the rest of the components. This will allow us to release a new version of this "integration package" every time that one becomes necessary." We have moved drools-karaf-features.xml, which defines versions of Drools/jBPM components for deploying into Fuse, into the camel-integration package. If I understand correctly, the version of drools-karaf-features.xml might not be anymore aligned with BRMS/BPMS version which can cause problems when: - deploying BRMS/BPMS version which has no corresponding camel-integration pack release into Fuse - using integration pack with a different BRMS/BPMS core components version I would suggest excluding kie-camel (and related) features from drools-karaf-features.xml, which should remain distributed with BRMS/BPMS, and creating a new bxms-integration-pack-features.xml defining the integration pack features such as kie-camel. What do you think?	1	1	https://issues.jboss.org/browse/RHBRMS-456
8779	RHBRMS-456	Ryan, could you please put the transitive dependencies into lib subdirectory to be consistent with jboss-brms-6.1.0.GA-engine.zip and jboss-bpmsuite-6.1.0.GA-engine.zip? The zip also contains two versions of the same lib, probably because groupId was changed between those two versions: - stax-api-1.0.1.jar - stax-api-1.0-2.jar Thanks!	0	0	https://issues.jboss.org/browse/RHBRMS-456
8780	RHBRMS-432	Proposing for 6.4.0 to consider for documentation. [~tirelli] please recommend Engineering's proposal (can a warning message be shown in the UI?).	0	0	https://issues.jboss.org/browse/RHBRMS-432
8781	RHBRMS-397	Can we automatically import classes from java.lang? Or some similar solution?	1	1	https://issues.jboss.org/browse/RHBRMS-397

#	Requirement	Questions	Answered	Successfully Answered	URL
8782	RHBRMS-126	I've not heard anything to suggest a change in name to "Decision Logic Editor". Please let me know what decision is made and we can update the text in the UI accordingly. What comes of "Guided Rule Template" too? This is effectively the same editor but allows use of "template keys". Should this be renamed "Decision Logic Template Editor"? Await you advices before proceeding.	0	0	https://issues.jboss.org/browse/RHBRMS-126
8783	RHBRMS-126	This ticket did not make 6.0.0.GA cut. Will it remain as "Guided Rule Editor", or should we change this for 6.0.1.GA?	0	0	https://issues.jboss.org/browse/RHBRMS-126
8784	RHBRMS-126	Isn't decision logic editor the editor in designer to define constraints for gateways? This imho doesn't have anything to do with the guided rule editor. This editor is simply called "editor" in the UI tooling (when you try to edit a constraint for a gateway by selecting the sequence flow and editing the constraint property). If the name needs to be changed, this should imho only happen in the documentation.	1	0	https://issues.jboss.org/browse/RHBRMS-126
8785	RHBRMS-114	Pedro, is this something Juanma could do short-term? "The image slider, if it stays at all, should at least switch between different images - using the same one over and over looks strange. It might perhaps contain links to demos."	0	0	https://issues.jboss.org/browse/RHBRMS-114
8786	RHBRMS-77	I think appropriated document this feature to allow users tune their environments based in this new property. Could it be documented please ?	1	0	https://issues.jboss.org/browse/RHBRMS-77
8787	JBBUILD-720	Nick, Could I accomplish the same thing by just changing the job command in your first code block above to what is below (not sure of syntax)? Could I get away from having a custom script then? Thanks. The lines of yours I modified are 4, 8, 9. The new lines I added are 5, 6, 7, 8. 1. mkdir -p ${WORKSPACE}/build/publish 2. cd ${WORKSPACE}/build/publish 3. rm -f ${WORKSPACE}/build/publish/publish.sh 4. wget http://https://github.com/ModeShape/modeshape-tools/scripts/publish.sh 5. export RELEASETYPE="development" 6. export ECLIPSERELEASE="juno" 7. export PROJECTVERSION=3.3.0.Beta5" 8. export SITE_DIR="modeshape@filemgmt.jboss.org:/downloads_htdocs/modeshape/tools/updates/" 9. export DESTINATION="${SITE_DIR}/${RELEASETYPE}/${ECLIPSERELEASE}/${PROJECTVERSION}/" 10. . ${WORKSPACE}/build/publish/publish.sh tools/tmp	1	1	https://issues.jboss.org/browse/JBBUILD-720
8788	JBBUILD-720	[~elvisisking] Any reason this issue is still open? What else do you need from me?	1	1	https://issues.jboss.org/browse/JBBUILD-720
8789	JBBUILD-710	The re-indexing completed successfully. Geoffrey, can you verify that the search is working correctly?	1	1	https://issues.jboss.org/browse/JBBUILD-710
8790	JBBUILD-689	What groupIds will be served from this repository? I'm not able to browse it to see what is there. Does it include valid checksums?	1	1	https://issues.jboss.org/browse/JBBUILD-689
8791	JBBUILD-683	Hi Manik, Can you tell me which groupIds will come from this repo? Just org.springframework?	1	1	https://issues.jboss.org/browse/JBBUILD-683
8792	JBBUILD-683	Should we be using this URL instead? http://maven.springframework.org/milestone The most recent docs I found about the various spring repos are from this blog post: http://blog.springsource.com/2009/12/02/obtaining-spring-3-artifacts-with-maven/ An older blog post points to the amazon URL http://blog.springsource.com/2007/09/18/maven-artifacts-2/	0	0	https://issues.jboss.org/browse/JBBUILD-683
8793	JBBUILD-679	Can you provide more information on this? Are you asking for a new proxy repository, or do you just want to upload a few jars?	1	1	https://issues.jboss.org/browse/JBBUILD-679
8794	JBBUILD-672	Hi Paul, Theres any idea of when this will be finished? Thanks for your attention.	1	1	https://issues.jboss.org/browse/JBBUILD-672
8795	JBBUILD-667	It looks like this is a artifactory repository and I can't browse the files. Is there a login required for this repo? What groupIds will be coming from this repo?	1	1	https://issues.jboss.org/browse/JBBUILD-667
8796	JBBUILD-666	If this is only needed for testing, maybe it can be added to a QA repository? My concern with adding it to the main JBoss repo is that it will eventually be deployed to central, and could cause a conflict with our repo. It seems like we need some temporary location for testing. One thing I could do is deploy it to a staging repo, and then just never promote it. That way the staging repo can be used for testing it. Does that sound ok?	1	1	https://issues.jboss.org/browse/JBBUILD-666
8797	JBBUILD-664	Thanks Paul! Could I get you to add the groupIds org.fedorahosted.openprops and org.fedorahosted.tennera to the routing rule, please?	1	1	https://issues.jboss.org/browse/JBBUILD-664
8798	JBBUILD-664	I think there was a problem with the way the routing was configured. Sean, can you try again? It should be working now.	1	1	https://issues.jboss.org/browse/JBBUILD-664
8799	JBBUILD-664	Thank you Paul and Graeme; that's looking great. The groups all work, including Staging, except Public Thirdparty Releases Group. Was that one meant to include Flies? Either way, I don't think it will cause a problem. I see the indexing is a known problem area: https://jira.jboss.org/browse/JBBUILD-663	1	1	https://issues.jboss.org/browse/JBBUILD-664
8800	JBBUILD-639	detectJavaApiLink - Is the default not working correctly for this one? It should put a link matching the compile source version. doctitle - The default is "${project.name} ${project.version} API". Is there a reason to remove API from the title? bottom - The only change I see in this one compared to the default is removing the project inception date, is there a reason for this? I would prefer to leave the APIViz configuration up to the individual projects in case some projects don't want this.	1	1	https://issues.jboss.org/browse/JBBUILD-639
8801	JBBUILD-638	Is this something that should be run for all JBoss projects? It seems more like something that should be left for each project to configure. Also, is there some documentation available for this plugin?	1	1	https://issues.jboss.org/browse/JBBUILD-638
8802	JBBUILD-638	No, not run, but it would be nice to not have to do this bit of configuration in every project. Is that possible?	1	1	https://issues.jboss.org/browse/JBBUILD-638
8803	JBBUILD-635	Fixed in r500. And deployed a snapshot. Do you think we should also add the index generation to the source jars? http://fisheye.jboss.org/changelog/Maven/?cs=500	1	1	https://issues.jboss.org/browse/JBBUILD-635
8804	JBBUILD-630	Hi Stan, I would prefer not to add this repository since it's just a single project snapshot repo. Can you just add this to your POM or settings file?	1	1	https://issues.jboss.org/browse/JBBUILD-630
8805	JBBUILD-630	I take it that we wouldn't want to proxy all sourceforge snapshots? I need my project to build/run with Hudson. So using the settings file won't help. I already tried adding it to the main JSFUnit pom, but it didn't work. I figured that this had something to do with extending the latest jboss-parent pom. Can I still use jboss-parent and still go around Nexus to get the HtmlUnit snapshots?	1	0	https://issues.jboss.org/browse/JBBUILD-630
8806	JBBUILD-629	It seems that the staging system in Nexus doesn't produce events that include comments from staged repositories, so there's currently no way to gain access to that information for the purposes of audit logging. I talked to the Nexus folks, and they said we need to file a feature request against the commercial Nexus JIRA instance to get this done. They seemed interested in the idea of firing events on completion of different staging actions, but need the JIRA to work against. I don't have access to this JIRA system, so can you file the feature request and then we'll go from there?	1	0	https://issues.jboss.org/browse/JBBUILD-629
8807	JBBUILD-605	Does this repository work? I get a 404 when I try to access it.	1	0	https://issues.jboss.org/browse/JBBUILD-605
8808	JBBUILD-601	I have added the scala-tools, jclouds, and spy repository to nexus and they are now included in the group URL. The java.net repo was already available. I didn't add the oracle repo because it doesn't seem to be a valid Maven repository. Can you verify that this is the correct URL?	1	1	https://issues.jboss.org/browse/JBBUILD-601
8809	JBBUILD-601	Also I don't see the jclouds, scala, etc. artifacts in https://repository.jboss.org/nexus/content/groups/public/ as yet. Does it just need some time to sync?	1	1	https://issues.jboss.org/browse/JBBUILD-601

#	Requirement	Questions	Answered	Successfully Answered	URL
8810	JBBUILD-601	So what's the "correct" solution re: Oracle? Pull in the artifacts we need and deploy to our own third-party repo?	1	1	https://issues.jboss.org/browse/JBBUILD-601
8811	JBBUILD-507	Should there be a separate distribution for each subproject? Or a single project that creates a distribution zip that includes all the subprojects?	1	1	https://issues.jboss.org/browse/JBBUILD-507
8812	JBBUILD-507	Ok, so taking the main MC project as an example, there is already a source and dist assembly in the "build" directory (maybe this should be changed to "dist"?). The assembly config is currently in a profile, so you have to call "mvn -Passembly install" for it to run. Should this to run by default for each build? The src assembly looks ok to me as is, it's just a zip of the whole project minus the target directories. Should the dist zip include dependency jars in addition to the module jars?	0	0	https://issues.jboss.org/browse/JBBUILD-507
8813	JBBUILD-489	I removed the thirdparty directory of my Branch_5_x workspace. performed svn update. However, building via build.sh results in a ConnectionException. The attempt eventually times out but it is not clear initially that will happen. This is also being seen on Hudson runs. Is this a known issue? I don't typically clean thirdparty so not sure if it recently started. createthirdparty: [java] [INFO] Scanning for projects... 8814	JBBUILD-447	Is the following failure somehow related to this issue? [ERROR] BUILD ERROR [INFO] ---------- [INFO] An Ant BuildException has occured: The following error occurred while executing this line: Target "dist" does not exist in the project "JBoss/Testsuite". and don't know wheter create new JIRA issue, or not?	1	1	https://issues.jboss.org/browse/JBBUILD-447
8815	JBBUILD-442	Ready for an on-going battle until the ant build is deleted ;) Still get some compile errors in varia. --- /home/pether/sandbox/workspaces/jboss/trunk/varia/src/main/org/jboss/varia/stats/DataSourceInterceptor.java:[67,7] org.jboss.varia.stats.DataSourceInterceptor is not abstract and does not override abstract method isWrapperFor(java.lang.Class<?>) in java.sql.Wrapper .. .. .. --- Will try to find out why later on. Have some changes in build/pom.xml for missing items in the dependency management section that showed up once i added embedded to trunk/pom.xml modules section again. Also created pom.xml for testsuite and spring-int that I will do more work on later..	1	1	https://issues.jboss.org/browse/JBBUILD-442
8816	JBBUILD-442	Pether, what else needs to be done on this issue? Are you able to generate the eclipse files now?	1	1	https://issues.jboss.org/browse/JBBUILD-442
8817	JBBUILD-437	I thought about adding this option when I added the groupId one. But it seemed like it could lead to confusion about where matching artifacts are. Can we just change the build scripts that depend on the old name? Or will that cause too many problems? It's not a big deal to add this, I just want to make sure it is the right behaviour.	0	0	https://issues.jboss.org/browse/JBBUILD-437
8818	JBBUILD-418	The maven issue http://jira.codehaus.org/browse/MNG-2045 has been applied, and will be released with 2.0.8. The app server maven builds will be dependent on the 2.0.8 release of maven.	0	0	https://issues.jboss.org/browse/JBBUILD-418
8819	JBBUILD-386	I think this issue is out of date now. Can I close this?	0	0	https://issues.jboss.org/browse/JBBUILD-386
8820	JBBUILD-316	Ruel, didn't you implement some snapshot related feature recently? Does that impact this request?	1	0	https://issues.jboss.org/browse/JBBUILD-316
8821	JBBUILD-316	Maven includes this feature in the release plugin. Does this still need to be added to the ant based build system?	0	0	https://issues.jboss.org/browse/JBBUILD-316
8822	JBBUILD-298	I've added it at: jboss/backport-concurrent/2.1.0.GA/lib/jboss-backport-concurrent.jar Renamed to jboss-backport-concurrent.jar, to distinguish, so this needs changing in jbossretro, too. I guess we can use the 3rd version digit to record our modifications (if any) on the base 2.1 library. Not sure though what do use in the component-info.xml for the licence field. Do we maintain the "creative commons public domain dedication" license?	0	0	https://issues.jboss.org/browse/JBBUILD-298
8823	JBBUILD-270	I created an ejb3 pom as part of issue JBBUILD-411. Is it ok to close this one?	1	0	https://issues.jboss.org/browse/JBBUILD-270
8824	JBBUILD-244	I think I need some help with reproducing the bug. Could anyone be so king ang give me the list of steps I should take to achieve this? Thanks!	1	1	https://issues.jboss.org/browse/JBBUILD-244
8825	JBBUILD-188	Are the remaining subtasks blockers for dealing with JBAS-2510 ?	0	0	https://issues.jboss.org/browse/JBBUILD-188
8826	JBBUILD-177	What is this issue about? It seems out of date.	1	0	https://issues.jboss.org/browse/JBBUILD-177
8827	JBBUILD-158	The maven assembly plugin can be used to package dependencies up with a project. It can extract and rejar the dependencies together with your project files. Is this something we want to do?	0	0	https://issues.jboss.org/browse/JBBUILD-158
8828	JBBUILD-113	Can you expand on this? How are we currently not satisyfing this feature? Apologies if we've discussed it, but this bug is rather brief.	1	0	https://issues.jboss.org/browse/JBBUILD-113
8829	JBBUILD-98	You cannot do that, unless there is mechanism to disable it (e.g. an unless="property"). What happens if somebody is working offline?	1	1	https://issues.jboss.org/browse/JBBUILD-98

#	Requirement	Questions	Answered	Successfully Answered	URL
8830	JBBUILD-95	When integrating this with the existing build I found some problems. Namely, when the build is started, this file is not created yet, so ANT will fail. This is due to the defintion of the import in the build/build.xml file. (<!ENTITY buildmagic SYSTEM "../tools/thirdparty/libraries.ent">). Scott's suggestion in the build forum is as follows: The libraries are only used by the main build when creating the dist. They have no purpose for building thirdparty or compiling the modules. Couldn't we simply break out the install target into a seperate build-dist.xml file that contains the install and related targets? Unless you do this, the initial build will be using the obsolete ../tools/buildmagic/etc/libraries.ent version and would fail anyway when the incorrect libraries were used. This is correct. The install target is actually many targets. The existing buildmagic system uses a process such that if a target exists such as : <target name="_module-j2ee-most">, then it will be executed during the most build. For most modules, targets such as these are defined. The caveat is that they must be present in the main build file, otherwise the buildmagic system will just skip over them. These targets are where the deployment operations take place (copying thirdparty files to certain places). I have implemented this locally and made it work. Changes are as follows: Build/build.xml 1) removal of reference to libraries.ent 2) properties for output structure moved to external file (they will need to be used by other xml files) 3) all module targets now call targets defined in file build-dist.xml (this removes the dependency on the libraries.ent file) Module build files 1) change the location of libraries.ent file build-distr.xml 1) this file contains all of the targets which copy thirdparty files to output directories 2) it is also where the libraries.ent location is defined install-structure.properties 1) contains properties which define the output structure, used by build.xml and build-distr.xml	0	0	https://issues.jboss.org/browse/JBBUILD-95
8831	JBBUILD-85	what's the difference between this and JBBUILD-79?	1	1	https://issues.jboss.org/browse/JBBUILD-85
8832	JBBUILD-76	I also had the same cvs issue, which the forge admins resolved. I would like to double-check what you wish to add to the thirdparty directory. The file you attached to this issue is a source structure with a number of files included. Is this what you wish to add, or are you wanting to include a single jar? The current thirdparty lib for jboss-cache currently has a file, JBossCache-1.2.3.zip, if the zip file is included, do you want it to be named the same as this?	1	1	https://issues.jboss.org/browse/JBBUILD-76
8833	JBBUILD-69	Can I close this issue? It seems to be out of date.	0	0	https://issues.jboss.org/browse/JBBUILD-69
8834	JBBUILD-60	I believe this is complete. Can I close this issue?	0	0	https://issues.jboss.org/browse/JBBUILD-60
8835	JBBUILD-59	Is there anything remaining to be done on this issue? I believe logging has been separated into the common project.	0	0	https://issues.jboss.org/browse/JBBUILD-59
8836	JBBUILD-58	Is there anything else that needs to be done for this?	0	0	https://issues.jboss.org/browse/JBBUILD-58
8837	JBBUILD-48	Has the circular dependency between the server and security modules been broken to do this? If not, it should be. All of the org.jboss.security.* classes should be in the security module.	0	0	https://issues.jboss.org/browse/JBBUILD-48
8838	JBBUILD-39	JMX creates 3 artifacts and puts them in the etc directory under test. Start.jar, target.mjar and MyMbeans.jar. Need to investigate why and or implement.	0	0	https://issues.jboss.org/browse/JBBUILD-39
8839	JBBUILD-28	Verified with 1.4 build. The jbossha.jar will probably need to be adjusted though. From Ben: Ruel, These are deprecated already with the new http session replcation that i did. Please remove them. Thanks, -Ben ---------- From: Ruel Loehr Sent: Monday, August 01, 2005 10:18 AM To: Ben Wang Subject: cluster build file Ben, I am working on a next-gen build system for jboss. In the cluster build I see the following: <!-- Build the ClusteredHttpSessionEB.jar --> <mkdir dir="${build.lib}/ClusteredHttpSessionEB.jar"/> <copy todir="${build.lib}/ClusteredHttpSessionEB.jar" filtering="no"> <fileset dir="${build.classes}"> <include name="org/jboss/ha/httpsession/beanimpl/interfaces/**"/> <include name="org/jboss/ha/httpsession/beanimpl/ejb/**"/> </fileset> <fileset dir="${source.resources}/ClusteredHTTPSessionBean"> <include name="META-INF/**"/> </fileset> </copy> <!-- Build the jbossha-httpsession.sar --> <mkdir dir="${build.lib}/jbossha-httpsession.sar"/> <copy todir="${build.lib}/jbossha-httpsession.sar" filtering="no"> <fileset dir="${build.lib}"> <include name="ClusteredHttpSessionEB.jar/**"/> </fileset> <fileset dir="${build.classes}"> <include name="org/jboss/ha/httpsession/beanimpl/interfaces/**"/> <include name="org/jboss/ha/httpsession/server/**"/> </fileset> <fileset dir="${source.resources}/ClusteredHTTPSessionService"> <include name="**"/> </fileset> </copy> 2 directories are created with a sar and jar in the name. How is this used? Is something dependent upon the names having the sar and jar in them?	1	0	https://issues.jboss.org/browse/JBBUILD-28
8840	JBBUILD-5	I believe this issue is out of date. Can I close this?	0	0	https://issues.jboss.org/browse/JBBUILD-5
8841	JBCACHE-1546	when runign with jgroups 2.6.12 GA: Tests run: 3772, Failures: 6, Errors: 0, Skipped: 0, Time elapsed: 587.558 sec <<< FAILURE! 8842	JBCACHE-1464	Marking this as high complexity since there is no API call in the cache loader interface for bulk gets at this time, nor can we "guess" which Fqns to retrieve. At best, we could implement a mechanism where we could enqueue get calls in the cache loader implementation and flush this queue as a single batch get every so often. This time interval would be user definable and also be pretty short to provide reasonable response times. Perhaps a second or so.	1	0	https://issues.jboss.org/browse/JBCACHE-1464
8843	JBCACHE-1416	Do you know if this affects 3.x as well? The startup/shutdown code in 3.x has changed.	1	1	https://issues.jboss.org/browse/JBCACHE-1416

#	Requirement	Questions	Answered	Successfully Answered	URL
8844	JBCACHE-1416	Hello, I don't know but it is easy to test it if the api is about the same : For example you can just launch the cache#stop and cache#destroy method in a separate thread that will starts after the webapp is undeployed (5s in this code). For example : public void destroy() { new Thread() { @Override public void run() { try { Thread.sleep(5000); } catch (InterruptedException e) { e.printStackTrace(); } cache.stop(); cache.destroy(); } }.start(); } generate this stacktrace in the log each time : Exception in thread "Thread-11" java.lang.NullPointerException at fr.arkhineo.ntp.controller.ApplicationLifeCycle$1.run(ApplicationLifeCycle.java:90) 29 sept. 2008 19:28:21 org.apache.catalina.loader.WebappClassLoader loadClass INFO: Illegal access: this web application instance has been stopped already. Could not load org.apache.log4j.spi.VectorWriter. The eventual following stack trace is caused by an error thrown for debugging purposes as well as to attempt to terminate the thread which caused the illegal access, and has no functional impact. java.lang.IllegalStateException at org.apache.catalina.loader.WebappClassLoader.loadClass(WebappClassLoader.java:1273) at org.apache.catalina.loader.WebappClassLoader.loadClass(WebappClassLoader.java:1233) at java.lang.ClassLoader.loadClassInternal(ClassLoader.java:319) at org.apache.log4j.spi.LoggingEvent.<init>(LoggingEvent.java:154) at org.apache.log4j.Category.forcedLog(Category.java:388) at org.apache.log4j.Category.log(Category.java:853) at org.apache.commons.logging.impl.Log4JLogger.error(Log4JLogger.java:193) at org.jgroups.protocols.Discovery$PingSenderTask$1.run(Discovery.java:389) at java.util.concurrent.Executors$RunnableAdapter.call(Executors.java:441) at java.util.concurrent.FutureTask$Sync.innerRunAndReset(FutureTask.java:317) at java.util.concurrent.FutureTask.runAndReset(FutureTask.java:150) at java.util.concurrent.ScheduledThreadPoolExecutor$ScheduledFutureTask.access$101(ScheduledThreadPoolExecutor.java:98) at java.util.concurrent.ScheduledThreadPoolExecutor$ScheduledFutureTask.runPeriodic(ScheduledThreadPoolExecutor.java:181) at java.util.concurrent.ScheduledThreadPoolExecutor$ScheduledFutureTask.run(ScheduledThreadPoolExecutor.java:205) at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:885) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:907) at java.lang.Thread.run(Thread.java:619)	1	0	https://issues.jboss.org/browse/JBCACHE-1416
8845	JBCACHE-1389	Is this irrelevant if OL is deprecated in 3.0?	1	0	https://issues.jboss.org/browse/JBCACHE-1389
8846	JBCACHE-1387	Can this be closed?	1	1	https://issues.jboss.org/browse/JBCACHE-1387
8847	JBCACHE-1286	If we were to include this in 2.2.0, could you add documentation and the patch/test to trunk, as well as any additional stuff like pooled HTTP connections? Couldn't you test this based on a stub that simulates the HTTP responses from S3, rather than an S3 account?	1	1	https://issues.jboss.org/browse/JBCACHE-1286
8848	JBCACHE-1250	Do you have a specific use case in mind for this? What sort of prio are we talking?	1	1	https://issues.jboss.org/browse/JBCACHE-1250
8849	JBCACHE-1250	? Didn't see anything specially relevant to my points above, regarding the cost of doing clearChildren() internally, and the risk of a concurrent insert if lockParent is not used. Did I miss something?	1	1	https://issues.jboss.org/browse/JBCACHE-1250
8850	JBCACHE-1218	If you feel like taking this on for 2.2, sure.	1	1	https://issues.jboss.org/browse/JBCACHE-1218
8851	JBCACHE-1197	And where does this belong? Current English docs reside in subversion alongside the code. Not sure if we want all translations here as well since translations may be out of sync or a couple of releases behind. E.g., the code is at version 2.1.0.Beta1, (and so is the English documentation) but given that we cut a public release ever couple of months, there may not be time for translations to catch up. What would you suggest here?	1	0	https://issues.jboss.org/browse/JBCACHE-1197
8852	JBCACHE-1197	Hi Manik, Sorry, there mate, can you assign this task to me? We are in process of recursing all the hibernate content into PO format and have used a new layout that keeps the translation in sync for the 4 AS books. This jira issue is a placeholder for me to ensure it stays in sync with your english. As soon as the tech review is done for AS422 I'll move onto this. http://jira.jboss.com/jira/browse/JBAS-4696 - Mike	0	0	https://issues.jboss.org/browse/JBCACHE-1197
8853	JBCACHE-1191	Has there been any progress on this?	1	1	https://issues.jboss.org/browse/JBCACHE-1191
8854	JBCACHE-1175	I coded it, but it's untested. It gets a bit complex in the OPTIMISTIC case, where if there's an implicit transaction I have to ensure that the async requirement is stored in the tx entry so the call gets replicated async when the implicit transaction commits. Use case is where they're trying to use a single cache for all 2nd level caching. Cache has to be REPL_SYNC for this to apply, as Hibernate will reject using INVALIDATION for the timestamps cache. So, currently a fairly narrow use case. But, it's possible I could eventually get INVALIDATION to work reasonably for timestamps, in which case the use case would be quite a bit broader.	1	1	https://issues.jboss.org/browse/JBCACHE-1175
8855	JBCACHE-1153	Identified by a boolean flag on the node?	1	0	https://issues.jboss.org/browse/JBCACHE-1153
8856	JBCACHE-1134	The difference between the classes extending DelegatingCacheLoader and the classes extending AbstractDelegatingCacheLoader is: Classes extending DelegatingCacheLoader are standalone classloaders, whereas the ones extending AbstractDelegatingCacheLoader are decorators of other class loaders. Maybe decorators, such as asynchronous or singleton store could one day become standalone cache loaders and stack/chaim them up/down other standard cache loaders? I'll open a discussion in the design forums soon.	1	1	https://issues.jboss.org/browse/JBCACHE-1134
8857	JBCACHE-1127	Isn't this the same as http://repository.jboss.com/maven2/jboss/jboss-j2ee/4.2.0.GA/ save for the name? 4.2.0.GA should be EE5 based, right?	1	1	https://issues.jboss.org/browse/JBCACHE-1127
8858	JBCACHE-1023	JBoss Forum reference should be a forum, not mail thread list. Anyway, why not have the Channel part of the RuntimeConfig object? This would result in a lot less number of changes throughout.	0	0	https://issues.jboss.org/browse/JBCACHE-1023
8859	JBCACHE-1023	Manik, I've been doing other stuff in this area and will wrap it up tomorrow, so why don't I do this at the same time?	1	1	https://issues.jboss.org/browse/JBCACHE-1023
8860	JBCACHE-992	This shouldn't affect the output of this JIRA, but if we prove that JBC builds and runs on JDK 6, bear in mind this: As far as AS is concerned, Java 6 is not currently supported, at least until the following issue has been resolved or the code is changed (I think this might happen in AS 5.0): Email to JBoss-Dev, Subject: Array class loading regression in jdk6 From: Scott M Stark <scott.stark@jboss.com> To: JBoss.org development list <jboss-development@lists.jboss.org> Reply-To: JBoss.org development list <jboss-development@lists.jboss.org> Date: 17 Dec 2006 - 6:05am An issue where ClassLoader.loadClass(String) is not resolving arrays is showing up as users start to use jdk6: http://bugs.sun.com/bugdatabase/view_bug.do?bug_id=6434149 Exception in thread "main" java.lang.ClassNotFoundException: [Ljava.lang.String; at java.net.URLClassLoader$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:276) at java.lang.ClassLoader.loadClass(ClassLoader.java:251) at test.main(test.java:7) The workaround is to use the Class.forName(String, boolean, ClassLoader) method.	1	1	https://issues.jboss.org/browse/JBCACHE-992

8861	JBCACHE-991	Re: approach 1, what's the exact usage pattern for this, particularly when it comes to locking and return values? E.g., 1. What happens to read calls when executed within a batch? Ignored? 2. Write calls that return values? E.g., put()? 3. Replication - I'm guessing this is the primary reason for this JIRA - deferred till commitBatch()? 4. Persisting? Same as 3.? 5. Notifications? 6. Locks - acquired with each WRITE invocation and held for the duration of the batch? Or just acquired and released at commit time? Depending on the answers above, it may look very similar to a JTA transaction. Also, should batches participate in ongoing JTA transactions?	1	1	https://issues.jboss.org/browse/JBCACHE-991
8862	JBCACHE-971	For the record (Manik's recent target version change reminded me to update this): I have now developed a cache library which includes implementations of the following algorithms: * ARC * FRC (non-self-adjusting version of ARC; not sure if this is covered by the same patents as ARC) * 2Q * MQ (Multi-Queue Replacement, by Zhou, Philbin and Li -- see http://www.usenix.org/event/usenix01/full_papers/zhou/zhou_html/index.html -- I am not sure if there are any patent encumbrances here, and have contacted 2 of the authors to try and find out) This library has been developed without being jboss-specific; I have produced an adapter for JBoss Cache 1.3 (which we're still stuck using) and then one for JBoss Cache 2.0, which I would be happy to contribute (my employer has given me permission to do so, and is in the process of formalising this internally). HOWEVER, I have not heard anything back from IBM in the last 5 months in relation to the ARC patent issues, which makes me loathe to release this (of course!). Is there anyone at JBoss who would be in a better position to shake the IBM tree and try to extract an answer? I would be very keen to release my library and think JBoss Cache would benefit from it.	1	0	https://issues.jboss.org/browse/JBCACHE-971
8863	JBCACHE-971	In the meanwhile, could you contrib the patent-free implementations? I can't expect the legal permission route to be quick in any way. :-)	0	0	https://issues.jboss.org/browse/JBCACHE-971
8864	JBCACHE-964	Are you also writing a "Migrator" application to do the looping - traverse the tree, read each node and put it back in the cache?	1	1	https://issues.jboss.org/browse/JBCACHE-964
8865	JBCACHE-957	Any reason why this needs to be in 2.0.0? Can this be moved off to 2.1.0?	1	1	https://issues.jboss.org/browse/JBCACHE-957
8866	JBCACHE-956	Manik, we discussed my adding docs for this behavior to LockParentForChildInsertRemove. Can you do this as part of this JIRA, since it might be done later than JBCACHE-955. I don't want to doc an unimplemented feature.	1	1	https://issues.jboss.org/browse/JBCACHE-956
8867	JBCACHE-941	Sounds interesting. Want to start a forum thread to discuss this? I see a few congruent lines, one being PojoCache and the other being the JSR-107 compliant JCACHE interface. Either way though, this would probably be something for the 2.1.0/2.2.0 timeframe.	1	1	https://issues.jboss.org/browse/JBCACHE-941
8868	JBCACHE-932	Pointless; will be superceded with lock striping when we move to MVCC	0	0	https://issues.jboss.org/browse/JBCACHE-932
8869	JBCACHE-905	This is great stuff; thanks! :-) I notice there are a couple packages in there that only exist in the testsuite. Is that the way it's meant to be, i.e. test if we're executing our tests?	0	0	https://issues.jboss.org/browse/JBCACHE-905
8870	JBCACHE-905	Do you know if a patched EMMA plugin is due soon as well (I know the EMMA and Clover plugins share a significant portion of their codebase)? All of our Maven scripts are built around EMMA right now. We could switch to clover, but if an EMMA plugin is due soon then I'd rather wait for that.	1	1	https://issues.jboss.org/browse/JBCACHE-905
8871	JBCACHE-905	Manik, please, have a look at http://hudson.qa.jboss.com/hudson/view/JBoss Cache/job/jbosscache-core-trunk-code-coverage/17/ Is that OK?	1	1	https://issues.jboss.org/browse/JBCACHE-905
8872	JBCACHE-880	Could you pls link to the discussion thread in this task. Also add that this will require documentation and configuration changes.	1	1	https://issues.jboss.org/browse/JBCACHE-880
8873	JBCACHE-879	Functionality added but there's some TODOs: - VersionAwareMarshallerPerfTest: comparison failures based on results from different marshalling methods, i.e, if difference bigger than x, fail. Also add marshalling different types of objects. - Increasing VAM performance: using similar techniques as used in ExposedByteArrayOutputStream for VAM? Needs profiling to determine effect. NOTE: All profiling and changes related to performance will be part of BETA2	0	0	https://issues.jboss.org/browse/JBCACHE-879
8874	JBCACHE-839	Done. But there are two minor issues: 1. The performance impact needs to be evaluated. 2. During testing, how do we turn it on and off?	0	0	https://issues.jboss.org/browse/JBCACHE-839
8875	JBCACHE-829	Isn't the EULA only for binary distributions, as per the discussion on core? Or have I missed something out?	1	1	https://issues.jboss.org/browse/JBCACHE-829
8876	JBCACHE-815	I thought this following code would mean having a dependency with jboss-serialization.jar: public static ObjectInputStream createObjectInputStream(byte[] bytes) throws IOException { ByteArrayInputStream in = new ByteArrayInputStream(bytes); if (useJBossSerialization) { return new JBossObjectInputStreamOverride(in); } else { return new MarshalledValueInputStream(in); } } Is it possible to use an interface as I proposed, so you don't need to use reflection to create JbossSerialization? If the stuff is working (not loading jboss-serialization.jar) and if you don't like the idea of the interface, just close the issue again.	1	1	https://issues.jboss.org/browse/JBCACHE-815
8877	JBCACHE-800	have you got a unit test for this, showing how this leads to fatal problems?	1	1	https://issues.jboss.org/browse/JBCACHE-800
8878	JBCACHE-797	I don't see why not. I think we need a more sophisticated NodeFactory in the first place though. The current approach to creating nodes is mimicking nodes of parent type, and all this starts with the root. A better approach would be to have the node instance type injected into the factory when the cache starts, based on configuration settings (i.e., optimistic or pessimistic locking, whether this is a pojo cache or a plain cache, etc)	1	1	https://issues.jboss.org/browse/JBCACHE-797
8879	JBCACHE-752	Manik, will you be able to look at this, or maybe ask Galder? If not, assign back to me.	1	1	https://issues.jboss.org/browse/JBCACHE-752
8880	JBCACHE-738	Vladimir, can I pass this over to you since you're dealing with these issues?	1	1	https://issues.jboss.org/browse/JBCACHE-738
8881	JBCACHE-735	Does this need to be in every log output? Or just do it once? When we switch to multiplexer, is this still necessary?	1	1	https://issues.jboss.org/browse/JBCACHE-735
8882	JBCACHE-675	Hi Ben, I couldn't sleep and I wanted to see if you had additional thoughts on this. I guess you did. :) I saw your forum message as well. Thanks for pointing out these related issues. http://jira.jboss.com/jira/browse/JBCACHE-676 http://jira.jboss.com/jira/browse/JBCACHE-110 http://jira.jboss.com/jira/browse/JBCACHE-675 To resolve JBCACHE-675, should we conform to our new requirement that Map keys be serialiable? Or do you want me to revert the requirement that keys be serializable? Same question is true for JBCACHE-676, I'm assuming your going to want me to support non-serializable key but I'll wait to hear back from you. JBCACHE-110, I'm not sure about this one yet. Should we continue on the forum? Scott <9880004.1151635871320.JavaMail.jira@cloud.prod.atl2.jboss.com>, "Ben Wang (JIRA)" <jira-events@jboss.com> wrote:	1	1	https://issues.jboss.org/browse/JBCACHE-675
8883	JBCACHE-675	Scott, can you update the 1.4 doc to reflect this? Thanks!	1	1	https://issues.jboss.org/browse/JBCACHE-675
8884	JBCACHE-672	Brian, I have fixed it and checked it in. But I have no way verifying the fix now. Can you please test it out really quick under AS4.0? Thanks!	1	1	https://issues.jboss.org/browse/JBCACHE-672
8885	JBCACHE-670	Brian, can you go thru one more time to see if this makes it easier for the user per our discussion? If you are sastified with it, please go ahead and close it.	0	0	https://issues.jboss.org/browse/JBCACHE-670

#	Requirement	Questions	Answered	Successfully Answered	URL
8886	JBCACHE-666	Brian, can you go thru one more time to see if this makes it easier for the user per our discussion? If you are sastified with it, please go ahead and close it.	1	1	https://issues.jboss.org/browse/JBCACHE-666
8887	JBCACHE-658	Can you give a code snnipet to illustrate this problem? Let's say if I do, cache.putObject("/org/jboss/person", ben); then only person node is WL, while org/jboss should be RL. And this is only for putObject. After that, fine-grained modification should only lock the appropriate sub-nodes.	1	1	https://issues.jboss.org/browse/JBCACHE-658
8888	JBCACHE-658	I see. But what is your fqn though? I thin there is way to get around your problem. Let's say, you are filling: "/person/1", "person/2", ..., "/person/n" then to prevent WL on person, you can pre-create "/person/1", "person/2", ..., "/person/n" after that you do, pubObject("/person/1", pojo1); pubObject("/person/2", pojo1); ... should give you the concurrency that you are looking for. The other thing is regarding the overall performance. You can try out the latest 1.4.CR1 that has been optimized for PojoCache specifically.	0	0	https://issues.jboss.org/browse/JBCACHE-658
8889	JBCACHE-642	Does this have to be a config option on the file cache loader or on all cache loaders? What if someone uses a different cache loader impl? Also, doesn't this completely beat the purpose of a cache loader if it gets purged on startup? I suggest a forum thread to discuss this ...	0	0	https://issues.jboss.org/browse/JBCACHE-642
8890	JBCACHE-627	Should this be done? I'm not sure if this silent creation is a good thing.	1	1	https://issues.jboss.org/browse/JBCACHE-627
8891	JBCACHE-620	Ben, could you pls look at this one for me?	0	0	https://issues.jboss.org/browse/JBCACHE-620
8892	JBCACHE-620	We do have a field called MaxAgeSeconds in LRU that is doing what you described. Did you try it?	1	1	https://issues.jboss.org/browse/JBCACHE-620
8893	JBCACHE-620	What version was the MaxAgeSeconds attribute added?	1	0	https://issues.jboss.org/browse/JBCACHE-620
8894	JBCACHE-619	So as I understand it, without this bug fix it is not possible to use enum values in entity objects when using the EJB3 entity cache? Is there a workaround? I found this JIRA from this forum thread: http://www.jboss.com/index.html?module=bb&op=viewtopic&t=71311&view=previous	0	0	https://issues.jboss.org/browse/JBCACHE-619
8895	JBCACHE-595	Cool. One other small thing: for completeness the MapModifications struct should probably also have a "public Map unmodifiedEntries" field. Manik Surtani wrote: Ok, sounds cool, will add this to the JIRA task. How about a variation on Ben's idea of providing an enum to specify the type of change? Sample API follows. /** * Called before and after a {@link Node} is modified. Data passed in the * <code>modData</code> param can be used to determine what was modified. * <p/> * When called with <code>pre == true</code>, <code>modData</code> is the * initial state of the {@link Node} before modification. * <p/> * When called with <code>pre == false</code>, the contents of <code>modData</code> * depend on the value of <code>modTtype</code>: * * - PUT_KEY_VALUE: Map contains the single key/value pair that was added. * - REMOVE_KEY_VALUE: Map contains the single key/value pair that was removed. * - PUT_MAP: Map contains the new state of the {@link Node} following modification. * This map includes modified key/value pairs as well as any that were not affected. * * <p/> * Implementations interested in seeing the difference in the node data in the PUT_MAP case * can cache the <code>modData</code> map passed when <code>pre == true</code>, and then * when the <code>pre == false</code> callback is received, pass the cached map and the new * <code>modData</code> to {@link org.jboss.cache.util.Util.diffNodeData(Map pre, Map post)}. * * @param fqn Fqn of the node being modified * @param pre <code>true</code> if the modification is about to be applied, * <code>false</code> if it has already been applied * @param isLocal <code>true</code> if the modification originated locally, * <code>false</code> if it was replicated from another node * @param modType PUT_KEY_VALUE, REMOVE_KEY_VALUE or PUT_MAP * @param modData Unmodifiable {@link Map}; will not be <code>null</code>. See * description above. */ public void nodeModified(Fqn fqn, boolean pre, boolean isLocal, ModificationType modType, Map modData); public class Util { public static MapModifications diffNodeData(Map pre, Map post) { // do the diff here } public static class MapModifications { public Map addedEntries; public Map removedEntries; public Map modifiedEntries; } } Advantage here is JBC goes to little effort to support this, so overhead is low if the listener isn't interested. CacheListener impls that are interested in modifications, but where the app never calls put(Fqn, Map) also have very little overhead. I believe Jerry's DistributedState is such a case. The big overhead of doing the diff is only incurred by CacheListener impls that care, and we provide much of the code to do it for them.	1	1	https://issues.jboss.org/browse/JBCACHE-595
8896	JBCACHE-574	This is pre-1.4Alpha version (05/01/06) profiling data under JProfiler. The snapshot is attached. This is for repeatedly putObject with pojo of list size=100 (from the perf tester). The profiling is for 24 times of putObject and it results in: cache.get(), 2383x3 times, 38.2% cpu cache.put() - 2383x2 times, 33.7% cpu Further profiling of plain cache get/put operations shows the bottleneck mostly in lock and tx interceptor (even with local mode). Note that PojoCache results in 100 times more of get/put becuase of the List size of 100 (so we have to iterate thru the list 100 times). Obviously, becuase of plain cache local mode is still too expensive, it adds up in total. Here are couple of solutions: 1. Create a pojo level lock, then all get operation can bypass lock interceptor (since we don't need it anymore). What about put operation? We want to bypass the lock operation but not the tx interceptor. 2. This can combine with a different kind of pojo mapping. E.g., we do map it in fine-grained from cache1. Instead, we will send the pojo over to cache2 directly and then do the mapping from there. Furthermore, the operation will be transactional in one shot.	0	0	https://issues.jboss.org/browse/JBCACHE-574
8897	JBCACHE-562	Not quite as simple with the pojo-based configuration in 2.0, since the cacheloader class is an inherent property of the typed config object. The config object should probably have an "enabled" property. The "empty class" idea could still work for parsing 1.x-style configs, though. If class is empty, parser doesn't create the config pojo, and thus no cacheloader is created.	1	1	https://issues.jboss.org/browse/JBCACHE-562
8898	JBCACHE-562	Is this still important? I vote that we don't attempt to inject behaviour based on an empty class name. If you want to disable cache loaders, simply comment out the relevant block in XML or don't set a CacheLoaderConfig in the Configuration object.	0	0	https://issues.jboss.org/browse/JBCACHE-562
8899	JBCACHE-555	Are your 'after' timings after switching to caching the trace boolean?	1	1	https://issues.jboss.org/browse/JBCACHE-555
8900	JBCACHE-549	Should use something like GET_CONDITIONAL - JGRP-518?	0	0	https://issues.jboss.org/browse/JBCACHE-549
8901	JBCACHE-535	Which corresponding unit test contradicts the TreeCache.getKeys() contract?	1	1	https://issues.jboss.org/browse/JBCACHE-535
8902	JBCACHE-535	Yes, I think Node.getDataKeys() needs to be more consistent as well. Perhaps return data != null ? (data.keySet().isEmpty() ? null : data.keySet()) : null; Would need to document this in the Javadocs very clearly - both in Node.java as well as interfaces implemented.	1	1	https://issues.jboss.org/browse/JBCACHE-535
8903	JBCACHE-525	Elias, how robust is this code ? I need to solve the following problem: 2 different processes modify the same (shared) file, e.g. on an NFS volume, does JDBM use file locks of some sort to serialize concurrent access ?	1	0	https://issues.jboss.org/browse/JBCACHE-525
8904	JBCACHE-520	Minor correction. I have moved the payload object construction out of the loop in the tester and got more performance because of CPU cycle, I guess. The number is 1400 res/sec (9.8MB) for async and 650 req/sec (4.6MB) for sync.	1	1	https://issues.jboss.org/browse/JBCACHE-520

#	Requirement	Questions	Answered	Successfully Answered	URL
8905	JBCACHE-520	On what cluster did you get the 1400 res/sec number ? dev02, dev03 too ?	1	1	https://issues.jboss.org/browse/JBCACHE-520
8906	JBCACHE-519	Just tried on the lab cluster usig cluster01 and cluster02 (with transactions) Total time spent (ms) on thread id 0: 94997 for 400 loops Throughtput for this node with: threads = 50 loops = 400 sleep interval = 1 object list size = 100 tranasaction? true is: 209 requests/sec (no transactions) Total time spent (ms) on thread id 0: 82528 for 400 loops Throughtput for this node with: threads = 50 loops = 400 sleep interval = 1 object list size = 100 tranasaction? false is: 241 requests/sec This was with repl_sync. What replication mode did you use for your tests?	0	0	https://issues.jboss.org/browse/JBCACHE-519
8907	JBCACHE-509	Just tried this on the lab cluster with 3 nodes in the cluster, with the latest srcs from HEAD and didn't see any OOMEs. Have you seen this when testing on the lab cluster?	1	0	https://issues.jboss.org/browse/JBCACHE-509
8908	JBCACHE-490	Not for 1.3.0 or 1.4.0, I presume? And how would you want to do this in code - POJOCache extends TreeCacheAop, with no added features?	0	0	https://issues.jboss.org/browse/JBCACHE-490
8909	JBCACHE-490	Definitely in 1.4. But what do you think in 1.3? This will be just an extra class that mirrors TreeCacheAop and TreeCacheAopMBean for now. I have refactor-ed it before, both files use delegation now. So they are very short anyway.	0	0	https://issues.jboss.org/browse/JBCACHE-490
8910	JBCACHE-490	It has been considered actually. What's your rationale?	1	1	https://issues.jboss.org/browse/JBCACHE-490
8911	JBCACHE-488	I presume this is regarding cache content rather than any of our nternal objects, for which we should have our own marshaller (e.g., Fqn, Gtx, MethodId, etc). I also presume this will have a dependency on JBoss Serialization solving it's current issue with generating a large number of bytes for each object it serializes. Is there an open JIRA task for this in JBoss Serialization?	1	1	https://issues.jboss.org/browse/JBCACHE-488
8912	JBCACHE-484	Elias, could we discuss the patches you have here on the JBoss Cache Design forum? Could you pls go ahead and start a thread there and link it to this task? Thanks, Manik	1	1	https://issues.jboss.org/browse/JBCACHE-484
8913	JBCACHE-471	Should we just define an API callback and leave it to the user to implement it? We can provide a simple default policy implementation where the new coordinator will always win, e.g., copy its state to everybody again? I think the user can come up with more sphosticated algorithm to contribute back.	0	0	https://issues.jboss.org/browse/JBCACHE-471
8914	JBCACHE-466	JSP-250 common annotations for the Java platform. Not too much there. Generated, Reousrce, and Security stuffs. Do we have use of Reousrce? I don't think so now.	0	0	https://issues.jboss.org/browse/JBCACHE-466
8915	JBCACHE-464	Do we include 3rd party licenses in the AS distro at the moment?	1	1	https://issues.jboss.org/browse/JBCACHE-464
8916	JBCACHE-450	After some further thinking, I conclude that eviction is really not well suited in PojoCache. Again, it will have to run as part of passivation. Here is why. If we use eviction only to evict the pojo then: 1. When evicted, the cache content will be empty (i.e., no long available). What happens to the interceptor? Do we remove it as well or not? If we keep the interceptor, what happens when the pojo is accessed again, e.g., pojo.getAge()? It will return null since the cache content has been evicted already. 2. However, if decide to remove the corresponding iterceptor, then pojo.getAge() will return correctly. However, pojo.setAge(21) won't be intercepted by the cache interceptor. It will be just a regular pojo operation. This is a semantic change that user won't be aware of. 3. For pojo-based eviction, if a sub-object is refereshed, we will need to refresh the corresponding parent object as well. E.g., if address is refershed, then Person needs to be refreshed (i.e., no evicted). We need to take care of multiple references as well. We can do this in 2.0 since we keep track of like of parent object from the sub-object. Nonetheless, it is not as straightforward. 4. What happens at the remote node if it is a passive node (e.g., only failing over purpose). Then the pojo won't be evicted since officially there won't be one yet (untill the user do cache.find(id)) So I think the best way is go with passivation. If we use passivation, we can use the current cache node-level eviction policy. We really don't care about the pojo level since from PojoCache point of view, the fqn value is always available, e.g., when I do a pojo.getAge(), behind the scene, the cache loader will retrieve the value associated with the age item, e.g., cache.get(id, "age"). This way, we are totally transparent. Couple things to take notice though: 1. When it is passivated, if the pojo becomes orphan (i.e., no one is referencing it anymore), GC will kick in. Originally, the pojo reference is also stored under AOPInstance (as a strong reference) but now AOPInstance has been passivated already (and the reference field is a transient modifier), so GC can freely to collect the pojo instance. No problem in the vm. 2. The only problem though is what happens to the data in the cache loader store? Since the pojo has been GCed, most likely no one will use it (unless, I am using cache.find(id) again to resurrect it), we will need to come up a way to trim it or age out. We can have a separate timer thread to weed out the ageout items. 3. This is the scenario: cache.attach("pojo", pojo); pojo.setName("Ben"); ... // it is passivated pojo.getName(); // no problem here Pojo anotherPojo = cache.find("pojo"); then pojo != anotherPojo because getAopInstance() return nulls during find (becuase it is a transient field). Can we come up a way to serialize the pojo reference but not replicating it? If somehow AopInstance contains non-transient pojo reference but AopInstance is stored as a local cache mode (e.g., doesnt replicate), then it is serializable but not replicatable. As a result, case solved. If we can't, then everything will work fine actually, e.g., pojo and anotherPojo can do indepdent update and get. But only comparison of object identity (by reference) will fail.	1	1	https://issues.jboss.org/browse/JBCACHE-450
8917	JBCACHE-445	Brian, what is the status of this one? Should I wait until it is complete before releasing?	1	1	https://issues.jboss.org/browse/JBCACHE-445
8918	JBCACHE-427	Added manually into HEAD as well - will look into modifying the build system to automate this for the next release.	0	0	https://issues.jboss.org/browse/JBCACHE-427
8919	JBCACHE-413	what exactly do you want to do ? Create a build-aop.xml and import that from build.xml ?	0	0	https://issues.jboss.org/browse/JBCACHE-413
8920	JBCACHE-404	The isActive method is in the new Region interface. Only open question is whether RegionImpl should check it's active status before running the activation code, and ignore the call (log warning?) if already active.	1	1	https://issues.jboss.org/browse/JBCACHE-404
8921	JBCACHE-397	This is being tackled by Brian for 1.2.4SP2 and 1.3. Ben, Manik and Bela will meet Feb 23/24 2006 in Neuchatel to discuss binary compatibility going forward (1.4 and onwards).	1	1	https://issues.jboss.org/browse/JBCACHE-397
8922	JBCACHE-394	Whats the status of this, can this be closed?	1	1	https://issues.jboss.org/browse/JBCACHE-394
8923	JBCACHE-372	I will take a closer look. But by looking your test bench, it looks to me you are doing putObject with different student pojo. This is expected to be slow (question is is it that slow?) since this is the acid test for TreeCacheAop. We expect the usage is 1. you will re-use pojo repeatedly. That is, pojo has a relative long live time; 2. It is read mostly. E.g., upadte on pojo fields doesn't happen with every single call.	1	1	https://issues.jboss.org/browse/JBCACHE-372
8924	JBCACHE-356	Bela, How about JBoss Cache content on Labs? How does it look? If all looks good, please close all the sub tasks. Cheers, Damon	1	1	https://issues.jboss.org/browse/JBCACHE-356
8925	JBCACHE-347	Should we be doing this? Still debatable, as per forum discussion... Deferring for now anyway.	0	0	https://issues.jboss.org/browse/JBCACHE-347
8926	JBCACHE-344	He's your friend :-) Q: can we have this by 1.3, or should we push it into 1.4 ?	0	0	https://issues.jboss.org/browse/JBCACHE-344
8927	JBCACHE-344	Are we going ahead with this for 1.3? I think we should push this out to 1.4 ...	0	0	https://issues.jboss.org/browse/JBCACHE-344

#	Requirement	Questions	Answered	Successfully Answered	URL
8928	JBCACHE-344	Gurkan, could you target your next release of the IDE to support JBossCache 1.4.0? New features (as far as configs go) over 1.3.0 should only be buddy replication (JBCACHE-61) config elements, and a new cache loader (JBCACHE-525). The moment these 2 tasks are completed and are in CVS HEAD you could use a CVS snapshot of JBossCache to test the IDE. Naturally as I release DRs, alphas, etc., you'd use these as well.	1	1	https://issues.jboss.org/browse/JBCACHE-344
8929	JBCACHE-330	Hany, what's the status of this? Is it just pending the implementation of an in-memory DB for the unit tests? Could you pls add the forum discussion link to this JIRA task? Thanks, Manik	1	1	https://issues.jboss.org/browse/JBCACHE-330
8930	JBCACHE-326	Are we still doing this? This is the concept of a separate 'processor' thread for state events.	0	0	https://issues.jboss.org/browse/JBCACHE-326
8931	JBCACHE-307	Sounds good. Can we have this document in JBossCache/docs/design and refer to it from here ? I don't want to go JIRA huting to look up an old design decision, would be nice to have those decisions be part of the code base.	1	1	https://issues.jboss.org/browse/JBCACHE-307
8932	JBCACHE-304	Manik, if you are done, can you close this one?	0	0	https://issues.jboss.org/browse/JBCACHE-304
8933	JBCACHE-273	Bela, can the new getState go through the interceptor chain to have proper locking?	0	0	https://issues.jboss.org/browse/JBCACHE-273
8934	JBCACHE-272	Hany, you have 3 remaining minor tasks for 1.2.4. Can you find time to finish them by tomorrow? 1.2.4beta is coming out this weekend.	1	1	https://issues.jboss.org/browse/JBCACHE-272
8935	JBCACHE-270	I had a discussion with Bela today over a teleconference call about this issue which results in the following requirements for this interceptor: 1. Needs to handle 2 types of events. One results from method call invocation, for example, evictNodeMethodLocal invoked from TreeCacheListener. The other results from an interceptor action, for example, cache loader interceptor emitting nodeLoaded event. 2. Needs to notify listeners to TreeCache of pre and post events. 3. Needs to support transactional events. For example, if a put has been issued during a transaction and a rollback has been followed through an undo operation. The interceptor should handle it correctly. The following questions and ideas are still under investigation: 1. Where do we place the interceptor? Should we place it right before the call interceptor or at the bottom of the stack? 2. Do we need a queue to hold the various events in the interceptor and other interceptor write to it during execution to have their notification emitted? 3. Method calls in TreeCache call the notification methods directly. Adding this interceptor means that we would need to remove those calls and the flags associated with them, for example TreeCache._removeData() which is called either from its own method call invocation or from other method call invocation such as evict(). Doing so might have undesirable effect on how the cache behaves and might introduce new bugs in the release. That actually makes me want to ask the following question: should we do this now or wait until release 1.3 and implement it along with TreeCache Refactor issue? That's all I can think of now. Bela, Please add you thoughts and any other questions/ ideas that we discussed and I've might forgot.	1	1	https://issues.jboss.org/browse/JBCACHE-270
8936	JBCACHE-261	Based on the discussion we had during our meeting, Bela added to JGroups 2.2.9 "payload" notion in MethodCall put and get methods. What do we need to add to TreeCacheListener to support DSListener and DSListenerEx? Can you please elaborate on the following quote? <quote>To implement this, we might add a thread local storage variable to TreeCache and set it/clear it depending on whether we are making a local/remote change.</quote>	0	0	https://issues.jboss.org/browse/JBCACHE-261
8937	JBCACHE-261	Sorry Bela, why do we need to use 2.2.9 get/set payload notion in order for this to work? Can't we tell from the interceptor stack to see whether the replication is local or not? We can't rely on 2.2.9 since AS won't use 2.2.9 as I understand it for version incomptability reason. Or unless we lobby it.	0	0	https://issues.jboss.org/browse/JBCACHE-261
8938	JBCACHE-261	I can add a new event type in ExtendedTreeCacheListener for local, would that satisfy the requirement? Also, where this event should be emitted? Should be called from TreeCache.callRemoteMethods or else where?	1	1	https://issues.jboss.org/browse/JBCACHE-261
8939	JBCACHE-258	Daniel, while you are at eviction, can you also take a look at this one? thanks.	1	0	https://issues.jboss.org/browse/JBCACHE-258
8940	JBCACHE-254	Removal and subsequent re-creation under B doesn't do it ?	0	0	https://issues.jboss.org/browse/JBCACHE-254
8941	JBCACHE-249	3 zip files are now created when a dist is done: meg:~/Code/JBoss/JBossCache manik$ ls -lh dist/ total 30832 -rw-r--r-- 1 manik manik 584K Sep 1 13:16 bdbje-for-jbosscache.zip -rw-r--r-- 1 manik manik 9M Sep 1 13:16 jboss-cache-dist.zip -rw-r--r-- 1 manik manik 5M Sep 1 13:16 jboss-cache-minimal-dist.zip drwxr-xr-x 4 manik manik 136B Sep 1 11:14 lib meg:~/Code/JBoss/JBossCache manik$ The bdbje-for-jbosscache.zip only contains the sleepycat jar and some readme docs. Who do we need to contact to make sure automated builds pick up the new zip and get it published on SF for downloads?	1	1	https://issues.jboss.org/browse/JBCACHE-249
8942	JBCACHE-229	I agree with Bela here. I like typed event better and it is more explicit as well. How about we do this? 1. We create a sub-interface from TreeCacheListener, say, ExtendedTreeCacheListener that has these extra events. Let's make sure it will cover what we will need for a while. Then we will need to add code to differentiate when a user is registering an regularu TreeCacheListener or an extended one. We will emit the events accordingly. 2. We combine them in 1.3 afterwards.	1	1	https://issues.jboss.org/browse/JBCACHE-229
8943	JBCACHE-229	JBoss Portal is a client of JBoss Cache and use the implements the TreeCacheListener interface. From what I read it sounds like the interface is maintained and does not change however according to the docs/design/NewTreeCacheListener.txt document it seems that it will need migration : <quote>Classes that need refactoring: All classes that currently implement TreeCacheListener</quote> I am worried about that because that could break JBoss Portal with future versions of JBoss Cache. Can you clarify this ?	1	1	https://issues.jboss.org/browse/JBCACHE-229
8944	JBCACHE-214	I take it this has been sorted? http://docs.jboss.com/jbcache/current/TreeCache/html_single/ now contains the new stuff to do with Async Cache Loaders, for example... Ben, could you pls check if your changes are up here as well, and confirm? Thanks.	1	1	https://issues.jboss.org/browse/JBCACHE-214
8945	JBCACHE-197	Okay, if there is no problem with perf I'll close the case. Okay with you ?	0	0	https://issues.jboss.org/browse/JBCACHE-197
8946	JBCACHE-193	With these changes 2 lock unit tests fail: - NonBlockingWriterLockTest.testUpgradeWithExistingReader() - NonBlockingWriterLockTest.testUpgradeWithMultipleReaders() Can you look into why they fail ?	1	1	https://issues.jboss.org/browse/JBCACHE-193

8948	JBCACHE-139	Is this still relevant? Invalidation is in place and works fine without such a notification. Can this be closed?	1	1	https://issues.jboss.org/browse/JBCACHE-139
8949	JBCACHE-137	This is just used to read the xml config files. Write our own xml parser to read this and get rid of this dependency?	0	0	https://issues.jboss.org/browse/JBCACHE-137
8950	JBCACHE-109	Bela, is this still an issue?	0	0	https://issues.jboss.org/browse/JBCACHE-109
8951	JBCACHE-92	1. Are there any plans in the roadmap to support the kind of forceful eviction policy I need in JBoss Cache? 2. Are there any side effects with me implementing a new LRUPolicy that forcefully evicts a node and its children? 3. Any advice on how to do #2? Off the top of my head I would probably create a new CascadingLRUPolicy class that overrides the evict(Fqn) method to accomplish what I need to do. The new evict() implementation would be largely a copy/paste of TreeCache._evict() but thatt doesn't check for children. Here's a quick mock-up of what the new CascadingLRUPolicy.evict(Fqn) implemention might look like: public void _evict(Fqn fqn) throws Exception { if(!cache_.exists(fqn)) return; // node does not exist. Maybe it has been recursively removed. // use remove method now if there is a child node. Otherwise, it is removed boolean create_undo_ops = false; boolean sendNodeEvent = false; boolean eviction=true; _remove(null, fqn, create_undo_ops, sendNodeEvent, eviction); } Thanks in advance for any/all help. Regards, Brian Dueck	0	0	https://issues.jboss.org/browse/JBCACHE-92
8952	JBCACHE-86	Do you mean to say that nodeEvicted(Fqn) is going to be called whenever a node gets invalidated?	1	1	https://issues.jboss.org/browse/JBCACHE-86
8953	JBCACHE-66	Did you update the documentation as well (JBossCache/docs/TreeCache/en/master.xml) ?	1	1	https://issues.jboss.org/browse/JBCACHE-66
8954	JBCACHE-61	Ah, I see it now. :-) Here is previous comments: Did I miss it or how come I don't see the buddy replication Jira on 1.3? I have one feedback from Greg Hinkle that WL is currently doing of which we should implement as well (may not be the first cut though). In configuring BR policy, can we allow user to configure the buddy group to be the one that is not located in the same physical machine? For example, we have instance A, B, C, D. A and B are in machine 1 and C and D are in machine 2. Then the buddy group of A will have to be either C or D, and vice versa. This is desired in case the machine goes down.	1	1	https://issues.jboss.org/browse/JBCACHE-61
8955	JBCACHE-47	Is this documented ?	1	0	https://issues.jboss.org/browse/JBCACHE-47
8956	JBCACHE-42	I am starting to gather a use case for the TreeCacheAop white paper after the fine-grained http session replication is almost complete. I want your contribution for any idea if you have! The use case that I am looking for will be either running outside or inside of the web application. But here are the key traits that need to have: 1. Use of fine-grained replication for performance. Ideally to have a large collection (huge list) and each element has another complex object. When a singular field is modified, it will only replicate that field (instead of the whole list!). In addition, for chatty replication, it can also do batch processing as well for performance optimization. 2. Transparent management of object relationship after replication. Each object potentially can also have object graphs that can have multiple or recursive references. Regular cache replication has no way of managing this relationship (when failing over, for example, and as a result, demands developer intervention). But TreeCacheAop can manage this automatically. 3. (Optional) Use of CacheLoader +CacheAop to provide state persistency. Some state data may need to guarantee persistency so it will be less expensive to reconstruct it. This can be either an individual or shared cache loader. So far, an example that I can think of is in the line of PIM (Personal Information Management). Let's say I need to keep track of a list of company employees. Each employee has the following fields: - Company address - Home address - Personal relationship (spouse, relative, friend) - Work relationship (boss, subordinate) So if I only change Joe's wife's age (in this case, Mary in another company), for example, I have a fine-grained replication scenario inside a huge list and fair size object. In addition, when replicated, the relationship is perserved automatically. Meaning, you only update it one place, and the Joe/Mary spousal relationship is preserved on the replicated node (this is good, right? :-). Do you better ideas or can you enhance this?	0	0	https://issues.jboss.org/browse/JBCACHE-42

8957	FUSETOOLS-2442	when done, two restrictions on tested version can be removed in org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForCXFCodeFirstIT.testCXFCodeFirstSpringProjectCreation() and org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForAMQIT.testAMQBlueprintProjectCreation()	0	0	https://issues.jboss.org/browse/FUSETOOLS-2442
8958	FUSETOOLS-2417	[~davsclaus] Hey Claus, any chance you can answer a handful of questions about the bean implementation in camel and the method properties? We allow a user to browse a bean to select a method for the init-method, destroy-method, and factory-method. Should those be public methods? Or can it be any private or protected method as well? And should it only be methods without parameters?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2417
8959	FUSETOOLS-2410	{quote}Is it a "one time" generation? or the user will update the Swagger API regularly?{quote} I think the user would like to update the Swagger (OpenAPI) specification and either re-run the generation or see the created REST DSL auto updated. {quote}After generation, the user will need to modify the generated code a bit or not at all?{quote} The current code generation available via [CAMEL-11006|https://issues.apache.org/jira/browse/CAMEL-11006] allows only customization via [DestinationGenerator|https://github.com/apache/camel/blob/master/tooling/swagger-rest-dsl-generator/src/main/java/org/apache/camel/generator/swagger/DestinationGenerator.java], i.e. the {{to}} part of the route generated, and gathers as much as possible from the specification file. The UI could offer the choice between built-in ({{direct:Swagger Operation ID}}) or a custom implementation of {{DestinationGenerator}}. {quote}Where is generally the swagger file available? A file hosted online? is it a maven artefact? A file inside the fuse project? A file in a specific project?{quote} Can't tell, to me it makes sense to be in the Fuse project, as you're modelling the specification file in the same place you're implementing it.	1	1	https://issues.jboss.org/browse/FUSETOOLS-2410
8960	FUSETOOLS-2410	bq. {quote}Is it a "one time" generation? or the user will update the Swagger API regularly?{quote} bq. bq. I think the user would like to update the Swagger (OpenAPI) specification and either re-run the generation or see the created REST DSL auto updated. as it is not a one-way generation, what about generating it at runtime only? and use directly the swagger file as an import in Camel dsl?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2410
8961	FUSETOOLS-2410	If I follow what you're saying, that functionality exists, i.e. you can use the same {{swagger-rest-dsl-generator}} to generate a {{RoutesBuilder}} implementation at runtime or to generate Java DSL source code. Is then the question should this be supported in the tooling? I think supporting this has merits for users that just use the tooling without writing Java code.	1	1	https://issues.jboss.org/browse/FUSETOOLS-2410
8962	FUSETOOLS-2410	{quote}If I follow what you're saying, that functionality exists, i.e. you can use the same swagger-rest-dsl-generator to generate a RoutesBuilder implementation at runtime or to generate Java DSL source code. Is then the question should this be supported in the tooling? I think supporting this has merits for users that just use the tooling without writing Java code.{quote} my question is more, do we really need to generate the code at design time or not? If the user is using the swagger file, doesn't he/she want to always use this one and not dealing with a Camel Rest Dsl?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2410
8963	FUSETOOLS-2410	{quote}Yeah, that's an option when user is willing to use swagger-rest-dsl-generator from Java, but how does the user that doesn't do any Java coding, i.e. user that only uses the IDE's design interface, use Swagger with Camel? There is no support (currently) in the camel-swagger-java to create consumers from Swagger/OpenAPI specifications.{quote} and if this support is added, will it still make sense to generate some code at design time?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2410
8964	FUSETOOLS-2410	{quote}Might be useful to step up a level and consider the context in which this might be used. First, I think it's safe to say that the team developing this API is following a design-first approach.{quote} I personally never met a team doing API first without making it evolving, looks alike a lot like an old Waterfall model in which it is possible but if you say the use case is this one, seems fine to have a one-time generation. {quote}So they've used a designer tool or text editor or copied an existing API definition - now they want to implement the API behind that design. Pretty unlikely that the user wants to write REST DSL on their own and then manually map that to the Swagger definition, so one-time generation fits the bill nicely here.{quote} If there is a better tool/API definition format than Camel Rest DSL, why do we need the Camel Rest DSL at all? Why Camel Runtime is not consuming directly this api? {quote} A slightly more advanced case is when the original Swagger definition changes - design team made a mistake, new version with additional stuff, etc. In this case, it should be fairly straightforward to note which resources/verbs in the Swagger definition are not covered by the DSL and vice versa. Providing that info to the user would be enough to enable them to go in and make their own changes to the REST DSL. {quote} maybe "fairly straightforward", I have no idea of what is a swagger definition, a rest dsl definition and what are the difference between them. So if it's easy, yes would be fine. The best place for this validation is inside a Language Server Protocol (when we will have it one day...) but can be done in Fuse Tooling first. {quote} Automagic updates are always nice, but maybe not necessary here?{quote} that was a part of my question :-)	1	0	https://issues.jboss.org/browse/FUSETOOLS-2410
8965	FUSETOOLS-2410	{quote}I personally never met a team doing API first without making it evolving, looks alike a lot like an old Waterfall model in which it is possible but if you say the use case is this one, seems fine to have a one-time generation.{quote} I think you may be connecting dots that don't exist here. I didn't say that API definitions don't evolve. In fact, I specifically referenced the case where the API definition changes. {quote}If there is a better tool/API definition format than Camel Rest DSL, why do we need the Camel Rest DSL at all? Why Camel Runtime is not consuming directly this api?{quote} Swagger / Open API are independent of the API implementation. REST DSL is implementation-specific for Camel. In my mind, this JIRA is proposing a mechanism for linking definition and implementation. Seems like a good match to me, but definitely open to other suggestions and superior approaches. {quote}maybe "fairly straightforward", I have no idea of what is a swagger definition, a rest dsl definition and what are the difference between them. {quote} OK, well would probably be good to get a bit of an intro/overview from Zoran or another Fuse engineer that's a bit closer to REST DSL.	0	0	https://issues.jboss.org/browse/FUSETOOLS-2410

8968	FUSETOOLS-2268	My opinion is that this is a bad approach. I don't see any benefit of using the jgit timestamps. I see only the mess of versions :(It's quite easy to check whether the code was modified since there are source bundles. And users really don't need to know which features were changed. Nice example is BPMN2 modeller - one feature is 1.3.1 and the other one is 1.3.2. What's the real version of the BPMN2 modeller?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2268
8969	FUSETOOLS-2268	From my point of view jgit timestamps make perfect sense. Here is an example of jbosstoos.as plugins from a users point of view (Eclipse -> Installation details etc): !as_jgit.png! You can see that all plugins are in version 3.2.3 but if you look more closely you'll see that e.g. as.core is timestamped based on commit from 2017-01-18, however as.ui is timestamped based on commit from 2017-02-15. [~apodhrad] not sure why is this a blocker for you. Can you maybe elaborate a bit more?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2268

#	Requirement	Questions	Answered	Successfully Answered	URL
8970	FUSETOOLS-2265	what is the status of this issue? 9.2 branch has been created but it is based on Neon. Should we rename it and create a 9.3 branch based on Oxygen? I think that we decide to not do that and use master with 10.0 for oxygen.	0	0	https://issues.jboss.org/browse/FUSETOOLS-2265
8971	FUSETOOLS-2263	Question: Is the Camel Catalog always available? I see the following issues: # user is working in an offline environment (probably just a small chance but its existing) # no catalog shipped with the runtime # runtime is remote and we need to grab catalog from a remote file system That brings up another question: Do we want to use the camel catalog or do we parse each component on the classpath. That would also affect the palette contents. If going that way we definitely need a way to add new components to the classpath in a visual way.	1	1	https://issues.jboss.org/browse/FUSETOOLS-2263
8972	FUSETOOLS-2263	Does this really block https://issues.jboss.org/browse/JBIDE-24243 ?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2263
8973	FUSETOOLS-2257	I need to have a deeper look because it is trange that it is failing on a single slave RHEL-7.2-m1.xlarge-10.8.185.31 currently: {noformat} org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForAMQIT.testAMQSpringProjectCreation[2.17.3] 10 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForAMQIT.testAMQSpringProjectCreation[2.15.1.redhat-621117] 10 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForCBRIT.testCBRSpringCreation[2.17.3] 10 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForCBRIT.testCBRSpringCreation[2.15.1.redhat-621117] 9.6 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForCXFCodeFirstIT.testCXFCodeFirstSpringProjectCreation[2.17.3] 14 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForCXFCodeFirstIT.testCXFCodeFirstSpringProjectCreation[2.15.1.redhat-621117] 12 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForSimpleIT.testEmptySpringProjectCreation[2.17.3] 9.6 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForSimpleIT.testEmptySpringProjectCreationOnLocationOutsideWorkspace[2.17.3] 8.7 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForSimpleIT.testEmptySpringProjectCreation[2.15.1.redhat-621117] 9.9 sec 1 org.fusesource.ide.projecttemplates.tests.integration.wizards.FuseIntegrationProjectCreatorRunnableForSimpleIT.testEmptySpringProjectCreationOnLocationOutsideWorkspace[2.15.1.redhat-621117] 8.2 sec 1 {noformat} {noformat} Error Message Expecting empty but was:<[{"severity"=2, "sourceId"="JDT", "Creation time: "=1488288879705L, "resource affected"="/home/jenkins/workspace/Fuse-Tooling-9.2.x-Update-Site/sources/editor/tests/org.fusesource.ide.projecttemplates.tests.integration/target/work sp@cé/FuseIntegrationProjectCreatorRunnableForAMQIT-AMQSpringProject-2.17.3", "message"="The project cannot be built until build path errors are resolved", "categoryId"=10, "type: "="org.eclipse.jdt.core.problem"}, {"severity"=2, "sourceId"="JDT", "Creation time: "=1488288877301L, "classpathFileFormat"="false", "message"="Archive for required library: '/home/jenkins/.m2/repository/org/apache/camel/camel-test-spring/2.17.3/camel-test-spring-2.17.3.jar' in project 'FuseIntegrationProjectCreatorRunnableForAMQIT-AMQSpringProject-2.17.3' cannot be read or is not a valid ZIP file", "cycleDetected"="false", "type: "="org.eclipse.jdt.core.buildpath_problem", "outputOverlappingSource"="false", "location"="Build path", "arguments"="0:", "resource affected"="/home/jenkins/workspace/Fuse-Tooling-9.2.x-Update-Site/sources/editor/tests/org.fusesource.ide.projecttemplates.tests.integration/target/work sp@cé/FuseIntegrationProjectCreatorRunnableForAMQIT-AMQSpringProject-2.17.3", "id"=964, "categoryId"=10}]> {noformat}	1	1	https://issues.jboss.org/browse/FUSETOOLS-2257
8974	FUSETOOLS-2229	[~chirino] [~kcbabo] maybe you have a better idea? Should we remove some of them? Should we add some others?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2229
8975	FUSETOOLS-2223	[~chirino] What is the URl of the FIS catalog? Is it somthing in? https://repository.jboss.org/nexus/content/groups/ea/io/fabric8/archetypes/archetypes-catalog/ ? How can we determine the exact version? Same as some FIS bom?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2223
8976	FUSETOOLS-2223	Yes thats it. Note that the repo and version suffix change when we GA. Ga will use a .redhat- version instead of a .fuse suffix. The latest DR build is at: https://repository.jboss.org/nexus/content/groups/ea/io/fabric8/archetypes/archetypes-catalog/2.2.180.fuse-000008/archetypes-catalog-2.2.180.fuse-000008-archetype-catalog.xml If you want inspiration/code on how to do it, see: https://github.com/jboss-fuse/fuse-forge/blob/master/src/main/java/org/jboss/fuse/forge/addon/ui/FuseProjectSetupStep.java#L270	0	0	https://issues.jboss.org/browse/FUSETOOLS-2223
8977	FUSETOOLS-2223	I created https://issues.jboss.org/browse/JBIDE-24283 to have the Red Hat catalog with all the FIS archetypes available. If it get accepted I will change target version to 10.0 or maybe close it we might not even still want this issue, do we really want to provide several catalogs for each specific version of FIS?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2223
8978	FUSETOOLS-2197	How can we choose a template for the user? Starting from a blank project seems to be the more common use case	1	1	https://issues.jboss.org/browse/FUSETOOLS-2197
8979	FUSETOOLS-2191	The issue will be with matching that approach, since the Tabbed Properties view in Eclipse really doesn't have a way to do a decorator label built in. We can easily do a tooltip and error decorator as we've done with SwitchYard. The image below is from the binding properties for a scheduling binding. You'll notice the little red X on the left side of the field and the tooltip with the error message. !switchyard-scheduling-binding-properties.png|thumbnail! I would like to see other examples since we have many Fuse components that have a ton of properties and we're not really going to want to space them out by putting an error label between them. What would the error look like if it was on a higher field? Where does the error message go (the one at the bottom)? What's with that label on top? Some of the Fuse components are very property dense. !fuse-activemq-properties.png|thumbnail! Adding the X (error) and I (information) decorators to the left of the field is great and I agree that the red background on the field makes it unreadable - but I don't see how we can make this quite match what they're attempting in the PatternFly approach.	0	0	https://issues.jboss.org/browse/FUSETOOLS-2191
8980	FUSETOOLS-2180	Is that solved now or not? [~jmurphey]	1	1	https://issues.jboss.org/browse/FUSETOOLS-2180
8981	FUSETOOLS-2176	I believe this belongs here, to JBTIS, right? Can somebody please set the fix version and component and resolve again? Thanks!	0	0	https://issues.jboss.org/browse/FUSETOOLS-2176
8982	FUSETOOLS-2172	Can you double check? I think this issue is no longer occuring.	0	0	https://issues.jboss.org/browse/FUSETOOLS-2172
8983	FUSETOOLS-2160	[~rafaelcba] Even if it has not yet been validated by QE you can try this feature by using the latest version: http://download.jboss.org/jbosstools/neon/integration/updates/integration-stack/fuse-tooling/9.1.0.CI/ If you have time to test it and tell us if it fulfills the requirements for the workshop/trainings/demo that you are doing it will be nice. Do you have other blocking points for workshop/training/demo?	1	0	https://issues.jboss.org/browse/FUSETOOLS-2160

#	Requirement	Questions	Answered	Successfully Answered	URL
8984	FUSETOOLS-2154	[~chirino] To determine if we need to use the SpringBoot catalog or not, I based the condition of having the "camel-spring-boot-starter" artifact as dependency. Can you confirm that it is the good condition? If not, what is a good condition for it?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2154
8985	FUSETOOLS-2149	[~chirino] is detecting class extending org.apache.camel.spring.boot.FatJarRouter enough? Do we need more precise constraints? Do we have other cases?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2149
8986	FUSETOOLS-2149	there was some discussions to get rid of Maven dependency and to be able to support Camel project based on Gradle for instance. So we were trying to be based on File detection. I'm not sure where we are for that, looking for maven dependency can be easier. [~lhein] Do you have more information? What do you think?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2149
8987	FUSETOOLS-2142	What kind of alignment needs to happen here?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2142

8993	FUSETOOLS-2119	{noformat} <janstey_mtg> would be good to add both: https://maven.repository.redhat.com/ga and https://maven.repository.redhat.com/earlyaccess/all <janstey_mtg> we do in the container as well <janstey_mtg> put ga first in list because that is the main one ... <lhein> what is https://access.redhat.com/maven-repository ? <janstey> it's just an informational web page <lhein> General availability repository: https://maven.repository.redhat.com/ga/ <lhein> Early-access repository: https://maven.repository.redhat.com/earlyaccess/all/ <lhein> You can choose between the general availability repository (GA releases) and the early access repository (Alpha and Beta builds). ... <lhein> so these are basically the ones we need <lhein> right? <janstey> yep {noformat}	1	1	https://issues.jboss.org/browse/FUSETOOLS-2119
8994	FUSETOOLS-2118	As further step it would be cool if * it could auto complete bean ID's - for instance when in camel route {{<process ref="...">}} it could list available beans implementing {{Processor}} * currently it lists bean IDs in Designer - ref fields, but it lists all beans, not just "matching" ones	0	0	https://issues.jboss.org/browse/FUSETOOLS-2118
8995	FUSETOOLS-2099	Hello [~lhein] [~apodhrad]. Would it be possible to incorporate this one any time soon? I believe it would be convenient just double click on route entry and see it's properties.	1	1	https://issues.jboss.org/browse/FUSETOOLS-2099
8996	FUSETOOLS-2095	Where do we define the checkstyle for the Fuse tooling? Or do we?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2095
8997	FUSETOOLS-2095	So [~aurelien.pupier] do we want to simply disable it for the SY tooling? Or what are you asking here?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2095
8998	FUSETOOLS-2095	I would prefer to deactivate it for now. If you activate the Eclipse checkstyle checker, you will notice that it reports a lot of violations even if these ones are not breaking the build. So to follow them is very complicated and they even are currently not compatible with Fuse Tooling (tabs vs spaces) i don't really want to enter in a long debate for this. i think the best is to deactivate it. Do you agree?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2095
8999	FUSETOOLS-2075	How can I reproduce that? Usually the progress dialog can be hidden.	1	1	https://issues.jboss.org/browse/FUSETOOLS-2075
9000	FUSETOOLS-2074	Is that done?	0	0	https://issues.jboss.org/browse/FUSETOOLS-2074
9001	FUSETOOLS-2064	What will be the location for the item "No Runtime Selected" at the beginning? or according to order?	1	1	https://issues.jboss.org/browse/FUSETOOLS-2064
9002	FUSETOOLS-1983	Added a first shot at defining the template but can't get my categories to show up in the wizard. https://github.com/fusesource/fuseide/pull/644 What am I doing wrong? [~lhein] - I'm guessing it's something brain dead.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1983
9003	FUSETOOLS-1983	I merged the template. Are you planning to do a BP or Java DSL one too or is that not working on EAP?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1983
9004	FUSETOOLS-1979	is it ok to do an API break on ICustomPaletteEntry? (as we are moving to 8.0.0) Or do we prefer to modify the extension point and putting an optional attribute for another class responsible for the update? Edit: i'm wondering if using a second would be cleaner and simpler for user in fact (even without considering API break disadvantage of first proposal)	0	0	https://issues.jboss.org/browse/FUSETOOLS-1979
9005	FUSETOOLS-1979	Could you provide more details how this issue can be verified, please? I'm not sure which camel version is changed (the property camel.version or a version defined for an artifact?)	1	1	https://issues.jboss.org/browse/FUSETOOLS-1979
9006	FUSETOOLS-1977	[~lhein] but if it doesn't work as local camel context, we introduce an inconsistency and introduce a big usability issue. How can we, at least, proposed to not "launch as camel context"? Perhaps if no camel maven plugin is not defined in pom.xml?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1977
9007	FUSETOOLS-1976	Do we have a specific feedback when we can drop or not on another node? Do we have a specific feedback when we drop on a connection? To be complete, I feel that we miss only: - to be able to "add before"/"Prepend" when an element has outgoing transition but no incoming. Then it will allow to place a new element from the palette to every place on the flow. - to handle containers, how to Prepend/Append for them?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1976
9008	FUSETOOLS-1976	for 1. if you drop on the timer:start, this is normal behavior. To insert between timer and bean, you need to drop on the connection for 2. What is your issue here? when you drop a Log on teh connection between bean and direct, it doesn't work?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1976
9009	FUSETOOLS-1957	I started to work on it. Several issues still. Test are emphasising some of them. You can check it on this branch: https://github.com/apupier/fuseide/tree/FUSETOOLS-1957-CXF-ContractFirstTemplate	0	0	https://issues.jboss.org/browse/FUSETOOLS-1957
9010	FUSETOOLS-1940	I feel that with the time that we have we need to do: # introduce microversions in facets (currently we only have major.minor) --> so which one do we create? 2.15.1 and 2.17.0 only? or should we create 2.15.1, 2.15.1-redhat-621084, 2.17.0 and 2.17.0.redhat-630077? # adapt camel configurator to install the correct facet --> the idea is to default to a generated catalog based on closest version? the 2 other solutions seems far more complicated: # in the model we should check if we have a supported service for that version and if not we then generate one using the json catalog we then grab via maven? # (or alternatively refactor the model to rely only on the catalog jar dependency and download missing ones on the fly if possible) --> I would say that if the version doesn't exist in our embedded catalogs, we then use the closer previous version.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1940
9011	FUSETOOLS-1932	The org.jboss.tools.forge plugins are available as a standard part for JBT core - they can be found here: http://download.jboss.org/jbosstools/neon/staging/updates/core/4.4.1.AM2/plugins/ The forge addon plugins are also from JBoss but they're not part of core or org.jboss.tools. Their dependency pom fragment looks like: {code} <dependency> <groupId>io.fabric8.forge</groupId> <artifactId>camel</artifactId> <classifier>forge-addon</classifier> <version>${version}</version> </dependency> {code} So - they're their own animal. [~nickboldt] - would we just create a new dependency in the IS TP with the forge-addon repo? Do we need to mirror it?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1932
9012	FUSETOOLS-1932	"Just" 17Mb. Can the addon be reviewed if it can be smaller? cc: [~davsclaus] ?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1932
9013	FUSETOOLS-1932	I'd need to understand a bit more. Some immediate questions: 1. +17MB. What's the size of JBDS Forge today? (+17MB on a 3MB distro is a big deal. +17MB on a 200MB distro is not.) 2. If this addon is added to the distro, how do we keep them properly in sync? e.g., if the camel commands addon is serviced/updated, does that force us to make a new release of JDBS Forge? I think I have others, but let's start with those... :)	0	0	https://issues.jboss.org/browse/FUSETOOLS-1932
9014	FUSETOOLS-1932	Having a way to easily browse and install would be a convenient feature for Forge in general and could save space for JBoss Tools. For Fuse Tooling itself, I think that it will be better to include the specific Camel addon as it is relevant. I don't undestand very well what you said [~gastaldi]: "The Forge plugin provides an extension point that allows you to specify additional addon repositories. AFAIK this is how the Windup team do to load their addons in the embedded runtime. If the camel team already provides an Eclipse plugin, it could implement that extension point. If not, perhaps we can consider another strategy." So it means that we can implement an extension in our Fuse Tooling project to include the addon? What do you mean by "camel team already provides an Eclipse plugin"?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1932

#	Requirement	Questions	Answered	Successfully Answered	URL
9015	FUSETOOLS-1932	I believe I need to create a new eclipse plugin that bundles these addons and implements the Forge plugin extension point. What repository is recommended to contain that?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1932
9016	FUSETOOLS-1932	I don't have much experience in creating Eclipse plugins (I only maintain the jbosstools-forge one but I am not sure what files are required so Eclipse can recognize it). Can someone create the basic structure in there so I can add the business code? This is an example of what should be implemented in the plugin so the JBoss Tools Forge plugin can call it: https://github.com/windup/windup-eclipse-plugin/blob/master/plugins/org.jboss.tools.windup.runtime/src/org/jboss/tools/windup/runtime/internal/FurnaceRepositoryProvider.java	1	0	https://issues.jboss.org/browse/FUSETOOLS-1932
9017	FUSETOOLS-1908	[~jmurphey] Can you update the documentation with a note to run Java DSL based samples? in this case the "Goals" field should be exec:java https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Fuse/6.0/html/Using_the_Fuse_Developer_Tools/files/RiderRunningMaven.html	1	1	https://issues.jboss.org/browse/FUSETOOLS-1908
9018	FUSETOOLS-1896	Can u explain the usecase a bit more? When using the import wizard for SAP it installs the SAP binaries as plugin into your eclipse. That makes the bundles available for all projects if they reference them. Why should I need to declare them in the POM? What is the use case?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1896
9019	FUSETOOLS-1889	Would need to see what it's like at moment to compare - is this image the merged version?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1889
9020	FUSETOOLS-1865	I tested this issue with JBDSIS 9.0.1.CR3. It seems to be still broken (see attached video). The Progress bar disappears but project creation is not completed. The UI freeze is not convenient. Can we move project creation process into background (_Run in background_ button)?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1865
9021	FUSETOOLS-1837	Remember you are using the Maven M2E Project import wizard. How can this wizard know about the nature of an imported project or set a specific project nature at all. That doesn't sound very logical to me.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1837
9022	FUSETOOLS-1798	yes I saw this. Thanks for opening the feature request. I'm currently on several other topics so not in my top list. What is the priority for you? Is it a blocking point? If yes, can you link the feature that is blocked by this one please? We might need to discuss about it with [~lhein] in this case.	1	0	https://issues.jboss.org/browse/FUSETOOLS-1798
9023	FUSETOOLS-1784	This works only for the first time you add a destination/server. But not for this use case: 1. Add a destination 2. Select tab 'Pool' 3. Add another destintion 4. The tab 'Pool' is selected for this new destination Tested with JBDS-IS 9.0.1.CR2 (JBoss Fuse SAP Tool Suite 8.0.0.Beta3-v20160713-1930-B63)	1	1	https://issues.jboss.org/browse/FUSETOOLS-1784
9024	FUSETOOLS-1740	Hello [~lhein], would it be possible to use Camel's capability to dump routes from camel context as XML file ? One can see this functionality in hawtio web console - there is tab for route diagram and also for "Source". Internally it calls [ManagedCamelContext.dumpRoutesAsXml|https://github.com/apache/camel/blob/master/camel-core/src/main/java/org/apache/camel/management/mbean/ManagedCamelContext.java#L408] I tried this small example and it seems to work ([^java-visualise-demo.zip]) !java-dsl-to-xml.png|thumbnail! {code:java} // get camel context with required route CamelContext context = new DefaultCamelContext(); CamelRoute r = new CamelRoute(); r.addRoutesToCamelContext(context); // get routes definition from context List<RouteDefinition> definitions = context.getRouteDefinitions(); RoutesDefinition routes = new RoutesDefinition(); routes.setRoutes(definitions); // dump given routes to xml String xmlContent = ModelHelper.dumpModelAsXml(context, routes); System.out.println(xmlContent); // try to open generated xml in camel editor - it should visualise routes Files.write(Paths.get("src/main/resources/routes-dump.xml"), xmlContent.getBytes(Charset.forName("utf-8"))); {code} There are definitely cases where this simple approach would fail, like this example with CDI - it creates one camel route for each entry injected in {{periods}} {code:java} @Inject private List<Period> periods; @Override public void configure() throws Exception { // Main route (for each period) for (Period period : periods) { final String periodNameWithDash = period.toString().replaceAll(" ", "-"); from(String.format("quartz2://timedRoutes/%s?cron=%s", period.name(), period.cronCamelFormat())) .id(Constants.PREFIX + "poll-" + periodNameWithDash) {code} What do you think about this approach?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1740
9025	FUSETOOLS-1700	Aurelien, can you take care of this one? I think there is already a method to cut the text. See https://github.com/fusesource/fuseide/blob/7.3.x/editor/plugins/org.fusesource.ide.camel.editor/src/org/fusesource/ide/camel/editor/features/add/AddNodeFeature.java#L95	1	1	https://issues.jboss.org/browse/FUSETOOLS-1700
9026	FUSETOOLS-1665	Do we need to remove also the select box to choose the project in the transformation wizard? !screenshot-1.png!	0	0	https://issues.jboss.org/browse/FUSETOOLS-1665
9027	FUSETOOLS-1650	What happens if we disconnect from the JMX server...shouldn't that also close the editor then? And what if I want to look at it after disconnecting? I am rather unsure if its really a good idea to close it right away.	1	0	https://issues.jboss.org/browse/FUSETOOLS-1650
9028	FUSETOOLS-1643	I'd say the Ugly picture is actually the more clean and straight forward here. Wdyt?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1643
9029	FUSETOOLS-1603	What is the goal of having the version defined in the project? isn't the version in the pom the right place to determine it? If version in the pom and in the project not matching, we should provide a warning validation?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1603
9030	FUSETOOLS-1602	Can the status of producer/consumer can be modified during design time? If yes, we need to think about the validation. If a property field is not valid but not shown due to its producer/consumer facet, what should we do? Is it working at deployments? How to remove/update these properties?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1602
9031	FUSETOOLS-1585	Spring IDE is providing useful Bean Editor but only for Spring beans. For Blueprint beans, that have a different syntax, I didn't find any editor. Is it worthy to propose Beans editor only for Spring in a first time?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1585
9032	FUSETOOLS-1585	[~aurelien.pupier] or [~apodhrad] Aurelien, do you by chance have a copy of the example project you were using for your screen shots? Or can either of you point me at a good example somewhere on the internet? I'm just trying to find a handful of simple examples so I can start working through this. It appears that you basically are exposing the bean declaration and some properties? Something along the lines of: {code} <bean id="myBean" class="org.testspringbeans.MyBean"> <property name="somename" value="Bob Hope" /> <property name="somevalue" value="30" /> </bean> {code}	1	1	https://issues.jboss.org/browse/FUSETOOLS-1585
9033	FUSETOOLS-1567	[~bfitzpat] suggested in the mailing list to have an enhancement to suppor thi suse case: "At this point, the Fuse Transformation Editor is not meant as a general purpose dozer configuration editor. It's not a use case we have tested. At this point it only works with dozer configurations inside Camel projects. " What is the cost of the enhancement? Is it possible in a first time to not allow user to open the editor when the format is not supported?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1567
9034	FUSETOOLS-1566	Aurelien, can you check and resolve if all is done?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1566

#	Requirement	Questions	Answered	Successfully Answered	URL
9035	FUSETOOLS-1566	I started work of externalizing String and it is just a matter of time to finish it. for the point 4, did you have some specific place to check? for the point 6, there is no use of CamelIOHandler, do you mean to get rid of CamelConfigBuilder?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1566
9036	FUSETOOLS-1560	when it tries to add one. I'm getting this. It looks like it's trying to insert the node before a text node in line 147. Even if I add a "<dataFormats/>" node by hand into the XML it's failing. I'm also unable to add anything via the Configuration tab of the editor, so am wondering about that as well. {code} org.w3c.dom.DOMException: NOT_FOUND_ERR: An attempt is made to reference a node in a context where it does not exist. at org.apache.xerces.dom.ParentNode.internalInsertBefore(Unknown Source) at org.apache.xerces.dom.ParentNode.insertBefore(Unknown Source) at org.fusesource.ide.camel.model.service.core.model.CamelContextElement.addDataFormat(CamelContextElement.java:147) at org.jboss.tools.fuse.transformation.core.camel.CamelConfigBuilder.createJsonDataFormat(CamelConfigBuilder.java:200) at org.jboss.tools.fuse.transformation.core.camel.CamelConfigBuilder.createDataFormat(CamelConfigBuilder.java:66) at org.jboss.tools.fuse.transformation.editor.wizards.NewTransformationWizard$1.run(NewTransformationWizard.java:137) at org.eclipse.jface.operation.ModalContext.runInCurrentThread(ModalContext.java:463) at org.eclipse.jface.operation.ModalContext.run(ModalContext.java:371) at org.eclipse.jface.wizard.WizardDialog.run(WizardDialog.java:1002) at org.jboss.tools.fuse.transformation.editor.wizards.NewTransformationWizard.performFinish(NewTransformationWizard.java:206) at org.eclipse.jface.wizard.WizardDialog.finishPressed(WizardDialog.java:799) at org.eclipse.jface.wizard.WizardDialog.buttonPressed(WizardDialog.java:429) at org.eclipse.jface.dialogs.Dialog$2.widgetSelected(Dialog.java:619) at org.eclipse.swt.widgets.TypedListener.handleEvent(TypedListener.java:248) at org.eclipse.swt.widgets.EventTable.sendEvent(EventTable.java:84) at org.eclipse.swt.widgets.Display.sendEvent(Display.java:4362) at org.eclipse.swt.widgets.Widget.sendEvent(Widget.java:1113) at org.eclipse.swt.widgets.Display.runDeferredEvents(Display.java:4180) at org.eclipse.swt.widgets.Display.readAndDispatch(Display.java:3769) at org.eclipse.jface.window.Window.runEventLoop(Window.java:827) at org.eclipse.jface.window.Window.open(Window.java:803) at org.jboss.tools.fuse.transformation.extensions.DataMapperEndpointFigureFeature.createNode(DataMapperEndpointFigureFeature.java:82) at org.fusesource.ide.camel.editor.features.create.ext.CreateFigureFeature.create(CreateFigureFeature.java:192) at org.fusesource.ide.camel.editor.features.create.ext.CreateEndpointFigureFeature.create(CreateEndpointFigureFeature.java:99) at org.jboss.tools.fuse.transformation.extensions.DataMapperEndpointFigureFeature.create(DataMapperEndpointFigureFeature.java:57) at org.eclipse.graphiti.features.impl.AbstractCreateFeature.execute(AbstractCreateFeature.java:100) at org.eclipse.graphiti.internal.command.GenericFeatureCommandWithContext.execute(GenericFeatureCommandWithContext.java:64) at org.eclipse.graphiti.internal.command.GFPreparableCommand.doExecute(GFPreparableCommand.java:37) at org.eclipse.emf.transaction.RecordingCommand.execute(RecordingCommand.java:135) at org.eclipse.graphiti.ui.internal.editor.GFWorkspaceCommandStackImpl.execute(GFWorkspaceCommandStackImpl.java:121) at org.eclipse.emf.transaction.impl.AbstractTransactionalCommandStack.execute(AbstractTransactionalCommandStack.java:219) at	1	1	https://issues.jboss.org/browse/FUSETOOLS-1560

#	Requirement	Questions	Answered	Successfully Answered	URL
9038	FUSETOOLS-1560	my local environment. That leaves just the "Other" support in the tooling. I'm working through this now: {code} !ENTRY org.eclipse.ui 4 0 2016-01-21 09:18:36.310 !MESSAGE Unhandled event loop exception !STACK 0 java.lang.NullPointerException at org.jboss.tools.fuse.transformation.editor.internal.wizards.OtherPage.initialize(OtherPage.java:269) at org.jboss.tools.fuse.transformation.editor.internal.wizards.OtherPage.setVisible(OtherPage.java:320) at org.eclipse.jface.wizard.WizardDialog.updateForPage(WizardDialog.java:1229) at org.eclipse.jface.wizard.WizardDialog.access$4(WizardDialog.java:1208) at org.eclipse.jface.wizard.WizardDialog$8.run(WizardDialog.java:1197) at org.eclipse.swt.custom.BusyIndicator.showWhile(BusyIndicator.java:70) at org.eclipse.jface.wizard.WizardDialog.showPage(WizardDialog.java:1194) at org.eclipse.jface.wizard.WizardDialog.nextPressed(WizardDialog.java:885) at org.eclipse.jface.wizard.WizardDialog.buttonPressed(WizardDialog.java:425) at org.eclipse.jface.dialogs.Dialog$2.widgetSelected(Dialog.java:619) at org.eclipse.swt.widgets.TypedListener.handleEvent(TypedListener.java:248) at org.eclipse.swt.widgets.EventTable.sendEvent(EventTable.java:84) at org.eclipse.swt.widgets.Display.sendEvent(Display.java:4362) at org.eclipse.swt.widgets.Widget.sendEvent(Widget.java:1113) at org.eclipse.swt.widgets.Display.runDeferredEvents(Display.java:4180) at org.eclipse.swt.widgets.Display.readAndDispatch(Display.java:3769) at org.eclipse.jface.window.Window.runEventLoop(Window.java:827) at org.eclipse.jface.window.Window.open(Window.java:803) at org.jboss.tools.fuse.transformation.extensions.DataMapperEndpointFigureFeature.createNode(DataMapperEndpointFigureFeature.java:82) at org.fusesource.ide.camel.editor.features.create.ext.CreateFigureFeature.create(CreateFigureFeature.java:192) at org.fusesource.ide.camel.editor.features.create.ext.CreateEndpointFigureFeature.create(CreateEndpointFigureFeature.java:99) at org.jboss.tools.fuse.transformation.extensions.DataMapperEndpointFigureFeature.create(DataMapperEndpointFigureFeature.java:57) at org.eclipse.graphiti.features.impl.AbstractCreateFeature.execute(AbstractCreateFeature.java:100) at org.eclipse.graphiti.internal.command.GenericFeatureCommandWithContext.execute(GenericFeatureCommandWithContext.java:64) at org.eclipse.graphiti.internal.command.GFPreparableCommand.doExecute(GFPreparableCommand.java:37) at org.eclipse.emf.transaction.RecordingCommand.execute(RecordingCommand.java:135) at org.eclipse.graphiti.ui.internal.editor.GFWorkspaceCommandStackImpl.execute(GFWorkspaceCommandStackImpl.java:121) at org.eclipse.emf.transaction.impl.AbstractTransactionalCommandStack.execute(AbstractTransactionalCommandStack.java:219) at org.eclipse.graphiti.internal.command.CommandExec.executeCommand(CommandExec.java:85) at org.eclipse.graphiti.ui.internal.command.CreateModelObjectCommand.execute(CreateModelObjectCommand.java:49) at org.eclipse.graphiti.ui.internal.editor.EmfOnGefCommand.execute(EmfOnGefCommand.java:54) at org.eclipse.graphiti.internal.command.GFPreparableCommand2.doExecute(GFPreparableCommand2.java:43) at org.eclipse.emf.transaction.RecordingCommand.execute(RecordingCommand.java:135) at	1	1	https://issues.jboss.org/browse/FUSETOOLS-1560
9039	FUSETOOLS-1555	I think that this issue should be transformed in "providing a Template using REST DSL" What do you think?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1555
9040	FUSETOOLS-1549	Hiram, isn't that more a runtime task for the camel cdi component instead of the tooling? Or can you elaborate how tooling is involved here?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1549
9041	FUSETOOLS-1521	Can you take a look at that Jon?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1521
9042	FUSETOOLS-1510	I tried to reproduce this issue with the latest Fuse Tooling (_7.3.2.FINAL_, part of _JBDSIS 8.0.7.GA_) for _JBDS 8.1.0.GA_ and the following runtimes: - JBoss Fuse 6.1.1.GA - JBoss Fuse 6.2.1.GA I can create and start a runtime. Also I can browse the runtime in _JMX Navigator_ view. --> *Cannot reproduce Bug* Did you set a user for JBoss Fuse? see https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Fuse/6.2.1/html/Installation_on_Apache_Karaf/InstallAddUser.html#topic-34584 Did you use an appropriate server type? In attached screenshot I see _Apache Karaf_ instead of _JBoss Fuse_.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1510
9043	FUSETOOLS-1488	[~jpav]there is a merged PR attached to this issue. Is it already fixed?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1488
9044	FUSETOOLS-1434	I'm still confused about this issue. The linked pull request has no actual effect on the Fuse Tooling (commented code) and HL7 support via HAPI java object models and _Other_ type in Data Transformation is there from the very beginning. I could not find any related commit in fuseide repository. Am I wrong? Can you edit name of this issue to be more descriptive? I'm still for reopening this issue and set the fix version to 9.0.0.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1434
9045	FUSETOOLS-1434	isn't the priority for HL7 has been lowered? Can we put it to major or low instead of critical?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1434
9046	FUSETOOLS-1430	[~jpav] and I talked about this on Tuesday a bit at our weekly meeting... but I want to document something here. My initial concern holds true. Right now we don't have a solid way of interpreting which file the user used to create their model in the case of JSON or XML. For Java and Other, the model is used -as is-, so it is automatically loaded each time the transformation editor is opened. We talked about stashing the path in the project metadata, but that seems like an incomplete solution for a few reasons now that I've been thinking about it. There's a few potential user paths to consider. 1. User creates new Transformation in a Camel project. No transformation has existed before. We have the opportunity stash the source and target for the models in the project metadata. 2. User imports a quickstart with existing models and transformation file. Right now that doesn't exist in the quickstarts, so we would need to add the metadata for proper importing and I'm not sure if m2e will properly process it. 3. User creates project in a previous version of the editor and wants to update the model. Same issues as #2. What do we do in those cases? I think it may be possible simply to look for the class name as a file name (either as *.xml, *.xsd, or *.json)... It would at least give us a guess. Still working on this.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1430

9047	FUSETOOLS-1422	Transformation Editor fails to create the part's controls *_<camelContext>_ element is not present in a Camel XML file *Steps:* 1. Create a new SwitchYard Project. Specify no runtime (select "<None>" as the Target Runtime in the SwitchYard Version Details) and type "2.1.0.redhat-630133" as the Library Version 2. Drag a Camel (XML) Implementation onto the composite (box with light blue background in the SwitchYard editor). 3. In the wizard, create a new service interface (whatever you want to call it) and hit Finish. 4. Open the generated "route.xml" file in the Camel editor. 5. Drag and drop the Transformation->Data Transformation item from the palette onto the canvas. 6. Finish the wizard (use xml2xml transformation from the following XML example) {code} <?xml version="1.0"?> <order> <customer id="A0001"> <name>Antwerp Zoo</name> <city>Antwerp</city> <country>BE</country> </customer> <date>2012-03-01</date> <orderlines> <orderline> <article id="A0001"> <description>Aardvark</description> </article> <quantity>1</quantity> </orderline> <orderline> <article id="A0011"> <description>Alpaca</description> </article> <quantity>10</quantity> </orderline> </orderlines> </order> {code} *Error* {code} eclipse.buildId=9.1.0.GA-v20160414-0124-B497 java.version=1.8.0_91 java.vendor=Oracle Corporation BootLoader constants: OS=linux, ARCH=x86_64, WS=gtk, NL=en_US Framework arguments: -product com.jboss.devstudio.core.product -pluginCustomization /home/tsedmik/devel/git/jbds-installer/jbds-9.1.0.GA_jbdsis-9.0.1.CR2/resources/pluginCustomization.ini Command-line arguments: -os linux -ws gtk -arch x86_64 -product com.jboss.devstudio.core.product -pluginCustomization /home/tsedmik/devel/git/jbds-installer/jbds-9.1.0.GA_jbdsis-9.0.1.CR2/resources/pluginCustomization.ini -data /home/tsedmik/devel/git/jbds-installer/jbds-9.1.0.GA_jbdsis-9.0.1.CR2/target/tmp -clean org.eclipse.e4.ui.workbench Error Fri Jul 29 13:36:45 CEST 2016 java.lang.RuntimeException: java.lang.ClassNotFoundException: generated_1469792188714.Order at org.jboss.tools.fuse.transformation.core.dozer.DozerMapperConfiguration.loadModel(DozerMapperConfiguration.java:433) at org.jboss.tools.fuse.transformation.core.dozer.DozerMapperConfiguration.getSourceModel(DozerMapperConfiguration.java:380) at org.jboss.tools.fuse.transformation.editor.internal.util.TransformationManager.rootSourceModel(TransformationManager.java:195) at org.jboss.tools.fuse.transformation.editor.internal.SourceTabFolder.<init>(SourceTabFolder.java:44) at org.jboss.tools.fuse.transformation.editor.TransformationEditor.createPartControl(TransformationEditor.java:231) at org.eclipse.ui.internal.e4.compatibility.CompatibilityPart.createPartControl(CompatibilityPart.java:151) at org.eclipse.ui.internal.e4.compatibility.CompatibilityEditor.createPartControl(CompatibilityEditor.java:99) at org.eclipse.ui.internal.e4.compatibility.CompatibilityPart.create(CompatibilityPart.java:341) at sun.reflect.GeneratedMethodAccessor216.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:498) at org.eclipse.e4.core.internal.di.MethodRequestor.execute(MethodRequestor.java:56) at org.eclipse.e4.core.internal.di.InjectorImpl.processAnnotated(InjectorImpl.java:898) at org.eclipse.e4.core.internal.di.InjectorImpl.processAnnotated(InjectorImpl.java:879) at org.eclipse.e4.core.internal.di.InjectorImpl.inject(InjectorImpl.java:121) at org.eclipse.e4.core.internal.di.InjectorImpl.internalMake(InjectorImpl.java:345) at org.eclipse.e4.core.internal.di.InjectorImpl.make(InjectorImpl.java:264) at	1	1	https://issues.jboss.org/browse/FUSETOOLS-1422

9049	FUSETOOLS-1422	Spring namespace in the route file. But I also don't see the error you have reported, even though I do see the Sleep interrupted exception from the transformation editor again. That seems to be the same issue reported with FUSETOOLS-1507, but maybe it's back again? {code} java.lang.InterruptedException: sleep interrupted at java.lang.Thread.sleep(Native Method) at org.eclipse.core.internal.jobs.JobManager.join(JobManager.java:1002) at org.jboss.tools.fuse.transformation.editor.TransformationEditor.waitJavaBuild(TransformationEditor.java:389) at org.jboss.tools.fuse.transformation.editor.TransformationEditor.init(TransformationEditor.java:376) at org.eclipse.ui.internal.EditorReference.initialize(EditorReference.java:361) at org.eclipse.ui.internal.e4.compatibility.CompatibilityPart.create(CompatibilityPart.java:319) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:497) at org.eclipse.e4.core.internal.di.MethodRequestor.execute(MethodRequestor.java:56) at org.eclipse.e4.core.internal.di.InjectorImpl.processAnnotated(InjectorImpl.java:898) at org.eclipse.e4.core.internal.di.InjectorImpl.processAnnotated(InjectorImpl.java:879) at org.eclipse.e4.core.internal.di.InjectorImpl.inject(InjectorImpl.java:121) at org.eclipse.e4.core.internal.di.InjectorImpl.internalMake(InjectorImpl.java:345) at org.eclipse.e4.core.internal.di.InjectorImpl.make(InjectorImpl.java:264) at org.eclipse.e4.core.contexts.ContextInjectionFactory.make(ContextInjectionFactory.java:162) at org.eclipse.e4.ui.internal.workbench.ReflectionContributionFactory.createFromBundle(ReflectionContributionFactory.java:104) at org.eclipse.e4.ui.internal.workbench.ReflectionContributionFactory.doCreate(ReflectionContributionFactory.java:73) at org.eclipse.e4.ui.internal.workbench.ReflectionContributionFactory.create(ReflectionContributionFactory.java:55) at org.eclipse.e4.ui.workbench.renderers.swt.ContributedPartRenderer.createWidget(ContributedPartRenderer.java:129) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine.createWidget(PartRenderingEngine.java:971) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine.safeCreateGui(PartRenderingEngine.java:640) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine.safeCreateGui(PartRenderingEngine.java:746) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine.access$0(PartRenderingEngine.java:717) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine$2.run(PartRenderingEngine.java:711) at org.eclipse.core.runtime.SafeRunner.run(SafeRunner.java:42) at org.eclipse.e4.ui.internal.workbench.swt.PartRenderingEngine.createGui(PartRenderingEngine.java:695) at org.eclipse.e4.ui.internal.workbench.PartServiceImpl$1.handleEvent(PartServiceImpl.java:99) at org.eclipse.e4.ui.services.internal.events.UIEventHandler$1.run(UIEventHandler.java:40) at org.eclipse.swt.widgets.Synchronizer.syncExec(Synchronizer.java:186) at org.eclipse.ui.internal.UISynchronizer.syncExec(UISynchronizer.java:145) at org.eclipse.swt.widgets.Display.syncExec(Display.java:4761) at org.eclipse.e4.ui.internal.workbench.swt.E4Application$1.syncExec(E4Application.java:211) at	1	1	https://issues.jboss.org/browse/FUSETOOLS-1422
9050	FUSETOOLS-1411	Length Data Format. This gets long, so my apologies... We're getting all the way to the Bindy marshaller, which is choking. The header row wasn't set on the exchange header here - https://github.com/apache/camel/blob/master/components/camel-bindy/src/main/java/org/apache/camel/dataformat/bindy/fixed/BindyFixedLengthDataFormat.java#L90 So it doesn't process anything for the header or footer, and then when it tries to unbind the model into the text file it appears that it's attempting to process the orderHeader, orderFooter, and items fields as fields - which obviously doesn't work. It's doing that in here: https://github.com/apache/camel/blob/master/components/camel-bindy/src/main/java/org/apache/camel/dataformat/bindy/BindyFixedLengthFactory.java#L327 If I don't wrap the items using the same rough structure we use for the json side (items/item) we have to specify an index in the transformation.xml file and you can get a single item (albeit without the header & footer). That doesn't fix the header/footer issue but at least you get a body row out of the marshaller. Unfortunately after looking at beanio I'm not sure it'll do much better. It has a similar approach to annotations. Any ideas? The transformer is doing just fine - the model is generated beautifully. It's just not being marshalled into the output file appropriately. Are there any ways to somehow intercept the model and populate the exchange header and footer properties? (Sorry, still learning Camel!) I'm attaching the two versions of the project (the one that spits out one line and the one that spits out nothing at all). (Here's the debug output.) {code} [main] TransformationTest INFO ********** [main] TransformationTest INFO Testing: transform(org.example.TransformationTest) [main] TransformationTest INFO ********** [main] CamelNamespaceHandler DEBUG Using org.apache.camel.spring.CamelContextFactoryBean as CamelContextBeanDefinitionParser [main] CamelNamespaceHandler DEBUG Registered default: org.apache.camel.spring.CamelProducerTemplateFactoryBean with id: template on camel context: camel-1 [main] CamelNamespaceHandler DEBUG Registered default: org.apache.camel.spring.CamelConsumerTemplateFactoryBean with id: consumerTemplate on camel context: camel-1 [main] SpringCamelContext DEBUG Set the application context classloader to: sun.misc.Launcher$AppClassLoader@54bedef2 [main] bstractCamelContextFactoryBean DEBUG Setting up routes [main] bstractCamelContextFactoryBean DEBUG Found JAXB created routes: [Route[[From[file:/tmp/inbox?fileName=abc-order.json]] -> [To[ref:json2fixed], To[file:/tmp/outbox?fileName=xyz-order.fixed]]]] [main] SpringCamelContext DEBUG onApplicationEvent: org.springframework.context.event.ContextRefreshedEvent[source=org.springframework.context.support.ClassPathXmlApplicationContext@246ae04d: startup date [Thu Sep 17 16:46:41 MDT 2015]; root of context hierarchy] [main] SharedProducerServicePool DEBUG Starting service pool: org.apache.camel.impl.SharedProducerServicePool@d41f816 [main] SpringCamelContext DEBUG Using ComponentResolver: org.apache.camel.impl.DefaultComponentResolver@8576fa0 to resolve component with name: properties [main] DefaultComponentResolver DEBUG Found component: properties in registry: null [main] DefaultComponentResolver DEBUG Found component: properties via type: org.apache.camel.component.properties.PropertiesComponent via: META-INF/services/org/apache/camel/component/properties [main]	1	1	https://issues.jboss.org/browse/FUSETOOLS-1411
9051	FUSETOOLS-1353	I have put "date", "Date", and "java.util.Date" as the field type in the json schema and it either comes across in the generated classes as a string or a java Object. {code} "date": { "type": "Date" }, {code} Becomes {code} @JsonProperty("date") private Object date; {code} Working through this from point A to point B, how do we expect to get "java.util.Date" into the generated POJO from org.jsonschema2pojo? Does the user have to tweak the generated code?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1353

#	Requirement	Questions	Answered	Successfully Answered	URL
9052	FUSETOOLS-1353	Ok, so now that I have a working example, I'm starting to look at how to implement this. As the data format has to be on the source, not the target, in the dozer config, I've added a new menu item to the drop-down on the source (left) side of the mapping detail pane. If the target is set to "java.lang.Date" as the type, the user will see a new menu - "Set date format" - which opens up the following dialog: !data-format-dialog-draft.png! The drop-down has a list of a few formats, but allows the user to type one (will probably need to add some kind of validation)... * "yyyy-MM-dd HH:mm:ss" * "yyyy-MM-dd HH:mm:ss.SSS" * "yyyy-MM-dd HH:mm:ss.SSS Z" * "MM-dd-yyyy HH:mm:ss" * "MM/dd/yyyy HH:mm" If the user types something or selects something, they can hit OK. The selected format is then set as the "data-format" on the source. I will need to add a "data-format" attribute to the org.jboss.tools.fuse.transformation.model.Model class that handles the property in the configuration. Should we also include this menu on the target side of the equation (which then would set it on the source)?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1353
9053	FUSETOOLS-1352	[~kcbabo] Can you provide a good example of how this should look in the transformation file? Right now I'm working with this, which assumes that the file "simple.txt" is in the src/main/resources directory, which is on the classpath: {code} <mapping> <class-a>org.apache.camel.component.dozer.ExpressionMapper</class-a> <class-b>xyzorderschema.XyzOrderSchema</class-b> <field custom-converter-id="_expressionMapping" custom-converter-param="simple:resource:classpath:simple.txt"> <a>expression origin </field> </mapping> {code} My other questions are: 1) Will this work with the custom converter in the Camel dozer component? 2) The three schemes supported are: classpath, file, and http? Where are these documented? I can't find them listed in http://camel.apache.org/language.html Thanks.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9054	FUSETOOLS-1352	Next question... With three "schemes" available for importing a script file, what do we want to present the user? In the http case, we're just pasting in a web URL. I'm assuming it's something like: {code} from("direct:start") // the script will be loaded on each message, as we disabled cache .to("language:simple:http://someurl.com/myscript.txt?contentCache=false") .to("mock:result"); {code} In the file case, are we browsing anywhere on the file system? What format should the file be in? The lone example I have found is: {code} from("direct:start") // the script will be loaded on each message, as we disabled cache .to("language:simple:file:target/script/myscript.txt?contentCache=false") .to("mock:result"); {code} Where is the file based? What context does that entail? And classpath... {code} from("direct:start") // load the script from the classpath .to("language:simple:classpath:org/apache/camel/component/language/mysimplescript.txt") .to("mock:result"); {code} Is this the classpath of the project? If so, then we should be able to limit it to a similar classpath file browse dialog as I've made a few other places. Sorry for all the questions. Documentation (and even the Camel in Action book) have not been very forthcoming with answers.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9055	FUSETOOLS-1352	I suspected that was going to be the route you wanted to go. The problem is we have a dialog on top of a dialog on top of an editor, so each level of UI we continue to add gets hairier. We can do it, but it won't be very pretty. I will see what I can come up with. Do we also want to take this opportunity to expand the expression text box so it's scrollable? How much text should we allow in an embedded expression before we suggest to the user that they really should import a file? I also wonder at which languages can have loaded expression files- every language? Or just some languages?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9056	FUSETOOLS-1352	Yeah, just like that! Personally, I prefer that interface. What do you and John think?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9057	FUSETOOLS-1352	It'll work for me. Should I just chug forward?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9058	FUSETOOLS-1352	[~janstey] or [~davsclaus], with [~kcbabo] stepping away from the Transformation project I'm hoping you guys might be able to help with what may be a bug in the camel-dozer component? [~lhein] Pointed me in your direction. :) What we're trying to do is have a way of passing a language object with a resource script to be loaded, but it seems to be being ignored when we run it through Camel. It would be one thing if it was just a path problem, but even if I provide a bogus file it's not being processed for some reason. Can you point me at the code where language expressions are handled in camel-dozer or any unit tests where we try to leverage that sort of "Loading scripts from resources" approach (as detailed here: http://camel.apache.org/language.html)? Thanks in advance!	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9059	FUSETOOLS-1352	[~davsclaus] Thanks again for the code pointer. Next question... Do you have any good examples for how the classpath, file, and http URIs are formed in this case? I found examples of classpath in several places in the docs, but the rest are more of a mystery. I have been Googling with no joy to find test cases to use when banging on the UI side (obviously they don't work right now, but will work when we get this issue fixed in the camel component). Do we have a test somewhere that puts this through its paces? Or a quickstart somewhere?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9060	FUSETOOLS-1352	[~davsclaus] [~kcbabo] I have created a PR against Camel master - https://github.com/apache/camel/pull/548 Can you take a look? I added code to handle the language script loading and tests to verify it's working. Would be great if this could also find its way into the 2.15.x branch. I don't have a way to test the http functionality at this point, so if you have suggestions please let me know. But it seems to work fine now. Loads from the classpath or the file scheme just fine.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9061	FUSETOOLS-1352	Hey Tomas, 1. The empty string in the Source combo is there for a reason. The model-driven combo box won't accept a null selection, so we must add an empty element to keep it happy in the Data Binding framework. 2. Source: File is definitely a bug. We should open a File dialog there, you are correct. Workaround right now is to type the path. 3. I'm unable to reproduce your case where the browse button is always enabled. Can you do a video? 4. We can definitely reset the Details after the user changes the Language, effectively clearing any options the user has set up to that point. 5. [~jpav] Any ideas on the scalar to vector/indexing issue when combined with expressions? [~tsedmik], can you create a couple of new JIRAs - #2, #3, and #4 can be combined into one. And #5 should be another. Thanks!	1	1	https://issues.jboss.org/browse/FUSETOOLS-1352
9062	FUSETOOLS-1348	If I understood well, the current solution requires to update the camel-dozer dependency. Is it in Fuse Runtime? In Camel itself? I think that we can't have it for 9.1.0 then as we will still be based on Fuse Runtime 6.3.0 or Camel 2.18.0. Which version can we target on Camel/Fuse? And last question, are we able to handle hiding this feature when user is based on a previous version which doesn't have the updated Dozer version?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1348

#	Requirement	Questions	Answered	Successfully Answered	URL
9063	FUSETOOLS-1347	We already have a mechanism for specifying Custom Operations in the Transformation Editor. In a mapping, click the drop-down menu arrow on the Source detail and select "Add Custom Function." This opens the "Add Custom Operation" dialog [1], which allows you to select from a pre-existing list of Classes or create a new one. Right now we are limited to methods with a single parameter. If we change the name of this to simply be "Add Function" (which still also allows the creation and use of user-created functions), we can easily add a library of String functions to match the requested functions out of the box with a single parameter (i.e. the original string). The class could be included in the camel-dozer component and exposed to the user through the current dialog. My logic here is to keep things simple. A function is a function, whether brought in from the user's project or from the upstream camel-dozer component, so having a complete list in one place would be handy since the selection dialog has a search area already. We could also expose them via a cascading menu (Add Function->[functionName]) in the same drop-down list as "Add Custom Function" shows up today if we want to keep them separate. Either way, the simple String functions (single parameter) we could expose initially would include: * toLowerCase (String original) * toUpperCase (String original) * trim (String original) Unfortunately, as we are only afforded a single parameter (the original string), we are limited in what we can accomplish here without some significant changes to org.apache.camel.component.dozer.CustomMapper. The "mapCustom" method would need to handle an arbitrary number of input parameters and the org.jboss.tools.fuse.transformation.editor.internal.AddCustomFunctionDialog would need to offer a way for users to provide inputs. Once we have that capability, we could offer all sorts of mapping functions out of the box: * concat (String original, String strToAdd) * replace (String original, char oldchar, char newchar) * replaceAll (String original, String regex, String replacement) * replaceFirst (String original, String regex, String replacement) * split (String original, String regex, int index) * substring (String original, int beginIndex) * substring (String original, int beginindex, int endIndex) And obviously the expanded parameter option would enhance the custom user-created operations as well. [~jpav] and [~kcbabo] - Do we have time in this sprint to push further Camel changes upstream to the camel-dozer component? These would be rather significant I suspect and we're down to the wire with time. [1] Note: We should probably settle on the text for this menu item and make the dialog text match.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1347
9064	FUSETOOLS-1347	[~jpav] I've been looking at your initial implementation of the functionality in the "Add Function" menu and associated dialog. Here's my feedback in no particular order and not trying to be overly critical, but seems to go contrary to other dialogs in Eclipse: * It opens without anything selected, so the Arguments group is empty and leaves you guessing as to what "applicable arguments" you may be referring to. Perhaps put a tooltip or some label in the group box if nothing is selected to hint (in addition to the text at the top of the dialog) that they need to select a function. * The list of functions is in a listbox with no vertical scrollbar. Need to add that * There should be a thin black line at the bottom of the "title" area of the dialog - not sure why that's missing. Looks odd. If you look at other title area dialogs, it's usually there. * I would change the dark black splitter and make it a darker gray or remove it entirely. We don't need it in this case since the user can resize the entire dialog to see whatever they wish to see. * Please use an actual table for the arguments or change the black column headers to be more like a traditional table in Eclipse. We don't need to custom build every control. TableViewer has built in functionality we can use for column editors and the like. * The arguments are a bit strange to me. In all cases there's just the one input parameter which is always the string to be converted. Can the user change the value? is the name really 'string'? Unless there are arguments that the user has to fill in (which there aren't any yet) I'd get rid of Arguments part of the dialog completely for this release. I think I get what you're after here in the future (when the user can actually set input for some of these arguments) but for now it's more confusing than anything else. Let's get some feedback from [~kcbabo] on this as well.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1347
9065	FUSETOOLS-1346	We now have: * csv-to-xml * json-to-json * json-to-xml * xml-to-csv * xml-to-json * xml-to-xml Still need: * csv-to-fixed (other to other) * java-to-java * java-to-json (may not be needed) * java-to-xml (may not be needed) * xml-to-java (may not be needed) * json-to-java (may not be needed) I'm erring on the side of completeness here. Other-to-Other and the Other-to-? and ?-to-Other examples essentially handle the Java-to-Java cases. We will for sure add the Other-to-Other (csv-to-fixed probably, since we've had some questions about fixed length messages) and a Java-to-Java example before I'm done. Also created FUSETOOLS-1429 so we get these examples moved back to the 7.3.x stream as well.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1346
9066	FUSETOOLS-1346	[~bfitzpat] The status is "coding in progress" but last comment is from last September. I suppose that it is not the case. But should it be resolved or set back in To do?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1346
9067	FUSETOOLS-1282	Currently we generate the components drawer entries in the palette from what we get from Camel meta data. Unfortunately this meta data doesn't provide any label for a component. So it would need a change on Camel side to get this fixed.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1282
9068	FUSETOOLS-1279	Created an initial version of the extension point in the editor plugin. To use it you have to create a class which implements ICustomDblClickHandler interface. see https://github.com/fusesource/fuseide/blob/master/editor/plugins/org.fusesource.ide.camel.editor/src/org/fusesource/ide/camel/editor/provider/ext/ICustomDblClick Handler.java The method *canHandle* decides if you want to handle a dbl click event on a specific figure or not. In the case of the data transformation you could check if its a ref and then lookup the ref and see if its a dozer endpoint. The method *handleDoubleClick* is called if *canHandle* returns true. This method should contain the actual action you want to do like opening an editor etc. I only tried if the handling itself works. You have to check if you can access the model to lookup the referenced EP in a REF endpoint. If thats not possible let me know and we extend the parameters of the methods a bit.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1279
9069	FUSETOOLS-1272	[~lhein] the SAP Tooling Beta 3 has been tagged? Where has it been pushed? Do we need to modify something in JBDSIS? [~tsedmik] Can you tell which version of SAP plugins are installed?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1272
9070	FUSETOOLS-1263	+1 for looking at doing the git move. -0 on changing plugin/features too much. We'll need to be careful about the renaming/refactoring since it changes API's and upgrade paths. I think we can for most things add p2 metadata to handle bundle id renames, but how about preferences or other properties/settings ? are their keys using the bundle id's? how many settings are there in Fuse tooling ? how would it affects users if we do the rename?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1263
9071	FUSETOOLS-1262	Whats the state here? I can't see anything in the new repo.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1262
9072	FUSETOOLS-1259	How about creating a tooling tutorial supplement repo in https://github.com/fusebyexample?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1259
9073	FUSETOOLS-1259	Ok. What would I need to do to get them there? And how easy will it be for Fuse Tooling users to get them out and installed in the correct folder in their CBRroute project?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1259

#	Requirement	Questions	Answered	Successfully Answered	URL
9074	FUSETOOLS-1259	"Why not zip them up and put them up on the Customer Portal with the book?" Yes, that's a possibility and might be a good solution in this case. You can put arbitrary files under the {{files/}} directory in Publican (though I would have to check that our {{sibin}} preprocessor script honours that). Having a place in {{github.com/FuseByExample}} to put doc demos would also be very useful. I've been thinking about this recently and it is something we could probably use for other doc demos (but I haven't figured out the details yet). Maybe we can have a chat about this sometime, Jane.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1259
9075	FUSETOOLS-1258	Modified the main project POM to add a targetplatform profile and created Jenkins build and publish projects to establish an independent SAP update site: https://github.com/punkhorn/jboss-fuse-sap-tool-suite/commit/16ec15aac8b0ccd405a60d6bd0d56eb57f052a84 mvn -Ptargetplatform clean install # mirror the JBTIS base-ea and is-stack-and-data-layer.target into a combined repo https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-fuse-sap-tooling https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-fuse-sap-tooling-publish The resulting update site is: http://download.jboss.org/jbosstools/updates/integration/luna/integration-stack/jboss-fuse-sap-tool-suite/7.3.0.Beta1/ Modified the ide-config.properties to create a property that may be used to identify the IS extras URL: https://github.com/jbosstools/jbosstools-download.jboss.org/commit/71b6294966f31ccce728634855c3baa7d40728c8 https://github.com/jbosstools/jbosstools-download.jboss.org/commit/26c879653786989884536cbce2fa3dc73495754d Also established IS composites to hold the "extras" URLs (currently only component is SAP tooling): http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/extras/compositeArtifacts.xml http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/extras/compositeContent.xml http://download.jboss.org/jbosstools/updates/stable/luna/integration-stack/extras/compositeArtifacts.xml http://download.jboss.org/jbosstools/updates/stable/luna/integration-stack/extras/compositeContent.xml What needs to be done? The wizard Java code which looks for the update site should pull the SAP tooling update site URL from ide-config.properties like this: PropertiesHelper.getPropertiesProvider().getValue("jboss.discovery.site.integration-stack-extras.url"); See this code for an example: https://github.com/jbosstools/jbosstools-central/blob/master/discovery/plugins/org.jboss.tools.discovery.core/src/org/jboss/tools/discovery/core/internal/DiscoveryActivator.java#L131	1	1	https://issues.jboss.org/browse/FUSETOOLS-1258
9076	FUSETOOLS-1258	looks like a good start. could we please avoid publishing non-stable ocntent into stable urls ? i.e. http://download.jboss.org/jbosstools/updates/stable/luna/integration-stack/extras/compositeArtifacts.xml shuold IMO just be empty. Also, shouldn't the actual published site be an aggregate instead of a composite pointing to dynamic changing sap site content ?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1258
9077	FUSETOOLS-1258	Just to be clear, the plugin should be made so it can survive without the property set. i.e. have a default value in case a mistake is made in the properties upload or whatnot. also should we make it a comma separated list to allow for freedom to extend it ? (i'm fine with staying just at one but then we just need to always be okey that the sap tooling is *only* one feature)	1	1	https://issues.jboss.org/browse/FUSETOOLS-1258
9078	FUSETOOLS-1258	I guess I'm confused now. We currently have this defined in ide-config.properties: jboss.discovery.site.integration-stack-extras.url|jbosstools|4.2=http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/extras/ This is a generic property value for identifying anything the IS defines as 'extras' - currently that's a composite site with just one entry: <child location="http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/jboss-fuse-sap-tool-suite/7.3.0.Beta1/all/repo/"/> There could be more. You're only interested in jboss-fuse-sap-tool-suite which is a real repo. Could you XML parse (in Java) the compositeArtifacts.xml and find the SAP tooling suite you're looking for? What's the alternative - creating a SAP-specific property value in ide-config.properties? This should be the SAP feature name? Please more details.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1258
9079	FUSETOOLS-1258	Looking at the actual live file: I see http://download.jboss.org/jbosstools/configuration/ide-config.properties {{{ jboss.discovery.site.integration-stack-sap.url|jbosstools|4.2=http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/jboss-fuse-sap-tool-suite/7.3.0.Beta1/all/repo/ jboss.discovery.site.integration-stack-sap.feature|4.2=org.fusesource.ide.sap.feature.feature.group }}} The thing I notice is that the latter does not have "jbosstools" specified despite it has the version number - so I think that should be fixed the |4.2 removed for the sap.feature line if you want it to be globally available. btw. is it really intended/expected the feature is named "feature.feature.group" ?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1258
9080	FUSETOOLS-1258	Thanks - looks like it doing everything in a nice straight line but one thing that I'm missing is how *updates* are going to be handled ? This code removes the generate updatesite meaning when next release comes out of IS with SAP tooling updates these will not be picked up. How are users going to get updates ? By running the install *again* ?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1258
9081	FUSETOOLS-1258	if you kept the updatesite created in a less temporary location and kept it in place then updates the SAP tools plugin will just work. I assume we are not locked into too specific SAP client lib versions ? With respect to the sap libraries if we actually put proper versions onto the generated plugins and you use proper version ranges then if you are just fixing bugs in the tools then updates will just become available and only if we actually have some strict incompatbility with sap client libs will you bump the version range and users will need to run the SAP wizard install again to get proper versions in place. makes sense ? could it work ?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1258
9082	FUSETOOLS-1225	[~ceposta] on the page that you pointed, all configuratiosn are based on beans (so should be covered by https://issues.jboss.org/browse/FUSETOOLS-1585). is it really the case? or do you mean something else? if yes, can you open an enhancement request linked to this one containing a sample of the xml code that you would like to manage please?	1	0	https://issues.jboss.org/browse/FUSETOOLS-1225
9083	FUSETOOLS-1200	[~lhein] Hi, I am new around these parts so not sure if JIRA is the place for questions. I have a few questions on this ticket if this enhancement is still in scope. * Does the screenshot !screenshot-1.png|thumbnail! depict what you have in mind? * I implemented this only on the 'Project Explorer' since 'Navigator' & 'Package explorer' doesn't follow [CNF|http://help.eclipse.org/mars/index.jsp?topic=%2Forg.eclipse.platform.doc.isv%2Fguide%2Fcnf.htm] so it doesn't seem straightforward to implement custom trees for those views. * Only <route/> child nodes are shown currently in expanded state (ref: issue description "show the contained routes as child elements"). When you double click a route it will take you to that route in the diagram editor (i.e., it behaves similar to the outline view) * I have a fork [here|https://github.com/2point718/fuseide] if you'd prefer to have this discussion on a pull request	1	1	https://issues.jboss.org/browse/FUSETOOLS-1200

#	Requirement	Questions	Answered	Successfully Answered	URL
9084	FUSETOOLS-1181	Jane, good to hear that. Can you open a PR for that? (I can't find one in our git repo)	0	0	https://issues.jboss.org/browse/FUSETOOLS-1181
9085	FUSETOOLS-1181	Jane, this issue is already resolved, isn't it? _(according to https://github.com/fusesource/fuseide/commit/dd8f66d230c961a763e95453bbe85244c317e6a4)_ Can you resolve the issue here?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1181
9086	FUSETOOLS-1177	I think Max's idea is great. Customer can create his project based on many quickstarts like the ones in $Fuse61_HOME/quickstart and moreover, camel-archetype-activemq is the old archetype, creating a project from it can not run in the fuse. about camel-archetype-spring-dm, is spring still the suggestion ? I suppose we should recommend blueprint instead.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1177
9087	FUSETOOLS-1168	This seems to be a bug in Camel's dumpAsXML JMX method. Claus, is that the same we already reported to Camel?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1168
9088	FUSETOOLS-1168	Huh? I am using the camel naming factory to create those ids. Don't you check on Camel side for uniqueness when assigning IDs? Can't believe that.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1168
9089	FUSETOOLS-1151	Hey James, could you add more details what you want to do? From what the headline says you want to check out some files from a fabric8 git repo. But what I am missing is details like what files, how can I reach that git repo, where do the files belong to? (guess a server?) If its a server thing I would recommend we add a configuration node below the server in the servers view and put the files under that node in some to be defined ordering / grouping. Also of interest is what those files contain and if we need custom editors for those files. Thanks in advance Lars	1	0	https://issues.jboss.org/browse/FUSETOOLS-1151
9090	FUSETOOLS-1120	Hi Lars, does 'publishing' means deploing to a server? Because as far as I know we do not support deployment of JAR projects. Am I correct?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1120
9091	FUSETOOLS-1106	[~pleacu]: I am not seeing that issue when running Fuse Tooling only. What kind of blocking dialog is showing up? As far as I remember we do not define special keys at all.	0	0	https://issues.jboss.org/browse/FUSETOOLS-1106
9092	FUSETOOLS-1104	Will it support both Java 7 and Java 8 and what is the timeframe for JBDS 8?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1104
9093	FUSETOOLS-1104	wait wait - build and test with JDK 8 is two very differnt things. We are *not* building our eclipse plugins with JDK 8. For JBDS 7 it is Java 6, for JBDS it is Java 7. We are *Testing* running our eclipse plugins with Java 6+7 in JBDS 7, and JAva 7+8 for JBDS 8. *Support* for *using* Java 8 is possible on kepler but only enabled on jbosstools as commnuity testing. JBDS 8 is where the first full support is for Java 8. If you need to target *users* apps on Java 8 - you currently need to move to JBDS 8/JBoss Tools Luna. Which one is this jira about ?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1104
9094	FUSETOOLS-1104	what are "some servers" ? some specific versions of Fuse or ?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1104
9095	FUSETOOLS-1103	Basic functionality like Start / Stop / Restart Server will be needed. For the publishing we need additional information: 1. What can be published / deployed to Fabric8? 2. How does the deployment work? 3. Do we deploy to local Fabric8 instances only or is remote publishing possible too? 4. If remote publish, then how can it be done? 5. How to remove published stuff in a clean way (local, remote)? ...	0	0	https://issues.jboss.org/browse/FUSETOOLS-1103
9096	FUSETOOLS-1103	[~jastrachan], could you answer above questions?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1103
9097	FUSETOOLS-1103	1. jars, wars, ears, bundles 2. see http://fabric8.io/#/site/book/doc/index.md?chapter=mavenPlugin_md. basically the deployment artefact is uploaded to fabric8's maven proxy: http://fabric8.io/#/site/book/doc/index.md?chapter=mavenProxy_md then a profile is lazily created/updated 3. see above docs; it works with any fabric; you can specify the URL to it. 4. there's only one way wherever the fabric 5. there's no way to do that; just like there's no clean way to do that with any maven repository/proxy. Why do you want to?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1103
9098	FUSETOOLS-1102	Can that plugin be also used for deployments to Apache Karaf and Apache ServiceMix?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1102
9099	FUSETOOLS-1079	Can we close that one?	0	0	https://issues.jboss.org/browse/FUSETOOLS-1079
9100	FUSETOOLS-1066	So now the gui has changed such that Fuse Fabric perspective --> Fabric8 perspective, and Fabric Explorer --> Fabric8 Explorer? (The last gui I saw -- 7.2.0.v20140312-2041-H37-CR3 -- Fabric Navigator had changed back to Fabric Explorer.) I will need new screen captures as well. When can I get a new build?	1	1	https://issues.jboss.org/browse/FUSETOOLS-1066
9101	FUSETOOLS-1066	Jane, can you try with a clean workspace? If that doesn't help you could also try to reset the perspective.	1	1	https://issues.jboss.org/browse/FUSETOOLS-1066
9102	FUSETOOLS-1031	Yes, in my tests I had no selection active. But besides that you can always create a route from the main menu and also inside the editor...why should I use the outline view for that. We don't even open that view in our perspectives by default.	1	0	https://issues.jboss.org/browse/FUSETOOLS-1031
9103	FUSETOOLS-955	It would appear that it's possible to co-install SpringIDE 3.3 and FuseIDE 7.2 into JBDS 7.0.0.GA: [^springide33_fuseide72_coinstalled_in_JBDS700GA.png] I'm just not sure if having both 4.0.M1 and 3.1.4.RELEASE plugins running at the same time will cause problems. Has anyone tried to USE both SpringIDE 3.3 and FuseIDE 7.2 at the same time from within the same JBDS 7 install? Give me some tests to run and I can try it out...	1	0	https://issues.jboss.org/browse/FUSETOOLS-955
9104	FUSETOOLS-955	Nick, what is the state here? Can we close that issue?	1	0	https://issues.jboss.org/browse/FUSETOOLS-955
9105	FUSETOOLS-955	State was "Give me some tests to run and I can try it out..." but no one did, so no testing was done. Have you tried to install FuseIDE 7.2.CR1 and Spring 3.3 in the same JBDS?	0	0	https://issues.jboss.org/browse/FUSETOOLS-955
9106	FUSETOOLS-948	Can we defer until after 6.1?	0	0	https://issues.jboss.org/browse/FUSETOOLS-948
9107	FUSETOOLS-913	Can this be deferred til after 6.1?	0	0	https://issues.jboss.org/browse/FUSETOOLS-913
9108	FUSETOOLS-907	Jane, could you also document, that using the context menu "Maven / Update Project" is only available on the project folder and not on the pom.xml file? I know its unrelated to this issue, but would be nice if you also put that in place. Thanks, Lars	1	1	https://issues.jboss.org/browse/FUSETOOLS-907
9109	FUSETOOLS-907	Jane, did u document it somehow? If yes, please resolve the issue.	0	0	https://issues.jboss.org/browse/FUSETOOLS-907
9110	FUSETOOLS-907	No, I didn't put it in the user guide because you said it needs to be fixed. So I was treating it as a known issue, which should go into the release notes. Is this a known issue that will be fixed? If not, I will need to add it as part of the procedure to view other items in the Fuse JMX Navigator. This isn't the only place where this occurs. I've also experienced it when selecting a message trace in Messages View and had to unpin Properties view to see the Message Details page correlated with the message trace I selected.	0	0	https://issues.jboss.org/browse/FUSETOOLS-907
9111	FUSETOOLS-868	Reviewed that patch from Paul and it gives an error dialog if the zookeeper password is wrong. Though the message inside that dialog is not really useful. It says that there might be no fabric and we should create or join one. But the cause was a wrong zookeeper password. Another strange thing for me: You can enter whatever credentials as Username / password as long as the zookeeper password is fine. Is that correct?	1	1	https://issues.jboss.org/browse/FUSETOOLS-868
9112	FUSETOOLS-868	fixed. Jason, can you verify the fix?	1	1	https://issues.jboss.org/browse/FUSETOOLS-868
9113	FUSETOOLS-832	Is that still an issue with the latest version?	1	1	https://issues.jboss.org/browse/FUSETOOLS-832
9114	FUSETOOLS-707	Assigning to you Luis - can we have a new Route icon with a trace modifier; so folks can visually see the routes being traced?	1	1	https://issues.jboss.org/browse/FUSETOOLS-707

#	Requirement	Questions	Answered	Successfully Answered	URL
9115	FUSETOOLS-658	the parameter "-Dcamel.blueprint=true" is now set if the context is a blueprint one. Not yet tested because we still use an old version of the camel:run plugin. Claus, could u test it by time?	1	1	https://issues.jboss.org/browse/FUSETOOLS-658
9116	FUSETOOLS-623	can we close that one, Charles?	1	1	https://issues.jboss.org/browse/FUSETOOLS-623
9117	FUSETOOLS-613	Oh and I just noticed in the server launch configuration, it has options for Apache Derby in the VM arguments (see screenshot 3). Is that really needed?	1	0	https://issues.jboss.org/browse/FUSETOOLS-613
9118	FUSETOOLS-565	thought that this is no longer there? could u dbl check and close this issue if it away?	0	0	https://issues.jboss.org/browse/FUSETOOLS-565
9119	FUSETOOLS-565	Tried the same here. When hitting the stop button the whole jmx process vanished from the JMX tree. I tried to get the context menu of the diagram view but it had no entry for dynamic instance.	1	1	https://issues.jboss.org/browse/FUSETOOLS-565
9120	FUSETOOLS-537	Can't reproduce that problem. When using add (tried both adding a standalone unconnected node and a connected node by using add on another node) context menu the new node gets aligned as wanted by the layout. If you add it to an existing route it is added to the right of the node otherwise it is aligned to the left as no connection is available. Also the newly created figure is selected automatically. Guess you had some buggy environment? Please recheck and reopen this issue if you still run into this problem.	0	0	https://issues.jboss.org/browse/FUSETOOLS-537
9121	FUSETOOLS-481	Don't the doc team do release notes now?	1	1	https://issues.jboss.org/browse/FUSETOOLS-481
9122	FUSETOOLS-477	Which perspective are you talking about?	1	1	https://issues.jboss.org/browse/FUSETOOLS-477
9123	FUSETOOLS-475	I haven't been able to reproduce this. What I did: 1. open the diagram 2. selected a figure --> the properties page was filled with properties of that figure 3. selected the Camel Context File from Project Explorer --> the Properties view was filled with the properties of that file 4. selected Context Menu "Run as / Local Camel Context Without Tests" The console was filled with texts about startup of the local camel context. The properties view was still showing the properties of the selected Camel Context file. After selecting the EIP figure again, the properties view was filled with the values of that figure again. Looks all fine to me. We have to remember that the properties view always tries to show the properties of the selected element. In the above case the last selected element was the Camel Context File and not the EIP figure inside the diagram.	1	0	https://issues.jboss.org/browse/FUSETOOLS-475
9124	FUSETOOLS-454	Was that new endpoint connected to something else or was it standalone? Just to clarify things. I think it may got dismissed because it was not valid at that moment.	1	1	https://issues.jboss.org/browse/FUSETOOLS-454
9125	FUSETOOLS-451	Claus, I can't find that context entry any longer. Can you check if its still there for you?	1	1	https://issues.jboss.org/browse/FUSETOOLS-451
9126	FUSETOOLS-420	Thanks Eric. Sorry I missed it! Instead of "Registering Fuse IDE" maybe we can specifically call it "Licensing Fuse ID"? Also, can we specifically say that if you are interested in a trial version to contact us? It's really the non-subscribers trying it out that seem to run into difficulties. Thanks, Susan	1	1	https://issues.jboss.org/browse/FUSETOOLS-420
9127	FUSETOOLS-383	wonder if this helps? http://stackoverflow.com/questions/6286701/an-eclipse-console-view-that-respects-ansi-color-codes	0	0	https://issues.jboss.org/browse/FUSETOOLS-383
9128	FUSETOOLS-325	With ECLIPSE-707, we have distinguished the icon for the camel route in the tree to show that tracing is on. Do we think we want to change the text still, to say "Fuse Message Tracing"?	1	0	https://issues.jboss.org/browse/FUSETOOLS-325
9129	FUSETOOLS-322	I think this is now resolved as we re-fresh connections every second or so - could you double check sometime if you can reproduce?	1	1	https://issues.jboss.org/browse/FUSETOOLS-322
9130	FUSETOOLS-309	Claus, if we would add such a bypass for the unit test, would you ever fix the broken tests in future? I am not sure if we should add such features as those unit tests should ensure that the application does what it was designed for. Bypassing unit tests is a risk and if used on production systems it is really dangerous.	0	0	https://issues.jboss.org/browse/FUSETOOLS-309
9131	FUSETOOLS-303	> Why does this occur when the following was entered into the eclipse.ini file (as per the Fuse > IDE for Camel installation guide, version 1.1 - Chapter 1 Prerequisites section): > > -vm > C:/Program Files/Java/jdk1.6.0_26/bin/javaw.exe > > Can you please also update this Fuse IDE for Camel Installation Guide document to ensure a clean Eclipse configuration on MS Windows? I've tried this setting on my WinXP box and it works fine for me.	0	0	https://issues.jboss.org/browse/FUSETOOLS-303
9132	FUSETOOLS-288	{quote} Calling a feature "Deploy To..." implies that artifacts are going to be packaged for and deployed into a run time environment of some sort. It also implies that some feedback about the success or failure of the deployment will be given. {quote} It does and it is. Though the output goes to the Console. The build may take a little while so it avoids having a modal dialog appear or anything like that. {quote} The Fuse IDE "Deploy To..." menu option does not do anything of the sort. It simply builds the project and copies the result to a local folder. {quote} How is that any different to your first paragraph? I'm confused. {quote} The only feedback presented to the developer is if the build succeeds or fails. {quote} The console shows the file being copied and that the build succeeded. What kind of output did you have in mind? {quote} The easiest fix for this would be to call the option "Export to...". {quote} Am not 100% sure Deploy is the right word, but am less sure Export is. Developers talk about deploying to containers. The directory is called "deploy" in Karaf for example; so folks are used to the term "Deploy" meaning put build artifacts into the deploy directory to deploy your application. {quote} Ideally, this feature would be coupled with a mechanism for configuring a connection to a run time environment, ensure that the artifacts are properly packaged (at least through a warning if the package property in the POM is wrong), and provide some feedback about the status of the generated artifact once it is deployed. {quote} So we could use a modal dialog with OK / failed or some kind of progress meter or something. Whether a runtime connection is used or not depends; currently the Deploy To mechanism deploys to a hot deploy directory; the "Servers -> Add Karaf / ServiceMix Server" option is about adding a 'runtime connection' to a server that is run inside Eclipse and so can grok what kinds of builds are suitable and so forth.	0	0	https://issues.jboss.org/browse/FUSETOOLS-288
9133	FUSETOOLS-285	Eric do you have suggestions for descriptions / better descriptions? If its the description in the maven pom.xml of the archetype, then we can adjust those. Here is for example the camel-archetype-activemq description: <description>Creates a new Camel project that configures and interacts with ActiveMQ.</description> If you supply better descriptions, then I can adjust them in the Fuse MR codebase Since we use the same descriptions as at Apache you can see them here: https://svn.apache.org/repos/asf/camel/trunk/tooling/archetypes/ eg its the pom.xml in the first directory. such as https://svn.apache.org/repos/asf/camel/trunk/tooling/archetypes/camel-archetype-activemq/pom.xml	0	0	https://issues.jboss.org/browse/FUSETOOLS-285
9134	FUSETOOLS-285	I can look through the Camel ones. Do the other projects have similar archetype structures in their repos and have the descriptions located in the archetype's POM?	0	0	https://issues.jboss.org/browse/FUSETOOLS-285
9135	FUSETOOLS-285	I can add descriptions to the ServiceMix ones, but I will need someone to commit them. Should I make a JIRA and a patch? I already fixed up the CXF one at Apache.	0	0	https://issues.jboss.org/browse/FUSETOOLS-285

#	Requirement	Questions	Answered	Successfully Answered	URL
9136	FUSETOOLS-281	All projects we create at Apache, Fuse Forge and our Fuse distributions are Maven based. As are all of our training projects and all projects our customers have created using our stuff to my knowledge. So I fail to see how the lack of the redundant "Maven" word in the menu is a bug. Folks who use Fuse kinda assume Maven is in there. Since there is no non-maven projects, I fail to see how mentioning Maven is that big a deal. BTW we are not creating a new "Fuse IDE Type" nor have any immediate plans to do so; so far we're using maven as our build system and don't provide any facade that hides setting up a class loader, compile time dependencies or the huge complexities involved of making WARs for web apps, using Spring or using OSGi with or without spring-dm or blueprint - never mind choosing some permutation of camel / cxf / activemq too. We've simply created a helper wizard for creating new Fuse based projects (via Fuse IDE). We're using "Fuse IDE Project" specifically to differentiate from other stuff outside of Fuse IDE; e.g. if you're using Fuse IDE with Spring STS one day. So this isn't really a bug - its more arguing for better text on a menu item right? I'd even be tempted to just use "Fuse Project" instead of "Fuse IDE Project" as all projects are going to be Maven for the foreseeable future. Then in the tooltip / description of the wizard talk about Maven. If we ever provide any other kind of project one day, we'd make using a maven or non-maven one an option/page in the same wizard anyway rather than having one menu item for "Fuse Maven Project" and "Fuse not-Maven Project" etc.	1	1	https://issues.jboss.org/browse/FUSETOOLS-281
9137	FUSETOOLS-280	I don't follow - could you be more specific which bit of IDE you're talking about?	0	0	https://issues.jboss.org/browse/FUSETOOLS-280
9138	FUSETOOLS-258	James I can see the icon is from the auto generated model. /* (non-Javadoc) * @see com.fusesource.rider.model.AbstractNode#getIconName() */ @Override public String getIconName() { return "endpoint.png"; } Can you change so idempotent consumer uses the filter icon? return "filter.png"	0	0	https://issues.jboss.org/browse/FUSETOOLS-258
9139	FUSETOOLS-220	What about Debug>Debug Configurations and Debug>Deploy To Container? Do they also need documenting, and are they still works in progress? The Fix Version of the dependency bug 213 is set to 2.2.	0	0	https://issues.jboss.org/browse/FUSETOOLS-220
9140	FUSETOOLS-206	Lets just not support it when its removed in Camel. We will remove it in Camel 3.0, or maybe earlier.	0	0	https://issues.jboss.org/browse/FUSETOOLS-206
9141	FUSETOOLS-204	Eric do you mind fixing the icon?	0	0	https://issues.jboss.org/browse/FUSETOOLS-204
9142	FUSETOOLS-202	I wonder if the real fix for this is a Camel one? i.e. remove the "ref" XML attribute and add a new XML element <dataFormatRef ref="foo"/> which would be a child of <marshal>? I guess we can try invent some hack in Fuse IDE though...	1	1	https://issues.jboss.org/browse/FUSETOOLS-202
9143	FUSETOOLS-194	Eric do you do icons? The icon in com.fusesource.rider.editor/icons/dynamicRouter24.png has its top black border chopped off when in the rider. Maybe we can redraw the icon so the top line is there?	0	0	https://issues.jboss.org/browse/FUSETOOLS-194
9144	FUSETOOLS-169	I've just used the latest build to create this wire tap... {code} <wireTap uri="file:something"> <body> <language language="xpath">/foo/bar</language> </body> </wireTap> {code} is that enough? Is there something missing?	1	1	https://issues.jboss.org/browse/FUSETOOLS-169
9145	FUSETOOLS-163	Jane, could you document that new flag?	1	1	https://issues.jboss.org/browse/FUSETOOLS-163
9146	FUSETOOLS-64	Any chance you could take a stab at allowing reordering of the tree (e.g. CBR when clauses) using drag and drop in the outline view?	1	0	https://issues.jboss.org/browse/FUSETOOLS-64
9147	FUSETOOLS-52	all of the patterns now have corresponding reference pages that describe the properties settable in the editor. Can this be closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-52
9148	FUSETOOLS-46	The documentation link on the welcome page opens the Fuse IDE help locally as suggested. Can this be closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-46
9149	FUSETOOLS-45	I've added Mac specific instructions to the install guide. Can this be confirmed and closed?	1	1	https://issues.jboss.org/browse/FUSETOOLS-45
9150	FUSETOOLS-44	This issue was fixed when the need to add the FuseSource archetypes was removed from the IDE. The offending link was removed from the install guide. Can this be confirmed and closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-44
9151	FUSETOOLS-43	The help plug-in shows content. Can this be confirmed and closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-43
9152	FUSETOOLS-30	I'm assuming you get this error when entering the archetype catalog as per the instructions at http://fusesource.com/docs/developer/camel/beta/install_guide/RiderInstallOther.html In m2eclipse you need to make sure "http://" precedes the URL, otherwise you will get the error. So the instructions are correct as it lists http://repo.fusesource.com/nexus/content/groups/public/archetype-catalog.xml Did this occur even with the http:// included?	0	0	https://issues.jboss.org/browse/FUSETOOLS-30
9153	FUSETOOLS-30	This issue seems to have been solved, but I'm getting the same errors...Eric mentioned it's not a problem because m2e is installed with fuse catalog installed... i assume that means when you install FUSE IDE, the catalog will be installed automatically... and it is... but it's empty. trying to add manually gives the errors originally reported by James. Using Fuse IDE 2.0.26 on Eclipse Indigo Service Release 2 (build 20120216-1857).... which I believe is Eclipse 3.7.x... is that version not supported? I'll try 3.6 and see if that helps...	0	0	https://issues.jboss.org/browse/FUSETOOLS-30
9154	FUSETOOLS-30	Same thing on eclipse 3.6. The arch list shows up empty. Should I open a new JIRA for my issue?	0	0	https://issues.jboss.org/browse/FUSETOOLS-30
9155	FUSETOOLS-28	Can we get html versions of the FDFC docs?	1	1	https://issues.jboss.org/browse/FUSETOOLS-28
9156	FUSETOOLS-18	The install guide does use the suggested pattern for adding an update site. Can this be confirmed and closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-18
9157	FUSETOOLS-7	A link to the help is shown on the welcome page now. Can this be confirmed and closed?	0	0	https://issues.jboss.org/browse/FUSETOOLS-7
9158	JBCL-185	We have a customer facing this issue currently in a migration effort. I whipped up a potential fix for them to test that would allow them to cache locally to the BCL to return from BCL.loadClass() calls before trying to go through synchronization and the domain. They confirmed this change resolved the performance degradation experienced moving from 4.3 to 5. Attached is the diff file and source file encompassing my changes for this on 2.0.9.GAs BCL. Would anyone more well versed mind reviewing these changes? Can we implement these in the JBoss Classloader? Or would there be a better way to get these loadClass calls to return from cache before synchronizing and bottlenecking?	1	1	https://issues.jboss.org/browse/JBCL-185
9159	JBCL-185	Did you try this on v2.0.11? * http://anonsvn.jboss.org/repos/jbossas/projects/jboss-cl/tags/2.0.11.GA/	1	1	https://issues.jboss.org/browse/JBCL-185
9160	JBCL-185	Could you clarify what you were wondering if I've tried? The performance testing exposing the issue on 2.0.11.GA? Or implementing this change on 2.0.11.GA? Currently, neither. Were you wondering if 2.0.11.GA would already have addressed this? If so, I don't believe so. Comparing 2.0.11.GA and 2.0.9.GA so far, I'm not really seeing any notable differences in BaseClassLoader or BaseClassLoaderDomain that would appear to provide any different caching/locking behavior seen here on 2.0.9.	1	1	https://issues.jboss.org/browse/JBCL-185
9161	JBCL-131	Can we please keep discussions in the forums. To avoid future confusion, jboss-cl has the exactly the same semantics. Optional dependencies can't trigger a new "wire" getting constructed once the deployment has passed the classloader created stage. Dynamic imports get resolved at runtime so they can pick up the results from lazy resolution (or plain old non-lazy resolution).	1	1	https://issues.jboss.org/browse/JBCL-131

#	Requirement	Questions	Answered	Successfully Answered	URL
9162	JBCL-131	This issue is not resolved in AFAICS. Could you please have another look? mvn -Dtest=DynamicImportPackageTestCase test Running org.jboss.test.osgi.classloader.DynamicImportPackageTestCase Tests run: 3, Failures: 1, Errors: 0, Skipped: 0, Time elapsed: 3.457 sec <<< FAILURE! testDynamicImportWithWildcard(org.jboss.test.osgi.classloader.DynamicImportPackageTestCase) Time elapsed: 0.43 sec <<< FAILURE! java.lang.AssertionError: Unexpected ClassNotFoundException for: dynamic-wildcard-a loads org.jboss.test.osgi.classloader.support.c.C at org.junit.Assert.fail(Assert.java:92) at org.jboss.osgi.testing.OSGiTestHelper.assertLoadClass(OSGiTestHelper.java:279) at org.jboss.osgi.testing.OSGiTest.assertLoadClass(OSGiTest.java:213) at org.jboss.osgi.testing.OSGiFrameworkTest.assertLoadClass(OSGiFrameworkTest.java:135) at org.jboss.test.osgi.classloader.DynamicImportPackageTestCase.testDynamicImportWithWildcard(DynamicImportPackageTestCase.java:118)	0	0	https://issues.jboss.org/browse/JBCL-131
9163	JBCLUSTER-220	Brian, did you know that RpcDispatcher already has a method callRemoteMethods() which has an 'oob' parameter ? I don't think this is exposed at the callMethodOnCluster() method though. If a recursive synchronous method call had an OOB flag, the call would not block !	1	1	https://issues.jboss.org/browse/JBCLUSTER-220
9164	JBCLUSTER-220	In 2.6.7, only the request is OOB, *not* the response. In 2.7 and later, the response is *always* OOB. I changed that because I removed the deadlock detection code in 2.7 and later. Should I backport this change to 2.6.x (2.6.8) ?	1	1	https://issues.jboss.org/browse/JBCLUSTER-220
9165	JBCLUSTER-220	Are there chances that this fix will be applicable for JBoss AS 4.2.x which uses JGroups 2.4.1-SP4?	1	1	https://issues.jboss.org/browse/JBCLUSTER-220
9166	JBCLUSTER-220	2.7 does not work with JBoss 4.2 because of conflicts in class definitions. 2.6.7 works though I see lots of warnings: [UDP] down_thread was deprecated and is ignored [UDP] up_thread was deprecated and is ignored [UDP] Attribute "use_outgoing_packet_handler" has been deprecated and is ignored [PING] down_thread was deprecated and is ignored [PING] up_thread was deprecated and is ignored [MERGE2] down_thread was deprecated and is ignored [MERGE2] up_thread was deprecated and is ignored [FD_SOCK] down_thread was deprecated and is ignored [FD_SOCK] up_thread was deprecated and is ignored [FD] down_thread was deprecated and is ignored [FD] up_thread was deprecated and is ignored [VERIFY_SUSPECT] down_thread was deprecated and is ignored [VERIFY_SUSPECT] up_thread was deprecated and is ignored [NAKACK] down_thread was deprecated and is ignored [NAKACK] up_thread was deprecated and is ignored [NAKACK] max_xmit_size was deprecated in 2.6 and will be ignored [UNICAST] down_thread was deprecated and is ignored [UNICAST] up_thread was deprecated and is ignored [STABLE] down_thread was deprecated and is ignored [STABLE] up_thread was deprecated and is ignored [GMS] down_thread was deprecated and is ignored [GMS] up_thread was deprecated and is ignored [GMS] join_retry_timeout has been deprecated and its value will be ignored [FC] down_thread was deprecated and is ignored [FC] up_thread was deprecated and is ignored [FRAG2] down_thread was deprecated and is ignored [FRAG2] up_thread was deprecated and is ignored [STATE_TRANSFER] down_thread was deprecated and is ignored [STATE_TRANSFER] up_thread was deprecated and is ignored [STATE_TRANSFER] use_flush has been deprecated and its value will be ignored Is this normal to ignore them?	1	1	https://issues.jboss.org/browse/JBCLUSTER-220
9167	JBCLUSTER-206	If this new library is already in SVN, can you please add the link? It would also need to be in jboss repository as well so that portal can easily bundle it.	1	1	https://issues.jboss.org/browse/JBCLUSTER-206
9168	JBCLUSTER-153	Any progress on this? When can we expect timer clustering working? Please, give some light.	0	0	https://issues.jboss.org/browse/JBCLUSTER-153
9169	JBCLUSTER-117	JBCLUSTER-87 was incorporated by this fix. How does the profile service support the previous netboot functionality? If the profile service variant of netboot is already supported in JBoss AS 5.0.0, where can we find documentation about the configuration? Thanks in advance, Dirk Daems	1	0	https://issues.jboss.org/browse/JBCLUSTER-117
9170	JBCLUSTER-115	Does JBCLUSTER49 have to be done for 5.0.0 to avoid compatibility problems?	0	0	https://issues.jboss.org/browse/JBCLUSTER-115
9171	JBCLUSTER-115	Does JBCLUSTER-68 have to be done in 5.0.0 to avoid compatibility problems?	0	0	https://issues.jboss.org/browse/JBCLUSTER-115
9172	JBCLUSTER-99	#5 Ran it with 2.2.9.1 (btw, why is it not on the jboss download page?). No error: 463 tps. Looks like this is what we should be recommending? Maybe more tests are needed.	1	1	https://issues.jboss.org/browse/JBCLUSTER-99
9173	JBCLUSTER-99	>>2006-03-20 16:05:18,669 ERROR [org.jgroups.protocols.pbcast.NAKACK] (requester=1 72.16.130.57:41887, local_addr=172.16.129.57:49802) >>message with seqno=3280 not found in sent_msgs ! sent_msgs=[1477 - 3503] I am having the same problem as above mentioned with JGroups 4rc2(cannot as yet update version to higher). How can i fix it ? Tips on how you resolved the above would be welcome.	0	0	https://issues.jboss.org/browse/JBCLUSTER-99
9174	JBCLUSTER-94	Jerry, whenever you get a chance to look at this, could you open a JBAS issue for it and close this one as a duplicate? I need to figure out how to keep people from opening issues in the JBCLUSTER project; it's meant to be an area for high-level planning issues. (No blame meant here for the people who open issues; it's the logical place if you don't know otherwise).	1	1	https://issues.jboss.org/browse/JBCLUSTER-94
9175	JBCLUSTER-80	Ben, can we close this one?	0	0	https://issues.jboss.org/browse/JBCLUSTER-80
9176	JBCLUSTER-72	Ben, Is there anything I can do to help you get your content certified on Labs? Anything in the instructions vague? Let me know. I'm here to help. Cheers, Damon	1	1	https://issues.jboss.org/browse/JBCLUSTER-72
9177	JBCLUSTER-68	Does JBCLUSTER-68 have to be done in 5.0.0 to avoid compatibility problems?	0	0	https://issues.jboss.org/browse/JBCLUSTER-68
9178	JBCLUSTER-67	Can you comment on this., Scott ?	0	0	https://issues.jboss.org/browse/JBCLUSTER-67
9179	JBCLUSTER-53	Michael, this issue belongs to JBossCache. Can you go over there and open up a Jira and assign it to 1.2.4 release. We will address it. thanks!	0	0	https://issues.jboss.org/browse/JBCLUSTER-53
9180	JBCLUSTER-16	How about failover testing and performance testing? Current JBento does not provide failover testing.	1	1	https://issues.jboss.org/browse/JBCLUSTER-16
9181	JBCLUSTER-16	Do we need to provide buddy replcation node in the JSESSIONID?	0	0	https://issues.jboss.org/browse/JBCLUSTER-16
9182	JBCLUSTER-13	So the standalone Tomcat clustering has no dependency on AS, except the some common code base and packaging details. The other issue is how do we do regular testing?	1	0	https://issues.jboss.org/browse/JBCLUSTER-13
9183	JBCLUSTER-9	1. Do we already have integration test for entity bean in ejb3 with clustering?	0	0	https://issues.jboss.org/browse/JBCLUSTER-9

9185	JBCOMMON-85	I assigned both above mentioned issues to me. I'll take care of the soon. I just need to know, which component new EntityResolver should reside in. Or should I create new JBAS subcomponent?	1	1	https://issues.jboss.org/browse/JBCOMMON-85
9186	JBCOMMON-85	Can JBossEntityResolver be refactored to do that? JBossEntityResolver is used directly from XB (at least) as the default resolver (it can be changed though via API).	1	1	https://issues.jboss.org/browse/JBCOMMON-85
9187	JBCOMMON-39	Can you explain again what the problem is? Is there a forum thread discussing it?	1	1	https://issues.jboss.org/browse/JBCOMMON-39
9188	JBCOMMON-37	Looks like this issue fell through the cracks, sorry about that. The jboss-common 1.2.1 binaries are in the maven repository here: http://repository.jboss.org/maven2/jboss/common/jboss-common/	0	0	https://issues.jboss.org/browse/JBCOMMON-37
9189	JBCOMMON-14	Is there a date in mind for this release? If possible, I would like to work on the next release of JBoss Common to test the maven release process. I have made a couple of modifications to the build scripts, and I will probably need to make a few more changes to have the release fully automated by maven.	1	1	https://issues.jboss.org/browse/JBCOMMON-14
9190	JDG-995	The text looks good, but I think that it should refer to the methods {{removeWithVersion}} and {{replaceWithVersion}}, instead of saying "conditional replace" or "conditional remove". Aren't those the correct Hot Rod API calls [~galder.zamarreno] or [~NadirX]?	0	0	https://issues.jboss.org/browse/JDG-995

#	Requirement	Questions	Answered	Successfully Answered	URL
9191	JDG-941	[Custom Externalizers|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#customize_externalizers] have been updated to use the Full Product Name. ---- 23. [About Synchronous and Asynchronous Notifications|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#about_synchronous_and_asynchronous_notifications] has had the typo corrected, and has included `XML` in the description. ---- 24. [Cache Entry Modified Listener Configuration|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#cache_entry_modified_listener_configuration] has been updated to include a link to the API Documentation, and the classes have been highlighted. Should `Cache` be highlighted as well? ---- 25. I have corrected the link in [The Cache Listener API|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#the_cache_listener_api]. You were correct - this should have linked to the About Synchronous and Asynchronous Notifications section. ---- 26. The code in [Clustered Listener Example|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#clustered_listener_example] has been updated. ---- 27. This appears to be the same as 26? ---- 28. I have included the Maven example in [Cassandra Cache Store Programmatic Configuration|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#cassandra_cache_store_sample_programmatic_configuration]. ---- 29. I have changed the version to `8.4.0.Final-redhat-2` in [Remote Event Client Listener Example|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#remote_event_client_listener_example], and adjusted the text to be the Full Product Version. ---- 30. I have included the missing link in [Filtering Remote Events|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#filtering_remote_events]. ---- 31. I have corrected the text in [Customizing Remote Events|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#customizing_remote_events] to be the full product name. ---- 32. `KeyValueFilter` and `Converter` have been emphasized in [Event Marshalling|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#event_marshalling]. ---- 33. I have changed the text to use the full product version in [JSR-107 (JCache) API|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#jsr_107_jcache_api_2]. ---- 34. Beta references have been removed per #1, and the version has been updated in [Option 2: Adding the necessary files to the classpath|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#option_2_adding_the_necessary_files_to_the_classpath]. ---- 35. Text in [Clustering JCache Instances|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#clustering_jcache_instances] and [The REST Interface|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#the_rest_interface] has been changed to use the full product name. ---- 36. The example in [Java Client Code|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#java_client_code] now defines one import per line, and the text has been updated to use the full product name. ---- 37. The text in [About Hot Rod|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/#about_hot_rod] has been updated to use the full product name. ---- 38 and 39 don't exist.	1	1	https://issues.jboss.org/browse/JDG-941
9192	JDG-941	[~chuffman] I probably missed something, but where should I see the changes? When I look at the https://access.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/developer_guide/ , I don't see any of the changes you made. I'm probably using wrong link :)	1	1	https://issues.jboss.org/browse/JDG-941
9193	JDG-920	I've made the following changes: * In 3.2, [Required Maven Repositories|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#required_maven_repositories], I've mentioned that this should be installed, and included a link to the below section. I have also changed the tech-preview repo to GA. * In 4.1, [Using JBoss Data Grid with Supported Containers|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#using_jboss_data_grid_with_supported_containers_2], I have corrected the link, and added a link to the JDG 7 release notes. This link should be live once the 7.1 Release Notes are published. * In 4.7.4, [Installing Red Hat JBoss Data Grid in Karaf (Library Mode)|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#installing_red_hat_jboss_data_grid_in_karaf_library_mode] I have corrected the typo, and the formatting is correct. * In 5.2, [The camel-jbossdatagrid component|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#camel_jbossdatagrid_component], I have adjusted the tables here. Please let me know your thoughts on this new presentation. There are currently several conversations inside CCS regarding table formatting. * In 5.8.1, [Installing camel-jbossdatagrid for Red Hat JBoss Enterprise Application Platform|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#installing_camel_jbossdatagrid_for_red_hat_jboss_enterprise_application_platform], I have included two links to the EAP Installation Guide, and updated the versions for EAP. One question - In section 5.2, [The camel-jbossdatagrid component|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_data_grid/7.1/html-single/getting_started_guide/#camel_jbossdatagrid_component], the version is listed as matching JDG. In the maven repo this is 2.17.0.Final-redhat-2 for the camel-jbossdatagrid component in CR3. I'm assuming this should indicate 2.17.0 instead of the JDG version?	1	1	https://issues.jboss.org/browse/JDG-920
9194	JDG-903	Hi Wolf, Why was this closed? Do you have definitive response from engineering that it will not be a supported feature.	1	0	https://issues.jboss.org/browse/JDG-903
9195	JDG-903	Wolf, Further would you know which version will support this feature fully in production?	1	0	https://issues.jboss.org/browse/JDG-903
9196	JDG-814	Hi [~pzapataf], what exactly is the reason for upgrade? I'm not very familiar with Vert.x . Is this a nice-to-have or really necessary?	1	1	https://issues.jboss.org/browse/JDG-814
9197	JDG-814	[~jsenko], will netty be upgraded to 4.1.8 in CR1 as well? I ask as I noticed the Fix Version hasn't been set.	1	1	https://issues.jboss.org/browse/JDG-814

#	Requirement	Questions	Answered	Successfully Answered	URL
9198	JDG-751	Hi, [~anistor] while verifying this issue I have noticed the following: 1. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:register-proto-schemas(file-names=[test3.proto],file-contents=[kaboom])' Getting: {"outcome" => "success"} 2. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:get-proto-schema-names' { "outcome" => "success", "result" => ["test3.proto"] } 3. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:get-proto-schema-errors(file-name=test3.proto)' { "outcome" => "success", "result" => "java.lang.IllegalStateException: Syntax error in test3.proto at 1:7: unexpected label: kaboom" } 4. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:get-proto-schemas-with-errors' { "outcome" => "success", "result" => ["test3.proto"] } 5. Then I am adding another .proto file without errors: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:register-proto-schemas(file-names=[test2.proto],file-contents=[package test;])' {"outcome" => "success"} 6. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:get-proto-schemas-with-errors' { "outcome" => "success", "result" => [] } 7. Performing: ./cli.sh -c '/subsystem=datagrid-infinispan/cache-container=clustered:get-proto-schema-errors(file-name=test3.proto)' { "outcome" => "success", "result" => "java.lang.IllegalStateException: Syntax error in test3.proto at 1:7: unexpected label: kaboom" } As you can see the result of step 6 doesn't contain the test3.proto, even though the step 7 contains it. My question is: is this a normal behavior? Shouldn't the outcome of step 6 still contain the test3.proto file's name? Thanks in advance, Anna. P.S. I have tried another way of operations: if on step 5 I am adding another .proto file which also contains syntax errors, then the step 6 shows only the new created .proto file's name and doesn't include the 'test3.proto' .	1	1	https://issues.jboss.org/browse/JDG-751
9199	JDG-751	[~amanukyan] Those two PRs are in now. Could you please retry the validation? Thanks	1	1	https://issues.jboss.org/browse/JDG-751
9200	JDG-739	Hi, [~gustavonalle] I have just checked the code, and seems that after changing the hibernate-search version to 5.6.0.CR1 another change was done to make it 5.6.0.Final. Is this ok? The tests are passing and seems that the change doesn't create any problems, but I wanted to recheck it with you. Thanks in advance, Anna.	1	1	https://issues.jboss.org/browse/JDG-739
9201	JDG-683	I've done the following: * Removed Tech notice from [Hot Rod C++ Client Encryption|https://access.qa.redhat.com/documentation/en/jboss-data-grid/7.1/single/developer-guide/#hot_rod_c_client_encryption] * Included section on [Hot Rod C++ Working with Sites|https://access.qa.redhat.com/documentation/en/jboss-data-grid/7.1/single/developer-guide/#hot_rod_c_client_working_with_sites] * Adjusted [Hot Rod C++ Client Encryption|https://access.qa.redhat.com/documentation/en/jboss-data-grid/7.1/single/developer-guide/#hot_rod_c_client_encryption] to include SNI function. * Included the additional Async methods in [Hot Rod C++ Client Asynchronous API|https://access.qa.redhat.com/documentation/en/jboss-data-grid/7.1/single/developer-guide/#hot_rod_c_client_asynchronous_api]: - clearAsync - putIfAbsentAsync - removeAsync - removeWithVersionAsync - replaceAsync * Added [Hot Rod C++ Client Remote Event Listeners|https://access.qa.redhat.com/documentation/en/jboss-data-grid/7.1/single/developer-guide/#hot_rod_c_client_working_with_sites] Am I missing any of the new features that were included in JDG 7.1? And should any of these be marked Tech Preview?	0	0	https://issues.jboss.org/browse/JDG-683
9202	JDG-639	Seems that {{SkipOnOs.OS.SOLARIS}} doesn't work as well, because the JniLevelDBCacheStoreTest.* and JniLevelDBStoreFunctionalTest.* tests are still running for Solaris and fail with exception mentioned by Martin. Another question is the integration tests. E.g. {{org.infinispan.server.test.cs.leveldb.LevelDBCacheStoreIT}} doesn't have the SkipOn annotation and fails on Solaris. Should the annotation is added here as well, or it only refers to functional tests?	1	1	https://issues.jboss.org/browse/JDG-639
9203	JDG-639	[~jsenko] Why did you change the state of this issue (and reassigned it to yourself and back to me)? If this was done by a mistake, please change it back to pull request sent.	1	1	https://issues.jboss.org/browse/JDG-639
9204	JDG-639	[~sebastian.laskawiec] The PR has been open for three weeks and looks invalid, so I wanted to move it back to coding in progress. Didn't know JIRA would assign it to me automatically. Does the code compile for you?	1	1	https://issues.jboss.org/browse/JDG-639
9205	JDG-523	Here is a brief discussion about this topic, from the infinispan IRC channel, 22-SEP-2016 (EST): (11:09:36 AM) me@freenode: I know you are beyond busy so I don't really want to bug you about this stuff. However, do you recommend doing a unique quickstart based on the embedded and clustered quickstarts? the secure-embedded-cache quickstart only demonstrates granular security of cache nodes, and not really fully secured infinispan/jdg library mode clustering. (11:13:52 AM) ttarrant: mwigglesworth, what features would you like to highlight ? (11:14:30 AM) ttarrant: mwigglesworth, ideally such a quickstart should be able to run both with a SecurityManager and without one (while maintaining the same behaviour((11:15:25 AM) me@freenode: I would like to highlight the use of callbackhandlers to demonstrate how an end-user/developer would enable node-authentication, with infinispan/jdg. (11:16:45 AM) me@freenode: This would be more of a "secure clustering" example, however, since the secure-embedded-cache quickstart is appropriately labeled, and has part of the security enabled, I thought it may make sense to simply fork and update it. (which I have already started to do.0 (11:25:07 AM) jbossbot: new jira ISPN-7037 Create quickstart that demonstrates library mode node security using callbackhandlers [New (Unresolved) Feature Request, Minor, Demos and Tutorials/Tasks, Unassigned] https://issues.jboss.org/browse/ISPN-7037 (11:34:34 AM) ttarrant: mwigglesworth, I'm not entirely familiar with JDF quickstart policies, but what about, instead of proliferating quickstarts, add to the existing one and enable the node auth via some switch / maven profile (11:35:13 AM) me@freenode: Sounds good.	0	0	https://issues.jboss.org/browse/JDG-523
9206	JDG-457	Looks like this was pushed to jdg-7.0.x by [~pruivo]. Is this approved for ER8 [~pzapataf] [~mgencur]?	1	0	https://issues.jboss.org/browse/JDG-457
9207	JDG-441	Hi Hiram, is this issue still valid? Thanks	0	0	https://issues.jboss.org/browse/JDG-441
9208	JDG-311	Is this issue backported to JDG?	1	1	https://issues.jboss.org/browse/JDG-311
9209	JDG-229	Thanks for explanation [~william.burns]! As I'm not aware about any JIRA for REST, I'll keep it in "reopend" state to track also REST logs. Could you please also elaborate more on console log? It's allowed to setup Console handler for HR logger, so I'd expect it works and logs into console. If this is not the case, IMHO it shouldn't be possible to set it up, otherwise user would be confused as I am :-) Thanks!	1	1	https://issues.jboss.org/browse/JDG-229
9210	JBDEPLOY-245	Is this still an issue with new CL Shutdown policy == GC?	1	0	https://issues.jboss.org/browse/JBDEPLOY-245
9211	JBDEPLOY-191	Anil, can you check if this is already fixed, via UnmarshallerFactoryDeployer::start. If not, can you give more instructions or do it yourself?	1	0	https://issues.jboss.org/browse/JBDEPLOY-191
9212	JBDEPLOY-171	This is done. There was one change required which is to make the "defaultCodeBaseRoot" URL a property of the SAR deployer rather than using the ServiceConfig which is JBossAS specific. This will need changing in the JBossAS config to add that property from the system property.	0	0	https://issues.jboss.org/browse/JBDEPLOY-171
9213	JBDEPLOY-79	This has been merged to the 2.0 and trunk.	0	0	https://issues.jboss.org/browse/JBDEPLOY-79

#	Requirement	Questions	Answered	Successfully Answered	URL
9214	JDF-842	[~pgier]: I see a pretty specific error: Tests in error: org.jboss.as.quickstarts.bean_validation_custom_constraint.MyPersonTest: The server is already running! Managed containers do not support connecting to running server instances due to the possible harmful effect of connecting to the wrong server. Please stop server before running or change to another type of container. Don't you see that? The 'bean-validation-custom-contraint' quickstart is a clone of the 'bean-validation' quickstart. It's interesting that 'bean-validation' doesn't have the same issue. I will have to investigate.	1	1	https://issues.jboss.org/browse/JDF-842
9215	JDF-819	Hi [~lhein]. Thanks for the PR. Can you please, also add Fuse to majorReleases (6) and minorReleases (6.0 and 6.1) ? You can use JPP 6 as and example.	1	1	https://issues.jboss.org/browse/JDF-819
9216	JDF-818	I just checked an the carmart quickstart is not in the JBoss EAP quickstarts: https://github.com/jboss-developer/jboss-eap-quickstarts [~fbricon]: Do you know where the quickstarts with the unusual quickstarts originate?	1	1	https://issues.jboss.org/browse/JDF-818
9217	JDF-818	It looks like this is a JDG quickstart. Adding the quickstart owners, Tristan and Martin, so they are aware of this issue. I will modify the Contributing Guide to talk about the required directory structure. [~rafabene]: Is it possible for the qstools Maven plug-in to test for this too?	1	1	https://issues.jboss.org/browse/JDF-818
9218	JDF-818	[~fbricon] : I'm not really clear what the problem is. The top level quickstarts are all in a directory one level below the top parent level. Some quickstarts, like `inter-app`, that are composed of multiple applications that talk to each other, are another level deep. Can you point to a specific problem? This is a shortened, simplified tree structure for the JBoss EAP quickstarts (https://github.com/jboss-developer/jboss-eap-quickstarts/) current directory = jboss-eap-quickstarts . ├── app-client │ ├── client-simple │ │ ├── pom.xml │ │ └── src │ │ └── ... │ ├── ear │ │ └── pom.xml │ ├── ejb │ │ ├── pom.xml │ │ └── src │ │ └── ... │ ├── pom.xml │ └── README.md ├── ejb-in-ear │ ├── ear │ │ └── pom.xml │ ├── ejb │ │ ├── pom.xml │ │ └── src │ │ └── ... │ ├── pom.xml │ ├── README.md │ └── web │ ├── pom.xml │ └── src │ └── ... │ ├── ejb-in-war │ ├── pom.xml │ ├── README.md │ └── src │ ├── ... ├── inter-app │ ├── appA │ │ ├── pom.xml │ │ └── src │ │ └── ... │ ├── appB │ │ ├── pom.xml │ │ └── src │ │ └── ... │ ├── pom.xml │ ├── README.md │ └── shared │ ├── pom.xml │ └── src │ └── ...	1	1	https://issues.jboss.org/browse/JDF-818
9219	JDF-818	[~fbricon]: : I am still not clear what the problem is. Can you point to a specific problem?	1	1	https://issues.jboss.org/browse/JDF-818
9220	JDF-818	Didn't I do that here: https://github.com/jboss-developer/jboss-developer-shared-resources/blob/master/guides/CONTRIBUTING.md#general-guidelines ?	1	1	https://issues.jboss.org/browse/JDF-818
9221	JDF-792	[~rafabene] or [~hugofirth]: Where does this issue stand and why does it belong to me?	1	1	https://issues.jboss.org/browse/JDF-792
9222	JDF-771	I am not qualified to make this code change. I thought I had added some developers to this previously, but apparently I did not, so I am doing that now. Can someone review this proposal?	1	0	https://issues.jboss.org/browse/JDF-771
9223	JDF-771	[~pmuir], yes, I can. But before I take this on, should we stop at kitchensink-angularjs? Pretty much every other quickstart (excepting contacts-mobile and it's derivatives) needs to be reviewed for the same; we could in fact copy over the patterns used in that quickstart. Also, should this be completed for WFK 2.7?	1	0	https://issues.jboss.org/browse/JDF-771
9224	JDF-771	[~pmuir], [~vineet.reynolds]: I think [~hugofirth] was offering to contribute the changes. I was looking for confirmation of the proposal and someone to do a code review when it's complete. [~hugofirth], am I reading your proposal correctly?	1	0	https://issues.jboss.org/browse/JDF-771
9225	JDF-771	[~sgilda], [~vineet.reynolds], [~pmuir], [~jowilson], [~paul.robinson]: I am happy to contribute some changes to kitchensink-angularjs, but might not have time to percolate those changes throughout the other quickstarts. [~jowilson] is right in thinking that [~paul.robinson] and I originally wanted these fixes to support a university coursework we're designing, however we reverted to building a derivative of the contacts-mobile QS and side stepped any issues. In general these changes (the corrected HTTP error codes specifically) would be a good idea long term IMO. Does that clear things up for everyone? :)	1	0	https://issues.jboss.org/browse/JDF-771
9226	JDF-769	[~rafabene]: Can we do this after we branch for the next release of JBoss EAP?	0	0	https://issues.jboss.org/browse/JDF-769
9227	JDF-740	[~lightguard], Can you elaborate on the new rules?	1	1	https://issues.jboss.org/browse/JDF-740
9228	JDF-740	[~lightguard] : I have another question. Are the meta data tags mapped to full descriptions? In other words, if I search for quickstarts that implement 'Bean Validation', will they appear in the result list?	0	0	https://issues.jboss.org/browse/JDF-740
9229	JDF-732	Hey [~manaRH]. Can you please send the branch that we work together to upstream? Thanks	1	1	https://issues.jboss.org/browse/JDF-732
9230	JDF-728	What problem are you running into here? Did you replace all jQueryMobile 1.0.x references with 1.4.x (including the JS, CSS and images)? And did you follow this guide: http://jquerymobile.com/upgrade-guide/1.4/ ?	1	0	https://issues.jboss.org/browse/JDF-728
9231	JDF-728	Is it related to ticket-monster ?	0	0	https://issues.jboss.org/browse/JDF-728
9232	JDF-719	Hi Ray, The quickstarts that use the PostgreSQL database have instructions to install the Postgres driver as a core module: https://github.com/jboss-developer/jboss-developer-shared-resources/blob/master/guides/CONFIGURE_POSTGRESQL.md#configure-the-postgresql-database-for-use-with-the-quickstarts Would it make sense to create a wrapper quickstart that makes it more obvious?	1	1	https://issues.jboss.org/browse/JDF-719
9233	JDF-706	Matej, Could you take this issue next when you have some time? Thank you! ~Lincoln	1	1	https://issues.jboss.org/browse/JDF-706
9234	JDF-706	Sande, could you post the relevant source locations for this project? http://www.jboss.org/jdf/quickstarts/jboss-as-quickstart/forge-from-scratch/ Thank you, Lincoln	1	1	https://issues.jboss.org/browse/JDF-706
9235	JDF-706	[~lincolnthree] and [~mbriskar] Are JBoss Developer Studio 8 and Forge 2 out in final release now? If so, do you want to rebase this on the 6.4.x-develop branch and submit the pull again?	0	0	https://issues.jboss.org/browse/JDF-706
9236	JDF-694	If you are looking for more things to validate, you could validate the name. It should only have letters and numbers, don't you think?	1	0	https://issues.jboss.org/browse/JDF-694
9237	JDF-682	I created general instructions in the JBoss developer shared repository here: https://github.com/jboss-developer/jboss-developer-shared-resources/blob/master/guides/DEPLOY_TO_OPENSHIFT.md Would it be okay to just point to them?	1	1	https://issues.jboss.org/browse/JDF-682
9238	JDF-673	[~fbricon]: Which repositories and branches should I be checking? I verified the following repositories and branches do not contain 'http://red.ht/jbeap-6-docs'. EAP quickstarts <https://github.com/jboss-developer/jboss-eap-quickstarts> * 6.3.x * 6.3.x-develop * 6.2.x EAP Archetypes <https://github.com/jboss-developer/jboss-eap-archetypes> * 6.2.x-develop WFK quickstarts <https://github.com/jboss-developer/jboss-wfk-quickstarts> * 2.5.x * 2.5.x-develop * 2.4.x WFK Archetypes <https://github.com/jboss-developer/jboss-wfk-archetypes> * 2.4.x * 2.5.x-develop Did I miss anything?	1	1	https://issues.jboss.org/browse/JDF-673
9239	JDF-670	I found unused imports in: kitchensink-ear/web/src/main/java/org/jboss/as/quickstarts/kitchensink_ear/util/WebResources.java Are there any others?	0	0	https://issues.jboss.org/browse/JDF-670

#	Requirement	Questions	Answered	Successfully Answered	URL
9240	JDF-649	Rafael, thanks for prompt fix, however I have just noticed a regression in 2.0.1 was found which we will need to address (ARQGRA-422). Could you please hold off this patch?	1	1	https://issues.jboss.org/browse/JDF-649
9241	JDF-607	[~rafabene] what is the problem? I can see it there http://search.maven.org/#artifactdetails|org.jboss.arquillian.extension|arquillian-drone-selenium-depchain|1.2.3.Final|pom Or bom-check is confused by pom type packaging?	1	1	https://issues.jboss.org/browse/JDF-607
9242	JDF-607	Can't this be a problem for customers that only have maven.repository.redhat.com and Maven Central? I don't think we instruct customers to include JBoss Nexus on their settings.xml	0	0	https://issues.jboss.org/browse/JDF-607
9243	JDF-607	So giving we have a bug on this update it should keep it opened, right? Should we reverte the change also ?	0	0	https://issues.jboss.org/browse/JDF-607
9244	JDF-592	[~bleathem] I was thinking about how to implement it and I the most close solution that I thought (that can work for multiple project) is the following: - Create a removePomProperties property - So you can remove any properties declaration from the original quickstart: version.richfaces, version.jboss.bom.eap, version.jboss.bom.wfk, etc - Create a insertPomPropertyFile property - A property pointing to a file that holds the full #if #else #end clause. What do you think about this proposal ? Any other idea on how to implement this solution ?	1	1	https://issues.jboss.org/browse/JDF-592
9245	JDF-592	Something that I was not considering is that this conditional expression is not only for Pom properties. Maybe a <applyPatch/> property to QSTools should work better. WDYT ?	1	1	https://issues.jboss.org/browse/JDF-592
9246	JDF-592	I was thinking of a comment syntax we could use that qstools could uncomment, however this would complicate the pom of the quickstart which defeats the usefulness of the quickstarts as a learning tool. {{<applyPatch/>}} would be brittle, with the patch file having to be adjusted as changes are made to the pom. However if we used a custom patch syntax, where the substitution was made accoding to commented markers in the pom then it would be more robust. Something like: {code:title=pom.xml} <!-- #enterprise versions of the BOM dependencies --> <version.richfaces>${richfaces-enterprise-version}</version.richfaces> <version.jboss.bom.eap>${jboss-bom-enterprise-version-eap}</version.jboss.bom.eap> <version.jboss.bom.wfk>${jboss-bom-enterprise-version-wfk}</version.jboss.bom.wfk> <!-- /#enterprise versions of the BOM dependencies --> {code} {code:title=substitutions.xml} <enterprise> #if ($enterprise == "true" || $enterprise == "y" || $enterprise == "yes") <version.richfaces>${richfaces-enterprise-version}</version.richfaces> <version.jboss.bom.eap>${jboss-bom-enterprise-version-eap}</version.jboss.bom.eap> <version.jboss.bom.wfk>${jboss-bom-enterprise-version-wfk}</version.jboss.bom.wfk> #else <version.richfaces>${richfaces-version}</version.richfaces> <version.jboss.bom>${jboss-bom-version}</version.jboss.bom> #end </enterprise> {code} In this proposal, the <!-- #enterprise --> ... <!-- /#enterprise --> comments mark the boundary of the substitution with the id _enterprise_. The substitutions file then provides the replacement code identified by the substitution code. WDYT?	1	1	https://issues.jboss.org/browse/JDF-592
9247	JDF-592	Can you include a usage sample in this jira issue?	1	0	https://issues.jboss.org/browse/JDF-592
9248	JDF-588	Wonderful. I'll probably head to Webapp. Is BRMS capable of running Webapps ? I tried to but it didn't work. I can't remember the exception at the moment.	1	1	https://issues.jboss.org/browse/JDF-588
9249	JDF-588	[~ge0ffrey] and [~sgilda] Can you review it when you have time, please ? Thanks	1	1	https://issues.jboss.org/browse/JDF-588
9250	JDF-560	[~pgier] As discussed with [~manaRH] we decided to remove the fail property since it could hide the "errors" and add an option to ignore specific dependencies only. ok ?	0	0	https://issues.jboss.org/browse/JDF-560
9251	JDF-543	Does this needs to be included on EAP BOMs also ?	1	1	https://issues.jboss.org/browse/JDF-543
9252	JDF-543	[~manaRH] [~aslak] I couldn't find the right Arquillian Persistence GAV .Final to be included. Can you provided me this info ?	1	1	https://issues.jboss.org/browse/JDF-543
9253	JDF-539	Thanks Rafael It does not work by specifying the maven settings xml file using "-s" option: mvn -s ~/building/eap6-quickstart-settings.xml -DeapMavenRepoUrl=file:///home/lgao/tmp/eap-repo/jboss-eap-6.2.0.GA-maven-repository/ -U org.jboss.maven.plugins:maven-qstools-plugin:bom-check But it works after I copied the ~/building/eap6-quickstart-settings.xml to ~/.m2/settings.xml. Is it possible to checks the resolution based on the maven settings xml file transferred using the '-s' option? Jenkins job does not have permission to write to ~/.m2/settings.xml.	1	1	https://issues.jboss.org/browse/JDF-539
9254	JDF-498	Brian, save the attached .cheatsheet.xml file in the root directory of the kitchensink-rf quickstart. It should open automatically when you import the project into JDBS. This is just a template. You will need to change wordings and descriptions because I have no idea what I'm talking about. :-) Please feel free to ask me for help if you need it! Please refer to the kitchensink quickstart for a complete example: https://github.com/jboss-developer/jboss-eap-quickstarts/blob/master/kitchensink/.cheatsheet.xml	0	0	https://issues.jboss.org/browse/JDF-498
9255	JDF-480	[~glamperi]: I have a number of questions on this: * You mentioned Fuse. Does this quickstart require Fuse? If so, you need to contribute it to the Fuse team. The quickstarts are now separated into separate repositories by product. * If it does not require Fuse, does it work on both AS 7.1 and EAP 6.1? * Could you provide an overview of the things you had to change from the original to get it to work? As a quick test, I tried to build this quickstart using both Maven Central and the EAP 6.1.1 repository. It failed because it could not find artifact `gnu-getopt:getopt:jar:1.0.13`.	1	0	https://issues.jboss.org/browse/JDF-480

#	Requirement	Questions	Answered	Successfully Answered	URL
9256	JDF-480	More information from Gary: Hi Sande, Here are answers to your earlier questions: 1) You mentioned Fuse. Does this quickstart require Fuse? If so, you need to contribute it to the Fuse team. The quickstarts are now separated into separate repositories by product. Yes, I am working with someone on the Fuse Team on this. The Fuse issue is perhaps a little worse, so the EAP Team shouldn't feel that bad The Security reference points you to non-existent references in the community. 2) If not, does this work on both AS 7.1 and EAP 6.1? My idea is that this should all be self-dependent in the helloworld-ws-secure example. I was in a hurry to get this to work and my primary objective was to show Fuse Web Service Proxy with security. When I started to run into issues with the amount of code needed to get this working and the lack of similar examples, I thought it was best to throw this out there. I would like this to all work with EAP 6.1 Maven repos without any outside, unsupported community repos. I needed to bring this repo in (http://repository.jboss.org/nexus/content/groups/public/) in addition to the downloaded EAP 6.1 repo. 3) Could you provide an overview of the things you had to change from the original to get it to work? A) Bring in the community repo mentioned in #2 into the settings.xml B) 1 additional dependency needs to be added to the pom.xml: <dependency> <groupId>org.jboss.ws.cxf</groupId> <artifactId>jbossws-cxf-client</artifactId> <version>4.1.3.Final</version> <!--<version>4.0.4.GA-redhat-1</version>--> <scope>provided</scope> </dependency> C) I renamed the Client class to ClientWS, so that I could bring in org.apache.cxf.endpoint.Client. I could have used fully qualified class names, but I was in a hurry. D) The ClientWS class was modified to accept all server certs: Client client = ClientProxy.getClient(helloWorldService); HTTPConduit conduit = (HTTPConduit)client.getConduit(); TLSClientParameters tcp = new TLSClientParameters(); tcp.setTrustManagers(new TrustManager[]{ new TrustAllX509TrustManager() }); conduit.setTlsClientParameters(tcp); AuthorizationPolicy auth = conduit.getAuthorization(); if (null == auth) { auth = new AuthorizationPolicy(); } auth.setUserName("local"); auth.setPassword("local"); E) added TrustAllX509TrustManager as an inner class F) Changed ClientTest.java to use a local wsdl and the pom.xml has a reference to the Fuse proxy location that needs to be replaced. This 2 steps should be changed for the real quickstart TBD, add ability to use client authentication as well as server only authentication. Regards, Gary	1	0	https://issues.jboss.org/browse/JDF-480
9257	JDF-455	Should we close this as compiler target is needed to specify? Otherwise the compiler target is derived from default version of maven-compiler-plugin, which is still 1.5 AFAIK.	1	1	https://issues.jboss.org/browse/JDF-455
9258	JDF-435	This change concerns me. I tried building from root after adding this module and the build fails with the following. Do the JPP quickstarts require a specific repository? $ mvn clean install '-Pdefault,!complex-dependencies'[INFO] Scanning for projects... Downloading: http://repo.maven.apache.org/maven2/org/jboss/bom/gatein-3.6-bom/1.0.1.Final-redhat-1/gatein-3.6-bom-1.0.1.Final-redhat-1.pom [ERROR] The build could not read 1 project -> [Help 1] [ERROR] [ERROR] The project org.gatein.portal.quickstarts:gatein-portal-quickstarts-parent:3.6.0.Final-qs-9-redhat-1 (/home/sgilda/GitRepos/quickstart-jdf/jpp-quickstarts/pom.xml) has 1 error [ERROR] Non-resolvable import POM: Could not find artifact org.jboss.bom:gatein-3.6-bom:pom:1.0.1.Final-redhat-1 in central (http://repo.maven.apache.org/maven2) @ line 190, column 25 -> [Help 2] [ERROR] [ERROR] To see the full stack trace of the errors, re-run Maven with the -e switch. [ERROR] Re-run Maven using the -X switch to enable full debug logging. [ERROR] [ERROR] For more information about the errors and possible solutions, please read the following articles: [ERROR] [Help 1] http://cwiki.apache.org/confluence/display/MAVEN/ProjectBuildingException [ERROR] [Help 2] http://cwiki.apache.org/confluence/display/MAVEN/UnresolvableModelException	1	1	https://issues.jboss.org/browse/JDF-435
9259	JDF-435	[~rafabene]: I spoke with Peter on IRC and he confirmed that the JPP quickstarts require that you configure your Maven settings to use their repository. The rest of the quickstart use Maven Central so it is quick and easy to do the root build at this time. I am reluctant to modify the root POM to include these quickstarts at this time. What do you think?	1	1	https://issues.jboss.org/browse/JDF-435
9260	JDF-435	I agree with you. But what about using "complex-dependencies" profile? As the description says: "All the quickstarts that have weird requirements around deployment that Maven can't handle" I'm facing the same problem on BRMS quickstarts and the decision around jpp quickstarts will be carried to brms quickstarts.	1	1	https://issues.jboss.org/browse/JDF-435
9261	JDF-426	Is Yaml the best format for this? Would JSON be better?	1	1	https://issues.jboss.org/browse/JDF-426
9262	JDF-407	Replace Errai and GWT with a poller based HTML5 solution. New services were written for obtaining the performance status, and to modify the bot state. New Backbone.js views and model were created. The polling strategy used is not a long-polling solution. It is timed to occur at the same interval for the Bot (3 seconds). What needs to be completed: * Updates to the TicketMonster guide * Consideration for a long-polling solution * Review of the JAX-RS resources created. The Bot resource is not RESTful since it is a direct port of the earlier RPC endpoint.	0	0	https://issues.jboss.org/browse/JDF-407
9263	JDF-388	Does this mean a quickstart which would show DS JSF module? There's a handful of DS examples here: https://github.com/rsmeral/deltaspike-examples expense-tracker, tickets and task-management use the DS JSF module. They are not necessarily quickstart quality, but could surely be adapted that way.	1	1	https://issues.jboss.org/browse/JDF-388
9264	JDF-388	+1. You can add it at two places: - https://deltaspike.apache.org/external.html (Please, just send me a PR and I'll merge it for you) - http://www.jboss.org/developer-materials/#!sys_type=demo (Take a look at: https://github.com/jboss-developer/jboss-developer-demos/blob/master/CONTRIBUTING.md and feel free to call me if you need any help) For this Jira, I have some ideas for kitchensink-deltaSpike: - Use JsfMessage - Use Pages (type-safe view config) What do you think ?	1	1	https://issues.jboss.org/browse/JDF-388
9265	JDF-358	I have done some research and it appears you use `:with_toc_data` to add HTML anchors to each header in the output HTML so you can link to each section. I checked the dist/github-flavored-markdown.rb script, and it appears to already use this option. However, when I look at the generated HTML for the README.md files, I can see that it generates an `id`: <h2 id="toc_1">What is it?</h2> But I don't see the anchors. I found some examples (https://github.com/vmg/redcarpet, http://dev.af83.com/2012/02/27/howto-extend-the-redcarpet2-markdown-lib.html) that used `:with_toc_data => true`. I tried it but it didn't seem to help. I see someone else has this issue: http://stackoverflow.com/questions/14673807/redcarpet-anchors-to-headers [~rafabene]: If you have any hints, let me know. I will continue to investigate.	1	1	https://issues.jboss.org/browse/JDF-358
9266	JDF-345	Can we at least update the lab guide with instructions in the PDF when using the PDF that this cut and pastes badly, and maybe link to the HTML source? To make this easier to understand, and note it is kinda messy. Maybe link to this jira also, so people know we are working it. Jim	1	1	https://issues.jboss.org/browse/JDF-345
9267	JDF-313	We have some test cases that show how to create and configure custom identity stores. Would that be enough ? Or the idea is provide a very simple store (with only a few methos implemented) with focus on the configuration ?	1	1	https://issues.jboss.org/browse/JDF-313

#	Requirement	Questions	Answered	Successfully Answered	URL
9268	JDF-312	This quickstart is complete, however depends on a currently unreleased version of PicketLink. Will send a pull request once PicketLink 2.5.0.Beta4 is released. Branch containing the quickstart is here: https://github.com/sbryzak/jboss-as-quickstart/tree/picketlink-permission-resolver	0	0	https://issues.jboss.org/browse/JDF-312
9269	JDF-282	about file size - why would you not want it there ? it is to provide an idea to the user how big the download will be before we start the download. yes jbosstools does not *need* it, but users would like to know if they are downloading 1 mb or 500 mb :)	1	1	https://issues.jboss.org/browse/JDF-282
9270	JDF-282	Why don't we put this in a new file e.g. legacy-stacks.yml. This could be used only by JBDS.	1	1	https://issues.jboss.org/browse/JDF-282
9271	JDF-282	I'm not against the idea of multiple stacks files, but, I don't think we should create a second file without being clear on a few things. By declaring that it'd "only be used by JBDS" seems to make its scope "JBDS responsibility" and removes your hands from keeping it up to date and accurate. If that's what we wanted, we would just maintain our own stacks.yaml and not even involve you. So we need a better 'scope' of the document than just 'only used by jbds'. 1) What is the scope of each document. This should not even mention consumers such as JBDS, but be more open to who's consuming it while being more exact on scope. 2) When do items become 'legacy', ie, when would they need to be moved from the primary stacks to the 'legacy' file? Take for example, seam. Currently seam 2.3.0 is in this patch. If a 2.3.1 comes out, do we remove 2.3.0 from the primary stacks and move it to the 'legacy'? There needs to be some rules here as to what we're planning on doing. Otherwise it'll turn into a big mess.	1	1	https://issues.jboss.org/browse/JDF-282
9272	JDF-282	If that's what you guys wish, then can we make it happen? Our client would then need to fetch stacks from two separate files, and, I assume, simply group them into a larger array. Which should be fine as long as there's no conflicting information between them, correct?	1	1	https://issues.jboss.org/browse/JDF-282
9273	JDF-282	We could also do this via the existing stacks file. How soon do you need this?	1	1	https://issues.jboss.org/browse/JDF-282
9274	JDF-269	Of course. I'll let you know. Can you guess archetype version right now? Will it be 7.1.3.CR6?	1	1	https://issues.jboss.org/browse/JDF-269
9275	JDF-264	I think I released with the latest hibernate-core .Final version at the moment. Maybe I'm confusing but I can't find the 4.3.1.Final version on maven repositories. Do you mind me send the link to any repository and GAV which contains the 4.3.1.Final ?	1	1	https://issues.jboss.org/browse/JDF-264
9276	JDF-254	In general, please file one issue per issue and don't compound issues, it makes it hard to track them, as not all may be fixable at the same time. 1) This is clearly documented in the tutorial, and is also a dupe of JDF-6 2) This is a bug in Forge 1.1.x, it's not reproducible in 1.2.x 3) This is a covered in https://issues.jboss.org/browse/JDF-257 which I've spun out of this issue (because it's covering too much).	1	1	https://issues.jboss.org/browse/JDF-254
9277	JDF-254	Karel Piwko <kpiwko@redhat.com> made a comment on [bug 929102|https://bugzilla.redhat.com/show_bug.cgi?id=929102] Tomas, can you please verify that 2) cannot be reproduced with 1.2.x? It seems that Pete and you are experiencing different behavior.	1	1	https://issues.jboss.org/browse/JDF-254
9278	JDF-254	Tomas Repel <trepel@redhat.com> made a comment on [bug 929102|https://bugzilla.redhat.com/show_bug.cgi?id=929102] (In reply to comment #8) > Tomas, can you please verify that 2) cannot be reproduced with 1.2.x? It > seems that Pete and you are experiencing different behavior. I have tried using: Ticekt Monster 2.0.7.Final-redhat-1 (the one from WFK 2.2.0.CR1 jboss-wfk-2.2.0-ticketmonster-demo.zip) Forge 1.2.2.Final The richfaces-bom can't be found for me.	1	1	https://issues.jboss.org/browse/JDF-254
9279	JDF-254	Karel Piwko <kpiwko@redhat.com> made a comment on [bug 929102|https://bugzilla.redhat.com/show_bug.cgi?id=929102] Do you guys use different settings.xml by any chance?	1	1	https://issues.jboss.org/browse/JDF-254
9280	JDF-231	Karel, how do we do this? https://github.com/jboss-jdf/jboss-bom/blob/master/jboss-javaee-6.0-with-tools/pom.xml - it's not in the BOM, it's coming in transitively.	0	0	https://issues.jboss.org/browse/JDF-231
9281	JDF-216	To be accurate, the dialog allows me to create the project anyway. But I'm just wondering why it says the server is missing. Maybe this is something in JBDS/JBT itself? But then what is the effect of the supported runtimes definition in the yaml file?	1	1	https://issues.jboss.org/browse/JDF-216
9282	JDF-209	How about: Check for a `<finalName>${project.artifactId}</finalName>` in the file to prevent appending version numbers to archives.	1	1	https://issues.jboss.org/browse/JDF-209
9283	JDF-209	[~rafabene]: Does this tool use the .m2/settings.xml file? The reason I ask is because when I test it against the EAP 6.1 quickstarts, I get an error: [ERROR] [ERROR] Non-resolvable import POM: Could not find artifact org.jboss.bom:jboss-javaee-6.0-with-tools:pom:1.0.4.Final-redhat-3 in central (http://repo.maven.apache.org/maven2) @ line 76, column 25 So it appears to be going to Maven Central instead of the repository I configured in my settings. It's not a big deal. I believe I can work around it by copying the repository into .m2/ instead of using the settings.xml file.	1	1	https://issues.jboss.org/browse/JDF-209
9284	JDF-208	Hi [~ppalaga] Is this Jira valid ?	0	0	https://issues.jboss.org/browse/JDF-208

9286	JDF-176	[~pmuir]: Vikram is asking if this is even possible yet? Does the full release version of RESTEasy support asynch processing?	1	1	https://issues.jboss.org/browse/JDF-176
9287	JDF-172	Using JBDS to publish ticket-monster is pretty easy (I can do a screencast if that helps): # ASSERT: have ticketmonster repo cloned to your machine # EXEC: Launch *OpenShift Application* wizard from central and create a jbossas-7/eap-6 application. # ASSERT: you get the application imported into a project in your workspace, and a server adapter is created for it. # EXEC: *File->Import->Maven->Existing Maven Project* and point it to the demo folder in the ticket-monster repo. # EXEC: drag and drop the ticket-monster project (you just imported in the former step) to your Openshift server adapter (*Servers* view). When it asks you if it shall publish, answer *No* # EXEC: in the openshift project: go to the deplyoments folder and rename the ticket-monster.war - that was created when you dragged'n'dropped it - to ROOT.war # EXEC: open the *Navigator* view, browse the imported OpenShift project and get to the *.openshift/markers* folder. Create an empty file called *skip_maven_build*. # EXEC: select .openshift/markers/skip_maven_build and pick *Team->Add to Index* from context-menu. Your imported Openshift project and the server adapter should now look like this: !ticket-monster.png! # EXEC: Tell your OpenShift server adapter to *Publish* To now look at your ticket-monster application, wait until the publishing progress disappeared from the status bar and point your browser to the OpenShift application: *Show in -> Web Browser* in the context menu of your OpenShift server adapter.	1	1	https://issues.jboss.org/browse/JDF-172
9288	JDF-172	Andre, can you modify your process for binary deployment?	1	1	https://issues.jboss.org/browse/JDF-172
9289	JDF-172	Not sure I follow you completely. In OpenShift source and binary deployments are done via pushing the source or pushing a war in the deployments folder. Those 2 are not mutually exclusive, you have both at the same time in cmd-line and JBDS. There's no difference btw the 2 in this matter. The only additional feature in JBDS is that it'll war any (WTP) project you drag and drop to the OpenShift server adapter (to the deployments folder). When publishing, the server adapter git pushes the wohle repo to openshift (exactly as a git push does), pushing the source and wars within the deployments folder. I'm thus not sure what workflow isn't clear, what added value there is with a checkbox. JBDS completely matches the workflow you have when you git push on the cmd-line. In the above scenario we rename the war (that JBDS built when we drag'n dropped the ticket-monster to the adapter) from ticket-monster.war to ROOT.war so that it'll appear at /. Since source and binary deployments both happen, the source would get built, deployed to ROOT.war, and override our prebuilt ROOT.war. We avoid that by skipping the maven build with the skip_maven_build marker. Do I miss something?	1	1	https://issues.jboss.org/browse/JDF-172
9290	JDF-172	sure, no prob with discussing, I just dont see any obvious improvement right now. The only improvement I spot with checkboxes is that one would have the "skip_maven_build" marker set. IMHO we should then provide some ceckbox "skip source build". Missing something? What feels unnatural in the above usecase is that you need the OpenShift repo imported as a project whereas you'd only want to work with the ticket-monster app/repo. Agree?	1	1	https://issues.jboss.org/browse/JDF-172
9291	JDF-172	+1 for having a 'binary deployment only' option which will go disable the the build marker...but what do we do about the existing project content - just leave it in place I would say. wdyt?	0	0	https://issues.jboss.org/browse/JDF-172
9292	JDF-159	The Deactivateable feature was added to cdi-portable-extension and cdi-veto quickstarts. But I'm now wondering if we should keep just on cdi-portable-extension to avoid any confusion that could exist mixing a veto with deactivateable. What you think?	0	0	https://issues.jboss.org/browse/JDF-159
9293	JDF-159	[~lightguard] wrote: I would say if your extension is going in a library it should, if it's for your application, I don't see the point. Why would you create an extension only to disable it? I just don't want to muddy the waters and have people wonder what's going on or think it's required to create an extension.	0	0	https://issues.jboss.org/browse/JDF-159
9294	JDF-159	In this case I think that for JDF-159 we shouldn't deactivate any of the existing (relevant) quickstarts but create another quickstart that disable some of the existing DeltaSpike extensions. Do you all agree ?	0	0	https://issues.jboss.org/browse/JDF-159

#	Requirement	Questions	Answered	Successfully Answered	URL
9295	JDF-153	I've done some ARQ tests using the RESTEasy Client, didn't have any problems, but as you say doing this from within an application may different. What difficulties have you seen?	0	0	https://issues.jboss.org/browse/JDF-153
9296	JDF-153	wasn't this met by jax-rs-client quickstart ?	1	1	https://issues.jboss.org/browse/JDF-153
9297	JDF-152	Hi Jeff, Thanks for volunteering to do this one! I put it in my name to take it off the table. Could you send me your email address? Thanks, Sande	1	1	https://issues.jboss.org/browse/JDF-152
9298	JDF-151	[~bleathem] Hi Brian, The tests said that: Can't resolve Archetype [org.richfaces.archetypes:richfaces-archetype-kitchensink:4.2.3.Final-1] I looked at https://repository.jboss.org/nexus/content/groups/public/org/richfaces/archetypes/richfaces-archetype-kitchensink/ and I didn't see this version: 4.2.3.Final-1 that you added in this commit: https://github.com/bleathem/jdf-stack/commit/6b222608338c121a8d0b3fc33f0a0d3ce672df2b Could you check the release of this version ? Thanks.	1	1	https://issues.jboss.org/browse/JDF-151
9299	JDF-151	[~bleathem] Brian, This BOM (org.jboss.spec:jboss-javaee-6.0:pom:3.0.0.Final-redhat-1) is available at the EAP6 maven repository. I'm not sure with we should merge the PR before the staging is finished since this can break anything. Shouldn't we wait the RF KS archetype to be released ? Most of stacks tools can use an alternate stacks repo. So you can use this feature to test your changes like [~fbricon] commented on JBIDE-13059: The archetype can be tested in Central by starting eclipse/jbds using the system property : -Dorg.jboss.examples.stacks.url=https://raw.github.com/bleathem/jdf-stack/a4d996b89e5a311759c2f8c9445cfc75a70cc49f/stacks.yaml	1	1	https://issues.jboss.org/browse/JDF-151
9300	JDF-147	Does JBoss Logging allow us to actually get the value of a message rather than log it?	0	0	https://issues.jboss.org/browse/JDF-147
9301	JDF-134	For jboss-bom release [~pgier] and [~kpiwko] asked me to not report by email, but just submit a JBPAPP jira instead as this example: https://issues.jboss.org/browse/JBPAPP-10284 . Should we keep notifying them also by email ?	1	1	https://issues.jboss.org/browse/JDF-134
9302	JDF-134	[~rafabene] this looks great, apart from my comment on removing EAP references :-) Also, I wondered if we want to add a question to the script "Do you want to send release notifications?" as there might be some situations where the user doesn't. Or perhaps a flag --do-not-notify to the command line...	1	1	https://issues.jboss.org/browse/JDF-134
9303	JDF-132	I can see it. I am using Chrome Version 22.0.1229.94. I can also see it on Firefox 16.0.1. Pete, what are you using?	1	1	https://issues.jboss.org/browse/JDF-132
9304	JDF-132	* Should open in a new tab * Would be nice to have it like the other ones, where it has the modal dialog that explains how to use it - show how to import to Eclipse maybe? Ok. I'll do the modal dialog instead of opening a new tab. Do you know if is there a DOC ready that explains that ? * What is the icon really? It seems a lego build block. I used because build makes me associate it with Maven :)	1	1	https://issues.jboss.org/browse/JDF-132
9305	JDF-129	The patches do *not* modify SectionAllocationBean. This is a Forge-generated class which apparently isn't generated correctly. Can you attach the generated source, Hardy? Does the project compile if you don't apply the patches?	1	1	https://issues.jboss.org/browse/JDF-129
9306	JDF-129	Hardy, Would you mind attaching the project files as generated by Forge as well? Trying to figure out what the error actually is (and the copy/pasted code is not too much of a help - I believe also due to the reformatting). Thanks, Marius	1	1	https://issues.jboss.org/browse/JDF-129
9307	JDF-128	No, Forge does not deliver the complete functionality we require for this example. The patches are required for: - changing the look and feel of the application; - including functionality that is not provided by Forge (e.g. handling of images as described in the tutorial); - fixing critical issues in Forge (we probably could do away with those by testing against a later release where they are presumably fixed) Now, I haven't been able to reproduce the above with JBoss Forge 1.1.1 (on a Mac OS X). What is your OS, Hardy?	1	1	https://issues.jboss.org/browse/JDF-128
9308	JDF-128	Hi Cuneyt, Can you try tag 2.0.4.Final or master? Thanks, Marius	1	1	https://issues.jboss.org/browse/JDF-128
9309	JDF-127	Hardy, can you list an exact list of points where the readme is not in sync, or is this simply missing the Forge installation bits? Because the Building and Running on OpenShift bits do not seem out of sync. Given the scenario when the repository is forked by the user, having the readme file is a must in order for it being consistent with the other example we provide.	0	0	https://issues.jboss.org/browse/JDF-127
9310	JDF-108	When you finish the quickstarts in the jdf repository you can assign to me again so I'll update the site	1	1	https://issues.jboss.org/browse/JDF-108
9311	JDF-108	Karel, in the comment above, you say kitchensink-html5-mobile is targeted for WFK, however, it appears in the master eap6 branch of https://github.com/jboss-eap/quickstart. 1. Should it be in the WFK instead? 2. If so, what about helloworld-html5?	0	0	https://issues.jboss.org/browse/JDF-108
9312	JDF-101	Jiri, Can you clarify why is it invalid ? The suggest BOM is here: http://mvnrepository.com/artifact/org.jboss.spec/jboss-javaee-6.0/3.0.0.Final	0	0	https://issues.jboss.org/browse/JDF-101
9313	JDF-76	Have we actually seen the cdn fail?	1	1	https://issues.jboss.org/browse/JDF-76
9314	JDF-70	Jason, would you be interested in coordinating this? My thought was to ask some of the seam module leads to write one or two, to show off what they thought was an interesting problem.	1	1	https://issues.jboss.org/browse/JDF-70
9315	JDF-70	We have the cdi-portable-extension quickstart now, however, it only covers some of the SPI. Shall we do one or two more to cover other parts of the SPI?	1	1	https://issues.jboss.org/browse/JDF-70
9316	JDF-51	Burr, can you do this?	1	1	https://issues.jboss.org/browse/JDF-51
9317	JDF-46	Hi [~sgilda]. Could you check please if this Jira can be closed ? Thanks	1	1	https://issues.jboss.org/browse/JDF-46
9318	JDF-19	Marius, did you document Postgres?	1	1	https://issues.jboss.org/browse/JDF-19
9319	JDF-8	That link is 404 now. What is it that we're supposed to do for this ticket?	1	0	https://issues.jboss.org/browse/JDF-8
9320	JDF-1	I thinks that the separation between quickstarts and demos solved this. Can you confirm that, [~pmuir] ? Thanks	0	0	https://issues.jboss.org/browse/JDF-1
9321	EMB-61	Newly-attached patch resolves Endorsed issues (though you must first add endorsed dirs properly, not through Surefire config). Error is now: org.jboss.ws.WSException: Cannot find configFile: META-INF/standard-jaxws-client-config.xml at org.jboss.ws.metadata.config.JBossWSConfigFactory.filenameToURL(JBossWSConfigFactory.java:196) at org.jboss.ws.metadata.config.JBossWSConfigFactory.getConfig(JBossWSConfigFactory.java:150) at org.jboss.ws.metadata.umdm.EndpointMetaData.initEndpointConfigMetaData(EndpointMetaData.java:882) at org.jboss.ws.metadata.umdm.EndpointMetaData.initEndpointConfig(EndpointMetaData.java:858) at org.jboss.ws.metadata.builder.jaxws.JAXWSClientMetaDataBuilder.rebuildEndpointMetaData(JAXWSClientMetaDataBuilder.java:295) at org.jboss.ws.core.jaxws.spi.ServiceDelegateImpl.getPortInternal(ServiceDelegateImpl.java:281) at org.jboss.ws.core.jaxws.spi.ServiceDelegateImpl.getPort(ServiceDelegateImpl.java:208) at javax.xml.ws.Service.getPort(Service.java:92) at org.jboss.embedded.testsuite.wsclient.Embedded.getEmbeddedWsPort(Embedded.java:63) at org.jboss.embedded.testsuite.ServerTestCase.testWs(ServerTestCase.java:487)	1	1	https://issues.jboss.org/browse/EMB-61

#	Requirement	Questions	Answered	Successfully Answered	URL
9322	EMB-42	Good. So as a prereq for this, what do we need to install into AS? Is there a single JAR distro we can depend upon in Maven, and deploy directly into the server? Or some more manual patching first?	1	0	https://issues.jboss.org/browse/EMB-42
9323	EMB-42	WB is integrated into JBoss 5.1.0 and above, so probably nothing much to update I think. In terms of tests, I would recommend copying a few out of the WB testsuite as a starting point. Or are you thinking to actually reuse these tests?	0	0	https://issues.jboss.org/browse/EMB-42
9324	EMB-37	Why are the slf4j classes added in Seam, rather than in embedded legacy?	1	1	https://issues.jboss.org/browse/EMB-37
9325	EMB-37	because of misunderstanding - anyway in Seam there was a requirement for that and therefore I understood it differently. So I have added slf4j-* to the distribution, but there is a question if it shouldn't be version beta3.SP10? WDYT?	1	1	https://issues.jboss.org/browse/EMB-37
9326	EMB-28	Might this later be moved to something in bootstrap?	0	0	https://issues.jboss.org/browse/EMB-28
9327	EMB-12	What does "legacy" version mean? Is this done?	1	0	https://issues.jboss.org/browse/EMB-12
9328	EMB-11	Pete, the old "embedded" module won't have these targets, but the new projects will. Is that enough to close this? If not, please provide for some more description.	1	0	https://issues.jboss.org/browse/EMB-11
9329	JBEAP-11780	??AFAICR we've only done so once?? Unfortunately, there has been made another change, see [my comment (JBEAP-11781) | https://issues.jboss.org/browse/JBEAP-11781?focusedCommentId=13426540&page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#comment-13426540] in cloned 7.0.z JIRA please (I should have probably posted it in here). Not to bringing confusion to topic, I'm digging more into patching and I've just found out that the configuration files are excluded from patches completely [1]. Why is that so? Un-ignoring these would leads to patching conflict, which is IMO more acceptable than missing piece of configuration, without even knowing it. Moreover, CLI (not sure about web-console) has features for dealing with conflicts. -- [1] https://github.com/jbossas/patch-gen/blob/master/patch-gen/src/main/java/org/jboss/as/patching/generator/DistributionStructureImpl.java#L60	0	0	https://issues.jboss.org/browse/JBEAP-11780
9330	JBEAP-11764	-Setting Blocker priority. The text is confusing and misleading.- I am sorry, I should have read the description more carefully. I expected that this issue is about the first Note, not about the first Important. Reverting priority back. The text in the description is confusing -- the cited note does not describe requirements on the feature -- the other note does -- and the other note needs the improvement. [~rhn-support-pnag], could you clarify the scope of this issue please?	0	0	https://issues.jboss.org/browse/JBEAP-11764
9331	JBEAP-11670	It states: For information about how to deploy and run the quickstarts and to run the Arquillian tests in JBoss Developer Studio, see Run the Quickstarts in JBoss Developer Studio in the Development Guide for JBoss EAP. If you follow the link to _+Run the Quickstarts in JBoss Developer Studio+_ [1], you'll see a subsection titled *Run the bean-validation Quickstart* that describes how to run the Arquillian tests. Is that too obscure? [1] https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.0/html-single/development_guide/#run_the_quickstarts_in_red_hat_jboss_developer_studio	1	1	https://issues.jboss.org/browse/JBEAP-11670
9332	JBEAP-11670	[~sgilda], I think the link to devel guide is fine. However, I agree with [~mjurc] that these instructions could be included also directly in the shared resources [1]. Similar to what we have for "Quickstarts Containing an EAR" or "Quickstarts Containing a Server and Java Client", there could be "Quickstarts Containing Arquillian tests". What do you think? [1] https://github.com/jboss-developer/jboss-developer-shared-resources/blob/master/guides/USE_JBDS.md#use-red-hat-jboss-developer-studio-or-eclipse-to-run-the-quickstarts	1	0	https://issues.jboss.org/browse/JBEAP-11670
9333	JBEAP-11606	Why is this needed? Is it essential for ER2? CC [~psakar]	0	0	https://issues.jboss.org/browse/JBEAP-11606
9334	JBEAP-11565	How do you plan to handle domain? Do you set MALLOC_ARENA_MAX for DC, HC and servers? Or only for servers?	0	0	https://issues.jboss.org/browse/JBEAP-11565
9335	JBEAP-11391	I get a 404 error on that link - is there an alternative link?	0	0	https://issues.jboss.org/browse/JBEAP-11391
9336	JBEAP-11167	Reopen on revision e7cfdf2f [~nids1409]: I'm not sure, what do you mean by "`logger` attribute" [here|https://gitlab.cee.redhat.com/red-hat-jboss-enterprise-application-platform-documentation/eap-documentation/merge_requests/3116/diffs#08b3c1ebfa9fec2bfb153588a31f783869b67055_0_4]. Can you please change "`logger` attribute" to "logging"? So the whole sentence would be: * "RESTEasy logs the used providers and interceptors in the `DEBUG` level of logging."	1	1	https://issues.jboss.org/browse/JBEAP-11167
9337	JBEAP-11167	[~nids1409]: Your JIRAs are somewhat confusing because even though you mark them as resolved, you have no comment indicating where to preview the fix. It takes extra effort to flip the JIRAs when we push to stage. Could you please remember to add the preview URL when you mark the JIRA resolved?	1	0	https://issues.jboss.org/browse/JBEAP-11167
9338	JBEAP-11129	I've qa_acked this, but I have some notes. After a cursory look at the PR, I think this fully implements EAP7-708. [~pferraro] is that correct, or is there some more integration work needed? [~pferraro] do you have some XML fragments or CLI commands that show how to configure the new AUTH protocol and new token types? If you don't have anything at hand, I'll eventually figure it out, but any resources would be appreciated. Thanks. Since security-related RFEs require that legacy configuration still works, I'll assume that AUTH legacy configuration also still works (e.g. configuration with no Elytron references required), in a similar way encrypt protocols do. [~pferraro] are there some notable issues with legacy configuration?	1	1	https://issues.jboss.org/browse/JBEAP-11129
9339	JBEAP-11036	[~rsvoboda] [~jmartisk] [~simkam] Can you ack please? Apparently this will fix (or be needed at least) JBEAP-10651.	1	1	https://issues.jboss.org/browse/JBEAP-11036
9340	JBEAP-11000	[~kabirkhan] [~jmesnil] could you move incorporated jiras to ready fo qa? Thanks. Edit: There are 11 jiras [1] for JMS and ActiveMQ component in resolved state and fix version 7.1.0.DR19. Can they be moved as well? [1] https://issues.jboss.org/issues/?jql=project%20%3D%20JBEAP%20AND%20fixVersion%20%3D%207.1.0.DR19%20AND%20component%20in%20(ActiveMQ%2C%20JMS)	1	0	https://issues.jboss.org/browse/JBEAP-11000
9341	JBEAP-10941	[~bmaxwell], do we need https://issues.jboss.org/browse/JBEAP-10156 for 7.0.7?	1	1	https://issues.jboss.org/browse/JBEAP-10941

#	Requirement	Questions	Answered	Successfully Answered	URL

Should there be a module containing it, or perhaps some kind of {{bin/client/jboss-client-legacy.jar}} with it? Or are users supposed to import it only via Maven?	0	0	https://issues.jboss.org/browse/JBEAP-10759
9348	JBEAP-10723	[~jmesnil] can you check if all issues solved by this upgrade are linked here? I think JBEAP-6606 should be linked here as well. Can you add it please? Thanks.	0	0	https://issues.jboss.org/browse/JBEAP-10723
9349	JBEAP-10621	Martin Svehla asked: {quote} Hey Kabir, Seems that JIRAs that have labels eap7.1.0-defer or eap7.1.0-to-prd, while having dev ack-, cause issues in some of our filters. Can you please make a mass update and set dev ack to '+' or '?' on all JIRAs with that label? {quote} Since this issue is one of these, these labels implicitly mean it is a valid issue, so setting devel-ack to +	1	0	https://issues.jboss.org/browse/JBEAP-10621
9350	JBEAP-10578	[~msvehla] How do we go about converting this to a documentation issue as you mentioned on the call?	1	1	https://issues.jboss.org/browse/JBEAP-10578
9351	JBEAP-10578	[~kanovotn] What is the process for these docs issues? It shows up in the security team's list of blockers, but it has been done really, and is not a dev task	1	1	https://issues.jboss.org/browse/JBEAP-10578
9352	JBEAP-10552	The scope of this task should be more than just aligning the full-ha profile. It should be an overall review of CONSOLE handler use in our config files. 1) In a managed domain, why is the full-ha profile different? Is any domain assumed to be "production" environment, thus deserving the higher perf config setting we use for standalone-full-ha.xml? 2) If we consider there's no good reason for full-ha to be different, are we ok with turning off all server logging via the HC console in EAP? Is that an acceptable change in an EAP minor? 3) If we consider there's no good reason for full-ha to be different in domain.xml, is there a good reason for it to be different in the standalone.xml variants? If not, is turning off console logging in those an acceptable change in an EAP minor? FWIW, I have no real strong opinions on these questions; I just want the task to be to consider the whole picture. My 2 cents (nothing more): I have a *very mild* dislike for changing only full-ha because it just doesn't make a lot of logical sense and that bothers my logical side. And dropping console logging in all configs including standalone variants feels too extreme; like something we'd regret when we realize some unforeseen impact. I'm indifferent between the other permutations, including doing nothing at all.	1	1	https://issues.jboss.org/browse/JBEAP-10552
9353	JBEAP-10527	Has the server knowledge of the AuthenticationContext defined by the client or is this object only stored on the client? On the server-side any authentication and authorization for JMS is performed by https://github.com/wildfly/wildfly/blob/master/messaging-activemq/src/main/java/org/wildfly/extension/messaging/activemq/ElytronSecurityManager.java using the ServerAuthenticationContext.	0	0	https://issues.jboss.org/browse/JBEAP-10527
9354	JBEAP-10527	Is it really blocker? I would think it is not: we were not offering that feature with PicketBox and it was my understanding that providing the same feature set with Elytron in the messaging subsystem was sufficient? From a technical perspective, If we can get the client's AuthenticationContext info on the server-side using ServerAuthenticationContext, that *new feature* can be done for EAP 7.1. Otherwise, it would require changes to Artemis to integrate it with SASL and I don't think it is reasonable to expect it for EAP 7.1	0	0	https://issues.jboss.org/browse/JBEAP-10527
9355	JBEAP-10261	how are you testing this? executing this scripts from cmd or from powershell? powershell "fixes" the path and is correctly set. .bat scripts needs to be executed in cmd.	0	0	https://issues.jboss.org/browse/JBEAP-10261
9356	JBEAP-10061	I updated the community [https://docs.jboss.org/author/display/WFLY/JPA+Reference+Guide] to refer to "Migrating from" the non-Hibernate persistence providers. Is that clear enough to also change in the EAP 7.1 documentation? I also updated the *jboss.as.jpa.classtransformer* description to: {quote} set to false to disable class transformers for the persistence unit. Set to true, to allow entity class enhancing/rewriting. {quote} For the EAP 7.1 description of *jboss.as.jpa.classtransformer*, we can change to: {quote} jboss.as.jpa.classtransformer |Set to `false` to disable entity class transformers for the persistence unit. Set to `true` to enable entity class tranforming, or set one of { hibernate.enhancer.enableDirtyTracking, hibernate.enhancer.enableLazyInitialization, hibernate.enhancer.enableAssociationManagement, hibernate.ejb.use_class_enhancer} properties to `true`. {quote}	0	0	https://issues.jboss.org/browse/JBEAP-10061
9357	JBEAP-10052	[~istraka] Could you please review the topics added here: https://gitlab.cee.redhat.com/nchaudha/eap-documentation/commit/8181db6c4d9f2d467daeb3bca41b7c20ab529940	1	1	https://issues.jboss.org/browse/JBEAP-10052
9358	JBEAP-9901	Hi [~ochaloup], I'm almost ready to start writing the transaction manager content for the Performance Tuning Guide (to be tracked in this sub-task JIRA). [You mentioned in the parent JIRA|https://issues.jboss.org/browse/JBEAP-7233?focusedCommentId=13345191&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13345191] that for XA transactions, using a journal store for logging would be better for performance. Is all that is required to enable the {{use-journal-store}} setting, or is any other configuration necessary? {code} /subsystem=transactions:write-attribute(name=use-journal-store,value=true) {code}	1	1	https://issues.jboss.org/browse/JBEAP-9901

#	Requirement	Questions	Answered	Successfully Answered	URL
9359	JBEAP-9746	Does this mean it should a configuration attribute on the logging subsystem? If so that will not work. It has to be done via a system property because loggers are generally static in WildFly/EAP and they will be created before the attribute can be parsed.	0	0	https://issues.jboss.org/browse/JBEAP-9746
9360	JBEAP-9746	Cannot the configuration be made as a system property in the standalone.xml?	1	1	https://issues.jboss.org/browse/JBEAP-9746
9361	JBEAP-9746	[~Takis] You mentioned "And it is a feature that comes with the next component upgrade to 3.3.1." Will this component upgrade make 7.1.0 GA?	0	0	https://issues.jboss.org/browse/JBEAP-9746
9362	JBEAP-9716	[~trepel]: It seems like someone may have already fixed this as I am not able to reproduce this issue now. Can you give it a shot with the latest source? If it is fixed, I will remove those warnings from the README file.	1	1	https://issues.jboss.org/browse/JBEAP-9716
9363	JBEAP-9716	[~jeffmaury] I can see the warnings even if using https://github.com/jbossas/eap-quickstarts/blob/7.x/kitchensink-jsp/pom.xml#L60 As you can see it uses taglibs-standard-impl and the scope is compile (default scope if nothing specified). I tried adding jsp-api to the pom.xm as you suggested but only one of the two warnings disappeared. I wonder [~sgilda] , could you please try it as well, it's really weird. There are other quickstarts that use jsp (e.g. spring-greeter). It seems that warnings are not shown for these quickstarts because of {noformat} <dependency> <groupId>org.jboss.spec.javax.servlet.jsp</groupId> <artifactId>jboss-jsp-api_2.3_spec</artifactId> </dependency> {noformat} in their pom.xml However when I tried adding this in kitchensink-jsp quickstart, again only one of the two warnings disappeared.	1	1	https://issues.jboss.org/browse/JBEAP-9716
9364	JBEAP-9716	[~ctomc]: This issue is beyond me. I've tried the suggestions, but they don't really work. Is there someone else who could take a look at this?	1	1	https://issues.jboss.org/browse/JBEAP-9716
9365	JBEAP-9712	@[~rjanik], do you have any suggestions for this chapter? [~johara] suggested mentioning simple caches for local caches that don't need transactions or persistence, but it seems the EAP implementation already enables that option automatically (according to JBEAP-1905 and https://github.com/jbossas/jboss-eap7/pull/26/). Is my understanding correct?	1	1	https://issues.jboss.org/browse/JBEAP-9712
9366	JBEAP-9603	What is the setup you are using to test websockets where you see this behavior?	1	1	https://issues.jboss.org/browse/JBEAP-9603
9367	JBEAP-9590	[~dlofthouse], [~jkalina] can you please switch linked JBEAP jiras to proper state before I ack this? Some of them are still in NEW state, should be in PR sent.	1	1	https://issues.jboss.org/browse/JBEAP-9590
9368	JBEAP-9324	[~emmartins]: Are you asking [~smarlow]?	0	0	https://issues.jboss.org/browse/JBEAP-9324
9369	JBEAP-9243	Changing the icon just requires swapping the JFrameIcon found in izpack. I was thinking of just using shadowman, or should it be more wildfly specific?	0	0	https://issues.jboss.org/browse/JBEAP-9243
9370	JBEAP-9193	https://github.com/jbossas/jboss-eap7/pull/1441 is to move to 3.0.0.Beta7 but that's not expected to be the last core upgrade for DR14.	1	1	https://issues.jboss.org/browse/JBEAP-9193
9371	JBEAP-8950	[~dmichael], could you please include the link of the JIRA that was included in the RN?	1	1	https://issues.jboss.org/browse/JBEAP-8950
9372	JBEAP-8944	This issue is fixed, can it be moved to fixed issues?	0	0	https://issues.jboss.org/browse/JBEAP-8944
9373	JBEAP-8941	1. Should the EAP 7.1 release notes refer to [https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-GetStartedusingtheElytronSubsystem], which contents may change to reflect future WildFly versions? Same question for [https://docs.jboss.org/author/display/WFLY/Using+the+Elytron+Subsystem] + [https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security] + [https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-UsetheElytronandSecuritySubsystemsinParallel]. 2. The link for "Migrate from Hibernate ORM 5.0 to Hibernate ORM 5.1", doesn't work for me, I get a http 404 error. [https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.alpha/html-single/migration_guide/#migrating_from_hibernate_5_0_to_5_1]	0	0	https://issues.jboss.org/browse/JBEAP-8941
9374	JBEAP-8941	Yes, the EAP 7.1 Alpha Release Notes intentionally links to upstream Elytron docs, because we had the Elytron writer help draft upstream Elytron content for Alpha use. For EAP 7.1 Beta & GA, the Elytron info in the Release Notes will be modified to link to relevant Elytron documentation in the official EAP product documentation and the Release Notes will no longer point to upstream WildFly docs.	1	1	https://issues.jboss.org/browse/JBEAP-8941
9375	JBEAP-8853	[~martyn-taylor] The Artemis upgrade incorporates [commit|https://github.com/rh-messaging/jboss-activemq-artemis/commit/3d765ae4cf1b122328ce7bfa8f8db671ad758b92] which likely fixes JBEAP-7454 and JBEAP-8523. Is it true? If yes these JIRAs should be linked here and consequently marked as Resolved. [~kabirkhan] it also affects RFEs EAP7-591 and EAP7-660.	1	1	https://issues.jboss.org/browse/JBEAP-8853
9376	JBEAP-8853	[~kabirkhan] There are some reopen issues related to this upgrade. Is there general policy for upgrade jiras which incorporates reopened issues? Should I reopen this jira as well or verify with comment that something is wrong with it? Thanks	1	1	https://issues.jboss.org/browse/JBEAP-8853
9377	JBEAP-8665	[~wolfc] Could you comment on this issue please?	1	0	https://issues.jboss.org/browse/JBEAP-8665
9378	JBEAP-8665	[~wolfc] [~kabirkhan] how can we push this issue forward for review/updates/action?	1	1	https://issues.jboss.org/browse/JBEAP-8665
9379	JBEAP-8659	Martin Svehla asked: {quote} Hey Kabir, Seems that JIRAs that have labels eap7.1.0-defer or eap7.1.0-to-prd, while having dev ack-, cause issues in some of our filters. Can you please make a mass update and set dev ack to '+' or '?' on all JIRAs with that label? {quote} Since this issue is one of these, these labels implicitly mean it is a valid issue, so setting devel-ack to +	1	0	https://issues.jboss.org/browse/JBEAP-8659
9380	JBEAP-8599	Hi, can you please include JDG-708? It's critical for us. It was fixed in 3.0.20.Final in upstream: https://issues.jboss.org/browse/RESTEASY-1205	1	1	https://issues.jboss.org/browse/JBEAP-8599
9381	JBEAP-8599	[~asoldano] hi, i've created and linked the issue. We need the fix for 7.0.5.GA actually, because of JDG release schedule, 7.0.6.GA would be too late. Is it possible to release SP2 in 7.0.5.GA (CR2)? I'll talk to my PM and escalate this if needed.	1	1	https://issues.jboss.org/browse/JBEAP-8599
9382	JBEAP-8593	[~pjelinek], is this a big concern given that the passwords are shown plainly in CLI? Changing it in the given form is trivial but the passwords would still show up in the Management Model browser (as do other passwords).	1	1	https://issues.jboss.org/browse/JBEAP-8593
9383	JBEAP-8532	This requires some changes that I don't want to make this late in the 7.1 cycle - can we move this to 7.2 and I'll take another look then?	1	0	https://issues.jboss.org/browse/JBEAP-8532
9384	JBEAP-8489	[~asoldano]: Can you please set dev_nack and close this jira?	0	0	https://issues.jboss.org/browse/JBEAP-8489
9385	JBEAP-8437	So basically only "name" attribute is check during XML validation and others are skipped and checked by model? Is there a plan to extend it the validation as information which attribute is required is in xsd?	1	1	https://issues.jboss.org/browse/JBEAP-8437
9386	JBEAP-8437	Is there an accepted requirement anywhere that all configuration mistakes are caught via xml parsers? I don't recall agreeing to one, although it's been a lot of years now. :) BTW, my comments are not meant as a rejection of this issue. I just want behavior improvements separately categorized.	1	1	https://issues.jboss.org/browse/JBEAP-8437
9387	JBEAP-8434	Hi [~jpallich]! What do you think about this issue becoming a RFE?	0	0	https://issues.jboss.org/browse/JBEAP-8434
9388	JBEAP-8434	Hi [~bilge]! What do you think about this issue becoming a RFE?	0	0	https://issues.jboss.org/browse/JBEAP-8434

#	Requirement	Questions	Answered	Successfully Answered	URL
9389	JBEAP-8371	[~jamezp]: Thank you for explanation. I see two choices: * add description of this use case to documentation and all similar use cases too. or * logging load all properties at first. Writer will be opened correctly after all properties are loaded. Anything else would be done after all properties are loaded. This is probably not a bug, it is enhancement. Component is also "User experience", because this could be really annoying for users although users could set logging correctly ... WDYT?	1	1	https://issues.jboss.org/browse/JBEAP-8371
9390	JBEAP-8308	[~kabirkhan] [~ataylor] [~clebert] I'm not happy with the "wildfly" in the suffix. Can we please use SP instead of wildfly ?	1	1	https://issues.jboss.org/browse/JBEAP-8308
9391	JBEAP-8287	Hello [~jamezp] I would like to ask you about supported languages. According to EAP7-30 we support zh_CN. On the other hand, 3.2.3. Change the Language of the Management Console [here|https://doc-stage.usersys.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.alpha/html-single/configuration_guide/#management_console_overview] is said, that we support zh_Hans in management console. Is EAP7-30 valid?	1	0	https://issues.jboss.org/browse/JBEAP-8287
9392	JBEAP-8287	One more question. These files can be found in eap sources: {code} ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_fr.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_zh_Hans.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_pt_BR.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_de.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_es.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_zh_CN.properties ./appclient/src/main/resources/org/jboss/as/appclient/logging/AppClientLogger.i18n_ja.properties {code} zh_Hans can not be set as language to be used (starting eap with java opts -Duser.language=zh -Duser.country=Hans - nothing is translated). Is there any reason why AppClientLogger.i18n_zh_Hans.properties is there? Note that this is only example. There are many zh_Hans property files.	1	0	https://issues.jboss.org/browse/JBEAP-8287
9393	JBEAP-8280	bq. The instance pool max-pool-size value is the maximum number of EJB instances that can exist in the pool. The default max-pool-size value is 20, which means that for a particular EJB there can only be 20 instances of that EJB at one time. Actually the default is that the pool size is derived from the size of worker pools: {noformat} [domain@localhost:9990 /] /subsystem=ejb3/strict-max-bean-instance-pool=slsb-strict-max-pool:read-resource { "outcome" => "success", "result" => { "derive-size" => "from-worker-pools", "max-pool-size" => 20, "timeout" => 5L, "timeout-unit" => "MINUTES" } } {noformat} If the {{derive-size}} attribute is defined, it overrides the value from {{max-pool-size}}. Please add some discussion about the {{derive-size}} attribute (and both of its possible values - {{from-worker-pools}} and {{from-cpu-count}}) and the possibility to undefine it (in which case the explicit {{max-pool-size}} is applied). This affects the {{5.1.1.1. Creating a Bean Instance Pool}} section where both possibilities should be described. bq. If more than the maximum number of threads try to use a particular EJB, the client will block and wait for an instance to become available. If a client does not get an instance within the time set in instance-acquisition-timeout, an exception is thrown. - I only see {{timeout}} and {{timeout-unit}} attributes, no {{instance-acquisition-timeout}}. Am I missing something? - Also the wording "more than the maximum number of threads" is a bit confusing, because obtaining an instance from the pool depends on whether the instance is free or not, it has nothing to do with number of threads (either someone is using it or not). bq. {{5.1.1.2. Specifying the Instance Pool a Bean Should Use}} - IMO it is worth mentioning that you can do this using the {{@org.jboss.ejb3.annotation.Pool}} annotation as well, not just using the deployment descriptor. - {{By default, EJBs use the default instance pool.}} - that sentence sounds a bit silly and tautological :) and it repeats what was already said at the beginning of {{5.1.1. Bean Instance Pools}} I think we could remove it. bq. Bean instance pools are used for Stateless Session Beans (SLSBs) and Message Driven Beans (MDBs). By default, beans use the default instance pool specified by default-slsb-instance-pool. The {{default-slsb-instance-pool}} is for SLSBs only, for MDBs, it is {{default-mdb-instance-pool}} bq. By default, a bean thread pool named default is used for remote EJB requests, asynchronous EJB calls, and EJB timers. This is no longer true for remote EJB requests, in EAP 7 these are by default handled in the worker defined in the IO subsystem. It is possible to use an EJB thread pool for remote requests, but you have to set the value of {{execute-in-worker}} of the {{/subsystem=ejb3/service=remote}} resource to {{false}}	1	1	https://issues.jboss.org/browse/JBEAP-8280
9394	JBEAP-8280	Verified in revision 018262f. Looks good to me now, thanks!	0	0	https://issues.jboss.org/browse/JBEAP-8280
9395	JBEAP-8054	Verification failed on Performance guide, revision 8288495. ---- {quote}CMS is the default garbage collector in Java 8{quote} Default garbage collector in Java 8 is "Parallel GC", you can check this by -XX:+PrintCommandLineFlags option: \[mkopecky@dhcp-10-40-5-170 bin\]$ java -XX:+PrintCommandLineFlags -version -XX:InitialHeapSize=257824576 -XX:MaxHeapSize=4125193216 -XX:+PrintCommandLineFlags -XX:+UseCompressedClassPointers -XX:+UseCompressedOops -XX:+UseParallelGC ... \[mkopecky@dhcp-10-40-5-170 bin\]$ ---- {quote} To explicitly enable large page ...: -XX:+UseLargePages To explicitly disable large page ...: -XX:-UseLargePages {quote} Large pages should be disabled by different attribute then is used for enabling of them, right? ---- Information about getting/setting large pages information from OS should be in documentation too. It could be enough to add link to [oracle documentation|http://www.oracle.com/technetwork/java/javase/tech/largememory-jsp-137182.html] ---- {quote}These operating system options do the same thing as the large pages JVM option, but are instead applied system-wide. For more information, see the Memory chapter in the Red Hat Enterprise Linux Performance Tuning Guide. {quote} Memory chapter is quite huge. Can you be more specific and add link to some subchapter? ---- There could be mentioned some basic informations about ulimit tool. On the [article on Customer portal|https://access.redhat.com/solutions/61334] is almost nothing about ulimit tool. There should be at least: * how to get soft limit values: ulimit -Sa * how to get hard limit values: ulimit -Ha * how to set some value: for example this: ulimit -Hn 4090 * difference between soft limit and hard limit	1	1	https://issues.jboss.org/browse/JBEAP-8054
9396	JBEAP-7969	[~rhusar]: Should I assign this one to you?	1	1	https://issues.jboss.org/browse/JBEAP-7969
9397	JBEAP-7877	I can't reproduce this. How are you actually configuring the proxy?	0	0	https://issues.jboss.org/browse/JBEAP-7877
9398	JBEAP-7875	[~kabirkhan] [~jmesnil] All the linked jira are in state PR sent or resolved but this upgrade jira is ready for QA. Could you update the state of jiras, please?	1	0	https://issues.jboss.org/browse/JBEAP-7875
9399	JBEAP-7867	I don't think this is a VDX concern. VDX has no knowledge of the namespaces for which parsers are registered. Not for 7.1; we're past the point where we can consider non-trivial enhancements.	0	0	https://issues.jboss.org/browse/JBEAP-7867

#	Requirement	Questions	Answered	Successfully Answered	URL
9400	JBEAP-7796	Hi Gunnar, could you give a few more details about the changes included. You mentioned that this upgrade fixes a regression and two bugs. Are there any new features? Or just the regression fix + bug fixes?	0	0	https://issues.jboss.org/browse/JBEAP-7796
9401	JBEAP-7790	[~rsvoboda] I presume we already test this using the property? Can we add it to the management model at this stage?	0	0	https://issues.jboss.org/browse/JBEAP-7790
9402	JBEAP-7780	[~rsvoboda] This one has been merged, can you ack it?	0	0	https://issues.jboss.org/browse/JBEAP-7780
9403	JBEAP-7762	Martin, I can see this ticket is assigned to me. Please can you be more specific on how the localization team can help you here? Thanks.	1	1	https://issues.jboss.org/browse/JBEAP-7762
9404	JBEAP-7721	[~mstyk] If I understand correctly, the guide should add the following line to the Core and Jms examples found at the end of the thread management chapter[1]: {{myFactory.allowCoreThreadTimeOut(true);}} Is there a CLI equivalent for allow-time-out (or whatever it may be called) like there is for use-global-pools? I'm unable to find the attribute if it exists. Reply when you can. Thank you! [1]https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/7.0/single/configuring-messaging/#client-side_thread_management	1	1	https://issues.jboss.org/browse/JBEAP-7721
9405	JBEAP-7720	[~pjelinek] or [~mnovak]: Could you please take a look at this merge request and let me know if I am understanding this one correctly?	1	1	https://issues.jboss.org/browse/JBEAP-7720
9406	JBEAP-7719	[~jpallich]: I spoke with [~rhn-support-pfestoso] and we both think this JIRA can be closed. Can you confirm?	1	1	https://issues.jboss.org/browse/JBEAP-7719
9407	JBEAP-7719	[~nziakova] or [~dudae]: Since this is now targeted for 7.2, should it still be a blocking issue?	1	1	https://issues.jboss.org/browse/JBEAP-7719
9408	JBEAP-7705	[~rsvoboda] since the general undertow+elytron use case is covered here: https://issues.jboss.org/browse/JBEAP-7228 are there any other usecases/scenarios I'm missing? If not can we close this JIRA?	1	1	https://issues.jboss.org/browse/JBEAP-7705
9409	JBEAP-7698	Verification failed in revision 864568d5. Chapter CHAPTER 2. HOW RED HAT JBOSS ENTERPRISE APPLICATION PLATFORM 7 HANDLES SECURITY OUT OF THE BOX looks good to me. There are only some 'major' issues - JBEAP-11399, JBEAP-11410, JBEAP-11411, JBEAP-11412. What needs to be improved is following - related Analysis document says: _From a documentation perspective we should add commands to show how to convert the default resources to use Elytron security, We should also show commands to remove the legacy security once it is no longer referenced._ There is JBEAP-8472 which will provide CLI script {{enable-elytron.cli}} in examples directory which will enable Elytron. By mention this script in documentation will be covered mentioned above requirement (otherwise there will be needed documentation for how to enable every particular resource which is integrated with Elytron). Please add information about this script once JBEAP-8472 will be resolved - there should be mentioned: * where this CLI script can be found * some basic information that it can be used as example for enabling Elytron in related subsystems and management interfaces	0	0	https://issues.jboss.org/browse/JBEAP-7698
9410	JBEAP-7694	Failing verification. What is missing: * common place with set of included mechanisms ** Anonymous ** Digest ** Entity ** External ** Gs2 ** Gssapi ** LocalUser ** OAuth2 ** OTP ** Plain ** Scram * information how and when to use each of them * list of parameters which can be used for the mechanisms configuration and their description: ** wildfly.sasl.local-user.quiet-auth / jboss.sasl.local-user.quiet-auth ** wildfly.sasl.gssapi.client.delegate-credential ** wildfly.sasl.otp.alternate-dictionary ** ... * how to configure set of mechanisms on server side (filtering, ordering, parameters etc). * how to configure set of mechanisms on client side (filtering, ordering, parameters etc).	0	0	https://issues.jboss.org/browse/JBEAP-7694
9411	JBEAP-7690	[~ahoffer] It needs to be listed as a newly supported feature and I think it also needs some documentation on the configuration of distributed workmanager. That should go in chapter 16 (JCA) of Configuration Guide. In addition to the usual stuff (what is a distributed workmanager, what attributes does it take, etc.) there are some specifics that I think need to be documented, such as that the thread pool for a distributed workmanager needs to be of the same name as the workmanager. [~maeste] I see the Jirban Community Docs flag on EAP7-495 has been set to Done/Not Relevant, but couldn't find the documentation in the WildFly docs *. Could you point [~ahoffer] to the docs, or provide some, if there are none? Thanks. * https://docs.jboss.org/author/display/WFLY10/Documentation	0	0	https://issues.jboss.org/browse/JBEAP-7690
9412	JBEAP-7689	[~nziakova]: I am a little confused by two of your comments as they contradict each other: 1. In the first bullet, you say: "The artifacts are not downloaded from JBoss EAP Maven repository, but from Red Hat Maven repository..." 2. In the last bullet you say it "Should be the JBoss EAP Maven repository" Should it be the "Red Hat Maven repository" or the "JBoss EAP Maven repository"? We refer to it extensively throughout our documentation as the "JBoss EAP Maven repository". It only contains artifacts for JBoss EAP, so it might be better to keep referring to it that way. Also, the downloaded version of the repository is branded with the JBoss EAP name. Your thoughts?	1	1	https://issues.jboss.org/browse/JBEAP-7689
9413	JBEAP-7679	[~jpallich]: We do not document Shrinkwrap resolvers. Is this JIRA to update the quickstarts that use it? If so, the component should be changed to "Quickstarts".	0	0	https://issues.jboss.org/browse/JBEAP-7679
9414	JBEAP-7672	[~jpallich]: We do not document AngularJS. Is this JIRA to update the quickstarts that use it? If so, the component should be changed to "Quickstarts".	0	0	https://issues.jboss.org/browse/JBEAP-7672
9415	JBEAP-7671	[~jpallich]: We do not document JQuery or JQuery Mobile. Is this JIRA to update the quickstarts that use it? If so, the component should be changed to "Quickstarts".	0	0	https://issues.jboss.org/browse/JBEAP-7671
9416	JBEAP-7670	[~jpallich]: We do not document Arquillian. Is this JIRA to update the quickstarts that use Arquillian? If so, the component should be changed to "Quickstarts".	0	0	https://issues.jboss.org/browse/JBEAP-7670
9417	JBEAP-7669	[~jpallich]: Should this component be changed to "Quickstarts"?	0	0	https://issues.jboss.org/browse/JBEAP-7669
9418	JBEAP-7665	- Please add a note about the {{org.wildfly.extension.batch.jberet.deployment.BatchPermission}} which is required to allow authenticated users deal with Batch jobs. The supported targets of this permissions are {{start}} for starting jobs, {{stop}} for stopping jobs, {{restart}} for restarting jobs, {{abandon}} for marking executions as ABANDONED, {{read}} for reading metadata about job executions using the JobOperator and management interfaces. bq. For example, a secured RESTful endpoint is created to initiate batch jobs and the batch-jberet subsystem. - This sentence is not very senseful, did you mean for example "using" instead of "and" the batch-jberet subsystem? bq. By default, the batch-jberet subsystem is configured to use the ApplicationDomain Elytron security domain. - I think that at least in 7.1.0.DR11 the security domain is undefined by default. [~jamezp] are we planning to keep it this way?	1	1	https://issues.jboss.org/browse/JBEAP-7665
9419	JBEAP-7615	Can you confirm that this is not default in EAP7? Can you point me to what system property it is? If above is true, maybe it would make sense to extend that property or add a new one to incorporate removing the file content entirely? Current approach doesn't fit well in Docker images, these are tested afterwards and we release only working images, so no rollback would be required.	1	0	https://issues.jboss.org/browse/JBEAP-7615

#	Requirement	Questions	Answered	Successfully Answered	URL
9420	JBEAP-7615	We are talking here about different things. We use the {{ageout-history}} command. It removes all the unnecessary, previous patches, which let us go down from 1.4 GB to around 280 MB. But there are *still left scrapped jar files* that were updated while patching under {{modules/system/layers/base}} directory. Example? {code} [root@d12b18135037 ~]# jar tf /opt/eap/modules/system/layers/base/org/jboss/log4j/logmanager/main/log4j-jboss-logmanager-1.1.1.Final-redhat-1.jar Picked up JAVA_TOOL_OPTIONS: -Duser.home=/home/jboss -Duser.name=jboss java.util.zip.ZipException: error in opening zip file at java.util.zip.ZipFile.open(Native Method) at java.util.zip.ZipFile.<init>(ZipFile.java:219) at java.util.zip.ZipFile.<init>(ZipFile.java:149) at java.util.zip.ZipFile.<init>(ZipFile.java:120) at sun.tools.jar.Main.list(Main.java:1115) at sun.tools.jar.Main.run(Main.java:293) at sun.tools.jar.Main.main(Main.java:1288) {code} When we remove these unusable jar files we save over 100 MB with 6.4.12.GA CP.	1	0	https://issues.jboss.org/browse/JBEAP-7615
9421	JBEAP-7470	This will be done in a later release, as it requires a non compatible Undertow API change that is not suitable for the 1.4.x branch.	0	0	https://issues.jboss.org/browse/JBEAP-7470

9427	JBEAP-7438	Verified on EAP 7.1.0 DR9 tag https://github.com/jbossas/jboss-eap7/blob/EAP_7.1.0.DR9-dev/webservices/tests-integration/pom.xml#L138 [~kabirkhan] [~asoldano], is this temporary thing till netty & artemis are synced or this will stay in for safety reasons in the future?	0	0	https://issues.jboss.org/browse/JBEAP-7438
9428	JBEAP-7362	[~soul2zimate]: When do you plan to fix this issue?	1	1	https://issues.jboss.org/browse/JBEAP-7362
9429	JBEAP-7362	Thank you. I updated status of this jira. [~soul2zimate]: Can you please set dev_ack?	0	0	https://issues.jboss.org/browse/JBEAP-7362
9430	JBEAP-7235	The originating JIRA is closed and I believe this one, which also targets 7.0,is complete. [~jpallich]: Can we close this issue also?	0	0	https://issues.jboss.org/browse/JBEAP-7235
9431	JBEAP-7233	Thanks a lot for the suggestions, [~ochaloup] and [~mkopecky]! @[~mkopecky]: I am writing the JVM chapter at the moment (tracked in sub-task jira JBEAP-8054), and I will be sure to mention ulimits as suggested. @[~ochaloup]: I have made a note in the planning doc to cover the transaction subsystem log store. When I get up to writing that section, I will probably contact you for some more details.	1	1	https://issues.jboss.org/browse/JBEAP-7233
9432	JBEAP-7228	Hey [~rhn-support-pnag], I have added comments to the MR. When do you expect you will add documentation for the other areas of this RFE?	0	0	https://issues.jboss.org/browse/JBEAP-7228
9433	JBEAP-7224	[~jpallich]: This seems to be a duplicate of https://issues.jboss.org/browse/JBEAP-1493. Or am I missing something here?	0	0	https://issues.jboss.org/browse/JBEAP-7224
9434	JBEAP-7221	Verification failed in revision n_2419454_how-to-configure-server-security_version_7.1.Alpha_edition_1.0_release_0-revision_8279980 (docs-bulk-12) The documentation for this RFE is insufficient. I'm missing a couple of important pieces of information: * How is it possible to create a custom manager * Where can be custom trust manager implementations referred from (e.g. server modules, in deployments, ...) * What must be changed in server's configuration in order to use a custom trust manager - including CLI commands with a brief reason and description * Explicitly say that usage of a custom trust manager will not be possible when running a JVM in FIPS mode (+ describe a way how to achieve similar behaviour as stated in analysis doc [1]) * An example of use case in which a custom manager could be used [1] https://docs.google.com/a/redhat.com/document/d/1oMPYgHgmYNG0psiQDx8p3D_A5hu5IZ_NCy3UMyR9cms/edit?usp=sharing	1	1	https://issues.jboss.org/browse/JBEAP-7221
9435	JBEAP-7218	> So for #3, is there any way that starting a job through the console would actually work? Yes, I use some batch examples from here https://github.com/javaee-samples/javaee7-samples/tree/master/batch Their job applications doesn't requires parameters. > Or perhaps should there be a way to allow the user to provide the necessary parameters when starting the job instead of just failing every time? Yes, it is possible, it would require some changed in the UI to allow the user to specify the parameters, but I would like to deter this implementation to a later release as the time is tight for the EAP 7.1. > Could you also verify the wording in my merge request to make sure it is accurate for the console behavior? I think the text reflects the actual UI, nice job.	1	1	https://issues.jboss.org/browse/JBEAP-7218
9436	JBEAP-7212	This should probably be treated as a review of all pom.xml examples related to EJB clients and suggesting this particular strategy for handling dependencies - using the {{wildfly-ejb-client-bom}} for versions and then just adding the {{jboss-ejb-client}} library. {noformat} <dependencyManagement> <dependencies> <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-ejb-client-bom</artifactId> <version>EJB_CLIENT_BOM_VERSION</version> <type>pom</type> <scope>import</scope> </dependency> </dependencies> </dependencyManagement> <dependencies> <dependency> <groupId>org.jboss</groupId> <artifactId>jboss-ejb-client</artifactId> </dependency> </dependencies> {noformat} We should also mention where to find the right EJB_CLIENT_BOM_VERSION - probably tell the users to take a look into the Maven repo, which version is present there? Any better idea?	1	1	https://issues.jboss.org/browse/JBEAP-7212

#	Requirement	Questions	Answered	Successfully Answered	URL
9437	JBEAP-7212	I would say that the chapter {{Project Dependencies for Remote EJB Clients}} as a whole needs a bit of restructuralization, it doesn't make much sense anymore. The pom.xml examples in the new chapter {{Single artifactID for jboss-ejb-client Dependencies}} basically just introduces a new way of achieving the same result as the two pom.xml snippets above (in {{Maven Dependencies for Remote EJB Clients}}) - the result is the same. But in the docs, these two sections are too separated and it looks like they are something different. Can we add an explanation that these are two different ways to achieve the same? Also, this list of added dependencies {quote} jboss-ejb-client xnio-nio jboss-marshalling-river jboss-sasl jboss-ejb-api_3.1_spec jboss-transaction-api_1.1_spec {quote} is not complete, and probably not necessary at all anyway. Do we really need to list all transitive dependencies? When the developer uses one of the two ways to declare an EJB client dependency, these transitive dependencies will be automatically added, it's not really necessary to list them in the documentation, IMO. Btw, please note that I also filed related JBEAP-11505 which is to remove a similar list of transitive dependencies from the beginning of the {{Maven Dependencies for Remote EJB Clients}} section - for the same reasoning.	0	0	https://issues.jboss.org/browse/JBEAP-7212
9438	JBEAP-7192	Hi [~dmichael]! It currently looks like there will no documentation apart RN. Do you plan to add rest of it to relevant chapters in Configuration Guide?	0	0	https://issues.jboss.org/browse/JBEAP-7192
9439	JBEAP-7178	reopening in n_2419413_security-architecture_version_7.1.Alpha_edition_1.0_release_0-revision_8279994 with these objections: * "Elytron uses SASL to implement HTTP authentication" - This is new information for me. Could you double ches it is true? Does this somehow impacts user? As I didn't realized that until now, I think this is internal implementation detail, isn't it? Is it worth mentioning then? * "...provides a complete set of HTTP authentication mechanisms including BASIC, FORM, DIGEST, and CLIENT-CERT." I am missing SPNEGO in the list * Document how to setup custom http authentication mechanism.	0	0	https://issues.jboss.org/browse/JBEAP-7178
9440	JBEAP-7178	[~zrhoads] [~rhn-support-pnag], we have agreed with Zach configuring custom component wil be tracked separately. Does this issue already exists? Could you link it? Or it should be created?	0	0	https://issues.jboss.org/browse/JBEAP-7178
9441	JBEAP-7174	@[~hsvabek], I think that details on how to create a custom implementation in the Development Guide is a different enough use case and should be tracked in a new JIRA. I don't think it should hold up verification of this one. What do you think?	1	1	https://issues.jboss.org/browse/JBEAP-7174
9442	JBEAP-7173	Verification failed with How to configure server security revision 6bff93b8. *3.3. Credential Stores* * IMPORTANT paragraph There is change in behaviour if you fill both - credential-reference and password attribute. Here is jira issue https://issues.jboss.org/browse/JBEAP-8764 According this jira issue please remove "IMPORTANT" paragraph. It is no longer necessary. *3.3.2. Supply a Master Password to a Credential Store* * Example Credential Store Created with a Password from Another Credential Store In example is "alias==master-pw" which contain double =, please remove one. *MISSING* * There is missing how to explicitly define type of Credential store Some explanation of /subsystem=elytron/credential-store=credStore:add(type= I can see a lot of texts in MR which is out of scope this jira issue. Can you give me a link to given issue?	1	1	https://issues.jboss.org/browse/JBEAP-7173
9443	JBEAP-7173	Documentation should give answer for these questions: - What is "uri" attribute and what it is used for? -- what are possible parameters in uri? -- and give their description - what is happened if I replace storage file on filesystem when EAP server runs? - Credential store storage file can be removed after server starts up, passwords stay loaded in memory. -- what happens if you add/remove/update new alias in this credential store -- what happens if you lost permission to write folder - When is loaded credential store to memory from file? start, reload, restart, creation of new credential store, ... - What is relation between storage file and credential store loaded to memory? - How to define absolute path to credential store storage file? - Table A.27. credential-store Attributes - wrong URI example, there isn't "vault://" -- keep on mind that URI parameter can be different for default implementation and custom credential store implementation	1	1	https://issues.jboss.org/browse/JBEAP-7173
9444	JBEAP-7173	Hi [~hsvabek], I'll be taking over docs for this feature. I have a few questions: * I am trying to go through the process of creating and using a credential store, but the commands currently documented don't work. I assume the implementation of this feature has changed? For example: {code} /subsystem=elytron/credential-store=exampleCS:add(\ > uri="cr-store://exampleCS?create=true", \ > credential-reference={clear-text=cs-secret} \ >) 'uri' is not found among the supported properties: [credential-reference, relative-to, case-sensitive, create, implementation-properties, location, modifiable, other-providers, provider-name, providers, type] {code} In looking at the management model in the CLI, it looks like there is now {{location}}, {{relative-to}}, and {{create}} attributes for the adding a new store. It looks like something like the following works for creating a new store (and having it stored in the {{data}} directory of the server): {code} /subsystem=elytron/credential-store=test_store01:add(location="cred_stores/test_store01.jceks", relative-to=jboss.server.data.dir, credential-reference={clear-text=pass123},create=true) {code} Can you confirm if this is correct? I assume the URI of {{cr-store://}} etc isn't required any more. * I think we should provide some advice on why a user would use a credential store vs using a password vault. Am I correct in assuming that we would recommend that users should prefer using a credential store because it is more easier to use and reference inside EAP (e.g. using the management CLI), rather than managing a vault externally using {{vault.sh}}? * For your suggestions in your previous comment re memory, permissions, etc: I'm not sure that we need to go in to that much detail on how the memory loading of the store file works. I think an admonition like the following would be sufficient? {quote}IMPORTANT: JBoss EAP reads the credential store file into memory and writes changes to it at varying times. You must ensure that the user running the JBoss EAP process has permissions to the store file, and that you do not externally modify or remove the store file while JBoss EAP is running.{quote}	1	1	https://issues.jboss.org/browse/JBEAP-7173
9445	JBEAP-7173	After doing a bit of googling, I've found these great blog posts by [~pskopek]: http://undertheelytron.blogspot.com.au/2017/04/basics-credential-store-in-wildfly.html http://undertheelytron.blogspot.com.au/2017/05/credential-references.html I think his example of using a credential reference for a datasource is a much better practical example of using a credential from a credential store (rather than using one store to create another credential store). @[~pskopek]: Do you mind if I take some content from your blog posts and adapt it for the EAP docs?	1	1	https://issues.jboss.org/browse/JBEAP-7173

#	Requirement	Questions	Answered	Successfully Answered	URL
9446	JBEAP-7173	Hi [~lcosti.redhat], You are right, 'uri' attribute was removed as this jira issue JBEAP-8450. Besides new attributes 'location', 'relative-to' and 'create', there are also 'modifiable' and case-sensitive attributes (maybe will be renamed, check JBEAP-8871 for details). And of course your example how to create credential store is correct. It would be nice go through whole documentation and update parts where is 'uri' attribute is used. Why prefer using credential store rather than vaults? One reason is easier usage, but it is not main reason for it. Main reason is better security how to get access to secure storage. Please [~pskopek] give here detailed answer, thanks. About loading storage to memory - there is reload() operation for credential store, to reload it from filesystem to memory. Now it doesn't work good JBEAP-10650. Your IMPORTANT paragraph looks good, please add there information about reload, keep on mind how reload works: *Scenario 1* # you replace storage file for credential store on filesystem # process reload() # you have in memory new content of storage file *Scenario 2* # you replace storage file for credential store on filesystem # through CLI you make remove/add operation for aliases -> memory is persisted to filesystem and your replaced storage file from first step is replaced. # process reload() # you have in memory same content as before reload() You must be very careful with reload() operation.	1	1	https://issues.jboss.org/browse/JBEAP-7173
9447	JBEAP-7168	Hi [~hsvabek], like the other credential store docs issues, I'll be taking over this one too. :) [~hsvabek] [~pskopek]: I'm a bit confused on the use cases for this feature. I understand that it is for Elytron Client, but is it expected that credential stores will only be available to clients deployed on EAP, [as this existing doc implies|https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.beta/html-single/how_to_configure_identity_management/#using_elytron_client_deployed]? Or, are clients that are not deployed on EAP expected to be able to create and use credential stores? If this is the case, how is it supported for users to create a credential store? Would using the elytron tool be supported? I can't find many details on how to refer to created stores for Elytron Client. I've found the [test cases here|https://github.com/wildfly-security/wildfly-elytron/blob/master/src/test/java/org/wildfly/security/auth/client/XmlConfigurationTest.java#L120], but while it looks like it uses custom-config.xml, I'm not sure about the EAP implementation of this. Those tests looks like it creates a credential store, but I can't see how it adds credentials to the store? Some assistance in helping me understand how this works would be very much appreciated. :)	1	1	https://issues.jboss.org/browse/JBEAP-7168
9448	JBEAP-7167	[~zrhoads], could you provide correct link? Custom component -- OK, I will check {{custom-realm}} documentation when available.	1	1	https://issues.jboss.org/browse/JBEAP-7167
9449	JBEAP-7167	Hi [~okotek], I'll be taking over this docs issue. I'm not sure how to document this change. As I understand it (please correct me if I am wrong), if a user's roles is changed in LDAP (or other modifiable realm), that change will not be propagated automatically to a relevant Elytron caching-realm. What should we advise a customer to do? Should we advise them that on every LDAP update that affects users' roles, that they should be clearing affected Elytron caching-realms?	1	1	https://issues.jboss.org/browse/JBEAP-7167
9450	JBEAP-7165	Verification failed in How to Configure Server Security in revision 6bff93b8. This documentation Jira should provide introduction to the new feature described in Analysis document in Jira description. Provided documentation misses some important information about configuration and understanding of this new feature. What is missing or incorrect: * Section 3.1.4. Mapping Identity for Authenticated Management Users includes sentence "Once you have added the identity resource, the identity of an authenticated user will appear when accessing the management interfaces.", but it is incorrect. In seems that in case when no access=identity is configured then identity from security domain used for authentication appears. * One of requirement for this RFE mentioned in Analysis documents says: "It will be possible to configure the SecurityDomain to be used by domain management to obtain the current SecurityIdentity which will be used for the invocation of the current management request." This requirement should be reflect in documentation. * Analysis document includes table which describes which identity is used in some cases (note, that scenarios 5 a 6 in table are out of the scope of that RFE and should not be documented). This table can be used for improving documentation of this RFE. * Documentation should provide answers for following questions: ** What is and how work inflow identity for Management security? (i.e. one security domain is used for authentication and results identity is inflowed into security domain used in access=identity) ** Provide some information about trusted-security-domains attribute from security domain - when and why it is needed. *** What happens if security domain from access=identity does not trust security domain from authentication. *** What happens if security domain from access=identity does not trust security domain from authentication, but both of them using the same security realm. *** There should be mentioned that trusted-security-domains is not transitive. ** How are mapped roles/groups to the final identity if access=identity is used (i.e. which domain maps it). In case when some information are needed for documenting mentioned above notes please ask developers. I also reported some issues related to this Jira - I linked them to this Jira.	0	0	https://issues.jboss.org/browse/JBEAP-7165
9451	JBEAP-7153	[~zrhoads]: Should this be moved to "Ready for QA"?	1	1	https://issues.jboss.org/browse/JBEAP-7153
9452	JBEAP-7152	[~ahoffer] Opps, sorry pasted the wrong link. Yeah, I meant the EAP7.0 release notes. I was talking about the community docs yeah for EAP 7.0, but I thought you had done some EAP docs for that at some point (I may not be remembering correctly.) WRT how we talk about it, the ignore-unused-configuration is generally used on the thing being managed, so in this case the slaves (The domain controller generally doesn't want to ignore anything, as it has to be able to distribute the entire domain model and deployments etc to a slave that is not ignoring or running --backup etc). FWIW, we mentioned this in the 7.1 alpha notes here: https://access.redhat.com/articles/2662761 (see: Slave Host Controllers Ignore Irrelevant Parts of the Domain Configuration and Content Repository). I'll double check what was available and what the default was in 7.0 vs 7.1 and post an update here. I don't remember exactly when the change went in.	0	0	https://issues.jboss.org/browse/JBEAP-7152
9453	JBEAP-7150	Hi [~pjelinek], the doc work to use the new subsystem is tracked and already done in this JIRA https://issues.jboss.org/browse/JBEAP-10180. Could you move this JIRA back to verified? Thanks!	1	1	https://issues.jboss.org/browse/JBEAP-7150

#	Requirement	Questions	Answered	Successfully Answered	URL
9454	JBEAP-7149	Hi [~zrhoads], thank you for the notification. I've briefly read that section and here are my notes: # In the first paragraph of {{17.11. CONFIGURING HTTP/2}}: ** There is link to HTTP2 RFC draft. Although that link is automatically redirected to the final specification I believe we should provide direct link to final spec instead: {{https://datatracker.ietf.org/doc/rfc7540/}} ** Regarding to the link to the SPDY protocol in the very same paragraph, maybe we might prefer to actually provide link to IETF RFC draft {{https://datatracker.ietf.org/doc/draft-mbelshe-httpbis-spdy/}} instead of the current {{www.chromium.org/spdy}} link? # In the {{WARNING}} section, there is {quote} HTTP/2 requires a TLS stack that supports ALPN... {quote} I would emphasize that this is true only when using HTTP2 over a secured connection (TLS). When you use HTTP/2 in cleartext, the TLS is not utilized at all. Thus I propose something like: {quote} When using HTTP/2 over secured TLS connection the TLS stack that supports ALPN TLS protocol extension is required as it is not provided by the default installation of Java 8... {quote} Also I should note that using HTTP2 over secured connection is probably 99% of the time it will be actually used as all modern browsers don't support HTTP2 in cleartext. # Section {{17.11.1. Configuring Undertow to use HTTP/2}}: ** Well, I think that all necessary information is already included in the description but I feel uncomfortable with the structure a little bit. Basically all you need to do to enable HTTP2 is to set 'enable-http2' attribute on particular http(s)-listener. In case of https-listener the HTTPS setup must be prepared also. Maybe we can separate the steps for the http-listener (with some warning note that most modern browsers enforce HTTP/2 over secured TLS connection - 'h2' - and does not support HTTP/2 in clear text - 'h2c') and https-listener. # I think that we should also provide information how to setup and use OpenSSL libs downloaded from JBCS in EAP somewhere in the documentation. This configuration might slightly differ depending on whether EAP is installed from .zip archive vs RPM packages. Should you have any additional questions or something is not clear, just let me know.	1	1	https://issues.jboss.org/browse/JBEAP-7149
9455	JBEAP-7149	Hi [~rhn-support-pnag], according to the latest discussion, we should also explicitelly mention that there is actually also some ALPN implementation put into the EAP itself (although we still prefer our customers to use OpenSSL based ALPN implementation instead). Thus I propose following - in the Configuration guide, section {{17.11. CONFIGURING HTTP/2}}, there is a following paragraph in the warning column: {quote} When using HTTP/2 over a secured TLS connection, a TLS stack that supports ALPN TLS protocol extension is required as it is not provided by the default installation of Java 8. To get ALPN TLS protocol extension support, utilize the OpenSSL provider in JBoss EAP 7.1 with OpenSSL libraries that implement ALPN capability. The supported OpenSSL libraries are the ones from JBoss Core Services, installed and configured. {quote} Proposed updated paragraph text (feel free to alternate/modify): {quote} When using HTTP/2 over a secured TLS connection, a TLS stack that supports ALPN TLS protocol extension is required. As ALPN is not available in Java 8, there was introduced implementation of it right into the JBoss EAP 7.1, which depends on Java internals. As such it works only with Oracle and OpenJDK (and doesn't work with IBM Java) and there is a risk (even though it is rather low) that it can break with some Java update. Because of this risk it is strongly recommended to utilize ALPN TLS protocol extension support from the OpenSSL provider in JBoss EAP 7.1 with OpenSSL libraries that implement ALPN capability. The supported OpenSSL libraries are the ones from JBoss Core Services, installed and configured. {quote} Also I thought that maybe we should reorder some paragraphs in the warning column so they are more logically ordered: # The paragraph starting with sentence '{{JBoss EAP will automatically try to search for the OpenSSL libraries on the system and use them.}}' should be moved right after the example of how to configure {{openssl}} provider via legacy security-based configuration. # The paragraph '{{If OpenSSL is loaded properly, you will see a message in the server.log during JBoss EAP startup, similar to}}' inluding the log message example should be moved right after the previously mentioned one - that means after the '{{JBoss EAP will automatically try to search for the OpenSSL libraries on the system and use them.}}' I think that this change should make information more clear regarding to the order of the steps customer would probably do. What do you think?	0	0	https://issues.jboss.org/browse/JBEAP-7149
9456	JBEAP-7146	* bq. If your application contains a persistence.xml file or the code uses the @PersistenceContext or @PersistenceUnit annotations, JBoss EAP 7 detects this during deployment and assumes the application uses JPA. It implicitly adds the Hibernate ORM 5 libraries plus a few other dependencies to your application class path and defaults to using these libraries. ** This has worked this way in EAP 6.x as well, I think. Is this really relevant for the migration guide then? * The {{Oracle Byte Array Mapping Changes}} speaks about the {{hibernate.dialect.oracle.prefer_longvarbinary}} property, but the property is correctly named {{hibernate.dialect.oracle.prefer_long_raw}} - yes, it's wrong in the official migration guide document, I'll report that. FYI this is where it is defined: https://github.com/hibernate/hibernate-orm/commit/177bbfe5e371796a5af523e0d1a70839ff0bdb71#diff-1e7261dc64d13954f60f7b0c87758dabR28 * Also, are we planning to include information about new features in Hibernate 5.1.x in addition to just the migration related stuff? I mean, the stuff which is not covered by RFEs, that means without Envers to-one associations	1	1	https://issues.jboss.org/browse/JBEAP-7146
9457	JBEAP-7140	Is this documentation for the Configuration Guide, the Migration Guide, or both? From what I can see, it seems like it might belong here: https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.Beta/html-single/configuration_guide/#manage_a_transaction If so, should the new operation be mentioned in the Migration Guide as well?	0	0	https://issues.jboss.org/browse/JBEAP-7140
9458	JBEAP-7139	What is the point of this issue?	0	0	https://issues.jboss.org/browse/JBEAP-7139
9459	JBEAP-7130	Hi [~rhn-support-pfestoso]! Is this a duplicate of JBEAP-7718? If so, can you please close it?	1	1	https://issues.jboss.org/browse/JBEAP-7130
9460	JBEAP-7044	[~brian.stansberry]: I agree with keeping type. But what about to rename "input-stream-index" to "input"? This would be still correct (for both "tooling" and "direct input by users"), but it would be also intuitive for customers. We can still keep "input-stream-index" (as something like alias) for backward compatibility and make it deprecated. And I really recommend to update description of this attribute.	1	0	https://issues.jboss.org/browse/JBEAP-7044

#	Requirement	Questions	Answered	Successfully Answered	URL
9461	JBEAP-7044	[~mjurc][~mkopecky] My apologies; in my comments above I think I didn't understand properly your perspective when you filed this. I forgot the CLI added a trick where it would check some metadata on the param and based on that let the user provide a file name as the attribute value. That's useful but it does have the impact of meaning the r-r-d output, which is a server management API description and is not directly meant as CLI help text, is made inconsistent with what the CLI user experiences. I'm not willing to change the server side management API description away from being a description of the server side management API and turn it into CLI help text. We need a proper server-side management API description. But still, we should try to improve. Some things to do: 1) Look into the param names and descriptions as you suggest here. That should be the focus of this particular JIRA. Text descriptions we of course have some flexibility, and param names we can tweak. (Note that in some cases the param is already in a .Final API and a change means a new param not a rename.) I personally prefer 'input-stream' to 'input' as it better hints at what is going on and is a better description of the server management API. But the '-index' part isn't really necessary. [~ehugonnet] can you have a look at this? Note that we should not change the type from INT, as that would be changing the description from a server API description to a CLI description. 2) [~jfdenise] Perhaps when the CLI feature you've worked on that generates CLI help text from r-r-d output comes along, it could factor this scenario into what is generated? Add some text or something to the CLI help output that explains what the CLI allows with the input? 3) CLI high level commands. One of the main points of CLI high level commands is to hide the less friendly aspects of the server side API from end users. So any place where we are using this CLI input trick is a candidate for a high level command. (We have high level commands around deployment and deployment overlays already.)	0	0	https://issues.jboss.org/browse/JBEAP-7044
9462	JBEAP-7007	[~psakar][~kabirkhan] This upgrade happened in WildFly Core 3.0.0.Alpha13, so it should be linked to JBEAP-7028, not JBEAP-7572, and moved to On QA, Fix Version DR9. I'll make a bold decision and decide I'm right and do all that now. :)	1	1	https://issues.jboss.org/browse/JBEAP-7007
9463	JBEAP-7007	[~jdenise]: Can you please close this as "Out of date"?	0	0	https://issues.jboss.org/browse/JBEAP-7007
9464	JBEAP-6868	[~asoldano] I can take this over, unless you want to keep it.	1	1	https://issues.jboss.org/browse/JBEAP-6868
9465	JBEAP-6868	We've found it works most easily to do major API version bumps in upstream (which in this case would be ported back to 7.x). At some point the EAP code base and the upstream one will fork more than they are now, and doing major bumps in upstream ensures there is a minor stream available for future changes in EAP's branch of the fork. Right now the two branches are the same so you could use 2.1 and then bump upstream to 3.0 in the next upstream release where there is a change. But then we have to remember it's being done this way, and guard against the upstream change being to 2.2, which would be the intuitive thing for someone seeing 2.1 as the current version to do. But that would prevent the EAP branch from producing a 2.2 if it didn't want everything that was in the upstream 2.2. So, a 2.1 would be ok if you prefer but just to follow the KISS principle and stay consistent across subsystems we say always bump the upstream version by a major increment.	0	0	https://issues.jboss.org/browse/JBEAP-6868
9466	JBEAP-6858	Do I understand it correctly? It is not possible to do it because of limitation of current implementation. I noticed you changed the type of Jira from Bug to Enhancement. Do you plan to address this issue in the future? If no we should close it.	1	1	https://issues.jboss.org/browse/JBEAP-6858
9467	JBEAP-6853	[~tomekadamski]: This is a bad user experience. Is there any underlying technical reasoning for nacking this?	1	1	https://issues.jboss.org/browse/JBEAP-6853
9468	JBEAP-6842	I added a blue focus box to the Jtree in treepackspanel. The focus box currently spans the height of the rows. Is this okay or should the focus box span the jtrees true size?	1	1	https://issues.jboss.org/browse/JBEAP-6842
9469	JBEAP-6842	What about input field focus proposal, would it be processed? !input_proposed_focus.png|thumbnail!	1	1	https://issues.jboss.org/browse/JBEAP-6842
9470	JBEAP-6842	Hi Jan, I'm unsure if an input field focus indicator is required, since the cursor appears on the focused text field. Additionally, this is quite a pain to implement since it requires drawing an indicator beyond the components bounds and any solution would be quite hacky.. I can do it but I believe it will take much more than it is worth. What do you think?	1	1	https://issues.jboss.org/browse/JBEAP-6842
9471	JBEAP-6842	Well, it was only a proposal. There are probably more important issues to work on. Still, can ve avoid drawing focus indicator outside component by wraping JTextField in JPanel and draw the border there so that it doesn't interfere with other components?	1	1	https://issues.jboss.org/browse/JBEAP-6842
9472	JBEAP-6842	Hi Daniel, I checked that and I am glad you make it possible, it looks good. However, the margins could be played with a little more to find the best visual effect. Currently the space around the field is not equal in every direction (bottom + right larger): !textfield-focus-current.png|thumbnail! And I think there is no need to have more than 1px space between filed and border. With these sizes for inset in JFocusPanel I get the desired effect: {code:java} gbc.insets = new Insets(1, 1, 0, 0); {code} !textfield-focus-altered-size.png|thumbnail! I am not quite sure why I see equally distributed space with inset sizes not the same, I was just trying different values. This way also the "blank" space between different fields get a bit smaller, but still bigger than the original without field focus. Can these margins can be altered too to get as close as possible to the margins in DR11 installer?	1	1	https://issues.jboss.org/browse/JBEAP-6842
9473	JBEAP-6834	The need to reload e.g. many servers in production domain just to enable transactional statistics is very user unfriendly behaviour. If this needs to add additional way how to inform Narayana about the variable value change this new way should be implemented. Do you need RFE for this?	1	1	https://issues.jboss.org/browse/JBEAP-6834
9474	JBEAP-6834	Hi [~tomjenkinson], I changed this ticket from bug to enhancement. Could you please take a look at the PR which is linked to the WFLY-7534. Thank you.	1	1	https://issues.jboss.org/browse/JBEAP-6834
9475	JBEAP-6702	Setting qa_ack. [~jmesnil] There is dependency for <module name="org.apache.activemq.artemis" /> in org.apache.activemq.artemis.journal module. I'm not sure if it's correct as everyone else should depend on "journal" module and "journal" module should not load "artemis" main module. wdyt?	1	1	https://issues.jboss.org/browse/JBEAP-6702
9476	JBEAP-6702	[~jmesnil] As JDBC store functionality was added to EAP 7.1.0.DR8, there is new jar {{artemis-jdbc-store-1.5.0.redhat-1.jar}} in artemis main module. Is it correct location. Shouldn't it be move to journal module as well?	0	0	https://issues.jboss.org/browse/JBEAP-6702
9477	JBEAP-6702	[~jmesnil] Looking at the code {{JDBCJournalImpl}} from artemis-jdbc-store.jar is implementing interface {{Journal}} from artemis-journal.jar which in "journal" module. It seems that artemis-jdbc-store.jar should be located in "journal" module as well. wdyt?	0	0	https://issues.jboss.org/browse/JBEAP-6702
9478	JBEAP-6694	Hey [~baranowb], what is the current state of this one? I see that all related Jiras are in "Pull Request Sent" for quite a long time. Just trying to clean things a little bit. Thank you.	1	1	https://issues.jboss.org/browse/JBEAP-6694
9479	JBEAP-6591	Below taken from email thread. Will update here with reply from Jimmy/Rich per below... Hi Bilge, what do you think? Can we remove the JBoss EAP 5 Legacy Clients section from the EAP 7 documentation? Erich ---------- I am ok removing it from the documentation. I would like to get confirmation from Jimmy and Rich as well. (Now cc-ed)	1	1	https://issues.jboss.org/browse/JBEAP-6591

9488	JBEAP-5919	[~sguilhen] Thanks. Is there any progress with jiras for [2] and [3]?	1	1	https://issues.jboss.org/browse/JBEAP-5919
9489	JBEAP-5830	This should be upgraded to tag created from maintenance branch: https://github.com/rh-messaging/jboss-activemq-artemis/tree/jboss-1.4.0-x [~ataylor] [~jmesnil] Any plans when tag could be created? It would be great to have it in EAP 7.1.0.DR7 (dead line is in ~ 1 week) [~kabirkhan] All jiras are in new state but most of them (maybe all) has already PR in jboss-1.4.0-x. Do you know who moves jiras to correct state?	1	1	https://issues.jboss.org/browse/JBEAP-5830
9490	JBEAP-5830	[~ataylor] [~jmesnil] Please see Miroslav's comments above. Andy, can you relink accordingly? For unlinked issues, please unresolve them and clear the fix version	1	0	https://issues.jboss.org/browse/JBEAP-5830
9491	JBEAP-5830	[~jmesnil] [~ataylor] is there any update on this? Do we have Artemis upgrade jira for EAP 7.1.0.DR8?	1	1	https://issues.jboss.org/browse/JBEAP-5830
9492	JBEAP-5784	Hi Martin. I'm working on the solution to this, and I just wanted to clarify with you what you believe the ideal solution to be. I've opted for the option '2' of the ones you've suggested; however, I am not sure which screen to return to. Do you mean the advanced options screen? Or the JDBC vendor screen? I'm unable to exit cleanly from the vendor screen as well. Perhaps it's best to add the 'press 1 to continue ...' dialogue in between the JDBC vendor selection and the jar entry?	1	1	https://issues.jboss.org/browse/JBEAP-5784
9493	JBEAP-5784	Hi Thomas, I've tested your changes. I found missing text and one regression. I think the new functionality is otherwise good. *Missing text*: When there are no JARs, pressing 1 results in: {code:java} Driver JAR locations: /home/mschvarc/lib/postgresql.jar [/home/mschvarc/lib/postgresql.jar] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 3 [ ] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 1 dynamicComponents.jars.empty //missing resource press 1 to continue, 2 to quit, 3 to redisplay. {code} "dynamicComponents.jars.empty" is not found anywhere in the 3 git repositories. From the behavior, pressing 1 sends the user back to JDBC Driver Vendor selection. Pressing 3 also sends the user to the same screen. Either way the user can now *quit* the installation or re-display JDBC Driver Vendor selection, which is what this JIRA is about. *Bugs*: IBM DB2 Driver selected Input Postgres or any other JAR (has to be an actual jar file) Remove the JAR (press '3 to remove' repeatedly) {code:java} You cannot remove anymore elements. [ ] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 1 dynamicComponents.jars.empty press 1 to continue, 2 to quit, 3 to redisplay. 1 None of the provided jars contained the chosen driver's Driver class: "com/ibm/db2/jcc/DB2Driver.class". Do you want to continue? (y/n) [n]: {code} I should not be able to proceed with *zero* JARs present (regression against DR4).	1	1	https://issues.jboss.org/browse/JBEAP-5784
9494	JBEAP-5784	Hi Thomas, your above solution looks good. However, as of 7.1.0.DR5 and when building the installer manually from master, this is what I get: {code:noformat} JDBC Driver Setup .... Driver vendor: 0 [x] IBM DB2 1 [ ] Microsoft SQL Server 2 [ ] MySQL .... Input Selection: 1 Driver JAR locations: /home/mschvarc/ [/home/mschvarc/] [Starting processing] ... Starting process Advanced configuration - JDBC (5/25) Failed to copy jars. /home/mschvarc (Is a directory) Starting process Onfail Server Shutdown Job (6/25) 11:17:45,756 ERROR [org.jboss.as.protocol] (Thread-39) WFLYPRT0003: Failed to close resource org.jboss.as.cli.embedded.ThreadContextsModelControllerClient@474ab1e9: java.lang.IllegalStateException: WFLYEMB0023: The embedded server is stopping and invocations on the ModelControllerClient are not available {code} The installer selects the file without any validation and begins/advances the installation, resulting in crash if file is invalid or a directory. "Validation error:: At least one jar is required for the JDBC driver." Where does this warning take you afterwards?	1	1	https://issues.jboss.org/browse/JBEAP-5784
9495	JBEAP-5751	[~mnovak] Thanks. I'm actually fixing this bug based on your comments in JBEAP-4363. (updated today with a question for you. please take a look when you can:) Close this one as dupe?	1	1	https://issues.jboss.org/browse/JBEAP-5751
9496	JBEAP-5576	AFAIK, JBoss is open source, even EAP. So the source code should be published. So where is the source code of wildfly-core 2.1.6-redhat-1 ?	1	0	https://issues.jboss.org/browse/JBEAP-5576
9497	JBEAP-5576	That's fine. But why don't you want to put the source code in the RedHat GA repository (https://maven.repository.redhat.com/ga/), just like version 2.1.2.Final-redhat-1, or the other artefacts ?	0	0	https://issues.jboss.org/browse/JBEAP-5576
9498	JBEAP-5518	Hi, It started logging in output system log. Can we make it customised to log into specific folder. under log dir. Thanks Jivendra	1	0	https://issues.jboss.org/browse/JBEAP-5518
9499	JBEAP-5480	[~treblereel] [~fjuma] I am trying to clean up some states of issues, and it isn't clear to me if this one is in EAP 7.x or not. Can you please let me know so I can adjust accordingly?	1	1	https://issues.jboss.org/browse/JBEAP-5480
9500	JBEAP-5480	[~treblereel] Would you be able to submit PRs against wildfly and jboss-eap7 to get this upgrade in?	1	1	https://issues.jboss.org/browse/JBEAP-5480
9501	JBEAP-5443	[~wolfc], what's the reason for the subject change? This was a jira for moving from 3.0.18 to 3.0.19 in 7.0.x, similar to JBEAP-5438 which did the same on 7.1. I've also opened up a PR one month ago.	1	1	https://issues.jboss.org/browse/JBEAP-5443
9502	JBEAP-5429	[~msvehla] JBEAP-5112 follows up this one to get fixed, so would you please provide qa_ack? Thank you.	1	1	https://issues.jboss.org/browse/JBEAP-5429
9503	JBEAP-5400	Singleton MDBs (if that's what the 1st item in this issue is about?) are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/developing-ejb-applications/#clustered_singleton_mdbs. Singleton services are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/development-guide/#clustered_ha_singleton_service (there's also a chapter in the EJB Dev Guide, but that's going away as a part of JBEAP-3816). Singleton deployments are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/development-guide/#ha_singleton_deployments. So the docs already have it all. Is the issue about adding links into the Config Guide that would point to the Dev Guides?	0	0	https://issues.jboss.org/browse/JBEAP-5400
9504	JBEAP-5349	Upstream pull request: - https://github.com/wildfly/wildfly/pull/9082 Tag: - https://github.com/wildfly-security/jboss-negotiation/releases/tag/3.0.3.Final Are SET Ok to take over with the EAP updates?	0	0	https://issues.jboss.org/browse/JBEAP-5349
9505	JBEAP-5331	[~manaRH]: I updated the merge request as you suggested. Could you please review again? Thanks for the help!	1	1	https://issues.jboss.org/browse/JBEAP-5331

#	Requirement	Questions	Answered	Successfully Answered	URL
9506	JBEAP-5331	[~mnovotn], the last changes look good(*) to me. Do you want to have a look at them or can assume they are alright? (*) There's "Red Hat JBoss Web Framework" instead of "Red Hat JBoss Web Framework Kit". I don't know if we care about that. I've also gone through the previous changes and found that there's an almost identical duplicate paragraph in the beginning of chapter 7.2 and 7.3. I don't think these are big issues, but I'll reopen the Jira.	1	1	https://issues.jboss.org/browse/JBEAP-5331
9507	JBEAP-5310	How is this related to JBEAP-5253 ? Duplicate?	1	1	https://issues.jboss.org/browse/JBEAP-5310
9508	JBEAP-5275	[~treblereel], [~brian.stansberry], JBEAP-5310 has been verified, but console logging in standalone-full-ha.xml is still enabled in DR4. When can we expect this fixed?	0	0	https://issues.jboss.org/browse/JBEAP-5275
9509	JBEAP-5256	@Jeff what is the next planned version in 7.1.0?	0	0	https://issues.jboss.org/browse/JBEAP-5256
9510	JBEAP-5243	[~nziakova]: I just noticed the outdated year in the license headers today. Should I merge this update? Waiting for QE to acknowledge this is an issue before I merge the 1200+ file changes.	0	0	https://issues.jboss.org/browse/JBEAP-5243
9511	JBEAP-5126	[~tomjenkinson] yep, ok, I do understand now. I haven't read the mailing list properly. With the new annotation it will be possible to forbid transaction propagation to happen. And what about JTS and IIOP? It behaves currently in the same fashion as ejb remoting. Is this by design behavior which will remain?	1	1	https://issues.jboss.org/browse/JBEAP-5126
9512	JBEAP-5057	[~lthon], [~sgilda] -- Does this JIRA need to be CLOSED manually? Looks like the work is completed. Thanks!	1	1	https://issues.jboss.org/browse/JBEAP-5057
9513	JBEAP-5041	Hello [~mjurc], can you be more specific please ? Or can you provide an example ? Thank you.	1	1	https://issues.jboss.org/browse/JBEAP-5041
9514	JBEAP-5041	[~mstefank]: Would you kindly provide this JIRA with ack+ seeing this has already been merged in upstream?	1	1	https://issues.jboss.org/browse/JBEAP-5041
9515	JBEAP-4980	Isn't this an EAP change on how it implements JBossWS?	0	0	https://issues.jboss.org/browse/JBEAP-4980
9516	JBEAP-4957	Is this still an issue?	1	1	https://issues.jboss.org/browse/JBEAP-4957
9517	JBEAP-4957	Hello Romain, Could you check this PR?	1	1	https://issues.jboss.org/browse/JBEAP-4957
9518	JBEAP-4943	I just checked with aesh-0.66.11 on Mac OS, I can skip words using Alt +Arrow. And this is not that bad already. =,/,(are delimiters. It seems that the issue is for Windows only. Would you confirm that this is Windows only? Thanks. JF.	1	1	https://issues.jboss.org/browse/JBEAP-4943
9519	JBEAP-4930	Each tree node displays the resource description retrieved from r-r-d, so the "Management Model" view is fairly descriptive, because is allows the user navigates in the domain model and see all attributes, operations and its descriptions. It there should be an enhancement, can you elaborate on which description is necessary ?	0	0	https://issues.jboss.org/browse/JBEAP-4930
9520	JBEAP-4886	[~mstyk] Hi Martin, Can you attach your configuration file and examples?	1	0	https://issues.jboss.org/browse/JBEAP-4886
9521	JBEAP-4886	[~mstyk] Hi Martin,I have made a modify according to your example, when i do the operation ??/subsystem=messaging-activemq/server=default:list-connection-ids?? ,the connection is built on two servers .And when i change the "RandomConnectionLoadBalancingPolicy" into "FirstElementConnectionLoadBalancingPolicy",all of the connection are built on one server,this is right according to the documentation .So I think the policy is useful,what do you think about it?	1	0	https://issues.jboss.org/browse/JBEAP-4886
9522	JBEAP-4886	How is the connection factory defined on the server? Is it the same on every server? I assume the connection factory is retrieved via JNDI. If so, how is the JNDI lookup defined? Is every client looking up the connection factory on the same server? In any event, no client-side solution is going to ultimately solve the problem you've outlined in your use-case as there's still a chance all the clients would end up connecting to the same server. The real solution would require a server-side feature that balanced connections smartly across the cluster.	1	1	https://issues.jboss.org/browse/JBEAP-4886
9523	JBEAP-4886	How are the clients doing their JNDI lookup? Is every client looking up the connection factory on the same server? If so, this behavior is not surprising. There are a few ways to address this with configuration: * Add connectors for the other (maybe even all) nodes in the cluster to "RemoteConnectionFactory." This, of course, is a bit tedious and prone to error, but it is nonetheless effective. * Remove the "connectors" attribute from the "RemoteConnectionFactory" and use "discovery-group" instead (referencing "dg-group1"). This is the recommended approach. * Ensure somehow that the clients' JNDI lookups are balanced among the cluster nodes.	1	1	https://issues.jboss.org/browse/JBEAP-4886
9524	JBEAP-4886	How can you update the cluster topology on the client side before the first connection is created? Where would you get the cluster topology information from? As I see it, the client would need to connect to its target, download the cluster topology, and then potentially connect to a different node in the cluster. This turns 100 connection events into potentially 200 connection events and would significantly increase the time it took the client to connect to the cluster. I think this solution would also get a bit messy because the client would want to maintain its original connection to the cluster while it attempted to connect to a different node so in case the topology changed it could receive those updates. In the end you could still end up with many (or even all) clients connected to the same cluster node since there's nothing "smart" about this approach. As I mentioned before, the real solution to this problem would require a server-side feature that balanced connections smartly across the cluster. This has been on our radar for some time, but we haven't gotten to it yet. See https://issues.apache.org/jira/browse/ARTEMIS-23.	1	1	https://issues.jboss.org/browse/JBEAP-4886
9525	JBEAP-4715	Upstream pull request: - https://github.com/wildfly/wildfly/pull/9082 Tag: - https://github.com/wildfly-security/jboss-negotiation/releases/tag/3.0.3.Final Are SET Ok to take over with the EAP updates?	1	1	https://issues.jboss.org/browse/JBEAP-4715
9526	JBEAP-4673	Hi [~asoldano], do you mind if I take this one?	1	0	https://issues.jboss.org/browse/JBEAP-4673
9527	JBEAP-4673	Thinking about this, I believe this can't work the way it's implemented. System properties in WildFly, IIRC, are only available at boot time. If we somehow tie this to a model change on WildFly, then I believe we can have this work on-the-fly. What do you think?	1	0	https://issues.jboss.org/browse/JBEAP-4673
9528	JBEAP-4673	Any update on this ? how hard would it be to achieve it ?	1	0	https://issues.jboss.org/browse/JBEAP-4673
9529	JBEAP-4673	Hi [~rsvoboda], the easiest and more manageable solution would be if the deployed web services already use logging interceptors. Then we would set a new property on WildFly that would trigger the on-the-fly logging functionality implemented in CXF. Would that be good enough?	0	0	https://issues.jboss.org/browse/JBEAP-4673
9530	JBEAP-4609	Why exactly is this an issue? This is really just about coding conventions. Either you use static imports, or you don't, or you mix it. Besides, even if we unified it now, we would have to introduce it as a new rule for developers to adhere to this convention. We would probably have to add it as a new checkstyle rule to enforce it. Just fixing it once and then leaving it would make absolutely no sense. Also I don't think that coding conventions fall under QA responsibility. Was this discussed with developers?	1	0	https://issues.jboss.org/browse/JBEAP-4609
9531	JBEAP-4600	[~thofman]: Has this jira correct description? There is mentioned "3.0.15.Final", but current version of RESTEasy in EAP is 3.0.16.	1	1	https://issues.jboss.org/browse/JBEAP-4600

#	Requirement	Questions	Answered	Successfully Answered	URL
9532	JBEAP-4547	[~jamezp]: That sounds like a good plan at this time. At some point in the future, we can revisit this. Since you created the JIRA, would you like to close it? Or should I close it was Won't Fix? ;-)	1	0	https://issues.jboss.org/browse/JBEAP-4547
9533	JBEAP-4485	[~manaRH]: I believe I addressed all of the JIRAs in this merge request. Would you please review and let me know if it needs anything? Also make sure I didn't restate anything improperly :-).	1	1	https://issues.jboss.org/browse/JBEAP-4485
9534	JBEAP-4485	I got an info that EAP7 docs are now frozen, but we need this for Windup EAP6->7 rule migrations to point to new added parts of Migration guide which I requested. [~nziakova], could you do something to ack this changes?	1	1	https://issues.jboss.org/browse/JBEAP-4485
9535	JBEAP-4293	[~jpallich] Just out of curiosity which Weld issue is a blocker for JDG 7? Is it WELD-2110?	1	1	https://issues.jboss.org/browse/JBEAP-4293

9537	JBEAP-4281	[~ataylor] Hi ,Andy,about this issue, in order to disable slow client reconnecting with KILL slow client policy,i just want to add a new attribute in ServerConsumer named "isKill" to record the client whether or not was killed, when the slow client is killed,we can set the attribute is true,then when the slow client want to reconnect the server,we can judge according to the attribute ,if the attribute is true we will ignore the reconnect attempt.This is my resolution to fix this issue,what do you think about it ? expected your reply,thanks!	1	0	https://issues.jboss.org/browse/JBEAP-4281
9538	JBEAP-4281	[~jbertram] Hi,Justin,yeah I have done it,when detected the slow consumer with the policy KILL,I will send a packet to the client,but i think it is not necessary for the client to response it.Even though I have done only work for core client,I do not understand why this not work for any other kind of client,can you tell me that?	1	0	https://issues.jboss.org/browse/JBEAP-4281
9539	JBEAP-4275	I would expect that if a server to which a connection in the pool is connected dies then that connection's ExceptionListener (i.e. {{org.apache.activemq.artemis.ra.ActiveMQRAManagedConnection#onException}}) would be invoked and the connection would then be removed from the pool (assuming reconnect-attempts isn't -1 and also assuming there is no backup configured). Then later if pool utilization was high enough to force the creation of a new connection to replace the one that was lost then a new connection would be added to the pool and would be created according to the connection load balancing policy configured on the pool and the updated cluster topology. That said, my hunch is that the main use-case in mind here is when a node is _added_ to the remote cluster. However, if a new node was added to remote cluster then a similar process could occur. If the pool's utilization was high enough so that a new connection was necessary (and there was room in the pool for another connection) then a new connection would be created according to the connection load balancing policy configured on the pool and the updated cluster topology. Therefore, connections could eventually go to the new node. Of course, this doesn't help in the situation where the pool is full. Also, I'm surprised that a complete server restart would be required to reset the pool. Isn't there a way to simply flush the connection pool so that the connections are destroyed and then recreated as they're needed? This was possible in previous versions of EAP. This may not be exposed on the pooled-connection-factory, but I'm fairly certain that the JCA subsystem supports ways to time-out idle connections which would be a way to get connections onto a new node. There are plans to implement server-side client connection re-balancing when cluster topology changes so I think development effort should probably go there rather than this particular feature since there ostensibly are ways to deal with this administratively in the mean-time. Lastly, was this based on a customer request? Typically EAP feature requests come from customers through GSS and product management for approval.	1	0	https://issues.jboss.org/browse/JBEAP-4275

9541	JBEAP-4232	Here's what standalone.sh does: {code} if ["x$CLIENT_SET" = "x" -a "x$SERVER_SET" = "x"]; then # neither -client nor -server is specified if $darwin && ["$JVM_OPTVERSION" = "-d32"]; then # Prefer client for Macs, since they are primarily used for development PREPEND_JAVA_OPTS="$PREPEND_JAVA_OPTS -client" else PREPEND_JAVA_OPTS="$PREPEND_JAVA_OPTS -server" fi fi {code} So, for macs running 32 bit, we append "-client", else we append "-server", appending nothing of course if the user configured one or the other. So, is the proposal here to 1) ignore the mac stuff and just append "-server", or 2) not append anything at all? If the latter, that implies that you consider "-server" by itself to be meaningless, completely redundant to the default tiered compilation behavior, and that the only reason anyone would meaningfully use -server is in conjunction with turning off tiered compilation (-server -XX:-TieredCompilation). Re: the code cache size, it sounds like the 240MB is the default with -server, so the only people not already using that amount are OSX users running 32 bit. BTW, AFAICT the lines I pasted above plus one other line are all that would come out of standalone.sh because of this change. The rest of the nearby logic is also used for putting OSX users on a 32 bit VM. I'm not saying getting rid of just those lines isn't a valid thing to consider, just that doing this doesn't mean the large chunk of script surrounding them can all come out.	1	1	https://issues.jboss.org/browse/JBEAP-4232
9542	JBEAP-4232	[~brian.stansberry], can you check what it shows on Mac OS ?	1	0	https://issues.jboss.org/browse/JBEAP-4232
9543	JBEAP-4232	Why haven't we resolved this issue already? Nothing needs to be changed.	1	0	https://issues.jboss.org/browse/JBEAP-4232
9544	JBEAP-4227	Hi [~brian.stansberry], [~anrobert] - this JIRA is marked as Affecting the RN. Is there any additional information needed in order to have this RN'ed correctly?	1	0	https://issues.jboss.org/browse/JBEAP-4227
9545	JBEAP-4133	[~dlofthouse], will elytron have new Kerberos/SPNEGO implementation? Is it opportunity to address long-lived kerberos bugs?	1	1	https://issues.jboss.org/browse/JBEAP-4133
9546	JBEAP-4133	Preliminary testing with elytron and eap 7.1 shows in this case "Continuation required" roundtrip doesn't occure. [~dlofthouse], could you elaborate more how is this achieved? Is important here the fact, that in {{kerberos-security-facotry}} only "Kerberos V5" and "SPNEGO" can be actually configured as {{mech-oids}}. When trying to configure "Kerberos V5 Legacy" I get {{java.security.PrivilegedActionException: GSSException: Unsupported mechanism requested: 1.2.840.48018.1.2.2}} [~paramjindal] , could you link customer case, please?	1	1	https://issues.jboss.org/browse/JBEAP-4133
9547	JBEAP-4133	[~darranl] , is there any progress on this issue ?	0	0	https://issues.jboss.org/browse/JBEAP-4133
9548	JBEAP-4004	Yes, you are right it uses a public API currently (updating description now) but the main reason here is to avoid doing an EE lookup from MSC service. So I think the strategy should be the following: # remove the QS as is in the existing (now closed) PR as this is not the recommended way to do similar thing # add a QS reaching the same goal, but the right way by using singleton deployments instead of EE lookup from MSC # add a QS showing singleton service, but doing something else than using EE lookup from MSC Does that sounds good now?	1	1	https://issues.jboss.org/browse/JBEAP-4004
9549	JBEAP-4004	I still do not think we should remove the quickstart. I would prefer to get someone to fix the code you have issues with. These are my concerns about removing it, especially this late in the process: * This will break the documentation as we have references to it. * It may also break the jboss.org developer site as they provide information and details for all the quickstarts. * Anyone that implemented code using this quickstart in the previous release will be looking for a way to migrate it to this release. As [~lthon] mentioned in the other JIRA [1], the migration concerns are real. * The code is actually a valid example of a timer service. Can you point out which class and lines of code you are concerned about? I am not clear what you mean when you say it does an "EE lookup from MSC service". [~wdfink] is out on PTO for a while, so he won't be able to update the offending code, but maybe I can find someone else to do it. [1] https://issues.jboss.org/browse/JBEAP-3270?focusedCommentId=13163319&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13163319	1	1	https://issues.jboss.org/browse/JBEAP-4004
9550	JBEAP-4004	Ha, did I change the _Assignee_ to myself? I must have clicked somewhere... Definitely wasn't intentional, sorry about that!	0	0	https://issues.jboss.org/browse/JBEAP-4004

#	Requirement	Questions	Answered	Successfully Answered	URL
9551	JBEAP-3984	[~jpallich] I have released 7.0.0.CR1 in Jira. This issue is still open, but we went with Paul's suggestion: {code} [~/sourcecontrol/jboss-eap7/jboss-eap7] $git grep jgroups -- pom.xml pom.xml: <version.org.jgroups>3.6.8.Final-redhat-2</version.org.jgroups> {code} CR1 contains 3.6.8.Final-redhat-2 with the cherry-pick. What to do with this issue?	1	1	https://issues.jboss.org/browse/JBEAP-3984
9552	JBEAP-3967	[~ataylor] this kind of improvement could be done at the Artemis level (when the broker is started) or at the WildFly level (when the configuration is read)? Do you have something similar in Artemis backlog?	1	0	https://issues.jboss.org/browse/JBEAP-3967
9553	JBEAP-3907	[~psakar] updated the groupId in the 7.0.x branch of the quickstarts. This JIRA is a reminder to update and synchronize the 7.0.x-development branch after GA. After GA, cherry-pick this commit back to 7.0.x-devel: https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be	1	1	https://issues.jboss.org/browse/JBEAP-3907
9554	JBEAP-3907	artifacts in the public Maven repository use `7.0.0.GA`. [~pgier]: Do you know how I should proceed with this JIRA? {code} [INFO] Scanning for projects... 9555	JBEAP-3907	Added the following comment here: https://issues.jboss.org/browse/JBEAP-2584?focusedCommentId=13251125&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13251125 This change [1] was applied to the product version of the quickstarts [2]. I originally thought the change had to be back-ported to the development branch of the quickstarts [3] after the 7.0.0.GA Maven repository was delivered, but I now question whether this is correct. When I cherry-pick the commit back to this branch, the quickstarts don't build because the BOMs in the development repository do not contain the correct version of the artifacts. [~pgier] and I discussed this and we both think that maybe this does not need to be ported back to the development quickstarts. Can someone please clarify whether the development quickstarts should be using the `org.jboss.eap` group ID? [1] https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be [2] https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.0.x [3] https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.1.x-develop cc @paul gier, [~rafabene], [~rsvoboda], [~nziakova]	1	1	https://issues.jboss.org/browse/JBEAP-3907

#	Requirement	Questions	Answered	Successfully Answered	URL
9567	JBEAP-3632	Understood, it is whatever the user sets. But if they use that upstream service script for something that sets and maybe expects WILDFLY_HOME. Wouldn't this risk causing some confusion? P.S.: Customers know EAP7 is based on Wildfly. GSS and PM have recently created some text to reply to the usual question "what is the Wildfly version that EAP 7 is based on?" So they will not be surprised to find env variables with a WILDFLY_ prefix.	0	0	https://issues.jboss.org/browse/JBEAP-3632
9568	JBEAP-3593	Is there an ETA for this version?	1	1	https://issues.jboss.org/browse/JBEAP-3593
9569	JBEAP-3590	[~dimitris] [~jason.greene] - Do we need to include this to 7.0.0?	1	0	https://issues.jboss.org/browse/JBEAP-3590
9570	JBEAP-3572	[~sgilda] How would you like to do it if you would like to support multiple versions concurrently ?	1	0	https://issues.jboss.org/browse/JBEAP-3572
9571	JBEAP-3572	Maybe the new QS can be added to WildFly Quickstarts, until it can be merged into product. What do you think, [~sgilda]?	1	0	https://issues.jboss.org/browse/JBEAP-3572
9572	JBEAP-3572	[~nziakova]: I was thinking the same thing! [~ozizka]: Do you want to modify and submit your pull to the WildFly quickstart repository?	0	0	https://issues.jboss.org/browse/JBEAP-3572
9573	JBEAP-3571	The only linked issue is JBEAP-3364 which is *MINOR*. Update from JGroups-3.6.7.Final to JGroups-3.6.8.Final contains *38 commits*, 4 from them are "Merge pull request". So it is quite a lot of changes, for details see https://github.com/belaban/JGroups/compare/JGroups-3.6.7.Final...JGroups-3.6.8.Final We are in *BLOCKERS only phase*, PR https://github.com/jbossas/jboss-eap7/pull/369 is already merged. How did this happen ? [~n1hility] [~jpallich]	0	0	https://issues.jboss.org/browse/JBEAP-3571
9574	JBEAP-3442	Hi [~ahoffer], sorry for unclear description. There is a small difference between the current text and text which is asked to be added by this jira. The information which is currently in doc talks about commit phase of two phase commit. This should be clarified in some way like change {{The JDBC driver returns XAER_RMERR when a network failure occurs during the commit phase.}} to something like {{The JDBC driver returns XAER_RMERR when a network failure occurs on commit phase of 2PC.}} This jira asks to add one more information about limitation of JDBC drivers as mentioned in description. This limitation lays in returning wrong error code when one phase commit optimization of 2PC is used. The description of the limitation should be clarify. My idea would be {{When connection failure happens when one phase commit optimization is used JDBC driver should return XAException error code XAER_RMFAIL but the driver returns XAER_RMERR.}}. So basically it's about adding more limitation info under the section. Now concerning one phase commit optimization for various jdbc drivers. Is my intention understandable or should I add some more info? Thank you Ondra	1	1	https://issues.jboss.org/browse/JBEAP-3442
9575	JBEAP-3433	[~lcosti.redhat]: The links for the JBCS docs are not available on the QA preview server yet, are they? I tried the following URL and didn't find anything: {code} :LinkJBCShttpdInstall: /documentation/en/red-hat-jboss-core-services/version-1/apache-http-server-installation-guide/ {code}	1	1	https://issues.jboss.org/browse/JBEAP-3433
9576	JBEAP-3426	Thanks for the review, [~jstefl]. Do you know what the download is going to be named on the Customer Portal? [~mbabacek], do you know where we can find this out?	1	1	https://issues.jboss.org/browse/JBEAP-3426
9577	JBEAP-3389	Hi [~hhovsepy]: Does this capture what you are trying to say? The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus database, so there is no way to determine the database to which the XID belongs. This issue is limited to cases where you define more than one data source for the same database in JBoss EAP.	1	1	https://issues.jboss.org/browse/JBEAP-3389
9578	JBEAP-3389	Hi [~sgilda], I will answer for Hayk as he moved to other department and I'm responsible for transaction component in EAP. [~dmichael] It's so. The problem, caused by the behavior, is visible for a user when there are more datasources configured under EAP pointing to the same database server. I would rephrase the sentence a bit, would that give you a sense? {code} The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus Server, so there is no way to determine the database to which the XID belongs. This could cause a trouble during recovery in case that JBoss EAP configures more than one datasource pointing to the same Postgres Plus Server. As that in-doubt transaction recovery could be run under wrong account which causes fail of the recovery attempts. {code}	1	1	https://issues.jboss.org/browse/JBEAP-3389
9579	JBEAP-3389	[~ochaloup]: Thanks for the explanation. I might rephrase it just a bit more. How is this: The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus Server, so there is no way to determine the database to which the XID belongs. If you define more than one data source for the same database in JBoss EAP, an in-doubt transaction recovery attempt could be run under wrong account, which causes the recovery to fail.	1	1	https://issues.jboss.org/browse/JBEAP-3389
9580	JBEAP-3374	[~tremes]: Can you please review the content in my merge request and let me know if it looks okay? Thanks!	1	1	https://issues.jboss.org/browse/JBEAP-3374
9581	JBEAP-3357	Hm ok....I overlooked this. Any suggestions how to rewrite this ? E.g "Weld should scan the archive to perform bean discovery" ?	1	1	https://issues.jboss.org/browse/JBEAP-3357
9582	JBEAP-3346	When will 5.0.8 be released?	1	1	https://issues.jboss.org/browse/JBEAP-3346
9583	JBEAP-3341	[~stalep] [~andy.miller] Can you please ack/nack/add labels as outlined in http://post-office.corp.redhat.com/archives/jboss-as/2017-March/msg00001.html	0	0	https://issues.jboss.org/browse/JBEAP-3341
9584	JBEAP-3306	[~ochaloup]: Where did you get the above code example? I am just curious if it has been tested. Some of the code seems incomplete. Here are a couple of examples. There is no definition for the `orb` variable referenced in this line: orb = com.arjuna.orbportability.ORB.getInstance("ClientSide"); This line does not assign the new object to a variable: new ContextPropagationManager();	1	1	https://issues.jboss.org/browse/JBEAP-3306
9585	JBEAP-3305	[~ochaloup]: Could you please review the procedure here and let me know your feedback: https://docs.google.com/document/d/1wCgjL-4Iqr4T4FmHEtd-L7khJo8uH8Wb-R7jPXNTOlY/edit#	1	1	https://issues.jboss.org/browse/JBEAP-3305
9586	JBEAP-3305	[~rhn-support-pnag] and [~ochaloup]: I commented in the merge request but it has already been merged and I don't want to lose the comment. I think it's the wording that is bothering me. It's isn't really narrowing the home interface, is it? Isn't it narrowing the reference to the home interface? For example: . Use the context lookup to narrow the reference to the `IIOPBeanHome` home interface. Or am I being too picky here? Also, if this change is made in another merge request, I would suggest changing the variable name for the Properties from "prope" to "props". That's the more common variable name used for properties. Thanks!	1	1	https://issues.jboss.org/browse/JBEAP-3305
9587	JBEAP-3305	[~rhn-support-pnag]: Sorry I didn't mention the "prope" variable name before. I had meant to, but I was too bothered by the phrasing in the "narrow" statement. Based on the reply by [~ochaloup], would you mind submitting the fixes to the 'narrowing' phrase and 'prope' I suggested above in another merge request?	1	1	https://issues.jboss.org/browse/JBEAP-3305

#	Requirement	Questions	Answered	Successfully Answered	URL
9588	JBEAP-3193	[~anrobert]: Do you think we should clone this issue so it can be tracked more easily? [~jstefl]: Can you clarify the following statement: * Connectors (mod_cluster, mod_jk, isapi, nsapi): mod_cluster,mod_jk are part of Apache HTTP Server delivered in separate product JBoss Core Services, isapi and nsapi are delivered with JBoss Core Serices as well. Can I just combine them into one statement and say the following: * The mod_cluster, mod_jk, isapi, and nsapi connectors are delivered with the product in a separate "JBoss Core Services" download.	1	1	https://issues.jboss.org/browse/JBEAP-3193
9589	JBEAP-3193	[~jstefl]: I'm not sure I'm clear what you are saying, particularly the 3rd bullet. Is the following okay? {code} Package JBoss EAP 6 JBoss EAP 7 AIO Natives for Messaging Delivered with the product in a The new ActiveMQ Artemis separate "Native Utilities" subsystem is included in the download JBoss EAP download. Note: The libraries are located in the JBoss EAP 7 org.apache.activemq.artemis module. {code}	1	1	https://issues.jboss.org/browse/JBEAP-3193
9590	JBEAP-3193	[~jstefl]: 1. The only reference I could find for JBoss Core Services was the link you provided here: https://access.qa.redhat.com/documentation/en/red-hat-jboss-core-services/version-1/apache-http-server-installation-guide/#about_red_hat_jboss_core_services. I don't see an equivalent product category on https://access.redhat.com/documentation/en/red-hat-jboss-core-services/. Do you know of a published link? 2. I thought you wanted me to mention the module location. I will simplify it. 3. Done!	1	1	https://issues.jboss.org/browse/JBEAP-3193
9591	JBEAP-3134	Let me summarize current situation: 1. For starting EAP as service via JSVC on RHEL or Solaris the "commons-daemon.jar" (name is only illustational) has to be delivered. 2. All combination of JSVC was not delivered in jbcs DR2.1, see JCSP-19 3. There was problem with naming of delivered bits, see JCSP-16 4. I expect JSVC (jar) will be delivered as part of jbcs in zip and rpm distro because jsvc was delivered via zip (it was in native utils) and rpm in EAP 6 as well. [~mladen.turk]: Could you please help us with construction of commands starting EAP as service with JSVC in EAP/standalone and domain mode? Any product specific scripts should be delivered with specific product. For example see handling of tooling for handling [EAP as Windows service|https://issues.jboss.org/browse/JBEAP-2735?focusedCommentId=13152301&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13152301].	1	1	https://issues.jboss.org/browse/JBEAP-3134
9592	JBEAP-3134	I am not sure the JBCS is the place to add this JAR, and we were actually told not to include it. Other consumers of JSVC (it is not only EAP) have their own version of commons-daemon.jar and if we ship our own it may cause class loader issues. Also, where would we instal it, as all consumers have different layouts (e.r. Wildfly and Tomcat)? AFAIK the Tomcats on JWS already have commons-daemon, so maybe EAP7 should ship as an optional RPM the commons-daemon to be used when JSVC is used. Not sure how to do that for the ZIP, maybe some optional ZIP as well. Or just include it on EAP from the starts. We need PMs input on this (JBCS, JWS, EAP).	1	1	https://issues.jboss.org/browse/JBEAP-3134
9593	JBEAP-3134	We'll create a jbcs-httpd24-apache-commons-daemon for that then. EAP7 customers will need to get that from the JBCS channel if they are using RPMs. And stick the .jar with the executables for the ZIP. A JBCS JIRA will be created for that. I still wonder... EAP6 and EWS are not the only consumers of JBCS. What happens if the product already has a commons-daemons.jar in the classpath?	0	0	https://issues.jboss.org/browse/JBEAP-3134
9594	JBEAP-3079	"Component Upgrade"? What gets upgraded? :-)	1	1	https://issues.jboss.org/browse/JBEAP-3079
9595	JBEAP-3079	[~baranowb], [~pgier] can you please comment on the state of the JIRA?	1	1	https://issues.jboss.org/browse/JBEAP-3079
9596	JBEAP-3067	[~pgier]: I was told this change made it into the ER4 release, so I updated the quickstart POM files to use the new GAV: <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-ejb-client-bom</artifactId> <type>pom</type> <scope>provided</scope> </dependency> <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-jms-client-bom</artifactId> <type>pom</type> </dependency> However, when I try to build the quickstarts, I get errors: 'dependencies.dependency.version' for org.jboss.eap:wildfly-ejb-client-bom:pom is missing. 'dependencies.dependency.version' for org.jboss.eap:wildfly-jms-client-bom:pom is missing. Have either the GA [1] or Staging [2] repository been updated with this change yet? [1] https://maven.repository.redhat.com/ga/ [2] http://jboss-developer.github.io/temp-maven-repo/	1	1	https://issues.jboss.org/browse/JBEAP-3067
9597	JBEAP-3067	[~pgier]: I thought that was the purpose of the staging repository. We update that repository with changes needed for the public version of the quickstarts [1]. [~rafabene]: Is that your understanding of the purpose of that repository? I don't think I can make this change until that is done. And I usually cherry-pick the changes to the product version. Is there a reason we can't update the staging repository?	1	1	https://issues.jboss.org/browse/JBEAP-3067
9598	JBEAP-3061	I tried to set auto-create-jms-queues to true and auto-delete-jms-queues to false. When I try to send message to non-existent queue then queue is created and consumer is able to receive this message. Problem occurs after the consumer was closed. Queue was deleted despite the fact that auto-delete-jms-queues is set to false. I'm not sure if it's problem in Artemis or integration. Providing reproducer below. How to run the test locally: {code} git clone git://git.app.eng.bos.redhat.com/jbossqe/eap-tests-hornetq.git cd eap-tests-hornetq/scripts/ git checkout refactoring_modules groovy -DEAP_VERSION=7.0.0.ER5 PrepareServers7.groovy export WORKSPACE=$PWD export JBOSS_HOME_1=$WORKSPACE/server1/jboss-eap export JBOSS_HOME_2=$WORKSPACE/server2/jboss-eap export JBOSS_HOME_3=$WORKSPACE/server3/jboss-eap export JBOSS_HOME_4=$WORKSPACE/server4/jboss-eap cd ../jboss-hornetq-testsuite/ mvn clean test -Dtest=AutoCreateQueueTestCase#testAutoDeleteQueueDisabled -DfailIfNoTests=false -Deap=7x | tee log {code}	0	0	https://issues.jboss.org/browse/JBEAP-3061
9599	JBEAP-3061	[~jbertram] Could you please have a look at this issue please? I quickly looked at https://github.com/rh-messaging/jboss-activemq-artemis/commit/e293d80f08de58e4ce2bafd9d63c1a4185e079a9 and artemis code base and I see no use for AddressSettings#isAutoDeleteJmsQueues(). Is the deletion of auto-created jms queue implemented?	1	1	https://issues.jboss.org/browse/JBEAP-3061
9600	JBEAP-3050	[~jstefl], I just wanted to make sure: I was previously told that Apache HTTP Server from JBoss Web Server 3 was also going to be supported for use with EAP 7. Is this still correct?	1	1	https://issues.jboss.org/browse/JBEAP-3050
9601	JBEAP-3050	[~dmichael]: I'm not clear which topic you mean. Are you referring to the topic shared between the Release Notes and the Migration Guide or a different topic? Either way, if you understand what needs to be done, please submit a merge request and I will be happy to review it.	1	1	https://issues.jboss.org/browse/JBEAP-3050
9602	JBEAP-3050	Hi Jan, How does this sound: {code} * The Apache HTTP server from JBoss Core Services does not include support HP-UX. If you need to configure load balancing for JBoss EAP 7 instances running on HP-UX servers, you have two choices: 1. You can configure the JBoss EAP 7 instance as a load balancer on the HP-UX server. For details, see Configuring {ProductShortName} as a Front-end Load Balancer. 2. You can deploy Apache HTTP server on a machine that is supported and certified and then run the load balancer on that machine. {code}	1	1	https://issues.jboss.org/browse/JBEAP-3050
9603	JBEAP-3028	Does this tag make it to be in EAP 7.0.0.ER5?	0	0	https://issues.jboss.org/browse/JBEAP-3028

#	Requirement	Questions	Answered	Successfully Answered	URL
9604	JBEAP-2998	[~gaol] I don't get it :) The PR linked here only adjusts a testcase, but where's the code which added the {{--connection-properties}} parameter? Am I blind?	1	1	https://issues.jboss.org/browse/JBEAP-2998
9605	JBEAP-2990	[~clebert] I'm willing to take a look at that for you, but could you point me to the right direction ? Maybe I am wrong, but given your description, it sounds like you have clear idea on where, in the code, the changes needs to be done, and how those unwanted calls could happen...	1	1	https://issues.jboss.org/browse/JBEAP-2990
9606	JBEAP-2931	Hi Mansi, can you please add one additional check? Installer should not allow user to add more modules in case that pool of Codes for given element is empty. Testing this on authentication element option, trying to add another module once the all code were selected by previous modules Installer simply skip to JSSE panel. {noformat} Operation qwe=asd [PermitAll, Required, asd=qwe] [DenyAll, Required, asd=zxc] [Delegating, Required, asd=qwe] [Web, Required, asd=qwe] [JACC, Required, qwe=asd] [XACML, Required, qwe=asd] Enter 1 to accept, 2 Add Module, 3 Remove Module 2 Code JSSE Configuration {noformat} Apart from this, all changes looks good to me. Thanks, Petr	1	1	https://issues.jboss.org/browse/JBEAP-2931
9607	JBEAP-2931	Hi Petr, Is it alright if when all codes are selected, it simply prints an error if the user tries to add another module? Something like "You cannot add more modules." This is what it would look like {noformat} ... Enter 1 to accept, 2 Add Module, 3 Remove Module 2 You cannot add more modules. [DenyAll, Required, sdfsd=sdf] [PermitAll, Required, sdf=sdf] [Delegating, Required, sdf=sdf] [Web, Required, sdf=sdf] [JACC, Required, sdf=sdf] [XACML, Required, asd=asd] Enter 1 to accept, 2 Add Module, 3 Remove Module {noformat}	1	0	https://issues.jboss.org/browse/JBEAP-2931
9608	JBEAP-2929	[~kabirkhan] or [~ppenicka]: Can you correct the Target Release on this to 7.1.0? [~jpallich] has probably PTO ...	0	0	https://issues.jboss.org/browse/JBEAP-2929
9609	JBEAP-2897	[~johnathonlee] [~jolee] [~gaol] The PR is for 7.1.0. Should the target release of this Jira be changed?	1	1	https://issues.jboss.org/browse/JBEAP-2897
9610	JBEAP-2897	[~rsvoboda] The PR is for 7.1.0. Should the target release of this Jira be changed?	1	1	https://issues.jboss.org/browse/JBEAP-2897
9611	JBEAP-2858	[~lcosti.redhat], [~dmichael], Thank you for this JIRA. There are some other reported issues in Release Notes. I think we should track all of them here. What do you think? If you agree, I will link all open RN issues to this one.	0	0	https://issues.jboss.org/browse/JBEAP-2858
9612	JBEAP-2789	[~emmartins]: I created a topic for migration of the `threads` subsystem, but can not find anything on the updates to Infinispan 4.0. Do you know who can help me with this one?	1	1	https://issues.jboss.org/browse/JBEAP-2789
9613	JBEAP-2789	[~pferraro] or [~emmartins]: Is there any information available about the important changes to the Infinispan subsystem? I don't see anything in the community docs here: https://docs.jboss.org/author/display/WFLY10/Admin+Guide	1	1	https://issues.jboss.org/browse/JBEAP-2789
9614	JBEAP-2786	{quote} I believe this belongs in the Configuration Guide, not the Migration Guide. {quote} Yes, the correct place for that is Configuration Guide, but the stack is now configured on a {{channel}} element instead of {{subsystem}}. I see the commit contains a link to Configuration Guide, so that's fine by me. {quote} The Migration Guide contains a section on threads subsystem changes here: {quote} In that case, there's no change needed for JGroups topic. {quote} Where do you see that thread-factory is deprecated? {quote} It is in the output of the following CLI command when EAP is started with HA capabilities ({{./standalone.sh -c standalone-ha.xml}}): {code} /subsystem=jgroups/stack=udp/transport=UDP:read-resource-description(recursive=true) {code} The output contains the following: {code} "thread-factory" => { "type" => STRING, "description" => "The thread factory to use for handling asynchronous transport-specific tasks.", "expressions-allowed" => false, "nillable" => true, "min-length" => 1L, "max-length" => 2147483647L, "deprecated" => { "since" => "3.0.0", "reason" => "Deprecated. Supports EAP 6.x slaves." }, "access-type" => "read-write", "storage" => "configuration", "restart-required" => "no-services" }, {code} I think the project documentation hasn't been updated since this changed. I'll reopen the Jira due to this, but the commit looks good otherwise.	0	0	https://issues.jboss.org/browse/JBEAP-2786
9615	JBEAP-2766	According to discussion in https://gitlab.cee.redhat.com/red-hat-jboss-enterprise-application-platform-documentation/eap-documentation/merge_requests/930 , section Unsupported and Deprecated functionality will be created. Currently, the note about unsupported org.jboss.genericjms module is placed under Pruning heading, but it would be much better to have it in section Unsupported and Deprecated functionality. Could you please move it there? Question about section https://access.qa.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/configuration-guide/#configure-generic-jms-resource-adapter is still open. Is it OK to keep section in and add note that it is unsupported?	0	0	https://issues.jboss.org/browse/JBEAP-2766
9616	JBEAP-2758	MR looks good, I only have one comment. Saying "Consider how to approach the migration of large managed domains that include hundreds of hosts" sounds weird for people that don't operate such domains. I'd reword like this: "If you operate a large managed domain (say 10s of hosts or more), consider how to approach gradual migration." We should have a dedicated chapter on this ourselves, but for now, a sentence like this will have to suffice :-) Also, we should say something about migrating a cluster. As I commented above, there's a topic about this in the Patching Guide that we can reuse. Here's how I'd like to proceed: let's fix the few things I mentioned above and then consider this JIRA resolved. For additional topics that require more detail, I'll file other JIRAs. I already filed JBEAP-3715 for gradual migration of large domain. What other topics do you think we need to cover and need help from other parties (developers, consultants, ...)? The recommended practices?	1	1	https://issues.jboss.org/browse/JBEAP-2758
9617	JBEAP-2758	[~lthon]: We do not use parenthesis in running text in our documentation. That is why I modified your suggestions of "If you operate a large managed domain (say 10s of hosts or more), consider " to say "If you are currently running a large managed domain consisting of 10 or more hosts, consider..." They both state pretty much the same thing. If we don't want a hard limit, we should not include it in the text at all. I would suggest we just say: "If you are currently running a large managed domain, consider a gradual migration approach." Does that work for you?	1	1	https://issues.jboss.org/browse/JBEAP-2758
9618	JBEAP-2584	How many/which artifacts does this affect ? If this 'leak' into artifacts used in examples and quickstarts we are looking at a rather massive impact and a direct opposition for the assumption used for the rules/guidelines for Project Wolf/Enterprise Maven repo.	1	1	https://issues.jboss.org/browse/JBEAP-2584
9619	JBEAP-2584	Do you have a matching PR for all the quickstarts to illustrate the impact this will have for users, documentation, examples and tools ?	1	1	https://issues.jboss.org/browse/JBEAP-2584
9620	JBEAP-2584	What are they being renamed from? I presume this breaks maven's conflict detection? If a wildfly and eap dependency that contain the same packages/classes are in the same dependency tree, then they end up both on the classpath (no conflict detection), so arbitrarily one will win. On BRMS/BPMS we make each war in a way that it deploys to both WildFly 10 and EAP 7 (or even EAP 6). Our current approach is very brittle. Is there a documented, recommended approach for that? If this issue means we need different dependency sets to support both WildFly 10 and EAP 7, especially different groupId/artifactId's of those dependencies (so this leaks beyond dependencyManagement), then this can make it very difficult for us to keep supporting both platforms - and therefore test against both platforms.	0	0	https://issues.jboss.org/browse/JBEAP-2584

#	Requirement	Questions	Answered	Successfully Answered	URL
9621	JBEAP-2584	This change [1] was applied to the product version of the quickstarts [2]. I originally thought the change had to be back-ported to the development branch of the quickstarts [3] after the 7.0.0.GA Maven repository was delivered, but I now question whether this is correct. When I cherry-pick the commit back to this branch, the quickstarts don't build because the BOMs in the development repository do not contain the correct version of the artifacts. [~pgier] and I discussed this and we both think that maybe this does not need to be ported back to the development quickstarts. Can someone please clarify whether the development quickstarts should be using the `org.jboss.eap` group ID? [1] https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be [2] https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.0.x [3] https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.1.x-develop cc @paul gier, [~rafabene], [~rsvoboda], [~nziakova]	1	1	https://issues.jboss.org/browse/JBEAP-2584
9622	JBEAP-2529	I am not sure they should be stored in the history. Does any other shell add commands from executed scripts to the command history?	0	0	https://issues.jboss.org/browse/JBEAP-2529
9623	JBEAP-2529	[~jpallich] I would like to set QA_NACK to this jira, because this jira is "Feature Request". And feature requests shouldn't be filled in JPEAt jira project. But "CDW Engine" remove my QA_NACK. Do you know what I need to do for setting QA_NACK?	1	1	https://issues.jboss.org/browse/JBEAP-2529
9624	JBEAP-2529	[~baranowb]: Ok, can you please set "target release" and "Affects Version"? I recommend to move this jira to EAP7/PRODMGT project. AFAIK, JBEAP jira project shouldn't contain feature requests.	1	1	https://issues.jboss.org/browse/JBEAP-2529
9625	JBEAP-2516	[~dmlloyd] the PR seems to have been merged without attention to your comment https://github.com/jbossas/jboss-eap7/pull/143/files#r48203353 -- is it still a valid concern?	1	1	https://issues.jboss.org/browse/JBEAP-2516
9626	JBEAP-2516	Ok if you are saying that the line-swap is fine, I don't object. I just didn't want to close this until we resolve concerns about the correctness, but I don't understand that code enough to be able to determine it myself. Could someone please provide the devel_ack? Then we'll move it forward, it is already in ER4.	0	0	https://issues.jboss.org/browse/JBEAP-2516
9627	JBEAP-2463	Since EAP 7.0.0.ER5 already contains Weld 2.3.2.Final (or rather 2.3.2.Final-redhat-1.jar), shouldn't this issue be resolved?	1	1	https://issues.jboss.org/browse/JBEAP-2463
9628	JBEAP-2456	Is this still valid ? The text appear correctly for me (Chrome and Firefox), see runtime_tx.png attached. I would like to close as Will not fix.	0	0	https://issues.jboss.org/browse/JBEAP-2456
9629	JBEAP-2443	[~jmesnil] Hi, is fix version for this upgrade 7.0.0.ER4?	1	1	https://issues.jboss.org/browse/JBEAP-2443
9630	JBEAP-2418	Regression definition = the user configures semaphores to be unfair, but that doesn't take any effect and the semaphores stay fair, therefore the performance benefit will not occur. We need to be sure that this won't happen. Can performance team ensure this?	0	0	https://issues.jboss.org/browse/JBEAP-2418
9631	JBEAP-2351	I assume that pressing the "OK" will continue the installation, correct? In that case how about we add something like "Do you wish to use the password anyway?" to the dialogue?	1	1	https://issues.jboss.org/browse/JBEAP-2351
9632	JBEAP-2283	Have you tried the operation /subsystem=messaging-activemq/server=default:import-journal ? It should be able to take a xml dump from HornetQ (EAP6) and import it into Artemis (EAP7)	1	0	https://issues.jboss.org/browse/JBEAP-2283
9633	JBEAP-2240	When could we expect this upgrade please?	0	0	https://issues.jboss.org/browse/JBEAP-2240
9634	JBEAP-2224	Thanks [~bilge] and [~jesper.pedersen] for the acks. Anyone any idea why the issue moved to New/Unresolved once all the acks were in? /cc [~jason.greene]	1	1	https://issues.jboss.org/browse/JBEAP-2224
9635	JBEAP-2214	[~okalman] Please note that the forward-when-no-consumers attribute is no longer used and is replaced by the message-load-balancing-type (see ARTEMIS-19). The current setup uses the default for message-load-balancing-type (ON_DEMAND) which is the same behaviour than forward-when-no-consumers=false I'm not sure if the configuration is correct. Why does the server #4 (which is the target of the bridges) define broadcast-group/discovery-group and a cluster-connection? From the test description, the cluster is formed of server #1 & #3 but not #4.	1	1	https://issues.jboss.org/browse/JBEAP-2214
9636	JBEAP-2158	You need to explain a little how these numbers have been captured. What exact process has been monitored (i.e. selenium process or actual browser)? How did you record the heap useage (tools, etc)?	1	1	https://issues.jboss.org/browse/JBEAP-2158
9637	JBEAP-2158	Did you compare it to other browsers in such an environment?	1	1	https://issues.jboss.org/browse/JBEAP-2158
9638	JBEAP-2064	Why would you split them further? Note I've organized the current module structure essentially in two categories: # the ones the end user code needs directly (contains API) # the ones which shouldn't be used directly (for example the backwards compatibility codecs) but need to be picked up by lucene-core and Hibernate Search Please keep in mind this module structure is maintained for both Hibernate Search (upstream and EAP) and Infinispan (upstream and JDG product). If given suggestions I'm happy to make changes but would prefer to do them upstream first.	1	1	https://issues.jboss.org/browse/JBEAP-2064
9639	JBEAP-2064	Note that we are talking about the way it is delivered in .rpm files. (I've adjusted the Summary to reflect that now, sorry). "Why would you split them further?" Because QE doesn't like the unused JARs to be installed anywhere in the system when the Server does not use them. We can't avoid this completely, but when we split the JARs between separate .rpm files we can avoid shipping some of these. "BTW We removed dependencies to Solr a long time ago." That is another JAR we need to have in a separate sub package. The way it was done now was not to include it in the RPM which is a bad way as prevents another product to re-use the RPM if it needs lucene-solr.	1	1	https://issues.jboss.org/browse/JBEAP-2064
9640	JBEAP-2020	Hi, please, what is status of this jira? It seems that Narayana 5.2.8.Final is part of the EAP7 ER3 but the fix version here or status to 'Ready for QA' is not changed. Thanks Ondra	1	1	https://issues.jboss.org/browse/JBEAP-2020
9641	JBEAP-1916	I checked Chapter 3. Configuring Destinations and I have few notes: * in section 3.3 there is no explanation for attributes queue-address, entries, durable, legacy-entries and selector. What are entries, why can we have more entries, what do entries mean for application developer, etc * which differences are between entries in the example (queue/myQueue jms/queue/myQueue java:jboss/exported/jms/queue/myQueue), why do we have various prefixes, especially java:jboss/exported	0	0	https://issues.jboss.org/browse/JBEAP-1916
9642	JBEAP-1915	First, I don't get why the content about configuration options should be placed in development guide? Why would we want this duplicated in configuration and in development guide? I think that simply something similar to this will be enough for development guide: {code:java} There are several configuration options that can help setup your application or help in your development process (ie. logging). For configuration options of webservices subsystem please consult Configuration guide, chapter xxx. {code} Second, even if it is acked to be placed in Development guide for webservices, is should be distinguished JAX-WS related things from JAX-RS related things, ie. configuring webservices subsystem should be moved within JAX-WS related chapters, as mentioned in JBEAP-2723	0	0	https://issues.jboss.org/browse/JBEAP-1915
9643	JBEAP-1905	[~rhusar], [~pferraro], how can this JIRA be resolved when it lacks the qa_ack+ ? The "workaround / hack" of closing and reopening the bug is meant for situation when you want to start to work on an issue before all the acks are provided. Resolved == MODIFIED in Bugzilla. It is not possible to move bugs to Resolved status without qa_ack. Reopening.	1	1	https://issues.jboss.org/browse/JBEAP-1905

#	Requirement	Questions	Answered	Successfully Answered	URL
9644	JBEAP-1905	This is already fixed and merged. The QA ack was automatic when moving from WFLY to JBEAP. What is your goal here?	0	0	https://issues.jboss.org/browse/JBEAP-1905
9645	JBEAP-1856	[~wolfc] - is the fixVersion intentional? I think it needs a target release instead?	0	0	https://issues.jboss.org/browse/JBEAP-1856
9646	JBEAP-1856	[~jmesnil] This jira seems to be out-of-date. Can it be closed?	1	1	https://issues.jboss.org/browse/JBEAP-1856
9647	JBEAP-1829	[~anrobert]: I'm not clear what content needs updating for the QA automated testing? [~nziakova]: Do you know what is needed here?	1	1	https://issues.jboss.org/browse/JBEAP-1829
9648	JBEAP-1758	[~mnovak] what's the status of this issue? the underlying issue in Artemis has been fixed some times ago. Is it still an issue or did the resolution slips through the cracks?	1	1	https://issues.jboss.org/browse/JBEAP-1758
9649	JBEAP-1667	[~bmaxwell]: I've updated the implicit dependency list via [JBEAP-2361|https://issues.jboss.org/browse/JBEAP-2361] with details from the spreadsheet you'd shared: [EAP 6.4.x Implicit Dependencies|https://docs.google.com/spreadsheets/d/1qx_HM9JZDeratNdU7KmB8iZzc5N2lv0zwsaPiWC6cnc/edit#gid=0] Could you please confirm if CMP or any other module/subsystem in the spreadsheet is not included in EAP 7? https://docs.google.com/spreadsheets/d/1qx_HM9JZDeratNdU7KmB8iZzc5N2lv0zwsaPiWC6cnc/edit#gid=0	1	1	https://issues.jboss.org/browse/JBEAP-1667
9650	JBEAP-1667	[~bmaxwell]: I've updated the 'Implicit Module Dependencies' table for EAP 7. Following are the changes made: * Removed the subsystems that are no longer there: CMP; JacORB; JAXR; Messaging; Threads; Web * Updated the subsystems that have been changed: Messaging to Messaging-ActiveMQ; Web to Undertow * Added newly added subsystems: Batch-JBeret; IIOP-OpenJDK * Added dependencies for the newly added subsystems with inputs from the source. Could you please review the changes below and confirm? Thanks! https://gitlab.cee.redhat.com/nchaudha/eap-documentation/blob/9b50b46b8f71d563d30dd1a9e50bbeedb12d36c0/docs/topics/4353.adoc	1	1	https://issues.jboss.org/browse/JBEAP-1667
9651	JBEAP-1667	[~bmaxwell] Also, could you please confirm if the '{{org.jboss.as.jacorb}}' dependency under EJB3 subsystem needs to be updated/removed? I checked in the source and it's still listed there even though JacORB is no longer supported.	1	1	https://issues.jboss.org/browse/JBEAP-1667
9652	JBEAP-1667	[~bmaxwell]: Let me take a stab at it. {code} JSF (Java Server Faces) Subsystem org.jboss.as.jsf jsf-api jsf-impl The package dependencies listed above are added if the WAR `web.xml` does not bundle JSF. The module slot added for the package dependencies listed below depends on the `web.xml`. javax.faces.api com.sun.jsf-impl {code} Does that sound right?	1	1	https://issues.jboss.org/browse/JBEAP-1667
9653	JBEAP-1667	[~nids1409]: Did you my comment in your merge request and [~bmaxwell]'s comments above? At the minimum, WAR and JSF need to be capitalized. This may also need some rewording. I will try to get to it today.	1	1	https://issues.jboss.org/browse/JBEAP-1667
9654	JBEAP-1667	[~nids1409] Looking at my notes now, it seems that I messed some dependencies in my previous comment. I'm sorry about that. in EE subsystem I forgot to mention that dependency {{org.hibernate.validator}} should be removed too. also I suggested to remove {{org.jboss.resteasy.resteasy-atom-provider}} from JAX-RS, but it is valid dependency, could you please re-add it? Again I'm sorry about these inaccuracies.	1	1	https://issues.jboss.org/browse/JBEAP-1667
9655	JBEAP-1604	Sounds to me like your asking for certain HHH fixes to be included in EAP 7. I think that the individual (JBEAP-1596, JBEAP-1460, JBEAP-1595) jiras should be assigned to someone that is doing the back porting of fixes for EAP 7. [~gbadner] should this jira be assigned to you? Or directly to David Stahl?	1	1	https://issues.jboss.org/browse/JBEAP-1604
9656	JBEAP-1604	All of the "incorporates" links have already been fixed in Hibernate ORM 5.0.2, so there is nothing listed that needs to be backported; they will already be fixed when updated to Hibernate ORM 5.0.3.Final. Scott Marlow, I have not been involved in getting new versions incorporated. Should I be? Let's discuss offline	0	0	https://issues.jboss.org/browse/JBEAP-1604
9657	JBEAP-1360	[~martyn-taylor] You're right. This was issue with the test. I've fixed it in the test suite. There is a question: I've tried to remove backup connector from configuration of core bridge so there was just connector to live server. If core bridge is configured with ha=true, should it receive live/backup pair topology and failover to backup without the need to have static connector to backup configured? Decreasing priority as reported issue is not valid.	1	1	https://issues.jboss.org/browse/JBEAP-1360
9658	JBEAP-1360	[~jmesnil] Jeff. When the connectors are set up, the ActiveMQServerService is doing an address resolution for loopback interfaces. This is causing problems when configuring static connectors. In order for Artemis to assume 2 TransportConfigurations are the same, the params must be equal. Since, WildFly is replacing the host="localhost.localdomain" when the server bind address is 127.0.0.1. Configuring a static connector with 127.0.0.1 means that the resulting TransportConfigurations are different. See above. This is causing failover to stop working on bridges with single static connector configured. Is there any reason for doing this? I am not sure if this is a bug in the WildFly code or if there is some policy to always use "localhost.localdomain"? {code:title=ActiveMQServerService.java|borderStyle=solid} // resolve the host name of the address only if a loopback address has been set if (sa.getAddress().isLoopbackAddress()) { host = NetworkUtils.canonize(sa.getAddress().getHostName()); } else { host = NetworkUtils.canonize(sa.getAddress().getHostAddress()); } {code} There is an additional problem here, I think either through the management interface or the tests where an additonal property is being set on the static connector "localAddress".	1	1	https://issues.jboss.org/browse/JBEAP-1360
9659	JBEAP-1360	[~jmesnil][~martyn-taylor]] Thanks for looking at this! I understand this way is correct. My concern is usability as it's not intuitive. I've never tried to even set {{local-destination-outbound-socket-binding}} with EAP 6/7 and did not know its existence. Is there a way to make it simple and use just socket-binding for remote-connector in live server?	1	1	https://issues.jboss.org/browse/JBEAP-1360
9660	JBEAP-1360	[~jmesnil] What do you think of the changes? It's usability problem.	1	1	https://issues.jboss.org/browse/JBEAP-1360
9661	JBEAP-1360	[~jmesnil] Hi Jeff, I can see that this was changed from bug to feature request. From usability point of view this seems to be bug. wdyt?	0	0	https://issues.jboss.org/browse/JBEAP-1360
9662	JBEAP-1291	The DR13 installer still contains checks for services running on conflicting ports, even though this enhancement obsoletes the checks. Possibly create a new JIRA?	0	0	https://issues.jboss.org/browse/JBEAP-1291
9663	JBEAP-1281	Hi Petr, Which VM are you testing this on? I'm testing on W10 and in some cases, I do see the path reselection; however, complications with aesh make it difficult to test. I believe there are some conditions on windows in which we will see this issue reproduced, but not all. We need to narrow down the reproduction procedure. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBEAP-1281

#	Requirement	Questions	Answered	Successfully Answered	URL
9664	JBEAP-1281	Seems there is still something wrong, in some cases installer doesn't offer reselecting target and instead ends with {{XML not written successfully}} Checked inputs: PASS 1) Unwritable location provided: G:\auto.xml or /root/auto.xml PASS 2) Directory provided: C:\tmp or /home/jbliznak PASS 3) Relative location: auto.xml PASS 4a) Existing file on local filesystem: C:\test\existing.xml or /home/jbliznak/existing.xml FAIL 4b) Existing file (not writable) on local filesystem C:\test\existing-nowritable.xml or /home/jbliznak/existing-nowritable.xml 5) Writing to network drive (windows): FAIL 5a) new file H:\home\hudson\jbliznak\users-tmp\auto.xml PASS 5b) Existing file H:\home\hudson\jbliznak\users-tmp\existing.xml FAIL 5c) Existing file (not writable) H:\home\hudson\jbliznak\users-tmp\existing-nowritable.xml ad 4b) this issue is for both, Windows and Linux platforms. 5c) seems to be the same problem - missing check after user select to overwrite. {code:java} [jbliznak@erebos-rh installer]$ sudo touch /home/jbliznak/existing-nowritable.xml [jbliznak@erebos-rh installer]$ ll /home/jbliznak/existing-nowritable.xml -rw-r--r--. 1 root root 0 29. bře 15.55 /home/jbliznak/existing-nowritable.xml ..... Would you like to generate an automatic installation script and properties file? (y/n) [n]: y Select path for the automatic installation script: [/home/jbliznak/test/EAP-7.0.0/auto.xml] /home/jbliznak/existing-nowritable.xml File already exists, would you like to overwrite it? (y/n) [n]: y XML not written successfully. [Console installation done] [jbliznak@erebos-rh installer]$ cat /home/jbliznak/existing-nowritable.xml [jbliznak@erebos-rh installer]$ {code} {code:java} Would you like to generate an automatic installation script and properties file? (y/n) [n]: y Select path for the automatic installation script: [C:\Users\Administrator\Deskt op\.\test-console\EAP-7.0.0\auto.xml] H:\home\hudson\users-tmp\jbliznak\existing-nowritable.xml File already exists, would you like to overwrite it? (y/n) [n]: y XML not written successfully. [Console installation done] {code} ad 5a) [~thauser] you wrote in JBEAP-3580, that you were unable to write the file even when checks say "OK to write", [~pkremens] on the other hand was able to write it. I am using the very same command he provided and I am also unable to write the file {code:java} Select path for the automatic installation script: [C:\Users\Administrator\Desktop\.\test-console\EAP-7.0.0\auto.xml] H:\home\hudson\users-tmp\jbliznak\auto.xml Cannot write to path, please choose another location. {code} This is something strange, I am able to create/edit files/dirs on that network drive, but installer says no in this case (although it is ok with 5b). In any case, would it be possible to extend the check and offer the reselection if the file was unable to write (although other checks claimed it should be writable)?	1	1	https://issues.jboss.org/browse/JBEAP-1281
9665	JBEAP-1093	This functionality works correctly in standalone.sh and standalone.ps1. This functionality don't work on bat script. Is it correct behaviour? If yes, this should be mentioned in documentation (documentation jira should be created now).	1	1	https://issues.jboss.org/browse/JBEAP-1093
9666	JBEAP-1093	[~jpallich] or [~ppenicka]: Can you correct the Target Release on this to 7.1.0?	0	0	https://issues.jboss.org/browse/JBEAP-1093
9667	JBEAP-1006	Yes that's it. Thanks [~jmesnil]!	0	0	https://issues.jboss.org/browse/JBEAP-1006
9668	JBEAP-760	Hi Pavel, I couldn't reproduce the problem, can you elaborate on how to reproduce it ?	1	0	https://issues.jboss.org/browse/JBEAP-760
9669	JBEAP-760	Can this issue be closed ?	0	0	https://issues.jboss.org/browse/JBEAP-760
9670	JBEAP-732	Can you guys do some proper clean up? Which version it affects, which version it's fixed, etc.	0	0	https://issues.jboss.org/browse/JBEAP-732
9671	JBEAP-523	[~rafabene]: Is this an issue with the QS tools Maven plugin? I see that Darran replaced the private API with the public API in this quickstart on Mar 13, 2014 with this commit: https://github.com/jboss-developer/jboss-eap-quickstarts/commit/9be73458bfc1cd909a19f5f1c175fbd0fe5b8160	1	1	https://issues.jboss.org/browse/JBEAP-523
9672	JBEAP-523	[~dlofthouse] or [~darranl]: See Rafael's comment above. You fixed this quickstart over a year ago. Do you know why these classes are still marked as private?	1	1	https://issues.jboss.org/browse/JBEAP-523
9673	JBEAP-523	[~bdaw]: There is a long history related to the use of private APIs in this quickstart and I thought it was resolved for JBoss EAP 6.3.1. These were the issues for this quickstart and as you can see, they are marked resolved. * https://issues.jboss.org/browse/EAP6-69 * https://issues.jboss.org/browse/EAP6-136 See [~rafabene]'s comment above. Do you know why these classes are still marked private?	1	1	https://issues.jboss.org/browse/JBEAP-523
9674	JBEAP-523	I took a look and I saw that `org.jboss.as.core.security` is private on the module `org.jboss.as.core-security` but `org.jboss.as.core.security.api` from `org.jboss.as.core-security-api` module is marked as "deprecated". [~sgilda]. Does QSTools still complaining about those imports? From my perspective it looks like org.jboss.as.security.api.* is a valid import	1	1	https://issues.jboss.org/browse/JBEAP-523
9675	JBEAP-459	Shouldn't those be returned by /subsystem=messaging-activemq/server=default:read-children-names(child-type=ha-policy) ? Which is what CLI tab-completion relies upon in this case.	0	0	https://issues.jboss.org/browse/JBEAP-459
9676	JBEAP-385	Petr, can you close this one as a duplicate? It's older than JBEAP-2529 but the other one has more data on it.	1	0	https://issues.jboss.org/browse/JBEAP-385
9677	JBEAP-235	Hi [~swd847], I have successfully verified support for options C, L, N and S (their respective form in Undertow predicate language). Alhough I am in trouble to verify options E and NE. Regarding to E: I have tried to create rewrite rule where I first define some env variable and then use that variable to determine what kind of rewrite should be used. My particular expression in expression-filter looks like this: {code} set(attribute='%{r,myvar}',value='myval'); equals('${ENV:myvar}',myval)->rewrite(/jboss-helloworld/second.html) else rewrite(/jboss-helloworld/third.html) {code} Output of this should be rewrite to 'second.html' page but unfortunatelly it seems that 'myvar' is not set. I think I am missing something here - did I misunderstand how this should work? Regarding to NE: does that mean that user can specify whether not to use URI escaping rules only when using rewrite handler, not in expression in predicate logic? Could you please provide more info for me? Thanks	1	1	https://issues.jboss.org/browse/JBEAP-235
9678	JBEAP-235	Thank you [~swd847] for your answer. Regarding to E: unfortunatelly I am still not able to make it working. When I try with {code}${r, myvar}{code} I get following error: {code} [standalone@localhost:9990 /] /subsystem=undertow/configuration=filter/expression-filter=envvar:write-attribute(name=expression,value="set(attribute='%{r, myvar}', value='myval'); equals('${r, myvar}','myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')") { "outcome" => "failed", "failure-description" => "WFLYCTL0211: Cannot resolve expression 'set(attribute='%{r, myvar}', value='myval'); equals('${r, myvar}','myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')'", "rolled-back" => true } {code} Well, when I use {{%}} instead of {{$}} then command succeed (although guess this is not correct input): {code} /subsystem=undertow/configuration=filter/expression-filter=envvar:write-attribute(name=expression,value="set(attribute='%{r, myvar}', value='myval'); equals('%{r, myvar}','myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')") {code} - after reload this still is not working -> still redirected to {{third.html}}. Could you please tell me what else am I doing wrong? Thanks. Regarding to NE: ok. I have checked that now URL encoding does not apply when using in rewrite predicate so user can do it manually.	1	1	https://issues.jboss.org/browse/JBEAP-235

#	Requirement	Questions	Answered	Successfully Answered	URL
9679	JBEAP-235	Hi [~swd847], I've just realized I have marked different Stuart Douglas in previous comment. Therefore now hopefully this will ping you - could you please look and see what am I doing wrong in previous comment regarding to setting own servlet request attribute? Thank you.	1	1	https://issues.jboss.org/browse/JBEAP-235
9680	JBEAP-176	[~jmesnil] After the long discussion in the cloned WFLY jira, I assume the only way to fix would be adding javax.jms.api to global modules. Is this correct, and is this a desired thing in Wildfly? Should this be discussed with someone else from Wildfly/EAP team before fixing or deciding to keep it in the backlog?	1	1	https://issues.jboss.org/browse/JBEAP-176
9681	JBEAP-143	What's the best component for this? Productization? RPM?	0	0	https://issues.jboss.org/browse/JBEAP-143
9682	JBEAP-142	What's the best component for this? Productization? RPM?	0	0	https://issues.jboss.org/browse/JBEAP-142
9683	JBEAP-117	This is reading like a feature request so as Brian says this is the wrong place - can we get this one closed?	0	0	https://issues.jboss.org/browse/JBEAP-117
9684	JBEAP-62	This was intended for JBoss EAP 6.1 as the comment above states. Can it be moved?	1	1	https://issues.jboss.org/browse/JBEAP-62
9685	JBEAP-52	Is it any workaround for this issue? We are migrating to jboss 7.2 and we have a big number of unicast remote objects, so it's really critical for us.	1	1	https://issues.jboss.org/browse/JBEAP-52
9686	JBEAP-31	How is this class packaged in the project? Are you sure it is not packaged twice?	1	1	https://issues.jboss.org/browse/JBEAP-31
9687	JBEAP-31	Do you have a reproducer for this issue?	0	0	https://issues.jboss.org/browse/JBEAP-31
9688	JBPAPP-11240	[~raggz] I can see that this is not built as roll-up patch as we usually do for HornetQ. Could you built it as roll-up patch as we did for JBPAPP-11226, please?	0	0	https://issues.jboss.org/browse/JBPAPP-11240
9689	JBPAPP-11214	multithreaded application. I tried running the reproducer against EAP 5.1.2 and it worked correctly there. I tried "patching" 5.0.1 by using jbosscx-client.jar and jboss-common-jdbc-wrapper.jar from a 5.1.2.GA distribution and it worked correctly too. I have a heavy suspicion that https://issues.jboss.org/browse/JBPAPP-3970 is the cause -- it needs to be backported to this patch too. The description of JBPAPP-3970/JBAS-7811 fits my testing logs very well: From the server log - two client threads get assigned connections with the same hashCode, so it is stored only once in the WrapperDataSourceService. {noformat} 10:01:51,723 DEBUG [WrapperDataSourceService] Created Connection proxy for invoker=jboss:service=invoker,type=jrmp, targetName=jboss.jca:service=DataSourceBinding,name=GlobalDS, cacheID=912805409 10:01:51,723 DEBUG [WrapperDataSourceService] Created Connection proxy for invoker=jboss:service=invoker,type=jrmp, targetName=jboss.jca:service=DataSourceBinding,name=GlobalDS, cacheID=912805409 {noformat} after that, one client uses the connection, then he closes it. The other client then tries to use it, but the connection with that ID is already closed. {noformat} Exception in thread "Thread-1" java.lang.RuntimeException: java.lang.reflect.UndeclaredThrowableException at AccessTest$1.run(AccessTest.java:48) Caused by: java.lang.reflect.UndeclaredThrowableException at com.sun.proxy.$Proxy1.close(Unknown Source) at AccessTest$1.run(AccessTest.java:41) Caused by: java.lang.IllegalAccessException: Failed to find connection: 912805409 at org.jboss.resource.adapter.jdbc.remote.WrapperDataSourceService.invoke(WrapperDataSourceService.java:213) at sun.reflect.GeneratedMethodAccessor256.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.jboss.mx.interceptor.ReflectedDispatcher.invoke(ReflectedDispatcher.java:157) at org.jboss.mx.server.Invocation.dispatch(Invocation.java:96) at org.jboss.mx.server.Invocation.invoke(Invocation.java:88) at org.jboss.mx.server.AbstractMBeanInvoker.invoke(AbstractMBeanInvoker.java:264) at org.jboss.mx.server.MBeanServerImpl.invoke(MBeanServerImpl.java:668) at org.jboss.invocation.jrmp.server.JRMPInvoker$MBeanServerAction.invoke(JRMPInvoker.java:855) at org.jboss.invocation.jrmp.server.JRMPInvoker.invoke(JRMPInvoker.java:422) at sun.reflect.GeneratedMethodAccessor255.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at sun.rmi.server.UnicastServerRef.dispatch(UnicastServerRef.java:303) at sun.rmi.transport.Transport$1.run(Transport.java:159) at java.security.AccessController.doPrivileged(Native Method) at sun.rmi.transport.Transport.serviceCall(Transport.java:155) at sun.rmi.transport.tcp.TCPTransport.handleMessages(TCPTransport.java:535) at sun.rmi.transport.tcp.TCPTransport$ConnectionHandler.run0(TCPTransport.java:790) at sun.rmi.transport.tcp.TCPTransport$ConnectionHandler.run(TCPTransport.java:649) at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:895) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:918) at java.lang.Thread.run(Thread.java:662) at sun.rmi.transport.StreamRemoteCall.exceptionReceivedFromServer(StreamRemoteCall.java:255) at sun.rmi.transport.StreamRemoteCall.executeCall(StreamRemoteCall.java:233) at sun.rmi.server.UnicastRef.invoke(UnicastRef.java:142) at org.jboss.invocation.jrmp.server.JRMPInvoker_Stub.invoke(Unknown Source) at	0	0	https://issues.jboss.org/browse/JBPAPP-11214
9690	JBPAPP-11127	What version of postgres plus are we talking about? Wasn't support for that first added in EAP 6?	0	0	https://issues.jboss.org/browse/JBPAPP-11127
9691	JBPAPP-11127	Guessing off your HHH-8349 link: If you're talking about pgplus 9.2, support for that wasn't added until ORM 4.2 and EAP 6 (HHH-8175). Can this be closed?	0	0	https://issues.jboss.org/browse/JBPAPP-11127
9692	JBPAPP-11073	I have deployed the tag HornetQ_2_2_28_Final I tried to upload it.. but for some reason the poms are not being accepted. This is an ancient project now... using ant... Would productization have better poms to this? or do I need to fix this?	0	0	https://issues.jboss.org/browse/JBPAPP-11073
9693	JBPAPP-11073	Could you be more specific on the issue you're meeting ? What error message do you get ?	0	0	https://issues.jboss.org/browse/JBPAPP-11073
9694	JBPAPP-10981	[~huwang] [~pferraro] I've tagged it. https://svn.jboss.org/repos/jbosscache/core/tags/3.2.12.GA/ Do you guys require maven artifacts to be uploaded as well or you're building it yourself in brew? If later I'd rather not release it in maven as I don't want people to see any activity around it (it is not maintained anymore and users are encouraged to use Infinispan)	0	0	https://issues.jboss.org/browse/JBPAPP-10981
9695	JBPAPP-10959	So far I built the following: jboss-seam2-2.2.7.EAP5-2.ep5.el6 jboss-seam2-2.2.7.EAP5-1.ep5.el6 rhel4 build is in WIP.	0	0	https://issues.jboss.org/browse/JBPAPP-10959
9696	JBPAPP-10916	Hi Marek, how about the 3.3.1.SP4 tag?	1	1	https://issues.jboss.org/browse/JBPAPP-10916
9697	JBPAPP-10916	Hi Brian, thanks for the SP4 tag. But I fond a problem, there is SP3 zip file in SP4 tag: http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP4/docs/ which is same in the SP3 tag: http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP3/docs/ Is that OK?	0	0	https://issues.jboss.org/browse/JBPAPP-10916
9698	JBPAPP-10911	[~navssurtani] thanks for details, I see commits 18199 and 18187 linked with this JIRA. Will you provide documentation for customers how to enable this feature ?	1	1	https://issues.jboss.org/browse/JBPAPP-10911
9699	JBPAPP-10893	So, based on the start script mentioned, the way to run EAP as a service on Solaris (without using the scipt itself) is something like: * Define JBOSS_HOME, SERVER_NAME, JBOSS_OPTIONS, JBOSS_USER, JBOSS_CONSOLE AND JAVA_HOME. * Ensure the user has write permission in these locations. * Stop any already running EAP processes * Start EAP with: ${JBOSS_HOME}/bin/run.sh -c ${SERVER_NAME} ${JBOSS_OPTIONS} Is there more to it than that?	1	1	https://issues.jboss.org/browse/JBPAPP-10893

#	Requirement	Questions	Answered	Successfully Answered	URL
9700	JBPAPP-10893	Note to self: Topic 3758 has good instructions for doing this in EAP 6. Would they apply to 5?	0	0	https://issues.jboss.org/browse/JBPAPP-10893
9701	JBPAPP-10893	Ivo; I have no such script in my EAP 5.2 zip installation (From CSP: JBEAP-5.2.0/jboss-eap-5.2.0.zip). Is it contained in one of the other distribution archives?	0	0	https://issues.jboss.org/browse/JBPAPP-10893
9702	JBPAPP-10889	Hi Bartosz, Could you elaborate? If you're talking about communicating between Remoting 2 on EAP 5 and Remoting 3 on EAP 6, then that's not likely ever to work. If you're talking about using RMI, then it's not a Remoting issue. Thanks, Ron	1	0	https://issues.jboss.org/browse/JBPAPP-10889
9703	JBPAPP-10847	Dennis, is it possible to get some info on how this race issue was fixed for inclusion in the 5.3.0 Release Notes? Also, is the text I provided in the Release Notes Text field accurate?	1	0	https://issues.jboss.org/browse/JBPAPP-10847
9704	JBPAPP-10839	Hi Tom, there is missing link to git/svn from where one-off patch was built. I need it so I can run HornetQ test suite and check that all fixes are present. Based on the naming convention described in [1] could you remove attachment JBPAPP-10839-signed.zip, please? Return patch to me as soon as it's done. Thanks, Mirek [1] https://docspace.corp.redhat.com/docs/DOC-151974	0	0	https://issues.jboss.org/browse/JBPAPP-10839
9705	JBPAPP-10816	Can you provide the stacktrace and/or a sample app to reproduce the issue?	1	0	https://issues.jboss.org/browse/JBPAPP-10816
9706	JBPAPP-10720	How do you launch your build so this issue happens ?	0	0	https://issues.jboss.org/browse/JBPAPP-10720
9707	JBPAPP-10710	Will this be included in EAP 5.3 release? also, will a new SOA-P 5 version be release along with EAP 5.3?	1	0	https://issues.jboss.org/browse/JBPAPP-10710
9708	JBPAPP-10666	Tom, it doesn't look like this issue is past EAP QE yet. Do we have more work to do on it? Thanks, Rick	1	1	https://issues.jboss.org/browse/JBPAPP-10666
9709	JBPAPP-10666	[~raggz]: This one has been sitting for a long time, and it only recently got turned over to QA. When I check the case, it's been closed with no apparent need for a patch. Can you confirm?	0	0	https://issues.jboss.org/browse/JBPAPP-10666
9710	JBPAPP-10645	Would you create 2.2.3.GA tag to include the patch?	1	1	https://issues.jboss.org/browse/JBPAPP-10645
9711	JBPAPP-10623	I am returning this one-off because of following issues: 1. Incorrect names of jars - it should be just jboss-messaging.jar and jboss-messaging-client.jar. If you would like to highlight that these jars are signed, try zipping them both into JBPAPP-10623-signed.zip or so. 2. Incorrect MANUAL INSTALL INSTRUCTIONS - the path should be without 'server' part, just $JBOSS_HOME/common/lib and $JBOSS_HOME/client. Could you please fix these issues? Thank you, Nikoleta	1	1	https://issues.jboss.org/browse/JBPAPP-10623
9712	JBPAPP-10623	It looks good now, thanks. Could you please hand over the jira back to QA?	1	1	https://issues.jboss.org/browse/JBPAPP-10623
9713	JBPAPP-10610	can this be uploaded soon?	1	1	https://issues.jboss.org/browse/JBPAPP-10610
9714	JBPAPP-10600	Does anyone watching this issue have some raw documentation with which we (ECS) can make a start? Without a starting point, this simply can't be delivered.	0	0	https://issues.jboss.org/browse/JBPAPP-10600
9715	JBPAPP-10596	testStatefulBank21() is the only test failure on this TestCase. testRemoteBindingInterceptorStack() passes locally and has been passing on Boo as well. Testcase: testStatefulBank21 took 0.046 sec FAILED null expected:<[_CREATED]> but was:<[]> junit.framework.ComparisonFailure: null expected:<[_CREATED]> but was:<[]> at org.jboss.ejb3.test.bank.unit.BankDeploymentDescriptorTestCase.testStatefulBank21(BankDeploymentDescriptorTestCase.java:248) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:23) at junit.extensions.TestSetup.run(TestSetup.java:27)	1	1	https://issues.jboss.org/browse/JBPAPP-10596
9716	JBPAPP-10557	Why do we have one-off patch for the same issue for both EAP 600 and EAP 601? I think we should push to use latest EAP and so only one one-off patch should be processed - the one for EAP 601.	0	0	https://issues.jboss.org/browse/JBPAPP-10557
9717	JBPAPP-10494	Could you please change MANUAL INSTALL INSTRUCTIONS: ? This step also remove hibernate-infinispan-4.1.3.Final-redhat-1.jar, but shouldn't: {noformat} Backup and remove the following files: $JBOSS_HOME/modules/org/hibernate/main/hibernate*.jar {noformat} Thanks	1	1	https://issues.jboss.org/browse/JBPAPP-10494
9718	JBPAPP-10444	There is another commit in Branch_2_0 of the microcontainer which relates to JBPAPP-6020 which is still open. Should this commit be included in 2.0.11 upgrade or not?	1	1	https://issues.jboss.org/browse/JBPAPP-10444
9719	JBPAPP-10444	Hi Ivo, The new source tag depends on google-guice-1.0, but google-guice-2.0 has been included in our EAP 5.2.0 release and compare to 1.0, 2.0 has great change, I have tried to patch sources but failed. Is it possible for you to tag new source which depends on google-guice-2.0? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-10444
9720	JBPAPP-10418	Attention: Miroslav The installation of libaio is already documented in the EAP Installation Guide, as can be confirmed here at [1]. I'm open to suggestions as to how these instructions or the HornetQ User Guide might be improved with reference to libaio. On re-reading the Installation Guide it seems that there is no direct mention of the native libraries in the HornetQ installation section. Is this what you want clarified? [1] https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Installation_Guide/index.html#Install_Native_Components	1	1	https://issues.jboss.org/browse/JBPAPP-10418

9730	JBPAPP-10102	Dominik Pospisil <dpospisi@redhat.com> made a comment on [bug 900989|https://bugzilla.redhat.com/show_bug.cgi?id=900989] That would work. But as I said this need to be copied before other tests are executed so I guess this needs to be hacked into testsuite POM file which is something I would not prefer to do. I guess you are much more familiar with the testsuite POMs. Can you do that Ondro?	1	1	https://issues.jboss.org/browse/JBPAPP-10102
9731	JBPAPP-10102	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900989|https://bugzilla.redhat.com/show_bug.cgi?id=900989] Is the workaround sufficient ? If yes and you don't want changes in TS, please close this BZ. Btw, how many tests are affected by this BZ, I can't access https://jenkins-jbossqa.rhcloud.com.	1	1	https://issues.jboss.org/browse/JBPAPP-10102

#	Requirement	Questions	Answered	Successfully Answered	URL
9732	JBPAPP-10017	I've tried replicating this situation on my localhost, using the following steps: 1. checkout sources from SVN, using the checkout.log for guidance on revId, etc. 2. apply VMan patch from dist-git, using patches.log for guidance 3. created proxy to jb-eap-6-rhel-6-build MEAD Maven repository on my local repository manager, disabling local caching to make it a "pass-through" proxy 4. setup variant settings.xml to <mirror/> to the pass-through proxy, so all I can access are artifacts in the jb-eap-6-rhel-6-build MEAD repository 5. ran `mvn -s ~/.m2/settings-jbeap6.xml dependency:resolve-plugins` which is the command that failed according to the root.log Nothing failed. So, I ran: `mvn -s ~/.m2/settings-jbeap6.xml org.apache.maven.plugins:maven-help-plugin:effective-pom -Doutput=effective.pom.xml` which calculates what the POM looks like after processing inheritance, interpolation, BOM imports, etc. and looked for the version of the project-info-reports plugin in that effective POM. Here's what I found: {noformat} [...] <pluginManagement> [...] <plugin> <artifactId>maven-project-info-reports-plugin</artifactId> <version>2.2-redhat-1</version> </plugin> [...] </pluginMangement> <plugins> [...] <plugin> <artifactId>maven-site-plugin</artifactId> <version>3.0-beta-3-redhat-1</version> <executions> <execution> <id>default-site</id> <phase>site</phase> <goals> <goal>site</goal> </goals> <configuration> <outputDirectory>/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site</outputDirectory> <reportPlugins> <reportPlugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-project-info-reports-plugin</artifactId> </reportPlugin> </reportPlugins> </configuration> </execution> <execution> <id>default-deploy</id> <phase>site-deploy</phase> <goals> <goal>deploy</goal> </goals> <configuration> <outputDirectory>/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site</outputDirectory> <reportPlugins> <reportPlugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-project-info-reports-plugin</artifactId> </reportPlugin> </reportPlugins> </configuration> </execution> </executions> <configuration> <outputDirectory>/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site</outputDirectory> <reportPlugins> <reportPlugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-project-info-reports-plugin</artifactId> </reportPlugin> </reportPlugins> </configuration> </plugin> [...] </plugins> {noformat} In short, the only version for the project-info-reports plugin I could find was 2.2-redhat-1, and I've verified that this doesn't depend on joda-time. Nor does the plugin declaration mention any additional dependency on joda-time. I'm not sure how this project ever came to depend on a different version of the project-info-reports plugin...is it possible the jboss-parent was rebuilt and had this plugin added?	1	1	https://issues.jboss.org/browse/JBPAPP-10017

#	Requirement	Questions	Answered	Successfully Answered	URL
9753	JBPAPP-9497	Result of Petr's review: ---------- * What sections we should remove, instead referring to the Migration Guide; Chapter 2, 3 and 4 - suitable candidates for move to the Migration Guide, if the Migration Guide is going to be published at all. If there will be no Migration Guide in the end, I'd suggest moving this to the end of this guide, so that New installation (currently chapter 5) is right after Introduction - better positioning of the information because a new installation is, imo, what users will most typically do when referring to this guide. ---------- * How we might restructure the remaining content. 5.1.2. Configuring Your Java Environment - points to Appendix C, but Appendix D is also relevant (maybe merge the two appendices as suggested further below) 6.1. Web Services Stack, 6.2. PicketLink Federation - these two don't go together with 6.3 Installation Methods; I'd divide this chapter into two, resulting in 6.3 being in its own chapter, and maybe move 6.1 and 6.2 to a further location in the guide not to interrupt the flow of information Chapter 14 - divide into two sections based on the type of installation (graphical (uninstall script) vs. others (rm -r [EAP root]), and indicate the installation types in the section heading Appendix A - Disabling Authentication - is there a reason for having this in the Installation Guide? I'd suggest moving this to the Security Guide or/and the Administration and Configuration Guide instead Appendix C - Installing JDK on RHEL - I'd merge this with Appendix D - Installing Sun JDK on Windows - info about JDK installation on RHEL6 is completely missing - we need to add it ---------- * other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." - referring to Enterprise Web Platform - should be Enterprise Application Platform - + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link Chapter 9. Installation using the Graphical Installer - running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux - I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM - second note: missing end comma + I'd turn "Administration and Configuration Guide" into a link leading to the guide Appendix E - Installing Apache Ant Procedure E.2: "Do this on Red Hat Enterprise Linux by adding the following line" - this procedure is about installing "on Other Operating Systems", not on RHEL - shouldn't we change it to "on Unix/Linux systems"	1	1	https://issues.jboss.org/browse/JBPAPP-9497
9754	JBPAPP-9497	Petr - My comments are prefixed $$$ ---------- What sections we should remove, instead referring to the Migration Guide; Chapter 2, 3 and 4 - suitable candidates for move to the Migration Guide, if the Migration Guide is going to be published at all. If there will be no Migration Guide in the end, I'd suggest moving this to the end of this guide, so that New installation (currently chapter 5) is right after Introduction - better positioning of the information because a new installation is, IMHO, what users will most typically do when referring to this guide. It seems we won't have the MG ready for 5.1.3 but I agree that the first chapter after the introdcution should be Installation. ---------- How we might restructure the remaining content. 5.1.2. Configuring Your Java Environment points to Appendix C, but Appendix D is also relevant (maybe merge the two appendices as suggested further below) $$$ Agree - please merge these two appendices. 6.1. Web Services Stack, 6.2. PicketLink Federation - these two don't go together with 6.3 Installation Methods; I'd divide this chapter into two, resulting in 6.3 being in its own chapter, and maybe move 6.1 and 6.2 to a further location in the guide not to interrupt the flow of information $$$ Agree - please divide into two and move 6.1 and 6.2. Chapter 14 - divide into two sections based on the type of installation (graphical (uninstall script) vs. others (rm -r [EAP root]), and indicate the installation types in the section heading $$$ Agree. Appendix A - Disabling Authentication is there a reason for having this in the Installation Guide? I'd suggest moving this to the Security Guide or/and the Administration and Configuration Guide instead $$$ Agree. Please move this to the A&C Guide. IMHO the Security Guide should not give steps which actually reduce the platform's security. Appendix C - Installing JDK on RHEL I'd merge this with Appendix D - Installing Sun JDK on Windows info about JDK installation on RHEL6 is completely missing - we need to add it $$$ Agree. ---------- other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." referring to Enterprise Web Platform - should be Enterprise Application Platform $$$ Wow - please fix the product name. + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out $$$ Agree - please remove this paragraph. 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link $$$ Agree - change so that it points to the EAP docs. Chapter 9. Installation using the Graphical Installer running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root $$$ Agree - I have seen a JIRA recently about the issue of running the installer as root. If I can find it I'll provide you the link. 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM $$$ Agree. second note: missing end comma + I'd turn "Administration and Configuration Guide" into a link leading to the guide $$$ Please fix comma. The Red Hat style guide states that we DON'T link directly from one book to another. Appendix E - Installing Apache Ant Procedure E.2: "Do this on Red Hat Enterprise Linux by adding the following line" this procedure is about installing "on Other Operating Systems", not on RHEL - shouldn't we change it to "on Unix/Linux systems" $$$ Agree - change to "on Unix/Linux..." I also noticed the word "Repository" and this should be deleted.	1	1	https://issues.jboss.org/browse/JBPAPP-9497

9755	JBPAPP-9497	should remove, instead referring to the Migration Guide; Chapter 2, 3 and 4 - suitable candidates for move to the Migration Guide, if the Migration Guide is going to be published at all. If there will be no Migration Guide in the end, I'd suggest moving this to the end of this guide, so that New installation (currently chapter 5) is right after Introduction - better positioning of the information because a new installation is, IMHO, what users will most typically do when referring to this guide. $$$ It seems we won't have the MG ready for 5.1.3 but I agree that the first chapter after the introdcution should be Installation. €€€ Moved chapters 2, 3 and 4 to a further location, now they are chapters 10, 11 and 12. ---------- How we might restructure the remaining content. 5.1.2. Configuring Your Java Environment points to Appendix C, but Appendix D is also relevant (maybe merge the two appendices as suggested further below) $$$ Agree - please merge these two appendices. €€€ Appendices merged, currently it is appendix B. 6.1. Web Services Stack, 6.2. PicketLink Federation - these two don't go together with 6.3 Installation Methods; I'd divide this chapter into two, resulting in 6.3 being in its own chapter, and maybe move 6.1 and 6.2 to a further location in the guide not to interrupt the flow of information $$$ Agree - please divide into two and move 6.1 and 6.2. €€€ Moved the Installation methods under Chapter 2. New Installation. Moved WSS and PicketLink under Chapter 9. Optional Components. Chapter 14 - divide into two sections based on the type of installation (graphical (uninstall script) vs. others (rm -r [EAP root]), and indicate the installation types in the section heading $$$ Agree. €€€ Divided into 2 sections (currently 13.1 and 13.2). Added 13.3 Uninstallation from RPM installation. Appendix A - Disabling Authentication is there a reason for having this in the Installation Guide? I'd suggest moving this to the Security Guide or/and the Administration and Configuration Guide instead $$$ Agree. Please move this to the A&C Guide. IMHO the Security Guide should not give steps which actually reduce the platform's security. €€€ Completely removed from the Installation Guide. Added to Administration and Configuration Guide. Appendix C - Installing JDK on RHEL I'd merge this with Appendix D - Installing Sun JDK on Windows info about JDK installation on RHEL6 is completely missing - we need to add it $$$ Agree. €€€ Merged, currently Appendix B. ---------- other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." referring to Enterprise Web Platform - should be Enterprise Application Platform $$$ Wow - please fix the product name. €€€ Paragraph completely removed, see below. + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out $$$ Agree - please remove this paragraph. €€€ Paragraph removed. 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link $$$ Agree - change so that it points to the EAP docs. €€€ Changed, now it is pointing to EAP docs. Chapter 9. Installation using the Graphical Installer running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root $$$ Agree - I have seen a JIRA recently about the issue of running the installer as root. If I can find it I'll provide you the link. €€€ Verified, no need to run the installer as root, information removed. 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM $$$ Agree. €€€ Verified, only RPM installation causes EAP to run as a service. second note: missing end comma + I'd turn	0	0	https://issues.jboss.org/browse/JBPAPP-9497
9756	JBPAPP-9495	Hui, I did the RHEL-6 bits for you. Can you please try replicating it for RHEL-4/5? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-9495
9757	JBPAPP-9493	Hi [~lakagwu] and [~jfclere]. I'm wondering if I can get some more information about exactly what was causing this issue and how it was resolved. Was a CPING/CPONG implemented in the end?	1	0	https://issues.jboss.org/browse/JBPAPP-9493
9758	JBPAPP-9493	Thanks for the info [~jfclere]. Can you confirm that the draft Release Note above accurately describes the bug and its fix? If not, can you let me know where I misunderstood. Cheers.	1	0	https://issues.jboss.org/browse/JBPAPP-9493
9759	JBPAPP-9493	I am not sure about the status of the this JIRA. Is there a one-off patch ? If yes, do we have a link to share with customers ?	0	0	https://issues.jboss.org/browse/JBPAPP-9493
9760	JBPAPP-9493	A customer urgently needs a one-off patch. Do I created a another JIRA for this ? Environment: * EAP 5.1.1 * mod_cluster 1.0.10.GA_CP02 * mod_cluster Native-Libs + a patch mod_cluster-native-1.0.10-5.1.1.GA_CP02_patch02.ep5.el6.x86_64.rpm (https://issues.jboss.org/browse/JBPAPP-8957) * Apache Webserver 2.2.15 * RHEL 6.2	0	0	https://issues.jboss.org/browse/JBPAPP-9493
9761	JBPAPP-9493	Can we close this one as the fix will be in EAP 5.2.0 ER5 as indicated in JBPAPP-10409 and this one doesn't have the right workflow?	0	0	https://issues.jboss.org/browse/JBPAPP-9493
9762	JBPAPP-9466	(10:15:02 PM) ozizka-ntb: the .awssecret can't be in ~ (10:15:07 PM) ozizka-ntb: think jenkins (10:15:20 PM) ozizka-ntb: can I specify different location? (10:16:17 PM) akostadinov: will need to hack aws: (10:16:18 PM) akostadinov: $secrets_file \|\|= "$home/.s3cfg" if !-e "$home/.awssecret" && -e "$home/.s3cfg"; (10:16:18 PM) akostadinov: $secrets_file \|\|= "$home/.awssecret";	1	1	https://issues.jboss.org/browse/JBPAPP-9466
9763	JBPAPP-9454	[~smarlow], should we reject this one? Since we had several issues with Javassist 3.17.1 in Hibernate 4 in general, as well as AS7, I'd be worried about attempting to backport it into EAP 5.	1	1	https://issues.jboss.org/browse/JBPAPP-9454
9764	JBPAPP-9454	IMO, It would be good to defer JBPAPP-9454 until the known issues are resolved and we get more community testing of the Javassist 3.17.x.x changes. HHH-7884/JASSIST-189 is still open.	1	1	https://issues.jboss.org/browse/JBPAPP-9454
9765	JBPAPP-9454	When the known issues are resolved and enough testing has occurred, I think the next question is can the fix be back ported. The Java 7 verify error fixes would not be included in the back port, which might make the change less risky. Lets discuss further when I'm back.	1	1	https://issues.jboss.org/browse/JBPAPP-9454
9766	JBPAPP-9454	We have all ack's for including in EAP 6.2.0 (https://bugzilla.redhat.com/show_bug.cgi?id=900690). However, who should we ping about this in EAP 5? In my opinion, with the regressions we hit before, it's a bit of a risky move.	1	1	https://issues.jboss.org/browse/JBPAPP-9454
9767	JBPAPP-9393	Hi [~jbertram] Could you please supply a bit more information about what was causing HornetQ to fail in this scenario and what was done to correct the problem? Both this and the original HQ JIRA seem to be light on details. I'll do up a draft release note as soon as I have a bit more to go on. Cheers.	1	1	https://issues.jboss.org/browse/JBPAPP-9393
9768	JBPAPP-9348	@Paul, can you create a tag so we can bring ha-server-api upgrade into EAP 5.1.3?	0	0	https://issues.jboss.org/browse/JBPAPP-9348
9769	JBPAPP-9337	claprun@redhat.com made a comment on [bug 831445|https://bugzilla.redhat.com/show_bug.cgi?id=831445] Kyle, Why is the standard XML XSD resolved from the wsdl director? Also, there's a jax-ws-catalog.xml file in $JBOSS_HOME/server/$PROFILE/conf which contains mappings from Public/System Ids to local files, couldn't we piggy back on this file instead of adding a new file? I tried adding references to the WSRP files there but it didn't work so maybe this why EAP doesn't support catalog files properly? I would also argue that the directory that contains the WSRP-specific schemas should be named differently (probably wsrp). Finally, if the current solution is the only one that would work with minimal effort at this time (i.e. targeting EAP 5.1.2), could you also do the same changes so that the WSRP 2 schemas are also resolved locally, please?	1	1	https://issues.jboss.org/browse/JBPAPP-9337

#	Requirement	Questions	Answered	Successfully Answered	URL
9770	JBPAPP-9337	Kyle Lape <klape@redhat.com> made a comment on [bug 831445|https://bugzilla.redhat.com/show_bug.cgi?id=831445] > Why is the standard XML XSD resolved from the wsdl director? This can be changed easily. Changing the dir name to 'wsrp' should be fine. > What about conf/jax-ws-catalog.xml? I'm not sure why this file is there for you, but it's only used by CXF. JBossWS Native doesn't have any code to parse jax-ws-catalog.xml and add the information to the deployment metadata. Adding this code would be a major change to code, and this is why I am opting for the simpler (code-change-wise) solution. I see that file is in EPP 5.2.1, but I'm not sure why. JBossWS Native doesn't use it (confirmed by Jim Ma). > Can you add WSRP 2 schemas? Sure, I can do this. Would you mind to give me the information needed to add these and test them?	1	1	https://issues.jboss.org/browse/JBPAPP-9337
9771	JBPAPP-9337	claprun@redhat.com made a comment on [bug 831445|https://bugzilla.redhat.com/show_bug.cgi?id=831445] Kyle, Did you get a chance to add the WSRP 2 files?	1	1	https://issues.jboss.org/browse/JBPAPP-9337
9772	JBPAPP-9337	Hi Kyle, I've added the ability to resolve the jbossws-entities.properties under WEB-INF/classes , and committed the fix to jbossws-native-3.1.2 branch. Can you please help try if that works in WSRP2 ? Thanks.	1	0	https://issues.jboss.org/browse/JBPAPP-9337

9775	JBPAPP-9316	A draft Release Note text has been supplied above, however confirmation is requested from the assignee as to whether a Release Note is required for this issue. Does the issue and it's resolution have an end-user impact? Might they need to know this to use EAP 5.1.3?	1	1	https://issues.jboss.org/browse/JBPAPP-9316
9776	JBPAPP-9299	According to JIRA the JBoss Web SME is Remy Maucherat - https://issues.jboss.org/secure/ViewProfile.jspa?name=rmaucher. How much work is likely to be involved in adding documentation of the Filter element? If it's more than a day or so I'd like to schedule it for a later date.	0	0	https://issues.jboss.org/browse/JBPAPP-9299
9777	JBPAPP-9295	After performing some research, I found that a link to the supported configurations page for EAP (the same as in the KB article) is already included in: - EAP Release Notes (as of 5.1.0): http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Release_Notes_5.1.2/index.html#id2300403 - EAP Installation Guide: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Installation_Guide/index.html#Getting_Started-Pre_Requisites - here it is mentioned as "Supported Operating Systems", I suggest to change it to "Supported Configurations" and modify the text accordingly From the other guides, only Administration and Configuration Guide seems as a potential candidate for inclusion of this info. I have, however, not been able to identify a suitable chapter to include it in. The guide also seems focused on EAP itself, not on the environment, so I'm really not sure about including it here. Russel: 1) Can I go ahead and modify the linked section of Installation Guide? 2) What is your opinion on inclusion in Administration and Configuration Guide? Do we want this type of information in it?	1	1	https://issues.jboss.org/browse/JBPAPP-9295

#	Requirement	Questions	Answered	Successfully Answered	URL
9778	JBPAPP-9294	I found out that we only have the "2.1 Do You Need Help?" section in the Preface of each book. It directs users to the Red Hat Customer Portal, where they can open a support case. However, not a word about what information should be provided. If anywhere, I would expect the information from the KB article here. I have two ideas: 1) Extend the "2.1 Do You Need Help" section with the required information. This would, however, require changing it in the Publican brands used for JBoss docs, which I'm not sure we really want to do. What do you think Russel? 2) I guess it might be much more effective to have the information included directly on the page where support cases are submitted: https://access.redhat.com/support/cases/new I guess this is out of our scope, but I reckon this might really help.	1	1	https://issues.jboss.org/browse/JBPAPP-9294
9779	JBPAPP-9258	This JIRA has been marked as affecting Release Notes however nothing in it contains any matter that would do so. The original ticket that was cloned from (HORNETQ-940) highlights an issue, however it contains no reference to how the problem was solved. More information is required before this issue can be included in the EAP 5.1.3 Release Notes: What was causing the issue? How was the issue resolved?	1	1	https://issues.jboss.org/browse/JBPAPP-9258
9780	JBPAPP-9163	I fixed JBPAPP-9507 + renamed oracle11RAC to oracle11gRAC to reflect product name and message about supported DBS which mentions Oracle 11gRAC. (Commit #113210) I'd like to bring up JDBC 3 and JDBC 4 topic. Currently this tool forces JDBC 4 drivers. Would you agree to change name.properties to be less specific and allow jdbc3 drivers?	1	1	https://issues.jboss.org/browse/JBPAPP-9163
9781	JBPAPP-9112	Wouldn't an enforcer rule be more appropriate here? Or something similar to that? It should be obvious when a dependency or plugin diverges from the parent POM or BOM(s): it will have a version specified. Right?	1	0	https://issues.jboss.org/browse/JBPAPP-9112
9782	JBPAPP-9002	Marking this issue as "Needs more info" as, from a user perspective, does this change actually need a release note? Does the user need to know that these error messages will no longer be logged every five seconds?	1	1	https://issues.jboss.org/browse/JBPAPP-9002

Note: Tested with ER4 which is in AMI.	1	1	https://issues.jboss.org/browse/JBPAPP-8986
9784	JBPAPP-8986	Dominik Pospisil <dpospisi@redhat.com> made a comment on [bug 900989|https://bugzilla.redhat.com/show_bug.cgi?id=900989] That would work. But as I said this need to be copied before other tests are executed so I guess this needs to be hacked into testsuite POM file which is something I would not prefer to do. I guess you are much more familiar with the testsuite POMs. Can you do that Ondro?	1	1	https://issues.jboss.org/browse/JBPAPP-8986
9785	JBPAPP-8986	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900989|https://bugzilla.redhat.com/show_bug.cgi?id=900989] Is the workaround sufficient ? If yes and you don't want changes in TS, please close this BZ. Btw, how many tests are affected by this BZ, I can't access https://jenkins-jbossqa.rhcloud.com.	1	1	https://issues.jboss.org/browse/JBPAPP-8986
9786	JBPAPP-8891	Do we need to build with Java 7? The requirement, as I understood it, was to only run on Java 7.	1	1	https://issues.jboss.org/browse/JBPAPP-8891
9787	JBPAPP-8891	I hate subversion: {noformat} svn cp varia/src/main/org/jboss/varia/stats/DataSourceInterceptorJDK6.java varia/src/main/org/jboss/varia/stats/AbstractDataSourceInterceptorJDBC4.java svn cp varia/src/main/org/jboss/varia/stats/DataSourceInterceptorJDK6.java varia/src/main/org/jboss/varia/stats/DataSourceInterceptorJDK7.java cd connector/src/main/org/jboss/resource/adapter/jdbc mkdir jdbc4 svn add jdbc4 svn cp jdk6/* jdbc4 for i in jdbc4/*; do svn mv $i `echo $i | sed "s/JDK6/JDBC4/"`; done cd - prep-svn-patch /tmp/JBPAPP-8891.patch patch -p0 </tmp/JBPAPP-8891.patch svn add varia/src/main/org/jboss/varia/stats/AbstractDataSourceInterceptorJDBC4_1.java cd connector/src/main/org/jboss/resource/adapter/jdbc svn add jdbc4_1/ jdk7/ cd - {noformat}	0	0	https://issues.jboss.org/browse/JBPAPP-8891
9788	JBPAPP-8786	Justin, is it possible to get more information about the fix that resolved this issue? Also, is that release notes draft text even approaching accurate?	1	1	https://issues.jboss.org/browse/JBPAPP-8786
9789	JBPAPP-8731	Justin, could you please confirm whether shutting down the main server or the backup server creates the problem? (refer to the <remark> tag in the Release Notes draft above for context) Also, did I identify the fix correctly from your and Clebert's comments on HORNETQ-911?	1	1	https://issues.jboss.org/browse/JBPAPP-8731
9790	JBPAPP-8683	from the code, i can see the fix provided from HHH-5043 is already in the EAP 5.1.2 release, would you provide a test case?	1	1	https://issues.jboss.org/browse/JBPAPP-8683

#	Requirement	Questions	Answered	Successfully Answered	URL
9791	JBPAPP-8683	Hello Liu, We used the same test case in the project JIRA. Do you really need another test case or the one attached in the other JIRA is enough?	1	0	https://issues.jboss.org/browse/JBPAPP-8683
9792	JBPAPP-8617	Do you see these OOM errors in upstream Jenkins builds? For this job [1] we're building against as console master branch (with -Peap), I'm just wondering if you are seeing the same errors. [1]https://hudson.qa.jboss.com/hudson/job/JBoss-EAP-6.0.x-Community/	1	1	https://issues.jboss.org/browse/JBPAPP-8617
9793	JBPAPP-8617	paul, did you figure it out?	1	1	https://issues.jboss.org/browse/JBPAPP-8617
9794	JBPAPP-8377	Can someone please explain just what it is that has been resolved in this JIRA issue? I presume JBTM = JBoss Transaction Manager? It's not at all clear in this issue nor linked issues just what the Cause, Consequence, Fix and Result are.	1	1	https://issues.jboss.org/browse/JBPAPP-8377
9795	JBPAPP-8363	Dimitris, can you create a tag to include 2.2.20 upgrade in EAP 5.1.3? Is there someone else this should be assigned to?	0	0	https://issues.jboss.org/browse/JBPAPP-8363
9796	JBPAPP-8168	Hi Justin, we're having difficulties to verify this jira. I can see that there were some changes to ClientCrashTest.java but it seems to be unstable: https://jenkins.mw.lab.eng.bos.redhat.com/hudson/view/EAP5/view/HornetQ/job/_hornetq-RHEL5-x86_64-SunJDK1.6-NIO/lastCompletedBuild/testReport/ Could you help with reproducing this issue, please? Thank you, Mirek	0	0	https://issues.jboss.org/browse/JBPAPP-8168
9797	JBPAPP-8125	Is this still an issue? can we close it? [~bershath27]?	0	0	https://issues.jboss.org/browse/JBPAPP-8125
9798	JBPAPP-8119	Hi Justin, it seems that work on this is done. Is it possible to commit it to upstream? Thanks, Mirek	1	1	https://issues.jboss.org/browse/JBPAPP-8119
9799	JBPAPP-8073	Since this issue is marked "Resolved", shouldn't the Fix Version/s field have been updated to "EAP 5.1.3"?	0	0	https://issues.jboss.org/browse/JBPAPP-8073
9800	JBPAPP-8073	Sorry, I didn't quite understand the initial request. That said, the part of the commit I backported should be fine as the synchronization will now log the stack trace. It looks to me like with both parts of the fix you would get the same stack trace twice? If you think it is safest, I can put the other part of the commit in if you want? I not too sure of the protocol in that case here, should I create a new tag and raise a Jira in JBPAPP to get the new version included?	1	1	https://issues.jboss.org/browse/JBPAPP-8073
9801	JBPAPP-8038	Which JBoss version uses EAP 5.1.3? As it is not fixed AS 7.1.1, I'd like know which version this bug fix for.	1	0	https://issues.jboss.org/browse/JBPAPP-8038
9802	JBPAPP-7881	Customer Answer: I think you don't understand my use case. We have a legacy app and JPA is a persistence option we are trying to bring (the app is using a proprietary ORM framework). We try to be as clean as possible (support the two through configuration with a clear migration path). Assume this app has 3 modules A, B and C. Each of them is using persistence (the proprietary one). B and C depends on A. I don't need to step back because we thought about that issue *a lot*. We're introducing module D which gives *RUNTIME* support for JPA through Hibernate. A, B and C can still perfectly work with the current system and support JPA if it's available. I don't want to bring hibernate as a dependency if we're not using it. Relying on JPA API and Hibernate annotations is fine though. In D, I am already registering the custom types we had to define to support custom data types. It's fine if D heavily relies on hibernate-core. Right now A still has hibernate core dependency because we have a @GenericGenerator on the base class and this refers to the generator class. Being able to register that through configuration in D is the feature I am looking for. Thanks for that. Regarding annotations split, it's the same. Why on earth would I have to bring the whole hibernate engine to configure a JPA entity with some advanced options? Again, a entity in B or C or A is using a custom type. I must use @Type. In order to do that, I have to bring the whole hibernate-core jar and its dependencies. Sorry, that does not make any sense to me.	1	0	https://issues.jboss.org/browse/JBPAPP-7881
9803	JBPAPP-7813	be the inclusion of the facelets-1.1.15.B1.patch, which doesn't work with properly with the JBoss Embedded version present in the seam distribution in EAP5.0.0, which is used to run the integration tests. See also JBPAPP-5456, which discusses a previous attempt to include facelets-1.1.15.B1.patch on EAP5.1. and JBPAPP-7057 JBPAPP-7058 which fixes the inclusion of the facelets-1.1.15.B1.patch in EAP5.1.2 by updating jboss embedded. The question is whether it is really necessary to include that part of the patch (which introduces the VFSClasspath to tothe jsf-facelets.jar) {noformat} java.lang.AssertionError: java.lang.IllegalStateException: File cannot contain children: FileHandler@1496691980[path= context=file:/home/maschmid/testing/one-offs/JBPAPP-7813/jboss-eap-5.0/seam/examples/excel/test-build/META-INF/MANIFEST.MF real=file:/home/maschmid/testing/one-offs/JBPAPP-7813/jboss-eap-5.0/seam/examples/excel/test-build/META-INF/MANIFEST.MF] at org.jboss.seam.mock.AbstractSeamTest$Request.onException(AbstractSeamTest.java:455) at org.jboss.seam.mock.AbstractSeamTest$Request$2.doFilter(AbstractSeamTest.java:504) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:83) at org.jboss.seam.web.IdentityFilter.doFilter(IdentityFilter.java:40) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.MultipartFilter.doFilter(MultipartFilter.java:90) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.ExceptionFilter.doFilter(ExceptionFilter.java:64) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.RedirectFilter.doFilter(RedirectFilter.java:45) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.ajax4jsf.webapp.BaseXMLFilter.doXmlFilter(BaseXMLFilter.java:178) at org.ajax4jsf.webapp.BaseFilter.handleRequest(BaseFilter.java:290) at org.ajax4jsf.webapp.BaseFilter.processUploadsAndHandleRequest(BaseFilter.java:368) at org.ajax4jsf.webapp.BaseFilter.doFilter(BaseFilter.java:495) at org.jboss.seam.web.Ajax4jsfFilter.doFilter(Ajax4jsfFilter.java:56) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.LoggingFilter.doFilter(LoggingFilter.java:60) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.HotDeployFilter.doFilter(HotDeployFilter.java:53) at org.jboss.seam.servlet.SeamFilter$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.servlet.SeamFilter.doFilter(SeamFilter.java:158) at org.jboss.seam.mock.AbstractSeamTest$Request.run(AbstractSeamTest.java:491) at org.jboss.seam.mock.AbstractSeamTest$FacesRequest.run(AbstractSeamTest.java:862) at org.jboss.seam.example.excel.test.RenderTest.testSimple(RenderTest.java:27) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.testng.internal.MethodHelper.invokeMethod(MethodHelper.java:580) at org.testng.internal.Invoker.invokeMethod(Invoker.java:478) at org.testng.internal.Invoker.invokeTestMethod(Invoker.java:617) at org.testng.internal.Invoker.invokeTestMethods(Invoker.java:885) at org.testng.internal.TestMethodWorker.invokeTestMethods(TestMethodWorker.java:126) at org.testng.internal.TestMethodWorker.run(TestMethodWorker.java:110) at org.testng.TestRunner.runWorkers(TestRunner.java:712) at org.testng.TestRunner.privateRun(TestRunner.java:582) at	1	1	https://issues.jboss.org/browse/JBPAPP-7813
9804	JBPAPP-7729	[~stliu] Can you please complete the Release Notes text with the nominated information about this bug. Unfortunately I wasn't able to grok the nature of the problem from the comments on this ticket (or the linked HornetQ ticket). Cheers	1	1	https://issues.jboss.org/browse/JBPAPP-7729

#	Requirement	Questions	Answered	Successfully Answered	URL
9805	JBPAPP-7671	121) 17. Complete Working Example Proxy Server example has an opening < that probably shouldn't be there 122) Appendix: workers.properties Reference What exactly does a range of _ to / comprise? "The structure of a Worker Property is worker.worker_name.directive" <-- missing final full stop 123) Appendix: workers.properties Reference – workers.properties Connection Directives "For example, a correct directive flag set is worker.node1.ping_mode=CI" <-- missing full stop, and should probably describe what it is attempting to set for clarity's sake 124) Appendix: workers.properties Reference – workers.properties Load Balancing Directives "...three times the load than other workers..." <-- three times the load OF other workers >>> Fixed. 125) Appendix: Java Properties Reference – B.1. Proxy Configuration itemizedlist is incorrectly punctuated Proxy Configuration Values <-- not values, parameters or attributes The default values are displayed next to the parameter name here, but nowhere else in the document. >>> Fixed. 126) Appendix: Java Properties Reference – B.1. Proxy Configuration "an usable worker" <-- a usable worker >>> Fixed. 127) Appendix: Java Properties Reference – B.1. Proxy Configuration cping and cpong or CPing and CPong? Consistency required. >>> Fixed.	1	1	https://issues.jboss.org/browse/JBPAPP-7671
9806	JBPAPP-7671	Jan, I have made the following edits as per your feedback. Revision 20 is the latest available edition of this book. I have rebuilt it and it should soon be available at [1]. 109) 15.2.1 Configuring HttpSession Passivation number of sessions managed by the the session manager <-- remove a the >>> "the" was not removed Checked and confirmed as removed. Note that this text is now contained in section 17.2.1 (previously 15.2.1). 117) 16.1 Configuration SSO's <-- NO. SSOs. Not fixed Checked and confirmed as corrected. Note that this text is now contained in section 17.1 (previously 16.1). 125) Appendix: Java Properties Reference – B.1. Proxy Configuration Proxy Configuration Values <-- not values, parameters or attributes >>> not fixed Can you please clarify exactly what's to be changed here? 127) Appendix: Java Properties Reference – B.1. Proxy Configuration cping and cpong or CPing and CPong? Consistency required. >>> not fixed >>> Could you please do fulltext search on entire document and make this consistent? Thanks. I have done a full text search on the book's content and changed all references to CPIng and CPon, with the exception of references in log files. [1] http://documentation-devel.engineering.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HTTP_Connectors_Load_Balancing_Guide/index.html	1	1	https://issues.jboss.org/browse/JBPAPP-7671
9807	JBPAPP-7670	90) 13. What Is Netscape Server API Question mark? lower case "is" "to gain a basic understand about" --> "to gain a basic understanding of" web server or HTTP Server? pick a term >>> Fixed. Question mark added, "Is" converted to lower case, "understand" changed to "understanding", HTTP changed to "web" 91) 13. What Is Netscape Server API Itemizedlist is not punctuated correctly – closing full stop with no commas or semi-colons >>> Fixed. Semi-colons added. 92) 14. Configuring the NSAPI Connector on Solaris worker node and master node use different cases here than in other places in the document >>> Invalid. I searched all the files which make up this book and the only instances I could find of capitalisation were correct - i.e. in titles.	1	1	https://issues.jboss.org/browse/JBPAPP-7670
9808	JBPAPP-7670	93) Task: Configure Initial Clustering Behaviour What is non-initial clustering behaviour? >_> Also, Step 1 – perhaps say "disable the mappings ..... by commenting them out, as shown...". Basic, but helps clarify the task for the unfamiliar. >>> Fixed 94) Task: Configure a Basic Cluster with NSAPI "The procedure specifies [that] worker01..." >>> Fixed. Also removed the unnecessary text "Use the following procedure".	1	1	https://issues.jboss.org/browse/JBPAPP-7670
9809	JBPAPP-7669	63) 12.1 Prerequisites and Configuration Assumptions Why is this a massive section, but most preprequisites in the first half of the book are as tiny little formalparas? Consistency please. >>> Fixed. I changed the layout and text so that it was more consistent with the rest of the text. 64) 12.1 Prerequisites and Configuration Assumptions The IMPORTANT note should probably be integrated into the steps rather than at the beginning of the chapter. (Which I think ought to be Step 4 of 12.2.) >>> Fixed. 65) 12.2 Configure Server Instance as a Worker Node – Prerequisites Step 1 – specifies use of the default profile. Is this the only profile supported? If so, remove "you want to configure as a worker node". If it's not the only supported profile, then the directive to copy default profile specifically should be removed. You can use default as an example after the main directive. Same again for subsequent steps – I'd make a main directive that summarizes what they are doing and why, followed by a specific example. >>> Fixed. The default profile is used as it already contains the necessary components. 66) Task: Define ISAPI Filter Not immediately clear what the filter will do or why you are defining it. Screenshots would be nice, if anyone has licensed products around. >>> Fixed. I added a sentence which explains briefly why the filter is created. 67) Task: Define ISAPI Filter Master Server or Master server? Be consistent. >>> Fixed. Changed "Master Server" to "master server".	1	1	https://issues.jboss.org/browse/JBPAPP-7669
9810	JBPAPP-7669	68) Task: Define ISAPI Filter – Step 5 Is the location of the executable always C:\connectors\jboss-ep-5.1\native\sbin\isapi_redirect.dll? >>> Fixed. I changed this so that it uses a path convention instead of an explicit path. 69) Task: Define ISAPI Virtual Directory Not immediately clear why this needs to be done. Perhaps a summary of the configuration required at the beginning of Ch. 12 would be useful to orient people. >>> Fixed. I added a brief description of what the filter will do. 70) Task: Define ISAPI Virtual Directory – Step 1 Missing closing full stop. >>> Fixed. 71) Task: Define ISAPI Virtual Directory – Step 2 Again, is this ALWAYS the path? >>> Fixed. I used a path convention here instead of the explicit path. 72) Task: Define ISAPI Virtual Directory – Step 4 Missing full-stop. >>> Fixed.	1	1	https://issues.jboss.org/browse/JBPAPP-7669
9811	JBPAPP-7669	73) Task: Define ISAPI Web Service Extension Bleh @ difference in cases between a button and a window – I'm assuming this is present in the software, but still. >>> I couldn't find where "window" and "button" are mentioned in this section so I've skipped this point. 74) Task: Define ISAPI Web Service Extension – Step 2 Missing "exactly as written" used in previous procedures. Also, is this always the path? >>> Fixed. Added "exactly as written" and changed path. 75) 12.4 Microsoft IIS 7 Initial Clustering Configuration – Terms URL at the end of the definition is not a hyperlink. Also, why does only this chapter have a Terms section? >>> Made text into a hyperlink. This chapter has only 1 entry in the Terms section and it's there instead of in an appendix because it's important the reader understands this term when reading the rest of the chapter. 76) Task: Define a JBoss Native ISAPI Restriction – Step 1 "Start -> Run, then type inetmgr." <- I think you also need to hit Enter or click Run afterward. >>> Fixed. 77) IMPORTANT: Task: Define a JBoss Native ISAPI Restriction – Step 2 Ends abruptly. Opens in the what? >>> Fixed. Deleted "in the what" 78) Task: Define a JBoss Native ISAPI Restriction – Step 5 Is this always the path? Also, the spacing around the "jboss" value is too wide (spaces inside and outside the tag?). >>> Fixed. Changed path. The spacing is a result of the styling applied. 79) Task: Define an JBoss Native Virtual Directory s/an/a >>> Fixed. 80) Task: Define an JBoss Native Virtual Directory – Step 2 Missing full stop after (exactly as written). Is this path always the same? >>> Fixed. Added full stop. Changed path. 81) Task: Enable the ISAPI-dll Handler – Step 1 Ends abruptly. >>> Fixed. 82) Task: Enable the ISAPI-dll Handler – Step 4 Missing full stop. >>> Fixed.	1	1	https://issues.jboss.org/browse/JBPAPP-7669

#	Requirement	Questions	Answered	Successfully Answered	URL
9812	JBPAPP-7669	83) Task: Configure ISAPI to serve a Basic Cluster – Step 1 Double spacing around the directory. Append to, not append into. >>> Fixed "append". Spacing is a matter of the JBoss styles and is not significant enough to change. 84) Task: Configure ISAPI to serve a Basic Cluster – Step 2 "... has an abstract directory name containing images" --> "has an abstract directory name, and contains images" >>> Fixed. 85) Task: Configure ISAPI to serve a Basic Cluster – Step 3 & 4 Append to, not into. >>> Fixed. 86) Task: Configure ISAPI to serve a Basic Cluster – Step 6 Is there a default location for the log_file property? We should tell people this. Also, tell them what exactly they are meant to be "verifying" about the logs. >>> Fixed. The default location is specified in the example configuration file. Re: checking logs, readers are to check for events of Warning and/or Error. 87) Task: Configure ISAPI to serve a Load Balancing Cluster Load-Balancing >>> Fixed. 88) Task: Configure ISAPI to serve a Load Balancing Cluster – Step 1 Directory has extra spaces around it >>> Spacing is a matter of the JBoss styles and is not significant enough to change. 89) Task: Configure ISAPI to serve a Load Balancing Cluster – Step 3 & 4 Append to, not into. >>> Fixed.	1	1	https://issues.jboss.org/browse/JBPAPP-7669
9813	JBPAPP-7668	29) 5.1.1. mod_manager.so "uses this location for generated keys" <-- uses this location to store generated keys, perhaps,to avoid for-for confusion >>> Fixed 30) 5.1.1. mod_manager.so Are there any limits on Maxcontext, Maxnode, Maxhost, Maxsessionid parameters? >>> Don't know but I'll try to find out. A quick Internet search didn't reveal any limits. 31) 5.1.1. mod_manager.so images/mod_status.png <--could stand to go inside a <figure> tag with a title, since it is all white it just kinda makes the spacing in the document look weird. >>> Fixed 32) 5.1.2. mod_proxy_cluster.so Again, keep an eye on case in your module names. "to change load balancing behaviour" --> load-balancing >>> Fixed 33) 5.1.3. mod_advertise.so case in module names "If port is not specified, the default port specified is 23364." --> the default port used, not specified >>> Fixed 34) 5.2 Install Proxy Server Components "on a JBoss Enterprise Web Server." <-- on a server instance, or on JBoss etc. not on a JBoss etc. >>> Fixed 35) 5.2 Install Proxy Server Components "The Native components are Operating System and processor architecture specific." --> The native components are specific to particular operating systems and processor architectures. (Either that or you need to hyphenate in a complicated way.) Also, check caps on Native Components. >>> Fixed 36) Task: Install Proxy Server Components "Edit the JBoss Enterprise Web Server Apache configuration file" --> Edit the [Apache] configuration file in your JBEWS instance: JBOSS_EWS_DIST/httpd/conf/httpd.conf Instruction for commenting out the line could be clearer, too. (Question for the devs: is there anything the mod_proxy_balancer module is compatible with, and if not, why is it here?) >>> Fixed 37) 6. Configure Basic Proxy Server "to configure a JBoss Enterprise Web Server" --> again, a JBEWS instance, or just JBEWS. Also, "JBoss HTTP connector mod_cluster" is poorly marked up and capitalized in the opening here. >>> Fixed	0	0	https://issues.jboss.org/browse/JBPAPP-7668
9814	JBPAPP-7668	45) Task: Install and Configure a JBoss Enterprise Web Server Worker Node Appendix B, Java Properties Reference is only mentioned in the EWS worker note config section, but the opening of this Appendix suggests that it refers to JBEAP, not JBEWS. Which is it? And should this appear in the previous task's prerequisites as well? >>> Fixed. Added to previous tasks's pre-reqs, also appendix opening changed so that EWS and EAP are mentioned. 46) 8. Further Server Configuration feels like a bit of a "misc" section. Can this content go elsewhere? >>> Fixed. In fact this material was somehow duplicated so I have deleted what was chapter 8. 47) Task: Configure Application Platform Worker Node with Static Proxy List comma separated --> comma-separated >>> Fixed 48) 9.2 Clustered Node Operation "The JBoss HTTP Connector can operate in non-clustered or clustered mode." --> in either clustered or non-clustered mode >>> Fixed 49) IMPORTANT: 9.2 Clustered Node Operation Does not include details on configuring clustered/non-clustered operation. >>> Still pending action. 50) 10. Load Balancing Demonstration jboss-eap-5.1/mod_cluster/demo directory. Only in 5.1? I imagine this will need to be edited in future; may as well make it multi-version compliant now. >>> Fixed. 51) 10. Load Balancing Demonstration I think QE likes us to avoid letting applications possess things (load-demo.war's) >>> Fixed. "load-demo.war's" change to "the application's" 52) 10. Load Balancing Demonstration "Load-demo app" <-- decide how you will refer to the app and use it consistently; avoid swapping between this and load-demo.war Similarly, decide whether to refer to it as the Demonstration or the Demo >>> Fixed. "Demo" changed to demonstration. 53) 10.1 Set up the Demonstration Step 2 Note – text and admonition weight (note vs important) should match the admonition in the previous section, if this note is here at all. >>> Fixed. 54) 10.1 Set up the Demonstration Step 3 - just prefix the step name with "Tomcat 6 only" or something, remove the admonition >>> Fixed. Admonition removed and prefix added instead.	0	0	https://issues.jboss.org/browse/JBPAPP-7668
9815	JBPAPP-7668	55) 10.1 Set up the Demonstration Step 3 - "<web-app>element," <-- missing space, and element not marked up as I would expect Also, is it actually "appending" (that is, is </web-app> the last thing in the file before you add this)? >>> Yet to be addressed 56) Task: Configure Client Control Tab Fields "...to learn the values you must supply in the Client Control tab of the Load Balancing Demonstration." <-- 'complete this task to learn' is a vague task goal; what does the task actually accomplish? I would recommend making Step 2 "Supply values for <required fields> and, optionally, <optional fields>." Move your list of references outside the task - either beforehand with "the demo client requires a number of values, defined here" or after with "the fields in step two expect values as defined in the following list". >>> Fixed. 57) Task: Interact with the Demonstration Task Prerequesites <-- differs from the straight "Prerequisites" in all other sections, and is misspelled >>> Fixed 58) Task: Interact with the Demonstration I'm not sure "experiment" should be a task/procedure. Additionally, screenshots couldn't go amiss. >>> Fixed. I have reworded the description to avoid "experiment". For the sake of the document's structure I have left this as a task. Regarding screenshots, I disagree and believe they are not necessary. The only steps which might benefit from screenshots are instructions to click on a tab in a GUI interface, a task so simple that I don't believe screenshots would help.	0	0	https://issues.jboss.org/browse/JBPAPP-7668

I am working on a JIRA issue in which some identified that the HTTP Connectors Load Balancing Guide states (in section 8.2 - "The JBoss HTTP Connector can operate in either clustered or non-clustered mode." but that is all. There is no further explanation of whether or not any configuration is required to use the HTTP Connector in a clustered configuration. Can you please give me some hints?"	0	0	https://issues.jboss.org/browse/JBPAPP-7668

#	Requirement	Questions	Answered	Successfully Answered	URL
9817	JBPAPP-7667	7) 1. Overview "takes the load of the disabled node" <-- reads like a typo for 'takes the load off'; awkward >>> Reworded 8) 1. Overview "Two distinct functions must be performed" <-- by...? Try "This involves two distinct operations:" >>> Reworded 9) IMPORTANT: 1. Overview "Sessions state replication" --> "Session state replication" "is handled by JBoss at the application level" <-- if it's handled at the application level, it's not handled by JBoss. Perhaps this should say "on an application by application basis"? Or does JBoss delegate responsibility to the application? >>> Reworded 10) 1. Overview "A cost effective way of managing load-balancing is..." <-- hyphenation is wrong. cost-effective and load balancing, please >>> Fixed 11) 1. Overview "Apache httpd " <-- described previously as Apache httpd Server, pick one and stick with it >>> "Apache HTTP Server" chosen as this is how it's described on the project's home page. Fixed. 12) 2. Download and Install "Apache httpd is included..." <-- described previously as Apache httpd Server, pick one and stick with it >>> Fixed 13) 3. Configure load balancing using Apache and mod_jk "Apache" <-- described previously as both Apache httpd Server and Apache httpd, pick one and stick with it, or say "hereafter referred to as Apache" (Last time I will mention this unless it develops a new reference; it's running rife throughout the document.) >>> Fixed 14) STYLE: 3. Configure load balancing using Apache and mod_jk – Prerequisites The weighting of the Task header and the Prerequisites header is the same, which makes it look like the steps actually belong to the Prerequisites. >>> Fixed	1	1	https://issues.jboss.org/browse/JBPAPP-7667
9818	JBPAPP-7666	OK, my fault but I must reopen - none of mentioned points are on https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/index.html Am I missing something?	1	1	https://issues.jboss.org/browse/JBPAPP-7666
9819	JBPAPP-7658	I have added the requested information to the EAP 5.1.2 Release Notes. The book has now being re-Brew-ed and the modified version is available on DocStage: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Release_Notes_5.1.2/index.html#id3501816	0	0	https://issues.jboss.org/browse/JBPAPP-7658

9821	JBPAPP-7610	When do you need this? I can do it tomorrow. (hopefully it will work w/o problems, as it's been a while since I released JBCL :-))	0	0	https://issues.jboss.org/browse/JBPAPP-7610
9822	JBPAPP-7603	Clebert, Is there any info about this available anywhere? Cheers	1	1	https://issues.jboss.org/browse/JBPAPP-7603
9823	JBPAPP-7603	Thanks Justin The content from the upstream docs has been added to the enterprise Guide and is available for review at: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id4021952 Could you please confirm that it is technically accurate and suitable for publication. 9824	JBPAPP-7603	Thanks for the feedback Justin. I had misunderstood your info, but have it straight now. Can you please confirm the changes to be sure they're clear and accurate. http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HornetQ_User_Guide/ch29s07.html Thanks again	1	1	https://issues.jboss.org/browse/JBPAPP-7603
9825	JBPAPP-7556	Can I please double-check what's being requested? I have read the latest comments on JIRA JBPAPP-7521 and I believe the problem was that the redelivery-delay parameter was *NOT* supposed to have been changed from 6000 to 0 but instead this was a mistake. If I understand correctly, you're asking that (1) the Release Notes entry for this JIRA issue be deleted, and (2) the change to the HornetQ documentation be undone - i.e. the value "6000" be changed back to "0" in the appendix. I don't understand just why in JBPAPP 7521, Clebert and Rostislav seem to confirm that having "redelivery-delay" set to a value greater than 0 is a problem, yet a later comment from Miroslav states that if this parameter is not greater than 0 that failover doesn't work. Can someone please clarify the situation and what changes are required to documentation (including Release Notes)?	1	1	https://issues.jboss.org/browse/JBPAPP-7556
9826	JBPAPP-7556	Can someone please confirm just what the status of this issue is? As far as I can tell the change was documented correctly but some comments indicate that the documentation changes need to be undone. If I haven't received a reply by 3 February 2012 I will resolve this JIRA issue.	0	0	https://issues.jboss.org/browse/JBPAPP-7556
9827	JBPAPP-7494	Martha, this file is needed in the main zip, I've updated the JBPAPP_5_1 branch (Committed revision 113599.) with the fix, and local build now includes that file under docs/examples/jms/, can you please merge that into your 5.2.0 tag? Also, we should have this file in the rpm and zip now. Please update those as well if needed. Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-7494
9828	JBPAPP-7480	Misty, Can you move JBPAPP-7480 to bz and then cross reference the bz number in this Jira and close this one? Thanks, Mike	1	0	https://issues.jboss.org/browse/JBPAPP-7480
9829	JBPAPP-7455	Hi Clebert, I am reopening this issue because I have not found any documentation updates related to this new feature. There is no description in new documentation for EAP 5.1.2 [1] and there is no description in project documentation [2]. I have tried to add min-large-message-size to connection factory and this works fine. Core-bridge takes this configuration value. But I want to verify new configuration properties (well same property but at different locations) according discussion at help desk ticket. Could you add documentation for this new feature, please? [1] http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html [2] http://anonsvn.jboss.org/repos/hornetq/branches/Branch_2_2_EAP	1	1	https://issues.jboss.org/browse/JBPAPP-7455
9830	JBPAPP-7455	Russe, Can you add something like the diff.patch attached here? I have committed this to the open source's doc.	1	1	https://issues.jboss.org/browse/JBPAPP-7455
9831	JBPAPP-7455	Attention: Clebert I am happy to add to the documentation mention of the "min-large-message-size" configuration option but before I do I need to check I understand correctly. (1) When I wrote the Release Notes entry for this issue I thought the configuration option already existed but that it wasn't recognised. If in fact this is a *new* configuration option, I need to correct the Release Notes text; (2) The patch you attached to this issue also contains documentation of two other configuration options. Is the documentation of those options covered by separate JIRA issues? I'll wait on your feedback before making any changes. Regards, Russell	1	1	https://issues.jboss.org/browse/JBPAPP-7455
9832	JBPAPP-7455	Attention: Clebert Sorry, but I'm now even more confused. :) "Russel: there should be two parameters to be added on the cluster-connection: min-large-message-size and max-retries" I understand from what you've written that these parameters already existed but previously *only* existed on ClientSessionFactory, not the cluster connnection. I understand that part. What I don't understand is the sudden mention of the "max-retries" parameter. It's not mentioned anywhere in this JIRA issue, nor in the patch you attached to this issue. The patch documents two parameters: min-large-message-size and reconnect-attempts. Can you please explain the difference between what you have said about the two parameters and the documentation patch? On an side note, I notice in the patch that you have a probably unwanted " character between the <literal> tags of the "reconnect-attempts" parameter. I'm sorry that we're having to play JIRA comment tag but I want to be sure I understand before I edit the documentation. Is there a better method by which we could communicate, perhaps IRC? I am rdickens and always in #docs, #brisbane, #jboss-docs when I am at work. Regards, Russell	1	1	https://issues.jboss.org/browse/JBPAPP-7455

#	Requirement	Questions	Answered	Successfully Answered	URL
9833	JBPAPP-7363	These issues require SME input to allow development of this document to continue: * Is it possible to get an example of how the SAML11SPRedirectFormAuthenticator method could be implemented? Config files, usecase? * What does Artifact Resolution Protocol offer end users, in a practical sense? * What happens if GLO participant numbers are too high? * There's tables in the source content for SAML2IssuerTrustHandler and SAML2LogOutHandler.java configuration parameters that have nothing in them. Is there content available or should they be removed? * Are the'authors' under BinaryTokenHandler (and the ensuing sections) the author of the code or the documentation about it? * How much of the content in the PicketLink STS Login Modules page is required in the enterprise docs?(http://community.jboss.org/wiki/PicketLinkSTSLoginModules). Part of ECS mandate is to avoid linking to community documents as much as possible. Is it important enough to port the entire page into the doc? * Is this an appropriate trace category for org.jboss.security? The documentation says to add one, but not what it should look like. <!-- <category name=" org.jboss.security"> <priority value="TRACE"/> </category> --> These questions are also in the PLINK doc itself (highlighted in yellow) http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/PicketLink_Reference_Guide/index.html	1	1	https://issues.jboss.org/browse/JBPAPP-7363
9834	JBPAPP-7325	Anil, can this change be added to the requested file without impacting the current customers?	1	1	https://issues.jboss.org/browse/JBPAPP-7325
9835	JBPAPP-7325	We can do this at the EAP level. Can we do this as part of the EAP build?	1	1	https://issues.jboss.org/browse/JBPAPP-7325
9836	JBPAPP-7275	Attention: Permaine We are past the docs freeze date for EAP 5.1.2 but I am willing to make this correction to the documentation if it's minor. The description and your comments on this issue don't seem to match so I'm confused. In the Description you say "But there isn't such package jbossas-web-tp-licences..." yet in the comments "We now have jbossas-{,web}tp-licences...". Even more confusing is your latest comment which states that this page should be removed from the yum command you quoted. If the package exists, why is it to be removed from the yum command? I look forward to your reply.	1	1	https://issues.jboss.org/browse/JBPAPP-7275
9837	JBPAPP-7275	Unfortunately, I haven't seen correction on Stage Docs server yet - licence package is still mentioned on every RHEL (EAP/EWP). Isn't the problem that IG for EWP will be not updated (PM decision)? Although I've seen this package also in EAP docs. Update: Note from Permaine is correct, licence package is deployed to system in the first phase automatically as dependency for jbossas.	1	1	https://issues.jboss.org/browse/JBPAPP-7275
9838	JBPAPP-7275	Attention: Pavel (and Rajesh) (1) The latest change noted on 22 November 2011 was to the *EAP* Installation Guide, not the *EWP* Installation Guide as this issue requests, so I'll need to correct my error ASAP. I wonder, though, if this change is also relevant to EAP? In other words, if this change affects EAP *and* EWP, should I leave my changes as they are? (2) Pavel, you're quite correct that in a PM meeting some time ago it was decided that EWP documentation was no longer to be maintained. So my original changes to the EWP Installation Guide should not have been done. I'll leave them as they are, though, since it's not worth undoing them.	1	1	https://issues.jboss.org/browse/JBPAPP-7275
9839	JBPAPP-7221	I'm trying to resolve old open issues filed against the Installer component, and it would seem that the [EAP 6 Installation Guide|https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/6/html/Installation_Guide/Install_JBoss_Enterprise_Application_Platform_6_Using_the_Installer_Method.html] now contains documentation about this feature. Does this issue need to remain open?	1	1	https://issues.jboss.org/browse/JBPAPP-7221
9840	JBPAPP-7221	I echo Alex' question from 2012; do we need this to remain open now that documentation exists?	1	1	https://issues.jboss.org/browse/JBPAPP-7221
9841	JBPAPP-7203	The customer has indicated that their production date is October 28, 2011. Can we make this date?	0	0	https://issues.jboss.org/browse/JBPAPP-7203
9842	JBPAPP-7046	Can this issue be gone? EAP branch deploys and runs.	1	1	https://issues.jboss.org/browse/JBPAPP-7046
9843	JBPAPP-7014	Brew build: jboss-cluster-ha-client-1.1.3-1.1.ep5.el6 Repo location: http://download.lab.bos.redhat.com/brewroot/repos/jb-eap-5-rhel-6-build/latest/maven/org/jboss/cluster/jboss-ha-client/1.1.3.Final/	0	0	https://issues.jboss.org/browse/JBPAPP-7014
9844	JBPAPP-7014	Brew Build: jboss-cluster-ha-client-1.1.4-1.1.ep5.el6 Repo Location: http://download.lab.bos.redhat.com/brewroot/repos/jb-eap-5-rhel-6-build/latest/maven/org/jboss/cluster/jboss-ha-client/1.1.4.Final/	1	1	https://issues.jboss.org/browse/JBPAPP-7014
9845	JBPAPP-6996	Attention: Derek Horton Can you please expand on the draft Release Notes entry? Standard release notes are based on four pieces of information: Cause, Consequence, Fix and Result. I have looked over the issue's description and commits etc but simply don't understand the issue well enough to complete the Release Notes field with confidence. Thankyou, Russell Dickenson Content Author	1	0	https://issues.jboss.org/browse/JBPAPP-6996
9846	JBPAPP-6990	The contents of the attached patch have been incorporated into setcion 15.2. Datasource Parameters of the Administration and Configuration Guide.	1	1	https://issues.jboss.org/browse/JBPAPP-6990
9847	JBPAPP-6958	Sent email to Clebert and Tomas (with Pavel in cc) Hi Clebert and Tomas Pavel raised https://issues.jboss.org/browse/JBPAPP-6958 to capture the need for GFS2/SAN Fencing information for HornetQ. Can you assist with the correct information so we can incorporate this info before docs freeze on September 18? I would need the basic procedure with configuration options. The end result of the procedure would be the customer correctly configuring Fencing on their system. Because customer server implementations vary, if we can give the customer configuration info for the most common, or top two most common scenarios (like we did for Colocated Symmetrical Clustering), that would be ideal. Jared Morgan	1	1	https://issues.jboss.org/browse/JBPAPP-6958
9848	JBPAPP-6923	This jira description is too brief for me to verify it. Please add some explanatory usecase or description so as we know what we should verify. Also, is there a relationship to JBAPP-6954? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-6923
9849	JBPAPP-6893	Does this need to be mentioned in the Release Notes for EAP 5.1.2, considering it has a helpdesk ticket reference. The policy is that every GSS issue has CCFR provided in the Release Note Text field.	0	0	https://issues.jboss.org/browse/JBPAPP-6893
9850	JBPAPP-6892	We need the change in both the zip and rpm, is that correct? Just want to make sure before I make the changes. Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-6892
9851	JBPAPP-6846	Hi [~rhatlapa] The instance of 'JBoss Server' in the Release Notes had already been corrected in the source code when I went to fix it. A new version will be staged today. Nice catch. Regarding the Security Guide; I'm having trouble finding the instance of 'JBoss Server' you're referring to. A search of a html-single build of the book returns only the reference in my own Revision History entry, which says that the term had been removed. It's possible the latest version of the doc had not propagated to the stage by the time you checked it (there can be some lengthy delays sometimes). If the instance is still present, could you grab a screenshot and attach it to this JIRA. If not, and you're satisfied that this fix is verified, please close this ticket. Thanks for your diligence on this issue.	1	1	https://issues.jboss.org/browse/JBPAPP-6846
9852	JBPAPP-6794	I've spoke to colleagues about testing this. Without changing the actual code to put in a sleep to stop the synchronization and try and make it break it's not possible. The customer is happy to test the patch for us but neither the upstream or apache fix has a test case for this either. Can we just do some base testing. Any questions let me know please.	1	1	https://issues.jboss.org/browse/JBPAPP-6794

#	Requirement	Questions	Answered	Successfully Answered	URL
9853	JBPAPP-6752	jbossas-tp-licenses-5.1.2-1.ep5.el4 jbossas-tp-licenses-5.1.2-1.ep5.el5 jbossas-tp-licenses-5.1.2-1.ep5.el6 jbossas-web-tp-licenses-5.1.2-1.ep5.el4 jbossas-web-tp-licenses-5.1.2-1.ep5.el5 jbossas-web-tp-licenses-5.1.2-1.ep5.el6 Built in Brew. Martha, please let me know when you have a jbossas{,-web} built, I can update the build to R: -tp-licenses and remove the packaing of the licenses file in the jbossas{,-web} itself.	1	1	https://issues.jboss.org/browse/JBPAPP-6752
9854	JBPAPP-6743	I can confirm the EAP 5 documentation is fixed, but EWS 2 doc still need this fix: http://documentation-devel.engineering.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/2/html-single/Hibernate_Entity_Manager/index.html#setup-configuration-bootstrapping Could you please fix it? Thank you	0	0	https://issues.jboss.org/browse/JBPAPP-6743
9855	JBPAPP-6726	Stefan, this is supposed to be fixed in the JBPAPP_5_1 branch since December but I could not find the SVN commit with that JIRA in the subject in the svn log. Can you confirm that is fixed and find the svn rev number for us please?	1	1	https://issues.jboss.org/browse/JBPAPP-6726
9856	JBPAPP-6724	To my mind, the problem only occurs when requireReauthentication is set to True (I checked it), because of this : After looking at the code of WebAuthentication, I saw that it sets AUTH_TYPE field with private static final java.lang.String AUTH_TYPE = "PROGRAMMATIC_WEB_LOGIN"; In org.apache.catalina.authenticator.SingleSignOnEntry.updateCredentials(Principal, String, String, String), the method checks if authtype is FORM or BASIC to sets the canReauthenticate boolean to true, this one will allow to reauthenticate later. So as far as I understand, org.jboss.web.tomcat.security.login.WebAuthentication.AUTH_TYPE is incompatible with org.apache.catalina.authenticator.SingleSignOn.requireReauthentication. What do you think ?	0	0	https://issues.jboss.org/browse/JBPAPP-6724
9857	JBPAPP-6706	Seems like something that a customer could do with knowing about. Flagged for release note at a minimum. Could there also be a docs impact with this fix?	1	1	https://issues.jboss.org/browse/JBPAPP-6706
9858	JBPAPP-6680	Hi, I'm not sure, how does a typical usecase looks like. Where is this resources.xml file located? Could you provide me with some example? Thanks	1	1	https://issues.jboss.org/browse/JBPAPP-6680
9859	JBPAPP-6680	I'm sorry, I'm not familiar with LzPack and I'm apparently missing something. This splash screen should be displayed when the installer is run? And where in the installer jar directory structure is eap-config directory located? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-6680
9860	JBPAPP-6654	Hi Howard, I've identified some tests which fails regularly due to too strict timeout. Could you please increase them 10x for receive(...) methods and 2x for thread sleep. Thank you, this will help me a lot with futher testing. Mirek org.jboss.test.messaging.jms.ConnectionFactoryTest(Remote-bisocket).testAdministrativelyConfiguredOrderingGroup - line 829 FailoverTest(Clustering).testSimpleFailoverWithRemotingListenerEnabled - line 1429 FailoverTest.simpleFailover(FailoverTest.java:2321) JMSExpirationHeaderTest.testNoExpirationOnTimeoutReceive(JMSExpirationHeaderTest.java:90) DistributedQueueTest.clusteredQueue(DistributedQueueTest.java:611) HATest.testFailoverWithUnackedMessagesClientAcknowledge(HATest.java:416) ChangeFailoverNodeTest.killAllToOneAndBackAgain - increase timeout in all Thread.sleep(8000) method to 20000 seconds	0	0	https://issues.jboss.org/browse/JBPAPP-6654
9861	JBPAPP-6649	do you have a test replicating this?	1	1	https://issues.jboss.org/browse/JBPAPP-6649
9862	JBPAPP-6649	Hi, we have tried to re-test this issue with EAP 5.1.2 ER2 and we are able to reproduce this issue with this build. {code} java.lang.IndexOutOfBoundsException at org.jboss.netty.buffer.AbstractChannelBuffer.checkReadableBytes(AbstractChannelBuffer.java:657) at org.jboss.netty.buffer.AbstractChannelBuffer.readBytes(AbstractChannelBuffer.java:337) at org.jboss.netty.buffer.AbstractChannelBuffer.readBytes(AbstractChannelBuffer.java:343) at org.hornetq.core.buffers.impl.ChannelBufferWrapper.readSimpleStringInternal(ChannelBufferWrapper.java:84) at org.hornetq.core.buffers.impl.ChannelBufferWrapper.readNullableSimpleString(ChannelBufferWrapper.java:58) at org.hornetq.jms.client.HornetQTextMessage.doBeforeReceive(HornetQTextMessage.java:143) at org.hornetq.jms.client.HornetQMessageConsumer.getMessage(HornetQMessageConsumer.java:236) at org.hornetq.jms.client.HornetQMessageConsumer.receive(HornetQMessageConsumer.java:133) at org.jboss.qa.hornetq.TestConsumerSimple.main(TestConsumerSimple.java:54) {code} How to reproduce it? - setup EAP 5.1.2 ER2 with HornetQ, use PAGE address full policy and durable test queue - use standalone JMS client and push 1000 large text messages into queue. Every message include 1MB of real text - use standalone JMS client and try to receive all messages (no transaction, auto ack). Disconnect network when client consumes messages (just pull out network cable from client machine) and restore this connection. Do it several times during the test and do not put cable back after last disconnection. After some time you will see IndexOutOfBoundsException on the client side (you will have to wait several minutes). We have also noticed another interesting behavior. Client is configured to receive messages with 30s timeout but client will not end with null message. Try to pull out cable and wait more than 30s. You should see it. {code} while ((message = consumer.receive(30000)) != null) {code}	1	1	https://issues.jboss.org/browse/JBPAPP-6649
9863	JBPAPP-6649	Hi Clebert, I agree but is it possible to provide better exception here? IndexOutOfBoundsException does not look good. Could you add your comment about described issue with consumer.receive(30000)? It seems that client does not return null message in this case. Is it expected behavior? Thank you.	1	1	https://issues.jboss.org/browse/JBPAPP-6649
9864	JBPAPP-6618	This is due to the nature of AUTO_ACK mode. The user should be aware that using a small timeout this would happen. I think it is a normal behavior. Can we mark it as 'won't fix'? Howard	1	1	https://issues.jboss.org/browse/JBPAPP-6618
9865	JBPAPP-6618	Hi Mirek, If a user doesn't want to loose a message, he should use a transactional ack to guarantee this. The behavior of AUTO_ACK conforms to JMS spec. Can we postpone this jira to later releases until we have a better idea? Howard	1	1	https://issues.jboss.org/browse/JBPAPP-6618
9866	JBPAPP-6589	Hi Clebert, Roger, severity of log message was decreased to "debug" level. Is it ok? Jira says to decrease it to "either WARNING or INFO". If it's ok then jira can be closed. I'll wait for feedback. Thank you, Mirek	0	0	https://issues.jboss.org/browse/JBPAPP-6589
9867	JBPAPP-6577	how does this relate to HHH-2389?	1	0	https://issues.jboss.org/browse/JBPAPP-6577

#	Requirement	Questions	Answered	Successfully Answered	URL
9868	JBPAPP-6577	Strong Lui, Have you ever tried to use the private modifier for version/id setter? For sure not! If you have tried it, you would notice that, because the proxy extends the entity class, these setters need to be, at least, protected. About the use case not being a good practice. Why this is not a good practice? In 2006 (when this version of hibernate was released) we did not have conversation scope in JavaEE, remember? As far as I know, conversation scope was recently add to Java EE 6 (which was proposed by Seam Framework). Even though, conversation scope, in my opinion, is not a good option for all kinds of system. About the rejection. It is not a "Feature Request". It is a "BUG", for sure. Think about the below cases: 1) Entity is detached: hibernate receives the version and understand it. 2) Entity is attached: hibernate receives the version, DOES NOT understand it and simply SAY NOTHING to the programmer. So, it is a BUG because we have only two options: 1) hibernate implements the same semantics in both attached or detached (that is the better solution and used by other JPA frameworks, in my opinion) OR 2) hibernate throws an Exception when entity is attached saying it does not understand the new value. Ignoring a value just set is, for sure, A BUG. Of course, the second option can not be implemented at this point because it will break many systems around the world. So, if you do not want to fix this. Please, say that. But do not say it is not a bug because IT IS. I know a lot of people that have the same problem, even with newer versions of hibernate. If you don't want to fix this in this old version, please, fix this in the last version of hibernate. So we will not have the same issue forever.	1	0	https://issues.jboss.org/browse/JBPAPP-6577
9869	JBPAPP-6577	{quote} Have you ever tried to use the private modifier for version/id setter? For sure not! If you have tried it, you would notice that, because the proxy extends the entity class, these setters need to be, at least, protected. {quote} trust me, i know what i was saying. http://docs.jboss.org/hibernate/core/3.6/reference/en-US/html/tutorial.html#tutorial-firstapp-firstclass {quote} About the use case not being a good practice. Why this is not a good practice? In 2006 (when this version of hibernate was released) we did not have conversation scope in JavaEE, remember? As far as I know, conversation scope was recently add to Java EE 6 (which was proposed by Seam Framework). Even though, conversation scope, in my opinion, is not a good option for all kinds of system. {quote} did i say conversation in JAVA EE 6? i say "session-per-conversation", it is a well known hibernate pattern. http://docs.jboss.org/hibernate/core/3.6/reference/en-US/html/transactions.html#transactions-basics-apptx {quote} About the rejection. It is not a "Feature Request". It is a "BUG", for sure. Think about the below cases: 1) Entity is detached: hibernate receives the version and understand it. 2) Entity is attached: hibernate receives the version, DOES NOT understand it and simply SAY NOTHING to the programmer. So, it is a BUG because we have only two options: 1) hibernate implements the same semantics in both attached or detached (that is the better solution and used by other JPA frameworks, in my opinion) OR 2) hibernate throws an Exception when entity is attached saying it does not understand the new value. Ignoring a value just set is, for sure, A BUG. Of course, the second option can not be implemented at this point because it will break many systems around the world. So, if you do not want to fix this. Please, say that. But do not say it is not a bug because IT IS. I know a lot of people that have the same problem, even with newer versions of hibernate. If you don't want to fix this in this old version, please, fix this in the last version of hibernate. So we will not have the same issue forever. {quote} i'm saying it is not a bug because of we never said in our document hibernate supports that, and, take a look of JPA spec, "11.1.50 Version Annotation" -- "In general, fields or properties that are specified with the Version annotation should not be updated by the application.[112]"	0	0	https://issues.jboss.org/browse/JBPAPP-6577
9870	JBPAPP-6514	Email sent to Thomas seeking further information: "Thomas, I need your help with this JIRA issue as I need to write an appropriate Release Notes entry but don't have enough information. Since this is a few feature, we'll need to provide instructions to customers as to how it's to be used - both in creating the installation template file and using it to complete an automated installation. Does this documentation already exist and if so, where? If not, when might it be created? Of course all I need is a rough draft, from which I can write more complete instructions and add these to the installation guide. Since we're writing draft Release Notes now, please ACK this message by Monday, 5 September 2011 and provide a response by Wednesday, 7 September 2011. https://issues.jboss.org/browse/JBPAPP-6514 Thanks, -- Russell Dickenson Engineering Content Services Red Hat, Brisbane Australia"	1	1	https://issues.jboss.org/browse/JBPAPP-6514
9871	JBPAPP-6497	Tyronne, Are these requests still valid? To my knowledge, no changes have been made to the docs as a result of this JIRA. 1: What is the JCA adapter renaming you referred to? 3: There's many references to 'transactions' in the HornetQ Guide, which section (number and title) did you wish to see separated into a new chapter?	1	1	https://issues.jboss.org/browse/JBPAPP-6497
9872	JBPAPP-6497	Hi, >>1: What is the JCA adapter renaming you referred to? This has already been changed and looks fine. >>3: There's many references to 'transactions' in the HornetQ Guide, which section (number and title) did you wish to see separated into a new chapter? I doubt it's necessary at this stage. With the latest changes in JMS RAR, you don't truly need to perform any manual configurations on the JBossTS to enlist HQ resources for recover. This has been automated since JBoss-EAP-5.1.2 This Jira can now be closed.	1	1	https://issues.jboss.org/browse/JBPAPP-6497
9873	JBPAPP-6483	Hi Jared, item: 7.4 Standalone HornetQ JNDI configuration needed to be removed Invalid configuration and comment is still here: “In the default configuration,….” + including Note. Could you check it, please? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id3379235	0	0	https://issues.jboss.org/browse/JBPAPP-6483
9874	JBPAPP-6462	Jimmy, Can you please provide Cause, Consequence, Fix, Result information for this issue? I have looked over the patch attached above and the linked JIRA issues but still don't understand what the issue was and how it was resolved. I need this information for EAP 5.1.2's release notes so I'd appreciate an ACK by Thursday, 25 August 2011 and a response by Monday, 29 August 2011.	1	1	https://issues.jboss.org/browse/JBPAPP-6462
9875	JBPAPP-6462	Jimmy, Do you know if I will have confirmation on this issue's draft Release Notes field by the end of this week? If not I'll need to exclude it from the Release Notes.	1	1	https://issues.jboss.org/browse/JBPAPP-6462
9876	JBPAPP-6462	Attention: Jimmy Sorry for marking this "Not Required" but I was pressed for time to get Release Notes finalised. Other JIRA issues are have put me back a little and since you've corrected the text I thought it was best to include it. I have added a little information to the Release Notes about what was done to fix the issue. I read the SVN commit diff but am not sure if I have described the fix accurately. Could you please look over it and tell me if the description is wrong? Thanks	1	1	https://issues.jboss.org/browse/JBPAPP-6462
9877	JBPAPP-6444	Hi Rajesh, I believe that certification for Oracle 11gR2 11.2.0.2 [1] is done. We could close this jira. What do you think? Thank you, Mirek [1] https://docspace.corp.redhat.com/docs/DOC-30279#Oracle_112020_mm184	0	0	https://issues.jboss.org/browse/JBPAPP-6444
9878	JBPAPP-6418	I mean.. if we don't at least log an error, the user will never fix his application.	0	0	https://issues.jboss.org/browse/JBPAPP-6418

#	Requirement	Questions	Answered	Successfully Answered	URL
9879	JBPAPP-6418	Another reason for not to do it: Say, you mistyped an expression. Say: venorID=id, when you had a vendorID property on your messages. If I don't throw an exception, you will never know you didn't have an exception. If you want an improvement here.. the maximum we could do is log a warn with PROPERTY=<property> non existent. But that would be major change, with low priority to be developed since I don't see much gain compared to other issues we have to invest our time.	0	0	https://issues.jboss.org/browse/JBPAPP-6418
9880	JBPAPP-6368	Will the .bat appear eventually, or should we close?	0	0	https://issues.jboss.org/browse/JBPAPP-6368
9881	JBPAPP-6368	Hi Clebert, I've attached switch.bat file. I'm not sure how to get it to EAP distribution. Could you do it please? Thank you, Mirek	1	1	https://issues.jboss.org/browse/JBPAPP-6368
9882	JBPAPP-6368	Is there any other mechanism (like ant) to install HQ on the EAP distribution to replace JBM? If no this is a blocker.	0	0	https://issues.jboss.org/browse/JBPAPP-6368
9883	JBPAPP-6333	Rajesh, could you reassign this issue to some EAP QE? Or, just close it as won't fix if you don't mind EAP 5 logging this annoying INFO.	0	0	https://issues.jboss.org/browse/JBPAPP-6333
9884	JBPAPP-6303	I am reopening this JIRA because there is a new configuration parameter for ra (see committed changes). This parameter is not documented in project documentation and it is not documented in EAP documentation. Could you update project and EAP documentation, please?	1	1	https://issues.jboss.org/browse/JBPAPP-6303
9885	JBPAPP-6302	Builds updated to use hornetq-eap-exmples, resteasy-examples, jboss-messaging-examples and a svn export of the ws examples: rh-ewp-docs-5.1.1-3.ep5.el4 rh-ewp-docs-5.1.1-3.ep5.el5 rh-ewp-docs-5.1.1-3.ep5.el6 resteasy and ws examples updated in : rh-eap-docs-5.1.1-3.ep5.el4 rh-eap-docs-5.1.1-3.ep5.el5 rh-eap-docs-5.1.1-3.ep5.el6 Marking this as resolved, will be in ER2.	1	1	https://issues.jboss.org/browse/JBPAPP-6302
9886	JBPAPP-6260	Larry O'Leary <loleary@redhat.com> made a comment on [bug 710230|https://bugzilla.redhat.com/show_bug.cgi?id=710230] (In reply to comment #3) > Fixed in master - commit 5f9ddb7. I do not see 5f9ddb7, did you mean e431028f? Also, please note that this doesn't truly resolve this BZ. It resolves the example use-case provided but the BZ is more general then that. It seems that this confusion can exist with any operation that would have a boolean result. Instead of using the "Success" status on the operation status, maybe we should be looking at: In Progress --> [Failed | Complete] Or even going as far as displaying the operations result as the state. If a boolean, "True|False", if a simple object "<object>.toString()", if a complex object, "Object Name" or "See Result" link. The idea is that we want to convey to the user, via the UI, that what they are looking at is not the result of the operation but a link that will take you to the result of the operation.	1	1	https://issues.jboss.org/browse/JBPAPP-6260
9887	JBPAPP-6174	Fernando, could we get this component upgrade to the ER2?	0	0	https://issues.jboss.org/browse/JBPAPP-6174
9888	JBPAPP-6166	Prabhat, can you assign this patch to somebody on Richfaces QE for testing?	0	0	https://issues.jboss.org/browse/JBPAPP-6166
9889	JBPAPP-6157	Martha, we need to bump the release, to at least 7, of the RHEL 6 build to be newer than the base one, antlr-2.7.7-6.5.el6. Do you mind rebuilding it? Thanks!	1	0	https://issues.jboss.org/browse/JBPAPP-6157
9890	JBPAPP-6156	Martha, we need to bump the release of the RHEL 6 build, to at least 9, to be newer than the base one, hsqldb-1.8.0.10-8.el6. Do you mind rebuilding it? Thanks!	1	0	https://issues.jboss.org/browse/JBPAPP-6156
9891	JBPAPP-6145	Is this JIRA about a documentation section describing how nad why S3_PING (and possibly the JBM id script) use Amazon S3 to enable clustering?	1	0	https://issues.jboss.org/browse/JBPAPP-6145
9892	JBPAPP-6145	Is this information really relevant? We ship our cluster-ec2 and mod_cluster-ec2 profiles pre-configured to use S3_PING and tcp (although UDP unicast might still work we have tcp in config). I guess we need to document how S3_PING works and what configuration user needs to apply in the amazon AWS console but I don't see why should we document advanced jgroups configuration details.	1	0	https://issues.jboss.org/browse/JBPAPP-6145
9893	JBPAPP-6138	Hi Jared, could you add a note to documentation about this issue. Thank you, Mirek	0	0	https://issues.jboss.org/browse/JBPAPP-6138
9894	JBPAPP-6138	Attention: Jared Are you happy to run with this one? I thought about re-assigning it to myself but I don't think it's worth it.	1	1	https://issues.jboss.org/browse/JBPAPP-6138
9895	JBPAPP-6138	Hi Jared, problem is little bit different. I think that documentation update is not correct here. Problem: You can use HA activation property on your MDB. Problem is that MDB with this activation property cannot be used in default EAP configuration profile because this configuration profile does not have cluster=true in HornetQ configuration. Documentation should contain information that this activation property cannot be used with HornetQ without cluster enabled. If you use this MDB with the HornetQ without cluster=true, you will get the following exception: {code} 09:51:07,042 WARN [HornetQActivation] Failure in HornetQ activation org.hornetq.ra.inflow.HornetQActivationSpec(ra=org.hornetq.ra.HornetQResourceAdapter@f1abb1c destination=/queue/DLQ destinationType=javax.jms.Queue ack=Auto-acknowledge durable=false clientID=null user=null maxSession=15) HornetQException[errorCode=3 message=Timed out waiting to receive cluster topology] at org.hornetq.core.client.impl.ServerLocatorImpl.createSessionFactory(ServerLocatorImpl.java:723) at org.hornetq.ra.inflow.HornetQActivation.setupSession(HornetQActivation.java:352) at org.hornetq.ra.inflow.HornetQActivation.setup(HornetQActivation.java:290) at org.hornetq.ra.inflow.HornetQActivation$SetupActivation.run(HornetQActivation.java:587) at org.jboss.resource.work.WorkWrapper.execute(WorkWrapper.java:205) at org.jboss.util.threadpool.BasicTaskWrapper.run(BasicTaskWrapper.java:260) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:679) {code} Could you contact Clebert for more detailed information, please? Thank you.	1	1	https://issues.jboss.org/browse/JBPAPP-6138
9896	JBPAPP-6138	Hi Clebert Can you provide more information regarding Pavel's comment? Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-6138
9897	JBPAPP-6107	Is this upgrade being done for EAP 5.1.1 or 5.1.2? I would prefer this be updated in EAP 5.1.1 as we want to target JDK 1.6 U24 certification with EAP 5.1.1. We already have all our lab systems updated to this version.	0	0	https://issues.jboss.org/browse/JBPAPP-6107
9898	JBPAPP-6098	Mike, let's leave this around for the next release. However, Would it be ok to not update this JIRA until after EAP 5.1.1 and EWS 1.0.2 releases as it's causing some confusion. Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-6098
9899	JBPAPP-6098	Do we need the 1.0.10? Its just EC2 stuff - is it supported in EWS anyway? If yes could we make it to CR2?	1	1	https://issues.jboss.org/browse/JBPAPP-6098
9900	JBPAPP-6098	jboss-eap5-native built with this version of mod_cluster. Mladen, can you please update the EAP 5.1.2 natives to include this version of mod_cluster? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-6098
9901	JBPAPP-6098	Updated. Do we need a -patch packages and what name that would be?	1	1	https://issues.jboss.org/browse/JBPAPP-6098
9902	JBPAPP-6098	Mladen, we don't need a -patch package, this is for EAP 5.1.2, can you please update the name of the zips to reflect it is for 5.1.2? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-6098
9903	JBPAPP-6098	Can somebody please fill in Affects and Fix versions? Now I don't know which release this is for.	0	0	https://issues.jboss.org/browse/JBPAPP-6098
9904	JBPAPP-5989	Juca, can this task be resolved?	1	1	https://issues.jboss.org/browse/JBPAPP-5989

#	Requirement	Questions	Answered	Successfully Answered	URL
9905	JBPAPP-5924	Hi Martha, can you build the patch-02 when Stefan sends us the new properties file please?	1	1	https://issues.jboss.org/browse/JBPAPP-5924
9906	JBPAPP-5893	Would it make sense to set the value inside the comment to {{jboss.messaging.ServerPeerID}} by default? i.e. instead of {code} <!-- property name="com.arjuna.ats.jta.xaRecoveryNode" value="CHANGE_ME" --> {code} put {code}<!-- property name="com.arjuna.ats.jta.xaRecoveryNode" value="${jboss.messaging.ServerPeerID}" --> {code} If the server is being used in a clustered environment, users would have to set {{jboss.messaging.ServerPeerID}} anyway.	1	1	https://issues.jboss.org/browse/JBPAPP-5893
9907	JBPAPP-5889	Hui, can you try and do this on Monday? The new tag is http://anonsvn.jboss.org/repos/jbossws/thirdparty/cxf/tags/cxf-2.2.12-patch-01/	0	0	https://issues.jboss.org/browse/JBPAPP-5889
9908	JBPAPP-5876	Hi Ivo I need more information before I can resolve this issue: For A. I will need a reference point with descriptions of these elements so I can add them to the table. For B. There is no mention of connection-factory.ha, connection-factory-ha, or any other permutation. Can you link to where you saw this element mentioned in the Enterprise HornetQ User Guide. Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-5876
9909	JBPAPP-5876	Hi Andy Can you help with the element descriptions? All I need is a link to a wiki or txt file with adequate info and I can take it from there. I've had no luck with my google searches for the missing element definitions. Cheers J	1	1	https://issues.jboss.org/browse/JBPAPP-5876
9910	JBPAPP-5875	Hi Ivo I've added descriptions for each of the elements for B. to the HQ User guide. I trawled the HQ user guide for the descriptions, and put them in with links to the most relevant section of the user guide. More info required to resolve this issue completely however: 1. For A, does the .xsd have descriptions in the form of comments for the missing configuration elements/parameters. I can list the elements as specified, but they will be meaningless without explanatory text. 2. Currently, the table seems to be largely unsorted, and quite chaotic. Can you see a reason why we might have the elements in the order they are? My only thought would be that it follows the nesting in each config file, but that seems a bit daft. I would propose a reorder (which would be after the Putnam release due to time to do this).	1	1	https://issues.jboss.org/browse/JBPAPP-5875
9911	JBPAPP-5875	Hi Andy Can you help with the element descriptions? All I need is a link to a wiki or txt file with adequate info and I can take it from there. I've had no luck with my google searches for the missing element definitions. Cheers J	0	0	https://issues.jboss.org/browse/JBPAPP-5875
9912	JBPAPP-5875	The following information has been provided by Clebert Suconic (many thanks). Some of these parameters need further context before Clebert can confirm their purpose etc. "I have embedded my answer, as well as adding some questions as I'm missing some context here: - initial-wait-timeout? In what context is that? cluster-connection there's a initial lookup for the cluster that has a separate timeout. log-delegate-factory-class-name... it's only for standalone usage. it should never be touched on the EAP context live-connector-ref... I"m not sure about it.... where is that definition? hornetq-configuration / root? log-journal-write-rate, perf-blast-pages, run-sync-speed-test is left undocumented on purpose. we can eventually enable to run some performance tests on the server and verify what's the write rate the system is capable off. I've been thinking of removing it anyway. connector-services? I'm not sure what's that? I'm missing a context here as well bridges.ha.. if it's using ha to connect to a server through the bridge. it should be under the birdge, right? bridge.user/password/static-connectors... that's used to define the connectivity on the birdge cluster-connection.static-connectors.. that's used to define static clusters message-counter-history-day-limit.. that's to define a limit on the MessageCounters.. which you can have a history on it. there's a chapter about it somewhere else."	0	0	https://issues.jboss.org/browse/JBPAPP-5875
9913	JBPAPP-5844	Dennis, can you please try and verify this fix? This pull the plug test requires a Windows host and on the very old XP host I have, it takes 23 minutes to start JBoss. The XP host executes so slowly that timeouts are causing members to be suspected, triggering merges and other problems which complicate verification. If you can't verify it, i'm going to have to pass it back to Rajesh so he can find someone with at least one moderately fast Windows platform from which a plug can be pulled.	1	1	https://issues.jboss.org/browse/JBPAPP-5844
9914	JBPAPP-5844	Good thinking, Ondrej. How about trying this out with the ER2 release? You'll need to start up two instances of EAP on two separate interfaces, let them cluster together, and then shut down / restart one of the interfaces as above. You could try to reproduce the error first using an older version of EAP.	0	0	https://issues.jboss.org/browse/JBPAPP-5844
9915	JBPAPP-5813	So should I take out the workaround then? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-5813
9916	JBPAPP-5813	Can anybody please fill in Affects Version/s and update Fix Version/s ?	0	0	https://issues.jboss.org/browse/JBPAPP-5813
9917	JBPAPP-5786	Why is tag called GA when version is SP1?	0	0	https://issues.jboss.org/browse/JBPAPP-5786
9918	JBPAPP-5775	Resolved with the fix for JBTM-821 in 4.6.1 CP09 via JBPAPP-5186.	1	1	https://issues.jboss.org/browse/JBPAPP-5775
9919	JBPAPP-5775	Jonathan, take a look at the Release Notes Text please. I think there should be TransactionManager or JBossTS instead of Hibernate. Could you help Misty with proper release notes wording, pls?	1	1	https://issues.jboss.org/browse/JBPAPP-5775
9920	JBPAPP-5757	Verified code in jboss-jpa-deployers.jar packed in EAP-5.1.2.ER1 distribution. MANIFESt.MF shows version 1.0.0 and PersistenceUnitInfoImpl still contains public ClassLoader getNewTempClassLoader() { return null; } Was the component upgraded in 5.1.2 as commented earlier?	0	0	https://issues.jboss.org/browse/JBPAPP-5757
9921	JBPAPP-5711	Anne-Louise, should we change the name of the ZIPs from what was shipped in EAP 5.1.0.GA or should we try and keep them consistent?	0	0	https://issues.jboss.org/browse/JBPAPP-5711
9922	JBPAPP-5702	We should probably move listConsumersAsJSON to JMS. Can you open a feature request on that case? (low priority) We would deprecate the method and create a new one for compatibility purposes.	1	1	https://issues.jboss.org/browse/JBPAPP-5702
9923	JBPAPP-5699	Is this on purpose, Fernando? If so we can close this out as Won't Fix.	0	0	https://issues.jboss.org/browse/JBPAPP-5699
9924	JBPAPP-5641	John, since resource recovery is now handled automatically, what exactly are our documentation requirements for this?	1	1	https://issues.jboss.org/browse/JBPAPP-5641
9925	JBPAPP-5641	Ivo, can you give your recommendation on this ticket? Reopen if necessary.	0	0	https://issues.jboss.org/browse/JBPAPP-5641
9926	JBPAPP-5616	Hi Jared, could you add a comment to HornetQ User Guide, please? Thank you, Mirek	0	0	https://issues.jboss.org/browse/JBPAPP-5616

9928	JBPAPP-5593	This should be fixed already. Can you check it?	1	1	https://issues.jboss.org/browse/JBPAPP-5593
9929	JBPAPP-5593	Hi Clebert, examples included in official distribution do not work. I have created new JIRA for it, see JBPAPP-6659. Could you check if examples were prepared correctly for distribution by productization, please? E.g. file readme [1] in root folder of examples should not be included in distribution. [1] http://source.jboss.org/browse/HornetQ/branches/Branch_2_2_EAP/examples-eap/readme?r=10177&r=10177&r=10177	0	0	https://issues.jboss.org/browse/JBPAPP-5593
9930	JBPAPP-5591	Here's the thread I started when I noticed it went missing... Jimmy -------- Original Message -------- Subject: IPv6 in JBoss Documentation Date: Mon, 11 Oct 2010 16:32:12 -0500 From: Jimmy Wilson <jawilson@redhat.com> To: Laura Bailey <lbailey@redhat.com> I have a customer asking about how to configure JBoss for use with IPv6. I have the information contained in the release notes [1], but I happen to know that bin/run.sh needs to be modified as well. This was previously documented in the Installation Guide. I know this because if I search for "ipv6 jboss" using the documentation search [2] it returns this: "7.3. IPv6 Configuration ... JBoss Enterprise Application Platform starts with an IPv4 stack by default. To use IPv6 instead, you will need to make some changes to the run scripts. ... www.redhat.com/.../4.3.0.cp08/html/Installation_Guide/IPv6.html - Cached" Clicking either the "www.redhat.com..." or "Cached" links doesn't work due to the docs changes, and looking at 4.3 CP08's Installation Guide, section 7.3 isn't about IPv6 anymore. Can you help me find the referenced page from the search? I've web searched the full text of *every* piece of 4.3 documentation that I thought relevant, and I've found nothing. I know what the documentation was about, so that's not the problem, but I'd like to reference it to the customer if it still exists. Should I open a JIRA to re-add it? [1] http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Release_Notes_CP08/index.html#id2834368	1	1	https://issues.jboss.org/browse/JBPAPP-5591
9931	JBPAPP-5591	"""Networking JBPAPP-5591 IPv6 is not supported in version 5 of the Enterprise Platform. """ Shouldn't this be "Enterprise Application Platform"? Or does it refer generally to E*P? Reopening.	0	0	https://issues.jboss.org/browse/JBPAPP-5591
9932	JBPAPP-5571	Removed Resolution text from release notes text field. Anil, would the new attribute need to be documented for all customers in the Sec Guide. Would customers other than Mastercard require this attribute to use it for other applications?	1	0	https://issues.jboss.org/browse/JBPAPP-5571
9933	JBPAPP-5568	Anil, would the new attribute need to be documented for all customers in the Sec Guide. Would customers other than Mastercard require this attribute to use it for other applications?	1	1	https://issues.jboss.org/browse/JBPAPP-5568
9934	JBPAPP-5567	Removed Resolution text from release notes text field. Anil, would the new attribute need to be documented for all customers in the Sec Guide. Is this allowable? <dependency> <groupId>quartz</groupId> <artifactId>quartz</artifactId> <version>1.5.2-brew</version> </dependency> <dependency> <groupId>dom4j</groupId> <artifactId>dom4j</artifactId> <version>1.6.1-brew</version> <exclusions> <exclusion> <groupId>xml-apis</groupId> <artifactId>xml-apis</artifactId> </exclusion> </exclusions> </dependency>	1	1	https://issues.jboss.org/browse/JBPAPP-5463
9941	JBPAPP-5461	Tyronne, Could you please advise as to where information on the missing configuration options you mentioned when you reopened this JIRA?	0	0	https://issues.jboss.org/browse/JBPAPP-5461
9942	JBPAPP-5456	Should this be an "Upgrade JSF to 1.1.15.B1-patch01" JIRA following the upgrade rules (docspace, parent JIRA)? For me it souds like it should. Thanks for the patch BTW	1	1	https://issues.jboss.org/browse/JBPAPP-5456
9943	JBPAPP-5456	Why was the license on Classpath.java changed from CDDL to ASL 2.0? Was this intentional (since the newer jsf2 code made a switch to ASL 2.0)? There is also an ASL 2.0 license on the new file VFSClasspath.java, and I assume that is a compatible license, although it does not share the same license as the rest of the files. I noticed that our RPM said 'License: ASL 2.0', but this doesn't seem to be the case. All of the code appears to be under the CDDL License. According to <https://fedoraproject.org/wiki/Packaging/LicensingGuidelines>, the package must list both licenses, plus include a comment with the license breakdown, e.g.: # The entire source code is CDDL except Classpath.java and VFSClasspath.java which are ASL 2.0 License: CDDL and ASL 2.0	1	1	https://issues.jboss.org/browse/JBPAPP-5456

9945	JBPAPP-5456	How exactly does the full url look like? For some reason the right protocol Handler didn't kick in. e.g. I suspect there is a "jar" prefix present	1	1	https://issues.jboss.org/browse/JBPAPP-5456
9946	JBPAPP-5456	Hi guys, Thanks for all of your hard work. The customer is requesting an update on this patch. Do we have any?	1	0	https://issues.jboss.org/browse/JBPAPP-5456
9947	JBPAPP-5456	How exactly does the url look like? Its protocol is "jar", but then it's missing "!/", as per the spec.	1	1	https://issues.jboss.org/browse/JBPAPP-5456
9948	JBPAPP-5456	>> I don't have a way how to go into VFS sources to inspect what JAR URL could fail in it Debuging? Trace logging? >> there is bundled jboss-vfs 2.0.0.Beta6 in it. Is there a way to replace this ancient version?	1	1	https://issues.jboss.org/browse/JBPAPP-5456

#	Requirement	Questions	Answered	Successfully Answered	URL
9949	JBPAPP-5456	Ales, trace logging is already attached in test-log.zip, see my previous comment. JBoss Embedded dependencies can't be easily changed. I can only add newer version to classpath, what version of jboss-vfs works with your jsf-facelets fix?	1	0	https://issues.jboss.org/browse/JBPAPP-5456
9950	JBPAPP-5456	>> Ales, trace logging is already attached in test-log.zip, see my previous comment. And it has no info about which URL is failing? If not, what about remote debugging? >> what version of jboss-vfs works with your jsf-facelets fix? Take the latest 2.2.x. There are some API changes in between, specially with some util classes, so I hope it should work, otherwise drop to 2.1.x or even 2.0.0.GA.	1	1	https://issues.jboss.org/browse/JBPAPP-5456
9951	JBPAPP-5456	Do we have a update on this? The customer is still waiting for the patch. thanks. Gary	1	0	https://issues.jboss.org/browse/JBPAPP-5456
9952	JBPAPP-5434	This has no component. Where should it go in the Release Notes?	0	0	https://issues.jboss.org/browse/JBPAPP-5434
9953	JBPAPP-5418	Hi Yang, can you build and upload to maven2-brew for us please?	0	0	https://issues.jboss.org/browse/JBPAPP-5418
9954	JBPAPP-5376	Verified on EAP 4.3.0_CP09 CR1. See for example http://hudson.qa.jboss.com/hudson/view/EAP4.3-jbossws/job/eap-4.3-jbossws-sun6/jdk=java16_default,label=RHEL5_x86/lastCompletedBuild/testReport/org.jboss.test.ws.jaxws.jbws2637/	1	1	https://issues.jboss.org/browse/JBPAPP-5376
9955	JBPAPP-5342	Please provide a link to download EAP 4.3 CP10 binary	1	1	https://issues.jboss.org/browse/JBPAPP-5342
9956	JBPAPP-5334	Carlo, apparently there is also an upgrade needed for jboss-ejb3-proxy-impl Is this intentional or a mistake in the 1.0.2 bom? If it is intentional, what is the tag for it?	0	0	https://issues.jboss.org/browse/JBPAPP-5334
9957	JBPAPP-5330	Kabir, can you create the 2.1.6 CP02 tag?	0	0	https://issues.jboss.org/browse/JBPAPP-5330
9958	JBPAPP-5293	The issue here is that the listener is being added after the notification thread has started running. Thus, the map of listeners is modified while the notification thread is iterating over it. SSLSocketImpl does not protect the map from concurrent access and so we hit this exception. Can the listener not be added before the thread is started?	0	0	https://issues.jboss.org/browse/JBPAPP-5293
9959	JBPAPP-5293	I have verified this, doesn't happen in EAP 5.1.1. Is the documentation work done? If it is, please confirm that and/or close.	0	0	https://issues.jboss.org/browse/JBPAPP-5293
9960	JBPAPP-5293	I am experiencing this exception in jboss 6.1.0-FINAL. In the documentation (http://docs.jboss.org/jbossweb/2.1.x/printer/changelog.html) I see that bug JBPAPP-5293 was fixed in Jboss Web 2.1.11.GA, but I can't find this version anywhere. On http://www.jboss.org/jbossweb/downloads/jboss-web the latest available is 2.1.9. Where can I download jbossweb 2.1.11 or higher?	1	0	https://issues.jboss.org/browse/JBPAPP-5293
9961	JBPAPP-5259	Hi Weinan, can you take care of this one?	0	0	https://issues.jboss.org/browse/JBPAPP-5259
9962	JBPAPP-5228	Justin I'm looking at $JBOSS_DIST/docs/examples/binding-manager/sample-bindings.xml, which is the only file called sample-bindings.xml in the distributiuon. What do you mean by a missing tag? The file sizes for sample-bindings.xml in CP08 and CP09 are the same.	0	0	https://issues.jboss.org/browse/JBPAPP-5228
9963	JBPAPP-5227	Hi Mike Just doing the triage on this for 5.1.1. Do you remember what guide you saw this in? I found "apr-utils" in the Installation Guide for EAP 5 so I will assume this bug relates to this. http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Web_Platform/5/html/Installation_Guide/Install_Native_Components.html	0	0	https://issues.jboss.org/browse/JBPAPP-5227
9964	JBPAPP-5214	David, how is this now? How did we set it up for MEAD loading?	0	0	https://issues.jboss.org/browse/JBPAPP-5214
9965	JBPAPP-5193	Isn't this fix to be included in the next EAP 5 release? I don't see any JIRA linked to this one nor any "Upgrade JBss TS to <new version>" filed. Without that this customer may experience a regression when upgrading.	1	0	https://issues.jboss.org/browse/JBPAPP-5193
9966	JBPAPP-5161	Can you check if this has been resolved for EAP 4.3.CP09? The linked issues is marked resolved with a fix version of 4.3.CP09. If that's the case we can resolve this JIRA too.	1	1	https://issues.jboss.org/browse/JBPAPP-5161
9967	JBPAPP-5161	Verified on EAP 4.3.0_CP09 CR1 jboss jaxr in version 1.2.0.SP2-brew https://anonsvn.jboss.org/repos/jbossws/stack/native/tags/jbossws-native-2.0.1.SP2_CP09/version.properties http://anonsvn.jboss.org/repos/jbossas/tags/JBPAPP_4_3_0_GA_CP09/build/build-thirdparty.xml	0	0	https://issues.jboss.org/browse/JBPAPP-5161
9968	JBPAPP-5150	Im still struggling with functional tests for this. I don't know how to correctly reproduce the scenario that throws in unpatched and doesn't throw in patched version i'm attaching sample project where i'm testing this contains two methods: store and store2, both can be called via their respective urls http://localhost:8080/hibernate-sample-war/eventmanager/store http://localhost:8080/hibernate-sample-war/eventmanager/store2 store calls session.close() in transaction which means before autoclose store2 calls session.close() out of transaction, after autoclose in scenario with autoclose=false it shouldnt throw "Session was already closed" when I'm using JTA the autoclose is true regardless of the HibernateMBean setting. It's because of org.hibernate.context.JTASessionContext.buildOrObtainSession() that disregards this setting. do you have any code that I can use to functionally test this ?	0	0	https://issues.jboss.org/browse/JBPAPP-5150
9969	JBPAPP-5150	yeah, that was what I forgot to mention. When I deploy to the unpatched appserver, I comment out the AutoCloseSessionEnabled attribute in the jboss-service.xml. but I have still a problem when I do it as you propose (no AutoCloseSessionEnabled attribute) unpatched: 1. start an unpatched EAP 4.3.0.GA_CP08 2. deploy hibernate-sample.ear 3. visit http://localhost:8080/hibernate-sample-war/eventmanager/store2 4. I get "Session was already closed" exception patched: 1. start an patched EAP 4.3.0.GA_CP08 2. deploy hibernate-sample.ear 3. visit http://localhost:8080/hibernate-sample-war/eventmanager/store2 4. I also get "Session was already closed" exception with http://localhost:8080/hibernate-sample-war/eventmanager/store there's no problem in either patched and unpatched, which is expected because of the logic of the store() method - it closes the session within the transaction and then when after the transaction when the framework tries to autoclose it doesn't complain because it closes only when not already closed. EAP 4.3.0.GA_CP08 seems to be packaged with Hibernate 3.2.4.sp1.cp10 (http://anonsvn.jboss.org/repos/hibernate/core/tags/JBOSS_EAP_3_2_4_SP1_CP10) I can see that by removing the line settings.setProperty(Environment.AUTO_CLOSE_SESSION, "true"); in org.jboss.hibernate.jmx.Hibernate (line 483): the patch effectively changes the default value to false because in org.hibernate.cfg.SettingsFactory (line 146) boolean autoCloseSession = PropertiesHelper.getBoolean(Environment.AUTO_CLOSE_SESSION, properties); the getBoolean method returns false if the property isn't set. but as I mentioned org.hibernate.context.JTASessionContext.buildOrObtainSession() successfully ignores this see lines 117 and 128 which happens also in this example project and that's why I get "Session was already closed" also in patched version. or does it behave differently in your environment ?	0	0	https://issues.jboss.org/browse/JBPAPP-5150
9970	JBPAPP-5148	Well, the fix is supposedly in common-core 2.2.17.GA which is what the EAP 5.1.1 has been updated to. This is from the MEAD build information: Parameters SCM URL: svn+http://anonsvn.jboss.org/repos/common/common-core/tags?2.2.17.GA#3877 So you guys are saying that the 2.2.17.GA version of commons-core did not solve the problem? That was the only reason to switch to that version. The branch has been upgraded to it and the JAR has been available from the repo from quite some time (Feb 11), didn't anybody try it before now? Or maybe the problem requires further investigation?	0	0	https://issues.jboss.org/browse/JBPAPP-5148
9971	JBPAPP-5148	Hi Jean-Frederic, would the upgrade of commons-core to 2.1.17 alone fix this issue?	0	0	https://issues.jboss.org/browse/JBPAPP-5148

#	Requirement	Questions	Answered	Successfully Answered	URL
9972	JBPAPP-5148	Per my last comment, can you make sure the build references the correct commons tag so this is in the EAP 5.1.2 release?	0	0	https://issues.jboss.org/browse/JBPAPP-5148
9973	JBPAPP-5143	Hi Ivo, can you give us a patch or a new tag? We are in a hurry to rebuild for ER2. It is not a blocker, so if you cannot do this now it is OK, but if it is a quick thing we will rebuild the plugin with the changes. Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-5143
9974	JBPAPP-5139	What should be there, this is not clear for me, if there are still symlink to real location? "But all of these %{_javadir}/sun-jaxws links should point to the real external locations."	1	1	https://issues.jboss.org/browse/JBPAPP-5139
9975	JBPAPP-5139	Marek, is this fixed? Did you find the right packages?	0	0	https://issues.jboss.org/browse/JBPAPP-5139
9976	JBPAPP-5139	David didn't respond to my question. What are correct packages to use. jboss-seam2 packages uses glassfish-jaxws for jsr173-api.jar, jsr181-api.jar and jboss-ejb-api for jsr250-api.jar. So again my question, Are they correct?	1	1	https://issues.jboss.org/browse/JBPAPP-5139
9977	JBPAPP-5139	I think it is resolved, because tatletale report was reviewed and nobody filed the jira against differences between these 3 jars in JBoss AS and Seam distribution. Do you agree?	1	1	https://issues.jboss.org/browse/JBPAPP-5139
9978	JBPAPP-5094	Hi Elspeth Could you please make the changes specified in this ticket this morning. The task estimation is 1hr, so because you've never done it before I'll expect the task to be finished in two. Cheers J	1	1	https://issues.jboss.org/browse/JBPAPP-5094
9979	JBPAPP-5094	Hey Elspeth, is this issue resolved now? From a quick glance it looks like you've done all the base roll-ins. If so, just Resolve the issue and assign it to Rajesh R.	1	1	https://issues.jboss.org/browse/JBPAPP-5094
9980	JBPAPP-5094	Hi Elspeth Can I roll in the other changes you've still got outstanding while you're doing the diff task? Or will that clash with the rebase you're currently working on?	1	1	https://issues.jboss.org/browse/JBPAPP-5094
9981	JBPAPP-5092	>Section 38.5.2 >in the Note change "HornetQ 2.0.0" to "HornetQ 2.1.x" Changed to HornetQ 2.2 <-- is this correct, or does the issue only relate to HQ 2.1.x	1	1	https://issues.jboss.org/browse/JBPAPP-5092
9982	JBPAPP-5092	Hi Jared, I have found new issues. I am reopening this JIRA. Thank you. Section 3.1 Starting The Server This section should be changed. We have automated installer which replaces JBoss Messaging with HornetQ. User do not have to create profiles. And “default-with-hornetq” is not correct profile. Section 5. Core Architecture “This allows HornetQ to be instantiated in any dependency injection framework such as JBoss Microcontainer, or Spring.” We do not support standalone HornetQ and we should remove such as sentences. Section 6. Using the Server “For the remainder of this chapter ...” We do not support standalone server, remove this sentence it (e.g. JNDI service is provided by EAP)? Section 6.1 Configuration files “... in the HornetQ directory structure ...” HornetQ is installed into EAP dir. structure, this sentence is valid only for standalone server. 7.4 JNDI Configuration We should remove text between "In the default ..." to the end of the section. JNDI is provided by EAP. Section 10.1 and 10.2 We should remove sentence “If the client runs inside a Java 5 virtual machine, use instead hornetq-core-client-java5.jar.” We do not ship special jar for JDK5. Chapter 32. Application Server Integration and Java EE This chapter uses hornetq-ra.rar on several spots. HornetQ is installed as full replacement of JBoss Messaging and it uses jms-ra.rar. But explicit declaration of @ResourceAdapter("jms-ra.rar") is not required. Section 32.5.1 “can be found inside the hornetq-ra.rar archive” EAP 5 does not include this archive file. Section 32.5.2 Configuring JBoss 5 MDB should be renamed, this name does not seem correct to me.	0	0	https://issues.jboss.org/browse/JBPAPP-5092
9983	JBPAPP-5092	{quote}Hi Jared, I have found new issues. I am reopening this JIRA. Thank you.{quote} Thanks for these observations. Comments inline: {quote}Section 3.1 Starting The Server This section should be changed. We have automated installer which replaces JBoss Messaging with HornetQ. User do not have to create profiles. And “default-with-hornetq” is not correct profile.{quote} This section was removed completely based on feedback in the Bugzilla issues. {quote}Section 5. Core Architecture “This allows HornetQ to be instantiated in any dependency injection framework such as JBoss Microcontainer, or Spring.” We do not support standalone HornetQ and we should remove such as sentences.{quote} Thanks for this pick-up. It seems that as soon as Tyronne and I think we have removed all info about "standalone" another one sticks it's head up to bite us. {quote}Section 6. Using the Server “For the remainder of this chapter ...” We do not support standalone server, remove this sentence it (e.g. JNDI service is provided by EAP)?{quote} And another one... Removed. {quote}Section 6.1 Configuration files “... in the HornetQ directory structure ...” HornetQ is installed into EAP dir. structure, this sentence is valid only for standalone server.{quote} I have changed "in the hornetq directory structure" to "in the JBoss Enterprise Application Platform directory structure". {quote}7.4 JNDI Configuration We should remove text between "In the default ..." to the end of the section. JNDI is provided by EAP.{quote} Yep, the same observation was made by Tyronne and Andrew Ross in the Bugzilla HQ issues. It was removed as part of that feedback. {quote}Section 10.1 and 10.2 We should remove sentence “If the client runs inside a Java 5 virtual machine, use instead hornetq-core-client-java5.jar.” We do not ship special jar for JDK5.{quote} This section was removed as part of BZ feedback. {quote}Chapter 32. Application Server Integration and Java EE This chapter uses hornetq-ra.rar on several spots. HornetQ is installed as full replacement of JBoss Messaging and it uses jms-ra.rar. But explicit declaration of @ResourceAdapter("jms-ra.rar") is not required.{quote} I think the same observation was made in a number of BZ issues. All the references I can see in this chapter now refer to the jms rar {quote}Section 32.5.1 “can be found inside the hornetq-ra.rar archive” EAP 5 does not include this archive file.{quote} I can't locate this section in the new guide. Since this JIRA was created, I have removed some sections completely based on Bugzilla feedback. I suspect this happened in this case. {quote}Section 32.5.2 Configuring JBoss 5 MDB should be renamed, this name does not seem correct to me.{quote} This name has either been changed or the section is no longer present in the document.	1	1	https://issues.jboss.org/browse/JBPAPP-5092
9984	JBPAPP-5092	Hi Jared, some of theese issues are still not fixed so I am reopening this JIRA. Could you look at it please? Thank you, Nikoleta ========== Section 2.5 Migrating JMS-administered Objects and Bridges correct Table 2.5 - "text overflow" ========== Section 32.1.1 the paragraph: " The TransactionManagement annotation tells the container to manage the transaction. The TransactionAttribute annotation tells the container that a JTA transaction is required for this MDB. Note that the only other valid value for this is TransactionAttributeType.NOT_SUPPORTED which tells the container that this MDB does not support JTA transactions and one should not be created. " – it seems that it has a bad aligning but now it is Section 30.1.1. ========== Section 32.4.2 "</connection-definition>" in the configuration example is a bad aligning - move to right now Section 30.4.2. ========== Section 33.3 "Different implementations can be provided with the org.hornetq.jms.bridge.DestinationFactory interface. " - seems to have a bad aligning now Section 31.3. ========== Section 39.1.1.1.1 in the both configuration examples is a bad aligning "</factory-class>" now in sections 5.3 and 43.1.5 ==========	1	1	https://issues.jboss.org/browse/JBPAPP-5092

#	Requirement	Questions	Answered	Successfully Answered	URL
9985	JBPAPP-5090	Peter, the content I have in there already is about Remote Method Invocation of EJB3s - is this information for something different? It talks about configuring servlets. How does this relate to the existing content, about configuring the server for EJB3 RMI over SSL?	1	1	https://issues.jboss.org/browse/JBPAPP-5090
9986	JBPAPP-5090	For the webconnector there is no keypair value specified. What happens when you use a keystore that has more than one key pair in it? Can we use keyAlias on the connector like this: https://jira.jboss.org/browse/JBPAPP-538 ?	0	0	https://issues.jboss.org/browse/JBPAPP-5090
9987	JBPAPP-5089	Peter, this section has moved to here: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#id3130166 The book name has been changed to "Security Guide", and the chapter has moved to chapter 19. To this specific JIRA issue: What about if we change it from "java -cp" to "java -jar " - does that remove the need to specify the classpath? I'd like to keep the example as simple as possible.	0	0	https://issues.jboss.org/browse/JBPAPP-5089
9988	JBPAPP-5088	Wow, that's important - thanks for catching that! On my running EAP 5.1 instance production profile https://server_name:8443/invoker/JNDIFactory and http://server_name:8443/invoker/JNDIFactory both do not connect to a running service. Are you saying that the CN of the certificate has to be the same as the SERVER_NAME that a client uses to connect with the server? If so, where is this configured on the client?	1	1	https://issues.jboss.org/browse/JBPAPP-5088
9989	JBPAPP-5086	Marek, On this issue there seems to be some confusion as to which JARs have definitely been removed and which have not. Can you please confirm this? I am currently writing and compiling Release Notes for EAP 5.1.2 and I need this information to be able to provide the customer with accurate information. Please ACK this message by Thursday, 1 September 2011 and provide a response by Monday, 5 September 2011. Thankyou, Russell Dickenson (Content Author)	1	1	https://issues.jboss.org/browse/JBPAPP-5086
9990	JBPAPP-5061	Email sent to Marcus Moyses asking for help: "Marcus, I need help to make progress on a JIRA issue and hope that you might be able to guide me. The specific issue is https://issues.jboss.org/browse/JBPAPP-5061. I have looked at the commit diffs of the changes made in linked JIRA issues (3583 for example) but still don't understand what needs to be done with respect to documentation. In the EAP Security Guide (http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#sect-JaasSecurityDomain_MBean) is mention of KeyStorePass and TrustStoreType but I'm not sure if something needs to be added to their description. Are you able to help? If not, can you suggest someone else I might contact? -- Russell Dickenson Engineering Content Services Red Hat Brisbane, Australia"	1	1	https://issues.jboss.org/browse/JBPAPP-5061
9991	JBPAPP-5061	Reply from Marcus: "Hi Russel, I think I added some descriptions of those options in http://community.jboss.org/wiki/JaasSecurityDomain Let me know if there is anything else you need. Regards On 10/25/2011 01:59 AM, Russell Dickenson wrote: > Marcus, > > I need help to make progress on a JIRA issue and hope that you might be able to guide me. 9992	JBPAPP-5020	Alessio, is there any harm in leaving the saaj-api.jar around when CXF is being used?	0	0	https://issues.jboss.org/browse/JBPAPP-5020
9993	JBPAPP-5016	Remy, what will those defaults be? I currently have a section in the performance tuning guide. It doesn't really cover everything, just the things I have tested that seem to show improvement, but I do talk about what the defaults are, so depending on what you are changing here, I will have to update the guide. If you are changing things that don't overlap than no problem. So, if you could shoot me a note that would be good. Also, I would like to test those defaults in my environment to see if they help or hurt my own tests. Thanks.	1	0	https://issues.jboss.org/browse/JBPAPP-5016
9994	JBPAPP-5009	Are you expecting to back port this to EAP 4.3 and 5.1? If so, please clone the JIRA and have one in TBD_EAP4 and one in TBD_EAP5. Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-5009
9995	JBPAPP-5006	Martin, can you verify the instructions?	1	1	https://issues.jboss.org/browse/JBPAPP-5006
9996	JBPAPP-4975	So Step 3 currently reads: <title>Deploy or package the deployment descriptor</title> <para>Move the deployment descriptor file to the <filename>deploy</filename> directory of the required server profile in your installation. </para> <para>Alternatively, package the deployment descriptor in the <filename>META-INF</filename> directory of the EJB Jar, or <filename>WEB-INF/classes</filename> of your web application (WAR).</para> If I understand correctly, you want me to change the Step to the following: 3. Deploy or package the deployment descriptor Deploy or package the deployment descriptor in a WAR file, and ensure the WAR is deployed to the WEB-INF folder. Could you please confirm I understand correctly?	1	1	https://issues.jboss.org/browse/JBPAPP-4975
9997	JBPAPP-4970	Marek, I still see it there: jboss-eap-5.1.1.ER1/seam/lib/hsqldb.jar jboss-eap-5.1.1.ER1/seam/bootstrap/deploy/messaging/hsqldb-persistence-service.xml jboss-eap-5.1.1.ER1/seam/bootstrap/deploy/hsqldb-ds.xml Is this a problem?	0	0	https://issues.jboss.org/browse/JBPAPP-4970
9998	JBPAPP-4970	Attention: Marek Novotny Should this issue's Release Notes text remain as it is or not? Since the issue has been reopened I expect perhaps it should *not* be included in the EAP 5.1.2 Release Notes document.	1	1	https://issues.jboss.org/browse/JBPAPP-4970
9999	JBPAPP-4946	/mnt/hudson_workspace/workspace/JBoss-EAP-5.1.x-Testsuite-sun16/JBossEAP_5_1_x/cluster/src/main/org/jboss/ha/framework/server/ClusterPartition.java:1742: cannot find symbol symbol : variable cvs location: class org.jgroups.Version return Version.description + "(" + Version.cvs + ")"; This rings a bell. Didn't we fix for Support a JAR that did not have the Version class?	1	1	https://issues.jboss.org/browse/JBPAPP-4946
10000	JBPAPP-4945	Hi Fernando, jettison-1.2-4.ep5.el5 and jettison-1.2-4.ep4.el5 are built with pom and repolib. I saw you've already built jettison 1.2 in rhel6, thank you for help! BTW, which hudson task I should check in future to ensure my build won't break anything? Could you please provide an url? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-4945

#	Requirement	Questions	Answered	Successfully Answered	URL
10001	JBPAPP-4933	Rebecca, Can you add these comments to the release notes? - Incorrect Numbering: 2.1. Consolidated Trust Store should actually be 2.1.1 and the others following it. Features introduced in 5.1 and features from previous releases are the two major sections. - Section 2.1.1 - This is the first time we are shipping the NSAPI connector,we should mention it. NSAPI is a connector used to connect Sun Java Web server to JBoss Enterprise Application Platform. - Important: Section 2.3 component versions for 5.1 are not in sync with what we are shipping. Some of the components had updates in some of the internal builds Cr2 and CR3. The latest can be found here. https://docspace.corp.redhat.com/docs/DOC-37998 Most of the current versions correspond to CR1 versions documented initially. - Section 2.4.4 Source zip should be ftp://ftp.redhat.com/pub/redhat/jbeap/5.1.0/en/source/jboss-eap-src-5.1.0.zip - Section 2, features introduced should talk about JDBC4 support which is offered from this release onwards Hibernate offers support for JDBC4 from this release onwards. https://jira.jboss.org/browse/JBPAPP-4180 Support for the connector component had existed from earlier. We should check with Jesper Pederson (dev) or Rich Sharples on what we want to call out here. - Section 2 should talk more about performance improvments made in this release.	1	1	https://issues.jboss.org/browse/JBPAPP-4933
10002	JBPAPP-4933	The above issues have been corrected, with the exception of: - JDBC4 support - I've emailed Rich and Jesper for assistance with this. - Performance improvements - I've emailed Andy Miller for assistance, but if you can suggest an alternate source that would be great. - Consolidated Trust Store - this section has been commented out as not applying to EAP 5.1. Is this correct?	1	1	https://issues.jboss.org/browse/JBPAPP-4933
10003	JBPAPP-4933	Hi Laura. I have found that known issue JBPAPP-2571 has been fixed. Related JBM issue (JBMESSAGING-1767) has been fixed in 1.4.7.GA which is included in EAP 5.1. Please could you remove note about this issue from section "Known Issues with this release"? Thank you.	1	1	https://issues.jboss.org/browse/JBPAPP-4933
10004	JBPAPP-4933	Moved JBPAPP-2571 from known to fixed in EAP 5.1 Release Notes. Renamed jboss-as to jboss-as-web three times in EWP 5.1 Release Notes. Removed JBPAPP-5014 and JBPAPP-2571 from EWP 5.1 Release Notes. Corrected JBoss Messaging and JBoss Web Services CXF versions in section 2.6 of RN as required. However, I was under the impression that a CXF tech preview of 3.1.2.SP6 had gone out alongside/post-release 5.0.1. I've removed the previous version in case I was incorrect, but can someone confirm/deny?	1	1	https://issues.jboss.org/browse/JBPAPP-4933
10005	JBPAPP-4933	Thanks! Looks good to me now. I am closing but how are we going to resolve the structure problem? Do you want a new Jira for it? "The issue with there being only one chapter is due to this book actually being an article - the form is different. I will fix this for the next release, but for now I am leaving it as it is. Every section should now have a heading, though. "	1	0	https://issues.jboss.org/browse/JBPAPP-4933
10006	JBPAPP-4920	Could I please get a description of this issue for the release notes? I need to know what was causing the issue, what effect that had, and how it was fixed. Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-4920
10007	JBPAPP-4902	Hi Hui, can you update this one for us and upload to maven2-brew? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-4902
10008	JBPAPP-4866	Hi, is there any test for this issue? Thanks Mirek	1	1	https://issues.jboss.org/browse/JBPAPP-4866
10009	JBPAPP-4866	How to run JBM 1.4 tests in QA Lab: cp /qa/tools/opt/jdbc-drivers/mysql-connector-java-5.0.4-bin.jar lib/jdbc-drivers/ echo '<container><database>mysql</database><database-configurations><database-configuration name="mysql"><url>jdbc:mysql://vmg08.mw.lab.eng.bos.redhat.com:3306/msgcc</url><driver>com.mysql.jdbc.Driver</driver><isolation>TRANSACTION_READ_COMMITTED</isolation><username>msgcc</username><password>msgcc</password></database-configuration></database-configurations><remoting-transport>bisocket</remoting-transport></container>' > etc/container.xml ant tests -Dintegration.base=EAP4 -Dtest.bind.address=`hostname` -DfakeOption=fakejms-mysql -Djboss.messaging.groupname=JBM_GRP4 -Djboss.messaging.datachanneludpport=45573 -Djboss.messaging.controlchanneludpport=45574 -Djboss.messaging.datachanneludpaddress=228.6.6.9 -Djboss.messaging.controlchanneludpaddress=228.7.7.10	1	1	https://issues.jboss.org/browse/JBPAPP-4866
10010	JBPAPP-4860	Is EWS able to support the JBoss Cache-based mechanism described in this "HTTP Connectors Load Balancing Guide"? I don't think it can, since AIUI it's just Tomcat with none of the integration hooks EAP provides for running JBoss Cache. (I'm phrasing this as a question since I don't follow this product closely, but I'd be shocked if EWS supports JBC-based session replication.) I don't think Clustered SSO would work on EWS either, for the same reason. The approach being documented is an alternative to the JBoss Cache based session replication discussed in http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html. It most logically fits along with those. I don't know how best to resolve the issue that much of the content there doesn't apply to EWS.	1	1	https://issues.jboss.org/browse/JBPAPP-4860
10011	JBPAPP-4860	I agree that this is the right spot: http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html An option would be to add an admonition to the chapter that this is not support on EWS. Would that be ok?	1	1	https://issues.jboss.org/browse/JBPAPP-4860
10012	JBPAPP-4860	Hi Paul, Could you, please, let me know, who is the person that can review the fix? Thanks	0	0	https://issues.jboss.org/browse/JBPAPP-4860
10013	JBPAPP-4835	In which case, can it be moved into fix version TBD EAP 5, and cloned for fix version TBD EAP 6 so that we can triage it for release notes properly? Thanks.	1	0	https://issues.jboss.org/browse/JBPAPP-4835
10014	JBPAPP-4828	Hi Fernando Can you help with the info for the upgrade procedure? If not, please flick the JIRA to someone who can assist. Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-4828
10015	JBPAPP-4828	Fernando responded by email: > Is there currently an upgrade path from 5.1 to 5.1.x for RPMs? I know you could probably just run up2date (RHEL 4) or yum update (RHEL 5) in most cases, but are there any customer gotchas that need to be specified in the upgrade instructions of the Installation Guide? No, just the usual recommendation, backup your stuff, look for .rpmsave or .rpmnew files if you have modified config files and merge you changes manually, Ahh, this is also standard for servers, but always good to emphasize, "stop the server before upgrading", restart afterwards. Another caveat: it is not supported to change the option made on the initial install (EAP 5.1.0) of CXF for the WS stack, the upgrade will keep that option and attempts to change it will have unpredictable results. The same is valif for the new option, HormetQ for JMS, it requires a new installation, not an upgrade. Note, we haven't yet finished the set of RPMs, never tried ourselves an upgrade from 5.1.1, we may find things we don't know about. Cheers, Fernando	0	0	https://issues.jboss.org/browse/JBPAPP-4828
10016	JBPAPP-4828	On QA we can't verify update instructions from 5.1.x to 5.1.2 (= added section to IG), because some blockers occurred (e.g. [JBPAPP-7272|https://issues.jboss.org/browse/JBPAPP-7272]) in ER1 build. So this verification should be postponed to ER2 build. Anne-Louise, could you please agree with my proposal and modify Fix version of this JIRA?	0	0	https://issues.jboss.org/browse/JBPAPP-4828
10017	JBPAPP-4828	Why is this reopened and assigned to me? If this is about instructions for how to install RPMs, it needs to be assigned to Fernando or someone on his team.	0	0	https://issues.jboss.org/browse/JBPAPP-4828

#	Requirement	Questions	Answered	Successfully Answered	URL
10018	JBPAPP-4796	Hey Laura, re: "release notes flag" - not sure what you mean. Are you talking to me or the person who will edit the build-thirdparty.xml file? -Ron	1	1	https://issues.jboss.org/browse/JBPAPP-4796
10019	JBPAPP-4795	Hi Marcus, is the new tag available?	0	0	https://issues.jboss.org/browse/JBPAPP-4795
10020	JBPAPP-4795	I don't think so. Can you ping the project lead (Alexey Loubyansky) please?	0	0	https://issues.jboss.org/browse/JBPAPP-4795
10021	JBPAPP-4795	No Fernando, this *is* the Jira for tracking that update but you changed its summary to '1.0.5' on 20/Aug/'10. The original description says it clearly [1]. Please try to keep Jira clean, makes it impossible for QE to verify the Jiras. [1] "Because of JBPAPP-4786 we need a new release of JBoss Metada (1.0.6?) and modify EAP 5.1 component matrix to use this version."	0	0	https://issues.jboss.org/browse/JBPAPP-4795
10022	JBPAPP-4795	Alexey, can you provide a tag for metadata 1.0.6 including a fix for the related issue?	1	1	https://issues.jboss.org/browse/JBPAPP-4795
10023	JBPAPP-4778	Carlo, what's a FIRO queue? Did you mean FILO?	1	0	https://issues.jboss.org/browse/JBPAPP-4778
10024	JBPAPP-4778	Carlo, what documentation is this patch for? Which book?	0	0	https://issues.jboss.org/browse/JBPAPP-4778
10025	JBPAPP-4778	One other thought. Why are we using jboss-beans.xml to try to accomplish this, instead of changing the code directly? That also seems like the wrong thing to do to me.	1	1	https://issues.jboss.org/browse/JBPAPP-4778
10026	JBPAPP-4778	Yeah, I'm aware of the pool size cannot be infinite, in terms of still getting the best possible throughput. I'm not so sure that the pool size as set is right though. The pool size for the HTTP connector is only 200 based on the document above. The best throughput is actually achieved using 600, not 200. So, I would argue its too small. The difference being that throttling the workload with a smaller thread pool just allows it to continue to run at higher number of clients, so our disagreement on this is really over what's most important. Supporting a larger number of clients, or getting the best possible throughput? When customers do their own benchmarks, they typically look for the best possible throughput. You answered Carlo's mistaken claim about the pool size not actually changing through the tests, just the number of sessions, or virtual users. The real question here is what do we do with this? I have been recommending that we close this issue, and not push this. The fact that it also breaks the metrics on the thread pool (admin-console and JON), make it a non-started as well. Can we agree not to apply this? Certainly it cannot be applied as is anyway since it breaks the admin console and JON.	0	0	https://issues.jboss.org/browse/JBPAPP-4778
10027	JBPAPP-4776	Verified the note about supported browsers is present in http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_Console_Quick_Start_Guide/Administration_Console_Quick_Start_Guide-Accessing_the_Console.html . Closing the issue.	0	0	https://issues.jboss.org/browse/JBPAPP-4776
10028	JBPAPP-4765	Ondrej, can you verify this in the CR3.5 build? I think this has been marked closed by Dev.	0	0	https://issues.jboss.org/browse/JBPAPP-4765
10029	JBPAPP-4763	Ondrej, can you continue on the investigation reported here?	1	0	https://issues.jboss.org/browse/JBPAPP-4763
10030	JBPAPP-4763	Can you set the component? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-4763
10031	JBPAPP-4762	Marking it as a blocker since it is a performance issue which needs to be investigated for the EAP 5.1 release. Bruno, could you assign this to somebody in dev?	0	0	https://issues.jboss.org/browse/JBPAPP-4762
10032	JBPAPP-4759	Hi Andy, the final date for this document to go to QE is August 18. We will need it a few days before that to check it for style, etc. Josh tells me you are writing the content - can you give me a date you will be able to hand the doc off to us before QE?	0	0	https://issues.jboss.org/browse/JBPAPP-4759
10033	JBPAPP-4759	Andy, I had created a perf guide for EPP 4.3 but could not get a chance to create one for EPP5. I would like to create one for EPP 5.1 because couple of customers have already asked for it. IIUC, perf guide for EAP 5.1 is slated to be created post release. Do you have any ETA on this? It will help me immensely.	1	1	https://issues.jboss.org/browse/JBPAPP-4759
10034	JBPAPP-4759	Having all these issues added to this container ticket will also help with Docs QE and Engineering QE. Is this guide going to make 5.1.1 Post GA? Should it be realigned with the normal 5.1.1 release?	1	1	https://issues.jboss.org/browse/JBPAPP-4759
10035	JBPAPP-4715	If this needs to go in the Release Notes / Installation Guide, can I get an official summary of the problem, its effects on customers, and any workarounds?	1	1	https://issues.jboss.org/browse/JBPAPP-4715
10036	JBPAPP-4715	Rich, is it also valid for clients using older JDKs, like JBoss EAP 4.3 client using JBoss EAP 5.x server?	0	0	https://issues.jboss.org/browse/JBPAPP-4715
10037	JBPAPP-4715	HI guys, can I echo Laura in asking for a summary, effects on customers, and any workarounds, for the Release Notes, please? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-4715
10038	JBPAPP-4691	Why was "PTG" added to the issue summary? I am not familiar with this abbreviation and I am linking to this Jira in a report and this is adding unnecessary confusion. If its something internal, tags should be used instead.	0	0	https://issues.jboss.org/browse/JBPAPP-4691
10039	JBPAPP-4691	Attention: Andy Has the information requested in this issue been included in the Performance Tuning Guide? If not, where would you recommend it be added? Maybe the "Stateless Session Beans" section?	1	0	https://issues.jboss.org/browse/JBPAPP-4691
10040	JBPAPP-4691	I have added the following text to the PTG as section 4.1.4: " <title>Local EJB3 Calls</title> <para> When an application uses a remote EJB3 interface the call is serialized and deserialized by default because this is a requirement of network communication. If the EJB is running in the same JVM as the client calling it, all communications are local so there's no need for serialization or deserialization. To avoid the CPU load involved and so improve the application's responsiveness, enable the system property org.jboss.ejb3.IsLocalInterceptor.passByRef to true, for example: add -Dorg.jboss.ejb3.remoting.IsLocalInterceptor.passByRef=true to JAVA_OPTS in the server's <filename>run.conf</filename> configuration file. </para>" Does this accurately reflect what you intended, Andy?	0	0	https://issues.jboss.org/browse/JBPAPP-4691
10041	JBPAPP-4684	Ivo, can you verify this in CR3.5?	1	0	https://issues.jboss.org/browse/JBPAPP-4684
10042	JBPAPP-4653	Will this change?	1	0	https://issues.jboss.org/browse/JBPAPP-4653
10043	JBPAPP-4611	Peter, can you verify this in CR3?	1	0	https://issues.jboss.org/browse/JBPAPP-4611
10044	JBPAPP-4611	There are two jars in the EAP 5.1.0.CR3 containing other jars: ./server/default/deploy/admin-console.war/plugins/rhq-jmx-plugin.jar [1] ./server/default/deploy/admin-console.war/plugins/jopr-jboss-as-5-plugin.jar [2] The first [1] jar contains only signed jars which is OK. The second [2] jar contains two jars which are not signed: ./lib/rhq-jboss-as-common-3.0.0.EmbJopr2.jar ./lib/jbpm-3.1.1.jar From Common Criteria or Java Security Manager policy point of view I am fine with those two not signed jars, because policy can reference them by location and since we have just two of them it is not going to make policy unreadable. The other argument is that those jars are part of JBoss Admin Console which code cannot be used by other (user's) applications. I would reopen the issue and move fix version to the next release. Anil, what do you think?	1	1	https://issues.jboss.org/browse/JBPAPP-4611
10045	JBPAPP-4611	Peter, can you check in CR3.5 if this issue still holds? The above mentioned jars are now built in brew.	1	0	https://issues.jboss.org/browse/JBPAPP-4611
10046	JBPAPP-4602	Should it be built as part of the WS build? Maybe as a separate build? Alessio, any suggestions?	1	0	https://issues.jboss.org/browse/JBPAPP-4602

#	Requirement	Questions	Answered	Successfully Answered	URL
10047	JBPAPP-4601	Although this is a bit older JIRA, I can't find a related info in "Transactions Development Quick Start Guide" nor "Transactions Administrators Guide". Is current state of docs about JBossXTS as supposed to be?	1	1	https://issues.jboss.org/browse/JBPAPP-4601
10048	JBPAPP-4589	Martha, I assume this will need to be documented - can you or Yiqiao create a documentation JIRA with instructions, including any channel subscription/JDK requirements?	0	0	https://issues.jboss.org/browse/JBPAPP-4589
10049	JBPAPP-4551	Chris, can you tell me where users will be able to download the HornetQ and CXF zips and what they are likely to be named? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4551
10050	JBPAPP-4551	Could you put the changes to the stage, please?	1	1	https://issues.jboss.org/browse/JBPAPP-4551
10051	JBPAPP-4551	I was not able to find the fixes on the stage. Now I can see there are two versions for EAP on the stage, 5.0 and 5. So now there are also two versions of the Installation Guide, one under the '5.0' section and the other one under the '5' section. Which of these versions is final and should be QE'd?	1	1	https://issues.jboss.org/browse/JBPAPP-4551
10052	JBPAPP-4546	password_tool.bat is in the $JBOSS_HOME/bin, but after trying to specify keystore (option 1) you get ClassNotFoundException (see at the bottom). password_tool.bat is missing following line: set JBOSSPASS_CLASSPATH=%JBOSSPASS_CLASSPATH%;%JBOSS_HOME%\client\jbosssx-client.jar Can you add the line, please? 10053	JBPAPP-4546	At this point it is not clear if a new build will be done for EAP 5.1 which would include this fix. The jira is resolved with a fix version of EAP 5.1, is this critical to include in EAP 5.1?	0	0	https://issues.jboss.org/browse/JBPAPP-4546
10054	JBPAPP-4546	Do we need to re-open this jira and put in TBD EAP 5 or should we add a new JIRA for the missing jar to be included in future release? Also, do we need the release notes to be updated with info about the missing jar and on where to get it?	0	0	https://issues.jboss.org/browse/JBPAPP-4546
10055	JBPAPP-4546	Anil, can you please commit this one line change to the tip of the JBPAPP_5_1 branch? I will try and backport it as a patch if we rebuild.	0	0	https://issues.jboss.org/browse/JBPAPP-4546
10056	JBPAPP-4539	Please see commit link https://issues.jboss.org/browse/JBAS-8344?page=com.atlassian.jirafisheyeplugin:fisheye-issuepanel#issue-tabs When committed, a type [JBAPP] make source link not work	1	1	https://issues.jboss.org/browse/JBPAPP-4539
10057	JBPAPP-4489	Andy, this is another change needed when switching to hornetq, can you please update the script in the JBPAPP_5_1 branch to include this change? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-4489
10058	JBPAPP-4489	Howard, Would it be possible to create a patch or fix it in a tag for EAP 5.1 CR2? We cannot include a patch which causes exception to come up even if it is harmless. We will start building CR2 next Monday, so we'll need something today or tomorrow. Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-4489
10059	JBPAPP-4483	Hi Michael Apologies for introducing the incorrect information back into the section again. It's what happens when I'm trying to close off issues close to the release. Don't look deep enough. Regarding [1] "Instead the users can base their application on the mavenized template WAR project "resteasy-jaxrs-war" that comes with the RESTEasy source distribution. " Would customers have to download that from the community? For enterprise customers, we try to avoid this scenario. Is there a project included in the enterprise binary a customer could access? Regarding [2], I have fixed the XML comments. The reason why the comments were formatted strangely here is because you can't comment out a section in XML that contains Comments. The author would have stripped out the comment markup so they could comment out the section.	1	1	https://issues.jboss.org/browse/JBPAPP-4483
10060	JBPAPP-4483	Hi again Michal That's exactly the information I was looking (and hoping) for. I'll direct the user to the location of the examples in the RESTEasy binary. Are you happy for me to close this issue after incorporating this change? Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-4483
10061	JBPAPP-4464	If I understand correctly the "fix version" will not include 4.3.0 CP09. Can you confirm.	1	1	https://issues.jboss.org/browse/JBPAPP-4464
10062	JBPAPP-4451	Dennis JGRP-1207 has status Rejected. In what sense is this JIRA issue resolved? Am I to understand that no changes were made?	1	1	https://issues.jboss.org/browse/JBPAPP-4451
10063	JBPAPP-4443	Clebert, can you please comment on the above?	0	0	https://issues.jboss.org/browse/JBPAPP-4443
10064	JBPAPP-4443	JORAM Tests are also consumed by AS6. Why don't you add an ignore on the libraries used by the JORAM tests.	1	1	https://issues.jboss.org/browse/JBPAPP-4443
10065	JBPAPP-4440	I have removed the '"-resteasy - a Technology Preview of RESTEasy - a portable implementation of JSR-311 JAX-RS Specification' reference from the Admin and Config guide. Does this resolve the issue?	0	0	https://issues.jboss.org/browse/JBPAPP-4440
10066	JBPAPP-4434	Hi Mladen, you know Solaris better, what do you think? I believe this script comes from the community AS, can this change be incorporated to the trunk if James clone this into a JBAS JIRA?	0	0	https://issues.jboss.org/browse/JBPAPP-4434
10067	JBPAPP-4434	The patch doesn't work. == is not allowed on solaris sh, and -c cannot be first param to grep. Has to be escaped (\-c) Here is the correct one: if ["x${isJBossRunningPid}" != "x"]; then args=`pargs -a ${JBossPid}` test "x${args}" = "x" && return 0 inst=`echo ${args} | grep "\-c ${instance}" 2>/dev/null` test "x${inst}" = "x" && return 0 fi Do you wish me to commit that?	1	1	https://issues.jboss.org/browse/JBPAPP-4434
10068	JBPAPP-4409	Can this please be cloned for EAP 4.x?	1	1	https://issues.jboss.org/browse/JBPAPP-4409

#	Requirement	Questions	Answered	Successfully Answered	URL
10069	JBPAPP-4403	Here are some comments after checking the docs: Chapter 2: Installation References to tech preview to be removed. Also the jbossws-cxf version is wrong. Chapter 3: WS Policy Framework Should be moved just before current Chapter 11 (keep all the general policy stuff together) Chapter 10: Messaging tutorial The chapter title should be something like "WS-Reliable Messaging tutorial" Chapter 12: How it works A reference to ws-policy or policies in general in the chapter title would be good Section 14.3 There's a reference to the community version JBossWS-CXF 3.1.1 that should be removed. The same in 14.4.1. Moreover, if you want to refer stack specific samples, those would need to be actually shipped with the EAP distribution (afaik this is currently not the case). The sample mentioned there is in the community version of jbossws-cxf stack specific testsuite. Otherwise you need to point users to some code online (using fisheye / viewcv) Section 14.4.3 There's a reference to the community jbossws-native stack userguide. Is that allowed? Chapters 14 and 15 should be swapped; as you did for WS-RM and WS-Addressing, first you talk about the topic leveraging the doc comning from Apache, then you provide a sample of integration into JBoss. Chapter 16: SOAP Messaging Logging The cxf-extensions-jbossws.xml file is actually not available on EAP 5.1, so what's written in the note applies; the whole chapter could then be reviewed with that in mind. Chapter 17: JMS Transport tutorial Remove this, it's actually not available in the version included in EAP 5.1 Chapeter 18: CXF configuration Remove this; most of what's there does not apply to the jbossws-cxf integration. Chapter 19: Logging All the logging related stuff (so everything except 19.4) either do not apply to jbossws-cxf integration or is already covered in Chapter 16, hence should be removed.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10070	JBPAPP-4403	Besides that, is another section of the documentation going to be available for basic ws doc, jaxws, etc like we used to have for native stack?	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10071	JBPAPP-4403	Alessio, which books are you referring to in your last comment? Where would this information come from, and is there a reason it wasn't mentioned when the documentation plan for the CXF docs was put forward?	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10072	JBPAPP-4403	Thanks Alessio. That section will still be available for customers in this release. To avoid duplicating content, I think we should reference that chapter of the Admin and Config Guide. Can you tell us which sections in particular apply to CXF, and where the references to the Admin and Config Guide should be made?	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10073	JBPAPP-4403	Hi Alessio, I have some questions about your comments. 1. We'd rather avoid referencing community documentation, but I don't know where else we could reference for this information. If you could provide information about configuring the Bouncy Castle provider, or suggest another reference point, that would be great 2. When you say, 'there's a reference to the community version JBossWS-CXF 3.1.1, are you simply referring to the version number? 3. In your first comment, you say that the jbossws-cxf version is wrong; can you tell me where this information comes from (is it the downloadable zip file?), and what version we should be using? 4. Could you please clarify what a sample reference is, and what you would like us to do with it?	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10074	JBPAPP-4403	> Thanks Alessio. That section will still be available for customers in this release. To avoid duplicating content, I think we should reference that chapter of the Admin and Config Guide. Can you tell us which sections in particular apply to CXF, and where the references to the Admin and Config Guide should be made? Here is the list of what applies to *JBossWS-CXF* too: - Chapters 5.1 (just remove the sentence "Even though JAXRPC..." as JAX-RPC is NOT supported with the CXF stack in EAP51), 5.2, 5.3, 5.4, 5.5, 5.6, 5.8, 5.9, 5.10, 5.11, 5.12, 5.13, 5.14, 5.15, 5.16, 5.17, 5.18, 5.19, 5.20, 5.22 (except section 5.22.1.1 Endpoint Config) - Section 5.21.3 As to where put references... well, basically all the stuff above comes logically before everything that's in the current EAP 5.1 CXF guide, as the latter is basically about jbossws-cxf stack specific things.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10075	JBPAPP-4403	> 1. We'd rather avoid referencing community documentation, but I don't know where else we could reference for this information. If you could provide information about configuring the Bouncy Castle provider, or suggest another reference point, that would be great http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_And_Configuration_Guide/ch05s21s02s04.html > 2. When you say, 'there's a reference to the community version JBossWS-CXF 3.1.1, are you simply referring to the version number? Yes, given the version in EAP is 3.1.2.SPx, there's no need to provide and reference to a community version. The feature mentioned there is available and the customer most probably doesn't need to know in which community version of the stack that became available. > 3. In your first comment, you say that the jbossws-cxf version is wrong; can you tell me where this information comes from (is it the downloadable zip file?), and what version we should be using? jbossws-cxf-3.1.2.SP3-3.SP3.6.ep5.el4-tp-installer.zip is the name of the downloadable zip file for EAP 5.0. CXF TP. I don't know which name it will have in EAP 5.1, but for sure that will not have 3.1.2.SP3 in it, given the jbossws-cxf version EAP 5.1 is based on is 3.1.2.SP6. You probably need to get in touch with Fernando's team for the exact file name. > 4. Could you please clarify what a sample reference is, and what you would like us to do with it? A sample reference is a reference to a jbossws class being a testsuite sample. For instance things like "you can check the sources of org.jboss.test.ws.jaxws.samples.SecurityTestCase" As said to Laura, I think we should avoid directly mentioning sources that are not actually shipped in the EAP distribution. Either changes are done for shipping them, or we do not reference them.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10076	JBPAPP-4403	Hi Alessio, I have made the changes you suggested and staged the book on docstage again. Aside from the section you recommended for removal, are there any other sections that are not directly related to something we support?	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10077	JBPAPP-4403	Hi Alessio, the email you sent was missing two of the documents: EAP51-Rebecca.txt and EAP51-CXF-Doc.txt. Could you send these to me again, please? :) Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10078	JBPAPP-4403	Alessio, can you get back to Rebecca on this? We are waiting on the missing documents mentioned in the previous comment.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10079	JBPAPP-4403	Hi Alessio, have implemented the changes in the diffs. Can you please check here http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.1/html/CXF_User_Guide/index.html and let me know what you think? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10080	JBPAPP-4403	Alessio, the source document is part of an internal repo for the product docs, so probably not. Bec, can you reapply the missing changes?	0	0	https://issues.jboss.org/browse/JBPAPP-4403
10081	JBPAPP-4403	Hi Alessio, I have NO IDEA what happened to the changes before, but they should be implemented now: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/JBoss_WS_CXF_User_Guide/index.html I'm not sure if I've removed too much of the Spring XML Configuration; could you please let me know if I have? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4403
10082	JBPAPP-4385	How should it look like the patch? Only changed file/s in special branch for the issue?	0	0	https://issues.jboss.org/browse/JBPAPP-4385
10083	JBPAPP-4378	Should this be documented in the release notes? Can I get a summary of the problem and any available workarounds?	1	1	https://issues.jboss.org/browse/JBPAPP-4378

#	Requirement	Questions	Answered	Successfully Answered	URL
10084	JBPAPP-4359	Hi Rostislav, could you please try locally updating to the version there to the one used in EAP 5.1? The maven testsuite builds the classpath using maven dependencies. Assuming this can be fixed just updating the version in the testsuite pom, we need to evaluate whether we want to cut another release for this single change or a simple patch can be applied when running the QA tests.	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10085	JBPAPP-4359	According to http://neptune.usersys.redhat.com:8080/jboss-support/ CR3 has JBoss WS Framework 3.1.2.SP8 and HornetQ 2.1.2 Do we still need this note at all??? Sorry, I don't have time to come up to speed on testing this. Can someone in QE please test this and let us know.	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10086	JBPAPP-4359	Rostislav, I've updated that version number. A couple of questions before I rebuild: 1. We are giving users an instruction to update a pom.xml file - what is the path of that file? 2. We say that tests fail - what tests are these? Is there a file path associated with them?	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10087	JBPAPP-4359	Hi Joshua. This issue applies to EAP 5.1.0 with standard JBossWS Native stack + installed HornetQ messaging, so I suggest this change: The following tests fail with a java.lang.SecurityException error: --> For EAP 5.1.0 with standard JBossWS Native stack + HornetQ messaging the following tests fail with a java.lang.SecurityException error: 1. We are giving users an instruction to update a pom.xml file - what is the path of that file? It's about pom.xml for WS Native testsuite. Relative path is modules/testsuite/pom.xml, SVN repository path is http://anonsvn.jboss.org/repos/jbossws/stack/native/tags/jbossws-native-3.1.2.SP7/modules/testsuite/pom.xml 2. We say that tests fail - what tests are these? Is there a file path associated with them? It's enough to have these test listed as it's now. These tests use JMS as transport protocol.	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10088	JBPAPP-4359	Rostislav, I cannot find the WS Native testsuite in my jboss-eap-5.1 installation. Is this something that is part of the EAP binary install? Is this situation something that users can encounter on their machine?	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10089	JBPAPP-4359	Do we need to tell customers about this in the release note then? It sounds like an internal QE tweak...	1	1	https://issues.jboss.org/browse/JBPAPP-4359
10090	JBPAPP-4356	Jesper, thanks for the email on this - can you create a subtask docs JIRA with the exact information that needs to change in the Admin and Config Guide? Thanks!	1	0	https://issues.jboss.org/browse/JBPAPP-4356
10091	JBPAPP-4353	I looked at this... I don't normally review documentation, but nothing lept out at me. Is this supposed to be assigned to me?	0	0	https://issues.jboss.org/browse/JBPAPP-4353
10092	JBPAPP-4353	Chris, you're listed as rel-eng lead, so I assigned it to you to review the Installation section - I assumed you would know where the files would end up and whether the download instructions were correct. If not, who is the best person to review this? I understand we do not do RPMs for WFK 1.1, so that whole section should be removed?	0	0	https://issues.jboss.org/browse/JBPAPP-4353
10093	JBPAPP-4353	Chapter 3.2: I would hope that : "None of the information in this section seemed relevant given that we no longer ship Struts, Spring or GWT. David, Ondrej, please provide additional information if required, or assign to someone who can." would not be included in the final, and that these sections have been updated? Chapter 6 - Is there a link to this doc download - jboss-wfk-docs-1.1.0.zip? The other link only shows a page with a copy of the release notes - http://www.redhat.com/docs/en-US/JBoss_Web_Framework_Kit/ Chapter 7 & 8 "YOUR INPUT HERE" - assuming this will be updated base on actual issues fixed, open.... If this is what is needed - I believe David would be able to compile this for you.	0	0	https://issues.jboss.org/browse/JBPAPP-4353
10094	JBPAPP-4353	Maybe boiler-plate we need, but don't see that the XFS trademark is ever used in the document outside the Legal Notices. Should it be removed?	0	0	https://issues.jboss.org/browse/JBPAPP-4353
10095	JBPAPP-4339	Hi Alexey, this a CP release (despite the number change 5.0.1 -> 5.1.0). Is t ok to upgrade metadata from 1.0.2 to 1.0.5 in a CP release? Fully backwards compatible, no side-effects? Anee-Louise (PM) and Laura (Docs) will need a list of issues fixed between 1.0.2 and 1.0.5. Can you add that as a comment to this JIRA please? (assuming the upgrade is ok for a CP) Many thanks, Fernando	1	1	https://issues.jboss.org/browse/JBPAPP-4339
10096	JBPAPP-4339	Many thanks Ales. Carlo, can you comment about JBMETA-277 and possible effects to EAP 5.0.1 customers upgrading to EAP 5.1.0 please?	0	0	https://issues.jboss.org/browse/JBPAPP-4339
10097	JBPAPP-4335	Marius, you seem to have removed all my formatting and language changes in making your modifications... can you revert that and add only the additional lines please? Or just let me know what material has to be added. Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4335
10098	JBPAPP-4292	If we are changing the version of rhq (and EMS) then we need a 1.4.3.SP1 tag for the embjopr right? Or will you simply re-tag 1.4.3.GA? It is OK to re-tag, we haven't given that to anyone else yet....	1	1	https://issues.jboss.org/browse/JBPAPP-4292
10099	JBPAPP-4292	Hi Simeon, do you have an update on the status of this?	1	1	https://issues.jboss.org/browse/JBPAPP-4292
10100	JBPAPP-4287	Please verify in EAP 5.1 documentation on stage.	1	1	https://issues.jboss.org/browse/JBPAPP-4287
10101	JBPAPP-4287	Guys, I had spent quite some time trying to look up the docs in question and I failed :-D There is just a general installation note in the corp preview and on the knowledge base web page... Can you point me to the archive?	0	0	https://issues.jboss.org/browse/JBPAPP-4287
10102	JBPAPP-4280	Could you verify this for accuracy, please, Strong? :)	1	1	https://issues.jboss.org/browse/JBPAPP-4280
10103	JBPAPP-4280	Hi Juraci, I think I have fixed the tabbing/rendering issue. Could you please verify here on stage? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/Hibernate_Search_Reference_Guide/search-mapping.html#search-mapping-entity	1	1	https://issues.jboss.org/browse/JBPAPP-4280
10104	JBPAPP-4278	Ales, transferring this content request from JBPAPP-2635. Can you write some example code for this section? Ideally your material would be inserted immediately following "Another way to limit scanning is to provide the jboss-classloading.xml file." http://java.dzone.com/articles/jboss-microcontainer-classloading goes into more detail with the jboss-classloading.xml files, but I'm no coder. :)	0	0	https://issues.jboss.org/browse/JBPAPP-4278

#	Requirement	Questions	Answered	Successfully Answered	URL
10105	JBPAPP-4278	Below is an email thread in which a JBoss Subject Matter Expert confirms that in fact this information should *NOT* be moved to the Performance Tuning Guide when the "Performance Tuning" chapter of the Admin & Config Guide is removed: ----- Original Message ----- > From: "Russell Dickenson" <rdickens@redhat.com> > To: "Andrig Miller" <anmiller@redhat.com> > Sent: Sunday, January 8, 2012 6:12:58 PM > Subject: Question about JIRA issue for EAP Performance Tuning Guide > > Andy, > > I need your help with a JIRA issue which was raised a long time ago: > https://issues.jboss.org/browse/JBPAPP-4278 > > The gist of the JIRA issue is that someone noted that with the > creation of the PTG the "Performance Tuning" section of the EAP > Admin & Config Guide could be removed. There was a further note > regarding this chapter's removal though: "If this chapter is > removed, a reference to the Classloading Layer chapter of the > Microcontainer User Guide should be added in the Performance Tuning > Guide's equivalent of the VFS Cache Tuning section." I have looked > over the PTG and can't find any reference to VFS, tuning or > otherwise. > > Assuming I'm correct and VFS is not mentioned in the PTG, should this > be added specifically so that this reference can be added, or have > circumstances changed perhaps and there's no longer a need to add > this reference? > I personally don't think that this should be added to the performance tuning guide. The actually changes only affect deployment performance, not actual runtime performance, and while you may increase the deployment time, the extra memory that the VFS will use, could actually hurt runtime throughput. So, I would not add this information to the performance tuning guide, since its focused on runtime throughput of the customers application, and the VFS tuning has nothing to do with that, and could actually hurt throughput. Also, there are no metrics where they show how much it actually improves deployment time. Most customers aren't going to care if there deployments take 6 seconds versus 5.5, or something like that. Andy > > -- > Regards, > > Russell Dickenson > Content Author, Engineering and Operations > > DID: +61 (0)7 3514 8159 > Email: rdickens@redhat.com > > Red Hat, Asia-Pacific Pty Ltd > Level 1, 193 North Quay > Brisbane 4000 > Office: +61 7 3514 8100 > Fax: +61 7 3514 8199 > Website: www.redhat.com <http://www.redhat.com/>	1	1	https://issues.jboss.org/browse/JBPAPP-4278
10106	JBPAPP-4251	Martha, is this the same as the JBoss XB component we report in the release notes? That version is currently listed as 2.0.1.GA... should that change for the Beta release?	0	0	https://issues.jboss.org/browse/JBPAPP-4251
10107	JBPAPP-4247	Rosta, can this jira be closed?	1	1	https://issues.jboss.org/browse/JBPAPP-4247
10108	JBPAPP-4229	On Thu, 2010-01-14 at 14:59 -0300, Hardy Ferentschik wrote: > Speaking of plugins, what does the maven-test-ext-plugin do for us and why > is it needed in > the annotations module? The build seems to work fine even w/o. Its there to mimic behavior JVZ promised me he would add to Maven but never has (in 3 years). Basically it allows you to *dynamically* alter the test classpath. We don't use it per se because its not really intended for us. Its intended for people running the hibernate testsuite(s) against "other databases". The build works ok for us without it there, but it needs to be there. -- Steve Ebersole <st...@hibernate.org> Hibernate.org	1	1	https://issues.jboss.org/browse/JBPAPP-4229
10109	JBPAPP-4229	Strong, on Hudson, for testing, it is OK to grab the plugins (all of maven) from central, so I vote we close this as WONTFIX. In Brew you can just patch out the reference, depmap it to nothing or something. Maybe David can suggest how to handle that but a small patch with some '-' lines will do it. Can we close this as WONTFIX?	1	1	https://issues.jboss.org/browse/JBPAPP-4229
10110	JBPAPP-4229	so David, would you please import it? I tried to work on jpackage, but don't know how to .. (can't remember the details, I remember i send you and Fernando a mail to ask this)	1	1	https://issues.jboss.org/browse/JBPAPP-4229
10111	JBPAPP-4229	David, would you please build this on jdk5? you only build this on jdk6, but hibernate can not be built on jdk6.. we need jdk5 thanks	1	1	https://issues.jboss.org/browse/JBPAPP-4229
10112	JBPAPP-4229	Strong, did you say that you no longer need a JDK5 build? If so, then this issue can be marked as Done.	1	1	https://issues.jboss.org/browse/JBPAPP-4229
10113	JBPAPP-4227	Fernando, can you take this from here?	1	1	https://issues.jboss.org/browse/JBPAPP-4227
10114	JBPAPP-4226	Manik, is this being included? If so, some mention should be made in the release notes about this Tech Preview. Can you let me know?	1	0	https://issues.jboss.org/browse/JBPAPP-4226

10116	JBPAPP-4226	This is a significant undertaking. We will have to dedicate a person to it full-time. They will need to study Infinispan and then do the productization of the docs. What resources are QE dedicating to this?	0	0	https://issues.jboss.org/browse/JBPAPP-4226
10117	JBPAPP-4217	What is the target version? Please update: https://docspace.corp.redhat.com/docs/DOC-37998	0	0	https://issues.jboss.org/browse/JBPAPP-4217
10118	JBPAPP-4192	I cannot see the fixes on stage. Could you update it on stage please?	1	1	https://issues.jboss.org/browse/JBPAPP-4192
10119	JBPAPP-4191	Ales, do you think we should have an admin guide for the MC as part of EAP doc bundle? Do you see the administrator configuring the microcontainer in any ways?	0	0	https://issues.jboss.org/browse/JBPAPP-4191
10120	JBPAPP-4191	What is usually in these admin guides?	0	0	https://issues.jboss.org/browse/JBPAPP-4191
10121	JBPAPP-4189	This issue is a clone of JBPAPP-3591 to specifically track EAP5. The last comment on the source JIRA was: Fernando Nasser - 27/Apr/10 03:23 PM Can we move this to 5.0.2 for tracking purposes now?	1	1	https://issues.jboss.org/browse/JBPAPP-4189
10122	JBPAPP-4157	Hi Ruchi, I'm not sure I understand you fully. For example, JBossQueue is not a final class, you can extend it whether your sub class is abstract or not. Also JBossQueue implements javax.jmx.Queue, so it can be casted to javax.jmx.Queue. Am I mising anything there? Howard	1	0	https://issues.jboss.org/browse/JBPAPP-4157
10123	JBPAPP-4155	Mike, this chapter is not included in the community version of the AS5 documentation either. Are you sure it is still required? If so, please let us know where in the current Admin and Config Guide it should go. Thankyou. :)	0	0	https://issues.jboss.org/browse/JBPAPP-4155
10124	JBPAPP-4155	Mike, I've attached the naming chapter file from 4.2. Can you please review the contents for use with EAP 5.1 and let me know what needs to change before I add it to the Admin and Config Guide for 5.1? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-4155
10125	JBPAPP-4155	Hi Mike, I have added the Naming chapter into the Admin and Config guide in chapter 17, after Clustered JNDI Services, but I wasn't quite sure where to slot it in. Would you be able to look over it and see if there's a more appropriate place, please? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-4155
10126	JBPAPP-4143	Ales, which version is expected? Please update https://docspace.corp.redhat.com/docs/DOC-37998	0	0	https://issues.jboss.org/browse/JBPAPP-4143
10127	JBPAPP-4143	This used to be top level issue for all potential MC upgrades -- VFS, Reflect, MDR, Man, Kernel, CL, Deployers, ... Hence there is no version. Or is there no need to top level MC component upgrade issue?	1	1	https://issues.jboss.org/browse/JBPAPP-4143
10128	JBPAPP-4143	Hi Ales, I don't see a subtask for JBoss Man but in DOC-37998 it is listed as having to be upgraded to 2.1.1.SP2 Is it no longer to be upgraded and can stay at 2.1.1.GA? Thanks, Fernando	1	1	https://issues.jboss.org/browse/JBPAPP-4143
10129	JBPAPP-4140	If the issue is resolved for 4.3.CP09, then we should clone off this issue and make one for EAP 4.2 so this issue can be closed off against 4.3.CP10. Or could we just remove the 4.2 Affects Version and close this ticket off since 4.2 is no longer under active development?	1	0	https://issues.jboss.org/browse/JBPAPP-4140

#	Requirement	Questions	Answered	Successfully Answered	URL
10130	JBPAPP-4139	Hi Rajesh, Could you please just verify that this section has been removed and is now correct? Thanks. http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/mail.html	1	1	https://issues.jboss.org/browse/JBPAPP-4139
10131	JBPAPP-4131	Please verify in EAP 5.1 documentation on stage.	0	0	https://issues.jboss.org/browse/JBPAPP-4131
10132	JBPAPP-4111	removed jboss-cache 1.4.1 and pojo cache	1	1	https://issues.jboss.org/browse/JBPAPP-4111
10133	JBPAPP-4111	I have made the changes as specified in the FishEye. Rajesh, could you please verify this for 5.1? Available here: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Seam_Reference_Guide/index.html#cache	0	0	https://issues.jboss.org/browse/JBPAPP-4111
10134	JBPAPP-4111	Hi. Just a quick comment before goes to archiving... What I encountered when trying the supported version of 3.2.x was that whenever you used the <s:cache> tag, an exception occurred. So we had to revert back to using the old 1.4.1 version of jboss cache. Is this now fixed?	1	1	https://issues.jboss.org/browse/JBPAPP-4111
10135	JBPAPP-4111	I am not aware of any exception in usage of s:cache component. Could you specify more details about it?	1	1	https://issues.jboss.org/browse/JBPAPP-4111
10136	JBPAPP-4089	Marek, where would I find this information? Would you suggest this forms part of the Seam Reference Guide, or part of the release notes?	0	0	https://issues.jboss.org/browse/JBPAPP-4089
10137	JBPAPP-4089	Hi Rajesh, I have made the changes as available in the fisheye. Could you please verify these for 5.1? Available here: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/index.html	1	1	https://issues.jboss.org/browse/JBPAPP-4089
10138	JBPAPP-4058	Docmented as a known issue in the EAP 4.3.8 release notes:<classname>CacheEntry</classname> resources are not cleaned when <classname>ApplicationContext</classname>s are shut down, causing a memory leak. Is there a workaround available for this?	1	0	https://issues.jboss.org/browse/JBPAPP-4058
10139	JBPAPP-4053	Tyronne, this has been set to Coding in Progress since April. Can you give an update on status and need for this? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-4053
10140	JBPAPP-4052	I merged the Transactions JTA, JTS, and XTS Programmers Guides into a single Transactions Development Guide for EAP 5.1. Here are the final EAP Transactions deliverables for EAP 5.1: 1. Transactions Administration Guide 2. Transactions Development Quick Start Guide 3. Transactions Development Guide	0	0	https://issues.jboss.org/browse/JBPAPP-4052
10141	JBPAPP-3961	Brian, since Infinispan is only a tech preview this time, can we really say Cache is deprecated? Doesn't deprecated imply 'no longer fully supported'?	1	1	https://issues.jboss.org/browse/JBPAPP-3961
10142	JBPAPP-3961	Attention: Jared Since this is marked with a Fix Version/s of TBD EAP 5, should it be targeted for EAP 5.1.2's Release Notes? It's a Documentation-specific issue.	0	0	https://issues.jboss.org/browse/JBPAPP-3961
10143	JBPAPP-3961	Eva - My memory of what you asked in our team meeting is not very clear. IIRC you asked if we were to *definitely* remove from documentation features which had been deprecated but were still supported. I believe we should leave documentation of supported features in place, removing only documentation of features which are no longer supported. Does this give you enough guidance? I'd honestly be ver surprised if any deprecated feature has since been declared unsupported, so there should be very little to do with this issue. I would expect a Release Notes entry to be written but expect that that's all.	0	0	https://issues.jboss.org/browse/JBPAPP-3961
10144	JBPAPP-3950	Yes some customers needlessly put jars in that shouldn't be added, however the bigger case is when a customer deploys a 3rd party product, I've seen several that include api classes for jms and such which should be ignored. When the customer has a 3rd party application, they have to go back to the vendor and get them to make a version with the classes removed so that they can maintain their support agreement. By delegation mode, do you mean to have it check the parent first? In that case it would not allow the customer to override other valid classes.	0	0	https://issues.jboss.org/browse/JBPAPP-3950
10145	JBPAPP-3950	Does this apply to EAP 4.x or 5.x or both? If both, this issue needs to be cloned and the one for 4.x put in TBD EAP 4 and the other one in TBD EAP 5. Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-3950
10146	JBPAPP-3935	Did you pass it the build.properties and with an empty version.tag ? This branch is set for a production build so the behavior without a version.properties is flaky.	0	0	https://issues.jboss.org/browse/JBPAPP-3935
10147	JBPAPP-3879	Considering that EAP 5.0.1 wasn't released yet, is it OK to run the regression/compatibility tests on 5.0.1 CR1?	1	1	https://issues.jboss.org/browse/JBPAPP-3879
10148	JBPAPP-3845	Can I get a description of this for the release notes, please?	1	1	https://issues.jboss.org/browse/JBPAPP-3845
10149	JBPAPP-3842	Laura, can you add the suggested changes?	0	0	https://issues.jboss.org/browse/JBPAPP-3842
10150	JBPAPP-3829	Why don't you use the full jbossweb.jar, which is in the repository? http://repository.jboss.org/maven2-brew/jboss/web/jbossweb/2.1.7.GA/jbossweb-2.1.7.GA.jar That is what the dependency is looking for and what the build in Brew uses.	1	1	https://issues.jboss.org/browse/JBPAPP-3829
10151	JBPAPP-3829	Checked the latest build of tomcat6 and jbossweb in Brew, can NOT find CometEvent in jbossweb jars, but in tomcat6 catalina.jar, CometEvent is there. CometEvent comes to tomcat since version 6, so jbossweb should use different catalina, a low version and it doesn't have CometEvent yet. So, we have to upload tomcat6 or upgrade the catalina jbossweb uses, Fernando, how do you think of it?	1	1	https://issues.jboss.org/browse/JBPAPP-3829
10152	JBPAPP-3828	Anil, I have looked over the project and I have some questions about the scope. There are multiple deliverables in the community repo: 1. User Guide - This appears to be a guided tutorial for creating a specific type of application using Microcontainer and POJOs 2. Getting Started Guide - This appears to be an overview for installing and configuring the Microcontainer 3. Reference Guide What level of detail are we looking at? I have been working from the User Guide, but I think the Getting Started Guide may be more the direction you were headed.	0	0	https://issues.jboss.org/browse/JBPAPP-3828
10153	JBPAPP-3817	Hi Fernando, In Brew, mojo-maven2-plugins-jaxb2 has a maven-jaxb2-plugin subpackage, but that maven-jaxb2-plugin has different version and groupId with the needed one, I'd like to add repolib to mojo-maven2-plugins and upload to maven2-brew, then liweinan can create a patch for the pom which has this dependency, this may resolve this problem. Do you have any advice?	1	1	https://issues.jboss.org/browse/JBPAPP-3817
10154	JBPAPP-3817	First of all, which version and groupId has the mojo-maven2-plugins-jaxb2 subpackage? Is this really the same plugin or some other plugin that just happens to be also related to JAXB2? How did we manage to build the resteasy RPM in Brew? Is there a depmap? I am not even sure if depmaps apply to plugins... CHeck the resteasy Brew root.log and brew.log and find out where the maven-jaxb2-plugin came from	1	1	https://issues.jboss.org/browse/JBPAPP-3817
10155	JBPAPP-3798	Hi Anne-Louise Should this issue be placed into a developer's queue, rather than being left unassigned? Cheers J	0	0	https://issues.jboss.org/browse/JBPAPP-3798
10156	JBPAPP-3797	This seems a reasonable RFE, other customers would likely benefit as well and is in-line with our focus on operational eas of use. Needs to be assessed by eng. to ensure it can be done without changing existing behaviour, eg. what happens if the run-as user doesn't have permission to create a pid file ?	0	0	https://issues.jboss.org/browse/JBPAPP-3797
10157	JBPAPP-3797	Lami, can you please be more specific. Which one of the http://anonsvn.jboss.org/repos/jbossas/branches/ this needs to go in	1	1	https://issues.jboss.org/browse/JBPAPP-3797
10158	JBPAPP-3764	If the test application still reports uncollected garbage, why is this issue resolved?	0	0	https://issues.jboss.org/browse/JBPAPP-3764
10159	JBPAPP-3754	I've updated the RHEL builds to 1.2.30: mod_jk-1.2.30-2.ep5.el4 mod_jk-1.2.30-1.1.jdk6.ep5.el5 Mladen, Can you please update the hudson build for the other platforms? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-3754

#	Requirement	Questions	Answered	Successfully Answered	URL
10160	JBPAPP-3732	Rich, as far as I can see, Oracle 9i isn't listed as a supported configuration for EAP 5.0.1, just 4.2 and 4.3: http://www.jboss.com/products/platforms/application/supportedconfigurations/ Can you advise on this? We don't have any information on support in the documentation itself, so would it be better to ensure the jboss.com page remained up to date?	1	1	https://issues.jboss.org/browse/JBPAPP-3732
10161	JBPAPP-3731	Rajesh, I've documented this as part of JBPAPP-3732 in the "Database Certifications" section of the release notes. Is the following still valid if this is TBD? JBoss Enterprise Application Platform 5.0.1 is now certified for the Oracle 11g R2 and Oracle 11g RAC databases when used with Oracle JDBC Driver version 11.2.0.1.0. It is also certified for Sybase ASE 15.0.3 when used with JConnect driver version 6.0.5.	1	1	https://issues.jboss.org/browse/JBPAPP-3731
10162	JBPAPP-3731	Rajesh, changed to "Oracle 11g R2 RAC". This is currently documented for 4.2 as well, is this correct?	1	1	https://issues.jboss.org/browse/JBPAPP-3731
10163	JBPAPP-3719	Here is where it appears in the community docs: http://labs.jboss.com/file-access/default/members/jbossmessaging/freezone/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient Is this book in the EAP set? If so, is this section in the book? According to Tyrone the information cannot simply be cut-and-pasted. He knows how it needs to be done in EAP.	0	0	https://issues.jboss.org/browse/JBPAPP-3719
10164	JBPAPP-3719	Hi Tyronne, Can you provide the relevant information? Thanks. Ben	1	1	https://issues.jboss.org/browse/JBPAPP-3719
10165	JBPAPP-3719	Hi, i tried to find a description in JBM User Guide for EAP 4.3 which would give a list of needed jars for a JMS client to run, but without success. Can you give me a hint where the description was added? I expected something as in http://docs.jboss.org/jbossmessaging/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient in section 4.4. Thank you	1	1	https://issues.jboss.org/browse/JBPAPP-3719
10166	JBPAPP-3719	Laura, could you help me to find the changes? Thank you	1	1	https://issues.jboss.org/browse/JBPAPP-3719
10167	JBPAPP-3719	Hi Howard I need a little help with this question raised by Tyronne. Would you be able to check it out for me, Howard? Thanks for any help you can give me here. Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-3719
10168	JBPAPP-3703	Bill, can you comment on the possible backward incompatibilities that may be encountered when upgrading RESTEasy from 1.1 to 1.2.1 ? This is a CP type of release, where we no longer support the previous version, so we must ensure absolute backwards compatibility.	0	0	https://issues.jboss.org/browse/JBPAPP-3703
10169	JBPAPP-3703	Will you upload the build result into http://repository.jboss.org/maven2-brew/org/jboss/resteasy/ ?	1	0	https://issues.jboss.org/browse/JBPAPP-3703
10170	JBPAPP-3677	I have a customer in support case [1]. Seems he is experiencing this issue. However the error message he is getting is slightly different. EAP 5.0.1 Oracle Driver Implementation-Version: 11.2.0.1.0 Oracle Server 11.2.0.1 They are requesting an patch for EAP 5.0.1. Any chance of a patch? If so, a timeline would be much appreciated. [1] https://c.na7.visual.force.com/apex/Case_View?id=500A0000003iovWIAQ [2] org.jboss.resource.JBossResourceException: Could not create connection; - nested throwable: (java.sql.SQLException: ORA-01017: invalid username/password; login denied)	0	0	https://issues.jboss.org/browse/JBPAPP-3677
10171	JBPAPP-3634	why we need this? if we do it, so, which one should users use in which case? what's the difference between http://hibernate.sourceforge.net/hibernate-mapping-3.0.dtd and "http://hibernate.sourceforge.net/hibernate-mapping-3.1.dtd" ?? take a look of http://fisheye.jboss.org/browse/Hibernate/core/trunk/core/src/main/resources/org/hibernate/hibernate-mapping-3.0.dtd?r1=15365&r2=17821&u=3&ignore=&k= this link shows the difference between these two dtd files, the one in hibernate-core jar in eap5 and another in source forge site as you can see the differences came with two project jira http://opensource.atlassian.com/projects/hibernate/browse/HHH-3275 http://opensource.atlassian.com/projects/hibernate/browse/HHH-4440 they are new features in hibernate trunk, and they are not available in eap5 for now we have carefully kept the compatibility between every change of that dtd file or if you want to use "hibernate-mapping-3.1.dtd", whatever it is, you can put it in one of your package, e.g. org.aaa.bbb and declare it in hbm files like this: <!DOCTYPE hibernate-mapping PUBLIC "-//Hibernate/Hibernate Mapping DTD 3.0//EN" "classpath://aaa/bbb/hibernate-mapping-3.1.dtd"> I leave this open in case others want to discuss more	1	0	https://issues.jboss.org/browse/JBPAPP-3634
10172	JBPAPP-3634	Strong, does this need to be documented as a known issue?	0	0	https://issues.jboss.org/browse/JBPAPP-3634
10173	JBPAPP-3620	Will it be before Aug 18? If not, let me know and we can reassign this to TBD EAP 5.	1	1	https://issues.jboss.org/browse/JBPAPP-3620
10174	JBPAPP-3620	Hi Marek, are you able to give us any information on this? E.g what changes actually need to be incorporated? Isaac, do you know who in JBDS we could contact for information on this? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-3620
10175	JBPAPP-3620	Isaac, was the intent behind these two JIRAs similar?	0	0	https://issues.jboss.org/browse/JBPAPP-3620
10176	JBPAPP-3618	The EWS release will include Tomcat Native 1.1.19. Do we need to be aligned on that version?	0	0	https://issues.jboss.org/browse/JBPAPP-3618
10177	JBPAPP-3591	Does this need to be documented for the EAP 4.2.9 and 4.3.8 release notes?	1	1	https://issues.jboss.org/browse/JBPAPP-3591
10178	JBPAPP-3591	Laura, the information about this certification is correctly there, but we need to mention the two issues linked to this one. I changed both to include the "Affects Version" for 4.x series, as they were missing (and weren't included in Release notes probably because of that). So, could you please include them in the Release Notes and assign this issue back to me for verification? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-3591
10179	JBPAPP-3591	Can we move this to 5.0.2 for tracking purposes now?	1	1	https://issues.jboss.org/browse/JBPAPP-3591
10180	JBPAPP-3529	Hi Remy, can we avoid making this copy? They may get out of sync again.	0	0	https://issues.jboss.org/browse/JBPAPP-3529
10181	JBPAPP-3529	Is fixing this really so important ? Not attempting to configure checkInterval would make it default to 0, which would disable background compilation if development is set to false. Moving to the next CR for now.	0	0	https://issues.jboss.org/browse/JBPAPP-3529
10182	JBPAPP-3499	Manik, can you let me know any details? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-3499
10183	JBPAPP-3498	Manik, I need to know if there are any changes required to this document for inclusion in the Enterprise Web Platform. EWP is not meant to expose any remote connections except the web server. Can you tell me which sections need to be removed so that this is the case? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-3498
10184	JBPAPP-3498	"Can I run JBoss Cache outside of the JBoss Enterprise Web Platform?" - surely we don't want this? "Can JBoss Cache run as a second level cache inside Hibernate?" - does EWP support hibernate in the first place? If not all of the HIbernate related FAQs can be removed. "Which transaction managers are supported by JBoss Cache?" - does EWP support JTA? Again, these could be removed if unnecessary... HTH Manik	1	1	https://issues.jboss.org/browse/JBPAPP-3498
10185	JBPAPP-3498	Will remove the first. Brian, can you answer the support questions so that I know what to remove?	1	1	https://issues.jboss.org/browse/JBPAPP-3498
10186	JBPAPP-3498	"Can JBoss Cache run as a second level cache inside Hibernate?" -- yes, clustered 2nd level caching is supported "Which transaction managers are supported by JBoss Cache?" -- yes, JTA is supported, (although JTS is not)	1	1	https://issues.jboss.org/browse/JBPAPP-3498

#	Requirement	Questions	Answered	Successfully Answered	URL
10187	JBPAPP-3498	I've removed "Can I run JBoss Cache outside of the JBoss Enterprise Web Platform?" Brian, thanks for the quick response. The original content is: Which transaction managers are supported by JBoss Cache? JBoss Cache supports any TransactionManager that is JTA compliant, such as JBoss Transactions. While JBoss Cache does ships with a dummy transaction manager (org.jboss.cache.transaction.DummyTransactionManager), we do not recommend using this for production. It is not thread safe, and is intended for internal testing only. I have added the following: JTS is not supported Java Transaction API (JTA) is supported for use with Enterprise Web Platform. However, Java Transaction Service (JTS) is not supported. Keep this in mind when selecting a transaction manager. Please confirm that this is appropriate.	1	1	https://issues.jboss.org/browse/JBPAPP-3498
10188	JBPAPP-3489	after a manual searching and google site search, javax.transaction:jta:jar:1.0.1B could not be found in: http://repository.jboss.com/maven2-brew/ and http://repository.jboss.com/maven2/ could fnasser kindly indicate me where can I find it or is there any better searching tools I can use? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-3489
10189	JBPAPP-3485	so, can i resolve this as won't fix?	1	1	https://issues.jboss.org/browse/JBPAPP-3485
10190	JBPAPP-3484	You're right, I do not like this. Though it has nothing to do with the DTD change. What is the use case for this?	1	0	https://issues.jboss.org/browse/JBPAPP-3484
10191	JBPAPP-3484	And have the measured the effect of causing the size of their query plan caches to explode?	1	0	https://issues.jboss.org/browse/JBPAPP-3484
10192	JBPAPP-3484	@sebastian I am more concerned with the why, not so much if it is possible (its programming, essentially anything is possible). I hear you saying that the db2 optimizer somehow treats "... where x = ?" differently from "... where x = 'SOME_VALUE'". Is that really what you are saying? What specifically is different? It's able to use an index in one case but not the other? Generally speaking a query optimizer is not about [optimizing results], so I am not really sure what "the optimizer is not able to properly optimize the result for next queries" means. Do you mean that you are asking it hold results for each query and here the "optimizer" is not able to distinguish the "cached results" based on bound parameter values? I am totally guessing here as I am not a db2 user (I have been lucky enough to avoid db2 my whole career) and the database with which I am familiar have a much different usage of the phrase "optimizer" in regards to queries.	1	0	https://issues.jboss.org/browse/JBPAPP-3484
10193	JBPAPP-3484	Hi Steve, no DB2 in your whole career? Really nice! :) Here's problem with the optimizer: Let's say we have a database table with 500.000 records. 200 records have an index 'a', the rest has an index 'b'. The table is partitioned with this index -> 2 Partitions (a = 200 recs, b=499800 recs). Now you query with "where index='?'", ?=a. The optimizer uses a table scan cause there are only 200 records. The acces plan is cached. Now you query with "where index='?'". ?=b The optimizer should now create a new access plan cause it's better to use the index tree if there are so much records. But there is a cached plan present for query ".. index=?" and db2 uses the cached one - and a full table scan is performed. Very, very slow :(If the index-field isn't a parameter-marker db2 uses a new plan every time this query is performed. There's no query plan cache used for db2, thats a bit bad. But the performance improves and costs went down.	1	1	https://issues.jboss.org/browse/JBPAPP-3484
10194	JBPAPP-3484	I am not sure how this a DB2 or any database specific issue. It is known that with any database there are 'cases' where using a literal value is better than a parameter marker for e.g. ... 'by substituting the actual predicate with a bind variable, you're removing the ability for the optimiser to compare your value with the data distribution in the column, which might make it opt for a full table scan or an index when this isn't appropriate' So the use-case above is one that fits into this category. The simplest solution for these cases is for the application to use a literal value in the query (HQL, Criteria whatever) instead of parameter marker. What is preventing the application from doing this... SQL injection ? I cant see how the index value choice is coming from user input data but even if it is, the app can duly sanitize it. The proposed solution seems a classic example of over engineering to me	1	1	https://issues.jboss.org/browse/JBPAPP-3484
10195	JBPAPP-3484	@Sebastian. As mentioned above, i don't think it matters whether this is Oracle or DB2 and also what's preventing the application from using a literal in the HQL or Criteria itself ?	1	1	https://issues.jboss.org/browse/JBPAPP-3484
10196	JBPAPP-3484	Mario, lets take a step back... Would you agree or disagree that this is a database issue? To me it boogles my mind quite honestly that the database does not account for these bind parameters (their values) when determining which execution plan to use, especially when linked to indexed columns, let alone columns used in partitioning.	1	0	https://issues.jboss.org/browse/JBPAPP-3484
10197	JBPAPP-3483	Documented as a known issue in the EAP 5.0.1 release notes.	0	0	https://issues.jboss.org/browse/JBPAPP-3483
10198	JBPAPP-3477	Howard, can you give me details on how to migrate from JBoss Messaging 1.4.6 to HornetQ and vice versa? This is a requirement on the EAP 5.1 ERD.	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10199	JBPAPP-3477	Laura, I'll try on this. By the way, I don't think migrate from HornetQ to JBM make any sense. Can you explain why EAP 5.1 need this? Howard	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10200	JBPAPP-3477	The guide looks very comprehensive, thanks Howard. Is the source code in a repo somewhere?	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10201	JBPAPP-3477	Howard, the HornetQ User Guide and HornetQ Quickstart Guides have been combined for EAP 5.1. Can you assign this to someone for technical review for EAP 5.1? I need to know what is not supported or does not apply to HornetQ in EAP 5.1. http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/HornetQ_User_Guide/index.html	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10202	JBPAPP-3477	Hi Tim, Can you help review the HornetQ's doc for EAP 5.1? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/HornetQ_User_Guide/index.html Thanks Howard	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10203	JBPAPP-3477	I am in the process of adding the migration PDF to HornetQ, however, I feel the following points could use clarification. Tim, if you could provide details that would be great. 1) Sections 4 and 10 in the PDF no longer seem entirely relevant to EAP, given that migration entails uninstalling and reinstalling the entire platform. Are these still valid? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Installation_Guide/index.html#alt-tech <-- The Alternative Technologies section details our current process. Are you able to help me synthesise these into one process? Where would those steps fit into this migration document? 2) "As HornetQ has a different transport layer and cluster design, you need to map the parameters in [Remoting and JGroups] configuration files to their HornetQ equivalents" - what are the equivalents? Can we list them here, or is there another section in the HQ user guide that covers this that we can link to? 3) The JMS Bridge parameters table is non-specific about the name of parameters after TargetDestinationFactory - is it possible to get the specific parameter name for the rest of the attributes, or is "Source user name parameter" as close as we can get? The JMS Bridges chapter does not specify these either and I think it would help to be specific. 4) Section 7 says: "You need to consult corresponding documents for a complete description of the parameters in Remoting and JGroups in order to get a proper settings for HornetQ." EAP does not ship with this documentation. What do HornetQ users need to know? 5) Section 8 says "After you have migrated all the JMS destinations on to HornetQ, you can " and does not finish. I assume the end of that sentence is " migrate existing messages from your JBoss Messaging server to the HornetQ server"?	1	1	https://issues.jboss.org/browse/JBPAPP-3477

#	Requirement	Questions	Answered	Successfully Answered	URL
10204	JBPAPP-3477	Laura - can you tell me which svn revision from the HornetQ repository you used when taking the HornetQ documentation to convert to EAP documentation? We will need to track this so we can do svn diffs to see any changes in the HornetQ docs that need to be also applied to the EAP docs.	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10205	JBPAPP-3477	Hi Laura, here is my answer. However, I think Tim's opinion is still important to have. :) 1) Sections 4 and 10 in the PDF no longer seem entirely relevant to EAP, given that migration entails uninstalling and reinstalling the entire platform. Are these still valid? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Installation_Guide/index.html#alt-tech <-- The Alternative Technologies section details our current process. Are you able to help me synthesise these into one process? Where would those steps fit into this migration document? --- I think you can omit those sections as you think fit for the EAP. 2) "As HornetQ has a different transport layer and cluster design, you need to map the parameters in [Remoting and JGroups] configuration files to their HornetQ equivalents" - what are the equivalents? Can we list them here, or is there another section in the HQ user guide that covers this that we can link to? --- I think the parameters of remoting and jgroups (in hornetq it has it own parameters) are wildly different because their architectures (jbm vs hq) is different. It's hard to find a one-to-one mapping between the two system. So probably we can point to the document of remoting and jgroups for references. 3) The JMS Bridge parameters table is non-specific about the name of parameters after TargetDestinationFactory - is it possible to get the specific parameter name for the rest of the attributes, or is "Source user name parameter" as close as we can get? The JMS Bridges chapter does not specify these either and I think it would help to be specific. --- HornetQ's JMS bridge doesn't have parameter names, they are passed in by order. 4) Section 7 says: "You need to consult corresponding documents for a complete description of the parameters in Remoting and JGroups in order to get a proper settings for HornetQ." EAP does not ship with this documentation. What do HornetQ users need to know? --- They need to understand JBM's remoting and jgroups configuration parameters to find a proper hornetQ config. I assume the users should have that knowledge as they are existing JBM users. 5) Section 8 says "After you have migrated all the JMS destinations on to HornetQ, you can " and does not finish. I assume the end of that sentence is " migrate existing messages from your JBoss Messaging server to the HornetQ server"? --- Sorry, my brain must have gone astray. :) Yes you are right, the rest of the sentence is what you have indicated.	0	0	https://issues.jboss.org/browse/JBPAPP-3477
10206	JBPAPP-3477	Tim, I will do the diff you have suggested and merge changes that way. Are you able to do a full tech review before August 13 so that we have the chance to include your feedback before CR3?	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10207	JBPAPP-3477	1) Because that page was not present in the community HornetQ documentation as far as I could tell, and we received no response to our email queries on this subject. Can you provide us with a list of contributors, or direct us to a contributor page? We definitely want to give the bulk of the credit to the people who actually wrote the document! 2) Can you give examples? I can see AS5 references, which I will remove, but I can't see installation references. http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/HornetQ_User_Guide/index.html	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10208	JBPAPP-3477	Chapter 3 - Probably remove the concept of Standalone.... (I hate to let it go though) On running examples, we should write that the JMS examples are starting a small standalone server that is suitable to run the server only, and not supported for production. Also, add a paragraph on examples that it's required to set JBOSS_HOME in order to have the examples running Chapter 6 - 6.1, 6.2, 6.3 needs to go away. LIBAIO (6.4) needs to be contextualized on how the .so is installed with EAP. Which I'm not sure ATM. 6.6, remove the line about run and run.sh. Also, remove log4j.xml and logging.properties paragraphs, since logging is part of jboss logging when hornetq is integrated 6.7 - needs to go 6.8 - needs to go Chapter 7 - 7.3 - needs to go Chapter 40 - I would keep it as is.. say if someone is running EAP on RHEL Mainframe. Chapter 43 - I would also keep it. Someone could do fancy things on the client, while bridging to a main server. (like running a Messaging server on a ATM or small store) Chapter 46.5 (Tuning the VM). That's a generic thing.. Maybe it needs to away, as long as the EAP also have similar suggestions	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10209	JBPAPP-3477	>>Chapter 3 - Probably remove the concept of Standalone.... (I hate to let it go though) >>On running examples, we should write that the JMS examples are starting a small standalone server that is suitable to run the server only, and not supported for production. jmorgan: Added <important> to Section 3.2.1 "The JMS Examples" >>Also, add a paragraph on examples that it's required to set JBOSS_HOME in order to have the examples running jmorgan: Added Section 3.2.2.1 "Option: Add JBOSS_HOME Environment Variable" >>Chapter 6 - >>6.1, 6.2, 6.3 needs to go away. jmorgan: Removed all sections as directed. Remaining comments have been renumbered to reflect the new numbering in the guide. >>LIBAIO (6.4) needs to be contextualized on how the .so is installed with EAP. Which I'm not sure ATM. jmorgan: NEW SECTION NUMBER 6.1 - >>6.6, remove the line about run and run.sh. >>Also, remove log4j.xml and logging.properties paragraphs, since logging is part of jboss logging when hornetq is integrated jmorgan: NEW SECTON NUMBER 6.3 - removed the line about the run scripts and the loging properties. I've also taken a look at what files are added when messaging is converted' to HornetQ, and added those into the section. I've broken the file locations into varlists to chunk them a bit. >>6.7 - needs to go >>6.8 - needs to go jmorgan: NEW SECTION NUMBERS 6.4 AND 6.5 - deleted as prescribed >>Chapter 7 - 7.3 - needs to go jmorgan: deleted 7.3 >>Chapter 40 - I would keep it as is.. say if someone is running EAP on RHEL Mainframe. >>Chapter 43 - I would also keep it. Someone could do fancy things on the client, while bridging to a main server. (like running a Messaging server on a ATM or small store) >Chapter 46.5 (Tuning the VM). That's a generic thing.. Maybe it needs to away, as long as the EAP also have similar suggestions jmorgan: Commented out the VM section.	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10210	JBPAPP-3477	Hi Clebert Regarding the LIBAIO question in your review comments, there seems to be information on that in Chapter 40 "Libaio Native Libraries" of the guide. Does this information nullify the comment you made in the document? Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10211	JBPAPP-3477	Clebert, how much of Chapter 40. "Libaio Native Libraries" applies to EAP? I assume we do not need to compile, so it seems like only the paragraphs just before 40.1 starts are useful. I would then mention that LibAIO can be obtained from the Native zips, correct? Would the following be more useful as part of the Persistence chapter, rather than in a chapter on its own? (Say, around the "Installing AIO" note? [1]) ---------- HornetQ uses a native library, <filename>libHornetQAIO.so</filename>, in order to implement Linux Asynchronous IO as part of its high-performance journaling. Download the appropriate Native ZIP for your operating system and architecture to obtain the <filename>libHornetQAIO.so</filename> library. More information about the Native ZIPs is available in the <citetitle>Installation Guide</citetitle>. [1] http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#persistence	1	1	https://issues.jboss.org/browse/JBPAPP-3477

#	Requirement	Questions	Answered	Successfully Answered	URL
10212	JBPAPP-3477	Hi Clebert {quote} Say if you are running EAP on Linux in a non common hardware chipset (such as a Mainframe, the experimental super fast PS3 computer.. etc). On that case you will have a proper JDK, a proper RHEL machine and everything else, but you won't have the HornetQ libaio. {quote} I guess the question here is whether it is supported under EAP product support. We don't make a habit of documenting cases in enterprise docs for those environments that are not under the SLA. {quote} So, if someone tell us we won't ever support such practice, then the compilations instructions can go away from the EAP doc. Otherwise it needs to stay. {We would need to offer the library for every supported platform also) {quote} Are you saying that we need to offer native compilation instructions because we don't provide libaio packages for all supported software environments? Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10213	JBPAPP-3477	Bump. NEEDINFO (email sent 20111021) Hi [~clebert.suconic] Can you help with the last question I asked? This is holding up this resolution for 5.1.2. If you're not the best person to ask, feel free to flick the issue over to someone else. Cheers mate Jared	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10214	JBPAPP-3477	[~atangrin], can you confirm whether the situation Clebert raised in this issue is required from a docs perspective?	1	1	https://issues.jboss.org/browse/JBPAPP-3477
10215	JBPAPP-3364	Will something roll up to EAP 5.0.1?	1	1	https://issues.jboss.org/browse/JBPAPP-3364
10216	JBPAPP-3359	Built in RHEL-4-EP-5 after commons-build-plugin was imported, https://brewweb.devel.redhat.com/buildinfo?buildID=122823 Hi Yiqiao Wang, I saw you were working on RHEL-5-EP-5, so could you please update it then?	0	0	https://issues.jboss.org/browse/JBPAPP-3359
10217	JBPAPP-3344	Is this included in JBoss Web 2.1.7?	0	0	https://issues.jboss.org/browse/JBPAPP-3344
10218	JBPAPP-3319	Hi Peter I've incorporated everything in your comments, however I can't find the place you want this info to go. - Another JBoss specific permissions: -- org.jboss.naming.JndiPermission with actions: bind, rebind, unbind, lookup, list, listBindings, createSubcontext, * (stands for all actions). More info in javadoc of the class. -- org.jboss.security.srp.SRPPermission = A custom permission class for protecting access to sensitive SRP information like the private session key and private key -- org.hibernate.secure.HibernatePermission -- org.jboss.metadata.spi.stack.MetaDataStackPermission -- org.jboss.config.spi.ConfigurationPermission -- org.jboss.kernel.KernelPermission -- org.jboss.kernel.plugins.util.KernelLocatorPermission Could you let me know where this info needs to be inserted. Cheers Jared	1	1	https://issues.jboss.org/browse/JBPAPP-3319
10219	JBPAPP-3287	Shall I include this info in the release notes, section 2.5 "The Native Package"? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0.0/html-single/Release_Notes/ The EAP 5.0 release notes do not currently list supported operating systems. These operating systems are listed in the EWS release notes - is support the same on EAP? * Red Hat Enterprise Linux 4, latest update (x86, x86_64) * Red Hat Enterprise Linux 5, latest update (x86, x86_64) * Solaris 9 (x86, SPARC32, SPARC64) * Solaris 10 (x86, x86_64, SPARC64) * Windows Server 2003 SP2 (x86, x86_64) * Windows Server 2008 R2 (x86, x86_64)	0	0	https://issues.jboss.org/browse/JBPAPP-3287
10220	JBPAPP-3279	***JBoss Web Console*** The Web Console gets a shout out in the Admin and Config Guide 24.5: "The JBoss Enterprise Application Platform web console http://localhost:8080/web-console/ provides you with monitoring tools starting with the JVM Hardware environment statistics on the default page and access to monitoring tools and snapshots." Configuring security for access is described in Section 7.3 of the Installation Guide: http://www.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0.0/html-single/Installation_Guide/index.html#Post-Installation *** Tomcat status*** Tomcat is the default servlet container used by the JBoss Application Server. Questions to answer: Why would you need to look at this status? What if you replace the default servlet container with another one?	0	0	https://issues.jboss.org/browse/JBPAPP-3279
10221	JBPAPP-3279	This JIRA is asking for clarification and detail on the following links, available on the main page of the EAP: Admin Console JMX Console JBoss Web Console Tomcat Status We need to answer the following questions: * What are the use-cases for each of these links? Why will users need them? * Is the Admin Console implemented as a Seam app? * What does the JMX console do, now that the App Server uses a microcontainer instead of a microkernel? Does it still provide a view into the microcontainer? * The JMX page lists a number of functions, but why would they be used? Examples? * What does the new microcontainer do? * What is the role of the microkernel now, and how does it relate to the microcontainer?	0	0	https://issues.jboss.org/browse/JBPAPP-3279
10222	JBPAPP-3279	Jason, we want to include an overview of the use cases of each of the links visible to users at http://localhost:8080/ when users start up their EAP instance. Could you give me an overview why each of the following would be used, please? - Admin Console - JMX Console - JBoss Web Console - Tomcat status Are you also able to clarify what the shift from microkernel to microcontainer means for the JMX Console (if anything)? If you are unable to answer these questions, could you suggest someone else to ask, please? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-3279
10223	JBPAPP-3279	The admin console is written using seam. The primary interface for management is Intended to be the admin console. However, we do not yet offer management of all services that offer a JMX interface. So the JMX console remains for this purpose. All it really is, is a generic JMX client. So it can be used for other things like operating on user service (provided they expose a JMX interface). The difference between the jmx microkernel and the microcontainer is really just that everything had to be done in jmx with the mc you don't need it unless you want to use it to expose some kind of simple management view	0	0	https://issues.jboss.org/browse/JBPAPP-3279
10224	JBPAPP-3273	The "1.7 Current Limitations" section needs updating: "* Dynamic load balance factor calculation support is currently limited to the JBoss AS integration." This is no longer true - nor is integration with other servers relevant to this document" "* Clustered-mode support is currently limited to the JBoss AS integration" This is not relevant (same reason). "* Checksum verification of proxy advertisements (if advertise is enabled) will never fail." This is the only current limitation - and will be fixed in the next point release (1.0.3). See https://jira.jboss.org/jira/browse/MODCLUSTER-104	1	1	https://issues.jboss.org/browse/JBPAPP-3273
10225	JBPAPP-3273	On http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/0.1/html/mod_cluster/chap-mod_cluster-Overview.html, the platforms supported are: RHEL4,5 x86, x64 Solaris x86, x64 Windows x86, x64 On http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/0.1/html/mod_cluster/sect-mod_cluster-Overview-Requirements.html, httpd is *not* included in the bundle. On http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/0.1/html/mod_cluster/sect-mod_cluster-Quick_Start_Guide-Install_the_httpd_binary.html, since we don't include httpd in our bundle, we don't need the instructions for 'Install the entire httpd'. In the section for 'Install only the modules', remove the reference for mod_proxy.so and mod_proxy_ajp.so . Same for 2.3, please remove the section that is for the extracted httpd. For 2.4 and 2.7, do we need the instructions for JBossweb and AS 4.2/3? In 3.4, are there text to follow this line: The HAModClusterService bean defines: ?	1	1	https://issues.jboss.org/browse/JBPAPP-3273
10226	JBPAPP-3273	Radoslav, I've made both changes - you should be able to see them at the link. HTTPD is an acronym, though. Why lower case? :(	1	1	https://issues.jboss.org/browse/JBPAPP-3273

#	Requirement	Questions	Answered	Successfully Answered	URL
10227	JBPAPP-3273	Paul, Can you please review the mod_cluster documentation? Please note that the review needs to be completed by cob 03 Feb in order to allow Content Services to amend and prepare the document for GA release. Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-3273
10228	JBPAPP-3273	Thanks for including previous changes, more needed though: Httpd conf ========== Content of 2.1. Download mod-cluster components should not be the chapter which was missing, that one belongs to 2.3. Configure httpd section - move it. In that section, all parts that start with "mod_" prefix are names of modules and currectly they are the same style as configuration values - change all of those to smaller headlines (h3). Furthermore, the rest of conf value listings are in a table format - why not here as well? Demo ==== there is one extra accidental - mod_proxy.so - remove (2.9, bullet 1 end) Two lines of code: [bes@besdev ~]$ cd /home/bes/mod_cluster/demo/client [bes@besdev mod_cluster]$ ./run-demo.sh change to: [user@machine ~]$ cd /home/user/mod_cluster/demo/client [user@machine client]$ ./run-demo.sh bullet 9 - remove extra number '2' from sessions2 Client Driver Configuration Options -> formatting problem, should be a headline remove sentence "(In the future this will likely be changed to a percentage input, so X% can be invalidated, the rest abandoned.) " Load Generation Scenarios -> should be title again Chapter 4 ========= there is extra italics in $JBOSS_HOME/server/$PROFILE/deploy/jbossweb.sar/server.xml - fix also in jvmRoute there is extra italics, 3 times Note mod_cluster currently works with JBoss AS 5.0. -> remove in 4.4. there is * The state of each proxy will be kept in sync on each node in the cluster. but missing second bullet, which should be: * Proxies will be proactively notified of view changes - specifically crashed members, allowing the proxy to gracefully reconfigure itself potentially avoiding failover processing. in Proxy Configuration, default for "stickySession" is in bold (tag), remove bold. Migration ========= Where is this part? Seems to be missing. http://www.jboss.org/mod_cluster/native/mod_proxy.html	0	0	https://issues.jboss.org/browse/JBPAPP-3273
10229	JBPAPP-3273	Hi Gary, assigning to you as I went through it, looks good to me. Lets be done with it soon :-) I found just few issues (they don't need review afterwards): * 1.7. Current Limitations this section is basically useless, unless this is our standard, shouldn't we remove this 'placeholder'? * In 3.2. Migration from mod_proxy This sentence seems to be there by an accident; remove: "To migrate from mod_proxy to mod_cluster, refer to http://www.jboss.org/mod_cluster/native/mod_proxy.html." * 4.1. Common Configuration this is "$JBOSS_HOME/server/$PROFILE/deploy/jbossweb.sar/server.xml" also in unnecessary italics	0	0	https://issues.jboss.org/browse/JBPAPP-3273
10230	JBPAPP-3257	Martha, I assume this change has also been made for EAP 4.3.8? Documented in the 4.2.9/4.3.8 release notes.	1	1	https://issues.jboss.org/browse/JBPAPP-3257
10231	JBPAPP-3232	Does it need to be mentioned at? https://docspace.corp.redhat.com/docs/DOC-37998	1	0	https://issues.jboss.org/browse/JBPAPP-3232
10232	JBPAPP-3216	Prakash, assigning to you for any/all of the following information: * Requirements as listed in WFK 1.1 ERD: o Package contents o Installation instructions o Configuration instructions: + How to use WFK with EAP 5.x + How to use WFK with EWP 5.x partially committed + How to use WFK with EWS 1.x If you cannot provide it yourself, please let me know who can. :) Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-3216
10233	JBPAPP-3212	Jason, can you exclude these for us? Or we should not have seen these?	1	1	https://issues.jboss.org/browse/JBPAPP-3212
10234	JBPAPP-3191	Chris, I see you have already signed the jar, but we should not rename the jar as this jar is directly passed on to the customer. Can you rename it and put it in an archive to indicate it's signed or through some other means without changing the jar name? Please "Hand Over to QE" and assign to "JBoss QA Lead" after that.	0	0	https://issues.jboss.org/browse/JBPAPP-3191
10235	JBPAPP-3157	Is this fixed and planned for EAP 5.0.1 and 4.3.0.GA_CP08? Can this case be closed?	0	0	https://issues.jboss.org/browse/JBPAPP-3157
10236	JBPAPP-3131	Hi guys, JBM 1.x is in maintenance mode now, so normally there will be no new features added to it. Users who seek features beyond JBM should turn to HornetQ. Is there any good reason to add this feature to JBM 1.4? Thanks, Howard	1	1	https://issues.jboss.org/browse/JBPAPP-3131
10237	JBPAPP-3131	Hi Tomohisa, Thanks for the help. I have already implemented the basics of this feature. The code already checked in to Branch_1_4. The listPreparedTransactions() method now lists only the Transaction Ids. Please see the details at https://jira.jboss.org/jira/browse/JBMESSAGING-1772. The main classes changed are ServerPeer and TransactionRepository. However I didn't implement the functions you listed, namely: 1. sort by creation time --- so far in JBM doesn't record the transaction creation time. To implement this, we need to add it to the DB. 2. show target destination name -- I am not clear what is the target destination name, can you explain? 3. show message header and body in summary -- can you explain what should be in the summary? Thanks Howard	1	1	https://issues.jboss.org/browse/JBPAPP-3131
10238	JBPAPP-3131	Hello Howard, Thanks for your reply! ---- 1. sort by creation time --- so far in JBM doesn't record the transaction creation time. To implement this, we need to add it to the DB. ---- jbm_msg table already have timestamp. I think sorting by this timestamp may be helpful for many systems, although I know this timestamp is not reliable because it depends on client clock... ---- 2. show target destination name -- I am not clear what is the target destination name, can you explain? ---- Just showing JMSDestination. I want to know which destination is the transaction about to send to or receive from. ---- 3. show message header and body in summary -- can you explain what should be in the summary? ---- For example, JMSMessageID, JMSTimestamp(above 1.), body, and etc.. Showing above information will helpful when operator use these features.Operator may want to check which data is abandoned in prepared and about to be commit/rollback. Thanks Tomohisa	1	1	https://issues.jboss.org/browse/JBPAPP-3131
10239	JBPAPP-3131	Hi Tomohisa, Sorry for the delay. I tried out the implementation bit. It looks nice. I have a couple of questions: 1. the table returned by listPreparedTransactions() is perhaps too wide. If possible, can we reduce the number of columns? For example we may retain the "transaction_id", "branch_qual", "format_id", "global_txid", "queue_name", "message_id", and consider to discard the rest of columns as they are mostly properties of each message, not the properties of each transaction. 2. How the user can commit/rollback the transactions? One way is we provide a servlet (like you did) and deployed it. The user then input transaction ids and decision (commit or rollback) and invoke the mbean service (JmsXAController). This must involve a bit of extra work. I would suggest we implement the functionality using xmbean services so that we can use jmx-console to generate the GUI for us. It could be easy to integrate the JmsXAController operations to ServerPeer. And this way we don't need to provide a separate servlet. What do you think?	1	1	https://issues.jboss.org/browse/JBPAPP-3131
10240	JBPAPP-3119	Documented in the EAP 4.2.CP08 and 4.3.CP07 release notes.	1	1	https://issues.jboss.org/browse/JBPAPP-3119
10241	JBPAPP-3088	In EAP 5, this feature is a bit extensive and uses a <SessionCookie> element nested in <Context>, and it can configure domain, path, comment, httpOnly, secure, maxAge and name. I designed it mirroring the Servlet 3.0 session cookie configuration features. Obviously it is a large backport (but adding httpOnly is a significant patch by itself, as Servlet 2.5 cookies do not allow this flag). This feature request should not be creating incompatible configuration, so <Context useHttpOnly="true"> is not acceptable as it is not going to be supported in EAP 5+.	1	1	https://issues.jboss.org/browse/JBPAPP-3088
10242	JBPAPP-3083	Jimmy, can you explain why this occurred and what you did to fix it, for the release notes?	0	0	https://issues.jboss.org/browse/JBPAPP-3083

#	Requirement	Questions	Answered	Successfully Answered	URL
10243	JBPAPP-3055	(10:18:53 AM) bstansberry: wolfc: jason was saying something about you having an problem w/ hibernate-jbosscache2 ? (10:19:32 AM) wolfc: bstansberry: hehe, yes EAP 5 uses it AS 5.2 does not. So I have an issue in ejb3/testsuite. (10:19:43 AM) wolfc: bstansberry: where are you btw? what's your time? (10:19:58 AM) bstansberry: wolfc: beijing. 5:20 PM (10:20:27 AM) bstansberry: wolfc: ic. would moving the clustered entity tests out of ejb solve your problem? (10:20:53 AM) wolfc: bstansberry: yes, what does it actually test? (10:21:13 AM) wolfc: bstansberry: I'm also looking at entityoptimisticlocking (10:21:45 AM) bstansberry: wolfc: it's all tests of Hibernate second level caching, except via JPA (10:22:14 AM) wolfc: bstansberry: that's what I thought. So it should actually be somewhere in jpa-hibernate-int, not in ejb3 (10:22:40 AM) bstansberry: wolfc: those tests require an appserver (10:23:38 AM) wolfc: bstansberry: no, these tests require a runtime :-) (10:23:55 AM) wolfc: bstansberry: using AS is the excuse :-) (10:24:10 AM) bstansberry: wolfc: ok, fair enough. but there are already a lot of tests of this stuff in Hibernate itself (10:25:14 AM) wolfc: bstansberry: yeah, we got a lot of superfluous tests in ejb3 (10:25:21 AM) bstansberry: wolfc: using AS is the lazy way to test that the stuff that's already tested actually works in the real runtime :) (10:25:23 AM) wolfc: bstansberry: but I can't determine whether this is one of them (10:25:48 AM) bstansberry: wolfc: well it has nothing to do with session beans or mdbs or service beans (10:27:23 AM) wolfc: bstansberry: so we can safely say this test is relatively bogus from the ejb3 p.o.v. (10:27:59 AM) bstansberry: wolfc: yes. it's there from the old AS 4 days when jpa integration was in the ejb3 module (10:28:11 AM) wolfc: bstansberry: I'm checking whether removing the actual hibernate.cache.region.factory_class setting will make stuff pass (10:28:39 AM) bstansberry: wolfc: oh, is that that problem? (10:28:53 AM) bstansberry: wolfc: use Hibernate 3.5 Beta2 (10:29:03 AM) wolfc: bstansberry: org.hibernate.cache.jbc2.JndiMultiplexedJBossCacheRegionFactory does not exist anymore (10:29:10 AM) bstansberry: wolfc: ^^^ (10:29:14 AM) wolfc: bstansberry: but how will this affect EAP 5? (10:29:21 AM) jbossfox is now known as fox_brb (10:29:31 AM) bstansberry: wolfc: steve refactored hibernate; i restored the old class (10:29:48 AM) bstansberry: wolfc: EAP 5 does not use Hibernate 3.5 (10:30:50 AM) bstansberry: wolfc: should say: steve refactored hibernate for 3.5 beta1, i restored the old class for backward compatiblity in beta2 (10:30:53 AM) wolfc: http://repository.jboss.org/maven2/org/hibernate/hibernate-jbosscache2/ (10:31:01 AM) wolfc: bstansberry: there is no 3.5b2 (10:32:40 AM) bstansberry: wolfc: http://repository.jboss.org/maven2/org/hibernate/hibernate-jbosscache/ (10:32:54 AM) bstansberry: wolfc: he made the whole "2" notion go away (10:33:10 AM) bstansberry: wolfc: since this stuff actually uses JBC 3 (10:33:49 AM) wolfc: bstansberry: ah I already found it weird that changing all settings to jbc instead of jbc2 would start trigger 'need jbc2 settings' errors (10:35:22 AM) bstansberry: wolfc: do you import org/hibernate/hibernate-jbosscache2 for any reason other than testsuite? (10:35:32 AM) wolfc: bstansberry: no, only there (10:36:19 AM) wolfc: building... (10:36:23 AM) bstansberry: wolfc: ok; i gotta go in a bit. can you open a JIRA to get these tests out of ejb3, assign to me? I'll do it tomorrow (10:37:05 AM) wolfc: bstansberry: this means porting them over to EAP 5, AS 5.2 & trunk (10:38:01 AM) bstansberry: wolfc: ok (10:38:13 AM) wolfc: bstansberry: got yourself a deal :-) (10:42:39 AM) wolfc: bstansberry: one more question: do we actually need those tests on EAP 5? (10:43:00 AM) bstansberry: wolfc: yes, i think so (10:43:05 AM) wolfc: rgr	1	1	https://issues.jboss.org/browse/JBPAPP-3055
10244	JBPAPP-3051	Strong, this looks like it's just a change in the way the code works - listing it as a fixed issue rather than a known issue. Will this change make it into EWP5?	0	0	https://issues.jboss.org/browse/JBPAPP-3051
10245	JBPAPP-3047	What is your opinion Jason: add to clean or create a clean-all target?	1	0	https://issues.jboss.org/browse/JBPAPP-3047
10246	JBPAPP-3047	Deferring to 5.0.2. Re: your question Fernando, if the artifacts in maven-thirdparty are being pulled from the local maven repo (i.e. ~/.m2/repository) then I think including this as a step in ./build.sh clean makes sense. Anyone know the timing difference to do a build following a ./build.sh clean w/ maven-thirdparty empty vs. full? Assuming that all artificats are in ~/.m2/repository i.e. there's no need to pull them from a remote repo.	0	0	https://issues.jboss.org/browse/JBPAPP-3047
10247	JBPAPP-3047	Didn't we have a clobber target that was supposed to be the 'super'-clean in the AS build that also trashed thirdparty downloads?	0	0	https://issues.jboss.org/browse/JBPAPP-3047
10248	JBPAPP-3042	13.1.2. Launching a JBoss Enterprise Application Platform Cluster ========== "for node1 isn't technically necessary, since ports-default is the ... default. " -> remove 3 dots in "@Cache (usage=CacheConcurrencyStrategy.TRANSACTIONAL)" what is our coding standard? i would remove the extra space after @Cache "public class Account implements Serializable" we probably want to keep the coding standards and show its the actual implementation, so it should include the curly brace "public class Account implements Serializable {"	1	1	https://issues.jboss.org/browse/JBPAPP-3042
10249	JBPAPP-3042	Brian, would you agree with the above? Reassign to Laura if you do.	1	1	https://issues.jboss.org/browse/JBPAPP-3042
10250	JBPAPP-3038	should the fix version include FP release?	1	1	https://issues.jboss.org/browse/JBPAPP-3038
10251	JBPAPP-3023	Rajesh, is this issue fixed for 5.0.1?	1	1	https://issues.jboss.org/browse/JBPAPP-3023
10252	JBPAPP-3023	Pavel, can you verify in the staged doc and close this issue?	0	0	https://issues.jboss.org/browse/JBPAPP-3023
10253	JBPAPP-3023	Pavel, I did not receive any comments when you re-opened the issue. Can you add them again and reassign to me if any changes are required?	1	1	https://issues.jboss.org/browse/JBPAPP-3023
10254	JBPAPP-3023	Howard, can you verify Pavel's comment re. queue/app1/email? This was not my understanding from the above discussion.	1	1	https://issues.jboss.org/browse/JBPAPP-3023
10255	JBPAPP-3018	Richard - Is EAP 5.1.1 going to need any modifications besides the run.sh to run with IPv6? Besides Transactions, are there any other caveats? I am trying to address JBPAPP-5555 for EAP 5.1.1 and Jimmy Wilson pointed me to this JIRA.	0	0	https://issues.jboss.org/browse/JBPAPP-3018

#	Requirement	Questions	Answered	Successfully Answered	URL
10256	JBPAPP-2997	NOTE ON HSQLDB and IPv6: A number of test cases use an HSQLDB instance during their execution. The database instance is started in the TestSeup.setUp() and torn down in TestSetup.tearDown(). A helper class DBSetup.java is used in EJB3 tests and clustering tests to do the initialization. The database is started up with no -address specified (and so by default binds to whatever localhost returns: java -cp .:hsqldb.jar org.hsqldb.server.Server -database cif-db -port 1701 -silent true -trace true -no_system_exit true The database is shutdown by using JDBC to connet to the URL: String dbURL = "jdbc:hsqldb:hsql://" + System.getProperty("jbosstest.server.host.url", "localhost") + ":1701"; The problem is that if by chance the system property jbosstest.server.host.url is not set oin the ant target for the test case, we use localhost instead. This was happening when running the AS testsuite against IPv6 and so IPv4 connections and hostnames were being used for the database accesses. The EJB3 testsuite fared better and revealed that HSQLDB 1.8.0 is not IPv6 compatible, and tests fail with the exception: SOO10 Invalid argument in JDBC call java.sql.SQLException: SOO10 Invalid argument in JDBC call at org.hsqldb.jdbcDriver.getConnection(Unknown Source) at org.hsqldb.jdbcDriver.connect(Unknown Source) at java.sql.DriverManager.getConnection(DriverManager.java:525) at java.sql.DriverManager.getConnection(DriverManager.java:171) at org.jboss.ejb3.test.DBSetup.tearDown(DBSetup.java:89) at junit.extensions.TestSetup$1.protect(TestSetup.java:20) at junit.extensions.TestSetup.run(TestSetup.java:23) This is what happens when we try to connect using a URL containing an IPv6 literal. Thus, the testsuite was not truly running against IPv6. It appears as though IPv6 support was intriduced in HSQLDB 1.9.0, but this is still in RC stage and no release has been made available. Furthermore, it has some package name chanhges which means that some clients will have to be rewritten. Hopefully only that to start the DB.	1	1	https://issues.jboss.org/browse/JBPAPP-2997
10257	JBPAPP-2970	What is the fix for this issue?	1	1	https://issues.jboss.org/browse/JBPAPP-2970
10258	JBPAPP-2968	Ondrej, can you pass this on for testing?	0	0	https://issues.jboss.org/browse/JBPAPP-2968
10259	JBPAPP-2954	How can I test this?Can you please provide further information?	1	1	https://issues.jboss.org/browse/JBPAPP-2954
10260	JBPAPP-2950	Could you put fixed version of the Installation Guide to the doc stage, please? I can still see the old version in [1]. [1] http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Installation_Guide/index.html	0	0	https://issues.jboss.org/browse/JBPAPP-2950
10261	JBPAPP-2948	Is this security loophole of having the jmx_remoting.sar file in /deploy directory resolved in JBoss EAP 6 or AS 7.1.2? Is there a plan to work on a more secure JSR 160 implementation?	0	0	https://issues.jboss.org/browse/JBPAPP-2948
10262	JBPAPP-2938	Martha, Can you please build, upload and then switch the EAP 4 branch to use this? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2938
10263	JBPAPP-2935	Hi, will this JIRA be fixed for this EAP 4 CP cycle?	0	0	https://issues.jboss.org/browse/JBPAPP-2935
10264	JBPAPP-2888	Juca, what is the status on this?	0	0	https://issues.jboss.org/browse/JBPAPP-2888
10265	JBPAPP-2888	Juca, that patch looks okay, I'd think you can apply it. but i only see you added "org.hibernate.tool.instrument.cglib.InstrumentTask" to testsuite/imports/sections/hibernate.xml, no javassist instrumentTask. I kind of remember that you told me that should be changed to javassist manually, is it true?	1	0	https://issues.jboss.org/browse/JBPAPP-2888
10266	JBPAPP-2848	Assigning to you, Gary - note that this issue affects both the 4.2 and 4.3 CP releases.	0	0	https://issues.jboss.org/browse/JBPAPP-2848
10267	JBPAPP-2848	Amended Paragraph 6.3 of 4.2CP08 and 4.3CP07 docs as requested. I will reassign this issue for verification when the docs are available for review on the doc-stage.	0	0	https://issues.jboss.org/browse/JBPAPP-2848
10268	JBPAPP-2837	Assigning to Martha as she takes care of the EAP 4 CPs now. Is JBossWS the only one that needs upgrading, any other of the jbossws components or JAXB?	0	0	https://issues.jboss.org/browse/JBPAPP-2837
10269	JBPAPP-2836	of:org.jboss.aop.asintegration.jboss5.VFSClassLoaderScopingPolicy java.lang.Error: Error determining protection domain for ZipEntryHandler@12893236[path=org/jboss/aop/asintegration/jboss5/VFSClassLoaderScopingPolicy.class context=file:/qa/hudson_ws/workspace/JBoss-EAP-5.0.x-Testsuite-sun16/JBossEAP_5_0_x/build/output/jboss-5.0.0.Branch/lib/jboss-aop-asintegration-mc.jar real=file:/qa/hudson_ws/workspace/JBoss-EAP-5.0.x-Testsuite-sun16/JBossEAP_5_0_x/build/output/jboss-5.0.0.Branch/lib/jboss-aop-asintegration-mc.jar/org/jboss/aop/asintegration/jboss5/VFSClassLoaderScopingPolicy.class] at org.jboss.classloading.spi.vfs.policy.VFSClassLoaderPolicy.getProtectionDomain(VFSClassLoaderPolicy.java:664) at org.jboss.classloader.spi.base.BaseClassLoader$2.run(BaseClassLoader.java:550) at org.jboss.classloader.spi.base.BaseClassLoader$2.run(BaseClassLoader.java:535) at java.security.AccessController.doPrivileged(Native Method) at org.jboss.classloader.spi.base.BaseClassLoader.loadClassLocally(BaseClassLoader.java:533) at org.jboss.classloader.spi.base.BaseClassLoader.loadClassLocally(BaseClassLoader.java:510) at org.jboss.classloader.spi.base.BaseDelegateLoader.loadClass(BaseDelegateLoader.java:134) at org.jboss.classloader.spi.filter.FilteredDelegateLoader.loadClass(FilteredDelegateLoader.java:131) at org.jboss.classloader.spi.base.ClassLoadingTask$ThreadTask.run(ClassLoadingTask.java:452) at org.jboss.classloader.spi.base.ClassLoaderManager.nextTask(ClassLoaderManager.java:251) at org.jboss.classloader.spi.base.ClassLoaderManager.process(ClassLoaderManager.java:150) at org.jboss.classloader.spi.base.BaseClassLoaderDomain.loadClass(BaseClassLoaderDomain.java:265) at org.jboss.classloader.spi.base.BaseClassLoaderDomain.loadClass(BaseClassLoaderDomain.java:1119) at org.jboss.classloader.spi.base.BaseClassLoader.loadClassFromDomain(BaseClassLoader.java:801) at org.jboss.classloader.spi.base.BaseClassLoader.loadClass(BaseClassLoader.java:444) at java.lang.ClassLoader.loadClass(ClassLoader.java:252) at java.lang.ClassLoader.loadClassInternal(ClassLoader.java:320) at java.lang.Class.forName0(Native Method) at java.lang.Class.forName(Class.java:247) at org.jboss.reflect.plugins.introspection.IntrospectionTypeInfoFactoryImpl.resolveComplexTypeInfo(IntrospectionTypeInfoFactoryImpl.java:419) at org.jboss.reflect.plugins.introspection.IntrospectionTypeInfoFactoryImpl.getTypeInfo(IntrospectionTypeInfoFactoryImpl.java:388) at org.jboss.reflect.plugins.introspection.IntrospectionTypeInfoFactory.getTypeInfo(IntrospectionTypeInfoFactory.java:54) at org.jboss.classadapter.plugins.BasicClassAdapterFactory.getClassAdapter(BasicClassAdapterFactory.java:61) at org.jboss.config.plugins.AbstractConfiguration.getBeanInfo(AbstractConfiguration.java:86) at org.jboss.kernel.plugins.config.AbstractKernelConfig.getBeanInfo(AbstractKernelConfig.java:80) at org.jboss.kernel.plugins.config.AbstractKernelConfigurator.getBeanInfo(AbstractKernelConfigurator.java:77) at org.jboss.kernel.plugins.config.AbstractKernelConfigurator.getBeanInfo(AbstractKernelConfigurator.java:96) at org.jboss.kernel.plugins.dependency.PreInstallAction.installActionInternal(PreInstallAction.java:90) at	1	1	https://issues.jboss.org/browse/JBPAPP-2836
10270	JBPAPP-2814	Martha, can you please also build, upload and flip the EAP 4 branch to use this build?	0	0	https://issues.jboss.org/browse/JBPAPP-2814
10271	JBPAPP-2809	Gary, assigning to you. Please note that this affects both 4.2 and 4.3 CP releases.	1	1	https://issues.jboss.org/browse/JBPAPP-2809

#	Requirement	Questions	Answered	Successfully Answered	URL
10272	JBPAPP-2809	These changes have been applied to 4.2_CP08, 4.3_CP07. I will reassign this issue for verification when the docs are available for review on the doc-stage.	0	0	https://issues.jboss.org/browse/JBPAPP-2809
10273	JBPAPP-2809	Pavel, I have corrected this and will stage the docs so you can verify and close this afternoon. This fix will only be in the online documentation unless we do a CR3 build; I will mention the error in the bundled docs in the release notes.	1	1	https://issues.jboss.org/browse/JBPAPP-2809
10274	JBPAPP-2808	There are other IPv6 related issues which need to be added to this issues list of dependencies. Will do as time goes on and before the JGroups release 2.4.7.GA is tagged.	1	1	https://issues.jboss.org/browse/JBPAPP-2808
10275	JBPAPP-2808	Not yet, but it can be in relatively short notice. We wanted to double check some IPv6 related issues. What is the latest reasonable possible date to get it to you? (I'm stuck with EAP 5 testing at the moment, as well as IP_v6 issues for EAP 4.2./4.3 CPs)	1	1	https://issues.jboss.org/browse/JBPAPP-2808
10276	JBPAPP-2808	We're already starting to upgrade and build the components for this CP, would it be possible to tag this by the end of this week? Or do we need to get the IPv6 fixes into this tag as well?	1	1	https://issues.jboss.org/browse/JBPAPP-2808
10277	JBPAPP-2808	Hi Richard, Is the tag for JGroups 2.4.7 ready? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2808
10278	JBPAPP-2808	Martha, When the tag is ready, can you please build in brew, upload to r.j.o and switch the JBPAPP_4_2_0_GA_CP branch to use the new build? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2808
10279	JBPAPP-2795	Hi Ron, We've built Remoting 2.2.3.SP1 and it's up on http://repository.jboss.org/jboss/remoting/2.2.3.SP1-brew/, the EAP 4 branch has also been switched to use this version. The Hudson runs look good so far, it runs ant tests in the testsuite directory, are those testcases part of the regular Hudson run?	1	1	https://issues.jboss.org/browse/JBPAPP-2795
10280	JBPAPP-2795	Hi Permaine, I'm not sure which testcases you're referring to. I think there might be some Remoting integration tests in the testsuite directory, though I'm not sure if they get run in Hudson. Are those the tests you're talking about? The Remoting test suite itself gets run separately in Hudson, though Hudson is configured to run the tests from a newer branch than the one that yields the 2.2.x releases. I run the 2.2.x tests myself. -Ron	1	1	https://issues.jboss.org/browse/JBPAPP-2795
10281	JBPAPP-2795	Hi Ron, I just confirmed with Rajesh that those test failures listed are part of the nightly Hudson run, so, they are passing for both EAP 4.2 and 4.3. Now that we have 2.2.3.SP1 built in brew and uploaded to r.j.o, can this be resolved? Cheers, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2795
10282	JBPAPP-2795	Hi Permaine, Re: "I'm not sure which testcases you're referring to" Could I possibly be any more oblivious? The test cases you were referring to were the ones I mentioned in my previous post. Doh! Re: "can this be resolved?" I rarely run the AS test suite, so when tests fail, I assume the problem is one of timing, configuration, or something like that, local to my own environment. The important thing is that these tests have no apparent relationship to Remoting, so I didn't cause any regressions in release 2.2.3.SP1. I think the fact that these tests are passing in hudson is all the resolution that's needed. Let me know if you disagree. -Ron	1	1	https://issues.jboss.org/browse/JBPAPP-2795
10283	JBPAPP-2781	Martha, can you please build this in brew and upload to r.j.o? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-2781
10284	JBPAPP-2780	Hi David, Can you please build this in brew and upload to r.j.o? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2780
10285	JBPAPP-2779	Wasn't this a problem on JBoss Common 1.x? EAP 5 uses JBoss Common 2.x, so does it apply? Also, if we needed a new JBoss Common we have not received it by component freeze date, there is no "Upgrade JBoss Comon to ...." JIRA opened, so I guess this must be moved to 5.0.2.	0	0	https://issues.jboss.org/browse/JBPAPP-2779
10286	JBPAPP-2779	Why is this issue still open? It looks like we have JBoss Commons 2.2.17 in EAP 5.1.1. Please close as Resolved if in EAP 5.1.1, if not, close as out of date. Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-2779
10287	JBPAPP-2726	Do we have a 2.2.16 tag yet?	0	0	https://issues.jboss.org/browse/JBPAPP-2726
10288	JBPAPP-2649	Found several minor issues, reopening: * Chapter 23. JBoss Cache Configuration and Deployment "JBoss Cache documentation available at http://www.jboss.org/jbosscache. " -> make the link clickable - but shouldnt we navigate users to the productized eap5 version of this document and not the community one? we need to make sure we are adding value * 23.1. Key JBoss Cache Configuration Options "...encouraged to read the JBoss Cache documentation available at http://www.jboss.org/jbosscache. " -> same comment as above "seen in the JBoss Cache javadocs. " -> capitalize J in javadocs * 23.1.2. Cache Mode 2 phase-commit -> change to "two-phase commit" * 23.1.4. Concurrent Access multi-versioned concurrency control -> remove the extra "ed", its "multi-version concurrency control" * 23.1.6. Eviction "see the Eviction chapter in the "Using JBoss Cache as a Hibernate Second Level Cache" guide at http://www.jboss.org/jbossclustering/docs/hibernate-jbosscache-guide-3.pdf." -> make the link clickable and possibly change it ot the productized version of that document * 23.1.8. Buddy Replication in a section starting with " The main things you would be likely to configure are: ", change 3 times two hyphen "--" to a single dash * 23.2.2. Deployment Via a -service.xml File JBoss 4 -> change to 4.x since there are more version of JBoss 4 JBoss 4, JBoss 5 -> four times, change to the product name, probably Enterprise App... (reviewed docs at: http://www.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0.0/html-single/Administration_And_Configuration_Guide/index.html#jbosscache.chapt)	0	0	https://issues.jboss.org/browse/JBPAPP-2649
10289	JBPAPP-2649	Some of the minor changes are still not reflected. "seen in the JBoss Cache javadocs. " -> capitalize J in javadocs 2 phase-commit -> change to "two-phase commit" multi-versioned concurrency control -> remove the extra "ed", its "multi-version concurrency control" JBoss 4, JBoss 5 -> change to the product name, probably Enterprise App... ps: is there no productized version of "Using JBoss Cache as a Hibernate Second Level Cache"?	1	1	https://issues.jboss.org/browse/JBPAPP-2649
10290	JBPAPP-2647	Hi Howard, how is this coming along?	1	1	https://issues.jboss.org/browse/JBPAPP-2647

#	Requirement	Questions	Answered	Successfully Answered	URL
10291	JBPAPP-2646	Issues found. Reopening. * Chapter 19. HTTP Services "Load-balancing of incoming invocations" - would somebody call a HTTP request an invocation? i would use a different term automtically -> automatically http://httpd.apache.org/ -> make it clicable - a link http://www.apache.org/dist/jakarta/tomcat-connectors/jk/binaries/ -> make it clicable - a link "Next, download mod_jk binaries. Several versions of mod_jk exist as well. We strongly advise you to use mod_jk 1.2.x, as both mod_jk and mod_jk2 are deprecated," -> what did the author mean? we recommend mod_jk and its deprecated? that is absurd "worker.node2.host= node2.mydomain.com" -> remove the space after `equals` sign JBoss AS instances -> JBoss Enterprise App.... http://jakarta.apache.org/tomcat/connectors-doc/config/workers.html -> wrong link! where do we want to point them? "The only thing you must change is the worker.loadbalancer.balanced_workers line: it must list all workers previously defined in the same file: load-balancing will happen over these workers. " -> there are 2 colons within the same sentence, rewrite somehow * 19.1.4. Configuring JBoss to work with mod_jk remove one group of 3 dots and leave only 1 group of 3 dots: ... ... </Engine> JBoss AS -> JBoss Enterprise App.... remove the two plus signs from here: <!-- Define an AJP 1.3 Connector on port 8009 --> +<Connector protocol="AJP/1.3" port="8009" address="${jboss.bind.address}" + redirectPort="8443" /> rewrite "Apache+mod_jk" to "Apache with mod_jk" http://www.jboss.org/community/wiki/UsingModjk12WithJBoss -> make it a link "with AS 5." -> with Enterprise App.... 5 JBoss AS 4 -> Enterprise App.... JBoss AS 5.0.0.GA -> Enterprise App... "In JBoss AS 5.1.0," -> talking about AS realease, is this desired? * 19.2.2. HttpSession Passivation and Activation AS 5 -> Enterprise App... * 19.3. Using FIELD level replication title says "FIELD level", the first pararaph starts with hyphenated "FIELD-level" -> sync to the best one @@org.jboss.cache.pojo.annotation.Replicable -> remove extra @, there should be only one JBoss AS 5 -> expand to eap " public class Address " -> remove extra space before word `public' /** * Represents a street address. * @@org.jboss.cache.pojo.annotation.Replicable */ in Xdoclet -> is this correct or only one @? // this will update and replicate the postal code. -> remove the last period in the comment * 19.4. Using Clustered Single Sign On title is not hyphenated but "single sign-on, " is -> synchronize and add the abbreviation (SSO) afterwards so that its introduced for later use * 19.4.2. SSO Behavior "as he accesses " -> "as he or she accesses "	0	0	https://issues.jboss.org/browse/JBPAPP-2646
10292	JBPAPP-2646	There are still many references to "AS" which should be changed to EAP. And one more forgotten: "worker.node2.host= node2.mydomain.com" -> remove the space after '=' (equals) sign	0	0	https://issues.jboss.org/browse/JBPAPP-2646
10293	JBPAPP-2645	This chapter is in very good shape, here are the issues: * 16 -> paths in this chapter are all relative, can be confusing it its some global conf dir or only profile's dir [what is our guide standard?] * 16.1. How it works in Note #1, remove the extra period/dot, expression in parenthesis is just part of the previous sentence "different "target" bound under the same name. (JNDI on node 1 will have a binding" * 16.2.1.3. How can I tell if things are being bound into HA-JNDI that shouldn't be? missing period at the end of the sentence: "Please visit the following link for an example: Problem with removing a Node from Cluster" * 16.2.2. For clients running outside the Enterprise Application Platform make "initialising" -> US spelling initializing "specifies the TTL (time-to-live) f or autodiscovery IP multicast packets" -> remove extra space after "f" to form the word "for" " Besides the above dependency injected services, the available configuration attributes for the HAJNDI bean are as follows: " -> make HAJNDI hyphenated HA-JNDI (watch out! not in the xml schema!) "Backlog specifies the maximum queue length" -> lower-case letter "B" in "backlog" (it refers to the property name which is all in lower-case) missing space in "LoadBalancePolicyimplementation" -> 2 words: LoadBalancePolicy implementation missing <a> link "See the Introduction and Quick Start chapter for details. "	0	0	https://issues.jboss.org/browse/JBPAPP-2645
10294	JBPAPP-2642	Radoslav, can you clarify what you meant in the section quoted in the previous comment?	1	1	https://issues.jboss.org/browse/JBPAPP-2642
10295	JBPAPP-2642	Hm, I dont know. Its probably fixed already, thanks for getting back to me. Where can I see the current version of the doc?	1	1	https://issues.jboss.org/browse/JBPAPP-2642
10296	JBPAPP-2642	Hey Laura, I just found what I meant. In section "21.1.1.2. POJO deployments using HASingletonController", there is one big code block with Java code. However within the same block there are 2 different public classes defined, which is not possible in Java. This is just cosmetic, but split the code block into two (so that there is a visual 'break' between those 2 classes). Move the fix version if its not doable. Otherwise verified. (at http://downtown.englab.bne.redhat.com/drafts/JBoss_Enterprise_Application_Platform/5.0.1/Administration_And_Configuration_Guide/html/deployment.chapt.html)	0	0	https://issues.jboss.org/browse/JBPAPP-2642
10297	JBPAPP-2641	Reopening (please talk to Brian/Paul for issues i didn't provide solution for.) * Chapter 18. Clustered Entity EJBs lonely "e.g.", make it part of the sentence above it, "Configuration of a the second-level cache is done via your EJB3 deployment's persistence.xml. " 2 times: in java code: make the quotes the `java quotes` or what to call it, like this " @Cache(usage = CacheConcurrencyStrategy.TRANSACTIONAL, region = "Account") "region named {region_prefix}/org/hibernate/cache/StandardQueryCache." -> for expressions in path we use probably these characters: <, >. missing space 'of the' in "region to use instead ofthe default" in java code: @QueryHint(name = "org.hibernate.cacheRegion, value = "Queries") rewrite quotes and add missing quote to: @QueryHint(name = "org.hibernate.cacheRegion", value = "Queries") can somebody please QA the sanity/up-to-dateness of the hibernate stuff? (Juca?) * 18.2. Entity Bean in EJB 2.x typo special -> "fit into the sepecial case situation" synched-> synchronized link is broken! remove? "Seppuku pattern http://dima.dhs.org/misc/readOnlyUpdates.html." in note: broken link again http://www.jboss.org/jbossgroup/partners.jsp	1	1	https://issues.jboss.org/browse/JBPAPP-2641
10298	JBPAPP-2641	Juca, can you please look at these 3 sections with Hibernate stuff and assign back to Laura? Thanks! 18.1.1. Configure the distributed cache 18.1.2. Configure the entity beans for cache 18.1.3. Query result caching http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_And_Configuration_Guide/clustering-entity.html#clustering-entity-30-cache	1	1	https://issues.jboss.org/browse/JBPAPP-2641

#	Requirement	Questions	Answered	Successfully Answered	URL
10299	JBPAPP-2640	* Chapter 17. Clustered Session EJBs note that this chapter often refers to "JBoss" with JBoss AS/EAP in mind, please synchronize with the rest of the guide or is "JBoss" (not in the context of the name of the company) acceptable? * 17.2.1. The EJB application configuration "(irregardless of whether maxSize beans are cached.)" -> move period outside of the parentheses like). * 17.2.3. CacheManager service configuration (aka buddies) -> sync, missing periods "a.k.a." * 17.4.2. Optimize state replication remove "This feature is available on JBoss Enterprise Application Platform 3.0.1+ " * 17.4.3. The HASessionStateService configuration thought: maybe make path "all/deploy/cluster/ha-legacy-jboss-beans.xml" generic to include all clustered profiles not only all? * 17.4.4. Handling Cluster Restart missing link: "We have covered the HA smart client architecture in the section called "Client-side interceptor architecture"." failover -> fail-over (sync; or the other way in chapter 16) HAJNDI -> with hyphen HA-JNDI The 3.2.7+/4.0.2+ releases contain a RetryInterceptor that can be -> should this be here? is this *only* for EAP5? then make it "RetryInterceptor can be..." * 17.4.5. JNDI Lookup Process JVM -> VM all the java code references are in standard paragraph style, should they be made <code> ? missing <a> link in "See the section on "ClusteredJNDI Services"" some weird references to RC and CR (4.0.4.RC1), what with that, ask Brian/Paul	0	0	https://issues.jboss.org/browse/JBPAPP-2640
10300	JBPAPP-2638	possible system property setting we can use to configure VFS behavior. <property key> - <options>; <default> jboss.vfs.forceCopy - true|false; false This defines how nested jars should be handled. If forceCopy equals true, we create a temporary copy of the nested jar, and re-wire VFS accordingly. If forceCopy equals false, we handle nested jars in-memory, which doesn't create temporary copy, but is more memory consuming. Currently JBossAS forces temporary copy by default. If this query part - "useCopyJarHandler" - is used as part of URI query, you can configure force-copy at runtime, per URI root (if it doesn't already exist). jboss.vfs.forceVfsJar - true|false; false By using this setting, you can fall back to old jar handling. Note that old jar handling was deprecated in favor of new zip handling code. jboss.vfs.forceNoReaper - true|false; false To gain a bit on performance, we close jar files asynchronously - via separate reaper thread. If you want to close jars files synchronously, you can force no usage of reaper thread. This can also be defined via URI query - "noReaper" query part. jboss.vfs.forceCaseSensitive - true|false; false Do we require case sensitive file path matching? With this enabled you can force differentiation between lower and upper cased file paths. jboss.vfs.optimizeForMemory - true|false; false With this enabled we re-order in-memory jar handling a bit, to gain on memory consumption. jboss.vfs.cache - full class name of cache implementation; org.jboss.virtual.spi.cache.helpers.NoopVFSCache In order to re-use existing temporary files (in order not to re-do all unpacking and wiring), you can define a VFS cache implementation which the VFS registry will use to keep its existing VFS roots. Every VirtualFile lookup from VFS class uses this singleton cache instance to check for existing matching cache entry. By matching we also consider any existing "ancestor" from which you can get a hold of exact VirtualFile instance. *VFS Cache Tuning As described before, VFS cache holds VFS roots, from which any VirtualFile lookup can access existing VirtualFile instances. This is a sepcially useful in the case of temporary files (created from nested jars), meaning you don't have to do multiple unpackings for nested jar file related resources. By default in VFS there is no caching involved - org.jboss.virtual.spi.cache.helpers.NoopVFSCache is used. But you can provide your own implementation or choose from existing VFS implementations. Cache implementations from "org.jboss.virtual.plugins.cache" package: - SoftRefVFSCache; uses soft reference as map's entry value - WeakRefVFSCache; uses weak reference as map's entry value - TimedVFSCache; evicts cache entries after defaultLifetime - LRUVFSCache; evicts cache entries based on LRU, keeping min and max entries - CombinedVFSCache; holds few permanent roots, any other new root is cached in its realCache property In JBossAS we use CombinedVFSCache as we know which are our permanent roots to watch and keep. This is how it's configured in MC's bean configuration file. <bean name="VFSCache"> <constructor factoryClass="org.jboss.virtual.spi.cache.VFSCacheFactory" factoryMethod="getInstance"> <!-- Use the CombinedVFSCache implementation --> <parameter>org.jboss.virtual.plugins.cache.CombinedVFSCache</parameter> </constructor> <start ignored="true"/> <property name="permanentRoots"> <map keyClass="java.net.URL" valueClass="org.jboss.virtual.spi.ExceptionHandler"> <entry> <key>${jboss.lib.url}</key> <value><null/></value> </entry> <entry> <key>${jboss.common.lib.url}</key> <value><inject bean="VfsNamesExceptionHandler"/></value> </entry> <entry> <key>${jboss.server.lib.url}</key> <value><inject bean="VfsNamesExceptionHandler"/></value> </entry> <entry> <key>${jboss.server.home.url}deploy</key> <value><inject bean="VfsNamesExceptionHandler"/></value> </entry> </map> </property> <property name="realCache"> <bean class="org.jboss.virtual.plugins.cache.IterableTimedVFSCache"/> </property> </bean> Any new custom VFS root (e.g. additional deploy/ directory) should be added to this configuration. *Annotation Scanning Tuning There are currently three ways to limit resources scanning. First one is to provide	0	0	https://issues.jboss.org/browse/JBPAPP-2638
10301	JBPAPP-2638	Can this issue be assigned to the docs team to be added to the Admin and Config Guide?	1	1	https://issues.jboss.org/browse/JBPAPP-2638
10302	JBPAPP-2635	Reopening, mostly typos: * Chapter 24. JBoss Enterprise Application Platform 5 Performance Tuning * 24.3. Operating System Performance Tuning unix based operating systems -> capitalize word Unix java based applications -> hyphenate and capitalize Java, "Java-based applications" "java heap" -> capitalize Java bench-marking -> remove the hyphen, its "benchmarking" "JVM Hardware" -> i dont understand, probably a missing period or lowercase hardware but that doesnt make much sense to me. "Note the process id for the "org.jboss.Main" application" -> make ID capitalized; 2 times * 24.6.1. Memory usage "and that is not part of the heap per se." -> i would suggest changing "per se" to something easily comprehensible to non-native English users. e.g.: itself change "-XX:MaxPermSize?=256m" to "-XX:MaxPermSize=256m"; two times (i.e. remove the extra question mark) "The jstat tool (http://java.sun.com/javase/6/docs/technotes/tools/share/jstat.html)" -> make it a clickable link * 24.6.1.1. VFS Tuning can we explain the VFS abbreviation here too? its only at the beginning of the guide (Virtual File System) "More information about this can be found in the Class Loader documentation section as it covers a lot of other details as well, not just scanning." -> can we link to it as well? * 24.6.2. Database Connection "use of your hardware (Hard disk," -> lowecase "hard disk" "database read's and writes. " -> remove extra apostrophy after read, so that its "reads" in note, change "Postgres" to PostgreSQL (possibly add a link too http://www.postgresql.org/) * 24.6.3. Clustering Tuning "particularly if if" -> remove extra if * 24.6.3.3. JGroups Message Bundling "TCP socket -- small " -> fix double hyphen to a dash	0	0	https://issues.jboss.org/browse/JBPAPP-2635
10303	JBPAPP-2635	Ales, would you be able to write a piece of example code for this section? http://community.jboss.org/wiki/JBoss5custommetadatafiles describes a simple jboss-classloading.xml file: <classloading xmlns="urn:jboss:classloading:1.0" export-all="NON_EMPTY"> <capabilities> <module name="test5"/> </capabilities> <requirements> <module name="test2"/> </requirements> </classloading> I'm not sure this is specific to limiting scanning. Please look at 24.6.1.1.2. "Annotation Scanning Tuning" in http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Administration_And_Configuration_Guide_CP01/#Memory_Usage_Tuning Ideally your material would be inserted immediately following "Another way to limit scanning is to provide the jboss-classloading.xml file."	0	0	https://issues.jboss.org/browse/JBPAPP-2635
10304	JBPAPP-2624	Howard, how's this going?	0	0	https://issues.jboss.org/browse/JBPAPP-2624
10305	JBPAPP-2623	Howard, are there any instructions for JBoss Messaging 1.4.6 that should be included in this chapter, or can I comment out the entire section about HornetQ until 5.1?	1	1	https://issues.jboss.org/browse/JBPAPP-2623

#	Requirement	Questions	Answered	Successfully Answered	URL
10306	JBPAPP-2622	There are just 2 typos in the chapter 7.3 Transactional Resources on page 73. 1) the first line of the first paragraph: "The transaction manger coordinates.." -> "The transaction manager coordinates.." 2) the sixth line of the second paragraph: "XA transactions, it it also feasible.." -> "XA transactions, it is also feasible.."	1	1	https://issues.jboss.org/browse/JBPAPP-2622
10307	JBPAPP-2621	Hi Isaac, I have found several issues in this chapter (see my comments). Please, could you fix it and reassign this issue back to me? Thank you, Pavel	1	1	https://issues.jboss.org/browse/JBPAPP-2621
10308	JBPAPP-2619	I know JBossPortal does something with MC on top of Tomcat. I hacked something long ago on top of GF. We need to update this diagram 4.1, as it's very out-dated. e.g. container module no longer exists - for almost 2years now; broken into smaller pieces - reflect, mdr, ... Reliance module could be left off - it's still in a sandbox phase. "where <server_configuration> represents the name of the server profile, for example, all, default or minimal" What about web? "profile-repository.xml" - I don't think this name is used anymore. "It's an extension of always looking to the filesystem server/name/conf/jboss-service.xml and server/name/deploy to load deployments." What about deployers/ directory? "JBoss5VirtualFileSystem" - we can drop the JBoss5 prefix. "this bean translates deployer-beans.xml into" - should be "-jboss-beans.xml" suffix "It handles the legacy jboss-service.xml style of mbean deployment descriptors" - it can handle any -service.xml file "More information on the JBoss Microcontainer project can be obtained from http://labs.jboss.com/jbossmc/." - the link should be www.jboss.org/jbossmc Who picked "most important" beans? How should we proceed with fixing/updating this issues?	1	1	https://issues.jboss.org/browse/JBPAPP-2619
10309	JBPAPP-2619	Ales, are you finished with this? If so, please reassign it to me so I can keep track of it. If not, when do you expect to have completed the review? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-2619
10310	JBPAPP-2617	Chapter 2. JBoss Enterprise Application Platform 5 architecture - The diagram is about the overall jboss portfolio, a super-set of EAP. EAP would really be the Application Server box from the picture. - The directory structure needs checking. OTOH maybe it would be better to discuss the content/purpose of individual dirs because it often changes. E.g. docs/examples/binding-manager - is gone docs/examples/netboot - obsolete server/default/conf/bootstrap - no profile-repository.xml server/default/conf/ - no bootstrap-norepo.xml server/default/xmbean - some descriptors are gone ... Overall Part I - Chapter 2 looks rather poor in content explaining the overall architecture.	1	1	https://issues.jboss.org/browse/JBPAPP-2617
10311	JBPAPP-2617	Dimitris, - Ch. 1 - changes applied. Thanks. :) - Ch. 2 - re. the diagram, would you be able to email me a mockup of a more appropriate diagram so that I can have one made? - re. the directory structure, until we can put together a chapter discussing the purpose of individual directories, can you point me to a more up-to-date directory structure? - Ch. 3 - I assume this means I can remove the bullet point referring to *-jboss-bean.xml? - Ch. 6 Does this mean we can remove Ch. 6 altogether? If not, there is a substantial amount of work required to render that massive diagram into something that will a) fit and b) be easily understood by readers. Please get back to me on this. Thanks, Laura	1	1	https://issues.jboss.org/browse/JBPAPP-2617
10312	JBPAPP-2606	where can I see customer support portal?Is this issue resolved there?	0	0	https://issues.jboss.org/browse/JBPAPP-2606
10313	JBPAPP-2601	Fernando, What do you want me to do with this? Javadocs are no longer stored on redhat.com/docs, and ECS doesn't handle javadocs. Let me know. :)	1	1	https://issues.jboss.org/browse/JBPAPP-2601
10314	JBPAPP-2600	Hey Permaine, please correct me if I'm wrong ;) since QA needs the javadocs for the distribution then once you know which ones you are including, would you be able to attach in zip format, the APIs that need to be included on redhat.com/docs? If the ones online need to be different API docs, can you please explain that a bit to me. I know there was an email about internal and external API docs that I didn't quite understand. Thanks, Isaac	1	1	https://issues.jboss.org/browse/JBPAPP-2600
10315	JBPAPP-2599	Permain, can you take this from here?	1	1	https://issues.jboss.org/browse/JBPAPP-2599
10316	JBPAPP-2595	Hi, is this resolved?	1	1	https://issues.jboss.org/browse/JBPAPP-2595
10317	JBPAPP-2579	I believe the way it is is the right way and we have been using it anyway.	0	0	https://issues.jboss.org/browse/JBPAPP-2579
10318	JBPAPP-2576	Ivo, do we know what the issues are? Is it documented somewhere, in a jira?	0	0	https://issues.jboss.org/browse/JBPAPP-2576
10319	JBPAPP-2571	Hi Isaac, we have found problem in JBoss Messaging on MS SQL Server with MS JDBC drivers version 2.0. But fix of this problem has been postponed (see JBPAPP-2595). We have workaround for this issue by adding parameter to JDBC URL connection string. Problem is related to Adaptive buffering. Adaptive buffering is introduced starting with the Microsoft SQL Server 2005 JDBC Driver version 1.2. But starting with the JDBC driver version 2.0 is this adaptive buffering selected as default behavior for the driver. When is Adaptive buffering active, large values can be read only once by using the get<Type>Stream methods. The second attempt causes exception "The data has been accessed and is not available for this column or parameter". Current JBoss messaging implementation causes this issue. It is necessary to reconfigure JDBC driver to use full buffering behavior. JDBC driver can be configured by parameter in JDBC URL string, please see comments on this issue. See http://msdn.microsoft.com/en-us/library/bb879937.aspx Please, could you add note about this workaround into the EAP5 documentation for MS SQL Server and MS JDBC drivers 2.0? Thank you.	0	0	https://issues.jboss.org/browse/JBPAPP-2571
10320	JBPAPP-2538	Hi David, can you give a status on this one please?	1	1	https://issues.jboss.org/browse/JBPAPP-2538
10321	JBPAPP-2520	Charles, can you assign this to the right person?	0	0	https://issues.jboss.org/browse/JBPAPP-2520
10322	JBPAPP-2488	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2488
10323	JBPAPP-2488	According to https://jira.jboss.org/jira/browse/JBPAPP-2328 RPMs for EAP5 should be available now, but I cannot find them anywhere. Does anyone know where they are?	1	1	https://issues.jboss.org/browse/JBPAPP-2488
10324	JBPAPP-2488	Is the RPM Spec (or maven-rpm-plugin configuration) available in Subversion somewhere?	0	0	https://issues.jboss.org/browse/JBPAPP-2488
10325	JBPAPP-2478	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2478
10326	JBPAPP-2458	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2458
10327	JBPAPP-2457	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	1	1	https://issues.jboss.org/browse/JBPAPP-2457
10328	JBPAPP-2453	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2453
10329	JBPAPP-2447	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2447
10330	JBPAPP-2447	Sean can you take a look at these and see how they turn out translated? Let me know about font type/size.	1	1	https://issues.jboss.org/browse/JBPAPP-2447
10331	JBPAPP-2447	Hi, could someone close this issue? I have no way to check weather those SVG images are in the correct place. Thanks	0	0	https://issues.jboss.org/browse/JBPAPP-2447
10332	JBPAPP-2446	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2446

#	Requirement	Questions	Answered	Successfully Answered	URL
10333	JBPAPP-2445	Isaac, Sorry, after further investigation, the web-console*properties under deploy/management should be used. jboss-as/server/<config>/deploy/management/console-mgr.sar/web-console.war/WEB-INF/classes/web-console-{users,roles}.properties Can we include those instructions? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2445
10334	JBPAPP-2445	Are you sure? :P I'll change it back again now.	0	0	https://issues.jboss.org/browse/JBPAPP-2445
10335	JBPAPP-2445	Sorry if it wasn't clear what I meant. What I see there now is this: (taken from http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Installation_Guide/Post-Installation.html) "$JBOSS_HOME/server/$CONFIG/deploy/management/console-mgr.sar/web-console.war/WEB-INF/classes/web-console-users.properties, where $JBOSS_HOME is the install directory and the $CONFIG is the server configuration being used. When a server configuration other than those mentioned, is in use, the $JBOSS_HOME/server/$CONFIG/conf/deploy/management/console-mgr.sar/web-console.war/WEB-INF/classes/web-console-{users,roles}.properties file should be modified." What there should be is this: "$JBOSS_HOME/server/$CONFIG/deploy/management/console-mgr.sar/web-console.war/WEB-INF/classes/web-console-users.properties, where $JBOSS_HOME is the install directory and the $CONFIG is the server configuration being used."	1	1	https://issues.jboss.org/browse/JBPAPP-2445
10336	JBPAPP-2441	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2441
10337	JBPAPP-2389	shared-udp --------- - use_incoming_packet_handler="true": remove (only option in 2.8) - use_concurrent_stack="true": remove (default=true) and deprecated in 2.8 - oob_thread_pool.queue_max_size="100": remove udp --- - <pbcast.NAKACK use_mcast_xmit="false": I'd set it to true. There is no additional cost when using UDP as transport, and more than 1 receiver could have lost a message so all of them receive the xmit udp-async --------- - oob_thread_pool.keep_alive_time="500": is a bit short, I'd set it to 1000 - oob_thread_pool.queue_max_size="100": remove as the queue is disabled tcp --- - Why is 'loopback' false here and true for the UDP based stacks ? - tcp_nodelay is true but enable_bundling is true, too: this is inconsistent - use_send_queues: I found this valuable to prevent threads getting blocked in the TCP socket write phase, and therefore blocking other threads too. If you enable this, also set send_queue_size General ------- - RPCs which run on a transport with message bunling enabled can override bundling on a per message basis by setting the OOB flag. Maybe this should be added as a comment to the "udp/tcp" stack - We use STATE_TRANSFER instead of STREAMING_STATE_TRANSFER, should we change this ? TDB - TBD: FLUSH: really needed for all stacks ? - There's a lot of repetition in this XML file, maybe we should look into using a templating mechanism and only define the diffs from a base stack (not just for shared-udp) - If bundling is disabled, I'd remove max_bundle_size="64000" and max_bundle_timeout="30"	1	1	https://issues.jboss.org/browse/JBPAPP-2389
10338	JBPAPP-2370	Hi Sean Which repo could we put those .PO files in? Currently all docs are in https://svn.jboss.org/repos/jbossas/projects/docs/enterprise/5.0. Cheers, Simon	1	1	https://issues.jboss.org/browse/JBPAPP-2370
10339	JBPAPP-2370	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2370
10340	JBPAPP-2370	Hi, which language/font pack I have to install on my computer in order to have correctly displayed chinese and japanese characters? I am using Fedora 11 and have installed several language/font packs, but chinese and japanese characters are still not correctly dispalyed.	1	0	https://issues.jboss.org/browse/JBPAPP-2370
10341	JBPAPP-2365	Is https://jira.jboss.org/jira/browse/JBAS-6722 marked private? I cannot read it.	1	1	https://issues.jboss.org/browse/JBPAPP-2365
10342	JBPAPP-2365	What is the impact of removing the two lines? I can see that the two lines are present in current EAP5 bits: <!-- This just checks metadata locations --> <bean name="MetaDataStructureModificationChecker" class="org.jboss.deployers.vfs.spi.structure.modified.MetaDataStructureModificationChecker"> <constructor> <parameter><inject bean="MainDeployer" /></parameter> </constructor> <property name="cache"><inject bean="StructureModCache" /></property> <property name="filter"><bean class="org.jboss.system.server.profile.basic.XmlIncludeVirtualFileFilter" /></property> </bean> <!-- We just visit wars, but exclude classes, lib, dev dirs --> <bean name="WebVisitorAttributes" class="org.jboss.system.server.profile.basic.IncludeExcludeVisitorAttributes"> <constructor> <parameter> <set> <value>.war</value> </set> </parameter> <parameter> <set> <value>WEB-INF/classes</value> <value>WEB-INF/lib</value> <value>WEB-INF/dev</value> </set> </parameter> </constructor> </bean>	1	1	https://issues.jboss.org/browse/JBPAPP-2365
10343	JBPAPP-2365	Is there still time to instead of just deleting those two lines, implement proper filter? I can do that tomorrow, first thing in the morning.	1	1	https://issues.jboss.org/browse/JBPAPP-2365
10344	JBPAPP-2365	Ales, what will the proper filter do? Which components will the filter impact (JBossWeb + Seam or only Seam?)	1	1	https://issues.jboss.org/browse/JBPAPP-2365
10345	JBPAPP-2363	The attached file should be all you need, but I'm not sure about the styling of the header. If it doesn't work, can you grab the XML of a similar page? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-2363
10346	JBPAPP-2363	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2363
10347	JBPAPP-2363	Is there a task for someone to create localized release notes too? The English release notes are up at http://www.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0.0.BETA/html-single/Release_Notes/index.html , but the localized links in the readmes are still giving 404s.	1	0	https://issues.jboss.org/browse/JBPAPP-2363
10348	JBPAPP-2348	Martin, Have these changes been applied to the current source zips of CR1 by some means? I'm still getting security related failures in jca tests (see http://hudson.qa.jboss.com/hudson/view/EAP5/job/eap5-as-solaris9-jdk6/16/ and the test case org.jboss.test.jca.test.LocalTransactionTidyupUnitTestCase).	1	1	https://issues.jboss.org/browse/JBPAPP-2348
10349	JBPAPP-2348	Is there any plan for making these changes available to the Hudson builds? I'm getting hundreds of failures due to this issue at present and there really isn't much point in me running testsuites or looking at testsuite results until it is fixed. Am I to prepare my own custom builds to work around this issue? Is there a plan to fix the CR1 build? Information would be appreciated.	0	0	https://issues.jboss.org/browse/JBPAPP-2348

#	Requirement	Questions	Answered	Successfully Answered	URL
10350	JBPAPP-2348	Martin I've had a look at this issue last night and I think that the way to solve it is sketched out below. It's based on noting that the only classpath which needs to be changed is tests.classpath which provides an execution classpath for junit, which is where the unsigned matching jars are getting picked up. In theory, it should be possible to simply redefine this classpath to pick up the right jars (those from the distribution), leaving everything else the same. For test case invocations which make use of run-junit, and so make use of the classpath, <classpath> <pathelement location="${build.classes}"/> <pathelement location="${build.resources}"/> <path refid="tests.classpath"/> </classpath> we should be OK. But additionally, there are a number of ant targets which start junit executions not using run-junit, and these define their own classpaths which point back into the build. These targets need to be updated to point to the distribution jars too. Basic recipe: (i) leave all the .ent files as they are - they are needed for the build and the tests.classpath can be constructed from scratch without them. (ii) replace the classpath tests.classpath <path id="tests.classpath"> <fileset dir="${jboss.dist}/client"> <include name="**/*.jar"/> <exclude name="jaxws-rt.jar"/> <exclude name="jaxws-tools.jar"/> </fileset> <pathelement path="${classpath}"/> <pathelement path="${local.classpath}"/> <pathelement path="${project.tools}/lib/ant.jar"/> <pathelement path="${project.tools}/lib/ant-junit.jar"/> <path refid="jboss.ejb3.classpath"/> <path refid="jboss.jmx.classpath"/> <path refid="jboss.jmx-remoting.classpath"/> <path refid="jboss.test.classpath"/> <path refid="thirdparty.classpath"/> </path> with <path id="tests.classpath"> <fileset dir="${jboss.dist}/client"> <include name="**/*.jar"/> <exclude name="jaxws-rt.jar"/> <exclude name="jaxws-tools.jar"/> </fileset> <pathelement path="${classpath}"/> <pathelement path="${local.classpath}"/> <pathelement path="${project.tools}/lib/ant.jar"/> <pathelement path="${project.tools}/lib/ant-junit.jar"/> <path refid="jboss.dist.modules.classpath"/> <path refid="jboss.dist.thirdparty.classpath"/> </path> where jboss.dist.thirdparty.classpath and jboss.dist.modules.classpath are defined to include all the modules jars and thirdparty jars from the distribution. These may not be the right definitions, and we may want to use jboss.dist.lib.classpth, jboss.dist.common.classpath, etc. and combine them as required. (iii) fix a number of test execution macros in the testsuite (e.g. tests-compatability) which add in pointers to the build jars (e.g. varia) in their classpath. These pointers need to be updated to point to the distribution. All this stuff should be turned on if the user passes a non-null value for jboss.dist. What do you think? Can you see any problems, errors?	0	0	https://issues.jboss.org/browse/JBPAPP-2348
10351	JBPAPP-2348	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2348
10352	JBPAPP-2348	If they are only under thirdparty and not in the distribution, where is the conflict from signed vs unsigned coming from?	1	1	https://issues.jboss.org/browse/JBPAPP-2348
10353	JBPAPP-2346	Ivo, can you link the JBTM bugs that were fixed in the CP branch to this JIRA?	0	0	https://issues.jboss.org/browse/JBPAPP-2346
10354	JBPAPP-2328	Are these RPMs available to license holders? I cannot find them.	1	1	https://issues.jboss.org/browse/JBPAPP-2328
10355	JBPAPP-2325	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	1	0	https://issues.jboss.org/browse/JBPAPP-2325
10356	JBPAPP-2322	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2322
10357	JBPAPP-2322	Shelly, where can I verify this? Should this be included in the Migrating to Enterprise Application Platform 5.0 Chapter of Installation Guide? Or this will be part of the new Migration Guide (JBPAPP-2511) which is not ready yet? I suppose the latter. In that case I will have to wait for the guide.	0	0	https://issues.jboss.org/browse/JBPAPP-2322
10358	JBPAPP-2316	Hi Strong. If this is being made available in 5.1.0 only, should we remove the 4.x tags from the affects version. And did this issue miss the 5.1.0 release? There doesn't seem to be evidence of a release note for 5.1.0, even if it is just a known issue. If this doesn't require a release note, could you please set the Release Note Docs Status flag to "Not Required". Cheers Jared	1	0	https://issues.jboss.org/browse/JBPAPP-2316
10359	JBPAPP-2315	This fix broke 3.4.2.GA mapping to Oracle. See here: https://forum.hibernate.org/viewtopic.php?f=1&t=1014208 What is the workaround for this break in compatibility?	0	0	https://issues.jboss.org/browse/JBPAPP-2315
10360	JBPAPP-2306	Hi Stelios, I've attached an updated jboss_init_hpux.sh, I don't have a HP machine around, do you mind trying it out before I commit this back to the branch? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2306
10361	JBPAPP-2306	Martin, can you verify the patch attached to the JIRA?	0	0	https://issues.jboss.org/browse/JBPAPP-2306
10362	JBPAPP-2306	One other question: why didn't you take the approach for passing options to org.jboss.Main as was done in the script jboss_init_solaris.sh (i.e. allowing a variable JBOSS_OPTIONS?). These "init" scripts are starting to have more differences than similarities - they should work in the same way from a users point of view, as they are basically all doing the same thing.	1	1	https://issues.jboss.org/browse/JBPAPP-2306
10363	JBPAPP-2306	Richard, you're right, I forgot to add some information about the new parameter to the header for EAP 4.x - I did it for EAP 5. I'll add it there. But otherwise I verified and committed the patch as requested. I just tested it again and it works for me. I didn't know about JBPAPP-3036, but I cannot reproduce it anyway. And I don't think I'm using ksh. What are you referring to when you talk about passing options to org.jboss.Main? I don't see anything like that in the jboss_init_solaris.sh script. This how the AS is started there: CMD_START="${JBOSS_HOME[i]}/bin/run.sh -c ${SERVER_NAME[i]}" nohup su - ${JBOSS_USER[i]} -c "sh $CMD_START" >${JBOSS_CONSOLE[i]} 2>&1 &	1	0	https://issues.jboss.org/browse/JBPAPP-2306
10364	JBPAPP-2306	1. Shouldn't this thing needs to be tested under root, as the instructions in the header file explicitly state that. 2 Which shell is this command *supposed* to use? In the script, it is marked as #!/bin/sh, which defaults on HPUX their implementation of the POSIX shell. root on HPUX in our lab has bash defined as its shell in the password file. 3. I have JAVA_HOME defined and exported in the .bash_profile for root, as well as the .profile 4. If I set the shebang (shell indicator) in the file as #!/bin/sh or #!/usr/bin/bash or #!/usr/bin/ksh, I get the same results: ++ isUserOK ++ id root ++ ((0!=0)) ++ su root -c 'test -w /tmp/jboss-eap-4.2/jboss-as/server/default' ++ ((0!=0)) +++ whence java /sbin/init.d/jboss: line 139: whence: command not found +++ [[-d /opt/java1.5]] ++ su - root -c ++ ((2!=0)) ++ echo 'ERROR: The user "root" does not have $JAVA_HOME defined; either define $JAVA_HOME for this user or ensure that a path to "java" exists.' ERROR: The user "root" does not have $JAVA_HOME defined; either define $JAVA_HOME for this user or ensure that a path to "java" exists. But this is a non-POSIX shell complaining, as when I start /usr/bin/ksh by hand and execute whence java, it doesn't complain. I really don't understand what whence does - from the manual: whence -pv name: For each name, indicate how it would be interpreted as a command name. The -v produces a more detailed report. 5. If I replace su - ${JBOSS_USER[i]} -c `whence java | | [[ -d $JAVA_HOME ]]` >/dev/null 2>&1 with su - ${JBOSS_USER[i]} -c "test -d $JAVA_HOME " >/dev/null 2>&1 it works fine. Don't know if this is equivalent.	1	1	https://issues.jboss.org/browse/JBPAPP-2306

#	Requirement	Questions	Answered	Successfully Answered	URL
10365	JBPAPP-2306	I'm still having problems with this script. I think you need to get someone else to test this. Here is why: 1. Here is my /etc/rc.config.d file: -bash-3.1# more /etc/rc.config.d/jboss JBOSS_HOME[0]=/tmp/jboss-eap-4.2/jboss-as JBOSS_USER[0]=rachmatowicz SERVER_NAME[0]=default JBOSS_START[0]=1 JBOSS_BIND_ADDR[0]=10.16.94.186 and here is the AS distribution -bash-3.1# ls -la /tmp/jboss-eap-4.2/ total 48 drwxr-xr-x 4 rachmatowicrachmatowic 96 Nov 12 14:25 . drwxrwxrwt 62 root root 8192 Nov 20 11:09 .. drwxr-xr-x 7 rachmatowicrachmatowic 8192 Nov 12 01:02 jboss-as drwxr-xr-x 10 rachmatowicrachmatowic 8192 Nov 12 05:35 seam and here is the user using the system: -bash-3.1$ who rachmato pts/0 Nov 20 10:52 Would you like to tell me what is my login id on this system? I login as rachmatowicz: alias dev24='ssh -l rachmatowicz dev24.qa.atl2.redhat.com' I remember the sysadmin guys telling me that my username was too long and required special treatment. Perhaps this is part of the problems i'm seeing? If I can be given another non-root userid to use, i'll gladly continue the testing... I'm still getting the same errors I saw yesterday.	1	1	https://issues.jboss.org/browse/JBPAPP-2306
10366	JBPAPP-2306	Richard, I managed to make it work under your account. What I needed to do is change your shell in /etc/passwd from /bin/bash to /bin/sh. Now the question is: Why doesn't it work with bash? Anyway, feel free to use my account for testing if you need it.	0	0	https://issues.jboss.org/browse/JBPAPP-2306
10367	JBPAPP-2306	Very odd stuff going on here, and i'm not sure if it is an HPUX issue or an issue with our testing environment (i.e. the use of LDAP and other login/validation/password file issies). With a use with a /usr/bin/sh shell (HPUX POSIX shell), the script works. Wiith bash, odd things happen. For example, pskopek has a /etc/passwd entry indicating /bin/bash as a default shell. 1. If I execute (i.e. start a non-login shell under pskopek and execute the env command): # su pskopek # env I see that .bashrc is called as expected 2. If I execute (i.e. start a login shell under pskopek and execute the env command separately): # su - pskopek # env I see that .bash_profile and .bashrc are called as expected 3. If I execute (i.e. start a login shell under pskopek and execute the env command): # su - pskopek -c 'env' I see that neither .bashrc nor .bash_profile is called This latter case is why the script is not working with a user who has a bash shell. However: 4. if I execite (i.e. start a interactive login shell under pskopek and execute the env command): # su - pskopek -i -c 'env' I see that both .bashrc and .bash_profile are called Adding the extra -i to make the command interafctive makes the init script work with my userid. I haven't quite been able to explain what is going on here, nor have I tested it with a user who has a POSIX default shell.	0	0	https://issues.jboss.org/browse/JBPAPP-2306
10368	JBPAPP-2298	Martha, Can you please build a 1.1.0.jboss.patch01-brew with this patch, upload and switch the EAP 4 branch to use this? The branch to use is jakarta-commons-logging-jboss/RHEL-4-EP-V1. Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-2298
10369	JBPAPP-2270	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-2270
10370	JBPAPP-2264	Martha, can you please add the patch, build, upload and then switch the EAP 4 branch to use this? The branch to use for this is: jacorb/RHEL-4-EP-V1 Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2264
10371	JBPAPP-2263	OK, I will clone this JIRA for the EAP 5. With regards to the upstream case, please add the link in a comment when you have one. Can you please add the IT link to the "Support Case Reference" box?	0	0	https://issues.jboss.org/browse/JBPAPP-2263
10372	JBPAPP-2186	Alessio, do you know what has to be done? Will this be OK for SOA-P?	0	0	https://issues.jboss.org/browse/JBPAPP-2186
10373	JBPAPP-2182	Hi Vicky, will the tag for JBoss Common be available soon?	1	1	https://issues.jboss.org/browse/JBPAPP-2182
10374	JBPAPP-2182	Martha, Dimitris has created the tag for jboss-common this for us: https://svn.jboss.org/repos/common/common-old/tags/JBossCommon_1_2_1_GA_CP01/ Can you please build, upload, then switch the EAP 4 branch to use this? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2182
10375	JBPAPP-2181	I will update the online Installation Guide for 4.2.0.GA_CP07 and 4.3.0.GA_CP05 but I will leave this issue open and set the fix to 4.2.0.GA_CP08 and 4.3.0.GA_CP06 so it can be recorded in those release notes for when this fix is included in the documentation bundle that is shipped with the software.	0	0	https://issues.jboss.org/browse/JBPAPP-2181
10376	JBPAPP-2160	Martha, Can you please work on this build? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-2160
10377	JBPAPP-2144	Hibernate integration code for non-supported second-level caches and connection pools will continue to be included in EAP 5 because we didn't deprecate it in EAP 4. How far in advance does functionality need to be deprecated before being removed? Would it need to be deprecated in EAP 5.0.GA to remove it in 5.1? Does it make sense to deprecate all of the integration code for non-supported components?	1	1	https://issues.jboss.org/browse/JBPAPP-2144
10378	JBPAPP-2144	These components have not been marked "@deprecated" in the code, so it will not be documented as deprecated in Javadoc. Is it sufficient, for now, to simply document that they are deprecated in the release notes? Also, as Steve mentioned in a discussion at https://docspace.corp.redhat.com/clearspace/message/12692#12692 , we may want to deprecate usage of a component specifically in EAP, but perhaps not in a standalone release. This would complicate how we mark source code as @deprecated.	1	1	https://issues.jboss.org/browse/JBPAPP-2144
10379	JBPAPP-2144	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	1	0	https://issues.jboss.org/browse/JBPAPP-2144
10380	JBPAPP-2142	I've always seen that to disable chunking encoding is always related to client configuration. How can it be disabled from server side? What configuration file can be changed in JBoss or JBossWS to do that?	1	0	https://issues.jboss.org/browse/JBPAPP-2142
10381	JBPAPP-2142	I'd like to but https://community.jboss.org/nfm/redirectToCSForum.jspa?module=bb&op=viewforum&f=247 and https://community.jboss.org/nfm/redirectToCSForum.jspa?module=bb&op=viewforum&f=242 are out of service. Do you know if is there another link to forum group? Thanks	1	0	https://issues.jboss.org/browse/JBPAPP-2142
10382	JBPAPP-2134	Shelly, have you talked to Jason about this already? Have you switched the Branch_5_0 to use these already?	1	1	https://issues.jboss.org/browse/JBPAPP-2134
10383	JBPAPP-2130	This fix has already been committed to the 2.4.x branch by Vladimir.	0	0	https://issues.jboss.org/browse/JBPAPP-2130
10384	JBPAPP-2129	Do you need me to find out, Permaine, or were you asking Fernando?	0	0	https://issues.jboss.org/browse/JBPAPP-2129
10385	JBPAPP-2075	Isaac, can you document the above?	1	1	https://issues.jboss.org/browse/JBPAPP-2075
10386	JBPAPP-2059	Ben, can you take care of this for me? Just go through the JBoss Messaging 1.4.3 documentation and remove/comment out information relating to 4.2 and 4.3, as above. :)	1	1	https://issues.jboss.org/browse/JBPAPP-2059

#	Requirement	Questions	Answered	Successfully Answered	URL
10387	JBPAPP-2059	Completed for JBossMessaging_1_4_0_SP3_CP10/ (EAP 4.3.8) except for the following, which should be added to the JBM documentation (or the Getting Started Guide) if required: <section id="properties"> <title>System Properties used by JBoss Messaging</title> <section id="properties.supportBytesId"> <title>support.bytesId</title> <para>This system property controls the default behavior when constructing a JBossMessage object from a foreign message object. If set to true, the JBossMessage constructor will try to extract the native byte[] correlation ID from the foreign message headers. If set to false, it will use the normal string type JMSCorrelationID. If this system property is absent or is given some value other than 'true' and 'false', it will defaults to 'true'.</para> </section> <section id="properties.retainOldxabehaviour"> <title>retain.oldxabehaviour</title> <para>This system property controls what kind of exception a JMS XAResource throws when the prepare is called after the connection is broken. If this property is not defined, an XAException with XA_RBCOMMFAIL error code will be thrown. If this propertie is defined, an XAException with XA_RETRY error code will be thrown instead. JBM by default doesn't define this property.</para> </section> <section id="properties.mapmessagesupportnullobject"> <title>mapmessage.support.null.object</title> <para>This system property, once defined, allows null values in MapMessage.setObject(String key, Object value). JBM by default doesn't define this property, which means passing null values to the setObject() method will cause a MessageFormatException to be thrown.</para> </section> </section> Howard, can you tell me whether this still applies to the product disributed with EAP and where the best place for this information would be? The installation chapter of the JBM guide is removed from the guide shipped with EAP.	1	1	https://issues.jboss.org/browse/JBPAPP-2059
10388	JBPAPP-2046	Misty, do you agree with the assessment in the JIRA? Can you give us advice on how to proceed for EAP 4.3.9?	1	1	https://issues.jboss.org/browse/JBPAPP-2046
10389	JBPAPP-2046	I cannot see the fix on the stage. Could you point me where it is, please? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Server_Configuration_Guide/index.html	0	0	https://issues.jboss.org/browse/JBPAPP-2046

10391	JBPAPP-2016	Phillip, is this resolved for this CP? If not, please move this to the next CP.	0	0	https://issues.jboss.org/browse/JBPAPP-2016
10392	JBPAPP-2002	JGroups-2.4.6.GA.src/build.properties has: # use true for IPv6 and false for IPv4 jgroups.useIPv6=false Is this the way we should build?	0	0	https://issues.jboss.org/browse/JBPAPP-2002
10393	JBPAPP-1996	Release Notes - JBoss Remoting - Version 2.2.3 - Text format Bug * [JBREM-1081] - Fix NPE in ServerInvokerCallbackHandler * [JBREM-1088] - MicroSocketClientInvoker(InvokerLocator locator, Map configuration) ctor - not propagating exceptions (only message is wrapped) * [JBREM-1099] - Make MulticastDetector detection message send buffer size configurable * [JBREM-1109] - Eliminate race in MicroRemoteClientInvoker.getDataType() * [JBREM-1111] - CLONE [JBREM-851] - In LeasePinger replace Timer if it has shut down * [JBREM-1112] - Potential race between ConnectionValidator and ConnectionListener upon connection failure * [JBREM-1119] - CLONE [JBREM-1113] - ServerInvokerCallbackHandlers leak when client doesn't shut down * [JBREM-1121] - Client SocketFactory should be configurable by InvokerLocator * [JBREM-1125] - Test for IllegalStateException when calling Timer.schedule() * [JBREM-1127] - ClassCastExceptions arising from Unmarsharller/Classloader caching in MicroRemoteClientInvoker * [JBREM-1129] - Eliminate nondeterminism in Lease updates Feature Request * [JBREM-1082] - Allow ConnectionValidator to access InvokerLocator parameters * [JBREM-1084] - Allow CallbackPoller to access Client and InvokerLocator parameters * [JBREM-1100] - Link ServerInvokerServlet instances to Connectors via MBean names rather than locator URLs * [JBREM-1102] - Make configuration map available to MarshalFactory * [JBREM-1128] - Introduce connection identity concept Release * [JBREM-1131] - Release 2.2.3 Task * [JBREM-139] - need automated test for servlet server invoker * [JBREM-1078] - Remove reference to "numberOfRetries" parameter from Remoting Guide * [JBREM-1079] - Port fixes to ServletServerInvoker from branch 2.x to branch 2.2 * [JBREM-1085] - Reduce log level of ServerSocketWrapper.close() log messages * [JBREM-1103] - Correct javadoc for Client.invokeOneway() * [JBREM-1104] - Identity.get() should create a more meaningful RuntimeException message * [JBREM-1108] - Warn against making ConnectionValidator.validatorPingPeriod shorter than ConnectionValidator.validatorPingTimeout * [JBREM-1110] - InvokerLocator.getParameters() should not return null * [JBREM-1130] - Assure version compatibility with earlier versions of Remoting	0	0	https://issues.jboss.org/browse/JBPAPP-1996
10394	JBPAPP-1996	Martha, Can you please build this in brew? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBPAPP-1996
10395	JBPAPP-1971	jbossws-jboss42 is the container integration artifact. Afaics there has been no changes there for 1.2.1.GA_CP05, so I did not cut any new release for that. Do you need a new release nevertheless?	1	1	https://issues.jboss.org/browse/JBPAPP-1971
10396	JBPAPP-1949	Hi Fernando, The related JBMESSAGING-1608 has been fixed into JBM 1.4.0.SP3-CP08. It should go in to EAP 4.3.0 CP05. What do you need me to do for the Porting? or shall I close this jira?	1	1	https://issues.jboss.org/browse/JBPAPP-1949
10397	JBPAPP-1948	So the RPM layout doesn't matter at all for the zip? For example, helpinfo is part of the main RPM and not a doc (-javadoc, -manual) RPM. Do you want the apidocs and helpinfo separated in the docs zip? Right now, everything from each package is being copied to the same directory.	1	1	https://issues.jboss.org/browse/JBPAPP-1948
10398	JBPAPP-1946	Is this included in CR3 build of WFK? How is this done? Reopening this issue just to keep track.	0	0	https://issues.jboss.org/browse/JBPAPP-1946
10399	JBPAPP-1935	Great. Not sure to understand what the technical preview contains: can this be proxified for example by our internal nexus instance, or does it contain only a subset of what the downloadable version offers? Thanks.	1	0	https://issues.jboss.org/browse/JBPAPP-1935
10400	JBPAPP-1898	Why does Richfaces need jhighlight? I can't find it being used in the community release	0	0	https://issues.jboss.org/browse/JBPAPP-1898
10401	JBPAPP-1898	Jay, can you please comment on why this is included for QE?	0	0	https://issues.jboss.org/browse/JBPAPP-1898
10402	JBPAPP-1898	I think he wants to know what jhighlight is for---why is it added to WFK, but not in the community (upstream) release? It is included in the list of jars in JBPAPP-1946.	1	1	https://issues.jboss.org/browse/JBPAPP-1898
10403	JBPAPP-1893	Jay, can you please read over the attached file and check that the information is correct, or assign it to someone who can? Thankyou. :) I think the only thing that needs to be added to this chapter is the note mentioned by Peter: When an application is deployed as .war file, it is expanded in a folder under ${jboss.server.home.dir}/tmp/deploy directory name as "tmp-exp.war". To configure a filter to archive app1.war, the correct jboss-log4j.xml should be : <param name="ConversionPattern" value="%d %-5p %c{1} %m%n"/> Please confirm that this is correct.	0	0	https://issues.jboss.org/browse/JBPAPP-1893
10404	JBPAPP-1877	The native libraries (at least as I defined them) were removed in CR3. But you are correct that there are tarballs of the mozilla libraries, as well as libraries for webkit (mac) in gwt/tools/redist. In that case, gwt/tools/sdk should be removed as well as it also contains mozilla- and webkit-related files. Aside from this, there are many jars here that come from upstream. Is this also a problem?	1	1	https://issues.jboss.org/browse/JBPAPP-1877
10405	JBPAPP-1876	Sorry Shaun, would you be able to clarify which book this is in? There are quite a few and it will save time if you can specify. :)	1	1	https://issues.jboss.org/browse/JBPAPP-1876

#	Requirement	Questions	Answered	Successfully Answered	URL
10406	JBPAPP-1873	Hey Mike, having a look at this issue in the JBoss Web project and even in the svn commits, it doesn't give any details on exactly how this issue was fixed but just that it was. Would you be able to give any details on the percise details of how this bug was fixed so I can document it correctly in the Release Notes? Thanks, Isaac	1	1	https://issues.jboss.org/browse/JBPAPP-1873
10407	JBPAPP-1868	Jared, can you get back to Anne-Louise about whether this is doable for 4.3.9?	0	0	https://issues.jboss.org/browse/JBPAPP-1868
10408	JBPAPP-1868	Hi Jared, there is comment "Implemented Eva's No. 2 Suggestion." but I am not able to find it at http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Server_Configuration_Guide/index.html#clustering-session-sfsb30. Could you point me to the updated part, please?	1	1	https://issues.jboss.org/browse/JBPAPP-1868
10409	JBPAPP-1864	Hi Jason, are we really supposed to do that? Why? Is that someone who can help with the change in the JBPAPP_5_0 branch? Thansks in advance. --Fernando	1	1	https://issues.jboss.org/browse/JBPAPP-1864
10410	JBPAPP-1819	Can online docs for CP06 be updated?	0	0	https://issues.jboss.org/browse/JBPAPP-1819
10411	JBPAPP-1819	This change has been added to the EAP 4.2.CP08 and 4.3.CP07 release notes. Rajesh, please verify on http://documentation-stage.bne.redhat.com/docs/en-US/ and close this issue if you believe the information is sufficient.	1	1	https://issues.jboss.org/browse/JBPAPP-1819
10412	JBPAPP-1749	Darran, could you please paste here your build order again?	1	1	https://issues.jboss.org/browse/JBPAPP-1749
10413	JBPAPP-1749	One more thing Alessio, the jbossws-spi build uses ant <get> to grab thirdparty/jboss-logging-log4j.jar but does not add it to the classpath (see ant-import/build-thirdparty.xml). Is this JAR really needed for something in this context? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-1749
10414	JBPAPP-1740	I think a one-off patch is going to be necessary for this issue. Beyond saying that here, what else does support need to do in order to make this happen?	0	0	https://issues.jboss.org/browse/JBPAPP-1740
10415	JBPAPP-1733	Gail, is it a one-time test, or should I prepare some scripts for an automated test?	0	0	https://issues.jboss.org/browse/JBPAPP-1733
10416	JBPAPP-1733	Emmanuel, if annotations and entity manager are upgraded to 3.3.x in EAP 4.2/4.3, will the non-FP version of seam work without validator? Is validator only a build dependency?	0	0	https://issues.jboss.org/browse/JBPAPP-1733
10417	JBPAPP-1731	I've found the email thread discussing this. The issues mentioned there are: http://opensource.atlassian.com/projects/hibernate/browse/ANN-551 http://opensource.atlassian.com/projects/hibernate/browse/ANN-683 ANN-551 was fixed in 4.2.0.GA_CP01 by a patch that was applied when building with brew (https://jira.jboss.org/jira/browse/JBPAPP-313) It was backported to annotations v3_2_1_GA_CP and fixed (w/o the patch) starting with 4.2.0.GA_CP02. ANN-653 was not backported to v3_2_1_GA_CP. There is no unit test for this fix and I'm not familiar enough with the code that was fixed to document the impact of fixing this bug. Emmnauel, will fixing ANN-653 cause a change in behavior that could be regarded as a backward compatibility issue? If so, please describe the change in behavior.	1	1	https://issues.jboss.org/browse/JBPAPP-1731
10418	JBPAPP-1731	Andrig Miller wrote: > Gail, > > Emmanuel told us about this issue during the process on deciding what to do in the FP. It was my considered opinion then, and it still is now, that this sort order difference is fine for a CP and the FP release. I would have never given the go ahead for the FP to begin with, if I didn't think that was true. Yes, the behavior is different, but the new behavior is correct, so I think of it as a bug. > > We should close this issue, and update the components in the base, with a release note on it saying that the fix for the original bug (whatever that was), changes the sort order. > > Andy > > ----- "Gail Badner" <gbadner@redhat.com> wrote: > > There is a backward-compatibility issue upgrading Hibernate annotations > > in 4.2.0.GA_CP07 / 4.3.0.GA_CP05 to be the same version used in > > 4.3.0.GA_CP05_FP01. Details are documented in > > https://jira.jboss.org/jira/browse/JBPAPP-1731. > > > > I'm sorry this issue is coming up so close to the release. 10419	JBPAPP-1731	Rich Sharples wrote: > Well I don't take the support calls - but if everyone thinks this has limited scope to impact customer's existing apps. I'm OK - is there a way we can pre-empt the problem and actively tell people about the --preserve-existing-but-wrong-behaviour flag ? >> Because we're trying not to have different behavior (i.e. add a parameter in run.conf) for CP and CP_FP...and also the fact that the broken behavior *is* broken... :) >> >> -CB >> >> Rich Sharples wrote: >>> If we think the impact is low then it's academic - but why wouldn't we make the broken but existing behaviour the default. >>>> Rich Sharples wrote: >>>> >>>>> The question is - how many existing applications will need to be recompiled / redeployed - if it's 0.1% that's OK - if it 50% then it's not OK. >>>> >>>> We don't know for sure. It seems like a very small number, if any. Also, I believe Gail implied that she was going to provide a switch to fall back to the broken (non-FP) behavior, but not make it the default. >>>> >>>> Are you cool with that? >>>> >>>> -CB	1	0	https://issues.jboss.org/browse/JBPAPP-1731
10420	JBPAPP-1729	I attached the JDiff reports for annotations and entitymanager. Is there a list somewhere on what we consider as public API? If so, I will cross the list with this report, to make sure we have no changes on it.	1	1	https://issues.jboss.org/browse/JBPAPP-1729
10421	JBPAPP-1729	For annotations hey Juca, Can you run a JDiff between ANN 3_2_1_GA_CP03 and Hibernate Validator (the one we include). Cause some of those APIs are public. The rest is fine for annotations	1	1	https://issues.jboss.org/browse/JBPAPP-1729
10422	JBPAPP-1729	Hardy/Juca, what's the final word on this? Are there any backward-compatibility issues that require that we stay with 3.2.x in EAP 4.2/4.3 CPs?	1	1	https://issues.jboss.org/browse/JBPAPP-1729
10423	JBPAPP-1728	The only fixes for annotations and entity manager that I see are for unit tests. Is it worth upgrading annotations and entity manager to include the unit test fixes, since they are going to be upgraded in the next CP anyhow?	0	0	https://issues.jboss.org/browse/JBPAPP-1728

#	Requirement	Questions	Answered	Successfully Answered	URL
10424	JBPAPP-1701	When I build Javadoc outside of brew, the HREFs are there. When I build with brew, they are gone. I'm not sure why this is happening, but I noticed the same thing happening for jboss-cache and jboss-messaging: - http://porkchop.devel.redhat.com/brewroot/packages/jboss-cache/1.4.1/6.SP13.1.ep1.el4/noarch/jboss-cache-javadoc-1.4.1-6.SP13.1.ep1.el4.noarch.rpm - http://porkchop.devel.redhat.com/brewroot/packages/jboss-messaging/1.4.0/2.SP3_CP08.1.ep1.el4/noarch/jboss-messaging-javadoc-1.4.0-2.SP3_CP08.1.ep1.el4.noarch.rpm Is this a problem with brew or the spec files?	1	1	https://issues.jboss.org/browse/JBPAPP-1701
10425	JBPAPP-1701	The problem is that the brew builds are done offline. When ant builds javadoc offline, it needs the "linkoffline" attribute specified with a location for the Java package list. Details about the ant javadoc task are at: http://ant.apache.org/manual/CoreTasks/javadoc.html Is the Java API package list already in the brew environment? If so, where will it be? If not, is there another package that should be added as a build requirement that has Java API package list? This is a minor issue and will be put off until the next CP.	1	1	https://issues.jboss.org/browse/JBPAPP-1701
10426	JBPAPP-1701	response from scm-tool mail list ---------- I checked with the person who packaged java-1.5.0-sun and she indicated that the javadocs (and hence the package-lists file) was not also packaged. However, you should be able to simply use a copy of the file http://java.sun.com/j2se/1.5.0/docs/api/package-list for instance, and instruct javadoc that this is the package list it should link to http://java.sun.com/j2se/1.5.0/docs/api/ - Chris On 08/05/2009 05:58 AM, Strong Liu wrote: > Hi all, > I'm trying to fix this issue : > Add HREFs for JDK methods to Hibernate Javadoc -- https://jira.jboss.org/jira/browse/JBPAPP-1701 > When I build Javadoc outside of brew, the HREFs are there, but in brew, it is missing, the problem is that the brew builds are done offline, when ant builds javadoc offline, it needs the "linkoffline" attribute specified with a location for the Java package list. > Details about the ant javadoc task are at: > http://ant.apache.org/manual/CoreTasks/javadoc.html > > Is the Java API package list already in the brew environment? If so, where will it be? > > If not, is there another package that should be added as a build requirement that has Java API package list?	1	1	https://issues.jboss.org/browse/JBPAPP-1701
10427	JBPAPP-1691	Rajesh, in previous CP releases, we used to deploy the *-jdbc2-service.xml files to server/all/deploy-hasingleton/jms, but now it seems that it doesn't works. Deploying to server/all/deploy/jms makes the test pass. Can you confirm this behaviour change?	0	0	https://issues.jboss.org/browse/JBPAPP-1691
10428	JBPAPP-1685	Perhaps we can call this "new" version 2.1.jdk15-brew as the 2.1-brew was still built with JDK 1.4 (JPackage has a patch to build with JDK 1.5 in their latest release of this RPM).	0	0	https://issues.jboss.org/browse/JBPAPP-1685
10429	JBPAPP-1679	What's the timeframe for this? I have this on my todo list, but currently I am quite busy with Bean Validation.	1	1	https://issues.jboss.org/browse/JBPAPP-1679
10430	JBPAPP-1679	In order to backport these things - what is the branch for hibernate core for these modules?	1	1	https://issues.jboss.org/browse/JBPAPP-1679
10431	JBPAPP-1648	Martin, I'm testing the patches, but is there a test case which I should pay special attention?	1	1	https://issues.jboss.org/browse/JBPAPP-1648
10432	JBPAPP-1648	Juraci, could you please run the tests again with the modified patch? Thanks!	1	1	https://issues.jboss.org/browse/JBPAPP-1648
10433	JBPAPP-1643	The dependency JBPAPP-1961 is still open, can this bug still be resolved? If yes, then should JBPAPP-1961 still be documented as fixed in this update?	1	0	https://issues.jboss.org/browse/JBPAPP-1643
10434	JBPAPP-1612	Clebert, could you help us with that change?	0	0	https://issues.jboss.org/browse/JBPAPP-1612
10435	JBPAPP-1612	I saw the solution in: http://fisheye.jboss.org/browse/JBossAS/branches/JBPAPP_4_2_0_GA_CP/varia/src/resources/services/binding/sample-bindings.xml?r1=82905&r2=82968 You probably haven't read my description. This same sample-bindinds.xml is used to build both EAP 4.2 and EAP 4.3. The way you "solve" it will only work for EAP 4.3. You need to either: a) Duplicate the binding for both 'jboss.jms' & 'jboss.mq' b) Leave it as it was and apply a patch when building 4.3 with the changed that you've made.	1	1	https://issues.jboss.org/browse/JBPAPP-1612
10436	JBPAPP-1612	If it's not too much of a hassle can you do it the other way, i.e. create a sample-bindings-4.3.xml for the 4.3 build so we can keep sample-bindings.xml synched with AS Branch_4_2? Thanks.	1	1	https://issues.jboss.org/browse/JBPAPP-1612
10437	JBPAPP-1598	Done?	0	0	https://issues.jboss.org/browse/JBPAPP-1598
10438	JBPAPP-1593	Done?	1	1	https://issues.jboss.org/browse/JBPAPP-1593
10439	JBPAPP-1553	Since the FP ships with Seam 2.0.2 whereas the EAP 4.3 CP ships with 1.2.1, this fix requires inclusion in the FP release notes as well -> however it should be stated that the FP fix is for the different version of Seam so there is no confusion for the customer when reading both the CP and FP release notes.	1	1	https://issues.jboss.org/browse/JBPAPP-1553
10440	JBPAPP-1550	I saw this jira notification and thought although error manifests in portal, it's caused by Webservices meaning that if a webservice sar/war is deployed in EAP, it would cause the same error. Rajesh, could you have some EAP folks look into it? If not, I will handle it.	0	0	https://issues.jboss.org/browse/JBPAPP-1550
10441	JBPAPP-1533	The subtasks JIRAs associated with this JIRA represent this information. Is there a reason we have to list them in an additional JIRA comment as well?	1	0	https://issues.jboss.org/browse/JBPAPP-1533
10442	JBPAPP-1532	The subtask JIRAs associated with this JIRA represent this information. Is there a reason we have to list them in an additional JIRA comment as well?	1	0	https://issues.jboss.org/browse/JBPAPP-1532
10443	JBPAPP-1522	Dominik, can you port Scott's fix from Branch_4_2 to the EAP branch and verify in a nightly build if the issue has been fixed?	0	0	https://issues.jboss.org/browse/JBPAPP-1522
10444	JBPAPP-1522	Has this fix been committed? Can this issue be resolved?	1	1	https://issues.jboss.org/browse/JBPAPP-1522
10445	JBPAPP-1512	Hi Chris, how is the investigation about signing JARs built in Brew automatically going? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-1512
10446	JBPAPP-1512	Peter, can you verify this on the CR1 build? Test cases are in testopia.	1	0	https://issues.jboss.org/browse/JBPAPP-1512
10447	JBPAPP-1479	Permaine, can you please check with Clebert if this is something we can get removed when the soa switch is specified?	0	0	https://issues.jboss.org/browse/JBPAPP-1479
10448	JBPAPP-1460	> 2) What do you mean? It is there since Nov 25. Where you looking under maven2? AS 4.2 is pre-maven, uses a buildmagic repo (top level of r.j.o.). Here is the URL: > http://repository.jboss.org/glassfish/jsf/1.2_10-brew/ I see now. I was looking under http://repository.jboss.org/sun-jsf/. Under that I find some old JSF brew builds. So I thought that's where 1.2_10-brew would go.	1	1	https://issues.jboss.org/browse/JBPAPP-1460
10449	JBPAPP-1439	A further question, does this only apply to EAP 4.3 or 4.2 as well? Cheers, Isaac	1	0	https://issues.jboss.org/browse/JBPAPP-1439
10450	JBPAPP-1433	Is there any specific test case I should pay more attention regarding this item?	1	1	https://issues.jboss.org/browse/JBPAPP-1433

#	Requirement	Questions	Answered	Successfully Answered	URL
10451	JBPAPP-1428	runs against the 'all' configuration: I am running: - testsuite checked out from JBPAPP_4_2_0_GA_CP04_JBPAPP-1180_JBPAPP-1268_JBPAPP-1428 - jboss 4.2.0.GA.CP04 with jars patched [rachmatowicz@dev91 reports]$ more TEST-org.jboss.test.cache.bean.MBeanUnitTestCase.txt Testsuite: org.jboss.test.cache.bean.MBeanUnitTestCase Tests run: 4, Failures: 3, Errors: 0, Time elapsed: 3.007 sec Testcase: testSetup took 0.142 sec Testcase: testPutTx took 0.362 sec FAILED javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name junit.framework.AssertionFailedError: javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name at org.jboss.test.cache.bean.MBeanUnitTestCase.testPutTx(MBeanUnitTestCase.java:112) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) Testcase: testRollbackTx took 0.069 sec FAILED javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name junit.framework.AssertionFailedError: javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name at org.jboss.test.cache.bean.MBeanUnitTestCase.testRollbackTx(MBeanUnitTestCase.java:149) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) Testcase: testReplicatedPutTx took 0.189 sec FAILED javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name junit.framework.AssertionFailedError: javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name at org.jboss.test.cache.bean.MBeanUnitTestCase.testReplicatedPutTx(MBeanUnitTestCase.java:190) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup$1.protect(TestSetup.java:21) at junit.extensions.TestSetup.run(TestSetup.java:25) In the case of the second test, testRollbackTx(), I put in a Throwable.printStackTrace() and got the following: ---------- Standard Error ---------- javax.transaction.SystemException: java.lang.IllegalArgumentException: null object name at org.jboss.tm.usertx.client.ClientUserTransaction.begin(ClientUserTransaction.java:128) at org.jboss.test.cache.bean.MBeanUnitTestCase.testRollbackTx(MBeanUnitTestCase.java:138) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at junit.framework.TestCase.runTest(TestCase.java:164) at junit.framework.TestCase.runBare(TestCase.java:130) at junit.framework.TestResult$1.protect(TestResult.java:106) at junit.framework.TestResult.runProtected(TestResult.java:124) at	1	1	https://issues.jboss.org/browse/JBPAPP-1428
10452	JBPAPP-1428	Galder I run the test org.jboss.cache.bean.MBeanUnitTestCase against the patched version of EAP 4.2.0.GA.CP04 and it fails with the above errors. I run the same test against the version of AS built from the tagged version JBPAPP_4_2_0_GA_CP04_JBPAPP-1180_JBPAPP-1268_JBPAPP-1428, after having unsecured it, and the test passes. Can you confirm the patch instructions? In the mean time, i'll try and follow up on possible differences.	1	1	https://issues.jboss.org/browse/JBPAPP-1428

Used awk to remove the extra information and get a list of files changed: cluster/src/main/org/jboss/proxy/AbstractTransactionStickyInterceptor.java cluster/src/main/org/jboss/proxy/ClientUserTransactionStickyInterceptor.java cluster/src/main/org/jboss/proxy/TransactionStickyInterceptor.java cluster/src/main/org/jboss/proxy/generic/ProxyFactoryHA.java cluster/src/main/org/jboss/ha/framework/interfaces/TransactionSticky.java cluster/src/main/org/jboss/invocation/unified/interfaces/UnifiedInvokerHAProxy.java cluster/src/main/org/jboss/invocation/jrmp/interfaces/JRMPInvokerProxyHA.java cluster/build.xml transaction/src/main/org/jboss/tm/TransactionPropagationContextUtil.java testsuite/local.properties testsuite/src/main/org/jboss/test/cluster/invokerha/InvokerHaFailureType.java testsuite/src/main/org/jboss/test/cluster/invokerha/ejb/UserTransactionStickinessVerifierInterceptor.java testsuite/src/main/org/jboss/test/cluster/invokerha/ejb/test/UserTransactionStickyUnitTestCase.java testsuite/src/main/org/jboss/test/cluster/invokerha/ejb/UserTransactionStickyBean.java testsuite/src/main/org/jboss/test/cluster/invokerha/ejb/UserTransactionStickyHome.java testsuite/src/main/org/jboss/test/cluster/invokerha/ejb/UserTransactionStickyRemote.java testsuite/src/main/org/jboss/test/cluster/invokerha/UnifiedInvokerHaTransactionStickyUnitTestCase.java testsuite/src/main/org/jboss/test/cluster/invokerha/InvokerHaTransactionalMockUtils.java testsuite/src/main/org/jboss/test/cluster/invokerha/UnifiedInvokerHaMockUtils.java testsuite/src/main/org/jboss/test/cluster/invokerha/UnifiedInvokerHaUnitTestCase.java testsuite/src/main/org/jboss/test/cluster/invokerha/AbstractInvokerHaTransactionSticky.java testsuite/src/main/org/jboss/test/cluster/invokerha/InvokerHaInfrastructure.java testsuite/src/main/org/jboss/test/cluster/invokerha/JRMPInvokerHaTransactionStickyUnitTestCase.java testsuite/src/main/org/jboss/test/cluster/invokerha/AbstractInvokerHa.java testsuite/src/main/org/jboss/test/cluster/invokerha/JRMPInvokerHaMockUtils.java testsuite/src/main/org/jboss/test/cluster/invokerha/JRMPInvokerHaUnitTestCase.java testsuite/src/resources/cluster/invokerha/ejb/META-INF/jboss.xml testsuite/src/resources/cluster/invokerha/ejb/META-INF/ejb-jar.xml testsuite/src/resources/test-configs/ustxsticky/conf/jboss-service.xml testsuite/imports/sections/cluster.xml testsuite/imports/server-config.xml testsuite/build.xml server/src/main/org/jboss/tm/usertx/server/ClientUserTransactionService.java server/src/main/org/jboss/tm/usertx/server/UserTransactionSessionImpl.java server/src/main/org/jboss/tm/usertx/client/ClientUserTransactionObjectFactory.java server/src/main/org/jboss/tm/usertx/client/ClientUserTransaction.java server/src/main/org/jboss/tm/usertx/client/ServerVMClientUserTransaction.java server/src/main/org/jboss/proxy/ejb/RetryInterceptor.java	1	1	https://issues.jboss.org/browse/JBPAPP-1428

#	Requirement	Questions	Answered	Successfully Answered	URL
10454	JBPAPP-1428	Jimmy I reran the testsuite adding in the jboss.jar file to server/all/lib and server/production/lib. The testsuite ran very clean, with one error only (org.jboss.test.tm.test.TxTimeoutIUnitTestCase) and this test passed successfully on retry several times. I was still getting the following WARN messages appearing on the console: 13:17:59,301 WARN [loggerI18N] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] Could not find new XAResource to use for recovering non-serializable XAResource < 131075, 28, 26, 1-a1058a0:c685:4935a90e:7d4ba1058a0:c685:4935a90e:7d51 > 13:17:59,308 WARN [loggerI18N] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] Could not find new XAResource to use for recovering non-serializable XAResource < 131075, 28, 26, 1-a1058a0:c685:4935a90e:7d55a1058a0:c685:4935a90e:7d5b > 13:17:59,315 WARN [loggerI18N] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] [com.arjuna.ats.internal.jta.resources.arjunacore.norecoveryxa] Could not find new XAResource to use for recovering non-serializable XAResource < 131075, 28, 26, 1-a1058a0:c685:4935a90e:7d5fa1058a0:c685:4935a90e:7d65 > These messages appear after the testsuite run and when restarting the server after the test run. Deleting the data directory and tmp directory and restarting the server causes the messages not to reappear, so I assume they are due to some test artifacts left over from the test run. I'm going to ask Jonathan Halliday if he knows why they might arise. Jonathan, do these messages cause any concern for you?	1	1	https://issues.jboss.org/browse/JBPAPP-1428
10455	JBPAPP-1393	Isaac, does this make it to this CP? if not, can you move it to the next one? Thanks, Permaine	1	0	https://issues.jboss.org/browse/JBPAPP-1393
10456	JBPAPP-1393	Hi Tihomir, Can you advise where I can find information relating to the deployment of a foo-ds.xml application? I have found the following material online: http://www.jboss.org/file-access/default/members/jbossweb/freezone/docs/latest/deployer-howto.html foo-ds.xml refernced in the Seam Reference Guide. http://docs.jboss.org/seam/2.1.2/reference/en-US/html/testing.html ....but cannot find a single definitive guide. Alternatively, can you provide a description? Thanks, Ben	1	0	https://issues.jboss.org/browse/JBPAPP-1393
10457	JBPAPP-1393	Laura, this was assigned to Tiho. Is it because we need more information from him? After it was assigned to him, you moved the CP fix version, so I want to be sure what we need.	1	0	https://issues.jboss.org/browse/JBPAPP-1393
10458	JBPAPP-1382	Done?	1	1	https://issues.jboss.org/browse/JBPAPP-1382
10459	JBPAPP-1381	Most of it is already done right?	0	0	https://issues.jboss.org/browse/JBPAPP-1381
10460	JBPAPP-1380	Done?	0	0	https://issues.jboss.org/browse/JBPAPP-1380
10461	JBPAPP-1368	I don't see where you made the change so that embedded is built with the new hibernate. I see lots of file changes for embedded version, but I must be missing the one for the hibernate version change. Can you point me to it?	1	1	https://issues.jboss.org/browse/JBPAPP-1368
10462	JBPAPP-1362	Hey Justin, I'm trying to work out where to fit this information into the Server Configuration Guide, is this part of the JBoss JAXR Configuration?	1	1	https://issues.jboss.org/browse/JBPAPP-1362
10463	JBPAPP-1341	I have been able to find information on the BaseCertLoginModule configuration in the EAP Server Config Guide: http://www.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3.0.cp02/html-single/Server_Configuration_Guide/index.html 9.5.3.7. BaseCertLoginModule However I have not been able to find anything for the others, does anyone have any information they can point me to that may be able to assist?	1	1	https://issues.jboss.org/browse/JBPAPP-1341
10464	JBPAPP-1334	Jean-Frederic, can you point Isaac to a list of the changes, please? Thanks in advance.	0	0	https://issues.jboss.org/browse/JBPAPP-1334
10465	JBPAPP-1333	A few discrepancies to note while reviewing the attachments: The RHEL 4 rpms at location: http://porkchop.devel.redhat.com/devel/candidates/JBEAP4.3.0/latest/rpm/JBEAP4.3.0-re20081028.0/i386/i386/RedHat/RPMS/ show the documentation rpm as: rh-eap-docs-4.3.0-4.GA_CP03.ep1.1.el4.noarch.rpm Also with the jbossas* rpms: From above link, the RHEL 5 rpms for jbossas* are shown as jbossas-4.3.0-3.GA_CP03.6.ep1.el5.noarch.rpm 27-Oct-2008 15:48 13M jbossas-client-4.3.0-3.GA_CP03.6.ep1.el5.noarch.rpm 27-Oct-2008 15:49 6.0M Shown in your RHEL 5 attachment: jbossas-4.3.0-3.GA_CP03.6.2.ep1.el5.noarch.rpm jbossas-client-4.3.0-3.GA_CP03.6.2.ep1.el5.noarch.rpm The former issues regarding the doc rpms seems to be that the doc updates were not made available for RHEL 5 [or to the RHEL 5 link] but can't explain the difference in the version of the jbossas rpms noted above. Can you comment?	0	0	https://issues.jboss.org/browse/JBPAPP-1333
10466	JBPAPP-1289	Darran, do you know how can we get the information Isaac needs? Thanks in advance.	0	0	https://issues.jboss.org/browse/JBPAPP-1289
10467	JBPAPP-1276	I see two tests failing. The first one I've no idea why, but wrt the second one, I wonder why is it trying to use MQ classes? <testcase classname="org.jboss.test.ws.jaxws.jbws1809.JBWS1809TestCase" name=" testWSDLAccess" time="0.415"> <failure message="JAXBIntros should turn the 'docRequest.name' pro perty into a XML attribute" type="junit.framework.AssertionFailedError">junit.fr amework.AssertionFailedError: JAXBIntros should turn the 'docRequest.name&a pos; property into a XML attribute at org.jboss.test.ws.jaxws.jbws1809.JBWS1809TestCase.testWSDLAccess(JBWS 1809TestCase.java:89) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:22) at junit.extensions.TestSetup$1.protect(TestSetup.java:19) at junit.extensions.TestSetup.run(TestSetup.java:23) </failure> </testcase> <testcase classname="org.jboss.test.ws.jaxrpc.samples.jmstransport.JMSTranspor tTestCase" name="testSOAPMessageToEndpointQueue" time="0.042"> <error message="org/jboss/aop/pointcut/PointcutStats" type="java.lang.NoClas sDefFoundError">java.lang.NoClassDefFoundError: org/jboss/aop/pointcut/PointcutS tats at org.jboss.jms.client.delegate.ClientConnectionFactoryDelegate.<cli nit>(ClientConnectionFactoryDelegate.java) at sun.misc.Unsafe.ensureClassInitialized(Native Method) ... On Stderr: ... Caused by: org.jboss.deployment.DeploymentException: No ClassLoaders found for: org.jboss.mq.server.jmx.Queue; - nested throwable: (java.lang.ClassNotFoundExcep tion: No ClassLoaders found for: org.jboss.mq.server.jmx.Queue) ...	0	0	https://issues.jboss.org/browse/JBPAPP-1276
10468	JBPAPP-1276	Since we are talking about EAP 4.3 GA, JBPAPP-491 seem to be exactly the issues I'm seeing. Though I wonder why JBPAPP-678 has not fixed the MQ issue. Please advice on how should I proceed. All other tests pass so here are the MD5 sums in case we're going to ignore: da465b8d24d16a3dc8ac30a1545bd7eb jbossws-client.jar b96d726b4b88d0f9b91381cb83b1ca45 jbossws-common.jar b51ad8a99ba7c3ed925caf1b0145d457 jbossws-core.jar 1d077383a5930bade2c2e1f828a95c06 jbossws-native.jar	0	0	https://issues.jboss.org/browse/JBPAPP-1276
10469	JBPAPP-1276	Please ignore the second failure, this is against JBoss EAP 4.3.0.GA and JBPAPP-678 did not make it in until JBoss EAP 4.3.0.GA_CP01 so that test is expected to fail. Do you have any further information on the first test that is failing, that is not failing locally for me. When run on it's own does that test still fail? Can you attach the junit files and test.log and server.log for that failure so I can see what is happening?	0	0	https://issues.jboss.org/browse/JBPAPP-1276

#	Requirement	Questions	Answered	Successfully Answered	URL
10470	JBPAPP-1276	Just before I start testing again. Last time I've set -Dorg.jboss.ws.eagerInitializeJAXBContextCache=true when starting the AS server. Do I need to set that when running the test suite as well (ant command line)?	0	0	https://issues.jboss.org/browse/JBPAPP-1276
10471	JBPAPP-1272	Hi Isaac, The notes referenced in the pdf (e.g. JBPAPP-916 [1]) don't have any explanation in the footer. Can you check that? Also, I found a typo which has been there since the previous version: JavaSE 6 includes includes support... should be: Java SE 6 includes support... Besides that, it looks alright. Thanks, Martin	1	1	https://issues.jboss.org/browse/JBPAPP-1272
10472	JBPAPP-1268	Ond?ej Žižka, First of all, not sure how your name is spelt, so taking the spelling JIRA did. Would it be possible to stop the QA process? There's a small bottleneck that we need to resolve in the fix provided. I'll hand it back to you once it's been fixed.	1	1	https://issues.jboss.org/browse/JBPAPP-1268
10473	JBPAPP-1268	Ond?ej Žižka, Assigning it back to you as customer is happy to go with the original fix for the moment. Could you also please confirm when you expect QA for this patch to finish and for it to be uploaded? In theory, it should take 5 biz days from the moment I pass it on to you. So, should be uploaded by 19th/20th November. Can you please confirm?	1	1	https://issues.jboss.org/browse/JBPAPP-1268
10474	JBPAPP-1268	Galder, we have rerun the testsuite last night and should be able to give you a result in an hour or so. There seem to be a few problems, but let us see if we can give you a repeatable error. For the WaekHashMap -> Map change, couldn't we update the testcases in the branch?	1	1	https://issues.jboss.org/browse/JBPAPP-1268
10475	JBPAPP-1268	Richard, I was just having a chat with Ondrej and he said the test pass Ok now. What exactly is it going on? Re: For the WaekHashMap -> Map change, couldn't we update the testcases in the branch? Well, I have already! At the beginning the testsuite from EAP 4.2.0.GA_CP04 was being run where weak hash map was still used but of course I updated the test in the branch. Re: The QA lab has just been taken down for 63 hours... What exactly does that mean? Ondrej was fine just a few minutes ago...	0	0	https://issues.jboss.org/browse/JBPAPP-1268
10476	JBPAPP-1262	Dominik, is this for EAP 4.x or for EAP 5? Can you please fill out the Affects and Fix Versions.	0	0	https://issues.jboss.org/browse/JBPAPP-1262
10477	JBPAPP-1261	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	1	1	https://issues.jboss.org/browse/JBPAPP-1261
10478	JBPAPP-1260	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-1260
10479	JBPAPP-1260	Rado, can you file bugs and link it to this JIRA for any issue that showed up on the failover and soak testing on the CR2 build?	0	0	https://issues.jboss.org/browse/JBPAPP-1260
10480	JBPAPP-1260	Dominik, were you able to run the failover tests with the fixes from the linked JIRA's? Can you comment on the latest status? Are there any new issues?	0	0	https://issues.jboss.org/browse/JBPAPP-1260
10481	JBPAPP-1227	Patch applied JBPAPP_4_2_0_GA_CP branch. Rev 78994.	0	0	https://issues.jboss.org/browse/JBPAPP-1227
10482	JBPAPP-1222	Has anyone gone through the DB2-specific JIRA issues for the community version of Hibernate? If the JBPAPP issues for DB2 were created just from unit test failures, then there may be more issues in the community version that are not unit tested yet. It would be a good idea to check if there is anything important identified in the community version and document it as known for this CP, then I can plan to fix it for the next CP.	0	0	https://issues.jboss.org/browse/JBPAPP-1222
10483	JBPAPP-1222	There are some open issues, but very few with test cases attached. So, it would be good to select some of the issues and build a test case for them. I can build them, but I'd need the selected issues. This JIRA query can be helpful: http://opensource.atlassian.com/projects/hibernate/secure/IssueNavigator.jspa?reset=true&&type=1&type=5&query=db2&summary=true&description=true&body=true&environment=true&resolution=-1&status=1&status=4&status=10000&sorter/field=updated&sorter/order=DESC&sorter/field=votes&sorter/order=DESC (you may want to add the "Votes" to your view) These are the most voted issues, but I saw in the comments that one of them won't be fixed and another doesn't looks like an issue. Maybe it is time to close them then? HHH-2763 HHH-817 HHH-1348 HHH-2160	1	1	https://issues.jboss.org/browse/JBPAPP-1222
10484	JBPAPP-1214	Is this tag ready? Can you please list which fixes are included in it since the last CP? Cheers, Fernando	1	1	https://issues.jboss.org/browse/JBPAPP-1214
10485	JBPAPP-1214	No, it hasn't been created yet. Should I do this before finishing unresolved issues, or wait until everything is done?	1	1	https://issues.jboss.org/browse/JBPAPP-1214
10486	JBPAPP-1199	JBAOP-633 is closed, can you confirm this fix is in the 1.5.5 CP branch and that it will be in the 1.5.5.cp03 release?	1	1	https://issues.jboss.org/browse/JBPAPP-1199
10487	JBPAPP-1180	How do you revert back the workflow status?	1	1	https://issues.jboss.org/browse/JBPAPP-1180
10488	JBPAPP-1180	Martin, UnifiedInvokerHaTransactionStickyUnitTestCase and UnifiedInvokerHaUnitTestCase are basic unit test cases and I've just run them from Eclipse successfully. How are you running these tests? What were the failures? Could you attach the unit test reports for these two classes? In the mean time, I'm specting the issue reported by the customer when testing this patch.	0	0	https://issues.jboss.org/browse/JBPAPP-1180
10489	JBPAPP-1168	Why did Seam migrate to xsd files? What advantage did that give the project?	0	0	https://issues.jboss.org/browse/JBPAPP-1168
10490	JBPAPP-1131	Which version o Hibernate Core are you using? Gail did a port of getPostCollectionRecreateEventListeners() into the production version to ensure Hibernate Search work with it.	0	0	https://issues.jboss.org/browse/JBPAPP-1131
10491	JBPAPP-1029	We do have jbossws "common", "framework" and "spi", besides the main jbossws build, which also produces jbossws-native42. We don't have any "integration" module. What is the repository.jboss.org module for it? Is this a new thing?	1	1	https://issues.jboss.org/browse/JBPAPP-1029
10492	JBPAPP-1029	And this separation happened between 2.0.1.SP2_CP03 and 2.0.1.SP2_CP04? We did not need any "integration" to build CP03. This kind of refactoring does not seem appropriate for a CP branch. Are you sure this is not produced by the main WS build (which is also producing native42 for us)? You can also check that http://repository.jboss.org/jboss has no jbossws-integration module, nor is one mentioned in the component-info.xml of jbossws-native42: http://repository.jboss.org/jboss/jbossws-native42/2.0.1.SP2_CP03-brew/component-info.xml AFAIK the integration code was separated for JBoss AS 5, but that is a different version of the WS.	1	1	https://issues.jboss.org/browse/JBPAPP-1029
10493	JBPAPP-1029	We don't have this step in what Heiko gave us (Deepak). All we do is to build JBoss WS core which also produces the native42 bits: svn export http://anonsvn.jboss.org/repos/jbossws/stack/native/tags/jbossws-native-2.0.1.SP2_CP03 jbossws # Copy resources cp %{SOURCE3} jbossws-jboss42-resources.zip popd mv ant.properties.example ant.properties # Build jbossws ant -Djboss42.home=$JBOSS_HOME -Djboss.server.instance=all -Dchecksum.ok=true jars We do get these "resources" from somewhere. Deepak, the instructions to get the Source3 are missing in the spec file. Can you fill that in please?	1	1	https://issues.jboss.org/browse/JBPAPP-1029
10494	JBPAPP-1000	Pavel, can you determine the minimum hardware requirements to run EAP 4.x. Production server config would be a good candidate, minimum would be server startup and running a sample app like the jmx-console would be sufficient.	1	1	https://issues.jboss.org/browse/JBPAPP-1000
10495	JBPAPP-1000	Isaac, can you add the minimum hardware requirements to the installation guide?	1	1	https://issues.jboss.org/browse/JBPAPP-1000
10496	JBPAPP-1000	Pavel, a couple of questions: 1) What CPUs does 'modern' refer to? All 32bit and 64bit processors? We need to be specific for this section. 2) What is the configuration of a 'simple application'? Is a simple application the most common usage for users? If not, perhaps we should mention specifications for the most common setup s well in order to not lead customers astray. Thanks, Isaac	1	1	https://issues.jboss.org/browse/JBPAPP-1000
10497	JBPAPP-983	Rajesh, was the EAP 4.2 certified as well?	1	0	https://issues.jboss.org/browse/JBPAPP-983

#	Requirement	Questions	Answered	Successfully Answered	URL
10498	JBPAPP-978	FYI on javadoc problem This javadoc problem was seen some time ago and is related to a bug in the JDK. Following are are my notes from when I looked into it. Looks as though I updated all versions exce[pt Branch_2_4. I've now added in the change to Branch_2_4 so it won't happen next time. Notes: There is a JDK bug (http://bugs.sun.com/bugdatabase/view_bug.do?bug_id=5082928) which presents itself as a java.util.Missing ResourceException when you try to compile the javadoc for JGroups using jdk1.5.0_06 or jdk1.5.0_11. I've included an example of the exception at the end of this mail. In a nutshell, versions of Javadoc bundled with JDK 1.5.0 have problems handling Javadoc text containg the characters "<A" in succession - they try to interpret it as an HTML anchor and then can't find the appropriate error message text and throw the exception. This bug is fixed in JDK 6. There is a workaround for the bug: replace "<A" with the equivalent <A. By playing around a bit, I found that this workaround: (i) prevents javadoc from throwing the exception, but does not generate correct javadoc for the element containing the <A with jdk1.5.0_06 (ii) prevents javadoc from throwing the exception, and does generate correct javadoc for the element containing the <A with jdk1.5.0_11 Here is a list of JGroups sourcefiles where this problem arises (I got these error messages using another trick mentioned in the bug report): src/org/jgroups/blocks/RequestCorrelator.java:703: warning - Malformed link: Stack<Address>. src/org/jgroups/util/Digest.java:34: warning - Malformed link: Map<Address, Entry> I've replaced the "<A" with <A in all cases, rebuilt the Javadoc and looked at it - everything seems OK with jdk1.5.0_11. Should I update the codebase with these changes? Richard	1	1	https://issues.jboss.org/browse/JBPAPP-978
10499	JBPAPP-978	Please do. Do you know if the resulting javadocs without your fix are generated correctly or if we should incorporate your patch and rebuild 2.4.4 to get proper javadocs?	1	1	https://issues.jboss.org/browse/JBPAPP-978
10500	JBPAPP-966	This is issue isn't fixed in Jboss 5.1.0GA (as downloaded from jboss site) with jbossws-native-3.1.2.GA Adding link to jboss-common-client.jar to classpath of wsrunclient does not make any changes. Stacktrace is (watch that string numbers in Provider and ProviderLoader changed): Exception in thread "main" java.lang.IllegalStateException: Failed to load javax.xml.ws.spi.Provider: org.jboss.ws.core.jaxws.spi.ProviderImpl at javax.xml.ws.spi.ProviderLoader.loadProvider(ProviderLoader.java:94) at javax.xml.ws.spi.Provider.provider(Provider.java:87) at javax.xml.ws.Service.<init>(Service.java:79) at org.jbia.ws.HelloService.<init>(HelloService.java:45) at org.jbia.ws.HelloWsClient.main(HelloWsClient.java:18) Caused by: java.lang.ClassNotFoundException: org.jboss.ws.core.jaxws.spi.ProviderImpl at java.net.URLClassLoader$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:276) at java.lang.ClassLoader.loadClass(ClassLoader.java:251) at javax.xml.ws.spi.ProviderLoader.loadProvider(ProviderLoader.java:88) ... 4 more Could you explain step by step how did you fix it? What does it mean "resolved in WS build" if it doesn't work in distributable jboss-5.1.0.GA ?	0	0	https://issues.jboss.org/browse/JBPAPP-966
10501	JBPAPP-943	While I begin work on this, do you know if the EAP 4.2 version and fixed issues be ready for the docs freeze on the 9th of July?	1	1	https://issues.jboss.org/browse/JBPAPP-943
10502	JBPAPP-932	Do we need to upgrade to JBossXB 1.0.0 SP3? What about jaxr?	0	0	https://issues.jboss.org/browse/JBPAPP-932
10503	JBPAPP-931	Hibernate entity manager and annotations will continue to be patched for EAP 4.2 CP04 / 4.3 CP02. The patches will be backported in the next release.	0	0	https://issues.jboss.org/browse/JBPAPP-931
10504	JBPAPP-918	It looks like the version for Entity Manager needs to be something different from 3.2.1.GA_CP02 to distinguish it from the previous version which was incorrectly set to 3.2.1.GA_CP02 for the code tagged v3_2_1_GA_CP01. The code has already been tagged as v3_2_1_GA_CP02 with the same version (3.2.1.GA_CP02) as v3_2_1_GA_CP01. Should I re-tag the branch as v3_2_1_GA_CP03 with version 3.2.1.GA_CP03 to keep the versions distinct? The code freeze is today so please let me know as soon as possible.	0	0	https://issues.jboss.org/browse/JBPAPP-918
10505	JBPAPP-910	Hi Clebert, is this done? Do we need a new JB Mesaging (we have 1.4.0.SP3_CP02)?	0	0	https://issues.jboss.org/browse/JBPAPP-910
10506	JBPAPP-910	Resolving this, the db2 persistence file has been tested and committed to the JBoss Messaging CP branch. All Messaging tests pass against DB2 9.1 Clebert, can you make sure to upload the db2 persistence file to the repository when you cut off the next JBM CP release? It will then make its way into the EAP example docs	0	0	https://issues.jboss.org/browse/JBPAPP-910
10507	JBPAPP-887	I am sorry, I do not understand the reason for the question. What problem are you trying to solve?	1	1	https://issues.jboss.org/browse/JBPAPP-887
10508	JBPAPP-887	In most cases, we see a jboss-<component>.jar up on repository.jboss.org, it's just that this one is different. Is the juddi-saaj.jar the only jar needed?	1	1	https://issues.jboss.org/browse/JBPAPP-887
10509	JBPAPP-886	This came too late, can you still include the fix? If not, please move it to the next CP versions, please.	1	0	https://issues.jboss.org/browse/JBPAPP-886
10510	JBPAPP-885	This came too late in the cycle, can you still include the fix by freeze date? If not, please move it to the next CP cycle please.	1	1	https://issues.jboss.org/browse/JBPAPP-885
10511	JBPAPP-878	TCK4 test should be run before releasing. (Changes in the API signatures).	0	0	https://issues.jboss.org/browse/JBPAPP-878
10512	JBPAPP-871	Clebert, can you take at this issue? This test case was added as part of the feature in JBAS-4945 Does org.jboss.ejb.plugins.jms.DLQHander handle DLQ's in jboss messaging as well? Please take a look at the analysis below from Martin. He doesn't see org.jboss.ejb.plugins.jms.DLQHander in the logs for EAP 4.3 From Martin: I was looking at the ResendMDBUnitTestCase failure and I'd like to give you a quick overview of what it's about. I first thought it was only testing JBoss Messaging and therefore used only in EAP 4.3, but that's not correct. In fact, it is being run on both releases (and it was first developed for Branch_4_2). Apparently it runs fine on 4.2. So how it works: The testcase first deploys 3 Message Driven Beans. The first one (MDBA) is connected to queue/A and whenever it reads a message, it does setRollbackOnly(). By default, the message is resent 10 times and then it should go to DLQ (Dead Letter Queue), which is set to be queue/B for this MDB. The second MDB (MDBB) is connected to queue/B and and whenever it gets a message, it resends it to queue/C. The third MDB (MDBC) is connected to queue/C and it does the same as the first MDB - when it receives a message, it just rolls it back. And then finally the message should go to DLQ, which is set to queue/D. The testcase sends a message to queue/A and then waits for it on queue/D as it should get there eventually. It works fine with JBoss MQ, but for some reason not with JBoss Messaging. All I can see in the log is that the message is 10 times rejected by MDBA, but it seems it never gets to the DLQ afterwards. For example JBoss MQ writes this after the 10 attempts: WARN [DLQHandler] Message resent too many times; sending it to DLQ; message id=ID:7-12136131402121 Whereas JBoss Messaging doesn't write anything and not even in the DEBUG level could I find any information of what was happening after those 10 attempts. But definitely the message never makes it to the second MDB (there is a log.info)	1	1	https://issues.jboss.org/browse/JBPAPP-871
10513	JBPAPP-871	Clebert, did you get a chance to look at the above comment?	1	1	https://issues.jboss.org/browse/JBPAPP-871
10514	JBPAPP-871	Isaac, can you please get in touch with Clebert to obtain a draft of the documentation bit? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-871

#	Requirement	Questions	Answered	Successfully Answered	URL
10515	JBPAPP-867	This already exists in AS5 branch - does it need to go in 4.2.x community before EAP?	1	1	https://issues.jboss.org/browse/JBPAPP-867
10516	JBPAPP-867	No, if you can backport it into the EAP CP branch. Is the change to the AS code only? P.S.: Freeze time approaching quicly. ;-)	0	0	https://issues.jboss.org/browse/JBPAPP-867
10517	JBPAPP-867	Chris, is there an HHH issue for this? Also, this issue is marked as a feature request. Should this be removed from the CP branch?	1	0	https://issues.jboss.org/browse/JBPAPP-867
10518	JBPAPP-865	Galder, is there any more information that you can provide about this issue and how it was fixed for release notes? Thanks, Isaac	1	0	https://issues.jboss.org/browse/JBPAPP-865
10519	JBPAPP-858	Rajesh, this -bin will be in this CP. Can you please add running one installation from -bin in addition to the regular RPM installation to the test plan? One from 4.2 and one from 4.3 would be what would make more sense. Note: You cannot install just the -bin, you need a regular jbossas installed on the server first. The -bin is for an _additional_ installation only, it cannot be used in place of a regular RPM jbossas installation. If you only have one version of the AS, it will have to be the regular RPM installation (or the old ZIP or installer ones). Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP-858
10520	JBPAPP-851	Darran, will this fix happen in the AS code or in WS code?	1	1	https://issues.jboss.org/browse/JBPAPP-851
10521	JBPAPP-823	Ok, thanks for checking this. W.r.t. jbossws-context.war I've got another idea: Can we leave this as an archive? Then we would patch it like any other jar file. And in the next CP04 release we would make it an archive again in the full distributions to keep it consistent between all distros. Or is there a reason why this is now an exploded war?	1	1	https://issues.jboss.org/browse/JBPAPP-823
10522	JBPAPP-823	I've slightly modified dist-diff to pick up jbossws-context.war and verified it works well. So I vote for making this dir an archive again and do the same for the other distributions in the next CP release. If we don't do so, we won't have consistent patch instructions. Sure we can remove that file and copy a whole dir when patching from GA, or CP01 or CP02 to CP03. But what do we say to a customer who patches from GA to CP04 and to another customer who patches from CP03 to CP04? The second one would already have a directory (from patching to CP03) so he wouldn't need to remove the jbossws-context.war file, the first one would still stick with that war archive and would need to perform this step.	1	1	https://issues.jboss.org/browse/JBPAPP-823
10523	JBPAPP-823	Due to JBPAPP-733 we cannot provide an archive :(Chris, we need to do something similar we do for Seam. So after you have built the new CP, you provide the Seam node maually in install-process.xml, right? <node name="155"> <action class="com.jboss.jbossnetwork.product.jbpm.handlers.NotificationActionHandler" config-type="bean"> <notification>To patch Seam to 1.2.1.EAP_4.2_CP03 rename the old directory #{jbossHomeDir}/../seam to #{jbossHomeDir}/../seam-1.2.0.AP and copy the new Seam directory from #{patchFolder}/seam to #{jbossHomeDir}/../seam </notification> </action> <transition name="success" to="156"/> </node> And now we also need another node for the jbossws-context.war, please add something like this: <node name="156"> <action class="com.jboss.jbossnetwork.product.jbpm.handlers.NotificationActionHandler" config-type="bean"> <notification>To patch jbossws-context.war rename the old file or directory #{jbossServerHomeDir}/deploy/jbossws.sar/jbossws-context.war to #{jbossServerHomeDir}/deploy/jbossws.sar/jbossws-context.war.replaced_by_CP03 and copy the new directory from #{patchFolder}/jboss-as/server/all/deploy/jbossws.sar/jbossws-context.war to #{jbossServerHomeDir}/deploy/jbossws.sar/jbossws-context.war </notification> </action> <transition name="success" to="157"/> </node> and don't forget to increase the last node's number, in this case 157, but that may change since you have added the 2 init scripts I mentioned above to patches.build.xml. And same way like you add the Seam directory to the CP, please also copy the jbossws-context.war directory from EAP-4.2_CP03 to patch_folder/jboss-as/server/all/deploy/jbossws.sar and zip the whole CP again.	1	1	https://issues.jboss.org/browse/JBPAPP-823
10524	JBPAPP-812	Who decided that this is going to be part of EAP5?	0	0	https://issues.jboss.org/browse/JBPAPP-812
10525	JBPAPP-812	Is this Issue a "Blocker" or "Critical" priority for EAP GA? If yes. please adjust the priority to indicate that the Jira should be considered for CR3.	0	0	https://issues.jboss.org/browse/JBPAPP-812
10526	JBPAPP-785	The RC3 build has the jar in the following locations: junit: Source distribution: ./jboss-as/thirdparty/junit/lib/junit.jar (this location is populated during build, downloads from thirdparty repo) ./jboss-as/ejb3/docs/examples/xpetstore/lib/ant/junit/junit.jar ./jboss-as/tools/lib/junit.jar ./jboss-as/tools/lib/ant-junit.jar (not sure if ant-junit.jar falls into the same issue) None in the binary zip: Docs bundle packages junit.jar /doc/examples/server-config-guide/lib/junit.jar JBPM: Binary Zip includes it at: jboss-eap-4.3/seam/lib/jbpm-3.1.4.jar Src zip has it at: jboss-eap-4.3-src/seam/lib/jbpm-3.1.4.jar If these have been removed from the rpm composes, how did they end up in the zip? (zip's built from rpm's) The EAP build downloads jbpm and bpel in its thirdparty while building. Is that allowed? ./jboss-as/thirdparty/jbpm ./jboss-as/thirdparty/jbpm/jpdl ./jboss-as/thirdparty/jbpm/jpdl/component-info.xml ./jboss-as/thirdparty/jbpm/jpdl/lib ./jboss-as/thirdparty/jbpm/jpdl/lib/jbpm-identity.jar ./jboss-as/thirdparty/jbpm/jpdl/lib/jbpm-console.war ./jboss-as/thirdparty/jbpm/jpdl/lib/jbpm-jpdl.jar ./jboss-as/thirdparty/jbpm/jpdl/lib/jbpm-jmx.jar ./jboss-as/thirdparty/jbpm/bpel ./jboss-as/thirdparty/jbpm/bpel/component-info.xml ./jboss-as/thirdparty/jbpm/bpel/lib ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel-jbossws10.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel-jbossws12.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel.sar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel-jbossws4ee.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel-config.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel-tools.jar ./jboss-as/thirdparty/jbpm/bpel/lib/jbpm-bpel.war	0	0	https://issues.jboss.org/browse/JBPAPP-785
10527	JBPAPP-757	This probably is a CSS issue. Can we fix this in the next CP?	0	0	https://issues.jboss.org/browse/JBPAPP-757
10528	JBPAPP-757	Jay can you provide the content to be added?	1	1	https://issues.jboss.org/browse/JBPAPP-757
10529	JBPAPP-757	Can you please rewrite this section (refer to http://www.redhat.com/docs/manuals/jboss/jboss-soa-4.2/html/JBPM_Users_Guide/jpdlgraphicalprocessdesigner.html and https://engineering.redhat.com/docbot/en-US/JBoss_SOA_Platform/4.2/html/SOA_ESB_JBPM_Integration_Guide/ch01s04.html for examples).	0	0	https://issues.jboss.org/browse/JBPAPP-757
10530	JBPAPP-756	does this also apply to 4.2 branch?	1	1	https://issues.jboss.org/browse/JBPAPP-756
10531	JBPAPP-756	Hey Jay, I have attached am image of what I believe is the issue you are talking about. Is the issue indeed about how the red round dots with the numbers do not seem to line up correctly with the text they are meant to be associated with? If this is the problem then I suggest either removing the use of these image bullet points in favour of the usual listing system (as I haven't seen images used as bullet points in other docs before), or it would be a CSS issue with spacing as the issue i believe is caused from the size of the images. If I am going down the totally wrong track then please let me know :) Cheers, Isaac	1	1	https://issues.jboss.org/browse/JBPAPP-756
10532	JBPAPP-756	Isaac, was this resolved in the last doc drop you provided? I assume it was not since jira issue is still open. Deferring this until next CP since it's minor. Please update this once resolved.	0	0	https://issues.jboss.org/browse/JBPAPP-756
10533	JBPAPP-755	Jay, Are we talking about one of the files included in the docs folder? Which readme.txt is this?	1	1	https://issues.jboss.org/browse/JBPAPP-755
10534	JBPAPP-754	Do we need to update the Release Notes? Or changelog.txt? Where is this changelog.txt?	0	0	https://issues.jboss.org/browse/JBPAPP-754

10559	JBPAPP-527	Juca, Can you check the version of the JDBC driver we test and address this JIRA?	1	1	https://issues.jboss.org/browse/JBPAPP-527
10560	JBPAPP-527	We test on this driver: Specification-Title: Oracle JDBC driver classes for use with JDK14 Sealed: true Created-By: 1.4.2_08 (Sun Microsystems Inc.) Implementation-Title: ojdbc14.jar Specification-Vendor: Oracle Corporation Specification-Version: Oracle JDBC Driver version - "10.2.0.2.0" Implementation-Version: Oracle JDBC Driver version - "10.2.0.2.0" Implementation-Vendor: Oracle Corporation Implementation-Time: Tue Jan 24 08:55:21 2006 There's also this other available in the lab, which is the latest as per Oracle's website: Specification-Title: Oracle JDBC driver classes for use with JDK14 Created-By: 1.4.2_14 (Sun Microsystems Inc.) Implementation-Title: ojdbc14_g.jar Specification-Vendor: Oracle Corporation Specification-Version: Oracle JDBC Driver version - "10.2.0.4.0" Implementation-Version: Oracle JDBC Driver version - "10.2.0.4.0" Implementation-Vendor: Oracle Corporation Implementation-Time: Sat Feb 2 11:53:00 2008 Can you please confirm which version should we use in the tests from now on? A more up-to-date version from the lab or 10.2.0.3 ?	1	1	https://issues.jboss.org/browse/JBPAPP-527
10561	JBPAPP-502	what's the status?	0	0	https://issues.jboss.org/browse/JBPAPP-502
10562	JBPAPP-502	Jimmy, is this change important enough to get done in CPs? Or can it wait till 5.0?	0	0	https://issues.jboss.org/browse/JBPAPP-502
10563	JBPAPP-488	When is this expected?	0	0	https://issues.jboss.org/browse/JBPAPP-488
10564	JBPAPP-413	Clebert, right. The HSQL clustered will be used for testing purposes. There will be instructions in the installation guide to configure a different db before using EAP. Coming to that, Clebert, can you point me to instructions for setting up a different db for clustered config? I saw the basic instructions on the messaging user guide. Is it the same for the clustered config as well?	1	1	https://issues.jboss.org/browse/JBPAPP-413
10565	JBPAPP-363	I am interested in configuring the JSessionID cookie name. However, I did not find the appropricate tag I can use from the jboss-web.xml. Could you tell me what I should use?	1	0	https://issues.jboss.org/browse/JBPAPP-363
10566	JBPAPP-360	Brian, the config files are not changed. Can you take a look at it? I am glad atleast this was brought to your attention now. The jgroups upgrade is already in place in branch JBPAPP_4_2. If you can change the config files, it will automatically be picked up in the next build for testing.	1	1	https://issues.jboss.org/browse/JBPAPP-360
10567	JBPAPP-360	Verified that bundling is enabled for all services except messaging. Is this intended? */deploy/jboss-messaging.sar/hsqldb-persistence-service.xml still has bundling disabled for both data and control channels.	1	1	https://issues.jboss.org/browse/JBPAPP-360

#	Requirement	Questions	Answered	Successfully Answered	URL
10568	JBPAPP-355	Yep Adrian wisely fixed the code and added a new version in the repository(1.3.4-jboss). The previous version was 1.3.4-brew. Oswego is not releasing any more builds because they are in maintenance. Matter of fact, these fixes weren't released as a package, but were available as individual files on the site. 1.3.4 is the last version that will ever be released from them. The original problem that Adrian fixed is that values, keySet, and entrySet toArray() methods were not thread safe. Adrian put a fix in there that used an iterator to build a secondary collection that we then call toArray with. This was the bug that was fixed. JBAS-4698. It doesn't look like that fix was ever moved into the cp. Actually there were a couple fixes in the oswego libraries that Adrian fixed, that didn't look like they were in EAP 4.2 CP/4.3. The version of the oswego libaries that was released for this fix(it went into 4.2.2) was 1.3.4-jboss(https://svn.jboss.org/repos/repository.jboss.org/oswego-concurrent/1.3.4-jboss/) The problem with the 1.3.4-jboss fix is that if an entry is removed, then it leaves a null in the map. When iterating through the collections the null would be propagated to the temporary collection being used to convert to an array. The end result was that when toArray() is called, it throws a null pointer exception. So the new version 1.3.4-jboss-update1 has that fix in there. So I put a check for a null in there for the values, keyset, and entry collections. This version of the oswego libraries that was just released is 1.3.4-jboss-update1.(https://svn.jboss.org/repos/repository.jboss.org/oswego-concurrent/1.3.4-jboss-update1). My plan is to change the build-thirdparty.xml file to reflect the new version. I also had to change the component-info.xml file in jbossxb version 1.0.0SP1-brew to reflect the compatibility with the new version of concurrent.jar.(http://repository.jboss.com/jboss/jbossxb/1.0.0.SP1-brew/component-info.xml) I had assumed that the same build process for EAP as AS, is that an incorrect assumption. The build-thirdparty.xml file holds the versions that are to be looked up in the repository. The version is then fetched from the repository and build. I have put a new version up in the repository. The build seems to run fine with the new entry in build-thirdpary. Does EAP build do the same thing? I had made the assumption that it did. Jay:)	1	1	https://issues.jboss.org/browse/JBPAPP-355
10569	JBPAPP-355	I provided the patch files to make a brew build. I also included the original source. They are at http://repository.jboss.com/oswego-concurrent/1.3.4-jboss-update1/src/ Why aren't the patch files enough. Do I have to attach this to this defect also? Cheers, Jay:)	1	1	https://issues.jboss.org/browse/JBPAPP-355
10570	JBPAPP-353	Ron, i see that the version of remoting has been upgraded to 2.2.2.SP1.patch01-brew for 4.2.0.GA_CP02 and 4.3.0.GA EAP. Is that the version you mean by "2.2.2.GA_CP01" above?	0	0	https://issues.jboss.org/browse/JBPAPP-353
10571	JBPAPP-353	By the way, what are the current freeze dates for EAP 4.3.0.GA and 4.2.0.GA_CP02?	1	1	https://issues.jboss.org/browse/JBPAPP-353
10572	JBPAPP-349	If a feature is needed, it must be discused in the forums with Adrian, first. Where is the discussion thread?	0	0	https://issues.jboss.org/browse/JBPAPP-349
10573	JBPAPP-349	is this really a blocker for the 4.3 release?	1	1	https://issues.jboss.org/browse/JBPAPP-349
10574	JBPAPP-343	Patrick, what do you think? This is for the RPM sets.	1	1	https://issues.jboss.org/browse/JBPAPP-343
10575	JBPAPP-334	Just create a 1.2.0.GA_CP01 release out of this branch. https://svn.jboss.org/repos/common/common-old/branches/JBossCommon_1_2_0_GA_CP/ The fix is already there.	1	1	https://issues.jboss.org/browse/JBPAPP-334
10576	JBPAPP-334	Should we upgrade to 1.2.1.GA for the EAP 4.3 BETA? Dimitris says it contains only this fix.	0	0	https://issues.jboss.org/browse/JBPAPP-334
10577	JBPAPP-332	So we need a JBossWS 1.2.1.GA_CP02 for EAP 4.2 CP01 and EAP 4.3 CP01 Could you please coordinate with the WS team so they incorporate the change you want?	1	1	https://issues.jboss.org/browse/JBPAPP-332
10578	JBPAPP-332	Darran, is JBossWS 1.2.1.GA_CP branch ready to be tagged? We need WS build integrated into EAP 4.2.0_CP02 by 01/22.	0	0	https://issues.jboss.org/browse/JBPAPP-332
10579	JBPAPP-330	I didn't get the problem, because Seam 1.2.1 uses the commons-beanutils-1.7.0.jar without the commons-collections classes in it. So what's the problem?	1	1	https://issues.jboss.org/browse/JBPAPP-330
10580	JBPAPP-330	Hi Marek, here is my proposal: We fix the <componentref name="apache-beanutils" version="1.7.0-brew"/> so it does not include the collections classes. They should not be thre in the first palce (i.e. we should be uploading commons-beanutils-bean-collections-1.7.0.jar not commons-beanutils-1.7.0.jar, even if we don't use the funky Apache naming of that JAR). This will not affect the AS as it explicitly includes <componentref name="apache-collections" version="3.1-brew"/> so it won't miss the removed classes. What I am concerned now is that the spurious collection classes in beanutils _in theory_ are the same ones from our collections 3.1-brew, so Seam should be seeing the same malfunction. It doesn't matter if the classes come from the same JAR as beanutils or from a separate JAR. Which common-collections does Seam use after all? Is there a special one that does not have the problem that is different from the one in the AS? How do you ensure these are used and not the ones already loaded by the container? Regards, Fernando	1	1	https://issues.jboss.org/browse/JBPAPP-330
10581	JBPAPP-330	Jon, can you flip the EAP branch of JBoss AS to use your new clean beanutils? Make sure it works first, of course. Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP-330
10582	JBPAPP-318	:(Don't forget http://jira.jboss.com/jira/browse/JBSEAM-1059 then too. Who is going to do this back port ? I really hope you checked that you can actually backport it safely without all the other fixes in Seam 1.2.1.	0	0	https://issues.jboss.org/browse/JBPAPP-318

#	Requirement	Questions	Answered	Successfully Answered	URL
10583	JBPAPP-314	1. Most of the linked Remoting issues are related somehow to JBossMessaging, in the sense that they were related to JBM test failures, or were simply pointed out by Tim Fox or Clebert Suconic. These are: JBREM-641 "re-implement the callback polling for http transport to reduce latency" JBREM-743 "For polling callback handler, org.jboss.remoting.Client.addListener() should create only one CallbackPoller per InvokerCallbackHandler? JBREM-747 "org.jboss.remoting.transport.Connector should unregister server invoker from MBeanServer" JBREM-751 "Eliminate unnecessary "Unable to process control connection:" message from BisocketServerInvoker: JBREM-754 "Reset timeout on each use of HttpURLConnection" JBREM-755 "Make ConnectorValidator parameters configurable" JBREM-756 "CallbackPoller should shut down if too many errors occur." JBREM-757 "Implement quick Client.removeListener() for polled callbacks." JBREM-761 "NPE in BisocketServerInvoker$ControlConnectionThread" JBREM-765 "Add a separate timeout parameter for callback clients" JBREM-766 "Guard against "spurious wakeup" from Thread.sleep()" JBREM-767 "Avoid deadlock in callback BisocketClientInvoker when timeout == 0" JBREM-774 "BisocketClientInvoker.replaceControlSocket() and handleDisconnect() should close control socket" JBREM-775 "MicroSocketClientInvoker.initPool() should omit pool from log message" JBREM-778 "BisocketServerInvoker.start() creates a new static Timer each time" JBREM-782 "Remove network i/o from synch block in ServerInvokerCallbackHandler.getCallbackHandler()" JBREM-783 "Remove network i/o from synch blocks that establish and terminate LeasePingers" JBREM-784 "Use separate maps for control sockets and ordinary sockets in BisocketClientInvoker" JBREM-785 "BisocketClientInvoker.transport() inadvertently uses listenerId member variable" JBREM-787 "Move network i/o in BisocketClientInvoker constructor to handleConnect()" JBREM-788 "Access to BisocketClientInvoker static maps should be synchronized in handleDisconnect()" JBREM-790 "NPE in BisocketClientInvoker$PingTimerTask" JBREM-793 "Lease should synchronize access to client map" 2. Two of the issues come from support cases: JBREM-781 "Socket transport needs to provide to the client local address of a TCP/IP connection, as seen from the server" JBREM-791 "In HTTPClientInvoker remove newlines and carriage returns from Base64 encoded user names and passwords" 3. One issue I found in some other context, but since it involves a possible socket leak, it's probably worth fixing: JBREM-771 "MicroSocketClientInvoker can experience socket leaks"	1	1	https://issues.jboss.org/browse/JBPAPP-314
10584	JBPAPP-311	The one off patch JBPAPP-264 appears to have been incorrectly noted as fixed in EAP 4.2 CP01. This JIRA was for incorporating the one-off patch into EAP 4.2 CP01 (based on the description). JBPAPP-264 should probably be removed from the EAP 4.2 CP01 change log and this one added. Based on the CP-related comments from Shelly McGowain in the one-off patch JIRA (this was apparently tested in CP01) and the fact that JBPAPP-314 was included (JBoss Remoting 2.2.2 GA contained this fix), I'd say we can close/resolve this issue after we get it in the right place. I'll mark JBPAPP-314 as having incorporated this change. I'll also resolve/close it. What shall we do for the fix version of JBPAPP-264 given that it was a one-off patch?	0	0	https://issues.jboss.org/browse/JBPAPP-311
10585	JBPAPP-304	Ok, sounds great. So besides from 1.2.1.GA already being available in SVN what/who else needs to do anything ?	0	0	https://issues.jboss.org/browse/JBPAPP-304
10586	JBPAPP-303	Move to CP02, as per Remy's complexity analisys?	1	1	https://issues.jboss.org/browse/JBPAPP-303
10587	JBPAPP-297	no need - just need to get them online	0	0	https://issues.jboss.org/browse/JBPAPP-297
10588	JBPAPP-278	comments from the duplicate ASPATCH issue that has been deleted: Darran Lofthouse [15/Aug/07 05:08 AM - Visible to JBoss Employee] Assigning to patch triage as this is technically a feature request. A number of customers have issues when they are attempting to use WSDL to Java with a WSDL that contains bound headers defined. In JBossWS 1.2.1.GA wstools just ignores these headers so the generated SEI does not reference the header type and the header types themselves are not generated. In the opposite direction Java to WSDL does support bound headers. The inclusion of this enhancement does not alter other scenarios for WSDLs that did not work they now start working. Non inclusion of this enhancement may be a barrier to some customers and could stop them upgrading to the platform, especially as we do not support JAX-WS. Darran Lofthouse [15/Aug/07 05:08 AM - Visible to JBoss Employee] Assigning to patch triage as this is technically a feature request. Non inclusion of this enhancement may be a barrier to some customers and could stop them upgrading to the platform, especially as we do not support JAX-WS. Ryan Campbell [16/Aug/07 05:50 PM] Are there test cases which will validate this new functionality? [Show »] Ryan Campbell [16/Aug/07 05:50 PM] Are there test cases which will validate this new functionality? Darran Lofthouse [16/Aug/07 05:54 PM] Every issue logged will be committed upstream and will either have it's own test case implemented specifically for it the only exception is if the issue can be reproduced with an existing test case or if an existing test case can be enhanced. So yes there is a set of new tests for this, there are a couple of minor dependent feature requests needed for this that also have their own test cases. [Show »] Darran Lofthouse [16/Aug/07 05:54 PM] Every issue logged will be committed upstream and will either have it's own test case implemented specifically for it the only exception is if the issue can be reproduced with an existing test case or if an existing test case can be enhanced. So yes there is a set of new tests for this, there are a couple of minor dependent feature requests needed for this that also have their own test cases. Ryan Campbell [17/Aug/07 03:43 PM] Since it sounds well-covered by tests, QE doesn't have any issue with this.	1	0	https://issues.jboss.org/browse/JBPAPP-278
10589	JBPAPP-266	We would need a jbossws 1.2.1.GA_CP01 uploaded to the repository.jboss.com so we could switch EAP AS 4.2.0.GA_CP01 to use it. Thomas, when could you get a build uploaded? The EAP AS CP01 freeze date is Aug 24th. Regards.	1	1	https://issues.jboss.org/browse/JBPAPP-266
10590	JBPAPP-266	Darran, What's ETA when all of these WS fixes will be ported to the CP branch? Some of the related JBWS issues have to reference to salesforce cases.	0	0	https://issues.jboss.org/browse/JBPAPP-266
10591	JBPAPP-266	thanks. can we get ETA for all 13 remaining WS issues? Is Aug 24th still feasible?	0	0	https://issues.jboss.org/browse/JBPAPP-266
10592	JBPAPP-251	so who would know ? :)	0	0	https://issues.jboss.org/browse/JBPAPP-251
10593	JBPAPP-233	can we close this issue now?	1	1	https://issues.jboss.org/browse/JBPAPP-233
10594	JBPAPP-233	are we going to be having HTML versions of the Arjuna docs?	1	1	https://issues.jboss.org/browse/JBPAPP-233
10595	JBPAPP-230	We will use either https://svn.jboss.org/repos/repository.jboss.org/jboss/remoting/2.2.0.SP4_CP02-brew/ or a Remoting 2.2.2.GA release, both which include these fixes. Ron, the code freeze for EAP AS is next week, how soon can you have a 2.2.2.GA (which also would support the JBM release) ready? P.S.: If possible we would like to propose that 2.2.2.GA be used in the EAP AS 4.2 CP01, so we would apply for the patch triage process to authorize that, if that could be out in time.	0	0	https://issues.jboss.org/browse/JBPAPP-230
10596	JBPAPP-230	who is getting these into remoting 2.2.2?	1	1	https://issues.jboss.org/browse/JBPAPP-230

#	Requirement	Questions	Answered	Successfully Answered	URL
10597	JBPAPP-229	Hi Carlo, who is going to produce a patch for the CP01?	1	1	https://issues.jboss.org/browse/JBPAPP-229
10598	JBPAPP-227	Jimmy, can we close this one?	0	0	https://issues.jboss.org/browse/JBPAPP-227
10599	JBPAPP-225	Should the appender reference be ASYNC like it is for the root element, or FILE as it is by default?	0	0	https://issues.jboss.org/browse/JBPAPP-225
10600	JBPAPP-225	Can you attach the latest jboss-log4j.xml so that I can have a look? I am fairly certain that org.jboss.ha should not have any appenders referenced (it gets them based on inheriting root), but I want to have a look to be sure we're on the same page.	0	0	https://issues.jboss.org/browse/JBPAPP-225
10601	JBPAPP-223	What is the impact of this appender not being commented? Does it affect performance or something else?	0	0	https://issues.jboss.org/browse/JBPAPP-223
10602	JBPAPP-223	Why was this reopened? The root category now uses ASYNC, as per Andy's comment....	1	1	https://issues.jboss.org/browse/JBPAPP-223
10603	JBPAPP-213	oh ? so the installer and the zip generated different content ? bummer. Which version should we (RHDS) use ? (note, currently we use the non-secured zip to allow the IDE to more easily start and run the server)	1	0	https://issues.jboss.org/browse/JBPAPP-213
10604	JBPAPP-199	JBossTS 4.2.3.SP4 is passed the JBossTS QA and available on the repository. I'm seeing some JBossAS testsuite failures with this version, but they may be unrelated. Is there a server from which I can get baseline testsuite results to compare? If not I'll have to run again on my (slow) machine.	1	1	https://issues.jboss.org/browse/JBPAPP-199
10605	JBPAPP-199	There are 2 known failures. What are you getting?	1	1	https://issues.jboss.org/browse/JBPAPP-199
10606	JBPAPP-196	why is this better to move *off* of a public mailing list where others can contribute information? ;) the problem is that sybase apparently makes no distinction between permanent and temporary tables. Why should one not be able to create temporary tables within a transaction? How does such a restriction make sense?	1	0	https://issues.jboss.org/browse/JBPAPP-196
10607	JBPAPP-196	Well I didn't want to talk about platform on a public mailing list. About sense and sybase... you know ;) Please tell us if it is possible to make hibernate not use ddl in transactions even create temporary tables. If it is too hard I guess it's late for the platform.	0	0	https://issues.jboss.org/browse/JBPAPP-196
10608	JBPAPP-196	Steve, the code freeze for AS 4.2 CP01 is Augist 24th. Do you have an ETA for this fix?	0	0	https://issues.jboss.org/browse/JBPAPP-196
10609	JBPAPP-196	Does this need release notes? If so, can you provide something in the format: Cause: Consequence: Fix: Result: Thanks!	1	0	https://issues.jboss.org/browse/JBPAPP-196
10610	JBPAPP-196	Strong, is this for EAP 5.x? If so, please move it to TBD EAP 5. Thanks.	1	0	https://issues.jboss.org/browse/JBPAPP-196
10611	JBPAPP-196	Anne, this issue was resolved as won't fix, Misty reopened it just to correct the release notes. since this issue affects to both eap4 & 5, i'd think set it to tbd would better, what do you think?	0	0	https://issues.jboss.org/browse/JBPAPP-196
10612	JBPAPP-195	Josh, is this being tracked in BZ? Was this addressed in time for RC6?	0	0	https://issues.jboss.org/browse/JBPAPP-195
10613	JBPAPP-195	Is this meant to go into the docs? I understood that this was just being jotted down for future reference internally. Do you want me to put this into the release notes for the platform?	0	0	https://issues.jboss.org/browse/JBPAPP-195
10614	JBPAPP-195	Well these are configuration options set for the test suite. Most of them are just optional. I think that having notes about options that users could have to change will improve user experience. . On https://wiki.corp.jboss.com/bin/view/IT/SystemServiceQaLab are described the database installations though this particular information is not always easy to extract. Did you included info from that url or just the options mentioned in the issue description?	0	0	https://issues.jboss.org/browse/JBPAPP-195
10615	JBPAPP-187	i.e. JBoss EAP 4.2.0.RC5 for 05/22 build Ram, are you ok with proposed version string?	0	0	https://issues.jboss.org/browse/JBPAPP-187
10616	JBPAPP-178	I added the following comments and left the old type-mappings in place instead of duplicating them or changing the type-mapping names which might break the current applications in place. Updated the following: 1 & 2) <type-mapping> <name>Oracle9i</name> <!-- | This type-mapping applies both to Oracle 9i and Oracle 10g | Make sure that you have the latest Oracle 10g version of ojdbc14.jar --> 3) <type-mapping> <name>MS SQLSERVER2000</name> <!-- | This type-mapping applies both to MS SQLSERVER 2000 and MS SQLSERVER 2005 --> 4.) <type-mapping> <name>DB2</name> <!-- | This type-mapping applies to DB2 V7.2 and V8.0 --> 7.) <type-mapping> <name>PostgreSQL 8.0</name> <!-- | This type-mapping applies to PostgreSQL V8.0 and V8.1 -->	0	0	https://issues.jboss.org/browse/JBPAPP-178

The production dir isn't present in the src-zip. Only in source zip: seam/* same as in RC7	0	0	https://issues.jboss.org/browse/JBPAPP-114
10627	JBPAPP-114	Deepak, are we all set for a code freeze (CP01) on Aug 24th? Do we still have any issues BTW, or is this just a placeholder so we remember to check this at each release?	1	0	https://issues.jboss.org/browse/JBPAPP-114
10628	JBPAPP6-1741	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 901281|https://bugzilla.redhat.com/show_bug.cgi?id=901281] Jim, can you share some details about changes, mainly motivation for adding BindingProvider properties? Tank you.	0	0	https://issues.jboss.org/browse/JBPAPP6-1741
10629	JBPAPP6-1692	Permaine Cheung <pcheung@redhat.com> made a comment on [bug 901242|https://bugzilla.redhat.com/show_bug.cgi?id=901242] Brian, can you please look into this? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP6-1692
10630	JBPAPP6-1680	Jimmy Wilson <jawilson@redhat.com> made a comment on [bug 901231|https://bugzilla.redhat.com/show_bug.cgi?id=901231] @Stuart: If this is the only way to address this, is a new property necessary? There are standard JVM properties that we could use to identify an IBM JVM and then act accordingly? Are there any IBM JVMs without this issue? My understanding is that all of them have it.	0	0	https://issues.jboss.org/browse/JBPAPP6-1680
10631	JBPAPP6-1680	John Doyle <jdoyle@redhat.com> made a comment on [bug 901231|https://bugzilla.redhat.com/show_bug.cgi?id=901231] We need a plan to close this BZ. We have lists of the the occurrences of the finalize in methods in the EAP 6, can we make that list more accessible and enable people to work on the occurrences as time permits, and reduce the list that way?	0	0	https://issues.jboss.org/browse/JBPAPP6-1680
10632	JBPAPP6-1626	@David, can you comment on this.	0	0	https://issues.jboss.org/browse/JBPAPP6-1626
10633	JBPAPP6-1615	Rosta, what's the reason to remove this from the Mead repository? Is it causing some problem?	0	0	https://issues.jboss.org/browse/JBPAPP6-1615
10634	JBPAPP6-1612	Clebert Suconic <csuconic@redhat.com> made a comment on [bug 900080|https://bugzilla.redhat.com/show_bug.cgi?id=900080] Do we really need that? We already have a flow control property per consumer.	0	0	https://issues.jboss.org/browse/JBPAPP6-1612
10635	JBPAPP6-1595	Hi Fernando, {quote} we do not modify upstream builds, so if they produce -sources.jar we include them if not we don't. {quote} that is basically what I am asking for :) We don't need to rely on the upstream build process. When we already have the sources available, why don't we just zip them, and upload as an artifact? 3 lines in bash, isn't it?	1	0	https://issues.jboss.org/browse/JBPAPP6-1595
10636	JBPAPP6-1595	Unfortunately is not usually that simple, these weird builds manipulate sources in crazy ways, they are not like well behaved maven builds that follow a convention. But we can try adding that for a few selected ones and see if we succeed (we tried in the past and failed). However, I inspected the 55 missing messages. There are several false positives for things like resources, test artifacts, console export etc. There are duplicates as well, some of the commons appear more than once I don't know why. All the rest are for Apache old projects, things like commons bits, dom4j, jdom, veocity, xom for which I am not sure we should be distributing APIs, maybe Jacorb (which is in there) but that probably requires separating APIs that we should and that we should not ship, which ain't going to be easy. Can you take a look and paste here a list of what you really need? And the smaller the list the easier if becomes for us to try some hack in the ant builds. P.S.: The list of things public and private is a bit fishy, I still cannot understand (nor does Rich Sharples) why we don't want to ship the RESTEasy javadocs. And I myself have serious doubts about us shipping APIs of these old Apache libraries. This sounds like trouble.	1	1	https://issues.jboss.org/browse/JBPAPP6-1595
10637	JBPAPP6-1595	{quote}But we can try adding that for a few selected ones and see if we succeed (we tried in the past and failed).{quote} Sounds good. And I will (try to) prepare a list of those which are missing to generate the javadoc for EAP. {quote}However, I inspected the 55 missing messages. There are several false positives for things like resources, test artifacts, console export etc. There are duplicates as well, some of the commons appear more than once I don't know why.{quote} Good, could you please consult the details with the maintainer of the job, Rostislav Svoboda - rsvoboda@redhat.com? {quote} All the rest are for Apache old projects, things like commons bits, dom4j, jdom, veocity, xom for which I am not sure we should be distributing APIs, maybe Jacorb (which is in there) but that probably requires separating APIs that we should and that we should not ship, which ain't going to be easy. {quote} Yep, some of them are not needed for javadoc. But for other purposes, like debugging, having them is, say, convenient, at least. Resteasy - No idea. Apache libs and such - +1, we should consider wisely what to include as public.	1	0	https://issues.jboss.org/browse/JBPAPP6-1595
10638	JBPAPP6-1595	Hmm, I can imagine how the jar's are assembled, I've seen e.g. Tomcat 5.x build. The problem is that JavaDoc plugin fails if some -sources.jar is not present for any dependency. IIRC this can't be overcame, but I will check once we have the JBoss bits. Could we perhaps create the source jars just for the EAP release? Not for CVEs etc. Just for the sake of JavaDoc. Probably not worth the special effort, just asking if it could be done once per minor release, along the way with your team's normal work.	1	0	https://issues.jboss.org/browse/JBPAPP6-1595
10639	JBPAPP6-1586	Has this fix been applied to both EAP and community branches?	0	0	https://issues.jboss.org/browse/JBPAPP6-1586
10640	JBPAPP6-1586	I'm not sure how this got into the EAP6 ER4 bin. Moving this to TBD until it is clear what is required. Tom, do you want this fix in EAP6 as well? The code changes for this issue show commits only on the EAP5 branch.	1	0	https://issues.jboss.org/browse/JBPAPP6-1586

#	Requirement	Questions	Answered	Successfully Answered	URL
10641	JBPAPP6-1585	You know, this whole discussion is telling. Once upon a time JBoss was all about being the best opensource appserver available. Now it's "we properly implement open specifications". Is that all you aspire to? Sad.	1	0	https://issues.jboss.org/browse/JBPAPP6-1585
10642	JBPAPP6-1585	My frustration with this issue has nothing to do with Jon. Furthermore, you can be sure that many other longtime JBoss users are feeling this same frustration. This bug has been in place for five years. Regardless of what the spec says, this behavior is fundamentally broken and seriously impedes the ability to use J2EE container managed security to develop applications. For example, the piece of software we're using *right now* - JIRA - could not use container managed security because of this bug prevents the most stupidly fundamental concepts on the web: * A page that renders differently depending on whether you are logged in or not. Yes, there are probably other issues as well, but this is one of the more serious ones. So, five years ago I was frustrated with a deficiency that is _glaring_ and _obvious_ to anyone who actually uses this technology to develop end-user websites. There were (and probably still are) numerous complaints about it in the forums. It (and a zillion other problems with JBoss of varying degrees of severity) sat neglected for five years. I gave up. Despite building a big chunk of my professional career since 2002 on JBoss, I threw away all my hard-fought knowledge (accumulated months of stepping through JBoss code in the debugger) and moved on to other platforms (Resin and Appengine). I'm bitter about this and I have a right to be; as an advocate of JBoss (don't think it was easy to convince EA or Kink.com) it sucks to shrug my shoulders and say "sorry guys, this platform is stagnant and you need to move on". So when I suddenly find an email in my box that says "We now have an official excuse for this bug: EE6 does not require us to fix our broken shit", it pulls the scab off the wound. You're getting both barrels because you said it. I've earned the right to be pissed with my blood and the subscription dues from two major corporations. Want to reverse JBoss' slow slide into obscurity? I hate to sound like the 15-pieces-of-flare guy from Office Space, but do you really just want to do the bare minimum? It's one thing to say "we can't fix this because of performance problems" or "we don't have the resources to fix this" but to close the bug as invalid just because the spec doesn't absolutely require that it be fixed is LAME.	0	0	https://issues.jboss.org/browse/JBPAPP6-1585
10643	JBPAPP6-1577	Strong, Does the hibernate team consider this to be a bug or a feature request?	0	0	https://issues.jboss.org/browse/JBPAPP6-1577
10644	JBPAPP6-1575	To be safe and consistent, can we just change the version suffix to .redhat-1 across the board, instead of -redhat-1?	0	0	https://issues.jboss.org/browse/JBPAPP6-1575
10645	JBPAPP6-1575	Unfortunately that would also create invalid versions because OSGi does not allow "." in the qualifier. 1.0.0.Final -> 1.0.0.Final.redhat-1 (invalid OSGi version)	1	1	https://issues.jboss.org/browse/JBPAPP6-1575
10646	JBPAPP6-1574	{quote} I think that's a great idea! I would love to see a quickstart that does the following: * Provides 2 login roles: administrator and regular user * If you log in as administrator, it takes you to a "Welcome Administrator" page. * If you log in as quickstartUser/quickstartPassword (this is the id used in the other quickstarts), it takes you to a "Welcome User" page. * It should also prevent you from accessing the Admin page when you log in as the regular user. * It should also provide a logout button so you can log in again as the other user. Are you volunteering? ;-) Thanks, Sande {quote}	1	1	https://issues.jboss.org/browse/JBPAPP6-1574
10647	JBPAPP6-1570	baranowb <bbaranow@redhat.com> made a comment on [bug 900560|https://bugzilla.redhat.com/show_bug.cgi?id=900560] Anne this seems to be fixed in 6.1. Is there any urge to have this fixed in 6.0.1 ?	0	0	https://issues.jboss.org/browse/JBPAPP6-1570
10648	JBPAPP6-1568	Misha H. Ali <mhusnain@redhat.com> made a comment on [bug 745912|https://bugzilla.redhat.com/show_bug.cgi?id=745912] Is this marked for Release Notes? If so, it does not need to be assigned to the Documentation component, the requires_release_notes? flag is sufficient.	0	0	https://issues.jboss.org/browse/JBPAPP6-1568
10649	JBPAPP6-1479	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900403|https://bugzilla.redhat.com/show_bug.cgi?id=900403] Peter, what's current status of this item? Is it incorporated in EAP 6.1.0 DRx ?	0	0	https://issues.jboss.org/browse/JBPAPP6-1479
10650	JBPAPP6-1479	Peter Skopek <pskopek@redhat.com> made a comment on [bug 900403|https://bugzilla.redhat.com/show_bug.cgi?id=900403] (In reply to comment #10) > Peter, what's current status of this item? Is it incorporated in EAP 6.1.0 > DRx ? It already there. run valut.sh --help to see all options. DR4 contains the change. There is also Java class which could be used from inside tests, so no need to call script from OS level. Quick example: I have tried to use API on my Vault and it works fine: public class Test { public static void main(String[] args) throws Exception { VaultSession s = new VaultSession("/home/pskopek/dev/as7/vault.jks", "password1234", "/home/pskopek/dev/as7/vault", "12345678", 23); s.startVaultSession("vault"); String attribute = s.addSecuredAttribute("DS", "password", "fero".toCharArray()); System.out.println(attribute); System.out.println(s.getKeystoreMaskedPassword()); } } Output: VAULT::DS::password::ODY4MmU5ZWEtNWNmYi00ZjUwLWFhNzgtYzJhMTdjOTZiOWM5TElORV9CUkVBS3ZhdWx0 MASK-3wLlsUw/wDupvXfU6WrXcZ CLI: [standalone@localhost:9999 /] /core-service=vault:add(vault-options=[("KEYSTORE_URL"=>"/home/pskopek/dev/as7/vault.jks"), ("KEYSTORE_PASSWORD" => "MASK-3wLlsUw/wDupvXfU6WrXcZ"), ("KEYSTORE_ALIAS" => "vault"), ("SALT" => "12345678"), ("ITERATION_COUNT" => "23"), ("ENC_FILE_DIR" => "/home/pskopek/dev/as7/vault/")]) {"outcome" => "success"}	0	0	https://issues.jboss.org/browse/JBPAPP6-1479
10651	JBPAPP6-1456	2. Who is the customer behind the request? Account name: Adam Halbardier Customer segment: 3 TAM/SRM customer: no Strategic Customer yes/no: no 3. What is the nature and description of the request? The customer is searching for the way to make JBoss EAP 6 FIPS 140-2 compliant. To use the NSS library is the only way which he found [1] and which is applicable for EAP 5. He tried it on EAP 6, but failed. The NSS library requires a PKCS#11 keystore, by contrast, a "keystore-type" attibute of JBoss EAP 6 configuration can not be "PKCS11", but "PKCS12" or "JKS", and JBoss EAP 6 checks whether a keystore would be a valid PKCS#12 keystore or a valid JKS keystore and recognizes PKCS#11 keystore as an invalid keystore. Therefore, the customer can not configure JBoss EAP 6 to be FIPS 140-2 compliant. [1] https://access.redhat.com/knowledge/solutions/42301 4. Why does the customer need this? (List the business requirements here) Because it will not be possible for the customer to procure and use JBoss EAP in production without an acceptable solution for FIPS 140-2 compliance. 5. How would the customer like to achieve this? (List the functional requirements here) It is a straightforward way to make EAP 6 to handle PKCS#11 keystore and use NSS library as EAP 5 can. Also, the other way is acceptable for the customer, if it exists. 6. For each functional requirement listed in question 5, specify how Red Hat and the customer can test to confirm the requirement is successfully implemented. If you take the way that the NSS library can be enabled, The steps to test is as follow:- 1. confirm if SSL/TSL works 2. confirm if a PKCS#11 keystore is used 3. confirm if the NSS library is used If you take the other way to fix this issue, need some discussions. 8. Does the customer have any specific timeline dependencies? The customer is currently evaluating JBoss EAP 6 in anticipation of migrating to the platform in the next few months.	0	0	https://issues.jboss.org/browse/JBPAPP6-1456

10652	JBPAPP6-1455	Peter Skopek <pskopek@redhat.com> made a comment on [bug 900887|https://bugzilla.redhat.com/show_bug.cgi?id=900887] Shay, was EAP6 web subsystem configured to use SSO? More info could be found at https://community.jboss.org/wiki/HowToUsePicketLinkIDPInClusteredEnvironment	0	0	https://issues.jboss.org/browse/JBPAPP6-1455
10653	JBPAPP6-1452	Matteo Mortari <matteo.mortari@gmail.com> made a comment on [bug 901070|https://bugzilla.redhat.com/show_bug.cgi?id=901070] Hello this was raised as Type: Feature Request and now CLOSED NOTABUG without a motivation. Can you kindly explain why, please? Thanks Ciao	0	0	https://issues.jboss.org/browse/JBPAPP6-1452
10654	JBPAPP6-1451	Guys how can you see this as a feature request? It has been available in the past (EAP4, EAP5), it is a common use case, it is not in EAP6 it was simply forgotten to put in...	0	0	https://issues.jboss.org/browse/JBPAPP6-1451
10655	JBPAPP6-1445	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900788|https://bugzilla.redhat.com/show_bug.cgi?id=900788] Is it still valid or can it be closed ?	0	0	https://issues.jboss.org/browse/JBPAPP6-1445
10656	JBPAPP6-1441	Heiko Braun <hbraun@redhat.com> made a comment on [bug 900675|https://bugzilla.redhat.com/show_bug.cgi?id=900675] Maybe some further clarification: try to answer this question yourself: What's are the drivers associated with selected profile?	0	0	https://issues.jboss.org/browse/JBPAPP6-1441
10657	JBPAPP6-1441	Bruno Machado <bmachado@redhat.com> made a comment on [bug 900675|https://bugzilla.redhat.com/show_bug.cgi?id=900675] JDBC Driver is a module, thus it's available to every profile. Sometimes the user doesn't want to start the server to configure a datasource. For instance, during a management schedule. User usually stop the server, change what he needs and start it again. With the current implementation, the JDBC driver will not be available if the server with the associated profile with the driver metadata is not up. Maybe it's not a UI issue, maybe it's the way AS7/EAP6 deals with datasources and drivers since its configurations are associated to a subsystem in a profile. It could be associated to a server settings in host.xml or to a server-group, not to a specific profile. Does it make more sense?	0	0	https://issues.jboss.org/browse/JBPAPP6-1441
10658	JBPAPP6-1337	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 901079|https://bugzilla.redhat.com/show_bug.cgi?id=901079] > dist-git has been reverted to 1.3.1 should it be still open ?	0	0	https://issues.jboss.org/browse/JBPAPP6-1337

10660	JBPAPP6-1333	The remoting upgrade is being tested upstream (in the 7.1 and master branches).	0	0	https://issues.jboss.org/browse/JBPAPP6-1333
10661	JBPAPP6-1333	Oh, I had set remoting to be upgraded to 3.2.9 for ER2 in http://ett.usersys.redhat.com/brew_tags/jb-eap-6-rhel-6-wolf/packages Should I cancel that?	0	0	https://issues.jboss.org/browse/JBPAPP6-1333
10662	JBPAPP6-1299	Hi Rotislav, I can't reproduce this locally (tried multiple times) with OpenJDK 1.7.0-b146, current AS7 master and current JBossWS-CXF 4.0.x EAP6 branch. Can you please check if we can have fresher results from hudson (using latest EAP6 & ws stack)?	0	0	https://issues.jboss.org/browse/JBPAPP6-1299
10663	JBPAPP6-1299	Jim Ma <ema@redhat.com> made a comment on [bug 899644|https://bugzilla.redhat.com/show_bug.cgi?id=899644] Rosta, can you please try my lastest fix ? https://source.jboss.org/changelog/JBossWS?cs=17389 We wrongly define a non-exsiting portName, it will be loaded transiently with some versionjdk6 and jdk7.	1	1	https://issues.jboss.org/browse/JBPAPP6-1299
10664	JBPAPP6-1238	Brian: Could you look at the screenshot in [this subtask|https://issues.jboss.org/browse/JBPAPP-9108]? What do you think of the design? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP6-1238
10665	JBPAPP6-1236	Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 901066|https://bugzilla.redhat.com/show_bug.cgi?id=901066] CXF-4561 was fixed in 2.6.4, EAP 6.1.0 contains 2.6.6 Does it mean it's resolved ? If yes, please set proper Status to ON_QA	0	0	https://issues.jboss.org/browse/JBPAPP6-1236
10666	JBPAPP6-1195	Madhumita Sadhukhan <msadhukh@redhat.com> made a comment on [bug 900649|https://bugzilla.redhat.com/show_bug.cgi?id=900649] I tried to enter remote location for existing file http://maven.repository.redhat.com/techpreview/all/example-settings.xml However it always gives me error message that settings.xml does not exist. However specifying a maven repository and settings.xml available on local works. Is this fix in 6.1.0.ER1?	0	0	https://issues.jboss.org/browse/JBPAPP6-1195
10667	JBPAPP6-1195	Thomas Hauser <thauser@redhat.com> made a comment on [bug 900649|https://bugzilla.redhat.com/show_bug.cgi?id=900649] Madhumita, What this part of the installer does is add an active profile to the given (local) settings.xml with the location of the maven repository configured (the locaiton of the maven repo can be remote). This is to simplify the building of the quickstarts. One cannot specify a remote location for the settings.xml (the installer is modifying the file). Scenarios: a) Local repo location, local settings.xml - Useful if the user has downloaded the JBoss maven repo, can specify the local location b) Remote repo location, local settings.xml - Useful if the user hosts their own maven repository, or for using the public JBoss repos c) Local repo location, no settings.xml exists - Basic settings.xml will be created at the given local path d) Remote repo location, no settings.xml exists - Same as above So it seems like the issue you've described, we should prevent by making sure the user is not trying to specify a remote settings.xml location. Does that sound about right? Thanks, Tom	0	0	https://issues.jboss.org/browse/JBPAPP6-1195
10668	JBPAPP6-1101	Hi Alessio, when will the tag of CXF&jbossws-cxf be ready?	1	1	https://issues.jboss.org/browse/JBPAPP6-1101
10669	JBPAPP6-1078	Hi Rio, Can you please change the EAP branch for JBoss Native so it has the correct (for EAP 6) version and groupId for netty? We are using Netty 3.2.6.Final and the groupId is still org.jboss.netty Thanks P.S.: I worked arounf and I am building native 4.0.6.GA so that request is for a future 4.0.7.GA release.	1	1	https://issues.jboss.org/browse/JBPAPP6-1078
10670	JBPAPP6-1064	What I think Misty wanted was something more in the lines of: If the version of Remoting in the client is not the same as the one the Server was just updated to you may encounter this problem. Right Misty?	1	1	https://issues.jboss.org/browse/JBPAPP6-1064
10671	JBPAPP6-1044	Can this be altered to adhere to the ISO/IEC 19770-2 standard?	0	0	https://issues.jboss.org/browse/JBPAPP6-1044
10672	JBPAPP6-1044	Paul, as you create the zips for EAP 6, can you please handle this? Thanks!	0	0	https://issues.jboss.org/browse/JBPAPP6-1044
10673	JBPAPP6-1043	Jason, can you make this change? At least incorporate Paul's patch?	0	0	https://issues.jboss.org/browse/JBPAPP6-1043
10674	JBPAPP6-1041	Verified during 6.0.1-ER2 test cycle. Javadoc is now shipped in ZIP and RPM distribution (the same content), remains issues are still tracked on ZIP side, hence marking this issue as resolved and closing...	1	1	https://issues.jboss.org/browse/JBPAPP6-1041
10675	JBPAPP6-1040	Alex, which one is that? Agent at i-e9138494 can't be launched, and I don't see i-83900dfe in the list of nodes. Is that the one?	0	0	https://issues.jboss.org/browse/JBPAPP6-1040
10676	JBPAPP6-1040	Ondra, I think empty junit reports happen on timeouts and other bad failures where a report file coulnd't be created. Are you sure these reported failures are really harmless?	0	0	https://issues.jboss.org/browse/JBPAPP6-1040
10677	JBPAPP6-1040	Alex, what do you mean? Are you referring to https://jenkins-jbossqa.rhcloud.com/job/EAP6-EC2/106/#showFailuresLink ?	0	0	https://issues.jboss.org/browse/JBPAPP6-1040
10678	JBPAPP6-1040	ah, I misread the error as an empty junit report. Anyways, why can't these tests find that path? {code}Path not found: /mnt/workspace/EAP6-EC2/jboss-as/testsuite/integration/manualmode/../../../build/target{code}	0	0	https://issues.jboss.org/browse/JBPAPP6-1040

#	Requirement	Questions	Answered	Successfully Answered	URL
10679	JBPAPP6-987	{quote}Note that these do need adding, we should not replace the existing BOMs.{quote} Do we need to include both versions of the poms in the EAP 6.0.1 repo? There won't be anything in the 6.0.1 repo that depends on the older versions of the boms, but maybe some of the 6.0.1 quickstarts or other stuff would need the older versions.	1	1	https://issues.jboss.org/browse/JBPAPP6-987
10680	JBPAPP6-987	Karel, ok, so if I understand correctly, removing the arquillian-drone-bom dependency from the -with-tools bom was the correct solution, right?	1	0	https://issues.jboss.org/browse/JBPAPP6-987
10681	JBPAPP6-985	I can't find Release Notes for this issue in http://documentation-devel.engineering.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/6/html-single/Release_Notes_6.0.1/ could you please look at it? Thanks	1	1	https://issues.jboss.org/browse/JBPAPP6-985
10682	JBPAPP6-982	The real question is the probability of the customer hitting this issue. Mirek confirmed that the server doesn't have to be killed multiple times to hit this issue. I don't understand the correlation to small message sizes here, when id-cache-size deals with message count. Is it likely to send more than 2000 messages during a single crash/restart when the message size is small? <mnovak> but when messages are small (means less then 500 bytes) then confirmation-window-size can contain more then 2000 messages (2000 is default value) and when duplicated message comes again after kill and restart case then it's not discarded because it's not in the cache <mnovak> so oldest message is always rewritten be the newest one <rajesh> Does the use case have to be killing/restarting multiple times to reproduce this? <mnovak> no <mnovak> it can be hit with just one kill	1	1	https://issues.jboss.org/browse/JBPAPP6-982
10683	JBPAPP6-982	What will be a better value? we could increase it to 20K, that will add performance impact to people who don't need that ammount of duplicate detection. You will have 20K strings in memory on a hashSet per address.	1	1	https://issues.jboss.org/browse/JBPAPP6-982
10684	JBPAPP6-982	I can increase the size... do you want to hold a release because of that?	0	0	https://issues.jboss.org/browse/JBPAPP6-982
10685	JBPAPP6-981	Unfortunately this seems to be a limitation of the jar. Only icons that go under /usr/share/icons seem to properly show up at proper resolution. The ones inside the jar (regardless of resolution) show up stretched/pixelated. I tried using one from the izpack itself : http://s01.yyz.redhat.com/dmondega/pastebin/files/gnomeicon.png As you can see its perhaps a bit better. In the menu bar (top-left) reason for cut-off is because we provided one resolution image, in order to accomodate for that we'd have to provide different resolution ones. Do you think its worth it to pursue this goal with the end result looking somewhat like what i posted ? Let me know, if so i can file in a request to get proper graphics done and use those instead.	1	0	https://issues.jboss.org/browse/JBPAPP6-981
10686	JBPAPP6-981	Do we really need a release notes text for this jira? Thomas, IMO its best to mark this as Release Notes text not required as officially we do not support Fedora. This is not included in release notes in docs devel yet.	0	0	https://issues.jboss.org/browse/JBPAPP6-981
10687	JBPAPP6-976	Hi Rotislav, I can't reproduce this locally (tried multiple times) with OpenJDK 1.7.0-b146, current AS7 master and current JBossWS-CXF 4.0.x EAP6 branch. Can you please check if we have fresher results from hudson?	0	0	https://issues.jboss.org/browse/JBPAPP6-976
10688	JBPAPP6-852	Does this mean GA will go out with a custom mvn build for customers to use !? How is the mvn that is being installed supposed to be used by users ? or is it to be ignored?	1	1	https://issues.jboss.org/browse/JBPAPP6-852
10689	JBPAPP6-852	@Max, F, J, and D have been addressed for CR1. We provided you with a CR1 Installer to verify. Can you?	0	0	https://issues.jboss.org/browse/JBPAPP6-852
10690	JBPAPP6-852	Can that JIRA be marked as resolved?	0	0	https://issues.jboss.org/browse/JBPAPP6-852
10691	JBPAPP6-852	Does this need a release note for EAP 6.0.1? If so, the issue needs to be re-opened and the release notes flags set (Affects Release Notes, Not Yet Documented). If not, the issue needs to be re-opened and the release notes flag set to "Release notes not required".	0	0	https://issues.jboss.org/browse/JBPAPP6-852
10692	JBPAPP6-850	I'm not sure if xsom is a common library that changes every release. Can we do a rebuild in mead for EAP 6.0.1 even if there is no code change to resolve these differences?	0	0	https://issues.jboss.org/browse/JBPAPP6-850
10693	JBPAPP6-849	David Walluck <dwalluck@redhat.com> made a comment on [bug 900762|https://bugzilla.redhat.com/show_bug.cgi?id=900762] How is this different from bug #957679?	0	0	https://issues.jboss.org/browse/JBPAPP6-849
10694	JBPAPP6-848	513 Utf8 Starting Apache Velocity v1.6.3 (compiled: 2012-04-20 14:27:08) Utf8 Starting Apache Velocity v1.6.3 (compiled: 2012-06-14 00:07:08) Is the only difference found.	0	0	https://issues.jboss.org/browse/JBPAPP6-848
10695	JBPAPP6-844	Hi String, you've rebuilt the hibernate4 RPMs after the ZIP was created for these fixes: * Tue Jun 26 2012 Strong Liu <stliu@redhat.com> 4.1.3-2.9.Final - Change to R antlr-eap6, javassist-eap6 - Remove hibernate-infinispan from zip This should not cause any class differences but QE is seeing differences in the org.hibernate.internal* packages between the ZIP (based on your previous build) and this latest RPM you've built. Of course, they are comparing the RHEL-6 previous build (the ZIP is created from the RHEL-6 build) and the RHEL-5 build of this last one. Are the differences somehow related to the different OSs? Or maybe you have a different patch in the two branches? Can you investigate please?	1	1	https://issues.jboss.org/browse/JBPAPP6-844
10696	JBPAPP6-844	that change was requested by EWS team (Permaine and Weinan). there is not other change except the two dependencies are changed to the -eap6 ones. I think the differences are caused by these dependencies change. but not sure. normally, it wouldn't. have they compared the jar from zip with the RHEL-5 build before this change applied? do they see any differences? and how the difference are compared?	1	0	https://issues.jboss.org/browse/JBPAPP6-844
10697	JBPAPP6-844	Hi Strong, you are abolutely right. The ZIP was created from the RHEL-6 build: And the RHEL-5 RPM is hibernate4-4.1.3-2.8.Final.ep6.el5 so it is from before the changes I mentioned above. hibernate4-4.1.3-2.8.Final.ep6.el6 So it should be a plain rebuild on RHEL-5 of your RHEL-6 one. But still, QE is seeing some differences in the classes above. They just want to make sure the code is equivalent. If you look at the classes in both 2.8 builds for RHEL-6 and RHEL-5 and on what they differ can you confirm they are just compiler (or some other tool) differences due to the different OS and JDK release? I don't know if you can access this: http://s01.yyz.redhat.com/jtripath/report/modules/org/hibernate/main/hibernate-core.jar/JarReport.html but even if you can't I can tell you the differences are all in classes related to JAXB. The RHEL-6 build was built with: glassfish-jaxb-2.2.5-4_redhat_1.ep6.el6 And, because of the mass rebuild build order and regen delay, the RHEL-5 one was built with: glassfish-jaxb-2.1.12-10_patch_02.ep5.el5 instead of glassfish-jaxb-2.2.5-4_redhat_1.ep6.el5 Maybe this explains the difference. Now the $1,000,000 question: At run time what will be used is jaxb 2.2.5 regardless of what we compiled hibernate-core with. Is there any problem using the code compiled with jaxb 2.1.12? BTW, your build for EWS (the 2.9 one) for RHEL-5 was also built with jaxb 2.1.12. If you think there is a problem, can you please rebuild the hibernate4 package on RHEL-5? I believe both EAP 6 6.0.0.GA and EWS can use the same builds as you say the changes do not affect code. Thanks for looking into this.	1	1	https://issues.jboss.org/browse/JBPAPP6-844

#	Requirement	Questions	Answered	Successfully Answered	URL
10698	JBPAPP6-844	the difference of jaxb generated source with different glassfish-jaxb do not matter, since they are only used in the new metamodel. this new metamodel is not finished/supported in EAP 6 (which we're currently working on and it is targeted to Hibernate 5), the _Configuration_ API is the only supported way in EAP 6, as same as before, no change. do you think this is still a problem that requires a rebuild?	1	0	https://issues.jboss.org/browse/JBPAPP6-844
10699	JBPAPP6-760	ER7 release is May 8. Is the resolution of this JIRA on track for that? Not sure if there is a QE element to this but we only have one build scheduled after if any adjustments in the build environment need to be made.	0	0	https://issues.jboss.org/browse/JBPAPP6-760
10700	JBPAPP6-760	There are projects in the src.zip that won't build. So far, what I'm finding is arquillian builds, which I'm sure are only used for running tests. I'll log the specific missing deps here, but it brings up a few questions: 1. Should we include sources for things we know won't build with our repository, in our src.zip file? 2. Should we be including test-time dependencies in the src.zip? 3. When we say "allow them to rebuild" are we talking about running the unit tests? If not, shouldn't we be looking at disabling tests? (we could possibly do this via an embedded settings.xml that specified maven.test.skip == true as a property in a profile or something.) I'm not clear on the rules of the road here. I'm supposed to verify that we can rebuild EAP6 from source, and document how to do it...but what does "rebuild EAP6 from source" mean, exactly?? Obviously, there are nuances to the phrase.	0	0	https://issues.jboss.org/browse/JBPAPP6-760
10701	JBPAPP6-760	Regarding building and running tests - I don't really have an opinion on this, our process now is mainly designed for convenience. For the short term, I think we can just focus on being able to reproduce the binaries without running tests as a requirement. Regarding jboss-osgi-logging - I see version 1.0.0-redhat-1 in the repository, doesn't this fall into the range [1.0.0.Final,1.0.0.Final-redhat-1]? If not, I'm not sure how the original build worked. Regarding openjpa - We don't ship this one, so we don't build it as part of EAP. Regarding BOMs - Users should not directly import the EAP BOMs into their builds, for the reasons you mentioned. For this use case, we have several user boms documented in the quickstarts and elsewhere. These main EAP BOMs purposely capture a superset of what is shipped in EAP because we use them to manage all the builds that go into EAP and many of these build dependencies are not shipped. Just as an example, the hibernate 3 stuff is use to verify the hibernate 3 integration, but this is not shipped because a user would be required to add the necessary components to their EAP instance to run a hibernate 3 based project.	0	0	https://issues.jboss.org/browse/JBPAPP6-760
10702	JBPAPP6-760	RE: jboss-osgi-logging, If I read the maven source code for version parsing, it *seems* as though 1.0.0 == 1.0.0.Final, which means it would fall in the stated range. However, something must have changed, or else that equivalence isn't tested. The bottom line is that I was using Maven 3.0.4 to run these builds, and it failed to find a valid version. I've verified that the metadata containing this version (1.0.0-redhat-1) is available to the build, yet it doesn't seem to satisfy the range. Is it possible that the BOM got changed after the build/pom.xml or dist/pom.xml ran? I thought we were using a different MEAD build to create the EAP distribution. If that's not the case, I'm at a loss to explain how it worked, but I can show the environment and logs that led to my result. RE: what to build (not building tests), should we exclude things from the src.zip if we're not intending them to be built? Isn't inclusion in the .zip implying rebuild-ability?	0	0	https://issues.jboss.org/browse/JBPAPP6-760
10703	JBPAPP6-757	Vladimir, can you create a list of the poms currently in the Maven repository which are still referring to jboss parent version 6? If possible put the list into a format that can be read by a script, maybe one line for each GAV that contains a reference to the older parent pom.	0	0	https://issues.jboss.org/browse/JBPAPP6-757
10704	JBPAPP6-692	The installer looks great! Here are a few things that came to mind as I was trying it out: Minor typo on the quickstart installation screen: - The title currently is "QuickStarts Installation" but it should just be "Quickstarts Installation" (since the docs don't seem to capitalize the "s"). - Similarly, "Do you want to install QuickStarts?" should be "Do you want to install quickstarts?" Minor typo on the maven repository screen: - "...containing Redhat artifacts,..." should be "...containing Red Hat artifacts,..." "Socket Binding Setup" screen: - It might be helpful to have a summary at the top of the screen that explains the options on the screen, as most of the other screens have something like this. "Socket Binding (Domain)" screen: - If a user chooses to only configure ports for domain.xml, when the "Socket Binding (Domain)" screen comes up, all fields in the first column are blank and so it might not be obvious to the user what kinds of values are allowed in that first column. Thus, it might be helpful to add names for the two columns.	1	1	https://issues.jboss.org/browse/JBPAPP6-692
10705	JBPAPP6-691	Is this the same as JBPAPP-7931 ?	0	0	https://issues.jboss.org/browse/JBPAPP6-691
10706	JBPAPP6-687	Rich, can you comment if this is a requirement for EAP6?	0	0	https://issues.jboss.org/browse/JBPAPP6-687
10707	JBPAPP6-686	@Tom, this is a roll over from EAP4/5. Has this been adderssed in 6 or planning to be?	0	0	https://issues.jboss.org/browse/JBPAPP6-686
10708	JBPAPP6-686	Hi, I read through the linked gss discussion. Here is what currently happens on timeout: com.arjuna.ats.arjuna.coordinator.TransactionReaper::doCancellations:349 tsLogger.logger.trace("Reaper Worker " + Thread.currentThread() + " attempting to cancel " + e._control.get_uid()); Are you saying that we need to bump this up to info from trace? Here are the normal transaction state change messages: com.arjuna.ats.arjuna.coordinator.BasicAction::Begin:1342 tsLogger.logger.trace("BasicAction::Begin() for action-id " + get_uid()); com.arjuna.ats.arjuna.coordinator.BasicAction::End:1342 tsLogger.logger.trace("BasicAction::End() for action-id " + get_uid()); com.arjuna.ats.arjuna.coordinator.BasicAction::Abort:1575 tsLogger.logger.trace("BasicAction::Abort() for action-id " + get_uid()); Are you saying we should bump these from trace to debug? To clarify, are we saying that the messages themselves are OK but you want me to bump their log levels? Tom	1	1	https://issues.jboss.org/browse/JBPAPP6-686
10709	JBPAPP6-686	Hi Taro, Thanks for the feedback. Assuming we have discrete log messages for these actions, is it not fair to say that the specific wording of the message (assuming it is on topic) is a matter of education for the user? Those messages are well established and to alter them for specific versions could actually introduce confusion for earlier users. I also can confirm that during regular transaction completion you will also get the following messages preceding those messages from BasicAction: com.arjuna.ats.internal.jta.transaction.arjunacore.TransactionImple::commit:172 if (jtaLogger.logger.isTraceEnabled()) { jtaLogger.logger.trace("TransactionImple.commit"); } com.arjuna.ats.internal.jta.transaction.arjunacore.TransactionImple::rollback:231 if (jtaLogger.logger.isTraceEnabled()) { jtaLogger.logger.trace("TransactionImple.rollback"); } Due to the way that the system is architected, those BasicAction messages I provided earlier are descriptive and apply to the transactions underlying "BasicAction". Tom	1	1	https://issues.jboss.org/browse/JBPAPP6-686

#	Requirement	Questions	Answered	Successfully Answered	URL
10710	JBPAPP6-686	Thanks Tom. As you read the original discussion, this request was originally one of change requests for new major version of EAP, 6.0, than for a particular version of JBossTS and from EAP perspective I am assuming incompatibility of trace messages between EAP 5 and 6 would be acceptable for customers. Also in general educating the user is important for gss to reduce support case load to explain what those messages mean and how to track those. The four messages in the description should be the typical ones the customers asking to gss and making those messages user-friendly from EAP6 release would be great for gss and customers. I understand that current messages are well established and BasicAction messages are descriptive from code perspective as you mentioned, however, it would be great that this enhancement is acceptable for EAP 6.x release than for a particular version of JBossTS. If it's not acceptable, can you please consider to add more details around those messages in JBossTS(and EAP) documentations? Taro	1	0	https://issues.jboss.org/browse/JBPAPP6-686
10711	JBPAPP6-682	Isn't this the same as JBPAPP-8931?	0	0	https://issues.jboss.org/browse/JBPAPP6-682
10712	JBPAPP6-677	Kyle, AS 7.1.2.Final already includes JAXB 2.2.5. Not sure which version of EAP 6 is picking that up.	0	0	https://issues.jboss.org/browse/JBPAPP6-677
10713	JBPAPP6-589	Karel, can you create a Mead build which contains only an Arquillian BOM which contains all the versions of arquillian components which should be used with EAP 6? Then we can ship this with the Maven repo, and use this for the build of the jboss-bom project.	1	1	https://issues.jboss.org/browse/JBPAPP6-589
10714	JBPAPP6-589	Karel, what about the javaee-with-tools bom? I can't build that one because it still points to BOMs in central, can this be changed to use the wfk-arquillian bom instead?	1	1	https://issues.jboss.org/browse/JBPAPP6-589
10715	JBPAPP6-503	Gao, could you please update the jbossws common and native ones?	0	0	https://issues.jboss.org/browse/JBPAPP6-503
10716	JBPAPP6-428	Can't this be pushed to AS 8 then..or into EAP 6.....it should be worked on at some point...	0	0	https://issues.jboss.org/browse/JBPAPP6-428
10717	JBPAPP6-380	Shelly, AFAIR in Beta1 logging was restored also for production profiles, does this address this issue as well?	0	0	https://issues.jboss.org/browse/JBPAPP6-380
10718	JBPAPP6-380	Shelly, any reason why don't we ship/enable async logging for production env?	1	1	https://issues.jboss.org/browse/JBPAPP6-380
10719	JBPAPP6-380	I know the heap sizes (just for standalone) were put back into the ER4 build. Did every other item targeted in JBPAPP-6738 make it into the ER4? If I am not wrong the commit made for JBPAPP-6738 was reverted completely? Is there another JIRA tracking any remaining work here?	0	0	https://issues.jboss.org/browse/JBPAPP6-380
10720	JBPAPP6-379	Fernando, would you mind I take this jira? Rajesh, Fernando, do you think this build has to come from brew or a local build is fine?	1	1	https://issues.jboss.org/browse/JBPAPP6-379
10721	JBPAPP6-379	Strong, I don't mind if the build is done locally. The official build is part of EAP 5.1.3 or an EWS deliverable. A local build is fine for EAP6 testing. Scheduling this for ER4, can you create a build and coordinate handoff with Shelly?	0	0	https://issues.jboss.org/browse/JBPAPP6-379
10722	JBPAPP6-337	What is the connection of this jira to DESIGN-209 ?	0	0	https://issues.jboss.org/browse/JBPAPP6-337
10723	JBPAPP6-304	thomas, can you elaborate on this?	0	0	https://issues.jboss.org/browse/JBPAPP6-304
10724	JBPAPP6-304	Ok - here's a start. Test OSGi Bundle deployment and runtime bundle management: On the 'Runtime' page: * Go to 'Runtime Operations->OSGi' * The console should ask whether the OSGi subsystem needs to be activated, select yes. Then, after a few seconds, the list of bundles will appear. * Deploy an OSGi Bundle (e.g. test TestOSGiBundle attached to this bug) via 'Deployments->Manage Deployments' * Enable the deployment ** You should see 'Hello from an OSGi Bundle!' appear on the AS7 console. * Go to 'Runtime Operations->OSGi' Initially the new deployment is not visible as the table only has 8 rows and our testbundle is the 9th. * Reverse the sorting on Bundle ID by clicking on the header. You'll see bundle with the highest ID is our TestOSGiBundle. * Click on the TestOSGiBundle row in the list and make sure that the Details pane is correctly filled with information. It should show: {noformat}Version: 1.0.0 Start Level: 1 SymbolicName: TestOSGiBundle Type: bundle State: ACTIVE{noformat} * Click the 'Stop' button on the bundle row. ** You should see 'Goodbye from an OSGi Bundle!' in the console ** The State column should be empty now and the state field in the details pane should say 'RESOLVED'. * Go back to 'Deployments->Manage Deployments' and remove the TestOSGiBundle deployment. Test capabilities configuration On the 'Profile' page: * Select 'OSGi->Framework' and go to the 'Capabilities' tab. * Click 'Add' and enter org.projectodd.stilts with start level 2. * Should appear now in the list. Go back to the Runtime page: * The stilts-stomplet-server-bundle should now be visible. Clicking on it should show Start Level 2. State should be INSTALLED. * Now move the framework to start level 2 by clicking the Framework tab. This causes the stilts bundle to be started, but unfortunately there is a resolution error. Thomas I attempted to add the org.jboss.netty module via capabilities, but that caused another error. Do you know what the issue is with netty? * Open the standalone.xml file and see that the following line was added to the configuration: {noformat}<capability name="org.projectodd.stilts" startlevel="2"/>{noformat} * Remove the stilts bundle again by going back to the Capabilities tab and clicking remove. ** Console should say that it needs to be restarted, currently it doesn't (JBPAPP-8358). Test framework properties On the 'Profile' page: * Select OSGi -> Framework and go to the 'Properties' tab. * Remove the 'org.osgi.framework.startlevel.beginning' and add it again now with value 3. (BTW we used to have an edit button here, it would be more user-friendly to allow editing instead of delete-add) ** Console should say that it needs to be restarted, currently it doesn't (JBPAPP-8358). * Check in the standalone.xml that it has the following configuration: {noformat} <properties> <property name="org.osgi.framework.startlevel.beginning"> 3 </property> </properties>{noformat} * Remove the check from the Lazy Activation configuration checkbox. * Check in the standalone.xml that it has the following configuration: {noformat}<subsystem xmlns="urn:jboss:domain:osgi:1.2" activation="eager">{noformat} * Restart the server and reopen the console. On the 'Runtime' page * Go to the 'Runtime Operations->OSGi' tab. Since the OSGi subsystem is eagerly started it should not ask to activate it. The list of bundles should appear instantly. * Select the Framework tab. It should show start level 3 as the active start level. Config Admin Service On the 'Profile' page select 'Core->Config Admin Service'. * Click 'Add' on top of the screen. Add a PID of org.foo.bar with mykey and myvalue as configuration values. Add another config value: xkey, yval * Check in the standalone.xml that it has the following configuration: {noformat} <subsystem xmlns="urn:jboss:domain:configadmin:1.0"> <configuration pid="org.foo.bar"> <property name="mykey" value="myvalue"/> <property name="xkey" value="yval"/> </configuration> </subsystem>{noformat}	0	0	https://issues.jboss.org/browse/JBPAPP6-304
10725	JBPAPP6-303	Why is this being rejected? If there is no documentation (yet) this issue should have a dependency on an issue that creates such docs from the jbosgi project docs. The Fix Version should reflect the EAP version that this is targeted for.	1	0	https://issues.jboss.org/browse/JBPAPP6-303
10726	JBPAPP6-302	Why would there be any tests in EAP that are not also available upstream?	0	0	https://issues.jboss.org/browse/JBPAPP6-302
10727	JBPAPP6-302	What does this mean? Is there anything I need to take care of?	1	0	https://issues.jboss.org/browse/JBPAPP6-302
10728	JBPAPP6-301	Can you please take a look at [4], the set of supported functionality? I believe we need to remove all the Jetty stuff from AS7 anyway: Webconsole, provided by Felix (requires HttpService) HttpService, provided by PaxWeb (runs on Jetty) Webapp support, provided by PaxWeb (runs on Jetty) or we should just get rid of all non-core OSGi bundles?	0	0	https://issues.jboss.org/browse/JBPAPP6-301
10729	JBPAPP6-301	The management console exposes OSGi as a runtime operation. If OSGi is removed, will there be an impact to the console functionality or is the availability of this subsystem dynamically detected?	0	0	https://issues.jboss.org/browse/JBPAPP6-301

#	Requirement	Questions	Answered	Successfully Answered	URL
10730	JBPAPP6-299	Isn't that the maven repo zip that contains the AS artifacts? Why do we need another zip, what's the main problem with rebuilding from source? In fact we should use the sources from the source distribution for running the AS testsuite. That validates the source distribution we ship as well.	1	1	https://issues.jboss.org/browse/JBPAPP6-299
10731	JBPAPP6-294	Mike, can you just write down in a wiki somewhere the steps you follow when creating the Mead repo snapshots? Then you can close this issue.	1	1	https://issues.jboss.org/browse/JBPAPP6-294
10732	JBPAPP6-274	This is the wrong package to use for xml-resolver. We are using some internal package-renamed version of xml-resolver that was being bundled with glassfish (which is certainly bad practice on both fronts). Can we use the correct GAV: xml-resolver:xml-resolver:1.2 instead?	0	0	https://issues.jboss.org/browse/JBPAPP6-274
10733	JBPAPP6-267	Actually is that command supposed to be in the DRx version? Maybe the devs forgot to include that command for the enterprise edition?	0	0	https://issues.jboss.org/browse/JBPAPP6-267
10734	JBPAPP6-264	Copied comment from AS-1338: "Hi all, I'm just adding some brief info from John about newly implemented remote jndi support and how to use it. As I understood everything what should be reachable in jndi from outside the server must be registered under "java:jboss/exported/" context. As an example I used it in standalone jms client to get connection factory and queue from jndi: // jms client code // initialize context final Properties env = new Properties(); env.put(Context.INITIAL_CONTEXT_FACTORY, "org.jboss.naming.remote.client.InitialContextFactory"); env.put(Context.PROVIDER_URL, "remote://localhost:4447"); Context context = new InitialContext(env); // do lookups ConnectionFactory cf = (ConnectionFactory) context.lookup("jms/RemoteConnectionFactory"); Queue queue = (Queue) context.lookup("jms/queue/test"); // do whatever you want How are jms objects registered to jndi in messaging subsystem in standalone-ha.xml: <jms-connection-factories> ... <!-- configuration for connection factory --> <connection-factory name="RemoteConnectionFactory"> <connectors> <connector-ref connector-name="netty"/> </connectors> <entries> <entry name="java:jboss/exported/jms/RemoteConnectionFactory"/> <!- this is the important part --> </entries> </connection-factory> ... </jms-connection-factories> <jms-destinations> ... <jms-queue name="testQueue"> <entry name="java:jboss/exported/jms/queue/test"/> <!- this is the important part --> </jms-queue> ... </jms-destinations> Used libraries (in my simple client): hornetq-core-2.2.11.Final.jar hornetq-jms-2.2.11.Final.jar jboss-as-naming-7.1.0.Final-SNAPSHOT.jar jboss-jms-api_1.1_spec-1.0.0.Final.jar jboss-logging-3.1.0.GA.jar jboss-marshalling-1.3.6.GA.jar jboss-marshalling-river-1.3.6.GA.jar jboss-modules.jar jboss-msc-1.0.2.GA.jar jboss-remote-naming-1.0.0.Beta4.jar jboss-remoting-3.2.0.CR9.jar jboss-sasl-1.0.0.Beta9.jar netty-3.2.6.Final.jar xnio-api-3.0.0.GA.jar xnio-nio-3.0.0.GA.jar Note: I had to add static block to my class so I could connect to server through remoting: static { Security.addProvider(new JBossSaslProvider()); } Hopefully I didn't forget anything and this info will help. Thanks for this cool feature, Mirek"	1	1	https://issues.jboss.org/browse/JBPAPP6-264
10735	JBPAPP6-263	Peter, can you link any upstream issue that details the issues?	0	0	https://issues.jboss.org/browse/JBPAPP6-263
10736	JBPAPP6-262	Hi Jonathan, I assume your comment on : https://jira.jboss.org/browse/PRODMGT-30 "JBossTS has no plans to support tx inflow with lazy interposition or non-interposed configurations. Changing the ejb interceptor chain to optimize out the tx import may be an alternative." applies here too. Can you confirm. Thank you. Bruno	1	1	https://issues.jboss.org/browse/JBPAPP6-262
10737	JBPAPP6-262	Does this need to be documented as a Known Issue for EAP 5.1.1? Thanks for your help!	0	0	https://issues.jboss.org/browse/JBPAPP6-262
10738	JBPAPP6-261	Anil, can you mark these dependencies as "optional"? Then you can close this issue.	0	0	https://issues.jboss.org/browse/JBPAPP6-261
10739	JBPAPP6-257	Why did you upgrade it only to 2.1.3.1? AS 7.1.3.Beta1 which is the base of EAP 6.0.1 ER1 has picketlink 2.1.4 in the dependency tree.	0	0	https://issues.jboss.org/browse/JBPAPP6-257
10740	JBPAPP6-208	It's both there: the landing pages and the console updates. Are you sure you are looking at the right instance? Maybe you need to clear your browser cache?	0	0	https://issues.jboss.org/browse/JBPAPP6-208
10741	JBPAPP6-204	It looks like there is a problem with the new maven bundle plugin 2.5 monolith. Can you take a look at this John? {noformat} [ERROR] Failed to execute goal org.apache.felix:maven-bundle-plugin:2.3.5-redhat-1:bundle (default-bundle) on project jboss-as-osgi-configadmin: Execution default-bundle of goal org.apache.felix:maven-bundle-plugin:2.3.5-redhat-1:bundle failed: Unable to load the mojo 'bundle' in the plugin 'org.apache.felix:maven-bundle-plugin:2.3.5-redhat-1'. A required class is missing: org/codehaus/plexus/archiver/UnArchiver [ERROR] ---------- [ERROR] realm = plugin>org.apache.felix:maven-bundle-plugin:2.3.5-redhat-1 [ERROR] strategy = org.codehaus.plexus.classworlds.strategy.SelfFirstStrategy [ERROR] urls[0] = file:/home/pgier/projects/jboss-eap/local-repo/org/apache/felix/maven-bundle-plugin/2.3.5-redhat-1/maven-bundle-plugin-2.3.5-redhat-1.jar [ERROR] urls[1] = file:/home/pgier/projects/jboss-eap/local-repo/org/codehaus/plexus/plexus-utils/2.1-redhat-1/plexus-utils-2.1-redhat-1.jar [ERROR] Number of foreign imports: 1 [ERROR] import: Entry[import from realm ClassRealm[project>org.jboss.as:jboss-as-osgi-configadmin:7.1.0.Beta1-redhat-1, parent: ClassRealm[maven.api, parent: null]]] [ERROR] [ERROR] ---------- ----------: org.codehaus.plexus.archiver.UnArchiver [ERROR] -> [Help 1] {noformat}	1	1	https://issues.jboss.org/browse/JBPAPP6-204
10742	JBPAPP6-195	Paul, will the JBossEAP-Release-Version be set only for artifacts that come from the AS source tree? External components for instance Hornetq, which is also built in mead, only has the community release version (2.2.6) in its manifest, does not have a corresponding EAP version. Typically components like this will have their own product branch and create releases from them, for instance say, 2.2.6.CP01. Should their manifests still have the corresponding EAP version (6.0.x).	0	0	https://issues.jboss.org/browse/JBPAPP6-195
10743	JBPAPP6-194	Vladmir, can you run the script against the -latest tag repository, and then upload the script?	1	1	https://issues.jboss.org/browse/JBPAPP6-194
10744	JBPAPP6-191	is this a permanent change or something that is done manually for every build?	0	0	https://issues.jboss.org/browse/JBPAPP6-191
10745	JBPAPP6-191	I mean, is there a manual process to remove openjpa for each build/release or is the removal automated?	0	0	https://issues.jboss.org/browse/JBPAPP6-191
10746	JBPAPP6-186	Could you please provide details how to import JBossPublicKey.RSA into keystore.	0	0	https://issues.jboss.org/browse/JBPAPP6-186
10747	JBPAPP6-179	What is the difference between -sources.zip and -sources.jar ? asking since maybe those sources.zip are needed but shuold be called sources.jar ? find on .tar shows the maven repo contains jboss-as-dist-7.1.0* zip - this is in .org mainly used for downloading/installing AS via arquillian afaik ? Is this a usecase we need to cover for EAP too or just remove this?	0	0	https://issues.jboss.org/browse/JBPAPP6-179
10748	JBPAPP6-169	Heiko, here is a patch with some minor updates to the content based on what we previously had in EAP 6, can you apply this to the ballroom git repo?	0	0	https://issues.jboss.org/browse/JBPAPP6-169

#	Requirement	Questions	Answered	Successfully Answered	URL
10749	JBPAPP6-165	If -redhat identifier represents EAP, should the version be 6.0.0-redhat-1 or 7.0.1-redhat-1/7.1.0-redhat-1? It relates to my comment in JBPAPP-6831 . When EAP 6.0.1 comes out, what will this version be? 7.1.1.-redhat-1? Actually incrementing the AS version like this in EAP releases was Andy's original recommendation, which you were opposed to. BTW, did we come to an agreement if the AS version in server startup messages would stay the same or increment with every EAP release. Basically the same question as above.	0	0	https://issues.jboss.org/browse/JBPAPP6-165
10750	JBPAPP6-164	Here are two versions of the EAP favicon based on the look and feel I designed for the Console. I've included the .png version and the .ico	0	0	https://issues.jboss.org/browse/JBPAPP6-164
10751	JBPAPP6-164	With DR11 build, I see the favicon only on the landing page, but not for the console pages. Can somebody check to verify if it's not an issue with my browser?	0	0	https://issues.jboss.org/browse/JBPAPP6-164
10752	JBPAPP6-154	btw. is http://lists.jboss.org/pipermail/jboss-as7-dev/2012-January/005017.html the one we should use going forward ? look for bin/product.conf for the "type" (eap, soa-p, etc.) and then modules/org/jboss/as/product/<product.conf>/dir/META-INF/MANIFEST.MF/JBoss-Product-Release-Version for the version ?	1	1	https://issues.jboss.org/browse/JBPAPP6-154
10753	JBPAPP6-154	Rob, I was asked to verify this. I just did - Max' steps work. Can you confirm that this is fine with you and close the JIRA? Thanks.	0	0	https://issues.jboss.org/browse/JBPAPP6-154
10754	BRMS-599	I've compared this request to our Support-Patch guidelines* and find the request reasonable. (We don't exactly follow the Support-Patch guidelines for BRMS at this point, but it can serve as a guideline.) The Support Patch guidelines are not particularly clear, so I will take it as a take-away to make sure they are clear when we make the move to BZ (perhaps this month.) Alessandro, sorry the doc failed us this time. Would you please make allowances for Tiho's request, and try to use this case as an example until we re-publish for BZ. Thanks, Rick *https://docspace.corp.redhat.com/docs/DOC-51939	1	1	https://issues.jboss.org/browse/BRMS-599
10755	BRMS-596	kylin <ksoong@redhat.com> made a comment on [bug 724753|https://bugzilla.redhat.com/show_bug.cgi?id=724753] As [1] hints the issue is fixed in drools 5.3.0.Final, but I test via BRMS 5.3.0 the issue still existed [1] https://issues.jboss.org/browse/JBRULES-3063	0	0	https://issues.jboss.org/browse/BRMS-596
10756	BRMS-596	Edson Tirelli <etirelli@redhat.com> made a comment on [bug 724753|https://bugzilla.redhat.com/show_bug.cgi?id=724753] Can you please clarify how you tested? By default, BRMS does allow rule replacement... it will only raise errors when the engine is configured to raise errors for rule duplication.	0	0	https://issues.jboss.org/browse/BRMS-596
10757	BRMS-555	The drools parent pom has been building the test-jar for a couple of months already: https://github.com/droolsjbpm/droolsjbpm-build-bootstrap/blob/master/pom.xml#L377 <plugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-jar-plugin</artifactId> <version>2.3.1</version> <executions> <execution> <goals> <goal>test-jar</goal> </goals> </execution> </executions> The test-jars should also be deployed to nexus. More info at http://maven.apache.org/guides/mini/guide-attached-tests.html So I don't understand the problem. One possible corner case: I don't know how that configuration affects war packaging, such as guvnor-webapp (formerly known as drools-guvnor). Of what artifact are you missing the test jars?	0	0	https://issues.jboss.org/browse/BRMS-555
10758	BRMS-428	Kris Verlaenen <kverlaen@redhat.com> made a comment on [bug 958408|https://bugzilla.redhat.com/show_bug.cgi?id=958408] This related to how metadata for files is stored in Guvnor for BRMS/BPMS6. Is metadata stored in an additional file on the file system (so it can be editor from Eclipse using for example EGit)?	0	0	https://issues.jboss.org/browse/BRMS-428
10759	BRMS-427	Lucas, Trevor is right. It should not be any different. We still expect users to deploy the deployable components on either EAP, EWP, SOA-P and EWS. So, they should use the same properties. I assume Docs would address this clearly. Btw, what does EWS use for the same ? Also, note, many of our customers use BRMS on other containers like Websphere and Weblogic. We dont need to get into those details and not necessarily document those scenarios. But we need to be congnizant of that fact. I am sure there are similar login module options in those products. My question is what does BRM (Guvnor) look for in that case.	0	0	https://issues.jboss.org/browse/BRMS-427
10760	BRMS-415	What else needs to be done with this? Can it be marked as 'Resolved'?	1	1	https://issues.jboss.org/browse/BRMS-415
10761	BRMS-415	This should now be a doc issue. Can we explain when one option is preferred over another? And then hand over to the docs group, please.	0	0	https://issues.jboss.org/browse/BRMS-415
10762	BRMS-415	IIUC, users don't have to change or decide on any of these options because the ModeShape service is now being configured correctly when used within BRMS. If that is the case, does anything need to be documented?	1	1	https://issues.jboss.org/browse/BRMS-415
10763	BRMS-415	Can this be closed? What else needs to be done? Does it need to be reassigned?	0	0	https://issues.jboss.org/browse/BRMS-415
10764	BRMS-397	Randall can I think 1.0 is out, I think it makes sense to upgrade MS to that version, rather then using an release candidate?	1	1	https://issues.jboss.org/browse/BRMS-397
10765	BRMS-393	Toshiya, checked this with trunk and I don't see the problem (unless am not running the right test). Can you show again here how to reproduce this issue in Guvnor by describing your model, rule and a test scenario?	0	0	https://issues.jboss.org/browse/BRMS-393
10766	BRMS-368	Should the fix version of this not also include 5.1.0 ? Idk.	0	0	https://issues.jboss.org/browse/BRMS-368
10767	BRMS-362	questions: 1 - Are these all the supported scenarios for BRMS 5.x ? 2 - what configuration will be provided out of the box in the EWP bundle ? 3 - how will deployment & configuration differ for tomcat in EWS ? 4 - what will be involved with BRE deployment ? Also what is it? And what is it for ?	0	0	https://issues.jboss.org/browse/BRMS-362
10768	BRMS-343	Note that all references to modeshape in this doc need to be prefaced with the fact that it is only supported in 5.1 and later versions of BRMS	1	1	https://issues.jboss.org/browse/BRMS-343
10769	BRMS-297	Document is here: http://downtown.englab.bne.redhat.com/drafts/JBoss_Enterprise_BRMS_Platform/5.0.2/Release_Notes/ Darrin - is the doc ready for review?	0	0	https://issues.jboss.org/browse/BRMS-297
10770	BRMS-297	Comments: Section: 4. Supported Deployment Platforms Supported Java Virtual Machines (JVM) * Sun JDK 1.5 * Sun JDK 1.6 Comment: This list may change. Waiting on a PM decision as RHEL dropped Sun 1.5 on March 31 ---------- Supported Browsers * Firefox 3 * Internet Explorer 7 * Internet Explorer 6 * Safari 3 Comment: This list needs to be expanded to also include IE8 and Safari 4 ---------- Section: 7. Possible Migration Issue Need to change the wording: Client applications built using the JBoss Rules engine libraries from the 5.0.1 and later releases are unable to user resources being server from a JBoss Enterprise BRMS Platform 5.0.0 server. Should read "use" not "user." ---------- Section: 8. Issues resolved in the 5.0.2 release The sequence of the JIRAs listed in this section seem to be random. Can the JIRAs be listed in numerical order?	0	0	https://issues.jboss.org/browse/BRMS-297
10771	BRMS-297	be handy if I actually set this issue to resolved wouldn't it ? ;-)	1	1	https://issues.jboss.org/browse/BRMS-297

#	Requirement	Questions	Answered	Successfully Answered	URL
10772	BRMS-285	Comments: ========== Figure 4.1. Main feature areas of the BRMS Platform The above picture shows the main feature areas of the BRMS Platform. • Info: This is the initial screen, with links to resources. • Rules: This is the category and business user perspective. • Package: This is where packages are configured and managed. • Deployment: this is where deployment snapshots are managed. • Admin: Administrative functions (categories, statuses, import and export) Comment: The image in figure 4-1 is truncated and the bulleted items do not match the screen display ========== Chapter 5 - The note that refers to: JBoss only provides support for this functionality in the JBoss Developer Studio 2 product. Should refer to: JBoss provides support for this functionality in the JBoss Developer Studio 2 and 3 products. ========== The first reference to Guvnor in the book is on page 4: Note These instructions tell you to use the URL http://<server>:8080/jboss-brms/ to access the BRMS application. However, that URL is just a convenience and it actually redirects your browser to the full URL, http://<server>:8080/jboss-brms/ org.drools.guvnor.Guvnor/Guvnor.html. You can use the full URL if you wish. But - the explanation of the relationship between Guvnor and BRMS is not explained until page 53: Important Guvnor is the name of the open-source project on which the JBoss Enterprise BRMS Platform has been built. The Eclipse Guvnor Tools were developed with it in mind. Any place where EGT refers to "Guvnor" it can be considered equivalent to "BRMS Platform". To avoid confusion the remainder of this chapter will use term "Guvnor". Comment: We should add this note to page 4: Important Guvnor is the name of the open-source project on which the JBoss Enterprise BRMS Platform has been built. ========== I think that it is worth defining DRL (Drools Rule Language - the "native" Drools rule language) and DSL (Domain Specific Languages - a way of extending the rule language to your problem domain) fo rth efirst time user/reader. ========== 4.6.1. The Rule Agent The Rule Agent is a component which is embedded in the core run-time of the Rules Engine. In order to use it, you do not need any extra components. In fact, if you are using the BRMS Platform, your application should only need to include the drools-core dependencies in its classpath (drools and mveljars only). There are no other rule-specific dependencies. Comment: We should refer the user to the "README_DEPENDENCIES.txt" file that is included in jboss-brms-engine.zip Note that there is also a drools-ant ant task... Comment: drools-ant-5.0.1.BRMS.jar is also included in: jboss-brms-engine.zip ========== 4.6.1. The Rule Agent The code fragment should also include: import org.drools.agent.RuleAgent; import org.drools.RuleBase; ========== Task to think about - not in the context of a point release - re-organizing the guide. Chapter 4 is named the "Quickstart Guide," but it is over 25 pages long. I'm thinking that we should redesign the guide and convert this long chapter into a set of shorter chapters where each chapter covers one task or use case.	1	1	https://issues.jboss.org/browse/BRMS-285
10773	BRMS-285	Items 1-7: 1 - already covered by BRMS-233 2 - JBDS 3 - will update 3 - will move these comments to the introduction of the book 4 - will add definitions to first usages 5 - will investigate, needs some clarification 6 - will update 7 - that is something that needs to occur upstream. The first section of the chapter is also called Quickstart Guide and actually *is* a quickstart guide. The chapter just needs renaming to something more appropriate	0	0	https://issues.jboss.org/browse/BRMS-285
10774	BRMS-284	Found the note - it looks good - one change to the wording is needed: NOTE: Quick Installation The JBoss Enterprise BRMS Platform WAR file can be quickly deployed with no configuration. This is only suitable for development and demonstration scenarios. To do this, skip three of the installation procedure and enable one or more users in jboss-as/server/production/conf/props/jmx-console-users.properties. This should read: "skip step 3"	0	0	https://issues.jboss.org/browse/BRMS-284
10775	BRMS-281	So, a user who is package admin and can access only rules of a particular category gets a permission error when he tries to access an asset that is assigned to a category (in this case no category) that this user should not have access - sounds good to me - or am I missing something? Let me summarize the problem: I have a user called "pawc" (packageadminwithcategory) which is - package admin for package "p" - analyst for category "c" and a user called "panc" (packageadminnocategory) which is package admin for package "p" I have an asset called a1 in "p" with category "c" I have an asset called a2 in "p" without any categories assigned User "panc" can access both assets, user "pawc" can only access a1 and cannot access a2. IMHO that works as expected, right? User "pawc" is limited to the package "p" but is also limited to a particular group of rules which are assigned to the "c" category.	0	0	https://issues.jboss.org/browse/BRMS-281
10776	BRMS-281	Which package admin? "073678" ? IMHO that's fine, because this is an admin who is limited with the analyst role to particular rules - so as a package admin he still can perform all the tasks a package admin is allowed to do (build pkg, create snapshots, etc) - that's what the package admin role is for. However he can only access rules which are assigned to the UWReporting, UWReporting/UWRMapping and UWReporting/UWRProviderSection categories. Rules assigned to other categories and also not assigned to any categories are out of sight for this guy, even he has package admin rights... these right are limited because of the additional analyst role.	0	0	https://issues.jboss.org/browse/BRMS-281
10777	BRMS-262	Is this content accurate and adequate ? Any suggestions ?	0	0	https://issues.jboss.org/browse/BRMS-262
10778	BRMS-257	DRL rules already supports import *, so this is a purely GUI issue. My impression is that this may not be a good idea, as the GUI needs to be eager and loads all type up for drop downs. This may make the GUI very inefficient. This is different to the import on demand in Java. In the import on demand case, java can be lazy and only resolves and loads classes that are needed during compiling. Having said that, we may still support import * if there is a valid use case and this support improves usability. As far as I know, the "Imported types" list is automatically populated with class types when a jar is uploaded. In this case, use does not need to edit the imported types manually, thus he/she does not need to use a import * which may save his/her time. Is there any other use cases when users may need to use import *?	1	1	https://issues.jboss.org/browse/BRMS-257
10779	BRMS-254	I think agents following multiple sources is rather complicated. What does it happen if the BRMS instance that is up does not have the latest package version? Instead of it, it would be better that all BRMS instances are aware they are clusterized. When a user builds a new version of a package, the BRMS should send messages to all the other BRMS instances asking to update that package. The fail over between BRMS instances could be provided by any well known HA alternative (like mod_jk).	0	0	https://issues.jboss.org/browse/BRMS-254
10780	BRMS-227	The doc looks good - can we get the URLs added to the new section? THAT will finish the book.	1	1	https://issues.jboss.org/browse/BRMS-227
10781	BRMS-219	In section 2.2. Installation, we tell the user to install the BRMS war as: http://localhost:8080/JBoss-BRMS/ instead of http://localhost:8080/jboss-brms/ (as was the case in the 5.0 GA release) as a result many other edits to the document are needed. (See the above comment.) Is there a need to change the URL on 5.0.1? If not, then we should restore the text to: http://localhost:8080/jboss-brms/	1	1	https://issues.jboss.org/browse/BRMS-219
10782	BRMS-219	Len, I removed the error message. I can't find any part of Section 2.2 or anywhere else taht referes to http://localhost:8080/JBoss-BRMS/ . They all seem to be lower case now. Can you please clarify where you saw this? Many thanks.	0	0	https://issues.jboss.org/browse/BRMS-219

10790	BRMS-83	When to use a BRMS Text: 1. You need to manage versions/deployment of rules Comment: This might read better: You need to manage versioning/deployment of rules ---------- Page 3, Section 2.1. Supported and recommended platforms Comment: This section should list Java 1.5 and 1.6 in the set of supported platforms. ---------- Page 3, Section 2.2. Installation Text: 2. Extract Files The JBoss Enterprise BRMS Platform package contains two files, jboss-brms.war and jboss-brms-engine.zip. jboss-brms.war is a Java web archive containing the BRMS application. jboss-brms-engine.zip contains the jar files for the JBoss Rules 5 rules engine. These files are a subset of jboss-brms.war. Comment: The jboss-brms.CR2.zip file contains these (2) files: jboss-brms-engine.zip jboss-brms-manager.zip The jboss-brms-manager.zip file contains the jboss-brms.war file only. ---------- Text: 3. "explode" the web archive Create a directory called jboss-brms.war and use a file archive tool to unpack the web archive into this directory. Comment: We should add this text as a warning: Be careful to name the directory "jboss-brms.war" - the ".war" is needed or the BRMS will not be properly deployed by the EAP server. ---------- Page 5, Figure 2.2. BRMS first screen after login Comment: This screenshot shows an IP address of 10.64.5.95. I'm guessing that this is a system in Brisbane. It would be safer to use localhost if we have time to replace the screenshot. ---------- Page 7, Procedure 2.2. Changing the repository location Text: 5. Move existing data store if required A new data store will be created by BRMS at the new location if there isn't one there already. If you wish to keep your existing data store then you can copy your existing files to the new location. Comment: Add this at the end of the above paragraph: "before you restart your server." ---------- Page 8, Section 2.3.2. BRMS Database Configuration Text: The means by which the BRMS Platform manages access to these databases is handled by a Persistence Manager. There is a generic Persistence Manager for use with any JDBC compliant database as well as several specific to particular database implementations, such as Oracle or MySQL. Comment: We should remove the reference to MYSQL here as we do not yet support that DB. ---------- Page 8, Section 2.3.2. BRMS Database Configuration Warning If you already have assets stored using the existing configuration that you wish to keep then you should export those before performing these steps. You can then import them into your new database afterwards. Comment: We should add a note to the warning that exporting and then importing a Rules repository is not supported as a backup and restore mechanism. Users should be told to set up a regular database backup procedure for their Worskpace and Versions databases. ---------- Page 18, 2.6.1. Backups Comment: We should repeat the note from 2.3.2 - instructing the users to not depend on export/import as a backup mechanism. ---------- Page 18, 2.6.2. Asset list customization Comment: This section refers to a AssetListTable.properties file. That file is not included in the .war: [ldimaggi@ldimaggi jboss-brms.war]$ pwd /jboss/local/EAP/jboss-eap-4.3/jboss-as/server/all/deploy/jboss-brms.war [ldimaggi@ldimaggi jboss-brms.war]$ ll total 56 -rw-rw-r-- 1 ldimaggi ldimaggi 3825 Apr 17 17:23 drools_logo.gif -rw-rw-r-- 1 ldimaggi ldimaggi 131 Apr 17 17:23 index.jsp drwxrwxr-x 3 ldimaggi ldimaggi 4096 Apr 17 19:57 META-INF -rw-rw-r-- 1 ldimaggi ldimaggi 130 Apr 17 17:23 NOTE.txt drwxrwxr-x 5 ldimaggi ldimaggi 4096 May 8 11:04 org.drools.guvnor.Guvnor drwxrwxr-x 2 ldimaggi ldimaggi 4096 Apr 17 19:57 org.drools.guvnor.Guvnor-aux drwxrwxr-x 4 ldimaggi ldimaggi 4096 May 12 13:41 WEB-INF [ldimaggi@ldimaggi jboss-brms.war]$ find . -name AssetListTable.properties -print ---------- Page 18, 2.6.3. 10793	BRMS-83	of rules Comment: This might read better: You need to manage versioning/deployment of rules ---------- Page 25, 4.2.1. Rules are assets Text: As the BRMS can manage many different types of rules (and more), they are all classed as "assets". An asset is anything that can be stored as a version in the repository. This includes decision tables, models, DSLs and more. Sometimes the word "rule" will be used to really mean "asset" (i.e. the things you can do also apply to the other asset types). You can think of asset as a lot like a file in a folder. Assets are grouped together for viewing, or to make a package for deployment etc. Comment: Can we reword this to: As the BRMS can manage many different types of rules and other rules-related data, which are referred to as "assets". An asset is anything that can be stored as a version in the repository. This includes decision tables, models, DSLs and more. In this guide and in the UI, the word "rule" is sometimes used mean "asset" (i.e. the actions you can perform on rules can also be performed on the other asset types). Assets are grouped together for viewing, or to make a package for deployment. ---------- Page 31, 4.2.4.1.3. A more complex example: Text: In the above example, you can see it is using a mixture of literal values, and formulas. The second constraint on the "Person" fact, is a formula (in this case it is doing a silly calculation on the persons age, and checking something against their name - both "age" and "name" are fields of the Person fact in this case. In the 3rd line (which says "age is less than .." - it is also using a formula, although, in this case the formula does a calculation and returns a value (which is used in the comparison) - in the former case, it had to return True or False (in this case, its a value). Obvious formulas are basically pieces of code - so this is for experienced users only. Comment: Can we reword the last line to: "Formulas are pieces of executable code - so this is for experienced users only." ---------- Page 34, Section 4.2.4.5. Technical rules (drl) Text: Technical (drl) rules are stored as text - they can be managed in the BRMS. A DRL can either be a whole chunk of rules, or an individual rule. if its an individual rule, no package statement or imports are required (in fact, you can skip the "rule" statement altogether, just use "when" and "then" to mark the condition and action sections respectively). Normally you would use the IDE to edit raw DRL files, since it has all the advanced tooling and content assistance and debugging, however there are times when a rule may have to deal with something fairly technical. In any typical package of rules, you generally have a been for some "technical rules" - you can mix and match all the rule types together of course. Comment: Can we reword this as: Technical (drl) rules are stored as text and can be managed in the BRMS. A DRL can either be an individual rule or multiple rules. If it's an individual rule, no package statement or imports are required. You can skip the "rule" statement altogether and just use "when" and "then" to mark the condition and action sections respectively. Normally you would use an IDE to edit raw DRL files, since it has all the advanced tooling to support editing, content assistance and debugging. Also - we have to ask Michael what this means - how does a rule being "technical" require that it be edited in the BRMS? However there are times when a rule may have to deal with something fairly technical. In any typical package of rules, you generally have a been for some "technical rules" - you can mix and match all the rule types together of course. ---------- Page 35, Section 4.2.4.7. Data enumerations (drop down list configurations) Text: Data enumerations are an optional asset type that technical folk can configure to provide drop down lists for the guided editor. These are stored and edited just like any other asset, and apply to the package that they belong to. Comment: Can we reword the paragraph to read: Data enumerations are an optional asset type that can be configured to provide drop down lists for the guided editor. These are stored and edited just like any other asset, and apply to the package that they belong to. ---------- Page 37, 4.2.4.8. Advanced enumeration concepts Text: Mode advanced enumerations: In the above cases, the values in the lists are calculated up front. This is fine for relatively static data, or	1	0	https://issues.jboss.org/browse/BRMS-83
10794	BRMS-83	From Michael - thanks! Try this: Technical (drl) rules are stored as text - they can be managed in the BRMS. A DRL can either be a whole chunk of rules, or an individual rule. if its an individual rule, no package statement or imports are required (in fact, you can skip the "rule" statement altogether, just use "when" and "then" to mark the condition and action sections respectively). Normally you would use the IDE to edit raw DRL files, since it has all the advanced tooling and content assistance and debugging. However, there are times when a rule may have to deal with something fairly technical in a package in Guvnor. In any typical package of rules, you generally have a need for some "technical rules" - you can mix and match all the rule types together of course. Len DiMaggio wrote: > Hey Michael, > > Question on something in the user guide - can you add to this? > > > Page 34, Section 4.2.4.5. Technical rules (drl) > > Text: > > Technical (drl) rules are stored as text - they can be managed in the BRMS. A DRL can either be a > whole chunk of rules, or an individual rule. if its an individual rule, no package statement or imports > are required (in fact, you can skip the "rule" statement altogether, just use "when" and "then" to mark > the condition and action sections respectively). Normally you would use the IDE to edit raw DRL files, > since it has all the advanced tooling and content assistance and debugging, however there are times > when a rule may have to deal with something fairly technical. In any typical package of rules, you > generally have a been for some "technical rules" - you can mix and match all the rule types together of > course. > > Comment: > > ------> How does a rule being "technical" require that it be edited in the BRMS? Maybe this needs rewording? > > However there are times when a rule may have to deal with something fairly technical. In any typical package of rules, you > generally have a been for some "technical rules" - you can mix and match all the rule types together of > course.	1	0	https://issues.jboss.org/browse/BRMS-83
10795	BRMS-83	Document has been updated with the above feedback. Feedback above has been incorporated with the exception of a couple of "formatting issues" (no time sorry) and the items below which need more information: Page 33, Section 4.2.4.3. Spreadsheet decision tables Text: To use a spreadsheet, you upload an xls (and can download the current version, as per the picture above). To create a new decision table, when you launch the rule wizard, you will get an option to create one (after that point, you can upload the xls file). Comment: We should also state that BRMS currently supports uploading from Microsoft Excel(tm) spreadsheets. ---------- Is that to say we should specify that when we say xls we specifically mean Microsoft Excel(tm) spreadsheets? Page 36, 4.2.4.8. Advanced enumeration concepts Comment: The references to ULP and PULP types of fuel may be lost on readers who are not in Australia. Maybe we can add a footnote: http://www.fuelwatch.wa.gov.au/info/dsp_fuel_types.cfm ---------- Examples in less specific domains would be preferred but adding further clarification is not really necessary. The description of the problem domain is fairly clear. Page 20, 2.6.5. Import and Export We've seen failures on importing large repos. We may need to add some additional warnings to this section. Let's talk to Darrin about how to describe this. ---------- what sort of errors? are there any plans to address this? JIRA? should I include it as a known issue in the release notes?	1	0	https://issues.jboss.org/browse/BRMS-83
10796	BRMS-82	updated, committed & sent to soa-pm-list aswell. Can you clarify this statement from the comments above? "The only JVMs that we should list are Sun 1.5, Sun 1.6, and Apple 1.5 - note that this is for the BRMS UI. " I'm a bit confused here, does this mean the BRMS UI has a client side java dependency (applets or something) ? And that we are supporting JDK1.5 on OSX for that, but only the Sun JDKs on the server ?	0	0	https://issues.jboss.org/browse/BRMS-82
10797	BRMS-8	Are you sure that's not a cache issue? If it's the same in CR1 can you attach a screenshot	0	0	https://issues.jboss.org/browse/BRMS-8
10798	BRMS-2	What's the status?	0	0	https://issues.jboss.org/browse/BRMS-2
10799	EDG-122	Rado, as you said this was executed with CR3 and precisely for CR4 I fixed messages and providing clearer exceptions. Closing now. Please reopen if no satisfied with CR4.	0	0	https://issues.jboss.org/browse/EDG-122
10800	EDG-121	Michal, what was the outcome of this? Seems like we're going with 2.2.x, so Infinispan would need to upgraded to REST 2.2.x, right?	0	0	https://issues.jboss.org/browse/EDG-121

#	Requirement	Questions	Answered	Successfully Answered	URL
10801	EDG-31	Why not Netty? Bill Burke had some interest in running RestEasy on top of Netty and that makes sense in my opinion. Less dependency, too.	0	0	https://issues.jboss.org/browse/EDG-31
10802	EDG-28	What should the official bundle look like? Does it look different from the usual tar/zip distribution? Any pointers would be appreciated.	0	0	https://issues.jboss.org/browse/EDG-28
10803	EDG-28	What I thought by official build is basically a somehow stabler tag - the build process and format of the distribution is not any different. I'd like to see it based on tagged AS 7.0.0.CR1 that's about to be released a tagged version of infinispan, that means probably 5.0.0.CR6 also I'd like to establish a nomemclature for later tags let's say ALPHA1, ALPHA2 etc. so that we can report against a concrete version in JIRA (set proper affectsVersion, fixVersion) so that when we take ALPHAx and find serious blockers in it, new ALPHA(x+1) is released and every change and bug report is trackable. the customer will get one of the later ALPHA tags, that would be the result of our QA process wdyt ?	0	0	https://issues.jboss.org/browse/EDG-28
10804	EDG-28	So, what you mean is tag Alpha1 real soon and keep fixing the known issues and keep tagging, and then provide the latest alpha (e.g. alpha5) to the customer when it's ready?	0	0	https://issues.jboss.org/browse/EDG-28
10805	EDG-23	ISPN-1267 has been resolved again. Michal, can you verify it looks good on your side now and close if necessary?	1	1	https://issues.jboss.org/browse/EDG-23
10806	EDG-22	Is this still an issue with 5.0.0.CR6?	0	0	https://issues.jboss.org/browse/EDG-22
10807	EDG-20	I think this issue can be better phrased as 'REST server cannot access the entries written by other protocol servers'. Can the REST server access the entries written via Hot Rod or direct calls?	0	0	https://issues.jboss.org/browse/EDG-20
10808	EDG-20	No, all server modules are basically isolated. HotRod is isolated from others by means of different key "encoding". All keys are stored as ByteArrayKey. In memcached and REST they are stored as plain String. It would be cool if we were able to share data between server modules, but there is one fundamental problem. All three server modules store different metadata with the entry. We would have to unite the way how the metadata is stored for each module and define "conversions" and default values for metadata that isn't written by one but read by the other. E.g. REST module writes mime type of the entry on PUT operation. HotRod doesn't. What kind of mime would be supplied to a value written by hotrod and read by REST ? I'm all for starting a design document on this, but so far the consensus I think was to isolate the server modules (via isolating their keyspaces).	0	0	https://issues.jboss.org/browse/EDG-20
10809	EDG-20	What does isolating keyspace really mean? Is it having a different EmbeddedCacheManager? Then does that mean we have to create three cache manager in a single VM?	0	0	https://issues.jboss.org/browse/EDG-20
10810	EDG-16	Michal, should this be closed then?	1	1	https://issues.jboss.org/browse/EDG-16
10811	EDG-15	Michal, can you check that with CR8 this is gone?	1	1	https://issues.jboss.org/browse/EDG-15
10812	EDG-14	What would be the desired behavior? Do you want Netty not to rename threads at all?	1	0	https://issues.jboss.org/browse/EDG-14
10813	EDG-12	1) Understood. See here for domain schema requirements: http://community.jboss.org/wiki/DomainRequirements 2) It covers *most* of it. The modifications can be largely summarized as: * More concise * Prune stuff that the AS handles internally. e.g. everything in <global>. Things like channel, thread pools, mbean server, transaction manager, are all injected from their respective subsystems. * Prune obscure configuration options (e.g. multiple cache loaders) * Only expose configuration options that are relevant for a given cache mode. e.g. don't expose rehash options for non-distributed caches * Provides sensible per cache mode custom default values * Combine multiple dependent options wherever possible (e.g. combine multiple booleans into single enum) The schema can be found here: https://github.com/jbossas/jboss-as/blob/master/clustering/src/main/resources/schema/jboss-infinispan.xsd Are there configuration options that you see missing? While the AS7 and EDG release schedules will vary, the EDG/EAP6 release schedules probably won't vary much. One of the domain schema requirements is that the domain schema should be *stable*. So, there *shouldn't* be any schema changes across minor releases. Changes across major releases are handled by versioning the schema itself.	0	0	https://issues.jboss.org/browse/EDG-12
10814	JBEPP-1468	The requested content has been included in the EPP Reference Guide. The new version (5.2.1-5) has been pushed to the Docs Stage.	1	1	https://issues.jboss.org/browse/JBEPP-1468
10815	JBEPP-1451	Matt, can you go ahead and commit for English language ?	1	0	https://issues.jboss.org/browse/JBEPP-1451
10816	JBEPP-1441	Scott, can you please include this in the documentation?	1	1	https://issues.jboss.org/browse/JBEPP-1441
10817	JBEPP-1430	Can you be more specific about what you would add to: http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Portal_Platform/5.1/html-single/Installation_Guide/index.html#sect-Reference_Guide-Database_Configuration ? Beside a warning note that the 2 DB must be different ?	0	0	https://issues.jboss.org/browse/JBEPP-1430
10818	JBEPP-1365	From Release Note text on the dev issue: {quote} The fix introduces JBossClusteredSSOValveFilter, which removes the patching and workarounds customers had to implement in earlier versions of the product, and increases overall platform security.{quote} Hi Marek The new ValveFilter sounds like a good thing to document, and replace the current workaround documented in the Reference Guide (which uses BASIC authentication, currently the subject of that worm). Can you link me to any info about the Filter, and what parameters it accepts? Even better, would it be possible to get a real-world configuration example of the ValveFilter in a directive file? Cheers Jared	1	0	https://issues.jboss.org/browse/JBEPP-1365
10819	JBEPP-1361	Hi Jared, This jira is not something, which needs to be secure. I set it with security level RH+EXO probably by accident, sorry for that:-/ Now I made it public. I returned release notes status back to "None". Is some more info needed from me? Because "Release notes text" already have some value, which can be used to identify purpose of this jira.	1	0	https://issues.jboss.org/browse/JBEPP-1361
10820	JBEPP-1350	Thank Marek, I've commented the points you mentioned, but would it be possible for you to give me some guidance on removing references to Tomcat altogether? (if EPP doesn't run on it, it probably shouldn't be in the documentation) There's some code snippets that reference tomcat, some URLs that seem Tomcat specific, notes on changing Tomcat port numbers and instructions to download and extract Tomcat. Which of those can be changed and what should they be changed to? Thanks	1	1	https://issues.jboss.org/browse/JBEPP-1350
10821	JBEPP-1290	I think we would benefit from it once we'll be able to consume EAP 5.1.2 (That should be in EPP 5.2.1), is that ok to do that or do we really have to override the versions shipped with Seam ? Thomas	1	1	https://issues.jboss.org/browse/JBEPP-1290
10822	JBEPP-1117	Thomas, not sure if this is a problem, can you please check this?	0	0	https://issues.jboss.org/browse/JBEPP-1117
10823	JBEPP-1098	Is this new info bar functionality documented anywhere that can be linked to in a release note?	1	0	https://issues.jboss.org/browse/JBEPP-1098
10824	JBEPP-1098	Based on Theute's comment, the Release Notes text has been redrafted. Old text: In previous versions of JBoss Enterprise Portal Platform, new portlets added to a page did not, by default, display the 'info bar' which usually surrounds the portlet. In this release, behaviour to have the 'info bar' displayed by default is available under the portal config settings. New text: This release of JBoss Enterprise Portal Platform adds a configurable setting to control whether the 'info bar' which surrounds new portlets is displayed by default. Is the revised text technically accurate?	1	0	https://issues.jboss.org/browse/JBEPP-1098

#	Requirement	Questions	Answered	Successfully Answered	URL
10825	JBEPP-1016	Busted, I did that too quickly ;) Matt can you replace the text ? The previous one: "Add priority for skin module css loading" was not very detailed.	0	0	https://issues.jboss.org/browse/JBEPP-1016
10826	JBEPP-1016	Is the new release text ok? Or does it need more details?	1	0	https://issues.jboss.org/browse/JBEPP-1016
10827	JBEPP-1013	If the underlying redirection handling has not been corrected, will this issue not just present again if a user points the iFrame to a site that does use redirection?	1	1	https://issues.jboss.org/browse/JBEPP-1013
10828	JBEPP-952	Can we also get the work done for GTNPORTAL-1706 in, please? (r6010 and r6136)	0	0	https://issues.jboss.org/browse/JBEPP-952
10829	JBEPP-894	I've checked it and everything seems to be ok now. Thanks Scott! Should I resolve this jira or you will?	1	1	https://issues.jboss.org/browse/JBEPP-894
10830	JBEPP-800	Scott, can you please add a comment at Chapter 8 (Portlets and Gadgets Administration) about JBEPP-927? It can be a Note or Warning that gadgets which are not used on Dashboard do not properly store preferences. It's about gadgets which you can add on portal pages in Gadget Wrapper Portlet. See comment from Thomas as well. This can be also added in Rel.notes as a known issue. Thanks	1	1	https://issues.jboss.org/browse/JBEPP-800
10831	JBEPP-780	Should this still be marked as a Known Issue? The problem causing the issue seems to have been corrected and the JIRA re-opened for a different reason (if I'm understanding the comments correctly)	0	0	https://issues.jboss.org/browse/JBEPP-780
10832	JBEPP-779	I am reopening since the main purpose of this Jira (setting multiplexer channel for MOPSessionManager) is not done. Shouldn't we create JIRA in eXo kernel for multiplexer channel support ?	0	0	https://issues.jboss.org/browse/JBEPP-779
10833	JBEPP-766	Download link in the page [1] fails with 'An Unexpected Error Has Occurred. ' Also the patch is not listed in [2]. Could you check it please? [1] https://support.redhat.com/jbossnetwork/restricted/softwareDetail.html?softwareId=5183 [2] https://access.redhat.com/jbossnetwork/restricted/listSoftware.html?downloadType=patches&product=jbportal&version=5.1.0	1	1	https://issues.jboss.org/browse/JBEPP-766
10834	JBEPP-735	Which jgroups configuration files ? (there are multiple ones for multiple channels) ? In general, you can define where to pickup the configuration file, so that you can always leave the one that we package intact in its jar and just specify a new location for a custom one.	0	0	https://issues.jboss.org/browse/JBEPP-735
10835	JBEPP-627	This table has been separated into EPP 5.0 and 5.1 specific sections. Entries for Oracle 11g R2 and Oracle 11g R2 RAC have been added to the 5.1 section. These new entries require version numbers.	1	1	https://issues.jboss.org/browse/JBEPP-627
10836	JBEPP-618	Thomas, would the instruction still be relevant for users on EPP 5.0?	1	1	https://issues.jboss.org/browse/JBEPP-618
10837	JBEPP-618	But I verified and it was already in EAP 5.0 as well, and should be removed from both versions of the doc	0	0	https://issues.jboss.org/browse/JBEPP-618
10838	JBEPP-616	Can you attach or list out all queries generated during CRUD of user and role?	0	0	https://issues.jboss.org/browse/JBEPP-616
10839	JBEPP-616	I have been logging sql queries for simple CRUD use cases (attached in a zip file). Then i've been counting the select queries with grep 'select this' sql.log | wc -l for different jboss-cache eviction algorithm set. there was no difference between algorithms, the eviction seems to be fully satysfying since it keeps all the data cached as long as possible. Anyway, there seems to be a place for improvement, since i.e. the query (in create.log) 2011-02-08 15:17:15,489 DEBUG [org.hibernate.SQL] org.jboss.logging.Logger select this_.ID as ID4_2_, this_.IDENTITY_TYPE as IDENTITY2_4_2_, this_.NAME as NAME4_2_, this_.REALM as REALM4_2_, type1_.ID as ID11_0_, type1_.NAME as NAME11_0_, rm2_.ID as ID0_1_, rm2_.NAME as NAME0_1_ from jbid_io this_ inner join jbid_io_type type1_ on this_.IDENTITY_TYPE=type1_.ID inner join jbid_realm rm2_ on this_.REALM=rm2_.ID where this_.NAME=? and type1_.NAME=? and rm2_.NAME=? is called several times with the same parameters. I will debug to understand the process better. my use case: start of startup.log 1. start clean EPP, after start 2. open "/portal/public/classic/" end of startup.log 3. click on login as root icon (bottom left) 4. click on Group -> Organization -> New staff start of create.log 5. fill in all fields, click save 6. click OK on modal confirmation window end of create.log 7. click on Group -> Organization -> Users and groups management start of retrieve.log 8. fill in the previously created username into the search field 9. click on search link end of retrieve.log 10. click on the edit button for that user start of update.log 11. change his first name 12. click save 13. click OK on modal confirmation window end of update.log 14. fill in the previously created username into the search field 15. click on search link start of remove.log 16. click on the delete button for that user 17. click ok on both modal confirmation windows end of remove.log	1	1	https://issues.jboss.org/browse/JBEPP-616
10840	JBEPP-592	Sorry, there is one change. If you change Template value it take effect, but after signing out. So this should be changed immediately. And what about some validation of Template input? Is it possible so that it could validate template path?	0	0	https://issues.jboss.org/browse/JBEPP-592
10841	JBEPP-592	One more comment: - if you change value of footer portlet from par:/groovy/groovy/webui/component/UIFooterPortlet.gtmpl to "text in footer" - it is saved properly, finish Edit Layout - sign out Error in log: 08:36:29,140 ERROR [FutureCache] Computing of resource org.exoplatform.resolver.ResourceKey@d2ace7e5 threw an exception java.lang.NullPointerException: No null input stream accepted at org.exoplatform.commons.utils.IOUtil.getStreamContentAsBytes(IOUtil.java:153) at org.exoplatform.groovyscript.text.TemplateService$1.retrieve(TemplateService.java:76) at org.exoplatform.groovyscript.text.TemplateService$1.retrieve(TemplateService.java:69) at org.exoplatform.commons.cache.future.FutureCache$1.call(FutureCache.java:83) at java.util.concurrent.FutureTask$Sync.innerRun(FutureTask.java:303) at java.util.concurrent.FutureTask.run(FutureTask.java:138) at org.exoplatform.commons.cache.future.FutureCache.get(FutureCache.java:117) at org.exoplatform.groovyscript.text.TemplateService.getTemplate(TemplateService.java:154) ... 08:36:29,142 ERROR [portal:Lifecycle] Template: text in footer not found.	0	0	https://issues.jboss.org/browse/JBEPP-592
10842	JBEPP-569	Patch applied to the EPP INstallation Guide configuration section and edited for doc consistency. svn -r5051 Is there further documentation needed for HTTPS and Gadgets? Or does this process correct that issue?	0	0	https://issues.jboss.org/browse/JBEPP-569
10843	JBEPP-560	JIRAs created: JBPAPP-5313 - One-off to upgrade JBC to version 3.2.6 in EAP 5.1.0 JBPAPP-5323 - Upgrade JBC in EAP 5.1.1 to version 3.2.6 (or higher if available)	0	0	https://issues.jboss.org/browse/JBEPP-560
10844	JBEPP-545	There looks to be enough content in the PL IDM Reference Guide to create a standalone, albeit slim, document. Are we able to apply the JBEPP name? I.E: "JBoss Enterprise Portal Platform PicketLink IDM Reference Guide" Based on ECS metric estimates, this conversion should take about two weeks to complete (including revision/editing).	1	1	https://issues.jboss.org/browse/JBEPP-545
10845	JBEPP-541	Is there info on how to change the IDM configuration anywhere?	1	1	https://issues.jboss.org/browse/JBEPP-541
10846	JBEPP-541	Could you describe a usecase?	1	0	https://issues.jboss.org/browse/JBEPP-541

#	Requirement	Questions	Answered	Successfully Answered	URL
10847	JBEPP-541	smumford@redhat.com made a comment on [bug 793458|https://bugzilla.redhat.com/show_bug.cgi?id=793458] Martin, I'm not sure I see the connection between the request for instructions on how to implement a custom DB schema and the Kbase article you linked which is about LastLoginTime. Can you confirm that the URL [1] is correct, and if so, please explain how the two topics are related. Thanks 1: https://access.redhat.com/knowledge/solutions/74953	0	0	https://issues.jboss.org/browse/JBEPP-541
10848	JBEPP-541	smumford@redhat.com made a comment on [bug 793458|https://bugzilla.redhat.com/show_bug.cgi?id=793458] Thanks Martin, I've drafted some simple content based on the KBase article, trying to be generic while using the kbase usecase as an example. Can you please review it and recommend any changes in a comment. I won't commit it to the document until it's verified by an SME. Thanks ######### Draft Content ######################## Overview: In order to implement a custom class, the following steps must be taken: * Edit the 02portal.war/WEB-INF/conf/organization/idm-configuration.xml file to use the custom class. * Create the custom implementation class. The easiest way to do this is to copy and edit one of the java files found at: http://anonsvn.jboss.org/repos/gatein/epp/portal/tags/EPP_5_1_1_GA/component/identity/src/main/java/org/exoplatform/services/organization/idm/ DOCS NOTE: Is there any way for a user to get these from their local EPP instance? Or are these downloads the only way? * Edit or remove any methods in the class that may interfere with the customized behavior you are implementing. DOCS NOTE; A 'for further information about possible changes please refer to ...' would be good here. Example: The following is a step-by-step example of the changes outlined above. This example disables writing a user's last login time to the database. 1: Change the value for org.exoplatform.services.organization.OrganizationService in idm-configuration.xml: <component> <key>org.exoplatform.services.organization.OrganizationService</key> <!--type>original.ExampleServiceImpl</type--> <type>custom.ExampleServiceImpl</type> <init-params> Obtain a copy of http://anonsvn.jboss.org/repos/gatein/epp/portal/tags/EPP_5_1_1_GA/component/identity/src/main/java/org/exoplatform/services/organization/idm/PicketLinkIDMOrganizationServiceImpl.java 2: Change the constructor of the custom PicketLinkIDMOrganizationServiceImpl to use custom DAO implementations: public PicketLinkIDMOrganizationServiceImpl(InitParams params, PicketLinkIDMService idmService) throws Exception { groupDAO_ = new GroupDAOImpl(this, idmService); userDAO_ = new UserDAOImpl(this, idmService); userProfileDAO_ = new UserProfileDAOImpl(this, idmService); membershipDAO_ = new MembershipDAOImpl(this, idmService); membershipTypeDAO_ = new MembershipTypeDAOImpl(this, idmService); 3: Remove the following code from the authenticate(..) method in the custom UserDAOImpl (as it sets the last login time): if (authenticated) { UserImpl userImpl = (UserImpl)user; userImpl.setLastLoginTime(Calendar.getInstance().getTime()); saveUser(userImpl, false); }	0	0	https://issues.jboss.org/browse/JBEPP-541
10849	JBEPP-530	Is there more information on how this fix was implemented? More info on the workaround ported from earlier JB Portal?	1	0	https://issues.jboss.org/browse/JBEPP-530
10850	JBEPP-519	* Should SP Installation be documented; 1) in it's own document, 2) in the SP User Guide, 3) in an SP specific section of the EPP Installation guide or 4) a combination (ie; in both the SP User Guide and the EPP Install Guide)? * How many installation scenarios are there? Is there an EPP+SP unit that has SP pre-deployed, or is the only method to obtain both EPP and SP (separately) and install EPP then deploy SP into it?	1	1	https://issues.jboss.org/browse/JBEPP-519
10851	JBEPP-519	Doc Note: Is Site Publisher 'separate' enough from EPP to require a new book for installation, or does it fall under the same product, and hence the "collapsed docs" regime (ie, it would go into EPP Installation Guide under 'Site Publisher' section)?	1	1	https://issues.jboss.org/browse/JBEPP-519
10852	JBEPP-517	Section 2.7.3.1: Second sentence: Why is "webapplication" one word and bold font? I think that sentence should read: "This icon can be changed by adding an image to the following directory of the <bold>web</bold> application:" What is even more confusing about this sentence is that the directory shown does not exist. And then the next sentence shows an example of an image placed in a different directory. This makes me think the above-mentioned directory should be: skin/DefaultSkin/portletIcons/portlet_name.png where "portlet_name" is the name of the portlet in portlet.xml. That would make the example consistent with the explanation.	1	1	https://issues.jboss.org/browse/JBEPP-517
10853	JBEPP-517	Rich, would you mind combining few comments together so that we get less emails? I currently get one email for every comment you make.	0	0	https://issues.jboss.org/browse/JBEPP-517
10854	JBEPP-517	Pg 124: Inside the "Assumptions" note: Number 2 needs to be updated to WSRP 2.0.0 (I think?). Number 3 mentions EPP Version 5.0-GA. Does that need to be updated to 5.1? Section 15.4: Third paragraph: First sentence: "...is used to *accomplish* this." Page 126: Last paragraph: Missing a space between "the" and "org.gatein.pc.remotable". Page 130: Inside the "Values" note: Second sentence ends with a couple extra periods. Page 130: Paragraph that proceeds the "Values" note: First word should be "Enter". Section 15.6.3 has the same couple of paragraphs as Section 15.6.2.2 (exact copies of each other). These two sections need to be merged into one. Section 15.7.1.1: Second paragraph: Second sentence: "...a valid email and the *previous* email address is not..." Section 15.8.1: Second paragraph: First sentence: "...can be modified with *repsect* to whether..." Section 15.8.2: First sentence; "...register with it before providing access *to* its services." Page 141: Step 4: I think the "A" in "Add property" needs to be bold. Page 142: Inside "Note": Second sentence: "...deploy the policy implementation as *a* JAR file in the..."	1	1	https://issues.jboss.org/browse/JBEPP-517

#	Requirement	Questions	Answered	Successfully Answered	URL
10855	JBEPP-517	Page 145: Last sentence: "Exo" should be "eXo". (Never mind - this might take a while to change since it appears numerous times in this chapter.) Section 16.3.2: Fourth paragraph: "...type, and a method on *the* target component to use..." Section 16.4: Fourth paragraph: Sentence should end "...can be left empty." Page 150: Second paragraph: First sentence: "...defines one or more <property> *elements*, each of which..." Page 150: Paragraph following the first code sample: "...requires one or more <value> *elements*." Page 151: First paragraph: "...which is used for plain *Java* style object..." Page 153: Middle of the page: "The Unified servlet context and unified classloader are..." (No comma after *context*) Page 153: Following paragraph: "...archives, configured with *the* dependencies property..." Section 16.6: Second paragraph: Remove the comma after "...the original portal .war archives by adding a .war..". A comma there creates a pause that makes the sentence confusing. Section 16.7: End of fifth paragraph has some extra spacing (I think). The term "org.exoplatform.container.ExoContainerContext" is a single word. Page 155: End of third paragraph - same story: should be "org.exoplatform.container.web.AbstractFilter" Page 155: Paragraph following the "Note": First sentence: "...may also need access to portal information..." (remove the first *to*) Page 155: The following sentence has a semi-colon in the middle of it that should be removed. Section 17.2.1: Question: Why does the Portal Reference Guide discuss using eXo JCR *outside* of Portal, i.e., in standalone mode? (I'm only curious- there may be a good reason for it.) Page 160: Next to the last paragraph: Remove the comma after *with*. Same sentence: Replace "J2EE" with "JavaEE". Section 17.2.2: Same story as before: From what I can tell, this entire section is for the standalone mode of JCR. The config file that takes up pages 162 and 163 should be replaced with the EPP version of the file. (I can send that to you if you need it.) Page 168: Third paragraph: Should be "...with the following *Relational* Database Management...". (It's kind of funny how it reads now though!) Section 17.3.2: From my understanding, this entire section refers to the standalone mode of JCR only, not EPP. I could be wrong though. The config file shown on pages 169-170 looks nothing like the EPP one. Page 171 and 172: Can you define your own JCR workspaces in EPP? I am either lost or confused at this point. If this information stays in the Reference Guide, then we need a use-case to explain why we would do this. Section 17.3.3: I don't know if this is EPP either. If it is, I can't find these config files so we should clarify where they are. Page 190: Within the "Note" is a reference to the /webapps folder, which is Tomcat. Just take off "/webapps". Section 17.10.1.1: Section title - "Jboss" should be "JBoss"	1	1	https://issues.jboss.org/browse/JBEPP-517
10856	JBEPP-517	The above issues have been addressed in version 1-1.19 of the Reference Guide. One issue requires more information to resolve: Re Marek's comment: "5.2 - Reference to "access.control.workspace.roles" , which is probably does not correct as well." "access.control.workspace.roles" does not appear in 5.1(ER04) file at all. Can anyone let me know what the correct code sample(s) would be (I need to cover both 5.0 AND 5.1.)? See the attached text file for info about the resolution of other issues. https://jira.jboss.org/secure/attachment/12339012/Feedback-action.txt	1	1	https://issues.jboss.org/browse/JBEPP-517
10857	JBEPP-517	VIlliam; I can't locate the typos you outlined (I think the page numbers are different in the version you looked at). p93. typo in the "You" word - Y is missing p145. typo in <field> - "f" is missing Can you give me the section title and possibly some surrounding text to make searching easier please? Thanks.	1	1	https://issues.jboss.org/browse/JBEPP-517
10858	JBEPP-517	Villiam: Are you sure about changing all instances of kernel_1_0.xsd to kernel_1_1.xsd? I grepped the jboss-epp-5.1 instance I have locally and numerous hits for kernel_1_0.xsd were found in the 02portal.war files	1	1	https://issues.jboss.org/browse/JBEPP-517
10859	JBEPP-517	VIlliam: RE: p143-144 - confgis should be updated from 02portal.war/WEB-INF/conf/common/common.configuration.xml The code sample on pages 143 and 144 of the PDF I have refers to web.xml and doesn't resemble the code in common-configuration.xml at all. Can you provide a section heading and some surrounding text to ensure I'm seeing the same code sample as you, please.	1	1	https://issues.jboss.org/browse/JBEPP-517
10860	JBEPP-517	On the WSRP part of the doc: - Why is section 15.3.2 on a different page as the rest of the 15.3 section? - 15.5: the URLs there are actually incorrect. Both URLs only work in EPP 5.1. EPP 5.0 only has access to WSRP 1 but the URL is different: in EPP 5.0: http://{hostname}:{port}/wsrp-producer/MarkupService?wsdl. (WSRP 1 only) in EPP 5.1: WSRP 1: http://{hostname}:{port}/wsrp-producer/v1/MarkupService?wsdl. WSRP 2: http://{hostname}:{port}/wsrp-producer/v2/MarkupService?wsdl. - 15.6.2.1.1: it doesn't matter that the screenshots are not updated as the example is not specific to the self consumer. Plus, it's still correct in EPP 5.0 (even though, again, the point of the screenshots here are not to show the self consumer, but rather how the portlet behaves if the given registration information is invalid). - Why is section 15.6.3.2 on its own page instead of the same page as the rest of section 15.6.3? - 15.6.4: self producer -> selfv1 and selfv2 consumers - Procedure 15.3: screenshots are barely legible... @Michal: you should add your documentation on how to remove the WSRP admin portlet...	1	1	https://issues.jboss.org/browse/JBEPP-517
10861	JBEPP-517	The above comments have been actioned. @Michal; I followed Chris's comments that, although the screenshots are slightly outdated, they serve the purpose they're intended for. Regarding Section "3.3. The Command Servlet" :I updated the para to read as follows: The CommandServlet is called by the portlet container for requests to particular portlets. It also includes some init code when the portal is launched. This servlet (org.gatein.wci.command.CommandServlet) is automatically added during the deployment of each portlet application and mapped to /gateinservlet. Is that more technically accurate? @Chris: Re the page placements. Were you looking at a chunked html version? This has to do with Publican's default chunking of sections. I can adjust that if needed, but it doesn't seem to be too much of a problem this close to release.	1	1	https://issues.jboss.org/browse/JBEPP-517

10862	JBEPP-516	Hi Scott, there are my comments for User Guide verification. Thanks! - First page + title + second page title - 5.0 is mentioned, should be 5.1 2.4 Navigation - Dashboard editor should be bold as well, it is twice in paragraph. - Site + Group editors are available for admin, but Dashboard editor is available for all users. 3.3.1 - There should be screen of Dashboard workspace and not calendar 3.3.2 - Screen 3. is misunderstanding, it could be removed or there could be only screen of Add gadgets link 5.1.2 (?) - "..that allows them to; add a new page..." -> "..that allows them to add new page..." 5.2.1 - There is not latest screen of point 2. Portal templates tab was added. - + there should be some comment (+screen) about portal templates as well 5.2.2 - It seems that ideas are not completed here. - First sentence ends with :, but nothing follows. - An administrator can change many aspects of a portal: - there should be some list of what can be changed I think - And I think this chapter is not about Edit Portal, because it is 5.2.5. 5.2.2 is only about displaying present portals. 5.2.3 - There should be mentioned ending of edit layout action: by Finish button on Edit Inline composer or with Abort (do not save changes) 5.2.4 - There is too big screenshot of Navigation management 5.2.7 - point 2. Screen could be updated with deployed SimpleSkin (to have list with at least 2 items) - Screen for permament skin change is not correct - Properties tab is missing, and Vista + Mac skins do not exists at gatein or epp - permanent, point 3. "Click Save then Finish" -> "Click Save (to finish)" 5.3.3 - point 3., it should be something like: Right-click on node where you want to paste this node - and screen is not correct, you should not paste in system nodes 5.3.4 - same as for 5.3.3 - remove last sentence: "This new pages will appear in the page lists:" 5.3.5 - same as for 5.3.3 5.3.6 - screen is not correct, you can't delete system nodes 5.3.7 - screen is not correct, system nodes should not have sub-nodes 5.4.1.1 - point 6., "or click the icon to see more templates" -> "or click the select box in right pane to see more templates" 5.4.1.2 - screen in point 3. is duplicated, second one doesn't bring anything new - Owner id for user owner type is not described, describe separately for portal, group, user. Remove sentence "The name of the page owner" 5.4.4 - point 1., "Go to Site Editor in..." -> "Mouse over Site Editor in..." 5.5.1 remove sentence: "You can not users to a group but you can remove them from the group". - it's not true, you can add users to groups as well General: - on some places there is Mouse over and somewhere it is Mouse-over, it should be unified 5.5.1.1 - under screen of point 2., "Account Settings" -> Account Setting 5.6.2.1 - should be numbered 1.-6. and not 1.-3.+1.3. 5.6.2.2 - same as for 5.6.2.1 (via page management numbering)	1	1	https://issues.jboss.org/browse/JBEPP-516
10863	JBEPP-516	Scott, there is wrong name of Preface page in EPP User Guide: pref-JBoss_Portlet_Bridge_Reference_Guide-Preface.html Can you edit page name? It doesn't look well in url :) Thanks.	1	1	https://issues.jboss.org/browse/JBEPP-516
10864	JBEPP-516	Thanks Michel. Fixed. How did you even catch that?!	1	1	https://issues.jboss.org/browse/JBEPP-516
10865	JBEPP-515	Prabhat, The section 2.1 about not upgrading has been removed and the Tomcat section had already been removed. Sorry, but I'm not sure what you mean in your last comment. Can you explain a little more? Should the command <mysql> CREATE DATABASE gateinjcr;> in step two of the "Creating a MySQL Database" procedure be repeated as <mysql> CREATE DATABASE gateinidm;> That way the line "Do the same with gateinidm." would be replaced with an example of the step. Is there more to it that should be documented? Should the whole procedure be repeated, and if so, what needs to be different?	1	1	https://issues.jboss.org/browse/JBEPP-515
10866	JBEPP-487	More information required w.r.t Release Notes: Thomas; does this issue require a release note?	0	0	https://issues.jboss.org/browse/JBEPP-487
10867	JBEPP-482	Adam Kovari <akovari@redhat.com> made a comment on [bug 793400|https://bugzilla.redhat.com/show_bug.cgi?id=793400] Hello, in what version is this scheduled to be fixed? In JPP 6 beta it seems to be still reproducable: Step to reproduce : - Edit the pages.xml of the classic portal - Change the page title with #{portal.classic.home} - Start the server with a clean jcr Result: - #{portal.classic.home} is display on page title instead of the "Home" label define in classic.properties ressource bundle.	0	0	https://issues.jboss.org/browse/JBEPP-482
10868	JBEPP-406	Who's in charge ?	1	0	https://issues.jboss.org/browse/JBEPP-406
10869	JBEPP-277	Wesley Hales said: >Error on bridge build > >[INFO] ---------- >[ERROR] FATAL ERROR >[INFO] ---------- >[INFO] basedir en-US does not exist >[INFO] ---------- >[INFO] Trace >java.lang.IllegalStateException: basedir en-US does not exist >Can you take a look? Scott Mumford said: Hi Wesley I updated my local copy of the PB Ref Guide and it built ok (using maven, which I assume you use). (also tried checking out the whole thing again and then again from the folder level above) I can't recreate the error. Can you give me some details of your circumstances; what you've check out of where, version number, build system, build commands, java version, etc. Thanks	1	1	https://issues.jboss.org/browse/JBEPP-277
10870	JBEPP-276	In attachement are notes for reference guide - Part 2 (Chapter 11, Chapter 13, Chapter 14). So till now, We went through almost whole reference guide and remaining chapters are only: Chapter 12 - Building JSF Portlet Chapter 16 - Foundations Chapter 17 - eXoJCR We will provide the rest as soon as possible. But I have question: Is Part 3 finished and ready for our review or you are still working on it? Because today Viliam noticed really big number of typos and typographic inconsistencies, especially in chapter 17.	1	1	https://issues.jboss.org/browse/JBEPP-276
10871	JBEPP-276	Section "11.2.2.4. JSF example using the JBoss Portlet Bridge" 1.) PortletBridge examples are places in "portletbridge/examples" folder instead of "examples" folder. 2.) No example "JSFHelloUser" is bundled with EPP5 (I don't know nothing about this example). Do we really have this example at all?	0	0	https://issues.jboss.org/browse/JBEPP-276
10872	JBEPP-276	I'm recommending triage of sections 17.12 (Transactions), 17.13 (TransactionManagerLookup) and possibly 17.14 (eXo JCR Statistics) due to inadequate content. Does anyone have any comments or objections?	1	1	https://issues.jboss.org/browse/JBEPP-276

#	Requirement	Questions	Answered	Successfully Answered	URL
10873	JBEPP-276	The latest version of the Reference Guide has been committed. Find it at the Hudson URL above. This revision completes the first pass edits and included as much of the QE feedback as ECS is able to complete. Outstanding issues (from various feedback sources) are listed below: _____ *Apply changes from Chris's commit no. 31061 3107!!!! (Not sure what this means - SM) *7.2.5 Debugging resources??? (Not sure what this means - SM) *this discuss about eXo JCR standalone configuration. is it the subject of EPP5 reference guide? (I can comment refernces to this out if nobody deems it necessary -SM) *Villiam mentioned the variance in file paths are formatted. I found the following examples: 02portal.war/WEB-INF/conf/portal/portal/classic/portal.xml WEB-INF/gatein-resources.xml 01eXoResources.war/WEB-INF/gatein-resources.xml $JBOSS_HOME/bin/run.sh eXoGadgets.war/WEB-INF/ web.war/WEB-INF/classes/locale/portlet/portal WEB-INF/classes/locale/portlet/gadget/GadgetPortlet. /web/skin/portal/webui/component/UIFooterPortlet/DefaultStylesheet-rt.css /GateInResources/skin/DefaultSkin/webui/component/UITabSystem/UITabs/background/NormalTabStyle-rt.gif /portletbridge/examples/ We definitely need a consistent style. We just need someone to choose one. I'm in favour of starting them all with /$PORTAL_HOME/blah/blah/ _____ Anything I've missed? Major additions and changes to the document are marked with comments in the XML code for reference.	1	1	https://issues.jboss.org/browse/JBEPP-276
10874	JBEPP-276	Latest Reference Guide edits committed. Solved XML layout problem in included config files. Adjusted column widths in Section 17.5 to correct overflow issues. Various minor edits. Outstanding issues: Section 11.2.2.3 - Sentence "My name is GateIn Portal. What's yours?" In example is used: "My name is JBoss Portal". But this is not issue in documentation, because "My name is JBoss Portal" should not be used (SM - Unable to get the example portlet running so cannot update screenshot if portlet has been updated to correct wording. Section 7.5.2 Debugging resources - magic locale??? (I have never seen this before and I don't know if it's even possible, it is great and there should be better description how to do it) (SM - Further information unavailable at the moment. Section commented out and marked for next release) Section 14.3.1. Configuration of org.exoplatform.services.organization.idm.PicketLinkIDMOrganizationServiceImpl - This service has one more option "useJTA" which is not mentioned in reference guide. (SM - Added to useJTA to relevant list. No information regarding option included here, so content inferred from context referencing cacheconfig options)	1	1	https://issues.jboss.org/browse/JBEPP-276
10875	JBEPP-163	Can we resolve this JIRA? The Site Publisher JIRA can be reassigned to JBEPP-372 (5.0.1 tracker) if required.	1	1	https://issues.jboss.org/browse/JBEPP-163
10876	JBEPP-158	The note mentioned in the first comment has been removed. WRT to Mike's comment, is there an argument for overhauling the section in question? Or can it be removed entirely? For the moment the section has been commented out pending decision and/or new content. 10877	JBEPP-97	Could we change it in the next non-CP release? I would think most customers would prefer security first and as you said, they'll likely be modifying login.jsp anyhow so can take away extra security then if desired.	1	0	https://issues.jboss.org/browse/JBEPP-97
10878	JBEPP-82	What do you mean by API change? I'd argue that the changes to CustomizationManager are fair as CustomizationManager was never part of the supported API...	0	0	https://issues.jboss.org/browse/JBEPP-82
10879	JBEPP-26	what about licences?	0	0	https://issues.jboss.org/browse/JBEPP-26
10880	JBEPP-23	Which version of the EAP installation guide should this be based on?	1	1	https://issues.jboss.org/browse/JBEPP-23
10881	JBEPP-23	> 3. Add database part. What content relating to database setup is needed?	1	1	https://issues.jboss.org/browse/JBEPP-23
10882	JBEPP-23	I made some changes. Please synch up your code with repository and see how everything looks. On another note, can you add DB descriptor parts for other databases? I think they were present in old installation guide that I pointed on my previous comment.	1	1	https://issues.jboss.org/browse/JBEPP-23
10883	JBEPP-23	For section 2.1.2, if that's what it says for EAP then it's true for EPP as well. I did not understand what you mean by "And further to that, are other databases?". What I meant is similar instruction for Oracle, Mssql, Postgresql to what you have for MySQL.	1	1	https://issues.jboss.org/browse/JBEPP-23
10884	JBEPP-23	Prabhat, Here are a few other things I've noticed in this version: 1.1 Feedback The JIRA information should be for JBEPP project and component "Documentation". Version is unset (currently says "<version>") **Should be 4.3.0.GA** Chapter 2 2.1.1 FYI: The supported configurations page linked to has up to date information for JBEAP, but no mention of JBEPP. 2.2 FYI: The components version page linked to has information about the level of the JBEAP that is included in JBEPP, but does not include the JBEPP component. Chapter 3 3.2 Installing. This section currently has inconsistent references to file names - some references are jboss-eap, one is jboss-epp Chapter 4 4.1 Should the directory name change from EnterprisePlatform to something like EnterprisePortalPlatform?	0	0	https://issues.jboss.org/browse/JBEPP-23
10885	JBEPP-23	Prabhat, I can not find the documentation for the descriptors for Oracle, Postgres, MSSQL etc. - it doesn't seem to be in the guide you previously linked.. Can you please direct me to where it is so I can import it into this guide?	1	1	https://issues.jboss.org/browse/JBEPP-23
10886	JBEPP-20	Do you have machine to do this? Can you use one from the lab? Otherwise, I will do it.	1	1	https://issues.jboss.org/browse/JBEPP-20
10887	JBEPP-17	I have found the difference between IE7 and Firefox 2 on wherethe page Test and TestWithAjax are displayed. On IE, it's displayed towards the right of the window and on FF, it's on left. Does this need to be fixed?	0	0	https://issues.jboss.org/browse/JBEPP-17

#	Requirement	Questions	Answered	Successfully Answered	URL
10888	JBEPP-4	Viliam, This has priority and if you get overwhelmed, I will take care of some of other tasks that I have assigned to you. Please start on it once you are done with selenium builds which I think you are very close. Currently, for JBoss Portal 2.7 release process can be summarized as: 1. svn checkout portal code 2. svn checkout portal docs 3. build portal and docs 4. unzip JBoss AS 5. copy portal stuff to AS for bundled distro 5. copy portal docs 6. zip it and actual commands are: $ mkdir release $ cd release release $ svn export https://svn.jboss.org/repos/portal/tags/JBoss_Portal_2_7_0 project release $ svn export https://svn.jboss.org/repos/portal/docs/tags/JBoss_Portal_2_7_0 docs release $ svn export https://svn.jboss.org/repos/portal/examples/tags/JBoss_Portal_2_7_0_BETA1 examples release $ unzip jboss-4.2.3.GA.zip release $ cd docs release/docs $ mvn package release/docs $ cd ../project/build release/project/build $ sh build.sh release/project/build $ export JBOSS_HOME=$PWD/../../jboss-4.2.3.GA release/project/build $ ant -f distrib.xml Please try this out and see what you get in projects/build/output. These are the output of above steps. Now this needs to be modified for EPP. So, please leave distrib.xml as it is and create a new one (epp-release.xml) taking it as a baseline. What new script should do is: 1. Read different version name (Portal, EAP, location of EAP.zip) from a properties file so that all one needs to do is update this file for a new release. 2. Build JBoss Portal source 3. Copy jboss-portal.sar to default configuration 4. Copy jboss-portal-ha.sar to production and all configuration 5. Build portal docs and copy them to doc folders in EAP 6. Produce one zip out of it. Ultimately, the output if EAP + Portal = EPP. I understand you have many questions so please feel free to ask.	0	0	https://issues.jboss.org/browse/JBEPP-4
10889	JBEPP-4	in distro.xml there are two patches applied : run.conf patch and log4j patch... should i apply them too?	0	0	https://issues.jboss.org/browse/JBEPP-4
10890	JBEPP-2	Dependencies such as <componentref name="sun-jaf" version="1.1"/> <componentref name="sun-javamail" version="1.3.1"/> <componentref name="sun-jsf" version="1.2_08-brew"/> have moved to glassfish such as <componentref name="glassfish/javamail" version="1.4.0-brew"/> <componentref name="glassfish/jstl" version="1.2.0-brew"/> This of course requires changing changing some build.xml. Should I go ahead and change them if there is no conflict with other jar version?	0	0	https://issues.jboss.org/browse/JBEPP-2
10891	SOA-3550	What depends on ant: - EDS - HornetQ - CXF - seam - schema tool - quick starts	1	0	https://issues.jboss.org/browse/SOA-3550
10892	SOA-3464	The following are some initial suggestions at the beginning of the documnt, but section 3.1 Data Services Examples will really change, how would you prefer I submit the changes? I can attach a doc with the rest of the suggested changes or I can cut and paste them here. Your choice. ---------- 5.2 Getting Started Guide Review General [note] suggestion: remove the version (i.e., 5.1.0) when JBoss Enterprise Data Services Platform is referenced, provides no additional context other than what the version of the document is referring to in the Title. If not, change the 5.10 to 5.2.0. Chapter 1 1.1 - reference to http://www.jboss.com/products/platforms/soa/components/ , is this right link? Cause this page doesn't contain Data Services or anything about its components. Or maybe that page needs to be changed to point to: http://www.jboss.com/products/platforms/dataservices/components/. Chapter 2 2.1 - JBoss SOA Platform version should be changed to 5.2.0, as well as, Standalone. - Link to tested configurations should be to: http://www.jboss.com/products/platforms/dataservices/supportedconfigs/ 2.3 - (my observation) The WARNING about CXF is no longer an issue in ER5, cause you can only deploy EDS to all, production or default. Since CXF and EDS has to be deployed to the same configuration, and CXF can only be deployed to those 3 because there is no option to install elsewhere, this shouldn't occur, since EDS is now changed to not allow other profiles. - in step 4 - "Run installation script", can the sentence "Apache CXF must ..." or the word "must" be emphasized to stress its need if using webservices? - in step 5 - "Configure", can we rephrase to: However, user accounts will need to be created to enable data access and other features. Refer.... Chapter 3 - sentence: VDB's can be queried ..... add ODBC: VDB's .... JDBC, ODBC and web-services.	0	0	https://issues.jboss.org/browse/SOA-3464
10893	SOA-3264	The client exception I get (from squirrel) is: Remote org.teiid.client.security.LogonException: VDB "bqt" version "latest" does not exist. This is using 7.4. The project indicates there is nothing to be fixed and we don't want to list what the available vdb's are for security purposes.	1	0	https://issues.jboss.org/browse/SOA-3264
10894	SOA-3154	Kurt, can you please respond to all of the open items here: https://docspace.corp.redhat.com/docs/DOC-70182 ? Thanks.	0	0	https://issues.jboss.org/browse/SOA-3154

10896	SOA-3146	The fix has been ported in EAP 5.1.1 branch . Gary, do you know if the SOA 5.2 will consume EAP 5.1.1 ? Thanks.	1	1	https://issues.jboss.org/browse/SOA-3146

#	Requirement	Questions	Answered	Successfully Answered	URL
10897	SOA-3117	examples without references on appropriate quickstarts (although they exist). This leads to low information value from reading the documentation h2.Problematic parts of the guide Following things I consider particulary bad: Inconsistent/wrong description of Administration console [where] Chapter 1, (especially 1.1.2 Metrics) [now] In documentation there is a list of metrics that can be "viewed" [notes] - The list contains actions: Terminate Session, Terminate Requests, Terminate Transaction. These actions are not present on Metrics tab and are now on "Control" tab in actual Console. Next problem with these actions is that they are not "viewable" it seems that they were put to this chapter (1.1.2) by mistake or the heading "Control" is just missing (Control). - In my opinion this documentation is somehow very obsolete because not all actions available in console are listed here and Control tab is missing description in documentation. Typography [where] 2.1 Getting started (Note box) [now] use theadminHelp() [suggest] use the adminHelp() Wrong method name [where] 2.3 The Log and Recorded Script Files [now] connectionAsAdmin() [suggest] connectAsAdmin() Bad english [where] 3 Deploying Virtual Databases [now] A VDB is the primary means to define a virtual database [note] "VDB are" or "VDB is primary mean". Although I don't know what is meant by VDB. I thought VDB is "virutal database" in which case the sentence wouldn't make sense. Typo [where] 3.2. Deploying VDB Dependencies, second paragraph [now] TO give Typo [where] 3.2. Deploying VDB Dependencies, last paragraph [now] Once you have deplored ... Invalid path [where] Example 3.4 WS-Security [now] ${jboss.server.home.dir}/server/default/conf/xxx-jbossws-cxf.xml [suggest] ${jboss.server.home.dir}/conf/xxx-jbossws-cxf.xml Type in example [where] Example 3.4 WS-Security [now] missing ending tag for <map> Incomplete or wrong information [where] 3.2.3.3 Logging [now] Logging, when enabled, will be performed at an INFO level to the org.apache.cxf.interceptor context [info] As I understood this sentence, after turing this feature ON, in my server log I should have logged requests and responses under mentioned logger. I made sure to have correctly configured log4j in my SOA platform and although I see logged request and response (encrypted) I don't see it coming out from org.apache.cxf.interceptor logger. [suggest] Add more information to this paragraph about where user can expect the output of such logger and add INFO box that he should have logging set up accordingly (as default settings of SOA P won't allow him to see the INFO outputs) Typo causing non-deployable DS [where] Example 3.6. Example Disabling Host-name Verification [now] ...rs disableCNcheck="true" /> [suggest] ...rs disableCNCheck="true"/> [note] When you supply examples, please validate at least against available xml schemas... Wrong chapter numbering [where] 3.2.5 CXF Configuration [now] 3.2.5 [suggest] 3.2.4.1 or consolidate the paragraph with 3.4.2 [note] It seems that CXF configuration is logically connected to 3.2.4 because notes about salesforce is there. Therefore it certainly shouldn't be numbered as 3.2.5 Confusing and duplicit information [where] 3.2.4, 3.2.5 [now] Information about how to configure salesforce connector with CXF configuration [note] The information is duplicit and is essentially copy-paste of 3.2.3.1. The documentation is confusing mainly becase of ambiguous titles of headings [suggest] Delete 3.2.5 and just refer to the fact that teiid-connector-salesforce.rar uses same configuration as CXF web services for Bus configuration. Also remove second Note box for "bus info". Cubersome language [where] 3.3 [now] If a specific version is set, then you can only connect to that VDB. If no version is set, the deployed VDBs are searched until the appropriate version is found. This feature helps support more fluid migration scenarios. [suggest] Specifying version is optional. If the version is not specified then deployer will decide which version of the VDB should be used. This helps... Not following conventions [where] 3.3 VDB Versioning [now] ... the deployment file (such as vdbname.version.vdb or marketdata.2.vdb... [suggest] use italic for "vdbname.version". Also restructure to something like: "... the deployment file such as	0	0	https://issues.jboss.org/browse/SOA-3117
10898	SOA-3115	Chapter 5) - all list items --> highlight terms being exaplained where appropriate - whole document --> english quotation marks - Install the schema in your IDE to avail yourself of its auto-completion functionality. --> rewrite - The Javabean Cartridge sets the following conditions to Java beans: --> following item list -- all end with a period or all without - ((1), (2), (3) - all accepts (4)) --> too many parenthesis -- (1, 2, 3 - all accepts 4) -- what does it mean all accepts? -- the hyphen is written as minus (rewrite) - all description of the above configuration contain too many parenthesis -- quite unreadable with the doubles -- ((- all terms in the above configuration should be emphasized -- for example "execOnElement" - (see the beanIdRef attribute values and how the reference the beanId values defined on (2) and (3)) --> see ... and how the reference the beanId? -- rewrite - Configuration (2) creates the com.acme.Header bean instance. --> missing bullet - ontoor the Header.customerNumber --> onto? - (3) Configuration (3) creates the ListOrderItem bean instance for holding the OrderItem instances. --> too much "3" - (4) Configuration (4) --> too much "4" - (one example being that the DateDecoder [decoder="Date"]). --> that? - The decodeParam iformat s based on the ISO 8601 standard for date formatting. --> probrably "format is" - Here is an Integer example: --> following note is much the same as the previous one, rewrite not to be so redundant -- readability - (for instance, the numeric value 876592.00 might be represented as "876_592!00"jb:bean element for some reason). --> rewrite, insert some space probably - In order to decode this value as (for isntalce) --> for instance? - which is a simple expression that you can applied to the Sting value before decoding it. --> you can applied? - that operates on the value String --> that operates on the String value - (The 'instanceMethod part is optional. --> ""? - There are three ways in which you can declare which definition language you want to use: --> rewrite these three ways, details follow: - For example. --> For example: <example style>....</example style> - Note:If you have a definition with your default language that includes a ':' then you must prefix that definition with 'default:' else you will run into an Exception. --> put into note style - MVEL as factory definition language --> is it a heading or what? - If MVEL where the default language then we couldn’t do anything to improve --> where? -- probably was or were - Binding Key Value Pairs into Maps --> heading? - On the config: --> label the examples better - as part of a model driven transform --> transformation - Merging Multiple Data Entities Into a Single Binding --> heading? - The ValueBinder class is the visitor that does the value binding. --> heading? - The value binding XML configuration is part of the JavaBean schema from Smooks 1.3 on: http://www.milyn.org/xsd/smooks/javabean-1.4.xsd. The element for the value binding is value. --> following item list -- end all items with a period or without - default : The default value for if the selected data is null or an empty string. --> rewrite - "Example" following above list item --> emphasize somehow - "Message" --> convert to example description - "The Configuration" --> convert to example description - The value binder can be programmatic configured using the org.milyn.javabean.Value Object. --> programmatically, "Object" = "object" - "The Message:" --> convert to example description - "The Java Model (not including getters/setters):" --> convert to example description - "The Configuration Code:" --> convert to example description... do the same rules as for headings apply here? -- "Code"="code"? - "The Execution Code:" --> convert to example description... do the same rules as for headings apply here? -- "Code"="code"? - The optional "-p" properties file parameter allows specification of additional config parameters: --> next list item is nested, so the bullets have to be indented more - The Html Reporting tool --> HTML? - your Source data --> "Source"="source"? - Note the "$TODO$" tokens. --> emphasize $TODO$ in other way - This will mean that some of the JavaSource bean instances may be visible in the JavaResult. --> meant?	0	0	https://issues.jboss.org/browse/SOA-3115

10899	SOA-3114	Hi guys, Could we please add to the Smooks_User_Guide (referenced above) something similar to what we find at [1]? (I've just notice we reference that link in the SOA-P Programmer's Guide.) The below referenced wiki article contains a couple of important points that I don't think are in the User Guide above: 1- From an ESB programmer's perspective, where do I get the thing I want to transform, and where do I set it (on the message)? 2- What's the relationship between my config file for Smooks and the ESB deployment descriptor (jboss-esb.xml)? I'd suggest putting this information near the front of the Smooks_User_Guide for SOA-P. If the user starts with this guide, they'll be wondering those things for quite a while. Another tip we might put in the user guide-- if they are seeking advice on how to use the various Smooks components available, give them a hint to check the schemas (XSDs) referenced in the quickstarts. There are comments in-line, these are helpful but I don't think we ever suggest that the user look at them. Thanks! Rick [1] http://community.jboss.org/wiki/MessageTransformation	1	1	https://issues.jboss.org/browse/SOA-3114
10900	SOA-3114	OK... sorry for not commenting on this earlier. @Rick... wrt #1 above... what do you mean by "get" and "set"? Do you mean "get-payload-location" and "set-payload-location". That's standard across all ESB actions. wrt #2 above... what do you mean by "relationship"?	1	1	https://issues.jboss.org/browse/SOA-3114
10901	SOA-3114	That all looks great to me Rick... how about the docs guys just add that then?	0	0	https://issues.jboss.org/browse/SOA-3114
10902	SOA-3108	3.1 first jboss-esb.xml sample, according to xsd, there cannot be invmScope attribute in the root element. I did not find any example configured like this. Move the attribute to the service element. 3 several occurances "end-point" -> "endpoint", the rest of the document uses "endpoint" 3.2 second sentence "the reason being that this will encourage loose coupling." I'm not a native speaker but this sentence seems incomplete to me. 3.2 "The message structure can be also >>be<< depicted in UML" 3.2 "Version 5.0 of the JBoss Enterprise Service Bus will be the first to support user-enhanced contexts." - are we going to have version 5.0? Do we add new features to ESB? IMHO this won't happen since there is SwitchYard now. 3.2 Second occurence of the same warning box "In JBossESB, Attachments and Properties are not treated differently from the Body. The general concepts they embody are currently being re-evaluated and may change significantly in future releases. As such, we recommend developers do not use Attachments." It should be removed since it do not have any relations to the surrounding text. 3.6 "unto" -> "into" 3.7 This section seems uncomplete. There is nothing regarding default value or behavior of fault-to header. I do not understand the reference to LogicalEPR in the information box in this section. 3.10 "Every implementation of the org.jboss.soa.esb.message.Message interface can >>be<< obtained from the", "be" is missing in the original doc. 3.10 information box at the end of the section, "JBOSS_XML . To" - additional space is present before the dot. 3.11 "Message Formats, There are two serialized message formats, JBOSS_XML and JBOSS_SERIALIZED. Read this section to learn about them." - isn't it obvious what is this chapter about? Is the last sentence in the first paragraph necessary? 3.11 last paragraph, "When it is packing objects in XML, The", capital T should be in lowercase	1	1	https://issues.jboss.org/browse/SOA-3108
10903	SOA-3108	This comment is completely on section 4.1.3 Notifiers IMHO this section need a major rewrite. 1) First paragraph reads "Use notifiers to pass on success and error messages to ESB-unaware end-points. ... This may mean that one cannot have ESB-aware and -unaware end-points listening to the same channel. If this is the case, consider using either couriers or the ServiceInvoker...". It is not clear what is exactly meant by "If this is the case". What is the case - having ESB-aware and -unaware endpoint on the same channel or the opposite? 2) Second paragraph starts with "Not every ESB-aware transport is supported by notifiers". What is the reason for mentioning this? In the first paragraph we learned that none ESB-aware endpoint is supported by a notifier. 3) Third paragraph (starting with "As outlined above, it is a listener's responsibilities...") and the following list is very confusing, inaccurate and full of errors. Fisrt, description of listeners configuration should go to section 4.1.1 Listeners. Second, several concepts are mixed together - providers configuration, services configuration and listeners configuration. Listener does not supply information for registry, according to XSD of jboss-esb.xml, there is no listenerClass tag or attribute, endpoint reference is configured using providers not in the listener, action pipeline is configured in the service at the same level as listener (not within the listener). There are no tags named service-category, service-name, service-description, EPR-description, instead there are attributes of the service tag called category, name and description. Terms 'tag' and 'attribute' are often confused in this part. 4) "This example configuration instantiates a listener object (the jms-listener attribute), which will wait for those incoming ESB messages that are serialized within a javax.jms.ObjectMessage." It configures two listener objects. 'jms-listener' is a tag, not an attribute. Messages can have various formats (various classes can be used), for instance javax.jms.TextMessage, not only ObjectMessage. I suggest specifying interface insted. It is necessary to mention why there are two listeners and clarify the difference between gateway listener (it would be sufficient that this is the ESB-unaware listener and that its role is to encapsulate the JMS message in the ESB message used throughout ESB). 5) In the example with "public class MyJMSListenerAction", the keyword extends and the correct predecessor (probably ActionProcessingPipeline). Starting with this example, there should be one more section called "Action Classes". 6) "Use action classes to customised the framework for specific needs. specific needs." Remove duplicate 'specific needs'. Fix 'customized' -> 'customize'. What framework is customized? There is no framework mentioned previously. I would prefer something like "Use action classes to provide additional functionality to ESB services that are not implemented in the out-of-the-box actions." 7) "ActionProcessingPipeline class expects any other action class to provide, at the minimum, this information:". I believe that this sentence is just a complicated and cryptic way of sayin "Each descendant of ActionProcessingPipeline must, at minimum, provide:".	1	1	https://issues.jboss.org/browse/SOA-3108
10904	SOA-3108	7.1 "advantage of thse features", "thse" -> "these" 7.1.1 "The service will then receive the JMSEPR use it to send the message." I don't understand this sentence. What should it mean? 7.1.1 "service (an application service.)" -> "service (an application service)." (note the dot position change) 7.1.6 terms should be in bold: ServiceInvoker, EPR, DeadLetterService, DLQ, MessageStore, DeadLetterService, RDLVR, jbossesb.esb 7.2.5 and subsections, dtto, I won't list all the terms here, it is obvious what should go in bold 7.2.5.1 code sample is missing syntax highlight 7.2.5.2 numbered list, "3. One of:", following list should be sub-list of the numbered one (now it is at the same level as the numbered list) 7.2.5.2 code sample is missing syntax highlight 7.2.5.3 "start by implementing a javax.jms.MessagListener:", 'start' -> 'Start' 7.2.5.3 all code samples are missing syntax highlight 7.2.5.3 "You could also used the ServiceInvoker", 'used' -> 'use' Given the shape of the docs, it would be more effective if I could fix the document directly...	1	1	https://issues.jboss.org/browse/SOA-3108

#	Requirement	Questions	Answered	Successfully Answered	URL
10905	SOA-3108	10.3 "JBossESB 4.8 has the following MimeDecoder implementations.", currently we have JBossESB 4.10 in SOA-P 5.2. Ommiting the version number seems to be the most elegant solution. 11.1 "In order to learn more about these components, one should refer to the Services Guide. It explains, in detail, how to configure them.", this text references to SOAPProcessor and SOAPClient. These are described later in this guide (Programmers Guide). There is no reference to them in Services Guide. It should be mentioned that there are several versions of these components at the moment, specifically I mean WISE. 12. Classes, methods and types should be in bold. See all subsections for this. 12.1.1 First table in this section, "byte[]" should be in bold 12.1.9 "The SmooksTransformer action will be deprecated" -> "The >>former<< SmooksTransformer action will be deprecated", I suggest adding the word 'former' here to explicitely note that this is the action mentioned in the previous section. For the first time reader, the terms may coincide. 12.1.9 "The easiest way to avoid this issue (in JBoss ESB 4.5.GA+) is", we do not have any GA releases of projects. This should refer to a plain version or SOA-P release. 12.1.9 "you should use the http://www.milyn.org/xsd/smooks/javabean-1.2.xsd configuration", this might be a clickable link 12.1.9 "See the Smooks v1.1+ documentation", we have Smooks 1.4 in SOA-P 5.2, are we sure that there are no changes? Shouldn't we rather refer to 1.4 docs? 12.1.9.1 "For more information on for Smooks Execution Report refer to http://www.smooks.org/mediawikiindex.php?title=V1.2:Smooks_v1.2_User_Guide#Checking_the_Smooks_Execution_Process.", what about updating the link to point to v1.4? 12.1.9.3 "12.1.9.3. XML, EDI, CSV etc Input Payloads" -> "12.1.9.3. XML, EDI, CSV and Other Input Payloads" 12.1.10 First table, "Message" should be in bold. 12.2.1 First table, "Message" should be in bold. 12.5.3 Table 12.8, missing http-client-properties description. A sample usage would be great as well: <action name="HttpRouter" class="org.jboss.soa.esb.actions.routing.http.HttpRouter"> <property name="endpointUrl" value="http://@HOSTNAME@:8080/Plain_ws_ejb/HelloWorldWS"/> <property name="http-client-properties" > <http-client-property name="connection.http.connection.stalecheck" value="false" /> <http-client-property name="max-total-connections" value="200" /> <http-client-property name="max-connections-per-host" value="200" /> </property> ... 12.7.1 "12.7.1. SOAPProcessor JBoss Webservices SOAP Processor", what is the line after section caption good for? 12.7.1.3 Bad formatting of the Caution Box, the text "Caution" is over the previous paragraph 12.7.1.4 "a .esb deployment" -> "an .esb deployment" 12.7.1.4 "This however means that this action can only be used when your .esb deployment is installed on the JBoss Application Server i.e. It is not supported on the JBossESB Server. ", "It is" should have lowercase 'i', the sentence is nonsense - you cannot deploy an .esb archive on JBoss AS without JBossESB. Doesn't it refer to standalone JBossESB usage without the AS? 12.7.2 "12.7.2. SOAPClient" -> "12.7.2. WISE SOAPClient" 12.7.2 "If there is a SOA Fault and HTTP 500", 'SOA' -> 'SOAP' 12.7.2.2 "See the "webservice_bpel" quickstart.", there is no webservice_bpel quickstart. Why there is a reference to this particular QS? 12.7.3 "12.7.3. SOAPClient" -> "12.7.3. soapUI SOAPClient" 12.7.3 Delete the first sentence in this section ("SOAP Client action processor.")	1	1	https://issues.jboss.org/browse/SOA-3108
10906	SOA-3107	Configuration [now] SOA_ROOT/server/CONFIG/deployers/esb.deployers/jbossesb-properties.xml [suggestion] SOA_ROOT/server/CONFIG/deployers/esb.deployer/jbossesb-properties.xml Incomplete information [where] Chapter 1.3.1 Configuring a Java Message Service Provider [now] Docs suggest user should set destination-type, destination-name in jboss-esb.xml [note] After brief tryouts I wasn't able to find out how these two parameters should be set. I am used to the fact that when I want to set destination for JMS provider i will just use jms-message-filter element and dest-type/dest-name attributes. However usage of destination-type and destination-name is not even in any quickstart that would help and neither is there any reference of these two parameters in XSD schema (they are probably set somewhere via string property of some xml element). As it is there is no way to easily follow what docs want to say for somebody who didn't use these params before. [suggest] Add these configuration into some hello world Quickstart with configuration pointing to implicit JBoss Messaging and reference this quickstart in docs. Also explain why there is need for these params when user can achieve this via dest-type/dest-name under jms-bus element. Maybe not complete information [where] 1.3.17.2. Message Tracing [now] By default, every interaction between components and messages is logged. [note] I am using 5.0.2.ER3 build and by default (with log4j config set to INFO) I dont see any of these audit logs when running quickstarts. [suggest] please supply more information what should be done to se these logging messages Incomplete information [where] Chapter 1.3.17.2 Message tracing [now] The TraceFilter will only log information if you set the org.jboss.soa.esb.messagetrace [note] Where should this property be set? Broken links [where] 1.3.17.5. Installing and...; Procedure 1.2. Deploying the OpenSSO to Tomcat, step 4 [now] broken links: http://java.net/projects/opensso/public/use/docs/fampdf/index.html https://opensso.dev.java.net/public/use/index.html Because of this i couldn't review rest of the chapter 1 Cubersome language [where] Chapter 2 The Registry [now] when services run, they usually add an end-point reference to the registry. It is through this that they are contacted. If services have been programmed well, they automatically remove these end-point references when they terminate. However, if they are poorly programmed or crash, theese entries will remain there. These "orphan" entries will prevent subsequent deployments from executing correctly, so remove them manually. [suggest] After service starts up, it usually adds an end-point reference (EPR) to the registry. EPR can be further used to contact the service. \par Well programmed service removes its corresponding EPR upon termination. However poorly programmed service can leave EPR in the case of service crash, this kind of EPR is reffered to as "orphan entry". Because orphan entry will prevent subsequent redeployments of the service it must be removed manually. Typo [where] Chapter 4 Default [now] word "prefixed" is used instaned of "suffixed" Incomplete information [where] 6.1 The Monitoring and ... [now] For instance, it displays message counts by service, action, and node. It also displays such useful information as: processing times,.... [note] Where are those information in the console located? Simplistic information about hotdeploy [where] Chapter 7. Hot Deployment [now] Very limited information about Hot deployment is explained in suprisingly long paragraphs. [suggest] Add information about hdscanner-jboss-beans.xml and limitations of Hot Deploy Cubersome language [where] 11.2. Message Store Interface [now] can ignore this field if need be. [suggest] can ignore this field if needed. Missing security settings [where] Table 12.1. jbossesb-properties.xml Security Settings [now] table is missing <property name="org.jboss.soa.esb.services.security.publicKeyTransformation" ... #	Requirement	Questions	Answered	Successfully Answered	URL
10907	SOA-3093	Hi David a few notes to get thinks started 1.2.2. Logging in. True for riftsaw installation on pure JBoss AS. Not true for SOA-P though . default login:password is admin:admin which is defined in soa-user.properties, soa-roles.properties. Login policy is definied in login-config.xml and can be changed in deploy/bpel-console/gwt-console-server.war/WEB-INF/jboss-web.xml in the <security-domain/> element. 1.2.5. What about process archives which do not have a version definition? e.g. process archive name Quickstart_bpel_simple_invoke.jar. These are handeled as version 0. So Quickstart_bpel_simple_invoke-1.jar may be deployed as the next process version. 2.2. Example 2.1. Sample Configuration: IMHO this should include a sample build file from SOA-P not Riftsaw. 2.3. consider to include: BPEL processes can be tested directly using JBDS. No ANT scripts are necessary. right click the process WSDL -> Web Services -> Test with Web Service Explorer -> ... 6.2. Mentioning the farm directory is good but we don't want to make the impression that it's suited for enterprise use. The process archives should be copied separately to each server.	1	1	https://issues.jboss.org/browse/SOA-3093
10908	SOA-3093	I have made most of these changes thanks, Marek. :-) The only thing I haven't altered is the sample build file - can an SME please provide a relevant SOA one? Cheers.	1	1	https://issues.jboss.org/browse/SOA-3093
10909	SOA-3093	Could you please add to guide steps to configure riftsaw clustering? In default It's disabled and old steps are for deploy riftsaw with clustering. It would be nice to have some template files in docs/examples as jboss-beans.xml and riftsaw-cache-manager-jboss-beans.xml (these files are ready in qa/clusterinstall2/resources/riftsaw/META-INF where is 1 configurable part @database@ in jboss-beans.xml). Step 1 would be set @database@ in jboss-beans.xml example file to some of these mysql, postgre, db2, sqlserver, oracle or sybase Step 2 would be copy jboss-beans.xml to [server-config]/deploy/riftsaw.sar/META-INF/ Step 3 would be replace [server-config]/deploy/cluster/jboss-cache-manager.sar/META-INF/jboss-cache-manager-jboss-beans.xml with riftsaw-cache-manager-jboss-beans.xml	1	1	https://issues.jboss.org/browse/SOA-3093
10910	SOA-3093	Hi David, can you have a look at the following please? 1.2 Quickstart Examples - Hello World - wrong path - should be SOA_ROOT/samples/quickstarts/bpel_hello_world - the user can send a message to the process as: ant runtest 1.3 ESB Examples. - wrong path - should be SOA_ROOT/samples/quickstarts/bpel_esb_helloworld 2.3 BPEL properties bpel.uddi.* property is located in the table header. I suppose this is a typo. 3.4 Changing End-Point Configuration Properties Everything in this section refering to Apache ODE should be removed since it's not configurable in Riftsaw. Riftsaw only supports process specific config. Also for completion the only property supported at this time is mex.timeout (as stated in the guide). 5.2 The note about the ClerkManager includes also Table 5.1. Is this a mistake or intention? 7.1 Installation Steps provided above by ibek should be in this section. Attempting to install another Riftsaw deployment can break the integration.	0	0	https://issues.jboss.org/browse/SOA-3093
10911	SOA-3086	Again, I'm not on-board with making this a blocker unless we are specific about the requirements. We're already at the end of the development window, but we don't fully understand the customer needs. What can be done in the near-term is to just reintroduce changes to have pluggable role validation, but that still leaves open issues of: -how many calls are being made to the custom implementation (1 per user query?) currently we make at least 1 call for each query/subquery/function call. -do they need the ability to modify the incoming query (this is the most problematic) -do they need to specific mechanism to conveys denials (they had indicated a potential conversational approach to refine the submitted query) or will the exception text of a SQLException be sufficient. There are possibly more.	0	0	https://issues.jboss.org/browse/SOA-3086
10912	SOA-3049	one off my head is the data instance cleanup configuration: http://ode.apache.org/instance-data-cleanup.html	1	0	https://issues.jboss.org/browse/SOA-3049
10913	SOA-3038	David - it's not there yet - can you check on this? Thx!	0	0	https://issues.jboss.org/browse/SOA-3038
10914	SOA-3012	Per DOC-53797: "The goal of this process is to provide a quick and clear response to the customer - we should respond to the request withing two weeks. The response has to be unambgious - if we have rejected the enhancement a reason needs to be provided; if it is accepted then a release version has to be commited to." Ken, can we please make a decision on this ASAP?	0	0	https://issues.jboss.org/browse/SOA-3012
10915	SOA-3009	Review comments: Comments on new 4.3 CP05 Getting Started Guide ---------- Page 1, Overview Text: Chapter 3 contains instructions on how to launch, shutdown and troubleshooting the JBoss Enterprise SOA Platform product. Comment: Grammar - should be "troubleshoot" ---------- Page 1, Section 1.1 Text: JBoss Enterprise SOA Platform is also the supported deployment platform for JBoss Enterprise Data Services. Refer to http://www.jboss.com/products/platforms/dataservices/ for more information about this product. Comment: Remove this paragraph - EDS is SOA 5.1 only. ---------- Page 4, Section 2.3 Text: Important This document does not cover the installation of the JBoss Enterprise Data Services Platform. Refer to the EDS Getting Started Guide for information for installation instructions other details for that product. Comment: Remove this paragraph - EDS is SOA 5.1 only. ---------- Page 10, Section 2.2.4 Text: 2.4.4. Managing jUDDI Console Users Read this section to learn about managing user accounts for publishers in the jUDDI Console. Only the jUDDI publisher root, or another publisher with administration rights, can grant administration rights to another publisher. Do this in the jUDDI Console by enabling the isAdmin checkbox in the Publisher Details screen. To enable root log-on, create the user root using the procedure described in Section 2.4.1, “Creating Server Console User Accounts”. The role of user must be assigned to this user. Comment: Remove this section. The jUDDI console is added in SOA-P 5.x ---------- Page 13, Section 3.1 Text: Important The startup time for the server using the production server profile is approximately two minutes. This is slightly longer than previous releases due to the high number of new features in this version. Comment: Remove this paragraph. ---------- Page 17, Section 4.1.1 Text: 4.1.1. The "Helloworld" Quick-Start Comment: All references to "Helloworld" should be changed to "helloworld" ---------- Page 19, Section 4.1.1 Comment: We should add a more descriptive definition of "ESB-aware" to this section of the guide: In describing application clients and services, the term "ESB-aware" means that they can understand the message format and transport protocols used by the JBossESB in the SOA Platform. Gateways are used to convert messages in ESB-unaware formats into a form that can be processed and routed by the ESB. ---------- Page 21, section A2 Comment: We should refer to the Oracle JDK as the "Oracle JDK" not the "Sun Microsystems" JDK. (The following appendix does this already.) ---------- Page 27, Appendix C. Verifying Downloaded Files Comment: The screenshot and example text in this section refer to SOA-P 5 builds, not 4.3. ---------- Page 29, Appendix D. Installing Apache Ant Comment: References to ant 1.8 should be changed to ant 1.7	1	1	https://issues.jboss.org/browse/SOA-3009

#	Requirement	Questions	Answered	Successfully Answered	URL
10916	SOA-3008	Hi Bob: Have we changed the facet name in OUR svn? Or only in the eclipse branch? Currently I have noticed the following files that might be affected: - VCFUtil (one line patch), very easy fix. - Large amounts of org.jboss.tools.bpel.runtimes/plugin.xml The second is the more worrisome version here. I need to know whether this plugin or some other integration plugin like it is going to continue to be distributed at all times. Before I can move forward with this, I need to understand the migration path in general, when we will switch from using our svn version to eclipse-released versions, and whether our svn will continue to hold an integration plugin of some sort. Ready to help, though. =]	0	0	https://issues.jboss.org/browse/SOA-3008
10917	SOA-3008	OK, after thinking about this some more, I've come to the conclusion that we should leave our jbt facet alone since we'll be pushing this stuff back into eclipse anyway. I'm thinking we leave the "bpel.facet.core" that's currently defined in the org.eclipse.bpel.apache.ode.runtime plugin (in the eclipse.org repo) as is, and we leave the "jbt.bpel.facet.core" defined in org.jboss.tools.bpel.runtimes as is, but rename it to something like "JBoss Riftsaw BPEL 2.0 Project Facet". Project facets appear to be bound to specific runtimes anyway, so this kind of makes sense. The two adapter plugins that define these facets could then become separate, installable features; so we'd have the features: 1. BPEL Editor 2. JBoss Riftsaw Runtime Adapter 3. Apache ODE Runtime Adapter Then you (the user) can switch between the two facets if you want to deploy to different runtimes. Is this reasonable?	0	0	https://issues.jboss.org/browse/SOA-3008
10918	SOA-3008	Just an afterthought: the ODE runtime requires that the service address include "ode/processes" in its URL, whereas Riftsaw does not. So for example, a "hello_world" process would be addressed as: http://localhost:8080/ode/processes/hello_world when deployed to ODE and as: http://localhost:8080/hello_world when deployed to Riftsaw. This means that the WSDL (where the service binding is defined) needs to be changed depending on which runtime the service is deployed to. Should this service URL change become part of the facet installation (esp. considering that each runtime may have defined different host and port#s) ?	0	0	https://issues.jboss.org/browse/SOA-3008
10919	SOA-2991	Tom, can you add this to the jbpm config in ESB?	0	0	https://issues.jboss.org/browse/SOA-2991
10920	SOA-2984	Zip file containing signed jar built from: https://svn.devel.redhat.com/repos/jboss-soa/branches/5.0.2-SOA-2984/build-tools/ Revision 8758 which uses: http://anonsvn.jboss.org/repos/labs/labs/jbossesb/branches/JBESB_4_7_CP2_JBESB_3584/ Revision 36860 README.txt: The included file: jbossesb-soap.jar should be copied over the following files: jboss-soa-p.5.0.0/jboss-as/server/<profile>/deploy/soap.esb/jbossesb-soap.jar where "<profile>" is "all", "default" and "production". The included file should also be copied to any additional profiles that have been created.	0	0	https://issues.jboss.org/browse/SOA-2984
10921	SOA-2978	Per denial note, we now have a support case to justify this request. I'll re-open it. https://c.na7.visual.force.com/apex/Case_View?id=500A0000008UO8NIAW&sfdc.override=1 SF case 00561240 Thanks, Rick	1	1	https://issues.jboss.org/browse/SOA-2978
10922	SOA-2974	3.1.2 SP9 - is included in ER6 - for example: ./jboss-as/jbossws-cxf-installer/deploy/lib/jbossws-cxf-server.jar ./jboss-as/jbossws-cxf-installer/deploy/lib/jbossws-cxf-client.jar	1	0	https://issues.jboss.org/browse/SOA-2974
10923	SOA-2925	Do we get this for "free" when we do the MRG-M cert?	0	0	https://issues.jboss.org/browse/SOA-2925
10924	SOA-2924	Kev, Great to have positive feedback from GSS. Can you please add the sample code and possibly the diagram to the project doc and I will pull it down into the product guide? Thanks.	1	0	https://issues.jboss.org/browse/SOA-2924
10925	SOA-2922	Need a little direction. In which document(s) does this appear? (What are migration notes"?)	0	0	https://issues.jboss.org/browse/SOA-2922
10926	SOA-2919	(Per Steve Hawkins) This seems overly general. Teiid exceptions generally contain detailed messages and a detailed exception chain. Can you provide examples when this is occurring and what you would like to see instead?	1	1	https://issues.jboss.org/browse/SOA-2919
10927	SOA-2916	Martin - is this still an issue?	1	0	https://issues.jboss.org/browse/SOA-2916
10928	SOA-2900	The current message in 5.1 that will display is: EDS cannot be deployed to profile ${profile}, it doesnt have all required dependencies. Is there different/improved message that you wish to display?	1	1	https://issues.jboss.org/browse/SOA-2900
10929	SOA-2688	It should already be possible to encrypt the passwords in jbossesb-properties.xml, can you give us an example of where you think this fails?	0	0	https://issues.jboss.org/browse/SOA-2688
10930	SOA-2630	If there are parts missing that you think should be included in the docs then please list them. As for where it should reside, are you intending to move it?	0	0	https://issues.jboss.org/browse/SOA-2630
10931	SOA-2626	Hi Van, I think you said that at least one of the GSG examples would include this. Can you please comment here on which one ? Thanks	0	0	https://issues.jboss.org/browse/SOA-2626
10932	SOA-2616	When using jUDDI v3, it makes much more sense to use user defined keys, and have part of the binding key be the host and port name. This way the existing binding keys are simply reused rather then a new set being created when the servers come back up. Also the new jUDDI v3.1 client ships with a service cache, which is updated by a subscription (when a service or endpoints change or are removed the client caches are informed). This is using standard UDDI v3 functionality so should work with any v3 registry and makes the registry much more dynamic. This reduces the problem to removing dead endpoint information of nodes that are really gone. I would think that a 3 'strikes you're out' policy in the ServiceInvoker should do the trick, that with an optional periodic query ("am I in the registry") - if not, reregistration to bring back services that could not be seen due to for example temporary network issues. "The real solution is to have a 'service repository' that reacts dynamically to cluster members appearing/disappearing" if you have this info then you can do registration/unregistration right there.. My 2 cents. --Kurt	1	0	https://issues.jboss.org/browse/SOA-2616
10933	SOA-2591	Lee Carlon <lcarlon@redhat.com> made a comment on [bug 724407|https://bugzilla.redhat.com/show_bug.cgi?id=724407] Pasted from email: > This needs to be fixed. Lee, why don't we sync up early next week > review this doc ? > Sounds good, Prakash. I'm in the process of having the document added to the BRMS docs on the internal Doc stage. I've marked off the chapters that I believe shouldn't be included for 5.2 as 'Not Supported in 5.2'. I'll let you know as soon as the document is up and we can review from there. - Lee	0	0	https://issues.jboss.org/browse/SOA-2591

#	Requirement	Questions	Answered	Successfully Answered	URL
10934	SOA-2376	doc updated & pushed to stage outstanding items emailed for feedback: Section 1.1 Can be a JCA Connector or any other custom connection provider. Teiid recommends and uses JCA as its specification defines how you can write, package, and configure access to EIS system in consistent manner. Open issue – We recommend that customers use the vendor-supplied JCA adapters for using JMS with JCA. Will we do the same for using Teiid with JCA? Section 1.2.1, 1.3.1 For sample Translator code, refer to the Teiid source code athttp://anonsvn.jboss.org/repos/teiid/trunk/connectors/ Where will the Teiid source be available from ? Will it be a standalone ZIP or included with the SOA source? And (assuming it will be available for download as a ZIP) what directory of the repo will be the root of the ZIP ? eg, if the docs refer to http://anonsvn.jboss.org/repos/teiid/trunk/connectors/ how will that be available in the ZIP - noting that the product docs will really be referring to the branch source although the upstream docs generally refer to the trunk. Section 3.1.7. Metadata Override and implement the method getMetadata(), if you want to expose the metadata about the source for use in Dynamic VDBs. This defines the tables, column names, procedures, parameters, etc. for use in the query engine. This method is not yet used by Designer tooling. Open issue: Need to check with the Dev team about “This method is not yet used by Designer tooling.” What are the user impacts of this?	0	0	https://issues.jboss.org/browse/SOA-2376
10935	SOA-2370	Toshiya - Do not set the fix version when opening Jira issues, leave the fix version unassigned so it can be picked up to be triaged. Looking at the linked Jira issue this is already resolved for 5.1 and is a duplicate? Or is there further work for this issue?	0	0	https://issues.jboss.org/browse/SOA-2370
10936	SOA-2309	AdminShell Bootstrap Environment TEIID_HOME = /jboss/local/51_ER2/jboss-soa-p-5/eds/teiid/adminshell CLASSPATH = /jboss/local/51_ER2/jboss-soa-p-5/eds/teiid/adminshell/lib/patches/*:/jboss/local/51_ER2/jboss-soa-p-5/eds/teiid/adminshell/lib/teiid-adminshell-7.1.1.jar:/jboss/local/51_ER2/jboss-soa-p-5/eds/teiid/adminshell/lib/* JAVA = /usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0//bin/java ========== ===> [import static org.teiid.adminshell.AdminShell.*; import static org.teiid.adminshell.GroovySqlExtensions.*; import org.teiid.adminapi.*;] ===> [import static org.teiid.adminshell.AdminShell.*; import static org.teiid.adminshell.GroovySqlExtensions.*; import org.teiid.adminapi.*;, import org.testng.annotations.*] ===> [import static org.teiid.adminshell.AdminShell.*; import static org.teiid.adminshell.GroovySqlExtensions.*; import org.teiid.adminapi.*;, import org.testng.annotations.*, import org.testng.TestNG] ===> [import static org.teiid.adminshell.AdminShell.*; import static org.teiid.adminshell.GroovySqlExtensions.*; import org.teiid.adminapi.*;, import org.testng.annotations.*, import org.testng.TestNG, import org.testng.TestListenerAdapter] FATAL: org.codehaus.groovy.control.MultipleCompilationErrorsException: startup failed: groovysh_parse: 6: unexpected token: @ @ line 6, column 5. @BeforeClass ^ 1 error org.codehaus.groovy.control.MultipleCompilationErrorsException: startup failed: groovysh_parse: 6: unexpected token: @ @ line 6, column 5. @BeforeClass ^ 1 error at org.codehaus.groovy.control.ErrorCollector.failIfErrors(ErrorCollector.java:296) at org.codehaus.groovy.control.ErrorCollector.addError(ErrorCollector.java:103) at org.codehaus.groovy.control.ErrorCollector.addFatalError(ErrorCollector.java:142) at org.codehaus.groovy.control.ErrorCollector.addError(ErrorCollector.java:113) at org.codehaus.groovy.control.ErrorCollector.addError(ErrorCollector.java:125) at org.codehaus.groovy.control.SourceUnit.addError(SourceUnit.java:353) at org.codehaus.groovy.antlr.AntlrParserPlugin.transformCSTIntoAST(AntlrParserPlugin.java:104) at org.codehaus.groovy.antlr.AntlrParserPlugin.parseCST(AntlrParserPlugin.java:71) at org.codehaus.groovy.control.SourceUnit.parse(SourceUnit.java:249) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:616) at org.codehaus.groovy.runtime.callsite.PojoMetaMethodSite$PojoCachedMethodSiteNoUnwrapNoCoerce.invoke(PojoMetaMethodSite.java:229) at org.codehaus.groovy.runtime.callsite.PojoMetaMethodSite.call(PojoMetaMethodSite.java:52) at org.codehaus.groovy.runtime.callsite.AbstractCallSite.call(AbstractCallSite.java:121) at org.codehaus.groovy.tools.shell.RigidParser.parse(Parser.groovy:148) at org.codehaus.groovy.tools.shell.RigidParser$parse.call(Unknown Source) at org.codehaus.groovy.tools.shell.Parser.parse(Parser.groovy:67) at org.codehaus.groovy.tools.shell.Parser$parse.call(Unknown Source) at org.codehaus.groovy.tools.shell.Groovysh.execute(Groovysh.groovy:130) at org.codehaus.groovy.tools.shell.Groovysh$execute.callCurrent(Unknown Source) at org.codehaus.groovy.tools.shell.Shell.leftShift(Shell.groovy:114) at org.codehaus.groovy.tools.shell.Shell$leftShift$0.call(Unknown Source) at org.codehaus.groovy.tools.shell.commands.LoadCommand$_load_closure1.doCall(LoadCommand.groovy:80) at	0	0	https://issues.jboss.org/browse/SOA-2309
10937	SOA-2308	This could be problematic, because the config file can't templetized because we can't be sure what the user has already changed. They now could have multiple sources that use HSQLDialect. Do we, by default, change all occurrences? Maybe, when the db schema tool is run, and modeshape is determined to be deployed, we add a prompt telling the user that they will need to update the config file with this "DIALECT". Suggestions?	0	0	https://issues.jboss.org/browse/SOA-2308
10938	SOA-2303	The config file needs to be changed from using the default inmemory repository to using hsql. A question here is - should the config define its own hsql (keep its data separate from everyone else) or reference the default repository by jndi name (DefaultDS) ?	0	0	https://issues.jboss.org/browse/SOA-2303
10939	SOA-2282	Regarding ModeShape: changed it to use the soa-users.properties and soa-roles.properties files, therefore added 2 steps to build process to: 1) exclude the modeshape users and and roles files and 2) remove the policy from the modeshape-jboss-beans.xml and added a step to modeshape installation to insert the policy to login-config.xml Teiid: added a step during build process to remove the application-policy from the teiid-jboss-beans.xml and added a setup to teiid installation to add the policy to login-config.xml Didn't change Teiid to use the soa-users.properties because these users represent the JDBC access to EDS.	0	0	https://issues.jboss.org/browse/SOA-2282
10940	SOA-2197	Need to find out: 1 - Has this been tested ? 2 - What configuration is different ?	0	0	https://issues.jboss.org/browse/SOA-2197
10941	SOA-2197	HP Systinet can be deployed just to 4.3 SOA-P, because their web framework does not work on 5.x SOA-P server (see SOA-1919). But it's possible to connect from 5.x SOA-P server to HP Systinet deployed on 4.3 SOA-P (use remote server as remote UDDI registry).	0	0	https://issues.jboss.org/browse/SOA-2197

#	Requirement	Questions	Answered	Successfully Answered	URL
10942	SOA-2183	Len, this seems to already be corrected in the current build. Page 94 reads: 2. SQL: <sql-provider>, <sql-bus>, <sql-listener> and <sql-message-filter>: The <sql-message-filter> can be added to either the <sql-bus> or <sql-listener> elements. Where the <sql-provider> and <ftp-bus> specify the JDBC connection properties, the <sql-message-filter> specifies the message/row selection and processing properties. 3. FTP: <ftp-provider>, <ftp-bus>, <ftp-listener> and <ftp-message-filter>: The <ftp-message-filter> can be added to either the <ftp-bus> or <ftp-listener> elements. Where the <ftp-provider> and <ftp-bus> specify the FTP access properties, the <ftp-message-filter> specifies the message/file selection and processing properties 4. Hibernate: <hibernate-provider>, <hibernate-bus>, <hibernate-listener> : The <hibernate- message-filter> can be added to either the <hibernate-bus> or <hibernate-listener> elements. Where the <hibernate-provider> specifies file system access properties like the location of the hibernate configuration property, the <hibernate-message-filter> specifies what classnames and events should be listened to. 5. File system: <fs-provider>, <fs-bus>, <fs-listener> and <fs-message-filter> The <fs-message- filter> can be added to either the <fs-bus> or <fs-listener> elements. Where the <fs-provider> and <sql-bus> specify the File System access properties, the <fs-message-filter> specifies the message/file selection and processing properties. Is this the section to which Jehudi is referring? If so, it seems to be correct in the current version of the book attached. Cheers.	1	1	https://issues.jboss.org/browse/SOA-2183
10943	SOA-2145	can you make sure the version numbers of the JAR files are up to date ? Then clone this JIRA with the remaining items & set the FixVersion to FUTURE Thanks.	1	1	https://issues.jboss.org/browse/SOA-2145
10944	SOA-2080	Need some more information for the release notes: How does this affect developers/administrators ? Is there anything they might have to change in their deployed applications ?	0	0	https://issues.jboss.org/browse/SOA-2080
10945	SOA-2064	Kevin, what does this mean: At the moment you should be able to achieve this through the help of static methods. I have tried the properties within the jboss-esb.xml the way you suggested by email, and it works, so I dropped that out of my codebase. However, I did not attempt this in my code until I went through JBoss Support, which said it was not possible: See: https://support.redhat.com/jbossnetwork/restricted/caseDetail.html?caseId=832723 As far as properties in the ESB file, can you point me to the point in the documentation where that is noted?	0	0	https://issues.jboss.org/browse/SOA-2064
10946	SOA-2064	As far as this bug goes, the logic being in the constructor also leads to the issue of the whole service failing when the proxied web service is temporarily unavailable on server restart. You suggested: "It is currently a requirement that the wsdl exist when starting the service, although it should be possible to handle this through a barrier of sorts. What is your scenario?" The scenario is that, if SOA-P is bounced, and a webservice is unavailable that it should be proxying, it leads to an exception on deployment of the ESB service, and *no way* to recover the service, even if the remote service comes back online. If this is a requirement of the SoapProxy, it is a design flaw. The SoapProxy should return a SoapFault until the point that the service becomes available.	0	0	https://issues.jboss.org/browse/SOA-2064
10947	SOA-2032	Comments on doc here: http://downtown.englab.bne.redhat.com/drafts/JBoss_Enterprise_SOA_Platform/4.3.CP04/SOA_Release_Notes/ 3.1.4. JBoss Rules SOA-1914 https://jira.jboss.org/jira/browse/JBRULES-2421 If the user was running JBoss Rules 4.0.7 on an IBM virtual machine with JIT enabled, an .RuntimeDroolsExceptions would occur. This was because of a problem with regard to the way in which XXXX instanceof Object expressions were handled. The code in the org.drools.base.ValueType class which handles these expressions has been modified. As a result, JBoss Rules can now be run on IBM virtual machines with JIT enabled, without it causing exceptions. *** Comment: Note that SOA Platform 4.3 CP04 is not certified with the IBM JVM. ---------- https://jira.jboss.org/jira/browse/SOA-1072 The example.base.build.xml used by jBPM examples has now been removed. It has previously caused some problems but is now no longer needed as examples are now being built with Maven rather than Ant. POM files have now been provided to test and run the examples. *** Comment: This bug is still open in CP04 - we need to list it as an unresolved issue, ---------- https://jira.jboss.org/jira/browse/SOA-1463 A java.lang.Exception exception would occur if the user tried to run start, stop, create or destroy deployment operations from within the ESB Statistics level. In order to mitigate this problem, these operations are no longer available at this level. *** Comment: This bug is still open in CP04 - we need to list it as an unresolved issue, ---------- https://jira.jboss.org/jira/browse/SOA-1998 *** Comment: See the JIRA - the description of this issue is changing. ---------- Known Issues in This Release 4.1.1. JBoss Business Process Manager SOA-1948 https://jira.jboss.org/jira/browse/JBPM-2791 If there is a variable mapping between the Enterprise Service Bus and the Business Process Manager and the mapped value happens to be an empty string, then the result will be null. Also, if an object is persisted in an Oracle database with a field set to be an empty sting, the field value will also be null. Currently, there is no work-around for this problem. 4.1.2. JBoss Enterprise Application Platform SOA-1519 https://jira.jboss.org/jira/browse/JBPAPP-2893 There are problems with crash recovery when inflowing transactions are associated with multiple resource managers. As a consequence, a single XAResource can not be returned to drive the recovery for a given Xid. There is currently no work-around solution for this problem. *** Comment: Have we used this phrase in the past: "There is currently no work-around solution for this problem." ---------- SOA-1529 https://jira.jboss.org/jira/browse/JBESB-3197 Currently, there is no service invoker load-balancing policy that prefers local end-point references. This would be of use if users do not want requests to be balanced between different instances in the clutter, as the latter makes debugging harder in the event of a failure. There is no work-around for this lack of functionality. *** This phrase "There is no work-around for this lack of functionality" sounds overly negative - why not simply say that the functionality is not supported by the Platform.	0	0	https://issues.jboss.org/browse/SOA-2032
10948	SOA-2004	Sorry to be a pain - but the names of the new figures: Figure 6.6. Metrics Disabled by Default One Figure 6.7. Metrics Disabled by Default Two Really should be changed - the titles that you used are from the screenshots that I attached to the JIRA, but those were just the filenames. ;-) How about: Figure 6.6. Service Metrics Disabled by Default Figure 6.7. Action Metrics Disabled by Default Thanks!	1	1	https://issues.jboss.org/browse/SOA-2004

#	Requirement	Questions	Answered	Successfully Answered	URL
10949	SOA-2003	Additional comments: ---------- Note in section 4.1.3 In JBoss ESB 4.3.CP03 the name of the property used to enclose NotificationList elements in the <action> target is not validated. Is this^ new in 4.3 CP03? ---------- Section: 4.3.1. ServiceInvoker This paragraph should be removed: From a clients perspective, the Courier interface and its various implementations can be used to interact with services. However, this is still a relatively low-level approach, requiring developer code to contact the registry and deal with failures. Furthermore, since JBossESB has fail-over capabilities for stateless services, this would again have to be managed by the application. See the Advanced chapter for more details on fail-over. ---------- Chapter 6. Example Comment: Better to call this section "An Example" ---------- 7.2.5. Quartz Scheduler Property Configuration I'm not sure if we support this - we removed it from the 5.0 book - will check with Kevin ---------- Duplicated sections: 11.5.3.2.1. Updated HTTP Connection Configuration. This "Configurator" is always applied to HttpClient instances created by the HttpClientFactory. To make the connection configurations in a different way, create a custom configurator that can generate and attach a different HttpConnectionManager instance with its own settings. 11.7.3.1. Updated HTTP Connection Configuration. This "Configurator" is always applied to HttpClient instances created by the HttpClientFactory. To make the connection configurations in a different way, create a custom configurator that can generate and attach a different HttpConnectionManager instance with its own settings.	1	1	https://issues.jboss.org/browse/SOA-2003
10950	SOA-2002	Hello Martin, As per SOA-1998 I have just added information about changes in numbers of retries that Alejandro documented. Is that what the part to which you were referring? If so, it is now in the document (Section 10.4.) Cheers.	1	1	https://issues.jboss.org/browse/SOA-2002
10951	SOA-2002	FYI - can you please look at these question that Len has raised?	1	1	https://issues.jboss.org/browse/SOA-2002
10952	SOA-1954	This will not be considered for SOA 4.3. Keeping 5.x only. Decision by SOA PM team triage meeting.	1	1	https://issues.jboss.org/browse/SOA-1954
10953	SOA-1950	It has been decided for now to keep the manifest file within the product zip. The MANIFEST.MF file will reside in a top level directory called Manifest. [12:37] <ldimaggi_> mschoene, tkirby remember the SOA-P 5.0 manifest files? Was this done as a stopgap measure as we were unable to sign all the jars? [12:38] <mschoene> ldimaggi_, yes, we wanted to have trusted checksum [12:38] <ldimaggi_> mschoene, tkirby what's the state of signing for 5.1? [12:39] <tkirby> tkirby, mschoene broken by the attempt to add a manifest :-) [12:40] <mschoene> tkirby, who is guilty , hen or egg ? [12:41] <jdc> mschoene: Dinsoaurs. [12:41] <mschoene> jdc, :) [12:41] <tkirby> mschoene, signing was working fine, but the manifest appeared in the top level, attempting to move this outside has caused problems so we can [12:42] <tkirby> mschoene, ldimaggi_ a) just sign [12:42] <tkirby> b) sign and have manifest in top level [12:42] <mschoene> tkirby, the signing process creates manifests too , btw [12:42] <tkirby> c) sign and have manifest seperate [12:42] <mschoene> tkirby, staying with b) is great [12:43] <tkirby> mschoene, ok because that is what we had [12:43] <tkirby> griz ping ^^^^^^^^^^ [12:45] <griz> tkirby: ok, I'll put it back to how it was. [12:45] <ldimaggi_> tkirby, griz mschoene great! [12:47] <tkirby> griz is it still in a meta-inf directory? [12:49] <griz> tkirby: I'd changed it to be a freestanding file in it's own zip. I'll take my changes out of the sign-unsigned-jars and then it'll be in the META-INF dir in the product zip. [12:49] <tkirby> griz can we rename that to Manifest? [12:49] <tkirby> griz or is that what you get given? [12:51] <ldimaggi_> tkirby, please put all this ^ into the JIRA - or we will forget it all [12:51] <griz> tkirby: A directory called Manifest in the prod zip containing a file called MANIFEST.MF? Sure. [12:51] <griz> ldimaggi_: will do. [12:51] <tkirby> mschoene, ^^^^ That OK with you? [12:54] <tkirby> griz unless mschoene objects go ahead with that, add the conversation to the Jiras [12:54] <griz> tkirby: will do. [12:54] <mschoene> tkirby, hmm, i am not sure i understand that entirely from the backlog , i'll comment in the jira [12:55] <tkirby> griz we may have a delay to the build so you probably have a day or so to revert it [12:55] <griz> tkirby: shouldn't take long to change and check [12:55] <tkirby> mschoene, the manifes will be call manifest.mf and will be in the top level of the zip under a dir called manifest [12:57] <griz> mschoene: hi. Just to make sure, The MANIFEST.MF will live in a directory called Manifest which will be a top level directory in the product zip. [12:58] <mschoene> griz, that sounds good to me, will that be in next ER? [12:58] <griz> mschoene: Yep. [13:00] <mschoene> griz, ok, then i'll have a look at that file too once available	0	0	https://issues.jboss.org/browse/SOA-1950
10954	SOA-1949	Hey David, can you add this to the release notes? It won't be fixed for GA. The consequence of this issue is that you cannot use the same JON server and agent to manage SOA instances with different versions (4.3 and 5.0). JON will remove the older esb plugin and you won't be able to manage SOA-P 4.3. So either you use the SOA 4.3 plugin to manage SOA 4.3 or you use the SOA 5 plugin to manage SOA 5. A workaround, which allows you to manage both instances at the same time is provided in comments above (rename the plugin name).	1	1	https://issues.jboss.org/browse/SOA-1949
10955	SOA-1913	What version do users require if they wish to use native ?	1	1	https://issues.jboss.org/browse/SOA-1913
10956	SOA-1904	I need some idea of what is happening with this JIRA so I can schedule docs work for 5.0.1 What volume of material? e.g. how many pages, diagrams, etc When will draft material be ready ?	0	0	https://issues.jboss.org/browse/SOA-1904
10957	SOA-1904	Here is the first draft of the document. Darrin, would you please take a look at it? http://community.jboss.org/wiki/jBPM3WebApponSOA-P In addition to the document, it would be great to have a unit-testable sample application that illustrated the concepts. What do you think?	1	1	https://issues.jboss.org/browse/SOA-1904
10958	SOA-1903	Approved for SOA 4.3 CP03, but depends on inclusion into EAP 4.3 CP08 and the ability for SOA 4.3 CP03 to consume EAP 4.3 CP08 in time for release.	0	0	https://issues.jboss.org/browse/SOA-1903
10959	SOA-1884	I think this needs to be an update of the kbase article that was created for SOA-1444 Can this be confirmed ?	0	0	https://issues.jboss.org/browse/SOA-1884
10960	SOA-1876	So what is this optimization? ..... Basically, if the Smooks configuration passes the following tests: 1. Has just an XSL config in it (nothing else). 2. The XSL config is targeted at the whole message i.e. the "#document" or "/" fragment i.e. not a sub-fragment of the message. 3. Is using the default (XML) reader config i.e. is not configured with a reader for CSV, JSON, EDI etc The XSLT will be applied directly, bypassing the Smooks fragment filtering process completely.	0	0	https://issues.jboss.org/browse/SOA-1876
10961	SOA-1769	Len, As per the above, all of the synchronousTimeout info has been added to the document. However, found the statement about documenting this Wiki ambiguous. Do you want it all documented? I ask this because there are significant differences between what is in the Wiki and what is in the upstream docs (for example, the entire "Security" section is missing from the Docs.) Since the Wiki was updated recently (Jan 10) by Tom Fennelley, do we take it as the "source of truth" for the entire HTTP Gateway section? Thanks.	1	1	https://issues.jboss.org/browse/SOA-1769
10962	SOA-1763	Okay I stand corrected, but can this be written to create a "transformer" pool so that each thread running can get their own instance. This would be a big improvement "approximately 20%" or so in my testing performance? I assume in a http_gateway multiple threads are running, is that true, how can that be confirmed? In my testing I saw no errors, so at least with my configuration is it possible this is only single threaded?	0	0	https://issues.jboss.org/browse/SOA-1763
10963	SOA-1763	Sorry, what does the gateway have to do with this?	1	1	https://issues.jboss.org/browse/SOA-1763

#	Requirement	Questions	Answered	Successfully Answered	URL
10964	SOA-1738	Where is the jbpm-console-production.war? where is the jbpm-console-development.war?	0	0	https://issues.jboss.org/browse/SOA-1738
10965	SOA-1730	Section 7.2.5 of the Programmers' Guide describes the ESB's use of a Quartz Scheduler - is this the same JMS/JCA inflow/quartz scheduler?	0	0	https://issues.jboss.org/browse/SOA-1730
10966	SOA-1730	Sorry Jiri, I don't know why this document never updated on the doc-stage site with the content as per my comment on the 3rd of February. I've just rebuilt it now, hopefully it will show up in a few hours. If for some reason it doesn't (don't know why), there is another copy here: http://downtown.englab.bne.redhat.com/drafts/JBoss_Enterprise_SOA_Platform/5.0.0/Administration_Guide/html/message_and_scheduler_service.html Can you please supply what additional content is required.	0	0	https://issues.jboss.org/browse/SOA-1730
10967	SOA-1730	Re your comment above: https://issues.jboss.org/browse/SOA-1730?focusedCommentId=12514180&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12514180 Does that mean that the originally requested content is now wrong ? If so can you please supply updated content for this JIRA ? (I misread that comment originally, feel kind of stupid now)	1	0	https://issues.jboss.org/browse/SOA-1730
10968	SOA-1715	Jiri, Can you give a few xml snippets that illustrate the different configuration possibilities of these parameters? Thanks, Koen	1	0	https://issues.jboss.org/browse/SOA-1715
10969	SOA-1688	Darrin - the release notes are not ready for review yet - will you be adding the new feature list in this doc?	0	0	https://issues.jboss.org/browse/SOA-1688
10970	SOA-1688	Section: 1. Overview Text: Warning - This is a Beta Release Comment: Remove this note. ;-) ---------- Not a technical review comment - but I think it's worth changing the opening of the first chapter from this: ========== JBoss Enterprise SOA Platform is a certified, tested, and supported platform for developing Enterprise Application Integration and Service Oriented Architecture solutions. It integrates several stable and scalable open source frameworks and solutions including Hibernate, Seam, JBoss Transactions, JBoss Clustering, the JBoss Application Server, and JBoss Enterprise Service Bus (ESB) to provide an infrastructure for enterprise SOA applications. These community developed and enterprise certified and supported products have been combined and tested to provide a solid, robust, and scalable platform. Powered by legendary JBoss innovation and backed by Red Hat engineering and quality assurance, JBoss Enterprise SOA Platform is the platform of choice for a new generation of enterprise applications. ========== To this: ========== JBoss Enterprise SOA Platform is a certified platform for developing Enterprise Application Integration and Service Oriented Architecture solutions. The Platform integrates several stable open source frameworks and community developed products including Hibernate, Seam, JBoss Transactions, JBoss Clustering, the JBoss Application Server, and JBoss Enterprise Service Bus (ESB) to provide a solid, robust, and scalable infrastructure for enterprise SOA applications. Powered by JBoss innovation and backed by Red Hat engineering, quality assurance and support, JBoss Enterprise SOA Platform is the platform of choice for a new generation of enterprise applications. ---------- Section 2 - New Features in 5.0 Text: The JBoss ESB now uses Apache jUDDI version 3 as its UDDI registry. This new version implements the UDDIv3 specification and includes a subscription API in addition to a new web console. These new capabilities are detailed in the new jUDDI User Guide. Comment: If we reference the jUDDI guide - then we need at least an initial draft of the guide at GA. Text: JBoss SOA Administration Console (JOPR) Comment: I could not find any direct reference to JOPR in the EAP 5.0 docs - can you check and see how they described the console? Was there a deliberate reason to not reference JOPR? ---------- 2.1. Technology Previews Text: JBoss Rules Fusion Comment: It's worth referencing Fusion as a CEP implementation. ---------- Section: 3. Components of the 5.0.0 Release Text: Apache jUDDI 3.0 Comment: Should be 3.0.1 ---------- Not looking at this section as it is out-of-date: 8. Known Issues in this release	0	0	https://issues.jboss.org/browse/SOA-1688
10971	SOA-1681	I need some idea of what is happening with this JIRA so I can schedule docs work for 5.0.1 What volume of material? e.g. how many pages, diagrams, etc When will draft material be ready ?	0	0	https://issues.jboss.org/browse/SOA-1681
10972	SOA-1660	Are you monitoring that server with JON?	1	1	https://issues.jboss.org/browse/SOA-1660
10973	SOA-1660	Is this consistent with other information used/collected by JON? It's no longer available after JON collects it? Or - is this configurable? Either way - we will need to document this for users.	0	0	https://issues.jboss.org/browse/SOA-1660
10974	SOA-1660	Could this be a difference between full JON (enables historical data) and embedded JON?	0	0	https://issues.jboss.org/browse/SOA-1660
10975	SOA-1660	Hey Tom, since the ESB JON plugin consumes these messages, where does it use this data? Is it exposed somewhere?	0	0	https://issues.jboss.org/browse/SOA-1660
10976	SOA-1660	This is expected behaviour - should expectations be changed, if so what should be expected	0	0	https://issues.jboss.org/browse/SOA-1660
10977	SOA-1660	Clearing the message alerts is expected behavior for the JON plugin. Not sure what the NPE here is - do we know it is definitely related?	0	0	https://issues.jboss.org/browse/SOA-1660
10978	SOA-1660	Question: If the JON Server or the Embedded Console are consuming these alerts then the collected alerts cannot be accessed programmatically by a user via JMX. They will have to access these via the JON API. Where is the best reference to refer users to for this task?	0	0	https://issues.jboss.org/browse/SOA-1660
10979	SOA-1660	Hi Jarek Can you add links to where to download the SOAP server used to reproduce this issue. Also we need the exact reproduction steps, e.g. which jmx console pages were visited to trigger the NPE.	0	0	https://issues.jboss.org/browse/SOA-1660
10980	SOA-1657	Off the top of my head, candidates for removal: Chapter 2 - it's only download/install instructions Chapter 4 - database config directions, this is handled within SOA already Chapter 6 - is minimal, does it apply to SOA anyway? Chapter 8 - is just placeholder content, unless content is supplied from jUDDI project Also are the screenshots correct for what will be shipping in SOA ?	0	0	https://issues.jboss.org/browse/SOA-1657
10981	SOA-1657	My vote: Chapter 2 - it's only download/install instructions Yes, remove it Chapter 4 - database config directions, this is handled within SOA already Yes, remove it Chapter 6 - is minimal, does it apply to SOA anyway? I think that this should stay Chapter 8 - is just placeholder content, unless content is supplied from jUDDI project Kurt did write up something on annotations here: http://apachejuddi.blogspot.com/2009/11/uddi-annotations-how-do-i-self-register.html Haven't seen anything in the project docs yet.	1	1	https://issues.jboss.org/browse/SOA-1657
10982	SOA-1657	Section 1.1 "Introduction" and Section 1.2 "UDDI Registry" are copies of sections 1.1.1.1 "Introduction" through 1.1.1.6 "The Registry and the JBoss Service-Oriented Architecture Platform" in the Services Guide. But... The information is more detailed and presented better in the services guide. ****** Given the amount of overlap and and of jUDDI-project specific material that we are already removing from the SOA-P jUDDI guide, maybe it's time that we drop the standalone SOA-P jUDDI guide and just expand the services guide?	1	1	https://issues.jboss.org/browse/SOA-1657
10983	SOA-1657	Darrin - can you create a new draft of this doc? Some of the changes needed are pretty dramatic - can we review this again before beta?	1	1	https://issues.jboss.org/browse/SOA-1657

#	Requirement	Questions	Answered	Successfully Answered	URL
10984	SOA-1613	Steps to recreate bug: R+D added a unit test case (LogMoveTest.java)[1] which ensures the function. But in addition, I'd like to do a manual integration test in order to confirm that this one-off solves the problem which NTT encountered in SOA-P environment. The manual test procedure is like: ========= 1. Set up 2 SOA-P instances(ESB node and JMS node) and deploy a test ESB service. (I have a zip file which includes all stuff) 2. Start SOA-P instances. 3. Set a breakpoint on BasicAction.phase2Commit(boolean)[line2172:updateState()] using a debugger. 4. Invoke a test ESB client to start a transactional work. 5. After the ESB node stops at the breakpoint, kill(kill -9) the node. 6. Start the ESB node. 7. Priodic recovery (2min by default) kicks in. The following warning is logged because this is an unrecoverable transaction(Resources are already committed, but the tx-log remains) Could not find new XAResource to use for recovering non-serializable XAResource < 131075, 30, 28, 1--3f57f59b:c51c:4a26721f:21b5-3f57f59b:c51c:4a26721f:21b6 > 8. [If the one-off works correctly] After the specified time (12hr by default), AtomicActionExpiryScanner should move the log to "Expired" directory. Then you can see the warning is not being logged any longer. ========== Yes, it's reproducible. Is this acceptable to QE team? It's a bit complex so I think I should test it by myself during the QE phase. [1] https://jira.jboss.org/jira/browse/JBTM-418 Regards, Toshiya	0	0	https://issues.jboss.org/browse/SOA-1613
10985	SOA-1589	Taro, I have actually reworded it slightly in order to make it read better. The new wording is below but can you also please give a little information about who was modifying the format and why? Was it a particular customer? Many thanks. 2.2.1. Format of End Point Reference Contents Has Changed The contents of message.getHeader().getCall().getTo().getAddr().getAddress() are now returned in a different format than that in the 4.3GA and 4.3.CP01 releases. Previously, the format was in the form of: jms://soa01:1200/queue/myRequestQueue but now it is: jms:soa01:1200#queue/myRequestQueue Users should not modify End-Point Reference formats directly because they are specific to implementations of the API. There is no guarantee the format will remain the same for them.	1	1	https://issues.jboss.org/browse/SOA-1589
10986	SOA-1587	There is no such warning. Does not the script support multiple execution now?	0	0	https://issues.jboss.org/browse/SOA-1587
10987	SOA-1575	Smooks defines multiple terms that are unique to the project. Can we a Glossary? 1. Smooks Core: Provides the basic Smooks infrastructure/framework. Smooks Core is responsible for processing a set of Smooks Resource configurations. From these configurations, Smooks Core constructs and manages "Execution Context", "Content Delivery Configuration" and "Filter" (DOM/SAX) components. Smooks Core is the subject of this section. 2. Smooks Cartridges: Provide the real functionality on top of Smooks Core e.g. Javabean/POJO population, Templating support (XSLT, FreeMarker, StringTemplate), Scripting Support (Groovy) etc. These are the resources that will be applied by Smooks Core during filtering (see below). 3. Visitor: Visitor logic is central to how Smooks works. A Visitor is a simple piece of Java logic that can perform a specific task on the message fragment at which it is targeted, such as applying an XSLT stylesheet. You have the choice of supporting your logic through either the SAX or DOM Filters by implementing one or both of the following interfaces: org.milyn.delivery.sax.SAXElementVisitor or org.milyn.delivery.dom.DOMElementVisitor. 4. Java Binding: This is the ability to populate a Java Object Model from the source message. 5. Message Splitting and Routing: This the ability to perform complex splitting and routing operations on the source message. It includes the ability to route to multiple destinations concurrently. Different data formats can also be routed concurrently. These formats include XML, EDI, CSV and Java. 6. Huge Message Processing: This the ability to be able to declaratively "consume" (that is, transform or split-and-route) very large messages without the need for one to write substantial amounts of high-maintenance code. 7. Cartridge - A cartridge is a Java Archive (JAR) that contains reusable Content Handlers. Smooks includes pre-built and ready to use visitor logic so that users can implement solutions with minimal java code. This visitor logic is bundled into categories. These bundles are called cartridges. 8. Content Handler - Can't find a definition in the doc for this. Content Handlers are the cornerstone of the Smooks component model. The following Content Handler types are currently in existance: 1. Stream Readers: Smooks supports filtering of both XML and non-XML data because it allows you to configure a "Stream Reader" for each filter process. If no reader is configured, it defaults to XML. So, the Stream Reader resource is responsible for generating a stream of SAX events from a hierarchical data stream (e.g. XML, CSV, EDI etc.). This stream of SAX events can then be processed by XML Element Visitors (via Smooks). 2. Element Visitors: After Smooks hooks a Stream Parser to the data Stream, it starts receiving a stream of SAX events i.e. "startElement", "endElement" etc. These events are then used by Smooks to select an "ElementVisitor" implementation, which process the event in some way. This is the primary extension point in Smooks, as well as being the mechanism though which Smooks supports a fragment based processing model. See the list of Smooks Cartridges for examples of ElementVisitor implementations already available with Smooks. 3. Element Serializers: DOM based processing supports implementation of DOM Element "Serialization Units", allowing you to implement custom serialization at a fragment level.	1	1	https://issues.jboss.org/browse/SOA-1575

#	Requirement	Questions	Answered	Successfully Answered	URL
10988	SOA-1575	Binding This feature is used to populate a Java Object Model from a data source (such as a CSV, EDI, XML or Java file.) The populated object models can then be used either as transformation results in themselves or, alternatively, as a templating resources from which XML or other character- based results can be generated. This feature also supports Virtual Object Models (maps and lists of typed data), which can be used by both the ETL and templating functionality. Comment: This is the first place in the book where the term "ETL" is used. We should define the term: Extract Transform Load (ETL) here. It's currently defined 2 pages later. ---------- Section 1 - Overview Comment: Invalid links in PDF file: http://www.smooks.org/mediawiki/index.php%3Ftitle=FAQ should be: http://www.smooks.org/mediawiki/index.php?title=FAQ http://www.smooks.org/mediawiki/index.php%3Ftitle=Maven_%2526_Ant should be: http://www.smooks.org/mediawiki/index.php?title=Maven_%26_Ant http://www.smooks.org/mediawiki/index.php%3Ftitle=Smooks_v1.2_Examples should be: http://www.smooks.org/mediawiki/index.php?title=Smooks_v1.2_Examples <<<Open issue: We really do not want to direct Platform customers to project URLs for examples, documentation, etc. In the case of Smooks, avoiding this will be difficult as the Smooks project documentation is in the form of a tree of wiki pages. Can the Smooks project provide the same information in a standalone PDF file? In the case of the example code, if we include Smooks in the Platform, we should also include the examples' code. >>> ---------- Section 2.1. Basic Processing Model Comment: Another invalid link http://www.smooks.org/mediawiki/index.php%3Ftitle=V1.2%3ASmooks_v1.2_Developer_Guide should be: http://www.smooks.org/mediawiki/index.php?title=V1.2:Smooks_v1.2_Developer_Guide <<<Another open issue: It's one thing to send Platform customers to a project URL for wiki pages. But if we are shipping a user guide that references a developer guide, then we should also ship the developer guide doc.>>> ---------- 2.2. Simple Example Comment: I know that the document is adapated from the Smooks' project on-line docs, but I think that it is a mistake to retain this example. The problems with the example are that the code fragement is incomplete and the example does not generate any ouput. What do you think about replacing the example with the example from: http://www.smooks.org/mediawiki/index.php?title=V1.2:xml-to-xml ? And - the name of the interface is: ExecutionContext not EvolutionContext ;-) Text: In this example, no result is produced. There is also no interaction with the execution of the filtering process. This is because the example didn't create an EvolutionContext and supply it to the Smooks.filterSource method call. See http://www.milyn.org/javadoc/v1.2/smooks/org/milyn/container/ExecutionContext.html Comment: This is the first time that the Smooks "ExecutionContext" interface is mentioned in the document. We really should define the need for this interface, and any others that are needed in the example before we show the user the example. ---------- 2.3. Smooks Cartridges Text: Smooks includes pre-built and ready to use visitor logic so that users can implement solutions with minimal java code. This visitor logic is bundled into categories. These bundles are called cartridges. Comment: We should not use the term "bundle" as it may cause user confusion with Java bundles: http://java.sun.com/j2se/1.4.2/docs/api/java/util/ResourceBundle.html How about "This visitor logic is combined into groups called "cartridges." Comment: Incomplete link: http://www.smooks.org/cartri ---------- Section: 2.4. Filtering Process Selection (Should DOM or SAX be Used?) Comment: We should remove the "(Should DOM or SAX be Used?)" question from the section title and add it in an opening sentence for the section. Text: This does not include non-element Visitor resources, like, for example, readers. Comment: What is a "non-element Visitor resource?" Also, in this context, what is a "reader?"	1	1	https://issues.jboss.org/browse/SOA-1575
10989	SOA-1575	Section: Example 7.1. A Simple Configuration Comment: There is a duplicate record in the output. ---------- Section: 7.1.4.1.3. Segment Matching Comment: The reference to Java 1.5 (http://java.sun.com/j2se/1.5.0/docs/api/java/util/regex/package-summary.html) should be replaced with this refenence to Java 1.6 (http://java.sun.com/javase/6/docs/api/java/util/regex/package-summary.html) ---------- Section: 7.1.4.3. Type Support Comment: Reference to this: http://www.smooks.org/mediawiki/index.php?title=V1.2:Smooks_v1.2_User_Guide#EJC_-_Edifact_Java_Compiler URL should be changed to reference section 7.1.4.5. EJC (Edifact Java Compiler) in this document. ---------- Section: 7.1.4.6. EJC Maven Plug-In Comment: Reference to this: http://www.smooks.org/mediawiki/index.php?title=V1.2:Smooks_v1.2_User_Guide#EDI_Mapping_Models URL should be removed - the corresponding information should be added to this document. ---------- Section: 7.1.4.7.1. Using EJC Text: The easiest way in which to commence using EJC is to learn from the example at http:// www.smooks.org/mediawiki/index.php?title=V1.2:ejc. Comment: We should add this example to the guide. The example code is already in the examples .zip file. ---------- Section 9: Rules Comment - We should add a note indicating that in this context, "rules" does not refer to JBoss Rules or Drools. ---------- Section: 9.2.1.1. Useful Regular Expressions Text: A list of useful regular expressions is maintained on the Smooks Wiki at http://www.smooks.org/ mediawiki/index.php?title=Useful_Regular_Expressions. Comment: It's actually a short list. Can we add it to the document. ---------- Section: 10.4. Example10.4. Example A detailed validation example can be see at http://www.smooks.org/mediawiki/index.php? title=V1.2:validation-basic Text: A detailed validation example can be see at http://www.smooks.org/mediawiki/index.php? title=V1.2:validation-basic Comment: We should include the example in the user guide. ---------- Chapter 11: Note on 1st page of the chapter: Text: Be sure to read Chapter 4, Java Binding . Comment: Why? ---------- Chapter 12 - the entire chapter consists of: Message Splitting and Routing Please refer to Section 11.2, "Splitting and Routing". Comment: We should remove this chapter. ---------- Chapter 14 - the entire chapter consists of: Message Enrichment When using the Persistence features of Smooks, the queried data is bound to the bean context (ExecutionContext). You can use the bound query data to enrich your messages e.g. where you are splitting and routing. Refer to Chapter 13, Persistence (Database Reading and Writing) for additional details. Comment: Why not just add this to chapter 13? ---------- Section: 15.2.1. Global Filter Setting Parameters Text: The following global configuration options are available for configuring Smooks filtering. See http://java.sun.com/j2se/1.5.0/docs/api/javax/xml/transform/stream/StreamResult.html and http:// www.milyn.org/javadoc/v1.2/smooks/org/milyn/Smooks.html#filterSource(javax.xml.transform.Source, %20javax.xml.transform.Result...). Comment: Replace the Java 1.5 reference with: http://java.sun.com/javase/6/docs/api/javax/xml/transform/stream/StreamResult.html ---------- Chapter 18: ESB Integration Smooks plugins are available for a number of ESBs: JBoss ESB http://wiki.jboss.org/wiki/Wiki.jsp?page=MessageTransformation Mule http://www.mulesource.org/display/SMOOKS/Home Apache Synapse/WS02 http://esbsite.org/resources.jsp?path=/mediators/upul/Smooks%20Transform%20Mediator Comment: We should remove this section and replace it with a section that covers the JBossESB integration in the SOA Platform. (I'll even help you write it! ;-)	1	1	https://issues.jboss.org/browse/SOA-1575

#	Requirement	Questions	Answered	Successfully Answered	URL
10990	SOA-1575	Assigning back to David - I completed a first pass on the doc - what I have not yet done is to check that all the example code is correct and working. I'd like to look at the other books before coming back to do this. Some global comments on the Smooks User Guide: * References to Smooks project assets (javadocs). For references to pages in Smooks javadocs, we should be able to reference files installed as part of the SOA-P 5.0 distribution, as the javadocs should be included in the distribution. We'll need to add a separate JIRA/task to add the javadocs to the distribution. They are not there in ER2. * References to Smooks project assets (other information). I haven't kept a count, but there are many instances where the user guide directs the user to a smooks wiki page for additional information. It's disruptive to have so many of these, but we may not have a choice, given the large number of wiki pages used by smooks. * Addition of a glossary - What is the technical challenge that blocks the addition of a glossary? Can we simply create a glossary out of the the most important 10-20 terms? * Best practices information for selecting transformation methods - We need to fulfill the SOA-P 5.0 PRD requirement to provide users with guidance in selecting transformation methods. * Example code from projects that we incorporate into platforms - In BRMS 5.0.1, Drools 5.0 added an expanded set of examples. The examples were referenced in the Drools user guide, but the examples.zip file was not shipped as part of the BRMS distribution. There is a similar situation with Smooks 1.2 as the user guide references example programs that are not included in the SOA-P 5.0 distribution. Recommendation: Add the Smooks examples to the SOA-P 5.0 distribution. http://downloads.sourceforge.net/smooks/smooks-examples-1.2.2.zip We will have to verify that the examples can be built and run. * Removing references to project team members - Some of the code examples in the book include the actual name of a smooks developer. This is acceptable for the open source project, but for the Platforms, we don't want to imply that customers should contact developers directly for support. * References to the "user guide" that are also present in the on-line documentation should be removed from the user guide document. (The document IS the user guide as far as customers should be concerned.) * Graphic images are fuzzy/unclear.	1	1	https://issues.jboss.org/browse/SOA-1575
10991	SOA-1575	Done: 1. Content Handler definition added. 2. Definition of acronym "ETL" moved to first occurrence. 3. "Simple Example" replaced with that for XML-to-XML transformations. 4. Definition of ExecutionContext added. 5. Reworded section to avoid use of word "bundle." 6. Question "(Should DOM or SAX be Used?)" removed from header. 7. Broken URL removed and cartridge list added to book. 8. Smooks Resource definition added. 9. Added mention of new XSL Transformation function in SOA-P 5. 10. Removed name of Smooks developer from example code and replaced with made-up names. 11. Clarified that "rules" does not refer to JBoss Rules. 12. References to Online User Guide removed. Added link to section in our own document. 13. Updated reference to Java 1.6 14. Link to section on EJC added. 15. EJC example added to document. 16. Regular expression list added to document. 17. Validation example added. 18. Java Binding chapter reference removed. 19. Splitting and Routing chapter removed. 20. Message Enrichment chapter merged. (May be broken out again in the future if upstream expands this section.) 21. Reference to Java replaced with reference to 1.6 Not done: 1. Glossary cannot be added due to technical limitations/specific business process rule. 2. Images have not been altered, as this a PDF rendering issue only. 3. Addition of a pre-Smooks 1.1 example. (Please point me in the direction of an appropriate one.) 4. Len to rewrite ESB integration chapter, as mentioned above.	1	1	https://issues.jboss.org/browse/SOA-1575
10992	SOA-1575	Hey Len... when you say "... the example uses FreeMarker - which we don't support in SOA-P 5...", what do we mean? Only XSLT is supported? If so, there are issues with this because XSLT is only supported via the Smooks DOM Filter. If this is what we mean, then I don't think it's a good idea.	0	0	https://issues.jboss.org/browse/SOA-1575
10993	SOA-1574	Should now be visible on Documentation-Stage.	0	0	https://issues.jboss.org/browse/SOA-1574
10994	SOA-1558	It is my understanding that we now support import/include for the EBWS feature (in.xsd, out.xsd and error.xsd). Is that true? I will create a change request.	0	0	https://issues.jboss.org/browse/SOA-1558
10995	SOA-1533	"pipeline" of message processors. These process the message before routing the result to the "replyTo" end-point. The action processing that takes place in the pipeline may consist of steps in which the message is transformed by one processor, then some business logic is applied by the next and so on, before the result is routed to eitehr the next step in the pipeline, or to another end-point. Comment: Misspelling: eitehr ---------- Section: 4.1.2. updated Routers Text: Tools like StaticWiretap and StaticRouter can... Comment: StaticWiretap is printed in bold, StaticRouter in italics ---------- Section: 4.3. Updated What is a Service? Text: The JBoss Enterprise Service Bus does not impose restrictions with regard to what should constitute a service. Comment: Section 3.1 stated: '...In the JBoss Enterprise Service Bus, a service is defined as "a list of action classes that process a Message in a sequential manner." How about changing the opening line in 4.3 to: In the JBoss Enterprise Service Bus, a service is defined as "a list of action classes that process a Message in a sequential manner." Within this definition, the JBoss Enterprise Service Bus does not impose restrictions with regard to what should constitute a service. ---------- Section: 6.1.5. Updated. Configuring for a Remote Service Invoker Text: log4j-1.2.14.jar stax-1.2.0.jar scout-1.2.0.aop.jar commons-logging-1.1.jar jboss-aop-jdk50-1.5.6.GA.jar javassist-3.6.0.GA.jar juddi-core-3.0.0.jar juddi-ws-3.0.0.jar (no such file in 5.0 ER5) xercesImpl-2.8.0.jar Comment: In ER5, the files are named: log4j.jar stax-ex.jar scout-1.2.aop.jar commons-logging.jar jboss-aop-jdk50.jar javassist.jar juddi-core-3.0.0.aop.jar xercesImpl.jar ---------- Section 9.1. Overview Text: http://anonsvn.labs.jboss.com/labs/jbossesb/trunk/product/etc/schemas/xml/jbossesb-1.0.1.xsd Comment: 404 not found error. The correct link is: http://anonsvn.jboss.org/repos/labs/labs/jbossesb/trunk/product/etc/schemas/xml/jbossesb-1.2.0.xsd ---------- Section Table 9.6, Table 9.7 Comment: Why are these pages in landscape mode? ---------- 11.1.1. Updated. Transformers & Converters Comment: Formatting of columns is corrupted for XsltAction 11.1.1. SmooksAction Comment: The note refers to smooks 1.1 - we are shipping 1.2 in SOA-P 5.0 ---------- Section: 11.3. Updated. Scripting 9 Text: 1. "script": Path (on classpath) to Groovy script. Properties Comment: There is no footnote #9. Text: ScriptingAction 10 Executes a script using the Bean Scripting Framework (BSF), receiving the message, payloadProxy, action configuration and logger as variable input. Some notes: 11 12 1. JBoss ESB 4.7 contains BSF 2.3.0, which has less language support than BSF 2.4.0 (for 13 14 15 example: no Groovy , and non-functioning Rhino). A future version will contain BSF 2.4.0, 16 17 which will support Groovy and Rhino . 18 2. BSF does not provide an API to pre-compile, cache and reuse scripts. Because of this, each execution of the ScriptingAction will go through the compile step again. Please keep this in mind while evaluating your performance requirements. 19 3. When including BeanShell scripts in your application, it is advised to use a .beanshell 20 extension instead of .bsh, otherwise the JBoss BSHDeployer might pick it up. Comment: The page only inlcudes footnote #10. ---------- Section 11.5. Updated. Routing Subsection: ContentBasedRouter Text: Regex is configured in exactly the same way as XPath. The only difference being that it uses Regex expressions (as opposed to XPath ones.) JBoss Rules: <action process="split" name="ContentBasedRouter" class="org.jboss.soa.esb.actions.ContentBasedRouter"> <property name="cbrAlias" value="Drools"/> <property name="ruleSet" value="MyESBRules-XPath.drl"/> <property name="ruleLanguage" value="XPathLanguage.dsl"/> <property name="ruleReload" value="true"/> <property name="destinations"> <route-to destination-name="express" service-category="ExpressShipping" service-name="ExpressShippingService"/> <route-to destination-name="normal" service-category="NormalShipping" service-	1	1	https://issues.jboss.org/browse/SOA-1533

#	Requirement	Questions	Answered	Successfully Answered	URL
10996	SOA-1533	The edits look fine - except for the footnotes - what's the problem blocking these?	1	1	https://issues.jboss.org/browse/SOA-1533
10997	SOA-1533	See highlights in attachment programmers_2.jpg for explicit reference to Rosetta code. Can we remove this paragraph?	1	1	https://issues.jboss.org/browse/SOA-1533
10998	SOA-1533	will contain the name of the original file from which the message was sourced. org.jboss.soa.esb.gateway.file The file from which the Message was sourced. This will only be present if this gateway is file- based. Comment: It looks like these file descriptions are for the same file. ========== Section: 4.3.1. The "ServiceInvoker" Text: From a client's perspective, the Courier interface and its various implementations can be used to interact with services. Comment: From Kevin: '...The Courier interface is a lower level, transport specific, interface. Not sure why it is being referenced in the docs though as people should really be using the service invoker...' So - can we remove references to the Courier interface? ========== Section: 4.3.4. Updated. The InVM Transport Text (in a note): One may not be able to achieve all of the ACID (Atomicity, Consistency, Isolation, Durability) semantics, particularly when it is used in conjunction with other transactional resources such as databases. This is because of the volatility of the InVM queue. However, the performance benefits of InVM will outweigh this downside in the majority of cases. In situations in which full ACID semantics are required, Red hat recommend that you use one of the other transactional transports, such as the Java Message Service or a database. Comment: This should read "Red Hat recommends" ========== Section: Examples 4.8 and 4.9 Text: The following example illustrates the declaration of a service which, (without being exposed through a web service end-point), "wishes" to validate the request/response messages: Example 4.8. Enabling the GLOBAL InVM Scope for a Service Example 4.9. Enabling GLOBAL InVM Scope for a Service Comment: The exampple titles refer to GLOBAL InVM Scope, not the service declaration. ========== Section: 5.3. Content-Based Routing Text: Sometimes it is necessary for the Enterprise Service Bus to dynamically route messages to their sources. Some scenarios in which this might be the case are when the original destination is no longer available, the service has moved or the application simply wants to have more control over where messages go based on either content, time-of-day or other such factors. The Content-Based Routing mechanism within the JBoss ESB can be used to route messages based on arbitrarily complex rules. These rules can be defined in XPath or JBoss Rules notation. Section: Can we also add the new Regex CBR feature to this section. ========== Section: 7.1. Fail-Over and Load-Balancing Support Text: It is important have redundancy in mind when one is designing mission-critical systems. The JBoss Enterprise Service Bus includes built-in fail-over, load balancing and delayed message re-delivery, all of which will help one build a robust architecture. When one uses a SOA, it is implied that Comment: "When one uses an SOA, it is implied that" ========== Section: 7.1.3. Protocol Clustering Text: Some Java Message Service providers can be clustered. JBossMessaging is one of these, which is why it was chosen as the JMS provider for the Enterprise Service Bus. When one clusters this JMS, one remove a single point of failure from one's architecture (see the next diagram.) Comment: "When one clusters this JMS, one removes a single point" ========== Section: Figure 7.3. Example of Protocol Clustering Using JMS Text: One should read the documentation on "Clustering for JBossMessaging," if one wants to enable this functionality. Both JBoss ESB replication and JMS clustering can be used together, as shown in the following illustratin. Comment: "illustation" ========== Section: 7.1.3. Protocol Clustering Text (in a note) If one is using JMS clustering in this way, one will obviously need to ensure that the configuration is correct. For instance, if one place all of one's ESB services within a JMS cluster, there could be no expected benefit from replication. Comment: "For instance, if one places all" ========== Section: 7.2. Scheduling of Services Text: JBoss ESB 5.0 supports two types of providers: 1. Bus Providers, which supply messages to action processing pipelines via messaging protocols such as JMS and HTTP. This type is	1	1	https://issues.jboss.org/browse/SOA-1533
10999	SOA-1532	Organization of the 1st chapter is awkward - the content at the start of the chapter is at 1 n.n.n.n level - can we make this one level higher? 1.1. What is the Registry? 1.1.1. Introduction The JBoss SOA-P Registry provides applications and businesses with a central point at which information about services can be stored. The Registry is expected to provide both the same level of information and the same breadth of services as does a conventional "marketplace." Ideally, a registry should also facilitate the automatic discovery and execution of electronic commerce by providing a dynamic environment for business transactions. Therefore, a registry is more than a mere "e. business directory." It is a fundamental component of the Service-Oriented Architecture's infrastructure. 1.1.1.1. Why Does One Need It?	0	0	https://issues.jboss.org/browse/SOA-1532
11000	SOA-1532	Section 3.3. Content-Based Routing Using Smooks Comment: We need to add a note that says: There is no native support for Freemarker inside the ESB (no action, no gateway, etc), any use of Freemarker must be in the context of Smooks. Comment: All the graphics in this section are unreadable. ---------- Section: 2.2.2. Rule Set Creation Text: One can create a rule set by using Red Hat Developer Studio. Comment: Should be "JBoss Developer Studio" ---------- Section: 2.2.1. Introduction Text: This the ESB Message, which is going to be inserted into the Rules Engine's working memory. ---------- Section: 3.2.4.1. XPath and Namespaces Text: The namespace-aware statements differ from the others in that it is a requirement thatthe extra expr Comment: "thatthe" ---------- ---------- Section: Figure 3.4. Message Splitting Text: ??? shows how to perform the by-order-item splitting operation Comment: Why the question marks?	0	0	https://issues.jboss.org/browse/SOA-1532
11001	SOA-1532	Section: 3.3. Content-Based Routing Using Smooks Text: This release of the JBoss Service-Oriented Architecture Platform includes Smooks v1.1. This means that the split described above can be undertaken without defining the binding configurations that were demonstrated in Resources One and Two.) For details on how to do this, one needs to refer to the section entitled "FreeMarker Transforms using Node Models" in the Smooks User Guide . That document can be found at http://docs.codehaus.org/display/MILYN/Smooks+User+Guide . Comment: (Thanks to Tom for supplying this): The Node Model Templating functionality (templating without having to define a Java Model) is available in Smooks v1.1+. Sounds like the "split" config talked about in the comment is using a fully defined Java object model, which is fine, and the comment is just trying to tell the user that they also have this other option of using the Node Model functionality, hence doing away with the need to define a Java Object model. I think I'd just remove the reference to Smooks versions in the first comment and say.... "The split described above can be undertaken without defining the binding configurations that were demonstrated in Resources One and Two.) For details on how to do this see the section on <insert link to section on Node Models>" That sound OK? T.	0	0	https://issues.jboss.org/browse/SOA-1532

#	Requirement	Questions	Answered	Successfully Answered	URL
11002	SOA-1531	http://www.jboss.org/community/wiki/ConfiguringMultipleJBossInstancesOnOnemachine ---------- Figure 1.2. Clustering Scenario Two Comment: I think we need to add some explanatory text to this figure. The difference between the 2 diagrams is that he ESB-aware gateways are either clustered, or duplicated. When would we recommend one configuration over the other? I'll try to get some details that we can add to the guide. ---------- Section 1.3. JBossESB Java Message Service Providers Text: Red Hat currently support the use of a number Comment: "supports" ---------- Text: How Can I Configure Them? You can configure JMSListeners and JMSGateways to listen to either "Queues" or "Topics" by setting the following parameters in the Service Configuration file: Comment: We should explicitly refer to the "jboss-esb.xml Service Configuration file." (FYI guys - see: https://jira.jboss.org/jira/browse/SOA-534 - this is a confusing part of the book.) ---------- Section: 1.3.1. JBoss Messaging Text: One should set the parameters for JBoss Messaging to: jndi-URL="localhost" jndi-context-factory="org.jnp.interfaces.NamingContextFactory" connection-factory="ConnectionFactory" destination-type="queue" destination-name="queue/A" Comment: We should replace the reference to "queue/A" with another queue name - maybe "queue/myqueue" - the "A," "B," "C," and "D" queues that we preconfigured in SOA-P 4.2 and 4.3 are not in 5.0. ---------- Section: 1.3.2. Apache ActiveMQ Text: Warning Apache ActiveMQ has not been fully tested & is not a supported JMS implementation. Comment: If it's not supported then we should not document it. Can we remove this section? Text: In your classpath you should have: • activemq-core-4.x • backport-util-concurrent-2.1.jar Both of these JARs can be found in the lib/ext/jms/activemq file. Comment: We don't ship these files as part of SOA-P. ---------- ---------- Section: 1.3.7. Oracle Advanced Queuing (AQ) Text: Oracle AQ has not been fully tested and it is not a supported JMS implementation. Comment: If it's not supported then we should not document it. Can we remove this section? Text: An example jboss-esb.xml configuration file that one may find useful can be found in the samples/quickstarts/helloworld_action/oracle-aq directory. Comment: We don't ship this quickstart with SOA-P. ---------- Section: 1.3.11. Updated Database Configuration Comment: The updated ant output is listed below - the list of supported database as described in the document should match this output: [ldimaggi@ldimaggi schema]$ ant Buildfile: build.xml check.profile: [echo] JBoss SOA Platform Database Configuration Script [echo] ---------- ---- [echo] [echo] This script is used to configure the SOA platform and all its [echo] constituent components against a new RDBMS. Deployment scripts [echo] are currently available for the following databases: [echo] DB2, MSSQL, MySQL, Oracle, PostgreSQL [echo] [echo] ** Warning ** [echo] This script may not work correctly if you have made manual [echo] changes to the database configuration. [echo] ask.profile: [input] Which server configuration are you changing? (production, all, ...): [default] exists.profile: [echo] Using directory /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default check.clustered: check.backup: do.backup: [echo] Backing up files ... [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy/jbossesb-registry.sar/META-INF [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy/jbossesb-registry.sar [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy/jbossesb.esb [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy/jbpm.esb [copy] Copying 1 file to /jboss/local/50_ER4/jboss-soa-p.5.0.0/jboss-as/server/default/deploy/jbpm.esb execute: [echo] Databases configured by this script are: [echo] DB2 9.7, MS SQL 2005, MySQL 5.1, Oracle 10g, PostgresSQL 8.3.7 [echo] Please enter the database you wish to configure: [input] [db2-97, mssql2005, mysql51, oracle10g,	1	1	https://issues.jboss.org/browse/SOA-1531
11003	SOA-1531	US/JBoss_Enterprise_SOA_Platform/5.0.0/html/ESB_Administration_Guide/monitoring_and_management.html Figures 6.1, 6.2 and 6.3 1. could be a little bit bigger 2. refer to AS 4 6.1.1. Services Each ESB service is displayed along with the processing time per action, processed count per action, failed count per action and overall message count (per service), as can be witnessed in the following screen-shot: 1. the following screenshot is not aligned with the text above 2. There are no metrics like "processing time per action, processed count per action, failed count per action". The Message Counter keeps track of the number of both successful and failed messages, along with their processing times and the dates. "processing times" should be "processed bytes" Figure 6.3. MBean Counter Maybe "Message Counter" would be better? 6.1.3. Smooks Transformations There is an MBean that keeps track of the count of "processed" Smooks Transformations and the time taken to process each. It also keeps track of the overall count of the Transformation Chain. Could this be explained in more detail? Where to find that MBean? ========== section 6.2 Alerts http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_SOA_Platform/5.0.0/html/ESB_Administration_Guide/alerts.html Chapter is based up on web-console which is no longer shipped AFAICT - but this needs to be clarified. Maybe this or "6.3.1. Message Alerts" would be a good place to document SOA-1656. ========== http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_SOA_Platform/5.0.0/html/ESB_Administration_Guide/JON_for_SOA.html section 6.3 in the eponymously-named quick start, "messagealert." 1. dot should be after " 2. the QS name is plural, messagealerts As one can deduce from this screenshot, the counters can be reset through the JMX console: 1. The scrnshot is too small to be able to deduce it 2. It's not the *counter* that can be *reset* but *alerts* that can be *cleared* Figure 6.4. Clustering Scenario One wrong title Sample code of MyJMSListenerAction.java not properly formatted at the end and following imported classes are never used: javax.management.MalformedObjectNameException org.jboss.mx.util.MBeanProxyExt org.jboss.soa.esb.actions.AbstractActionPipelineProcessor org.jboss.soa.esb.actions.ActionProcessingException I think, here would be a good place to document SOA-1660 Adding your JBoss SOA Platform Server to the JON Inventory missing numbering (6.2) Conveniently, the error message also contains a short-cut link to the "Connection Properties" page. Looks like there is no error message anymore, but the SOA-P is marked as DOWN (see down.png attached) Figure 6.5 is refferring to SOA-P 4.3 instead of 5.0 JBoss SOA-P Enterprise Service Bus Statistics missing numbering (6.3) Once one's JBoss SOA-P server is correctly configured for the JBoss Operations Network tool, one should find the item JBoss ESB Statistics now available underneath the menu entry in Resources on the MONITOR tab. "available underneath the menu entry in Resources" - not sure this is true, attaching screen "underneath.png" for clarification.. I *think* this should read "available above the Resource menu entry" The metrics collected and displayed vary, depending on the Enterprise Service Bus component in question. The available metrics include: this needs to be revisited, I can help with this setting up the environment, just ping me; attaching screens, might be helpful (count1.png - count7.png) Figure 6.6. Metrics Displayed 1. Displayed should not start with a capital D 2. figure could be bigger Managing deployed ESB archives missing numbering (6.4) A new Enterprise Service Bus archive can be deployed by selecting JBoss ESB Deployment from the Create New menu. Then, from the Create New Resource page, specify which archive to deploy, to where it should be sent (which, under normal circumstance, would be one's deploy directory) and, finally, whether it should be sent as a compressed or extracted archive. "whether it should be sent as a compressed or extracted archive" - you can only upload *zipped* archives (files, not directories) - the "Deploy Zipped" option tells	1	1	https://issues.jboss.org/browse/SOA-1531

#	Requirement	Questions	Answered	Successfully Answered	URL
11004	SOA-1531	I have addressed most of the issues raised by yourself and Jaroslaw above. Here are a few that I have not done, with my comments in CAPITALS: 6.1.3. Smooks Transformations There is an MBean that keeps track of the count of "processed" Smooks Transformations and the time taken to process each. It also keeps track of the overall count of the Transformation Chain. Could this be explained in more detail? Where to find that MBean? NEED INFORMATION FROM SUBJECT MATTER EXPERT The metrics collected and displayed vary, depending on the Enterprise Service Bus component in question. The available metrics include: this needs to be revisited, I can help with this setting up the environment, just ping me; attaching screens, might be helpful (count1.png - count7.png) NOT QUITE SURE WHAT THE ISSUE IS THAT JAROSLAW IS TRYING TO RAISE. ARE THE METRICS OUT OF DATE OR INACCURATE? Maybe this or "6.3.1. Message Alerts" would be a good place to document SOA-1656. SOA 1656 IS ASSIGNED TO DARRIN BUT I WILL LIAISE WITH HIM ABOUT THIS.	1	1	https://issues.jboss.org/browse/SOA-1531
11005	SOA-1531	Note sent to Tom Fennelly: Smooks question for you on the ESB/SOA-P Admin Guide. Section 6.1.3 refers to: 6.1.3. Smooks Transformations "...There is an MBean that keeps track of the count of "processed" Smooks Transformations and the time taken to process each. It also keeps track of the overall count of the Transformation Chain..." But, this is the only smooks MBean that I can find - but - it does not keep track of the transformations: http://localhost:8080/jmx-console/HtmlAdaptor?action=inspectMBean&name=jboss.esb%3Adeployment%3Dsmooks.esb Does this MBean still exist?	1	1	https://issues.jboss.org/browse/SOA-1531
11006	SOA-1531	Please remove the references to the smooks MBean: <ldimaggi_> tcunning, will try a smooks sample <tcunning> just tried one <tcunning> it looks to me like that bean is never registered <tcunning> so i think you're okay removing the section i added <ldimaggi_> tcunning, Was it ever registered? I'm guessing no - thanks!	1	1	https://issues.jboss.org/browse/SOA-1531
11007	SOA-1531	Final comments on this version of the guide: Section: 1.4. JBossESB Java Message Service Providers Text: Important In the sections that follow, these assumptions are made: • your JMS provider runs on 'localhost' • the connection factory is called 'ConnectionFactory' • the destination-type is a 'queue' • the destination-name is 'queue/A' Comment: We changed the examples to not all use queue/A, remember? This line should be removed. ---------- 1.4.1. JBoss Messaging Text: Instructions for installing JBoss Messaging can be found on the project website: http://labs.jboss.com/jbossmessaging/docs/userguide-1.4.0.GA/html/installation.html Comment: We should remove the reference to installing JBoss messaging. SOA-P customer will already have it installed. ---------- Section: 1.4.6. Tibco Enterprise Message Service (EMS) Text: One should set the parameters for the Tibco Enterprise Message Service to the following: jndi-URL="tcp://localhost:7222" jndi-context-factory="com.tibco.tibjms.naming.TibjmsInitialContextFactory" connection-factory="QueueConnectionFactory" destination-type="queue" destination-name="<queue-name>" Comment: We should name the queue "myqueue" to be consistent with the JBoss messaging example. ---------- Section: 1.4.9. Updated Database Configuration Text (in the note): As long as there is script availabe for one's database, the Enterprise Service Bus will auto-create the schemas on startup. (By default, the JBoss Enterprise Service Bus is configured to use a JEE data source.) Comment: "availabe" Comment: The ant output references the ER4 build - should be GA. ---------- Section: 1.4.10. Switching Databases Comment: The example refers to a version of Postgres (7.2) that we do not support. ---------- Section: 1.4.11. Using a JSR-170 Message Store Text: The Java Content Repository implementation included is called Apache Jackrabbit. To enable the Java Content Repository's message store, add the following property to the "core" section of the jbossesb-properties.xml file, (which can be found in the root of the jboss-esb.sar or the root of deployers/esb.deployer on AS5): Comment: On a SOA-P server, the file is found in: ./deployers/esb.deployer/jbossesb-properties.xml Also - we should remove the reference to AS5. ---------- Section: 1.4.13. Clustering and Fail-Over Support Text: Because the ServiceInvoker hides much of the fail-over complexity from users, it only works with "native" SOA Platform messages. Furthermore, not all gateways have been modified to use the ServiceInvoker, so incoming messages that are unaware of the SOA Platform may not always be able to take advantage of service fail-over. The Release Notes document contains more details related to this topic. Comment: Is this still described in the rel notes? ----------	1	1	https://issues.jboss.org/browse/SOA-1531
11008	SOA-1530	Chapter 3 should be removed, it was new content in the upstream but mostly related to downloading and setting up the ESB 3.3.2 - might need to be added as a known issue, SOA-1584 3.3.3 - should go into a "migrating applications" section somewhere 3.3.4 - might belong towards the start of the programmer's guide	0	0	https://issues.jboss.org/browse/SOA-1530
11009	SOA-1530	some typos - use of "an" instead of "a" 2.4 - ...do they represent an minimum requirement... 4.3 - ...to Section 5.1, "Launching an Zip installation". 5.1 - Launching an Zip installation 4.1.2 - Copy the development console WAR archive from the tools/resources directory to the *deploy* directory of the server configuration. It should be *deploy/jbpm.esb*. It's the same for both standalone and eap-embedded version. 4.1.2 - Not sure about this one but in the sentence above there's a difference for standalone and eap-embeddet version: for standalone is - to the deploy directory of the *default* server configuration for eap-embedded just - to the deploy directory of the server configuration 4.1.3 - This value (DownloadServerClasses) is configured to false by default in "EAP Embedded" edition. Actually it's false only for "production" config, for all others it's true by default. Maybe it should be mentioned there. 7 - In the very first paragraph there is: "They can be used Insert definition of what the quickstarts are and what they are for." It looks that someone forgot to substitute this for the actual definition :-)	0	0	https://issues.jboss.org/browse/SOA-1530
11010	SOA-1489	until further notice documenting the package files to be: If you are using JON 2.1.2 : rhq-jbossesb-soa-plugin-SOA.4.3.0.GA_CP02.zip If you are using JON 2.3 : jon-plugin-pack-soa-2.3.0.GA.zip checked in	0	0	https://issues.jboss.org/browse/SOA-1489

#	Requirement	Questions	Answered	Successfully Answered	URL
11011	SOA-1478	1 - this procedure is how to configure JBossESB to use the SOA Software Service Manager as it's UDDI registry instead of jUDDI ? ------> That is correct. 2 - from the document: "This text assumes you have a running JBoss Application/ESB Server, and the latest 4.4 CP GA." This corresponds to SOA Platform 4.3 CP01 ? ------> Yes, but this opens up a good question - to date, we have only deployed and tested with SOA Software running on 4.3 SOA-P servers (and being accessed by SOA-P 4.3 and 5.0 servers). Do we want to also support (and test and certify) deploying to 5.0 servers? Will this work? 3 - from the document: "For JBoss ESB 4.4.GA, the Scout jar must be updated to scout-1.0rc2.aop.jar " This would be SOA Platform 4.3 GA ? Where do they obtain the updated Scout jar from ? And which file do they have to replace with it ? what path ? Or do we only want to support this on SOA 4.3 CP01 or later? ------> In SOA 4.3 CP04, the scout file included is 1.0 - In 5.0, the file is version 1.2 - I think both are OK. 4 - Apache Axis is required because SOAP is the only transport we can use for this integration, or the only one we support/test ? ------> I think that it's possible to do something in memory - this is a Tom Cunningham question. 5 - The document describes the progress of setting up "the guest user in Workbench to the guest role". However it doesn't describe why this is required, nor can I find reference to this user in the rest of the document. Why is it needed ? ------> That's a good point - the docs say that this is used for anonymous access - but - don't we have all access go thru the admin account? Also a Tom Cunningham question.	0	0	https://issues.jboss.org/browse/SOA-1478
11012	SOA-1478	------> In SOA 4.3 CP04, the scout file included is 1.0 - In 5.0, the file is version 1.2 - I think both are OK. Do we only want to support this in 4.3.CP04 or later then ?	0	0	https://issues.jboss.org/browse/SOA-1478
11013	SOA-1473	known issues: 1 - re-worded to: "When upgrading from the JBoss Enterprise SOA Platform 4.3.GA release" 2 - removed	0	0	https://issues.jboss.org/browse/SOA-1473
11014	SOA-1473	Thanks for the feedback, I've updated the mentioned items with the exception of the "FIXED" JIRAs which I will deal with separately. Could run your eye over those items & verify they are OK ?	0	0	https://issues.jboss.org/browse/SOA-1473
11015	SOA-1470	It is not obvious where this should be documented. Has this been added to any of the upstream ESB docs ? new "max-total-connections" property, default value 2 Should this be added to the properties for Apache Commons HttpRouter at http://www.redhat.com/docs/en-US/JBoss_SOA_Platform/4.3.CP01/html-single/Programmers_Guide/index.html#section-HttpRouter and added to the properties for SOAPClient at http://www.redhat.com/docs/en-US/JBoss_SOA_Platform/4.3.CP01/html-single/Programmers_Guide/index.html#OOTB-Actions_webservices-soap	0	0	https://issues.jboss.org/browse/SOA-1470
11016	SOA-1457	This was fixed for 4.3.0 CP02 with: http://fisheye.jboss.org/changelog/JBossESB?cs=26923 which changed the ExistsSql statements in: jbossesb.esb/jbossesb-service.xml jbpm.esb/jbpm-service.xml to use: select count(*) instead of: select *	0	0	https://issues.jboss.org/browse/SOA-1457
11017	SOA-1450	"needs at least 8k page size table space to create tables" doesn't parse too well is "requires a tablespace with at least an 8 kilobyte pagesize" valid ? Also I'm assuming kilobyte , not kilobit ?	1	1	https://issues.jboss.org/browse/SOA-1450
11018	SOA-1450	Hi Jim, I'm not familar with DB2 & wanted to fill in some additional details 1 - can you supply the SQL command/s that will be required to set this?	0	0	https://issues.jboss.org/browse/SOA-1450
11019	SOA-1444	I cannot read this doc - see attachments - can you check on this? Thanks!	1	1	https://issues.jboss.org/browse/SOA-1444
11020	SOA-1444	The doc looks good - when will it go public?	1	1	https://issues.jboss.org/browse/SOA-1444
11021	SOA-1440	This was fixed as part of the 4.3.CP05 release. If there is ever another 4.2 series release, we can reopen this JIRA.	1	1	https://issues.jboss.org/browse/SOA-1440

11023	SOA-1407	Hello David I believe that Section 11.9 of the SOA 5.0 Programmers' Guide now contains all of the information that you require. Do you have a copy of the WebService_Proxy_v3.odt document, to which Darrin refers in the comment above? Does it contain any information that I need to incorporate into the Programmers' Guide? Many thanks, David Le Sage	1	1	https://issues.jboss.org/browse/SOA-1407
11024	SOA-1407	Do we have any information that matches Burr's request ?	0	0	https://issues.jboss.org/browse/SOA-1407
11025	SOA-1407	What is not resolved apart from the "compare & contrast" content that Burr requested ?	0	0	https://issues.jboss.org/browse/SOA-1407
11026	SOA-1406	How about configuring JBossCache with <attribute name="CacheMode">LOCAL</attribute> for 'default' configuration of the SOA-P (not only for 'all' and 'production')? EhCache may be ok. HashtableCacheProvider would cause problem even in non-cluster environment as its cache entries don't expire.	0	0	https://issues.jboss.org/browse/SOA-1406
11027	SOA-1382	is there any content from the wikipage (version 21) that is not correct or not appropriate for the SOA documentation? or is there anything specific missing that should be included? Also the wikipage has two TODO's at the bottom with the images.	0	0	https://issues.jboss.org/browse/SOA-1382

#	Requirement	Questions	Answered	Successfully Answered	URL
11028	SOA-1382	Is this also content that should be added to the JBoss ESB Programmers Guide ?	0	0	https://issues.jboss.org/browse/SOA-1382
11029	SOA-1382	Who are you waiting for information from?	1	1	https://issues.jboss.org/browse/SOA-1382
11030	SOA-1365	Changing status to resolved - since the doc is ready for review - Darrin - does this have the final bug lists?	0	0	https://issues.jboss.org/browse/SOA-1365
11031	SOA-1365	Final changes verified in attached doc. Will close the JIRA when the final docs .zip is created.	1	1	https://issues.jboss.org/browse/SOA-1365
11032	SOA-1363	How about we use following paragraph to the 'best practices guide': " In the combination of Seam, jBPM and ESB. it is recommended that users are using seam to interact with jBPM in a loosely coupled way, which is through the ESB service gateway, not the jBPM integration annotation directly. In this way, we can see the ESB as the session facade, which provides the entries to all of other service, not only jBPM process, but also other services, like web service, ESB service etc. Now you might feel that seam and jBPM integration is very simple and handy, but it is not a best practice since this is a component-to-component invocation, it is fine that we've just had two components, but if we have more than two components, especially we are having the ESB into play, it is not recommended to do so. In the SOA world, as the ESB term indicates, it is the bus, other components (here like seam, jBPM) should talk to the ESB, not the end-to-end way, which will lead to the spaghetti issue if we have many components, and most of them are talking to component directly. In the future release, we will introduce a set of annotation for seam and ESB integration, it will make users a lot easier to do the seam and ESB integration, just as simple as what we have for the jBPM integration. Before we've had these annotations, it is recommended to do the integration pragmatically that uses the gateway as channel to talk to ESB, and then invoke the target service. (like jBPM process service etc). "	0	0	https://issues.jboss.org/browse/SOA-1363
11033	SOA-1363	I need two things if this is going to make it into the docs: 1 - Is this content agreed upon as appropriate/correct ? 2 - Where should it be included in the docs?	0	0	https://issues.jboss.org/browse/SOA-1363
11034	SOA-1363	I need some idea of what is happening with this JIRA so I can schedule docs work for 5.0.1 What volume of material? e.g. how many pages, diagrams, etc When will draft material be ready ?	0	0	https://issues.jboss.org/browse/SOA-1363
11035	SOA-1357	Hi Len , This issue is initially created for JBPM DB2 support. Could you clarify if we still need this for JBPM ? I found JUDDI also needs the large page size table space to create tables , should we also move the SOA-1450 to 4.3 CP03 ? Thanks Jim	1	0	https://issues.jboss.org/browse/SOA-1357
11036	SOA-1357	Does jBPM require 32k pages or not now? If yes then the requirement should be merged with SOA-1450 and the documentation to be updated properly.	0	0	https://issues.jboss.org/browse/SOA-1357
11037	SOA-1353	Yes and yes! I'll see about getting the page updated... ----- Original Message ----- From: "Burr Sutter" <bsutter@redhat.com> To: "Len DiMaggio" <ldimaggi@redhat.com> Sent: Monday, June 29, 2009 3:05:36 PM GMT -05:00 US/Canada Eastern Subject: clarification We list HP JDK on this page http://www.jboss.com/products/platforms/soa/testedconfigurations/ What OS did we test this against? HP-UX? If so, shouldn't that be added to the list of supported OSs?	1	1	https://issues.jboss.org/browse/SOA-1353
11038	SOA-1351	why the pages 12,14 and 16 are completely empty? is the standard for end of a section? why is not that way between Chapter 1. and Chapter 2 for example?	0	0	https://issues.jboss.org/browse/SOA-1351
11039	SOA-1351	Hey Darrin - I just looked here: https://svn.devel.redhat.com/repos/jboss-soa/branches/4.2.0/build-tools/docs/SOA_Getting_Started_Guide.pdf And the out of date information is still there - can you update it ASAP - this should be the last edit needed for any of the 4.2 CP04 docs. • At this time there are no migration scripts included for PostgreSQL databases. • The ESB Management Console is a tech preview at this time.	0	0	https://issues.jboss.org/browse/SOA-1351
11040	SOA-1350	Seeing failure with WS tests - is OpenJDK more strict on flagging deprecations and on configuring exception handling? http://hudson.qa.jboss.com/hudson/view/SOA-Release/job/temp-soa-ws-OpenJDK16-single/1/console	1	1	https://issues.jboss.org/browse/SOA-1350
11041	SOA-1348	Final changes verified here: https://svn.devel.redhat.com/repos/jboss-soa/branches/4.2.0/build-tools/docs/esb/SOA_ESB_Message_Action_Guide.pdf Will close the JIRA when the final docs .zip is created.	1	1	https://issues.jboss.org/browse/SOA-1348
11042	SOA-1346	Only some minor changes needed: 1.4. SOA Components 1 An SOA is a specific type of distributed system in which the agents are "services" . The key components of a Service Oriented Architecture are the messages that are exchanged, agents that act as service requesters and service providers, and shared transport mechanisms that allow the flow of messages. A description of a service that exists within an SOA is essentially just a description of the message exchange patter between itself and its users. Within an SOA there are thus three critical roles: requester, provider, and broker. ------> pattern misspelled as "pattern" 3.2. Embedded All ESB components (with components we really mean JVMs in this case) can embed the registry and they all can connect to the same database (or different once if that makes sense). ------> ones misspelled as "once" 3.3. RMI using the juddi.war or jbossesb.sar The JBoss SOA includes juddi.war in the ${SOA_ROOT}/server/production/deploy/ jbossesb.sar/ directory. When deployed this brings up the regular web services but also an RMI service. You also need to deploy a datasource which points to your jUDDI database. An example file is supplied for MySQL. ------> We should remove the reference to the MySQL example file and indicate that the schema tool handles configuring the uddi database. 5.2. More Information • For more information see the wiki http://labs.jboss.com/wiki/JudyEvaluation ------> The URL should be changed to http://www.jboss.org/community/wiki/JudyEvaluation	0	0	https://issues.jboss.org/browse/SOA-1346
11043	SOA-1346	Final changes verified here: https://svn.devel.redhat.com/repos/jboss-soa/branches/4.2.0/build-tools/docs/esb/services/SOA_ESB_Registry_Guide.pdf Will close the JIRA when the final docs .zip is created.	1	1	https://issues.jboss.org/browse/SOA-1346
11044	SOA-1344	Point of reference - in the 4.3 CP01 jBPM doc: The section on enterprise archive is not included in the book. The section on document management is labeled as: Important - This is still an experimental feature. If the jBPM Version 3.2.5.SP5 bits are the same - we should keep the docs the same too. Can the 4.2 CP04 jBPM book mirror the features listed in the same guide for 4.3 CP01?	0	0	https://issues.jboss.org/browse/SOA-1344
11045	SOA-1344	Final changes verified here: https://svn.devel.redhat.com/repos/jboss-soa/branches/4.2.0/build-tools/docs/esb/JBPM_Users_Guide.pdf Will close the JIRA when the final docs .zip is created.	1	1	https://issues.jboss.org/browse/SOA-1344
11046	SOA-1328	The issue is not QE ready IMHO. I'd expect a how to document that we should test. We shouldn't be figuring out how to create the required configuration. Kevin, could you please have a look on it?	0	0	https://issues.jboss.org/browse/SOA-1328
11047	SOA-1299	added to release notes as a known issue as per the 4.3.CP01 issue	0	0	https://issues.jboss.org/browse/SOA-1299
11048	SOA-1297	What is the status?	1	0	https://issues.jboss.org/browse/SOA-1297
11049	SOA-1275	We never officially supported JCA/Mail integration in the project because the mail resource adapter was buggy. Has this been fixed? Do we now support the adapter?	0	0	https://issues.jboss.org/browse/SOA-1275

#	Requirement	Questions	Answered	Successfully Answered	URL
11050	SOA-1275	It is my understanding that there is "patch" for the JCA adapter and that it is supported at the product-level. I am not sure if that patch founds its way back into the jboss.org AS stream. With that said, do we agree that the HTTP & Socket areas need better/more complete docs at least?	1	0	https://issues.jboss.org/browse/SOA-1275
11051	SOA-1264	Do we know if this issue occurs in 5.0? We will need to document it in the Release Notes if so. Thanks.	1	1	https://issues.jboss.org/browse/SOA-1264
11052	SOA-1250	Do we have the correct JSF console? Manifest-Version: 1.0 Archiver-Version: Plexus Archiver Created-By: Apache Maven Built-By: aguizar Build-Jdk: 1.6.0_0 Implementation-Title: JBoss jBPM3 - 4JSF Implementation-Version: 3.2.6.SP2 Implementation-Vendor-Id: org.jbpm.jbpm3 Implementation-Vendor: JBoss, a division of Red Hat	0	0	https://issues.jboss.org/browse/SOA-1250
11053	SOA-1246	What do you expect to see apart from JAAS integration??	1	0	https://issues.jboss.org/browse/SOA-1246
11054	SOA-1246	It seems that the purpose of this issue is blurred. What exactly means identity component in SOA-P? Just support for JAAS? Integration between jBPM and PicketLink IDM? I suggest splitting the issue into two or more so we can track what is done and what is not <jpechane> kconner, The subject says SOA-P but description is talking about jBPM and there is a link to unresloved jBPM issue <jpechane> kconner, So my feeling was that the issue was about jBPM using Identity (probably IDM component) <kconner> jpechane: Okay, so was it a mistake to assign it to me? <kconner> jpechane: Identity should just be another JAAS module, not sure what else would need to be done for jBPM <jpechane> kconner, No it was intentional to generate an interest :-) I am really not sure about what the issue is <kconner> jpechane: lol, that makes two of us in that case <jpechane> kconner, Maybe the issue has to be split in two - integration with JAAS which is there and integration with jBPM which is not. IMHO the description is talking about replacing jBPM Idenity componenet with picktelink's IDM <kconner> jpechane: Then I am definitely the wrong assignee :) <tkirby> jpechane, or ask jeff what his intention was when he raised it <jpechane> kconner, I'll comment on the issue in this way and will assign it back to Jeff <kconner> jpechane: Okay, thanks	0	0	https://issues.jboss.org/browse/SOA-1246
11055	SOA-1224	It looks like SOA-1217 has been pushed back to 4.3.CP02 I imagine we want this documented as a known issue. Could you supply some more concrete details please, I'm not familiar with jUDDI. Thanks.	0	0	https://issues.jboss.org/browse/SOA-1224
11056	SOA-1224	hang on, is this just the removal of juddi-service.sar ?	0	0	https://issues.jboss.org/browse/SOA-1224
11057	SOA-1196	I think that the relevant issue here is for 4.3 GA customers that built their DBs manually. They will need to be told about the DB schema changes in CP01 - how will these customers get these changes into their DBs? Will they invoke the DB upgrade scripts manually? Re-opening and assigning to Darrin.	0	0	https://issues.jboss.org/browse/SOA-1196
11058	SOA-1192	The last comment there Mark.... they were JIRAs purely for testing the quickstarts for the last Community GA. What's the relevance to "New Quickstarts"?	1	0	https://issues.jboss.org/browse/SOA-1192
11059	SOA-1190	Also, can we move the stacktrace to a new issue??	0	0	https://issues.jboss.org/browse/SOA-1190
11060	SOA-1155	Closing - it's in the 5.0 Admin guide: How Can I Configure Them? Set the following parameters in the jboss-esb.xml service configuration file in order to configure JMSListeners and JMSGateways to listen to either queues or topics: * jndi-URL * jndi-context-factory * jndi-pkg-prefix * connection-factory * destination-type * destination-name	1	0	https://issues.jboss.org/browse/SOA-1155
11061	SOA-1084	Hi Darrin, Could you please help me add the above Description into the 'Known Issues in this release' chapter of 'Release Notes' book. Thanks Jeff	1	1	https://issues.jboss.org/browse/SOA-1084
11062	SOA-1069	Darrin - I cannot find this reference in the docs - can you confirm that we have this listed in one of the docs? The Getting Started Guide or the Services Guide?	1	1	https://issues.jboss.org/browse/SOA-1069
11063	SOA-1068	Hi Darrin, Could you please help me to add following section into the '1.8 Configuring OpenSSO in SOA-P' of 'JBoss_Enterprise_Platform_Administration_Guide' book. ========== 1.8.2 Install and configure Opensso in SOA-P Due to an opensso.war deployment issue (https://jira.jboss.org/jira/browse/SOA-731), we have provided a workaround to fix it. We are testing against OpenSSOv1 Build 4.5 (http://download.java.net/general/opensso/stable/openssov1-build4.5/) 1. Go to $SOA-P/jboss-as/samples/quickstarts/opensso/opensso-ear, run 'ant'. 2. Copy the opensso-1.0.ear from $opensso-ear/build to $SOA-P/jboss-as/server/$config(such as default)/deploy 3. Start the soa-p from $soa-p/jboss-as/bin/run.sh 4. Open http://localhost:8080/opensso in a browser. 5. Click on "Create Default Configuration". This causes OpenSSO to configure itself. 6. Enter 'adminpass' for the "Default User[amAdmin]" and 'ldappass' for "Default Agent [amldapuser]" 7. Visit http://localhost:8080/opensso again. Log in using the proper credentials. User Name is amAdmin and Password is the password you chose to go with amAdmin. More information about opensso, please visit its website at: http://opensso.dev.java.net ==========	1	1	https://issues.jboss.org/browse/SOA-1068
11064	SOA-1068	Hi Darrin, Could you please help me to include the above message in the 'Administration_Guide' book? Thanks Jeff	1	1	https://issues.jboss.org/browse/SOA-1068
11065	SOA-1068	verifying tomcat installation: the instructions say build 4.5 but it seems to be no longer available on the site. Can we give people more specific instructions on the correct version's location ?	0	0	https://issues.jboss.org/browse/SOA-1068
11066	SOA-1068	Darrin - are the doc changes available for review? Thx.	0	0	https://issues.jboss.org/browse/SOA-1068
11067	SOA-1061	Jiri Pechanec has pointed out a number of faults in this doc. * "3.2 Figure 3.1 and Figure 3.2 - each describes the same but have different structure (missing pieces in the figures)" Diagrams are derived from the ESB Programmers Guide & I believe 3.1 is supposed to be a much generalized image. Guidance please. * "3.2.4 The name for any given named object in a message must be unique or an exception will be thrown. - is it really true? How can this happen?" Verify content in ESB Programmers Guide * "3.2.5 Creating different body types - there is org.jboss.soa.esb.message.body.content.Payload class for this purpose List of different message bodies - there are duplicate items" Verify content in ESB Programmers Guide * "4.1 Routers are in the section name but are not mentioned in the text - also need to explain difference between routers and notifiers Would be also good to mention that it is not necessary to provide the information to listener - the reference to provider for given transport is typically used Update content in ESB Programmers Guide * "5 This chapter should contain also Service orchestration section" Update content in ESB Programmers Guide * "page 73 - Note and page 34 - Note: The latter says that the gateway EPRs are not stored in registry and the former says they are" Verify/update content in ESB Programmers Guide * "Chapter 10 - the is new style functionality related to WS - EBWS (ESB services exposed as Web Services)" Update content in ESB Programmers Guide * "Appendix A - there is nothing in the text that justifies the inclusion of this Appendix - for what the JAXB is used in ESB context?" Verify/update content in ESB Programmers Guide	1	1	https://issues.jboss.org/browse/SOA-1061

#	Requirement	Questions	Answered	Successfully Answered	URL
11068	SOA-1061	>These are the review comments for the Guide for the actual content from the ESB guide, ie its the same in both, and I need someone to verify either that it is correct or provide from info on what it >should be Ok, I'll go through the ProgrammerGuide in the ESB project and take a look at the issues mentioned. Do I need the SOA version of this document to find references to pages mentioned in this Jira? Thanks	1	1	https://issues.jboss.org/browse/SOA-1061
11069	SOA-1061	Hey Darrin, I've looked through the issues here and compared them with the ESB projects documentation. I've added comments to each one below and this should hopefully be enough to create jiras for those issues that require a change to the ESB project docs. * "3.2 Figure 3.1 and Figure 3.2 - each describes the same but have different structure (missing pieces in the figures)" >Diagrams are derived from the ESB Programmers Guide & I believe 3.1 is supposed to be a much generalized image. Guidance please. This what Figure 3.1 looks like in the ESB Projects ProgrammersGuide: <?xml version = "1.0" encoding = "UTF-8"?> <jbossesb xmlns="http://anonsvn.labs.jboss.com/labs/jbossesb/trunk/product/etc/schemas/xml/jbossesb-1.0.1.xsd"> <services> <service category="Retail" name="ShoeStore" description="Acme Shoe Store Service"> <actions> <action name="println" class="org.jboss.soa.esb.actions.SystemPrintln" /> </actions> </service> </services> </jbossesb> The "missing pieces would in this case be the provider configuration and the listener configurations, unless the invm transport is assumed. The two diagrams do not describe the same thing, unless I'm missing something. I don't think that action should be taken here. * "3.2.4 The name for any given named object in a message must be unique or an exception will be thrown. - is it really true? How can this happen?" No, this is not true (the report is correct that is). This is simply a Hashtable and adding a new named object will replace the old one. This is also present in the ESB Programmers Guide on page 28 which needs to be updated * "3.2.5 Creating different body types - there is org.jboss.soa.esb.message.body.content.Payload class for this purpose >List of different message bodies - there are duplicate items" There are no duplicates in the ESB projects programmers Guide. See page 24. * "4.1 Routers are in the section name but are not mentioned in the text - also need to explain difference between routers and notifiers. >Would be also good to mention that it is not necessary to provide the information to listener - the reference to provider for given transport is typically used Routers are not mentioned in the ESB Programmers Guide, not in this section. Update required. * "5 This chapter should contain also Service orchestration section" >Update content in ESB Programmers Guide The "Service orchestration section" is located in the ESB projects document "ServicesGuide.pdf". It could be lifted into the SOA Platform document. * "page 73 - Note and page 34 - Note: The latter says that the gateway EPRs are not stored in registry and the former says they are" Page 41 of ESB ProgrammersGuide: Note: It is possible that multiple EPRs may be present in the Registry with the same Service Name/Category and that some of these EPRs may not be ESB-aware, e.g., Gateways. If the ServiceInvoker receives ESB-unaware EPRs from the Registry then it will ignore them. You may see the warning: "Invalid EPR for service (probably ESB-unaware)". Page 77 of ESB ProgrammersGuide: Note: For each gateway listener defined in a service, an ESB aware listener (or "native") listener must also be defined as gateway listeners do not define bidirectional endpoints, but rather "startpoints" into the ESB. From within the ESB you cannot send a message to a Gateway. Also, note that since a gateway is not an endpoint, it does not have an Endpoint Reference (EPR) persisted in the registry. This will need to be updated. * "Chapter 10 - the is new style functionality related to WS - EBWS (ESB services exposed as Web Services)" This needs to be added to the ESB projecs ProgrammersGuide. This is no currently in the main trunk but will be shortly. * "Appendix A - there is nothing in the text that justifies the inclusion of this Appendix - for what the JAXB is used in ESB context?" The appendix is for "JAXB Introductions" (http://www.jboss.org/community/docs/DOC-10075) and not JAXB isself.	1	1	https://issues.jboss.org/browse/SOA-1061
11070	SOA-1061	Where do you think it should belong? Maybe we can just add a reference to it there?	0	0	https://issues.jboss.org/browse/SOA-1061
11071	SOA-1051	A couple of final comments - it looks like EAP is larger than before so we should update that section. 1.2. Hardware Requirement Recommendations Disk space requirements - for 4.2 CP03 CR7 standalone (inc. docs) = ~195MB (I would say 200 in the guide) embedded (inc docs) = ~497MB (I would say 500 in the guide) 1.7. Installing the SOA Platform Do we ever tell the user to also install the doc's .zip files? I can't see it anywhere else. We should mention it here.	1	1	https://issues.jboss.org/browse/SOA-1051
11072	SOA-1049	2.5.4.2. Insertion When an Object is insert it returns a FactHandle. ------> Comment "inserted" New instance assertions will only return a new FactHandle if a not equal classes have been asserted. ------> Comment "if a not equal classes condition" 2.5.4.3. Retraction Note that it is possible to have rules that depend on the "non existence" of a fact, in which case retracting a fact may cause a rule to activate (see the 'not' and 'exist' keywords). ------> Comment "(see the 'not' - section 5.2.2.5 and 'exist' - section 5.2.2.6 - keywords) 2.5.4.6. Shadow Facts There's generally two ways to guarantee truthfulness. ------> Comment "There are two ways to guarantee truthfulness." 2.5.4.8. Initial Fact To support conditional elements like "not" (which will be covered later on), ------> Comment "(which will be covered later on in chapter 5)" 2.5.6. Stateless Session The execute method iterates the objects inserting each and calling fireAllRules() at the end; session finished. ------> Comment "and calling fireAllRules() at the end when the session is finished." "StatelessSessions also support sequential mode, which is a special optimized mode that uses less memory and executes faster; please see the Sequential section for more details." ------> Comment "please see the Sequential section (section 2.5.10) for more details." ReferenceOriginalGlobalExporter just passes a reference to the original Global Resolver; the latter should be used with care as identifier instances can be changed at any time by the StatelessSession and the GlobalResolver may not be serializable freindly. ------> Comment - just drop the misspelled word "freindly" 2.5.7.2. Agenda Groups Agenda groups are a way to partition rules (activations, actually) on the agenda. At any one time, only one group has "focus" which means that the activations for rules in that group will only take effect - you can also have rules "auto focus" which means the focus for its agenda group is taken when that rules conditions are true. ------> Comment "when those rules' conditions are true" Agenda groups are a handy way to create a "flow" between grouped rules. ------> Comment: The previous paragraph indicated that a flow between rules cannot be relied on. Are we saying that the flow between groups is a way around that limitation? 2.5.10. Sequential Mode 1. Order the Rules by salience and position in the ruleset (just sets a sequence attribute on the rule terminal node). 4 ------> Comment: Delete the "4" 3.1.4.1. Syntax of templates The "$param" place holder is used in templates to indicate where data form the cell will be interpolated ------> Comment "from" For consequences: How snippets are rendered also depends on if there is anything in the row immediately above it. If there is nothing there, the output is simple the interpolated snippets ------> Comment: Change "simple" to "simply" 4.1. Introduction ------> This section refers to "Red Hat Developer Studio." Is this name being used at all? We only refer to it as JBDS. Note you can get the plug in either as a zip to download, or from an update site (refer to the chapter on installation). ------> There is no "installation" chapter in this book. Figures 4.3, 4.4 - these include a very old Rules icon - probably from Rules 3 in 2006 (figure 4.6 shows a date of 2006) - when can we get these updated? If not in 4.2 CP03 then in 4.3 FP01? 5.5.2.1. Pattern The subsections in this^ section are numbered: 5.5.2.1.1. Field Constraints 5.5.2.1.1.1. JavaBeans as facts 5.5.2.1.1.3.1. Operators It's hard to read and reference chapter sections with 7-level-deep section numbers - why not move section 5.5.2.1 "Pattern" to the same level as 5.5 "Rule" - 4-levels is about as deep as most people can follow.	0	0	https://issues.jboss.org/browse/SOA-1049

#	Requirement	Questions	Answered	Successfully Answered	URL
11073	SOA-1049	6.1. Deployment options If you are using the BRMS, you should use the RuleAgent (the detailed documentation for this is in the chapter on the BRMS). ------> comment: There is no chapter on the BRMS in this doc. 6.1.1. Deployment using the RuleAgent The easiest and most automated way to deploy rules is to use the RuleAgent. This is described in detail in the BRMS user guide. ------> comment: Do we have a BRMS user guide? Index BeanShell, 12 ------> Comment: The only reference to BeanShell is a question on page 12. C Collection, 108, 108 ------> Comment: The term is used on pages 1, 17, 42, etc. But not ever really defined in the context of Rules Domain Specific Languages, 128 ------> Comment: It's on pages 79 and 128 DSL, 129 ------> Comment: It's used on pages 128-133 I think we need to remove/replace the entire index. It's very short and includes multiple errors.	0	0	https://issues.jboss.org/browse/SOA-1049
11074	SOA-1049	feedback incorporated with the following exceptions: JBoss Rules Terms - I'll work on this for FP01, see what comes out of the newer docs & port it back in a future CP 2.5.4.2. Insertion New instance assertions will only return a new FactHandle if a not equal classes have been asserted. ------> Comment "if a not equal classes condition" Neither form makes grammatical sense 2.5.7.2. Agenda Groups Agenda groups are a handy way to create a "flow" between grouped rules. ------> Comment: The previous paragraph indicated that a flow between rules cannot be relied on. Are we saying that the flow between groups is a way around that limitation? Need clarfication on intent of content, specifically the meaning of the term 'flow' in this context	0	0	https://issues.jboss.org/browse/SOA-1049
11075	SOA-1049	Nothing major so far - did the doc pick up all the changes from 4.3 CP03? Index Remove the index - it's very incomplete and includes some errors Section 5.5.2. Left Hand Side (when) Conditional Elements below misspelled as bellow Comments from: https://jira.jboss.org/jira/browse/SOA-1049?focusedCommentId=12444597#action_12444597 These are still in the doc 2.5.4.2. Insertion When an Object is insert it returns a FactHandle. ------> Comment "inserted" New instance assertions will only return a new FactHandle if a not equal classes have been asserted. ------> Comment "if a not equal classes condition" 2.5.4.3. Retraction Note that it is possible to have rules that depend on the "non existence" of a fact, in which case retracting a fact may cause a rule to activate (see the 'not' and 'exist' keywords). ------> Comment "(see the 'not' - section 5.2.2.5 and 'exist' - section 5.2.2.6 - keywords) 2.5.4.6. Shadow Facts There's generally two ways to guarantee truthfulness. ------> Comment "There are two ways to guarantee truthfulness." 2.5.4.8. Initial Fact To support conditional elements like "not" (which will be covered later on), ------> Comment "(which will be covered later on in chapter 5)" 2.5.6. Stateless Session The execute method iterates the objects inserting each and calling fireAllRules() at the end; session finished. ------> Comment "and calling fireAllRules() at the end when the session is finished." "StatelessSessions also support sequential mode, which is a special optimized mode that uses less memory and executes faster; please see the Sequential section for more details." ------> Comment "please see the Sequential section (section 2.5.10) for more details." ReferenceOriginalGlobalExporter just passes a reference to the original Global Resolver; the latter should be used with care as identifier instances can be changed at any time by the StatelessSession and the GlobalResolver may not be serializable freindly. ------> Comment - just drop the misspelled word "freindly" 2.5.7.2. Agenda Groups Agenda groups are a way to partition rules (activations, actually) on the agenda. At any one time, only one group has "focus" which means that the activations for rules in that group will only take effect - you can also have rules "auto focus" which means the focus for its agenda group is taken when that rules conditions are true. ------> Comment "when those rules' conditions are true" Agenda groups are a handy way to create a "flow" between grouped rules. ------> Comment: The previous paragraph indicated that a flow between rules cannot be relied on. Are we saying that the flow between groups is a way around that limitation? 2.5.10. Sequential Mode 1. Order the Rules by salience and position in the ruleset (just sets a sequence attribute on the rule terminal node). 4 ----> Comment: Delete the "4" 3.1.4.1. Syntax of templates The "$param" place holder is used in templates to indicate where data form the cell will be interpolated ------> Comment "from" For consequences: How snippets are rendered also depends on if there is anything in the row immediately above it. If there is nothing there, the output is simple the interpolated snippets ------> Comment: Change "simple" to "simply" 4.1. Introduction ------> This section refers to "Red Hat Developer Studio." #	Requirement	Questions	Answered	Successfully Answered	URL
11076	SOA-1048	the following words use capital letters where appropriate: Java, jBPM, JBoss, jPDL, XML, Hibernate, Eclipse, Petri net, JNDI, JDBC, XA, LDAP, Ant, Xerces... This occurs on so many places that I suggest mass search&replace. 2) Most of the diagrams in the document have a very low picture resolution / compression issues, making them look ugly. I suggest taking a look at the printout. 3) Things like "graph based," "domain specific" or "process oriented" should actually go by "graph-based," "domain-specific" and "process-oriented." Occurrences of this phenomena are too many to mention. 4) Pretty pretty please, get native English proof-reader - I'm sure I missed quite a lot of grammar-related problems. 5) Please mass replace all the "till"s with "until" and also check if "cause" (based on the context) cannot be replaced for "because." 6) The actual spelling of "particular" is with "a" not "e" (as in "perticular"). Another mass replace, please. 7) I think using "web application" instead of "webapp" would help. Another mass replace. 8) Double colons (and question marks) aren't AFAIK usually preceded by spaces. Many occurrences in the document where they are. 9) Starter's kit is sometimes referred to as "starters-kit" - it'd be cool to unify this. 10) Most of "-ful" words like powerful, handful etc. are actually written with just a single "l" at the end. Occurences are quite a few, perhaps RE could be made to fix that. 11) "Whether" isn't "wether," another candidate for mass replace. 12) "more then" can be mass-replaced with "more than." 13) It's not "ommited" or "ommitted," it's just "omitted." Page by page: (P${pageNumber}, ${chapterNumber}) P1, 1: "... process language is buil*t* on top..." P1, 1.2: First sentence contains "Download" 3 times. P3, 1.5: - "EJB will be writen against" - isn't it written already? Or should it be written by the user? - "We have done great efforts ..." - AFAIK efforts aren't done but taken. P3, 1.6: "... is richer th*a*n the traditional..." (This problem actually occurs in quite some places.) P7, 3: - "The examples can also be fo*u*nd..." - "download jbpm-3.0-[version].zip" - please highlight the file name based on the document conventions, including highlighting the "[version]" in italics. (repeats on P144, 18.1.2.) - Last paragraph is actually an unfinished sentence that appears out of place. P7, 3.1: "The hello world process" - it would be good to highlight "hello world" to indicate that it is some identifier. P9, 3.2: "E.g. a*n* piece" - the "n" shouldn't be there, should it? P20, 4.1.1: - "The IDE is buil*t* around..." - another very common mistake throughout the text. - "When a user saves*,* the compiled class is saved*.*" - May I suggest better use of interpunction? - "Where ten years ago..." - The sentence doesn't make much sense to me by itself. Either remove the "where" or join it with the other sentences in the paragraph somehow. - "... is a common foundation for all these type*s* of domain*-*specific..." - "... to edit *J*ava in the *source* file format*, because* ..." P21, 4.1.2.1: - "An imperative programming language*s* like..." - "... implementation technique is only targets..." - please remove the "is" - "... of the order manager and the*n* wait *until*..." - "This could be a sufficient..." - please remove the " a" P22, 4.2.1: "nodes have leaving*-* and arriving..." - please remove the dash. P25, 4.2.3: "The event method will propagate find..." - please choose only one verb. :-) P26, 4.2.3: "... doubleCheck's task node is adds ..." - the same as immediately above :-) P27, 4.2.5: "... an event is sen*t* to the execution." P29, 4.3.2: - "... mixed up with multi-threaded* *programming." - "... in the process execution relate*s* ..." - please remove the "s". P30, 4.3.3: "... An invoke will start *of* a new sub process." - Please remove the "of". P30, 4.3.4: "Messaging systems are also know*n* as..." P33, 4.5.1.1: "Let's define a business process" should IMHO be quoted. P35, 4.5.2: "... for writing *a* new services..." - please remove the "a" P36, 4.6: "... even the BPM engine's database tables *in* integrated into..." - please remove the "in" P37, 4.7.2: - "This is problematic because it results in monolithic system that is very hard to integrate into a project *SOMETHING MISSING* combines plain OOP software with business processes." - "... with the BPM server *to* become..." - please remove "to" - "As show*n* above, ..." P38, 4.7.3: I suggest either filling the chapter with content or removing entirely. P39, 5: "... project, rather th*a*n installing..." P40, 5.3: "Only used in the script's and	0	0	https://issues.jboss.org/browse/SOA-1048
11077	SOA-1048	you make a copy the default configuration..." - doesn't make much sense. - "The third part are some misc*a*llanious configurations..." P50, 6.3: The whole chapter would look much better in a bullet-point list instead of naming every config file in its own subchapter with one sentence in it. P51, 6.3.7: "The id*'*s are stored..." - please remove the apostrophe. P51, 6.5: "Therefor*e*, by default, the ... *the that* *H*ibernate" - please add "e", remove "the" and make Hibernate use capital "H." P55, 7.1.1: "The persistence API *is integrated with*..." P58, 7.1.2: "As a result, a Hibernate session will *only be opened*"... P59, 7.1.3: - "The transaction attribute..." - please end the sentence with a full stop. Even better, put it in some other paragraph, as it's just one sentence. - The following sentence begins with "the the". P60, 7.2.1: - first paragraph: names of the properties should be highlighted. - seconds paragraph: we have an environment for important notes. P62, 7.3: "and use the session per transaction pattern" - please, either put the "session per transaction" in quotes or join it using dashes. P65, 7.6.3: - "The jbpm.db subproject*,* contains..." - please remove - "... scripts for all database*s*..." P65, 7.7: - "This can eliminate*s* ..." - please remove - Secondly, this enable*s* ..." P66, 7.8: The bullet-point list should either state sentences (first letter capital, last letter followed by a full-stop) or the first two bullet points should end with a comma (",") and the last one with a full-stop. P70, 8.1.3: "... only takes a few minutes in *windows*." - I suggest we either use full name and state whose trademark is that, or we stop using our competitors' products in examples... :-) P72, 8.1.4.1: "*To execution* this script..." - doesn't seem right. P74, 8.1.4.2: - "mysql -u root -p" - the username should be in italic as it depends on an environment. Also, once we do this, most of the next paragraph can be left out. - "Once the script executes, you should have the foll*ow*ing..." P76, 8.1.6: "Well, almost..." - I'd follow that with a line break. P77, 8.1.6: "This section should look like shown in the listing below. There are two changes in this file: the hibernate.connection.datasource property should point to the JbpmDS datasource we created as the first step in this section and the hibernate.dialect property should match the PostgreSQL or MySQL dialect." - properties should be highlighted. P82: "You may have to ALT-TAB to get this application as it may be covered by another window." - I suggest we don't treat jBPM users as idiots who don't know anything about window management. :-) And if we do, Alt+Tab is heavily dependent on user's environment, so I'd left that out. P88, 9.3.4: - The first paragraph would be much better when converted into a bullet-point list with two items. - Also, "Should the decision made by the process..." doesn't make much sense. - "The first paragraph for which the *conditions resolves* to 'true'"... you can't have both words ending with "s" in this case. P89, 9.4: "If more th*a*n..." P93, 9.6.2: "... to distinct between..." - is "distinct" a verb? P94, 9.7: s/serached/searched P97, 9.10: s/implementated/implemented P101, 10.1: "The most basic operations are*:*" P102, 10.4.1: s/independant/independent P103, 10.6: "hibernatable type" - really? :-) (Two occurences.) P104, 10.6: "When you refer *to* your custom..." P105, 10.6 type "LongInstance" should be highlighted. P108, 11.2.2: "... one task instance *are* associated..." P110, fig 11.1: Instances' arrows go into the boxes. P110, 11.3.4: "*T*o specify the pooled actors..." P111, 11.4: "The controller can be used to create*,* populate and ..." P111, 11.5: Please remove the a) and b) from the bullet-point list. P113, 11.6: s/assignements/assignments P119, 12: - "IMPORTANT NOTE": We have an environment for that, don't we? - In the same paragraph, the repository method should be highlighted. - Same comment for the bullet-point list as in "P66, 7.8" - "a word document" - either use the full trademark name of Microsoft Word or don't mention the product at all. :-) P121, 13.1: - "A timer that is specified on a node*,* is not executed" - without the comma, please. - Same comment for the bullet-point list as in "P66, 7.8" P123, 14.2: - "... by looking *at* two examples." - "The first frame*,* show the..." - without the comma, please. P124, 14.2: "Now, we are going to look at the second example, the second example is a variant..." - I smell redundancy... P125, 14.2: "2 separate transactions*,	0	0	https://issues.jboss.org/browse/SOA-1048
11078	SOA-1048	fixes applied up to and including chapter 5. and - "(wow, that a lot of seq's there :-s)." - please, remove entirely. - P167, 20.3: Either extend or remove, please. - P148: "Thanks Gavin! Absolutely awesome! :-)" - I suggest removal 1st 13 items applied as well, except 2 which will be worked on for a future version	0	0	https://issues.jboss.org/browse/SOA-1048

#	Requirement	Questions	Answered	Successfully Answered	URL
11079	SOA-1047	What is JBoss Enterprise SOA Platform Edition 1.4 on page 2? Page 3 - not sure if this is correct: It may be updated dynamically when services first start-up, or statically by an external administrator. Page 6 - Is still Systinet in business? http://en.wikipedia.org/wiki/Mercury_Interactive Page 6 - SystinetRegistryImplentation should be SystinetRegistryImplementation Page 7 - Strange formating of tables and table names Page 7 - There is no directory product/install/jUDDI-registry with juddi sql scripts, same for page 10, files are in ${deploydir}/jbossesb.sar/juddi-sql and warfile is in ${deploydir}/jbossesb.sar Page 14 - the description is definitely not complete, to use AxisTransoprt, one must also put axis.jar to classpath - Tom C. has more info Chapter 4 - JBDS also provides UDDI browser - should not we promote it here? Section 5.1 - is it also Product related? It seems to belong only to project	0	0	https://issues.jboss.org/browse/SOA-1047
11080	SOA-1047	1 - the 1.4 refers to the book edition 2 - need confirmation on its behaviour 3 - I don't think this really matters, although it would be nice to have more current examples if that is the case 4 - FIXED: corrected typo 5- FIXED: the 3 tables want to be a single table with settings on one axis & transport type on the other, but the content is way to wide to fit it on a page :-(I changed the formatting a little to try to make it clearer. 6 - Need more information. "The product/install/jUDDI-registry directory contains db create scripts for you favorite database. "jbossesb.sar/juddi-sql doesn't contain database creation scripts, it has import scripts. jboss-as/server/production/deploy/jbossesb.sar/lib/juddi-2.0rc5.aop.jar seems to have creation scripts. Are users expected to unpack the jar to get at the files? 7 - where does axis.jar come from ? I need more information 8 - FIXED: added a comment about JBDS included a UDDI browser. Also updated some of the language as was done for the corresponding content in the 4.3 Services Guide 9 - need confirmation if this should be removed 10 - spacing in address has been fixed in book template	0	0	https://issues.jboss.org/browse/SOA-1047
11081	SOA-1046	Address on title page 1801 Varsity Drive Raleigh, NC 27606-2072USAPhone: +1 919 754 3700 Phone: 888 733 4281 Fax: +1 919 754 3701 PO Box 13588Research Triangle Park, NC 27709USA - see missing spaces What is JBoss Enterprise SOA Platform Edition 1.3 on page 2? The version number is confusing 1.2. When would you use an ESB? The figures below illustrate some concrete examples where JBossESB would be useful. Although these examples are specific to interactions between participants using non-interoperable JMS implementations, - this is confusing as the images displays file-based participants and/or interoperable JMS participants The descrpitons for images are above the images so the page break should not separate the description from the image 4.1 Chapter is wrong there is also PickUpCourier and TwoWayCourier is derived from both courier and pickuponlycourier. Morever TwoWayCourier interface has different definition 6.1.4 The code example contains <<<<<<< .mine // it's out response! ======= // it's out response! >>>>>>> .r12360 break; } 7.2.5 In first example there should be <jms-listener name="helloWorld2" busidref="quickstartEsbChannel2" instead of <jms-listener name="helloWorld2" busidref="quickstartFtpChannel2" in the cecond there are two listeners defined on the same ftpChannel3 Figure 7.5 - cuts page number in half 7.3.1 and 7.3.2 - the examples are swapped Note on page 73 - Also, note that since a gateway is not an endpoints, it does not have an Endpoint Reference (EPR) persisted in the registry. Note on page 34 - It is possible that multiple EPRs may be present in the Registry with the same Service Name/Category and that some of these EPRs may not be ESB-aware, e.g., Gateways. I think these two statements are in contradiction	0	0	https://issues.jboss.org/browse/SOA-1046
11082	SOA-1046	FIXED Address on title page in page template CLARIFICATION: Edition 1.3 on page 2 refers to the version of the book NOT BEING FIXED IN THIS VERSION: 1.2. When would you use an ESB? images MORE INFORMATION REQUIRED FOR CORRECT CONTENT 4.1 Chapter is wrong there is also PickUpCourier and TwoWayCourier is derived from both courier and pickuponlycourier. Morever TwoWayCourier interface has different definition FIXED 6.1.4 The code example FIXED 7.2.5 example2 FIXED Figure 7.5 - cuts page number in half FIXED 7.3.1 and 7.3.2 - the examples are swapped MORE INFORMATION REQUIRED, IS ONE OF THEM OUT OF DATE OR IS ONE MISSING INFORMATION: Note on page 73 - Also, note that since a gateway is not an endpoints, it does not have an Endpoint Reference (EPR) persisted in the registry. Note on page 34 - It is possible that multiple EPRs may be present in the Registry with the same Service Name/Category and that some of these EPRs may not be ESB-aware, e.g., Gateways. I think these two statements are in contradiction	0	0	https://issues.jboss.org/browse/SOA-1046
11083	SOA-1046	FIXED Address on title page in page template - VERIFIED CLARIFICATION: Edition 1.3 on page 2 refers to the version of the book - OK NOT BEING FIXED IN THIS VERSION: 1.2. When would you use an ESB? images - OK MORE INFORMATION REQUIRED FOR CORRECT CONTENT 4.1 Chapter is wrong there is also PickUpCourier and TwoWayCourier is derived from both courier and pickuponlycourier. Morever TwoWayCourier interface has different definition - Please look into ESB source code, more info probably provided by the dev team FIXED 6.1.4 The code example - VERIFIED FIXED 7.2.5 example2 - VERIFIED FIXED Figure 7.5 - cuts page number in half - VERIFIED FIXED 7.3.1 and 7.3.2 - the examples are swapped - VERIFIED MORE INFORMATION REQUIRED, IS ONE OF THEM OUT OF DATE OR IS ONE MISSING INFORMATION: Note on page 73 - Also, note that since a gateway is not an endpoints, it does not have an Endpoint Reference (EPR) persisted in the registry. Note on page 34 - It is possible that multiple EPRs may be present in the Registry with the same Service Name/Category and that some of these EPRs may not be ESB-aware, e.g., Gateways. I think these two statements are in contradiction - According to my best knowledge this statement is correct "It is possible that multiple EPRs may be present in the Registry with the same Service Name/Category and that some of these EPRs may not be ESB-aware, e.g., Gateways." which means that the other one should be removed. But this has to be consulted with the dev team	0	0	https://issues.jboss.org/browse/SOA-1046
11084	SOA-1045	The new screenshots are even uglier than the previous ones. Could you include higher quality screenshots?	0	0	https://issues.jboss.org/browse/SOA-1045
11085	SOA-1045	What pdf viewer are you using, what version and on what operating system? Please supply a screenshot of images in question at 100% image size	0	0	https://issues.jboss.org/browse/SOA-1045
11086	SOA-1045	- The images look much better now. Thanks. Besides that: - 1.1 Overview: stand-alone ESB server -> standalone ESB server What are the percentage signs supposed to mean? % cd tools/console/management-esb% - Fig. 2.3 MessageCounter: Could you scale it down?	0	0	https://issues.jboss.org/browse/SOA-1045
11087	SOA-1045	FIXED: stand-alone -> standalone FIXED: the % are shell prompts, missed a linefeed in copy-paste, changed them to $ & fixed position FIXED: hmmm, scaling it down made it look worse when viewed at greater than 100%, I made it wider so at 100% it scales down automatically & when viewer at greater it is closer to actual 100%. Does that make any sense? ;-) Also cleaned up the language in the overview a little	0	0	https://issues.jboss.org/browse/SOA-1045

#	Requirement	Questions	Answered	Successfully Answered	URL
11088	SOA-1044	On the title page: ---------- JBoss Enterprise SOA Platform 4.2 SOA ESB Message Action Guide JBoss Enterprise SOA Platform Edition 1.3 ---------- What is the reference to 1.3? Note - the doc is missing its revision page. ========== 1.1.2. LongToDateConverter It looks like this actin was deleted: https://cloud.prod.atl2.jboss.com/jira/browse/JBESB-152;jsessionid=BE9600515828DE2DBD08A8BD0C8F39BE?page=com.atlassian.jira.ext.fisheye%3Afisheye -issuepanel It's not in the ESB source or javadocs - I'll check with Mark and Kevin. ========== 1.1.3. ObjectInvoke We should also state which properties are required/optional - from the javadocs: <Action name="doCustomer" processor="ObjectInvoke"> <property name="class-processor" value="CustomerProcessor" /> <!-- Required. Class processor used to process the message . --> <property name="class-method" value="fooMethodName" /> <!-- Optional. Default to name of action. --> </Action> ========== 1.1.4. ObjectToCSVString We should also state which properties are required/optional - from the javadocs: <Action name="Customer-To-CSV" processor="ObjectToCSVString"> <property name="bean-properties" value="name,address1,address2,phone" /> <property name="fail-on-missing-property" value="true" /> <!-- (Optional) Default of false. --> </Action> ========== 1.1.8. XStreamToObject exclude-package is also optional - from the javadocs: <Action name="doCustomer" processor="XStreamObject"> <property name="class-alias" value="Customer" /> <!-- Optional. Class alias used in call to XStream.alias(String, Class) prior to deserialisation. --> <property name="incoming-type" value="CustomerProcessor" /> <!-- Required. Class for incoming type used to process the message after deserialisation. --> <property name="exclude-package" value="false" /> <!-- Optional. Default "true". Not applicable if a "class-alias" is specified. --> <property name="root-node" value="/root/Customer" /> <!-- Optional. Specify an XPath expression be used to determine the root node used with XStream. Useful when the object to convert is not the root node of the document --> <property name="aliases"> <!-- Optional list of extra aliases to add to XStream --> <alias name="aliasName" class="className" /> <alias name="aliasName" class="className" /> ... </property> <property name="converters"> <!-- Optional list of converter to register with XStream --> <converter class="className" /> <converter class="className" /> ... </Action> What about the optional converters? ========== 1.2.1. jBPM - BpmProcessor JBossESB can make calls into jBPM using the BpmProcessor action. Please also read the jBPIntegrationGuide to learn how to call JBossESB from jBPM. Should be: "also read the jBPMIntegrationGuide (SOA_ESB_JBPM_Integration_Guide.pdf)" StartProcessCOmmand Should be: StartProcessCommand These two API commands: setProcessInstanceVariables, getTokenVariables are not documented in the SOA_ESB_JBPM_Integration_Guide.pdf doc - I think we should remove them from this doc too. ========== 1.3.5. Notifier The code example includes "@" characters. These are used to substitute strings from variables and is used in several of the quickstarts. In this example, however, it may cause some user confusion. I'd just remove the "@" characters. ========== 1.3.5.3. NotifySQLTable The SqlGatewayListener also requires a timestamp field - see https://jira.jboss.org/jira/browse/SOA-1111	1	1	https://issues.jboss.org/browse/SOA-1044
11089	SOA-1044	1 - its the version number of the book 2 - FIXED 3 - need confirmation that LongToDateConverter is removed. 4, 5 - Marked all properties with "required"/"optional"/"optional, defaults to " 6 - the 4.2.cp03 (CR5) javadocs don't show the optional converters. 4,3 does. Can you check this, maybe added since CR5 ? 7 - FIXED, also reworded first paragraph slightly to help translation, please confirm is still appropriate. 8 - removed @ 9 - I'm a little confused by SOA-1111 & related JIRAs. Is the timestamp field supposed to be optional, or is that a bug in this release that will be fixed in CP04 ?	0	0	https://issues.jboss.org/browse/SOA-1044
11090	SOA-1043	I've attached both text & pdf versions of the document. Do we also want this doc added to those on redhat.com/docs ?	0	0	https://issues.jboss.org/browse/SOA-1043
11091	SOA-1032	We already have a tuning section. Plus, which version of SOA-P is this affecting?	0	0	https://issues.jboss.org/browse/SOA-1032
11092	SOA-1008	Hi Thomas! I am a bit confused about the status now. What I found in the codebase was a "Deployment" interface and a DeploymenService in "the API". But how is it included in the ESB? Unfortunately there are no fisheye links to code. And somewhere needs to be a JBoss AS Deployer, right? Is it only targeted for jbpm 4? Then it couldn't go into JBoss ESB 4.3 already, right? Can you quickly explain? Thanks a lot for sheding light on this...	0	0	https://issues.jboss.org/browse/SOA-1008
11093	SOA-1008	afaict, there has not been a promise to the soa platform productization to deliver a jboss deployer for par files. this would have to be discussed at lenght before because it is has a lot of implications. synchronizing pars in a deploy directory with deployments in a jbpm database has a lot of situations that can go bad. writing a jboss deployer that finds and deploys a par file is easy. but how to know at server boot time if a process needs to be redeployed ? how to sync in a cluster? what if the deployment is deleted in jbpm?... etc. all those requirements have to be discussed and agreed before we can go ahead with this.	0	0	https://issues.jboss.org/browse/SOA-1008
11094	SOA-972	Moreover, the registry now contains interceptors as well. So this should be included into the example - see jboss-as/server/produciton/deploy/jbossesb.sar/jbossesb-properties.xml. Anything about caching interceptor SHOULD NOT be there since it doesn't work currently.	1	1	https://issues.jboss.org/browse/SOA-972
11095	SOA-972	3.3. RMI using the juddi.war or jbossesb.sar The JBoss SOA includes juddi.war in the jUDDI-registry directory. When deployed this brings up the regular webservices but also an RMI service. You also need to deploy a datasource which points to your jUDDI database. An example file is supplied for MySQL. This is quite strange, there are two juddi.war files in the SOA-P. First in deploy/jbossesb.sar/ and second in deploy/juddi-service.sar. Only the first contains the configuration shown in the examples later in the text. They are definitely not in the jUDDI-registry directory. So it would be good to correct the directory name.	1	1	https://issues.jboss.org/browse/SOA-972
11096	SOA-972	Why it is not possible to click on the links in the document?	1	1	https://issues.jboss.org/browse/SOA-972

#	Requirement	Questions	Answered	Successfully Answered	URL
11097	SOA-972	outstanding items * not sure what the issue is with the image on page 2 * "Moreover, the registry now contains interceptors as well. So this should be included into the example - see jboss-as/server/produciton/deploy/jbossesb.sar/jbossesb-properties.xml. Anything about caching interceptor SHOULD NOT be there since it doesn't work currently." This needs to be fixed in ESB Services Guide source document * "3.3. RMI using the juddi.war or jbossesb.sar The JBoss SOA includes juddi.war in the jUDDI-registry directory. When deployed this brings up the regular webservices but also an RMI service. You also need to deploy a datasource which points to your jUDDI database. An example file is supplied for MySQL. This is quite strange, there are two juddi.war files in the SOA-P. First in deploy/jbossesb.sar/ and second in deploy/juddi-service.sar. Only the first contains the configuration shown in the examples later in the text. They are definitely not in the jUDDI-registry directory. So it would be good to correct the directory name." This needs to be fixed in ESB Services Guide source document * "5.1. Scout and jUDDI pitfalls • Make sure to put our version of the jaxr-api-1.0.jar, scout-0.7rc2-embedded.jar and the juddi-embedded.jar first. The versions of these libraries that are included with the JBoss Application Server are incompatiable. This should get resolved in future release of JBoss Application Server. I did not find any jaxr*jar or juddi-embedded.jar in SOA-P, so what is that thing reffered as "our version"? I only found scout-1.0rc2.aop.jar or scout.jar (version 1.0rc1). " This needs to be fixed in ESB Services Guide source document *"Page 23, another reference to non-existing jUDDI-registry directory: • Make sure to read the README in the jUDDI-registry directory, for instructions regarding prepopulating your own jUDDI database. " This needs to be fixed in ESB Services Guide source document *"Page 39, "3. xpathGreaterThan" The rule is in fact called "xpathLessThan"." I assume you are referring to the "xpathLowerThan" rule *"Page 45, Figure 10.1 is useless because the texts in the image can't be read. It has poor quality." We are constrained by a maximum image width of 430px, this diagram has to be completely re-thought * "Why it is not possible to click on the links in the document?" Are there any particular links you were having problems with? What PDF viewer, what OS? Versions?	0	0	https://issues.jboss.org/browse/SOA-972
11098	SOA-972	libraries that are included with the JBoss Application Server are incompatiable. This should get resolved in future release of JBoss Application Server. (I don't think that the paragraph is at all applicable to 4.3. It should be deleted.) Section 6.1 (Rules Service) (This section of the guide refers to Rule "facts," but does not define this term in the context of JBoss Rules. Why don't we add some brief definitions such as: Fact (application data) Working Memory (stateful collection of facts) Production Memory (the rules) Inference Engine (JBoss Rules & RETE) Agenda (conflict resolution) Salience (priority) REF: http://www.cooug.org/brsig/event_details/presentations/2006_June_20_DRules.pdf 7.1. Introduction (Rules Services) When a message gets send to the BusinessRulesProcessor a rule set executes over the objects in the message and updates either of those objects or the message. ("sent") 7.3. Rule Service Consumers The consumer of a rule service has little to worry about. There is no need for the consumer to creating rulebases or working memories, inserting facts or firing the rules. ("to be creating") 7.4. Configuration A dsl and dslr (domain specific language) files ("dsl and dslr (domain specific language) files") 9.1. Introduction (Content Based Routing) When a message gets send to the CBR, a certain rule set will evaluate the message content and return a set of Service destinations. ("sent") 9.2. Three Different Routing Action Classes In this case the message is simply filter out. ("filtered") Figure 2 shows an example where the MessageType is used to determine to which destination the Message is going to be send. ("sent") 9.4. XPath Domain Specific Language 2. xpathEquals <element>, <value> : yields true if the element is found and it's value equals the value. 3. xpathGreaterThan <element>, <value> : yields true if the element is found and it's value is greater than the value. 4. xpathLessThan <element>, <value> : yields true if the element is found and it's value is lower then the value. (its, not it's) 9.5. Configuration Now that we have seen all the individual pieces how does it all tie together? It basically all comes down to configuration at this point, which is all done in your jboss-esb.xml. (Now that we have seen all the individual pieces, how does it all tie together? It all comes down to configuration at this point, which is all done in your jboss-esb.xml.) Each ESBMessage is passed on to in this case the ContentBasedRouter action class which is loaded with a certain rule set. (Each ESBMessage is passed on to the ContentBasedRouter action class which is loaded with a certain rule set.) It uses the rule set JbossESBRules.drl, which matches two destinations, name 'xml-destination' and 'serializeddestination'. (It uses the rule set JbossESBRules.drl, which matches two destinations, named 'xml-destination' and 'serializeddestination'.) Table 9.2. CBR Action Configuration Properties Optional property which tells the RuleService to use a stateful session where facts will be remembered between invokations. ("invocations") 9.8. RuleAgent We should not have the same URL duplicated in two separate footnotes on the same page. One reference to the URL in a footnote is sufficient. 10.1. Introduction (Content Based Routing with Smooks) An example of this might be a huge order message with thousands/millions of order items per message. (Is this realistic? Millions of order items in one message?) In this case, we're just binding the data into HahMaps. ("HashMaps") Figure 10.1. Message Splitting - The text in this image is not clear enough to be read. Resource configurations #1 and #2 are there to bind data from the source message into Java Object in the Smooks bean context. In this case, we're just binding the data into HahMaps. The Map being populated in configuration #2 is recreated and repopulated for every order item as the message is being filtered. The populated Java Objects (from resources #1 and #2) are use to populate a FreeMarker template (resource #4), which gets applied on every order item, with the result of the templating operation being output to a FileResourceStream (resource #3). The FileResourceStream (resource #3) also gets applied on every order item, managing the file output for the split messages. (Where are these numbers defined? There are no numbers in the figure.) Chapter 11 - Message Transformation The JBoss ESB supports message	1	1	https://issues.jboss.org/browse/SOA-972
11099	SOA-972	12.5.2. ESBActionHandler under normal processing the signal will be send by the JBossESB callback Service. ("sent") 12.5.3. jBPM to ESB Exception Handling Only if the call was made from the EsbActionHandler it makes sense to report back the exception to jBPM. ("does it make sense") 12.5.4. Scenerio 1: Time-out it maybe that you want to limit how long you want to wait ("may be") 13.1. Orchestrating Web Services JBossESB provides WS-BPEL support via its Web Service components. For details on these components and how to configure and use them, see the Message Action Guide. (We don't have a message action guide. In which of the SOA-P docs is this information?) 13.2. Orchestration Diagram (One of these four footnotes is sufficient.) 1 http://www.active-endpoints.com/ 2 http://www.active-endpoints.com/ 3 http://www.active-endpoints.com/ 4 http://www.active-endpoints.com/ 13.3. Process Deployment and Instantiation In the previous paragraph we create the process definition and we quietly assumed we had an instance of it to explain the process flow. But now that we have created the processdefinition.xml, we can deploy it to jBPM using the IDE, ant or the jbpm-console (as explained in Chapter 1). (That's chapter 12. ;-) Chapter 14 - The Message Store In JBossESB 4.2 the Message Store is also used for storing messages that need to be redelivered in the event of failures. (This is release 4.3.)	1	1	https://issues.jboss.org/browse/SOA-972

#	Requirement	Questions	Answered	Successfully Answered	URL
11100	SOA-971	2.2 Rosetta is built on three core architectural components: but there are FOUR items in the list 3.2 Example 4.3, Figure 3.1 and Figure 3.2 - each describes the same but have different structure (missing pieces in the figures) 3.2.1 header property Action shold be explained in more detail replace MessageIDas with MessageIDs 3.2.4 The name for any given named object in a message must be unique or an exception will be thrown. - is it really true? How this can happen? 3.2.5 Creating different body types - there is org.jboss.soa.esb.message.body.content.Payload class for this purpose List of different message bodies - there are duplicate items 4.1 Routers are in the section name but are not mentioned in the text - also need to explain difference between routers and notifiers Would be also good to mention that it is not necessary to provide the information to listener - the reference to provider for given transport is typically used 5 This chapter should contain also Service orchestration section 7.1.1 Note - should refer to 4.4 version, not 4.2.1 B.4 Arethe versions correct? Should not be 4.4? Versions in general, in text there are multiple references to ESB 4.3 GA. I think it should be 4.4 (maybe CP1) page 73 - Note and page 34 - Note: The latter says that the gateway EPRs are not stored in registry and the former says they are page 76 - enumeration - replace <jms-provder> with <jms-provider>, >services> with <services>, busrefid with busidref Chapter 10 - the is new style functionality related to WS - EBWS (ESB services exposed as Web Services) Appendix A - there is nothing in the text that justifies the inclusion of this Appendix - for what the JAXB is used in ESB context?	0	0	https://issues.jboss.org/browse/SOA-971
11101	SOA-971	* "3.2 Figure 3.1 and Figure 3.2 - each describes the same but have different structure (missing pieces in the figures)" Diagrams are derived from the ESB Programmers Guide & I beleive 3.1 is supposed to be a much generalised image. * "3.2.4 The name for any given named object in a message must be unique or an exception will be thrown. - is it really true? How this can happen?" JIRA to verify content in ESB Programmers Guide * "3.2.5 Creating different body types - there is org.jboss.soa.esb.message.body.content.Payload class for this purpose List of different message bodies - there are duplicate items" JIRA to verify content in ESB Programmers Guide * "4.1 Routers are in the section name but are not mentioned in the text - also need to explain difference between routers and notifiers Would be also good to mention that it is not necessary to provide the information to listener - the reference to provider for given transport is typically used JIRA to update content in ESB Programmers Guide * "5 This chapter should contain also Service orchestration section" JIRA to update content in ESB Programmers Guide * "page 73 - Note and page 34 - Note: The latter says that the gateway EPRs are not stored in registry and the former says they are" JIRA to verify/update content in ESB Programmers Guide * "Chapter 10 - the is new style functionality related to WS - EBWS (ESB services exposed as Web Services)" JIRA to update content in ESB Programmers Guide * "Appendix A - there is nothing in the text that justifies the inclusion of this Appendix - for what the JAXB is used in ESB context?" 11102	SOA-970	of features were developed which special focus on language expressiveness, engine performance and tools availability. The following is a list of the most interesting changes. comment ------> "with special focus" ------ 1.1.1. Language Expressiveness Enhancements Fact attributes auto-vivification for return value restrictions and inline-eval constraints comment ------> "auto-verification" comment ------> Style difference between section 1.1.1 - and 1.1.2 - in 1.1.2, (some) feature names begin with Uppercase letters ------ 1.2.1.1. Working Memory creation Drools 3.0.x had only one working memory type that worked like a stateful working memory. Drools 4.0.x introduces separate APIs for Stateful and Stateless working memories that are called now Rule Sessions. comment ------> Drools 3.0.x had only one working memory type that functioned as stateful working memory. Drools 4.0.x introduces separate APIs for Stateful and Stateless working memories. In Drools 4.0.x, stateful working memories are called now Rule Sessions. ------ 1.2.1.2. Working Memory Actions Drools 4.0.x now supports pluggable dialects and has built-in support for Java and MVEL scripting language. In order to avoid keyword conflicts, the working memory actions were renamed as showed bellow: comment ------>1.2.1.2. Working Memory Actions Drools 4.0.x now supports pluggable dialects and has built-in support for Java and the MVEL scripting language. In order to avoid keyword conflicts, the working memory actions were renamed as shown below: ------ 1.2.2. Rule Language Changes The DRL Rule Language also has some backward incompatible changes as detailed bellow. comment ------>The DRL Rule Language also has some backward incompatiblity changes as detailed below: ------ 1.2.2.1. Working Memory Actions The Working Memory actions in rule consequences were also changed in a similar way to the change made in the API. The following table summarizes the change: comment ------> The following table summarizes the changes: ------ 1.2.2.2. Primitive support and unboxing Drools 3.0.x did not had native support for primitive types and consequently, it auto-boxed all primitives in it's respective wrapper classes. That way, any use of a boxed variable binding required a manual unbox. Drools 4.0.x has full support for primitive types and does not wrap values anymore. So, all previous unwrap method calls must be removed from the DRL. comment ------> Drools 3.0.x did not had native support for primitive types, Consequently, it auto-boxed all primitives in their respective wrapper classes. Any use of a boxed variable binding required a manual unbox. Drools 4.0.x has full support for primitive types and does not wrap values. All previous unwrap method calls must be removed from the DRL. ------ 1.2.3. Drools Update Tool The Drools Update tools is a simple program to help with the upgrade of DRL files from Drools 3.0.x to Drools 4.0.x. Currently its main purpose is to upgrade the memory action calls from 3.0.x to 4.0.x, but future versions will conver additional scenarios. It is important to note that it does not perform a simple search and replace in the rules file, but parses the rules file to ensure it is not doing anything unexpected. For this reason t is a safe tool to use for upgrade large sets of rule files. comment ------> Currently its main purpose is to upgrade the memory action calls from 3.0.x to 4.0.x, but future versions will cover additional scenarios. 11103	SOA-969	native speaker review these documents as I'm sure I didn't catch all the spelling errors, typos and stuff. General comments: - Comments in examples are word-wrapped in a way that usually one word overflows to the next line - this leaves tons of unused space on the page and looks unprofessional. If resolved, document gets shorter and better looking. - Also, the color of the comments (along with the background color) makes them very very hard to read. - When talking about specific methods (such as "take" or "execute") it would be cool if these were somehow "annotated" to show this isn't just another text. A Courier font perhaps? - The previous note also applies to class names. The occurences are too many to mention. - When there are comments in XML examples, their opening and closing chars (<>) are not in the usual comment color. - Make sure that, when JBoss is mentioned, it's JBoss and not jboss. The same goes for jBPM, XML etc. - "Justify" text-alignment looks great for print, I suggest we use it. - 3.5.1.1: "Let's define a business process is a description of the way..." (The 'Let's define a business process' should IMHO be quoted.) - 3.7.3: The section is completely void of any information; removal suggested. - 7.1, last listing - completely wrong syntax highlighting. - 8.9: "For an example on how to do this, check out the Fork and Join node implementation in the jbpm source code :-)." (A link would be good, or just remove the smiley to make it look less like we are challenging our customers." - 10.11: "People interested in contributing should check the jboss jbpm jira issue tracker for more details." (URL would be nice, also it's JBoss and jBPM and JIRA.) - 13.6 and 13.7:and 19.3 and perhaps also someplace else: Looks very unprofessional to me to have these "TODO" sections there, some of them don't even provide any information. I suggest re-phrasing or removal. - 15.1.3: "Setting notify to yes, true or on will cause jBPM to send an email to the actor that will be assigned to this task." (The possible values should be separated from the regular text somehow.) - 16.1: "(wow, that a lot of seq's in there :-s)." (Is that really necessary there?) - Index: contains only one item. Is this intentional? Language-wise problems (delimited by asterisks): - 1.6 The JBoss jBPM identity component: "The model used in the identity component is richer th*e*n the traditional servlet-, ejb- and portlet models." - Tutorial: "The examples can also be *fond* in the jBPM download package in the directory src/java.examples." - 3.1.1: "The IDE is buil*d* around the grammar of a language." - 3.1.1: "*Where* ten years ago, the biggest part of a developer was spend on writing code." - 3.1.2.1: "The Graph Oriented Programming implementation technique *is* only targets process languages that are..." - 3.2.3: "Let's assume that the execute implementation of the doubleCheck's task node *is* adds an entry into ..." - 3.2.4: "An Action is also a command*s* with an execute method." - 3.2.4: "All the actions will be executed with the event *fires*." - 3.2.5: "An execution starts when an event is sen*d* to the execution." - 3.2.5: "By default, all of these propagation*'s* are done as nested method calls." (repeated) - 3.2.5: "So the execution can have trave*l*ed over multiple nodes..." - 3.3.2: "Let's go *though* the steps to extend the Graph Oriented Programming model..." - 3.3.3: "An invoke will start *of* a new sub process." - 3.3.4: "The command executor *take* the message from the queue and invokes..." - 3.4.3: "Graph oriented programming on itself does not*'t* support analytical algorithms..." - 3.6: "When the BPM engine can be completely integrated into a software development project and when even the BPM engine's database tables *in* integrated into..." - 3.7.2: "Then other products added and packaged together with the BPM server *to become* a complete BPM suite." - 6.2.4: "This is done to get people up and running as fast as possible without having to worr*ie* about classpaths." - 6.2.4: "Previous incompatibilities between a jboss version and a p*e*rticular ehcache version..." - 6.4: "Make sure that you bind the datasource to an XA datasource in case you're using more th*e*n 1 resource." - 7.1.4: "To execut*ion* this script with DBVisualizer, you select 'Database->Execute'." - 8.3.4: "The first transition for which the conditions resolve*s* to 'true' will be taken." - 8.4: "If more th*e*n one transition has the same name, the first transition..." - 8.8: "The path of execution of the super	0	0	https://issues.jboss.org/browse/SOA-969
11104	SOA-969	Items still to be done: * Dealing with wrapping of source code samples * tagging of methods, classnames * correct capitalisation of product names (I did the few I noticed) "Justify" text-alignment looks great for print, I suggest we use it. I agree but the document style sheets are out of my control. - 16.1: "(wow, that a lot of seq's in there :-s)." (Is that really necessary there?) Not sure what is being referred to here - Index: contains only one item. Is this intentional? I'm not sure that the story is with the index. It isn't something that is manually included. There is an element somewhere that causes the docbook processor to do 'hey I need an index to store this item'.	0	0	https://issues.jboss.org/browse/SOA-969
11105	SOA-969	>> - 16.1: "(wow, that a lot of seq's in there :-s)." (Is that really necessary there?) > Not sure what is being referred to here There is a sentence "(wow, that a lot of seq's in there :-s)." in section 16.1 which, in my opinion, is totally childish and unnecessary. >> "Justify" text-alignment looks great for print, I suggest we use it. > I agree but the document style sheets are out of my control. Would you, please, suggest to the responsible people to include these changes next time? There's also the syntax highlighting issues that I expect are out of your control for the same reason.	0	0	https://issues.jboss.org/browse/SOA-969
11106	SOA-968	More comments: 1.1 http://wiki.jboss.org/wiki/ConfiguringMultipleJBossInstancesOnOneMachine ----> This has moved to: http://www.jboss.org/community/docs/DOC-9384 1.2. JMS Providers The JBoss Enterprise SOA Platform currently supports JBoss Messaging, IBM Websphere MQ Series (version 5.3 and 6.0) and Tibco EMS as Java Message Service (JMS) providers. (We only tested with MQ 6 - where did the 5.3 reference come from?) Each JMSListener and JMSGateway can be configured to use it's own JMS provider so you can use more than one provider in your deployment. (its) 1.2.5. Tibco Enterprise Message Service (EMS) TibcoEMS version 4.4.1 has tested with JBoss SOA (version 5 has been tested too) 1.4. Switching Databases Why don't we mention the schema tool in this section of the document? /jboss-esb/tools/schema <type-mapping>PostgreSQL 7.2</type-mapping> (We only tested with Postgres 8) 1.7. Clustering and Fail-over support Furthermore, in not all gateways have been modified to use the ServiceInvoker, ("not all gateways") 1.8.1. Installing and configuring OpenSSO in Tomcat (Duplicate text) JAVA_OPTS="$JAVA_OPTS "-Xmx1G" "- Djava.util.logging.manager=org.apache.juli.ClassLoaderLogManager" JAVA_OPTS="$JAVA_OPTS "-Xmx1G" "- Djava.util.logging.manager=org.apache.juli.ClassLoaderLogManager" JAVA_OPTS="$JAVA_OPTS "-Xmx1G" "- Djava.util.logging.manager=org.apache.juli.ClassLoaderLogManager" - JAVA_OPTS="$JAVA_OPTS "-Xmx1G" "- Djava.util.logging.manager=org.apache.juli.ClassLoaderLogManager" Example 1.1. Adding max size to JAVA_OPTS JAVA_OPTS="$JAVA_OPTS "-Xmx1G" "- Djava.util.logging.manager=org.apache.juli.ClassLoaderLogManager" Example 1.2. Adding max size to JAVA_OPTS (We should direct the reader to the opensso quickstart as it also describes the opensso installation process.) Chapter 5 The Jboss application server documentation ("JBoss") Sections 6.1.2 and 6.1.4 are different descriptions of the same information. 6.3 JON for SOA Existing archives can be deleted by checking them in the list of Child Resources and clicking DELETE. (We should also tell the reader that they have to "uninventory" the archive to remove it from the JON management console.) see the groovy QuickStart at http://wiki.jboss.org/wiki/Wiki.jsp?page=JBossESBQuickStart ----> This has moved to: http://www.jboss.org/community/docs/DOC-10363 http://wiki.jboss.org/wiki/Wiki.jsp?page=JBossESBContentBasedRouting ----> This has moved to: http://wiki.jboss.org/wiki/Wiki.jsp?page=JBossESBContentBasedRouting	0	0	https://issues.jboss.org/browse/SOA-968

#	Requirement	Questions	Answered	Successfully Answered	URL
11107	SOA-968	All these items have been updated with the exception of: 1.4. Switching Databases Why don't we mention the schema tool in this section of the document? /jboss-esb/tools/schema <type-mapping>PostgreSQL 7.2</type-mapping> (We only tested with Postgres 8) The schema tool is not not refered to in the source doc (ESB Admin Guide), that is why it's not here. Should we create a JIRA for someone to create that content ? what should the type-mapping be? <type-mapping>PostgreSQL 8</ type-mapping> or <type-mapping>PostgreSQL 8.0</ type-mapping> or something else?	0	0	https://issues.jboss.org/browse/SOA-968
11108	SOA-968	I've added some content in for the schema tool. Do we still want to include the step-by-step instructions as well.	0	0	https://issues.jboss.org/browse/SOA-968
11109	SOA-953	Will we see any functional impact of this change? For example, in the JON console?	0	0	https://issues.jboss.org/browse/SOA-953
11110	SOA-931	SOA-898 looks like it is just a naming problem for the jar (currently SNAPSHOT). Are you still intending to modify the jar version as part of the build? Will it still be in step with the SOA-P version?	1	1	https://issues.jboss.org/browse/SOA-931
11111	SOA-918	I'm confused. Am I looking at the wrong thing? The only references I can find (in IR5) is this, which says the column is 255 characters, not 2000 , "ACCESS_POINT_URL VARCHAR(255) NULL" jboss-as/server/production/deploy/juddi-service.sar/META-INF/ddl/juddi_create_db.ddl CREATE TABLE BINDING_TEMPLATE (SERVICE_KEY VARCHAR(41) NOT NULL, BINDING_KEY VARCHAR(41) NOT NULL, ACCESS_POINT_TYPE VARCHAR(20) NULL, ACCESS_POINT_URL VARCHAR(255) NULL, HOSTING_REDIRECTOR VARCHAR(255) NULL, LAST_UPDATE TIMESTAMP NOT NULL, PRIMARY KEY (BINDING_KEY), FOREIGN KEY (SERVICE_KEY) REFERENCES BUSINESS_SERVICE (SERVICE_KEY));	0	0	https://issues.jboss.org/browse/SOA-918
11112	SOA-918	What's the status?	0	0	https://issues.jboss.org/browse/SOA-918
11113	SOA-916	I don't want to move this out any further. Can we have this in CP04 please?	0	0	https://issues.jboss.org/browse/SOA-916
11114	SOA-911	Hiya Ian. Could you please clarify what further manifest properties are used by JON and what values are expect? For example, how would you determine that this was a SOA version of run.jar rather than an EAP version? Would the suffix be sufficient? It would be better to nail all these in one go. Thanks	1	1	https://issues.jboss.org/browse/SOA-911
11115	SOA-911	Thanks Ian. It looks like we may only have one outstanding issue in that case, differentiating between our two servers. The configurations we have are - standalone with a default configuration of 'default' - embedded with a default configuration of 'production' From what I can see from your last comment, you only (currently) cater for the embedded version and are not capable of handling the standalone version. Is this correct? If we are then to distinguish between standalone and embedded for the purpose of updating, does this mean that we must use different Implementation-Version strings? Perhaps 4.3.0.GA_SOA and 4.3.0.GA_SOA_STANDALONE? If I have understood your previous comments then this would appear to remove any clashes during the update process but, obviously, would not handle the different default configuration names. Thanks again, Kev	0	0	https://issues.jboss.org/browse/SOA-911
11116	SOA-880	Where are we with this one?	0	0	https://issues.jboss.org/browse/SOA-880
11117	SOA-877	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-877
11118	SOA-872	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-872
11119	SOA-867	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-867
11120	SOA-860	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-860
11121	SOA-855	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-855
11122	SOA-852	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-852
11123	SOA-844	Can we have confirmation that fixes are in place for 4.2CP03.	0	0	https://issues.jboss.org/browse/SOA-844
11124	SOA-842	This is due to the issue that we reported at: https://jira.jboss.org/jira/browse/SOA-731. so we will have opensso deployed in the tomcat in soa-p 4.3 release. does it make sense we add this explanation in the documentation? if it is, I can update it and then ask Darrin to help me updated in the doc book.	0	0	https://issues.jboss.org/browse/SOA-842
11125	SOA-841	Is this in the ESB docs or just the SOA-P docs?	0	0	https://issues.jboss.org/browse/SOA-841
11126	SOA-826	Also what document should this information be in? Service Guide?	0	0	https://issues.jboss.org/browse/SOA-826
11127	SOA-826	I need some idea of what is happening with this JIRA so I can schedule docs work for 5.0.1 What volume of material? e.g. how many pages, diagrams, etc When will draft material be ready ?	1	0	https://issues.jboss.org/browse/SOA-826
11128	SOA-825	Can we just include it "as is"?	0	0	https://issues.jboss.org/browse/SOA-825
11129	SOA-825	What is the status of this? We either include the docs in the next few days or push this out. It can't hold up the release. Worst case: let's include a link to the Smooks docs!	0	0	https://issues.jboss.org/browse/SOA-825
11130	SOA-818	The stacktrace would suggest that the database has not been initialised correctly, specifically that the classification scheme cannot be located. From the scout code public void setClassificationScheme(ClassificationScheme cscheme) throws JAXRException { scheme = cscheme; /* * not 100% clear, but I *think* the JavaDoc indicates that if * our internality dictates that of the scheme. */ 103: ((ClassificationSchemeImpl) scheme).setExternal(isExternal()); } So scheme must be null. public Classification createClassification(ClassificationScheme scheme, InternationalString name, String value) throws JAXRException { Classification cl = (Classification) this.createObject(LifeCycleManager.CLASSIFICATION); 198: cl.setClassificationScheme(scheme); cl.setName(name); cl.setValue(value); ((ClassificationImpl) cl).setExternal(true); return cl; } public Classification createClassification(ClassificationScheme scheme, String name, String value) throws JAXRException { 210: return createClassification(scheme, this.createInternationalString(name), value); } So this value of scheme has come from the JAXRegistryImpl ClassificationScheme cScheme = bqm.findClassificationSchemeByName(findQualifiers, "org.jboss.soa.esb.:category"); Collection<Classification> classifications = new ArrayList<Classification>(); 425: Classification classification = blm.createClassification(cScheme, "category", category); So the scheme is obtained from scout/jUDDI and would appear to be null. Does this classification exist in the jUDDI database? If not, why not?	1	1	https://issues.jboss.org/browse/SOA-818
11131	SOA-818	How is this classification created in the UDDI directory? Is the ESB supposed to create it at startup time?	0	0	https://issues.jboss.org/browse/SOA-818
11132	SOA-818	Do we need to setup categories, etc in SOA Software before starting up the ESB. Similar to how the jUDDI database is initialized?	0	0	https://issues.jboss.org/browse/SOA-818
11133	SOA-818	Tom, is there any way that this can be handled automatically?	1	1	https://issues.jboss.org/browse/SOA-818
11134	SOA-816	I'll add this in the Administration Guide in the Monitoring section is there also a config xml file where this can be set ?	0	0	https://issues.jboss.org/browse/SOA-816
11135	SOA-764	This doesn't sound like it is critical for this release. Correct?	0	0	https://issues.jboss.org/browse/SOA-764

#	Requirement	Questions	Answered	Successfully Answered	URL
11136	SOA-759	"The war file created to automatically expose ESB services through a webservice endpoint does not contain a dependency on the esb archive." This is a specific war file that ships in SOA for this purpose? filename? "the esb archive" in this context is the jbossesb.sar ? This is only an issue if "the esb archive has failed to deploy cleanly". In JBESB-1972 this was due to misconfiguration of, this would also be a factor for otherwise messed up deployments of the ESB into an existing JBossAS deployment?	0	0	https://issues.jboss.org/browse/SOA-759
11137	SOA-731	What solution was implemented for this JIRA? The user still has to install/use Tomcat and deploy OpenSSO to it, yes?	1	1	https://issues.jboss.org/browse/SOA-731
11138	SOA-731	Hi Len, For the readme.txt file update, do you mean add the 'steps 1-6 refer to installing opensso with Tomcat: ' sentence in the file?	0	0	https://issues.jboss.org/browse/SOA-731
11139	SOA-719	just add this note to known issues in release notes? Are there any other specific places where you know it should be noted?	0	0	https://issues.jboss.org/browse/SOA-719
11140	SOA-715	Can you please record the status here? Thanks.	0	0	https://issues.jboss.org/browse/SOA-715
11141	SOA-715	JBPM console works well with JDK 6. I did not find any error when I did the following test : 1. deploy a new processes. 2. mointor the processes status , start/delete a new process instance 3. manually control the task and monitor the task status 4. delete and monitor the all jobs and timers	1	1	https://issues.jboss.org/browse/SOA-715

11149	SOA-641	No changes? how can i use MySql database with no changes?	0	0	https://issues.jboss.org/browse/SOA-641
11150	SOA-640	Email sent to soa-engineering-list@redhat.com Hi, trying to get some info together on the SOA platform hardware requirements. I didn't think there would be much point with actual minimum requirements, as people would never actually run that. So I was thinking of a base line of "small to medium single application deployment". CPU: the only references I can find say a 'modern CPU', what should JBoss consider to be the baseline for 'modern'? P4? multi-core? is there any material on other platforms? SPARC, Itanium, PowerPC ? or anyone know of a good comparison reference ? does it matter? Harddrive (based on unzip downloads): standalong ESB: 220meg Full SOA (ie EAP+ESB): 600meg + space for logs Memory: Any recommendations for RAM for standalone ESB & full SOA with "small to medium single app" ? The SOA 4.2 getting started guide says: 768meg (addition to OS & other software requirements) with unspecified load This JIRA SOA-640 recommends 1Gig for EAP as a GUI-less server for "small to medium single app deployment" Darrin.	0	0	https://issues.jboss.org/browse/SOA-640
11151	SOA-640	Proposed inclusion: SOA Platform Hardware Requirement Recommendations ========== These recommendations do not represent an absolute minimum requirement for running the SOA Platform but rather presents a baseline for reasonable performance. The SOA Platform will run on far lesser hardware although your performance will suffer accordingly. Also note that performance is affected by other factors such as the sub-systems of the hardware platform. When using 'non-server class' hardware such as a laptop for development & testing, performance results may be less than those when deployed in your production environment. These guidelines also do not take into account the requirements of the server's operating system or other applications, nor does it include your own applications and services deployed on the SOA Platform. It is the developers' responsiblity to provide performance requirements for their own services & applications to be deployed. CPU === Minimum: Pentium4 class. Recommended: Dual-core or greater. MEMORY ====== 1 Gigabyte of memory is a recommended minimum. Increasing memory is often the most effective means of increasing performance. STORAGE SPACE ============= The full installation of the SOA Platform server requires 600 megabytes of harddrive space. The standalone ESB server only requires 220 megabytes of space. You will also require additional space for log files. 10 Gigabytes is considered adequate for a production environment with log rotation configured.	0	0	https://issues.jboss.org/browse/SOA-640

#	Requirement	Questions	Answered	Successfully Answered	URL
11152	SOA-628	Couple of things need to be verified here. 1) transactions. are the JTA transactions properly integrated with jBPM ? Is there a retry policy for transactions that failed because of optimistic locking failures ? Does it work correctly for rollback scenarios in case of different resources being used by ESB and jBPM and... 2) suite setup. in jpdl-suite, we have tried to create an easy-to-unzip distribution that contains out of the box, jbpm runtime installation, jbpm deployed on jboss with a preloaded jBPM DB containing an example and some example users. and the designer. The preconfigured database, the examples and the documentation needs to be reviewed. Maybe the jBPM build can be improved so that it is easier to build the SOA platform and so that the examples of jBPM 3 actually get tested automatically.	1	0	https://issues.jboss.org/browse/SOA-628
11153	SOA-628	Thomas, where does this currently stand?	0	0	https://issues.jboss.org/browse/SOA-628
11154	SOA-628	For completeness ;) (15:05:06) tdi: I want to have a look at https://jira.jboss.org/jira/browse/SOA-628 (15:05:21) kconner: ok (15:05:31) tdi: whats the esb bracnch I should be using? (15:05:46) kconner: You need to be using a SOA release (15:06:01) kconner: The SOA guys build jBPM and overlay ours (15:06:15) kconner: Which version are you looking at? (15:06:19) kconner: SOA 4.3 GA? (15:06:54) tdi: I'd like to create ESB/jBPM3 integration tests somewhere (15:07:05) kconner: ?? (15:07:59) tdi: shall we talk on the phone for a sec? this might be quicker (15:08:38) kconner: Sorry, I thought the purpose of the task was for someone to check the configuration of jBPM under SOA (15:08:42) kconner: Is that not correct? (15:09:05) kconner: Any 'integration' tests would just be between the jBPM configuration and the SOA platform, not ESB (15:09:27) kconner: Trevor has pasted the download link into #jbosssoa (15:09:44) tdi: There is a jBPM action in the ESB, right? (15:10:13) kconner: Only for sending to an ESB service, nothing more (15:10:20) kconner: We already have tests for that (15:10:27) kconner: This issue is not related to that action (15:11:52) tdi: If I want to answer the question "are JTA transactions properly integrated with jBPM", where do I create a test for that? (15:12:23) kconner: You create any jBPM specific test to see whether the transaction configuration of the job scheduler is correct (15:12:40) kconner: That is the issue (15:12:58) tdi: ok, where do I do that? (15:13:00) kconner: This is about generic jBPM and its configuration, nothing more (15:13:35) kconner: I would guess that the correct place for jBPM tests is within jBPM (15:13:45) kconner: If it is SOA specific then you may want to ask Trev to add it to their build (15:13:48) kconner: (or QE) (15:14:01) kconner: There is no ESB involvement with this (15:14:16) tdi: ok, thanks (15:15:27) kconner: If you do want to look at the ESB code then I can point you in the right direction (15:15:39) kconner: But I think the real issue is the jBPM configuration within SOA (15:15:41) tdi: yes, please (15:17:00) kconner: The current SOA code is http://anonsvn.jboss.org/repos/labs/labs/jbossesb/workspace/platform/JBESB_4_4_SOA_4_3_GA/product/services/jbpm/src/main/java (15:17:08) kconner: I am going to go through it soon and simplify it	1	0	https://issues.jboss.org/browse/SOA-628
11155	SOA-628	Tom, could you please reassign appropriately.	1	0	https://issues.jboss.org/browse/SOA-628
11156	SOA-623	I think the title of this issue needs fixing as it doesn't make sense ;-) (replace jboss-esb with jboss-esb?)	0	0	https://issues.jboss.org/browse/SOA-623
11157	SOA-623	Darrin, where - in which files and/or docs - were these changes made? I'm seeing references to SOA_ROOT, but not ESB_ROOT. (Which actually seems OK - do we have any docs that refer to ESB_ROOT?) GettingStarted Guide: To use the POP3 gateway, replace the mail-ra.rar in ${SOA_ROOT}/server/${CONFIG}/deploy/ with the mail-ra.rar from the directory seam/mail/. Admin Guide: jcr.jndi.path - optional path in JNDI where the repository is found. If this property is not specified, a new repository will be created based on ${SOA_ROOT}/server/${CONFIG}/deploy/ jbossesb.esb/repository.xml , and the repository data will be stored in ${SOA_ROOT}/server/${CONFIG}/data/repository/	0	0	https://issues.jboss.org/browse/SOA-623
11158	SOA-613	Where in the documentation this should be added ?	0	0	https://issues.jboss.org/browse/SOA-613
11159	SOA-613	Still don't know where to put this. Services Guide? Release Notes? Supported ActiveEndpoints BPEL Engine ========== The following versions of the ActiveEndpoints ActiveBPEL Engine are supported on the JBoss Enterprise SOA Platform: * ActiveBPEL 5.0 * ActiveBPEL 4.1 * ActiveBPEL 4.0 * ActiveBPEL 3.1 * ActiveBPEL 3.0 * ActiveBPEL 2.1 * ActiveBPEL 1.2 They can be downloaded from the ActiveEndpoints website at: http://www.activevos.com/community-open-source-engine-download.php The ActiveEndpoints ActiveBPEL Engine open-source license terms can be found here: http://www.activevos.com/community-open-source-license.php	0	0	https://issues.jboss.org/browse/SOA-613
11160	SOA-613	Feedback received: Looking at https://jira.jboss.org/jira/browse/JBESB-1852, it looks as though v5.0.2 is the latest version known to work with ActiveBPEL. As for a full list of versions... I wouldn't have that. Regards, T. Darrin Mison wrote: > Hi, can you confirm what versions of ActiveEndpoints BPEL Engine have > been tested against. > This is for the 4.3GA docs.	0	0	https://issues.jboss.org/browse/SOA-613
11161	SOA-577	Hi Trevor. so what are we going to do regarding this jira? Remove these demos that didt work or add dependencies that required by these failed demos or what?	0	0	https://issues.jboss.org/browse/SOA-577
11162	SOA-570	Please could you have a look on this?	1	1	https://issues.jboss.org/browse/SOA-570
11163	SOA-570	Unfortately I can't use phrases like "vice versa" because they don't translate well. New content: Once a queue is undeployed you cannot deploy a new queue with the same name if one of the queues was a clustered queue and the other queue was not. You must delete the destination from the JBM_POSTOFFICE table before the new queue can be deployed successfully.	0	0	https://issues.jboss.org/browse/SOA-570
11164	SOA-554	Question - are we seeing a related issue with MS-SQL Server DB - where the limit is 8K?	0	0	https://issues.jboss.org/browse/SOA-554
11165	SOA-554	Can you check tha value of @@TEXTSIZE parameter?	0	0	https://issues.jboss.org/browse/SOA-554
11166	SOA-554	Release notes: 7.1. Sybase database cuts the payload according to pagesize by default When a database is created Sybase sets the maximum size of text and image datatypes to the default page size of 2 KB. The longer message payload is truncated without any information or warning. The database parameters have to be updated to change the page size. Further information: http://jira.jboss.com/jira/browse/SOA-554 | http://jira.jboss.com/jira/browse/SOA-553 Is this ok? Or do you want something about MS SQL Server, as well?	0	0	https://issues.jboss.org/browse/SOA-554
11167	SOA-550	The CP02 CR1 build Getting Started Guide includes this text: ---------- 6. Delete the following files and directories from the development/deploy directory: ? cluster-service.xml ? deploy-hasingleton-service.xml ? ejb3-clustered-sfsbcache-service.xml ? httpha-invoker.sar ? jboss-web-cluster.sar ? deploy-hasingleton ? farm ---------- The last two lines should be moved (deploy-hasingleton, farm) - these files/dirs are not in server/development/deploy, but are in server/development	0	0	https://issues.jboss.org/browse/SOA-550

11176	SOA-508	Do you have some specific examples that you could share with us? cheers, --josh	0	0	https://issues.jboss.org/browse/SOA-508
11177	SOA-507	Could you please give the incorrect sentence and perhaps some context around it so that I can grep for it. thanks, -josh	1	1	https://issues.jboss.org/browse/SOA-507
11178	SOA-507	seamframework.org is the project site. The jboss.com site has been previously updated so that most of the links go to seamframework.org for the latest information. Pointing to the .com site should be fine as long as is it updated. Who's responsibility is that?	1	1	https://issues.jboss.org/browse/SOA-507
11179	SOA-487	Can you please comment on whether this is still required or obsolete. If it obsolete can you close as such, otherwise can you re-affirm and re-assign to me.	0	0	https://issues.jboss.org/browse/SOA-487
11180	SOA-465	It's close - but not the same. Is this a 'major' priority problem? JMX Console: 4.2.0.GA_CP02_SOA (build: SVNTag=SOA_4.2.0.GA_CP02 date=200806090827) run.jar: Implementation-Version: SOA_4.2.0.GA_CP02 (build: SVNTag=SOA_4.2.0.GA_CP02 date=200806090827)	0	0	https://issues.jboss.org/browse/SOA-465
11181	SOA-462	1.5GB is too large. Will remove all the .svn directories. That should halve the size: mkdir soa-4.2.0 && \ (cd soa-4.2.0 && \ svn co https://svn.corp.jboss.com/repos/soa/trunk/src-tools && \ mv src-tools/* . && \ rm -rf src-tools && \ svn co https://svn.corp.jboss.com/repos/soa/tags/4.2.0GA/build-tools && \ find build-tools -name .svn -exec rm -fr {} \; -prune && \ (cd build-tools && ant materialize.projects) && \ find soa-work -name .svn -exec rm -fr {} \; -prune) && \ find soa-4.2.0 | zip soa-4.2.0.zip -@ && \ md5sum soa-4.2.0.zip > soa-4.2.0.zip.md5	1	1	https://issues.jboss.org/browse/SOA-462
11182	SOA-457	Jervis: I did see a QS named bpm_orchestration4 in jbossesb-server-4.3.GA kit built by myself using trunk. Shall I say this jira can be closed now? Trevor: It looks like it's in the trunk but not in the platform branch. Assign it to me and I'll investigate further.	1	1	https://issues.jboss.org/browse/SOA-457
11183	SOA-454	Can I have some information on this issue for the TP_FP01 release notes please? thanks, --josh	1	0	https://issues.jboss.org/browse/SOA-454
11184	SOA-428	Well GA is out already so I care more about SP1 or whatever next version will be. Weren't we going to have a branch for each project?	0	0	https://issues.jboss.org/browse/SOA-428
11185	SOA-428	Can we close this issue?	0	0	https://issues.jboss.org/browse/SOA-428

#	Requirement	Questions	Answered	Successfully Answered	URL
11186	SOA-428	Alex - are you all set with this? Trevor - isn't this the branch for CP01? https://svn.labs.jboss.com/labs/jbossesb/workspace/platform/JBESB_4_2_1_SOA_4_2/	0	0	https://issues.jboss.org/browse/SOA-428
11187	SOA-422	Are there any other open JIRAs against these issues that I can refer to? Is there a way for the user to distinguish between the spurious WARN and ERROR messages and important ones?	1	1	https://issues.jboss.org/browse/SOA-422
11188	SOA-421	Jiri, could you please update this JIRA with more information, or a pointer to source JIRAs for more information. thanks --josh	1	1	https://issues.jboss.org/browse/SOA-421
11189	SOA-421	What's the roadmap for stateful action replication in a clustered environment? Is there one? Is there a pointer that I can give to more information on developing a replicating stateful action?	1	1	https://issues.jboss.org/browse/SOA-421
11190	SOA-405	Josh, can you add this to the online docs for GA and then pull it into the docs for the CP release?	0	0	https://issues.jboss.org/browse/SOA-405
11191	SOA-377	Josh, we may be creating a workaround for this issue. Can you hold off on this until I get back to you?	0	0	https://issues.jboss.org/browse/SOA-377
11192	SOA-375	jUDDI / Scout compatibility between JBoss Enterprise SOA Platform and JBoss Enterprise Application Platform During testing of the JBoss Enterprise SOA Platform it did not pass a number of JAXR Scout tests from the JBoss Enterprise Application test suite. This indicates that there may be differences between the jUDDI / Scout implementations that affect applications. At this stage there are no known instances of these differences affecting applications. However, if you find an affected application, please inform us. Further Information: http://jira.jboss.com/jira/browse/SOA-354	0	0	https://issues.jboss.org/browse/SOA-375
11193	SOA-359	That version should be from BRANCH_3_2_2_SOA_4_2, right?	0	0	https://issues.jboss.org/browse/SOA-359
11194	SOA-327	Do I have this right: jboss-soa-p.4.2.0/jboss-as/server/all/deploy/jbpm.esb/jbpm-console.war jboss-soa-p.4.2.0/jboss-as/server/production/deploy/jbpm.esb/jbpm-console.war are both the secure war that should be used in production. jboss-soa-p.4.2.0/jbpm-jpdl/deploy/jbpm-console.war is the "insecure" war file to be used for development. To switch from the default secured war a user should copy the currently deployed one from /server/production/deploy/jbpm-console.war to another folder as jbpm-console.war.secure (can they do this in place? i.e: can they simply rename the file like this) and copy in the jbpm-jpdl version. Rinse, lather, and reverse to go from insecure to secure?	1	1	https://issues.jboss.org/browse/SOA-327
11195	SOA-325	My thoughts from an email: SOA-P is based on EAP-4.3, but beside patches available for this EAP version, we will have patches strictly related to the SOA-P - for "subcomponents" like esb, smooks, drools, ... which are not present in EAP. Are we going to double the bits available for download? If no subcomponents are involved for a particular CP then we will have one CP for EAP-4.3 and the same CP available for SOA-P. Or do we want to have all CPs for EAP-4.3 also available for SOA-P and additionally another CP for SOA-P "subcomponents"? I don't think that would make sense. Maybe another approach: Create CPs only for SOA-P which would be also applicable for EAP-4.3. Even if the CP would contain patches for esb, drools, etc, it wouldn't affect the EAP-4.3 because these bits aren't there and would be ignored. The version string for SOA-P is currently the same as in EAP 4.3.	1	1	https://issues.jboss.org/browse/SOA-325
11196	SOA-290	Tom, could you please reassign appropriately.	0	0	https://issues.jboss.org/browse/SOA-290
11197	SOA-236	Trev, can you talk to Mike and one of you look at this as a priority in the new year? When I asked Ryan who did this for EAP he said: "Mr. Crouch spec'd it & implemented the JON logic. I implemented the build tooling. This repsonsibility has now been transfered to release engineering (Chris O'Brien)." So that should give you a handle on contact points.	0	0	https://issues.jboss.org/browse/SOA-236
11198	SOA-235	Why is this a bad thing to bundle the jbpm framework ?	1	0	https://issues.jboss.org/browse/SOA-235
11199	SOA-235	Coming back to this issue. How do you want to solve the problem of a tool supporting multiple runtimes at the same time and offering code completion and 'ctrl-click' functionality to view sources of classes if you don't include these sources? Also, this is really only a matter of what you want to offer your users. If you don't include the sources, than the editor and the create process wizard will still work, only they will not be able to create 'jbpm projects'.	1	1	https://issues.jboss.org/browse/SOA-235
11200	SOA-235	koen - is it actually *all* the sources that is needed or is it like with seamgen in seam where we will extract the "template" part to use for tooling independent of the runtimes... anyway this is a general problem we have that the runtimes are not dev-friendly, but primary prod-friendly. Something we should find a good solution for since it is relevant for all projects.	0	0	https://issues.jboss.org/browse/SOA-235
11201	SOA-235	Is src attachement to classpath the *only* feature this is for ? I thought you had some templates or something you needed from the distribution ?	0	0	https://issues.jboss.org/browse/SOA-235
11202	SOA-235	this would be a big work. i don't think it's worth doing it on the jBPM 3 codebase. we will make sure that this works in jPDL 4. but the solution is not yet clear to me. on the one hand, you want the plugin not to have a dependency on the runtime for creating a new template process eclipse project. on the other hand, we want the jpdl runtime download to contain a command line tool for creating a new template process eclipse project so do we want to end up with 2 versions of the runtime ? one that is contained within the designer and one on the filesystem ? here's my thoughts on this: * if the designer needs things from a runtime, it should get it from a runtime installation on the file system. * runtime should be able to create a new eclipse template project for working with processes (command line tool) * designer should be able to invoke that command line tool from the designer * optionally, the designer could have a new process project that doesn't have a dependency on the runtime. this would be the case for process modelling only. at this point we're not sure yet to what extend this will be realized in the next jPDL 4 designer version.	0	0	https://issues.jboss.org/browse/SOA-235
11203	SOA-235	Who wants command line creation of jbpm specific projects ? I still have not understood what the dependency is all about except the wish to have source attachements in the classpath container - that is not a critical thing and should be handled in a different way IMO (but again that is a future thing) So I ask again: What is the *exact* dependency on the runtime dir in jbpm (besides source attachments) ? e..g for Seam it iis that we tempaltes in the seam-gen dir that we use in our Eclipse Wizards - main functionallity that would not work without a "runtime dir".	1	0	https://issues.jboss.org/browse/SOA-235
11204	SOA-234	Can we close this issue now?	0	0	https://issues.jboss.org/browse/SOA-234
11205	SOA-195	care to elaborate why this is the case? I'm very curious	0	0	https://issues.jboss.org/browse/SOA-195
11206	SOA-182	Yes, but then they have CORBA that is supported in EAP all and production profiles, but not default. So how is this any more confusing?	0	0	https://issues.jboss.org/browse/SOA-182
11207	SOA-180	Is this still an issue? Did SOA-205 fix it?	0	0	https://issues.jboss.org/browse/SOA-180
11208	SOA-151	Wouldn't it be sufficient to run the WS tests against JBAPP?	0	0	https://issues.jboss.org/browse/SOA-151

#	Requirement	Questions	Answered	Successfully Answered	URL
11209	SOA-151	What we really need to do is to run the tests in both a JBPAPP and SOA-P configuration: * Running the tests against a "vanilla" JBPAPP system will give us a baseline for throughput * We can then compare that set of throughput baseline numbers against the same tests running on a SOA-P system - we would hope to not see either functional problems not seen on the JBPAPP system and we would hope to see no significant degredation in throughput for the tests running on a SOA-P system as compared to the JBPAPP system	1	0	https://issues.jboss.org/browse/SOA-151

11214	SOA-53	Jarek and Fernando - is this issue still open? Should it still go into the rel notes?	0	0	https://issues.jboss.org/browse/SOA-53
11215	SOA-45	please see http://hudson.qa.jboss.com/hudson/view/SOA/job/drools-4.0.2_SOA-4.2_branch/ Mark, can you verify we run all necessary tests against the SOA-P drools bits? http://hudson.qa.jboss.com/hudson/view/SOA/job/drools-4.0.2_SOA-4.2_branch/64/testReport/	1	1	https://issues.jboss.org/browse/SOA-45
11216	SOA-45	what do you mean by "all remaining tests", can you point to any jiras? Are these new tests? What kind of tests? BTW, in my comment above, by "all necessary tests", I meant all necessary tests included in the native drools testsuite.	1	1	https://issues.jboss.org/browse/SOA-45
11217	SOA-45	Below is an URL to results for running the testsuite against the current SOA-P bits: http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-rules-testsuite-single/93/testReport/ All errors will go away, when we use finally the correct drools bits in SOA-P, beside two issues which come up only when using JANINO: Could you please have a look at them? http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-rules-testsuite-single/93/testReport/org.drools.compiler/Java5Test(JANINO)/testJava5Rule/ http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-rules-testsuite-single/93/testReport/org.drools.integrationtests/MiscTest(JANINO)/testWithInvalidRule/ Thanks	1	1	https://issues.jboss.org/browse/SOA-45
11218	SOA-45	According the latest test the configuration isn't founding janino library, could someone take a look or help me with? http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-rules-testsuite-single/95/	1	1	https://issues.jboss.org/browse/SOA-45
11219	SOA-45	What is the status of this issue?	1	1	https://issues.jboss.org/browse/SOA-45
11220	SOA-45	Is there a JIRA for the failed tests?	0	0	https://issues.jboss.org/browse/SOA-45
11221	SOA-43	Should I assign this to Fernando to work on?	0	0	https://issues.jboss.org/browse/SOA-43
11222	SOA-43	Fernando - can you add this to the short list of other Drools issues that you are working on? Thanks...	1	0	https://issues.jboss.org/browse/SOA-43
11223	SOA-43	I need to create a unit test to include this, where can I find some example on how write tests against soa-p?	0	0	https://issues.jboss.org/browse/SOA-43
11224	SOA-11	Len, can you email me about this?	0	0	https://issues.jboss.org/browse/SOA-11
11225	SOA-9	Yes, it would be extremely helpful/nice if we would be able to cut down these dependencies somewhat. Would it be possible to isolate what dependencies are actually _needed_ to complete the build?	0	0	https://issues.jboss.org/browse/SOA-9
11226	SOA-4	Received svn commit access today (Aug 24 2007). Some questions: Will this repository be a mirror of https://svn.labs.jboss.com/labs/jbossesb/trunk? (plus the tests that we add) I just tried to access https://svn.corp.jboss.com/repos/soa/ - the only link there is "admin" - when I tried to access it I received a 403 Forbidden - You don't have permission to access /repos/soa/admin/ on this server error.	0	0	https://issues.jboss.org/browse/SOA-4
11227	SOA-2	Can we add some automatic profiling to CI?	1	1	https://issues.jboss.org/browse/SOA-2
11228	JBEWS-455	Permaine, the only information I have at present is this: Enterprise Web Server is now distributed with Red Hat Signed JARs Red Hat signed JARs mean you can be confident that your product distribution is exactly the distribution that was shipped by Red Hat. Is this sufficient? More information about the benefits of signed JARs might be helpful.	0	0	https://issues.jboss.org/browse/JBEWS-455
11229	JBEWS-452	Assigning to you for the exact commands required for each of the above installations. Which would be the most common use cases and in what order should they be included?	0	0	https://issues.jboss.org/browse/JBEWS-452
11230	JBEWS-444	Mladen, could you please take a quick look to see if the attached patch is good for 2.2.17? Thanks!	1	1	https://issues.jboss.org/browse/JBEWS-444
11231	JBEWS-444	httpd22-2.2.17-5.ep5.el4, httpd-2.2.17-5.1.ep5.el5 and httpd-2.2.17-5.1.ep5.el6 built in Brew with the patch. Mladen has also added the patch to the Hudson builds, will be in the build tomorrow. Marking as resolved.	0	0	https://issues.jboss.org/browse/JBEWS-444
11232	JBEWS-439	Documented as a known issue in EWS 1.0.1 release notes.	0	0	https://issues.jboss.org/browse/JBEWS-439
11233	JBEWS-439	This feature is verified to be provided on all platforms in the EWS 1.0.2 release with a known bug on RHEL-4 JBPAPP-6282 . Closing issue.	0	0	https://issues.jboss.org/browse/JBEWS-439
11234	JBEWS-439	I have included this in the New With This Release section of the RNs for 1.0.2 as so: Apache httpd 2.2 contains support for Online Certificate Security Protocl (OCSP). Is this the right place for it? Is there anything else you would like to see written about it? Thanks.	1	0	https://issues.jboss.org/browse/JBEWS-439
11235	JBEWS-429	I've got a program: {code}int main(void) { printf("%s\n",apr_version_string()); }{code} Solaris: {code}# ./apr 1.4.2{code} RHEL5: {code}$ ./apr 1.2.7{code} Why do we use a different apr version on solaris and RHEL? Wouldn't it be less engineering for everybody to support same version?	0	0	https://issues.jboss.org/browse/JBEWS-429
11236	JBEWS-429	If this issue is resolved, does the documentation need to advise that aprutils and apr are required to be installed? ie: https://issues.jboss.org/browse/JBPAPP-3293 Thanks.	0	0	https://issues.jboss.org/browse/JBEWS-429
11237	JBEWS-417	Hi Juraci, and Rajesh, thanks for your comments. @Rajesh, I have removed the references to Validator and Search in the additional modules section of the Annotations Guide. @Juraci, I changed EJB3 to JPA where I could, but I am not familiar enough with the subject to be confident of my changes. Could you please look over the new copy(ies) on stage and let me know A) If I have made a complete mess and B) Where I have missed EJB3--> JPA? There are a number of methodnames etc that I have not changed. I have added a note to the release notes in New With This Release warning customers that JTA is not supported with EWS; would you like to see notes in all of the books as well, or is the RNs sufficient? I have removed the Setup section advising that the compatibility matrix be consulted. Please let me know if I need to replace it. I have made the change from RESOURSE_LOCAL To RESOURCE_LOCAL Thanks again for your feedback.	1	1	https://issues.jboss.org/browse/JBEWS-417
11238	JBEWS-417	Hello Rebecca, I think I'm still seeing the old document: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/1.0/html-single/Hibernate_Entity_Manager_Reference_Guide/index.html Can you please confirm it's the right location?	1	1	https://issues.jboss.org/browse/JBEWS-417

#	Requirement	Questions	Answered	Successfully Answered	URL
11239	JBEWS-416	One of my RHEL friends gave me these lines: [root@localhost sbin]# /usr/sbin/groupadd -g 91 apache [root@localhost sbin]# /usr/sbin/useradd -s /bin/sh -d /home/apache -u 91 -g apache -G apache apache are they correct, should they be in the docs.	0	0	https://issues.jboss.org/browse/JBEWS-416
11240	JBEWS-413	Hi Eva, can you please verify the progress on this, and resolve, please? Thanks.	0	0	https://issues.jboss.org/browse/JBEWS-413
11241	JBEWS-410	Laura, can you please let Jim know of the location of the EWS docs? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBEWS-410
11242	JBEWS-410	Permaine, who would be the best person to get this information from? Currently we have no docs for EWS except the Release Notes. Do we need a separate guide, possibly a common tasks guide of some sort?	0	0	https://issues.jboss.org/browse/JBEWS-410
11243	JBEWS-410	Sorry, I meant the Release Notes, the info is in there. Can you please let us know where the Release Notes is located? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBEWS-410
11244	JBEWS-407	Mladen, can we get rid of the duplicate javadocs in the Solaris/Windows builds? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBEWS-407
11245	JBEWS-407	Documentation is produced as part of build process. For example make install for httpd creates the documentation as well. The final documentation for windows also has DOS line endings which makes it more familiar to the windows users. I would leave that to our customers to decide weather they wish the single download package or multiple packages that would require the careful drop in inside the installation tree to have working and browsable documentation. Since this is certainly not an technical issue, we can discuss to eventually split documentation in later versions. Changing that in the middle of product life cycle is usually not an smart idea, cause the first thing the customer will file as a technical support question would be: Where are the docs?	1	1	https://issues.jboss.org/browse/JBEWS-407
11246	JBEWS-404	You are right, I was starting cmd from Total Commander. But this is real-life scenario - will the client be aware that he can't call service.bat from a cmd launched from a 32 bit app? Even if it's documented, this will be a bit annoying feature. Please consider making this work from 32-bit cmd, at least for EWS 1.0.2.	0	0	https://issues.jboss.org/browse/JBEWS-404
11247	JBEWS-400	Dave, can you please look into this? Thanks!	0	0	https://issues.jboss.org/browse/JBEWS-400
11248	JBEWS-399	Hi Eva, can you please verify if this has been included and resolve? Thanks.	1	1	https://issues.jboss.org/browse/JBEWS-399
11249	JBEWS-399	Hi Rebecca, module descriptions are available at http://httpd.apache.org/docs/2.2/mod/ I have provided the link in the guide. However, I think the list of supported modules should be included in the guide. Could you, please, tell me, who is the right person to talk to? And also: is this sufficient? Thanks	0	0	https://issues.jboss.org/browse/JBEWS-399
11250	JBEWS-397	Rajesh, Can this be closed?	1	0	https://issues.jboss.org/browse/JBEWS-397
11251	JBEWS-396	In the RHEL zips, I've added a dir named extras under jboss-ews-1.0 and moved the log4j.jar and log4j.properties there. Mladen, can you please update the zip for the other platform? Thanks!	0	0	https://issues.jboss.org/browse/JBEWS-396
11252	JBEWS-391	The version of mod_jk in EWS 1.0.1 will be 1.2.28, can you please re-evaluate and let me know? Thanks, Permaine	1	1	https://issues.jboss.org/browse/JBEWS-391
11253	JBEWS-390	Hi Eva, Could you please take a look at this and see if you can work it into the Installation Guide? Thanks! Bec	1	1	https://issues.jboss.org/browse/JBEWS-390
11254	JBEWS-390	Could you, please, provide me the information I need to add to the installation guide? Thank you	1	1	https://issues.jboss.org/browse/JBEWS-390
11255	JBEWS-390	Paths to startup.sh: Solaris: /opt/redhat/ews/share/tomcat5/bin/startup.sh /opt/redhat/ews/share/tomcat6/bin/startup.sh RHEL zip - can be installed anywhere, so, $EWS_HOME/tomcat[5|6]/bin/startup.sh RHEL RPM - I don't know, ask Ivo Studensky Windows: "c:\Program Files\Red Hat\Enterprise Web Server\share\tomcat5\bin\startup.sh" "c:\Program Files\Red Hat\Enterprise Web Server\share\tomcat6\bin\startup.sh" Maybe you could use $EWS_HOME for simplicity...	1	1	https://issues.jboss.org/browse/JBEWS-390
11256	JBEWS-390	I agree that management system should provide instructions on how different components can be used to work with it. Ondrej, can you please ask someone from the JON team to take a look? we don't have experience with JON. Thanks!	0	0	https://issues.jboss.org/browse/JBEWS-390
11257	JBEWS-390	Charles, could you please assign someone to help with this?	1	1	https://issues.jboss.org/browse/JBEWS-390
11258	JBEWS-390	Rewording the paragraph once more. Eva, rather than describing it here, can you give me a link to SVN to this chapter? I'd make a patch and send you.	1	1	https://issues.jboss.org/browse/JBEWS-390
11259	JBEWS-390	Hi Ondrej, what's the progress on this? Did you get the SVN link you were after? Thanks.	0	0	https://issues.jboss.org/browse/JBEWS-390
11260	JBEWS-389	We don't add those in by default, but I can add them in as comment so that it'll be easy for the customers. How does that sound?	0	0	https://issues.jboss.org/browse/JBEWS-389
11261	JBEWS-386	Will these be available for customer to deploy or one would need to download from the apache web site?	0	0	https://issues.jboss.org/browse/JBEWS-386
11262	JBEWS-386	Can we remove the examples (webapps/examples) completely from the distribution? We still have the WEB_INF files lying around. webapps/ROOT/index.jsp should be updated to remove the jsp and servlet examples link from the index page. On tomcat5 the the WEB-INF files are not present. But the index page may still need to be updated.	0	0	https://issues.jboss.org/browse/JBEWS-386
11263	JBEWS-384	Think this one is already fixed by latest build. The latest build contains README file that contains ... Timestamp: YYYYddmmHHMMSS ... Can you check that number?	1	1	https://issues.jboss.org/browse/JBEWS-384
11264	JBEWS-141	Hi all, I'm assigning this to Eva to include in the Installation Guide. I don't think it is a release note issue, as it is being deprecated in the *next* release. Please let me know if you disagree. Eva, could you please amend the package names in the Install Guide, and add a note warning that jkstatus-ant will be deprecated in the next release? Thank you.	1	1	https://issues.jboss.org/browse/JBEWS-141
11265	JBEWS-141	Verified, found "Deprecation of tomcat-jkstatus-ant" in http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/1.0/html-single/Installation_Guide/index.html However missing in Release notes. Permaine, is that ok? http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/1.0/html-single/Release_Notes_1.0.2/index.html	0	0	https://issues.jboss.org/browse/JBEWS-141
11266	JBEWS-141	Where do we usually put 'deprecated items'? In the installation guide or release notes?	1	1	https://issues.jboss.org/browse/JBEWS-141
11267	JBEWS-140	Hi Samuel, sorry I couldn't find the description you've quoted from http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/1.0/html-single/Release_Notes_1.0.2/index.html Could you please tell me where you find these instructions?	1	1	https://issues.jboss.org/browse/JBEWS-140
11268	JBEWS-140	Hi Misha, yes you are correct, seems the release notes I've found are not the correct one. I've found a standalone installation guide on our official doc site: [Installation|http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/1.0/html/Installation_Guide/index.html] Could you please help to check it.	1	1	https://issues.jboss.org/browse/JBEWS-140
11269	JBEWS-140	Weinan, I'd like to close off the issue identified in this JIRA (sudo not included where required for certain commands in the release notes). Can you confirm: a. Are the commands Samuel is linking to required for the EWS 2 release? b. If yes, which ones require sudo?	1	1	https://issues.jboss.org/browse/JBEWS-140
11270	JBEWS-137	John Doyle <jdoyle@redhat.com> made a comment on [bug 899449|https://bugzilla.redhat.com/show_bug.cgi?id=899449] If we have 1.2.36 in 2.0.0, is this actually an EWS 1 request?	1	1	https://issues.jboss.org/browse/JBEWS-137

#	Requirement	Questions	Answered	Successfully Answered	URL
11271	JBEWS-137	Mandar Joshi <majoshi@redhat.com> made a comment on [bug 899449|https://bugzilla.redhat.com/show_bug.cgi?id=899449] @Wei Nan, can you provide CCFR for this bug?	1	1	https://issues.jboss.org/browse/JBEWS-137
11272	JBEWS-137	Mandar Joshi <majoshi@redhat.com> made a comment on [bug 899449|https://bugzilla.redhat.com/show_bug.cgi?id=899449] Added DocText. @Wei Nan Li, can you please review the Doc Text content? Since bug 900793 is already documented, do we need to document this bug? This bug seems to be dependant/duplicate of bug 900793.	0	0	https://issues.jboss.org/browse/JBEWS-137
11273	JBEWS-135	Jean-frederic Clere <jclere@redhat.com> made a comment on [bug 900492|https://bugzilla.redhat.com/show_bug.cgi?id=900492] Where is validationQueryTimeout missing?	0	0	https://issues.jboss.org/browse/JBEWS-135
11274	JBEWS-135	Jean-frederic Clere <jclere@redhat.com> made a comment on [bug 900492|https://bugzilla.redhat.com/show_bug.cgi?id=900492] Where is validationQueryTimeout missing?	0	0	https://issues.jboss.org/browse/JBEWS-135
11275	JBEWS-132	I guess the first step it get a hudson build. Could you have a look to it.	0	0	https://issues.jboss.org/browse/JBEWS-132
11276	JBEWS-131	What are the exact changes needed and is container/catalina/build.xml the only file that needs updating?	1	0	https://issues.jboss.org/browse/JBEWS-131
11277	JBEWS-131	Hi Alex, Can you please specify the exact changes needed, and which files need to be updated? Thanks, Permaine	1	0	https://issues.jboss.org/browse/JBEWS-131
11278	JBEWS-131	Dave, can you please look into this? Thanks!	1	0	https://issues.jboss.org/browse/JBEWS-131
11279	JBEWS-131	Hi, After reviewing the build files, I think the solution is an Ant build script that is owned by the EWS build. As I see it, this Ant script would consolidate the test locations and run each in a sequence. A property can point to the customer's installation. It would assume the EWS directory structure when defining the classpath. The EWS build would contain this build file and inject it into the distribution. This has not been an issue upstream, so I recommend we make this an EWS 'feature' versus a tomcat5 feature. Does that satisfy the requirements? -- dave	0	0	https://issues.jboss.org/browse/JBEWS-131
11280	JBEWS-131	Dave, QE think that's ok as a fix. Do we have enough time to put this into EWS 1.0.2? If so, please move this back to 1.0.2.	0	0	https://issues.jboss.org/browse/JBEWS-131
11281	JBEWS-125	Can you please unify those installation feature requests into one issue? Like for install, uninstall would need a proper installer, and that needs to get approved by the PM.	1	0	https://issues.jboss.org/browse/JBEWS-125
11282	JBEWS-124	Hi Ondrej, is this a docs issue? Can you please assign it accordingly? Thanks!	1	0	https://issues.jboss.org/browse/JBEWS-124
11283	JBEWS-124	Hi David, can you please include these files in the tomcat builds for EWS 2 (as described by Arun) when you have time? Thanks!	1	0	https://issues.jboss.org/browse/JBEWS-124
11284	JBEWS-122	How about Windows Scripting Host? Javascript syntax, can use ActiveX/COM... viruses are written in it so it's surely powerful :) Regarding 2) and 3), I think e.g. EZinstaler supports launching WSH scripts amongst others. And, how about Java-based installer like IzPack?	1	0	https://issues.jboss.org/browse/JBEWS-122
11285	JBEWS-122	Mladen, any decision on this? Or who should I ask? Permaine?	0	0	https://issues.jboss.org/browse/JBEWS-122
11286	JBEWS-120	I fixed that in the jboss-ews build which only takes care of the RHEL builds, these should really be removed in the tomcat zips which the Hudson builds use. Dave, can you please fix that in the tomcat* builds? Thanks!	1	1	https://issues.jboss.org/browse/JBEWS-120
11287	JBEWS-120	Mladen, can you please get rid of the backup files in our Hudson builds? Thanks!	0	0	https://issues.jboss.org/browse/JBEWS-120
11288	JBEWS-117	Could you please attach spec file and policy file for the rpm(s). I guess RHEL5 and RHEL6 are different.	0	0	https://issues.jboss.org/browse/JBEWS-117
11289	JBEWS-117	Weinan, can you check on the status of this? Should it be closed?	0	0	https://issues.jboss.org/browse/JBEWS-117
11290	JBEWS-114	Mladen, can you please update our Windows/Solaris jboss-ews build to get the jars directly from mod_cluster and jboss-logging brew builds so that we can avoid rebuilding tomcats just because of mod_cluster rebuilds? Thanks!	0	0	https://issues.jboss.org/browse/JBEWS-114
11291	JBEWS-114	Not for EWS 1 as there's no future planned release, probably not worth the effort, can we get this in EWS 2? sorry for the confusion.	0	0	https://issues.jboss.org/browse/JBEWS-114
11292	JBEWS-114	For EWS2 sure. Where should those files end up? In share/java ?	0	0	https://issues.jboss.org/browse/JBEWS-114
11293	JBEWS-113	Mladen, could you please ACK this and re-assing to docs team (Jared Morgan)? Thanks.	0	0	https://issues.jboss.org/browse/JBEWS-113
11294	JBEWS-112	Will we add the default config?	1	0	https://issues.jboss.org/browse/JBEWS-112
11295	JBEWS-8	Weinan Li <weli@redhat.com> made a comment on [bug 901126|https://bugzilla.redhat.com/show_bug.cgi?id=901126] Hi Mladen, could you please patch the win/sol postinstall file (for zip bundle) as I did in attachment? Thanks!	1	1	https://issues.jboss.org/browse/JBEWS-8
11296	JBESB-3948	Max, is it possible to just comment the action (which we want disable) as ESB doesn't support this feature? I've been doing this "workaround" in my projects! e.g.: <action class="org.jboss.soa.esb.actions.SystemPrintln" name="Print "> <property name="message" value="print"/> </action> When we mark this action as disabled, the JBDS just do something like this: <!-- Action Disabled blablablabla <action class="org.jboss.soa.esb.actions.SystemPrintln" name="Print "> <property name="message" value="print"/> </action> --> It's very useful when we are developing/debugging.	0	0	https://issues.jboss.org/browse/JBESB-3948

#	Requirement	Questions	Answered	Successfully Answered	URL
11297	JBESB-3906	means caused by BZ902156. The error [1] reproduced by comment 13 of BZ915386 indicates it stems from the invoked web service not SOAPClient. And I confirmed in my environment that if all BZ915386 patches but CXF upgrade is applied the error doesn't happen. I believe the root cause should be found in the following BZs: - [BZ-858926] [CVE-2012-3451] jbossws-cxf, apache-cxf: SOAPAction spoofing on document literal web services - [BZ-896338] [CVE-2012-5633] jbossws-cxf, apache-cxf: Bypass of security constraints on WS endpoints I also doubt that this is a regression of JBoss ESB or SOA-P as no behaviours in JBoss ESB seem to change; what's changed is JBoss WS. So, should we close this BZ and chase it as a JBoss WS regression instead? Thank you! [1] 15:33:39,174 WARNING [PhaseInterceptorChain] Interceptor for {http://webservice_consumer1/helloworld}HelloWorldWSService#{http://webservice_consumer1/helloworld}sayHello has thrown exception, unwinding now org.apache.cxf.interceptor.Fault: The given SOAPAction sayHello does not match an operation. at org.apache.cxf.binding.soap.interceptor.SoapActionInInterceptor$SoapActionInAttemptTwoInterceptor.handleMessage(SoapActionInInterceptor.java:192) at org.apache.cxf.binding.soap.interceptor.SoapActionInInterceptor$SoapActionInAttemptTwoInterceptor.handleMessage(SoapActionInInterceptor.java:164) at org.apache.cxf.phase.PhaseInterceptorChain.doIntercept(PhaseInterceptorChain.java:243) at org.apache.cxf.transport.ChainInitiationObserver.onMessage(ChainInitiationObserver.java:111) at org.apache.cxf.transport.servlet.ServletDestination.invoke(ServletDestination.java:99) at org.apache.cxf.transport.servlet.ServletController.invokeDestination(ServletController.java:431) at org.jboss.wsf.stack.cxf.ServletControllerExt.invoke(ServletControllerExt.java:173) at org.jboss.wsf.stack.cxf.RequestHandlerImpl.handleHttpRequest(RequestHandlerImpl.java:61) at org.jboss.wsf.stack.cxf.CXFServletExt.invoke(CXFServletExt.java:185) at org.apache.cxf.transport.servlet.AbstractHTTPServlet.handleRequest(AbstractHTTPServlet.java:179) at org.apache.cxf.transport.servlet.AbstractHTTPServlet.doPost(AbstractHTTPServlet.java:103) at javax.servlet.http.HttpServlet.service(HttpServlet.java:637) at org.apache.cxf.transport.servlet.AbstractHTTPServlet.service(AbstractHTTPServlet.java:159) at org.apache.catalina.core.ApplicationFilterChain.internalDoFilter(ApplicationFilterChain.java:290) at org.apache.catalina.core.ApplicationFilterChain.doFilter(ApplicationFilterChain.java:206) at org.jboss.web.tomcat.filters.ReplyHeaderFilter.doFilter(ReplyHeaderFilter.java:96) at org.apache.catalina.core.ApplicationFilterChain.internalDoFilter(ApplicationFilterChain.java:235) at org.apache.catalina.core.ApplicationFilterChain.doFilter(ApplicationFilterChain.java:206) at org.apache.catalina.core.StandardWrapperValve.invoke(StandardWrapperValve.java:235) at org.apache.catalina.core.StandardContextValve.invoke(StandardContextValve.java:191) at org.jboss.web.tomcat.security.SecurityAssociationValve.invoke(SecurityAssociationValve.java:183) at org.jboss.web.tomcat.security.JaccContextValve.invoke(JaccContextValve.java:95) at	0	0	https://issues.jboss.org/browse/JBESB-3906
11298	JBESB-3830	From Martin Weiler: The reason I raised this question was to avoid ending up with the same situation as with the SignalCommand of the old jBPM3 BpmProcessor, which was removed in ESB 4.5 (SOA-P 5.0) by JBESB-2315. Some citations from the forum: https://community.jboss.org/thread/144559: The SignalCommand is no longer available, [...] because it is not safe to use it without additional information. Any service invocation from jBPM to ESB and back stores the appropriate information within the EPR and is automatically handled. All the ESB service has to do is respond to the correct EPR. https://community.jboss.org/thread/153723: direct use of the signal command within jBPM 3 will fail very quickly once you move away from the simple scenarios, which is why we jump through those hoops. [...] The present integration focusses on interactions between ESB services and jBPM, forcing a 'one time only' execution of the signal. The EPR contains additional information necessary to enforce that guarantee, i.e. one request and one response.	1	1	https://issues.jboss.org/browse/JBESB-3830
11299	JBESB-3611	Unfortunately what you are proposing is likely to break things. Can you create a test case showing what you are trying to fix?	1	1	https://issues.jboss.org/browse/JBESB-3611
11300	JBESB-3353	Creating a more comprehensive contract model in ESB 5 that would support both XSDs and WSDLs would be very useful. If a JIRA is created in the future to track this feature, would you add a reference to this JIRA? Thanks.	1	0	https://issues.jboss.org/browse/JBESB-3353
11301	JBESB-3259	Thanks Kurt, can you attach an example to this issue along with the WSDL being parsed? It looks like it should be fairly straight forward to fix.	1	1	https://issues.jboss.org/browse/JBESB-3259
11302	JBESB-3248	Do we want people to be using jbossesb-1.1.0.xsd or jbossesb-1.2.0.xsd? This section suggests using 1.1.0.	0	0	https://issues.jboss.org/browse/JBESB-3248
11303	JBESB-3244	The Scripting action talks about how 4.7 ships with bsf 2.3.0 but a future version is going to have 2.4.0. Does 4.8 have 2.4.0? I noticed both 2.3.0 and 2.4.0 in the build dir.	0	0	https://issues.jboss.org/browse/JBESB-3244
11304	JBESB-3197	Is this still an issue?	1	0	https://issues.jboss.org/browse/JBESB-3197
11305	JBESB-3139	Daniel, this needs to go in the SOA docs. I'm about to create a SOA jira for this, can you add the details of this change to that JIRA?	0	0	https://issues.jboss.org/browse/JBESB-3139
11306	JBESB-3130	Committed to JBESB_4_7_CP with revision 31130.	1	1	https://issues.jboss.org/browse/JBESB-3130
11307	JBESB-3130	picketlink jars updated from 1.0.0 to 1.0.1 in product/.classpath Eclipse file. Committed to JBESB_4_7_CP with revision 31141.	0	0	https://issues.jboss.org/browse/JBESB-3130
11308	JBESB-3046	1 - Did not know the ESB 4.7 does not support CXF via JBossWS so fine that this is a Feature Request 2 - I am not reading the log files or even attempting to diagnose the real cause, I was just bringing this to your attention. I leave the diagnosis to you :)	1	1	https://issues.jboss.org/browse/JBESB-3046
11309	JBESB-2941	JBESB-2906 is definitely the same and there is a workaround on that issue. Can you test with the workaround? JBESB-2948 is not the same issue however, although it is related to what needs to be done to v3 in order for this to pass :)	1	1	https://issues.jboss.org/browse/JBESB-2941
11310	JBESB-2937	[Show »] Tom Fennelly - 05/Nov/09 06:15 PM Done. Still http gateway issues with redeploy on AS5. What isssues are you seeing with redploy here Tom?	0	0	https://issues.jboss.org/browse/JBESB-2937
11311	JBESB-2902	This would only update the pre-installed server version, nothing more. Is this what you want? It is still possible to install ESB into an app server and use whichever version of jboss messaging is already present.	1	1	https://issues.jboss.org/browse/JBESB-2902
11312	JBESB-2902	How can this be "out of date" when we still have a "jbossesb-server-4.8.zip" download, which still comes with "jboss.messaging.providerVersion=1.4.0.SP3" ???	1	1	https://issues.jboss.org/browse/JBESB-2902
11313	JBESB-2882	A few comments. 1) "When someone sends in a Message that specifies dispose as a Message property, halt() is called on the session, which kills the spawned thread." Is session.dispose() called. If not, the Message property should be named halt (or something similar). Does re-deploying the service also call halt and dispose of the the session? 2) Is there a mechanism to "publish" the stateful session so that other services could process messages through a second entry point?	1	1	https://issues.jboss.org/browse/JBESB-2882
11314	JBESB-2875	It should also support public key, does this not work for you?	1	1	https://issues.jboss.org/browse/JBESB-2875

#	Requirement	Questions	Answered	Successfully Answered	URL
11315	JBESB-2813	Kevin, would you like me to create a change request for SOA-P5 to include Noel's changes? AND/OR do you think this can go out in the 4.3 CP stream as well?	0	0	https://issues.jboss.org/browse/JBESB-2813
11316	JBESB-2805	Hi Ricardo! Thanks for providing this. I still miss some functionality: What if I have an XML file with multiple items in it and I want to split the message into messages, one for every item. So all resulting messages go to the same destination, but with a different payload. Like a for each loop. That would be a very good thing to include as well! Or is there work already done on this? Cheers Bernd	1	1	https://issues.jboss.org/browse/JBESB-2805
11317	JBESB-2760	4.7 is being targeted against the 5.1.0 release and SOA 5/EAP 5. Do you know if this will be an issue for either of these?	0	0	https://issues.jboss.org/browse/JBESB-2760
11318	JBESB-2760	What is the state of this issue? I've checked the trunk version of jbossesb and did not notice any changes indicating that AS6 support is being worked on...	1	1	https://issues.jboss.org/browse/JBESB-2760
11319	JBESB-2711	First off, I did revert some stuff to not mask the initial problem: Revisions 27961 and 27962. Second, it looks to me like the smooks request mapping is being done correctly: a) See attached [smooks-request-report.html] file. On the Result tab you will see the complexObject details. b) In the debugger, I see that the output map in SmooksMapper.java:104 *does* contain the complexObject. What's intersting, then, is why this exception is spit out in the server console when exercising the test: it.javalinux.wise.core.exceptions.WiseRuntimeException: Error during method invocation! at it.javalinux.wise.core.exceptions.WiseRuntimeException.rethrow(WiseRuntimeException.java:44) at it.javalinux.wise.core.client.WSMethod.invoke(WSMethod.java:88) at it.javalinux.wise.core.client.WSMethod.invoke(WSMethod.java:119) at org.jboss.soa.esb.actions.soap.wise.SOAPClient.process(SOAPClient.java:251) at org.jboss.soa.esb.listeners.message.ActionProcessingPipeline.processPipeline(ActionProcessingPipeline.java:634) at org.jboss.soa.esb.listeners.message.ActionProcessingPipeline.processPipeline(ActionProcessingPipeline.java:586) at org.jboss.soa.esb.listeners.message.ActionProcessingPipeline.process(ActionProcessingPipeline.java:420) at org.jboss.soa.esb.listeners.message.MessageAwareListener$TransactionalRunner.run(MessageAwareListener.java:545) at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:651) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:676) at java.lang.Thread.run(Thread.java:595) Caused by: java.lang.IllegalArgumentException: wrong number of arguments at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at it.javalinux.wise.core.client.WSMethod.invoke(WSMethod.java:75) ... 9 more So, the question becomes, "why is WSMethod.invoke having a problem invoking PingWS.java's 'public ComplexObject pingComplexObject(@WebParam(name = "complexObject")' method/operation?" If the SmooksMapper is indeed creating the correct result in applyMapping, why can't WISE map that to the "complexObject" @WebParam?	1	1	https://issues.jboss.org/browse/JBESB-2711
11320	JBESB-2709	Check out jboss-5.1.0.GA/server/default/conf/bindingservice.beans/META-INF/bindings-jboss-beans.xml maybe?	1	1	https://issues.jboss.org/browse/JBESB-2709

11322	JBESB-2699	Is this the same as https://jira.jboss.org/jira/browse/JBESB-2331 perhaps?	1	1	https://issues.jboss.org/browse/JBESB-2699
11323	JBESB-2621	I have checked the files nsswitch.conf but the problem still continues.. I can make telnet to this specific port: Trying 127.0.0.1... Connected to localhost.localdomain (127.0.0.1). Escape character is '^]'. ¬ísrjava.rmi.MarshalledObject|½—ícü>lhashlocBytest[BobjBytesq~xp)°Ûjur[B¬óTàxp&¬íthttp://AGW-CLA1:8083/q~q~uq~Ã¬ísr org.jnp.server.NamingServer_Stubxrjava.rmi.server.RemoteStubé?ÜÉ‹áexrjava.rmi.server.RemoteObjectÓa´' a3xpw7 UnicastRef2 10.64.168.61J,p!óWbù€xConnection closed by foreign host. Also I can ping the localhost: PING localhost.localdomain (127.0.0.1) 56(84) bytes of data. 64 bytes from localhost.localdomain (127.0.0.1): icmp_seq=0 ttl=64 time=0.028 ms 64 bytes from localhost.localdomain (127.0.0.1): icmp_seq=1 ttl=64 time=0.036 ms 64 bytes from localhost.localdomain (127.0.0.1): icmp_seq=2 ttl=64 time=0.035 ms When trying to integrate our solution with other products I get usually java.rmi.RemoteException: java.lang.NullPointerException Can it be because of this problem? Could you please give more specific instructions to solve the issue?	1	0	https://issues.jboss.org/browse/JBESB-2621
11324	JBESB-2581	Can we add more details to this please?	1	1	https://issues.jboss.org/browse/JBESB-2581
11325	JBESB-2524	What was the intention of the ftpLocalDir setting? From what I can see in the code... there's no config option (in the XSD) to specify the ftpLocalDir configTree parameter, but that was probably never the intention. It doesn't seem to be getting set on the FTP EPR (via ListenerUtil.assembleEpr). Has anyone an idea what it was intended for, considering that the FTPGateway has been working away (in some capacity) without it?	1	1	https://issues.jboss.org/browse/JBESB-2524

#	Requirement	Questions	Answered	Successfully Answered	URL
11326	JBESB-2524	Thanks Kev, but that wasn't the question ;) I asked did anybody know what was the intention of capturing the ftpLocalDir setting? Has anyone an idea why is it being set on the ConfigTree, since I can't see it ever being used, which is what I think Gearge means by "RemoteGatewayListener ignores local FTP location"? If it's not being used for anything, then it's just a case of removing that code perhaps i.e. not even any need to change it to use the System property. Maybe I'm blind and it is being used somewhere, but if it is I'd expect it to be a bit more obvious.	1	1	https://issues.jboss.org/browse/JBESB-2524
11327	JBESB-2524	+1... I was also thinking this, but was half afraid to suggest it :) I will remove the code (from RemoteGatewayListener) that suggests an intention to configure this at the EPR level (but doesn't in reality).	0	0	https://issues.jboss.org/browse/JBESB-2524
11328	JBESB-2395	I've been using this myself with Red Hat JBoss application server SOA and Jboss application server 4.2.3 with no troubles. Offhand I couldn't see a test suite to run this against. Is there a set of tests? Happy to pick up any formal testing required and work through getting this patch complying with any additional requirements. If anything else is needed, please let me know and I'll get on to it. Keep up the good work! Take care, Murray	1	1	https://issues.jboss.org/browse/JBESB-2395
11329	JBESB-2362	Jim.... can you elaborate on this a bit please? Can you outline the use case... what's on the client side... what protocol etc etc?	1	1	https://issues.jboss.org/browse/JBESB-2362
11330	JBESB-2362	When use http protocol to send the content type is "binary/octet-stream" or "application/octet-stream" http request to RemotingGatewayListener, the HttpUnmashaller can not process them correctly. Also should we check other content types support ?	1	1	https://issues.jboss.org/browse/JBESB-2362
11331	JBESB-2362	Jim... can we get an example of this please (e.g. a modified quickstart)? There was a somewhat similar issue fixed on the JBR Gateway recently (JBESB-2616 and http://www.jboss.org/index.html?module=bb&op=viewtopic&t=156733). Would be good to have something concrete to go on before we try resolving it.	0	0	https://issues.jboss.org/browse/JBESB-2362
11332	JBESB-2362	Guys... with the new <http-gateway>... do we need to do this now? Can't we just tell users to use the new <http-gatway> for HTTP?	1	1	https://issues.jboss.org/browse/JBESB-2362
11333	JBESB-2335	Can you elaborate on that one please Kev?	1	1	https://issues.jboss.org/browse/JBESB-2335
11334	JBESB-2335	Sorry? What's the "issue" with how it is currently? :)	1	1	https://issues.jboss.org/browse/JBESB-2335
11335	JBESB-2335	What, you mean bringing maven into this as well as ivy when we can fix the ivy issue and just use that?	1	1	https://issues.jboss.org/browse/JBESB-2335
11336	JBESB-2335	Sorry... can I take this issue Kev?	1	1	https://issues.jboss.org/browse/JBESB-2335
11337	JBESB-2288	What is the context of this JIRA please? Support for what additional use case(s) is being added, or is it a fix for s bug? What will work after applying this patch that didn't work before?	1	1	https://issues.jboss.org/browse/JBESB-2288
11338	JBESB-2288	Mark may know more as he moved it into 4.6, but have you checked out what has been done in the attachments?	1	1	https://issues.jboss.org/browse/JBESB-2288
11339	JBESB-2285	If you say so, i was informed by Jboss respresenative in Antwerp. To raise a JIRA for feature requests. But you seem not to share that opinion. This definitly something you should listen to with respect cause customer can always choose another product than JBoss if it not satifiesn their needs. You feedback you got feedback goday. /Daniel	1	1	https://issues.jboss.org/browse/JBESB-2285
11340	JBESB-2284	Okay, let me check with Trev on this as he was the one who asked. Sounds like he got the versions mixed up. (09:38:48) tkirby: kconner, this is for fp01, the version of mvel that is being used in drools is mvel2-2.0-M4-SNAPSHOT.jar, do we know if mvel 2.2 will behave with smooks?	1	1	https://issues.jboss.org/browse/JBESB-2284
11341	JBESB-2273	How will the Stateful Rule session with an ESB be handled in a Cluster? That is, do we impose a sticky session or will there be an ordered JMS queue backing this?	0	0	https://issues.jboss.org/browse/JBESB-2273
11342	JBESB-2239	We cannot clean anything up in the EPR as it is intended to be an opaque structure. As for the token/process instance id that was deliberately removed to prevent anyone other than jBPM from driving the process. If you have a use case for this, can you raise it on the forums? We can discuss it and decide what is appropriate.	1	1	https://issues.jboss.org/browse/JBESB-2239
11343	JBESB-2235	jBPM 3.3.0 was released back in November, are there issues with it?	1	1	https://issues.jboss.org/browse/JBESB-2235
11344	JBESB-2235	This sounds like the 'enterprise' version of jBPM which we do not yet support in the SOA platform. Is there another version?	1	1	https://issues.jboss.org/browse/JBESB-2235
11345	JBESB-2235	I can't find jbpm-jpdl-3.3.0 only version 3.2.3 so I assumed that I should be using the 3.3.0 download. I'm slightly confused as which version I should be using for this. Do you know which one? Thanks	1	1	https://issues.jboss.org/browse/JBESB-2235
11346	JBESB-2235	Can you please document all the changes you have had to make to get this to work? The SOA guys will, almost certainly, have to go through the same process when they build the next SOA platform and will appreciate any help.	1	1	https://issues.jboss.org/browse/JBESB-2235
11347	JBESB-2234	I could not find a GA release (http://www.jboss.org/drools/downloads.html). Can we use 5.0.0.M4.	1	1	https://issues.jboss.org/browse/JBESB-2234
11348	JBESB-2234	Tried with M4 and found no issues. All test pass. Very smooth :) Should I check this in or should we wait for the GA version?	1	1	https://issues.jboss.org/browse/JBESB-2234
11349	JBESB-2234	We cannot force JTA as this is not available outside of the application server/esb server. Can we create two new issues for these please? The second one appears to be an issue with the embedded console and should be looked at by TomC.	1	1	https://issues.jboss.org/browse/JBESB-2234
11350	JBESB-2233	Updated to CP2_CR3, still have two doc changes to make. Changes in revision 24966.	0	0	https://issues.jboss.org/browse/JBESB-2233
11351	JBESB-2224	Kev, Can you expand on what you mean as a proper gateway? There is currently a GroovyGateway in the codebase but I'm sure you know that. Thanks	1	1	https://issues.jboss.org/browse/JBESB-2224
11352	JBESB-2224	Ok thanks, got it. Last time I checked Netty did not have support for UDP but there is a JIRA for that. How about we create a MinaGateway based on what Tom has done here?	1	1	https://issues.jboss.org/browse/JBESB-2224
11353	JBESB-2217	Just checked the SOA issue, it is now against SOA-4.4GA and not the CP release	1	1	https://issues.jboss.org/browse/JBESB-2217
11354	JBESB-2207	I can see no real benefit to adding this within the gateway, and the implementation is likely to cause issues in a transactional environment. Can you please start a discussion on the forums about your requirements so that we can find out what you really want?	1	1	https://issues.jboss.org/browse/JBESB-2207
11355	JBESB-2179	Can we just use "http" instead of "tomcat"? What about the HTTP response codes for a timeout, ESB exceptions, etc?	1	1	https://issues.jboss.org/browse/JBESB-2179
11356	JBESB-2179	I also think "http-provider" or "http-gateway" is good name for it. But I wonder if that will confuse some users because the JBRGatewayListner is also a kind of "http" gateway. There is some overlap between the name "jbr-provider" and "http-provider". Is it a problem? The HTTP response code "408" is for a timeout and "500" for a ESB exception . We can also customize the response code by adding a property in ESB message to fit for particular requirement .	1	1	https://issues.jboss.org/browse/JBESB-2179
11357	JBESB-2168	One of the issues that we currently have with the current trailblazer is the building of it. We have been getting a lot of question about users having issues building and configuring it. But if the trailblazer has been updated it might be worth looking more closely at the building and making sure it works will the different environments (source project, jbossesb-server download etc). What do you think?	0	0	https://issues.jboss.org/browse/JBESB-2168
11358	JBESB-2148	Isn't that it on page 95 of the Programmers Guide? (Image attached.)	0	0	https://issues.jboss.org/browse/JBESB-2148

#	Requirement	Questions	Answered	Successfully Answered	URL
11359	JBESB-2132	Will this request be realized in the 4.5 release ?	0	0	https://issues.jboss.org/browse/JBESB-2132
11360	JBESB-2121	> The util also relies on having a keystore configured but it would be sufficient to have the key(s) automatically generated on startup and use this to encrypt the >session information. If we generate keys upon startup the keys will only be known to that ESB node. If the message switches to a different node then using that solution will not work. That is why we are currently using a keystore so that users can configure a key pair that can be installed on all nodes and they will be abe to decrypt a security context encrypted by other nodes. Is this not what we want?	1	1	https://issues.jboss.org/browse/JBESB-2121
11361	JBESB-2121	If you mean that I'm encrypting the SecurityContext by "encrypting everything" then yes that is correct. And yes, other systems will not be able to decrypt it, at least not after this task is completed. At the moment other systems can decrypt the security context. Is what you are after that the security context should be encrypted per node, and if the message is routed to a different node, it should re-authenticate. Is that correct?	1	1	https://issues.jboss.org/browse/JBESB-2121
11362	JBESB-2121	The other question that spring to mind with the current code is what is the reason for sending credentials around? At present the pipeline will decrypt the context and, if successful, will do no authentication. If this is unsuccessful then it has no access to the credentials to perform an authentication.	1	1	https://issues.jboss.org/browse/JBESB-2121
11363	JBESB-2121	>Even as it stands we have a situation where only a specific set of servers would be able to reauthenticate, those with the correct credentials in their kestore. If the >message were to be sent to another set of ESBs or even to clients without access to those credentials then they have no means of authenticating them. Yes, this is intentional. The requirement here is that the correct credentials exist in the keystores and that the ESBs have these in common. >The other question that spring to mind with the current code is what is the reason for sending credentials around? The reason is that the subject is used when executing the pipeline. >At present the pipeline will decrypt the context and, if successful, will do no authentication. If this is unsuccessful then it has no access to the credentials to perform an authentication. Yes, that is correct. But this has sort of been a moving target and this was not always the case. I'm really not sure anymore what should be passed between the ESB and what requirements we have for interoperability :(So I definitely think that we should talk and see if we can get the requirements set and then take it from there.	1	1	https://issues.jboss.org/browse/JBESB-2121
11364	JBESB-2121	> Yes, this is intentional. The requirement here is that the correct credentials exist in the keystores and that the ESBs have these in common. I believe it was intentional, but was not what I thought you were doing :) > The reason is that the subject is used when executing the pipeline. But why the credentials? The only aspect used for the authorisation are the Principals associated with the subject and not its credentials. > Yes, that is correct. But this has sort of been a moving target and this was not always the case. Well, lets make sure it isn't moving any more and make it explicit. The introduction of the encryption appears to have removed one ability. > I'm really not sure anymore what should be passed between the ESB and what requirements we have for interoperability :(> So I definitely think that we should talk and see if we can get the requirements set and then take it from there. Definitely, lets get together and flesh everything out once and for all.	1	1	https://issues.jboss.org/browse/JBESB-2121
11365	JBESB-2120	Sorry about that one. Missed checking in jboss-xml-binding.jar that I'd placed in the testlib directory. Should I check it in?	1	1	https://issues.jboss.org/browse/JBESB-2120
11366	JBESB-1996	Hello Mark, the code is not perfect at the moment. It works for my needs, but needs some modifications to be perfect and another namespace. We have to talk, how some things have to be done. Do you want to have the code as is?	0	0	https://issues.jboss.org/browse/JBESB-1996
11367	JBESB-1937	I'm ready to do this. I have my own notes I took when doing the performance work wtih Daniel, as well as other sources I can gleam from - like the wiki, forums, blog, jira and the like. I agree that it would be nice for these things to be consolidated. I am leaning to just updating/augmenting the somewhat dated wiki page here: http://community.jboss.org/wiki/JBossESBPerformanceTuning , then either reference it from the admin guide, or (gulp) copy/paste it. Honestly I don't like the sounds of copy/pasting. I don't think we need a separate performance tuning guide (as a lot of the information is stuff you can get from AppServer tuning docs). I think for ESB-specific tuning, we put it in the admin guide, and reference it in the programmer's guide. Kev, what are your thoughts?	0	0	https://issues.jboss.org/browse/JBESB-1937
11368	JBESB-1936	What did you have in mind here Kev? Are you just talking about exposing the wsdl for the remote WS, or are you talking about creating an actual proxy (on the ESB) to the remote WS endpoint?	1	1	https://issues.jboss.org/browse/JBESB-1936
11369	JBESB-1934	Is it still in question or is it already outdated/deprecated requirement?	0	0	https://issues.jboss.org/browse/JBESB-1934
11370	JBESB-1904	Pushing this until we flesh out the requirements more. What sort of facility(s) do we need to provide to the user to configure the dispose/don't-dispose logic based on rules execution?? This could be messy enough to implement!	1	0	https://issues.jboss.org/browse/JBESB-1904
11371	JBESB-1865	Jervis. I added a quick fix to trunk. Can you try it out there please.	0	0	https://issues.jboss.org/browse/JBESB-1865
11372	JBESB-1809	The changes in JBESB-1064 seem to already be in the CP branch. Diff:ing product/tools/console/management shows no diffs. Did I miss something here?	1	1	https://issues.jboss.org/browse/JBESB-1809
11373	JBESB-1809	Did you check the 4.2.1 CP branch or the 4.4 CP branch?	1	1	https://issues.jboss.org/browse/JBESB-1809
11374	JBESB-1809	Ah, I only checked the 4.4 CP branch. Should these changes be merge into JBESB_4_2_1_GA_CP ?	0	0	https://issues.jboss.org/browse/JBESB-1809
11375	JBESB-1754	Is it enough that we only list the packages that are used in jbossesb.sar and jbossesb.esb in install/Deployment.txt? Perhaps every service should have its own Deployment.txt, or we could have sections in the install/Deployment.txt for the different services. One for smooks, soap, slsb, soap... The reason for this would be that a few jar exist in both the jbossesb.sar and in the services. Listing all the jars and their versions might be confusing as users might not know which one is used where. Any thoughts on this?	0	0	https://issues.jboss.org/browse/JBESB-1754
11376	JBESB-1753	I followed the steps in install/readme.txt and tried a few quickstart. Only thing I found was (install/readme.txt) : Deployment into JBoss AS 4.2.2.GA ================================ - - Install JBoss AS 4.2.1.GA into an appropriate location. + - Install JBoss AS 4.2.2.GA into an appropriate location. Is there more to this jira then that?	1	1	https://issues.jboss.org/browse/JBESB-1753
11377	JBESB-1752	Will this be changed in the trunk too? [ldimaggi@ldimaggi product]$ cat -n build.xml | grep FAQ 305 <copy file="docs/FAQ.txt" todir="${org.jboss.esb.installationdirectory}/docs"/> At revision 20138.	0	0	https://issues.jboss.org/browse/JBESB-1752
11378	JBESB-1707	Created the 4.3.CR1 tag in revision 19907. Will change to 4.3.GA once the CR1 has been built and released.	0	0	https://issues.jboss.org/browse/JBESB-1707

#	Requirement	Questions	Answered	Successfully Answered	URL
11379	JBESB-1683	Hmmm... well, looks like the environment (classloading + deployers) are different for the test case vs. when run in .esb mode. ;) ;) ;) I found a couple bugs: 1. helloworld.bsh should be renamed helloworld.beanshell so our gold ol' BeanShellDeployer doesn't pick it up (although it seems hit or miss, otherwise I would have noticed it before). So, rename the script and change the name in jboss-esb.xml. 2. jsr-14.jar can be removed. It's not needed. 3. Here's the nasty one. You won't actually have access to the declared beans (like "message") in your py + js scripts unless classloading is "just so". Basically, jython.jar and js.jar *cannot* be included in the esb archive. They have to be loaded by the same classloader as bsf.jar is. Sooooo, for all of the following scripts to work, one needs to place jython.jar and js.jar in jbossesb-server-4.2.1GA/server/default/lib/. NOT in scripting-quickstart.esb (so remove them from the quickstart lib dir). The problem I see with this is (a) licensing, and (b) it's a manual step for the person running the quickstart. Any ideas? 4) Here are the new scripts I tested that work just dandy when jython.jar and js.jar are next to bsf.jar and bsh.jar in jbossesb-server-4.2.1GA/server/default/lib/. : hellworld.bsh: print("**** Hello World from BeanShell! ****"); print(message) helloworld.gy: println "**** Hello World from Groovy! ****" println message helloworld.js: importClass(java.lang.System); System.out.println("**** Hello World from JavaScript! ****"); System.out.println(message.toString()); helloworld.py: print "**** Hello World from Python! ****" print message.toString()	1	1	https://issues.jboss.org/browse/JBESB-1683
11380	JBESB-1683	Well, it's been horrible that EAP has been stuck on bsh-1.3.0 for so long. Maybe I should put in a JIRA on EAP for them to upgrade to bsh-2.0b4? That version is seriously the best it's gonna get in the foreseeable future. Now, if this is a roadblock, then I would still like to see the ScriptingAction getting added. I can just remove the bsh upgrade piece (which would mean removing it from the unit tests and the quickstart too, I guess, considering I'm pretty sure it will cause classloading collisions). Hmm... that gets me thinking. Is it okay that I added rhino (javascript) and jython jars to the quickstart? I'm thinking probably so considering I'm not adding them to the underlying platform...	0	0	https://issues.jboss.org/browse/JBESB-1683
11381	JBESB-1673	I took a look in the web.xml for the jbpm-console.war see that there are three login-configs there. Two are commented out. I actually looked and thought that BASIC authentication was in use, but it is FORM based authentication which is the default. This has an impact on the upload servlet with regard to authentication. Should the ant task be able to support both authentication methods or just one of them? Thanks, Daniel	1	1	https://issues.jboss.org/browse/JBESB-1673
11382	JBESB-1673	Ignore my previous comment. I've got it working will all three login-config authentication options. I do find the commenting in web.xml a little hard to read though. For example this is what one of the login-config elements looks like: <!-- Login configuration option #2 - use basic auth ==> <login-config> <auth-method>BASIC</auth-method> <realm-name>jBPM Administration Console</realm-name> </login-config> <!== End Login configuration option #2 --> If you look at this quickly you might think that this login-config is in use, when it is in fact commented out. Anyone else think that this is somewhat hard to read, or is it just me? :)	1	1	https://issues.jboss.org/browse/JBESB-1673
11383	JBESB-1641	Why is this different from JBESB-1584?	1	0	https://issues.jboss.org/browse/JBESB-1641
11384	JBESB-1641	Did I say it was different? ;-)	0	0	https://issues.jboss.org/browse/JBESB-1641
11385	JBESB-1574	Was this issue really resolved? I cannot find any real commits to the repository in this issue. Also, FreeMarker transformation still doesn't seem to work as I see the following transformation result in SOAP Header. I use JBoss ESB 4.11 (SOA-P 5.3.0). {code} <soapenv:Header><text><wsse:Security soapenv:mustUnderstand="1" xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd"> <wsse:UsernameToken> <wsse:Username>kermit</wsse:Username> <wsse:Password>thefrog</wsse:Password> </wsse:UsernameToken> </wsse:Security> </text></soapenv:Header> {code}	0	0	https://issues.jboss.org/browse/JBESB-1574
11386	JBESB-1513	Thanks for looking into that! I've some questions though: --------- We don't need ESB bits to be copied to the test profile for SOA-P tests. They actually must not be copied to have valid results as the idea is to test SOA-P, not sources. As well SOA-P uses JBM so JBESB-1524 should not be an issue. So I tried running the tests by changing these properties: chprop src/qa/quickstarts/quickstarts.properties org.jboss.esb.server.home "$WORKSPACE/jbosssoa/jboss-as" chprop src/qa/quickstarts/quickstarts.properties org.jboss.esb.server.config $SERVER_NAME chprop product/build/jbossesb/samples/quickstarts/conf/quickstarts.properties org.jboss.esb.server.home "$WORKSPACE/jbosssoa/jboss-as" chprop product/build/jbossesb/samples/quickstarts/conf/quickstarts.properties org.jboss.esb.server.config $SERVER_NAME chprop product/build/jbossesb/install/deployment.properties org.jboss.esb.server.home "$WORKSPACE/jbosssoa/jboss-as" chprop product/build/jbossesb/install/deployment.properties org.jboss.esb.server.config $SERVER_NAME Where SERVER_NAME is "default" or "all" because for the embedded SOA-P distro we need that profile tested. What am I doing wrong? --------- What about the "product" directory tests? Can they run with test.classpath set to external bits?	1	1	https://issues.jboss.org/browse/JBESB-1513
11387	JBESB-1513	Tom, did you modify http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-ESB-testsuite to test that? Should I assume it is a working version?	1	0	https://issues.jboss.org/browse/JBESB-1513
11388	JBESB-1513	Not sure what to modify - what targets is that version of hudson running for the jboss-soa-platform-ESB-testsuite? All of the code changes here have gone into project code - I don't think we've touched any platform files.	0	0	https://issues.jboss.org/browse/JBESB-1513
11389	JBESB-1498	Hiya Naveen. This code has just been rewritten (checked into trunk yesterday) so may no longer be an issue. Can you attach a log file showing this error? I would like to look through it and make sure it is no longer applicable. Thanks.	1	1	https://issues.jboss.org/browse/JBESB-1498
11390	JBESB-1498	Hiya Naveen. It looks like you may have specified the HA-JNDI configuration as the default JNDI configuration. The result of this is that any name which cannot be located within the HA-JNDI will cause a recursive invocation (and a StackOverflow). What is your setup? How have you configured the server?	1	1	https://issues.jboss.org/browse/JBESB-1498
11391	JBESB-1498	Is this an issue still Kev?	1	0	https://issues.jboss.org/browse/JBESB-1498
11392	JBESB-1457	But let suppose we have application that communicates with ESB via gateway. How we allow this app to specify replyTo address via JMS header? I suppose we want to decouple apps from ESB implementation.	0	0	https://issues.jboss.org/browse/JBESB-1457
11393	JBESB-1457	when the eclipse ide plugin will support those changes?	1	1	https://issues.jboss.org/browse/JBESB-1457
11394	JBESB-1457	Are you asking about the jboss-esb.xml editor plugin or the jpdl editor plug-in?	0	0	https://issues.jboss.org/browse/JBESB-1457
11395	JBESB-1404	Daniel, could you take a look at this? We may want to update the EPR definition too.	1	1	https://issues.jboss.org/browse/JBESB-1404
11396	JBESB-1404	Thanks Daniel. Can you update the docs if necessary too?	1	1	https://issues.jboss.org/browse/JBESB-1404
11397	JBESB-1404	Could you commit this to the CP branch too? Change the Fix Field if you do.	1	1	https://issues.jboss.org/browse/JBESB-1404
11398	JBESB-1389	Kev, can you close this with an Assignee field please?	1	1	https://issues.jboss.org/browse/JBESB-1389

#	Requirement	Questions	Answered	Successfully Answered	URL
11399	JBESB-1366	stop-server: [echo] Stopping local ESB server [java] Shutdown message has been posted to the server. [java] Server shutdown may take a while - check logfiles for completion [echo] Waiting for ESB server to stop... At this time I only see 1 java process. Presumably the integration build itself. So it is waiting on nothing at that point. Where is it waiting for exactly?	1	1	https://issues.jboss.org/browse/JBESB-1366
11400	JBESB-1366	I added a timestamp and now include the specific log file being searched. Revision is 17083. Can you run the following test? - cd product - ant start-server - ant stop-server	1	1	https://issues.jboss.org/browse/JBESB-1366
11401	JBESB-1366	From what I can see the filename looks correct. Can you see what happens if you use ant 1.6.5? (this is the version you should be using) Also, are you running from within cygwin or through a command prompt?	1	1	https://issues.jboss.org/browse/JBESB-1366
11402	JBESB-1366	I've tried modifying esb-config.xml with this: <waitfor maxwait="@{seconds}" maxwaitunit="second" checkevery="5" checkeveryunit="second" timeoutproperty="shutdown.timeout"> <isfileselected file="@{serverHome}/server/@{serverConfig}/log/server.log"> <contains text="[org.jboss.system.server.Server] Shutdown complete"/> </isfileselected> </waitfor> This works for me with Ant version 1.6.5 and with version 1.7.0. Kurt or Kevin, could you give this a try to verify that this does indeed work before I check anything in? Thanks, Daniel	1	0	https://issues.jboss.org/browse/JBESB-1366
11403	JBESB-1365	Daniel, Can you talk with me if this is based on the current plugin? There is some tidying up that needs to be done with the current source before we develop it further.	1	1	https://issues.jboss.org/browse/JBESB-1365
11404	JBESB-1365	I feel a little stupid asking this, but where can I find the Eclipse plugin ? :) I didn't know that there was one. Or did you mean the config editor?	1	1	https://issues.jboss.org/browse/JBESB-1365
11405	JBESB-1283	Does that mean you fixed it? Can't wait to hear what I did wrong :-)	1	1	https://issues.jboss.org/browse/JBESB-1283
11406	JBESB-1251	With Smooks 1.0 it is possible to use "Virtual models" (maps in maps, with lists, etc...), so is this still an issue?	1	1	https://issues.jboss.org/browse/JBESB-1251
11407	JBESB-1181	This should already be covered by ObjectMapper. Do you have an example of where this doesn't work?	1	1	https://issues.jboss.org/browse/JBESB-1181
11408	JBESB-1177	Which console?	0	0	https://issues.jboss.org/browse/JBESB-1177
11409	JBESB-1121	Tom, could this apply to the new JOPR embedded console for the new message alerts capability? If not then we should "retire" this request.	0	0	https://issues.jboss.org/browse/JBESB-1121
11410	JBESB-1072	Is the preferred fix to move everything to the JBoss logger or the Apache logger?	1	1	https://issues.jboss.org/browse/JBESB-1072
11411	JBESB-1041	org.jboss.soa.esb.services.routing.cbr.ContentBasedRouter is abstract (I'm going to change it to an interface now that some actual code moved into the ServiceInvoker. All CBR need to implement this interface. This allows for plugging in other rules engines then just Drools. org.jboss.soa.esb.actions.ContentBasedRouter is the action that delegates the calls to the class behind the interface. Why is this confusing? --Kurt	1	1	https://issues.jboss.org/browse/JBESB-1041
11412	JBESB-1006	The labs page was updated with new binary/src zips in revision 175439. The labs site is currently down so I have been unable to verify this. Coincidence?	0	0	https://issues.jboss.org/browse/JBESB-1006
11413	JBESB-1000	What's this one about?	1	1	https://issues.jboss.org/browse/JBESB-1000
11414	JBESB-997	Which console? Makes my life easier when I re-assign the task ;-)	0	0	https://issues.jboss.org/browse/JBESB-997
11415	JBESB-939	Release Notes for JBoss ESB Includes versions: 4.2 ** Feature Request * [JBESB-177] Add SQLListener to the Trailblazer demo * [JBESB-182] Web Services support * [JBESB-183] JCA support * [JBESB-198] RMI interface for persistence store service * [JBESB-229] Add "Update" capability on all Admin Console wizards. * [JBESB-239] tools module * [JBESB-374] Getting Started Project Template for Eclipse/Ant * [JBESB-415] JCA container support. * [JBESB-429] Clustering: load balancing * [JBESB-430] Clustering: fail-over * [JBESB-431] Hot redeployment * [JBESB-434] Hibernate listener * [JBESB-462] Oracle AQ JMS Provider * [JBESB-505] Add external webservice invocation action * [JBESB-525] FTPGatewayListener: refactor extract rename functionality. * [JBESB-538] Add method to print entire message for debugging purposes in SystemPrintln action * [JBESB-595] Easy proxy for Spring-POJO * [JBESB-597] Easy proxy for WS * [JBESB-639] Update "stub" so that it throws propagated faults as exceptions * [JBESB-684] Richer message structure/hierarchy * [JBESB-725] Create Scheduled Event Provider/Listener * [JBESB-741] Allow default message type to be overridden at runtime * [JBESB-742] Allow for different Message views of the payload at creation time * [JBESB-761] Add control message type * [JBESB-763] Add section on services within the programmer's guide * [JBESB-806] ServiceInvoker should ignore To field * [JBESB-813] Update the documentation to more clearly describe what we can and can't do in terms of SOA for this release. * [JBESB-816] Clearly define Message in relationship to development approach * [JBESB-822] Change the <simple-schedule> "repeatCount" to be an "execCount" * [JBESB-831] Add an application ability to remove messages from the RDLVR queue * [JBESB-859] Add Message best practices/hints-and-tips to the documentation * [JBESB-877] Streaming transformation? ** Bug * [JBESB-192] Listener implementations need to perform the payload to Message wrapping, not the AbstractListener * [JBESB-268] Make the Gateway Controller's creation + initialisation an atomic opp * [JBESB-270] JMSQueueListener doesn't manage Thread creation for the ActionProcessingPipeline i.e. can be flooded with messages * [JBESB-619] Catch NPE in header re-assembly * [JBESB-632] Util was masking errors during serialization/deserialization * [JBESB-641] ConnectionPools are not closed * [JBESB-642] JBossRulesRouter does not dispose of WorkingMemory * [JBESB-647] JAXRRegistryService doesn't unpack "cause" exception after proxied invocation of Registry * [JBESB-650] Investigate why HTTPS isn't working for the SOAPClient * [JBESB-688] quickstart jbpm_simple1 remove or rename * [JBESB-694] ERROR [ClosedInterceptor] ClosedInterceptor.ClientConsumerDelegate * [JBESB-699] ConnectionManager interface should not be in internal package * [JBESB-705] deadletter quickstart modifications * [JBESB-709] jbpm CommandInterpreter action fails silently within doTheJob * [JBESB-710] remoting error messages when running bpm_orchestration2 as standalone * [JBESB-721] Failure on redeployment of helloworld_hibernate_action * [JBESB-727] SOAPClient Action & .NET Endpoints * [JBESB-728] MessageFilter.process duplicates the code from ContentBasedWiretap.process * [JBESB-734] bpm-based quickstarts don't allow for a signal from jBPM 3.2.1 Admin Console * [JBESB-739] jboss-esb-console is registering over an existing MBean * [JBESB-743] ServiceInvoker ignores ReplyTo * [JBESB-747] Changed body contents is not propagated * [JBESB-749] Invalid events in bpm_orchestration1 and bpm_orchestration2 samples * [JBESB-750] Process definition for bpm_orchestration2 contains refernce to class from bpm_orchestration1 * [JBESB-752] Oracle create SQL should be updated * [JBESB-753] Add a Quickstart for NotifyFiles * [JBESB-755] Upgrade jboss-esb-console to seam 1.2 * [JBESB-756] Contextualised information not being used in event driven gateways * [JBESB-766] JBossWS RequestHandlerImpl "create WSDL" method assumes the invocation context is based on a Servlet context * [JBESB-774] helloworld_hibernate_action - ClassCastException * [JBESB-794] The getting	0	0	https://issues.jboss.org/browse/JBESB-939
11416	JBESB-908	This is in trunk, and will be in the 4.2 ESB GA release.	0	0	https://issues.jboss.org/browse/JBESB-908
11417	JBESB-878	I've added a comment about using a clustered DB backend to the docs. Want to do/add anything more Kurt?	0	0	https://issues.jboss.org/browse/JBESB-878
11418	JBESB-875	Do you think it's worth including them, or a reference?	1	0	https://issues.jboss.org/browse/JBESB-875
11419	JBESB-858	Kurt, can you remove the WS patch from the zip. This should be done through the build process and is covered by a separate JIRA.	0	0	https://issues.jboss.org/browse/JBESB-858
11420	JBESB-831	The DLQ is not used to redelivery (the RDLVR is). So once it is in the DLQ is truly dead. I had thought it'd be a manual process to empty the DLQ, but I'm happy to add a button somewhere. Where would you like the button?	1	1	https://issues.jboss.org/browse/JBESB-831

#	Requirement	Questions	Answered	Successfully Answered	URL
11421	JBESB-823	K: Yeah I agree. So I added a new column called 'classification', which basically enables use to have more types of stores, rather then setting up different db schemas (or even tables). The different types are STORE (this is store as intended), and I added DLQ and RDLVR. So they function independently from one another. Does that answer your question? M: Sort of: I think that addresses the back-end implementation issue. But I was wondering about separate services: they may get configured to be the same implementation, but from a users perspective they could still remain separate. That way if someone wants to have a separate MessageStore because of security implications, we can support that. K:The only problem is that we only have one place to configure the store credentials which is in the jbossesb-properties.xml. A while ago a figured we should move it out and put it with the service configuration, but since there was no real hard reason to make clutter up the service configuration I left it as it was. So it's a config issue only. That said you could run different stores on different nodes and get around it that way. M:OK, so it's possible at the moment, just not ideal. I'll add a JIRA task so we don't forget this conversation and then we can get back to it in a later revision. K:Sounds good. Or you can make the messageStore use the JCR, and the DLQ/RDLVR the DBimpl.	0	0	https://issues.jboss.org/browse/JBESB-823
11422	JBESB-802	Can you explain what you're thinking in a little more detail, using code examples. The ServieInvoker doesn't expose anything physical to the calling code. That was the whole point of it. To hide the EPR + Courier "stuff". The Message object is a different kettle of fish ;-)	1	0	https://issues.jboss.org/browse/JBESB-802
11423	JBESB-802	I might add... I think you're hitting on something that's dear to my heart ;-) ... i.e. the idea that using the physical EPR on the Message (for replyTo etc) is a broken concept (in spite of that WS-A may or may not say). It's anything but loose coupling! If I set an EPR for the replyTo, how can I be sure that that EPR will work for the "other guy". If I set a cat:name, the "other guy" can use that to get all the EPRs for that service and select the one that works best for him. High availability etc.	1	0	https://issues.jboss.org/browse/JBESB-802
11424	JBESB-725	Tom, can you keep this as a separate issue for now. Mark had this down as a 5.0 requirement and I would like to hear his reasoning before development starts.	0	0	https://issues.jboss.org/browse/JBESB-725
11425	JBESB-725	Grrrr... why do JBoss insist on disabling features on software like the forums/Confluence/JIRA... drives me bats!!!	0	0	https://issues.jboss.org/browse/JBESB-725
11426	JBESB-677	Is this available right now? Where do I get it and are there official builds available?	1	1	https://issues.jboss.org/browse/JBESB-677
11427	JBESB-677	OK what do you mean "use"? - In qa? - On our developer boxes? - for CI?	1	1	https://issues.jboss.org/browse/JBESB-677
11428	JBESB-676	Can you give pointers to the places that remain?	1	1	https://issues.jboss.org/browse/JBESB-676
11429	JBESB-675	Since this is a public class, all we can do in 4.2 is deprecate it (which you've done). What about documentation? If Invoker is used in the docs then we should update those too.	1	1	https://issues.jboss.org/browse/JBESB-675
11430	JBESB-675	I checked the docs and ServiceInvoker is discussed in the context of JCA. Can you pull this out and create a separate section on it? Since we talk a lot of EPRs and Couriers, it's necessary to have a separate section on ServiceInvoker.	1	1	https://issues.jboss.org/browse/JBESB-675
11431	JBESB-668	Moving this to 5.0 because of recent JON information.	1	1	https://issues.jboss.org/browse/JBESB-668
11432	JBESB-658	Maybe the JMS expiration value should also be carried with the Message object. This might make sence if one there is no point in delivering the message after the expiration time has expired. In the current impl the JMS Message would be save for ever is it is persistent. Mark, do you have any suggestions as to where this infomation should be stored within the Message object? /Daniel	1	1	https://issues.jboss.org/browse/JBESB-658
11433	JBESB-658	Mark, we discussed this ealier about the URI for RelatesTo and I want to make sure I get this right. This is how I'm creating the URI for the correlationID : URI correlationURI = new URI(JMSEpr.JMS_PROTOCOL, "correlationID" , from.getJMSCorrelationID()); which produces an uri like this: jms:correlationID#YYXX-123456780-GG JMSCorrelationID is set as a fragment on the URI and can be retrieved like this: correlationURI.getFragment(); This correlation id is not used in the ESB code base as the default behaviour is to set outgoing JMSCorrelationID's to the ESB MessageID. But users can override this and could then set the outgoing correlation id to the original correlation id. And this is how the JMSMessageID is being set on the Call object instance: to.getHeader().getCall().setMessageID(new URI(from.getJMSMessageID())); Does this look right to you? Also I'm setting the JMSExpiration as a property on the ESB Message. Thanks, Daniel	1	1	https://issues.jboss.org/browse/JBESB-658
11434	JBESB-655	Marc, Please do provide us with your requirements and thoughts as it relates to this feature. It hasn't been requested all that often (notice: Votes: 0 in Jira at the time this comment is being written). Is your use case C++ remote clients taking to JBoss-hosted server side objects? And now you would like to hook an ESB in between the remote client and the server side object as a mediation point? Perhaps bring this discussion to the Design Forums.	0	0	https://issues.jboss.org/browse/JBESB-655
11435	JBESB-654	Would a JBI Gateway essentially be an implementation of a "Service Engine" that acts as a bridge between us and the NMR? OR would a JBI Gateway act like a BC container?	0	0	https://issues.jboss.org/browse/JBESB-654
11436	JBESB-652	Is it alright if I check this in? Perhaps I should add a note about this somewhere in the docs. Users might have different correlation strategies and having an example of how they can override the JMSRouter might help them. Any ide in which doc this would go into? Thanks, Daniel	1	1	https://issues.jboss.org/browse/JBESB-652
11437	JBESB-651	Shouldn't JMSReplyTo be related to the ReplyTo in the ESB Message header?	1	1	https://issues.jboss.org/browse/JBESB-651
11438	JBESB-651	But EPRs support MessageID and RelatesTo (equivalent of correlation identifier). Can we not use them, rather than putting message related information within the message body?	1	1	https://issues.jboss.org/browse/JBESB-651
11439	JBESB-646	I think we need to fix this, because it will affect performance. Is this something that could be specified in the EPR, for instance?	1	1	https://issues.jboss.org/browse/JBESB-646
11440	JBESB-646	Assuming this has a jboss-esb.xml impact. Would we change the jms-bus? <jms-bus busid="quickstartGwChannel"> <jms-message-filter dest-type="QUEUE" dest-name="queue/quickstart_business_service_Request" persist="true" <!-- or something like that --> /> </jms-bus> OR Could it be an out-of-the-box action that marks the message as needing to be persisted? OR something else entirely different?	1	1	https://issues.jboss.org/browse/JBESB-646
11441	JBESB-646	So should this persistent property be added to JMSEpr in the same way that the destinationType, message selector etc, are? I'll go through and check the pointer where we are sending JMS messages. This one I currently know about are: 1. JMSCourier 2. JMSRouter 3. NotifyQueues 4. NotifyTopics Any others I should know about?	1	1	https://issues.jboss.org/browse/JBESB-646
11442	JBESB-646	Mark made me aware that Persistent, TTL, and Priority are QoS aspects and should not go into the JMSEpr. So, I've been poking around and the found that the JMSCourier is created with an instance of a JMSEpr. So I need some other way of making such QoS aspects available to the the courier. I'm getting the feeling that this might be a bigger issue then the original jira was intended for. A QoS config should be usable will all types of transports. The properties above are easily mapped to JMS but for other transports like ftp something has to be put in place. Any thought on this? I've implemented the three configuration properties above for JMSRouter and NotifyJMS which are independent of the solution for the JMSCourier above. Would it be alright to check this in or should I create a separate JIRA for one of these issues? Thanks /Daniel	1	1	https://issues.jboss.org/browse/JBESB-646

#	Requirement	Questions	Answered	Successfully Answered	URL
11443	JBESB-646	To take a pragmatic approach, can we do this within the config as originally thought?	1	1	https://issues.jboss.org/browse/JBESB-646
11444	JBESB-646	Should I add Priority and TimeToLive aswell of leave them until we find a better place for these values?	0	0	https://issues.jboss.org/browse/JBESB-646

11446	JBESB-623	When can we close this?	1	1	https://issues.jboss.org/browse/JBESB-623
11447	JBESB-623	Issue 1: fixed Issue 3: Almost fixed. I have installed hudson's emma plugin. Does esb testsuite generate emma report by default? If not, please let me know how you currently generate report and where is report file. Issue 2: Our patch has not been made to upstream yet. In worst case, I will use our local build of hudsdon containing this fix. Issue 4: No update. Please let me know on issue 3 and I will proceed accordingly.	1	1	https://issues.jboss.org/browse/JBESB-623
11448	JBESB-623	I haven't seen any Hudson build notifications for the past 3 days. What's up?	1	1	https://issues.jboss.org/browse/JBESB-623
11449	JBESB-623	Still waiting for a status update. Prabhat?	1	1	https://issues.jboss.org/browse/JBESB-623
11450	JBESB-601	Can you link the other JIRA as a dependency for this issue?	1	1	https://issues.jboss.org/browse/JBESB-601
11451	JBESB-597	Is this covered by http://wiki.jboss.org/wiki/Wiki.jsp?page=ExternalWebserviceConsumption and http://jira.jboss.com/jira/browse/JBESB-588?	0	0	https://issues.jboss.org/browse/JBESB-597
11452	JBESB-597	Can we close this now?	1	1	https://issues.jboss.org/browse/JBESB-597
11453	JBESB-595	Can we close this?	1	1	https://issues.jboss.org/browse/JBESB-595
11454	JBESB-581	How would I know a service is stateless?	1	1	https://issues.jboss.org/browse/JBESB-581
11455	JBESB-576	http://wiki.jboss.org/wiki/Wiki.jsp?page=JBossESBHotDeployment In which guide should we dupe this info?	0	0	https://issues.jboss.org/browse/JBESB-576
11456	JBESB-575	So which of the two classes goes?	0	0	https://issues.jboss.org/browse/JBESB-575
11457	JBESB-573	Great, I'll add that fix and the other one and check it in. So, are you working of converting scout to use JAXB and perhaps I should begin working on using JAXB to generate the configuration bindings? Wasn't sure if that was what you were implying :)	1	1	https://issues.jboss.org/browse/JBESB-573
11458	JBESB-573	Sounds good. I'll check in what I have currently done and then create a JIRA for the task. This will be an updated xbean.jar and javadoc fixes in the code base. I tried to add your patch as well but it still complained...could be that they have added more code as I downloaded the current stable release. I'm using version 2.2.0. Just thought that if we are going to use JAXB instead then this might be acceptable to see the warnings and save some time. What do you think?	1	1	https://issues.jboss.org/browse/JBESB-573
11459	JBESB-572	I'm to blame for the unit tests that use an embedded ftp server. Sorry about that. Should I remove/rename the tests do you think? I have a few more in my workspace for http://jira.jboss.com/jira/browse/JBESB-533, but they have not been checked in to the trunk yet. thanks, Daniel	1	1	https://issues.jboss.org/browse/JBESB-572
11460	JBESB-572	Kevin - I just checked out revision 13788 and am still seeing this error with no FTP server configured. Am I missing something? compile: [mkdir] Created dir: /opt/ESB_July25/trunk/product/samples/quickstarts/static_router/build/classes [javac] Compiling 2 source files to /opt/ESB_July25/trunk/product/samples/quickstarts/static_router/build/classes assert-ftp-config: BUILD FAILED /opt/ESB_July25/trunk/product/samples/quickstarts/tests/build.xml:173: The following error occurred while executing this line: /opt/ESB_July25/trunk/product/samples/quickstarts/tests/build.xml:141: The following error occurred while executing this line: /opt/ESB_July25/trunk/product/samples/quickstarts/conf/base-build.xml:435: Please configure ftp properties in quickstart.properties	1	0	https://issues.jboss.org/browse/JBESB-572
11461	JBESB-569	Yeah it'd be nice if you name the project "ESBTest" that it builds an ESBTest.esb archive. I think the classnames and package can be set to some default like: my.action.package.HelloWorldAction as far as the jbossall-client.jar goes we should just find the smallest jar in the AS/client jar that fits our need. I think we only need some JMS API classes. Put our jars in a Library (rules and jbpm do this too) "JBESB Library", I think we can add the JBM messaging jar on the classpath so we're ready to go. Should we make the classes in mypackage.test to be real log4j unittests? So you have somekind of validation you're starting from something that works? build.properties should be defaulted to: org.jboss.esb.server.home=/jbossesb-server-4.2.GA org.jboss.esb.server.config=default update the readme the juddi.properties file can be deleted, since the registry is configured to use an RMI connection.	0	0	https://issues.jboss.org/browse/JBESB-569
11462	JBESB-563	Do you have something specific in mind here Mark?	1	1	https://issues.jboss.org/browse/JBESB-563
11463	JBESB-562	Sorry, I noticed that won't work:) It works with the test class but will not be ok in the jboss-esb.xml file. How about: <property name="aliases"> <alias name="vehicles" class="java.util.ArrayList"/> <alias name="vehicle" class="Vehicle"/> <alias name="serviceType" class="ServiceType"/> <alias name="phonenumbers" class="java.util.ArrayList"/> <alias name="phonenumber" class="PhoneNumber"/> <alias name="comments" class="java.util.ArrayList"/> <alias name="comment" class="Comment"/> </property> I have commited code that works with this configuration (same workspace as mentioned above) and this time tested it in a the jboss-esb.xml. Thanks, /Daniel	1	1	https://issues.jboss.org/browse/JBESB-562
11464	JBESB-560	Derek, can this be closed now? I thought I saw your code added a while back?	1	1	https://issues.jboss.org/browse/JBESB-560
11465	JBESB-560	Thanks. Did this need any associated documentation updates?	0	0	https://issues.jboss.org/browse/JBESB-560
11466	JBESB-555	Hasn't this been done? I thought I'd seen the move happen last week?	1	1	https://issues.jboss.org/browse/JBESB-555
11467	JBESB-546	Is this important for 4.2, or should we push this to 5.0?	1	1	https://issues.jboss.org/browse/JBESB-546
11468	JBESB-546	No longer supported under 4.x. The 5.x work will cover this.	0	0	https://issues.jboss.org/browse/JBESB-546
11469	JBESB-544	Can you make sure these are documented?	0	0	https://issues.jboss.org/browse/JBESB-544

#	Requirement	Questions	Answered	Successfully Answered	URL
11470	JBESB-533	I have added a strategy so that it is possible to specify different strategies for a read-only ftp server (comments removed): public interface RemoteFileSystemStrategy { void init(String configFile) throws Exception; File[] filterFileList(File[] files) throws GatewayException; boolean deleteFile(File file) throws GatewayException; boolean renameFile(File from, File to) throws GatewayException; File getWorkFileName(File file, String suffix); } The default implementation does the same as what the RemoteGatewayListener did before. RemoteGatewayListener just delegates now. This lets us specify different implementations in the esb configuration file. Every time that RemoteGatewayListeners's getFileList method is called it calls the strategies filterFileList method. I have written an implementation (ReadOnlyRemoteFileSystemStrategy.class) that uses JBoss Cache to cache the filenames, and replicate to other members in the current cache cluster. This also has a cache loader configured so that the file list is persisted. The cache can be configured so that the files are only stored in the cache for a certain amount of time (jgroups configuration). In our case the files on the ftp server will be archived every day. Having such a solution will prevent the esb from working with the same file more then once. I think that may be others have similar situations and perhaps this is something that should be checked in? I have not yet changed the ftp-message-filter to have the property read-only. If read-only is true the ReadOnlyRemoteFileSystemStrategy could be used, but this could also be overrridden in the config file if a different impl is to be used. Should I add this property?	1	1	https://issues.jboss.org/browse/JBESB-533
11471	JBESB-533	I'll check this in by the end of the week. I need to add a way to specify the TreeCacheListener to be used. I don't quite know where to put the documentation for this. Where do you think if should put this? Thanks, Daniel	1	1	https://issues.jboss.org/browse/JBESB-533
11472	JBESB-526	Can you prune lib/ext as and when those services get broken out?	1	1	https://issues.jboss.org/browse/JBESB-526
11473	JBESB-523	For a start, can you please let me what you currently do to build and run testsuite? Where is the repository?	1	1	https://issues.jboss.org/browse/JBESB-523
11474	JBESB-523	Kevin, Do you need a running instance of jboss for tets to run? I got following error: clean-jms: [get] Getting: http://localhost:8080/jmx-console/HtmlAdaptor?action=invokeOpByName&name=jboss.mq.destination:service=Queue,name=A&methodName=removeAllMessages [get] To: /qa/services/hudson/hudson_workspace/workspace/jboss-esb-linux/trunk/clean.jms [get] Error opening connection java.io.FileNotFoundException: http://localhost:8080/jmx-console/HtmlAdaptor?action=invokeOpByName&name=jboss.mq.destination:service=Queue,name=A&methodName=removeAllMessages If that's the case, it would have been nice if you could tell the build where jboss is installed and it started jboss before running tests. We have ant task for that as well.	1	1	https://issues.jboss.org/browse/JBESB-523
11475	JBESB-523	Hiya Prabhat. This probably got lost in the previous comment, sorry about that - "Each image runs a local instance of AS, purely for JMS, and requires access to an FTP server. " At present we do not restart the app servers as we do not deploy anything into them, it is purely for JMS. Which ant tasks are you referring to? Are these the ones used in the AS build?	1	1	https://issues.jboss.org/browse/JBESB-523
11476	JBESB-523	Yes, the ant task I am refereeing is from AS build. (server:start and sever:stop). Can you add that in build? I guess since it does not deploy anything, it does not matter which AS version is being used as long as jms queue A,B,C are there. I will first configure it on linux, then I will work on windows.	1	1	https://issues.jboss.org/browse/JBESB-523
11477	JBESB-523	It's set up at http://dev45.qa.atl.jboss.com:8585/hudson/job/jboss-esb-linux and you can see the details of last build at http://dev45.qa.atl.jboss.com:8585/hudson/job/jboss-esb-linux/16/. You need to be behind redhat vpn to access the page. Hudson had some problem exiting the build process when it was configured to start and stop running jboss instance that was configured through its shell script UI. So, I have temporarilty started jboss in the background so that testsuite can run until we start jboss from testsuite itself or I import those tasks in hudson. I have set jbossesb-tests@googlegroups.com,jboss-qa-internal@redhat.com as buiild notificaiton recipients. The last build failed org.jboss.internal.soa.esb.couriers.tests.CourierIntegrationTest because of java.net.UnknownHostException: ftp.ncl.jboss.com: ftp.ncl.jboss.com. What is the correct ftp address? Currently, I start the testsuite with ant -f integration-build.xml -Dorg.jboss.esb.properties=/home/hudson/configs/jboss-esb/product.properties and this is how the product.properties file look like org.jboss.esb.build.deprecation=yes org.jboss.esb.build.optimize=off org.jboss.esb.build.frominstall=no org.jboss.esb.build.debug=yes org.jboss.esb.build.tests=no org.jboss.esb.alltests.build=yes org.jboss.esb.jboss.home=. org.jboss.esb.test.ftp.hostname=ftp.ncl.jboss.com org.jboss.esb.test.ftp.user=lintest org.jboss.esb.test.ftp.pwd=lintest org.jboss.esb.test.ftp.dir=/home/lintest/test Please let me know if some configs have changed.	1	1	https://issues.jboss.org/browse/JBESB-523
11478	JBESB-523	Hiya Prabhat. There are four properties that you need to configure for ftp access. You should change these to match whichever ftp server is accessible in your local environment. org.jboss.esb.test.ftp.hostname - The ftp server hostname org.jboss.esb.test.ftp.user - The user name for login org.jboss.esb.test.ftp.pwd - The password for login org.jboss.esb.test.ftp.dir - The base directory for the tests Kurt has recently asked for the build to be changed to use an embedded ftp server but overriding in this fashion will still be supported. Which email address is hudson using to sent reports to the jbossesb-tests mailing list? We will need to add it to the group. Kev P.S. Did you manage to get a windows integration running?	1	1	https://issues.jboss.org/browse/JBESB-523
11479	JBESB-523	Hi Kevin, I thought ftp.ncl.jboss.com is what you want me to use. I would have to to see which ftp server I can use. Would you need to access this ftp server as well? If so, then I have to work with IT on how long to keep files etc. Hudson uses jboss-qa-internal@redhat.com to send mail to jbossesb-tests@googlegroups.com. Please add this to the safe list. Once I set up linux compeltely, I will work on windows. As requested before, can you add server start and server stop target to the tesstuite to start and stop jboss AS?	1	1	https://issues.jboss.org/browse/JBESB-523
11480	JBESB-523	Hiya Prabhat. ftp.ncl.jboss.com is the local ftp server in the Newcastle office (where we currently run the CI). You would not have access to those machines. I do not believe we would need access to your ftp server as long as we could contact the person administering it. I have asked Mark to add the email address to the test google group. I will have a look at adding similar tasks into our build system (we are not part of AS and do not use buildmagic), but this is likely to be a low priority task for us. Is there an issue with leaving the AS running? Thanks for your help, Kev	1	1	https://issues.jboss.org/browse/JBESB-523
11481	JBESB-523	Hiya Prabhat. Is there any way to configure Hudson so that it will always send an email? One of the benefits of receiving the emails is that we are aware of changes shortly after they happen.	1	1	https://issues.jboss.org/browse/JBESB-523
11482	JBESB-523	Also, is there a reason why you chose 12 hours? At present we are running CI checks/builds every 15 mins on the Newcastle systems.	1	1	https://issues.jboss.org/browse/JBESB-523
11483	JBESB-523	It is possible to configure Hudson to send success emails. Can you please do that for our builds?	0	0	https://issues.jboss.org/browse/JBESB-523

#	Requirement	Questions	Answered	Successfully Answered	URL
11484	JBESB-523	Did you guys get an e-mail? I see that there was a build failure and then a successful build and as per log, it should have sent mail to jbossesb-tests@googlegroups.com. Len, please add yourself to jbossesb-tests@googlegroups.com or if you are a member of jboss-qa-internal then you should have got that as well.	1	1	https://issues.jboss.org/browse/JBESB-523
11485	JBESB-523	Hi Kevin, Agreed. 1. We are almost there with e-mail notificaiton. 2. It can now be done with the latest hudson and is being done. 3. Hudson has emma plugin. Where are emma coverage reports? Reliable: What has been going wrong? This will help me fix the problem.	1	1	https://issues.jboss.org/browse/JBESB-523
11486	JBESB-520	Jason, are you going to be able to work on this?	0	0	https://issues.jboss.org/browse/JBESB-520
11487	JBESB-518	Can you put an example here?	1	0	https://issues.jboss.org/browse/JBESB-518
11488	JBESB-509	Hi Kevin, the only thing I want to add to the deploy target is <ant dir="install" target="deploy"/>. Is that what you meant by 'You should either remove it, in favour of the install build.xml, or have it call the install build.xml to handle the deployment.' ? Thanks	1	1	https://issues.jboss.org/browse/JBESB-509
11489	JBESB-509	That looks much cleaner. I'll change it to that. Do you know whether jbossesb-listeners.jar and jbossesb-services.jar are needed anymore? They are no longer created but I wanted to make sure...	1	1	https://issues.jboss.org/browse/JBESB-509
11490	JBESB-501	Re removing the ability to chain actions... I don't think we should be throwing out the baby with the bath water. Not saying I'm a big lover of action chaining in its current form, but I'd suspect removing the option completely and replacing it with nothing more than "singleaction + service2service" will meet with some disapproval from the likes of Burr (and others). When we got Rosetta first, this was effectively what we had. Plugging "actions" (code that operates on a message) together meant defining separate services and routing the message between them. Otherwise you had to write monolithic actions (un-reuseable). IMO, either option was a total pain in the ass from a usability/reuseability perspective. Why can't we have a happy medium of some sort, where chained actions are still supported but we make "troublesome" actions (for scoping reasons or whatever) into standalone Services as Kurt describes.	1	1	https://issues.jboss.org/browse/JBESB-501
11491	JBESB-500	As part of this, can we remove the services directory from core?	1	1	https://issues.jboss.org/browse/JBESB-500
11492	JBESB-498	How is this different from either saying to people that only ESB aware services should be registered in the ESB registry, or that they shouldn't use EPRs for non-ESB-aware services?	1	1	https://issues.jboss.org/browse/JBESB-498
11493	JBESB-490	What's strange about that ;-)	1	1	https://issues.jboss.org/browse/JBESB-490
11494	JBESB-490	Since you started it (in all but name), do you want to finish it? ;)	1	1	https://issues.jboss.org/browse/JBESB-490
11495	JBESB-490	David, I have been looking at an issue logged against the helloworld quickstart and have made a number of changes in this area. Apologies for this. Are your changes ready to commit? If not, could you do it in stages?	1	1	https://issues.jboss.org/browse/JBESB-490
11496	JBESB-476	Does this mean that customactions,demonstrated by the quickstarts, should use the BeanConfiguredAction as the default?	0	0	https://issues.jboss.org/browse/JBESB-476
11497	JBESB-468	For the MP? What sort of transformation?	0	0	https://issues.jboss.org/browse/JBESB-468
11498	JBESB-465	How important do you think this is for 4.x?	0	0	https://issues.jboss.org/browse/JBESB-465
11499	JBESB-464	Is this still on course for this week?	0	0	https://issues.jboss.org/browse/JBESB-464
11500	JBESB-464	Can you register a new JIRA bug against the issue you're seeing? I assume that everything works fine when the server is not running? If that's the case we'll mention this in the release notes and take a look at it after the release.	1	1	https://issues.jboss.org/browse/JBESB-464
11501	JBESB-453	Kurt, please tell me how the undeliverable service would work. First, a message can't reach it's destination(s). You need to store it. How do you want to store it? The message store currently has a DB implementation which use a table and 3 columns (uri key, message, type) which directly reflects the Message types (XML/SERIALIZABLE) that the ESB has support for. Would you have a new Message type? You need to know within the message store that a given message is an undelivered message. Would you require some other columns to support this? A flag, (delivered vs stil to be delivered, etc) ?? Do you want to remove messages that get re-delivered successfully or flag them, etc? More information is required before we can code away... ;-)	1	1	https://issues.jboss.org/browse/JBESB-453
11502	JBESB-449	Derek, can you check your build.xml. According to the one in project.zip there is supposed to be a WEB-INF/lib and there isn't one. This causes the building of the WAR to fail. Maybe I'm missing something?	1	1	https://issues.jboss.org/browse/JBESB-449
11503	JBESB-447	Does this mean we're going to package up JBM in the standalone JBossESB deployment as it's JMS provider? Note that JBM depends on the 4.x MC architecture.	1	1	https://issues.jboss.org/browse/JBESB-447
11504	JBESB-447	So should we deploy ESB to the same 4.0 MC on which JBM is running, or have our bootstrapper start the JBM MC in parallel?	1	1	https://issues.jboss.org/browse/JBESB-447
11505	JBESB-447	Good question. What are the pros and cons?	1	1	https://issues.jboss.org/browse/JBESB-447
11506	JBESB-447	The pros are that deploying to JBossAS or to the JBM MC is pretty much doing the same thing! So we end up with a simpler unified deployment strategy. In this standalone mode we then support clean shutdowns, and clustering (which needs to be tested). The downside is that ESB will be married to the 4.x MC for it's startup and shutdown infrastructure. We would use no longer use the apache launcher. The ESB maybe persieved heaver. Here is where it gets fuzzy for me. Would it still be light if we'd build our own? From a functionality perspective I think it's a no brainer that we should do it. But keep in mind that what JBM is using is a fully dressed down (naked?) version of JBossAS 4.x.	0	0	https://issues.jboss.org/browse/JBESB-447
11507	JBESB-445	What was the CDATA section issue with the XSD? I remember trying this when we were doing the XSD stuff. I may be wrong, but I thought it actually did support a CDATA section in the properties, but it just didn't make it through to the XMLBeans binding classes.	1	1	https://issues.jboss.org/browse/JBESB-445
11508	JBESB-445	Ah OK. Wouldn't it be useful to inject the properties/ConfigTree into the script (as well as the message). This way you can parameterize the scripts from the config. I wonder how this action will perform? I'd imagine that creating a new instance of it every time will be a bit of a dog. But I suppose this is an issue we have with all our actions - they're non-singleton. I'd suggest that if/when we make the actions (or whatever they'll be called in the new architecture) singleton (by default), we could look at using the GroovyClassloader and require the Groovy scripts to implement our ActionProcessor interface (or whatever we call that). Then we can just treat Groovy scripts like any other java class (plus cache the instance on a per action basis).	0	0	https://issues.jboss.org/browse/JBESB-445
11509	JBESB-443	Do you think this is enough for 4.2? Could we push off any more performance improvements to the 5.0 release?	1	0	https://issues.jboss.org/browse/JBESB-443

#	Requirement	Questions	Answered	Successfully Answered	URL
11510	JBESB-438	Mark, can you elaborate on this please? With the current codebase anything within a single .esb file should already be taken down cleanly. The order used to specify the listeners/gateways is the sequence used by the managed lifecycle controller to initialise/start the lifecycles. When the managed lifecycle stops/destroys the lifecycles then the order is reversed. Each listener/gateway should wait until current work has finished before being destroyed, subject to timeout. Now that there is a move to deploy multiple .esb files we must make sure that the dependencies *between* those .esb files are fully realised. I do not believe the current codebase is in a position to do this and would have been happier if this had been deferred until 5 where we will have proper MC/OSGi integration.	0	0	https://issues.jboss.org/browse/JBESB-438
11511	JBESB-437	What would my Action class need to look like to access the properties that were configured from jbossesb.xml?	0	0	https://issues.jboss.org/browse/JBESB-437
11512	JBESB-437	Can this go in for MR2?	1	1	https://issues.jboss.org/browse/JBESB-437
11513	JBESB-434	Nice work Tom. If you haven't already, can you make sure the docs mention this and cover any configuration/deployment options?	0	0	https://issues.jboss.org/browse/JBESB-434
11514	JBESB-430	Can we do this just for JBoss Messaging on 4.2?	1	1	https://issues.jboss.org/browse/JBESB-430
11515	JBESB-429	Is it documented :-)?	0	0	https://issues.jboss.org/browse/JBESB-429
11516	JBESB-417	I can understand what has to be done to realise this for 5 but am unsure what is required for 4.2. Can you elaborate please?	0	0	https://issues.jboss.org/browse/JBESB-417
11517	JBESB-417	Without fundamental changes to the codebase, is there anything more we can do? The answer may be: no.	0	0	https://issues.jboss.org/browse/JBESB-417
11518	JBESB-417	The current deployer architecture, as it is based on the AS, can be used to provide different profiles for deployments in the same way. Would this suffice for 4.2? If so then we can drop the 4.2 requirement and keep this open for 5. BTW The OSGi development should include supporting repositories for bundles, this could also help in this requirement.	0	0	https://issues.jboss.org/browse/JBESB-417
11519	JBESB-417	Concerning the dev, test, staging, production item... That is more a matter of making sure the steps involved in moving a "project" out of dev and into production are at least tested/well documented. In the future there might be a central repository that is responsible for this type of thing. For instance, if I need to update 2 ESBs with the same services/archives together, can I simply have a shared file system between the 2 servers? Can I ask one ESB server and all its associated services to "stand down" in which case it no longer consume messages and all new messages would be routed to other ESB servers that hosted those same services (matched by category and name)? There may be more questions like this.	0	0	https://issues.jboss.org/browse/JBESB-417
11520	JBESB-417	With the current AS setup it is possible to share these deployments between multiple ESBs providing they have access to the same deployment locations. Taking down one ESB should unregister all the services deployed in that ESB but I am unsure whether failover will work in all circumstances. Do you have specific scenarios that you would like us to check?	0	0	https://issues.jboss.org/browse/JBESB-417
11521	JBESB-415	Can we replace gateways with JCA inflow/outflow?	0	0	https://issues.jboss.org/browse/JBESB-415
11522	JBESB-405	How's that for coincidence then ;-)	1	1	https://issues.jboss.org/browse/JBESB-405
11523	JBESB-400	Is this still relevant?	1	1	https://issues.jboss.org/browse/JBESB-400
11524	JBESB-400	Can we close this issue?	0	0	https://issues.jboss.org/browse/JBESB-400
11525	JBESB-396	Is there anything in particular I can do to reproduce this issue Kev?	1	1	https://issues.jboss.org/browse/JBESB-396
11526	JBESB-393	Is this a GA item?	1	0	https://issues.jboss.org/browse/JBESB-393
11527	JBESB-385	Well there are 2 requirements here actually: 1. A home for the Wink (tool used to create the demos) project files. I would put these into the JBossESB main project in SVN but for the fact that they're very big (~25M each). Is there another location in SVN that we can put them, but not as part of the main ESB Project. 2. A home on the web (jboss.org) where we can link the demos. We could have links to these in a number of places - wiki, labs pages etc. This stuff is "sales" material as well as educational.	1	1	https://issues.jboss.org/browse/JBESB-385
11528	JBESB-376	How is this going?	1	1	https://issues.jboss.org/browse/JBESB-376
11529	JBESB-376	Release is today/tomorrow. Should I move this task until after the release?	1	1	https://issues.jboss.org/browse/JBESB-376
11530	JBESB-370	Should we push this until after the 4.0 GA?	0	0	https://issues.jboss.org/browse/JBESB-370
11531	JBESB-369	Kurt has already done the war deployment, certainly for tomcat. Do we know if there is anything else to do in this?	1	1	https://issues.jboss.org/browse/JBESB-369
11532	JBESB-369	Yes this is testing on tomcat 5.5.20, and seems to only work with the tomcat.zip, not with the tomcat installer as Burr recently found out. So we may want to take a look at that, and maybe deploying it to the other environments. How much work would it be to add an orderly shutdown? There is no "unload-on-shutdown" is there?	1	1	https://issues.jboss.org/browse/JBESB-369
11533	JBESB-366	Does the flash work help here?	1	1	https://issues.jboss.org/browse/JBESB-366
11534	JBESB-365	Object to XML: What are we looking for here - integrating something like XStream/Castor? DOM to XML: ??? Just DOM serialisation? Groovy Scripting: I'll be adding Groovy support for Smooks very soon. Once there, people will be able to dev transformations in Groovy (Vs raw Java) Binary to ASCII Encode/Decode: Fine. Byte Array to Serializable: ??? Mail Body to String: ??? Is this a Mail Gateway we're talking about here? Http Request Body to String: ??? Is this a HTTP Gateway?	0	0	https://issues.jboss.org/browse/JBESB-365
11535	JBESB-363	If you're working on this, can you mark it as active.	1	1	https://issues.jboss.org/browse/JBESB-363
11536	JBESB-353	Why do we need this exactly?	1	0	https://issues.jboss.org/browse/JBESB-353
11537	JBESB-347	Kurt, can you add tests for the Aggregator and CBR actions in the package? Thanks.	0	0	https://issues.jboss.org/browse/JBESB-347
11538	JBESB-347	There are tests for that in the qa package as you need a running server. Can I close this?	1	1	https://issues.jboss.org/browse/JBESB-347
11539	JBESB-327	Is this definitely needed for 4.0 GA?	1	0	https://issues.jboss.org/browse/JBESB-327
11540	JBESB-323	Will relative paths not work on all OSs?	1	1	https://issues.jboss.org/browse/JBESB-323
11541	JBESB-261	Which Email helper class?	1	1	https://issues.jboss.org/browse/JBESB-261
11542	JBESB-238	I think we should drop this in favour of 5.0. What do you think?	0	0	https://issues.jboss.org/browse/JBESB-238
11543	JBESB-233	What would the rule look at in the message to determine if it gets stored or not? Would we use XPath and define a rule that way to determine storing rule(s)? What about non xml messages? Wondering what the strategy should be for this.	1	0	https://issues.jboss.org/browse/JBESB-233
11544	JBESB-208	How does this relate to the jUDDI management tool?	1	1	https://issues.jboss.org/browse/JBESB-208
11545	JBESB-208	What do you mean by "configuring an EPR"?	1	1	https://issues.jboss.org/browse/JBESB-208
11546	JBESB-189	Could you add some more detail here? Cheers.	1	1	https://issues.jboss.org/browse/JBESB-189

#	Requirement	Questions	Answered	Successfully Answered	URL
11547	JBESB-181	And yet another option might be to define a static inner class in the ActionProcessor interface such that ActionProcessor to provide "helper" type methods for accessing message components e.g. ActionProcessor.MessageAccessor.setProcessingObject(message, object); ... Object processingObj = ActionProcessor.MessageAccessor.getProcessingObject(message); ... so the static string is completely hiden and the getting and setting are centrally managed... in fact, we could change where we store it in the future (should we decide to do that) and no ones code would break (in theory ;-))	1	1	https://issues.jboss.org/browse/JBESB-181
11548	JBESB-172	I have sent an email round to groups for comments on the work I have done to resolve this issue. Should I add the details here if we are happy with the groups email?	0	0	https://issues.jboss.org/browse/JBESB-172
11549	JBESB-166	Is this still relevant? With the Quickstarts maybe we no longer need to worry about it?	0	0	https://issues.jboss.org/browse/JBESB-166
11550	JBESB-165	Since you're working on this, can you drive the related discussion on the forum around spawning new listeners?	1	1	https://issues.jboss.org/browse/JBESB-165
11551	JBESB-165	Can you add some unit and QA tests before merging with the trunk?	0	0	https://issues.jboss.org/browse/JBESB-165
11552	JBESB-161	What exactly is being requested here? We merged the old "product/config" and "product/docs/install" resources to the current "product/install" structure. Was there something additional in mind e.g. a replacement for the DomElement configs used on the listeners (MicroContainer, no??)?	1	1	https://issues.jboss.org/browse/JBESB-161
11553	JBESB-161	The other related task is http://jira.jboss.com/jira/browse/JBESB-119 and David D is working on this. Can we close out this task now?	0	0	https://issues.jboss.org/browse/JBESB-161
11554	JBESB-152	How about a conversion sub-package with ByteArrayToString, FileToByteArray, ObjectToCSVString, ObjectToFileWriter ObjectToXStream? A template sub-package with all of the DummyX classes.	0	0	https://issues.jboss.org/browse/JBESB-152
11555	JBESB-141	How is this going?	0	0	https://issues.jboss.org/browse/JBESB-141
11556	JBESB-125	Can you mark this as In Progress ;-)?	1	1	https://issues.jboss.org/browse/JBESB-125
11557	JBESB-119	Dave, can you post a reference to the forum in case others have comments? Thanks.	1	1	https://issues.jboss.org/browse/JBESB-119
11558	JBESB-119	Good day, Mark. Excellent suggestion. However, I believe there needs to be a bit more to a forum post. I have (prior to developing the Alpha schema) taken both the Trailblazer and TestJBossESB samples' config files and transformed them to meet the "new standard". The context of each set of properties requires, in my view, a README to explain, along with these sample config files. I will attach these documents shortly, then create the forum thread. Overkill? Dave	1	1	https://issues.jboss.org/browse/JBESB-119
11559	JBESB-119	Dave, I know you're snowed under. Should I ask Kurt to look at this?	1	1	https://issues.jboss.org/browse/JBESB-119
11560	JBESB-114	As per groups message, should I start to abstract the bus concept as a service in order to facilitate this task? My current line of thought is to provide services/transport with sub service categories for email, ftp, jms, file, jdbc etc.	0	0	https://issues.jboss.org/browse/JBESB-114
11561	JBESB-109	What DB connection are you refering to? The persistence store DB will be using Apache Commons DBCP to handle the connection pooling and validating connections in the pool for stale connections, etc... It used a "validate sql" sending any query you tell it to validate wether a connection from the pool is still valid or not.	1	1	https://issues.jboss.org/browse/JBESB-109
11562	JBESB-105	I have decided to use the JDK 1.5 UUID implementation. For more info: http://java.sun.com/j2se/1.5.0/docs/api/java/util/UUID.html Can we close this one Mark if you have already reviewed the algorithm?	1	1	https://issues.jboss.org/browse/JBESB-105
11563	JBESB-103	Yes. I think we're in agreement. Definitely not for the beta. That's why I set Fix Version to 4.0 (the GA).	1	1	https://issues.jboss.org/browse/JBESB-103
11564	JBESB-90	Can this also include renaming them (as per the discussion during the Newcastle meeting)?	0	0	https://issues.jboss.org/browse/JBESB-90
11565	JBESB-70	The class NagiosStandaloneHeartbeat just contains a constructor. How are we going to integrate? Is there an API to use. Once I implemented a component sending a heartbeat message to a Netsaint monitoring server. I was communicating with it using sockets. Is this the way we want to integrate with Nagios (former Netsaint) too?	1	1	https://issues.jboss.org/browse/JBESB-70
11566	JBESB-50	Not quite sure Mark. That would somehow imply that properties correspond to a package. Do they ? if you leave it at org.jboss.soa.esb.property.XXX they would still belong to ESB but not related to any package in particular In any case, it doesn't make a big difference	1	1	https://issues.jboss.org/browse/JBESB-50
11567	JBESB-46	Is this something that could be dynamically pluggable? Instead of replacing a class, couldn't users simply define their own class(es) and let the "encryption manager" pick them up from a configuration file (for example) and instantiate them at runtime?	0	0	https://issues.jboss.org/browse/JBESB-46
11568	JBESB-39	Tom, about 6 weeks prior to release can you go through the code and let the team know which pieces need more coverage?	0	0	https://issues.jboss.org/browse/JBESB-39
11569	JBESB-38	ESCCore/Tests has been deleted and the classes move to their relevant modules. I will leave this issue as open as I need to revisit the tests which are dependant on a running server - these are functional tests and will come into play once refactoring is nearing to a completion for the first phase and we have set up scripts for the server which also deploy the esb and run the functional tests. Can this issue be downgraded ?	0	0	https://issues.jboss.org/browse/JBESB-38
11570	JBESB-35	Do you have an idea for what this should contain?	1	1	https://issues.jboss.org/browse/JBESB-35
11571	JBESB-22	Where are we with this at the minute: 1. Forum: http://www.jboss.com/index.html?module=bb&op=viewtopic&t=81237, http://www.jboss.org/index.html?module=bb&op=viewtopic&t=82506 2. Wiki: http://wiki.jboss.org/wiki/Wiki.jsp?page=TransformationServices	1	1	https://issues.jboss.org/browse/JBESB-22
11572	JBESB-19	Is there any technical documentation available about implementing this? Are there any guidelines?	0	0	https://issues.jboss.org/browse/JBESB-19
11573	JBESB-19	That's what I initialy understood using the description. But than there was somthing about deployment and I got confused. Ok this is what I'm thinking off : Build a REST servlet which can handle GET, POST and DELETE requests. GET : will do a receive from a certain service and returns the result. For example : GET http://www.mycompany.com/rest/ordersQueue will get the first message on a JMS queue named ordersQueue POST : do a synchronous call to a service endpoint and return the result PUT :do a synchronous call whithout returning a result DELETE : will do a receive from a certain service whithout returning the result Like this every service should be accessible using a HTTP method What do you think about this design? What I would like to know before I can start developing is how I can delegate the request to the service itself.	0	0	https://issues.jboss.org/browse/JBESB-19
11574	JBESB-19	Have these classes or has this functionality been added to the newest version of the JBoss ESB? I can't find these classes anywhere and there are no examples of using synchronous HTTP directly (except for a separate service which uses the ESB directly).	1	0	https://issues.jboss.org/browse/JBESB-19
11575	JBESB-16	The client-side is straightforward. Do we implement a server-side or try to leverage one that already exists?	1	1	https://issues.jboss.org/browse/JBESB-16
11576	JBESB-16	Can you integrate the branch using the old listener classes, which are still there but moved to the 'old' package structure? At least then we'd have everything in the trunk and after the RC you and Esteban can talk about updating to the new model.	1	1	https://issues.jboss.org/browse/JBESB-16

#	Requirement	Questions	Answered	Successfully Answered	URL
11577	JBESB-13	Mark, can you confirm this is done with the code under branches/JBESB-13 ? The basic messaging server (slimmed down JBossAS) and a basic esb kernel are up and running. There is nothing to deploy as there are no entries in the configuration files ie no core services and no general services as there are 2 configuration files I have added, see svn under svn\jbossesb\branches\JBESB-13\ESBCore\etc\server\default\config where there empty configuration files jboss-esb-core.xml & jboss-esb-services.xml If we now add service implementations via the MC, we are not dependant on the MC M3 release - which is what standalone Messaging built on the MC will need.	1	1	https://issues.jboss.org/browse/JBESB-13
11578	JBESB-13	Can you add a couple of stand-alone JMS QA tests, just to confirm the deployment outside of ESB?	0	0	https://issues.jboss.org/browse/JBESB-13
11579	JBESB-11	For this issue, i presume you want me to add a jms and messaging protocol implementation similar to the tcp implementation you have added. Can I continue this on the same branch JBESB-13 ?	1	1	https://issues.jboss.org/browse/JBESB-11
11580	JBESB-11	I am unsure whether this should be closed or not, the initial discussion was about getting rossetta running on jboss messaging, the idea was plug-and-play, or rather it should just drop in and wokr, and it does, as there are no dependencies. If i can assume that is the initial part, i am now assuming that the next step to this issue is to provide a messaging layer (not jms, but jboss messaging) transport. Mark can you clarify ?	1	1	https://issues.jboss.org/browse/JBESB-11
11581	JBSSO-37	When will this issue be solved ? I believe it's the last issue before 1.0GA release comes out.	0	0	https://issues.jboss.org/browse/JBSSO-37
11582	JBSSO-36	Could any provide some more info about this bug? It would be nice to start fixing it.	1	1	https://issues.jboss.org/browse/JBSSO-36
11583	JBSSO-25	With what version of seam do you want to provide a hook? we can do it right now and begin with testing... What kind of hook do you want? please explain...	0	0	https://issues.jboss.org/browse/JBSSO-25
11584	JBFORUMS-268	What this task has to do with JBoss Forums project?	0	0	https://issues.jboss.org/browse/JBFORUMS-268
11585	JBFORUMS-263	Yep, I saw all your comments and I will work on mentioned bugs. Nevertheless, I made an agreement with our graphic designer and he will create buttons for all needed languages. All he needs is a translation of buttons' texts. Especially for images: forum_but_addnewcategory.gif forum_but_addnewforum.gif forum_but_closed.gif forum_but_delete.gif forum_but_edit.gif forum_but_email.gif forum_but_moderate.gif forum_but_newtopic.gif forum_but_postreply.gif forum_but_profile.gif forum_but_quote.gif forum_but_subscribe.gif forum_but_unsubscribe.gif which can be found here: http://anonsvn.labs.jboss.com/labs/jbossforums/branches/forums101P26/forums/src/bin/portal-forums-war/default_graphics/images/ Would you be so kind and attach a text file with their translations?	1	1	https://issues.jboss.org/browse/JBFORUMS-263
11586	JBFORUMS-263	Thanks, although it's a bit hard to say that there is a whole team behind Forums ;-). Nevertheless, I have a problem with the TXT file. I believe you saved it in ASCII instead of UTF-8 coding and French characters are messed up. Could you reattach UTF-8 version?	1	1	https://issues.jboss.org/browse/JBFORUMS-263
11587	JBFORUMS-203	Awesome. Big thanks. Could you please tell me which version of ResourceJSF.properties did you translate, from which version of JBoss Forums? 1.0.0 RC from binary downloads or maybe from svn sources. It is very important for me as I'm adding some things there while doing redesign and new views.	1	1	https://issues.jboss.org/browse/JBFORUMS-203
11588	JBFORUMS-203	Hi Luca, Would you mind checking if it works properly? I cannot find in my web browsers locale switch and I'd like to be sure that your contributorship works as expected. btw. I'll do soon some work on 1.0.1 bundle and I'll need few new lines to be translated. Can I count on you ? Cheers, Rysiek	1	1	https://issues.jboss.org/browse/JBFORUMS-203
11589	JBFORUMS-203	Thanks Luca but you used ASCII encoding and the file has messed up Italian specific characters for me. Additionally, could you replace all Italian characters with their equivalents of \uXXXX notation? This fixes a problem with displaying UTF-8 messages in <h:messages>.	1	1	https://issues.jboss.org/browse/JBFORUMS-203
11590	JBFORUMS-152	I checked this issue with lastPost which you pointed out but it works correctly for me. Could you tell me how to reproduce?	0	0	https://issues.jboss.org/browse/JBFORUMS-152
11591	JBFORUMS-151	Is it possible, while changing the look and feel, to add a mechanism to translate the images ? I'd like to translate the buttons in french, but it's kinda ugly if I simply overwrite the english image files. If you can add such a mechanism, I'll create french buttons for you. I'd need the original files though. Working with compressed gifs is such pain in the a$$...	0	0	https://issues.jboss.org/browse/JBFORUMS-151

11593	JBFORUMS-2	I will look at the forums debate. Thanks for pointing me there. But one small question Ales. In what way was I bashing? I was just mislead by the fact that it is not a change to the current forum, but a completely new forum with a new searchengine. Sorry if I gave the impression I was bashing, that was not my intention (maybe the term frustrated was wrongly used here, since I'm not frustrated with the current searchengine, but with the users that do not take the time to read the text on the radionbuttons and they get frustrated by me for shouting Search The Fine Forum ;-))	1	0	https://issues.jboss.org/browse/JBFORUMS-2
11594	ENTESB-7042	[~alexkieling] I logged the two tasks we talked about (ENTESB-7127, ENTESB-7128) for authentication and handling special characters. Is there anything else we need to log separately or do you think we can close this JIRA?	1	0	https://issues.jboss.org/browse/ENTESB-7042
11595	ENTESB-6946	https://github.com/jboss-fuse/fuse-jenkins-pipelines/commit/e07daaf33385f99fdbde8e3c18eaec630d7bf565 re: info for prod - we could do it here - you'd prefer a config file? Any preferred format? Would it be produced only for successful builds? What info should be in it (I'm assuming the tags that are produced by the build, but wasn't sure whether there was anything else that would be necessary)?	0	0	https://issues.jboss.org/browse/ENTESB-6946
11596	ENTESB-6879	Can I mark this as Resolved for Fuse 7?	1	0	https://issues.jboss.org/browse/ENTESB-6879
11597	ENTESB-6878	Hi, Spring Boot uses BOM dependency io.fabric8:fabric8-project-bom-camel-spring-boot. I don't know, if fuse 7 will use also this dependency. If yes, which version i should use ? If not, what should we use to test fuse 7 with Camel on Spring Boot ?	1	1	https://issues.jboss.org/browse/ENTESB-6878
11598	ENTESB-6878	For CXF, it doesn't appear that there is an official BOM (https://issues.apache.org/jira/browse/CXF-6857). It looks like the distribution manifest might be something workable there though : org.apache.cxf:cxf-distribution-manifest - here is a link to the most recent one produced : http://origin-repository.jboss.org/nexus/content/groups/ea/org/apache/cxf/cxf-distribution-manifest/3.1.11.fuse-000030/cxf-distribution-manifest-3.1.11.fuse-000030.pom Karaf : org.apache.karaf:karaf pom seems like the best choice - link to most recent version : http://origin-repository.jboss.org/nexus/content/groups/ea/org/apache/karaf/karaf/4.2.0.fuse-000030/karaf-4.2.0.fuse-000030.pom Hibernate : I think that's being pulled in by Karaf or EAP, depending on container. We're not building it as part of the pipeline. For the karaf kit, the only thing I see shipped is hibernate-validator and it's version corresponds to the version of hibernate-validator in the Karaf pom above. So I think there's a few questions here : - should we change org.jboss.fuse:fuse-parent -> org.jboss.fuse.bom:fuse-parent to match 6.3? - do we want to generate a bom combining some of these?	1	1	https://issues.jboss.org/browse/ENTESB-6878
11599	ENTESB-6878	Hi [~tcunning], we were discussing how users can deploy fuse and here's what we found: * bundle deployed on standalone fuse ** runtime jboss-fuse-karaf, all dependencies provided by karaf as features ** BOM with versions aligned to karaf 4 features * jar/war deployed onto EAP 7 ** runtime EAP7 camel and other stuff provided by subsystem ** BOM with versions aligned to EAP * far jar / spring-boot ** flat classpath built by maven plugin from MRRC ** BOM with spring boot camel starter... ([~llowinge] might elaborate what we need here) * war / tomcat (Enterprise Web Server) ** runtime EWS, all dependencies pulled from MRRC ** BOM do we need to align with EWS ? does it make sense to reuse other bom? * FIS / OpenShift deployment / Sprint Boot ** flat classpath ** BOM there is fabric8 spring BOM afaik * FIS / OpenShift deployment / Karaf ** karaf distro built by karaf maven plugin ** BOM there is fabric8 karaf bom AFAIK * IPaaS / integration project generated from UI ** flat classpath with spring boot ** here it gets complicated with connectors and it's mapping to camel components IMHO the best solution would be to have documentation for each target platform showing * basic project template (consumed by fuse tooling in create project wizard and in Fuse documentation) * which BOM to use * what is provided by target runtime and what is "developers responsibility to package" What do you think about that?	1	1	https://issues.jboss.org/browse/ENTESB-6878

#	Requirement	Questions	Answered	Successfully Answered	URL
11600	ENTESB-6878	[~jludvice] I think you did a good job of documenting it right here! If we want this in the user documentation we should probably file a doc JIRA. Are we missing anything here? I think we've come to consensus for Karaf, EAP, Spring Boot, FIS. The only one I don't really know is the EWS scenario.	1	1	https://issues.jboss.org/browse/ENTESB-6878
11601	ENTESB-6878	Hello [~tcunning] (CC [~tturek] [~ppecka] [~apodhrad]) Thanks for creating FUSEDOC-2080, but what is doc team supposed to put in? I recall some mentions that {{jboss-fuse-parent}} is more for internal use than official BOM. What exactly should it be? Where is link for that file? Can we please agree on concrete *GAV* for each deployment type until we pass it on to docs team?	1	0	https://issues.jboss.org/browse/ENTESB-6878
11602	ENTESB-6878	[~jludvice] * bundle deployed on standalone fuse ** runtime jboss-fuse-karaf, all dependencies provided by karaf as features ** BOM with versions aligned to karaf 4 features : org.apache.karaf:karaf * * jar/war deployed onto EAP 7 ** runtime EAP7 camel and other stuff provided by subsystem ** BOM with versions aligned to EAP : org.jboss.eap:jboss-eap-parent * fat jar / spring-boot ** flat classpath built by maven plugin from MRRC ** BOM with spring boot camel starter : io.fabric8:fabric8-project-bom-camel-spring-boot * FIS / OpenShift deployment / Sprint Boot ** flat classpath ** BOM : io.fabric8:fabric8-project-bom-camel-spring-boot * FIS / OpenShift deployment / Karaf ** karaf distro built by karaf maven plugin ** BOM : io.fabric8: fabric8-project-bom-fuse-karaf * IPaaS / integration project generated from UI ** flat classpath with spring boot ** BOM : io.fabric8:fabric8-project-bom-camel-spring-boot The one idea I have really no idea about is war/tomcat (below), I'm not familiar with it at all. * war / tomcat (Enterprise Web Server) ** runtime EWS, all dependencies pulled from MRRC ** BOM do we need to align with EWS ? does it make sense to reuse other bom?	1	1	https://issues.jboss.org/browse/ENTESB-6878
11603	ENTESB-6878	We were just discussing with [~maschmid] and he says that there were two BOM files for FIS 2.0 because of different camel versions * FIS / karaf used camel 2.17.x / aligned to fuse 6.3 * FIS / spring-boot used camel 2.18.x / because of spring-boot support in camel 2.18 Is there any reason to keep them separate if we're going to have just one version of camel? I did now want to say we need 7 different BOM files. It could be one BOM to rule all runtimes, if it's possible :) Will there be any difference in versions for standalone fuse and for FIS/karaf ?	1	0	https://issues.jboss.org/browse/ENTESB-6878
11604	ENTESB-6849	[~janstey] why don't these quickstart issues show up in fuse 7 backlog? Ignore - set component and now they show up.	0	0	https://issues.jboss.org/browse/ENTESB-6849
11605	ENTESB-6828	Looks like 2012 still has active extended support and 2014 is still within active support lifecycle (SP2 ends maintenance support in 2019). https://support.microsoft.com/en-us/lifecycle/search?alpha=SQL%20Server Agree with adding 2016. So should we adjust to drop 2012, keep 2014, and add 2016?	0	0	https://issues.jboss.org/browse/ENTESB-6828
11606	ENTESB-6828	Could you also list about the driver's version which will be used for the certification test please? I'm sure that user loves to know which sets of DB and driver we test and certified.	0	0	https://issues.jboss.org/browse/ENTESB-6828
11607	ENTESB-6810	Now the Artemis plugin is managed by the AMQ team and is already bundled in AMQ 7.0 with hawtio 1.x line. So who should proceed this task? [~aileenc] [~ataylor]	1	0	https://issues.jboss.org/browse/ENTESB-6810
11608	ENTESB-6794	I don't yet fully understand what's really the issue. Under low load most operations in the ActiveMQ tab execute immediately even on a queue with 10000 messages, so does it occur only under high load such as production? Also, we can find the "Execute" buttons only when invoking an operation in the "Operations" sub menu on a MBean. So is the user invoking MBean operations such as {{browseAsTable()}} directly instead of utilising features provided by the ActiveMQ plugin? Essentially is "the execute button to stay depressed till there is a response from the browse command" what we just need to implement for this enhancement request?	1	1	https://issues.jboss.org/browse/ENTESB-6794
11609	ENTESB-6641	What is the best way to handle these changes - should this all be done in the Jenkins pipeline? [~tcunning] [~chirino] ?	1	1	https://issues.jboss.org/browse/ENTESB-6641
11610	ENTESB-6641	There's no "fuse" startup script in bin directory. Karaf gives me this error - do I need later version of JDK? C:\Fuse\esb-project-7.0.0.fuse-000015>.\bin\karaf.bat Error occurred during initialization of VM java/lang/UnsupportedClassVersionError: java/lang/Exception : Unsupported major. minor version 52.0 C:\Fuse\esb-project-7.0.0.fuse-000015> C:\Fuse\esb-project-7.0.0.fuse-000015>java -version java version "1.8.0_101" Java(TM) SE Runtime Environment (build 1.8.0_101-b13) Java HotSpot(TM) 64-Bit Server VM (build 25.101-b13, mixed mode)	0	0	https://issues.jboss.org/browse/ENTESB-6641
11611	ENTESB-6641	I think the reason is that the startup script is using the {{JAVA_HOME}} environment variable to locate the {{java}} executable. Can you check if it points to a JRE / JDK 8 ?	0	0	https://issues.jboss.org/browse/ENTESB-6641
11612	ENTESB-6637	Is this not covered by https://10.8.63.16/view/wildfly-camel/job/fuse-eap-redhat-7.0 and friends?	1	1	https://issues.jboss.org/browse/ENTESB-6637
11613	ENTESB-6634	Hi Paolo, Thanks for the update.I will take care of formatting going ahead. I agree that keeping the container state as it is in case of wrong decryption value in profile is expected or current behaviour. But customer expecting that his application should fail in this case.In fuse it just throws WARN message and keeps on using old correct decryption value without any change. Customer saying they don't restart their containers or redeploy all applications frequently on any profile changes.So In this case if some user has added bad decryption value by mistake and forgot to restart container or redeploy application then his application will keep on using old value until next restart.Customer expecting his application should fail immediately.It should throw error message instead of WARN. If this is not a bug, can we have it as enhancement?	1	0	https://issues.jboss.org/browse/ENTESB-6634
11614	ENTESB-6634	Hi Paolo, Is it possible to suggest in which release this enhancement can be released, so that same i can update to a customer. Thanks, Swapnil	1	0	https://issues.jboss.org/browse/ENTESB-6634
11615	ENTESB-6603	Hi [~alexkieling] I need your input. I have started toying with the activity and I have just started familiarizing with Patternfly. I have noticed that there multiple distros of Patternfly: https://www.patternfly.org/download/ In particular I notice that there is a {{Angular PatternFly}} . Is that that we are using? I'm asking this mainly because I wanted to use a `DataTable` widget. But I have noticed that it has no automatic integration with Angular data binding. I could use it, but it would be like using jquery, with me directly responsible of all the state transitions. Can you comment on this? Should I follow a different approach?	1	1	https://issues.jboss.org/browse/ENTESB-6603
11616	ENTESB-6603	How are you doing, Paolo? Need any help?	1	1	https://issues.jboss.org/browse/ENTESB-6603
11617	ENTESB-6600	Hi [~stefanutti], What's left with this ticket? I'm trying to resolve ENTESB-6358, and to me most of the works here for the JMX tree seems to be complete already (awesome work!). One minor point I noticed is that the icon for leaf nodes of the tree is also a folder, which was a cog. I think a different icon from the folder nodes is better for leaf nodes. Is it something you are working on?	1	1	https://issues.jboss.org/browse/ENTESB-6600

#	Requirement	Questions	Answered	Successfully Answered	URL

11626	ENTESB-6460	[~jdyson] Hey this 'curl -XDELETE 'http://<Hostname>:9200/insight-2016-07-06' thing they are doing to solve the space issues, does that also delete data that can be viewed from the UI? What do you think about this case?	1	0	https://issues.jboss.org/browse/ENTESB-6460
11627	ENTESB-6418	hello [~tcunning], is there any special way to verify this issue? If I update soap-mtom quickstart switchyard.xml (Fuse 630269 build on EAP) with: <soap:endpointConfig configFile="META-INF/jaxws-endpoint-config.xml" configName="SwitchYard-Endpoint-Config"/> + add jaxws-endpoint-config.xml to main/resource/META-INF as per ENTESB-6305 SY reproducer, I even cannot build it (mvn clean package), it fails with this exception: testSwitchYardWebService(org.switchyard.quickstarts.soap.mtom.SoapMtomTest) Time elapsed: 0.852 s <<< ERROR! javax.xml.ws.soap.SOAPFaultException: Could not generate the XML stream caused by: org.xml.sax.SAXParseException: cvc-type.3.1.2: Element 'imageResponse' is a simple type, so it must have no element information item [children].. at org.switchyard.quickstarts.soap.mtom.SoapMtomTest.testSwitchYardWebService(SoapMtomTest.java:48) Caused by: org.apache.cxf.binding.soap.SoapFault: Could not generate the XML stream caused by: org.xml.sax.SAXParseException: cvc-type.3.1.2: Element 'imageResponse' is a simple type, so it must have no element information item [children]..	1	1	https://issues.jboss.org/browse/ENTESB-6418
11628	ENTESB-6393	[~alexkieling], [~stefanutti], [~stlewis], Should hawtio-log be yet another separate project? Where will the plugin be best located?	1	1	https://issues.jboss.org/browse/ENTESB-6393

#	Requirement	Questions	Answered	Successfully Answered	URL
11629	ENTESB-6393	Ah, I think Antonin's point is valid and really insightful. FWIW, Fuse 6.x already has two different log plugins for standalone and Fabric8: https://access.redhat.com/documentation/en-us/red_hat_jboss_fuse/6.3/html-single/management_console_user_guide/#FMCUG_Insight So I think it's natural even for hawtio v2 to separate the Log plugin for standalone containers from the plugin for OpenShift / Kubernetes. I thought that this ticket is targeted only for the standalone version, which only takes care of standalone containers like Karaf, EAP, and SpringBoot. For this, now I think _hawtio-log_ is the good starting point. For logging on OpenShift or logging for FIS, I'm really not sure how much capabilities are already implemented in either OpenShift Console or Fabric8 projects, but maybe either of them is the good place to accommodate such a plugin. I noticed Fabric8 already has some hawtio plugins like _hawtio-forge_ in it. Or could _hawtio-kubernetes_ be a good home for such a plugin?	1	1	https://issues.jboss.org/browse/ENTESB-6393
11630	ENTESB-6393	Is this task about the [Logs page|https://access.redhat.com/documentation/en-us/red_hat_jboss_fuse/6.3/html-single/management_console_user_guide/#FMCUG_Container_Logs] or the [Insight plugin|https://access.redhat.com/documentation/en-us/red_hat_jboss_fuse/6.3/html-single/management_console_user_guide/#FMCUG_Insight]? If we are going to have multiple logging solutions, it makes sense having a repository to each one. We can register the Angular modules (hawtio plugins) we need to create the final console. What name should we give to the repository and who want's to work on it?	1	1	https://issues.jboss.org/browse/ENTESB-6393
11631	ENTESB-6364	[~stefanutti] Have you migrated JMX tree on the left hand side to {{patternfly-bootstrap-treeview}}? Or will you?	1	1	https://issues.jboss.org/browse/ENTESB-6364
11632	ENTESB-6358	Maybe we should break this task into smaller tasks. What do you think?	1	1	https://issues.jboss.org/browse/ENTESB-6358
11633	ENTESB-6357	I'm curious about how it's to be implemented in hawtio v2. RBAC is one of the major parts that have been improved in Fuse 6.3 (ENTESB-4055 and ENTESB-5219). But that improvement was implemented mostly at the Java backend. How can we accommodate the same capabilities in the hawtio v2 architecture?	1	0	https://issues.jboss.org/browse/ENTESB-6357

11660	ENTESB-5874	I have several points for which i'm not able to have the project working: - mvn camel:run for local deployment is not working, it wasn't configured so I added the dependency to camel-maven-plugin but then it complains about asm artefacts - the test is not played during build (skipTests=true) and I'm not able to have it working (ConnectException: Connection refused) And last question is: how can I test that the route is working? what should I call? i tried to call http://localhost:8181/cxf/report/ from web browser but I get connection refused too here is my current work for the subject: here is my current work on the subject: https://github.com/apupier/fuseide/tree/FUSETOOLS-1981-ActivateLocalLaunchCOnfiguration	0	0	https://issues.jboss.org/browse/ENTESB-5874
11661	ENTESB-5847	I've been trying to recreate this error with no success. I have been combing through the code to see where it could be improved. The only obvious point seems to avoid the NPE that happens in [SubscriptionHelper|https://github.com/jboss-fuse/camel/blob/2.15.0.redhat-6-2-x-patch/components/camel-salesforce/camel-salesforce-component/src/main/java/org/apache/camel/component/salesforce/internal/streaming/SubscriptionHelper.java#L251]. But that exception is logged and swallowed in the BayeuxClient, so it's not the root cause of the Camel context shutdown. The primary problem is that BayeuxClient gets an early EOF from Salesforce. It's too late for the component to do anything at that point. BayeuxClient is supposed to be able to recover from a network error and reconnect, with a 1s increment and 30s max backoff, but I looks like it doesn't happen in the fixed 40s subscribe timeout. I suspect the problem might be with the user's JVM version or the network environment, which is causing a low level SSL disconnect. Can the user test Salesforce streaming with the [workbench|https://developer.salesforce.com/docs/atlas.en-us.198.0.salesforce1api.meta/salesforce1api/quick_start_workbench.htm], to see if they can recreate the error. It's not strictly equivalent, since it's browser based and doesn't use Jetty client and BayeuxClient like the component, but it's worth a try to validate the environment. The user could also try with the latest JDK if it's not being used already and see if that makes a difference in the SSL connection handling.	1	1	https://issues.jboss.org/browse/ENTESB-5847

11666	ENTESB-5845	[~ppecka] i was asking because we don't provide the Java dsl based templates. So where did you get it? The failure that you have are also here when you use the fixed readme instructions?	1	1	https://issues.jboss.org/browse/ENTESB-5845

#	Requirement	Questions	Answered	Successfully Answered	URL
11667	ENTESB-5845	What does samples from JBDS9 mean? We are only shipping our wizard which has its own set of templates. If you don't use them you are probably using runtime provided quickstarts the tooling is not responsible for in first line. Though if you find issues with those quickstarts we can raise the issues at ENTESB jira for you.	1	1	https://issues.jboss.org/browse/ENTESB-5845
11668	ENTESB-5845	[~aurelien.pupier] as described by this issue. i found the ones in the git repository, and then i've used JBDS9 directly. and i think the JBDS9 provides the java dsl template for activemq, see https://github.com/fusesource/fuseide/tree/master/editor/plugins/org.fusesource.ide.projecttemplates/template-sources/simple/amq [~lhein] can you be more specific in terms of above mentioned "wizard"? i might be using wrong terminology, althrough in JBDS9 I was using some "wizard" to obtain blueprint and spring example. So we probably need to be clear on purpose of this issue. [~lhein] can you help me here? what exactly is "expected behaviour" one should see to say "fixed"? If the fixed means "customer is provided with working templates" then I suggest correcting readme files.	1	1	https://issues.jboss.org/browse/ENTESB-5845
11669	ENTESB-5806	Hi Stephen, We can look at this in the 7.X timeframe, however, in the near term would they be able to configure fabric? If so, there is a master slave component in there that should handle this. Susan	1	1	https://issues.jboss.org/browse/ENTESB-5806
11670	ENTESB-5791	Hi [~sonicaaaa], Could you please advise me how to test this fix? I have tried to run fuse with *-Djolokia.historyMaxEntries=13*. The default value is 10. If I check it via Hawtio (JMX - jolokia - Config) the value of *History max entires* parameter is 10. Supposed this is a good approach the fix doesn't work or Hawtio reads default value and doesn't take into account the changed value.	1	1	https://issues.jboss.org/browse/ENTESB-5791
11671	ENTESB-5791	[~mastepan] Yes, that should be a correct approach to test it. How have you passed {{-Djolokia.historyMaxEntries=13}} to Fuse? Note you need to use {{EXTRA_JAVA_OPTS}} env variable to pass them to Fuse at startup, something like: {code} $ EXTRA_JAVA_OPTS='-Djolokia.historyMaxEntries=13' bin/fuse {code} or adding the line in {{bin/setenv}}: {code} export EXTRA_JAVA_OPTS="-Djolokia.historyMaxEntries=13" {code}	1	0	https://issues.jboss.org/browse/ENTESB-5791
11672	ENTESB-5765	Why do they need to secure the list of endpoints?	1	1	https://issues.jboss.org/browse/ENTESB-5765
11673	ENTESB-5694	it is published only for SNAPSHOT build. For tagged version, shouldn't we provide it to a specific place? if not, I suppose that we "just" have to modify perfectus build to let him publish also the tagged version	1	1	https://issues.jboss.org/browse/ENTESB-5694
11674	ENTESB-5675	Currently, I cannot build wfc-2.4-redhat ``` [ERROR] Failed to execute goal on project wildfly-camel-modules: Could not resolve dependencies for project org.wildfly.camel:wildfly-camel-modules:pom:2.4.0.redhat-630000-SNAPSHOT: Could not find artifact org.slf4j:slf4j-log4j12:jar:1.7.7.redhat-2 in central (http://repo.maven.apache.org/maven2) -> [Help 1] ``` This artefact is missing in all of these locations ``` Downloading: http://repo.maven.apache.org/maven2/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: http://repository.jboss.org/nexus/content/groups/public/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: https://maven.repository.redhat.com/ga/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: https://maven.repository.redhat.com/earlyaccess/all/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: http://repo.springsource.org/libs-release-remote/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: http://download.eng.bos.redhat.com/brewroot/repos/jb-eap-6.4-rhel-6-build/latest/maven/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar Downloading: https://repository.jboss.org/nexus/content/groups/ea/org/slf4j/slf4j-log4j12/1.7.7.redhat-2/slf4j-log4j12-1.7.7.redhat-2.jar ``` Jon, could you pls have a look?	1	1	https://issues.jboss.org/browse/ENTESB-5675
11675	ENTESB-5567	Are there any changes needed in Fuse 6.3 or can this issue be closed and a new one created in OSFUSE?	0	0	https://issues.jboss.org/browse/ENTESB-5567
11676	ENTESB-5553	Fuse 6.3 should be updated to use the Red Hat build of winsw. [~pgallagh] Can you add link to the Red Hat build?	1	1	https://issues.jboss.org/browse/ENTESB-5553
11677	ENTESB-5547	Hi, I think this could be implemented by a user app bundle. They just need to use the Thread.html.setDefaultUncaughtExceptionHandler [1] to setup a JVM wide exception handler. Then in the exception handler they can use the Throwable.getStackTrace() and FrameworkUtil.getBundle() [2] to find out which bundle threw the exception and handle the exception accordingly. Note that "which bundle your in" can mean different things. Is it the bundle that threw the exception, or is the bundle that started the thread you were running in? If you want to get fancy and make it pluggable, user bundles could register exception handlers in the OSGi registry. The default handler that was set would just need to find all implementation in the registry and call the first one that was registered in the OSGi registry by the bundle associated with the exception. [1]: https://docs.oracle.com/javase/7/docs/api/java/lang/Thread.html#setDefaultUncaughtExceptionHandler(java.lang.Thread.UncaughtExceptionHandler) [2]: https://osgi.org/javadoc/r4v43/core/org/osgi/framework/FrameworkUtil.html#getBundle(java.lang.Class)	0	0	https://issues.jboss.org/browse/ENTESB-5547
11678	ENTESB-5514	Hi [~rick_wagner], is this what you want? guessing you used # while ? should be used for dynamic query. http://camel.apache.org/sql-component.html {quote} CamelSqlQuery Camel 2.8: Query to execute. This query takes precedence over the query specified in the endpoint URI. Note that query parameters in the header are represented by a ? instead of a # symbol {quote}	1	1	https://issues.jboss.org/browse/ENTESB-5514
11679	ENTESB-5471	Helll [~rkieley], could you please add commit link if it's fixed?	1	1	https://issues.jboss.org/browse/ENTESB-5471
11680	ENTESB-5471	Hi [~kearls], I just checked with 6.3 build 237 and it's still 813 kB for {{java.svg}}. Can you please provide link to commit fix to check where we actually have this fixed?	0	0	https://issues.jboss.org/browse/ENTESB-5471
11681	ENTESB-5452	[~gnodet] Can you comment on whether this is feasible?	1	0	https://issues.jboss.org/browse/ENTESB-5452
11682	ENTESB-5430	Pax web change, [~gnodet] can you comment on this?	1	1	https://issues.jboss.org/browse/ENTESB-5430
11683	ENTESB-5379	Would [Ehcache Replication|http://www.ehcache.org/generated/2.9.0/html/ehc-all/#page/Ehcache_Documentation_Set%2Fehcache_all.1.230.html%23] help here ? [~ffang], [~aileenc] as long term solution a jcache-base implementation in cxf may be a nice to have as switching cache implementation would be much easy (no change to the code base)	0	0	https://issues.jboss.org/browse/ENTESB-5379
11684	ENTESB-5379	[~ffang] fyi, ehcache 3.0 has support for JCache, would you like me to create an JCache OAuthDataProvider ?	0	0	https://issues.jboss.org/browse/ENTESB-5379
11685	ENTESB-5363	Would it make sense to eventually put it under camel-kubernetes upstream and then use it in the future "route policy" API ?	1	1	https://issues.jboss.org/browse/ENTESB-5363
11686	ENTESB-5329	Hi [~oscerd], what's the status of this issue? It's marked as resolved but I didn't see any activity on this issue.	0	0	https://issues.jboss.org/browse/ENTESB-5329
11687	ENTESB-5311	hi Tomohisa igarashi, I've tried it as you recommend (@Named("myCDIBeanRouteBuilder") on RouteBuilder) and it works for @Inject annotation above TestBean b; (630067 fuse build on eap) However it doesn't work for @BeanInject annotation. Since this issue relates to @BeanInject I'm not sure if I can consider this issue closed, could you give me advise?	1	1	https://issues.jboss.org/browse/ENTESB-5311
11688	ENTESB-5290	Should this be on list for fuse 7?	1	0	https://issues.jboss.org/browse/ENTESB-5290

#	Requirement	Questions	Answered	Successfully Answered	URL
11689	ENTESB-5162	[~virchete] - could you please try the following: 1. Run Fuse 6.2.1 on EAP 6.4.x 2. Run 'mvn clean package' in the provided transform-jaxb quickstart 3. cp target/switchyard-transform-jaxb.jar $FUSE_HOME/standalone/deployments/ 4. Start Eclipse/JBDS 5. Import transform-jaxb as maven project 6. In SwitchyardCXFSOAPTest, change ORDER_SERVICE_PORT to 8080 (optional: @Ignore tests testMTOMSimpleAttachment and testMTOMWithImage, as these are related to ENTESB-5161) 7. Run the class as JUnit test Note that the two tests testMTOMexpandSimpleAttachment/testMTOMexpandWithImage pass, but the response is not in the expected format nevertheless: * testMTOMexpandSimpleAttachment/testMTOMexpandWithImage: requests against xopExpand=true endpoint. working, but base64 inline attachment and no mtom response * testMTOMexpand_analyseResponse: sends special requests which forces the server to return an attachment and analyses the httpresponse. take a look at the unittest log.	1	1	https://issues.jboss.org/browse/ENTESB-5162
11690	ENTESB-5150	Verified with fuse 630045 on karaf, by QE. For fuse on EAP I have a question: Some packages were updated, but some of them (httpclient, httpcore, freemarker, jgroups) not. These are in "base" folder only, I'm not sure whether should be updated also. Could you give me advice?	1	1	https://issues.jboss.org/browse/ENTESB-5150
11691	ENTESB-5139	Comments from requesting party. March 30, 2016: {quote} I've seen Claus Ibsen's comments on ENTESB-5139. It is obviously a bit more work to make Camel run with Saxon 9.7. The referenced Camel upstream tickets (CAMEL-8830 and CAMEL-7891) are from 2014 and 2015 and still unresolved. Not sure if possible, but it would be really good if a fix with Saxon 9.7 upgrade would make it into Fuse 6.3. I'm a bit afraid that we have to wait very long until something moves forward if the fix gets delayed to much... Do you think this would be possible? {quote} April 3, 2016: {quote} If you could inform PM that we as a customer are heavily invested in XSLT/Saxon on Fuse so that PM might give this some priority, that would be very helpful. {quote}	0	0	https://issues.jboss.org/browse/ENTESB-5139
11692	ENTESB-5087	If you already have an example, could you please make this a PR? There is some test coverage [here|https://github.com/wildfly-extras/wildfly-camel/blob/master/itests/standalone/basic/src/main/java/org/wildfly/camel/test/quartz/QuartzIntegrationTest.java]	0	0	https://issues.jboss.org/browse/ENTESB-5087
11693	ENTESB-5050	[~gnodet1], What karaf related javadocs you would want packaged in the fuse distro? Could you give me a link to the mvn gavs to the javadoc artifacts?	0	0	https://issues.jboss.org/browse/ENTESB-5050
11694	ENTESB-5028	Is this something we can get into 6.3?	0	0	https://issues.jboss.org/browse/ENTESB-5028
11695	ENTESB-4979	[~rick_wagner], can we close this issue?	0	0	https://issues.jboss.org/browse/ENTESB-4979

Except for the page doesn't refresh (update) if I add or remove a new camel context. Hasn't that been the thing to fix? (tried on 6.3 067)	0	0	https://issues.jboss.org/browse/ENTESB-4599

#	Requirement	Questions	Answered	Successfully Answered	URL
11737	ENTESB-4598	Hi [~sonicaaaa], the logs from the cleaning manager are printed out to stdout when using interactive shell: {code} JBossFuse:karaf@root> Removing file: Apr 8, 2016 9:20:08 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.206f Removing file: Apr 8, 2016 9:16:38 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.1b1a Removing file: Apr 8, 2016 9:09:19 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.d36 Removing file: Apr 8, 2016 9:13:27 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.1434 Removing file: Apr 8, 2016 9:05:01 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.1 Removing file: Apr 8, 2016 9:22:46 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/log.2646 Removing file: Apr 8, 2016 9:20:08 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/snapshot.2644 Removing file: Apr 8, 2016 9:16:38 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/snapshot.206d Removing file: Apr 8, 2016 9:13:27 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/snapshot.1b18 Removing file: Apr 8, 2016 9:09:19 AM /tmp/jboss-fuse-6.3.0.redhat-045/data/zookeeper/0000/version-2/snapshot.1432 {code} I believe they should be logged into the log (and probably debug level only?) Is there anything that could be done about this? If not, then resolve the issue again and I will close it as it is working as expected	1	1	https://issues.jboss.org/browse/ENTESB-4598
11738	ENTESB-4597	Hi [~chirino], the examples/samples for: - *cxf* are not present - *camel* are present Is this intended? There are some examples for camel, but not for cxf. If yes, then I think I can close this issue. Thanks Hiram.	1	1	https://issues.jboss.org/browse/ENTESB-4597
11739	ENTESB-4597	Hi [~vkasala], where did you find the examples for camel?	1	1	https://issues.jboss.org/browse/ENTESB-4597
11740	ENTESB-4597	Hi [~chirino], shouldn't be this issue moved to next Sprint? How can I verify it, if it is not in ER1 or other build? Thanks.	0	0	https://issues.jboss.org/browse/ENTESB-4597
11741	ENTESB-4593	[~tcunning], we should create an issue in Camel project to fix the following method: https://github.com/jboss-fuse/camel/blob/camel-2.16.1.redhat-630015/components/camel-jaxb/src/main/java/org/apache/camel/converter/jaxb/FallbackTypeConverter.java#L149 Bean class without annotation {{@XmlRootElement}} is not handled as JAXB type. I have a simple switchyard example where I use HTTP binding and JAXB transformation. There is missing transformer: {{java:java.io.StringReader => java:<my-custom-type>}}. So I have to use annotation {{@XmlRootElement}}. Otherwise I have to add extra transformer... What do you think?	0	0	https://issues.jboss.org/browse/ENTESB-4593
11742	ENTESB-4592	Prod can change the DDL scripts, so we could increase the size of the clob columns, but to what size? The original ticket suggested an increase to the max supported value, which is 2,147,483,647 bytes. What are the performance/storage implications of this change? How will this affect any other DB2 customers? Furthermore, increasing the clob size in 6.3 will break compatability for DB2 users with existing data. Do we also need to provide an upgrade script for the 6.3 release?	1	1	https://issues.jboss.org/browse/ENTESB-4592
11743	ENTESB-4588	I'm attaching my reproducer with question, [~tcunning] can you please help me figure out what is the real issue here? what the customer really expects to get? empty message? empty soap body? Please see my attachment. 1) mvn clean test and please observe lines 13-16 in src/main/resources/wsdl/PingService.wsdl Caused by: org.switchyard.extensions.wsdl.WSDLReaderException: SWITCHYARD012801: Service operations on a WSDL interface must have exactly one parameter. at org.switchyard.extensions.wsdl.WSDLReader.getParts(WSDLReader.java:388) at org.switchyard.extensions.wsdl.WSDLReader.readWSDL(WSDLReader.java:103) at org.switchyard.extensions.wsdl.WSDLService.fromWSDL(WSDLService.java:100) at org.switchyard.extensions.wsdl.WSDLService.fromWSDL(WSDLService.java:83) at org.switchyard.deploy.internal.Deployment.loadServiceInterface(Deployment.java:418) ... 10 more 2) if we uncomment src/main/resources/wsdl/PingService.wsdl on line 13 - 16, tests are passing	1	1	https://issues.jboss.org/browse/ENTESB-4588
11744	ENTESB-4584	Hello Red Hat engineers, We have a support case associated with this request, the customer is offering to provide an implementation if we suggest the design. Can you please consider, offer some suggestions about high-level design? (i.e. the proper package for the thread pool, the classes that will need to interact with it.) Support will maintain a dialogue with the customer, perhaps their implementation can later be shared back. Thanks, Rick	1	0	https://issues.jboss.org/browse/ENTESB-4584
11745	ENTESB-4582	The new component has been merged in master branch as of https://github.com/apache/camel/commit/0421c24dfcf992f3296ed746469771e3800200e3 so that it'll be available in the upcoming 2.17.0 upstream Camel release.	1	1	https://issues.jboss.org/browse/ENTESB-4582
11746	ENTESB-4558	Is this already in the 7.0 kits built from Jenkins pipeline?	0	0	https://issues.jboss.org/browse/ENTESB-4558
11747	ENTESB-4551	That's definitely possible. How do you envision the notification working if the container detects that a new version is available? In all scenarios, I think it's a situation where we compare the version in use (determined via Maven GAV) to the latest available version (via MRRC query or other catalog).	0	0	https://issues.jboss.org/browse/ENTESB-4551
11748	ENTESB-4534	Hi [~igarashitm], I'm not sure why you need to change leveldb itself. Can't you use it's existing APIs to to implement the filter policy?	1	1	https://issues.jboss.org/browse/ENTESB-4534
11749	ENTESB-4459	[~emil.cervenan], there's ENTESB-2844 where we tried to describe most of http-proxy related configuration. Is this invalid now?	0	0	https://issues.jboss.org/browse/ENTESB-4459
11750	ENTESB-4459	[~emil.cervenan], you describe two issues: * http proxy * maven proxy Assuming that fabric-agent (that uses information from profile-edit) first contacts fabric's main maven proxy (started with fabric-maven-proxy bundle), it should be enough to correctly configure maven resolver inside fabric-maven-proxy. Try this: h3. http proxy either create file {{my-settings.xml}}: {code:xml} ... <proxies> <proxy> <id>my-proxy</id> <active>true</active> <protocol>http</protocol> <username>fuse</username> <password>fuse</password> <host>localhost</host> <port>3128</port> <nonProxyHosts /> </proxy> </proxies> ... {code} and tell fabric-maven-proxy about it: {noformat} profile-edit --pid io.fabric8.maven/io.fabric8.maven.settings=/path/to/maven-settings.xml default {noformat} or do it _inline_: {noformat} profile-edit --pid io.fabric8.maven/io.fabric8.maven.proxies=http:host=foo,port=8080,user=xxx,pass=xxx;https:host=bar,port=9090 default {noformat} h3. maven proxy Append your special maven proxy with this command: {noformat} profile-edit --pid io.fabric8.maven/io.fabric8.maven.repositories='http://fusewin.tpb.lab.eng.brq.redhat.com:8081/nexus/content/repositories/fuse-qe-repo@id=fuse-qa' --append default {noformat} The idea above is to configure maven/http proxy in one place (fabric's internal maven proxy, that should be contacted first by each fabric-agent), instead of using {{profile-edit \--pid io.fabric8.agent/org.ops4j.pax.url.mvn.XXX=yyy}} as a way to configure download manager for fabric-agent. [~sonicaaaa], [~janstey], [~chirino] would you like to add/change something to/in my explanation?	0	0	https://issues.jboss.org/browse/ENTESB-4459

#	Requirement	Questions	Answered	Successfully Answered	URL
11751	ENTESB-4408	Can we disable this for 6.2.1 and direct people to command line?	0	0	https://issues.jboss.org/browse/ENTESB-4408

11758	ENTESB-4267	Test was ran again with build #69 and feature camel-sap is back. Can we close this issue?	0	0	https://issues.jboss.org/browse/ENTESB-4267
11759	ENTESB-4236	It works. But the workaround with classloader is not mentioned neither in [community documentation|http://camel.apache.org/groovy.html] nor in product documentation. Is it ok? Do you think it is obvious?	0	0	https://issues.jboss.org/browse/ENTESB-4236
11760	ENTESB-4221	It looks like this is working {{etc/org.ops4j.pax.web.cfg}} {code} org.ops4j.pax.web.config.file=etc/jetty.xml # enable http org.osgi.service.http.port=8181 org.ops4j.pax.web.session.cookie.httpOnly=true org.osgi.service.http.enabled=true # enable https org.osgi.service.http.secure.enabled=true org.osgi.service.http.port.secure=8441 # configure keystore org.ops4j.pax.web.ssl.keystore=${karaf.etc}/broker.ks org.ops4j.pax.web.ssl.keystore.type=jks org.ops4j.pax.web.ssl.password=awesomeStorePass org.ops4j.pax.web.ssl.keypassword=awesomeKeyPass # PaxWeb docs https://ops4j1.jira.com/wiki/display/paxweb/SSL+Configuratione {code} It was working also when this part of {{jetty.xml}} was deleted. Can we delete this hardcoded port ? Do we need to define those properties? {code:xml} <New id="httpConfig" class="org.eclipse.jetty.server.HttpConfiguration"> <Set name="secureScheme">https</Set> <Set name="securePort"> <Property name="jetty.secure.port" default="8443" /> </Set> <Set name="outputBufferSize">32768</Set> <Set name="requestHeaderSize">8192</Set> <Set name="responseHeaderSize">8192</Set> <Set name="sendServerVersion">true</Set> <Set name="sendDateHeader">false</Set> <Set name="headerCacheSize">512</Set> </New> {code} {{broker.ks}} created for testing purposes with this command {code} keytool -genkeypair \ -dname "CN=name of your container, O=name of your organization, L=city name, ST=your state or province, C=US" \ -validity 365 \ -alias cert-alias \ -keypass awesomeKeyPass \ -storepass awesomeStorePass \ -keystore broker.ks \ -keyalg RSA {code}	0	0	https://issues.jboss.org/browse/ENTESB-4221
11761	ENTESB-4147	Verified by QA: {code} grep -R "jolokia-version>1" fabric8/pom.xml: <jolokia-version>1.3.2.redhat-1</jolokia-version> hawtio/pom.xml: <jolokia-version>1.3.2.redhat-1</jolokia-version> {code}	0	0	https://issues.jboss.org/browse/ENTESB-4147
11762	ENTESB-4085	Why do you think that this would "allow exploitation of any security vulnerabilities"? The trigger for camel module wiring is currently the existence of the Camel subsystem in the configuration. Even if we followed your advice, it is still possible to do an explicit module load of any module that is in the hierarchy. From that module you can then obtain the classloader and do what you do above just the same.	0	0	https://issues.jboss.org/browse/ENTESB-4085
11763	ENTESB-4058	Is this one resolved then?	0	0	https://issues.jboss.org/browse/ENTESB-4058
11764	ENTESB-4045	Can we make this change for 6.2.1 so it doesn't turn into a Fuse 6.2 / Hibernate last minute issue..	1	1	https://issues.jboss.org/browse/ENTESB-4045
11765	ENTESB-4045	Did we ship 1.0 / 1.1 and 1.2 in previous releases?	1	1	https://issues.jboss.org/browse/ENTESB-4045
11766	ENTESB-4045	Is there still a benefit to aligning to versions in EAP? That way if we need a fix in the core of weld (not OSGi bundle) we have a team in house who can provide that.	1	1	https://issues.jboss.org/browse/ENTESB-4045
11767	ENTESB-4043	I thought this analyser would help us identify artefacts that had already been built from source by another product that we might want to align with, Is that the intention of the analyser?	1	0	https://issues.jboss.org/browse/ENTESB-4043
11768	ENTESB-4043	Hi, what are your expectations from this tool? What data would you like to get from it? This tool is in development state and the new features will be added in the future. This is a first version, which should discover, what the users wants. Let me know what do you want from the tool and some of next versions can contains more useful features for you.	1	1	https://issues.jboss.org/browse/ENTESB-4043
11769	ENTESB-4043	What is the goal of this tool? My expectation was that it would give us a list off all 3rd party dependencies fro Fuse and help identify those that have already been built by other teams so that we can aim to align. Is that something you plan to support in future versions?	1	0	https://issues.jboss.org/browse/ENTESB-4043
11770	ENTESB-4043	[~jbartece] We're having a hard time interpreting the report we got https://10.8.63.16/view/Perfectus/job/ncl-test/5/console I see comments like: Requested GA was not found org.apache.servicemix.specs:org.apache.servicemix.specs.activator:2.5.0 None no list 4 dependencies not built 2 available versions None list: io.fabric8.mq:mq-client:1.2.0.redhat-621048 Can you provide some guidance on what we should be looking for in the report?	1	0	https://issues.jboss.org/browse/ENTESB-4043
11771	ENTESB-4043	[~aileenc] Sorry, we still miss the user's documentation - should come in 2 weeks. You should find some helpful information, when running the script without parameters (it'll print the help). Note: The Dependency Analyser version 0.4 was release 2 weeks ago. Download new scripts, please: https://github.com/project-ncl/dependency-analysis/blob/master/cli/da-cli-0.4.2.zip?raw=true Explanation of the output: Requested GA was not found - bad message (bug for it is reported), It typically means, that the GAV hasn't been internally built (-redhat build wasn't found). org.apache.servicemix.specs:org.apache.servicemix.specs.activator:2.5.0 None no list 4 dependencies not built 2 available versions None == <Best Matched Red Hat Version> - if the artifact was built, then there will be RH version of the artifact no list = = <In black/white list?> 4 dependencies not built == <Number of not built dependencies> 2 available versions == <Available Versions> - internal builds of this artifact (in different versions) None list: io.fabric8.mq:mq-client:1.2.0.redhat-621048 - It means, that this artifact is not in blacklist nor whitelist	1	1	https://issues.jboss.org/browse/ENTESB-4043
11772	ENTESB-4043	I think the report could benefit from some reformatting to make it more readable When is the 0.5 release scheduled?	1	0	https://issues.jboss.org/browse/ENTESB-4043
11773	ENTESB-4043	It should be released in 5 or 6 weeks. The output was reworked once, but we can improve it again. Do you have any proposal of more readable output for you?	1	1	https://issues.jboss.org/browse/ENTESB-4043
11774	ENTESB-4043	[~kearls] There's a new release out. Could you try another run?	0	0	https://issues.jboss.org/browse/ENTESB-4043

11801	ENTESB-2877	this issue also affects camel-spark-rest: {code} feature 482/518 - camel-spark-rest will be tested installation of feature Feature "camel-spark-rest" (2.15.0.redhat-620004) from camel-2.15.0.redhat-620004 failed for reason: ←[31mError executing command: Can not resolve feature: Unsatisfied requirement(s): ---------- package:(&(package=org.eclipse.jetty.client.util)(version>=8.0.0)(!(version>=10.0.0))) camel-jetty9 package:(&(package=org.eclipse.jetty.client.api)(version>=8.0.0)(!(version>=10.0.0))) camel-jetty9 {code}	0	0	https://issues.jboss.org/browse/ENTESB-2877
11802	ENTESB-2825	No code changes required for this functionality, the behavior comes from https://github.com/jboss-fuse/fuseenterprise/commit/5b211ece28bfe367a8faca2a14ab62d916d002c4 corresponding to ENTESB-1758 What is currently *supported* is: - github https protocol - github pub key authentication protocol (assumes key in {{~/.ssh/ }}folder What is *not supported*: - ssh password authentication. (we need code change for this, see http://www.codeaffine.com/2014/12/09/jgit-authentication/) Note that pub key authentication relies on plain .ssh configuration. So you need to verify from command line that the user that will be running the process is also able to access remote ssh location. It's also required to accept key fingerprint of remote servers. Some example configuration I have tested succesfully: {code} # pubkey github # no user/pass required since authentication information is taken from git client and ssh client configuration profile-edit --pid io.fabric8.datastore/gitExternalUrl=git@github.com:paoloantinori/test fabric {code} {code} # https github. # user and pass are read and used only in case of https protocol ! profile-edit --pid io.fabric8.datastore/gitExternalUrl=https://github.com/paoloantinori/test.git fabric profile-edit --pid io.fabric8.datastore/gitRemoteUser=pantinor@redhat.com fabric profile-edit --pid io.fabric8.datastore/gitRemotePassword=******* fabric {code} {code} # private ssh server, pub key only profile-edit --pid io.fabric8.datastore/gitExternalUrl=pantinor@localhost:/tmp/git_repo fabric 1.1 # this setup required the additional customization of ~/.ssh/config to disable manual interaction to accept server key fingerprint. # Host localhost # Port 22 # VerifyHostKeyDNS no # StrictHostKeyChecking no {code}	1	1	https://issues.jboss.org/browse/ENTESB-2825

11810	ENTESB-2705	Hi [~emil.cervenan] , can you elaborate more when you say that "Whole io.fabric8.agent.properties file is broken afterwards. " ? I tried your steps, and it fails, because we are passing a not value value for that property. If I invoke : {code} profile-edit --pid 'io.fabric8.agent/org.ops4j.pax.url.mvn.repositories=http://someValue=my' --append default JBossFuse:karaf@root> profile-display default Profile id: default Version : 1.0 Attributes: Containers: Container settings ---------- Repositories : mvn:org.apache.karaf.assemblies.features/standard/${version:karaf}/xml/features mvn:io.fabric8/fabric8-karaf/${version:fabric}/xml/features Features : fabric-agent fabric-git fabric-jaas insight-log jolokia fabric-git-server karaf fabric-web fabric-core Overrides : mvn:org.ops4j.pax.logging/pax-logging-service/1.8.1 mvn:org.apache.servicemix.bundles/org.apache.servicemix.bundles.jsch/0.1.51_1 mvn:javax.mail/mail/1.4.7 Agent Properties : patch.repositories = https://repo.fusesource.com/nexus/content/repositories/releases, https://repo.fusesource.com/nexus/content/groups/ea metadata#org.apache.felix.scr#[1.0,2.0)#Provide-Capability = osgi.extender;osgi.extender=osgi.service.component, osgi.service;effective:=active;objectClass="org.apache.felix.scr.ScrService" optional.ops4j-base-lang = mvn:org.ops4j.base/ops4j-base-lang/1.4.0 resolve.optional.imports = true io.fabric8.agent.download.threads = 4 metadata#org.apache.aries.blueprint.core#[1.0,2.0)#Provide-Capability = osgi.service;effective:=active;objectClass="org.apache.aries.blueprint.services.ParserService" org.ops4j.pax.url.mvn.globalUpdatePolicy = always metadata#org.apache.felix.metatype#[1.0,2.0)#Provide-Capability = osgi.service;effective:=active;objectClass="org.osgi.service.metatype.MetaTypeService" org.ops4j.pax.url.mvn.repositories = file:${runtime.home}/${karaf.default.repository}@snapshots@id=karaf-default, file:${runtime.data}/maven/upload@snapshots@id=fabric-upload, http://repo1.maven.org/maven2@id=central, https://repo.fusesource.com/nexus/content/groups/public@id=fusepublic, https://repository.jboss.org/nexus/content/repositories/public@id=jbosspublic, https://repo.fusesource.com/nexus/content/repositories/releases@id=jbossreleases, https://repo.fusesource.com/nexus/content/groups/ea@id=jbossearlyaccess, http://repository.springsource.com/maven/bundles/release@id=ebrreleases, http://repository.springsource.com/maven/bundles/external@id=ebrexternal, http://someValue=my ... {code} Also, you can ignore the difference between escaped and unescaped values. {{java.util.Properties}} handles them both, and it's directly its method {{http://docs.oracle.com/javase/7/docs/api/java/util/Properties.html#store%28java.io.Writer,%20java.lang.String%29}} that introduces them while saving the properties files. Still being able to load correctly the values that do not present the escape sequence. Regarding the re-ordering issue of entries, we don't currently have a satisfactory solution, unluckily. More advance extensions of Properties class idea exist in the java world, but we have Felix constraints and switching to another implementation might not be easy/possible. For example: http://commons.apache.org/proper/commons-configuration/apidocs/org/apache/commons/configuration2/PropertiesConfiguration.html Can you verify if providing a valid location of a Maven repo solves to problem for you as well? thank you paolo	1	1	https://issues.jboss.org/browse/ENTESB-2705
11811	ENTESB-2702	I just updated the doc source for versions 6.1, 6.2, and 6.2.1, explaining that you need to create a fabric and deploy a cloud profile (for example, {{cloud-aws.ec2}}, {{cloud-openstack}}, and so on).	1	1	https://issues.jboss.org/browse/ENTESB-2702
11812	ENTESB-2688	Ideally we woudl have all the quickstartrs running as smoke tests. How many are missing?	1	1	https://issues.jboss.org/browse/ENTESB-2688
11813	ENTESB-2665	feature pax-cdi-web-openwebbeans has the same issue {code} JBossFuse:karaf@root> features:install pax-cdi-web-openwebbeans Error executing command: Can not resolve feature: Unsatisfied requirement(s): ---------- package:(&(package=org.eclipse.jetty.server.handler)(version>=9.0.0)(!(version>=10.0.0))) OPS4J Pax CDI Web OpenWebBeans Adapter package:(&(package=org.eclipse.jetty.servlet)(version>=9.0.0)(!(version>=10.0.0))) OPS4J Pax CDI Web OpenWebBeans Adapter {code}	1	1	https://issues.jboss.org/browse/ENTESB-2665
11814	ENTESB-2625	Is this done now or is there work still outstanding?	0	0	https://issues.jboss.org/browse/ENTESB-2625
11815	ENTESB-2625	Hi Willem, thanks for suggestion. Now it works. :) But how often does the clientMode consumer send requests to a server? Does it do only once, or is there some some timer? I had assumption that the clientMode consumer will send next request immediately after ever response from a server. But it's not like this.	1	1	https://issues.jboss.org/browse/ENTESB-2625

#	Requirement	Questions	Answered	Successfully Answered	URL
11816	ENTESB-2625	Hi Willem, do you mean modify netty server to don't close channel after message send ? But connection can accidentally fail (e.g. network problem, server down, ...). What in this case? Reset camel route to inicialize new connection? And will it work for with mina2 too (don't close IoSession after message send?) ? I am trying do do it with mina2+hl7 and it works very strange for me now. I will experiment with it now. Can I catch you on IRC? When and where? Your nickname is njiang, isn't it?	1	1	https://issues.jboss.org/browse/ENTESB-2625
11817	ENTESB-2427	The command was add in https://github.com/jboss-fuse/fuse/commit/59ddc9630b3a4ba700f0fc110f153976242ceaf3 For the {{amq:create-admin-user}} command, wouldn't it make sense to update the activemq.jmx.user/password properties as well as part of this command or do we want to leave it up to user whether or not they will use that?	1	1	https://issues.jboss.org/browse/ENTESB-2427
11818	ENTESB-2320	Why file this as requirement when it looks like a bug and is described like a bug?	1	1	https://issues.jboss.org/browse/ENTESB-2320
11819	ENTESB-2320	Because your engineering colleauges asked me to file it this way. Email chain attached. ========== Thanks Guillaume. Kevin would you log an enhancement request please? Remember to use JBFPL for enhancements. Susan On Oct 15, 2014, at 11:21 AM, Guillaume Nodet <gnodet@redhat.com> wrote: > No, there's currently no way to disable this behavior. > However, this may be improved, as I think the computation of the list brings too many bundles, and there may also be some ways to remove a few dependencies that could help a lot. But this need code changes. > > Guillaume > > ----- Original Message ----- > From: "Kevin Boone" <kboone@redhat.com> > To: fuse-eng-help@redhat.com > Sent: Wednesday, October 15, 2014 12:20:27 PM > Subject: Overzealous bundle restarts in Karaf/fabric > > Hi folks > > I'm sorry -- I've raised this subject before, but I didn't realize at > the time how many customers were affected by the problem. it seems to be > pretty pervasive. > > When a bundle gets redeployed, a bunch of other bundles seem to get > restarted. Here's a example I saw this morning: > > "Caused by: org.apache.camel.FailedToCreateRouteException: Failed to > create route route1: > Route(route1)[[From[timer:///foo?fixedRate=true&period=36000... because > of Failed to resolve endpoint: > timer:///foo?fixedRate=true&period=3600000 due to: No component found > with scheme: timer" > > I understand from the previous discussion that improvements are > under-way for Fuse 6.2, but we have a fair number of customers with > problems of this sort now, and Fuse 6.2 is some way off. > > Is there anything we can do, in a fabric, profile-based deployment, to > prevent any bundles being restarted at deployment time other than those > in the application itself? > > Best wishes > Kevin >	1	1	https://issues.jboss.org/browse/ENTESB-2320
11820	ENTESB-2313	Hi Susan, I have now drafted some doc for patching standalone ActiveMQ. Would you (or somebody else in GSS) like to review it? You can see a preview here: http://jenkinscat.gsslab.pnq.redhat.com:8080/job/doc-FuseSource-ActiveMQDocs-6-1/lastStableBuild/artifact/publican/admin_guide/tmp/en-US/html-single/index.html#ESBRuntimePatchActiveMQ Cheers, Fintan	1	1	https://issues.jboss.org/browse/ENTESB-2313
11821	ENTESB-2288	What target Linux env are you using?	0	0	https://issues.jboss.org/browse/ENTESB-2288
11822	ENTESB-2288	What OS were you checking this one on and what commands were not available?	1	1	https://issues.jboss.org/browse/ENTESB-2288
11823	ENTESB-2288	For 6.1 and greater we already check for telnet, curl and java before trying to create a container. What error were you getting exactly? I tried this on a box without telnet and I got the following: JBossFuse:karaf@root> container-create-ssh --user janstey --password ********** --host 192.168.2.54 --path /tmp/foo2-fuse foo2 The following containers have failed: foo2: janstey@192.168.2.54:22: received exit status 255 executing --- command --- #!/bin/bash function run { echo "Running: $*" ; $* ; rc=$? ; if ["${rc}" -ne 0]; then echo "Command Failed:Error running installation script: $*" ; exit ${rc} ; fi ; } ... --- output --- Running: mkdir -p /tmp/foo2-fuse Running: cd /tmp/foo2-fuse Running: mkdir -p foo2 Running: cd foo2 Java version is greater than 1.6. Command Failed:Telnet is not installed. --- error --- ------ JBossFuse:karaf@root>	1	1	https://issues.jboss.org/browse/ENTESB-2288
11824	ENTESB-2195	[~ffang] How much work is this? Can we get into 6.2?	1	1	https://issues.jboss.org/browse/ENTESB-2195
11825	ENTESB-2181	[~pklimcza], can you verify this issue using provided links?	0	0	https://issues.jboss.org/browse/ENTESB-2181
11826	ENTESB-2169	It makes no sense for the Fuse quickstarts to have a group id of "eap" or "fabric8". What was it for the Fuse 6.1 release?	1	1	https://issues.jboss.org/browse/ENTESB-2169
11827	ENTESB-2160	Is this in the 2.2.0 Milestone?	0	0	https://issues.jboss.org/browse/ENTESB-2160
11828	ENTESB-2146	{{spring-dm}} feature is (Fuse 6.3.x) referenced from these features: * spring-dm-web * activemq-client * camel-spring * fabric-camel I think we could try removing this... [~davsclaus] I remember you planned to remove this in Camel 2.18, right? [~gtully], [~dbosanac], [~chirino] can this be removed from {{activemq-client}} feature? is spring-dm needed there? I'll try to check if it's needed in {{fabric-camel}} feature.	1	0	https://issues.jboss.org/browse/ENTESB-2146
11829	ENTESB-2146	In Camel 2.17 camel-spring and therefore spring-dm is only installed if you really need this, eg you install camel-spring or camel-cxf. Its only camel-cxf that has a dependency on camel-spring due to namespace parsers and because camel-cxf is a big bloated module. That ought to be split up into camel-cxf-core camel-cxf-blueprint camel-cxf-spring camel-cxf-ws camel-cxf-rs All the other modules that uses spring, do not use spring-dm, but the spring 4.x version. Only a few requires either spring 4.0.x or 4.1.x or 4.2.x, but they have the osgi import range for that set correctly. Most can run with any of the spring 4.x version. With only camel-cxf using camel-spring, the need for separating spring-dm out of camel-spring is less needed. As camel-spring component in itself do not bring much value to the table when you use blueprint etc. Using camel-spring without spring-dm does not make much sense as it is really spring-dm, eg using spring xml files with Camel. Though you can still move spring-dm out of it, and leave camel-spring as kind of abstract component. The only value in there is that it integrates the spring expression language in Camel. Notice its only spring-dm on osgi that is the problem. People not using osgi, have no problem at all, they can use camel-spring and whatnot with spring 4.x without any spring 3.x libraries.	1	1	https://issues.jboss.org/browse/ENTESB-2146
11830	ENTESB-2146	[~davsclaus] thanks for explanation. I wouldn't touch camel-spring - it's well known that in OSGi it's a layer on top of spring-dm, so it's fine. I think the explanation, that spring-dm is inherent part of camel-spring and camel-cxf should be enough to close this issue as "won't fix", [~rogerhui] - do you agree?	1	0	https://issues.jboss.org/browse/ENTESB-2146
11831	ENTESB-2142	Hi [~sonicaaaa], "admin" role was added across {{etc/auth/jmx.acl.*}} config files (ENTESB-3109). Could you include it also in this configuration?	1	1	https://issues.jboss.org/browse/ENTESB-2142
11832	ENTESB-2124	Do I need to write the new READMEs then?	1	1	https://issues.jboss.org/browse/ENTESB-2124
11833	ENTESB-2056	Which property / where should I set the timeout value to change the default one?	1	0	https://issues.jboss.org/browse/ENTESB-2056

#	Requirement	Questions	Answered	Successfully Answered	URL
11834	ENTESB-2033	[~chirino] Can you make this change for next build?	1	1	https://issues.jboss.org/browse/ENTESB-2033
11835	ENTESB-2003	What version of hibernate would we need for this?	1	1	https://issues.jboss.org/browse/ENTESB-2003
11836	ENTESB-1993	Can I close this now? I think it's done.	1	1	https://issues.jboss.org/browse/ENTESB-1993
11837	ENTESB-1992	First off, the final name for this new cart has not yet been decided. It's currently only available as downloadable cart but part of the productization will be making it an RPM cart (ENTESB-1993). What this cart does: It does a 'mvn clean install' build of the OSE app's git repo when the git repo is updated. This similar to how most other OSE carts works. It then exposes it's local maven repository over http so that it's builds can be accessed by other machines. Why Fuse OSE deployments benefit: Deploying user built binaries into a fabric cluster can be challenging since the mvn repo hosted by fabric nodes do not replicate and a node failure could cause a loss of availability of user deployed maven artifacts. Fabric deployments can be configured to add the new 'builder' app as a remote maven repo. Furthermore, OSE users can get a more streamlined continuous delivery system. They just need to check in their sources into a git repo, and the resulting binaries will be available to fabric deployments.	1	1	https://issues.jboss.org/browse/ENTESB-1992
11838	ENTESB-1992	should the user add this cart to all the fuse gears / only the fabric server / completely separate gear?	1	1	https://issues.jboss.org/browse/ENTESB-1992
11839	ENTESB-1992	Hi Hiram, I suppose that the best practice would be to have at least one Fuse/AMQ cart in OSE before creating builder to have system variables available for builder "auto config". Is it correct? This should be clarified in the doc also.	1	1	https://issues.jboss.org/browse/ENTESB-1992
11840	ENTESB-1800	Can you comment on this Jon?	0	0	https://issues.jboss.org/browse/ENTESB-1800
11841	ENTESB-1796	It's also important to note that just because remove the profiles, does not me that we are not shipping the binary bits to support what was in the profile configurations. Should we also attempt to remove the associated bundles from the OSE distro that implement those profiles?	1	1	https://issues.jboss.org/browse/ENTESB-1796
11842	ENTESB-1796	Can this be closed? I think it got done for 6.1 OSE release.	0	0	https://issues.jboss.org/browse/ENTESB-1796
11843	ENTESB-1737	Fintan, From the 6.1 release notes, https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Fuse/6.1/html/Release_Notes/files/FMQReleaseNotesNew.html the technical preview part, there is a: Fabric partition But do not have the Fabric8 Maven plug-in sorry I do not know what is the "Fabric partition" meaning? and what is "Process manager" meaning? I think there should have a brief description about the technical preview ones.	1	0	https://issues.jboss.org/browse/ENTESB-1737
11844	ENTESB-1736	Is this one still valid? Do you have specific details of what should be copied?	1	0	https://issues.jboss.org/browse/ENTESB-1736
11845	ENTESB-1733	I've tried to verify, but getting JMX connection exception. Also the "child" options is still present in Hawtio. Is it possible that your fixes aren't in 390-2 respin? {code} JBossFuse:admin@root> container-create-child root child The following containers have failed: <not available>: java.io.IOException: Failed to retrieve RMIServer stub: javax.naming.ServiceUnavailableException [Root exception is java.rmi.ConnectException: Connection refused to host: root-test.example.com; nested exception is: java.net.ConnectException: Connection refused] {code}	1	1	https://issues.jboss.org/browse/ENTESB-1733
11846	ENTESB-1728	Where can we launch OSE VM? Could we use OS1?	1	1	https://issues.jboss.org/browse/ENTESB-1728
11847	ENTESB-1723	Updating the shared "system" directory for all users (this is the big dir with most of the libs in it) won't help with patching though. It will still help save disk quota though since this can be the same for all users. So when Fuse boots up, the OSGi framework copies the set of runtime bundles into the "data/cache" dir along with other metadata. This dir would likely be different for each user. When patching Fuse, we patch the runtime container (i.e. the "data/cache" dir), NOT the "system" dir.	0	0	https://issues.jboss.org/browse/ENTESB-1723
11848	ENTESB-1709	Did we ship process container in 6.1?	0	0	https://issues.jboss.org/browse/ENTESB-1709
11849	ENTESB-1694	Can you explain a bit more what you mean? I do not understand what it is that you want improved?	0	0	https://issues.jboss.org/browse/ENTESB-1694
11850	ENTESB-1580	Would it be enough to add it to the Console Reference page for the command? This is the page: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_Fuse/6.1/html/Console_Reference/files/ConsoleFabricCreate.html	0	0	https://issues.jboss.org/browse/ENTESB-1580
11851	ENTESB-1539	Can I mark this as already Resolved?	1	1	https://issues.jboss.org/browse/ENTESB-1539
11852	ENTESB-1491	Is there a way to configure an mbean/path so that any user can access it? I've got to ensure anyone can access hawtio.plugins/* as hawtio has to look for available plugins before login to ensure the right branding/login background etc. is in place. So far that I can tell it seems you have to put in some role, tried * and an empty string with no luck...	0	0	https://issues.jboss.org/browse/ENTESB-1491
11853	ENTESB-1491	Could maybe have an empty string disable role matching for an mbean perhaps? I haven't looked at the JMX guard stuff so not sure how it's making it's permission checks...	0	0	https://issues.jboss.org/browse/ENTESB-1491
11854	ENTESB-1479	What are the steps to follow?	1	1	https://issues.jboss.org/browse/ENTESB-1479
11855	ENTESB-1479	Bugzilla bug 1096325 fixed by Customer Portal Operations team: https://bugzilla.redhat.com/show_bug.cgi?id=1096325 Kyle Benson <kbenson@redhat.com> changed: What |Removed |Added ---------- CC| |amatlack@redhat.com Flags| |needinfo?(amatlack@redhat.c | |om) --- Comment #1 from Kyle Benson <kbenson@redhat.com> --- Thanks Jane, I've updated this in prod, including the version number on the Overview page. The link there now should default to whatever is the most recent release. Allison when able if you can publish that'd be great	1	1	https://issues.jboss.org/browse/ENTESB-1479
11856	ENTESB-1477	What mis configuration. Can you provide an example.	0	0	https://issues.jboss.org/browse/ENTESB-1477
11857	ENTESB-1477	It seems that user can configure Log4j and forward its output to stdout, stderr. [~jpechanec] Would this solution be sufficient?	1	0	https://issues.jboss.org/browse/ENTESB-1477
11858	ENTESB-1467	Would an acceptable fix be to just remove the Note which says JDBC isn't transactional?	1	1	https://issues.jboss.org/browse/ENTESB-1467
11859	ENTESB-1456	{{<headerName>:<headerValue>}} works, but {{body:<value>}} does not work. Shall I report an issue? But I think I can close this issue.	1	1	https://issues.jboss.org/browse/ENTESB-1456
11860	ENTESB-1437	Checked 6.1.x.redhat-patch branch locally and on jenkins (http://10.8.63.16/view/JBoss%20Fuse%206.1%20patch/job/fuseenterprise-6.1.x.redhat-patch-checkin/) both built this module fine. Could you check mq/jboss-a-mq/target/dependency-pom.xml.log for more information on why it is failing on your machine?	1	0	https://issues.jboss.org/browse/ENTESB-1437

#	Requirement	Questions	Answered	Successfully Answered	URL
11861	ENTESB-1436	I noticed that dependencies.txt contains some artifacts of 2.5.6.SEC01 version: {code} grep spring dependencies.txt ... - org.springframework.aop org.springframework:org.springframework.aop:jar:2.5.6.SEC01 - org.springframework.beans org.springframework:org.springframework.beans:jar:2.5.6.SEC01 - org.springframework.context org.springframework:org.springframework.context:jar:2.5.6.SEC01 - org.springframework.core org.springframework:org.springframework.core:jar:2.5.6.SEC01 {code} I didn't find them exported anywhere. 11864	ENTESB-1344	Fixed up the error messages by switching back to the default version when you delete a version -> http://fusesource.com/forge/git/hawtio.git/?p=hawtio.git;a=commit;h=e5371943ce4ed1395cf4d8301a6328db5205e928 However I do notice that the versions still come back after restarting the container: {noformat} JBossFuse:karaf@root> version-list [version] [default] [# containers] 1.0 true 1 1.1 false 0 1.1.foo false 0 1.2 false 0 1.2.foo false 0 1.3 false 0 1.3.foo false 0 1.4 false 0 1.4.foo false 0 1.5 false 0 {noformat} Guess maybe they're not quite purged out of git?	1	1	https://issues.jboss.org/browse/ENTESB-1344
11865	ENTESB-1343	Did the patch fail to install or was the container just hanging while the patch was being applied?	0	0	https://issues.jboss.org/browse/ENTESB-1343
11866	ENTESB-1343	Do we need to make any changes to the product? Or is this just an update to the script that builds patches?	1	0	https://issues.jboss.org/browse/ENTESB-1343
11867	ENTESB-1334	The Release notes should have a summary of what's new in 6.1 and why you would want to upgrade. Can we add a "highlights" section at the start?	0	0	https://issues.jboss.org/browse/ENTESB-1334
11868	ENTESB-1334	What's new in 6.1 Full support of AMQP 1.0 – provides wire-level compatibility across connections Ability to modify broker configuration without requiring a restart Improved high availability (HA) – embedded message store for shared-nothing HA Certification of the JBoss A-MQ resource adapater with JBoss EAP 6 Support for MQTT 3.1.1 draft spec Vast library of connectors – over 200 out-of-the-box-connector via Apache Camel including new connectors for Salesforce and SAP Tooling to manage integration routes - start, stop, measure and trace Camel routes on-premise or in the Cloud	0	0	https://issues.jboss.org/browse/ENTESB-1334
11869	ENTESB-1290	btw we have disabled the Maven plugin out of the box in JBoss Fuse 6.1, as that plugin would require online internet access. And not everyone like that.	1	1	https://issues.jboss.org/browse/ENTESB-1290
11870	ENTESB-1289	{quote} [4REVIEWER] Need info: What's in the Local tab? is it the same as the Remote tab? if they're identical, there's no point in documenting them separately, and instead I will insert a note that states that they're identical {quote} The local tab only shows up if you've managed to get tools.jar in your classpath. It lists local JVMs running on your machine and lets you inject a jolokia instance and connect to that JVM, so it's pretty handy, however I've not ever been successful getting tools.jar available in the classpath in a Karaf server, so likely we can skip this to be honest. {quote} [4REVIEWER] UI feedback: there are a few entries in the drop-down list but when I select them the list shows a different value from what I selected. Also, none of the buttons next to the list seem to work? {quote} Ah so yes, probably best to make sure you go to "Preferences" and go to the "Reset" tab and clear your local storage. Since stuff changes between builds your local storage in your browser can become stale. So best to clear this when moving between builds. Not sure, maybe it's worth noting somewhere in the document that this could be necessary when migrating to newer versions of FMC. Also the reset button underneath the form (in the "Danger zone" section) just got moved to the preference page (sorry!)	1	1	https://issues.jboss.org/browse/ENTESB-1289

#	Requirement	Questions	Answered	Successfully Answered	URL
11871	ENTESB-1289	{quote} [4REVIEWER] UI feedback: this Create button is very similar to the buttons you use to create containers/profiles in other FMC areas. I was actually expecting to be able to create a container/profile from here, is there some way we can differentiate between the buttons? This is especially confusing because the Wiki page opens to the Profiles folder, so logically the Create button would let me create a profile? {quote} Damn, yeah, that's kind of a "create thing" button, i.e. you can create a property file or a regular file, a Fabric8 profile or even a new Fabric8 version. Oh yes, so yeah "create" should let you create a Fabric8 profile, should be the second item in the list, let me know if it's not there as that's a bug, the Fabric8 entries are dynamically enabled if the fabric has been created.	1	1	https://issues.jboss.org/browse/ENTESB-1289
11872	ENTESB-1289	{quote} . [4REVIEWER] UI feedback: in this area (as well as the other pie charts) the mouse cursor changes to a hand when I hover over the slices, but nothing happens when I click. Intentional? Mistake? What is supposed to happen when I click? {quote} Hmm, yeah, I don't believe anything is supposed to happen when you click the charts. {quote} [4REVIEWER] UI feedback + need info: Firstly, what exactly are loaded classes? The other pie slice text is cut-off and I can't read the full name of whatever the opposite of loaded classes is. Second, the area title has a typo in it. {quote} The text is all pulled straight from JMX for all of these charts (except for the typo, I can fix that :-)). It's LoadedClasses vs. UnloadedClasses, i.e. it tells you how many .class files the JVM has loaded and unloaded, handy for figuring out things like classloader leaks. {quote} [4REVIEWER] UI feedback: The area is missing the title (I assume it's "Threads", and "CPU" should be uppercase everywhere. {quote} Yeah, I'll add that in... Again the text in that area is what we get from the JVM. One comment to make on this section regarding the dashboard, it's not really a static thing, you can customize what's on the dashboard and move stuff around. Generally you look for the "Add to dashboard" link on a given page, for those charts there's icons that show up next to the name of an mbean attribute if there's a chart definition available. It'd be good to describe the "Edit dashboard" page a bit, as you can create more dashboards with their own stuff on 'em. Also when in a fabric, what dashboards are available depend on what profiles are deployed on the container you're looking at, so you can have customized per-profile dashboards. So for example if I have a profile that has a broker configured, I can then add a dashboard to that profile that contains stuff specific to a broker view, i.e. mbeans that show queue sizes and so on.	1	1	https://issues.jboss.org/browse/ENTESB-1289
11873	ENTESB-1278	Is this in a felix release yet?	0	0	https://issues.jboss.org/browse/ENTESB-1278
11874	ENTESB-1248	What about new switchyard quickstarts? Should they contain fabric plugin too?	0	0	https://issues.jboss.org/browse/ENTESB-1248
11875	ENTESB-1235	FYI you can access the apps individually outside of hawtio: kibana3 -> http://localhost:8181/kibana3/index.html eshead -> http://localhost:8181/eshead/ If you go to the kibana3 app it looks like maybe we've missed loading a script would be my first guess, javascript console output: Attr.specified is deprecated. Its value is always true. angular.min.js:41 event.returnValue is deprecated. Please use the standard event.preventDefault() instead. jquery.min.js:4 POST http://minimi:8181/kibana3/es/insight-2014.02.21/camel/_search 500 (Server Error) angular.min.js:106 TypeError: Cannot read property 'hits' of undefined at http://minimi:8181/kibana3/panels/table/module.js:175:59 at i (http://minimi:8181/kibana3/common/lib/angular.min.js:79:437) at http://minimi:8181/kibana3/common/lib/angular.min.js:80:485 at Object.e.$eval (http://minimi:8181/kibana3/common/lib/angular.min.js:92:272) at Object.e.$digest (http://minimi:8181/kibana3/common/lib/angular.min.js:90:142) at Object.e.$apply (http://minimi:8181/kibana3/common/lib/angular.min.js:92:431) at j (http://minimi:8181/kibana3/common/lib/angular.min.js:101:80) at r (http://minimi:8181/kibana3/common/lib/angular.min.js:104:449) at XMLHttpRequest.v.onreadystatechange (http://minimi:8181/kibana3/common/lib/angular.min.js:106:90) angular.min.js:63 POST http://minimi:8181/kibana3/es/insight-2014.02.21/camel/_search 500 (Server Error) angular.min.js:106	1	1	https://issues.jboss.org/browse/ENTESB-1235
11876	ENTESB-1235	Can we document this option somewhere as until now nobody was aware that we have to turn it on to use it ?	0	0	https://issues.jboss.org/browse/ENTESB-1235
11877	ENTESB-1235	Did you create any containers with the Elasticsearch storage profile? Without this there is nowhere to store or query logs. The error message could definitely be a bit nicer though.	0	0	https://issues.jboss.org/browse/ENTESB-1235
11878	ENTESB-1235	I've recreated this now. The profiles you need to assign are insight-elasticsearch.datastore (to create somewhere to store data), insight-logs.elasticsearch (to send logs to elasticsearch) & insight-metrics.elasticsearch (to send metrics to elasticsearch). However, even doing this one the JMX mbeans isn't properly registered if done in the order you've done it. You can solve this by restarting the "Fabric8 :: Insight :: Elastic Search Factory" bundle. Can you try that & see if the issue is fixed? If the elasticsearch profiles are assigned either at the same time or before the other profiles then this works fine. Looks like a problem in refreshing bundles when deploying subsequent profiles.	1	1	https://issues.jboss.org/browse/ENTESB-1235
11879	ENTESB-1223	In latest build (#350) with jclouds 1.7.1, only the jclouds-rackspace-cloudblockstorage-us feature is broken :-) JBossFuse:karaf@root> features:install jclouds-rackspace-cloudblockstorage-us Error executing command: Can not resolve feature: Unsatisfied requirement(s): ---------- package:(&(package=org.jclouds.rackspace.cloudidentity.v2_0.config)(version>=1.7.1)) jclouds Rackspace Next Generation Cloud Block Storage US provider JBossFuse:karaf@root> features:install jclouds-aws-sts JBossFuse:karaf@root>	1	1	https://issues.jboss.org/browse/ENTESB-1223
11880	ENTESB-1212	p17 You can deploy multiple types of containers, such as fabric management containers or application host containers. --> Wonder what you mean by application host containers? Is this a word for containers not-managed by fabric? eg just plain karaf? If so we do not have any way in the web console to create karaf containers. All containers created from the web console are fabric managed containers. After all fabric is the "star piece" of our product.	0	0	https://issues.jboss.org/browse/ENTESB-1212
11881	ENTESB-1212	p27 fabric:join --> explain better that the container_name option is. eg its the name you want this container to have in the fabric. Also give some pointers how to get this zookeeper url? And do we not have other documentation that covers Fuse Fabric better, you can refer the user for more details? eg maybe you dont need this chapter 6 at all in this guide? as this guide is for the web console.	0	0	https://issues.jboss.org/browse/ENTESB-1212
11882	ENTESB-1212	general observation I would like to know more about what and why I would need to use/do that. eg chapter 7 is about creating and deleting profiles. So what is a profile? And what do I use it for? And why do I wont to create a profile? And can I not edit/modify a profile? If so why do you not cover this also?	0	0	https://issues.jboss.org/browse/ENTESB-1212
11883	ENTESB-1212	p10 > You can choose a public, private, or open source cloud environment Is it not a public, private or hybrid cloud environment? And its all open source - eg all we do at Red Hat is open source.	1	1	https://issues.jboss.org/browse/ENTESB-1212
11884	ENTESB-1195	Is this already done in 6.1? Can I close it?	1	1	https://issues.jboss.org/browse/ENTESB-1195
