3751	DROOLS-687	After discussion with Marco we see several ways to implement this: Proposal A) In mvel add a SourceContext object during bootstrap, so when evaluations turn bad, it can include the context in the error message. Note: you might be able to reuse ParserContext directly instead of having to add a SourceContext interface and instance. {code} interface SourceContext { String buildErrorMessagePart(); } class ReflectiveAccessorOptimizer { ... SourceContext sourceContext; public ReflectiveAccessorOptimizer(...., SourceContext sourceContext) { this.sourceContext = sourceContext; } public Object evaluateExpression(...) { ... // Old code // if (curr == null) throw new NullPointerException(); // New code if (curr == null) throw new NullPointerException("NPE happened at " + sourceContext.buildErrorMessagePart()); } {code} Pro: no performance impact! (the if's, catches etc are already there. Only when it's broken it might take a few nanoseconds longer to build the exception, but nobody cares how slow a broken app is) Con: A lot of work (need to be applied throughout mvel, including jitted constraints) Proposal B) try-catch around every mvel calls in drools and somehow figure out the context from drools. This means that the encapsulating drools code needs to know the exact line of every mvel object it uses... Con: performance impact! Try-catches during runtime code, all the time. Con: easy to forgot try-catch when writing new drools code that uses mvel (maintenance prob) Proposal C) Introduce boolean assertMode that if true does B) (so a try catch around every mvel call) and otherwise not Con: User has to be educated about this assertMode Con: 2 paths of execution that need to be kept in sync. Personally, I prefer A) - anything worth doing is worth doing well ;)	0	0	https://issues.jboss.org/browse/DROOLS-687
3752	DROOLS-664	Do we have anything similar available in 6.2? I am looking to filter collections without using from.	0	0	https://issues.jboss.org/browse/DROOLS-664
3753	DROOLS-660	public Class<?> fastFindClass(final String name) { lock.lock(); Class<?> cls = findLoadedClass(name); if (cls == null) { final byte[] clazzBytes = this.store.read(convertClassToResourcePath(name)); if (clazzBytes != null) { String pkgName = name.substring(0, name.lastIndexOf('.')); if (getPackage(pkgName) == null) { definePackage(pkgName, "", "", "", "", "", null); } cls = defineClass(name, clazzBytes, 0, clazzBytes.length, PROTECTION_DOMAIN); } if (cls != null) { resolveClass(cls); } } lock.unlock(); return cls; } it that ok? i find the lock has been removed in 6.2.0.Final, is that means 5.6.0Final has dead lock problem？ can i use 5.6.0 in my project?	1	1	https://issues.jboss.org/browse/DROOLS-660
3754	DROOLS-660	Are you reporting a deadlock problem ??? If so, please change this ticket to bug - blocker AND provide a reproducer. Reading your comment, this is not a bug report, not a feature request, but a question. In this case, please close this ticket and ask your question here https://groups.google.com/forum/#!forum/drools-development (By the way, the classloader architecture was completely redesigned for 6.x, so you can't just compare 5.6 and 6.x. Is there any reason why you would prefer an old, no longer supported version for your project? This would be a discussion for here: https://groups.google.com/forum/#!forum/drools-usage) Thanks	1	0	https://issues.jboss.org/browse/DROOLS-660
3755	DROOLS-660	Could you try using 6.x? The 5.6 series is a community version and no longer maintained, so even with a reproducer it may take a long time to fix it and you would have to build a SNAPSHOT version anyway. If the issue was still present in 6.x, things would be very different Davide	1	0	https://issues.jboss.org/browse/DROOLS-660
3756	DROOLS-656	mbiarnes, would you mind creating a new repo under droolsjbpm, push some stuff to it and then force push some more stuff to it? That will answer the question above. Note: We can't on existing repo's without potentially breaking them which is not an option.	1	1	https://issues.jboss.org/browse/DROOLS-656
3757	DROOLS-652	===== FROM DAVIDE ===== Hi Edson, my quick 2 cents on this proposal Section 2: I like the idea of "defining" rather than just declaring datatypes and events. This problem actually overlaps much with "semantic" classes (actually semantic traits), where, in addition to declaring the type, ancestors and member fields, an "equivalentTo" LHS-like definition(s) may be provided. So I wonder if we could merge the two parts (syntax is tentative here) {code}declare event VoiceCallEvent extends SuperTypeEvent // promote event to first-class ? into(voiceCalls) // either keyword or annotation @into(voicecalls) ? as // equivalent-to definitions callStart : CallStartEvent() -> callEnd : CallEndEvent(callingNumber == callStart.callingNumber) $phone : MobileDevice(number == callStart.callingNumber) $cust : Customer(id == $phone.customerId) ; // fields. in DL would be considered anonymous superclasses callStart : CallStartEvent // ok: initialize when var name coincides callEnd : CallEndEvent customer : Customer = $cust // should we allow explicit initialization using other expressions, possibly involving local vars ? end{code} Section 3 : ok Section 4 : I'd either use infix A() -> B() or prefix notation, but I wouldn't mix the two seq(A() B()), as we do with and/or CEs. Unless the parser requires so :) Question: what about a "strict sequencing" operator A() => B(), meaning "B() after A() and nothing in between"? Question: what about the interval deadlines, like we have in "after[a,b]" ? Section 4 again :) : Another options, maybe uglier? {code}A+(...), B*(....), C[2:4](...){code} Yet another, maybe more explicit? {code}exists[+] A(), exists[*] B(), exists[2:3] C(){code} Section 4.1 Ok! this is again related to what I've been dreaming of writing even in more traditional DRL: {code}$x : exists X(){code} Section 5.5 I'd use "not" ... what would be the high-level difference between "no" and "not" from a conceptual perspective? (not talking about implementation here) Moreover, shouldn't we stick to the "not X(this after $y)" semantics we already have?	1	1	https://issues.jboss.org/browse/DROOLS-652

#	Requirement	Questions	Answered	Successfully Answered	URL
3758	DROOLS-652	Davide, thanks for the feedback. Regarding your comments: h5. Section 2 I considered that as well, but I think it is best to keep them as 2 separate pieces of syntax. The easiest way to see this is that a "declare type" statement is like declaring a class, while an "event" statement is like instantiating that class. While there can be only one "declare type" for each type, there can be multiple "event" statements to instantiate events of the same type based on different criteria. Just a dumb example to illustrate the idea: {code}declare type AccountDebit @role(event) accountId : String ammount : BidDecimal end event AccountDebit as ATMTransaction(type == TransactionType.Withdraw, accountId : accountId, ammount : totalAmmount) end event AccountDebit as InternetTransaction(type == TransactionType.TransferOut, accountId : accountId, ammount : totalAmmount) end {code} h5. Section 4 * I agree that we don't want both a delimiter and the infix -> CE, but I am still not sure the infix will be enough for our needs. Will have to proceed to the design and implementation and revisit this issue when we get there. * The "strict followed-by" (=>) operator remains a possible implementation, but the more I think about it, the less I think it will be used, because in most of the use cases, there aren't any assurances that the events won't be intermixed in the streams coming into the system. Unless we have a compelling use case, I think this is a nice to have, but lower priority feature. I will add it to the spec anyway. Let me know if you know of any specific use case we should consider. * One can still use temporal operators to further constrain sequences of events: {code}$a : A() -> $b : B(this after[0,10s] $a){code} I don't think it would be good to allow, at this point, further parameterization of the -> CE by itself. Basically, what the -> CE defines is a state machine/automaton, and that can be constrained as necessary by the patterns themselves with both temporal and non-temporal constraints. What do you think? * The problem of using the [] after the pattern type is that it become ambiguous with array types: A[*] ---> is this an array of A's with a typo or does it mean matching a repetition of A's? The "exists[+] A()" is feasible, just more verbose... do you think it would be worth writing a keyword there all the time? h5. Section 4.1 Yes, it is a step towards what you asked before... probably 80% of the way, but we would still need a few more things to get where you want... nevertheless, one feature that serves 2 purposes. h5. Section 5.5 The main difference is in semantics: event qualifiers only work with event sequencing. They are not Conditional Elements, like the "not" CE. That is the reason I can't decide between overloading the use of "not" or using a different keyword. In any case, all qualifiers are used in sequences of events, not in regular patterns. I actually need to check if there is any syntax ambiguity that I haven't identified yet.	1	1	https://issues.jboss.org/browse/DROOLS-652
3759	DROOLS-652	(WL2) Section 3 (a) There is no "end timestamp" in the definition of "event" in the "Fusion" manual. Is it the "duration" for the derived event that is computed from the difference between the latest timestamp and the oldest one? (b) What if the contributing events have duration? Then the "end timestamp" of the derived event must be computed by max/over all events(timestamp+duration).	1	1	https://issues.jboss.org/browse/DROOLS-652
3760	DROOLS-652	(WL5) Subsection 5.1, binding of tuples Given the "event" declaration (Section 2): How would this interact with bindings to event tuples selected by wildcards? I see no simple way of permitting such combinations; here explicit event creation (using new) and insertion must be done. Please clarify.	1	1	https://issues.jboss.org/browse/DROOLS-652
3761	DROOLS-652	(WL8) Subsection 6.2 (a) Who is going to want an operator where you don't know the result? (b) Given that "any A() -> any C()" has a "possible (!) result" [A1, C1], why has "every(any A() -> any C())" an exact result - note that "X1 = [A1, C1], X2 = [A4, C3]" is presented as a well-defined (!) result. (And why does this only produce 2 results - there are A1,A2,A3 and C1, C2, C3?)	1	1	https://issues.jboss.org/browse/DROOLS-652
3762	DROOLS-651	The documentation uses the term _binding variable_ 8 times, so bindings seems to be variables too (but of course special ones). I understand that these bindings are not yet cached because of constraint idempotence. However, in my view the implication should be, that especially a non changing result +can+ be cached! Rather than a _good practice_, the documentation says: {quote} "Property accessors +must+ not change the state of the object in a way that may effect the rules. Remember that the rule engine effectively +caches+ the results of its matching in between invocations to make it faster." {quote} So if kind of functional immutability is required and used inside the engine, I would indeed think about caching method calls (with variables) in constraints, as this saves potentially massive processor time and would be much more intuitive. I don't understand your sentence {quote} "If you can't or desire not to guarantee this property, Drools won't enforce it caching the first value returned." {quote} Is it possible, to enforce Drools to cache variable bindings? Drools shouldn't cache values, that change. Let me say that I'm still intrigued about the huge, powerful Drools framework and that we get this as Open Source including this helpful support. Feel free to change the issue-type to a feature request, as the behavior is not strictly incorrect but optimizable.	1	1	https://issues.jboss.org/browse/DROOLS-651
3763	DROOLS-599	Hi [~mbiarnes] , in reference to my previous comment above, and now discussing with [~mfusco] , we would like to highlight the availability of the Kie Archetype to end users. However, [since this archetype was first proposed|https://github.com/droolsjbpm/droolsjbpm-knowledge/pull/74/files#diff-ae073dbf7d2d212e8ef79caab795cb87], now [License file-headers are attached to all files|https://github.com/droolsjbpm/droolsjbpm-knowledge/commit/7172a50c4989800a8cda029b1e5efaec9c1d7dcb#diff-42a73ec3fc7beda342f8c8ad2bddec31]; with the actual consequence that once you use the archetype, as a user, your files are containing the Red Hat file-header license; and I believe this could be very confusing for the end-users, and also I believe is wrong. My proposal is to remove License file-headers, at least from all files which are serving as a template-generation. I have two question, please? # Do you agree with me reverting your change? # Did you notice the License file-headers are missing thanks to some automatic tool? Is there a way to manage exclusion, either in the tool or by adding a special header to the file itself? Thank you in advance for your feedback.	0	0	https://issues.jboss.org/browse/DROOLS-599
3764	DROOLS-566	Thanks, what about the other way around, eg DROOLS SNAPSHOT with mvel 2.1.9 - does that work?	1	1	https://issues.jboss.org/browse/DROOLS-566
3765	DROOLS-552	I double checked that all the tests in your pull request run successfully and merged it. I am not sure of what we could do to better support other encodings. Any suggestion?	1	1	https://issues.jboss.org/browse/DROOLS-552

#	Requirement	Questions	Answered	Successfully Answered	URL
3766	DROOLS-552	Hi Mario, I have found why those tests fail with -Dfile.encoding=MS932. DrlParser.parse() uses resource.getInputStream() + resource.getEncoding() instead of resource.getReader() which commit#c3a90d5 fixed. resource.getEncoding() returns null and then it uses platform encoding. https://github.com/droolsjbpm/drools/blob/master/drools-compiler/src/main/java/org/drools/compiler/compiler/DrlParser.java#L150 If our direction is "Use UTF-8 if encoding is not specified" then, we should explicitly set "UTF-8" to 'encoding' in Resource class constructors. However, then, there is another concern. If users have Drools applications which depend on platform encoding (= expecting resources are decoded with platform encoding other than UTF-8), they will face that their applications are broken. To keep backward compatibility, one idea is a system property switch. Here I introduce "drools.default.encoding.utf8.enabled" system property (by default, it's true). If it's true, default encoding would be "UTF-8". If it's false, default encoding would be platform encoding (= "file.encoding"). So if users want backward compatibility in Drools 6.2, they would need to set -Ddrools.default.encoding.utf8.enabled=false. This is the commit in my work branch. Now test cases run fine with both -Dfile.encoding=UTF-8 and MS932. Could you review and let me know your thought? This commit fixes only ClassPathResource and ByteArrayResource. To make a pull request, I would need to fix more many classes. https://github.com/tkobayas/drools/commit/162fabbe0a614dbcf9783c1e10c1aa13b45de81f	0	0	https://issues.jboss.org/browse/DROOLS-552
3767	DROOLS-529	Could you please submit the rules you used to benchmark the engine? Thanks!	0	0	https://issues.jboss.org/browse/DROOLS-529
3768	DROOLS-529	We'd like to try and fix this for 6.1, which is due within 2 weeks. But to do so we need some benchmarks, can you upload a zip for us?	1	1	https://issues.jboss.org/browse/DROOLS-529
3769	DROOLS-529	Give me some time (one day tops) and I'll clean some organizational IP from the project and send you a maven project with some instructions on how we did the profiling. Thanks for the quick consideration.	1	1	https://issues.jboss.org/browse/DROOLS-529
3770	DROOLS-507	Is there any update on this? i'm facing the same issue..	0	0	https://issues.jboss.org/browse/DROOLS-507
3771	DROOLS-507	The FireUntilHalt command is marked as unpersistable (for obvious reasons - it is usually executed in a dedicated thread), which causes the exception even before the command is attempted. Could you elaborate more on your use cases? In particular, what would you expect to happen if a running session was persisted and then restored?	0	0	https://issues.jboss.org/browse/DROOLS-507
3772	DROOLS-492	[~cmoulliard] Great! If the exception isn't being thrown anymore, it sounds like this issue (the exception, old class, etc) has been fixed. Does it make sense to assign the issue to you and close it?	0	0	https://issues.jboss.org/browse/DROOLS-492
3773	DROOLS-483	Thanks for reporting this, can you submit a PR? It will be easier to discuss the details Thanks! Davide	1	1	https://issues.jboss.org/browse/DROOLS-483
3774	DROOLS-483	Hi there. It's been more than 3 months and neither this issue nor the pull request has seen any kind of response, so I was wondering if something important is missing (other than time of the Drools team side). Should I continue rebasing the modification on master from time to time?	1	1	https://issues.jboss.org/browse/DROOLS-483
3775	DROOLS-424	The configuration part of this would be easy. e.g. in the xsd: <xsd:attribute name="type" use="required" type="knowledgeSessionTypeEnum"/> could be replaced with: <xsd:attribute name="type" use="optional" type="knowledgeSessionTypeEnum"/> <xsd:attribute name="scope" use="optional" type="knowledgeSessionScopeEnum"/> <xsd:simpleType name="knowledgeSessionScopeEnum"> <xsd:restriction base="xsd:string"> <xsd:enumeration value="request" /> <xsd:enumeration value="session" /> <xsd:enumeration value="application" /> </xsd:restriction> </xsd:simpleType> and then in KnowledgeSessionDefinitionParser, scope="request" would be equivalent to type="stateless", and scope="application" would be equivalent to type="stateful". The new option would be scope="session". However I'm not sure when the StatefulKnowledgeSession would actually be created as it requires access to the HTTP session to store it for future requests. Does the HTTP request get passed all the way through from Camel to the Drools classes? I tried tracing it through but lost it somewhere in the depths of Camel.	0	0	https://issues.jboss.org/browse/DROOLS-424
3776	DROOLS-365	I see what you are trying to do, but I am not sure that such an attribute would be feasible, or even solve your problem. What happens if a rule inserts (and modifies, and retracts...) more than one object? And what happens if the same object is insert by more than one rule? Have you tried using the EQUALITY assertion behavior and/or the @propertyReactive annotation? The former considers equivalent (i.e. equals()) object to be the "same" and thus do not activate rules multiple times, regardless of the rule that generated the objects. The latter allows you to control how rules fire in case of updates. Best Davide	1	1	https://issues.jboss.org/browse/DROOLS-365
3777	DROOLS-365	I don't see the problem with modifications to multiple facts: you could condition on the NOT of the logical AND of all facts. Or the logical OR; I think both approaches are defensible. As for your second example, what's the issue with multiple rules asserting the same fact? In any case, I think the biggest challenge to implementation is that the rule consequence is a snippet of Java, and thus can do absolutely anything. For example, it could conditionally assert a fact. How do you modify the rule then? Also conditionally? Based on runtime input? It seems really challenging. The example that actually drove me to file this bug looks something like this: {noformat} rule "1" when accumulate (Foo($type : type, $value : value), $total : sum($value)) then insert(new Bar($type, $total)); end rule "handle all Bars of type first" when $bar : Bar(type == 'first', $total : total) ... then retract($bar); end rule "handle all Bars of type second" when $bar : Bar(type == 'second', $total : total) ... then retract($bar); end rule "generic rule to handle all leftover Bars" salience -1 // let custom Bar rules fire first when $bar : Bar($total : total) ... then retract($bar); end {noformat} The flow here is to convert the sum of all Foos (of a given type) into a Bar. Subsequently, there's a rule to handle each type of Bar, with a generic rule to handle Bars without a custom rule. To get that fallthrough behavior I need: # Salience -1 on the generic rule, so it fires last. # Retraction of each Bar as it's processed. However, the retraction causes the summation rule to reactivate, unless I add an explicit {{not Bar(type == $type)}} condition to the rule. Granted, in this case, I suppose the feature request mentioned here wouldn't work, because it'd add {{not Bar(type == $type, total == $total)}}, which would allow the rule to reactivate. For this example, I don't think equality-based assertion will solve my problem; fundamentally the retraction of a Bar causes us to reevaluate the accumulate rule. Likewise, I don't think @propertyReactive will help either; the issue here isn't with modifying a single property, but with removing an entire fact.	1	0	https://issues.jboss.org/browse/DROOLS-365

3778	DROOLS-355	These days, you can check it like this: {code} <build> <plugins> <plugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-jdeps-plugin</artifactId> <version>3.0.0</version> <executions> <execution> <goals> <goal>jdkinternals</goal> <goal>test-jdkinternals</goal> </goals> </execution> </executions> <configuration> <dependenciesToAnalyzeIncludes> <include>*:*</include> </dependenciesToAnalyzeIncludes> </configuration> </plugin> {code} which gives: {code} INFO] --- maven-jdeps-plugin:3.0.0:jdkinternals (default) @ drools-compiler --- [INFO] *org.kie.internal.builder* (kie-internal-7.0.0-SNAPSHOT.jar) -> com.sun.tools.xjc not found *org.kie.internal.builder.help* (kie-internal-7.0.0-SNAPSHOT.jar) -> com.sun.tools.xjc not found *org.drools.core.builder.conf.impl* (drools-core-7.0.0-SNAPSHOT.jar) -> com.sun.tools.xjc not found *org.drools.compiler.builder.impl* (drools-compiler-7.0.0-SNAPSHOT.jar) -> com.sun.tools.xjc not found *org.drools.compiler.runtime.pipeline.impl* (drools-compiler-7.0.0-SNAPSHOT.jar) -> com.sun.codemodel not found -> com.sun.tools.xjc not found -> com.sun.tools.xjc.model not found -> com.sun.tools.xjc.outline not found {code}	0	0	https://issues.jboss.org/browse/DROOLS-355
3779	DROOLS-355	Jigsaw is now part of JDK 9. Raising priority of this issue.	0	0	https://issues.jboss.org/browse/DROOLS-355
3780	DROOLS-355	Hi, I'm Henry from Red Hat IoT engineering team. We are working on putting Drools on IoT gateway devices. I'd like to use kie-server-client and install it into Eclipse Kura server (which is really OSGi container based on Eclipse Equinox). I'm running into the same problem as drools-core is a dependency of kie-server-client. Do you have an estimate of when this issue could be resolved? Cheers!	1	1	https://issues.jboss.org/browse/DROOLS-355
3781	DROOLS-355	Hello [~hkonsek]. Would it possible to attach a reproducer which shows the error you are encountering? It would help us a lot. Thanks!	1	1	https://issues.jboss.org/browse/DROOLS-355
3782	DROOLS-355	I did test and merge your pull request. And that part works. However I am now stuck at the next bundle: {code} org.osgi.framework.BundleException: The bundle "org.kie.remote.client_6.4.0.201604141724 [26]" could not be resolved. Reason: Missing Constraint: Import-Package: org.kie.remote.services.ws.common; version="0.0.0" {code} However the JAR {{kie-remote-ws-common-6.4.0.Final.jar}} is not an OSGi bundle. I updated the repository, so you can test if you like. Should I open a new issue?	1	1	https://issues.jboss.org/browse/DROOLS-355
3783	DROOLS-355	And which is not available on Equinox ;-) So should I open a new issue for that? Or can you do that. I guess you can provide better information than I can.	1	1	https://issues.jboss.org/browse/DROOLS-355
3784	DROOLS-337	Ok, you are right for the backward compatibility. ==> ena"B"led is fine. What should i do for the next step ? I didn't understood. Should i select under the workflow button, the "Link Pull Request" choice ?	1	1	https://issues.jboss.org/browse/DROOLS-337
3785	DROOLS-315	Edson, I 've been running into this issue a lot (with scary overflow or rounding errors such as 0.09 + 0.01 != 0.10). Something needs to be done. I see 3 ways: A) Stuff drools-planner with a kit functions, such as sumInteger, sumLong, sumDouble, ... I'd even recommend people in the manual not to ever use sum. B) Stuff drools-compiler itself with those functions. C) Fail-fast overloading of accumulate functions: Only the following sum functions are available: sum(Integer), sum(Double), sum(Long) so when "the result type of the expression inside the function parenthesis" is not Integer, Double or Long a compiler error is thrown. This presumes that mvel is mostly hard typed. If we wouldn't have to worry about backwards compatibility, I believe C) would be the best solution: Using the wrong type to sum leads to bugs, so we can't afford to guess and just go with double, because double only works for double and int: it does NOT work reliably for long and BigDecimal. Wdyt?	0	0	https://issues.jboss.org/browse/DROOLS-315
3786	DROOLS-315	Hey Edson, What's the status of this issue? Do we have sumInt(), sumLong(), sumBigDecimal() available in Drools? Or better yet, support for overloaded methods support, so sum(int), sum(long), sum(BigDecimal) just do the right thing (instead of using sum(double)).	0	0	https://issues.jboss.org/browse/DROOLS-315
3787	DROOLS-300	Issue #2 In our discussions, we have remarked that drools is not real-time, so the scheduled time is a lower bound for the actual activation: i.e., expect the rule to activate any time AFTER the scheduled time. Should we have an activation-specific deadline? E.g., activate with a period of 1 day, but cancel any activation that can't be fired within 1 hour since the activation. If you miss the 1hr-window, just skip and go for the next day	0	0	https://issues.jboss.org/browse/DROOLS-300
3788	DROOLS-299	Do you mean I need to add the org.drools:drools-jboss-integration dependency to the project itself? If I do this it adds over 80mb of dependencies to the deployment.	0	0	https://issues.jboss.org/browse/DROOLS-299
3789	DROOLS-298	This issue is actually a bit more severe than it seems: 1) When "user.home" property is not set (for whatever reason), MavenRepository may fail with an obscure exception: java.lang.NoClassDefFoundError: Could not initialize class org.kie.scanner.MavenRepository at org.kie.scanner.ArtifactResolver.getMavenProjectForGAV(ArtifactResolver.java:78) 2) You will get the same exception when the POM you're trying to parse cannot be parsed. (Or when some of the dependencies cannot be located.) This comes from the way how .embedder.MavenProjectLoader parses the POM - when the parsing fails in the static inner class, you won't find out why (the POM error), you just get the above. 3) You should be able to provide a settings.xml to the parser; since that is (AFAIK) the only way to tell Maven that you have additional repositories with additional dependencies. (Think in-house applications.)	1	1	https://issues.jboss.org/browse/DROOLS-298
3790	DROOLS-297	[~mbiarnes] On the ip-bom list, Keith and Gary we're wondering how to do this. How did you fix this for us? We 'll want to extract that to the ip-bom, so the other projects benefit from it too.	1	0	https://issues.jboss.org/browse/DROOLS-297
3791	DROOLS-297	Does this need to be an extra profile? Can't the enforcer rule be smart enough to do the following "if the version of this module is not a SNAPSHOT, then it should have no SNAPSHOT dependencies"?	1	0	https://issues.jboss.org/browse/DROOLS-297
3792	DROOLS-292	Edson Tirelli <etirelli@redhat.com> made a comment on [bug 1016727|https://bugzilla.redhat.com/show_bug.cgi?id=1016727] Mark fixed this one: 6.0.x: https://github.com/droolsjbpm/drools/commit/a550d5ea54c8e816a5bade7d87d8e65e65ac37a2 master: https://github.com/droolsjbpm/drools/commit/be1444020f71277207743d708238c05253b494a9	0	0	https://issues.jboss.org/browse/DROOLS-292
3793	DROOLS-290	Constraints are handled differently in 5.5 than 5.0. In later versions, you can have "free-form" constraints as opposed to simpler <Field OP Value>. This is not a bug. Are you manipulating the Descr tree yourself? Those classes have never been part of the public API, as far as I know	0	0	https://issues.jboss.org/browse/DROOLS-290

3795	DROOLS-166	With reference to: https://groups.google.com/d/msg/drools-usage/fbF8KhOPCKM/D9pCQvLdfIEJ Feedback by Edson Tirelli: {quote} As we moved to a minimal public API, the getConfiguration() method was moved to the internal API, but I think this can be reconsidered. May I ask you please to open a JIRA requesting this method be moved to the public API? Meanwhile, as a workaround, you will need to cast it to the internal API: InternalKnowledgeBase.getConfiguration(). {quote} As I understand what should be the proper solution based on Edson's feedback, I also was able to discover this bug on JIRA; so I'm going to re-use this record instead of creating a new one. I do confirm that the workaround in the meantime works for me, thank you very much Edson. @Petr, for KieSession you can do .getSessionConfiguration() of the public API interface, works for me at least.	1	1	https://issues.jboss.org/browse/DROOLS-166
3796	DROOLS-147	Hi,thanks for the reply. Couple of things i want to point out, 1) For the attached code which i had sent , i had already added the jBPM 5.4 dependency. 2) In the attached code i have commented the part wherein i am using knowledge builders ,knowledgepackages and stateless knowledge sessions. The code works fine for te same scenario when i use the above mentioned classes. The problem is with the usage of of PackageBuilders and that too in a peculiar way in which the rule flow is called. Initially we are calling a rule and from the rule we are invoking the rule flow using the drools.getWorkingMemory().startProcess(<rule flow id>) Kindly refer the drl and rf files attached. In the above scenario the first rule is executed successfully but the execution of 2nd rule fails(ie the call to rule flow).But the exact case works fine with the knowledge builders. Is it possible to provide a workaround / patch for the case to work with packagebuilders?	1	0	https://issues.jboss.org/browse/DROOLS-147
3797	DROOLS-146	This has worked well for months on the optaplanner repository. Michael, 1) All the other blessed repositories should now also get that .gitattributes file (copy it for the optaplanner repo). Possibly improve it first before copying. 2) Clean up all previous errors, as stated in the important above. Shells scripts like dos2unix etc can help here. All java files etc were dos2unixed 2 years ago, but we've seen many contributions since then ...	0	0	https://issues.jboss.org/browse/DROOLS-146
3798	DROOLS-113	Is some work being done on this feature?	1	0	https://issues.jboss.org/browse/DROOLS-113
3799	DROOLS-49	So what do you suggest to do ?	1	1	https://issues.jboss.org/browse/DROOLS-49
3800	DROOLS-49	Turns out the pull requests are versus 5.5.x, not master, which explains the <manifestFile>META-INF/MANIFEST.MF</manifestFile> stuff. It's unclear to which extent the changes on master already fix or don't fix this problem.	0	0	https://issues.jboss.org/browse/DROOLS-49
3801	DTGOV-215	The classifiers are directly related to the ontologies. For example "http://www.jboss.org/overlord/deployment-status.owl#InProd" Then what I am thinking for create an interceptor that reads when an ontology is inserted/updated/deleted from s-ramp and update the UIConfiguration List accordingly. I think this can be done better when the JMS S-ramp integration is working in DTGov. Then could be a subscriber for a topic that only check if the item is an ontology. What do you think Eric?	0	0	https://issues.jboss.org/browse/DTGOV-215
3802	DTGOV-174	Would you be willing to take a look or would you advise we report the issue to jbpm straight away?	1	1	https://issues.jboss.org/browse/DTGOV-174
3803	DTGOV-174	OK I just got around to trying this. I used EAP 6.3 to test and was unable to reproduce the behavior. [~virchete] - can you confirm or provide additional details?	1	1	https://issues.jboss.org/browse/DTGOV-174
3804	DTGOV-147	Can this be closed?	0	0	https://issues.jboss.org/browse/DTGOV-147
3805	DTGOV-126	David can you add more context to this jira? How can it be reproduced?	0	0	https://issues.jboss.org/browse/DTGOV-126
3806	DTGOV-112	Want me to take care of this during SRAMP-382?	1	1	https://issues.jboss.org/browse/DTGOV-112
3807	DTGOV-76	Should the installer put the modules in the soa layer if installing into a SY EAP?	1	1	https://issues.jboss.org/browse/DTGOV-76
3808	DTGOV-65	Ultimately what we need is a plugin approach to deployers. We need a new interface (e.g. Deployer) which encapsulates the logic of actually sending a binary deployment artifact to the target. We then need to modify the deployment REST service impl to use that Deployer interface, moving the specific logic out of the REST impl and into contributed implementations of Deployer. We likely also need a DeployerProvider interface which can be contributed at runtime. Maybe have a look at the following classes in the s-ramp repository for inspiration: DeriverProvider ArtifactDeriverFactory ArtifactDeriver	0	0	https://issues.jboss.org/browse/DTGOV-65
3809	CHE-286	[~jastrachan] we are moving all issues from jira to github. Do you happen to know if there any related issue opened in che / rh-che ? if no I will create one	0	0	https://issues.jboss.org/browse/CHE-286
3810	CHE-285	Hi [~mloriedo] I am still facing this issue : https://drive.google.com/a/redhat.com/file/d/0B1qUq_laG6COX1BGemg4V0F5ekE/view?usp=sharing can you please update !	1	0	https://issues.jboss.org/browse/CHE-285
3811	CHE-257	Could you elaborate what do you mean here? Does it mean to verify that a workspace created from a stack definition can start?	0	0	https://issues.jboss.org/browse/CHE-257
3812	CHE-257	Workspace started is part of it but not enough. I think we need to have a test framework where we can define the image to pull and tests to run on. The tests does not necessarily need to be running a che workspace but rather can check if the created container from the image has the correct items to run a workspace. Here is an example of things to check off top of my mind * Check JAVA_HOME set and point to a JAVA SDK, not JRE * Check JAVA version * Is MAVEN_HOME set * Is correct maven version installed * Check node.js version	0	0	https://issues.jboss.org/browse/CHE-257

#	Requirement	Questions	Answered	Successfully Answered	URL
3813	CHE-257	Even I would have a test to check stacks.json, it would not be enough. Env vars are specified in Dockerfiles of stacks. Checking env vars manually in bash script could not help because env var could still point to a symlink not to a folder with SDK, or it could be a pointing to a folder which could be called sdk but it still could not contain sdk just only jre. Our stack images are not build from scratch, but they are using upstream docker images. So these tests would have to run all the time, because of possible changes in upstream. And if something breaks, we would have to fix also upstream image. I think the first step would be to abstract our images (for rh che distribution) from upstream images to have full control over stack images. Again, as I wrote in previous comment, we can run a workspace on Che an drun EE tests on each of them. Because EE tests uses maven and maven for building requires properly set JAVA_HOME pointing to a JDK instead of JRE, it would fail and we will know that something is wrong. And it still have to be responsibility of stack author that a stack is working when it is submitted. We then wouldnt end up with issues such as CHE-213 which I have reported some time ago, when I guess the stack author did not checked/verified that the stack is actually running on Che. What I would suggest is - have a one stack for EE tests in verification job of Che. Have another tests, which could reuse code of EE tests after few changes (making them parameterized) and run those tests on changes performed to RH Che stacks/stack images repos to verify it is working. Before creating such parameterized suite for workspaces, we have to build our stack images from scratch to not be dependant on upstream images.	0	0	https://issues.jboss.org/browse/CHE-257
3814	CHE-243	Can't we just print instructions on how to get the logs of different commands? Something like: {code:bash} echo " Workspaces don't log to stdout. Instead agents log files can be fond inside the container: - wsagent logs open are in folder /home/user/che/ws-agent/logs - ls-bayesian logs can be found in /home/user/che/bayesian.log (c.f. https://github.com/fabric8-analytics/fabric8-analytics-lsp-server/pull/9) " {code} The PR sent by [~snjeza] is brilliant but has 2 drawbacks: 1. The code is error prone and it's run in container pid 1: if, for whatever reason, logging to stdout fails the workspace will crash 2. Besides wsagent there are still other agents logging (i.e. bayesian)	1	1	https://issues.jboss.org/browse/CHE-243
3815	CHE-231	Do we need to put some requirements to SPI work?	0	0	https://issues.jboss.org/browse/CHE-231
3816	CHE-230	[~amisevsk] It seems that we expect "Server-" to be there https://github.com/eclipse/che/blob/openshift-connector/plugins/plugin-docker/che-plugin-docker-machine/src/test/java/org/eclipse/che/plugin/docker/machine/ServerEvaluationStrategyTest.java#L135 ? Do we change this Server name evaluation strategy or the route creation strategy ? Somehow, these 2 strategies need to be the same IMO	1	1	https://issues.jboss.org/browse/CHE-230
3817	CHE-229	what has been done in https://github.com/eclipse/che/pull/5052 (compared to openshift-connector branch) * Skipped code actions (5 commits) already in master * Skipped Java Testing support Bug fixes and Enhancements - Step 2 already in master * Squashed 7f19381d813910897d48ce85e01f01ee69d39585 : Revert WorkspaceFilesCleaner binding (f3a9123be9f3e963635392a70cd4e01628913633) * Squashed Temporarly comment out usage of PV for workspaces and Rework PVC * rebase of course and some cleanup what does https://github.com/eclipse/che/tree/openshift-connector-wip include: * Add secret to workspaces for bayesian plugin * Set github token what still to do in https://github.com/eclipse/che/tree/openshift-connector-wip * -cherrypick Register ls by pattern 2 (#4846)- not anymore needed thanks to https://github.com/eclipse/che/pull/5156 what still need to do to merge https://github.com/eclipse/che/tree/openshift-connector-wip * *Temporary* fix for https://issues.jboss.org/browse/CHE-214 (will be fix by codenvy refactoring https://github.com/eclipse/che/issues/4679) * Add secret to workspaces for bayesian plugin -> should be done in rh-che using this. https://github.com/l0rd/che/commit/65030292589b48 (override injection) + create a ticket * set github token proper way that Sergii will accept -> CHE-262 should solve it * Rework Register ls by pattern 2 (#4846) so it is mergeable -> https://github.com/eclipse/che/pull/5156 * https://github.com/redhat-developer/rh-che/pull/54 stacks openshift.io * transplant https://github.com/eclipse/che/pull/4961 to rh-che stacks.json * https://github.com/eclipse/che/pull/5157 to rebase https://github.com/eclipse/che/pull/5191	1	1	https://issues.jboss.org/browse/CHE-229
3818	CHE-224	[~dfestal] > which is planned afaik What is the Jira issue ?	1	0	https://issues.jboss.org/browse/CHE-224
3819	CHE-224	What is the Jira issue ? It's possible that there isn't a Jira issue for now. But the idea is still that the CI build files will be moved to the `rh-che` repository. [~mloriedo] should we create an issue for this ?	0	0	https://issues.jboss.org/browse/CHE-224
3820	CHE-217	[~gercan] I was told by Ilya, that stacks are gonna be somehow resolved by pipelines. Could you elaborate on this topic? Reopening for clarification.	0	0	https://issues.jboss.org/browse/CHE-217

#	Requirement	Questions	Answered	Successfully Answered	URL
3821	CHE-180	[~snjeza] it would be easy to revert the https://github.com/eclipse/che/pull/4799, but I have a few comments inlined before we make an agreement of doing this: {quote} when a pod doesn't contain any logs, the OpenShift connector tries to read from a stream that doesn't exist which causes the "Pipe not connected" exception {quote} {quote} debug the che server, PipedInputStream.java, line 305 and start/stop a workspace. "Pipe not connected" isn't fixed, but only hidden. {quote} Indeed, pipe is not connected will be thrown, but it is done by design and not coupled with this issue (there are *no* logs of "Pipe not connected" in che-sever pod when the exception is thrown) - https://github.com/eclipse/che/blob/openshift-connector/plugins/plugin-docker/che-plugin-openshift-client/src/main/java/org/eclipse/che/plugin/openshift/client/OpenShiftConnector.java#L763 This issue is *not* coupled with the fact that that the pod logs are empty, because we do see logs in the che-server pod with "Pipe not connected" and after that che-server become unusable - not possible to create a workspace. {quote} getContainerLogs doesn't close a log watch the getEvents method doesn't close an event watch {quote} Yeah, agree - those issues need to be fixed, but are you sure that closing watches fix the main critical issue - after some time ~ 5 -10 mins it is simply not possible to create a worskpace {quote} https://github.com/eclipse/che/pull/4799 doesn't introduce a new issue, but doesn't fix anything and makes fixing the connection leak more difficult. {quote} In general closing client is what is done in all fabric8 examples e.g. - https://github.com/fabric8io/kubernetes-client/blob/master/kubernetes-examples/src/main/java/io/fabric8/openshift/examples/DeploymentConfigExamples.java#L96 OpenShift client should be treated as DB connection IMO - it implements Autocloseabe interface and must be closed once the operation on cluster is finished (the good think that in comparison with DB connection, creating OpenShift client is a "cheap" operation) One thing I notice, if OpenShift connector is created in method and not closed there will be warning - Resource leak 'openShiftClient' is never closed. Also, I do not understand how closing client in each method can actually "hide" any issue e.g what is difference between: {code} LogWatch watchLog = this.openShiftClient.pods().inNamespace(openShiftCheProjectName).withName(podName) .watchLog() ... LogWatch watchLog = new DefaultOpenShiftClient.pods().inNamespace(openShiftCheProjectName).withName(podName) .watchLog() {code} I believe that opening client and not closing it at all, as was implemented previously, might lead to some unpredictable consequences (like this issue). {quote} Some methods (getContainerLogs) require a Kubernetes connection as long as a workspace runs so we can't close the client. {quote} Why ? maybe I do not fully understand the code, but there is a while loop for pending logs (after it's execution I see no reason of having client opened) - https://github.com/eclipse/che/blob/openshift-connector/plugins/plugin-docker/che-plugin-openshift-client/src/main/java/org/eclipse/che/plugin/openshift/client/OpenShiftConnector.java#L756	1	1	https://issues.jboss.org/browse/CHE-180
3822	CHE-180	{quote} Indeed, pipe is not connected will be thrown, but it is done by design and not coupled with this issue (there are no logs of "Pipe not connected" in che-sever pod when the exception is thrown) - https://github.com/eclipse/che/blob/openshift-connector/plugins/plugin-docker/che-plugin-openshift-client/src/main/java/org/eclipse/che/plugin/openshift/client/OpenShiftConnector.java#L763 {quote} That is, probably, a bug in the Kubernetes client. {quote} OpenShift client should be treated as DB connection IMO - it implements Autocloseabe interface and must be closed once the operation on cluster is finished {quote} Agree. I have tested opening/closing the client. The first time it takes about 1,5 seconds and 30-50 ms every time after that. {quote} This issue is not coupled with the fact that that the pod logs are empty, because we do see logs in the che-server pod with "Pipe not connected" and after that che-server become unusable - not possible to create a workspace. Yeah, agree - those issues need to be fixed, but are you sure that closing watches fix the main critical issue - after some time ~ 5 -10 mins it is simply not possible to create a worskpace {quote} I can reproduce it with the current openshift branch, but can't with the snjeza/che-server:che180fixed image. {quote} Also, I do not understand how closing client in each method can actually "hide" any issue e.g what is difference between: {quote} Closing the client doesn't hide the issue. It is hidden in the getContainerLogs method (OpenShiftConnector.java#L763). {quote} Why ? maybe I do not fully understand the code, but there is a while loop for pending logs (after it's execution I see no reason of having client opened) - https://github.com/eclipse/che/blob/openshift-connector/plugins/plugin-docker/che-plugin-openshift-client/src/main/java/org/eclipse/che/plugin/openshift/client/OpenShiftConnector.java#L756 {quote} Che creates a separate thread for a container log. This thread runs as long as a workspace runs. If we close the client, we will get a connection leak. I have tried to read a container log synchronously, but haven't succeeded to find a solution that would work correctly. Maybe there is a bug in the kubernetes client.	1	1	https://issues.jboss.org/browse/CHE-180
3823	CHE-180	[~snjeza], yeah it looks like client has issues with watchers :/ {quote} I can reproduce it with the current openshift branch, but can't with the snjeza/che-server:che180fixed image. {quote} Could you please provide steps for reproducing this issue against the latest 1.0.91 [1] template, which uses docker image *rhche/che-server:e271ace* ? The only reason why PR https://github.com/eclipse/che/pull/4799 was merged is because neither I, nor reviewers were not able to reproduce this issue on minishift. I still can not reproduce it - creating / removing workspaces on minishift against different stacks does not break che server for me after a couple of hours of work {quote} Closing the client doesn't hide the issue. It is hidden in the getContainerLogs method (OpenShiftConnector.java#L763). {quote} PR https://github.com/eclipse/che/pull/4799 implements the *only* thing - creating / closing client in each method. The logic of OpenShiftConnector methods was not changed at all (at this point hiding getContainersLogs was done before this PR was merged, and it did not help - the issue was still reproducible). I do not insist on the fact that this PR fix anything and just fall back on two assumptions: - it is incorrect to open client and never close it (as it was done before) - after closing client correctly in each method the issue is not reproducible (for me) [1] http://central.maven.org/maven2/io/fabric8/online/apps/che/1.0.91/	1	1	https://issues.jboss.org/browse/CHE-180
3824	CHE-180	I can reproduce connection leak coupled with the watcher - there is a following trace in the console: {code} 2017-04-17 12:14:05,499[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); {code} But with this warn I still can create / remove workspaces without any issues, that is why I am not sure that watch issue is tightly coupled with pipe is not connected error, which results in making che-server unusable	1	1	https://issues.jboss.org/browse/CHE-180

#	Requirement	Questions	Answered	Successfully Answered	URL
3825	CHE-180	{quote} Could you please provide steps for reproducing this issue against the latest 1.0.91 [1] template, which uses docker image rhche/che-server:e271ace ? {quote} - create a workspace - start and stop it several times. In the che server log, you will get the following: {quote} 2017-04-17 13:20:07,208[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); 2017-04-17 13:20:09,975[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); 2017-04-17 13:20:09,983[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); 2017-04-17 13:20:14,691[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); 2017-04-17 13:20:17,420[ConnectionPool] [WARN] [okhttp3.OkHttpClient 129] - A connection to https://kubernetes.default.svc/ was leaked. Did you forget to close a response body? To see where this was allocated, set the OkHttpClient logger level to FINE: Logger.getLogger(OkHttpClient.class.getName()).setLevel(Level.FINE); {quote} - debug the che server and set a breakpoint to InputStreamPumper.java, line 305. You will see the "Pipe not connected" exception is thrown. After some time, you won't be able to create a workspace. The snjeza/che-server:che-180 image is the same as the rhche/che-server:e271ace image. It uses the current openshift branch and adds only a log so you can see what's happening. See https://github.com/snjeza/che/tree/che-180.	1	1	https://issues.jboss.org/browse/CHE-180
3826	CHE-180	[~snjeza] hmmm... can reproduce all except "After some time, you won't be able to create a workspace" :/ minishift has been running for ~ 5 hr non-stop and I have started / stopped / removed dozen of worrkspaces by now and still can create new one without problems. [~mloriedo], [~amisevsk] can you, guys, reproduce original issue against the latest openshift connector ?	1	1	https://issues.jboss.org/browse/CHE-180
3827	CHE-173	So a buffer on the ws-agent. I think we should also consider what happens when we move servers to run on their own container. What will be the role of agent on that architecture?	1	1	https://issues.jboss.org/browse/CHE-173
3828	CHE-142	Doesn't Che uses jgit ? then the missing piece is to have a CredentialsProvider that will read the .gitcredentials file or some other storage or API point that will provide that token given by platform.	0	0	https://issues.jboss.org/browse/CHE-142
3829	CHE-132	[~mloriedo], I was not able to find vertx stack there, I thought this one is top priority is it coupled with - https://issues.jboss.org/browse/CHE-128 ? (vertx stack is not going to be published on dockerhub ?)	1	1	https://issues.jboss.org/browse/CHE-132
3830	CHE-122	for longer time/with more request over time (e.g. soak scenario). 3832	CHE-120	Marian let me try to summarize what we should investigate: - If we can run a command as a super user in a non privileged container on OpenShift (e.g. "sudo service apache2 start") or what are the minimum needed privileges - Which command are run as super user when we bootstrap a vert.x workspace and how can we get rid of these (e.g. https://github.com/eclipse/che/blob/master/wsagent/agent/src/main/resources/org.eclipse.che.ws-agent.script.sh#L37 is one of these) And I think that these task can be done even if the Docker API hasn't been implemented yet in the OpenShift connector.	0	0	https://issues.jboss.org/browse/CHE-120
3833	CHE-60	For the remaining 2 we should be able to use a distinct PV then the one used by che-server volume. Can you test it and see if you get an error? I suspect something like folder does not exist...	1	1	https://issues.jboss.org/browse/CHE-60
3834	CHE-60	Che-server and a workspace can use the same PVC when they are in the same namespace. That means, we can use the claim-che-data PVC (from CHE-59) when creating a workspace. They will have the same /data directory (I have checked it) and we can just create the mentioned links. If we would use a distinct PVC (I suppose you meant PVC, not PV), we would have to ensure that they are shared between a server and a workspace. BTW Do you know how we can call a command in the workspace container?	1	1	https://issues.jboss.org/browse/CHE-60
3835	CHE-35	On Centos with Docker version 1.10.3 (package 1.10.3-46.el7.centos.14) and SELinux activated Docker provides an error when trying to mount a non existing folder: {code:bash} docker create -v /tmp/thisfolderdoesntexist/:/tmp/:Z busybox sh Error response from daemon: no such file or directory {code} This prevent to Che from creating new workspaces on CentOS with SELinux activated because Che uses flag 'Z' when mounting the new workspace folder. To avoid this problem Che should have a property and an environment variable that would let configurable the Z flag. The background of this particular Docker issue: {quote}Everything starts with this bugzilla https://bugzilla.redhat.com/show_bug.cgi?id=1274210. After that Dan (Walsh) opened an issue upstream in docker https://github.com/docker/docker/issues/17262. That issue has been closed at some point because docker deprecated the auto-creation of directories on the host when using bind mounts (https://github.com/docker/docker/pull/16349). Shortly after that, they realized that was too much of an issue for existing deployments and reverted that deprecation. So, Dan went ahead and implemented the directories auto-creation on host with https://github.com/docker/docker/pull/23026. The issue I see here is that we didn't backport https://github.com/docker/docker/pull/23026 to our 1.10.3 projectatomic/docker branches (yet?). I'm not sure we're going to ship this backport in 7.3.1 so I'd say this issue has been fixed in rhel/centos with docker-latest 1.12.1 (is centos shipping docker-latest?) {quote}	1	1	https://issues.jboss.org/browse/CHE-35
3836	CHE-35	I can reproduce the issue using centos/7 and centos/atomic-host with docker 1.10.3, but can't with docker >=1.12.1. centos/7 doesn't include docker-latest (1.12.1). It has to be separately installed. I am not sure what else I could help with. [~mloriedo], would you like me to create PRs for the 1.10.3 branches? There are two such branches in https://github.com/projectatomic/docker - fedora-1.10.3 and rhel7-1.10.3.	1	1	https://issues.jboss.org/browse/CHE-35
3837	CHE-34	We are working on the solution which has a similar feature but currently integrated as a part the build (ordering test execution). Is there any work around that started on your side?	1	0	https://issues.jboss.org/browse/CHE-34
3838	CHE-34	Which ITS it is? Can you share the link?	1	0	https://issues.jboss.org/browse/CHE-34
3839	CHE-32	[~amisevsk] that's great! We need to share this script with CentOS team. We can share that on eclipse-che@redhat.com but maybe it's worth create a github repository (for redhat che related source files) and put that script there. [~gercan] what do you think?	1	1	https://issues.jboss.org/browse/CHE-32
3840	CHE-31	PR was merged and this functionality should be available in Che 5.0.0-M7 release	0	0	https://issues.jboss.org/browse/CHE-31
3841	CHE-24	[~mloriedo] I was not able to finish this task in this sprint. Could you please drag it to the #123 during the next planning ?	0	0	https://issues.jboss.org/browse/CHE-24

#	Requirement	Questions	Answered	Successfully Answered	URL
3842	CHE-17	I had a chat with [~tmancini] and we agreed that we should concentrate testing effort around "unit testing for Java" for this release. CHE-11 is probably relevant to this work and may be a starting point. [~aslak], [~alrubinger] Can you think of additional requirements for Java unit testing on Che? Must support frameworks ?	1	0	https://issues.jboss.org/browse/CHE-17
3843	CHE-17	I would also like to start the discussion about how we should actually run those tests from the IDE. What should happen when we click "run test" or hit the shortcut? We can either do it like Eclipse and IDEA does, so having our own test runners or delegate it to the underlying build tool of choice and collect the results. If we go with the second approach we don't have to discuss the support for testing frameworks, but rather about build tools support in Che. As far as I know we are limited to Maven at this point. Do you see any disadvantages of delegating to build tool rather than writing IDE/framework specific test runner? From Arquillian experience, where [~aslak] can shed more light, IDE specific runners were always a struggle, but if we go with delegating to the build are we losing something? Speed? Incremental compilation? I've spent time reading aforementioned PR (what I assume is a GSoC project) and I've noticed it's a mix of both. For resolving test dependencies it [simply invokes Maven|https://github.com/Mirage20/che/blob/77ef09d02a2a68ded2b6ec872eabc4d201fa77c1/plugins/plugin-java-test-runner/che-java-testing-classpath/che-java-testing-classpath-maven-server/src/main/java/org/eclipse/che/ide/ext/java/testing/classpath/maven/server/MavenTestClasspathProvider.java#L38-L55], but for executing the tests [it is heavily reflection based|https://github.com/Mirage20/che/blob/77ef09d02a2a68ded2b6ec872eabc4d201fa77c1/plugins/plugin-java-test-runner/che-java-testing-junit/che-java-testing-junit-server/src/main/java/org/eclipse/che/ide/ext/java/testing/junit/server/JUnitTestRunner.java#L90-L148].	1	1	https://issues.jboss.org/browse/CHE-17
3844	CHE-17	[~gercan] Cool, let me know if you want some support from our side. Do the suggestions above make sense? I would also like to hear your opinion about few aspects mentioned in the thread. But no rush :)	1	1	https://issues.jboss.org/browse/CHE-17
3845	CHE-17	[~amisevsk] and I have been talking about this. Here is our thoughts. We plan to build on top of GSoC PR that was referred to. It seems to be doing most of what is discussed here but [~amisevsk] will take a pass and determine the gaps. We may also help with its merge if needed. [~bmajsak] I think most of the requirements were OK, a few questions and comments. * Can you elaborate what do you mean by _fork mode_? * Environment and VM paramters are a more general problem on Che that should be addressed for all run types not only tests. Angel will take a look and create suggestions on how to proceed with them. * We do not plan to depend on maven to run the tests because this will sever our ability to easily run a selected set of tests which is a requirement that was discussed above. * Created CHE-34 for the continuous testing plugin to Che, but I do not expect the work on it to start soon. [~alrubinger] I think build and deployment pipeline alignment is probably a larger scope issue then testing. I think in general the stacks used by Che and the pipeline should be same. See CHE-33 for more on that.	1	0	https://issues.jboss.org/browse/CHE-17
3846	CHE-17	{quote} Can you elaborate what do you mean by fork mode? {quote} Like in surefire for example (as well as in IDEA) you can define how you would like to run your tests in parallel. Classes - just classes are forked, methods - it also executes methods in parallel. {quote} We do not plan to depend on maven to run the tests because this will sever our ability to easily run a selected set of tests which is a requirement that was discussed above. {quote} How would this limit you? Just out of curiosity.	1	1	https://issues.jboss.org/browse/CHE-17
3847	CHE-17	What's the status? I see that epic child is resolved and closed, because the upstream has been merged. But [~amisevsk] has some pretty good points in the CHE-11 and the current user experience with java unit testing in Che is bad.	0	0	https://issues.jboss.org/browse/CHE-17
3848	ERT-391	[~amisevsk], pushed to master. One thing I noticed while checking the gerrit change is that Outline view is not refreshing on js file change. In order to update outline I have to close and open the file again. Do you experience the same behaviour ?	1	1	https://issues.jboss.org/browse/ERT-391
3849	ERT-222	Marking as RESOLVED since this has been fixed, and will be targeting 5.0 (RC3)	0	0	https://issues.jboss.org/browse/ERT-222
3850	ERT-74	No. JIRA and bugzilla have different users. It's impossible to match them. At least not always.	0	0	https://issues.jboss.org/browse/ERT-74
3851	ERT-68	[~dgolovin] Why do you closed the issue? Shouldn't we add ChDT features into WTP p2 repo?	0	0	https://issues.jboss.org/browse/ERT-68
3852	EJBTHREE-2122	Ondrej, I'm not responsible for modifying the community documentation, and as far as I know we don't have EJB3 docs shipping with EAP yet. Can you suggest anyone for this to be assigned to in the mean time? I'm not going to get the chance to look at anything extra until November or so.	1	0	https://issues.jboss.org/browse/EJBTHREE-2122
3853	EJBTHREE-2110	Patch applied to ejb3-core 1.3 branch http://anonsvn.jboss.org/repos/jbossas/projects/ejb3/branches/jboss-ejb3-core-1.3/ as well as EJB3 trunk.	0	0	https://issues.jboss.org/browse/EJBTHREE-2110
3854	EJBTHREE-2110	How can the patch be applied? Thank you.	0	0	https://issues.jboss.org/browse/EJBTHREE-2110
3855	EJBTHREE-2110	Is this patch embedded into JBoss 7 ?	1	0	https://issues.jboss.org/browse/EJBTHREE-2110
3856	EJBTHREE-2071	Did the AS workaround help? The missing JMXAdapter class is now include in the client jar.	0	0	https://issues.jboss.org/browse/EJBTHREE-2071
3857	EJBTHREE-2042	Remi, thank you for the profiler numbers. Can you provide more details about your application including the bean code and the invocation details?	0	0	https://issues.jboss.org/browse/EJBTHREE-2042
3858	EJBTHREE-2011	This is a BLOCKER for CDI integration in AS. Is there an estimate or a Fix Version that this is targeted for?	0	0	https://issues.jboss.org/browse/EJBTHREE-2011

3862	EJBTHREE-1669	Can you provide some context on the forums? The "service" Integration Tests and EJBTHREE-1530 are now working.	1	1	https://issues.jboss.org/browse/EJBTHREE-1669
3863	EJBTHREE-1659	Updated the tutorial to use the new API on the AsyncUtils, as explained in the forum thread. Works fine now.	0	0	https://issues.jboss.org/browse/EJBTHREE-1659
3864	EJBTHREE-1650	But we have multiple servers and we can add dynamically new servers (clustering) so we can't specify one explicit address. Is there a workaround ?	0	0	https://issues.jboss.org/browse/EJBTHREE-1650
3865	EJBTHREE-1650	Is there any workaround? If not when it is planned to be resolved?	0	0	https://issues.jboss.org/browse/EJBTHREE-1650

#	Requirement	Questions	Answered	Successfully Answered	URL
3866	EJBTHREE-1650	Andrew, Do I have to hardcode the clientBindUrl parameter into the RemoteBinding() annotation? This doesn't work: @RemoteBinding(clientBindUrl = "sslsocket://127.0.0.1:3843", jndiBinding="MessageServiceEJB/secure") and this doesn't work either: @RemoteBinding(clientBindUrl = "sslsocket://0.0.0.0:3843", jndiBinding="MessageServiceEJB/secure") and of course this doesn't work: @RemoteBinding(clientBindUrl = "sslsocket://${jboss.bind.address}:3843", jndiBinding="MessageServiceEJB/secure") This does works but isn't what I need: @RemoteBinding(clientBindUrl = "sslsocket://tommyboy:3843", jndiBinding="MessageServiceEJB/secure") Hardcoding the clientBindUrl will make it just about impossible to deploy my app. Any suggestions? Thanks, Bryant	1	0	https://issues.jboss.org/browse/EJBTHREE-1650

3872	EJBTHREE-1480	This says resolved but for build: SVNTag=JBoss_5_0_0_GA date=200810310742, it still logs, "[JBoss] 08:19:36,599 WARN [LifecycleCallbacks] EJBTHREE-1480: LifecycleCallbackStack has not been defined for domain..." Is this forgotten, or when will it be removed?	0	0	https://issues.jboss.org/browse/EJBTHREE-1480
3873	EJBTHREE-1437	Is the fix for this in the EJB3 version currently used in AS trunk? If so, this issue can be closed	1	1	https://issues.jboss.org/browse/EJBTHREE-1437
3874	EJBTHREE-1337	I've added the Proxy implementation. Can someone take care of the injection?	1	1	https://issues.jboss.org/browse/EJBTHREE-1337
3875	EJBTHREE-1302	why are we not creating one ejb3 client jar rather than 10 different ejb3-xxx-client.jars?	0	0	https://issues.jboss.org/browse/EJBTHREE-1302
3876	EJBTHREE-1287	Does this mean the EJB3 project does not cover appclients in their test suite? I hope not. Wherever appclients are tested, service-ref injection should be tested as well.	0	0	https://issues.jboss.org/browse/EJBTHREE-1287
3877	EJBTHREE-1251	Anil, we're fixing up the TestSuite, can we get an update here? Current failures are due to Caused by: javax.ejb.EJBAccessException: Caller unauthorized	0	0	https://issues.jboss.org/browse/EJBTHREE-1251
3878	EJBTHREE-1248	Heiko: Who did you have in mind for this? Can you elaborate in this issue's description as to what needs to be done?	1	1	https://issues.jboss.org/browse/EJBTHREE-1248

#	Requirement	Questions	Answered	Successfully Answered	URL
3879	EJBTHREE-1248	Rajesh: Could you look at this for Heiko? I believe he's provided the sample configs, just need to get this into official QA.	1	1	https://issues.jboss.org/browse/EJBTHREE-1248
3880	EJBTHREE-1244	@Dragos: Can you provide more context on the EJB3 User Forum? Surprised to see this in 4.2.x. http://wiki.jboss.org/auth/wiki/BadPostMETOO	0	0	https://issues.jboss.org/browse/EJBTHREE-1244
3881	EJBTHREE-1096	What changes to JBoss AS or the EJB3 spec are required to achieve this? Please also comment on the difficulty and likely time frame for these changes.	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3882	EJBTHREE-1096	Any news on this? Will this require major modifications to JBAS or the EJB3 implementation?	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3883	EJBTHREE-1096	This does seem to be a popular issue. Yet, I see no comments regarding what would be required. Do any other app servers support this? If not, then wouldn't this be a major advantage to JBAS? If so, then shouldn't JBAS do the same?	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3884	EJBTHREE-1096	I would appreciate a response to Jason Long's questions directly above. This issue is not even assigned yet. This problem is a total disaster in terms of productivity. I've recently been restarting JBoss dozens of times a day during dev/test cycles for my Seam app. I use ant explode as default build for Seam apps. When you use ant deploy, it's faster for session bean dev/test cycles b/c the new version of the EAR will be re-deployed by JBoss (restart not required - which takes longer than re-deploy) but eventually you will have to restart Jboss/Eclipse due to strange problems and perm-gen memory issues even if you use -XX:PermSize=256M -XX:MaxPermSize=512M on a 2GB machine. Either way sucks. I've also seen seemingly invalid duplicate id errors when I save a change to a facelet and do an ant explode and refresh browser. These comments refer to Seam 2.0.0.GA, RF3.1.3.GA and JBoss 4.2.1.GA. Is this a EJB spec issue or JBoss EJB implementation issue or both?	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3885	EJBTHREE-1096	I am with you. I see several +1 from core JBoss developers, but is anyone actually taking this seriously? I realize that these developers are on other projects. Can we at least get this in for JBoss 5?	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3886	EJBTHREE-1096	And look at all the votes. Is there a way to search for issues by the number of votes? I would bet this it one of the top ones.	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3887	EJBTHREE-1096	Well I found Pete's answer from this thread I started on this issue: http://www.jboss.com/index.html?module=bb&op=viewtopic&p=4122726#4122726 me: Is it going to be targeted for release and coincide with EJB 3.1 release which apparently is going to remove local interface for session beans? Pete: Unlikely, this is implementation detail, not spec related. Also EJB3.1 is still a while away. So it sounds like it needs to be a part of a maintenance release for JBoss 5...	0	0	https://issues.jboss.org/browse/EJBTHREE-1096
3888	EJBTHREE-1096	I posted the following comment in Ken Saks' blog (Ken is the EJB 3.1 Spec Lead) when the EJB 3.1 Early Draft was announced: " Hi Ken. Thanks for the resume. I was working with EJB since 2.0 (limitations fixed by our own), then EJB 3. I really like the Java EE platform and I'm looking forward for the new features. What I would really like is the possibility to hot deploy EJB. This would be a very big advantage for EJB, specially for the developers. Currently the development process for EJB applications is a bit cumbersome, we need to redeploy application server every time an EJB is added or changed. Do you know about the hot deployment (for development process) support for EJB? Was it mentioned on JCP? Was it considered? Will it be? Thanks in advance!" His answer was: " Hi Fernando, Thanks for your feedback. Hot deployment has typically been left as a value-add for products as opposed to a spec requirement, so it's unlikely we'll address this specifically within EJB 3.1. There's a basic issue with the way classloaders are used in the EE platform that makes supporting hot deployment for any single component challenging. Typically most or all of the classes in an application are loaded by a single classloader, which means everything has to be reloaded when a single thing changes. From a glassfish perspective we have a couple things to ease redeployment. The first is directory-based deployment. That saves you having to re-issue an asadmin command and transfer the application to the server. We've also significantly reduced the overhead of deployment itself. In the case of EJB deployment we've eliminated all statically generated code from the deployment stage (except for legacy CMP 2.x apps). " So, as you can read, seems like the EJB (3 or 3.1) hot deployment is reserved to be a "value-add" for JBoss AS. I'm really sure this would be a really big advantage for JBoss AS. The post I mentioned is here: http://blogs.sun.com/kensaks/entry/ejb_3_1_early_draft Regards,	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3889	EJBTHREE-1096	Any news on this as it is killing productivity for all users of EJB3? Here http://www.jboss.org/index.html?module=bb&op=viewtopic&p=4122726#4122726 on Wed Jan 23, 2008 Pete Muir stated, "I spoke to Andy from EJB3 team about this a few days ago, he was going to try to get it scheduled." That was over a year ago and this is still dead. Would someone please comment on this issue so I can decide whether to drop EJB3 entirely or suffer longer until this can be fixed?	1	0	https://issues.jboss.org/browse/EJBTHREE-1096
3890	EJBTHREE-1096	Jevgeni Kabanov: "The big things to look for in the next release are integration with EJB containers supporting changes to EJB interfaces, full Struts 1.x and 2.x support, better support for enums and static values plus some stuff we'd like to keep secret for the moment :)" source: http://java.dzone.com/articles/saving-time-java-development Note "integration with EJB containers supporting changes to EJB interfaces". That is a very critical enhancement for the upcoming release of JRebel. What does it mean exactly? Will Weblogic, Glassfish or JBoss support this behavior in an upcoming release, for example? Pretty decent tool, we're using 2.1a currently...	0	0	https://issues.jboss.org/browse/EJBTHREE-1096
3891	EJBTHREE-1029	A one workaround I have found is to deploy a EJB2.1 facade to the EJB3.0 on the server, this I found I needed to compile with 1.4.2 even though it will end up running on 1.6.x. Then I use the client jar's from 4.0.x and download and use the 2.0.x jar from jbossremoting to replace the 1.x.x version that comes with 4.0.x, this seems to work ok on client jdk1.4.2 -> server jdk1.6.x. Is there a simpler way to do this?	0	0	https://issues.jboss.org/browse/EJBTHREE-1029
3892	EJBTHREE-1026	Is this work complete?	1	0	https://issues.jboss.org/browse/EJBTHREE-1026
3893	EJBTHREE-1017	Galder, did you run the ejb3 testsuite with this patch? If so, I'd appreciate your help as I'm running into some issues. Thanks.	0	0	https://issues.jboss.org/browse/EJBTHREE-1017
3894	EJBTHREE-1017	Can someone upload to it to network.jboss.com? Customer needs it. Cheers,	0	0	https://issues.jboss.org/browse/EJBTHREE-1017
3895	EJBTHREE-1017	What link are you refering to when you say that the link is not here? If you're refering to the support case link, it is already in the JIRA issue.	0	0	https://issues.jboss.org/browse/EJBTHREE-1017
3896	EJBTHREE-856	Can this issue be resolved? Since we have JbossCache 1.4.1.SP6 now	1	1	https://issues.jboss.org/browse/EJBTHREE-856
3897	EJBTHREE-689	How can i use the xmbean attribute in @Service?	0	0	https://issues.jboss.org/browse/EJBTHREE-689
3898	EJBTHREE-680	Hi, Can this issue be added into the EJB3 RC9. Since I did not see this issue listed on the RC9 roadmap. Thanks, Joe	1	1	https://issues.jboss.org/browse/EJBTHREE-680
3899	EJBTHREE-679	Hi, Can this issue be added into EJB3 RC9 please? I did not see this issue listed on RC9 roadmap. Cheers, Joe	1	1	https://issues.jboss.org/browse/EJBTHREE-679
3900	EJBTHREE-678	Hi, Can this issue be added into EJB3 RC9 please? It is not listed in RC9 roadmap. Cheers, Joe	1	1	https://issues.jboss.org/browse/EJBTHREE-678
3901	EJBTHREE-648	Is this reuqest will be realized in AS 7 ?	0	0	https://issues.jboss.org/browse/EJBTHREE-648

#	Requirement	Questions	Answered	Successfully Answered	URL
3902	EJBTHREE-646	Its false that a security-domain is unsupported at the ejb level. This shows up in the container-configuration: <!ELEMENT container-configuration (container-name , call-logging?, invoker-proxy-binding-name?, sync-on-commit-only?, insert-after-ejb-post-create?, call-ejb-store-on-clean?, store-not-flushed?, container-interceptors? , instance-pool? , instance-cache? , persistence-manager? , web-class-loader? , locking-policy? , container-cache-conf? , container-pool-conf? , commit-option? , optiond-refresh-rate? , security-domain?, cluster-config?, depends*)>	1	0	https://issues.jboss.org/browse/EJBTHREE-646
3903	EJBTHREE-585	Had a conf call last night with Brian, Bela, Steve and Emmanuel. Here are 3 points conclusion: Sounds good. One additional option we might want to look into is #4: invalidation. It may be interesting to see whether we can (a) replicate the full state including class and primary ID (if any) the first time and then (b) invalidate on write access (NOT read access !) subsequently. Invalidation would be nice because if we use JBossCache as 2nd level cache with Hibernate, then we're replicating each entity bean twice... Ben Wang wrote: Thanks for the time last time. Like I said, I'd like to check into item #3 first to see exacly what it takes to instrument Hibernate. I can see I will need Steve's help in this regards. If that doesn't work, I will then work with Steve to come up an API for #2. Cheers, -Ben ---------- From: Bela Ban Sent: Wednesday, June 28, 2006 11:28 PM To: Ben Wang; Brian Stansberry; Steve Ebersole; Emmanuel Bernard Subject: Minutes We essentially have 3 avenues to pursue: Full serialization for entity beans (replicate everything) Delta-based replication Hibernate provides a call which returns the deltas (changes) within the current scope (transaction, session?) We can tell Hibernate to apply the deltas (on the receiving side) Field-based replication Look into feasibility of instrumenting *everything* (persistence context etc) Steve: can we remove the 'transient' modifiers ? I don't think this should have an effect on performance, and documents that PojoCache needs to replicate those field	1	0	https://issues.jboss.org/browse/EJBTHREE-585
3904	EJBTHREE-582	Do not backport this to Branch_4_0. This will be done when we do a 4.0.5 release or another ejb3 release.	1	1	https://issues.jboss.org/browse/EJBTHREE-582
3905	EJBTHREE-436	Same problem: to stay in my example, 3 different xml's would be needed, each for one cluster and so it would still not be possible to deploy the same .ear on all clusters. How would you distribute a clustered ejb3 example? You force me to setup a cluster with the same partition name as yours? What if my 3 colleagues in the next room want to deploy your example, too on their computers. Would we have to setup individual subnetworks so they can all run jboss cluster wkith the same partition name?	1	0	https://issues.jboss.org/browse/EJBTHREE-436
3906	EJBTHREE-369	Should we raise this to the expert group on who should flush() container or persistence provider? BTW, flush_before_complete is set to default by default in the JBoss EJB 3.0 implementation.	1	1	https://issues.jboss.org/browse/EJBTHREE-369
3907	EJBTHREE-343	Hi There can be two ways of getting rid of INFO msgs: First one is to use other level of logging like DEBUG,ERROR in the source code instead of using INFO level for all the messages. Second one is to change the logging level in JBOSS .The log4j configuration is loaded from the jboss server conf/log4j.xml file. You can increase/descrease the level of logging for various jboss subsytems by adding category threshold statements to the conf/log4j.xml configuration file with the desired priority value: <category name="org.jboss.management"> <priority value="INFO"/> </category> The priority value can be one of: ERROR - error messages WARN - borderline error messages INFO - general status messages DEBUG - verbose debug level messages TRACE - very verbose Tell me if this is the one you expected? TIA. Jyoti.	1	1	https://issues.jboss.org/browse/EJBTHREE-343
3908	EJBTHREE-281	Would it be possible to add a default security domain on the jboss-app.xml as well? Since the ear usually represents an entire application, with several modules, this would be very useful, if possible.	1	1	https://issues.jboss.org/browse/EJBTHREE-281
3909	EJBTHREE-212	Apologies up front if this sounds stupid. I am using Struts-EJB3 on a new production project, but no injection using @EJB or @PersistenceContext seems to work with 4.0.4 so I can not create my SessionBean or use JTA (using oracle db). Is this related to this issue, or am I missing something - r is there some work around (service pojo mentioned elsewhere on forum). Any, repeat, any help, greatly appreciated. Paul	1	1	https://issues.jboss.org/browse/EJBTHREE-212
3910	EJBTHREE-204	This issue seems reopen. I downloaded jboss 4.0.4 GA and jboss-EJB-3.0_RC8-FD. I installed jboss and ejb3 support than I tryed to modify the standard port 3873 so I changed the file deploy/ejb3.deployer/META-INF/jboss-service.xml: <mbean code="org.jboss.remoting.transport.Connector" xmbean-dd="org/jboss/remoting/transport/Connector.xml" name="jboss.remoting:type=Connector,name=DefaultEjb3Connector,handler=ejb3"> <depends>jboss.aop:service=AspectDeployer</depends> <attribute name="InvokerLocator">socket://${jboss.bind.address}:10009</attribute> <attribute name="Configuration"> <handlers> <handler subsystem="AOP">org.jboss.aspects.remoting.AOPRemotingInvocationHandler</handler> </handlers> </attribute> </mbean> While the server listens correctly on new port the client has no way to contact the bean I deployed. Using strace I figured out that the client ignores the new port and tries to contact port 3873 as before RC3 of ejb3 support (while another installation with ejb3 rc3 works without problems). Is this a regression? Regards. Andrea	1	0	https://issues.jboss.org/browse/EJBTHREE-204
3911	EJBTHREE-142	can you elaborate on what you want for an API for this?	0	0	https://issues.jboss.org/browse/EJBTHREE-142
3912	EJBTHREE-105	I'd suggest to enable the deployer to provide the datasource name and the hibernate dialect in the ear archive (jboss-application.xml). How can one have one ear talk to a postgres and another talk to a oracle else?	0	0	https://issues.jboss.org/browse/EJBTHREE-105
3913	EJBBOOK-41	Build instructions are documented: http://community.jboss.org/docs/DOC-15565 What's nontrivial about "mvn clean install"? The build is already configured once Maven is installed.	1	0	https://issues.jboss.org/browse/EJBBOOK-41

3915	EJBCLIENT-161	Which version are you trying to build?	1	1	https://issues.jboss.org/browse/EJBCLIENT-161
3916	EJBCLIENT-76	Hello [~jaikiran] can these setting be configured via xml like jboss-ejb3.xml to specify a method/methods to apply the settings?	1	1	https://issues.jboss.org/browse/EJBCLIENT-76
3917	EJBCLIENT-66	Dennis, how are you using that selector in your code? Or more specifically what does your code look like irrespective of whether you are directly using that selector or it's being picked up internally. Which version of EJB client API are you using?	1	0	https://issues.jboss.org/browse/EJBCLIENT-66
3918	EJBCLIENT-47	Will this be in EAP 7.0 or 7.1 release?	0	0	https://issues.jboss.org/browse/EJBCLIENT-47
3919	EJBCLIENT-34	This needs a bit more thought and discussion. Some things to consider are: 1) What happens when the application code has a jboss-ejb-client.properties file in the classpath (which triggers auto creation of a EJB client context) and the code also uses a map based InitialContext to setup a EJB client context? What's supposed to happen in that case? An application is expected to have just a single EJB client context. So what are we going to do with either of these client contexts that get created differently. 2) Consider the following case that can happen within the same application: {code} public void someMethod() { Properties props = new Properties(); props.put("endpoint.name", "foo-bar"); props.put("remote.connection.foo.host", "localhost"); props.put("remote.connection.foo.port", "4447"); Context = new InitialContext(props); {code} {code} public void someOtherMethod() { Properties props = new Properties(); props.put("endpoint.name", "foo-bar"); props.put("remote.connection.bar.host", "localhost"); props.put("remote.connection.bar.port", "5557"); Context = new InitialContext(props); } {code} What are we supposed to do here? We can't setup two different EJB client contexts. The client context lifespan will be the same as the application lifespan and there will be just one EJB client context. So when do we create it? The "first" initialcontext creation (which in itself isn't well defined)? There are many more things to consider but this is just a start. We need to make sure what we want to support and how that might conflict/impact with what we already have. We should avoid the confusion that's already there related to the various ways (remote-naming and ejb-client API) for remote EJB invocations.	1	1	https://issues.jboss.org/browse/EJBCLIENT-34
3920	EJBCLIENT-34	Could you consider to replace static selector with InheritableThreadLocal. This will solve a lot of problems and will make whole think Multithread ready!	1	1	https://issues.jboss.org/browse/EJBCLIENT-34
3921	EJBCLIENT-33	Is there any easy way to reproduce these clients getting stuck?	1	1	https://issues.jboss.org/browse/EJBCLIENT-33
3922	EJBCLIENT-33	In order to cherrypick this in the EAP ER2 build, we would need a resolution by Feb/27th. Is this doable?	0	0	https://issues.jboss.org/browse/EJBCLIENT-33
3923	EJBCLIENT-33	Jaikiran, I see you changed Coding In Progress, can you describe the strategy and design decisions here? Thanks.	1	1	https://issues.jboss.org/browse/EJBCLIENT-33
3924	EJBCLIENT-12	How do you provide the configuration without using a jboss-ejb-client.properties file then ? You pseudo-code does not appear to be suitable when using https://docs.jboss.org/author/display/AS71/EJB+invocations+from+a+remote+client+using+JNDI	1	1	https://issues.jboss.org/browse/EJBCLIENT-12
3925	EJBCLIENT-12	In ALL our applications the user is shown a login dialog with username, password, host address and port name. This is very essential for our customers because they have to be able to connect to different servers. How can this be achieved using just a static file? The file is just a property file so it would be fine if we can provide a Properties object somehow somewhere. Is there a way or is there at least a plan for doing so?	0	0	https://issues.jboss.org/browse/EJBCLIENT-12
3926	EJBCLIENT-12	{quote} In ALL our applications the user is shown a login dialog with username, password, host address and port name. This is very essential for our customers because they have to be able to connect to different servers. How can this be achieved using just a static file? {quote} Security aspects for a EJB remote client are currently being considered for 7.1.0.CR1. We'll take into account this usecase too.	1	1	https://issues.jboss.org/browse/EJBCLIENT-12

3944	EMBJOPR-103	But shouldn't we use the Embedded Jopr logo, rather than the Jopr one?	0	0	https://issues.jboss.org/browse/EMBJOPR-103
3945	EMBJOPR-101	I've uploaded the latest snapshot of JSFUnit 1.2.0. This snapshot uses HtmlUnit 2.7, which was just released yesterday. http://snapshots.jboss.org/maven2/org/jboss/jsfunit/jboss-jsfunit-core/1.2.0.GA-SNAPSHOT/ Can we give this a try and see if the problem is still there? Also, it would be great if you guys can try out the new <rich:tree> methods in RichFacesClient. See http://community.jboss.org/wiki/JSFUnitWithRichFaces. I've uploaded a snapshot for that as well. http://snapshots.jboss.org/maven2/org/jboss/jsfunit/jboss-jsfunit-richfaces/1.2.0.GA-SNAPSHOT/	1	1	https://issues.jboss.org/browse/EMBJOPR-101

#	Requirement	Questions	Answered	Successfully Answered	URL
3946	EMBJOPR-85	Instead of looking for a solution in the individual frameworks you are using (Seam, Hibernate), shouldn't this be the job of the application server? So for example, you could have a switch in jboss-web.xml that delays bootstrapping the web.xml (listeners that start Seam and then Hibernate) until the first request for that context is received.	0	0	https://issues.jboss.org/browse/EMBJOPR-85
3947	EMBJOPR-85	See the attached admin-console-war-seam-init.log.. The scanning of the admin-console.war's WEB-INF/classes dir is taking less than a second. The remaining time is spent scanning the Seam jars, as well as a whole bunch of other jars from the war's WEB-INF/lib which definitely do not contain seam.properties. It seems like this may be a Seam bug. Is a seam.properties in a war's WEB-INF/classes dir supposed to indicate Seam should scan only the classes in WEB-INF/classes, or does it mean it should scan every single jar in WEB-INF/lib, even ones without seam.properties? I was assuming the former.	1	1	https://issues.jboss.org/browse/EMBJOPR-85
3948	EMBJOPR-85	The next issue is that somehow the entire .war deployment is being scanned from its location in the /tmp folder. This includes all .jar files in WEB-INF/lib and even jars not on the classpath e.g. in /plugins. This adds another about 7seconds to the startup time as you can see below. Is this a bug in Seam/VFS? Or is there a way to configure things so this doesn't happen? Assigning to Jason to see if he can get this answered. 18:06:23,265 TRACE [VFSScanner] Root url: file:/C:/opt/jboss-5.1.0.CR1-SNAPSHOT/server/default/tmp/aaaa-mk2ugc-fthpqrht-1-fthprbee-s/jbas5-admin-console.war/ 18:06:23,265 TRACE [VFSScanner] File: C:\opt\jboss-5.1.0.CR1-SNAPSHOT\server\default\tmp\aaaa-mk2ugc-fthpqrht-1-fthprbee-s\jbas5-admin-console.war 18:06:23,265 TRACE [VFSScanner] URL: file:/C:/opt/jboss-5.1.0.CR1-SNAPSHOT/server/default/tmp/aaaa-mk2ugc-fthpqrht-1-fthprbee-s/, relative: jbas5-admin-console. war 18:06:23,265 TRACE [VFSScanner] Top: FileHandler@16722742[path=jbas5-admin-console.war context=file:/C:/opt/jboss-5.1.0.CR1-SNAPSHOT/server/default/tmp/aaaa-mk2 ugc-fthpqrht-1-fthprbee-s/ real=file:/C:/opt/jboss-5.1.0.CR1-SNAPSHOT/server/default/tmp/aaaa-mk2ugc-fthpqrht-1-fthprbee-s/jbas5-admin-console.war/] 18:06:23,499 TRACE [Scanner] found css/console-style.css 18:06:23,515 TRACE [Scanner] found css/form-style.css 18:06:23,515 TRACE [Scanner] found error.xhtml 18:06:23,515 TRACE [Scanner] found errorLayout.xhtml ... 18:06:23,530 TRACE [Scanner] found plugins/jopr-jboss-as-5-plugin-2.2.0-SNAPSHOT.jar/lib/testng-5.7-jdk15.jar/META-INF/LICENSE.txt 18:06:23,530 TRACE [Scanner] found plugins/jopr-jboss-as-5-plugin-2.2.0-SNAPSHOT.jar/lib/testng-5.7-jdk15.jar/META-INF/MANIFEST.MF ... 18:06:24,937 TRACE [Scanner] found WEB-INF/lib/commons-digester-1.8.jar/org/apache/commons/digester/ExtendedBaseRules$1.class 18:06:24,937 TRACE [Scanner] found WEB-INF/lib/commons-digester-1.8.jar/org/apache/commons/digester/ExtendedBaseRules.class ... 18:06:26,796 TRACE [Scanner] found WEB-INF/lib/rhq-core-domain-1.2.0-SNAPSHOT.jar/org/rhq/core/domain/measurement/MeasurementBaseline.class 18:06:26,796 TRACE [Scanner] found WEB-INF/lib/rhq-core-domain-1.2.0-SNAPSHOT.jar/org/rhq/core/domain/measurement/MeasurementCategory.class ... 18:06:30,530 TRACE [Scanner] found WEB-INF/lib/richfaces-ui-3.3.0.GA.jar/org/richfaces/taglib/html/jsp/GraphValidator.class 18:06:30,530 TRACE [Scanner] found WEB-INF/lib/richfaces-ui-3.3.0.GA.jar/org/richfaces/ui.pack.js	1	1	https://issues.jboss.org/browse/EMBJOPR-85
3949	EMBJOPR-85	Can you try with JBoss-Seam-Int 5.2.0-SNAPSHOT?	1	1	https://issues.jboss.org/browse/EMBJOPR-85
3950	EMBJOPR-85	Jason's lazy init fix works nicely for me. The approximately 10s Seam init is deferred until the first request is made to the admin-console webapp. The only disadvantage is that the user must wait an extra 10s or so for the login page to load for the first request. Patch committed - r314. Ales, would you please attach a copy of the JBoss-Seam-Int 5.2.0-SNAPSHOT jar? When I test with it, what am I looking for - improved Seam init time due to fixes in the scanning code?	0	0	https://issues.jboss.org/browse/EMBJOPR-85
3951	EMBJOPR-72	(12:07:01 PM) ccrouch: ok first off, we had a big discussion a few months back with stan (12:07:22 PM) ccrouch: about how we should be using id's not xpath for identifying elements (12:08:00 PM) ccrouch: is that still QA's preference? or you good with xpath now? (12:11:04 PM) ozizka: ccrouch: There are cases when IDs are not an option (12:11:19 PM) ozizka: Like when working with tables etc. (12:11:29 PM) ccrouch: ok fair enough (12:11:48 PM) ccrouch: the change you used as an example there, looks fairly harmless (12:12:10 PM) ccrouch: as you say as long as it doenst impact form or function, i'm fine with it (12:12:53 PM) ozizka: ccrouch: Ok, thanks	1	1	https://issues.jboss.org/browse/EMBJOPR-72
3952	EMBJOPR-56	Hi Farah, could you take a look at what options we have to implement this. Richfaces presumably could help here.	1	1	https://issues.jboss.org/browse/EMBJOPR-56
3953	EMBJOPR-56	I added this label under the "Previous Operations" label on the Control tab. I've attached a screenshot. Does it look ok? Should I commit?	1	1	https://issues.jboss.org/browse/EMBJOPR-56
3954	EMBJOPR-56	I've been looking into why the a4j:poll component in resourceInstanceOperation.xhtml doesn't currently update the "Previous Operations" table as it should. Here's an update about what I've found so far: The toggle panel in the "Previous Operations" table has many conditionally rendered components. This may explain why the a4j:poll component isn't working: See section 1.59. "Why does reRendering fail? Hide/Show components using rendered." http://www.jboss.org/file-access/default/members/jbossrichfaces/freezone/docs/devguide/en/faq/faq.html I tried using a4j:outputPanel components to wrap conditionally rendered components, as suggested in the link. This allows the text to update (i.e. "In Progress" changes to "Successful"). However, the "Show/Hide Details" link stops working completely. Clicking on the link results in a redirect to the index page.	0	0	https://issues.jboss.org/browse/EMBJOPR-56
3955	EMBJOPR-37	Does the underlying DeploymentManager we are using have support for this?	1	1	https://issues.jboss.org/browse/EMBJOPR-37

3956	EMBJOPR-19	Discussion on this topic: (14:57:02) jess: ping spritz - which browser did you test the embedded config pages with? (14:57:32) spritz: I have Firefox 2.0.0.4 (14:57:47) jess: hmm, me too (14:58:04) jess: but when I go to http://10.11.14.163:8080/embedded-console/secure/resourceView.seam?path=-34 -- in Firefox - the page gets an invalid XML error (14:58:09) jess: but it works in opera (15:02:10) spritz: Funny, I know what is th ematter, it is something that was in our layout.xhtml which someone must have just recently overwritten ro took out. It was the same issue we had with s before (15:03:09) spritz: Yeah, it is no longer there. it was an attribute as part of the <f:view> tag (15:03:30) jess: oh - that xhtml thing (15:04:06) spritz: that contentType="text/html" (15:04:07) spritz: thing (15:05:24) ccrouch: the problem is that an extra div is getting rendered somehow (15:05:49) ccrouch: the way to remove the symptom is to get FF to not parse it as xhtml (15:06:07) ccrouch: but that doesn't remove the underlying problem (15:08:30) spritz: ccrouch: extra divs is under ips's jurisdiction here. :-D (15:10:36) ips: where are we seeing extra divs? (15:10:46) ccrouch: jess: if you right click on that error message you can get the full src, you might be able to chop of the xml declaration and get it to render (15:11:14) ips: the problem on the config pages were spans that were closed too early (15:11:22) jess: thx ccrouch I was able to add the line spritz mentioned and it fixed it (15:12:23) spritz: jess, can you put the error back to show ips? (15:12:35) ccrouch: it didn't fix it, it just doesnt tell you about the error anymore :-/ (15:12:45) ccrouch: spritz: +1 (15:12:54) ccrouch: we need to have a jira for that (15:13:17) jess: ok - I'll add a jira (15:14:19) ips: ccrouch: from what i read in a few places on the Web, it's recommended to have Firefox in trnasitional mode, rather than strict mode (15:14:44) ips: it renders certain things in wacky ways in strict mode (15:14:45) ccrouch: it is (15:14:45) ccrouch: <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd" > (15:15:03) ccrouch: this is the fact that the doc ain't well formed xml (15:15:40) ips: ccrouch: but FF bases what mode it uses on the content-type of the response (15:15:50) ips: not the doctype inside the response body (15:16:04) ips: so i think we want to keep the contentType="text/html" (15:16:34) ccrouch: how do you specify strict vs transitional if not through the DOCTYPE? (15:16:36) ips: instead, we should enable xhtml validation on the server side (15:16:51) ccrouch: ok, fair enough (15:16:57) ips: ie - via some Facelets setting, if possible (15:17:13) ips: yeah, you would think it would use doctype (15:17:23) ips: but it uses the content-type header (15:17:29) ccrouch: i just want it to be validated as well formed xml, dangling tags just means we've screwed up the rendering somewhere	1	1	https://issues.jboss.org/browse/EMBJOPR-19
3957	EMBJOPR-19	I'm pretty sure I fixed this last night (there was a missing closing td and tr tag). Jess or Charles, would you please verify?	1	1	https://issues.jboss.org/browse/EMBJOPR-19
3958	WOLF-57	How would you like to present wolf reports in jenkins like junit reports? In jenkins, there is summary view for tests results, which use table with tree columns (test name, duration and age) and for exception message is necessary to click on details. Which is fine for junit tests, but for wolf reports this would be uncomfortable. I can try encode all information into test name, but is it what you want?	1	1	https://issues.jboss.org/browse/WOLF-57
3959	WOLF-5	I walked through jar files, and found only one thing that I want ask. There are few jars that are not compiled, but contain .java sources in it. Is it intended to be, or they got from eap into repository by accident? Specifically few libraries from /seam/lib/src/ jars: jboss-seam-debug-2.2.2.EAP5-eap5_1_0.jar <-> jboss-eap-5.1/seam/lib/src/jboss-seam-debug-sources.jar jboss-seam-mail-2.2.2.EAP5-eap5_1_0.jar <-> jboss-eap-5.1/seam/lib/src/jboss-seam-mail-sources.jar jboss-seam-ui-2.2.2.EAP5-eap5_1_0.jar <-> jboss-eap-5.1/seam/lib/src/jboss-seam-ui-sources.jar jboss-seam-resteasy-2.2.2.EAP5-eap5_1_0.jar <-> jboss-eap-5.1/seam/lib/src/jboss-seam-resteasy-sources.jar jboss-seam-remoting-2.2.2.EAP5-eap5_1_0.jar <-> jboss-eap-5.1/seam/lib/src/jboss-seam-remoting-sources.jar For example jboss-seam-pdf-2.2.2.EAP5-eap5_1_0.jar is with class files from jboss-eap-5.1/seam/lib/jboss-seam-pdf.jar	0	0	https://issues.jboss.org/browse/WOLF-5
3960	WOLF-3	I see that license information was added to the POM, thanks! Can you also add a comment which includes the local path to the file in the EAP zip? For example, the pom for org.jboss.logging:jboss-logging-jdk should contain a comment with the file path. {code:xml} <!-- File: jboss-as/lib/jboss-logging-jdk.jar --> {code}	1	1	https://issues.jboss.org/browse/WOLF-3
3961	ENVERS-60	Would you be interested in contributing this feature?	0	0	https://issues.jboss.org/browse/ENVERS-60
3962	ENVERS-49	Hello, do you maybe have an example UserType that I can use for testing? Thanks, Adam	1	1	https://issues.jboss.org/browse/ENVERS-49
3963	ENVERS-26	Ah, I forgot about this Hibernate feature. So far I only tested mappings with @OneToMany, and without a @JoinColumn - in this case, Hibernate creates a third relationship table to maintain the association. Now, if you add a @JoinColumn, the database schema is exactly the same as if you used a @ManyToOne + @OneToMany(mappedBy="") combination, except that the association is owned by a different side. Is that what you wanted to achieve? I'll check the @OneToMany+@JoinColumn combination. -- Adam	1	1	https://issues.jboss.org/browse/ENVERS-26
3964	ENVERS-26	Hello, there is one problem with storing the relation in the table of the entity (as is the case when @OneToMany + @JoinColumn are used). Let's say that entity A is on the many end, and entity B on the one end. Then, B has a collection of A's. Now, if you add a new A to an instance of B, the property ID_B in table A is modified. To version it, a new revision has to be generated - for A. However, nothing in the A-bean changed, as the relation is unidirectional. All fields have the same values as before - so no revision should be generated. One solution to this problem is to store the relation in a third table. This wouldn't directly mimick the hibernate mapping, but it wouldn't generate unnecessary revisions. There is a problem here to: a new annotation would have to be introduced (@VersionsJoinTable), to be able to set the name of the third table. What do you think? Any other ideas? Adam	1	1	https://issues.jboss.org/browse/ENVERS-26
3965	ERRAI-1050	As far as I can tell, these dependencies are brought in through gwt-dev. Is it really a good idea to exclude these?	0	0	https://issues.jboss.org/browse/ERRAI-1050
3966	ERRAI-1005	It would be great to renaming classes (obfuscate or crypt them) because the requests between client are too verbose (security). Is there any option for that ?	0	0	https://issues.jboss.org/browse/ERRAI-1005
3967	ERRAI-983	I don't understand this request. Why get rid of dom4j? And what does getting rid of dom4j have to do with Java 8?	1	1	https://issues.jboss.org/browse/ERRAI-983
3968	ERRAI-979	"the client bus will negotiate for the token when first connecting." Is this the same mechanism as in https://github.com/google-web-toolkit/gwt.svn/blob/master/user/src/com/google/gwt/user/server/rpc/XsrfTokenServiceServlet.java which the official docs still declare as experimental and where you are told not to use it in production? My thought is this: is the first request of the xsrf token secured against XSRF attacks? It doesn't look like that to me.	1	0	https://issues.jboss.org/browse/ERRAI-979
3969	ERRAI-971	[~psiroky], I have fixed all the Errai JPA issues on [this branch|https://github.com/mbarkley/errai/commits/ip-bom-7.0.0.CR5]. Does the merger of this change need to be coordinated with the ip-bom upgrade in the workbench?	1	1	https://issues.jboss.org/browse/ERRAI-971

#	Requirement	Questions	Answered	Successfully Answered	URL
3970	ERRAI-960	Guys, Thanks for cleaning up the POMs! Now, i hope I don't have to filter out so many jars like in my Gradle builds any more: ========== subprojects { apply plugin: 'java' apply plugin: 'maven' ext.compileExcludes = { exclude group: 'com.google.gwt' exclude group: 'com.google.guava' exclude group: 'javax.enterprise' exclude group: 'javax.annotation' exclude group: 'javax.inject:javax' exclude group: 'org.keycloak' exclude group: 'org.jboss.resteasy' exclude group: 'dom4j' exclude group: 'org.lesscss' exclude group: 'org.jboss.spec' exclude group: 'javax.servlet' exclude group: 'javax.inject' exclude group: 'javax.el' exclude group: 'junit' exclude group: 'org.hibernate.javax.persistence' exclude group: 'org.jboss.spec.javax.interceptor' exclude group: 'org.jboss.spec.javax.el' exclude group: 'org.jboss.spec.javax.ws.rs' exclude group: 'org.jboss.spec' exclude group: 'org.hibernate' exclude group: 'asm' exclude group: 'org.apache.httpcomponents' } ========== There are still a few questions though: 1. Why can't we just declare dependency on the Java EE single jar instead of those proprietary JBoss integration BOMs? Here is what I have been doing for a while now in my Gradle builds with no problems: ========== .... //Java EE - has all APIs that Errai 4 needs providedCompile "javax:javaee-api:7.0" ========== 2. Guice. Can we get rid of it for good and declare Errai to be Java EE/CDI/Weld product. Guice is no longer maintained by google and brings in a nasty dependency of an old asm jar (v3), which can collide with the one used in GWT 2.8 (v5) 3. I see that Errai (code generators?) uses Apache Stombol - another obscure and dead-in-the-water product the was last updated in 2014. Not only it brings a tons of jars during the (usually painfully slow) gwt compilation, but also some ancient and nasty xml jars too (dom4j, xml-apis). My deep hunch is that Errai only need (the excellent) jsoup.jar here, but I have not dug into the code deep enough to be confident ... Just my 2c. Thanks!	0	0	https://issues.jboss.org/browse/ERRAI-960
3971	ERRAI-939	Hi [~mbarkley] - Im trying to run the tutorial app, and can see it is still referencing WF8 - but Im very interested in using WF10. Is there any docs on how to run Errai with WF10? Also, any plans to update the tutorial? Thanks	1	0	https://issues.jboss.org/browse/ERRAI-939
3972	ERRAI-932	Max, Here is the confusing diagnostic: *java.lang.IllegalArgumentException: Element to be wrapped must not be null - Did you forget to initialize or @Inject a UI field* It does not say; - which element - in which template/class	1	1	https://issues.jboss.org/browse/ERRAI-932
3973	ERRAI-932	[~hr.stoyanov], I've updated the first two error messages you described so that they reference the templated bean type and the data field name involved in the error. Regarding the third error, I'm not sure how or where this error occurs. Did you see this when you forgot to annotate a type as @Templated? I'm leaving this issue open for now in case you are able to provide more information about that particular error.	0	0	https://issues.jboss.org/browse/ERRAI-932
3974	ERRAI-925	Hi [~swiderski.maciej], This issue is fixed in Errai 4 (was closed in [this issue|https://issues.jboss.org/browse/ERRAI-887]), but wasn't back-ported to Errai 3.2 (though probably it should have been). It should be possible to use the EmbeddedWildFlyLauncher from Errai 4 with Errai 3 by changing the version of errai-cdi-jboss. Is this a good enough workaround?	1	0	https://issues.jboss.org/browse/ERRAI-925
3975	ERRAI-885	When can you push a release with the patch ... Keycloak is pretty unusable without it. Maybe just 3.2.2.Final ?	0	0	https://issues.jboss.org/browse/ERRAI-885
3976	ERRAI-875	Hi Slava, Could you please your use case? If you have a compelling reason for accessing these properties it might make more sense to have them available through some more public API (such as a new method on the DataBinder). Cheers.	0	0	https://issues.jboss.org/browse/ERRAI-875
3977	ERRAI-861	Sure is! Do you want to send us a pull request for this change? This will get the feature in faster and makes sure you get the credits for it ;).	1	1	https://issues.jboss.org/browse/ERRAI-861
3978	ERRAI-840	Hi Paul, Can you share the error message / stack trace with us? Using "agent" as a model property should actually work fine. We have a test for this: https://github.com/errai/errai/blob/master/errai-data-binding/src/test/java/org/jboss/errai/databinding/client/TestModel.java	1	1	https://issues.jboss.org/browse/ERRAI-840
3979	ERRAI-829	I tried the above but I can't successfully bind to those Widgets (I assume) because they don't implement {{HasValue<T>}} but only {{TakesValue<T>}}? Would it be possible to support binding {{TakesValue<T>}}? Obviously in this case the binding is one-way but that's not really a problem since these Widgets are display-only?	1	1	https://issues.jboss.org/browse/ERRAI-829
3980	ERRAI-822	This IS broken in 3.1.1 or the documentation is wrong: {code} <module> <inherits name="org.jboss.errai.common.ErraiCommon"/> <inherits name="org.jboss.errai.bus.ErraiBus"/> <inherits name="org.jboss.errai.ioc.Container"/> <inherits name="org.jboss.errai.enterprise.CDI"/> <set-property name="gwt.logging.logLevel" value="ALL"/> </module> {code} {code} @EntryPoint public class Client { private static final Logger JUL = Logger.getLogger(Client.class.getName()); @Inject org.slf4j.Logger SLF4J; @PostConstruct public void onReady() { LoggingHandlerConfigurator config = LoggingHandlerConfigurator.get(); config.getHandler(ErraiConsoleLogHandler.class).setLevel(Level.ALL); config.getHandler(ErraiSystemLogHandler.class).setLevel(Level.ALL); config.getHandler(ErraiDevelopmentModeLogHandler.class).setLevel(Level.ALL); // That doesn't even exist but is still documented... // config.getHandler(ErraiFirebugLogHandler.class).setLevel(Level.ALL); JUL.severe("### JUL"); JUL.warning("### JUL"); JUL.info("### JUL"); JUL.fine("### JUL"); SLF4J.error("### SLF4J"); SLF4J.warn("### SLF4J"); SLF4J.info("### SLF4J"); SLF4J.debug("### SLF4J"); ... {code} In SDM all I see is SEVERE/ERROR messages in the browser console and a breakpoint in GWT ConsoleLogHandler shows that only SEVERE is logged. Also, there is a typo in the doc: "ErraiSimpleFormmater" Could please make this logging hackery optional in a separate module so those of us who like JUL can continue with standard logging and lower blood pressure?	1	1	https://issues.jboss.org/browse/ERRAI-822
3981	ERRAI-785	Sounds good! How did you implement the dynamic redeployment of changes?	1	0	https://issues.jboss.org/browse/ERRAI-785
3982	ERRAI-784	Do you have the project on GitHub so we can take a look? Are the tests based on Arquillian?	1	0	https://issues.jboss.org/browse/ERRAI-784
3983	ERRAI-742	As I commented in ERRAI-741: I've checked generated proxy code, and looks like you are right, performance hit should not be big, because newVal.equals(oldVal) is executed on model level, without touching converters/widgets. So priority of this request is not high :-) Also once again the question form 741: Why {code:java} String getAaa1() {code} is considered a valid getter, even without corresponding {code:java} void setAaa1(String value) {code} setter declared? And why {code:java} String getAaa1(String someParams) {code} is not considered as valid getter? Because non-bean property format convention, right?	1	0	https://issues.jboss.org/browse/ERRAI-742

#	Requirement	Questions	Answered	Successfully Answered	URL
3984	ERRAI-736	Thanks for that input! To 1. Unfortunately, in both, the CDI and websocket specifications is missing how websocket sessions / message-processings could / should work with CDI builtin (HTTP related) scopes. Because of that it necessary to use Weld Implementation classes to solve this. As i see we have 3 options: 1. let it as it is. (Okay in my opinion, but non-JEE containers is a very good point.) 2. "CDI'fying" of websocket in a separate module. (Best choice in my opinion, because then we may can also support other CDI implementations like Apache Open Webbeans for example in the future). 3. Remove the CDI'fying. (From my point of view and when you google around, there are many people there they are missing this feature in other frameworks or plattforms.) I think about to fix that with an additional (optional) module to CDI'fying the JSR-356 websocket module (errai-bus-jee7-websocket). Is that okay? To 2. ... i will do it so.	1	1	https://issues.jboss.org/browse/ERRAI-736
3985	ERRAI-732	I am interested in using Errai Security for contextual role based access. The use case would be User X is a member of Role Z constrained to Project Y granting them permission to view a a particular field related to Project Y. For example using Errai data binding a particular Errai UI Template is bound to a model and I would like to restrict access to a particular DataField on the composite autobound to the model based on whether or not the user belongs to a role related to that particular model. Using the role provider approach implementations of RequiredRolesProvider would not have access to the CDI InjectionPoint like a traditional CDI producer would. How could the model of interest be passed from the Errai UI Template to the RequiredRolesProvider? Does the RequiredRolesProvider need to provide role implementations for all possible permutations? If so that would be impractical. The test RequiredRolesProvider in source control all provide static role lists which could be accomplished the same way by setting custom role implementations on the user in the AuthenticationService implementation. Perhaps what I am trying to say is that is there a way to combine role and context information to allow for more complex security constraints, similar to Apache Shiro Permissions? http://shiro.apache.org/authorization.html#Authorization-PermissionBasedAuthorization	1	0	https://issues.jboss.org/browse/ERRAI-732
3986	ERRAI-721	Can you share your test with us so we can reproduce this? If changing to a for loop improves the situation significantly and doesn't slow down other use cases we can definitely merge your changes! If I understood correctly you're saying the improvement for your 1000 entities is ~30% (from 12s to ~8s). That would be a big win. However, we can't use a string switch statement because we can't make Java 7 a minimum requirement before Errai 3.1 So, we'll have to go with if/else statements instead.	1	0	https://issues.jboss.org/browse/ERRAI-721
3987	ERRAI-721	for Errai 4.0, we can use Switch, correct? Can we look at revisiting this?	0	0	https://issues.jboss.org/browse/ERRAI-721
3988	ERRAI-703	Great news, Marius! Thanks for trying it right away! Can you create a separate JIRA for the bug involving Errai UI including all details you have (stacktrace etc.)? Thanks!	0	0	https://issues.jboss.org/browse/ERRAI-703
3989	ERRAI-693	Can you please elaborate on this? It is unclear what feature you are requesting based on just the title.	0	0	https://issues.jboss.org/browse/ERRAI-693
3990	ERRAI-630	Hi Christian, you're totally right. Took me a couple of days to figure it out. The BatchCaller has no control over the callbacks being called, the bus does that. I also seriously doubt that one can practically stop the queued requests. Since javascript is single-threaded, once flush() has been called and it returned, the requests have been placed on the bus. Any cancel() after that will have no effect. Maybe if we make flush() a RepeatingCommand, but then again, in the majority of cases flush() will complete by the time cancel() is called. We could prevent the callbacks from being called by 1. turn the RemoteCallback interface into an abstract class (or create a CancellableRemoteCallback that implements RemoteCallback) - add a field that stores the cancelled state (initialised as false) - isCancelled - add a cancel method that sets isCancelled to true 2. When calling the callback method with the received data, we check isCancelled first (various ways to achieve that elegantly) 3. In the batch caller, on cancel we can iterate through the pendingCallbacks and set them cancelled. The bus will still receive the responses, but we can block the callbacks' execution. As you said, the need for supporting cancelling is questionable. In my case I do have a very specific need for it, however, I see now that I can achieve it locally in my own code by wrapping the RemoteCallback and the BatchCaller.	0	0	https://issues.jboss.org/browse/ERRAI-630
3991	ERRAI-626	Thank you soch much for adding this feature. It works as excpected. However, event.getProperyName() does not report the full binding path. It only contains the name of the Property. Would it be useful to add a method event.getFullBindingPath()?	1	0	https://issues.jboss.org/browse/ERRAI-626
3992	ERRAI-612	There's a twist that hasn't been mentioned yet: the lookup of the User object is asynchronous. In general, it could take a long time--minutes, even. The @PageShowing method will have to return (and so the page will get displayed) before the User object has been resolved. What will we put there? How will we update the DOM when the User object comes back? How will we display errors in case the async request fails? I think a lot of apps would benefit from a nice clean way of implementing this asynchronous lookup pattern while displaying some sort of "loading" message or locally cached data in the mean time. Also, a customizable error handler that's on by default would make Errai-based apps feel less flaky, since they would generally do something sane when the server request fails. Ideas? Maybe a method annotated with @PageDataResponse that gets the results of an RPC/JAX-RS call? Here's a straw man to get us started: {code} @Page public class AccountPage { @Model private User user; // this method will be called with the response that a Caller<UserService> would get from findUser(userId) // so it could be an Errai RPC or a JAX-RS request @PageDataRequest(service=UserService.class, method="findUser", args={"userId"}) @ModelSetter private void setUser(User user) { this.user = user; } @PageShowing public void loadUser() { // Load the user here if necessary. } } {code} The error handling would probably best be done with a global handler (straw man again): {code} @Templated @PageDataRequestErrorHandler public class PageDataRequestErrorPanel extends Panel implements BusErrorCallback { @Inject @DataField Label errorLabel; @Inject @DataField Button retryButton; // <--- it would be nice if we could make a retry button that works. ideas? @Override public boolean error(Message message, Throwable throwable) { errorLabel.setText("Error fetching data from server: " + throwable.getMessage()); } } {code}	0	0	https://issues.jboss.org/browse/ERRAI-612
3993	ERRAI-560	To me, it would be more annoying to deal with a framework that makes me use different annotations (@Page, @DefaultPage, @LoginPage) to express the same idea: "this class is a page." Do you have any other ideas that could make us both less annoyed? :)	0	0	https://issues.jboss.org/browse/ERRAI-560
3994	ERRAI-547	Why this wont fix?	1	1	https://issues.jboss.org/browse/ERRAI-547
3995	ERRAI-538	Guys, can we possibly revisit this? It would be a big help to get this. Is it complicated, or is there a reason NOT to do it?	1	1	https://issues.jboss.org/browse/ERRAI-538
3996	ERRAI-538	We could use GWT's UncaughtExceptionHandler for this and make sure RPC errors that are not handled by an error callback are passed to it. {code} GWT.setUncaughtExceptionHandler(new UncaughtExceptionHandler() { @Override public void onUncaughtException(Throwable e) { } }); {code} We can also create a declarative API for it: {code} @UncaughtException private void onUncaughtException(Throwable t) { } {code} Josh, what do you think?	1	1	https://issues.jboss.org/browse/ERRAI-538

#	Requirement	Questions	Answered	Successfully Answered	URL
3997	ERRAI-516	I think we had a slight adjustment to that code since this issue was filed. It's possible that's why there isn't a ClassCastException anymore. But I agree, even without the ClassCastException, the lifecycle methods are not being called in a sane order by the framework in this case! I think for the lifecycle methods to be reliable, and to save boilerplate to the maximum extent possible, we should aim for the lifecycle methods to be called like this when an attempt to display PageWithRedirects is made (assuming PageWithRedirects has all 4 lifecycle methods): {code} PageWithRedirects.beforeShow() // navigateTo SomePage PageWithRedirects.afterShow() // called because transition to PageWithRedirects is canceled PageWithRedirects.beforeHide() // called because transition to PageWithRedirects is canceled PageWithRedirects.afterHide() // called because transition to PageWithRedirects is canceled SomePage.beforeShow() SomePage.afterShown() {code} This way, any side effects within PageWithRedirects.beforeShow() or PageWithRedirects.afterShow() will be cleaned up as usual by the PageWithRedirects.beforeHide() or PageWithRedirects.afterHide() methods. A major drawback to this idea is that the docs on @PageShown and @PageHiding say these methods will be called when the page is attached to the DOM. Do we actually want to do this? In some ways, it seems excessive to attach the page to the DOM when we know we don't want it to display. On the other hand, not doing so will make the lifecycle contract too loose, and inflate the amount of boilerplate code necessary to implement a page lifecycle method correctly.	1	1	https://issues.jboss.org/browse/ERRAI-516
3998	ERRAI-516	I think it's better to satisfy the contract to @PageShown and @PageHiding and live with the small overhead adding/removing it to the DOM. History has to be taken care of too. Should PageWithRedirects appear in the browser's history stack? So that going back from SomePage will end in PageWithRedirects. Imho adding it to the History stack is the cleanest and simplest	1	1	https://issues.jboss.org/browse/ERRAI-516
3999	ERRAI-423	What do you mean exactly? Because you could bind a UL or LI like this: @DataField private Element liElement = DOM.createElement("li");	0	0	https://issues.jboss.org/browse/ERRAI-423
4000	ERRAI-423	Where do changes need to be made for this to happen? I've got a use-case where it would be nice to be able to directly template list items but they get translated into s currently.	1	1	https://issues.jboss.org/browse/ERRAI-423
4001	ERRAI-406	don't know how I missed that. Will it work for subcomponents? ("foo.bar")?	1	1	https://issues.jboss.org/browse/ERRAI-406
4002	ERRAI-388	Dear Mike, I tried aliasing in 2.1.0.Beta1 and it didn't work, as per https://community.jboss.org/thread/204604, which I should've included when I submitted this. Has this been fixed and does it preserve the ordering as specified by the LinkedHashMap / LinkedHashSet etc.? Thanks.	0	0	https://issues.jboss.org/browse/ERRAI-388
4003	ERRAI-303	Mike, Any thoughts on this one? Is my suggested change not advisable? Maybe it could be put in properties, or somehow externalized. As it stands I have added the modified to ServerMessageBusImpl to my classpath, so will make my errai upgrades more difficult. Thanks. PS: using websockets has made a substantial improvement to the user experience of my app.	0	0	https://issues.jboss.org/browse/ERRAI-303
4004	ERRAI-293	RPC batching is implemented now. The current API looks as follows: {code} public class MyBean { @Inject BatchCaller batchCaller; public MyBean() { batchCaller.call(remoteCallback1, RemoteService1.class).method1(); batchCaller.call(remoteCallback2, RemoteService2.class).method2(); batchCaller.sendBatch(); //batchCaller.sendBatch(remoteCallback3); } } {code} Josh, does this meet all your needs? We could build a higher lever API based on your suggestion but we'd need to qualify the injected callers so they know that they're in batch mode. {code} public class ChainedCaller { @Inject BatchCaller batchCaller; @Inject @Batched Caller<Service1> service1; @Inject @Batched Caller<Service2> service2; public ChainedCaller() { batchCaller.batch(service1).call(responseHandler1).method1(); batchCaller.batch(service2).call(responseHandler2).method2(); batchCaller.sendBatch(); //batchCaller.sendBatch(remoteCallback3); } } {code} I am not sure if the latter API is required since it is not really shorter or more expressive.	1	1	https://issues.jboss.org/browse/ERRAI-293
4005	ERRAI-275	Is there a specific issue you can describe as the impediment to marshalling these classes? Classes which are not marshallable by default can, in fact, be mapped manually. Please refer to our docs on this: http://docs.jboss.org/errai/2.0.CR1/errai/reference/html_single/#sid-5931328	1	0	https://issues.jboss.org/browse/ERRAI-275
4006	ERRAI-275	Here is the code snippet for which i am having Marshalling problem for api classes. public class ClientDTO extends com.extjs.gxt.ui.client.data.BaseModel implements com.extjs.gxt.ui.client.data.TreeModel { } I want to send instance of this class to My ErraiService as part of Message. i provided the mappings in erraiApp.properties as below errai.bus.serializableTypes=com.extjs.gxt.ui.client.data.BaseModel \com.extjs.gxt.ui.client.data.TreeModel But when i submit the message getting marshalling exceptions.	1	1	https://issues.jboss.org/browse/ERRAI-275
4007	ERRAI-275	Can you please share the exception details? Also you will have to make sure that all types BaseModel and TreeModel depend on are also listed in ErraiApp.properties.	1	0	https://issues.jboss.org/browse/ERRAI-275
4008	ERRAI-275	Would I be able to see the MarshallerFactoryImpl.java from the .errai/ directory in the root of your project?	1	0	https://issues.jboss.org/browse/ERRAI-275
4009	ERRAI-260	Is this still a valid issue ? I was now some time hanging around Forge project and investigating how other jboss projects deal with Forge plugins. There is already existing Archetypes subproject https://github.com/errai/archetypes with availability to generate a template project examples and IMHO other jboss projects forge plugins (eg: richfaces, arquilian https://github.com/forge) are like creating template project examples, so like errai Archetypes. Does it bring any value to Errai project having a forge plugin in case it would make nearly the same stuff like errai Archetypes ? If yes, I am probably missing here some points, could you explain to me a bit detail, what exactly is the goal of errai forge plugin. One of the reasons, I ask this is I have checked already existing https://github.com/errai/forge-errai/ and it does not look like a "typical" Forge plugin (anotated Command methods ... like https://github.com/forge/plugin-richfaces/blob/master/src/main/java/org/richfaces/forge/RichFacesPlugin.java) - might be already outdated first shot ?	1	1	https://issues.jboss.org/browse/ERRAI-260
4010	ERRAI-260	Hi Pavel, That would be amazing if you could work on this. To answer your questions: "existing https://github.com/errai/forge-errai/ and it does not look like a "typical" Forge plugin" -- it is very old, and AFAIK it was never finished. If you have a better starting point, then disregard this old code. "Does it bring any value to Errai project having a forge plugin in case it would make nearly the same stuff like errai Archetypes ?" -- yes, for sure: 1. adding Errai to an existing project that does not already have it 2. generating UI from model objects (originally I said UiBinder, but Lincoln has now implemented a really nice Errai UI module that we'd probably want to target instead/also) 3. making a bunch of types @Portable in a single command (for example, all types used by a @Remote interface) 4. ability to remove Errai from a project :,(and more.. once the basic Errai plugin is working, we can probably add all sorts of amazing stuff!	0	0	https://issues.jboss.org/browse/ERRAI-260
4011	ERRAI-237	What would suggest for Spring?	0	0	https://issues.jboss.org/browse/ERRAI-237
4012	ERRAI-218	Why is there an empty ErraiApp.properties? What are the roles.properties and users.properties used for?	0	0	https://issues.jboss.org/browse/ERRAI-218

4017	ERRAI-10	Is this still important for BRMS? -- Posted from Bugbox for Android	1	0	https://issues.jboss.org/browse/ERRAI-10
4018	ERPL-7	Isn't this a duplicate of ERPL-4?	0	0	https://issues.jboss.org/browse/ERPL-7
4019	ERPL-3	This would be a fantastic idea. This would enable us to have a single servger impl for a in-house SWT app and our external customer facing GWT based app. Would this still allow push communications from the server? If so.... Nirvana :) Keep up the good work.	0	0	https://issues.jboss.org/browse/ERPL-3
4020	ESC-12	The only problem here is that you'd need Maven generate-sources to be executed everytime you want to test the code. Also, current IDE integrations allows you to simply right-click and execute. Would that be still possible?	1	1	https://issues.jboss.org/browse/ESC-12
4021	ESSC-1	Would it be possible to remove the port from the URL and do either some kind of port forwarding or just run it on standard port (80)? The URL is kind of ugly with the port.	1	1	https://issues.jboss.org/browse/ESSC-1
4022	ESSC-1	Why is there an incrementing number on the right end of an URL "?(X+1)"? Would it be possible to add a link to the home screen to the right menu (all products) / make the "Products" clickable? From purely subjective PoV, the green check mark before the titles is kind of useless. Personally I would remove it.	1	1	https://issues.jboss.org/browse/ESSC-1
4023	EXOJCR-1890	QA retested daily tests on [sha1:6e0bf47 TESTUKR-600|http://tests.exoplatform.org/issues/TESTUKR-600/single-thread-performance-testing/jcr.core/index.html] with reverted configuration (was used <property name="db-structure-type" value="single"/> instead of <property name="db-structure-type" value="isolated/>) Decreased TPS on [sha1:6e0bf47|http://tests.exoplatform.org/JCR/1.15.0-Beta01/05_18_6e0bf47/single-thread-performance-testing/jcr.core/index.html] was disappeared.	1	1	https://issues.jboss.org/browse/EXOJCR-1890

#	Requirement	Questions	Answered	Successfully Answered	URL
4024	EXOJCR-1829	Old database tables are not removed after migration via backup/restore. This, obviously, occurs only when we have different db types (e.g. single db -> isolated db), because in this case we create new tables instead of using the same tables (single db -> single db). The main question is: do we need to keep those tables for any reason, or they are useless and we should remove them.	1	1	https://issues.jboss.org/browse/EXOJCR-1829
4025	EXOJCR-1819	Which are ?	1	1	https://issues.jboss.org/browse/EXOJCR-1819
4026	EXOJCR-1819	> Which are ? < If you check the content of the 2 listed file above, you will see that the full XML content is duplicated. For example for the first file https://github.com/exodev/jcr/blob/master/exo.jcr.component.core.impl.infinispan.v5/src/test/resources/conf/standalone/test-configuration-mjdbc-ispn.xml, check line #665, you have: {code} <remove-configuration>org.exoplatform.services.scheduler.JobSchedulerService</remove-configuration> <!--<import>jar:/conf/database-configuration.hsql.xml</import> --> </configuration> <?xml version="1.0" encoding="ISO-8859-1"?> <!-- Copyright (C) 2009 eXo Platform SAS. 4027	EXOJCR-1812	Hi Nicolas, Could you explain more details on this? We need to explain more clearly with reporter. Thanks, Minh	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4028	EXOJCR-1812	To allow a user to add a mixin to a given node the JCR checks if it has the permissions SET_PROPERTY and ADD_NODE on that particular node. In other words addMixin is a special operation that requires special rights. In this particular case john doesn't have the permission ADD_NODE so it fails which is a normal behavior as it is mandatory. BTW why do you consider it as a bug?	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4029	EXOJCR-1812	As I understand, to add a mixin to a given node, we just need to change the property *jcr:mixinTypes*. So only permision *SET_PROPERTY* is enough. Why you require user to have permission *ADD_NODE*?	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4030	EXOJCR-1812	@Nicolas Filotto, Anatoliy Bazko: In our scenario, as you read in [https://jira.exoplatform.org/browse/ECMS-3545], user does not care about the *addMixin* funtion. He just notices that he has *SET_PROPERTY* and *REMOVE* permissions but can not edit the document. The question here is: - Do we need the *ADD_NODE* permission for all cases of *addMixin*? I think we only need it when the *mixin* node type contains at least 1 mandatory auto-created nodes. In case it does not have these things, *ADD_NODE* is not necessary.	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4031	EXOJCR-1812	Hi Nicolas, IMO, that is a real use case in WCM and in the real life. He wants to edit a document so he just has edit permission on it. Why do we need *Add* permission? is it safe to let people has more permission than what he has to do? It is not logical for me. And if you consider this one could be done in JCR 1.15 then could you reopen it and add into 1.15 scope? Thanks, Minh	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4032	EXOJCR-1812	>> Why do we need Add permission? is it safe to let people has more permission than what he has to do? It is not logical for me. << Maybe it is not logical but it is how it works from the beginning so changing it now would be a behavior change which is forbidden in a maintenance branch as you know >> And if you consider this one could be done in JCR 1.15 then could you reopen it and add into 1.15 scope? << Done BTW: The given unit test cannot work even with this improvement as making a node mix:versionable will add nodes to create the history of this node, so I guess it should be replaced with something like mix:lockable which seems to be the current issue in ECMS-3545	0	0	https://issues.jboss.org/browse/EXOJCR-1812
4033	EXOJCR-1812	What is the exception ?	0	0	https://issues.jboss.org/browse/EXOJCR-1812
4034	EXOJCR-1812	>> So there is no way for him to modify the child node which is created by him, right? right. >> In real life this is a real use case. >> I have a folder, It is mean you are owner, correct? >>I allow another one to add data into this folder, so he should be able to modify the files he created. If you allowed it is mean you add him some permissions, in case of modification files it should be SET_PROPERTY. Otherwise how it possible? Did I understand your correct?	1	1	https://issues.jboss.org/browse/EXOJCR-1812
4035	EXOJCR-1812	@Anatoliy Bazko: {quote} >>I allow another one to add data into this folder, so he should be able to modify the files he created. If you allowed it is mean you add him some permissions, in case of modification files it should be SET_PROPERTY. Otherwise how it possible? {quote} In case of modification files it should be SET_PROPERTY, yes. But I do not want the user to modify my folder. User can modify THEIR files inside my folder. Note that the files are created by him. I think the file owner can modify and should have full permission on his created file.	0	0	https://issues.jboss.org/browse/EXOJCR-1812
4036	EXOJCR-1793	I don't understand the purpose of this issue, what you describe should already be possible (I mean Could Workspace team can do that already), if not what is the issue met?	0	0	https://issues.jboss.org/browse/EXOJCR-1793

#	Requirement	Questions	Answered	Successfully Answered	URL
4037	EXOJCR-1791	Maybe there is some misunderstanding here. PortalContainer.getInstance() is not called directly from my JMXOrganizationInitializer. It's called from another class later in IDM layer (namely from class org.exoplatform.services.organization.idm.IDMUserListAccess), which is not instantiated by kernel and don't have reference to container. But what I am saying is, that during invocation of JMX component, should kernel layer pay attention to set correct portal container into ThreadLocal of ExoContainerContext. I think that this should be done in classes for JMX integration (namely in ManagementContextImpl.beforeInvoke or in ExoModelMBean.invoke). It's sure think that I have some possibilities to workaround it. What I am currently doing as workaround is like: {code} public class JMXOrganizationInitializer implements Startable { private ExoContainer exoContainer; public JMXOrganizationInitializer(ExoContainerContext exoContainerContext, OrganizationListenersInitializerService organizationListenersInitializerService, OrganizationService orgService) { this.exoContainer = exoContainerContext.getContainer(); this.initializerService = organizationListenersInitializerService; this.orgService_=orgService; } {code} And then in method launchAll, which is invoked by JMX, I can wrap the invocation with correct portal container this way: {code} public String launchAllListeners(@ManagedDescription("Check JCR Folders") @ManagedName("checkFolders") Boolean checkFolders) { // TODO: We need to encapsulate call with correct portal container by ourselves because JMX kernel layer is not doing it ExoContainer oldContainer = ExoContainerContext.getCurrentContainer(); try { ExoContainerContext.setCurrentContainer(this.exoContainer); boolean ok = initializerService.launchAll(checkFolders); String responseString = ok ? "All listeners executed successfuly." : "Error occured during execution of listeners."; return responseString; } finally { ExoContainerContext.setCurrentContainer(oldContainer); } } {code} But do you really think that it should be done this way? I really don't think that it's responsibility of calling component (in our case JMXOrganizationInitializer) to setup correct portal container to ThreadLocal. I think that this really should be already done by kernel. So in my case, variable "oldContainer" should be already set to correct container, which is not the case now. For normal invocations by Http request, we have SetCurrentIdentityFilter, which encapsulates whole Http request with correct Portal Container. I think that similar thing should be also done in JMX layer.	1	1	https://issues.jboss.org/browse/EXOJCR-1791
4038	EXOJCR-1791	Hi Nicolas, For that specific case with IDMUserListAccess: Previously it was done in the way, which you just suggest. IDMUserListAccess had references to Organization and IDM services. Problem is that IDMUserListAccess is Serializable and there were problems like "NotSerializableException" so Bolek fixed it by removing references. You can see diff here https://source.jboss.org/browse/GateIn/portal/trunk/component/identity/src/main/java/org/exoplatform/services/organization/idm/IDMUserListAccess.java?r2=7565&r1=7152 and JIRA here https://issues.jboss.org/browse/GTNPORTAL-2138 . Of course, this specific case can be solved in other way, like using some custom serialization mechanism. But I am pretty sure that there may be cases, where it's not easily possible to inject instance of service or ExoContainer to the calling component, and so you need to use ExoContainerContext.getCurrentContainer or PortalContainer.getInstance . For instance all WebUI components are using method UIApplication.getApplicationComponent for obtaining instances of some service, which in next turn invoke ExoContainerContext.getCurrentContainer. Another example can be ExtensibleFilters, which requires that GenericFilter must be last filter in the mapping (I remember that you personally created GTNPORTAL JIRA that GenericFilter mapping was before SetCurrentIdentityFilter and Filters could have bad instance of portal container because of it) I am sure there are many components and services, which relies on the fact, that ExoContainerContext.getCurrentContainer returns correct instance of PortalContainer. And during normal HTTP invocation, it always returns correct PortalContainer thanks to SetCurrentIdentityFilter. But during JMX calls, you can't be sure that ExoContainerContext.getCurrentContainer returns correct instance. And only 2 lines of code can fix the whole thing. Are you seeing any disadvantages of adding these 2 lines into kernel code to have more reliable JMX layer? Me not, i am seeing only advantages. I agree that it's not a bug but enhancement. Sorry for creating it as bug.	1	1	https://issues.jboss.org/browse/EXOJCR-1791
4039	EXOJCR-1782	Hi, reviewing the patch, I've noticed that you added new blocks to documents, for example, {code:xml} <itemizedlist> <listitem> <para><link linkend="JCR.Extensions.Concept">Concept</link></para> </listitem> <listitem> <para><link linkend="JCR.Extensions.Implementation">Implementation</link></para> </listitem> <listitem> <para><link linkend="JCR.Extensions.Configuration">Configuration</link></para> </listitem> <listitem> <para><link linkend="JCR.Extensions.Related_Pages">Related Pages</link></para> </listitem> </itemizedlist> {code} And that seemed to me quite a bit strange, because the contents of a chapter (a list of its sections along with links to them) are generated automatically during creation of documentation book. So I see no need to duplicate it by adding an {{itemizedlist}} in the very beginning of a chapter. In this case you will have two contents lists in a row. Could you please explain me your intends, if I have understood something wrong.	1	1	https://issues.jboss.org/browse/EXOJCR-1782
4040	EXOJCR-1778	Please provide concrete use cases what kind of error did you face ? what was the corresponding stack trace/issue?	0	0	https://issues.jboss.org/browse/EXOJCR-1778
4041	EXOJCR-1751	(from 2.9 to 3.5) Features for future investigation: * FieldCache? How can it be used? Expert API? * SearcherLifeTimeManager - should be used or not? Useful or not. * FST? (Lucene-3140) Can it improve similarity search or search by word part?. Seems it's internal feature and doesn't actually change the Lucene's behavior, only better RAM usage. * (Experimental) TwoPhaseCommitTool in Lucene. Can be useful when implementing new JCR SQL 2.0 Search Engine. * Facet search API in 3.4.0 - * IndexUpgrader - Compressed fields are not supported now. Old indexes with compressed fields will be "de-compressed" on optimize or segments merge. But also utility can do this. Possibly it can do smth more. * PathHierarchyTokenized - tokenizes path entries. Can be usefull if storing paths in index. * ParalellMultiSearcher - ? study. Changes and notices * IndexReader.openIfChanged() - consider using. Changed behavior comparing to reopen. * IndexSearcher.createWeight() -> createNormalizedWeight. * IndexWriter.addIndex() - doesn't merge segment any more. Need explicit call to .maybeMerge or optimize. * Searcher and Searcheble -> IndexSearcher. * Query.getSimilarity() - deprecated (lucene-2869). * TopScoreDocCollector throws exception when nDoc=0 (lucene-2785). * FSDirectory.open() can return MMapDirectory instance. * IndexWriter constructor accepts IndexWriterConfig instance * FSDirectory and LockFactory are not settable via SysProps (?).	0	0	https://issues.jboss.org/browse/EXOJCR-1751
4042	EXOJCR-1734	As solution for the "hot modification support" part I propose to expose a set of getter and setter through JMX (they will also be part of the interface of the service to allow UI to call them if needed) in order to give the ability to hotly change the parameters but the values won't be stored in the db, the customer will need to modify the configuration file manually. I prefer to keep it simple as I'm not sure it is a common use case. @tug: Is this proposal acceptable for you?	0	0	https://issues.jboss.org/browse/EXOJCR-1734

#	Requirement	Questions	Answered	Successfully Answered	URL
4045	EXOJCR-1709	when volatile flushed, both non-system and system; * sync indexes on cluster node startup, both new and previously re-started node; * specifying RSync configuration for QueryHandler; * support of RSync Authentication; h1. How implemented Standard Shared Index strategy has much in common with new RSync-Based concept. Only difference is an RSync call when indexes changed on coordinator for synchronization with other cluster nodes. That's why RSync concept is implemented on the top existing JBossCache-based components. JBossCacheIndexChangesFilter updated to handle new type of IndexInfos, RSyncIndexInfos. Those are the classes that manage the list of indexes, calling MultiIndex when list changed. RSyncIndexInfos triggers call to system utility in order to retrieve the last snapshot of index folder. When process finished, then control flow returned to JBossCache-based index components. Also RSync utility invoked on startup to retrieve latest index state. h1. What tested Concept launched on 2 and 3-nodes cluster. Following features tested manually: * basic index synchronization, when coordinator flushes new index; * index retrieval on startup, when no local index present; * index re-synchronization on startup, when local index already present; * coordinator changes; * temporary outage of some cluster node. On each step new document was uploaded via Dav and tested launching queries on each node. Next task is a performance testing, comparing different approaches. h1. How to configure You need ordinary JBossCache index configuration as shown below: {code} <query-handler class="org.exoplatform.services.jcr.impl.core.query.lucene.SearchIndex"> <properties> <property name="index-dir" value="${exo.jcr.parent.dir:..}/temp/jcrlucenedb/production" /> <property name="changesfilter-class" value="org.exoplatform.services.jcr.impl.core.query.jbosscache.JBossCacheIndexChangesFilter" /> <property name="jbosscache-configuration" value="jar:/conf/portal/cluster/jbosscache-indexer.xml" /> <property name="jgroups-configuration" value="jar:/conf/portal/cluster/udp-mux.xml" /> <property name="jgroups-multiplexer-stack" value="false" /> <property name="jbosscache-cluster-name" value="JCR-cluster-indexer" /> <property name="jbosscache-shareable" value="true" /> <property name="max-volatile-time" value="60" /> </properties> </query-handler> {code} Make sure "index-dir" is pointing to local folder. Then need to add RSync configuration options: {code} <query-handler class="org.exoplatform.services.jcr.impl.core.query.lucene.SearchIndex"> <properties> <property name="index-dir" value="${exo.jcr.parent.dir:..}/temp/jcrlucenedb/production" /> <property name="changesfilter-class" value="org.exoplatform.services.jcr.impl.core.query.jbosscache.JBossCacheIndexChangesFilter" /> <property name="jbosscache-configuration" value="jar:/conf/portal/cluster/jbosscache-indexer.xml" /> <property name="jgroups-configuration" value="jar:/conf/portal/cluster/udp-mux.xml" /> <property name="jgroups-multiplexer-stack" value="false" /> <property name="jbosscache-cluster-name" value="JCR-cluster-indexer" /> <property name="jbosscache-shareable" value="true" /> <property name="max-volatile-time" value="60" /> <property name="rsync-entry-name" value="index" /> <property name="rsync-entry-path" value="/home/exo/tomcat" /> <property name="rsync-port" value="8085" /> <property name="rsync-user" value="rsyncexo" /> <property name="rsync-password" value="exo" /> </properties> </query-handler> {code} Let's start with authentication: "rsync-user" and "rsync-password". It is optional and can be missing if RSync Server allows anonymous access. Before reviewing other RSync index options need to have a look at RSync server configuration. Sample RSync Server (rsyncd) Configuration {code} uid = nobody gid = nobody use chroot = no port = 8085 log file = rsyncd.log pid file = rsyncd.pid [index] path = /home/exo/tomcat comment = indexes read only = true auth users = rsyncexo secrets file= rsyncd.secrets {code} This sample configuration shows	0	0	https://issues.jboss.org/browse/EXOJCR-1709
4046	EXOJCR-1691	Can you provide the related statistics?	1	1	https://issues.jboss.org/browse/EXOJCR-1691
4047	EXOJCR-1673	Hum, according to PLF-2493 you already choose solution #2 so why choosing solution #1 for exo:registry only? Can't you apply the same logic on this node at ECMS or PLF level?	0	0	https://issues.jboss.org/browse/EXOJCR-1673
4048	EXOJCR-1673	I checked this patch with PLF 3.1.0-GA rev 77495. It's ok for node exo:registry, exo:services. But exo:applications is not hidden (cf capture) What do you think ?	0	0	https://issues.jboss.org/browse/EXOJCR-1673
4049	EXOJCR-1661	What is the expected version? JCR 1.14 only or JCR 1.12 too?	0	0	https://issues.jboss.org/browse/EXOJCR-1661
4050	EXOJCR-1660	Warning what you propose is not backward compatible, we cannot remove a parameter just because it is not compatible with multitenancy, multitenancy is only one use case. What has already been implemented at NodeHierarchyCreator is this: {code} String repositoryName = hierarchyConfig.getRepository(); ManageableRepository repository = repositoryName == null || repositoryName.isEmpty() ? jcrService_.getCurrentRepository() : jcrService_.getRepository(repositoryName); {code} In other words if we define a repository name it uses the given repository otherwise it uses the current repository, it is compatible with multitenancy and it is backward compatible.	0	0	https://issues.jboss.org/browse/EXOJCR-1660
4051	EXOJCR-1652	Please review each query and rewrite those which are written to use JCR_IDX_SITEM_PARENT_NAME by using filters in the same order as the list of column defined in the index JCR_IDX_SITEM_PARENT_NAME. For example the query: {code} select I.NAME, V.DATA, V.ORDER_NUM from JCR_SITEM I, JCR_SVALUE V where I.I_CLASS=2 and I.CONTAINER_NAME=? and I.PARENT_ID=? and (I.NAME='[http://www.jcp.org/jcr/1.0]primaryType' or I.NAME='[http://www.jcp.org/jcr/1.0]mixinTypes' or I.NAME='[http://www.exoplatform.com/jcr/exo/1.0]owner' or I.NAME='[http://www.exoplatform.com/jcr/exo/1.0]permissions') and I.ID=V.PROPERTY_ID {code} first check I_CLASS, then CONTAINER_NAME, then the PARENT_ID, then the NAME exactly like the order of the column defined in the index definition which is "I_CLASS, CONTAINER_NAME, PARENT_ID, NAME, I_INDEX, VERSION DESC". The query should be rewritten to match with the order defined in the index JCR_IDX_SITEM_PARENT which is "CONTAINER_NAME, PARENT_ID, NAME, I_INDEX, I_CLASS, VERSION DESC"	0	0	https://issues.jboss.org/browse/EXOJCR-1652
4052	EXOJCR-1652	I removed the index JCR_IDX_SITEM_PARENT_NAME and launched {code} explain select I.*, P.NAME AS PROP_NAME, V.ORDER_NUM, V.DATA from JCR_SITEM I, JCR_SITEM P, JCR_SVALUE V where I.I_CLASS=1 and I.CONTAINER_NAME='collaboration' and I.PARENT_ID='collaborationac1b5f7fc0a8010218cb98a47d54b11b' and P.I_CLASS=2 and P.CONTAINER_NAME='' and P.PARENT_ID=I.ID and (P.NAME='[http://www.jcp.org/jcr/1.0]primaryType' or P.NAME='[http://www.jcp.org/jcr/1.0]mixinTypes' or P.NAME='[http://www.exoplatform.com/jcr/exo/1.0]owner' or P.NAME='[http://www.exoplatform.com/jcr/exo/1.0]permissions') and V.PROPERTY_ID=P.ID order by I.N_ORDER_NUM, I.ID {code} The result is not good, I get "Using where; Using temporary; Using filesort" for P so it seems that both indexes are needed: JCR_IDX_SITEM_PARENT is at least required for: {code} FIND_ITEM_BY_NAME = "select * from JCR_SITEM" + " where CONTAINER_NAME=? and PARENT_ID=? and NAME=? and I_INDEX=? order by I_CLASS, VERSION DESC"; {code} and JCR_IDX_SITEM_PARENT_NAME is at least required required for: {code} protected static final String FIND_NODES_BY_PARENTID_CQ_QUERY = "select I.*, P.NAME AS PROP_NAME, V.ORDER_NUM, V.DATA from JCR_SITEM I, JCR_SITEM P, JCR_SVALUE V" + " where I.I_CLASS=1 and I.CONTAINER_NAME=? and I.PARENT_ID=? and" + " P.I_CLASS=2 and P.CONTAINER_NAME=? and P.PARENT_ID=I.ID and" + " (P.NAME='[http://www.jcp.org/jcr/1.0]primaryType' or" + " P.NAME='[http://www.jcp.org/jcr/1.0]mixinTypes' or" + " P.NAME='[http://www.exoplatform.com/jcr/exo/1.0]owner' or" + " P.NAME='[http://www.exoplatform.com/jcr/exo/1.0]permissions')" + " and V.PROPERTY_ID=P.ID order by I.N_ORDER_NUM, I.ID"; {code} So we need to revert changes related to this issue and resolve it as won't fix	0	0	https://issues.jboss.org/browse/EXOJCR-1652

#	Requirement	Questions	Answered	Successfully Answered	URL
4053	EXOJCR-1646	What requested by PLF-1898 is already covered by EXOJCR-1374 even for the JCR locks, to benefit of the changes done for it you need to replace org.jboss.cache.loader.JDBCCacheLoader with org.exoplatform.services.jcr.impl.core.lock.jbosscache.JDBCCacheLoader in your JBC config file for the locks, here is an example https://svn.jboss.org/repos/exo-jcr/jcr/trunk/exo.jcr.component.core/src/test/resources/conf/standalone/test-jbosscache-lock.xml	0	0	https://issues.jboss.org/browse/EXOJCR-1646
4054	EXOJCR-1621	@tung do thanh What did you run?	1	1	https://issues.jboss.org/browse/EXOJCR-1621
4055	EXOJCR-1618	On which AS do you expect this use-case working?	1	1	https://issues.jboss.org/browse/EXOJCR-1618
4056	EXOJCR-1618	On which AS do you expect this use-case working? - Tomcat 6.0.32 or higher And on which context exactly this use-case is required? -cloud-ide.com application	1	1	https://issues.jboss.org/browse/EXOJCR-1618
4057	EXOJCR-1618	I know that it is for cloud-ide.com application what I meant is more why would the end-users need to modify the war files? or more generally in which context would you need to modify the war files?	1	1	https://issues.jboss.org/browse/EXOJCR-1618
4058	EXOJCR-1618	And finally does this use-case represent a common need or a very rare need?	1	1	https://issues.jboss.org/browse/EXOJCR-1618
4059	EXOJCR-1592	Do we need to restore locks?	0	0	https://issues.jboss.org/browse/EXOJCR-1592
4060	EXOJCR-1590	So for the second issue, you will be able to remove old locks created by JCR 1.12 once upgraded to JCR 1.14 (EPP 5.2) ? In this case, if we use shareable and same table for locks, customers will still have old N tables in their database. But if I understand it correctly, these tables will be empty then (because locks will be removed) and so it should not be a problem for migration ? Only thing is that customers will have empty tables for old locks but I guess this should not be a problem (only few useless additional tables). Is it correct? Especially I wanted to know if customers will be able to upgrade to shareable without doing any manual steps with their DB (aka deleting old lock tables). And can we assume that this can be fixed in JCR 1.14.3 (Sorry for bothering, but 1.14.3 is the version, which will be used in EPP 5.2.0.GA) ? Thanks a lot!	0	0	https://issues.jboss.org/browse/EXOJCR-1590
4061	EXOJCR-1561	What about JCR 1.12.10 and 1.14.0?	0	0	https://issues.jboss.org/browse/EXOJCR-1561
4062	EXOJCR-1559	What about JCR 1.12.10 and 1.14.0?	1	1	https://issues.jboss.org/browse/EXOJCR-1559
4063	EXOJCR-1522	Did you disable the JCR Cache before launching the tests? how many iterations did you configure for these tests?	1	1	https://issues.jboss.org/browse/EXOJCR-1522
4064	EXOJCR-1483	I'm wondering if the patch could cause inconsistency issue, indeed even with read operations as for some operations we launch several JDBC queries (for example get Item by id) it could be required to have autocommit to false to ensure consistency between all the queries. Could you please review all the read operations and set autocommit to false for all the read operations that requires several queries. If this new change doesn't allow to have the same perf as now (with this feature), simply revert everything and resolve it as won't fix.	0	0	https://issues.jboss.org/browse/EXOJCR-1483
4065	EXOJCR-1479	I see dependencies doesn't change. So what I have to do to safe use of slf4j 1.6.1 with ExoLoger ?	1	1	https://issues.jboss.org/browse/EXOJCR-1479
4066	EXOJCR-1471	There is strange usecase. Some non binary properties, for example primatyType, have binary values stored on file system. How to find such properties? {code:sql} select V.*, P.P_TYPE from JCR_SVALUE as V, JCR_SITEM as P where P.I_CLASS=2 and name='[http://www.jcp.org/jcr/1.0]primaryType' and V.PROPERTY_ID = P.ID and V.DATA is null {code} In our case it will return row {code} 241290, , collaboration608768af0afe1ae0198496cabb87c860, collaboration, 2 {code} We can find this value stored on file system, using shell script above. So the value is nt:file. Then fix the record in JCR_SVALUE table {code:sql} update JCR_SVALUE set DATA='[http://www.jcp.org/jcr/nt/1.0]file', STORAGE_DESC=null where (PROPERTY_ID='collaboration608768af0afe1ae0198496cabb87c860') and ORDER_NUM=0; {code}	0	0	https://issues.jboss.org/browse/EXOJCR-1471
4067	EXOJCR-1471	I have read link above, and description of CheckIndex tool {code} **WARNING**: -fix should only be used on an emergency basis as it will cause documents (perhaps many) to be permanently removed from the index. Always make a backup copy of your index before running this! Do not run this tool on an index that is actively being written to. You have been warned! Run without -fix, this tool will open the index, report version information and report any exceptions it hits and what action it would take if -fix were specified. With -fix, this tool will remove any segments that have issues and write a new segments_N file. This means all documents contained in the affected segments will be removed. This tool exits with exit code 1 if the index cannot be opened or has any corruption, else 0. {code} So, there is few points: - index must NOT be used during the check. So it definitely must be executed in standalone mode; - CheckIndex "fixes" index in very special way. If index-segment can not be read (some bytes are lost, etc) it removes this broken segment with all documents within. (I still investigating, how can we fetch broken documents list); - if we can not fetch docuemnts list from corrupted segment - there is no reason to make new tool with CheckIndex inside. Script will be enough. BTW I checked the index from crashed disk - its ok.	0	0	https://issues.jboss.org/browse/EXOJCR-1471
4068	EXOJCR-1406	According to the svn history, this lock exists since the class has been added to svn (the related JIRA is https://jira.exoplatform.org/browse/JCR-456) so we cannot know why it has been added. @peter As you seem to be the code owner, can you tell us more? If you can't since the QA did not detect any issue when the lock has been removed, I suggest to remove it completely from the code as long as we don't have good proof that it is required. If later we face issue because of this we will then implement a smarter mechanism based on a ConcurrentMap<String, Lock> where the String would be the path.	1	1	https://issues.jboss.org/browse/EXOJCR-1406

#	Requirement	Questions	Answered	Successfully Answered	URL
4069	EXOJCR-1361	Thanks to Anatoly, I understand why performance depends from getChildNodesData in ChildAxisQuery Lets check our usecase We want find node by path "/teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content" with query "select * from nt:base where dc:title = 'Exoplatform' and jcr:path like '/teststorage/root2/%'" 1) How it works with getChildNodesData * ChildAxisQuery$SimpleChildrenCalculator.getHits() takes root-node child nodes with getChildNodesData(). Result is "teststorage", and this node is cached. IMPORTANT: getChildNodesData assigned parent-nodes ACL to child nodes. Thats why "teststorage" cached WITH ACL. * ChildAxisQuery$SimpleChildrenCalculator.getHits() takes child nodes for "teststorage". Same algoritm and comments. "root2" with ACL is cached. * query does some job. Thats not impotant. * on - QueryResultImpl.getResuls(QueryResultImpl.java:329) - QueryResultImpl.isAccessGranted(QueryResultImpl.java:413) takes all result nodes - VersionableWorkspaceDataManager.getItemData is called * VersionableWorkspaceDataManager.getItemData takes a node and ACLInheritanceSupportedWorkspaceDataManager.getNearestACAncestorAcl(node) is called. * ACLInheritanceSupportedWorkspaceDataManager.getNearestACAncestorAcl(node) traverse all nodes from the end, until any node with acl is fetched. So, for node /teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content there is next calls: /teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content /teststorage/root2/node2/node9/node5/1-9-5-2.txt /teststorage/root2/node2/node9/node5 /teststorage/root2/node2/node9 /teststorage/root2/node2 /teststorage/root2 - and this is finish, because root2 is cached and contains ACL. 2) How it works without getChildNodesData Same steps. With single exception - "teststorage" and "root2" cached WITHOUT ACL. For node /teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content there is next calls: /teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content /teststorage/root2/node2/node9/node5/1-9-5-2.txt /teststorage/root2/node2/node9/node5 /teststorage/root2/node2/node9 /teststorage/root2/node2 /teststorage/root2 /teststorage / - yep, root node always have ACL There is two extended getItemData calls. And moreover, when "teststorage" and "root2" became fetched and cached, thay will be cached WITHOUT ACL. Thats why, redundant calls will be repeated all times. Why preformance in our usecase was so dramaticaly decreased? Because, search result contain 10 nodes on same level (/teststorage/root2/node2/node9/node5/1-9-5-2.txt/jcr:content - 7 nodes). For each node - 2 redundant getItemData calls on QueryResultImpl.getResuls() and fetching result with NodeIterator. So there is 40 redundatn calls per single usecase run.	0	0	https://issues.jboss.org/browse/EXOJCR-1361
4070	EXOJCR-1333	By the way, how do you do insert the text results in the comment?	1	1	https://issues.jboss.org/browse/EXOJCR-1333
4071	EXOJCR-1333	>> By the way, how do you do insert the text results in the comment? << Add it in a code block \{code\}my code\{code\} >> BTW why is it so important for you to optimize this method? Did you see on your profiler results that it was a bottleneck? It looks like a big patch for very small impact, don't you agree?	1	1	https://issues.jboss.org/browse/EXOJCR-1333
4072	EXOJCR-1333	Oh, yes, I totally agree that there's no need to optimize this method. I thought my first approach would work better than it did (thanks for the benchmark, btw). And, like I said, I was bored so I spent half an hour writing a slightly more optimized version. :) I do still wonder about memory usage of the current approach, though... What can I say, I like to optimize things when I can but I agree that in this case, it makes the code a lot more complex for no obvious gain.	1	1	https://issues.jboss.org/browse/EXOJCR-1333
4073	EXOJCR-1333	We already waste too much time on this so I will add it. WDYT about this compressed version of your optimized version: {code} public static boolean contains1(String profiles, String profileName) { if (profileName != null && profiles != null) { int i = profiles.indexOf(profileName); if (i != -1) { // look for next comma int nextComma = profiles.indexOf(',', i); int previousComma = profiles.lastIndexOf(',', i); return profiles .substring(previousComma == -1 ? 0 : previousComma + 1, nextComma == -1 ? profiles.length() : nextComma) .trim().equals(profileName); } } return false; } {code} And what about simply caching the Set of profiles? I don't think that the list of profiles will change much from one call to another?	0	0	https://issues.jboss.org/browse/EXOJCR-1333
4074	EXOJCR-1332	What files we need to store on svn?	0	0	https://issues.jboss.org/browse/EXOJCR-1332
4075	EXOJCR-1303	Hi! Can You, please, provide your JBoss AppServer bundle and quick steps to check the patch. I.e. some steps to reproduce and check that patched code works fine.	0	0	https://issues.jboss.org/browse/EXOJCR-1303
4076	EXOJCR-1295	I am not the one who created the question. I am just pointing the fact that the answer does not seem to answer. My bet on the meaning of the question is : Can 2 JCR instances be synchronised across a WAN ? That said. If JCR team doe not understand the question, I guess the question should be removed from their FAQ....	1	0	https://issues.jboss.org/browse/EXOJCR-1295
4077	EXOJCR-1293	What is also strange that Kernel's packaging contains reference on _commons-lang_ for {{commons}} module, but it doesn't present in Kernel Common POM: {noformat} module.commons = new Project("org.exoplatform.kernel", "exo.kernel.commons", "jar", module.version). addDependency(new Project("commons-lang", "commons-lang", "jar", "2.6")). ..... {noformat}	0	0	https://issues.jboss.org/browse/EXOJCR-1293
4078	EXOJCR-1293	What about _exo.kernel.commons_ and _commons-lang_ there? Do we need it in Kernel?	0	0	https://issues.jboss.org/browse/EXOJCR-1293

4086	EXOJCR-1159	About upgrade ISPN to 4.2.1.FINAL (https://wiki-int.exoplatform.org/display/exoproducts/Review+all+the+third+party+libraries) The latest FINAL release is 4.2.0.FINAL, but last release 4.2.1.CR2 (https://repository.jboss.org/nexus/content/groups/public/org/infinispan/infinispan-core/4.2.1.CR2/) What version of ISPN will be used 4.2.1.CR2 or 4.2.0.FINAL?	0	0	https://issues.jboss.org/browse/EXOJCR-1159
4087	EXOJCR-1159	The dependency from article https://wiki-int.exoplatform.org/display/exoproducts/Review+all+the+third+party+libraries was updated, but with same new dependency we have follow problem: 1) com.ibm.db2:db2jcc - the version 9.7 was not present on maven repository (now this dependency was stored in local maven repository). 2) com.ibm.db2:db2jcc_license_cu - the version 9.7 was not present on maven repository (now this dependency was stored in local maven repository). 3) com.microsoft:sqljdbc - the version 3.0.1301.101 was not present on maven repository (now this dependency was stored in local maven repository). 4) commons-fileupload:commons-fileupload - now version in WS is 1.0, because one test failed with version 1.2.1 in project ws/trunk/exo.ws.rest.core. 5) javassist:javassist - the version 3.14.0.GA was not present on maven repository (now this dependency was stored in local maven repository). 6) jotm:jotm - the version 2.1.9 was not present on maven repository (now this dependency was stored in local maven repository). 7) jtidy:jtidy - now version is 4aug2000r7-dev , because same tests failed with version r938(and with version r918) in project core/trunk/exo.core.component.xml-processing. The version r938(and with version r918) was not present on maven repository (now this dependency was stored in local maven repository). 8) org.apache.poi:poi poi-oomxl poi-scratchpad - now version is 3.6, because same tests failed with version 3.7 in project core/trunk/exo.core.component.document. 9) org.apache.tika:tika-core tika-parsers - now version is 0.7, because project core/trunk/exo.core.component.document was not build with version 0.8. 10) org.apache.ws.commons:ws-commons-util - now version is 1.0.1, because version 1.0.2 was not exists (http://apache.cp.if.ua//ws/commons/util/binaries/) 11) org.aspectj:aspectjrt - now version is 1.6.10, because final version 1.6.11 not exists (http://www.eclipse.org/aspectj/downloads.php) 12) org.infinispan:infinispan-core infinispan-cachestore-jdbc - now version 4.1.0.FINAL, because one test (testDistributedCache(org.exoplatform.services.cache.impl.infinispan.TestAbstractExoCache)) failed with version 4.2.0.FINAL in project kernel/trunk/exo.kernel.component.ext.cache.impl.infinispan.v4. 13) org.slf4j:slf4j-log4j12 slf4j-api - now version is 1.5.8, because project kernel/trunk/exo.kernel.commons was not build with version 1.6.1. 14) org.w3c:sac - now version is 1.3, because version 1.3.1 was not exists (http://www.w3.org/Style/CSS/SAC/). 15) quartz:quartz - now version is 1.5.2, because project kernel/trunk/exo.kernel.component.common was not build with version 1.8.4. The version 1.8.4 was not present on maven repository (now this dependency was stored in local maven repository). 16) stax:stax-api - now version is 1.0.1, because version 1.2 was not exists. 17) xpp3:xpp3 - now version is 1.1.4c, because version 1.1.5 was not exists. Should the test and build issues be fixed for the latest library versions? Or it is better to leave versions unchanged for those libraries that caused problems? Should the dependency that not present on maven repositories be stored on our public maven repository?	0	0	https://issues.jboss.org/browse/EXOJCR-1159
4088	EXOJCR-1157	Successfully upgraded to lucene 2.9. What was changed/done: 1. Query class: changed definition (visibility modifier) of createWeight(..) method. 2. Interface Weight replaced with it's abstract type. 3. Weight.score(IndexReader) replaced with Weight.score(IndexReader, boolean, boolean). 4. IndexReader.getSequenceReaders() introduced and used in Lucene internals for per-segment search and caching. In our custom IndexReader should be overridden and return null (This is safe solution and confirmed within lucene's mailing list by Simon Willnauer). 5. FSdirectory.getDirectory(...) replaced with FSdirectory.open(...). But open(...) doesn't create a directory structure anymore. 6. Term can be null, when reader.termDocs(Term) invoked. Adding safe check to avoid NPE. 7. Got rid of HitCollector in favor of Collector class.	0	0	https://issues.jboss.org/browse/EXOJCR-1157
4089	EXOJCR-1156	How ConfigurationFormat class demands creation of SimpleExoLog? I'm interesting do we really need this staff in production?	1	1	https://issues.jboss.org/browse/EXOJCR-1156
4090	EXOJCR-1148	How can I reproduce usecase?	1	1	https://issues.jboss.org/browse/EXOJCR-1148
4091	EXOJCR-1144	Can you perform the same test as your first comment to see if it helps?	1	1	https://issues.jboss.org/browse/EXOJCR-1144
4092	EXOJCR-1105	Could you please give more details about your need because it is not clear for me?	0	0	https://issues.jboss.org/browse/EXOJCR-1105
4093	EXOJCR-1104	Do we need to load value data? or just empty property data?	1	1	https://issues.jboss.org/browse/EXOJCR-1104
4094	EXOJCR-1103	>> So we can not make simple query for pattern like - "e*o:name" << The idea would be to get all the properties/nodes that have a prefix and which are called name, then filter manually thanks to the ItemDataNamePatternFilter >> On other hand, What should we return for "exo*name" pattern? "exo:name"? << all the properties/nodes with no prefix which name match with this pattern So the expected behavior is: "na*me | e*o:name" 1) sql query '[]na%me' OR '[%]name' 2) check resulting set with ItemDataNamePatternFilter "exo:na*me" 1) sql query '[http://www.exoplatform.com/jcr/exo/1.0]na%me' 2) return result	0	0	https://issues.jboss.org/browse/EXOJCR-1103
4095	EXOJCR-1082	RepositoryServiceImpl is an internal class so you are not supposed to create any instance of it by your own, it is totally forbidden. Could you show me your code to allow me to understand what you did?	0	0	https://issues.jboss.org/browse/EXOJCR-1082
4096	EXOJCR-1080	Can't you send the query as a String and let the coordinator parses it for you? if parsing a query is not too resource consuming it could make sense	1	1	https://issues.jboss.org/browse/EXOJCR-1080
4097	EXOJCR-1080	About RPCManager from JBC. It look strictly implemented for internal need of JBC, it not the thing we need. First of all it's not clear how can we control marshaling/unmarshaling since it doesn't use JVM's serialization. It relies it's own internal tool. It's not clear how can we manage commands. I.e. in eXo RPCService, when command registered - we can inject whatever we need inside, using JBC's RPCManager it looks impossible in such a way. And it's completely not documented. Actual question is why should JBC's RPCManager be used, when we have our own?	1	1	https://issues.jboss.org/browse/EXOJCR-1080
4098	EXOJCR-1080	The problem with the RPCService is that it has not been well tested to be considered as production ready and it has not been designed to get the best performances. Moreover, the goal is to backport this feature in JCR 1.12.x and I did not plan to backport the RPCService. If you test your feature that is based on something on which we cannot really trust in term of performances how can you know if your results are relevant?	1	1	https://issues.jboss.org/browse/EXOJCR-1080

#	Requirement	Questions	Answered	Successfully Answered	URL
4099	EXOJCR-1080	To clarify the work the we did and we still need to do: What we did: 1. We try to execute the queries on the coordinator but it was a failure so we abort this study, so the related changes can even be reverted if. 2. We try to replicate Lucene Document instead of ids, the results are not as good as expected but at least they are better than what we currently have so we keep them The next steps are: 3. Instead of having one single volatile index in the coordinator, we will allow to have a volatile index in all the cluster nodes (even if it can cause consistency issues) but only the coordinator will be able to flush the volatile index into the disc. This way the other nodes will be aware of the latest changes sooner. When the coordinator flushes the volatile index, all the volatile indexes must be cleared 4. We will propose another search filter that will allow to have lucene indexes per cluster node, this approach is in fact 2 + 3 + the fact that all nodes will be able to flush their volatile indexes independently (like in JCR 1.10.x). The indexes will be local so we should be more scalable	1	1	https://issues.jboss.org/browse/EXOJCR-1080
4100	EXOJCR-1080	Why the RPC Service usage was discontinued? We can't use it no longer? How can we send commands (like "cleanup volatile now") through the cluster nodes?	1	1	https://issues.jboss.org/browse/EXOJCR-1080
4101	EXOJCR-1080	Why the RPC Service usage was discontinued? We can't use it no longer? > Because we have already something that works well without so I prefer to keep on using the same logic it is safer How can we send commands (like "cleanup volatile now") through the cluster nodes? > For me, the best way would be to change the method IndexUpdateMonitor.setUpdateInProgress(boolean updateInProgress, boolean persitentUpdate) into setUpdateInProgress(boolean updateInProgress, UpdateType type) in order to give more information about the current update, we will then propagate the id of the UpdateType that could be a byte over the cluster instead of the boolean (knowing that java uses a byte to serialize a boolean)	1	1	https://issues.jboss.org/browse/EXOJCR-1080
4102	EXOJCR-1022	Could you please describe more why providing a POJOValue would be helpful? maybe you could give a concrete example	1	1	https://issues.jboss.org/browse/EXOJCR-1022
4103	EXOJCR-1021	Can you point me to a test that do a conversion fron a POJO with jaxb annotations into json ?	0	0	https://issues.jboss.org/browse/EXOJCR-1021
4104	EXOJCR-1021	Do you expect JSON serialization to take in account @XmlTransient ? Which by idea "Prevents the mapping of a JavaBean property to XML representation. "	0	0	https://issues.jboss.org/browse/EXOJCR-1021
4105	EXOJCR-1021	Does your test case work on Jersey implementation? Personally, I don't find it really intuitive for a developer to use JAXB annotations to serialize JSON Objects knowing that most of them only makes sense for XML serialization which is actually what JAXB is used for.	1	1	https://issues.jboss.org/browse/EXOJCR-1021
4106	EXOJCR-1021	I did not tried with Jersey. We could also re-invent the wheel and create our own annotations. Actually supporting the JAXB annotation for the Json conversion does not prevent us from creating our own set of annotation if we think it has value. I just think that it would be nice to support JAXB annotation. The problem with inventing another annotation set is that for a bean that are converted in Json and XML, we need to have 2 annotations per property. And if we add another writer, let say something stupid: CSV, we will have to add more annotations again. {code} @JSONObjectValue(name = "bean") @XmlRootElement(name = "bean") public static class Bean { private String name; private String password; private String shouldNotSerialize = "SHOULD NOT APPEARS"; @JSONValue @XmlElement public String getName() { return name; } public void setName(String name) { this.name = name; } @JSONValue @XmlElement public String getPassword() { return password; } public void setPassword(String password) { this.password = password; } @JSONTransient @XmlTransient public String getShouldNotSerialize() { return shouldNotSerialize; } public void setShouldNotSerialize(String shouldNotSerialize) { this.shouldNotSerialize = shouldNotSerialize; } } {code} So to keep things simple, it would be better to reuse JAXB annotations. It worked well for my webservices.	0	0	https://issues.jboss.org/browse/EXOJCR-1021
4107	EXOJCR-1021	You were saying that JAXB annotation would not fit to JSON, so I deduced that you would prefer to develop non-standard annotation. Do you know a standard to do similar things with Json ?	0	0	https://issues.jboss.org/browse/EXOJCR-1021
4108	EXOJCR-1021	I am working on small improvement of our REST framework which will make possible to overwrite default providers (readers and writers). So, you will be able to replace out default JSON serializer (which is light and suitable for absolutely most the cases) w/ one from Jackson or whatever you need. This improvement will be available in several days in trunk (next CF release if you prefer stable), I'll let you know details then. Is it OK for everyone?	1	1	https://issues.jboss.org/browse/EXOJCR-1021
4109	EXOJCR-1021	>> You were saying that JAXB annotation would not fit to JSON << For me no since it is not intuitive at all, mixing JSON with JAXB/XML it is about the same as mixing tomatoes and potatoes >> so I deduced that you would prefer to develop non-standard annotation. << Yes because even if we decided to use JAXB annotations, it still won't be standard, so I rather prefer to use internal annotations and warn the developers in the doc that it is not standard so it should be used with caution >> Do you know a standard to do similar things with Json ? << Personally I don't If you still think that it is critical to have such feature, could you please give us a list of all the annotations that you would like to have to manage the serialization into JSON format? At least I guess that you want one annotation to indicate that the field is transient, maybe another one to be able to change the name of the field and/or object, what else?	1	1	https://issues.jboss.org/browse/EXOJCR-1021
4110	EXOJCR-999	Code research result: SessionCleaner - SessionCleaner is holded by SessionRegistry. SessionRegistry is per-repository. So, there is nothing to do with Session Cleaner. FileCleaner: - there is WorkspaceFileCleanerholder that uses single FileCleaner thread and may be used as per-repository (I did a commit already). - I have found a two FileCleaners that may be created and started, but does not make any usefull works . In SysViewWorkspaceInitializer and BackupWorkspaceInitializer. These initilizer now uses FileCleaner from WorkspaceFileCleanerholder; - FileValueStorage - each FileValueStorage have own FileCleaner. And there is a trouble with TreeFileValueStorage, it uses extended TreeFileCleaner. LockRemover: - each LockManager have own LockRemover, but this LockRemover executes removeExpired(). This operation may be heavy. Do we need single LockRemover thread for all LockManagers?	1	1	https://issues.jboss.org/browse/EXOJCR-999
4111	EXOJCR-999	Hi Sergey, Here are my remarks about your work: 1. WorkerService: Do we really need poolNumber? if so it should be static otherwise the value will always be 1. But I believe that ExoContainerContext.getName()/RepositoryName should be more helpful for debugging, don't you agree? 2. WorkerService: It could make sense to allow to create Deamons instead of normal thread to avoid blocking the AS when we stop it 3. WorkerService: executePeriodically should return object of type ScheduledFuture<?> instead of ScheduledFuture to avoid warnings 4. LockRemover: lockRemoverTask should be of type ScheduledFuture<?> 5. LockRemover: The method start should ignore cases where the lockRemoverTask is not null instead of calling stop method to prevent any issues 6. The FileCleaner should also be based on the WorkerService to be able to have more than one thread for the whole repository if needed 7. The new parameters should be described into the doc	1	1	https://issues.jboss.org/browse/EXOJCR-999

#	Requirement	Questions	Answered	Successfully Answered	URL
4112	EXOJCR-999	Multithread FileCleaner is a bit unclear for me. For now FileCleaner have a list of files that periodically cleaned. Each FileCleaner user may add files to this list How is it supposed to work as multithread? * There is many FileCleaner object , each have own file-list. These FileCleaners registered as tasks in WorkerService. What is bad - each call of getFileCleaner makes new class instance. Maybe you have own vision how it might work.	1	1	https://issues.jboss.org/browse/EXOJCR-999
4113	EXOJCR-998	Hi Sergey, Here are my first remarks: 1. Could you please remove old code instead of commenting it in order to have a code much more clear? 2. When you check if a given id is a NULL_ID, I don't think that it is necessary to use "equalsIgnoreCase", "equals" should be enough 3. In the method get(String parentId, QPathEntry name, ItemType itemType), if itemType == ItemType.PROPERTY and itemId equals NullNodeData.NULL_ID, it will return a NullNodeData instead of a Property. Which probably means that we need 2 other classes which will be NullItemData and NullPropertyData. NullNodeData should be used when itemType = UNKNOWN or NODE 4. The method "get(String id)" should return "getFromCacheById(id)" since those 2 methods do exactly the same things 5. When it is possible it would be cleaner to test the type of the item (instanceof NullItemData or NullPropertyData or NullNodeData) instead of testing if its path is null or its id equals NULL_ID 6. In putProperty(PropertyData prop, ModifyChildOption modifyListsOfChild), we should manage the case where the PropertyData is a NullPropertyData 7. Remove the method putNullNode, a manage null values directly in putNode and putProperty or ignore #6 and remove your changes related to null values in putNode, otherwise the code doesn't look consistent 8. In CacheableWorkspaceDataManager, when a node has no properties or sub nodes, store an empty list into the cache	1	1	https://issues.jboss.org/browse/EXOJCR-998
4114	EXOJCR-992	This is clearly not a bug at best it is an improvement but frankly speaking I don't believe that it is a good approach to manipulate Strings to create your result since it is really error prone, for example if your name contains a special character like '<' in the helloxml method or ':' in the hello method, your result will be incorrect. You should manipulate objects instead (which is for me much more convenient for developers) and let the framework de-serialize and serialize the objects for you. Andrey what do you think about that?	1	1	https://issues.jboss.org/browse/EXOJCR-992
4115	EXOJCR-991	Why need to set mixin via WebDAV? We can simple set directly to node via Node.addMixin(String mixinName) method.	0	0	https://issues.jboss.org/browse/EXOJCR-991
4116	EXOJCR-985	could you please describe more what you mean?	1	1	https://issues.jboss.org/browse/EXOJCR-985
4117	EXOJCR-934	Yes, I know that the way to add listeners is supposed to be via the component-plugin mechanism. This is actually what I used first. However this approach has a major drawback for my use case: I cannot retrieve the listener instance created by the kernel anymore and I need to get that instance so that I can actually pass it to other objects (the component is bridging GateIn session events so that the WSRP module can be made aware of them). More generally speaking, if a component is assigned a different name in the xml configuration, doesn't that mean that the component will be instantiated twice? I need the same component to handle both events, so that wouldn't fit my use case either. Globally, I think it's a rather dubious design to change the name of a component in a method that should be without side-effect to the passed object, so yes, I think that the addListener(String eventName, Listener listener) should be the proper way to add a listener and that it shouldn't change the passed object.	1	1	https://issues.jboss.org/browse/EXOJCR-934
4118	EXOJCR-920	Can someone assign this JIRA to me? thanks.	0	0	https://issues.jboss.org/browse/EXOJCR-920

4120	EXOJCR-887	If so those errors are not a problem, maybe they should be warnings instead of errors, don't you agree? otherwise users could believe that it is an issue	1	1	https://issues.jboss.org/browse/EXOJCR-887
4121	EXOJCR-887	those exceptions happen because all the nodes try to create the tables and indexes at the same time. If they already exist, it means that the work has already been done so it is not a problem as soon as it doesn't prevent the node to start and work normally, don't you agree? If not what do you propose?	0	0	https://issues.jboss.org/browse/EXOJCR-887

#	Requirement	Questions	Answered	Successfully Answered	URL
4122	EXOJCR-886	Thnx. Also question about time-date format for spreadsheets. Currently "yyyy-MM-dd HH:mm:ss.SSSZ" is used, so that TIMEZONE of host machine added. May be timezone should be removed? WDYT? Because of it, jcr-index created on different machines can be a bit different (it include some data from host machine settings), tests for this are also a bit more complicated, since they can be launched in different time-zones.	1	1	https://issues.jboss.org/browse/EXOJCR-886
4123	EXOJCR-874	Could you get the same profiler results with JCR 1.12.x to identify the differences?	1	1	https://issues.jboss.org/browse/EXOJCR-874
4124	EXOJCR-783	I've just checked your patch and I did not see any relationship with this task, so I don't really understand why it is required only for this particular feature. Don't we have to apply it anyway? If so please create a dedicated JIRA. BTW please note that: 1. The fix versions are 1.12 and 1.14 and the privileged block is only for 1.14 2. The feature will be proposed only if it doesn't affect too much the performance on GateIn, if you need twice more time to launch GateIn, I really believe that it is useless, so we need to check it first	1	1	https://issues.jboss.org/browse/EXOJCR-783
4125	EXOJCR-783	What about the fix related to the "privileged block"? Is it always required or it is only required for this task?	1	1	https://issues.jboss.org/browse/EXOJCR-783
4126	EXOJCR-778	Protect means check permissions for each method mentioned? Do you mean one permission for all Repository methods or a dedicated for each method?	0	0	https://issues.jboss.org/browse/EXOJCR-778
4127	EXOJCR-778	<< Protect means check permissions for each method mentioned? >> Yes << Do you mean one permission for all Repository methods or a dedicated for each method? >> One generic RuntimePermission for all those methods could me enough such as for example "manageRepository"	1	1	https://issues.jboss.org/browse/EXOJCR-778
4128	EXOJCR-769	@Julien, Could you help please, where is the source code which need to be ported?	0	0	https://issues.jboss.org/browse/EXOJCR-769
4129	EXOJCR-769	What about the most important class aka RestManagementProvider.java? Why didn't you port it? Without the provider it cannot work	1	1	https://issues.jboss.org/browse/EXOJCR-769
4130	EXOJCR-752	I understand you point of view however don't forget that jcr 1.12 and 1.14 must remain compatible which means that the old method such as DocumentReader.getContentAsText must still be supported. I guess that we will need to create a new interface such as AdvancedDocumentReader that will extends DocumentReader that will propose new methods such as : * Reader getContentAsReader(InputStream is, String encoding) throws IOException, DocumentReadException * Reader getContentAsReader(InputStream is) throws IOException, DocumentReadException So in our code we will first check if the instance of DocumentReader found is a subclass of AdvancedDocumentReader, if so we will use getContentAsReader otherwise we will use getContentAsText. By default in JCR 1.14, we will propose only one implementation of AdvancedDocumentReader which will be the Tika implementation BTW in which format do we get the metadata with Tika? Is-it a Map or a Properties object? Because according to the type we could have to add another method in AdvancedDocumentReader for the metadata	1	1	https://issues.jboss.org/browse/EXOJCR-752
4131	EXOJCR-749	What I expect for this task: 1. An implementation of the new interface "AdvancedDocumentReader" for Apache Tika 2. This implementation will be registered into the configuration file (the old ones will be removed) with the same mimetypes in order to support at least the same file format 3. The configuration files of Tika must be retrieved thanks to the ConfigurationManager in order to rely on eXo kernel	0	0	https://issues.jboss.org/browse/EXOJCR-749
4132	EXOJCR-749	General thoughts, perhaps at JCR 1.15. Why do we need DocumentReaderService? What it can do this do not make Tika? In my opinion Tika API has a well sophisticated and well-supported structure. DocumentReaderService not added anything new to them. I believe that to maintain it in the future makes no sense and it would be logical to move to the exo-configuration only the configuration of Tika service.	0	0	https://issues.jboss.org/browse/EXOJCR-749
4133	EXOJCR-744	R&D "LIC-709" branch successfully upgraded to lucene 2.9. What was changed/done: 1. Query class: changed definition (visibility modifier) of createWeight(..) method. 2. Interface Weight replaced with it's abstract type. 3. Weight.score(IndexReader) replaced with Weight.score(IndexReader, boolean, boolean). 4. IndexReader.getSequenceReaders() introduced and used in Lucene internals for per-segment search and caching. In our custom IndexReader should be overridden and return null (This is safe solution and confirmed within lucene's mailing list by Simon Willnauer). 5. FSdirectory.getDirectory(...) replaced with FSdirectory.open(...). But open(...) doesn't create a directory structure anymore.	0	0	https://issues.jboss.org/browse/EXOJCR-744
4134	EXOJCR-739	I've added files: - product-exo-jcr-as-jboss-ear.xml - product-exo-jcr-as-jonas-ear.xml - product-exo-jcr-as-tomcat6.xml to <modules> in jcr/applications/pom.xml so maven will use them like simple modules and will update version automatically. Other changes related to this issue: 1. artifactId was changed in this files now it is: exo.jcr.applications.jboss exo.jcr.applications.jonas exo.jcr.applications.tomcat instead of exo.product.jcr 2. Packaging of poms chnged to pom (was jar) 3. A special profile for deploying named "deploy" added. This was done to reduce time of jcr build. We don't need to deploy application servers each time we build JCR 4. to build Application server run "mvn -f product-exo-jcr-as-tomcat6.xml clean install -P deploy" command.	0	0	https://issues.jboss.org/browse/EXOJCR-739
4135	EXOJCR-725	Which collation is proposed to be used in MySQL and MSSQL dialects?	0	0	https://issues.jboss.org/browse/EXOJCR-725
4136	EXOJCR-725	A collation usually set on a database not on a table or column, on MySQL our DBA executes: create database jcrtest default charset latin1 collate latin1_gneral_cs;. And from this point of view I manage this issue. JCR creates tables but not a database itself, it should be ready before first start of JCR service. If you haven't an opportunity to ask a DBA for a right db, we have a new service in 1.12 - org.exoplatform.services.database.creator.DBCreator. This service cares about a stuff JCR doesn't - a database creation (via ready script) - http://wiki.exoplatform.org/xwiki/bin/view/Core/Database+Creator (docs also in docbook on svn) An application can configure it: {code:xml} <component> <key>org.exoplatform.services.database.creator.DBCreator</key> <type>org.exoplatform.services.database.creator.DBCreator</type> <init-params> <properties-param> <name>db-connection</name> <description>database connection properties</description> <property name="driverClassName" value="com.mysql.jdbc.Driver" /> <property name="url" value="jdbc:mysql://localhost/" /> <property name="username" value="root" /> <property name="password" value="admin" /> </properties-param> <properties-param> <name>db-creation</name> <description>database creation properties</description> <property name="scriptPath" value="createdb.sql" /> <property name="username" value="testuser" /> <property name="password" value="testpwd" /> </properties-param> </init-params> </component> {code} Where createdb.sql will contains smth like: create database jcrtest default charset latin1 collate latin1_gneral_cs. Then create a dedicated database calling DBCreator.createDatabase(String name). This database should be bind to a JNDI with a DataSource name will be used in JCR. It's can be done via InitialContextInitializer.bind(String, String, String, String, Map<String, String>). Will it be useful?	1	0	https://issues.jboss.org/browse/EXOJCR-725

#	Requirement	Questions	Answered	Successfully Answered	URL
4137	EXOJCR-718	Can we add REST binding in addition to JMX ? REST has the advantage of only requiring a browser to invoke the operation. For support it is a great advantage.	1	1	https://issues.jboss.org/browse/EXOJCR-718
4138	EXOJCR-718	Is REST secured enough for such feature?	1	1	https://issues.jboss.org/browse/EXOJCR-718
4139	EXOJCR-716	Abstract of what do do : Leverage the ContainerLifeCyclePlugin inside the JobSchedulerService so that we can start the job only when all other components have finished starting. Step 1 : Hook the JobSchedulerService to ContainerLifeCyclePlugin public JobSchedulerService(ExoContainerContext ctx) { ExoContainer container = ctx.getContainer(); ctx.addContainerLifecylePlugin(new JobStartupController(this)); } Step 2 : JobStartupController This component will be notified when the container has started. It is responsible for accumulating all job initialization request and temporize them in a queue class JobStartupController extends BaseContainerLifecyclePlugin { @Override public void startContainer(ExoContainer container) throws Exception { processJobQueue(); // execute all accumulated jobs allowJobsToStart(); // the queue will no longer block } } Step 3 : the Job queue instead of forwarding operations to the underlying quartz instance, all operations are queued until a glag allows the queue to be processed.	0	0	https://issues.jboss.org/browse/EXOJCR-716
4140	EXOJCR-711	From commit comment: In J2EEServerInfo, a "System.out.println" has been replaced with a "log.info". At time of J2EEServerInfo use the logging system can be not yet initialized, e.g. on the system start. In this case we can lost log output. Did you checked this usecase with GateIn on Tomcat/JBoss?	1	0	https://issues.jboss.org/browse/EXOJCR-711
4141	EXOJCR-693	This article is already ported into docbook: https://svn.jboss.org/repos/exo-jcr/jcr/trunk/docs/reference/en/src/main/docbook/en-US/modules/jcr/multilanguage-support.xml Is that what you meant ?	1	0	https://issues.jboss.org/browse/EXOJCR-693
4142	EXOJCR-692	>> Method WorkspaceStorageCache.getChildNodesCount() does not help us. We in any case should get all childs from cache to be sure that all of them are not evicted. << Why? we don't care whether the nodes are evicted or not, we only want to know how many child nodes we have into the cache that can be known thanks to the total amount of keys found into the cache. Node.hasNodes is an important method for the JCR, so we need to try to improve the perfs, so please at least test this solution in order to know if it improves the perf or not.	1	1	https://issues.jboss.org/browse/EXOJCR-692
4143	EXOJCR-692	Good news, what did you do to get those results?	1	1	https://issues.jboss.org/browse/EXOJCR-692
4144	EXOJCR-684	Upgrade to 2.9 lucene on LIC-709 "Single index" was finished and NRT was tried for the first time. Result of first daily benchmark attached. In general, this POC shows good results, much similar to original index implementation, some tests even show 3x increase, but some of them show decrease. The reason of decrease in absolutely unknown up to now and should be profiled. * Single-Index currently has no RedoLog (comparing to trunk's version, have a RedoLog, that writes some bytes of data on FS, each time save() is called). Also some aspects of NRT usage are now under investigation. They are: * When commit is invoked and how can it be listened and/or controlled. * When optimize is called and how can it be controlled. * Performance decrease in some tests. * NRT interns and failover capabilities/external possibilities.	0	0	https://issues.jboss.org/browse/EXOJCR-684
4145	EXOJCR-684	What is known up to now: * autoCommit feature is deprecated in 2.9+ and should be controlled out of Lucene. So we can manage commit operation in the same way as before, providing the same "commit on idle", "commit when buffer filled" features. * There is an optimize operation, that re-builds index, making search faster. This procedure is / should be launched only manually and periodically; * failover facilities can be provided using the same RedoLog-based mechanism. Having control over the commit, we can easily manage and cleanup RedoLog in time; So SingleIndex with NRT (near real time) search can serve as an indexing subsystem in JCR replacing current MultiIndex implementation. Making it as production ready system needs some time to implement missing in POC features and have reasonable set of tests. Benefits: * Much simpler code, much easy to support; Disadvantages: * Time to implement/test; * Not tested in production, as existing impl. Under investigation: * Search should be a bit faster with larger indexes. * Possibly this implementation can give performance increase in concurrent environment, when multiple threads are writing and/or reading. Note: * is not directly affiliated with clustered implementation.	0	0	https://issues.jboss.org/browse/EXOJCR-684
4146	EXOJCR-680	What you propose won't work with FTP so for me it cannot be done this way. Moreover, you assume that the content is in HTML format which is not always the case. And finally this feature doesn't seem to be valid according to the JAX-RS specification. What do you want to do exactly? You would like to see eXo JCR index your HTML metadata when you add it though Webdav and/or FTP, is-it what you are trying to do?	1	1	https://issues.jboss.org/browse/EXOJCR-680
4147	EXOJCR-640	ok, but how can I test this JS to be sure everything is fine? Because PDFBox groupId in maven's repositories was changed from "pdfbox" to "org.apache.pdfbox" and this should be tested.	0	0	https://issues.jboss.org/browse/EXOJCR-640
4148	EXOJCR-634	The "replace forbidden chars" mechanism was ported. By default "replace forbidden chars" mechanism is enabled. By default the forbidden chars is ':', '[', ']', '*', '"', '\', '|'. By default the forbidden chars will be replaced to '_'. How to configuration in ftp config when need change defaults config : <value-param> <name>replace-forbidden-chars</name> <value>true</value> </value-param> <value-param> <name>forbidden-chars</name> <value>:[]*'"|</value> </value-param> <value-param> <name>replace-char</name> <value>_</value> </value-param>	0	0	https://issues.jboss.org/browse/EXOJCR-634
4149	EXOJCR-625	@Dmytro is-this task over? if not what else do we need to do?	1	0	https://issues.jboss.org/browse/EXOJCR-625
4150	EXOJCR-624	Since you won't fixed this issue. Can you let us know where/how you intend to implement it with Tika ?	1	0	https://issues.jboss.org/browse/EXOJCR-624
4151	EXOJCR-610	Which JCR features should be described first, i.e. which are most used in portal applications now?	1	0	https://issues.jboss.org/browse/EXOJCR-610
4152	EXOJCR-610	What kinds of guidance it should cover? - just API (huge doc, but means the spec retell) - any predefined usecases (dedicated to a task(s)) - integration questions (dedicated also, but to which other apps so)	0	0	https://issues.jboss.org/browse/EXOJCR-610

4154	EXOJCR-592	What was done: query FIND_PROPERTIES_BY_PARENTID_CQ was updated in next order - fields in where constraint was sorted according to exist indexes. Oracle_GetChildNodesCQ graph shows that average execution time of old getChildNodes and getChildProperties queries are growing. Oracle_NewGetChildNodesCQ graph shows that average execution time of new getChildNodes query do not grows.	1	1	https://issues.jboss.org/browse/EXOJCR-592
4155	EXOJCR-583	What can works on JCR 1.12.1-GA-SNAPSHOT with expected conditions?	1	1	https://issues.jboss.org/browse/EXOJCR-583
4156	EXOJCR-551	To make the task JCR related please: 1. Describe the usecase in term of JCR only (i.e. use Node and/or Property without 'page') 2. Describe exact nodetype we should test and how to connect it to a Nodes/Properties given via parameters reads/writes. How those related methods parameters will be calculated or will be read from the configuration? 3. Should nodetype be configurable or hardcoded? 4. Is it a benchmark test or something else? 5. If case of a run on several physical JCRs, should it be synchronous start assuming that we need an initial node start or a manual start? 6. What the tests will measure? One operation time/tps (read or/and write?), whole tests time, other parameters. 7. How to manage the execution of the usecases: by time or by iterations? 8. How to treat results if run on several severs? Add all results, average result, other.	0	0	https://issues.jboss.org/browse/EXOJCR-551
4157	EXOJCR-551	About usage of JCR-sessions. Should session be one per usecase or one per scenario? I.e. 1) Session is one per usecase (per page in Your's terms) and it is opened-closed few times per scenario: read() { session = repository.login(); session.getNode(); session.logout(); } doRun() { read(); read(); write(); } 2) One session per-scenario read(Session session) { session.getNode(...); } doRun() { session = repository.login(); ... read(session); read(session); write(session); ... session.logout(); }	0	0	https://issues.jboss.org/browse/EXOJCR-551

#	Requirement	Questions	Answered	Successfully Answered	URL
4158	EXOJCR-551	what we have done. Test PageUsecasesTest from package org.exoplatform.jcr.benchmark.usecases.portal implements usecases mentioned in issue. On prepare it reads configuration and creates tree of nodes with configured depth. node1 node11 node111 node112 node12 node121 node122 node2 ... Configuration options are: * PREPARE parameters initialization depth, by default 2 is used: <!-- if parameter is not defined, default value "2" is used --> <param name="exo.prepare.depth" value="2" /> child nodes number <!-- if parameter is not defined, default value "10" is used --> <param name="exo.prepare.nodesPerLevel" value="10" /> String property length <!-- if parameter is not defined, default value "64" is used --> <param name="exo.data.stringLength" value="64" /> Number of values in multivalued property <!-- if parameter is not defined, default value "4" is used --> <param name="exo.data.multiValueSize" value="4" /> Size of randomly generated binary value or path to file. If nothing configured, random binary array of 1024 bytes is used <!-- if no binary parameter defined, default value "exo.data.binarySize=1024" is used --> <!--param name="exo.data.binaryPath" value="file.txt" /--> <param name="exo.data.binarySize" value="1024" /> Synchronization options. If nothing configured japex will run doRun as soon as latest doPrepare finishes. If "manual" is used, then after configured number ("exo.waitThread") of doPrepare finishes, it will ask to press a key to start doRun. "exo.waitThread" must be equals to the number of threads configured in japex driver. <!-- how to sunchronize cluster nodes. Default value is NONE --> <!--param name="exo.synchronisation" value="manual"/> <param name="exo.waitThread" value="5"/--> To define whether to remove or not the tree of nodes created for test <!-- Defines whether cleanup created nodes on finish or not. True by default. --> <param name="exo.finish.cleanup" value="false" /> Set scenario to perform. On each doRun only one "page" action will be performed. <!-- String containing scenario in form of usecases separated by ";". Each usecase can have a multiplier, defining that this usecase should be perform few times or may not have it, notifying single invocation. Each usecase has list of argument. Read and ReadAnon usecases has 2 arguments (Number of nodes and properties to read). Write usecase has 5 arguments: number of removed, added, modified properties and removed, added nodes. All strings are CASE INSENSITIVE and whitespaces between elements are skipped. --> <param name="exo.scenario.string" value="2*ReadAnon(2,3);8*Read(2,3);Write(2,3,1,1)" /> Existing actions: * ReadAnon(x,y), Read(x,y) Action that reads x nodes and for each node it reads y properties. ReadAnon uses anonymous session for operations. * Write(w,x,y,z) Action removes w properties, sets x properties, removes y nodes and adds z nodes. What is done in another way. 1. For stability of results, on each operation the node of latest level is used. (i.e. node121 on diagram above). For add/remove node the node of previous level is used (i.e node11). This is done in such a way, cause node.getNodes() (get all the child nodes) is rather heavy operation and if it would be called for different actions different number or times, the result of the test will have some chaotic manner. 2. JCR doesn't have "addProperty" and checking each time what properties are missing in node - will require read operation for all the 20 properties to find what is missing. so only "setProperty" operation is performed, instead of add and modify operations.	0	0	https://issues.jboss.org/browse/EXOJCR-551
4159	EXOJCR-536	How would you like to configure the directory name "exo-conf"? with a JVM parameter?	1	1	https://issues.jboss.org/browse/EXOJCR-536
4160	EXOJCR-535	It's not clear how current implementation - versions storage in system workspace is worse. Can you point the benefits visible from your side within a dedicated versionned-workspace? Only the sizing issue is visible now. And a migration question will be an another complicated task. At other hand JCR spec describes a version storage as a some place visible in each workspace at the path /jcr:system/jcr:versionStorage (8.2.2.1 jcr:versionStorage). I.e. we can store in hidden workspace or even directly in special persistence. But it's a big enough rework of JCR core. So, the benefits question interesting first.	1	0	https://issues.jboss.org/browse/EXOJCR-535
4161	EXOJCR-528	How do you define settings for the default portal ?	1	1	https://issues.jboss.org/browse/EXOJCR-528
4162	EXOJCR-528	<< How do you define settings for the default portal ? >> I don't understand your question, can you describe a concrete usecase?	0	0	https://issues.jboss.org/browse/EXOJCR-528
4163	EXOJCR-517	Jeremi, this issue not clear for our WS guys. I let Andrew to ask technical questions. But if the solution already exists (you link to japanese code) and you found it applicable, can you implement it or provide a patch with possible code? At least it will make the understanding of the task more clear.	0	0	https://issues.jboss.org/browse/EXOJCR-517
4164	EXOJCR-517	This japanese code is not application as it is. It needs to use the exo's user base. @Andrew, What is not clear?	1	1	https://issues.jboss.org/browse/EXOJCR-517
4165	EXOJCR-517	Is it what you mind or can we adapt existed code ?	1	1	https://issues.jboss.org/browse/EXOJCR-517
4166	EXOJCR-517	Have you looked at the the documentation I sent you, and at the code? The point is to validate a signature and if it's valid, to authenticate the user using opensocial_viewer_id. For exemple, it's something that could be really useful for the IDE since it would remove the need to do the basic auth.	1	1	https://issues.jboss.org/browse/EXOJCR-517
4167	EXOJCR-480	As a JDBC user (JCR here) it's not clear why the user cannot use JDBC API fully and be involved into XA transaction transparently. JCR manages JDBC transactions itself and right work with JTA should looks as a sequence of JDBC commits (or rollbacks) executed in global transaction, then the global transaction will be committed and all data will be persisted (including committed via JDBC connections; but rolled back data do not). Why only rollback causes a problem so? And why JDBC commit is ok so? Can be such behaviour (transparency) configured via JBoss Transaction Service or other XA related stuff?	0	0	https://issues.jboss.org/browse/EXOJCR-480
4168	EXOJCR-480	Did you configure the DataSourceProvider as described here http://docs.jboss.org/exojcr/1.14.0-CR4/developer/en-US/html/ch-data-source-provider.html ? Indeed by default all the datasources are considered as non managed.	1	1	https://issues.jboss.org/browse/EXOJCR-480
4169	EXOJCR-480	What is the full stack trace?	1	1	https://issues.jboss.org/browse/EXOJCR-480
4170	EXOJCR-480	Could you please provide your binary to allow me to test it?	1	1	https://issues.jboss.org/browse/EXOJCR-480
4171	EXOJCR-455	Have you seen this article? http://www-01.ibm.com/support/docview.wss?rs=2004&context=SSVHZU&dc=DB550&uid=swg1IZ36922&loc=en_US&cs=UTF-8&lang=en&rss=ct2004tivoli	0	0	https://issues.jboss.org/browse/EXOJCR-455
4172	EXOJCR-439	Why do we need that? since it will be fixed by EXOJCR-434. The variables like ${cacheloader.lock.datasource} can already be used in the repository configuration file. So if this configuration is in repository configuration file, we have no need to do extract task like this	0	0	https://issues.jboss.org/browse/EXOJCR-439
4173	EXOJCR-430	Actually, I would like to simplify that and avoid to have many files to maintain. So we need to have a discussion on how to make that easy at the configuration level. What I mean by that is the capability to have JCR "generate" the configuration for JBoss Cache programmatically because all the files are the same. The idea would be to have in repository-configuration.xml a setting where we would have <cluster>true</cluster> and it would configure JBoss Cache in the right fashion.	1	1	https://issues.jboss.org/browse/EXOJCR-430

#	Requirement	Questions	Answered	Successfully Answered	URL
4174	EXOJCR-422	Hi Alex, I have some remarks about your work: 1. in PDFDocumentReader.java, in your error message, you wrote "documet" instead of "document". 2. Your solution is not generic enough, it makes no sense to have a PDFDocumentReadException in a generic class such as NodeIndexer, so could you please for example rename PDFDocumentReadException in DocumentReadException to make it more generic	0	0	https://issues.jboss.org/browse/EXOJCR-422
4175	EXOJCR-420	What will be a criteria for a decision for "what is a best"? From my side it can be: - Better performance of API operations (current daily and load tests), but this tests don't cover usage described in the issue, so it's only for "ping" testing - Special tests written assuming keeping of JCR items on client side, memory consumption is a point there. We have to write such tests, so create a subtask for it.	1	1	https://issues.jboss.org/browse/EXOJCR-420
4176	EXOJCR-420	In which way to measure and in which tests (new?): 1. memory usage 2. cache misses 3. performances ? Currently we can use performance only from daily/weekly tests in TPSes.	1	1	https://issues.jboss.org/browse/EXOJCR-420
4177	EXOJCR-420	Hi Anatoliy, Could you please also test with the Weak Value HashMap from the google collections http://code.google.com/p/google-collections (maven repo: http://repo1.maven.org/maven2/com/google/collections/google-collections, blog entry: http://pietrowski.info/2010/01/guava-google-collections/). See the MapMaker http://google-collections.googlecode.com/svn/trunk/javadoc/com/google/common/collect/MapMaker.html.	1	1	https://issues.jboss.org/browse/EXOJCR-420
4178	EXOJCR-420	Nicolas, we have tested WeakValueHashMap and WeakHashMap with WeakReference value and the last shows better results of values GCing (ItemImpl instances released quickly here). What a reason of experiment with Google Collections here?	0	0	https://issues.jboss.org/browse/EXOJCR-420
4179	EXOJCR-392	Is-this still up to date?	0	0	https://issues.jboss.org/browse/EXOJCR-392
4180	EXOJCR-392	In addition to previous version of bug fix, there is another way. We can change ChangesLog of orderBefore. If this ChangesLog will contain ADDED and REMOVED states, for all affected nodes (reordered nodes and child nodes), cache will update all nodes correctly. What is bad - if reordered node will contain a big childs tree, changesLog will be huge. This method has slower performance than previous - because full node tree will be removed and added in cache, instead of list of child nodes will be fetched only if cache do not contains such one. What is good - this is very simple way to fix this bug.	0	0	https://issues.jboss.org/browse/EXOJCR-392
4181	EXOJCR-392	JDBCStorageConnection it's only an impl of WorkspaceStorageConnection interface, we have several implementations of it. Do you propose to change our internal API (WorkspaceStorageConnection) once again? Another point: the cache knows nothing about persistence, contract of cache is clear now. But with this change we'll mix the cache and persistence responsibilities. And we still will traverse a whole subtree in the cache. With such success we can just traverse a whole subtree and remove Items with descendant path of reordered node. It's the approach we have used in old impl cache. And it will be more efficient comparing to use of a database to fix cache content. So let select from two: - traverse cache and remove descendant items - fill changes log with all affected items WDYT?	0	0	https://issues.jboss.org/browse/EXOJCR-392
4182	EXOJCR-392	BTW how did we fix this issue with the old JCR Cache?	1	1	https://issues.jboss.org/browse/EXOJCR-392
4183	EXOJCR-392	Removing all nodes tree on CHILD_NODES_LIST eviction - do not guarantee cache consistence. Lets see the usecase. we have such nodes /node1[3]/child1/child2/child3 Cache do not have full nodes tree (those nodes was added many time ago, and info about those nodes already removed by eviction). Than: - node1[3] and child3 nodes are added to cache again; - node1[3] is reordered; There is no chains between node1[3] and child3, so updateTreePath can not find and update child3. So, there is two possible decision: - clean cache on sibling reordering; - check all items in cache - is it descendant of reordered node?. Second one is no so bad, as it seemed at first glance: - iteration is hard operation, but it will be executed only on samename siblings; - there is no additional operations on eviction; - we do not need to bother about links to child;	0	0	https://issues.jboss.org/browse/EXOJCR-392
4184	EXOJCR-391	Working under this task, I've faced such an impediment: Source: org.exoplatform.services.jcr.api.lock.TestLock Description: Node has child-node "bar" and property "bar". Later NodeIndexer (line 404) asks property from DM to get property's values. And it returns Node instead of property. Why it was working before? Before changing cache logic listChildNodes returned properties with values and everything was great. Status: Solved : use getItemData(String uuid) instead of getItemData(String parent, QName name).	0	0	https://issues.jboss.org/browse/EXOJCR-391
4185	EXOJCR-388	Do we have to synchronize all dependencies versions ?	0	0	https://issues.jboss.org/browse/EXOJCR-388

4186	EXOJCR-324	sun.nio.ch.FileChannelImpl.map(FileChannelImpl.java:731) at sun.nio.ch.FileChannelImpl.transferFromFileChannel(FileChannelImpl.java:540) at sun.nio.ch.FileChannelImpl.transferFrom(FileChannelImpl.java:603) at org.exoplatform.services.jcr.impl.storage.value.fs.operations.ValueFileIOHelper.copy(ValueFileIOHelper.java:263) at org.exoplatform.services.jcr.impl.storage.value.fs.operations.ValueFileIOHelper.copyClose(ValueFileIOHelper.java:321) at org.exoplatform.services.jcr.impl.storage.value.fs.operations.ValueFileIOHelper.writeValue(ValueFileIOHelper.java:168) at org.exoplatform.services.jcr.impl.storage.value.fs.operations.WriteValue.commit(WriteValue.java:104) at org.exoplatform.services.jcr.impl.storage.value.fs.FileIOChannel.commit(FileIOChannel.java:129) at org.exoplatform.services.jcr.impl.storage.jdbc.JDBCStorageConnection.commit(JDBCStorageConnection.java:305) at org.exoplatform.services.jcr.impl.dataflow.persistent.WorkspacePersistentDataManager$ChangesLogPersister.commit(WorkspacePersistentDataManager.java:278) at org.exoplatform.services.jcr.impl.dataflow.persistent.WorkspacePersistentDataManager.save(WorkspacePersistentDataManager.java:251) at org.exoplatform.services.jcr.impl.dataflow.persistent.ACLInheritanceSupportedWorkspaceDataManager.save(ACLInheritanceSupportedWorkspaceDataManager.java:214) at org.exoplatform.services.jcr.impl.dataflow.persistent.VersionableWorkspaceDataManager.save(VersionableWorkspaceDataManager.java:235) at org.exoplatform.services.jcr.impl.dataflow.session.TransactionableDataManager.save(TransactionableDataManager.java:298) at org.exoplatform.services.jcr.impl.core.SessionDataManager.commit(SessionDataManager.java:1133) at org.exoplatform.services.jcr.impl.core.ItemImpl.save(ItemImpl.java:649) at org.exoplatform.services.jcr.impl.storage.fs.TestRandomValueIO.testUpdate_BigToBigValue(TestRandomValueIO.java:434) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at junit.framework.TestCase.runTest(TestCase.java:164) at junit.framework.TestCase.runBare(TestCase.java:130) at junit.framework.TestResult$1.protect(TestResult.java:106) at junit.framework.TestResult.runProtected(TestResult.java:124) at junit.framework.TestResult.run(TestResult.java:109) at junit.framework.TestCase.run(TestCase.java:120) at junit.framework.TestSuite.runTest(TestSuite.java:230) at junit.framework.TestSuite.run(TestSuite.java:225) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at org.apache.maven.surefire.junit.JUnitTestSet.execute(JUnitTestSet.java:213) at org.apache.maven.surefire.suite.AbstractDirectoryTestSuite.executeTestSet(AbstractDirectoryTestSuite.java:140) at org.apache.maven.surefire.suite.AbstractDirectoryTestSuite.execute(AbstractDirectoryTestSuite.java:127) at org.apache.maven.surefire.Surefire.run(Surefire.java:177)	0	0	https://issues.jboss.org/browse/EXOJCR-324
4187	EXOJCR-302	- Properties may hav not value, so new getChildPropertiesData query must support this usecase. This query is incorrect because property may have not value GET_PROPERTIES_BY_PARENTID = "select I.*, V.ORDER_NUM, V.DATA, V.STORAGE_DESC from JCR_MITEM I, JCR_MVALUE V" + " where I.I_CLASS=2 and I.PARENT_ID=? and V.PROPERTY_ID=I.ID order by I.ID"; This works as expected: GET_PROPERTIES_BY_PARENTID = "select I.*, V.ORDER_NUM, V.DATA, V.STORAGE_DESC from JCR_MITEM I LEFT OUTER JOIN JCR_MVALUE V ON (V.PROPERTY_ID=I.ID)" + " where I.I_CLASS=2 and I.PARENT_ID=? order by ID, ORDER_NUM"; - Reference property may be multivalued and values may contain same uuid. So getReferencesData must return same property many times for this uuid. With new query it's impossible (it returns single property, but values count is multiplicated); FIND_REFERENCE_PROPERTIES = "select P.ID, P.PARENT_ID, P.VERSION, P.P_TYPE, P.P_MULTIVALUED, P.NAME, V.ORDER_NUM, V.DATA, V.STORAGE_DESC" + " from JCR_MREF R, JCR_MITEM P, JCR_MVALUE V" + " where R.NODE_ID=? and P.ID=R.PROPERTY_ID and P.I_CLASS=2 and V.PROPERTY_ID=P.ID order by P.ID, V.ORDER_NUM";	0	0	https://issues.jboss.org/browse/EXOJCR-302
4188	EXOJCR-286	Webdav usecases: AddNode - uses webdav PUT method GetNode - uses webdav GET method RemoveNode - uses webdav DELETE method GetNodeByUUID - can't be test via webdav, because this operation is never directly used in webdav CreateProperty - uses webdav PROPPATCH nethod SetProperty - uses webdav PROPPATCH nethod on previosly created property. RemoveProperty - uses webdav PROPPATCH nethod on previosly created property. GetPropertyValue - has the same semantiv as GetNode usecase (webdav GET method reads and returns the value of "jcr:data" property)	0	0	https://issues.jboss.org/browse/EXOJCR-286
4189	EXOJCR-267	Here are my remarks : * The query is incorrect because of setMaxRows that cannot work here mostly due to the fact that we don't have one row per node since we get the properties primaryType, mixinTypes, owner and permissions at the same time for each node. So if your limit is 10, and you have one node with 7 properties and another node with 5, you will get 2 nodes instead of 10 and the second node won't have its 2 last properties which causes an inconsistency issue. * The value of fromOrderNum must be determinist since we use it as key to store the page content in the cache. The value should be of type 0, 1, 2, 3 (aka the page index) and so on because if you make it depend on the result set if the result set change (due to a delete, move, add...) we could face unpredictable bugs. *So I would even say that we need to replace fromOrderNum with pageIndex.* * In WorkspaceStorageCache, we need to add a method of type isChildNodesByPageSupported to be able to call getChildNodesData(NodeData) and return false directly when we call CacheableWorkspaceDataManager.getChildNodesDataByPage otherwise for implementation like LinkedWorkspaceStorageCacheImpl that doesn't support this feature the result will never be stored into the cache so it will be very slow. * In SessionDataManager.getChildNodesDataByPage and TransactionableDataManager.getChildNodesDataByPage, I don't really understand the merge logic: Why the code is different in those two methods ? What about the state isUnchaged() ? Why state.isRenamed() is treated exactly like isAdded() ? In case of isMixinChanged and isUpdated why simply checking if the id exists in the map instead of using the OrderNumber? I mean instead of: {code} childs.remove(state.getData()); if (minOrderNum <= data.getOrderNumber() && data.getOrderNumber() <= maxOrderNum) { childs.add(data); } {code} why not simply {code} if (childs.remove(state.getData())) { childs.add(data); } {code}	1	1	https://issues.jboss.org/browse/EXOJCR-267
4190	EXOJCR-267	Hi Nikolay, here are my remarks about your last commit: * 75 as min page size is quite big, could you please decrease it to 20? * Looking at the code, it looks like if the page set is < min, we will get a warning at each session creation which is too annoying, we should have this warning only once at workspace startup.	1	1	https://issues.jboss.org/browse/EXOJCR-267
4191	EXOJCR-265	To make the issue more clearer please provide next answers: How JCR will be used via JSON in external services for integration (example of ESB, other)? What are disadvantages of integration via XML (WebDAV) making us to use JSON?	0	0	https://issues.jboss.org/browse/EXOJCR-265

#	Requirement	Questions	Answered	Successfully Answered	URL
4192	EXOJCR-265	How JCR will be used via JSON in external services for integration (example of ESB, other)? It cans be anything a google gadget for example or a Flex application What are disadvantages of integration via XML (WebDAV) making us to use JSON? JSON is much lighter than XML due to the XML tags, so most of the architects now, prefer to use JSON instead of XML	0	0	https://issues.jboss.org/browse/EXOJCR-265
4193	EXOJCR-258	Doing lazy loading via several transactions can made such feature implementation even not possible. E.g. 1. we have 10 child nodes, read 5 on first read, other transaction deletes 6 of them. Will it be a okay to tell - no one node exists anymore? I.e. we tell that this Node has 5 childs (it's not a truth). 2. or we have 10 child nodes, read 5 on first read, other transaction deletes the parent node, we should throw RepositoryException (or InvalidItemState) exception but we already returned 5 of the deleted (i.e. API user used them assuming consistency). So, I'm back to lazy fetching from the ResultSet obtained on initial transaction (on method executed). The ResultSet will be from one JDBC transaction, it will be wrapped into Iterator implementation and fetched on hasNext()/next() calls. In this case the database will be responsible for consistency (and it's works well for many RDBMS, except of MySQL/MyISAM). And user will fetch all he/she could see on the Node.getNodes(). WDYT?	1	1	https://issues.jboss.org/browse/EXOJCR-258
4194	EXOJCR-198	Unfortunately, this change causes many stack-traces during tests (e.g. in Core). Running org.exoplatform.services.security.TestRolesExtractor Error of default config init: java.lang.Exception: unsupport war uri in this configuration service at org.exoplatform.container.configuration.ConfigurationManagerImpl.getURL(ConfigurationManagerImpl.java:297) at org.exoplatform.container.configuration.ConfigurationManagerImpl.getURL(ConfigurationManagerImpl.java:269) at org.exoplatform.container.configuration.ConfigurationManagerImpl.addConfiguration(ConfigurationManagerImpl.java:112) at org.exoplatform.container.StandaloneContainer.initDefaultConf(StandaloneContainer.java:329) at org.exoplatform.container.StandaloneContainer.getInstance(StandaloneContainer.java:131) at org.exoplatform.container.StandaloneContainer.getInstance(StandaloneContainer.java:87) at org.exoplatform.services.security.TestRolesExtractor.setUp(TestRolesExtractor.java:56) at junit.framework.TestCase.runBare(TestCase.java:128) at junit.framework.TestResult$1.protect(TestResult.java:106) at junit.framework.TestResult.runProtected(TestResult.java:124) at junit.framework.TestResult.run(TestResult.java:109) at junit.framework.TestCase.run(TestCase.java:120) at junit.framework.TestSuite.runTest(TestSuite.java:230) at junit.framework.TestSuite.run(TestSuite.java:225) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at org.apache.maven.surefire.junit.JUnitTestSet.execute(JUnitTestSet.java:213) at org.apache.maven.surefire.suite.AbstractDirectoryTestSuite.executeTestSet(AbstractDirectoryTestSuite.java:140) at org.apache.maven.surefire.suite.AbstractDirectoryTestSuite.execute(AbstractDirectoryTestSuite.java:165) at org.apache.maven.surefire.Surefire.run(Surefire.java:107) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at org.apache.maven.surefire.booter.SurefireBooter.runSuitesInProcess(SurefireBooter.java:289) at org.apache.maven.surefire.booter.SurefireBooter.main(SurefireBooter.java:1005) StandaloneContainer initialized using: file:/D:/Projects/eXo/dev/projects/projects-jboss/exo-jcr/core/trunk/component/security/core/target/test-classes/conf/st andalone/test-configuration.xml	0	0	https://issues.jboss.org/browse/EXOJCR-198
4195	EXOJCR-172	In exo.core.packaging.module there is a file https://anonsvn.jboss.org/repos/exo-jcr/core/trunk/packaging/module/dependencies.txt which contains a full dependencies tree of exo.core.packaging.module. Is this file needed for some functionality or it can be safetly removed ?	0	0	https://issues.jboss.org/browse/EXOJCR-172
4196	EXOJCR-164	Did you try to use -Prun-tck,run-its in the build configuration ?	0	0	https://issues.jboss.org/browse/EXOJCR-164
4197	EXOJCR-65	It's not a RegistryService bug. It's QName issue and it's applicable for ALL JCR internal names compares. QName.equals() based on hashcodes of namespace and name of both QName instances. Yes, hascode doesn't guaranty full 100% equality for varies of Strings used in namespace and name. But we do that for performance staring from JCR 1.5 (JCR-15) and it works ok for 99.9% of human-readable Items names. yes, hashcodes for strings bBbB and aaaa are same, but is it a real usecase? Tung, is it a customer issue? Or where eXo uses similar names? I prefer to have valuable motivation of the issue. Anatoty, investigate how we can improve the QName equality procedure optimal to a performance.	0	0	https://issues.jboss.org/browse/EXOJCR-65
4198	FABRIC-1213	http://fabric8.io/v2/forge.html Under Forge Addons "figure out whats available" should use "what's".	1	1	https://issues.jboss.org/browse/FABRIC-1213
4199	FABRIC-1213	http://fabric8.io/v2/faqGeneral.html "What Java versions is supported?" should be "versions are supported".	1	1	https://issues.jboss.org/browse/FABRIC-1213
4200	FABRIC-1180	I think that would work. I was thinking more along the lines of separation of concerns within the fabric. So that a plain old user on a plain old container has the ability to do whatever basic operations needed for his container; but more sensitive operations (maybe external container interactions) or sensitive znode paths in the container would require an admin-type auth; and fabric-modifying operations would require a fabric-admin-type auth. Is something like that feasible?	1	0	https://issues.jboss.org/browse/FABRIC-1180
4201	FABRIC-1180	The point about not sharing passwords with non-trusted entities is part of the larger issue of the overall security of the system, which we are strengthening with this issue. This added security could be what keeps an attacker from getting control of an entire fabric instead of only one node, or just limited access to one node. And if we're looking at expanding the types of registry components we're using in the long term, then now is the best time to make sure we have a more secure design to model as we grow. Back to my original question, is the separation of zk roles/concerns a feasible way of moving forward?	0	0	https://issues.jboss.org/browse/FABRIC-1180
4202	FABRIC-1180	Hiram, you're right-- it's not required per se, but addressing this issue was a condition of Product Security's approval of the Planning Phase Exit. And while I understand that implementing a hardening feature for what seems like a longshot as a security risk is not anyone's first priority, we want to manage such issues sooner, before they become a very high priority for urgent reasons. If the role-separation approach is feasible, could we move forward with that for 6.2.0? Thanks!	0	0	https://issues.jboss.org/browse/FABRIC-1180
4203	FABRIC-1150	Could you please file issues with SCM sync project (and link them here) that describe what is not working. I'd like this to work out of the box.	1	1	https://issues.jboss.org/browse/FABRIC-1150
4204	FABRIC-1084	Does turning on this option, affect every optional import specified in a feature or multiple features? Is it global?	0	0	https://issues.jboss.org/browse/FABRIC-1084
4205	FABRIC-1084	Is fabric version 7.4.0.redhat-62 the version that went out with Red Hat JBoss Fuse version 6.1 GA release?	0	0	https://issues.jboss.org/browse/FABRIC-1084

4215	FABRIC-812	Ideally, we would find and remove all places where the TCL is being set. Stuff that is supposed to run in an OSGi environment, should be able to do so without TCL. Any particular TCL value is likely going to be wrong. Does your fix work when you just unset the TCL?	0	0	https://issues.jboss.org/browse/FABRIC-812
4216	FABRIC-807	Do you mean freegeoip.net? It seems like the screenshot contains a typo (it says freegoip.net).	1	0	https://issues.jboss.org/browse/FABRIC-807
4217	FABRIC-796	The test fix is merged to master and 6.1.x branches	0	0	https://issues.jboss.org/browse/FABRIC-796
4218	FABRIC-739	An clarification / addition: A profile may also contain any kind of resources, e.g: i) a spring or blueprint descriptor (broker configuration, camel routes etc) ii) any kind of text resource an application may use (properties, xml, json yml etc). Those resources are displayed in profile-list in the section called "Resources". An additional option (--dispaly-resources) is available in 6.1 to display the content of those resources (the default behaviour is to just display their names). All those resources can be used by the app using the profile url handler.	1	1	https://issues.jboss.org/browse/FABRIC-739
4219	FABRIC-739	In the modifying profile configuration pid, there are the following cases we need to describe: i) Edit the pid in the editor (fabric:profile-edit --pid myPid myprofile will open myPid inside the cli text editor we have) ii) Edit the pid in line. When editing a pid in line there are the following cases we need to cover: i) value assignment to a specific key (is already covered). ii) appending a value to a delimited list (e.g. we want to add a url to a comma separated list of urls: fabric:profile-edit --append --pid myPid/myKey=newUrl myprofile) iii) removing a value to delemited list (e.g. we want to remove a url to a comma separated list of urls: fabric:profile-edit --remove --pid --pid myPid/myKey=newUrl myprofile) iv) removing the key completely (e.g. using the delete option) A perfect example of a case where we need to append/remove values to a delimited list is when adding maven repositories to a profile by appending/removing repository urls from the org.ops4j.pax.url.mvn.repositories key (usually directly in the default profile).	1	1	https://issues.jboss.org/browse/FABRIC-739
4220	FABRIC-730	Grzegorz, could you take a look? The biggest issue would be getting this to run in a reasonable amount of time... probably would have to boot up a container once and check all features against that. So a new test could go here: https://github.com/fabric8io/fabric8/tree/master/esb/esb-itests/extra/src/test/java/org/fusesource/esb/itests/extra and in that test you can use the features service to list all possible features to try: https://github.com/apache/karaf/blob/karaf-2.3.x/features/core/src/main/java/org/apache/karaf/features/FeaturesService.java#L72	0	0	https://issues.jboss.org/browse/FABRIC-730

4235	FABRIC-662	This issue was already fixed Unresolved constraint in bundle servicemix-eip Does it need to be merged to 6.1 branch?	1	1	https://issues.jboss.org/browse/FABRIC-662
4236	FABRIC-653	I found this {code} 405 ? Sl 20:59 /opt/jdk1.6.0_45/jre/bin/java -Xmx512M -Djava.awt.headless=true -jar /mnt/hudson/workspace/activemq-5.9.0.redhat-6-1-x-stable-dualjdk/activemq-unit-tests/target/surefire/surefirebooter4757849231766109607.jar /mnt/hudson/workspace/activemq-5.9.0.redhat-6-1-x-stable-dualjdk/activemq-unit-tests/target/surefire/surefire2173923929772988658tmp /mnt/hudson/workspace/activemq-5.9.0.redhat-6-1-x-stable-dualjdk/activemq-unit-tests/target/surefire/surefire817381951878609726tmp {code} It seems that there is a surefire process left over from a totally unrelated build job. Is it possible that the cleanup job interferes and perhaps deletes a tmp file that surefire needs in order to shut down correctly? If we cant find the root cause, we should include this condition in the kill-stale-processes.sh script	1	0	https://issues.jboss.org/browse/FABRIC-653
4237	FABRIC-646	The test should be split in 2: i) testJoin: Should be part of the smoke tests, as it test core fabric funcionality. ii) testJoinAndAddToEnsemble: Can be moved to an other test set, as it is actually a regression test.	0	0	https://issues.jboss.org/browse/FABRIC-646
4238	FABRIC-619	Thomas what is the status of this? What artifacts do you need published, and from what jobs?	0	0	https://issues.jboss.org/browse/FABRIC-619
4239	FABRIC-619	Still not available from any repo. Could you check it please? Remember that those artifacts are somehow no longer built in the nightly runs due to Thomas changes for the smoke test stuff. Those modules seem to be only built when using the release profile.	1	1	https://issues.jboss.org/browse/FABRIC-619
4240	FABRIC-619	Which job is publishing the artefacts?	1	1	https://issues.jboss.org/browse/FABRIC-619
4241	FABRIC-599	Would it be possible to force a reinstall of the bundle from Fabric whenever the bundle version changes? That would set the bundle location correctly but I am not sure what other drawbacks this approach would cause.	0	0	https://issues.jboss.org/browse/FABRIC-599
4242	FABRIC-517	Is this still used in IDE?	0	0	https://issues.jboss.org/browse/FABRIC-517
4243	FABRIC-508	Can we finally close this one? All the subtasks are resolved!	1	1	https://issues.jboss.org/browse/FABRIC-508
4244	FABRIC-502	After talking to Dave, we wanted to expand this feature a little bit to insure that clients who run in their own runtime environment can access resources in the fabric. For example, we have a rest service deployed in fabric across three machines. How can remote clients who can not user fabric-camel component connect? We believe the same mod_cluster/mod-proxy solution here will also cover this use case.	0	0	https://issues.jboss.org/browse/FABRIC-502
4245	FABRIC-409	Can you take a look at this one Willem?	1	1	https://issues.jboss.org/browse/FABRIC-409
4246	FABRIC-409	Hi Dejan, What's the error did you get? I tried to deploy the demo into jboss-fuse-6.0.0.redhat-015, I got the error {code} 2013-03-21 17:05:05,301 | ERROR | NAPSHOT-thread-1 | FabricLoadBalancerFeature | ? ? | 236 - org.fusesource.fabric.fabric-cxf - 7.2.0.redhat-015 | Cannot initialize the bus with FabricLoadBalancerFeature due to java.util.concurrent.TimeoutException: timeout reached while waiting on the lock: java.lang.Object@3582c145 {code} It looks like the FabricLoadBalancerFeature have some trouble to connect the zookeeper. I will keep digging it.	0	0	https://issues.jboss.org/browse/FABRIC-409
4247	FABRIC-391	Have u tried setting java.rmi.server.hostname system property to the same name as appears in the jmx url?	1	1	https://issues.jboss.org/browse/FABRIC-391
4248	FABRIC-391	That did it! This is kinda painful to do though when you have more than 5 separate machines I think. Is there any way we could maybe pass this on the command line automatically when starting containers? Ideally it should be set to whatever the resolver is I guess.	0	0	https://issues.jboss.org/browse/FABRIC-391

#	Requirement	Questions	Answered	Successfully Answered	URL
4249	FABRIC-382	Excellent work! Some things I would clarify: i) To open a pid in the editor you can also use --pid option and not just the --resource option (both are correct) ii) In the substitution section, its not just karaf.name, karaf.data, etc. It's all system properties, regardless of wether they are define in etc/system.properties or jvm options. iii) I like the part with the recursive substitution. I'd like to add an example, which pops up quite often from the cs and forums: "How do I refer to the path of resource, without being tied to the version: ${zk:/fabric/configs/versions/${zk:/fabric/configs/containers/${karaf.name}}/profiles/my-profile/my-resource}	0	0	https://issues.jboss.org/browse/FABRIC-382
4250	FABRIC-205	Can we close this old issue, as I think we have it covered in the current docs? It only makes sense to use an authentication system whose security data can be accessed throughout the fabric (e.g. also remotely). Currently, we have two JAAS modules that satisfy this requirement: the {{ZookeeperLoginModue}} (which is enabled by default) and the {{LDAPLoginModule}} (which is documented in the LDAP Authentication Tutorial in the Security Guide). So, I think the relevant cases are covered in the docs.	0	0	https://issues.jboss.org/browse/FABRIC-205
4251	FABRIC-183	There is the cluster-list command now. I guess we got some pieces for this already. So what is needed left? A simpler end-user API?	0	0	https://issues.jboss.org/browse/FABRIC-183
4252	FABRIC-150	What is the priority of this ticket? I can take a stab at it after finalising the camel-mongodb component, which will hopefully happen at the beginning of next week.	0	0	https://issues.jboss.org/browse/FABRIC-150
4253	FABRIC-107	The help should describe its optional and provide help on how to install it. I tried this and it failed in beta-051... {code} FuseESB:karaf@root> features:install fabric-jclouds Error executing command: Can not resolve feature: Unsatisfied requirement(s): ---------- package:(&(package=org.jclouds.sshj.config)(version>=1.3.0)) JClouds :: Karaf :: Services {code}	1	0	https://issues.jboss.org/browse/FABRIC-107
4254	FABRIC-48	mvn:org.fusesource.fabric/fabric-distro/1.1-SNAPSHOT/karaf/activemq but then could not connect to JMX from IDE. I suspect its missing the various authentication stuff? 4255	FABRIC-45	Looks like zk:export and zk:import could allow this, right now you can do zk:export, copy paste the output to some file, make changes and then pass the URI of that file to zk:import, but they seem incomplete, for example if I pass a properties file to import I can't specify what path it should go in, so all the keys wind up at the root of the ZK config. Do you think though that if the import/export commands were more user friendly this would fit the bill? The problem with trying to do a live sync between the file system and ZK I can see is how to determine who has the definitive version of the config at a given time.	1	1	https://issues.jboss.org/browse/FABRIC-45
4256	FABRIC-45	So maybe we start with a recursive import and export; where we can import from a directory to a given path in the config - or export from a path in ZK to a directory? Once we've recursive import/exports, we should be able to build a 'if it changes in git/svn, update ZK' little heroku style example, where folks can hack files in source control then update ZK on a push. i.e. the git on commit handler would checkout git and do a recursive ZK import. Folks could even modify this so that only certain parts of the tree are imported from SCM etc. Extra bonus points - we could maybe have a .fabricignore file like a .gitignore where it lists the ZK paths to ignore when exporting maybe? On import we could maybe delete stuff not in ZK (unless the paths are in the .fabricignore) - so if you delete something in the file system, it'll be deleted in ZK. Then using the .fabricignore files; we can define 'holes' in the ZK tree where we don't import/export (or delete in ZK). The only worry with this I can see is if folks decide to setup a heroku style git commit hook to update ZK; if folks also setup a 'on ZK change export to file system' thingy; then automatically do a commit & push; we could end up with a ZK <-> git infinite loop. Maybe some code review may be required to move the 'runtime changes' branch into the 'heroku deploy branch' in git? I guess folks can figure out (outside of our fabric java code) how best they want to deal with this stuff. Or to say that another way - if we can provide flexible recursive import & export - with an easy way to ignore bits of the tree or certain named entries with wildcards etc - folks can build whatever file system / SCM / operational / workflow mechanism they wish to maintaining the fabric config.	1	1	https://issues.jboss.org/browse/FABRIC-45

#	Requirement	Questions	Answered	Successfully Answered	URL
4257	FH-3707	Hi [~davidmartin], [~jmadigan] , [~maleck13], [~wtrocki], This command has a TODO: To check if it still valid for FH3. Could you help me to know if we should keep this one or just delete? Following the line code. https://github.com/feedhenry/fh-fhc/blob/master/lib/cmd/common/git.js#L4	1	1	https://issues.jboss.org/browse/FH-3707
4258	FH-3687	With google not allowing OAuth from WebViews, shouldn't we look into Chrome Custom Tabs instead? https://developer.chrome.com/multidevice/android/customtabs	1	1	https://issues.jboss.org/browse/FH-3687
4259	FH-3687	Either way, what I mean is to not use WebViews, if you don't like Chrome Custom Tabs, then use intents to open a browser, but not WebViews. It could be also Chrome Custom Tabs with a fallback in case Chrome is not installed. In the Chrome Custom Tabs doc they say {quote} What happens if the user doesn't have a recent version of Chrome installed? Custom Tabs uses an ACTION_VIEW Intent with key Extras to customize the UI. This means that by default the page willopen in the system browser, or the user's default browser. If the user has Chrome installed and it is the default browser, it will automatically pick up the EXTRAS and present a customized UI. It is also possible for another browser to use the Intent extras to provide a similar customized interface. {quote} Where I understand that if Chrome Custom Tabs are not available it will use the default browser as a fallback, but then they mention in another part of the docs {quote} Provide a fallback for when Custom Tabs is not installed Although Custom Tabs is available for the great majority of users, there are some scenarios where a browser that supports Custom Tabs is not installed on the device or the device does not support a browser version that has Custom Tabs enabled. Make sure to provide a fallback that provides a good user experience by either opening the default browser or using your own WebView implementation. {quote} Which makes me wonder if they really provide the fallback or if you have to do it instead.	1	1	https://issues.jboss.org/browse/FH-3687
4260	FH-3687	Chrome Custom tabs are implemented by Chrome and exposed as a service that you bind to. {quote} How can I check whether Chrome supports Chrome Custom Tabs?# All versions of Chrome supporting Chrome Custom Tabs expose a service. To check whether Chrome supports custom tabs, try to bind to the service. If it succeeds, then custom tabs can safely be used. {quote} If chrome isn't installed then Chrome Custom tabs won't work. It is "probably" enough to have a factory that returns a Intent that can be used for authorization and have it be implemented by a ChromeCustomTabIntent or a regular Intent depending on the system's capabilities. We will however have to create our own convenience method for launchUrl and use it. (see https://github.com/GoogleChrome/custom-tabs-client/blob/master/customtabs/src/android/support/customtabs/CustomTabsIntent.java#L261)	0	0	https://issues.jboss.org/browse/FH-3687
4261	FH-3659	Would a planet site like http://fedoraplanet.org/ or http://planet.gnome.org/ do what we want? AIUI the source of the software used is here: http://www.planetplanet.org/	0	0	https://issues.jboss.org/browse/FH-3659
4262	FH-3658	Hi [~trepel], I did the PR, however, I don't know exactly how to run it locally. Could you help me test it?	0	0	https://issues.jboss.org/browse/FH-3658
4263	FH-3657	[~spahuta], could you please verify and approve the PR for we merge it?	0	0	https://issues.jboss.org/browse/FH-3657
4264	FH-3649	*Command :* fhc version --format=json This command[1] is not working as follows and I don't think it is useful. Could we remove it? Or what is the utility of this? {code:java} Camilas-MacBook-Pro:fh-fhc cmacedo$ fhc version --format=json (node) sys is deprecated. Use util instead. fhc ERR! Error: Error - not 2xx status code. (null) fhc ERR! undefined fhc ERR! fhc ERR! Invalid arguments: fhc ERR! fhc session info <session-token> fhc ERR! fhc session verify <session-token> fhc Command executed with error Camilas-MBP:fh-fhc cmacedo$ {code} Following some points. * The `fhc session verify` call the URL "box/srv/1.1/admin/authpolicy/verifysession" which is not been used into NGUI, however, I could find into the `fh-mbaas-api` : https://github.com/feedhenry/fh-mbaas-api/blob/b31e688baaeed950ec7fe7ae5e470b491e1293e5/test/fixtures/auth.js#L22 * The `fhc session info` I couldn't find into N project. Should we keep these commands? Can we delete them? c/c [~jmadigan], [~davidfmartin], [~wtrocki]	1	1	https://issues.jboss.org/browse/FH-3644
4267	FH-3644	Hi [~bienbos-dmartin], [~jmadigan], I could not found valid data, session-token, to do the success test in this one. Where can we find the token? Is this a valid/useful command? Could you help me with it or who can with it? How can we check it?	0	0	https://issues.jboss.org/browse/FH-3644
4268	FH-3640	I couldn't find this functionality into Ngui. Should we really keep this command? I think it should be removed from FHC since the studio doesn't do the same. Could you help me with this decision? Command: https://github.com/feedhenry/fh-fhc/blob/master/lib/cmd/common/ota.js c/c [~davidmartin], [~weil], [~jmadigan] , [~wtrocki]	1	1	https://issues.jboss.org/browse/FH-3640
4269	FH-3640	[~cmacedo86] To be clear, the OTA function is in NGUI. Every time when you build an app, there is a QR code showing up on the screen to allow users to scan & download the app, and that is the OTA functionality. In NGUI, it is not using `ota.feedhenry.com` anymore, but instead using an endpoint in millicore: https://github.com/fheng/fh-ngui/blob/master/public/javascript/app/models/platform.model.js#L301-L315. Given that in NGUI, the OTA function is available as part of build function, we can probably do the same in fhc - When the build is completed, fhc should print out the OTA url of the binary (and QR code perhaps?). Then we can remove the OTA command from fhc. How does this sound?	1	0	https://issues.jboss.org/browse/FH-3640
4270	FH-3631	This command do a call (request) into the project. {code:java} Camilas-MBP:fh-fhc cmacedo$ fhc call (node) sys is deprecated. Use util instead. fhc ERR! fhc call <url> [<method> <params>] fhc Command executed with error {code} Is really good we have this command? Should we keep it or can we delete? c/c [~jmadigan], [~davidfmartin], [~wtrocki]	1	1	https://issues.jboss.org/browse/FH-3631
4271	FH-3626	Hi [~leahliu], do you know how it should work? I tried to test it and I could not find a scenario to test it? Could you help me understand better it? Command: https://github.com/feedhenry/fh-fhc/blob/master/lib/cmd/common/auth.js	0	0	https://issues.jboss.org/browse/FH-3626
4272	FH-3624	Hi [~davidmartin], [~jmadigan], [~peter.braun], [~maleck13], [~wtrocki] Should we keep this command? Is it really useful for the users? Could we remove it instanced to move for v3 standard? Line: https://github.com/feedhenry/fh-fhc/blob/master/lib/cmd/common/appinit.js	1	0	https://issues.jboss.org/browse/FH-3624

Maybe [~leahliu] could help us to understand better it? [1] - https://github.com/fheng/fh-ngui/search?utf8=%E2%9C%93&q=box%2Fsrv%2F1.1%2Fapp%2Finit&type=	1	0	https://issues.jboss.org/browse/FH-3624
4274	FH-3619	thanks [~cmacedo86] - will take a look with [~davidmartin]	1	1	https://issues.jboss.org/browse/FH-3619
4275	FH-3619	Hi folks, During PR review, [~wtrocki] suggested that we should re-write all project and create a new one, fhc2, using `yargs` as we can find into digkins-node[1]. Tks for all your contributions and help so far Wojciech :-). IMHO re-writing is not the case since the current one still adherent with requirements and technology stack is not deprecated. What we have here are "technical debts"[2] matters, the main issue for me is that commands are not following the same patterns which are in some cases preventing horizontal improvements. Also, I think that rewriting the whole project will cause secondary effects like testing the whole thing and keep on both projects the features and fix bugs synchronized until we deprecate the previous version. *Why follow the V3 pattern and not adopt another?* This is the most present standard in the project. In this way, the cost to accomplish this task is lower than adopt another. Also, this standard works well and it is easy to understand, keep, maintained and so on. *What is the idea of this JIRA?* The goal is to apply the same standard for all commands, removing deprecated code and organizing things, after that we'll be able to do more improvements step by step. Hi [~davidmartin] and [~jmadigan], Please, let me know what do you think about it? Could you tell us what should we do, re-write the whole project or continue working on "technical debts"[2]? I am looking for your answer to keep working on this tasks. [1] - https://github.com/aerogear/digkins-node [2] - https://martinfowler.com/bliki/TechnicalDebt.html [3] - https://issues.jboss.org/browse/FH-3619	1	1	https://issues.jboss.org/browse/FH-3619

4277	FH-3560	[~wtrocki] Maybe this is what you are looking for? https://gitlab.cee.redhat.com/red-hat-mobile-application-platform-documentation/RHMAPDocsNG/blob/master/guides/cloud-api/setRecordHashFn.adoc. This is available in the new sync APIs and it will allow developers to provide a different implementation to determine if the object has changed. You can just return some values from some of the fields of the object and concatenating them together, you don't have to hash them. Does it make sense? cc [~ndonnell]	1	1	https://issues.jboss.org/browse/FH-3560
4278	FH-3538	See it's working but not 100% sure what it is doing ??	0	0	https://issues.jboss.org/browse/FH-3538

4280	FH-3483	[~mziccardi] [~peter.braun] Think about this again. I think it might be better to return a random generated value as the session id for security reasons. We probably don't want to perform authentication for each getChunk request. If this is the case, the sessionId can be used as kind of simple security mechanism. If we always use the file id, it could mean that somebody can bypass the authentication step in the "startDown" step and just use this endpoint to download data. WDYT?	0	0	https://issues.jboss.org/browse/FH-3483
4281	FH-3478	[~ngough] I think that we need to: * remove this from 3.x docs * remove from 4.4 docs What I'm not sure about is whether to remove it from: * Supported configs page https://access.redhat.com/node/2357761 (or should we move it to deprecated?) * 4.2, 4.3 docs, given that there was support for this in the past	1	1	https://issues.jboss.org/browse/FH-3478

#	Requirement	Questions	Answered	Successfully Answered	URL
4292	FH-3260	100 Jira-Miner Functionality Utilisation of JIRA Miner JIRA Miner is a tool to gather data from JIRA and query them locally for better speed and more flexible query language than jql. First you need to target the data source {code:java} jira-miner target <JIRA uri> --user [username] --password [password] {code} To get a response like e.g. {code:java} Jira-miner target https://issues.jboss.org --user austincunningham --password ********** { url: 'https://issues.jboss.org', user: 'austincunningham' } 'Successfully targeted JIRA' {code} Which populates the Contents of .jira-miner {code:java} {"jira":{"url":"https://issues.jboss.org","user":"austincunningham","password":"passwordhere"}} {code} Once, you have targeted a jira, you can populate local database {code:java} jira-miner populate <jqlQuery> {code} To get a response like e.g. {code:java} jira-miner populate "project in (RAINCATCH)" Updated and stored collection default in \home\acunningham\.jira-minerdb {code} You can then use the data in the local database to run JIRA Miner queries Query the database JIRA miner provides an API to query the database. Query must be defined in one of following formats: {code:java} const query = ctx => { // ctx.acc contains result of previous call // ctx.collection contains Loki.js collection // ctx.args contains optional arguments, such as ones on command line } // or const query = [ctx => { return xyz }, ctx => { // ctx.acc now contains a result of previous function call }] // or const query = [{ 'age': {'$gt': 21 } /* Loki.js Mongo like query */ }] // or mix of function and Loki.js queries module.exports = query {code} Supposing that this file, called my-example-query.js is in current directory, you call it via following {code:java} jira-miner query my-example-query [--args] {code} {panel:title=CLI Help} usage: jira-miner query <file> [options] Queries locally populated database using query(ies) located in <file>. Query file is a Node.js module exporting "query(ctx)" object/array/function and optionally a "transform(ctx)" function. module.exports = { query: (ctx) => { // ctx.args contains command line arguments that can be used to parametrize query externally // ctx.acc contains result of the last subquery // ctx.collection contains collection to be queried }, transform: (ctx) => { // ctx.args contains command line arguments that can be used to parametrized transformation externally // ctx.data contains result of query function } } Note that query can be a array of functions or Loki.js query objects. In such subqueries are executed in sequence and users are encouraged to use "ctx.acc" object to chain execution. Since "transform(ctx)" function is optional by default jira-miner expect "query(ctx)" to return a JSON data and uses pretty print to output it to console. If this is not desired behavior, user can provide --json or --csv argument. In case that "transform(ctx)" is provide, it is responsible for handling output itself. Options: --help Show help [boolean] --debug Logs debug information to console output [boolean] [default: false] --version Show version number [boolean] --db, -d Database location [default: .jira-minerdb in HOME directory] --json, -j Print out query outcome in JSON format [default: false] --csv Print out query outcome in CSV format [default: false] {panel}	1	1	https://issues.jboss.org/browse/FH-3260
4293	FH-3220	[~davidmartin] the description links to [here|https://github.com/trentm/node-bunyan#level-suggestions] for guidelines. From there though, it says: bq. Trent's biased suggestions for node.js libraries: IMHO, libraries should only ever log at trace-level. Fine control over log output should be up to the app using a library. Having a library that spews log output at higher levels gets in the way of a clear story in the app logs. I'd have previously considered fh-mbaas-api to be a library, rather than a server app itself. Does that sound reasonable? Does that mean that we should only log at trace level?	1	1	https://issues.jboss.org/browse/FH-3220
4294	FH-3220	[~davidmartin] on these points: {quote} * if there is an error situation in the code, still log it below the default level as long as the error can be propegated back to the calling code * if there is an error situation in the code that can't be propagated back to the calling code, log it at error level e.g. if a background task like a sync worker hits an error {quote} This may not be as straightforward as I originally expected: when returning an error as the first parameter in a callback, should that be an error object, or a string with an error message? I'm not sure about the API that's exposed to consumers, but I think in the sync code as a whole, there's a mixture of these two approaches. This can make it more complex to wrap an error with the new information (that may have been logged at error level, but not actually returned to the consumer), because it's not always clear at a particular point, whether an Error object or a String (or something else) is being returned. At least initially, unless you have more information than I do (likely!), I'll just leave such log entries as error level.	0	0	https://issues.jboss.org/browse/FH-3220
4295	FH-3219	[~vsazel] Some notes from a conversation on bluejeans: * fh-mbaas-api uses its own 'consolelogger' implementation * it currently isn't possible to pass in a logger to fh-mbaas-api (the logger is a hardcoded instance of 'consolelogger') * a follow up issue should be created to allow passing in a logger to fh-mbaas-api * for this issue, this consolelogger implementation should be passed into the sync code, and sync should use it as its logger * liase with [~grdryn] on changes in https://issues.jboss.org/browse/FH-3220 to ensure the 'consolelogger' in fh-mbaas-api is sufficient for the type of logging we're doing in sync Does this sound correct?	0	0	https://issues.jboss.org/browse/FH-3219
4296	FH-3189	[~jmadigan] [~davidmartin] [~craig.brookes] [~weil] since you guys are long standing FeedHenries, can I ask you for a careful review of the JIRAs ? thanks!	1	1	https://issues.jboss.org/browse/FH-3189
4297	FH-3177	[~beve] given that you have worked on FH-3170, do you want to take this one as well?	1	1	https://issues.jboss.org/browse/FH-3177
4298	FH-3170	{quote} It should keep the data handlers overrides for each individual dataset in memory, or use the default global data handler it no overrides. {quote} After looking into this again I'm still not exactly sure about what we should do here (sorry). Should we still delegate to sync-DataSetModel as done [here|https://github.com/danbev/fh-mbaas-api/commit/c84e027451f26940fd40438cfb2e6c11d4dac69e].	1	1	https://issues.jboss.org/browse/FH-3170
4299	FH-3136	[~akeating1] As this is marked as Dev Complete, is there a PR for it we can link to the issue?	1	1	https://issues.jboss.org/browse/FH-3136
4300	FH-3123	Do the individual tickets in this epic need to have a fix version set?	1	0	https://issues.jboss.org/browse/FH-3123
4301	FH-3115	Should we write a deprecate notice on the blank-cordova-app README.md? and also close the issues related to that template?	1	1	https://issues.jboss.org/browse/FH-3115
4302	FH-3087	[~davidmartin] Can this issue be closed? I don't think it's relevant in the new sync framework? Now that we're using debug for the whole of fh-mbaas-api, should FH-3394 also be closed?	1	0	https://issues.jboss.org/browse/FH-3087
4303	FH-2996	Hi [~alanmoran] and [~jhellar] this is tagged for 3.16 and has an associated PR with it. Can we land it, verify it and merge it OR can we disassociate the 3.16 fix version. Alan I don't know if teams are aware of this ticket as you tagged it 3.16.0 but it missed the teams filters as we normally filter our Sprints on untagged release versions -- we tend to set the release version ourselves when the ticket is complete. So this one slipped between the cracks.	1	1	https://issues.jboss.org/browse/FH-2996
4304	FH-2993	I really like the fhc projects -mine idea. What do you think about something like {{fhc projects list amoran@redhat.com}}? It would be less restrictive this way and it gives the ability to search for other users projects too. The usage would be {{fhc projects list [<author-email>]}}	0	0	https://issues.jboss.org/browse/FH-2993
4305	FH-2992	Hi [~grdryn], I believe that is already fixed. Look the last PR as example: http://bob.feedhenry.net:8080/job/fh-fhc_pullrequests/663/console. Could you check ?	1	0	https://issues.jboss.org/browse/FH-2992

#	Requirement	Questions	Answered	Successfully Answered	URL
4306	FH-2981	Suggestion from [~fantasyxky] {quote} Allow counter resetting, parameters, tags, filtering (See how influxdb/grafana can do this) {quote} Should we extend fh.stats API? OR should we look at providing grafana & influxdb?	0	0	https://issues.jboss.org/browse/FH-2981
4307	FH-2978	[~bgallagh] [~fantasyxky] This request came in from the paltform feedback here https://docs.google.com/document/d/1Uw5-vz-d691o10iQfdrtdaflajGc-TRWnZu7Hov3H6k/edit Can you give some context around this feature request so we can better understand what its trying to solve, and for who?	1	1	https://issues.jboss.org/browse/FH-2978
4308	FH-2978	[~evanshortiss] just going through the backlog, is this still a valid request for TKE?	1	1	https://issues.jboss.org/browse/FH-2978
4309	FH-2956	[~corinnekrych] I'm wondering now why we aren't providing, at the most, a simple wrapper for Keycloak in the SDK? Something similar to `$fh.keycloak` which just exposes the JS Keycloak client and all of its functions, maybe add some small platform-specific helper functions if they'd be useful? Is there something I'm missing for why something like `$fh.auth({ policyId: "Keycloak "}, ...)` would be better?	1	1	https://issues.jboss.org/browse/FH-2956
4310	FH-2956	[~jfrizell] Sorry for getting back to this so late. I think that clears a lot of things up. Thank you. However, according to the PRD thing we are not looking at RHMAP Auth Policies at the moment and assuming the user has RHSSO / Keycloak hosted somewhere themselves. [Link to section in PRD|https://docs.google.com/document/d/1Delb4Nmi4GY1G1BkMArXQkxi1E0EvOiSpTtmS0V3GIg/edit#heading=h.kojksmf5p4db] If this Spike should take into account working with an RHSSO policy, maybe it would make sense to defer it until we are looking at an RHSSO Policy in a later phase? I, at least, was under the impression that this section of Phase 1 would involve exposing the Keycloak JS client in the client SDK WDYT? I don't know if I'm making much sense at this point? Need sugar!	0	0	https://issues.jboss.org/browse/FH-2956
4311	FH-2941	It looks like there is some kind of problem on the build phase for https://github.com/feedhenry-templates/welcome-windows/ which makes https://github.com/feedhenry-templates/welcome-windows/pull/8 flag an issue. Can someone check? [~wtrocki]	1	1	https://issues.jboss.org/browse/FH-2941
4312	FH-2941	[~corinnekrych][~supittma] https://github.com/feedhenry-templates/welcome-windows/pull/8 Corinne or Summers, this PR is being blocked because of an expired certificate. Updating the certificate should be fairly simple on a Windows machine with Visual Studio installed. Can you help me on this? I only have an apple machine and it keeps failing when I try to update it. thanks!	1	1	https://issues.jboss.org/browse/FH-2941
4313	FH-2941	[~wtrocki][~pmdarrow] Hey guys, can any of you review these PRs? Summers has already fixed the building issue :)	1	1	https://issues.jboss.org/browse/FH-2941
4314	FH-2940	Is 'platform' alone a good category name? Do we need to change anything else in any other service? [~wtrocki] any idea?	1	1	https://issues.jboss.org/browse/FH-2940
4315	FH-2939	How can I check this was working? (mysql access)	1	1	https://issues.jboss.org/browse/FH-2939
4316	FH-2928	How can I know which are the most used? [~wtrocki]	1	1	https://issues.jboss.org/browse/FH-2928
4317	FH-2927	Where can we do a review of naming convention for templates, samples etc as part of this epic?	1	1	https://issues.jboss.org/browse/FH-2927
4318	FH-2925	[~coneill] I am wondering what is missing here. - For CSV export, the user has the option to export by field name and field code. Do we need to add an option to export by field ID also? - For PDF export, we could add the field ID or field code to the exported PDF. The user could have the same option to view field ID, field code or both?	1	1	https://issues.jboss.org/browse/FH-2925
4319	FH-2895	Further question for the team - I can see these templates being updated from Android N branch to master branch. Are they landing in 3.15.0 tag? And what environment has been used to run verification? It should be QED1, that now contains 3.15.0-rc2.	1	1	https://issues.jboss.org/browse/FH-2895
4320	FH-2891	Could we at least do this for the ones that are already open-sourced?	1	1	https://issues.jboss.org/browse/FH-2891
4321	FH-2891	There are around ~200 repositories that aren't forks or mirrors under the 3 organizations: * FeedHenry - 94 repos * FeedHenry Templates - 98 repos * FeedHenry Engineering - 13 repos # Does every one of these need CONTRIBUTING.md? If not, specifically which ones do? # Should we create a story to clean up old, unused repositories? There's a lot of repositories that look out of date, e.g. https://github.com/feedhenry/FHActProxy.	1	1	https://issues.jboss.org/browse/FH-2891
4322	FH-2891	Added CONTRIBUTING.md for all mbaas components and dependencies outlined in RHMAP-10046, temporarily disabling branch protection where necessary to the the job done. Can finally put this to rest now!	0	0	https://issues.jboss.org/browse/FH-2891
4323	FH-2888	[~davidmartin] does this only come into effect for 3.16? does it affect 4.x? referring to https://gitlab.cee.redhat.com/red-hat-mobile-application-platform-documentation/doc-RHMAP_Docs/merge_requests/90/diffs	1	0	https://issues.jboss.org/browse/FH-2888
4324	FH-2886	Hello [~supittma], can we move that to 3.16.0 given 3.15.0 release date is slowly approaching?	1	1	https://issues.jboss.org/browse/FH-2886
4325	FH-2877	[~akeating1]Could you link to the JIRAs around adding nsp, security check? I couldn't find them in backlog? do they have clientsdks label?	0	0	https://issues.jboss.org/browse/FH-2877
4326	FH-2876	One part of the flow that may be worth adding, is how a developer can push changes to a git repo and have them reflected in his local MBaaS. - Can he push code to a repo and it will then trigger a build - Can he build a docker image and push it to the OSCP repo and have it redeploy	0	0	https://issues.jboss.org/browse/FH-2876
4327	FH-2875	[~wtrocki] Who is requesting this template? Should it be a template? A sample app sounds more appropriate. We have a old websocket sample client & cloud app already https://github.com/david-martin/websocket-demo It would probably need updating if we want to use that as the sample (the folder structure is very old with both client & cloud in the 1 repo)	1	0	https://issues.jboss.org/browse/FH-2875
4328	FH-2855	[~emilioicai] Initial review. As mentioned on slack {quote} The doc looks great. When you add the other section for 'adding mongo-express to an existing cloud app', might be best to put that as the first option? {quote}	1	1	https://issues.jboss.org/browse/FH-2855
4329	FH-2853	[~cbyrne] Initial change was done and merged. Can we include this in upcoming release. Please refer to the deploy notes.	1	1	https://issues.jboss.org/browse/FH-2853
4330	FH-2851	[~davidmartin] what about create a google form and send it out to the consulting team and gather feedback? This way we can ask some specific questions?	1	1	https://issues.jboss.org/browse/FH-2851
4331	FH-2851	h4. Status update: - Created sample forms app - Created request to get access to the us.feedhenry.com cluster for hosting h4. Proposed Questions Dear platform user. We planning to improve data access layer for RHMAP. To help us to improve it please find 2 minutes to provide answers for the form bellow. 1. Do you use DataBrowser mongo import and export functionality? 2. What's is the main reason for using/not using it? 3. What do you like or dislike in import and export functionality? 4. How useful for you would be get direct access to the mongo database? 5. Would you use data browser export functionality if it would export only the current query? 6. Do you store large amounts of data in mongodb (more than 1GB collections)? 7. How you manage your mongo datasets?	1	1	https://issues.jboss.org/browse/FH-2851
4332	FH-2851	Some thoughts: - I would add a "Why" for every Yes/No question - It would be nice to know how do they manage large amounts of data currently - Should we also get the general feeling of using the import/export functionality? I mean maybe a generic question like "How do you feel about the import/export functionality?" would drive more insight than a direct one as "Did you experience any problem?"	1	1	https://issues.jboss.org/browse/FH-2851

#	Requirement	Questions	Answered	Successfully Answered	URL
4333	FH-2851	My thoughts: * The link doesn't send me directly to the form but to the list of forms (pretty much what you said [~wtrocki]) * Strange permission requested: !Screen Shot 2016-11-23 at 1.22.34 PM.png|thumbnail! * Why does loading take so long that we need a progress bar? I feel like a simple form should load in < 200ms!	1	1	https://issues.jboss.org/browse/FH-2851
4334	FH-2851	[~pmdarrow] That's dogfooding experience for our forms. We wanted to use our internal forms to collect feedback. How about questions itself? Can you try to fill this as you were probably using data browser before.	1	1	https://issues.jboss.org/browse/FH-2851
4335	FH-2848	[~craig.brookes] I have been looking through the 3.14 documentation. I can see many references for "fh-mbaas-api" throughout the docs however I cannot find even one reference for "$fh.feed". I assume I should see something - am I doing something wrong, ie: should I broaden the scope of my search outside of 3.14 docs (if so, where should I look do you think)?	1	0	https://issues.jboss.org/browse/FH-2848
4336	FH-2842	There are many times when an Anonymous class seems slightly excessive and cumbersome and as of Java 8, a new structure has been introduced to this effect, the Lambda Expression. A Lambda Expression enhances the readability of code and also allows one to express instances of single-method classes more compactly. For more info, please refer to the Lambda Expression tutorial : https://docs.oracle.com/javase/tutorial/java/javaOO/lambdaexpressions.html. Within the context of FeedHenry, Lambda Expressions have an impact on Apps that use Jack and Java 8, specifically around the consumption of a Lambda Expression by the FeedHenry API. Be aware of the fact that as of Java 8, a Lambda Expression can be passed into a method that consumes an Anonymous Inner class. Given this, it is highly likely that Lambda Expressions will impact DefaultCallbacks as illustrated in the following code snippet: @FunctionalInterface public interface DefaultCallback extends FHActCallback { default void fail(FHResponse pResponse) { Log.e("DefaultCallback", pResponse.getErrorMessage()); }; @Override void success(FHResponse pResponse); } The following code snippet illustrates the use of a Lambda Expression within a FeedHenry context: @Override protected void onStart() { super.onStart(); FH.init(this, (DefaultCallback)(ignore) -> { findViewById(R.id.check_online).setVisibility(View.VISIBLE); findViewById(R.id.check_online).setOnClickListener(view -> Toast.makeText(getBaseContext(), FH.isOnline()?"Is online":"Is not online", Toast.LENGTH_LONG).show()); }); }	1	1	https://issues.jboss.org/browse/FH-2842
4337	FH-2826	[~pbrookes] thoughts on doing this in the dump too? Is it something we want to action?	1	0	https://issues.jboss.org/browse/FH-2826
4338	FH-2825	[~avibelli] we've decide during planning to go with the dependency on tar for 4.2.0, and investigate a pure-Go solution in 4.3.0. Therefore we need to update the rpmspec to depend on GNU tar and Gzip, if it doesn't already. Could you please create a JIRA for that work? Thanks.	0	0	https://issues.jboss.org/browse/FH-2825
4339	FH-2811	[~corinnekrych]Can we get this fixed for rc3, if not lets move it to 3.15.0	1	1	https://issues.jboss.org/browse/FH-2811
4340	FH-2801	Hey guys can you identify which platforms this issue is referring to, give an example project/gist, and the use case? Is this a cordova issue or iOS? Does it affect Android, etc.	0	0	https://issues.jboss.org/browse/FH-2801
4341	FH-2801	[~mwessendorf] [~tkonishi] Would it be possible to get some more information about this issue?	1	0	https://issues.jboss.org/browse/FH-2801
4342	FH-2801	[~akeating1],[~danielpassos], sorry for my late response. Cloud app sample: https://github.com/RHMAP-Support/apn-silent_notification-cloud Cordova app sample: https://github.com/RHMAP-Support/apn-silent_notification-cordova AeroGear's push object is referred here: https://github.com/RHMAP-Support/apn-silent_notification-cordova/blob/master/www/js/index.js#L49-L51 Sending a silent push: https://github.com/RHMAP-Support/apn-silent_notification-cloud/blob/master/lib/push.js#L17-L21 How to reproduce: # create a bare project on RHMAP # import these applications # modify the client app id in config.xml to fit to your certificate # enable iOS push on the cordova app # build it # install the app to an iOS device then run the app # connect the device to a Mac, start XCode then open device window to check a log of the device # deploy the cloud app # {{curl <the cloud app url>/push}} You can see messages like this: {code} Mar 30 12:43:41 myiphone Push Starter[34167] <Notice>: Background Fetch Mar 30 12:43:41 myiphone Push Starter[34167] <Notice>: didReceiveNotification Mar 30 12:43:41 myiphone Push Starter[34167] <Notice>: Notification received {code}	0	0	https://issues.jboss.org/browse/FH-2801
4343	FH-2791	What's this about ? Not sure we can reboot the fh-digger component very often, just because of some setting Or is this a tasks that needs to be done, when the AndroidN/Container feature is deployed to wild (aka production) ?	1	1	https://issues.jboss.org/browse/FH-2791
4344	FH-2791	[~supittma] [~danielpassos] so what's actually needed ? Work on the template/apps ?	1	1	https://issues.jboss.org/browse/FH-2791
4345	FH-2788	How about using the standard one that Visual Studio generates when creating a project: https://github.com/feedhenry-templates/helloworld-windows/blob/master/.gitignore	1	1	https://issues.jboss.org/browse/FH-2788
4346	FH-2788	This is difference between the standard one that Visual Studio generates and the https://github.com/github/gitignore: https://www.diffchecker.com/wwFk1CPh Would it make sense to merge it?	1	1	https://issues.jboss.org/browse/FH-2788
4347	FH-2787	There are other templates: * https://github.com/feedhenry/appforms-project-client * https://github.com/feedhenry-templates/helloworld-app * https://github.com/feedhenry-templates/fh-mobile-spec-app * https://github.com/feedhenry-raincatcher/raincatcher-demo-mobile Should not be those updated as well?	0	0	https://issues.jboss.org/browse/FH-2787
4348	FH-2782	Is this really needed ? :) I feel during one release there are way too many bumps of the version :)	1	1	https://issues.jboss.org/browse/FH-2782
4349	FH-2764	[~weili] [~mwessendorf] 'fh-mbaas-core' could be a bit misleading to Users and RHMAP developers. It sounds like something the 'fh-mbaas' component might use, but then has 'core' in the name which makes it sound like somthing for the 'fh-mbaas' talking back to the 'Core'. To avoid confusion maybe we could have a common prefix e.g. 'fh-mbaas-api-core', 'fh-mbaas-api-forms' wdyt?	1	0	https://issues.jboss.org/browse/FH-2764
4350	FH-2764	[~conoro] [~mwessendorf] I wonder are we missing a potential new cloud app template here on the back of this epic? What I'm thinking is we don't have any template that demonstrates an absolute minimal resource footprint, but still has fh api capabilities. If this new template was a goal of this epic, it might help drive how the server sdks could be made 'pluggable'. Also, the new template could be used as a reference for developers on best practices to keep a node.js app resource usage low. Perhaps we could get some input on it from the community (customers and consultants?) as well during development. What do you think?	1	0	https://issues.jboss.org/browse/FH-2764
4351	FH-2764	[~weil] This came up at triage today. Do you want to tag it and all issues as team-sustaining?	1	0	https://issues.jboss.org/browse/FH-2764
4352	FH-2764	[~davidmartin] this is really for the server sdk team. Which label they are using atm?	1	0	https://issues.jboss.org/browse/FH-2764
4353	FH-2741	Where is a link to the offending line : https://github.com/feedhenry/fh-android-sdk/blob/775dbc32ae47d7a1ed179823fc18628795cd3a97/fh-android-sdk/src/main/java/com/feedhenry/sdk/sync/FHSyncClient.java#L418	1	1	https://issues.jboss.org/browse/FH-2741

#	Requirement	Questions	Answered	Successfully Answered	URL
4354	FH-2739	[~akeating1] No worries at all - I'm a little unsure of what the status is too. [~supittma] What is the expectation re publishing this work? The title reads, "Document how lambdas should work and make epic for refactoring SDK" and to this point, I've documented "...how lambdas should work...". Do you/your team/someone on your side/etc publish this or do Docs publish this?	1	1	https://issues.jboss.org/browse/FH-2739
4355	FH-2739	[~supittma] : Where is this documentation supposed to land? Would it be customer facing documentation? ^ Updated by John Stafford ^	1	1	https://issues.jboss.org/browse/FH-2739
4356	FH-2739	[~kpiwko] Good to get feedback Karel. Re "this documentation should be kept close to Swift 2.3/3.0 one", not fully sure what you mean. I reviewed the table of contents and also searched the doc [https://docs.google.com/document/d/1UV2l9z-T3axQbMrqFlsXrVQsmvme0LgX4XVg5wstmpg/edit] for the keyword "Swift" and there is no mention of this. Is there another document for "Swift 2.3/3.0"? If so, can you provide me with a link to this "Swift 2.3/3.0" documentation?	1	0	https://issues.jboss.org/browse/FH-2739
4357	FH-2736	[~corinnekrych] Can this ticket be closed?	1	1	https://issues.jboss.org/browse/FH-2736
4358	FH-2734	[~ndonnell] this is something for the appforms work, and just having the serversdks label, because the code is hosted there? Is this work already planed to be done by your team ?	0	0	https://issues.jboss.org/browse/FH-2734
4359	FH-2732	[~ndonnell] this is something for the appforms work, and just having the serversdks label, because the code is hosted there? Is this work already planed to be done by your team ?	0	0	https://issues.jboss.org/browse/FH-2732
4360	FH-2728	[~ndonnell] this is something for the appforms work, and just having the serversdks label, because the code is hosted there? Is this work already planed to be done by your team ?	0	0	https://issues.jboss.org/browse/FH-2728
4361	FH-2727	[~ndonnell] this is something for the appforms work, and just having the serversdks label, because the code is hosted there? Is this work already planed to be done by your team ?	1	0	https://issues.jboss.org/browse/FH-2727
4362	FH-2724	Is not MBaaS-ART exactly that? https://github.com/fheng/mbaas-art	0	0	https://issues.jboss.org/browse/FH-2724
4363	FH-2721	IIUC, this is purely internal documentation, is that correct, [~ndonnell]? If so, could you assign the "tools/help" component instead of Documentation? Thanks.	0	0	https://issues.jboss.org/browse/FH-2721
4364	FH-2705	Where can I test this templates? qed1 an meh1 won't build them	0	0	https://issues.jboss.org/browse/FH-2705
4365	FH-2702	It will only use ChildBrowser if it's installed, which is not the case for new templates. It has an else to use InAppBrowser *if installed*, which isn't the case neither. Should we install InAppBrowser plugin in all Cordova templates?	1	0	https://issues.jboss.org/browse/FH-2702
4366	FH-2702	I have checked the code again and if ChildBrowser is not installed it will use window.open, but that window.open is for using inAppBrowser, not a regular window.open. The problem is that if the inAppBrowser is not installed, it will fail on next line where it adds an event listener for the inAppBrowser object. That works if the inAppBrowser is installed, but won't work on a regular window.open, and as that code is in a try-catch it will go to the catch and nothing will happen. So, should we document that the inAppBrowser is needed when using fh.auth with an OAuth2 auth? or should we just add inAppBrowser to all Cordova templates? Also, if the OAuth2 is for Google, they don't allow webviews anymore, so, should we update the fh-js-sdk to use a different approach?	0	0	https://issues.jboss.org/browse/FH-2702
4367	FH-2697	[~danielpassos] Are these tasks (Android, Windows, JS) still required/relevant? If so, would it be possible to expand a bit more on the task itself. I'm not sure if I'm understanding this correctly. Is this just adding a cordova build into the `travis.yml` file in the components to ensure it builds? Thanks :)	1	1	https://issues.jboss.org/browse/FH-2697
4368	FH-2653	Might be good to mention some limitations that GCM 3.0 brings, wdyt ? * AGPUSH-1625 * number of devices no longer represents number of active installations (we discussed this on IRC) * number of dispatched notifications is incorrect (dispatched only one for whole topic)	0	0	https://issues.jboss.org/browse/FH-2653
4369	FH-2649	What does it mean to support GCM-3 on Xamarian ? IMO it's unclear. Currently the Xamarian-SDK uses the .NET SDK for push, but has specific knowledge for other networks (e.g. GCM for Android): https://github.com/feedhenry/fh-dotnet-sdk/blob/master/FHSDK/Services/Network/PushBase.cs Topic support addition is needed	1	1	https://issues.jboss.org/browse/FH-2649
4370	FH-2631	[~supittma], [~mwessendorf] since it's already merged should we schedule that for 3.10 instead of 3.11?	1	1	https://issues.jboss.org/browse/FH-2631
4371	FH-2627	Templates are there. There are separate subtasks for verification of each template. [~jbalunas] for some reason blank-template is called "Xamarin Hello World Project" and there is another "Native Xamarin Hello World Project" which is actually what it is. Should we change it?	1	0	https://issues.jboss.org/browse/FH-2627
4372	FH-2619	[~kpiwko] Good point, I've labeled the issue to see it on agile board. Could it be something [~jhellar] could help us on?	1	1	https://issues.jboss.org/browse/FH-2619
4373	FH-2615	[~jbalunas] / [~corinnekrych] - Is there anyone else we could get to review this? [~rsmeral] has a lot on his plate between now and Friday, so if we could get someone else from Client SDK team to get involved here, that would be super.	1	1	https://issues.jboss.org/browse/FH-2615
4374	FH-2614	Hello [~corinnekrych], do I read correctly this is a blocker for 3.10.0 release?	1	1	https://issues.jboss.org/browse/FH-2614
4375	FH-2593	[~mmurphy_fh] - Can you follow up on this? Why was the app never added to the template list?	0	0	https://issues.jboss.org/browse/FH-2593
4376	FH-2593	[~supittma] [~davidmartin] This feels like invalid bug. Can you provide more details. How we can help here?	1	1	https://issues.jboss.org/browse/FH-2593
4377	FH-2587	[~supittma] [~danielpassos] given the code freeze at the end of sprint 272, and updates to millicore required this does not seem like something we can get done in 272? I'll shift it to 3.X-Future to eval later. Please feel free to comment/update if needed.	1	1	https://issues.jboss.org/browse/FH-2587
4378	FH-2561	[~corinnekrych] Some of the issues (5) in this Epic are scheduled for 3.9 release. Since we are now targeting iOS Swift SDK support in 3.10, do they need to be updated? If so, can you update them?	1	1	https://issues.jboss.org/browse/FH-2561
4379	FH-2559	[~edewit] [~corinnekrych] Can we shift this epic to either not have a version, or to 3.10.1, or 3.11?	1	1	https://issues.jboss.org/browse/FH-2559
4380	FH-2555	[~corinnekrych] - there seems to be a lot of unrelated tickets in this Epic. Can you please review and comment on each of the tickets and identify which ones will land as part of 3.7.0.	1	0	https://issues.jboss.org/browse/FH-2555
4381	FH-2535	[~corinnekrych] - is this going to land in 3.7.0? Seems like it is better suited to 3.8.0.	1	1	https://issues.jboss.org/browse/FH-2535
4382	FH-2482	[~supittma][~edewit] sorry for the delay on getting back to this. We may want to shelve this until we work through our own windows build farm support options. I know the Xamarin account is separate, but it feels like we can tackle all of this at once with the updates in a few sprints. Wdyt?	1	1	https://issues.jboss.org/browse/FH-2482
4383	FH-2479	[~corinnekrych] - is this going to land in 3.7.0? Seems like it is better suited to 3.8.0.	1	1	https://issues.jboss.org/browse/FH-2479
4384	FH-2475	[~corinnekrych] - is this going to land in 3.7.0? Seems like it is better suited to 3.8.0.	1	1	https://issues.jboss.org/browse/FH-2475
4385	FH-2471	Can you project the app link?	0	0	https://issues.jboss.org/browse/FH-2471
4386	FH-2467	[~corinnekrych] is there anything I'm doing wrong? Has MEH1 BF been updated?	1	1	https://issues.jboss.org/browse/FH-2467

#	Requirement	Questions	Answered	Successfully Answered	URL
4387	RAINCATCH-1057	wtrocki: Do you think we can find all console.statements in the code and replace them in this PR? This will be very quick considering your improvements in this PR and then we can totally close logging story as more loggers will be added on the fly. discussed with wtrocki and it is beyond the scope of this ticket , will leave the PR open and close this ticket and open a fresh ticket to replace the console with the new logger.	0	0	https://issues.jboss.org/browse/RAINCATCH-1057
4388	RAINCATCH-1055	Adding my reply to some of the points: - Ability to have generic UI process When going to new step user need to have method to render specific template. This will be for example method wrapping angular router > I've been thinking about this and it's definitely very hard to decouple rendering from an being angularjs specific, but we can try to restrain it to a single method on the task, and provide a couple of utilities to DRY custom task implementations - Correlation with status and actual step processing. While having status is good idea I think that we need to have clearly define when we moving to next step, by just having exact method. I do not think we should remove status, but just disconnect it from actual step definition > Yes from what I've seen in the existing UI I think statuses are only used for display purposes. In a WFM scenario I don't think there is much need for reporting partial progress at all. - Summary screen is really angular specific Summary screen should be really outside WFM. We should have this as some step that will take all results, but then I'm not sure how to mount that into html (js specific implementation) that's to specific Any ideas? Dropping summary screen from requirements it's not a runner. > I think we either have to define a strict set of fields for the Result so they can be rendered uniformly by a given UI implementation, and specific needs can be addressed by custom detail views, or give results the same ability (and complexity) of being as customizable as Tasks - Tasks are not strongly coupled to entire model Tasks needed to be added as separate module or code in demo application. I think that's the way to go because it depends on what we expect users to be more likely to modify for their customization. I'm not sure I understand this right, currently Tasks handle the logic for dealing with user interactions to specifying what next step in a Process should be run, but if we somehow split these responsibilities users would have to provide alternative implementations for other entities too, and ways to configure that. We do not need any for task as we can save them as array of ID's for Process. ProcessInstance in my opinion will just need to hold current step status and array of results assigned to steps. From what I've seen from jbpm and other engines the need for data instantiation is mainly to allow Processes to be modified at any time and even explicitly versioned for the benefit of analysts. What would happen if one was changed while there is an active ProcessInstance assigned to a user? Nevertheless we can keep it this way for 1.0 In relation to additional functionalities like json schema I think we may retain them. > In retrospect maybe reducing the feature set to the bare minimum of supporting the existing UI would allow us to deliver better. If the idea is starting integration with jbpm a lot of our custom implementations would be redundant.	0	0	https://issues.jboss.org/browse/RAINCATCH-1055
4389	RAINCATCH-1036	[~wtrocki][~jstaffor] some notes * Cutting and pasting content isn't going to help us * Repeating content isn't going to help us * There's a danger of content going out of date So, I propose criteria for moving content: * if it's still being developed (ie significant changes, tag it, and leave it in the readme) * if it's not related to the user story, leave it in the readme (tag it and/or see if it's covered under https://issues.jboss.org/browse/RAINCATCH-914) * check with PRD, make sure it's addressing a requirement before moving WDYT?	1	0	https://issues.jboss.org/browse/RAINCATCH-1036
4390	RAINCATCH-1027	[~wtrocki] Client interface is the exact same as the cloud interface? Description is misleading. Can we update to specify whats in the client interface?	1	1	https://issues.jboss.org/browse/RAINCATCH-1027
4391	RAINCATCH-1014	This is only for moving the generated javascript files. Other issues can be addressed as follow on tickets. [~wtrocki][~phajidec] Can you create these follow on tickets for a backlog refinement session.	1	1	https://issues.jboss.org/browse/RAINCATCH-1014
4392	RAINCATCH-923	[~ndonnell] In the spikes along with [~wtrocki] the pattern we were using was having something like: {code:java} import MongooseStore, { Store } from '@raincatcher/store'; {code} So, our supported implementation as the default export and the public, reimplementable api as a named export. Do you see them as separate modules for now? Or perhaps for the store specifically? It's a pattern that we'd need to agree upon for the other packages. Depending on the decision we can merge RAINCATCH-922 into this one and have a single package.	1	1	https://issues.jboss.org/browse/RAINCATCH-923
4393	RAINCATCH-923	[~phajidec] Would it mean though that anyone wanting to use our Store interface would require the raincatcher mongoose store as a dev dependency. Would it not make more sense to have the Store interfaces and classes as a separate module that has a much reduced dependency list? WDYT ?	1	1	https://issues.jboss.org/browse/RAINCATCH-923
4394	RAINCATCH-921	[~wtrocki] Perfect, will I redefine this ticket to be for Passport and move it to the passport epic? There is already a ticket for Keycloak in this epic.	0	0	https://issues.jboss.org/browse/RAINCATCH-921
4395	RAINCATCH-914	[~wtrocki] Just confirming, do you see the documentation repo having a dev dependency on typedoc and running it on top of the packages in the monorepo? Or running it through lerna and then 'exporting' the generated html into the doc repo?	1	1	https://issues.jboss.org/browse/RAINCATCH-914
4396	RAINCATCH-875	I was under impression that user profile is attached to request so we do not need to have this as part of the interface. Can you provide more info how you will see this implemented here? For passport: Both login and logout will need to be separate endpoints that will be handled by passport. We just need to build template for this. Logged user will be always attached to req.user. So effectively the only one method needed will be the actual security middleware.	0	0	https://issues.jboss.org/browse/RAINCATCH-875
4397	RAINCATCH-875	Oh.. I get ya. I think it's best to provide clean separation between server support (req.user available in handlers) and client. As we assumed that all profile data will be in fact stored on our side we can have user module function that will get user data. Something like that: {code} router.get("/profile", rsecMiddleware, function(req,res) { res.json(req.user); } {code} Is that also possible for keycloak?	1	0	https://issues.jboss.org/browse/RAINCATCH-875
4398	RAINCATCH-873	Thanks [~austincunningham], can you maybe sync with [~wtrocki] to get this documentation and examples onto https://feedhenry-raincatcher.github.io?	0	0	https://issues.jboss.org/browse/RAINCATCH-873
4399	RAINCATCH-871	[~wtrocki] Is the aim at this point to still include node_acl integration, or will it be a simpler role check based on a certain user id?	1	1	https://issues.jboss.org/browse/RAINCATCH-871
4400	RAINCATCH-844	I want to extend idea to talk also about supported API. To we can auto generate code using: https://github.com/swagger-api/swagger-codegen	0	0	https://issues.jboss.org/browse/RAINCATCH-844
4401	RAINCATCH-843	FYI [~davidmartin] - Do you see type definitions being part of the fh-mbaas-api or we should have separate repo for the moment?	1	1	https://issues.jboss.org/browse/RAINCATCH-843
4402	RAINCATCH-771	[~wtrocki] Thinking I might either re-open this ticket and update the tickets description or just create a new ticket instead. For an automated deploy script, i think this should include: # Running the Keycloak Server (Docker looks Good) # Creation/Configuration of Realms using the Keycloak Admin CLI - This would be a script that creates all the required Keycloak configurations to integrate with the Raincatcher demo solution. WDYT?	1	1	https://issues.jboss.org/browse/RAINCATCH-771
4403	RAINCATCH-769	[~tjackman] Hey. We have this ticket covered in our docs story. Do you have any updates on this? Maybe we can close and move some results from here.	1	1	https://issues.jboss.org/browse/RAINCATCH-769

#	Requirement	Questions	Answered	Successfully Answered	URL
4404	RAINCATCH-765	[~tjackman] Let's finish and close all non essential spikes outside the scope. h4. Draft of proposed set of tasks for Raincatcher 1.0 1. Create Cloud Interface for Security 2. Raincatcher rsec module implementation for Keycloak - Create the keycloak realm to seed the user/roles - docs + startup script + how to extend - ##Blocker No support for realm updates - ##Blocker Offline suport sync - spike - ##Blocker SaaS offering may not have keycloak exposed - Implement Linking user module users to keycloak users as part of express middleware required to expose all available data. - Add configuration option triggering offline authentication (separate epic) - Implementation for all supported Raincatcher protect them by roles in demo application. (This will be using interface only) - Investigate sync support and user filtering. - Investigate Web API module support - may be not used. - Complete user security story in demo - how the keycloak demo realm is configured - Demo cloud should support for the security interface. docs. - Custom login theming. Documentation 3. ClientSec Implementation for keycloak (May include elements that are not initial requirement) - JS module coming from server? no interface? - Docs surrounding hiding of UI elements by role - Investigation of online/offline as part Raincatcher - demo-mobile integration for client - supporting/testing verification of cookies - demo-portal integration for client - supporting/testing verification of cookies - custom login theming? 4. Raincatcher rsec cloud module implementation for passport.js (previously dummy authentication module) - Implementation for basic security interface - implement login endpoint - should have redirects to match keycloak - add more data to user module including passwords to mongo db - implement credentials handler that will match credentials with user ping [~bofarrel]	0	0	https://issues.jboss.org/browse/RAINCATCH-765
4405	RAINCATCH-760	h4. What was done I replaced our homegrown authentication service with keycloak for demo portal. h4. Quick demo: https://drive.google.com/a/redhat.com/file/d/0B4yds-KCN6cvYW15MWFZMWU5dzA/view?usp=sharing h4. Changes: https://github.com/feedhenry-raincatcher/raincatcher-demo-cloud/compare/master...wtrocki:keycloak h4. Documentation: https://keycloak.gitbooks.io/documentation/securing_apps/topics/oidc/javascript-adapter.html Suggested steps to fully migrate to keycloak: - Use keycloak client in mobile apps to retrieve tokens in mobile/cookie in browser. - Migrate sample users from auth service to keycloak - Remove auth service integration in clients and cloud - Remove auth service h4. Why remove security service - It provides zero additional value when keycloak solution is used. - Makes really hard to configure access origin for sessions and tokens (It's best to configure keycloak on the edge which is cloud app). - Having security service complicates raincatcher setup. Without security service we can setup raincatcher in 1 step instead of 6 steps. - It's not aligned with raincatcher modular architecture where modules can be placed everywhere.	1	1	https://issues.jboss.org/browse/RAINCATCH-760
4406	RAINCATCH-730	[~wtrocki] - Are you looking form some action from me here?	1	1	https://issues.jboss.org/browse/RAINCATCH-730
4407	RAINCATCH-711	Currently there are problems with the Drag and Drop functionality in the Selenium WebDriver. This prevents the use of drag and drop using protractor or accesing the WebDriver directly. A workaround for this is to use a drag and drop simulator such as [html-dnd|https://www.npmjs.com/package/html-dnd]. Example usage with protractor as follows: {code:javascript} var dragAndDrop = require('html-dnd').code; browser.executeScript(dragAndDrop, elementToMove, targetElement); {code}	1	1	https://issues.jboss.org/browse/RAINCATCH-711
4408	RAINCATCH-711	[~thnolan] test fails for me locally. Any clues? What cluster you use? {noformat} Running "ui:local" (ui) task Running "clean:0" (clean) task >> 0 paths cleaned. Aborted due to warnings. {noformat}	1	1	https://issues.jboss.org/browse/RAINCATCH-711
4409	RAINCATCH-708	[~phajidec] What needs to be updated to include the new sync server changes in fh-mbaas-api? Is it just the demo cloud app at https://github.com/feedhenry-raincatcher/raincatcher-demo-cloud? Or are there modules that need updating as well?	1	1	https://issues.jboss.org/browse/RAINCATCH-708
4410	RAINCATCH-692	[~wtrocki] In the description: "File endpoints are currently not secured. Anyone with link to the file can see them." Have you steps to reproduce? The portal app will return a 401 if not authenticated, and mobile users won't be able to see them as sync will only download files created by the logged in user. If you change the file identifier in the URL to one from another user, it won't show it, as that file was never synced down locally and can't render if its not there.	1	1	https://issues.jboss.org/browse/RAINCATCH-692
4411	RAINCATCH-636	[~wtrocki] I have updated the description of the ticket. Does this help give a clearer picture?	1	1	https://issues.jboss.org/browse/RAINCATCH-636
4412	RAINCATCH-634	POC Project repo - https://github.com/JameelB/raincatcher-workflow-angular-demo Findings: *Can the module be instantiated without any other modules?* Module was successfully instantiated without any other modules apart from raincatcher-mediator. It was able to work fully with all CRUDL operations and is able to begin and complete a workflow process. *What extra configuration would be needed if they can't?* [Subscribers|https://github.com/JameelB/raincatcher-workflow-angular-demo/blob/master/src/app/mediator-subscribers.js] to the mediator topics are required to be set up. Form templates to be used for the workflow process are required to be set up as well *Should the module stand alone or be merged with another module?* I believe that it should be a stand alone module to avoid limiting development options.	1	1	https://issues.jboss.org/browse/RAINCATCH-634
4413	RAINCATCH-633	POC project repo - https://github.com/witmicko/raincatcher-demo-workorder-angular Findings: *Can the module be instantiated without any other modules?* Module worked fully including all CRUDL operations and only needed RainCatcher-mediator module *What extra configuration would be needed if they can't?* I needed to add [mediator subscribers|https://github.com/witmicko/raincatcher-demo-workorder-angular/blob/master/src/app/mediator_subscribers.js] *Should the module stand alone or be merged with another module* I believe it should be a standalone module as merging it with another module might limit development options.	0	0	https://issues.jboss.org/browse/RAINCATCH-633

#	Requirement	Questions	Answered	Successfully Answered	URL
4414	RAINCATCH-620	[~phajidec], [~davidmartin] my understanding is that this change is already on master, but is not yet the version that's delivered with the latest RHMAP version. Should we start using this now in our load testing work, or hold off? Edit: I think we might already have it on our branch, as a result of some rebasing I did last week in an attemp to fix some issues seen in the cloud app. The new changes didn't fix the issues that I encountered. Should I go back to the old version, or keep pulling changes in from master periodically?	1	1	https://issues.jboss.org/browse/RAINCATCH-620
4415	RAINCATCH-619	currently. These tests were run with the raincatcher solution running locally on my laptop, and the test runner operating from there also. The cloud app appeared to be consuming 75-100% of the CPU time that was available to it for the duration. I think these results are useful: when running on a production-like RHMAP3, we don't reach the same concurrency -- 10-15 failures are seen at a concurrency of 30. Something to note is that in some cases of failure, this could be a problem in the load-test scripts: any time they go into a sync loop, they'll time out after 2 minutes if their success condition is not reached (i.e. the cloud app is responding as expected, but the test is still failing). However, the number of "Mediator request timeout..." messages in the logs appears to roughly match the number of test failures. I'm not sure if that validates the test script logic. I'm hesitant to say that it does. As I currently understand it, a real client would timeout a single sync request after 2 minutes, is that right? The test script times out the looping after two minutes -- so there could be timely responses from the cloud app, but because of the number of clients concurrently updating a dataset, a given script execution may just not be lucky enough to successfully match the hash that the server has for long enough. Does that make any sense? Another rare issue that we've seen, typically at high memory usage (when the memory leak was there, this occurred also, so it seems more tied to memory usage than concurrency), is that the cloud app would crash with the following uncaught exception output in the error logs: {code} uncaughtException: [Error: Can't set headers after they are sent.] Internal error: [Error: Can't set headers after they are sent.] Error: Can't set headers after they are sent. at ServerResponse.OutgoingMessage.setHeader (_http_outgoing.js:344:11) at ServerResponse.writeHead (_http_server.js:180:21) at endResponseCallback (/home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/node_modules/fh-mbaas-express/lib/mbaas.js:116:9) at /home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/node_modules/fh-mbaas-express/lib/mbaas.js:182:16 at timeWrappedCallback (/home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/lib/util/metrics.js:68:31) at /home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/lib/sync-srv.js:193:24 at timeWrappedCallback (/home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/lib/util/metrics.js:68:31) at /home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/lib/sync-DataSetModel.js:401:7 at invokeCb (/home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/lib/sync-DataSetModel.js:510:13) at /home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/node_modules/fh-mbaas-client/node_modules/fh-logger/node_modules/continuation-local-storage/node_modules/async-listener/glue.js:188:31 at nextTickCallbackWith0Args (node.js:420:9) at process._tickCallback (node.js:349:13) {code} [~davidmartin] and I have tried to understand this onen a bit, but we haven't gotten very far yet really. Another thing that's seen in the cloud app logs regularly at high concurrency is ECONNREFUSED to fh-mbaas: {code} {"name":"basic-logger","hostname":"testing-qed1-mbaas1-live","pid":20085,"level":50,"msg":"FH-MBAAS-CLIENT: Invalid Response Body { body: 'Service unavailable, check service exists and is running ok - { [Error: connect ECONNREFUSED 10.71.11.120:8819]\\n code: \\'ECONNREFUSED\\',\\n errno: \\'ECONNREFUSED\\',\\n syscall: \\'connect\\',\\n address: \\'10.71.11.120\\',\\n port: 8819 }' }","time":"2017-04-04T10:45:50.652Z","src":{"file":"/home/fh/apps/testing-t5smsumn2ninh3k4mrxnmugp-qed1-mbaas1-live/src/node_modules/fh-mbaas-api-metrics/node_modules/fh-mbaas-client/node_modules/fh-logger/lib/request-	1	1	https://issues.jboss.org/browse/RAINCATCH-619
4416	RAINCATCH-619	I'm curious as to the header-setting error, does it mean we have some asyncronous building of express responses?	1	1	https://issues.jboss.org/browse/RAINCATCH-619
4417	RAINCATCH-619	bq. Afterwards we could consider overriding that value to a larger one for network-related mediator topics in the raincatcher codebase. Yeah, that's one possible way. Another could be to have some init of each module, where things like this could be passed in from the app. That way, developers could configure different modules with different timeouts (or other properties), based on their app config file (or env vars that the app consumes and passes values to the relevant modules). bq. I'm curious as to the header-setting error, does it mean we have some asyncronous building of express responses? I'm not really sure what it means. It could be that, or maybe it could be some strange handler somewhere that's listening for some exceptional case and returning (or trying to return) a response even though execution continues as normal somehow also; or it could be that there's a missing {{return}} on a callback somewhere that lead to it being called more than once. In any case, if upgrading to the latest fh-mbaas-api might fix it, I'd rather try that instead of sinking lots of time into it to try to find. :)	0	0	https://issues.jboss.org/browse/RAINCATCH-619
4418	RAINCATCH-619	For the next test, everything was doubled: 800 executions at a peak concurrency of 80, ramping up over 160 seconds. The total time was 72 minutes, running between Thu Apr 27 15:29:25 and Thu Apr 27 16:41:20. There were 125 failures, all of which were timeouts in the load test scripts. To understand what this means, a bit of context from the test scripts is needed: There are a few places in the test scripts where we loop waiting for something for something from the server, checking every 5 minutes. If we haven't gotten what we want after 5 minutes, we fail that execution and move on. [Here's one example|https://github.com/feedhenry-raincatcher/raincatcher-demo-load-testing/blob/master/util/createRecord.js#L13..L30] - after sending a create or update of a record to the server, we wait until the server has told us that it has applied it before moving on. Looking at the times when these failures occurred is useful here: the first was at 17:28, in the final 15 minutes of the test. After this point, only 20 successful runs finished, all finishing at 17:30 (11 minutes before the end). This scenario was predicted in the last point in the previous comment. We should investigate whether this is due to too much load on the server, or bad assumptions on the test clients (are we not waiting long enough? How long is enough?). Some follow-on questons: * Will a soak test run experience these timeouts eventually at a lower concurrency? If we had only run 600 executions here, we wouldn't have seen any failures. * If we increased the timeout to 10 minutes or more, what's the next wall that we'd hit? * Are there any configurable options in the new sync that would improve this? * Would we continue to see the same behaviour if we scaled up the number of cluster workers in a multi CPU dyno, or the number of cloud app instances in an OCP cluster? Here are the grafana (with some lead-in and lead-out) and load-runner graphs, over the duration of the test: !raincatch-619_800_80_160-new-sync-grafana-fullpage.png|thumbnail! !raincatch-619_800_80_160-new-sync-lrgraph-fullpage.png|thumbnail!	0	0	https://issues.jboss.org/browse/RAINCATCH-619

#	Requirement	Questions	Answered	Successfully Answered	URL
4419	RAINCATCH-618	[~vsazel], [~phajidec], [~davidmartin], [~akeating1]: See the attached [^raincatch-618.csv] (which is created from running the collection script against the relevant runs in [^raincatch-618.tar.gz]), and the Grafana screenshot below. I ran this from the server that Aiden uses for the sync load testing server (the raincatcher-demo-load-testing repo is cloned there), then tarred the runs dir and downloaded it and the CSV, then stopped the instance again. Before the test I restarted both the cloud app and the auth service from the RHMAP studio. For the Grafana screenshot, I customized the view based on the times listed in the csv, just with a slight lead-in and lead-out to make them less sharp, and give an idea of what activity was like beforehand. !raincatch-618-fullpage.png|thumbnail! Some notes: * I ran the setup script from load runner with the {{--before}} option. I *think* that this leads to the setup script activity being part of the graph, but I might be wrong. I'm not sure which is better. * We don't have any visibility into the auth service activity during the run. I'll create a follow-on issue to instrument that and use it, and configure Grafana to show it. * Our load test scripts don't do the independent sync of each dataset at each interval: they just do it once, they just send some data to the sync endpoints. I'm not sure if that's important, or how much additional load that would add. From my understanding of how sync is used by raincatcher modules on devices, each dataset is synced every interval to *check if there's any new data on the server*, but when they've got data to *send* (like our load test scripts do), that's outside the regular interval sync. For the time that a script execution is running, that's probably currently fine -- executions should currently be quite quick, I'm not sure if that's good or bad or neither. How does this look? Is there anything clearly missing?	1	1	https://issues.jboss.org/browse/RAINCATCH-618
4420	RAINCATCH-602	I think I might've editted this issue's description back to an old version by mistake, removing an edit by [~davidmartin], if someone got the email with the diff could they revert it?	1	1	https://issues.jboss.org/browse/RAINCATCH-602
4421	RAINCATCH-582	[~phajidec] I'm proposing that we don't bother with this, and instead just restart the cloud app and auth service manually. What do you think? All of the stuff (users and workorders) that gets created by the setup script at least seems to get cleared up by doing that (and, depending on the number of users and workorders, this could be a much quicker way than getting the cloud app to process deletes for everything).	1	1	https://issues.jboss.org/browse/RAINCATCH-582
4422	RAINCATCH-582	bq. We'll be releasing the storage implementations that use mongo for persistency soon, so we won't be able to rely on this behavior How soon is soon? :) bq. We've also implemented a data reset http endpoint to make it easier to reset to the initial seeds, so in the future we can also make the script hit that one. Is that endpoint there now? If not, I propose that we leave the implementation of this script until it (and the persistent storage in MongoDB) is the default. Does that sound reasonable?	0	0	https://issues.jboss.org/browse/RAINCATCH-582
4423	RAINCATCH-575	[~tjackman] Is that still requirement. Can we close it and wait for more clear results of the architecture meetings?	1	0	https://issues.jboss.org/browse/RAINCATCH-575
4424	RAINCATCH-565	So from what I understand, the demo mobile client communicates to the cloud app as follows: - Login at the start - Each module (workflow, workorders, messages, result) performs a sync check at each interval - If there's new data, it will then do a syncRecords to get the records that it's missing - If there's data changed on the client, it always seems to be the *result* module that syncs that back to the server The portal client is similar, except that it can generate data for all of the different modules to sync back (e.g. adding a workflow, sending a message to a user, adding a workorder, etc). I think we could have the load test script cover both: some runs would act as a mobile user, and some would act as a portal user (we could configure the ratio of that using the run number I think). I've a feeling that mobile clients could have more reason to send data to the server, since they could send at each workflow step. I might be making the script too complex by thinking about it like this, I'm not sure. One thing that I'm not really clear on is how long each "client" (mobile or portal) should stay running. Just enough to carry out their own agenda, or should they continue to run after that to continue to receive updates from the server based on the updates from other clients? I guess once an instance of the script finished, it'll be replaced by another one, so there will always be N clients sending and receiving updates.	0	0	https://issues.jboss.org/browse/RAINCATCH-565
4425	RAINCATCH-564	My current understanding is that there would be regular sync requests from devices (e.g. every 5 seconds), but there won't always be new data to send to the cloud, and there may or may not be any new data on the cloud. Is this something that we'd need to have in there, or is that just implicit that we get by having many instances of the script running?	1	1	https://issues.jboss.org/browse/RAINCATCH-564
4426	RAINCATCH-564	[~grdryn] In reality there will be apps syncing with data & without data all the time (at sync frequency) I think having enough instances of the script running at a particular concurrency is enough to mimic the 'worst case' scenario. i.e. everyone is going through the 'happy path' and generating data for sync to be syncing. I don't think there's enough value in including sync traffic without data as it doesn't help answer the question of 'What is the maximum number of active users it can handle?' We can define an active user as someone working their way through a happy path as fast as programatically possible (worst case).	1	1	https://issues.jboss.org/browse/RAINCATCH-564
4427	RAINCATCH-564	How different from a load-testing standpoint it is to actually simulate a happy path at programatic speed as opposed to just hammering the datasets at a ratio and profile that we determine would reflect actual usage? i.e. results suffering a lot of additions and no editions, Workorders having a few orders of magnitude more changes than Workflows, etc. I feel the load-testing client setup might be simpler this way and allow for a higher speed of execution and easier extending as there we get more server-side load-testing points in the project. We could eventually replace educated guessing with actual usage reporting.	0	0	https://issues.jboss.org/browse/RAINCATCH-564
4428	RAINCATCH-540	[~supittma] I think the third option might be the right one. To me, mapping functionality seems like 2 things: - A map display module (raincatcher-map, raincatcher-map-angular?) to display "something" or a list of "something" where "something" is an object with locations, labels etc. It subscribes to "wfm:map:display, arrayOfSomething". - A workorder-map (workorder-map-angular?) module that displays workorders. It publishes a "wfm:workorder:list" topic to get the workorders, plucks out the data it wants to display and then publishes "wfm:map:display, arrayOfSomething". I think both of these modules have value. I can certainly see users wishing to integrate the raincatcher-map module into other stuff (e.g. where are my drivers at any time?).	1	1	https://issues.jboss.org/browse/RAINCATCH-540

#	Requirement	Questions	Answered	Successfully Answered	URL
4429	RAINCATCH-540	So pinching in with what I mentioned before about using typescript to annotate topics. [~supittma]'s third option fits very well with an optional addition of runtime checking of values (i.e. json-schema) to the mediator but also with a interface declaraion in typescript, which could provide additional information through jsdocs. an simple example interface for this topic would be: {code:java} interface IMapPoint { /** Point's latitude on Earth */ lat: number, /** Point's longitude on Earth */ lng: number, /** Optional label for display */ label?: string } {code} However the only way to leverage this through editor support is if we expose 'typed' utility functions: {code:java} class RaincatcherMap { add(point: IMapPoint) { this.mediator.publish('map:add', point); } } {code} These are akin to [action creators|http://redux.js.org/docs/basics/Actions.html#action-creators] in redux If we adopt a file structure/convention for adding these interfaces to the projects we could have some tooling to add them to the READMEs as well, so they can be seen alongside their related topics and used by non-typescript-able users. As a plus these bindings would still be picked up by VSCode's Intellisense even if the user was writing plain javascript.	0	0	https://issues.jboss.org/browse/RAINCATCH-540
4430	RAINCATCH-538	[~ndonnell] In https://github.com/feedhenry-raincatcher/raincatcher-demo-portal/blob/b9241d4a0d9cb5e681cdb6390926ad4169fe7a24/src/app/initialisation/run.js#L75 we call userClient.hasSession(). The userClient service/manager is provided by the fh-wfm-user module and is injected via angular. I think this is an example of where the appropriate module boundary is being respected, and emitting and waiting for a response to an event via the mediator may confuse things rather than make them clearer. This is also similar to places where userClient.list() is bound to a workers property. wdyt?	1	1	https://issues.jboss.org/browse/RAINCATCH-538
4431	RAINCATCH-536	Backing this out a bit I see in https://github.com/feedhenry-raincatcher/raincatcher-message/blob/89a7bea44e4f40082443a522a013c98921ad5248/lib/angular/directive.js the following : {code} .directive('messageForm', function($templateCache, mediator) { return { restrict: 'E' , template: $templateCache.get('wfm-template/message-form.tpl.html') , scope: { message : '=value' , workers: '=' } , controller: function($scope) { var self = this; self.model = angular.copy($scope.message); self.workers = $scope.workers; self.submitted = false; self.done = function(isValid) { self.submitted = true; self.model.receiver = JSON.parse(self.model.receiver); self.model.receiverId = self.model.receiver.id; self.model.status = "unread"; if (isValid) { mediator.publish('wfm:message:created', self.model); } }; } , controllerAs: 'ctrl' }; }) {code} Basically when the form is submitted the "created" event is emitted. However the message is not "created" yet but is submitted for creation. Should creation happen here or should there be another event handler which consumes a submit event and then emits the created event?	1	1	https://issues.jboss.org/browse/RAINCATCH-536
4432	RAINCATCH-518	So you are proposing the UI layer listen for read events published by the mediator instead of querying client services itself? Are the new UI directives implemented by extending a Raincatcher module instead of in the application module? Are there working demos (however trivial) that we can look at to compare/contrast the two approaches? I'm having trouble seeing how this proposed architecture makes the modules less reliant on Angular. Could you provide an example of how this Architecture would work with React or Angular 2?	1	0	https://issues.jboss.org/browse/RAINCATCH-518
4433	RAINCATCH-518	[~ndonnell] - All looks good and makes sense. 100% agree that we should split the core functionality and the presentation logic into separate modules - this would allow people to implement their own views (either in Angular or any other framework) without needing to touch the core functionality. Can you confirm with this approach that the core modules would not have any angular specific logic or code in them? If so, I think we are on to a winner here.	1	0	https://issues.jboss.org/browse/RAINCATCH-518
4434	RAINCATCH-518	[~ndonnell] [~supittma] Is splitting the UI parts into separate modules feasible? In my simplistic view of raincather, would it not make more sense for the Demo App to have the angular implementation in its repo (not in separate modules), requiring the core modules and using them? Having separate UI modules sounds like a very tricky thing to manage as they would all need to know there is a common view into where their things are rendered. There would need to be a UI management layer on top of all the modules that brings them all together as part of the single UI. Each UI module would need to understand where it sits in bigger UI picture so that it fits in appropriately. That bigger UI picture is going to be different depending on the solution which could immediately make UI modules unusable as is. If a module is unusable as is (e.g. needs to be forked, but never PR/merged back?) it probably shouldn't be a module.	1	0	https://issues.jboss.org/browse/RAINCATCH-518
4435	RAINCATCH-516	[~pmdarrow] These look all merged. Can this JIRA be closed?	1	0	https://issues.jboss.org/browse/RAINCATCH-516
4436	RAINCATCH-515	[~pmdarrow] These look all merged. Can this JIRA be closed?	0	0	https://issues.jboss.org/browse/RAINCATCH-515
4437	RAINCATCH-509	[~vchepeli] deployed to http://testing-rkbtsebhwbh6syl2gdsegmip-dev.phaji.skunkhenry.com/?url=http://testing-rkbtsegwgjr336vqus3lbsmu-dev.phaji.skunkhenry.com#/login with fixes from RAINCATCH-510, could you retest please? Project is at http://testing.phaji.skunkhenry.com/#projects/rkbtsecyj2d2cqbp2x5m5uw6/apps, auth service at http://testing.phaji.skunkhenry.com/#services/cpkwf63o24eed7jxl5jughdo/apps/cpkwf67qoepr4bylejy56h67/details.	1	1	https://issues.jboss.org/browse/RAINCATCH-509
4438	RAINCATCH-508	[~ndonnell] [~vchepeli] [~spriadka] Has any progress been made on this issue since the last comment? Anything we can do to help?	1	1	https://issues.jboss.org/browse/RAINCATCH-508
4439	RAINCATCH-489	[~ndonnell] I did some tooling setup and wrote a basic script for the video, but since the auth service didn't use the simple store before (it used pretty much equivalent code but not it as a dependency, see [here|https://github.com/feedhenry-raincatcher/raincatcher-demo-auth/blob/66349c79d085b139eaed55f14b199b4d169bfc61/lib/user.js#L7]) and we're still finishing adding the reset data and simple store to the cloud app+portal, I was thinking about putting this issue on hold and adding RAINCATCH-486 and RAINCATCH-451 as blockers so I can record it after that work is merged. WDYT?	1	1	https://issues.jboss.org/browse/RAINCATCH-489
4440	RAINCATCH-487	[~ndonnell] [~mogrodni] Would it be okay to just have the stores subscribe to `wfm:cloud:{dataset}:reset` like this https://github.com/feedhenry-raincatcher/raincatcher-simple-store/pull/5/files#diff-e208f5ddd2f6398fbbdf6ae5374688c0R24 instead of doing the listing/deleting/creating explicitly in demo-cloud?	1	1	https://issues.jboss.org/browse/RAINCATCH-487
4441	RAINCATCH-487	[~vchepeli] Works fine here !screenshot-1.png|thumbnail! Can you please clear storage in dev tools and/or try it in incognito mode?	1	1	https://issues.jboss.org/browse/RAINCATCH-487
4442	RAINCATCH-475	[~ndonnell] What did we agree to do on the tickets in this epic still targeted for 3.16 on the triage today?	0	0	https://issues.jboss.org/browse/RAINCATCH-475
4443	RAINCATCH-475	[~davidmartin] Is new version of the sync framework changing the way we should handle errors for sync. Do you have some early documentation we can verify before finishing this tickets?	1	1	https://issues.jboss.org/browse/RAINCATCH-475
4444	RAINCATCH-453	[~spriadka] We don't story point sub tasks. Can you remove the story points from this sub task and add to the parent task.	0	0	https://issues.jboss.org/browse/RAINCATCH-453
4445	RAINCATCH-452	[~spriadka] We don't story point sub tasks. Can you remove the story points from this sub task and add to the parent task.	0	0	https://issues.jboss.org/browse/RAINCATCH-452
4446	RAINCATCH-448	[~ndonnell] I removed the subtask for making a video as it's not critical path -- it's now a standalone task. Can you let me know if the ticket is still being worked on or if it's ready for QA? [~vchepeli] has added steps to verify which is leading me to think it is the latter. Leigh	1	1	https://issues.jboss.org/browse/RAINCATCH-448

#	Requirement	Questions	Answered	Successfully Answered	URL
4447	RAINCATCH-426	Awesome, thanks [~tjackman]! If that's PR based, I guess no extra jobs are needed. Do you want me to close this ticket ore do you want it open to keep tracking more vulnerabilities?	1	1	https://issues.jboss.org/browse/RAINCATCH-426
4448	RAINCATCH-416	Instead of implementing security ourselves.. would it make sense to evaluate Keycloak here?	1	1	https://issues.jboss.org/browse/RAINCATCH-416
4449	RAINCATCH-416	[~mwessendorf] this would be a nice opportunity for us to get familiar with the project! Relevant adapter for us would be [keycloak's nodejs adapter|https://keycloak.gitbooks.io/securing-client-applications-guide/content/v/2.4/topics/oidc/nodejs-adapter.html] Or perhaps the [oauth|https://github.com/jaredhanson/passport-oauth] or [oid connect|https://github.com/jaredhanson/passport-openidconnect] strategies for passportjs if we decide to go with it as a more generic client library and provide keycloak as a auth backend alternative. I think one of our main requirements with raincatcher is a low-friction deployment to RHMAP, is keycloak made available easily alongside the platform?	1	1	https://issues.jboss.org/browse/RAINCATCH-416
4450	RAINCATCH-416	Is the plan to use/provide a library for doing that or do we just modify demo-auth module to use best practices?	1	1	https://issues.jboss.org/browse/RAINCATCH-416
4451	RAINCATCH-412	[~spriadka] We don't story point sub tasks. Can you remove the story points from this sub task and add to the parent task.	0	0	https://issues.jboss.org/browse/RAINCATCH-412

4460	RAINCATCH-328	[~mogrodni] Could you clarify a bit the {{Things to consider}} section? I can't understand their implications precisely. i.e. - What should be the flow for using prerelease tags (when do we drop them) - How those tags would interact with the cli command - How to avoid using internal npm	0	0	https://issues.jboss.org/browse/RAINCATCH-328
4461	RAINCATCH-303	[~phajidec] Added detail for getting unit tests for the mediator. We should do this before load testing. If you are happy, can you mark as ready for story pointing.	1	1	https://issues.jboss.org/browse/RAINCATCH-303
4462	RAINCATCH-297	h1. Reopened. missing q in package json, its required in {{lib/mediator-service.js}} getting this err when running {code:java} grunt test {code} {code} ~/temp/raincatcher-map ⍰⍰ RAINCATCH-540 ⍰ grunt test Running "mochify:unit" (mochify) task Error: Cannot find module 'q' from '/Users/Mick/temp/raincatcher-map/lib' Error: Exit 1 Warning: `/Users/Mick/.nvm/versions/node/v4.4.7/bin/node /Users/Mick/temp/raincatcher-map/node_modules/grunt-mochify/node_modules/mochify/bin/cmd.js --reporter spec --colors test/mapController-spec.js test/mapDirective-spec.js test/mapMediatorService-spec.js test/mapService-spec.js` failed with code 1 Use --force to continue. Aborted due to warnings. {code}	1	1	https://issues.jboss.org/browse/RAINCATCH-297
4463	RAINCATCH-219	[~ndonnell] Could you add some details on How this should be achieved? i.e. - Passing in collision handlers from the raincatcher-sync API or also from raincatcher-workorder and the other consumers for passing in solution? - Brief sketch of how the API should be, or links to examples (searched for the example we saw during workshop but couldn't find them atm). - Suggestions for verification setup (unit testing / scenario for manually testing in a cluster) Can you also confirm if this only relates to allowing user-defined functions or also adding some default implementation?	1	1	https://issues.jboss.org/browse/RAINCATCH-219
4464	RAINCATCH-219	[~mogrodni] [~jameelb] just wondering can you give an update on this ticket? It looks to be holding steady for the past few days and I understand you had some blockers in it. Can you submit a PR so that we have visibility on it and can get more eyes on it if necessary. I'm going to suggest looking at putting in some sub tasks as well.	1	1	https://issues.jboss.org/browse/RAINCATCH-219
4465	RAINCATCH-205	[~vchepeli] If you have scope this sprint, can you take a look at this spike to see if there is a good way to load test the demo solution automatically.. I think it would be scenario-based but I think a spike of 3 - 4 days is required to see how this could be done. [~adamsaleh] is working on spiking how load / performance testing of the raincatcher modules in isolation could be done. It might be good to work together on this to get up to speed on Raincatcher. [~kpiwko] Thoughts? Any questions, let me know.	0	0	https://issues.jboss.org/browse/RAINCATCH-205
4466	RAINCATCH-187	[~phajidec] I just wanted to double check the goal of this task... Reading the header it says add "grunt tasks", but should this perhaps say create a grunt plugin? With a plugin the task whould become part of the projects own tasks, compared to just adding a grunt task to raincatcher-template-build which I think would still mean that we'd have to run them using either an npm script (like we currently do) or using something like: {quote}$ grunt --gruntfile node_modules/fh-wfm-template-build/Gruntfile.js build:test{quote} Let me know if I've misunderstood anything here. Thanks	1	1	https://issues.jboss.org/browse/RAINCATCH-187
4467	RAINCATCH-187	h2. Verification steps To test this you can pick an existing Raincatcher module that currently uses the npm scripts. For example raincatcher-user. h3. Install the plugin From the raincatcher-user directory run: {code} $ npm install --save-dev fh-wfm-template-build@0.1.1 --registry http://npm.skunkhenry.com $ npm install {code} Add the loading of the task to Gruntfile.js: {code} grunt.loadNpmTasks('fh-wfm-template-build'); {code} h3. Try the commands Try the _build_ task: {code} $ grunt wfmTemplate:build --debug --module=wfm.user.directives {code} Try the _watch_ task: {code} $ grunt wfmTemplate:watch --debug --module=wfm.user.directives {code} Touch one of the templates to trigger a rebuild: {code} $ touch lib/angular/template/worker-form.tpl.html {code} h3. Configure the plugin Try the above commands but this time with the configuration in Gruntfile.js (so no need to include the --module=<module name> option) {code} module.exports = function(grunt) { 'use strict'; grunt.initConfig({ eslint: { src: ["lib/**/*.js"] }, wfmTemplate: { module: 'wfm.user.directives', } }); grunt.loadNpmTasks('fh-wfm-template-build'); grunt.loadNpmTasks("grunt-eslint"); grunt.registerTask('default', ['eslint']); }; {code}	0	0	https://issues.jboss.org/browse/RAINCATCH-187
4468	RAINCATCH-152	[~ndonnell] This looks like it should be broken into at least two issues, do you agree? 13 points came from big scope and unknowns.	0	0	https://issues.jboss.org/browse/RAINCATCH-152

#	Requirement	Questions	Answered	Successfully Answered	URL
4469	RAINCATCH-143	[~ndonnell] [~wtrocki] [~vchepeli] Coveralls is not completely free. You have to pay monthly $5, but it can be used to track unlimited count of open-source repos. Do we have some sort of account associated with Coveralls? (Base feedhenry organization has, see: https://github.com/feedhenry/fh-ios-sdk and click on coverage badge)	1	1	https://issues.jboss.org/browse/RAINCATCH-143
4470	RAINCATCH-33	[~spriadka], I've made some comments on the review : https://github.com/feedhenry-raincatcher/raincatcher-appform/pull/29. What is the setup to test this? If you tell me which versions/branches of the other modules I need to use I can run it myself. Otherwise is this deployed to a cluster?	1	1	https://issues.jboss.org/browse/RAINCATCH-33
4471	RAINCATCH-33	[~spriadka], [~emilioicai] can you guys add details for ticket validation: cluster steps to validate? Thanks!	1	0	https://issues.jboss.org/browse/RAINCATCH-33
4472	RAINCATCH-33	[~spriadka] You would need to point your local setup to form that has checkbox. See your grunt configuration (FH_MBAAS_HOST etc.) Once form is updated make sure is deployed to environment you using in config. Last part would be to make sure that your workflow have your form reference id. To check that go to demo-cloud application and verify/change id's: https://github.com/feedhenry-raincatcher/raincatcher-demo-cloud/blob/master/lib/app/workflow.js#L18-L19 I do not see this process documented anywhere so maybe we can pull out this into: https://github.com/feedhenry-raincatcher/raincatcher-documentation/blob/master/running-locally.adoc WDYT?	0	0	https://issues.jboss.org/browse/RAINCATCH-33
4473	RAINCATCH-15	Advice from [~bgallagh] via e-mail: {quote} What I've done in the past is used a single dataset (workOrders) with query params to filter on the logged in user. The dataset structure looks like this: workOrder : { clientData: {}, // Data created on the client and never updated by customer cloudData: {}, // Data sent from customer - read only on client shared: {} // Data that can be updated on the client and from the customer } This makes handling collisions easier. I needed to write custom logic to 'merge' the shared properties on the client and cloud. Not sure if that helps at all. I think there is a balance, you need to be careful to not have too many datasets. Each one will have its own sync loop which could result in a lot of parallel http connections on device and in node. Are you duplicating data across the smaller datasets? If so, consider that all datasets are held in memory. There is a WFM style app coming shortly that requires supporting 1500 users. So, here is a basic calculation: 1500 Users * 60 second sync * 1 DataSet => 25 Http requests per second (minimum) 1500 Users * 60 second sync * 2 DataSet => 50 Http requests per second (minimum) 1500 Users * 60 second sync * 3 DataSet => 75 Http requests per second (minimum) etc etc {quote}	0	0	https://issues.jboss.org/browse/RAINCATCH-15
4474	RAINCATCH-1	Should this renaming also include the angular module names as well perhaps? For example, [lib/angular/sync-ng|https://github.com/feedhenry-raincatcher/raincatcher-sync/blob/a6fb3b6f61ece4132403375cf5ae2bdabc99e206/lib/angular/sync-ng.js#L7]	1	1	https://issues.jboss.org/browse/RAINCATCH-1
4475	FORGE-2752	[~claprun], what are the use cases for those examples? A feature that may help you is that Forge allows you to listen to command execution by implementing a CommandExecutionListener: https://github.com/forge/core/blob/master/ui/api/src/main/java/org/jboss/forge/addon/ui/command/CommandExecutionListener.java	1	0	https://issues.jboss.org/browse/FORGE-2752
4476	FORGE-2665	we could yeah - I"d be happy just doing the addon-remove / addon-Install TBH to start with ;) I guess JRebel would be much faster; but could end up with jboss modules issues possibly?	1	1	https://issues.jboss.org/browse/FORGE-2665
4477	FORGE-2665	Some questions: - What would be a good syntax for this command? (eg. {{addon-watch --coordinate a:b}}?) - How would you stop this command from executing? (another command? Specify a number of times after execution?)	1	1	https://issues.jboss.org/browse/FORGE-2665
4478	FORGE-2653	Totally agree. Had this in my todo list but haven't created a JIRA for it. I struggle a bit when trying to define it. Do you have any suggestions? Forge is a project management tool that allows you to automate repetititve, boring development tasks that you would probably google it, like setting up JPA in a Java eE 7 application using Maven for example (what files should be changed? What should go into those files?), . It sports a set of addons for the most used technologies nowadays and integrates with your favorite IDE to provide a seamless experience.	0	0	https://issues.jboss.org/browse/FORGE-2653
4479	FORGE-2645	Would it help to have two new options: {{-- idPropertyName}} (default: id) and {{-- versionPropertyName}} (default: version) ?	1	1	https://issues.jboss.org/browse/FORGE-2645
4480	FORGE-2637	Hi [~remmeier], Thank you for your feedback. They are really important. I am thinking of working on a JBoss Forge Users Guide and publishing it on https://www.gitbook.com (with a Github repository to allow easier contributions). I'd love to know what the community thinks about the beginner/intermediate/advanced labels. Would you mind posting a message in our user forums and ask for feedback(https://developer.jboss.org/en/forge) ? Once again, thank you very much!	1	1	https://issues.jboss.org/browse/FORGE-2637
4481	FORGE-2637	I noticed that one has been renamed from addon to forge-addon in 3.0.The websites mentions that forge 3.0 has been released. Is there an eclipse update site? because the jobs developer studio still has the old one. Some instructions in this regard would be helpful on the website. regarding command renaming: a deprecation mechanism (allow old command to be used for one major release, give warning on console) and stronger validation of input parameters could be helpful. In this example I used the command and ended up with just a war project.	1	1	https://issues.jboss.org/browse/FORGE-2637
4482	FORGE-2637	thx for the help. Got the basics of first plugin up and running (Apache Olingo). regarding documentation, a gradle example would be great. I installed it for both 2.x and 3.x. But did not manage to get it up and running. The 2.x version in the JBoss Develop Studio showed me only "Maven" as buildSystem option. And the following command gave me a pom without any errors/warnings: project-new --named demo --buildSystem Gradle What is the general status of the gradle support? I noticed that for 3.x it is still in Alpha stage. At my company, all new projects are soon supposed to use Gradle. And is there a possiblity to display the available parameters of a command from the command line? like "--help"? Similar to the wizard in the Dev Environments?	1	1	https://issues.jboss.org/browse/FORGE-2637

#	Requirement	Questions	Answered	Successfully Answered	URL
4483	FORGE-2615	to have the ui elements and the execute [15:11:10] <davsclaus> as today [15:11:17] <davsclaus> but being able to mark some of the uis [15:11:18] ggrzybek is now known as ggrzybek_bbl [15:11:20] <davsclaus> to be on page 2, 3 etc [15:11:29] <davsclaus> and then forge automatic turn that into a wizard with next/back [15:11:47] <davsclaus> so you dont have to move it into new UIStep classes and whatnot [15:11:51] <davsclaus> but can keep it all in 1 file [15:11:59] <@gastaldi> hmm [15:12:02] <davsclaus> for those simpler commands where [15:12:10] <davsclaus> you start with 3-4 ui\s [15:12:17] <davsclaus> and then add some more and then you have 8 or so [15:12:26] <davsclaus> and find out it makes the ui better if it was 2 pages [15:12:26] <@gastaldi> right, I think we can have a command that splits that into multiple UISteps internally [15:12:32] <davsclaus> yep [15:13:25] <@gastaldi> or a fluent language builder [15:13:49] <davsclaus> yeah [15:13:55] <@gastaldi> something like: Command.named("").having(UIInput, UIInput) [15:14:15] <davsclaus> builder.add(one).add(to).next().add(three).add(four).next().add(five); [15:14:27] <davsclaus> in that initializeUI method [15:14:31] <davsclaus> where you add the ui elements [15:14:34] <@gastaldi> ah you mean the UIBuilder [15:14:56] <davsclaus> yeah [15:14:58] <@gastaldi> hmm [15:15:13] <davsclaus> the pain today is to break up your command into N steps in the wizard [15:15:18] <@gastaldi> I see [15:15:23] <davsclaus> for simpler uis that is just straight line [15:15:37] <davsclaus> i can understand the complex ones you need more code and to code in the next() etc [15:15:44] <davsclaus> but for 90% ui's [15:15:54] <davsclaus> its N options you want to show the users [15:15:56] <davsclaus> but not all at once [15:16:02] <davsclaus> to not overload/confuse the user [15:16:07] <davsclaus> but spread out in N pages [15:16:21] <davsclaus> having all that in 1 java file [15:16:27] <@gastaldi> what about the conditions of showing an Input on a Nth page? [15:16:27] <davsclaus> makes it easier to code and "overview" [15:16:46] <davsclaus> from forge pov it is as if all the options are on the same page [15:16:56] <@gastaldi> right, I see [15:16:59] <davsclaus> but imageing people dont have big monitors [15:17:15] <davsclaus> so somehow it automatic overflow [15:17:27] <davsclaus> that can work for the simpler cases [15:17:38] <davsclaus> if you need conditional and branches, or whatnot [15:17:41] <davsclaus> then you can code it [15:18:30] <@gastaldi> by overflow you mean automatically adding a vertical scroll bar to the Wizard panel? [15:19:02] <davsclaus> if you add to many options to a command then today it will show a dialog [15:19:06] <davsclaus> that cannot fit the screen [15:19:10] <davsclaus> an you cannot see all the options [15:19:15] <davsclaus> and the next / finish button either [15:19:29] <davsclaus> that is okay if you keep to max 20-30 options etc [15:19:36] <davsclaus> but that happens seldom [15:19:40] <@gastaldi> in any IDE? or is that just in Eclipse? [15:19:45] <davsclaus> any of them [15:19:52] <@gastaldi> gotcha, that looks like a bug [15:20:06] <davsclaus> i dont think anyone builds ui like that [15:20:15] <davsclaus> we only see it in those camel wizards with camel endpoints [15:20:22] <davsclaus> where you have maybe 90+ options [15:20:37] <davsclaus> and we do not want 90 on one page either [15:20:45] <davsclaus> so that is why we have that dynamic wizard with the camel [15:20:46] <@gastaldi> right. What if you could split these options into fine grained commands? [15:20:53] <davsclaus> where we compute how many pages and all that [15:21:07] <davsclaus> i cannot its 100% dynamic [15:21:12] <@gastaldi> Right [15:21:23] <davsclaus> that is okay, its all the other commands i talk about really [15:21:31] <davsclaus> we often have commands with 4-10 options [15:21:36] <davsclaus> but would like 2 or 3 pages [15:21:42] <davsclaus> instead of 1 [15:21:50] <davsclaus> and today i have to code a fair bit to do that [15:21:56] <@gastaldi> I see [15:21:58] <davsclaus> hence why i would love to keep it in 1 java file [15:22:10] <@gastaldi> right [15:22:15] <davsclaus> and just tell forge that these X inputs = page 1, these Y inputs = page 2 [15:22:34] <@gastaldi> or have Forge automatically calculate that for you [15:22:36] <davsclaus> and optionally be able to set the title for each page as	1	0	https://issues.jboss.org/browse/FORGE-2615
4484	FORGE-2588	so one really simple workaround for this issue is to remove the pom.xml and src folder before the ArchtypeHelper processes the archetype jar; as for java / maven projects its going to replace whatever is there with the pom.xml thats inside the archetype anyway and will generate all the required java source folders with the correct package names or files from the archetype etc. Then if there's no pom.xml or src folders in the archetype jar, things just work beautifully without having to make major changes to ProjectType / NewProjectWizardImpl.java to defer decisions on what facets are inside a MavenArchetypeProjectType.java until after the archetype has been generated. Does this simple patch seem OK to you? It only affects projects created using MavenArchetypeProjectType. I did ponder about adding a custom "non-java" marker to the archetype to restrict the scope of this fix further; but thats harder right now as ArchetypeHelper is called with an InputStream of the archetype jar so its harder to pre-process the jar first to look for a magic file to delete pom.xml and src before processing it again. If you're happy with the above I can submit a PR?	1	1	https://issues.jboss.org/browse/FORGE-2588
4485	FORGE-2585	How about having a method like: {{T getSelectedRegionFor(Resource)}} and it could return a child element of the given resource ({{MethodSource}}, {{FieldSource}} when the resource is a {{JavaResource}} or {{Node}} if element is a {{XMLResource}} or even a {{String}} with the selected contents)? I am thinking on how useful would this API change be to make it easier for your code	1	1	https://issues.jboss.org/browse/FORGE-2585
4486	FORGE-2580	Hi [~davsclaus], Can you test against the latest master? I'll release Forge 3.0.0.Beta3 today if that works for you. Thanks!	0	0	https://issues.jboss.org/browse/FORGE-2580
4487	FORGE-2565	How does forge download from maven, do it uses a single thread? Maven itself used to be very slow as well, but they are now downloading concurrently. Maybe forge can do the same?	1	0	https://issues.jboss.org/browse/FORGE-2565
4488	FORGE-2553	In IDEA, even though the tooltip is being set in the component, it is not rendered (we use IDEA's {{TextFieldWithAutoCompletion}} class). I implemented the tooltip on labels and it's working fine now. Should be available on the plugin's 1.1.3.Final version.	0	0	https://issues.jboss.org/browse/FORGE-2553

4490	FORGE-2548	Hi Claus, This sure looks annoying. How can I reproduce this error? Thanks	1	1	https://issues.jboss.org/browse/FORGE-2548
4491	FORGE-2526	Hi Claus, Would adding a {{UISelectOne.getSelectedIndex()}} method be enough to fulfill this requirement? I didn't understand the {quote}The same thing would be nice on the change listener, where its applicable{quote} part.	1	1	https://issues.jboss.org/browse/FORGE-2526
4492	FORGE-2508	Did it work after changing it to JDK 8? Check for the Java executable that executes your IDE. What UI are you using? (Eclipse, Shell)? In case you are using the shell (from the standalone ZIP) change the forge.bat to display the JAVA_HOME used to start Forge.	1	1	https://issues.jboss.org/browse/FORGE-2508
4493	FORGE-2492	Just added a {{org.apache.maven.log_transfer}} system variable in Furnace 2.22.4-SNAPSHOT. See http://github.com/forge/furnace/commit/4f61059ec Can you test with this version?	1	1	https://issues.jboss.org/browse/FORGE-2492
4494	FORGE-2490	How can we solve this issue? Can you provide a pull-request with the necessary fix? Thanks	0	0	https://issues.jboss.org/browse/FORGE-2490
4495	FORGE-2484	[~agoncal], could you review the PR?	1	1	https://issues.jboss.org/browse/FORGE-2484
4496	FORGE-2484	[~gastaldi] You should rename the parameter {{enumClass}} with {{targetClass}} : {code} [MyEnum.java]$ java-add-enum-const TAB --enumClass --named {code} I thought deprecated command would not appear when having code completion. It's important to state that the command is deprecated and will soon disappear (like in scripting), but should not be displayed in code completion. WDYT ? : {code} [proj]$ java-new-enum --named MyEnum [MyEnum.java]$ java-new-enum TAB java-new-enum java-new-enum-const [MyEnum.java]$ java-add-enum TAB java-add-enum-const [MyEnum.java]$ java-new-enum-const TEST ***WARNING*** The command 'Java: New Enum Const' is deprecated and will be removed in future versions. Use 'java-add-enum-const --named' instead ***SUCCESS*** Enum constants [TEST] created in org.proj.MyEnum {code} You mentioned the possibility to add several enums in a single command. I would be nice to still have it actually. This is not the case : {code} [MyEnum.java]$ java-add-enum-const --named VISA ***SUCCESS*** Enum constant 'VISA' added in org.myenum.MyEnum [MyEnum.java]$ java-add-enum-const --named VISA1 VISA2 VISA3 ***SUCCESS*** Enum constant 'VISA1' added in org.myenum.MyEnum // Only VISA1 is created {code} We have this behavior with methods in JPA entity listeners where we use plural : {{lifecycles}} instead of {{lifecycle}}. If we follow this naming convention, that would be like renaming all the commands {{name}} and {{names}} instead of {{named}}. So we could have : {code} $ java-add-enum-const --name VISA1 $ java-add-enum-const --names VISA1 VISA2 VISA3 $ jpa-new-entity-listener --lifecycles PRE_PERSIST PRE_REMOVE PRE_UPDATE {code} Too much refactoring :o(	1	1	https://issues.jboss.org/browse/FORGE-2484

#	Requirement	Questions	Answered	Successfully Answered	URL
4497	FORGE-2469	agoncal So the question of this JIRA is "how do I write a proper add command" gastaldi Right. We might need an AbstractAddxxx class agoncal (targetClass being the real pain) agoncal That's what I thought gastaldi Or we could have a class that creates and sets up these inputs properly gastaldi Something like: Inputs.createTargetClass() agoncal While we still use inheritance vs aggregation, I was thinking of having AbstractCDICommand at the top, and then AbstractCDINewCommand and AbstractCDIAddCommand agoncal yes, that goes back to the main idea of aggregating parameters gastaldi Yeah agoncal But is there a possible quick win ? We don't break everything (too expensive), keep on with inheritance, and get a nice pattern that can be reused in most of the add commands gastaldi Thats a good question gastaldi I'd like to minimize the number of inherited classes agoncal yes agoncal But I realize that most of the AbstractCDICommand, AbstractFacesCommand.... are good for new commands, not add gastaldi what if we moved these common inputs to another class and @Inject them in the add commands gastaldi I mean in an encapsulating class gastaldi @Inject CommonAddInputs gastaldi food for thought :) agoncal I would like it to be even more flexible : agoncal @Inject TargetPackage agoncal @Inject TargetClass gastaldi ah-ha agoncal @Inject Named gastaldi that's interesting agoncal This way you create a command that fits your needs gastaldi so what if we could come with an API that allows you to aggregate this input? gastaldi hmmm or maybe: agoncal This way we could even keep the inheritance (eg. AbstractCDICommand) and use these @Inject gastaldi @Produces public TargetPackage produceTargetPackage() { ...} gastaldi public interface TargetPackage extends UIInput<String> agoncal Also remember that targetClass can be customized agoncal example : agoncal java-add-annotation : target class is any class gastaldi sure, as it is an UIInput, you can call the methods you'd like agoncal cdi-add-producer : target class is most of the classes, except Entities gastaldi that would be in the initializeUI of the commands afaik gastaldi or we could have a factory class that could accept parameters agoncal Would you have time to give it a try in the coming days ? If yes and we find a nice pattern, then I could apply it to the Java EE addon and start developing new commands gastaldi I can try, sure gastaldi that would be awesome agoncal Yes, that would allow me to kiil a few "add" commands that are still waiting to be developped ;o)	1	1	https://issues.jboss.org/browse/FORGE-2469
4498	FORGE-2460	Have you tried calling {{org.jboss.forge.addon.ui.command.CommandFactory.getCommands()}} when the server starts? You need to lookup {{CommandFactory}} through the {{AddonRegistry}}.	1	0	https://issues.jboss.org/browse/FORGE-2460
4499	FORGE-2460	Interesting. Have you had a chance to profile to see where the bottleneck is? Last time I checked, it was the Maven integration's fault (It is a bit slow when accessed the first time).	1	0	https://issues.jboss.org/browse/FORGE-2460
4500	FORGE-2398	Thanks, George! :) When is it going to be available in Forge core?	1	0	https://issues.jboss.org/browse/FORGE-2398
4501	FORGE-2362	It already does for addon projects. Do you mean other projects as well?	1	1	https://issues.jboss.org/browse/FORGE-2362
4502	FORGE-2362	Yes. Each time you create a new project with {{project-new}} it should generate a basic readme (I think it's a good practice to have) with at least some technical information, such as the name of the project and the type (war, ear). Another idea is, each time a Facet is installed, an event is sent (we've talked about this for the Swarm addon ;o) and a new line is added in the readme. We could get some inspiration from [The Perfect Readme|http://fr.slideshare.net/netguru/perfect-project-read-me] and generate a structure as follow, with some information we can automatically add, but also leave blanks for the developper to add : {code} = ${projectName} == General information * ${projectName} * // blah blah description == Technologies * ${language} // this would be mainly Java * ${Database} // we can get this from JPA setup command * ${applicationServer} // We can get this from javaee setup command * ${List of installed facet} == Setup * ${buildSystem}} // Maven or gradle * ${howToBuild}} // If it's Maven then we can say "use mvn clean install".... * // blah blah about the config files (if any) passwords (if any) == Development * // blah blah Additional configuration to be able to develop * // blah blah How to use in your IDE == Tests * // blah blah How to test the code * ${Arquillian} // we know that from Arquillian setup command * ${Junit} or ${testNG} // we know that from arquillian-setup command == Common problems/bugs * // blah blah Solution to common problems == Access to staging/beta/production * // Git repository, branches, tags * // blah blah How can I access (user/passord) == Notes * ${codeStyle} // we can get this information from the code formatter * // blah blah Any note {code}	1	0	https://issues.jboss.org/browse/FORGE-2362
4503	FORGE-2331	agoncal Basically, when you write a command, you need attributes : agoncal named (for most of the commands), targetPackage (for the new commands), targetClass (for the add commands)... agoncal And then you also end up "duplicating" attributes : example the "qualifiers" are used in several CDI commands gastaldi right agoncal So the idea was giving up inheritance (AsbtractCDINewCommand, AbstractJPACommand....) in favor of aggragation agoncal And then gastaldi came with an idea agoncal gastaldi your turn ;o) gastaldi my idea was to introduce some classes with the common inputs containing @Inject UIInputxxx and then @Inject the aggregate class in the command gastaldi something like @Inject DefaultCDIInputs inputs; gastaldi and then in the initializeUI you could call inputs.initializeUI(builder) gastaldi and fetch the values agoncal gastaldi But also more specific ones ? Such as @Inject DefaultCDIQualifier, @Inject DefaultJPAField... ? gastaldi that could work too gastaldi hm, maybe we could introduce a "input-only" concept here gastaldi a class that has only injected inputs gastaldi that would save some memory, by lazy-injecting them gastaldi right now, every @Inject in the command is resolved every time a command is executed agoncal And one suggestion was to start with the "qualifiers" attribute (used in several new CDI commands) gastaldi agoncal, what do you mean by that, specifically? agoncal gastaldi Well, if we could start introducing the concept after this release, and if yes, the "qualifiers" attribute could be a good start gastaldi you mean having a separate class for the inputs? agoncal gastaldi Yes gastaldi yeah, we can think about it in the next version. Still needs some thought to become a pattern agoncal gastaldi Ok, let's keep on exchanging on the subject soro I didn't understand this yet. We have some issue of some document to explain about it or will be discussed in future? soro about this "qualifiers" agoncal soro "qualifiers" is just an example agoncal soro Basically, how do you aggregate common attributes into a command soro agoncal, ah... ok! soro nice!	1	1	https://issues.jboss.org/browse/FORGE-2331
4504	FORGE-2316	@Max why not rely on the {{pom.xml}} ? If you have {{javax.javaee-api}} version 7, then you know it's a Java EE 7 stack. Would you need more ?	1	1	https://issues.jboss.org/browse/FORGE-2316
4505	FORGE-2316	just a comment for my clarification - I thought Stacks would be something that managed one or more facets ? Is that what Stack does but is still seen itself as a Facet ? Could one have Stack's of Stack's then ?	1	1	https://issues.jboss.org/browse/FORGE-2316

#	Requirement	Questions	Answered	Successfully Answered	URL
4506	FORGE-2316	Not sure about the naming convention, but choices are mostly in uppercase, shouldn't it be JAVA_EE_7, JAVA_EE_6 : {code} [test]$ project-new --named MyProj --stack java-ee-6 java-ee-7 none {code} Talking about naming again, if the default choice is {{none}}, then maybe rename {{org.jboss.forge.addon.projects.stacks.NullStack}} to {{StackNone}} or {{NoneStack}} (or {{NoStack}}) When I start Forge, and press TAB (not even created a project) I get all these commands that shouldn't be appear : {{constraint-setup, ejb-setup, jms-setup}} What about filtering choices ? This can be tricky, but would help users. For example, if you setup a JAVA EE 7 stack, having GlassFish 3 and JBoss EAP 6 doesn't make sense {code} [test]$ jpa-setup --container CUSTOM_JDBC GLASSFISH_3 JBOSS_AS6 JBOSS_EAP6 NON_JTA TOMEE WILDFLY CUSTOM_JTA GLASSFISH_4 JBOSS_AS7 JBOSS_EAP7 SAP_HCP WEBLOGIC_12C {code} In the {{StackFacet}} I really don't get the priority. If it's just for ordering, name is fine. BTW, what is the use case of overriding the {{supports}} method ?	1	1	https://issues.jboss.org/browse/FORGE-2316
4507	FORGE-2315	So, what do you think better? Create a move or change the renameTo? For me: create move +1	1	1	https://issues.jboss.org/browse/FORGE-2315
4508	FORGE-2283	Ok, sounds good. Where can I find the latest release offline zip file?	0	0	https://issues.jboss.org/browse/FORGE-2283
4509	FORGE-2279	Done ? For all the parameters ? BTW, is there a way to list all the parameters of all the commands (something like {{command-list --show-parameters}}). It would be helpful to review all the naming conventions	1	1	https://issues.jboss.org/browse/FORGE-2279
4510	FORGE-2268	Is this something that'd be enabled in the CLI provider itself; or something we could add as an option inside the camel commands? If the latter, any pointers on examples I could use to try it out?	0	0	https://issues.jboss.org/browse/FORGE-2268
4511	FORGE-2246	Hum... So shall we "duplicate" the code of {{AbstractJavaSourceCommand}} (the target package, named and overwrite) into {{AbstractJavaEECommand}} ? Both {{AbstractJavaSourceCommand}} and {{AbstractJavaEECommand}} extend from {{AbstractProjectCommand}}, so {{AbstractJavaEECommand}} cannot extend from {{AbstractJavaSourceCommand}} (except we refactor the entire graph}. WDYT ?	1	1	https://issues.jboss.org/browse/FORGE-2246
4512	FORGE-2230	How much slow is it? Will it severely impact performance? I don't think this is really an issue because we'll be 1) Avoiding unnecessary NullPointerExceptions: (Eg: {{coordinate.getPackaging().matches("?ar")}}); 2) Promoting better code legibility (Eg: {{packaging.isEmpty()}} is better read than {{packaging != null}}) I am still not convinced we should return null, but an empty String instead. IMHO, statements like {{coordinate.setPackaging(null)}} should throw an {{IllegalArgumentException}} because {{null}} is not a valid packaging type (unless we want to assume JAR as the default packaging)	1	1	https://issues.jboss.org/browse/FORGE-2230
4513	FORGE-2224	What do you mean by "scripts" that already use this command ? Are we talking about Forge shell scripts ? A few months ago there was plenty of command renaming (see [FORGE-1387]). I'm sure it broke plenty of scripts (I am a big fan of Forge Shell scripts and I spend always a bit of time to update them)	1	1	https://issues.jboss.org/browse/FORGE-2224
4514	FORGE-2106	This facet is implemented in another addon: https://github.com/gastaldi/reflections-addon Should we bring it to core?	1	1	https://issues.jboss.org/browse/FORGE-2106
4515	FORGE-2102	Can this issue be closed? I guess the remaining tasks can be closed as well	1	1	https://issues.jboss.org/browse/FORGE-2102
4516	FORGE-2050	Strange thing is that addon is listed when running forge --list: ben@ben-K55VD:~/Development/playground$ forge --list /home/ben/Development/forge-distribution-2.12.0.Final/addons: org.jboss.forge.addon:addon-manager-spi,2.12.0.Final org.jboss.forge.addon:addon-manager,2.12.0.Final org.jboss.forge.addon:dev-tools-java,2.12.0.Final org.jboss.forge.addon:shell-spi,2.12.0.Final org.jboss.forge.addon:shell,2.12.0.Final org.jboss.forge.addon:scaffold-faces,2.12.0.Final org.jboss.forge.addon:parser-json,2.12.0.Final org.jboss.forge.addon:maven,2.12.0.Final org.jboss.forge.addon:addons,2.12.0.Final org.jboss.forge.addon:git,2.12.0.Final org.jboss.forge.addon:scaffold-spi,2.12.0.Final org.jboss.forge.addon:scaffold,2.12.0.Final org.jboss.forge.addon:templates-spi,2.12.0.Final org.jboss.forge.addon:templates,2.12.0.Final org.jboss.forge.addon:parser-java,2.12.0.Final org.jboss.forge.addon:dependencies,2.12.0.Final org.jboss.forge.addon:projects,2.12.0.Final org.jboss.forge.addon:parser-xml,2.12.0.Final org.jboss.forge.addon:environment,2.12.0.Final org.jboss.forge.addon:ui-spi,2.12.0.Final org.jboss.forge.addon:convert,2.12.0.Final org.jboss.forge.addon:ui,2.12.0.Final org.jboss.forge.addon:bean-validation,2.12.0.Final org.jboss.forge.addon:text,2.12.0.Final org.jboss.forge.addon:javaee-spi,2.12.0.Final org.jboss.forge.addon:rest-client,2.12.0.Final org.jboss.forge.addon:javaee,2.12.0.Final org.jboss.forge.furnace.container:cdi,2.12.0.Final org.jboss.forge.furnace.container:simple,2.12.0.Final org.jboss.forge.addon:facets,2.12.0.Final org.jboss.forge.addon:resources,2.12.0.Final org.jboss.forge.addon:configuration,2.12.0.Final org.jboss.forge.addon:database-tools,2.12.0.Final org.jboss.forge.addon:core,2.12.0.Final /home/ben/.forge/addons: reproduction path: http://forge.jboss.org/document/write-a-java-ee-web-application-basic OS: ubuntu 14.04 (64 bit) oracle java jdk 1.7.0_67-b01 (64 bit) maven 3.2.3 Stacktrace: [conference]$ scaffold-generate --targets org.conference.model.Speaker ***ERROR*** Error while executing 'Scaffold: Generate' org.jboss.forge.addon.facets.FacetNotFoundException: No Facet of type [interface org.jboss.forge.addon.javaee.faces.FacesFacet] is installed. at org.jboss.forge.addon.facets.AbstractFaceted.getFacet(AbstractFaceted.java:51) at org.jboss.forge.addon.scaffold.faces.FacesAccessStrategy.<init>(FacesAccessStrategy.java:27) at org.jboss.forge.addon.scaffold.faces.FacesScaffoldProvider.getAccessStrategy(FacesScaffoldProvider.java:440) at org.jboss.forge.addon.scaffold.faces.FacesScaffoldProvider.setupWebXML(FacesScaffoldProvider.java:555) at org.jboss.forge.addon.scaffold.faces.FacesScaffoldProvider.setup(FacesScaffoldProvider.java:211) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.jboss.forge.furnace.proxy.ClassLoaderInterceptor$1.call(ClassLoaderInterceptor.java:87) at org.jboss.forge.furnace.util.ClassLoaders.executeIn(ClassLoaders.java:42) at org.jboss.forge.furnace.proxy.ClassLoaderInterceptor.invoke(ClassLoaderInterceptor.java:103) at org.jboss.forge.addon.scaffold.spi.ScaffoldProvider_$$_javassist_cabe0c6b-761c-47e7-8b20-740c935b5b50.setup(ScaffoldProvider_$$_javassist_cabe0c6b-761c-47e7-8b20-740c935b5b50.java) at org.jboss.forge.addon.scaffold.impl.ui.ScaffoldExecuteGenerationStep.execute(ScaffoldExecuteGenerationStep.java:69) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at	1	1	https://issues.jboss.org/browse/FORGE-2050
4517	FORGE-2004	Did we discuss this issue on IRC?	1	0	https://issues.jboss.org/browse/FORGE-2004
4518	FORGE-1975	Now all deadlocks and thread leaks are fixed, but max build time has been reached (40 min). This is due to the tests, not the aesh upgrade. (This is the same with the old version) Can you increase the maximum time allowed for a build to validate this PR? Regards, Jeremie.	1	1	https://issues.jboss.org/browse/FORGE-1975
4519	FORGE-1970	I'm not convinced this is the source of the problems, and I think re-throwing the target exception would probably be a better solution anyway. Could you please provide steps to reproduce?	1	1	https://issues.jboss.org/browse/FORGE-1970
4520	FORGE-1953	Sure, create a PR and we'll be happy to merge it if it's ok. Does it allow you to set system properties too?	1	1	https://issues.jboss.org/browse/FORGE-1953

#	Requirement	Questions	Answered	Successfully Answered	URL
4521	FORGE-1953	Yes, actually we can type: - *sysprops* : to list system properties - *sysprops-get --propertyName foo* : to get the value of the system property 'foo' - *sysprops-set --propertyName foo --propertyValue bar* : to set the value 'bar' to property 'foo' What do you think about this definition? Kind regards, Mahmoud	1	1	https://issues.jboss.org/browse/FORGE-1953
4522	FORGE-1944	And what about an abstraction like the one we have with building (Maven or Gradle) ? Instead of {{junit-}} commands we could have something more abstract, such as {{test-}} and let us choose between Junit and TestNG. The Arquillian addon does that : {code} // Sets up a test framework test-setup --testFramework JUnit / TestNG --version // Creates a new test case test-new-test --named TheClassNameTest // Adds a new test to a test case test-add-test --named theMethodName --targetClass TheClassNameTes // Generates a test case for a given class (generates one test per public method) test-create-test --targets TheClassToGenerateTests ... {code}	0	0	https://issues.jboss.org/browse/FORGE-1944
4523	FORGE-1911	Hey Vineet, The Id isn't passed to the @PUT method, just the entity itself. How should this be handled then?	1	1	https://issues.jboss.org/browse/FORGE-1911
4524	FORGE-1897	[~gastaldi], http://img.ctrlv.in/img/15/02/28/54f1d0e53b6f6.png What I did? I added the getExtension in ProjectType interface. So, in AbstractProjectType I set the default value for null: @Override public String getExtension() { return null; } In each implementation, I need set this method. So.. I need to change my convert: type.setItemLabelConverter(new Converter<ProjectType, String>() { @Override public String convert(ProjectType source) { if (source == null) { return null; } if (source.getExtension() == null) { return source.getType(); } return source.getType().concat(" (").concat(source.getExtension()).concat(")"); } }); That seem good?	1	1	https://issues.jboss.org/browse/FORGE-1897
4525	FORGE-1897	This looks good, however using the String.concat method makes the code less readable :) Doesn't this also change the project-new command type option? What happens if you <TAB> the type option?	1	1	https://issues.jboss.org/browse/FORGE-1897
4526	FORGE-1881	Should this be a singleton instance?	1	0	https://issues.jboss.org/browse/FORGE-1881
4527	FORGE-1874	Is it possible to have this alias built in within Forge ?	1	1	https://issues.jboss.org/browse/FORGE-1874
4528	FORGE-1874	Hi [~agoncal], Have you tried {{build test --profile arquillian-wildfly-remote}} ? That should work afaik.	0	0	https://issues.jboss.org/browse/FORGE-1874
4529	FORGE-1874	What do you mean about treating Maven as an addon? Maven is already in it's own addon.	0	0	https://issues.jboss.org/browse/FORGE-1874
4530	FORGE-1867	Is there an existing use case for this? The calls to {{UIBuilder.add(...)}} is already a valid way of sorting UIInputs	0	0	https://issues.jboss.org/browse/FORGE-1867
4531	FORGE-1842	How do i get source code?? I am not getting from where to start??	1	1	https://issues.jboss.org/browse/FORGE-1842
4532	FORGE-1804	It's really weird. I've updated to the latest version of the code, executed the exact same commands, and ended up with badly formatted code. Could anyone else tried ? I'm running on a Mac with JDK 1.7_45	0	0	https://issues.jboss.org/browse/FORGE-1804
4533	FORGE-1802	What criteria to validate the script?	0	0	https://issues.jboss.org/browse/FORGE-1802
4534	FORGE-1802	I ran the above script and everything went fine: {code} [delme]$ run /tmp/crash.fsh project-new --named cdbookstore --topLevelPackage org.agoncal.training.javaee6adv --type war --finalName cdbookstore ; ***SUCCESS*** Project named 'cdbookstore' has been created. [cdbookstore]$ jpa-setup --persistenceUnitName cdbookstorePU ; ***SUCCESS*** Persistence (JPA) is installed. [cdbookstore]$ constraint-new-annotation --named ISBN ***SUCCESS*** Bean Validation Constraint Annotations org.agoncal.training.javaee6adv.constraints.ISBN was created [ISBN.java]$ jpa-new-entity --named Genre ; ***SUCCESS*** Entity org.agoncal.training.javaee6adv.model.Genre created [Genre.java]$ jpa-new-field --named name --length 100 ; ***SUCCESS*** Field name created [Genre.java]$ ***SUCCESS*** Field name created [delme]$ {code} Are there any issues here left to be fixed?	1	1	https://issues.jboss.org/browse/FORGE-1802
4535	FORGE-1802	OK, found the reason for the hanging shell Basically, when you run scripts, the Run command will execute the commands one after the other. It will wait until the command returns a result (success or failure) or until a timeout of 500 seconds passes. The issue doesn't come when the command *execution* throws an exception. Then the command execution listener's postCommandFailure method will be run and the run script command will not hang - it will report an error. The real issue occurs when the command *initialization* fails for some reason. In that case one of he ForgeCommandRegistry methods would throw an exception. The problem with that exception is that it gets lost somewhere in AeshShell and there is nobody to notify the command execution listeners about the failure. So the execute method in the RunCommand class will run for the full 500 seconds waiting in vain for a result. Now, I've hacked a quick solution to this problem, that works: https://github.com/ivannov/core/commit/5ed84f5f3ce5fedae2bfa100f7e270cc645a2994 I just need an advise from someone more knowledgeable: 1) Having so many nulls on line 132 is fine for RunCommand.ScriptCommandListener, but probably this does not apply for all the possible listeners that may come to this point. Obviously there is no Command object so far, but can I get somehow UIExecutionContext? I only got a UIContext 2) I just fire the failure notification when parsing of the command doesn't succeed. I can also spot some other candidates in this class. But are these all the locations that we must fire the event? Cheers, Ivan	1	1	https://issues.jboss.org/browse/FORGE-1802
4536	FORGE-1802	The thing is that after any exception is thrown here, we go to the Aesh shell. Would you propose a better place for firing those events?	0	0	https://issues.jboss.org/browse/FORGE-1802
4537	FORGE-1784	Strange, I've executed the same script again, and this time I have a stack trace {code} [agoncal-training-javaee6-advanced]$ scaffold-generate --webRoot admin --targets org.agoncal.training.javaee6adv.* ; Exception in thread "Aesh Process Loop 104588629" java.util.concurrent.RejectedExecutionException: Task AeshProcess{pid=86, manager=org.jboss.aesh.console.ProcessManager@150f7bf0, consoleCallback=org.jboss.aesh.console.AeshConsoleImpl$AeshConsoleCallbackImpl@2b91d45d, operation=ControlOperator: END, Buffer: scaffold-generate --webRoot admin --targets org.agoncal.training.javaee6adv.* } rejected from java.util.concurrent.ThreadPoolExecutor@730d3c03[Shutting down, pool size = 1, active threads = 1, queued tasks = 0, completed tasks = 85] at java.util.concurrent.ThreadPoolExecutor$AbortPolicy.rejectedExecution(ThreadPoolExecutor.java:2048) at java.util.concurrent.ThreadPoolExecutor.reject(ThreadPoolExecutor.java:821) at java.util.concurrent.ThreadPoolExecutor.execute(ThreadPoolExecutor.java:1372) at org.jboss.aesh.console.ProcessManager.startNewProcess(ProcessManager.java:44) at org.jboss.aesh.console.Console.processOperationResult(Console.java:628) at org.jboss.aesh.console.Console.processInternalOperation(Console.java:594) at org.jboss.aesh.console.Console.execute(Console.java:582) at org.jboss.aesh.console.Console.access$700(Console.java:60) at org.jboss.aesh.console.Console$6.run(Console.java:499) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:615) at java.lang.Thread.run(Thread.java:744) {code}	1	1	https://issues.jboss.org/browse/FORGE-1784

#	Requirement	Questions	Answered	Successfully Answered	URL
4538	FORGE-1780	Hi, I did this issue, but I have a problem. I created a method to do this task, but I don't know where put my code, into Strings class of the roaster or furnace. What the better place?	1	1	https://issues.jboss.org/browse/FORGE-1780
4539	FORGE-1750	1. What about creating one command for both FORGE-1749, FORGE-1750 prompting the user while executing to choose one? 2. What builder pattern application to choose? setName vs withName, new Person() vs Person.newInstance()?	1	1	https://issues.jboss.org/browse/FORGE-1750
4540	FORGE-1729	Thanks, right. My question, though, is should this happen automatically when running in a test environment? Seems like this is something that you might expect to be compartmentalized for you. WDYT?	0	0	https://issues.jboss.org/browse/FORGE-1729
4541	FORGE-1729	Is there any system property we might check if it is being running from a unit test?	0	0	https://issues.jboss.org/browse/FORGE-1729
4542	FORGE-1729	Is there any system property we might check if it is being running from a unit test?	0	0	https://issues.jboss.org/browse/FORGE-1729
4543	FORGE-1712	Would this have a series of questions for people to answer, or is it simply delegating to the various commands?	1	1	https://issues.jboss.org/browse/FORGE-1712
4544	FORGE-1699	Hey Esteve, Sorry you are having this issue! Does this occur for all commands such as 'cd' and 'ls' as well, or is it limited only to specific commands? Thank you, Lincoln	1	1	https://issues.jboss.org/browse/FORGE-1699
4545	FORGE-1699	Hi Esteve, Could you replace Aesh with 0.49 manually in your {{addons/org-jboss-forge-addon-shell-spi-2-3-0-Final}} folder to confirm if this is an Aesh issue or something in the core? Don't forget to replace aesh-extensions in {{addons/org-jboss-forge-addon-shell-2-3-0-Final}} too. Thanks!	1	1	https://issues.jboss.org/browse/FORGE-1699
4546	FORGE-1699	Hey Esteve, Does slowness persist after the first TAB completes? It should be faster (but still not instant.) ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-1699
4547	FORGE-1699	What do you mean "dies?"	1	1	https://issues.jboss.org/browse/FORGE-1699
4548	FORGE-1699	Sure, actually. If you could do something, that would be great: I'm wondering if you could start a fresh forge instance, press <TAB>. Wait for the CPU usage to spike, then in another terminal, use 'kill -3 xxxxxx' where 'xxxxxx' is the process id of the running forge instance. (Can be obtained using 'ps -ef | grep forge' - it will be the PID of the Java process) Also, does the CLI ever return from a TAB? Or does it hang "forever"? I do notice a delay, but it always returns on my machine.	1	1	https://issues.jboss.org/browse/FORGE-1699
4549	FORGE-1699	Could you please check to see if this issue still occurs in Forge 2.4.1.Final ? Thank you! ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-1699
4550	FORGE-1699	From the graph, it looks like this took your computer about 30 seconds to complete. Is that the case? On my laptop it takes about 5 seconds to run all of the pasted commands. CPU usage is slightly high, but overall tolerable. How long does this take on your computer? What is your Java Version? What type of CPU do you have, and how much memory is allocated to your JVM? It's possible that garbage collection is running crazy.	1	1	https://issues.jboss.org/browse/FORGE-1699
4551	FORGE-1699	This doesn't seem related to Forge. Are you monitoring the Forge process only? I opened the same and my CPU never reaches above 60% on peak. It stays 20% most of the time.	1	1	https://issues.jboss.org/browse/FORGE-1699
4552	FORGE-1699	Curious, how fast and what type of CPU do you have?	0	0	https://issues.jboss.org/browse/FORGE-1699
4553	FORGE-1698	Isn't this already implemented? (https://github.com/forge/core/blob/master/maven/impl-projects/src/main/java/org/jboss/forge/addon/maven/projects/facets/MavenJavaCompilerFacet.java)	0	0	https://issues.jboss.org/browse/FORGE-1698
4554	FORGE-1680	This is caused because Furnace failed to start: {code} Mar 18, 2014 3:00:41 PM org.jboss.forge.furnace.impl.FurnaceImpl addRepository INFO: Monitoring repository [/Users/lb3/projects/jboss/forge/jbosstools-forge/plugins/org.jboss.tools.forge2.runtime/addon-repository] for file changes. Mar 18, 2014 3:00:41 PM org.jboss.forge.furnace.impl.FurnaceImpl addRepository INFO: Monitoring repository [/Users/lb3/.forge/addons] for file changes. Mar 18, 2014 3:00:41 PM org.jboss.forge.furnace.impl.FurnaceImpl start INFO: Furnace [2.1.1.Final] starting. Mar 18, 2014 3:00:41 PM org.jboss.forge.furnace.impl.FurnaceImpl start INFO: Detected changes in repository [/Users/lb3/projects/jboss/forge/jbosstools-forge/plugins/org.jboss.tools.forge2.runtime/addon-repository (Immutable)]. Mar 18, 2014 3:00:41 PM org.jboss.forge.furnace.impl.FurnaceImpl start INFO: Detected changes in repository [/Users/lb3/.forge/addons]. Mar 18, 2014 3:00:42 PM org.jboss.forge.furnace.impl.FurnaceImpl start SEVERE: Error occurred. java.lang.IllegalStateException: Cycle detected in Addon graph: [[org.jboss.forge.addon:scaffold-faces,2.1.1.Final], [org.jboss.forge.addon:javaee,2.1.2-SNAPSHOT], [org.jboss.forge.addon:scaffold,2.1.2-SNAPSHOT]] at org.jboss.forge.furnace.impl.graph.OptimizedAddonGraph.<init>(OptimizedAddonGraph.java:87) at org.jboss.forge.furnace.impl.addons.AddonLifecycleManager$4.call(AddonLifecycleManager.java:194) at org.jboss.forge.furnace.impl.addons.AddonLifecycleManager$4.call(AddonLifecycleManager.java:182) at org.jboss.forge.furnace.impl.LockManagerImpl.performLocked(LockManagerImpl.java:48) at org.jboss.forge.furnace.impl.addons.AddonLifecycleManager.forceUpdate(AddonLifecycleManager.java:181) at org.jboss.forge.furnace.impl.FurnaceImpl.start(FurnaceImpl.java:192) at org.jboss.forge.furnace.impl.FurnaceImpl$1.run(FurnaceImpl.java:123) {code} We probably need to figure out a way to fall back here and load only the internal repository if this occurs. Or to make Furnace more resilient.	0	0	https://issues.jboss.org/browse/FORGE-1680
4555	FORGE-1671	Another attempt... but looks like it's impossible to do with Roaster at the moment : {code} public class BeanValidationAnnotation { public static void main(String[] args) { // This is the inner annotation List final JavaAnnotationSource listAnnotation = Roaster.create(JavaAnnotationSource.class); listAnnotation.setName("List"); listAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); listAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); listAnnotation.addAnnotationElement("Email[] value()"); System.out.println(listAnnotation); // This is the annotation @Email final JavaAnnotationSource emailAnnotation = Roaster.create(JavaAnnotationSource.class); emailAnnotation.setPackage("org.agoncal.proj.constraints").setName("Email"); emailAnnotation.addImport(Payload.class); emailAnnotation.addAnnotation(Documented.class); emailAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); emailAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); emailAnnotation.addAnnotation(Constraint.class).setLiteralValue("validatedBy", "{}"); emailAnnotation.addAnnotationElement("String message() default \"wrong email address\""); emailAnnotation.addAnnotationElement("Class<?>[] groups() default {}"); emailAnnotation.addAnnotationElement("Class<? extends Payload>[] payload() default {}"); // I was expecting to have a method like that so I could add annotation inside another one // emailAnnotation.addAnnotationElement(emailAnnotation); System.out.println(emailAnnotation); } }{code}	1	1	https://issues.jboss.org/browse/FORGE-1671

#	Requirement	Questions	Answered	Successfully Answered	URL
4556	FORGE-1671	Cool, it works with the new {{addNestedType}} type of Roaster 2.1. I just need a bit of time to send a pull request ;o) {code} public class BeanValidationAnnotation { public static void main(String[] args) { // This is the inner annotation List final JavaAnnotationSource listAnnotation = Roaster.create(JavaAnnotationSource.class); listAnnotation.setName("List"); listAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); listAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); listAnnotation.addAnnotationElement("Email[] value()"); // This is the annotation @Email final JavaAnnotationSource emailAnnotation = Roaster.create(JavaAnnotationSource.class); emailAnnotation.setPackage("org.agoncal.proj.constraints").setName("Email"); emailAnnotation.addImport(Payload.class); emailAnnotation.addAnnotation(Documented.class); emailAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); emailAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); emailAnnotation.addAnnotation(Constraint.class).setLiteralValue("validatedBy", "{}"); emailAnnotation.addAnnotationElement("String message() default \"wrong email address\""); emailAnnotation.addAnnotationElement("Class<?>[] groups() default {}"); emailAnnotation.addAnnotationElement("Class<? extends Payload>[] payload() default {}"); emailAnnotation.addNestedType(listAnnotation); System.out.println(emailAnnotation); } } {code}	1	1	https://issues.jboss.org/browse/FORGE-1671
4557	FORGE-1644	The AddonRepository is associated with a Single Addon in a specific version isn't it? How would you deal with stored data across Addon versions? How do you get access to your own Addon info?	0	0	https://issues.jboss.org/browse/FORGE-1644
4558	FORGE-1625	Shoud an exception be thrown when an UIWizard is added?	1	1	https://issues.jboss.org/browse/FORGE-1625
4559	FORGE-1610	Ideally this feature would check the Forge website for the latest version, then prompt the user: "A new version of Forge is available, would you like to update? [Y,n]" and of course, once that is done: "Attempt to update automatically when Forge starts? [Y,n]"	0	0	https://issues.jboss.org/browse/FORGE-1610
4560	FORGE-1603	I'd like to bring this discussion to the channel or the forge-dev list. Does an overwrite flag make sense or should we just display the validation error?	0	0	https://issues.jboss.org/browse/FORGE-1603
4561	FORGE-1599	I think we could make our custom cache builder with additional options, and in case user wants to use it then he could create his own Cache producer which would use this extension. I don't know if that will work with many addons at the same time, is there some kind of addon scope in Forge CDI? Otherwise it will be necessary to use own custom annotations (or @Named) for caches other than default.	1	1	https://issues.jboss.org/browse/FORGE-1599
4562	FORGE-1593	What do you mean? Could you out an example? Thanks	1	1	https://issues.jboss.org/browse/FORGE-1593
4563	FORGE-1591	Thanks. Closing it	0	0	https://issues.jboss.org/browse/FORGE-1591
4564	FORGE-1590	[~abhijithtn], I just pushed the changes to the master branch. Since I don't have a proxy environment to test it, I need you to build from the sources and test it again. Can you do that for me? Thanks!	1	1	https://issues.jboss.org/browse/FORGE-1590
4565	FORGE-1590	Can you paste2.org the stacktrace please?	1	0	https://issues.jboss.org/browse/FORGE-1590

4569	FORGE-1590	Do you have the proxy set in settings.xml?	1	0	https://issues.jboss.org/browse/FORGE-1590
4570	FORGE-1590	Hi Abhijith, Since I am not in a proxy environment, we'll need you to debug it as an attempt to find the root cause. Can you do that for us? You need to debug the MavenContainer class (where the proxies are set) to confirm that it is really a bug.	0	0	https://issues.jboss.org/browse/FORGE-1590
4571	FORGE-1582	I've been trying to create a Bean Validation constraint properly... in vain. What I want to achieve is the following (notice the @List annotation) : {code} @Target({METHOD, FIELD, ANNOTATION_TYPE, CONSTRUCTOR, PARAMETER}) @Retention(RUNTIME) @Documented @Constraint(validatedBy = {}) public @interface Email { String message() default "wrong email address"; Class<?>[] groups() default {}; Class<? extends Payload>[] payload() default {}; @Target({METHOD, FIELD, ANNOTATION_TYPE, CONSTRUCTOR, PARAMETER}) @Retention(RUNTIME) @interface List { Email[] value(); } } {code} This is the code I've written. Both annotation are generated separately... but I don't know how to add listAnnotation inside emailAnnotation. Any idea ? {code} public class Main { public static void main(String[] args) { // This is the inner annotation List final JavaAnnotationSource listAnnotation = Roaster.create(JavaAnnotationSource.class); listAnnotation.setName("List"); listAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); listAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); listAnnotation.addAnnotationElement("Email[] value()"); System.out.println(listAnnotation); // This is the annotation @Email final JavaAnnotationSource emailAnnotation = Roaster.create(JavaAnnotationSource.class); emailAnnotation.setPackage("org.agoncal.proj.constraints").setName("Email"); emailAnnotation.addImport(Payload.class); emailAnnotation.addAnnotation(Documented.class); emailAnnotation.addAnnotation(Retention.class).setEnumValue(RUNTIME); emailAnnotation.addAnnotation(Target.class).setEnumValue(METHOD, FIELD, PARAMETER, TYPE); emailAnnotation.addAnnotation(Constraint.class).setLiteralValue("validatedBy", "{}"); emailAnnotation.addAnnotationElement("String message() default \"wrong email address\""); emailAnnotation.addAnnotationElement("Class<?>[] groups() default {}"); emailAnnotation.addAnnotationElement("Class<? extends Payload>[] payload() default {}"); // I was expecting to have a method like that so I could add annotation inside another one // emailAnnotation.addAnnotationElement(emailAnnotation); System.out.println(emailAnnotation); } } {code}	1	1	https://issues.jboss.org/browse/FORGE-1582
4572	FORGE-1555	It looks like it's already working. Can you recheck this issue please?	0	0	https://issues.jboss.org/browse/FORGE-1555
4573	FORGE-1554	Is there any way we could override that behavior? I agree with Vineet that this makes Forge users productive.	1	1	https://issues.jboss.org/browse/FORGE-1554
4574	FORGE-1550	http://www.travis-ci.org Eg. https://travis-ci.org/aeshell/aesh WDYT?	1	1	https://issues.jboss.org/browse/FORGE-1550
4575	FORGE-1550	The project use travis: https://github.com/forge/core/blob/master/.travis.yml Do you want migrate to other service?	1	1	https://issues.jboss.org/browse/FORGE-1550
4576	FORGE-1550	I understand, the problem is builder on Windows. I don't know a free CI with windows. Doesn't viable execute builder on Windows in another server?	0	0	https://issues.jboss.org/browse/FORGE-1550
4577	FORGE-1509	No more freezing, however.. when I do: {code} jpa-setup (SUCCESS) ... remove the dependencies (no need to remove managed only) jpa-setup (SUCCESS) {code} the pom.xml is in the inconsistent state and the mvn install will not work. In other words, jpa-setup will not fix the pom.xml. Shouldn't be somehow fixed?	1	0	https://issues.jboss.org/browse/FORGE-1509
4578	FORGE-1498	Not sure I really follow this issue. What is the problem? Service lookups just return objects, so activation order could be handled by the consumer. -- Lincoln Baxter, III http://ocpsoft.org "Simpler is better."	1	1	https://issues.jboss.org/browse/FORGE-1498
4579	FORGE-1498	Ah, so you're saying that you want the listeners to be ordered? Do we ever need to execute them in order? If so, we should add a priority() method and/or make them Comparable/Provide a comparator. -- Lincoln Baxter, III http://ocpsoft.org "Simpler is better."	1	1	https://issues.jboss.org/browse/FORGE-1498

#	Requirement	Questions	Answered	Successfully Answered	URL
4580	FORGE-1498	Perhaps we could assume that Comparable instances could be automatically ordered in the Imported.iterator(). Then it could be up to the implementation to decide which strategy to use for ordering. WDYT? ----- Mensagem original ----- De: "Lincoln Baxter III (JIRA)" <issues@jboss.org> Para: forge-issues@lists.jboss.org Enviadas: Domingo, 26 de janeiro de 2014 16:59:29 Assunto: [forge-issues] [JBoss JIRA] (FORGE-1498) Allow ordering in the lookup of services in AddonRegistry [https://issues.jboss.org/browse/FORGE-1498?page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel&focusedCommentId=12938797#comment-12938797] Lincoln Baxter III commented on FORGE-1498: ---------- Ah, so you're saying that you want the listeners to be ordered? 4581	FORGE-1462	Hi Justin, We are still in the process of building our Roadmap for the future releases. Do you have any feature that would be essential for your adoption? Please use the Forums or the mailing list (forge-dev or forge-users) for questions. If you need some help, we are pleased to help you out on the #forge IRC channel. Best Regards, George Gastaldi	1	0	https://issues.jboss.org/browse/FORGE-1462
4582	FORGE-1452	Antonio, How can I reproduce that? This doesn't happen if you setup your project to Servlet 3.1	1	1	https://issues.jboss.org/browse/FORGE-1452
4583	FORGE-1432	What do you mean by that ? For me, the {{run}} command is there to run a script. I just give it a try but it doesn't work. Let's say I have the following {{test.fsh}} scrip : {code} @/* Country */; jpa-new-entity --named Country ; jpa-new-field --named isoCode --length 2 ; jpa-new-field --named name --length 80 ; jpa-new-field --named printableName --length 80 ; jpa-new-field --named iso3 --length 3 ; jpa-new-field --named numcode --length 3 ; {code} This is what I get when I run the following commands : {code} [Forge]$ project-new --named Tutu ***SUCCESS*** Project named 'Tutu' has been created. [Tutu]$ run ../test.fsh ***ERROR*** ../test.fsh: timed out. {code}	0	0	https://issues.jboss.org/browse/FORGE-1432
4584	FORGE-1432	Hey [~stalep] - Could you look at this class and tell me if you can think of any reason why it would freeze after executing the first line of a script? https://github.com/forge/core/blob/master/shell/impl/src/main/java/org/jboss/forge/addon/shell/command/RunCommand.java#L100 Thanks!	1	1	https://issues.jboss.org/browse/FORGE-1432
4585	FORGE-1432	How does this work ? I have a timeout. I've created a simple file with a few command lines : {code} echo before export export ACCEPT_DEFAULTS=true echo before project-new project-new --named testrun --topLevelPackage com.testrun --type war --finalName testrun echo script end {code} When I run the file, I have the following output : {code} [Forge]$ run proj.fsh [Forge]$ echo before export before export [Forge]$ ***ERROR*** proj.fsh: timed out. [Forge]$ {code}	1	0	https://issues.jboss.org/browse/FORGE-1432
4586	FORGE-1418	Could you please take a look at this? Thanks!	1	1	https://issues.jboss.org/browse/FORGE-1418
4587	FORGE-1407	Not quite working for the `scaffold-setup` wizard: {code} [jpa-demo]$ scaffold- scaffold-generate scaffold-setup [jpa-demo]$ scaffold-setup --facesVersion 2. 2.2 2.1 2.0 [jpa-demo]$ scaffold-setup --facesVersion 2. 2.2 2.1 2.0 [jpa-demo]$ scaffold-setup --facesVersion 2.2 {code} As you can see, the options that should be available are not, and the wizard moves immediately to the next setup step: {code} @Inject @WithAttributes(label = "Provider", required = true) private UISelectOne<ScaffoldProvider> provider; @Inject @WithAttributes(label = "Target Directory") private UIInput<String> target; @Inject @WithAttributes(label = "Overwrite existing files?", defaultValue = "false") private UIInput<Boolean> overwrite; {code}	1	1	https://issues.jboss.org/browse/FORGE-1407
4588	FORGE-1398	Already implemented the command + relationshipType. What about restricting user to select @Embedded relationshipType for not an @Embeddable object and vice versa? E.g not showing these relationTypes as suggestions?	0	0	https://issues.jboss.org/browse/FORGE-1398
4589	FORGE-1396	Good question. Can I get the opinion of [~crobson] again? What do you think Catherine? Should we go singular or plural, or both, and in what situations?	1	1	https://issues.jboss.org/browse/FORGE-1396
4590	FORGE-1392	Was this occurring during a running resource-transaction?	1	0	https://issues.jboss.org/browse/FORGE-1392
4591	FORGE-1381	What do you mean be uninstalling facets ? Does this also mean deleting the code that has been generated ? I'm using Forge to do some quick prototyping and sometimes just want to erase and start everything again, something like : {code} jpa-new-entity Customer jpa-new-field string name # got it wrong jpa-clear {code}	1	0	https://issues.jboss.org/browse/FORGE-1381
4592	FORGE-1346	I like this idea. I wonder [~stalep], is there any reason this could not be done that you can think of?	1	1	https://issues.jboss.org/browse/FORGE-1346
4593	FORGE-1346	well, atm this wont be possible in æsh since the completor never remove any text. it can only add. - ive planned to change this in an upcoming version, but i do not know when. imo i think a feature like this would create more confusion than it would be helpful. i just cant imagine an intuitive way of selecting which command to select. - if you're not thinking of similar to what zsh have?	1	0	https://issues.jboss.org/browse/FORGE-1346
4594	FORGE-1333	Example: {code} NAME jpa-setup -- Java EE/JPA SYNOPSIS jpa-setup [-m] [-c --container] PersistenceContainer [-j --jpaVersion] JPAFacet [-p --provider] PersistenceProvider DESCRIPTION Setup JPA in your project (multi-step wizard - some options may not be auto-documented in this man page.) -c container Container - [PersistenceContainer] (required) -j jpaVersion JPA Version - [JPAFacet] (required) -m configureMetadata Install a JPA 2 metamodel generator? - [Boolean] -p provider Provider - [PersistenceProvider] (required) RESOURCES forge: <http://forge.jboss.org/> COPYING Copyright 2013 Red Hat, Inc. and/or its affiliates. Licensed under the Eclipse Public License version 1.0, available at http://www.eclipse.org/legal/epl-v10.html Manual page jpa-setup(1) line 1 (press h for help or q to quit) {code}	1	1	https://issues.jboss.org/browse/FORGE-1333
4595	FORGE-1330	Do you really think this is more intuitive than new-project? I have doubts about this change in particular, singly because it is the first command that people need to type, and it would be an un-intuitive change from Forge 1. I know that this would be inconsistent with the way we are naming things in Forge 2, but I am not sure how to handle this. Let me loop in [~crobson] (our UI expert) and see what she thinks.	1	1	https://issues.jboss.org/browse/FORGE-1330
4596	FORGE-1330	[~crobson], The issue here is that our commands are generally named using the format: "technology-command" (See related issue: https://issues.jboss.org/browse/FORGE-944) But the "new-project" command is obviously different. What do you think we should do here?	1	1	https://issues.jboss.org/browse/FORGE-1330
4597	FORGE-1330	Yeah, this one is challenging. 'new-project' is certainly more intuitive from a first use standpoint - but project-new will become more intuitive over time once people are used to the Forge formatting of other object actions. Is there any reason why we cannot support both as valid entries to perform the action? This might be the best solution if it is possible.	0	0	https://issues.jboss.org/browse/FORGE-1330

4601	FORGE-1229	This might not be a bad idea - Is the functionality in maven-jar-plugin documented/supported? If it's a bug or coincidence, I'd avoid making this change.	0	0	https://issues.jboss.org/browse/FORGE-1229
4602	FORGE-1228	I don't know what a pull request is. If it involves more than 1/2 hour of my time, I can't afford it right now. Possibly in a couple weeks however.....	1	1	https://issues.jboss.org/browse/FORGE-1228
4603	FORGE-1226	This is something we wanted for a long time. Wanna take a shot at it? Pull-Requests are more than welcomed ;)	0	0	https://issues.jboss.org/browse/FORGE-1226
4604	FORGE-1204	Hey Robb, Sorry you're having trouble, but this feature is definitely not broken (or nothing would work and the release would have failed hard) - Since I'm guessing you encountered this when upgrading to Alpha12, is it possible that the Resources Addon has not started yet? Remember to check all the versions in your Addon.waitUntilStartd(...) statements to give Furnace appropriate time to start up the Addons you need. ~Lincoln	1	0	https://issues.jboss.org/browse/FORGE-1204
4605	FORGE-1155	{quote} <gastaldi> right, but I need to set the values to the UIInput objects before that <gastaldi> should I do that in the Completer implementation for each option ? <stalep> aesh does that for you <stalep> atleast all values that are "finished" <stalep> so if you have: "foo --bar one --" then the bar field will be populated <stalep> eh, in that example aesh itself will try to populate the option name <stalep> but if it was trying to complete a value it would call the specific option's complete class <stalep> with the bar value populated <gastaldi> how would it set the values in the UIInput objects inside my UICommand? <gastaldi> org.jboss.forge.addon.shell.aesh.CommandLineUtil.populateUIInputs(CommandLine, Map<String, InputComponent<?, Object>>) does that <stalep> there is a Converter interface that will be called <vineetreynolds> bbl <stalep> public interface CLConverter<T> { <stalep> T convert(String input); <stalep> } <gastaldi> how does that work with multiple values ? <stalep> if its a list object its called for each value <stalep> the aesh adds it to the list <stalep> or set <stalep> etc {quote}	1	1	https://issues.jboss.org/browse/FORGE-1155
4606	FORGE-1138	How about: {code} 'forge update' only works when it is run outside from the IDE. The embedded Forge versions are automatically updated when there is a new version of the JBoss Tools Forge Plugin. If you want to use the latest version without waiting for a new plugin release, do the following: 1. Download the latest Forge version from http://forge.jboss.org and unzip in any place you may find convenient; 2. In Window->Preferences, look for Forge->Installed Forge Runtimes and add the path to your installation and make it the default runtime choice; 3. Start the forge console. You should see it is running the latest version. {code}	0	0	https://issues.jboss.org/browse/FORGE-1138
4607	FORGE-1129	hey max, you've mentioned jmerge before, but does that work with the eclipse (accept changes) merge editor?	1	0	https://issues.jboss.org/browse/FORGE-1129
4608	FORGE-1125	Gerry, Could you submit a Pull request with the changes? If done in time, we can still make it to 1.4.1.Final, to be released tonight or tomorrow morning. Best Regards, George Gastaldi	1	1	https://issues.jboss.org/browse/FORGE-1125
4609	FORGE-1113	Isn't this achieved by listening to PreShutdown and PostStartup events?	1	0	https://issues.jboss.org/browse/FORGE-1113
4610	FORGE-1067	Could this be handled a parameter? By default, we do not use it, however, there could be an additional parameter like scaffold from-entity model.* --overwrite --webjars	1	0	https://issues.jboss.org/browse/FORGE-1067
4611	FORGE-1067	I like the idea but I do have my concerns since: A) this would require webjar to have the exact version we support available. i.e. we would need to somehow QE that the official bootstrap.* files we support is actually the ones explicitly included into the files... B) initial blog says you need to add additional repositories to your project: <repositories> <repository> <id>webjars</id> <url>http://webjars.github.com/m2</url> </repository> </repositories> That is not good if true. B) looks like users would have to update all their specific version references of css/js in all their html pages when updates are made ? C) how does it work in m2e/eclipse and other IDE integrations ? If I read it right the actual javascript and css is not actually available in the filesystem making file:// viewing and things like livereload not working out of the box. D) Is this is only for serverside processed html (i.e. JSF) since the resources are on the classpath, not your project ? E) Since the resources are on the classpath my assumption is you won't see changes to these before restarting the module - this is probably not a big deal since it is just for a dependendent library but debugging/tweaking does becomes harder with this on first look at least. ...on the other hand I really like it since it does make dependency fetching much saner...but is it worth the loss of livereload, incremental updates, ide tooling ?	1	1	https://issues.jboss.org/browse/FORGE-1067
4612	FORGE-1043	Hey Hardy, Thanks for reporting this. Could you try with the most recent version of Forge? 1.3.3.Final? Thanks! You can get it here: http://forge.jboss.org/ ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-1043
4613	FORGE-1034	Although JBIDE-15281 is fixed, I don't see how the version of Maven that is used in order to build JBoss Tools affects the behavior of this plugin. Can you tell me more?	1	1	https://issues.jboss.org/browse/FORGE-1034
4614	FORGE-1034	Ok, but I still don't understand the link between forge-maven-plugin and JBT build. How does one depend on the other?	1	1	https://issues.jboss.org/browse/FORGE-1034
4615	FORGE-1034	Same question as [~mickael_istria] - why is jboss tools forge plugin build affected by this ? And is requiring Maven 3.1 okey knowing it actually causes breakage with existing 3.0 builds ?	1	1	https://issues.jboss.org/browse/FORGE-1034
4616	FORGE-1034	As replied in the e-mail: {quote} > > why is the forge-maven-plugin relevant for the eclipse plugins build ? The forge-maven-plugin retrieves the required addons in order to make Forge 2 usable in Eclipse and copy them to an addon-repository folder that is created during build time. This is to prevent binaries being pushed to the forge git repository. There is an older version of the plugin already doing this but for some strange reason behind the classworld land, Aether 1.13.1 (used to fetch the declared addons) does not work inside a maven plugin targeted for 3.0.5. > And isn't requiring Mvn 3.1 in Forge 2 going to break other plugins ? I tested and the build works with Maven 3.1 AFTER Mickael upgraded the tycho plugin version. So that is not an issue afaik. > afaics the mvn 3.1 release is getting many reports about incompatibilities... > > how does that affect our JBDS 7.0/7.1 where mvn 3.0 still needs to work too ? That should probably require some additional testing. I tested the JBT Forge build and the only plugin that was preventing this to happen was the tycho I as beforementioned, which is now fixed. {quote}	1	1	https://issues.jboss.org/browse/FORGE-1034

#	Requirement	Questions	Answered	Successfully Answered	URL
4617	FORGE-1034	> The forge-maven-plugin retrieves the required addons in order to make Forge 2 usable in Eclipse and copy them to an addon-repository folder that is created during build time. Can you please provide a link to the place in jbosstools-forge repository where this plugin is used? I had a quick look at som pom files and didn't find a reference to this plugin [~maxandersen]: With the move to Tycho 0.18.1, JBT build supports both Maven 3.0.x and Maven 3.1.0. The only benefit so far is that is makes developers' life easier (they won't have to deal with multiple versions of Maven and can use the one of their choice to build JBT). Moving to Tycho 0.18.1 is a way to let [~gastaldi] and friends keep only a single version of Maven to build both JBT and forge-maven-plugin.	1	1	https://issues.jboss.org/browse/FORGE-1034
4618	FORGE-1032	What about 1.x ? Would that be interesting to have ?	0	0	https://issues.jboss.org/browse/FORGE-1032
4619	FORGE-946	The current implemented addons check if the UISelection returned by UIContext is null. If not null, then a selection is available (that is, uiSelection.size() is always >=1). Unless we change this behavior, I think this method is not necessary, what do you think ?	1	1	https://issues.jboss.org/browse/FORGE-946
4620	FORGE-946	It feels strange that UISelection can be null, and that it is also a container/iterable, don't you think? I think we should re-evaluate this, and remove the ability for UISelection to ever be null.	1	1	https://issues.jboss.org/browse/FORGE-946
4621	FORGE-946	Do you think that we should throw an exception when UISelection.get() is called and no selection exists or should return null silently ?	0	0	https://issues.jboss.org/browse/FORGE-946
4622	FORGE-944	[~lincolnthree] mentioned on : https://community.jboss.org/message/843635#843635 {quote} So far, our command style is following this basic premise: jpa-new-entity (instead of entity --named) jpa-new-embedable jpa-new-mapped-superclass --named Person jpa-new-entity --named Vet --extends Person (spec alias or acronym)-new-(something) (spec alias or acronym)-(something)-from-(something else) We have a dilemma with faces and CDI, though. Should we call them 'faces' and 'rest' or "jsf" and "jaxrs", since we already have "jpa" "ejb" etc. I think JAX-RS is the real issue, because most people know it as REST. {quote} Today, most of the commands follow the proposed pattern, except for JAX-RS (rest), JAX-WS (soap), JPA (entity, persistence, field), JASF (faces) and Bean Validation (constraint, validation) . So to make it more explicit in some edges, here is what we have now and what could happen || Specification || Today's commands || Tomorow's commands ? || | CDI | beans | beans | | Bean Validation | constraint, validation | constraint | | EJB | ejb | ejb | | JSF | faces | jsf | | JPA | field, persistence, entity | jpa | | JMS | jms | jms | | JTA | jta | jta | | JAX-RS | rest | rest | | Servlet | servlet | servlet | | JAX-WS | soap | soap | And some other might come in the future such as Batch...	1	1	https://issues.jboss.org/browse/FORGE-944
4623	FORGE-943	Hi [~rajonjava], I believe this information should only appear when {code} set VERBOSE true {code} is run, otherwise, it will be kinda annoying. Thoughts ?	0	0	https://issues.jboss.org/browse/FORGE-943
4624	FORGE-911	Hi Hanine, Which Embedded ID bug are you referring to ? Could you please link to this issue ? Thanks, George Gastaldi	1	1	https://issues.jboss.org/browse/FORGE-911

4626	FORGE-898	Would auto-complete of *org.jboss.forge.addon* in the groupId be sufficient in this case ?	1	1	https://issues.jboss.org/browse/FORGE-898
4627	FORGE-847	Good idea. This shouldn't be so hard to do. Feel like taking a shot at it, actually?	0	0	https://issues.jboss.org/browse/FORGE-847
4628	FORGE-835	Hey George, Thanks for mentioning that! I did a quick research and found that on some databases JPA creates the column with different type based on the 'length' attribute of the @Column annotation. Should we always set it to MAX_VALUE or we should let the user configure it with an option (defaulting to MAX_VALUE)? Something like: field lob --named <field-name> [--length <length>] Cheers, Ivan	1	1	https://issues.jboss.org/browse/FORGE-835
4629	FORGE-834	Thanks ! Unfortunately, I am not able to make it works with my Qooxdoo plugin ! I have re-compiled/installed the forge project (mvn clean install) with my changes (version 1.2.3-SNAPSHOT). Basically, it can not find the "org.jboss.forge.spec.javaee.rest.events.RestGeneratedResources". When I install the local forge distribution, run forge, go to plugin dir and run the forge source-plugin . command, I got an error: [ERROR] ... package org.jboss.forge.spec.javaee.rest.events does not exist Did I miss something ? Charles.	1	1	https://issues.jboss.org/browse/FORGE-834

#	Requirement	Questions	Answered	Successfully Answered	URL
4630	FORGE-815	Want to try this one on? Should be simple.	1	1	https://issues.jboss.org/browse/FORGE-815
4631	FORGE-811	Shouldn't this be added to the project plugin? Now there is a 'project add-dependency groupId:artifactId' already.	0	0	https://issues.jboss.org/browse/FORGE-811
4632	FORGE-806	We could however, introduce a "resetOutput" method in the AbstractShellTest class. would that be enough ?	0	0	https://issues.jboss.org/browse/FORGE-806
4633	FORGE-773	You are correct. The reflection part is not hard. I've done it mostly already. I implemented JavaClass using reflection. Method, Field, etc... also. URLClassloader can be used to load all the project's dependency jars. I don't think that is big either. Of course I wonder what the response time will be like. I think the big change is for ScaffoldPlugin to be changed so generateFromEntity takes a class name as string, not a JavaResource, alleviating ShellImpl from making the choice to get a class or a java resource; the plugin will find either the class on the dependency path or the java resource; and for Dependency plugin to give over a list of the compile time dependencies of the project. Are these kinds of changes to the forge system acceptable?	1	0	https://issues.jboss.org/browse/FORGE-773
4634	FORGE-773	Hey John! That's excellent. A working prototype gives me hope. As far as changing the scaffold plugin, it's fine to add to the API, but we can't remove or change anything that we have right now. So it's possible we could simply add another option / command in the ScaffoldPlugin that would kick things off using your reflection loading system. An issue that might be related here is the following: https://issues.jboss.org/browse/FORGE-563 Since you are already building an implementation of the JavaClass API on top of Reflection, would it be conceivable to use that information to create a type of cache for each object inspected in this way? The index could be parsed on-demand, and enable retrieving the information needed for the scaffold. It would also enable wildcard expansion in the JavaParser itself -> https://issues.jboss.org/browse/FORGE-424 Thoughts? Would enhancing the scaffold provider meet your goals?	1	1	https://issues.jboss.org/browse/FORGE-773
4635	FORGE-773	Yes, such an enhancement will meet the goal. I see the maven plugin/facet is using Aether, so I believe I can reliably obtain the dependency's jar file, though the applicable forge api is not known to me yet. I understand the generality to an interface that supports queries for a JavaClass(es) backed by a binary class. Such would be useful in the issues you mention. A more general implementation returns a JavaClass independent of whether it is found as a binary class or in the project's source directory. Does forge already have such an interface that returns JavaClass parsed from JavaSource?	1	0	https://issues.jboss.org/browse/FORGE-773
4636	FORGE-770	Here are the comments from David Bosschaert about OSGi versioning: {quote} Let's say you have a component that wants to use the org.acme.Foo service. Let's say you have 2 versions of the Foo service in your system: // version 1.0 interface Foo { public void bar(); } // version 2.0 interface Foo { public void bar(); public void bar(int blah); } Each of the above would be in a separate module. If I want to use the bar(int) API I clearly need version 2.0 of the API. So such a client would import org.acme at version range [2.0, 3.0), so it has visibility of the correct API. When looking up services they are normally looked up by API name, so org.acme.Foo. If there is both an 1.0 and 2.0 service in the system, how do you pick the right one? How does the service registry decide which one to return? Since it knows the client that is requesting the service it will check whether the interface requested as visible by the client is the same one as the interface implemented by the service. If it is not the same then it is a different version of the interface and the service should not be returned to the client. If it is assignable then we're good and the client gets the service instance. This is how OSGi frameworks do it, and it's actually quite a simple process, as the Class.isAssignableFrom() API gives you the tool you need to do it :) If you want automated support for installing additional addons when required you really need some sort of a repository that has all the addons and exposes metadata about what they provide. Then you need a resolver that knows how to use this information and installs the addons on request. This is potentially a (very) large piece of work. Especially resolvers are complex and can take a lot of time to write. The OSGi Enterprise R5 spec [1] and [2] defines a Repository spec that can be used to catalogue your addons in a machine-readable way. Then, the OSGi Resolver spec (also in [1] and [2]) implements a general purpose resolver that can work with the Repository to install just the additional modules that you want. If you want to play with this stuff the Reference Implementations are available as opensource, see here for more details: http://en.wikipedia.org/wiki/OSGi_Specification_Implementations I would think twice before implementing all this stuff, as it might seem simple when you start out but it could end up being more work than you think. OSGi implements all these things already. If you're inside AS8 then JBoss OSGi provides all this. If you are in a different environment you could simply use Apache Felix, which is about 500 kb and very embeddable. Cheers, David [1] http://www.osgi.org/Download/Release5 [2] http://www.osgi.org/javadoc/r5/enterprise/ {quote}	1	1	https://issues.jboss.org/browse/FORGE-770
4637	FORGE-766	Isn't this resolved? org.jboss.forge.maven.plugins.MavenPluginBuilder?	1	1	https://issues.jboss.org/browse/FORGE-766
4638	FORGE-734	Not sure I agree this makes sense. Capable is a more confusing term in this case, I think. Target is very explicit about "This thing can be the target of an annotation." Capable seems more ... loose. What does it do with annotations? It is capable of something with them, but not exactly sure what.	1	0	https://issues.jboss.org/browse/FORGE-734
4639	FORGE-734	There exists InterfaceCapable and GenericCapable right now. AFAIK, the operations on each of them are equivalent (add/remove/get). Is this concept different anyhow ?	0	0	https://issues.jboss.org/browse/FORGE-734
4640	FORGE-719	My biggest gripe/concern with the current Forge approach is that it is all very "(re)action based". i.e. plugins seem to follow the pattern of "ask user question 1,2,3,4 (based of the cmd annotations)", do something - realize something was not possible to ask about via cmd annotations "ask user question 2,3,4", do something, "ask user some more questions", do things. This is all great in a cmd-line world but really really hard for newbie users to grok (IMO) and when you actually have to do or combine multiple forge level operations things becomes really hard from an IDE user perspective - i.e. IDE users expect to be able to just press Cancel in a multi-step wizard and not see any change in his project from that, also when driving from the IDE, we'll need to be able to call out to Forge and query for the possible values etc. (something the current 'single Is this issue about solving/improving this challenge or "just" about providing an UI on top of the existing "cmd line/reaction pattern" ? Things to consider here is how forge can provide rich enough info to have "Browse.." buttons work for file/resource, database resource selection, etc. And how a multistep wizard could be created outlining pages needed to provide the questions ...and in a way that does not require fully running forge inside something like Eclipse.	1	1	https://issues.jboss.org/browse/FORGE-719
4641	FORGE-707	Is this already fixed?	1	1	https://issues.jboss.org/browse/FORGE-707

4642	FORGE-705	(03:31:20 PM) lincolnthree: kenfinnigan: https://github.com/forge/core/tree/2.0/plugin-container-api/src/main/java/org/jboss/forge/container (03:31:47 PM) lincolnthree: You'll want to probably figure out how people are going to interact with the Resource API (03:32:06 PM) lincolnthree: In Forge 1.x, you had to @Inject the ResourceFactory (03:32:13 PM) lincolnthree: That may still be the case in Forge 2.0 (03:32:18 PM) gastaldi: yeah (03:32:20 PM) lincolnthree: But just something to consider. (03:32:27 PM) lincolnthree: Something will need to set up the ResourceFactory (03:32:47 PM) lincolnthree: And if you need to do that, you'll probably want to @Observes Startup event. (03:33:02 PM) gastaldi: kenfinnigan: see the Aesh Addon example (03:33:11 PM) gastaldi: there are some stuff in there to help (03:33:41 PM) gastaldi: like the @Observes Startup event for instance (03:34:22 PM) kenfinnigan: so would resources api be in forge-resource-addon module under core? (03:34:46 PM) kenfinnigan: ie. create that module, or should the code live somewhere else? (03:34:56 PM) lincolnthree: yeah, create that module (03:35:01 PM) lincolnthree: for now we can put it all in the same repo (03:35:06 PM) lincolnthree: but it should eventually be split up	1	1	https://issues.jboss.org/browse/FORGE-705
4643	FORGE-694	Is this the same as https://issues.jboss.org/browse/FORGEPLUGINS-54 ?	1	1	https://issues.jboss.org/browse/FORGE-694
4644	FORGE-694	Hi Darren, You're right. I guess that FORGEPLUGINS-54 needed a better description after all. Could you please add your comments to that issue ? As a thumb of rule, we always create new issues related to plugins (new ideas, etc) in the FORGEPLUGINS project. The FORGE project in JIRA is related to core features only. :) Much appreciated ! George Gastaldi	1	1	https://issues.jboss.org/browse/FORGE-694
4645	FORGE-670	OK, I touched this as well :-) Maybe some hints would be helpful. So, FSHParser::captureLogicalStatement is the place, where we may detect that a redirect was issued. So there is maybe the place to somehow tell the LogicalStatement to redirect its output somewhere else. Just speculating... Next, I see also that there is a PipeOut interface that is passed around all the methods in the trace. But it is usually null and is never used inside org.jboss.forge.shell.command.Execution::perform. I see that this interface has just one implementation (org.jboss.forge.shell.util.PipeOutImpl), which uses the shell as output. However, the fact that it is never used inside Execution::perform makes me wonder whether creating a new implementation of PipeOut (RedirectPipeOutImpl for example) and passing it to that method would work at all. Can someone open my eyes for this Forge internals? :-) Thanks! Ivan	1	1	https://issues.jboss.org/browse/FORGE-670
4646	FORGE-664	In this case, I think using System.out.println() would work just fine. As long as your logger is also printing to STDOUT. However, I don't think this is really encouraged. The whole point of the Shell is that we can control this through a single API. I'm not sure this is something we should do - unless we create our own category, but before we do this, I suppose I should ask: Why do you need this? Maybe there is an alternative, or maybe we actually need it :) but we should discuss why you want to in the first place.	1	1	https://issues.jboss.org/browse/FORGE-664
4647	FORGE-652	Hi Jose, Any work on this ? If not, can we add it back to pool ? Thanks !	0	0	https://issues.jboss.org/browse/FORGE-652
4648	FORGE-616	Hey George! This is really really great. 1 comment, 1 question: Comment: Forge should ask the user if they would like to install before going ahead. Looks like it automatically does this right now? Question: Have you checked for other locations where Status.SUCCESS / Status.FAILURE to make sure that adding another enum won't cause issues? I ask because MISSING should probably behave like FAILURE if not otherwise specified. Thoughts?	1	1	https://issues.jboss.org/browse/FORGE-616
4649	FORGE-616	Hi Lincoln, I totally agree with your comment. Will implement that today. Also, I checked for other locations where the Status enum is used and is not used anywhere besides the Execution class and ForgePlugin itself. There are very few plugins which observes this CommandExecuted event and deals with the status. One of them is the Undo plugin, which Jevgeni already checks for it ("Create a commit only if Status == SUCESSS"). Anyway, I thought about that and I found out that it's a matter of interpretation: Should Status.FAILURE indicate a failure in the plugin execution or it can be used to indicate that a plugin is missing / wrongly typed ? The best way to detect that was with this new MISSING enum afaik. If you feel the need to change that, we can do it, no problem. Just let me know your thoughts about it. Best Regards, George Gastaldi	1	0	https://issues.jboss.org/browse/FORGE-616
4650	FORGE-604	Hey Chris! Thanks so much for reporting. Do you think you might be able to add a brief description of what Forge does incorrectly when operating on an EAR? Also perhaps attach a sample project that we can reproduce the functionality with? I know this is asking a lot, but it would really help us get things working! Thanks, Lincoln	1	1	https://issues.jboss.org/browse/FORGE-604
4651	FORGE-604	Hi Christopher, Forge 1.2.4.Final now supports EAR packaging as described in FORGE-864. Could you check if that is sufficient to close this issue ? Best Regards, George Gastaldi	1	1	https://issues.jboss.org/browse/FORGE-604
4652	FORGE-602	Isn't that already resolved ?	0	0	https://issues.jboss.org/browse/FORGE-602
4653	FORGE-601	Ryan, Can you provide us with a JUnit test case ? Best Regards, George Gastaldi	1	0	https://issues.jboss.org/browse/FORGE-601
4654	FORGE-598	Hey Rafael! I think you can do this in a subtle way: extend SimpleTokenCompleter @Inject ShellPrintWriter writer; writer.renderColor(ShellColor.WHITE, "CANDIDATE3"); Return candidates in the order in which you want them displayed. But we could certainly improve this experience, I think! Let me know if this works?	1	0	https://issues.jboss.org/browse/FORGE-598
4655	FORGE-588	Felipe, Which JDK version are you using ? Can you try using JDK 7 or add the root certificate from https://github.com to your cacerts keystore ? Thanks.	1	1	https://issues.jboss.org/browse/FORGE-588
4656	FORGE-583	We can also add PDF of wiki as well. something like JBoss-Forge-UserGuide-<version>.pdf or something similar. User can read and learn from the UserGuide. Make sure this must be updated and added in each release.	0	0	https://issues.jboss.org/browse/FORGE-583
4657	FORGE-580	Maybe it's a stupid question but what's wrong with Apache License? Is there a specific reason why Apache License doesn't work for Forge anymore? P.S. I always thought Forge was under GPL and not Apache. Source code headers I've seen only mention GPL. Btw, it might be a good idea to add forge license information here (empty now) : http://www.jboss.org/projects	1	1	https://issues.jboss.org/browse/FORGE-580
4658	FORGE-580	Which files are saying GPL ? That would be bad if it was ;)	1	1	https://issues.jboss.org/browse/FORGE-580
4659	FORGE-565	Isn't this issue already fixed ?	1	1	https://issues.jboss.org/browse/FORGE-565
4660	FORGE-561	Hi there :) Could you please describe the problem you are having in a little more detail? Also, if you could post the entity you used to generate scaffolding from, and the resultant xhtml files, that would be of great assistance in figuring out this problem. Thanks, Lincoln	1	0	https://issues.jboss.org/browse/FORGE-561

#	Requirement	Questions	Answered	Successfully Answered	URL
4661	FORGE-558	George, That's cool. I haven't used Twitter bootstrap so apologies if I'm speaking out of turn. Just so long as the developer doesn't look at the generated project and say 'what is this non-standard thing here? Oh it's Twitter bootstrap. I guess I'll have to go grok that project before I can edit this generated code'. IMHO this would apply even if Twitter bootstrap is just a bunch of CSS/JS/JQuery stuff. It's still stuff that the developer may not necessarily want in their end project. But it's your call. I only mention it as 'no external libraries' was an explicit requirement of the original UI scaffolding. And I'd think this would extend to the JS side too. Regards, Richard.	1	1	https://issues.jboss.org/browse/FORGE-558
4662	FORGE-558	That´s a valid point indeed. In fact, I think I didn´t take in count that requirement. Maybe we should discuss that on forge-dev list ? WDYT ? Regards, George	1	1	https://issues.jboss.org/browse/FORGE-558
4663	FORGE-508	Hey Pete, currently the as7 plugin just adds the jboss-as-maven-plugin to the build section of the project pom. Currently the version is hardcoded to be 7.1.1.Final. There is no further implication when setting up the plugin, i.e. the jboss-javaee-6.0 BOM is set up independently when setting up persistence. Am I right in assuming you want the persistence plugin and the as7 plugin to play together so that this is somehow automatically inferred? If yes, is there an easy way to find out which jboss-javaee-6.0 version is provided by each as7 version?	0	0	https://issues.jboss.org/browse/FORGE-508
4664	FORGE-508	Yes this makes sense, it is along the lines of my first comment. But the question of figuring out which BOM version is needed by each AS version still remains. Is this information available anywhere?	0	0	https://issues.jboss.org/browse/FORGE-508
4665	FORGE-508	Max and I had a plan to store this data in one place, and then consume it from all tools that need it (e.g. jdf site, JBDS, Forge etc etc.) My approach for this would be like Lincoln's for Forge plugins - https://github.com/forge/plugin-repository/blob/master/repository.yaml - a yaml file stored on git, that we update as needed, probably along with a utility class that people can copy into their project to parse and provide as an object structure, maybe along with simple queries. WDYT?	0	0	https://issues.jboss.org/browse/FORGE-508
4666	FORGE-508	That sounds like a good solution indeed. Where do you think this yaml file and utility should sit?	0	0	https://issues.jboss.org/browse/FORGE-508
4667	FORGE-505	No core plugins should be adding arquillian. Could you explain? Thanks.	1	0	https://issues.jboss.org/browse/FORGE-505
4668	FORGE-504	Could you provide a link to the BOM you want used? Thanks.	0	0	https://issues.jboss.org/browse/FORGE-504
4669	FORGE-504	Now I'm confused. Why do we have so many POMs for Hibernate? Forge currently uses the one from teh EE 6 BOM.	1	1	https://issues.jboss.org/browse/FORGE-504
4670	FORGE-504	Pete, is this still valid ? Or is the JDF plugin handling this ?	1	0	https://issues.jboss.org/browse/FORGE-504
4671	FORGE-500	Hey Burr, could you please explain this in a bit more detail? What does this flag do? Where should it be located in Forge? How should users access or control it? Thanks.	0	0	https://issues.jboss.org/browse/FORGE-500
4672	FORGE-488	Hi. Could you please explain this? Thanks.	1	0	https://issues.jboss.org/browse/FORGE-488
4673	FORGE-451	Should there be a prompt asking for the generation of these methods or only a warning when these methods are absent? Isn't this only facesScaffold specific?	1	1	https://issues.jboss.org/browse/FORGE-451
4674	FORGE-451	I think you could probably just add a checkbox to ScaffoldableEntitySelectionWizard to add missing equals and hashcode methods (if the object does not already have them, of course.) WDYT?	1	1	https://issues.jboss.org/browse/FORGE-451
4675	FORGE-451	Matej, is this issue complete?	1	1	https://issues.jboss.org/browse/FORGE-451
4676	FORGE-447	Hey Pete, Do you think you could provide a little bit more technical detail on what you want to have happen here? Perhaps some proposed JSF code that would do what you ask? That way we can have a better idea of exactly how you think this should work. I'm personally not quite following you yet. ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-447
4677	FORGE-422	Hey Pablo! Any update on this one? :) How's it going?	1	1	https://issues.jboss.org/browse/FORGE-422
4678	FORGE-422	Hey Linconln!!, I'm so sorry for no update it before!!. I was few busy, becaming a new job. So please, can you let me some days more?. Maybe, you would like to add this feature to forge CR1, wouldn't you?	1	1	https://issues.jboss.org/browse/FORGE-422
4679	FORGE-422	Hi, what's the status of this issue?	1	1	https://issues.jboss.org/browse/FORGE-422
4680	FORGE-422	Hi. Again, I'd like to ask whether it's possible to provide option "evaluate" in the next Forge release. I want to create automatized tests for RichFaces plugin, but it's impossible without this option. If there is nobody from Forge developers who is interested in this issue, would it be possible to navigate me to right places (java classes), so I can implement it on my own and send pull request? In this case It will take me a huge amount of time, because I don't know Forge structure.	1	1	https://issues.jboss.org/browse/FORGE-422
4681	FORGE-422	Maybe a stupid question, but where can I find the version providing the "evaluate" option? I've tried to download 1.0.3-SNAPSHOT (from JBoss repository), but it doesn't work. {code} [jpapouse@dhcp-27-156 tmp]$ forge -e "echo hi jan" Using Forge at /opt/forge-1.0.3-SNAPSHOT _____ | ___|__ _ __ __ _ ___ | |_/ _ | `__/ _` |/ _ \ \\ | _| (_) | | | (_| | __/ // |_| ___/|_| __, |___| |___/ [no project] tmp $ {code}	1	1	https://issues.jboss.org/browse/FORGE-422
4682	FORGE-421	Hi, We currently don't support Proxy configuration by any specific forge feature, but it's definitely something we need! Is this something you could look at? It's relatively simple, I think. Just need to set some system properties: http://docs.oracle.com/javase/6/docs/technotes/guides/net/proxies.html Otherwise, this could be done by setting FORGE_OPTS in your terminal environment before executing Forge itself (or adding them to your profile or windows settings): unix: {code}export FORGE_OPTS="-Dhttp.proxyHost=webcache.mydomain.com -Dhttp.proxyPort=8080"{code} windows: {code}set FORGE_OPTS="-Dhttp.proxyHost=webcache.mydomain.com -Dhttp.proxyPort=8080"{code} Let me know if this works? (The values will need to be chanced to match your proxy configuration.)	1	1	https://issues.jboss.org/browse/FORGE-421
4683	FORGE-421	Hi, Unfortunately I couldn't succeed as well while behind the proxy. My error was even less verbose: Connecting to remote repository https://raw.github.com/forge/plugin-repository/master/repository.yaml... **ERROR** [forge install-plugin] raw.github.com Does anyone know where can I read some logs or see some detailed exception traces? I saw a log file under ~/.forge, but it did not contain anything particularly interesting. Maybe I could somehow increase the logging severity? Cheers, Ivan	1	1	https://issues.jboss.org/browse/FORGE-421
4684	FORGE-421	Hey Ivan, I'm not sure if you can increase logging, but we don't have any explicit support for proxies at the moment. Are you looking for something to pick up? This could be a good issue for you since you can actually reproduce the problem. What do you think? It would really help us out a lot! ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-421
4685	FORGE-421	Hey Ivan! I've assigned this issue and given you permissions for future ones as well :) Sorry about that! In order to get more information, you might have to Debug Forge like so: https://docs.jboss.org/author/display/FORGE/Debugging+Forge Does that help?	1	1	https://issues.jboss.org/browse/FORGE-421

#	Requirement	Questions	Answered	Successfully Answered	URL
4686	FORGE-421	Hi guys, I have a question. Right now I found a way to setup programatically Apache HTTP client and JGit to work with a proxy. And this is done with just Forge instruments (no additional manual steps than configuring Forge). However, I just found that if you want to use maven behind a proxy (and Forge uses it for building the just downloaded plugin), then you have to change your settings.xml (http://maven.apache.org/guides/mini/guide-proxies.html). So, I had the following dilemma: maybe we should tell the forge users behind proxies that they should setup their settings.xml so that Forge can access external Maven repos? Argh, this sounds nasty: I hate manual configurations done by users!!! However, when given a second thought: you are behind a proxy... And you want to use open source software, that is most likely not located on your enterprise maven repository. Then you should definitely setup your settings.xml to access external sites! Otherwise you can live just with what you find on your www.proprietary.com intranet... Do you think the same or I miss something? Can we rely on the fact that Forge users that want to use our tool from within corporate environments have already setup their settings.xml to use their company proxy? Cheers, Ivan	1	1	https://issues.jboss.org/browse/FORGE-421
4687	FORGE-421	Hey Ivan, Sorry for the late reply, on vacation. We do some configuration of the maven settings internally in Forge as well. This should be a good place to try to avoid duplicate configuration for users. Thoughts? Can you do what is needed at runtime in Forge? ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-421
4688	FORGE-421	Hey Lincoln, How was your vacation? Did you drink plenty of Alt and Kolsch? :-) I also tried to exploit the Forge capabilities for configuring Maven. However, besides passing some parameters, like for example system properties, on the command line, I did find anything else. And to enable proxies in Maven, you need to touch settings.xml. Or at least this is what all the resources I found say (I actually tried some proposals for adapting MAVEN_OPTS, but they did not work). What I can do is download Maven source code and look there what exactly happens. Or maybe you can point me to the Forge code that manipulates Maven, as maybe I have missed something? Cheers, Ivan	1	1	https://issues.jboss.org/browse/FORGE-421
4689	FORGE-421	Have you tried integrating the settings at this point? This allows direct access to set system properties. https://github.com/forge/core/blob/master/project-model-maven/src/main/java/org/jboss/forge/maven/facets/MavenContainer.java I believe some proxy work is already done there? Also, any plans on adding username/password support to config.xml? ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-421
4690	FORGE-421	Hi Lincoln, Thanks for the idea of using the Maven Container! However, I'm not yet sure that the MavenContainer instance has any impact on the executeMaven method, that is eventually run upon building the plugin. As for the username/password support - thanks for reminding me! I thought of adding them, but then I forgot. It will not be a big deal... However, I'm afraid I will not be able to test it, because my company proxy does not use such stuff. Thanks also for merging my changes! They seem to be all there, even an experiment that I did some time ago and was not supposed to go into the upstream (it works, though). I am still afraid of using Git :-) BTW, something off topic. Do you have a good resource on how should we use Git when working with a Github project? I use mainly this: https://community.jboss.org/wiki/ArquillianDevelopmentAndContribution However, it does not answer an important question: how do I keep my origin repository (ivannov/core) up-to-date with the upstream one (forge/core). I tried to do that by pushing to ivannov/core after I pull from forge/core, but you saw what a mess I produced with that approach... Thanks, Ivan	1	1	https://issues.jboss.org/browse/FORGE-421
4691	FORGE-421	Hi, No luck. I've tried the solution but errors still persist. I am using the last version: JBoss Forge, version [1.0.2.Final] - JBoss, by Red Hat, Inc. [http://jboss.org/forge] The error is as follows: Connecting to remote repository [https://raw.github.com/forge/plugin-repository/master/repository.yaml]... ***ERROR*** [forge install-plugin] Connection to https://raw.github.com refused Can I get more stacktrace to upload? Regards	1	1	https://issues.jboss.org/browse/FORGE-421
4692	FORGE-398	Do you want this on all owning side relationships? Or all relationships as a whole?	1	1	https://issues.jboss.org/browse/FORGE-398
4693	FORGE-398	Update. Only needed on on owning side of @OneToOne relationships, but do we need this in other places as well? Why does @ManyToMany not need this on both sides of the relationship? How do we know which side to put it on? Both sides maybe? It's possible that the UI scaffolding may need to update the entity manually for its own needs, instead of doing this in the EntityPlugin.	1	1	https://issues.jboss.org/browse/FORGE-398
4694	FORGE-389	Can we please improve this a litte? At the moment it outputs: public String toString() { return "" + firstName + ", " + lastName + ", " + city + ", " + state + ", " + zip; } I'm not a big fan of the commas, but worse is that it outputs them even if the value is empty. So you end up with: "John, Smith, , , , " We need to: 1. definitely not append a field if it is empty 2. maybe not append commas Then we'd have: "John Smith"	1	1	https://issues.jboss.org/browse/FORGE-389
4695	FORGE-388	Hi Senthy, Right now Forge does not comprehend settings in multi-module projects. This is something we would like to support better. Do you have any ideas on how we can support non-trivial projects better? We do already support parent POM and dependency inheritance, but we don't do things like detect persistence.xml files in dependencies. Thoughts? ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-388
4696	FORGE-388	According to latest comments in FORGE-120 I see how to create "pom" type of project. Obviously the same way I can create "war" or "jar"projects. I can run something like {code} new-project --named foo --topLevelPackage com.bar --type pom new-project --named foo-data --topLevelPackage com.bar --type jar new-project --named foo-web --topLevelPackage com.bar --type war {code} but it is still needed to setup dependencies between sub-projects (modules) manually. In is possible to add some helper commands like {code} project add-subproject --named foo-data --type jar {code} But frankly speaking this is not really important. Instead we can have a simple one-page official documentation that explains people how to setup such projects. I would prefer having more documentation and less commands :-). Could you please add some documentation which covers this? Other issue is that is some cases in order to use some functionality you first needs to "setup" something. For example, in order to create new entity classes you need to run {code} persistence setup ... {code} It obviously makes seance. But if you really want to support multi-module projects this approach will not work. Default behavior should stay the same. But I propose to introduce alternative way to add "persistence awareness" to the project through plugins. Something like {code} forge install-plugin jpa {code} This "new" plugin will not add persistence.xml to the project but will rather add proper dependencies to pom.xml and will enable possibility to work with entities using seam commands. Same approach can be used to other plugins that require setup before usage. Another example I want to talk about is the automatic discovery functionality. For example {code} scaffold from-entity {code} and "tab" gives the list of all available entities. Forgive me for not trying this by myself but I had some issues last time when I tried to setup this. I am not sure if this list if only from "current" project or forge does scans also jars in dependencies to check if they have appropriate classes. But anyway the most important thing is some official documentation or guide how to work with multiple modules using seam. There is no need to support everything or all possible features. I am absolutely positive that even very limited (but documented and supported :-)) multi-module support would very helpful and absolutely ok in most cases. Thanks, Serhiy	1	1	https://issues.jboss.org/browse/FORGE-388

#	Requirement	Questions	Answered	Successfully Answered	URL
4697	FORGE-388	Maybe I am missing something but I was not able to find mentioned options in the prompt. Here is my console output (can't attache screenshot because issue is closed) {code} D:\tmp\forge-distribution-1.0.0.Beta3\forge-1.0.0.Beta3\bin>forge ____ _____ / ___| ___ __ _ _ __ __ ___	___|__ _ __ __ _ ___ ___ \ / _ \/ _`	'_ ` _ \	|_ / _ | '__/ _` |/ _ \ \\ ___)	__/ (_|								_| (_)			(_|	__/ // |____/ ___|__,_|_| |_| |_| |_| |_| ___/|_| __, |___| |___/ Windows? Use [D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core] as project directory? [Y/n] y ***SUCCESS*** Created project [foo-core] in new working directory [D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core] Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/pom.xml Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/src/main/java Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/src/test/java Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/src/main/resources Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/src/test/resources Wrote D:\/tmp/forge-distribution-1.0.0.Beta3/forge-1.0.0.Beta3/bin/foo/foo-core/src/main/resources/META-INF/forge.xml [foo-core] foo-core $ {code} I was asked only about project directory. And after I've added second project pom.xml of "foo" project is following {code} <?xml version="1.0" encoding="UTF-8"?> <project xsi:schemaLocation="http://maven.apache.org/POM/4.0.0 http://maven.apache.org/xsd/maven-4.0.0.xsd" xmlns="http://maven.apache.org/POM/4.0.0" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"> <modelVersion>4.0.0</modelVersion> <groupId>com.bar</groupId> <artifactId>foo</artifactId> <version>1.0.0-SNAPSHOT</version> <packaging>pom</packaging> <repositories> <repository> <id>JBOSS_NEXUS</id> <url>http://repository.jboss.org/nexus/content/groups/public</url> </repository> </repositories> <build> <finalName>foo</finalName> </build> </project> {code} So it is missing {code} <modules> <module>foo-core</module> </modules> {code} and respectively pom.xml of "foo-core" is missing "parent" definition. Do I need to add some special parameters to the commands? I really don't want to bother you but I can't find mentioned options or any documentation how to work with them. Thanks, Serhiy	1	0	https://issues.jboss.org/browse/FORGE-388
4698	FORGE-386	Thanks for doing this! But the version implemented is broken, I think. It basically says 'all unsaved entities will have the same hashCode' and 'all unsaved entities are equivalent'. It may even NullPointer? I would rather it delegate to super.hashCode and super.equals if (id == null). The same as my version above. But up to you.	1	1	https://issues.jboss.org/browse/FORGE-386
4699	FORGE-380	Hey Pete. This already works using the ';' character. Is that good enough? && already has a meaning in FSH (logical and)	0	0	https://issues.jboss.org/browse/FORGE-380
4700	FORGE-378	I agree with [~agoncal] that it should be possible to control JAVAEE separately from CONTAINER. I kinda see it as CONTAINER will specify the defaults for things like JAVAEE if user have not explicitly set it. With respect to referencing JavaEE api's instead of Java EE BOM then that was at least with Java EE 6 problematic since the referenced jars were incomplete thus making test runs using these jars impossible. This issue should be fixed in Java EE 7 (http://developinjava.com/2013/06/java-ee-7-fixes-java-ee-6s-absent-code/) but still, some of the spec jars require specific container content (i.e. JPA) thus something like using JBoss BOM still are necessary. Also reason for using BOM's is so you don't have to update all your projects individual dependency versions and just use properties provided by the BOM.	1	0	https://issues.jboss.org/browse/FORGE-378
4701	FORGE-378	What would happen if someone starts working with a specific version of EE, then sets the "environment" to a different version? While I agree with this concept in principal, I don't think that this should be the primary method of exposing it. As I explained in an email to Forge-Dev: Our current plan is this - https://github.com/forge/core/blob/2.0/projects/api/src/main/java/org/jboss/forge/addon/projects/ProjectType.java This is used in the new-project command like so: `new-project --named "blah" --type javaee-7 --version 1.0 --topLevelPackage org.blah` Now, the interesting thing is that depending on the project type, we can also specify additional parameters that will become activated: `new-project --named "blah" --type javaee-7 --version 1.0 --topLevelPackage org.blah --profile web/full` So we can do web profile selection as part of the javaee7 project type, or we could just have multiple project types for each profile. It could go either way.	1	0	https://issues.jboss.org/browse/FORGE-378
4702	FORGE-378	"What would happen if someone starts working with a specific version of EE, then sets the "environment" to a different version?" - you mean like you target JavaEE6 explicitly and then targets Wildfly 8 (which would default to JavaEE7?) I would just expect forge to ask something like: Current project is targeting JavaEE-6, the default type for Wildfly 8 is JavaEE-7. Do you wish to use JavaEE-7 or continue to use JavaEE-6 ?	0	0	https://issues.jboss.org/browse/FORGE-378
4703	FORGE-374	Okay cool. Could you please push Seam Render 1.0.0.Alpha5 into Maven? The Forge build is broken at the moment I think.	0	0	https://issues.jboss.org/browse/FORGE-374
4704	FORGE-372	Sorry for the late reply. I have been traveling. This is a valid concern. But is it enough just to delete one of the EntityManager Producers? It's not a simple yes or no because this deals with how plugins interact on the project together, and that complicates things. I'm not sure what is more correct, but I am leaning toward agreeing. Because this is part of the scaffold, which is an extension point for frameworks themselves, I think this would be OK. Is this something you're interested in prototyping? That would help get it done a lot sooner :) ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-372
4705	FORGE-372	Hi, In fact, I've test several solutions in the last few days and find some solutions. The main question is : do you want Forge plugins to use the EntityManager provided by Forge (in its package) or the "default" EntityManager of the application (define by the user) ? The first one is probably safer since you know exactly how the EntityManager is parametrized, but the second one seems more logic since it's the user's application, so if he wants an extended Seam EntityManager, good for him, the plugins should use it too (hoping all will be good). In the first case, easy to do : add a qualifier on the producer of the Forge EntityManager, add it also on the @Inject point, and you're done. In the second case, I have several propositions : 1) Delete the DatasourceProducer class in your package and generate it when the user initialize the project : in this configuration, the user can override it or delete it without any problem. A new command in the console like "restore datasourceProducer" would delete and re-create DatasourceProducer class with the default configuration provide by Forge. 2) Keep the DatasourceProducer class in your package but add an @Alternative annotation in the producer and put it in the beans.xml alternative list. So the day the user want to use it's own EntityManager, he just has to edit the beans.xml and remove the correct line. 3) There is also a solution by adding an @Veto annotation at runtime with Seam Solder but since, perhaps, the project does not require Solder, it's not good enough. In any case, you have to generate something in the user project in order to let him change it when he needs to. Hope my french-english will not kill your eyes.	0	0	https://issues.jboss.org/browse/FORGE-372

#	Requirement	Questions	Answered	Successfully Answered	URL
4706	FORGE-372	Hey Daniel, Sorry for the huge delay in getting you something else to chew on! Is this something you'd be interested in taking a shot at? ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-372
4707	FORGE-372	Hi, I think the second case with the second propositions sounds most reasonable to me. I would go with this solution. Is everybody in with me so I can go and realize it? Cheers, Daniel	1	1	https://issues.jboss.org/browse/FORGE-372
4708	FORGE-348	Actually I'd rather just go with metawidget-all. It's far cleaner for those learning Metawidget (just a single entry in the POM) and easier on Seam Forge too. I'd be much more interested in getting the AS 7 issue resolved, because this will impact all my tutorials and examples too. They all use metawidget-all, because it is an easier initial learning curve. Really only power users will want the fine-grained dependencies of metawidget-faces, metawidget-jpa etc. Does Jason have a link to the JIRA for the AS 7 issue?	1	1	https://issues.jboss.org/browse/FORGE-348
4709	FORGE-348	Using forge, it is expected that using Metawidget should be an option, not a mandatory feature. However this was found that when we use Forge to create a SEAM3 project from scratch, we must use metawidget. We have to understand the fact that Metawidget just creates some auto-generated xhtml codes from POJOs (good for simple CRUD based apps). But real life project is much more complicated. It is not always the direct table -> POJO - > xhtml mapping. What if we don't need metawidget at all, but we still want to use Forge to build up SEAM3 project using Richfcaes, JB7 etc... Do we have the option? Do we always need to use metawidget and then remove the config files (metawidget releted) manually to make our project metawidget free?	1	0	https://issues.jboss.org/browse/FORGE-348
4710	FORGE-345	Lincoln, if you get a chance, could you assign it to me?	1	1	https://issues.jboss.org/browse/FORGE-345
4711	FORGE-345	Hey Kevin, I've added you to the developer role. You should now be able to assign tickets to yourself :) Let me know if it doesn't work on this one and I'll see what's wrong. (I'll leave this unassigned so you can test it out.) Thanks Kevin! Lincoln	1	1	https://issues.jboss.org/browse/FORGE-345
4712	FORGE-343	I didn't see any j2ee references, is this for the javaee packaging? For example: ./src/main/java/org/jboss/forge/spec/javaee ./src/main/java/org/jboss/forge/spec/javaee/util ./src/main/java/org/jboss/forge/spec/javaee ./src/main/java/org/jboss/forge/spec/javaee/cdi ./src/main/java/org/jboss/forge/spec/javaee/jpa ./src/main/java/org/jboss/forge/spec/javaee/jpa/api ./src/main/java/org/jboss/forge/spec/javaee/jpa/container ./src/main/java/org/jboss/forge/spec/javaee/jpa/provider ./src/main/java/org/jboss/forge/spec/javaee/jsf ./src/main/java/org/jboss/forge/spec/javaee/servlet Would they all be moved to javaee6 directory/packaging? What about JavaEEDefaultContainer.java, the only java file I found with javaee in it's name? Should it change as well?	1	1	https://issues.jboss.org/browse/FORGE-343
4713	FORGE-340	the installFromGit() method already has a checkoutDir option that defines a directory in which to clone the repository. So, I have an implementation that uses this directory if defined, otherwise it prompts with "Would you like to save the source?". If this is true, then it saves to ~/.forge/plugins-src/ otherwise it saves to a temp directory that is removed when done. All in all, there are a total of 3 possibilities: 1) User defines the repository directory 2) User wants to save, but did not supply a directory 3) User does not want to save and a temp directory is used Does this make sense?	1	1	https://issues.jboss.org/browse/FORGE-340
4714	FORGE-340	Hey Rodney, think this one will make it in to Beta 3? (EoW or early next week hopefully)	1	1	https://issues.jboss.org/browse/FORGE-340
4715	FORGE-337	Minor point, but according to http://jcp.org/en/jsr/detail?id=344, it's JavaServer Faces. Maybe change "The default scaffold comes by default in any Forge distribution" to something like "The default scaffold comes as part of the Forge distribution" Should there be a discussion of the options for "scaffold setup" in the Getting Started section? The Customizing the Scaffold section tells you how to change what was generated. But, is there a way to change files in the plugin that would change all generated files? For example, change the css that is generated (used) for each application.	1	1	https://issues.jboss.org/browse/FORGE-337
4716	FORGE-330	It looks like this has already been pulled in. Did you work with Shane Bryzak to get this into the repository?	1	1	https://issues.jboss.org/browse/FORGE-330
4717	FORGE-327	imo for the plain scaffolding, there are not that many navigation cases to justify a navigation provider or something like that... or do I miss something? I'll make sure a nice index page is created that contains all the entities that are 'scaffolded'. This will be done by a 'menu' on the left of the screen, [kind of like|http://blog.mgm-tp.com/wp-content/uploads/2011/06/roo-web-application.png] :-) Agreed? Please assign this issue to me then	1	1	https://issues.jboss.org/browse/FORGE-327
4718	FORGE-325	Did you want this to target an EE appserver, or a servlet container?	1	1	https://issues.jboss.org/browse/FORGE-325
4719	FORGE-322	Done in new scaffolding implementation. Well, sort of. I don't really grok what these 'finder' methods are all about. What if an entity has 3 fields? Do I need: public Customer findByFirstname(...) { ... } public Customer findBySurname(...) { ... } public Customer findByAddress(...) { ... } public Customer findByFirstnameAndSurname(...) { ... } public Customer findByFirstnameAndSurnameAndAddress(...) { ... } public Customer findBySurnameAndAddress(...) { ... } public Customer findByFirstnameAndAddress(...) { ... } This seems unwieldy in Java? It works in, say, Ruby because they have 'method_missing'. But I don't like the idea of statically generating all these (when most will never be used). So instead I've implemented a simple Query By Example into the scaffolding using Criteria queries. Will that be sufficient? Please test!	1	1	https://issues.jboss.org/browse/FORGE-322
4720	FORGE-321	Could you please try a new snapshot and see if the problem persists? Thanks, I haven't been able to reproduce this: https://repository.jboss.org/nexus/content/groups/public/org/jboss/forge/forge-distribution/1.0.0-SNAPSHOT/forge-distribution-1.0.0-20110608.211641-40.zip	1	1	https://issues.jboss.org/browse/FORGE-321
4721	FORGE-321	Hi, The problem still persists with the version you provided: [forge-test] Customer.java $ scaffold from-entity ? No scaffold type was selected, use default (Metawidget & JSF)? [Y/n] Y ? Scaffold provider [metawidget] is not installed. Install it? [Y/n] Y ***ERROR*** [scaffold from-entity] promptChoice() Cannot ask user to select from a list of nothing. Ensure you have values in your options list. I am behind a proxy. Maybe it needs to be configured. Regards,	0	0	https://issues.jboss.org/browse/FORGE-321
4722	FORGE-321	Tried from my home laptop which is not behind a proxy and it works fine. So this could be due to some proxy settings. Is there any place to set the proxy settings for seam forge? Or does it take the Maven proxy settings in which case I guess we need to set it in maven settings.xml	1	1	https://issues.jboss.org/browse/FORGE-321
4723	FORGE-305	What error are you getting?	0	0	https://issues.jboss.org/browse/FORGE-305
4724	FORGE-302	Awesome! Glad you got this figured out. Since you already prototyped a solution, could you polish it up a bit and send a pull request? Thanks!	1	1	https://issues.jboss.org/browse/FORGE-302
4725	FORGE-289	To give some more info: I actually liked the use of this 'hidden' plugin because it provided me pretty much with all I needed. I think the only thing that needs to be provided is a way to really hide the command, maybe with a '@Hidden' annotation or something alike. Or is that too hacky?	1	1	https://issues.jboss.org/browse/FORGE-289

#	Requirement	Questions	Answered	Successfully Answered	URL
4726	FORGE-289	What do you think about something like this that gets evaluated before the command is parsed or executed? {code} /** * Allows the shell input stream to be intercepted, modified, or observed by extensions. * * @author Lincoln Baxter, III * */ public interface InputStreamInterceptor { /** * Intercepts a line of input and returns it along with any modifications. The returned value will be passed to the * Shell for invocation. */ public String intercept(String line); } {code} I hesitate to use hidden plugins, because I think we are already going to have plugin name conflicts soon (though we could qualify them) But this is probably a useful API anyway. Thoughts?	1	1	https://issues.jboss.org/browse/FORGE-289
4727	FORGE-286	quick top of my head comments: Creating yet another plugin/module system sucks ;) Using classifier of maven artifacts would be a "misuse" IMO - could we index it someway else ? Consider using something like P2 from eclipse.org to handle the installation/automatic updates?	1	1	https://issues.jboss.org/browse/FORGE-286
4728	FORGE-286	Max, Could you explain how you see that fitting in? I checked out the site but was not able to find much info about how to use it, what it actually does, etc... http://www.eclipse.org/projects/project_summary.php?projectid=rt.equinox.p2 Would it work with Maven artifacts/dependency management? Also, yes; we could: * Index assuming that we had control over the repository and it were dedicated to Forge plugins. * Use our own packaging type (fpg) or something, for which the artifact would be a JAR (is this possible?), but run a nightly cron-job to scan through all the artifacts. Personally I think we need a repository of which we have complete control. The repository would be responsible for containing necessary metadata, much like an eclipse update-site. I would prefer not to implement a repository system myself, but I am assuming that we will need to in order to provide this functionality ... Unless P2 works well enough that it would: A) not require significant modifications to our architecture, and B) not require more work/time than creating a simple system ourselves.	1	1	https://issues.jboss.org/browse/FORGE-286
4729	FORGE-285	On the forum they say to be working on a REST api. Let's put this on hold until the api is available, otherwise we're hacking around something that will proably brake later. Is it ok I assign this to myself? I'll monitor the forum and start working on it when available.	0	0	https://issues.jboss.org/browse/FORGE-285
4730	FORGE-285	Is this issue closeable?	1	1	https://issues.jboss.org/browse/FORGE-285
4731	FORGE-281	Lincoln, can you assign this to Paul Bakker to credit him as the contributor, then resolve it?	1	1	https://issues.jboss.org/browse/FORGE-281
4732	FORGE-273	Is this the one you're working on? Using FPak?	1	1	https://issues.jboss.org/browse/FORGE-273
4733	FORGE-273	Which archetype catalogs should we provide by default?	0	0	https://issues.jboss.org/browse/FORGE-273
4734	FORGE-268	I like the idea of Lombok, but the issue I see with it is that I think it requires plugins for the IDE in order to get things to work. (And not throw up lots of compile errors.) Can you tell me if that's still the case?	1	1	https://issues.jboss.org/browse/FORGE-268
4735	FORGE-254	Lincoln, does the Ctrl+D work also for e.g. dependency-add, new-field custom, repository-add, ... ? I mean their interactive mode. Now when I'm trying to escape from dependency-add with Ctrl+c/exit it's not possible. And another question... Shouldn't the fix version be higher? Because I'm testing 1.0.0.Alpha3 and it's not there. The only thing I get after pressing Ctrl+D is "***ERROR*** Exception encountered: null (type "set VERBOSE true" to enable stack traces)", the command really exits but it's not nice:)	0	0	https://issues.jboss.org/browse/FORGE-254
4736	FORGE-253	From mail on forge-dev May 11: well, is that info persisted somewhere so other plugins can read the info ? persistence.xml does not have it and as discussed at JBW I believe deplomentime DB info <> development DB info. What would be great is if the persistence plugin would have a single or even list of named JPADataSource's which have enough info for data query, reverse engineering etc. could be done withuot having to repeat it at every generate-entity call.	1	0	https://issues.jboss.org/browse/FORGE-253
4737	FORGE-239	What would be the best place for this? I was thinking in a new facet (ProjectExecutionFacet) in dev-plugins. The facet is mostly an API for plugin authors. We can also add a plugin that exposes the facet to end-users. Thoughts?	1	1	https://issues.jboss.org/browse/FORGE-239
4738	FORGE-239	JavaExecutionFacet perhaps? Not all projects would necessarily execute using Java. Wondering if this should be in the core API. Dev-plugins isn't a place for feature addition, so for now I'd say let's put it in the Shell-API itself (implemented by the Maven Project Impl)	0	0	https://issues.jboss.org/browse/FORGE-239
4739	FORGE-233	Would it make sense to integrate parts of the formatter plugin for this? https://github.com/thomashug/forge-formatter-plugin	1	1	https://issues.jboss.org/browse/FORGE-233
4740	FORGE-227	Hi. Thanks for working on this! Could you please send a pull request and link that URL? The link you have provided is just a link to your source tree. Thanks, Lincoln	1	1	https://issues.jboss.org/browse/FORGE-227
4741	FORGE-227	To send a pull request, navigate to https://github.com/includeeasy/core/tree/SEAMFORGE-162 and click the "send pull request" button. Then fill out the subject and description and click send. The encoding may pose a problem. If possible, could you change this to UTF-8 and re-submit? Also, if you could make the following refactoring to the findRange() method: From: {code}public <T> List<T> findRange(Class<T> type,int[] range) {code} To: {code}public <T> List<T> findAll(Class<T> type,int firstResult, int maxResults){code} I think that API will be a little easier to understand, and a little less user-error prone. Thanks! This is good stuff.	1	1	https://issues.jboss.org/browse/FORGE-227
4742	FORGE-227	Done! Thanks for this enhancement! If you have not already, could you please sign this contributors agreement and make sure you have an account on jboss.org? That way I will be able to give you credit for completed issues. https://cla.jboss.org/ Thanks, ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-227
4743	FORGE-227	Hantsy, if you'd like to see this feature. Could you please file a new issue describing your needs? This issue has been closed for some time. Thanks. This sounds like something that would better belong in the RichFaces plugin: https://github.com/forge/plugin-richfaces	1	1	https://issues.jboss.org/browse/FORGE-227
4744	FORGE-227	I have implemented this by add a field of "private T filter;",put filter parameter inside getItemsCount() and createPageDataModel(). But there is problems whith isolate richfaces/icefaces/primefaces and integrate richfaces & matewidget. So now you can write an plugin that implement scafford api. but how can those plugins work together?	1	0	https://issues.jboss.org/browse/FORGE-227

#	Requirement	Questions	Answered	Successfully Answered	URL
4745	FORGE-226	Discussion on irc: (03:38:13 PM) lincolnthree: imagine you have a PomXmlResource (there is such a thing in Forge 1) (03:38:16 PM) lincolnthree: you could say: (03:38:31 PM) lincolnthree: pomResource.getFacet(ProfilesFacet.class) (03:38:53 PM) lincolnthree: So in a sense, a project would just be a Resource! (03:39:32 PM) kenfinnigan: so if I understand it.. (03:39:34 PM) lincolnthree: webXmlResource.getFacet(ServletsFacet.class) (03:39:46 PM) kenfinnigan: JavaSourceResource.getFacet(EJBFacet.class).isBeanType(Type.MESSAGE_DRIVEN_BEAN) (03:39:55 PM) lincolnthree: webXmlResource.hasFacet(ContextParamsFacet.class) (03:39:56 PM) kenfinnigan: would return an EJB that was an MDB? (03:40:01 PM) lincolnthree: right (03:40:05 PM) kenfinnigan: ie the java source of the class that is (03:40:10 PM) lincolnthree: well (03:40:17 PM) lincolnthree: based on what you've written, i'd expect it to return a boolean (03:40:18 PM) lincolnthree: but (03:40:19 PM) lincolnthree: yes (03:40:42 PM) lincolnthree: javaResource.hasFacet(ArquillianFacet.class) (03:40:44 PM) lincolnthree: etc (03:41:22 PM) kenfinnigan: ok, I was reading JavaSourceResource as a static, but from what you're saying in that example it would actually be an instance (03:41:26 PM) kenfinnigan: correct? (03:41:44 PM) kenfinnigan: so asking that java source instance if it's an MDB (03:41:47 PM) lincolnthree: javaResource.getFacet(TransactionInterceptorFacet.class).getPropagationType(); (03:41:56 PM) lincolnthree: it would be an instance (03:41:57 PM) lincolnthree: yes (03:42:04 PM) kenfinnigan: ok (03:42:21 PM) lincolnthree: so the facet would be able to inspect/install/remove certain pieces of information from java code in this case (03:42:30 PM) lincolnthree: in a very granular/controlled manner (03:42:55 PM) kenfinnigan: hmm, so where would that control lie, in the Facet or Resource, or bit of both? (03:44:42 PM) lincolnthree: the resource would have no knowledge of the facets contained within (03:44:54 PM) lincolnthree: facets would be responsible for inspecting the resource and determining their own installation sate (03:44:56 PM) lincolnthree: state (03:44:59 PM) lincolnthree: just like Project facets (03:45:07 PM) aslak: kenfinnigan, what am i saying? :) (03:45:24 PM) kenfinnigan: ok, so Resource just needs to provide the means that Facet can do the kinds of things aslak wants? (03:45:29 PM) kenfinnigan: aslak: FORGE-226 (03:45:30 PM) jbossbot: jira [FORGE-226] Support for Facets construct on Resources [Open (Unresolved) Feature Request, Major, Unassigned] https://issues.jboss.org/browse/FORGE-226 (03:45:39 PM) lincolnthree: resource needs to provide a generic Facet API (03:45:47 PM) lincolnthree: like the Project class in forge 1.x does (03:45:47 PM) kenfinnigan: lincolnthree: ok (03:46:18 PM) lincolnthree: https://github.com/forge/core/blob/master/shell-api/src/main/java/org/jboss/forge/project/Project.java (03:46:31 PM) lincolnthree: something like that (03:46:39 PM) aslak: kenfinnigan, aa.. the basic idea is.. you have Facets on a Project (capabilities for a given project), the similar thing you would have on Resource level (03:47:15 PM) aslak: new XMLResource("arquillian.xml").getFacet(ArquillianFacet.class).addContainer() (03:47:51 PM) kenfinnigan: aslak: ok, so then the ArquillianFacet "knows" the correct XML to add back to the resource for addContainer()? (03:48:00 PM) aslak: yes (03:48:30 PM) kenfinnigan: ok, so Facets do all the work of modifying Resource, but Resource needs to know what kind of Facet it can deal with (03:48:33 PM) aslak: you need a 'supports(Facet)" or similar in ther ea swell (03:48:47 PM) aslak: it's basically a way to share code on resource level instead of just project level (03:48:59 PM) lincolnthree: yea (03:48:59 PM) kenfinnigan: ok, think that makes sense (03:49:18 PM) aslak: the EJB addon should know 'stuff' about a Class to determine if it's a EJB.. possible add EJB related annotations	1	1	https://issues.jboss.org/browse/FORGE-226
4746	FORGE-219	Hey Michael! Any more updates on this plugin? Can this issue be closed? Thanks. ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-219
4747	FORGE-219	Don't need to file core JIRA issues for creating new plugins. Have a blast :) Keep it up!	1	1	https://issues.jboss.org/browse/FORGE-219
4748	FORGE-213	Is it enough that someone be able to do this by typing "install beans" "install ejb" "install servlet"? Or do you want something more like an archetype?	0	0	https://issues.jboss.org/browse/FORGE-213
4749	FORGE-205	Kevin, if you think this is ready, I can begin merging it into the core JavaEE 6 plugins. This would mean that it will be part of the forge distribution, and you'll have to send pull requests to make updates. Is that OK? I'd really like for this to be a part of forge itself (You will of course still have credit for all of the work.) We already have a few JavaEE plugins: persistence faces beans (servlet facet) and this would add "validation" Thoughts? Lincoln	1	1	https://issues.jboss.org/browse/FORGE-205
4750	FORGE-202	[example] example $ project repository-add CUSTOM What is the name of the repository? OCPSOFT What is the URL of the repository? http://ocpsoft.com/repository/ Added repository [OCPSOFT->http://ocpsoft.com/repository/] [example] example $	0	0	https://issues.jboss.org/browse/FORGE-202
4751	FORGE-180	Hey Richard, could you take a look at this? Thanks!	1	1	https://issues.jboss.org/browse/FORGE-180
4752	FORGE-176	Hey Kevin, did you run the tests before you sent this pull request? From what I saw the tests didn't pass because there was a bug in the PromptType Enum. Anyway, this is great and the tests are very thorough. Keep up the good work!	1	1	https://issues.jboss.org/browse/FORGE-176
4753	FORGE-175	I agree that it would be best to add it as provided. Do you change that when pulling, or should I change and commit it?	1	1	https://issues.jboss.org/browse/FORGE-175
4754	FORGE-175	Now I know a little more about Forge I see you're right. I'll extend it a bit too when I make the changes: -Check if either cdi-api or jboss-specs are in the pom already -> if so, don't add anything -if not promt the user if cdi-api should be installed (defaults to Y) -if Y, promt the user what scope it should get, defaults to compile (probably it's a standalone project, otherwise the specs should have been on the classpath) Do you agree?	1	1	https://issues.jboss.org/browse/FORGE-175
4755	FORGE-169	Hey Ken, Just checking, were you working on this?	1	1	https://issues.jboss.org/browse/FORGE-169
4756	FORGE-169	Hey Ken, did you ever start on this one?	0	0	https://issues.jboss.org/browse/FORGE-169
4757	FORGE-167	Do you remember why we opened this issue, Paul? Something you want to knock out, maybe?	1	0	https://issues.jboss.org/browse/FORGE-167
4758	FORGE-163	Where would that name get injected from?	0	0	https://issues.jboss.org/browse/FORGE-163
4759	FORGE-161	The beauty of Forge is that we can support *everybody's* use case! :) I think this is a good addition, and will help streamline path to deployment on AS7, even if Forge actually handles unzipping itself (which I think may be the route I want to take, instead of using maven.) Forge can unzip servers to its local ~/.forge/ directory, and use those locations for deployments. But I think in the short term, using maven is a good option, too. Some people may want that, too.	0	0	https://issues.jboss.org/browse/FORGE-161
4760	FORGE-161	Thanks for picking this one up, paul! I think you have the right experience in order to do this right :) Do you think we can do startup/shutdown of the AS7 server as well? That would be harder but certainly doable (JBoss Tools does it.) That would mean forge could really stand on its own when it comes to developing webapps!	0	0	https://issues.jboss.org/browse/FORGE-161
4761	FORGE-157	Could you create a unit test that shows this failing? That would make it easy to fix :) Thanks!	1	0	https://issues.jboss.org/browse/FORGE-157
4762	FORGE-143	Could you please list out the actions that you think should be provided by base classes in specific? I'm willing to bet that most are already provided by Facets. E.g: JavaSourceFacet can be used to calculate the current package. But we could make that API a bit more powerful depending on what you need.	1	1	https://issues.jboss.org/browse/FORGE-143
4763	FORGE-142	To run forge from the IDE - you should ideally run the dist/ project, not the shell/ project which is what I think you are doing? Can you try that and let me know if it works?	1	1	https://issues.jboss.org/browse/FORGE-142

#	Requirement	Questions	Answered	Successfully Answered	URL
4764	FORGE-139	Do you want this issue to be closed?	0	0	https://issues.jboss.org/browse/FORGE-139
4765	FORGE-137	Hey Kevin, Do you have an example of such a plugin that we could incorporate? I'd be glad to add this; I think it's very useful. ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-137
4766	FORGE-137	Hey Lincoln, isn't this issue obsolete through the forge commands as7 deploy, as7 exploded, etc.? Regards//Kevin	1	1	https://issues.jboss.org/browse/FORGE-137
4767	FORGE-137	Hi Lincoln, I've a couple of ideas on how to solve this issue. The investigation below is focused on JBoss AS 7 only. I copied the scenario approaches from the JBoss AS 7 deployments README.txt. Within the pom.xml define variable for deployment mode, by default: - auto-deploy-zipped = "true" - auto-deploy-exploded = "false" h3. explode commands *maven compile -Pexplode* - Scenario 1: Add new unzipped content and deploy it {quote} 1. cp -r target/example.war/ $AS/standalone/deployments 2. (Manual mode only) touch $AS/standalone/deployments/example.war.dodeploy {quote} - Scenario 2: Live replace portions of currently deployed unzipped content without redeploying {quote} 1. (Auto mode only) touch $AS/standalone/deployments/example.war.skipdeploy 2. cp -r target/example.war/foo.html $AS/standalone/deployments/example.war {quote} One remark Scenario 2 only triggers if Scenario 1 has been executed first. *maven compile -Pre-explode* - Scenario: Replace currently deployed zipped content with a new version and deploy it: {quote} 1. cp target/example.war/ $AS/standalone/deployments 2. (Manual mode only) touch $AS/standalone/deployments/example.war.dodeploy {quote} *maven clean -Punexplode* - Scenario: undeploy and remove unzipped content {quote} 1. rm $AS/standalone/deployments/example.war.deployed 2. wait for $AS/standalone/deployments/example.war.undeployed file to appear 3. rm $AS/standalone/deployments/example.war {quote} h3. deploy commands *maven package -Pdeploy* - Scenario: Add new zipped content and deploy it {quote} 1. cp -r target/example.war/ $AS/standalone/deployments 2. (Manual mode only) touch $AS/standalone/deployments/example.war.dodeploy {quote} *maven package -Pre-deploy* - Scenario: Redeploy currently deployed content (i.e. bounce it with no content change): {quote} 1. touch $AS/standalone/deployments/example.war.dodeploy {quote} *maven clean -Pundeploy* - Scenario: undeploy and remove unzipped content {quote} 1. rm $AS/standalone/deployments/example.war.deployed 2. wait for $AS/standalone/deployments/example.war.undeployed file to appear 3. rm $AS/standalone/deployments/example.war {quote} I'm not sure whether the wait commands in unexplode and undeploy can be realized with maven. Therefore this might need a rework. What do you think? Any questions or suggestions? Can you think of any pitfalls with this approach? Regards//Kevin	1	1	https://issues.jboss.org/browse/FORGE-137
4768	FORGE-137	Hey Kevin, Sorry for the late reply. I've been on the road at conferences. These command breakdowns look good, but does this actually make this functionality available when using maven standalone? It looks like these are just Forge commands. Is that what you want? I'm not really clear how you plan to implement this approach (but that doesn't mean I'm against it, just that I want to know more.) Thoughts? ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-137
4769	FORGE-137	Hey Lincoln, no problem this gave me some time to think of a solution ;) Here is an example on how I thought to implement this issue for *mvn compile -Pexplode* {code:xml} <profile> <id>explode</id> <build> <plugins> <plugin> <artifactId>maven-war-plugin</artifactId> <configuration> <webappDirectory>${exploded.dir}</webappDirectory> <failOnMissingWebXml>false</failOnMissingWebXml> </configuration> <executions> <!-- execute goal war:explode with compile phase --> <execution> <id>explode</id> <phase>compile</phase> <goals> <goal>exploded</goal> </goals> </execution> </executions> </plugin> <plugin> <groupId>org.apache.maven.plugins</groupId> <artifactId>maven-antrun-plugin</artifactId> <version>1.7</version> <executions> <execution> <id>copy-as-deployment-descriptors</id> <phase>compile</phase> <goals> <goal>run</goal> </goals> <configuration> <target> <touch file="${exploded.dir}.dodeploy" /> </target> </configuration> </execution> </executions> </plugin> </plugins> </build> </profile> {code} Though this works it gets really ant like messy if you plan to implement this for all deploy and explode goals. Another approach I thought of is to use the the jboss as7 maven plugin. But as they only support deploying this isn't really a complete solution. This also leave the question open on how the implementation for Glassfish will look like? What do you think? //Kevin	1	1	https://issues.jboss.org/browse/FORGE-137
4770	FORGE-137	Hmmm, actually. If we do FORGE-194, do you think this is necessary? Would that be a solution that meets your use case? Also, the "as7 deploy" command now supports "as7 deployExploded". There's also FORGE-256 which is related to this I think. So many people asking for different things! Do all? One? Some?	1	1	https://issues.jboss.org/browse/FORGE-137
4771	FORGE-127	Do you think we should reconsider that? Feel free to reopen if that's the case. Thanks	0	0	https://issues.jboss.org/browse/FORGE-127
4772	FORGE-124	Thanks Paul! I'll get to these soon. In the future, could you create an individual pull-request for each issue? That will make it much easier to pull things in and test individually/ ~Lincoln	1	1	https://issues.jboss.org/browse/FORGE-124
4773	FORGE-124	Yes, I was looking for that on github. When I try to create another pull requests it says there already is one. How do you get around that, use feature branches for pull requests? I'm not that familiar with git yet, so still trying to figure out how to work best with it.	1	1	https://issues.jboss.org/browse/FORGE-124

#	Requirement	Questions	Answered	Successfully Answered	URL
4776	FORGE-120	This does not seems to be working anymore. Executing project-new --named demo --topLevelPackage org.demo. --type pom gives a war project. The commited source code has since than be refactored. NewProjectPlugin and NewProjectPluginTest are no longer available. Is there an example for this and general multi-module support? This would be fairly vital for any larger application.	1	1	https://issues.jboss.org/browse/FORGE-120
4777	FORGE-118	Actually, I think this is even easier than scanning the class. If the project packaging is WAR, then make a WebArchive, if it is JAR, then make a JavaArchive :) PS. Who are you?	0	0	https://issues.jboss.org/browse/FORGE-118
4778	FORGE-114	I abstract BackingBean as "CommonGenericBean",and then write an concrete bean "PersonBean" as following: public class PersonBean extends CommonGenericBean<Person> implements MenuItem{} When i test PersonBean on jboss-as7,two types of problems I encountered, 1.When write CommonGenericBean as floowing,enable interceptor class "org.jboss.seam.transaction.TransactionInterceptor" caused getItemType() returns Object,then disable the interceptor,getItemType() become return Peron class,so I can not use JTA. public abstract class CommonGenericBean<T> extends PersistenceUtil { private List<T> list = null; private T item = createInstence(); private long id = 0; private PaginationHelper<T> pagination; private transient Class<T> entityClass; public Class<T> getItemType() { if (entityClass == null) { entityClass = getSuperClassGenricType(getClass()); } return entityClass; } ... 2.When write CommonGenericBean as floowing,it says "No active JTA transaction on joinTransaction call",in this case,only "RESOURCE_LOCAL" type of persistence can run. public abstract class CommonGenericBean<T> { private List<T> list = null; private T item = createInstence(); private long id = 0; private PaginationHelper<T> pagination; private transient Class<T> entityClass; protected PersistenceUtil persit; protected abstract void setPersistenceUnit(PersistenceUtil persit); public Class<T> getItemType() { if (entityClass == null) { entityClass = getSuperClassGenricType(getClass()); } return entityClass; } ... Any one can fix those problem?	0	0	https://issues.jboss.org/browse/FORGE-114
4779	FORGE-111	im curious why does Java EE 6 war project require a web.xml ?	1	1	https://issues.jboss.org/browse/FORGE-111
4780	FORGEPLUGINS-211	agoncal The idea is when you setup a logger, you also generate the appropriate producer method... but that means the project relies on CDI 16:35:05 gastaldi Interesting 16:35:36 gastaldi Maybe this could be a separate addon 16:35:53 agoncal gastaldi Yes, I think so 16:36:09 gastaldi We could start by creating it outside of core 16:36:09 agoncal And what about the producer method and the CDI dependency ? 16:36:24 gastaldi Roaster can generate that 16:36:51 gastaldi It should depend on javaee facet 16:36:55 agoncal yes, I know, I'm just wondering if it's a good idea to always depend on CDI 16:36:57 gastaldi CDIFacet 16:37:04 agoncal (Spring projects for example) 16:37:21 gastaldi That depends on the facets installed in the project 16:37:23 agoncal I like CDI and would love to see it used everywhere... but it's not the case yet 16:37:36 agoncal or maybe : 16:37:40 agoncal logger-setup 16:37:49 agoncal logger-new-producer 16:37:51 agoncal or 16:37:54 agoncal logger-new-factory 16:38:12 gastaldi Yeah thats a good idea too 16:38:14 agoncal One uses CDI, the other doesn't.... but is that really useful ? 16:38:37 agoncal logger-new-producer would install the CDIFacet, the other no 16:38:39 gastaldi New factory could do the same as new producer 16:38:52 agoncal ok 16:39:01 gastaldi Hm. I think that it wouldnt need to install the CDIFacet 16:39:27 gastaldi Just enable the commands if the facet is already installed should be enough 16:40:28 agoncal Hum.... When we create a backing bean, the command faces-new-bean is enabled without or without CDI... and then, it installs it 16:40:47 agoncal I think the behevior should stay the same 16:40:57 gastaldi Ah right 16:41:05 gastaldi Yeah makes sense	1	0	https://issues.jboss.org/browse/FORGEPLUGINS-211
4781	FORGEPLUGINS-179	What setup? It's just the design of the endpoints.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-179
4782	FORGEPLUGINS-171	This is excellent! Great idea for an addon! Do we know what the issue is here?	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-171
4783	FORGEPLUGINS-171	I don't think so because on the first step, the example_manual.ftl is copied to src/main/asciidoc and I used the ResourceFacet to do it and it works, so the folders src/main/resources and src/main/asciidoc are created. WDYT?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4784	FORGEPLUGINS-171	The installation succeeded. Can you update the addon to use Forge 2.10.0.Final?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4785	FORGEPLUGINS-171	It's weird, the plugin version is still not being added to the pom.xml. Do you see that happening?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4786	FORGEPLUGINS-171	No. Do you specify a converter ?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4787	FORGEPLUGINS-171	Indeed it's weird, this command works for me. Is it a new project or an existing project ?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4788	FORGEPLUGINS-171	an existing project. Are you using Forge 2.10.1.Final?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4789	FORGEPLUGINS-171	No. Can you try on a new project , I mean without any asciidoctor datas un the pom?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4790	FORGEPLUGINS-171	Maybe it's something related to my .m2 local repository. Indeed the plugin version is not set in the code but it's resolved with the DependencyFacet, I may add a default version. I will try with a clean repo and debug too. WDYT?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-171
4791	FORGEPLUGINS-163	Isn't that done by windup?	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-163
4792	FORGEPLUGINS-97	[~pmuir] Did you have any idea in particular when you opened this issue ? George Gastaldi suggested split the container in categories: REMOTE, EMBEDDED, MANAGED so we can do something like: {code} arquillian setup --containerType REMOTE --containerName JBOSS_AS_4.2.X {code} What you think ?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-97
4793	FORGEPLUGINS-83	Hum, I wonder how would this client behave ? Main problem is that a REST endpoint is not fully described. You can pass any parameters you want. How would a client know which HTTP methods are supported (POST / GET/ DELETE/HEAD) ? Probably generating from a WADL file (if people use this anyway :)) would be much better. This should be something interesting to discuss about.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-83
4794	FORGEPLUGINS-73	I wonder how Eclipse handle it's refactorings. Wouldn't that be on the AST level? In that case we could maybe use that directly.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-73
4795	FORGEPLUGINS-69	Hi! Is it OK that a plugin extends another plugin? Or we want to definitely avoid inheritance? Cheers! Ivan	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-69
4796	FORGEPLUGINS-65	Although it's a common approach to use some marker syntax it's very breakable. If someone edits the file by hand there's a good change that the marker syntax is removed or the file structure is inconsistent. That's the problem with generating code in user-editable files. The Spring Roo guys solved this by putting all generated code in AspectJ Inter Type Declarations. The cool thing about it is that all generated code is outside of files editable by users. I don't like the heavy dependency on AspectJ however, but isn't something similar possible for Forge? For more advanced scaffolding etc. an elegant solution is necessary too.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-65
4797	FORGEPLUGINS-64	Hey Mike, this looks like it is due to the FSH parser. Can you take a look and see if there is anything we can do about this? Thanks.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-64

#	Requirement	Questions	Answered	Successfully Answered	URL
4798	FORGEPLUGINS-54	Feature *wish* list (starting with what would be desireable versus achievable): *Bi-directional Incremental change support. I do not recall where, but this was a black eye for Forge/Hibernate reverse engineering in one review ('destructive' was a word used to describe it, which is unfair when you talk reverse engineering tool versus change management tool) when compared to Grails and Roo. --change in database schema and have 'incremental' change support to domain code...without replacing existing code (example, if you modified the JPA design to include TABLE_PER_CLASS inheritance, and you add a new column to one of those tables or a separate class that as one-to-many to that inheritance, do not want to loose that work). --change the domain in code, incrementally handle db migration. Note that column renames need to be specifically addressed, and some type of ability to *track* other columns marked for deletion, but not actually purge unless explicitly defined. *SQL support to handle more database-specific work, like data migration work (if merging or breaking apart data in column(s) to other column(s)). *SQL specific schema support -- Specifically, there may be additional columns/relations in the table design that do not/are not part of the domain model. This should be supported with some type of 'ignore' feature when working on the code-domain but still exist/support/be upgraded as part of the upgrade process (new/improved indexes, constraints, spoc/functions, sql views for example). Not primary feature of this plugin, but should support it. *Control data population (setting default values, app-specific values, environment/client values, etc). *Application-deploy upgrade process, cluster aware (avoid multiple apps upgrading the schema at the same time) -- have support to (optionally) auto-upgrade database schema when deploying newer application. This should support multi-version upgrade (optional to control size/number of diff/changes -- if database schema was for application v3, and now deploying application v5, but able to upgrade through all changes). --caveat, one of the comments against this approach is the upgrade library/code and the upgrade scripts would 'always' be packaged with the application, versus only needed once per upgrade. There is no way around this without introducing additional external support (separate system) or separate artifact like an 'app-upgrade.war' sibling that can be undeployed without impacting the real application (potentially deploy both, have the real application have lightweight version to check db version matches need for application version, if not call/wait for upgrade artifact, then undeploy/remove the upgrade artifact). *Support both code-first and database-first kickstart (how/where to baseline the database). *(nice to have) - ability to know what changes are backward compatible from the application domain code and the database changes point-of-view, versus those that are not. For example, adding new columns that are nullable and no FK constraint are backward compatible allowing the prior applications to continue to function during the upgrade. This is useful for stepped upgrade processes for minimal downtime.	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-54
4799	FORGEPLUGINS-37	does those two lines mean you end up with the merged set of boms from both -with-tools and -with-hibernate or is this meant to be just one time per project ?	0	0	https://issues.jboss.org/browse/FORGEPLUGINS-37
4800	FORGEPLUGINS-37	To use a engine to retrieve the available stacks I suggest that jdf uses two different commands (one for install and another get the list of available stacks) like {code} jdf install-stack --stack jboss-javaee-web-6.0-with-tools --version 1.0.0.Final {code} and {code} jdf update-stacks || jdf update-available-stacks {code} Most users uses the autocomplete feature to discover what a plugin does. If we use --stack option in the default command I think that will be hard to users discover how they can update BOM list. What you think ?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-37
4801	FORGEPLUGINS-17	Pete, can you paste a minimal arquillian.xml to be created ? Regards, George Gastaldi	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-17
4802	FORGEPLUGINS-16	Just wondering. Did you have the richfaces plugin installed at the time?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4803	FORGEPLUGINS-16	Sorry. I was (stupidly) expecting you to call 'richfaces setup' before 'scaffold setup'. Try again now?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4804	FORGEPLUGINS-16	Why is it stupid to expect that one would call richfaces setup? Shouldn't that be required if you want richfaces functionality? PS. Nice job richard!	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4805	FORGEPLUGINS-16	Further fixes for: CSS fixes. Adding multiple one-to-many at once. Required field handling. Nested collections. Note we appear to have a bit of an issue with Bean Validation's @NotEmpty. Pete could you please investigate? Basically: 1. Generate the app 2. Cheer how the date pickers no longer overlap 3. Cry because when you go 'Booking->Create New' you get validation errors on the search fields Now, I have already removed JSF's 'required=true' attribute from these fields. So it appears it is Bean Validation doing this. You cannot use 'immediate=true' on the button or else nothing will get POSTed at all. The 'correct' solution, I think, is to add f:validateBean disabled="true" to each of the required fields. I can do this no problem, but it doesn't seem to work (under AS 7.0.2.Final). Example: 1. Add 'f:validateBean disabled=true' to 'h:inputText id="bookingBeanSearchCancellationCode"' and 'h:inputText id="bookingBeanSearchContactEmail"' in 'booking/search.xhtml' 2. Go to the search screen and click 'Create New'. Works! Hurrah! 3. Go back to the search screen and click 'Search' and then 'Create New'. Now it fails. It appears f:validateBean does not survive POST-back? Is this a bug? Even if this *did* work, a bad side effect is that all validation is disabled for these fields. So for example it no longer validates the e-mail address format. We can probably live with that on the search screens, but it may be unacceptable on the one-to-many 'add' fields (where this is also a problem). Suggestions?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4806	FORGEPLUGINS-16	I'm not 100% sure of what the design is here. Do you want Create New to take values from the search fields at all? I'm guessing so. I'm also assuming that you generally don't want @NotEmpty to apply to searches at all. In this case the answer is validation groups. I think you need a search group which ignores certain validations such as @NotEmpty. If you give this group a standard name, this will work for an existing domain model as well, as we can apply the group there.	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4807	FORGEPLUGINS-16	Emmanuel, I agree most validations won't apply to search fields. I think an 'easy default' (i.e. without requiring people to modify their domain model) would be to just add <f:validateBean disabled="#{true}"/> to each search field. However this doesn't appear to survive POST-back (i.e. it works for one click, but then fails after that). Are you aware of this? Is it a bug? I attach a minimal test case. I'd be most grateful if you could look at it. If you agree it is a bug, could you raise it with the relevant team? I could do it myself, but you have the whole 'scary French genius' thing going on so can probably get people to react more quickly :) Regards, Richard.	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16
4808	FORGEPLUGINS-16	Okay, opened as: https://issues.jboss.org/browse/AS7-3621 I guess FORGE-460 will remain in limbo until that's resolved? Pete can you please assign to Stan?	1	1	https://issues.jboss.org/browse/FORGEPLUGINS-16

4810	FURNACE-60	Would that be the prefix or the suffix ?	0	0	https://issues.jboss.org/browse/FURNACE-60
4811	FURNACE-26	Is this still an issue?	1	0	https://issues.jboss.org/browse/FURNACE-26
4812	FURNACE-21	Hi [~ozizka], Would you mind providing a failing test case illustrating this behavior? Thanks!	1	1	https://issues.jboss.org/browse/FURNACE-21
4813	FURNACE-12	Con you confirm that the maven central repo is overriden by a mirror in the settings.xml? If you could paste a sample of their settings.xml that would help also. Thanks	1	0	https://issues.jboss.org/browse/FURNACE-12
4814	FURNACE-12	Hi [~agoncal], Can you confirm this is still an issue with 2.15.0.Final? Thanks	1	0	https://issues.jboss.org/browse/FURNACE-12
4815	ESBSYSTEMTESTS-73	If we're extracting these classes, it might be a good idea to make a distinction between: - generic classes to access JMX, read files, ... that can be reused to test other projects (e.g. in kite/common) - ServiceMix-specific classes to ease building tests for FUSE ESB (e.g. in kite/servicemix) - the tests themselves and other artifacts we need for testing (e.g. in tests/*) Wdyt?	1	0	https://issues.jboss.org/browse/ESBSYSTEMTESTS-73
4816	FUSEFORGE-127	But point taken.. we should force https access to avoid credentials being passed around in the clear.	1	1	https://issues.jboss.org/browse/FUSEFORGE-127
4817	FUSEFORGE-118	should this be moved to a forge jira?	0	0	https://issues.jboss.org/browse/FUSEFORGE-118
4818	FUSEFORGE-115	How, other than as a "project directory mechanism" would people navigate the forge? I agree that all project pages should have some required common elements, but they should be customizable. I really don't understand the difference between sites/management and projects/MANAGEMENT though. Would a project have more than one site? Would a site have more than one project? (why?) If there's a 1-1 mapping between site and project then we should collapse 'em.	0	0	https://issues.jboss.org/browse/FUSEFORGE-115
4819	FUSEFORGE-115	My question "what's the difference" is perhaps misleading. I didn't mean to imply that they looked the same. In fact, the "sites" page actually looks good, and the "project" page in my opinion doesn't. At the same time, they offer pretty much the same options. I see the analogy with sourceforge, and I have to say I've never liked the way sourceforge does this - I've always found it confusing. At least initially, I would expect that people will come into the forge and navigate around rather than going to specific projects, so we should make that experience as clear as possible (and as a guy who's kind of walking in off the street, so to speak, my sense is that it's not all that clear right now - hence Jiras like this one). How's this (option 1): 1. For projects that don't choose to set up websites, the project page should look more like the "site" link rather than the "project" link in the above example. 2. If someone chooses to customize their project page to create a site, they should be able to do so and when I'm navigating the forge that's the site that I see. 3. We should have some control in place (like maybe a required navbar or something that has standard links like jira, wiki, source, downloads) or some such. Alternatively (option 2): 1. If we must have the "project" vs "site" distinction, can we make the "project" one really small in content, cleaner in design and clearly hold a pointer to the "site" if such a thing exists?	0	0	https://issues.jboss.org/browse/FUSEFORGE-115
4820	FUSEFORGE-104	So taking the management project as an example - are we getting rid of the generic page ? http://fusesource.com/forge/projects/MANAGEMENT And replacing the link off the projects page to be the custom pages - if there is one available ie . http://management.fusesource.org/	1	1	https://issues.jboss.org/browse/FUSEFORGE-104
4821	FUSEFORGE-104	The web site model that we are using on FUSE Forge is the same as SourceForge, where you will find the following: 1) A generic "project" site such as http://sourceforge.net/projects/docbook/, which is accessible from a list of projects (http://sourceforge.net/softwaremap/) 2) A "public" web site for the project, such as http://docbook.sourceforge.net I find this model confusing, since there is duplicate information on both sites. It's also hard to distinguish the purpose of each site. Contrast this with Apache, where if you go to the Apache home page (http://www.apache.org/) and click a project name, you are taken to the project's public home page (http://camel.apache.org/) So my question is, if we remove the generic "project" page entirely for public projects, as Amanda and Heather suggest, do we lose any functionality?	1	0	https://issues.jboss.org/browse/FUSEFORGE-104

#	Requirement	Questions	Answered	Successfully Answered	URL
4822	FUSEFORGE-79	Is this just for search engine optimization purposes?	0	0	https://issues.jboss.org/browse/FUSEFORGE-79
4823	FUSEFORGE-56	Can you suggest a better way to navigate people back to the project they came from then? There's no easy way to do that right now.	0	0	https://issues.jboss.org/browse/FUSEFORGE-56
4824	FUSEFORGE-50	Hi Jon, Could you start looking into this? This might be a good way to get you familiar with the forge rails app. Could you brainstorm what would be the best/easiest user interaction scenario to fulfill this requirement. Thx!	1	1	https://issues.jboss.org/browse/FUSEFORGE-50
4825	FUSEFORGE-50	Could we get the ICLA formatted more professionally, i..e. with progress letterhead etc. Also need it in PDF format. Also I don't understand the over 18 deal. Why can't that copy be in the ICLA?	1	1	https://issues.jboss.org/browse/FUSEFORGE-50
4826	FUSEFORGE-50	I don't understand how more explicit it can get? I doubt there anything more explicit than a legal contract with your signature on it saying your 18 right? How is an little web form click through going to get better than that? They do know I have no way of proving who actually clicked on the click through right? Regards, Hiram	1	1	https://issues.jboss.org/browse/FUSEFORGE-50
4827	FUSEFORGE-50	Aparently, some minor or their parents argued in court that they hadn't fully read the contract and and hadn't got to the bit about 18 so by forcing a click, we are covered against that. However, Jaime - can we split that bit out from this jira to a new one and add it for a future update of the forge and go live with what we have ? We have a lot to get through for Monday.	1	1	https://issues.jboss.org/browse/FUSEFORGE-50
4828	FUSEFORGE-42	how about you put a redirect into your static website - in a .htaccess file? Then you can update those redirects whenever you like in your git/svn repo?	1	1	https://issues.jboss.org/browse/FUSEFORGE-42
4829	FUSEFORGE-42	The site now supports .htaccess files for the project websites. The only problem is that WebDAV does not really let you edit them.	0	0	https://issues.jboss.org/browse/FUSEFORGE-42
4830	FUSEFORGE-27	We currently show a tag cloud on the "Search" page. Do you also want to show this tag cloud on the "Projects" page?	1	0	https://issues.jboss.org/browse/FUSEFORGE-27
4831	FUSEFORGE-27	ah yes so you do! :) Yes, lets show the tags on the projects page too (I'd not thought to look at the search page :) If its easy to do; showing the tag cloud at the top before showing the category boxes would be cool - maybe showing the tag cloud so its the width of both columns of 'category boxes' maybe? Also can we sort the tag cloud in alphabetical order?	0	0	https://issues.jboss.org/browse/FUSEFORGE-27
4832	FUSEFORGE-20	Hmm, weird. I did something called "Test user permissions" in phpbb. It lets me browse the forum using your permissions, and when I went to the board index, I did not see activeio, lightsabre, or jmstester. Can you try something for me? Log out of fusesource, delete your cookies and cache, and then login and see what the forum index screen shows?	1	1	https://issues.jboss.org/browse/FUSEFORGE-20
4833	FUSEFORGE-11	I am planning on changing the *external* website url for each project so that it would point to, for example, http://cloudmix.fusesource.org. But you bring up a good point, would this be the right thing to do for a non-opensource project? Do we need to capture whether the project is opensource, commercial, etc? I guess Muleforge does it by having the project admin select a license for their project, but we don't currently have that function implemented. Should we?	0	0	https://issues.jboss.org/browse/FUSEFORGE-11
4834	FUSEFORGE-11	BTW when stuff shows up at $PROJECT.fusesource.org - can we avoid the forge login/pwd stuff we've setup currently to keep the forge internal for now. i.e. as soon as the $PROJECT.fusesource.org capability is working - I'd like to start pointing folks on the web to some of the projects we've got in the forge - without necessarily having to wait for the full forge to go live. (i.e. I'm gagging to point folks at some of the projects we've got :)	1	1	https://issues.jboss.org/browse/FUSEFORGE-11
4835	FUSEFORGE-5	Debbie you going to work on this or what?	0	0	https://issues.jboss.org/browse/FUSEFORGE-5
4836	FUSEFORGE-5	Debbie, is there something you had in mind for this? Currently the text is "FUSE Forge is the developer center for hosting extensions to FUSE , the leading open source ESB and integration platform." which is a copy of MuleForge's welcome text. We go live next week so we should probably change this to avoid embarrassment :)	0	0	https://issues.jboss.org/browse/FUSEFORGE-5
4837	FUSEFORGE-5	Text supplied by Coco via email - Welcome to FUSE Forge! This is a community site for creating and sharing projects based on FUSE, the leading open source integration and messaging products. The Forge includes a complete infrastructure for developing software including a source code repository, integrated forums, a wiki, an issue tracker and licensing options to help you get the most out of Apache technology. More questions? View our FAQ [link]. Want to create a project or become a committer? View the contributor agreement [link] Search for a Project | Create a Project | Register	1	1	https://issues.jboss.org/browse/FUSEFORGE-5
4838	FUSEFORGE-5	Front page updated. Went with a slight variation of Coco's text: Focus on your application, not on software development infrastructure. The FUSE Forge is an open environment for the creation of integration projects and is designed to help you make the most out of FUSE technology. More questions? View our FAQ. Want to create a project or become a committer? View the contributor agreement	0	0	https://issues.jboss.org/browse/FUSEFORGE-5
4839	JANSI-37	Do you have a solution for my request please ? thanks	1	0	https://issues.jboss.org/browse/JANSI-37

#	Requirement	Questions	Answered	Successfully Answered	URL
4840	MOP-23	BTW the reason I introduced the "download" command was to differentiate the execution commands (jar/run/exec/war/spring/guice etc) from the install commands (install/upgrade/list/whatever else - the rpm/yum-ish stuff) - where download purely just fetches remote stuff into the local repo without doing any kind of execution or unpacking. e.g. you might want to download the jars/wars for stuff; so that in offline mode you can then execute stuff (without doing a binary install). If we were just building a kinda rpm/yum tool, things would be simple; we could just be like rpm/yum. Though I see mop as being a variety of things to different people * an alternative to mvn/ant/java command line tools for dev folks wanting to run some java, jar, war, spring, guice, ear, jbi, bundle, whatever from the command line * a neat way for developers to install/run open source software itself, example programs, test cases, soak tests, performance tests and so forth without having to delve into mvn/ant/shell stuff * a sysadmin-ish tool for installing/uninstalling/updating software packages like the binary distros of activemq, servicemix, jetty, tomcat et al The first two need to start in online mode unless the user turns it off. The sysadmin tool's install/update commands should definitely be in online mode by default. But a sysadmin person would mostly just be installing stuff right? e.g. installing packages & services - setting up daemons and not actually arbitrarily running jar/war/run/spring/guice stuff from the command line? So the only real difference the sysadmin role for mop is that the execution stuff tends to be in offline mode for sysadmins - if they use those commands at all?. I wonder if sysadmins would ever use the execution stuff? Wouldn't they prefer an alternative to run/exec/war/jar/spring/guice et al - where they create a daemon/service/script to run things (which are in offline mode - only using local stuff). Maybe we just need something like this... * mop [offline|online] to switch purely the execution stuff (everything but install/upgrade) to work in offline/online mode - this could then write to ~/.mop.properties the offline/online mode * install/upgrade default to online (would someone ever want an offline install - e.g. installing only from local repo?) - maybe someone who was super anal about what artifacts could be used could just limit the remote repos to a local-ish one on the intranet? * a sysadmin alternative to run/exec/jar/war/spring/guice et al - where instead of actually running things, we generate a kinda installation which has the same effect. For example; a sysadmin would install binary packages like the activemq broker; but if they wanted to run a load testing producer/consumer which is just a (say) executable jar or spring main - they may want to create an offline install of the executable. Not sure what to call it, lets maybe say something like "mop package someDir name <command>") e.g. {code} mop package fooDir123 runFoo jar myGroup:myArtifact:123 {code} Then in the directory *fooDir123* there would be a lib dir with all the jars required; then a script *runFoo* (with a .bat for windows) which sets the classpath and runs the jar?	0	0	https://issues.jboss.org/browse/MOP-23
4841	SCALATE-69	Hello, Could you tell us any information about this request?, do you need more information? Could you provide an estimate of time when you will give us an answers? Thanks in advance. Regards. Carlos Saavedra.	0	0	https://issues.jboss.org/browse/SCALATE-69
4842	SCALATE-69	Hi, Do you need more information?. Could you send us any answer? Regards. Carlos Saavedra.	0	0	https://issues.jboss.org/browse/SCALATE-69
4843	SCALATE-28	Would this work with singletons only? It would be nice if it also worked with default constructors of classes, then I could trigger dependency injection manually in the constructor (I think at least Guice allows that, but I haven't tried). Or maybe the uri scheme could be pluggable, for example "guice:org.acme.MyTags" and I could extend Scalate with a Guice provider. Or Spring etc.	1	0	https://issues.jboss.org/browse/SCALATE-28
4844	SCALATE-23	not sure about this one. The question is at what point does the value get put back into the context attribute map? Just doing it when the template finishes rendering would probably not be good enough since it would be more natural to expect it occur when the variable get set with the new value.	0	0	https://issues.jboss.org/browse/SCALATE-23
4845	SCALATE-15	ERB has a handy features where trailing newlines are stripped for code blocks terminated with: {code}-%>{code} How about we do the same? It also comes in handy for loop control statements. Example: {code} <% list.foreach { -%> ${_} <% } -%> {code}	1	1	https://issues.jboss.org/browse/SCALATE-15
4846	FRESH-10	Ales, it wouldn't be just one line :) The problem is that that ajaxgroovyshell deployes as servlet, but we don't have anything deployed as web app... Should we just provide sample web app that has this functionality as an add-on? How could we implement this so elegantly that it would just "magicly" apear in lets say jboss status page as additional "link"? The only question I have is packaging as functionality itself is not hard to implement. I would still like to keep simple deployment aka "drop one jar into deploy and everything works"	0	0	https://issues.jboss.org/browse/FRESH-10
4847	FRESH-5	I made it work with jboss threadPool that gets injected by mc Mare, can you please check if my fixes are ok? I am a bit worried about Process.startjoin() method where you do some kind of joining of processes...	0	0	https://issues.jboss.org/browse/FRESH-5
4848	JBFSWDOC-97	Anshu, I think you have done a really great job here. I really like the way you have provided a summary of each aspect to governance. Well done! Suggestions for improvement: - The rtgov-ui gadget server is being replaced in 6.1 and I don't think the following content will remain true - "Run-Time Governance uses a gadget server to display runtime governance information with a set of configurable gadgets. You can access these gadgets with the gadget server." Can you please confirm with Len (and cc me), or delete it. - S-RAMP - I think a lot of the information here is not interesting for customers. What do they really need to know about S-RAMP at this high-level? What's it for? Perhaps replace most of the content here with something like: "The S-RAMP repository is used as the storage mechanism for Design-Time Governance artifacts." Thanks, Ben	1	1	https://issues.jboss.org/browse/JBFSWDOC-97
4849	JBFSWDOC-97	Thanks, Anshu. I just have one more idea. We have at least two types of readers: one who wants to do minimal reading to get to what they are looking for, and one who wants to find out more about what governance has to offer. Do you think we can explore separating the governance information from the links to the consoles? What might that look like? Would it help our readers/users?	1	1	https://issues.jboss.org/browse/JBFSWDOC-97
4850	JBFSWDOC-96	Draft content - http://docbuilder.usersys.redhat.com/22489/#chap-JBoss_Fuse_Management_Console Waiting on content specific to what the console provides for SwitchYard. Will this be much the same as what is provided by the EAP Management Console?	1	0	https://issues.jboss.org/browse/JBFSWDOC-96
4851	JBFSWDOC-94	Thank you, Nichola! You have obviously put a lot of thought and effort into this which is much appreciated. Suggestions for improvement: Section - Administering JBoss Fuse Service Works Components - There are some instances of 'EAP'. These should be 'JBoss EAP'. - "Consoles are available for the following products:" -> "...components:" - There are also the CLIs and JBoss Operations Network. Do they belong here too? Section: Components of Red Hat JBoss Fuse Service Works - I have also created a table of components [1], but mine is also aiming to explain which component comes with what. To avoid confusion and inconsistencies, do you think it would be possible to consolidate/rearrange or something? - "Table 1.1. Add-user Command Arguments" - I think this table heading needs to be updated. [1] http://docbuilder.usersys.redhat.com/13666/#Application_Server_Compatibility	1	0	https://issues.jboss.org/browse/JBFSWDOC-94
4852	JBFSWDOC-31	Is this more relevant to administration?	0	0	https://issues.jboss.org/browse/JBFSWDOC-31
4853	JBFSWDOC-16	Do we have the option of choosing a JBoss Fuse server during JBDS installation?	1	0	https://issues.jboss.org/browse/JBFSWDOC-16

#	Requirement	Questions	Answered	Successfully Answered	URL
4854	FAB-13	we should allow a 'version range digit' header to be supplied to indicate how an exact version number gets translated to a range. e.g. for 2.5.6 of a dependency we could have possible values of... {code} 0 => "[2.5.6.qualifier,2.5.6.qualifier]" // exact only 1 => "[2.5.6.qualifier,2.5.7)" // exact only but allowing beta v ga releases etc 2 => "[2.5.6.qualifier,2.6)" // patch releases but not 2.6.x or later 3 => "[2.5.6.qualifier,3)" // patch and minor releases but not 3.x or later 4 => "2.5.6.qualifier" or "[2.5.6.qualifier,)" // the current OSGi default which just means anything at all >= 2.5.6 {code} A default value of *2* seems to make the most sense - in that we can then easily update bundles with emergency bug fixes but require a development / testing release cycle for more riskier updates	0	0	https://issues.jboss.org/browse/FAB-13
4855	FAB-13	the Fabric-Version-Range-Digits manifest entry is used now to define the number of variations of digits in version ranges used by default on all non-range OSGi versions on Import-Packages. The default value is 2 (i..e any micro increase in version)	0	0	https://issues.jboss.org/browse/FAB-13
4856	FAB-3	Why wouldn't the jar have the pom.xml inside it if it was built with mvn?	1	1	https://issues.jboss.org/browse/FAB-3
4857	ESB-1727	Further does aries.transaction.howl.bufferSizeKBytes rather need to be called aries.transaction.howl.bufferSize? [TransactionManagerService.java|https://svn.apache.org/repos/asf/aries/trunk/transaction/transaction-manager/src/main/java/org/apache/aries/transaction/internal/TransactionManagerService.java] suggests only the latter variable exists.	0	0	https://issues.jboss.org/browse/ESB-1727

4859	ESB-1522	Hi Eric, Which LDAP server are you using? Nothing is jumping out at me but most likely it is something with the role.filter setting. Depending on which LDAP server you are using you may need an extra colon in there Also, I attached my ldif file which you can import and use the settings I was using. For ApacheDS, you may have to add a partition for dc=fusesource,dc=com. Here's the note I sent to Lowry on this: {quote} yes that's a "partition" that you have to add first. This link should help: http://hasini-gunasinghe.blogspot.com/2011/07/how-to-created-new-partition-in.html The server.xml file is a bit buried (./instances/default/conf/server.xml). I added a partition (me): <partitions> <!-- NOTE: when specifying new partitions you need not include those --> <!-- attributes below with OID's which are the system indices, if left -> <!-- out they will be automatically configured for you with defaults. --> <jdbmPartition id="example" cacheSize="100" suffix="dc=example,dc=com" optimizerEnabled="true" syncOnWrite="true"> <indexedAttributes> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.1" cacheSize="100"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.2" cacheSize="100"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.3" cacheSize="100"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.4" cacheSize="100"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.5" cacheSize="10"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.6" cacheSize="10"/> <jdbmIndex attributeId="1.3.6.1.4.1.18060.0.4.1.2.7" cacheSize="10"/> <jdbmIndex attributeId="dc" cacheSize="100"/> <jdbmIndex attributeId="ou" cacheSize="100"/> <jdbmIndex attributeId="krb5PrincipalName" cacheSize="100"/> <jdbmIndex attributeId="uid" cacheSize="100"/> <jdbmIndex attributeId="objectClass" cacheSize="100"/> </indexedAttributes> </jdbmPartition> <jdbmPartition id="faa" cacheSize="100" suffix="dc=dex" optimizerEnabled="true" syncOnWrite="true"> </jdbmPartition> <jdbmPartition id="me" cacheSize="100" suffix="dc=fusesource,dc=com" optimizerEnabled="true" syncOnWrite="true"> </jdbmPartition> </partitions> {quote} Hope that helps, Susan	1	1	https://issues.jboss.org/browse/ESB-1522
4860	ESB-1456	Hi Gert, The customer was wondering if we could make the message more specific, e.g: {code} XXXXXX> shutdown Do you really want to shutdown (yes/no): {code} Will thel user realize this message means all of servicemix will shut down? Thanks, Susan	1	0	https://issues.jboss.org/browse/ESB-1456
4861	ESB-1448	Tracked at Apache with https://issues.apache.org/jira/browse/KARAF-590 which will be included in Karaf 2.2.x branch	1	1	https://issues.jboss.org/browse/ESB-1448
4862	ESB-1441	Sections 1 and 3 looks ok. In the table 2.1, why can a Library "Maybe" import its own package ? I think if that's the case, it's mostly an API bundle then, not a library anymore.	0	0	https://issues.jboss.org/browse/ESB-1441

#	Requirement	Questions	Answered	Successfully Answered	URL
4863	ESB-1438	@Freeman: Could you also backport this fix into the karaf-2.1.x-fuse branch ? Thanks !	0	0	https://issues.jboss.org/browse/ESB-1438
4864	ESB-1432	We may want to investigate switching to the geronimo specs. They've rewritten the logic in order to add some improvements, but i can't recall which one exactly. But as a work around for the next patch releases, the BundleFactoryLoader should definitely cache the loaded class, but i'd rather keep the url as the main way to retrieve the class, as that does not need the bundle to be resolved.	1	1	https://issues.jboss.org/browse/ESB-1432
4865	ESB-1413	Can we have a bit more details about the use cases / scenario ? Do they have problem writing the manifest or at deployment time ?	1	0	https://issues.jboss.org/browse/ESB-1413
4866	ESB-1352	@Freeman: Could you take a look at this?	1	1	https://issues.jboss.org/browse/ESB-1352
4867	ESB-1315	Providing doc for the OSGi Event Admin service has been added to our list of doc tasks. It won't make it into the ESB 4.4 release, however.	0	0	https://issues.jboss.org/browse/ESB-1315
4868	ESB-1308	Is this only relevant for AMQ and SMX? What about CXF and Camel?	1	0	https://issues.jboss.org/browse/ESB-1308
4869	ESB-1304	Thanks to Lars for providing these patches -- both have been applied at Apache and fixes have been merged into the karaf-2.1.x-fuse branch.	0	0	https://issues.jboss.org/browse/ESB-1304
4870	ESB-1302	This issue is a bit vague. Do you know exactly what kind of problems they are having configuring Fuse ESB?	0	0	https://issues.jboss.org/browse/ESB-1302
4871	ESB-1301	I would like to confirm what kind of problem the user is encountering here. Is it something like this? Say we have bundle A that depends on bundle B and on bundle C. Bundle B depends on log4j version 1.1 and bundle C depends on log4j version 1.2. Now we have a conflict, because bundle A will try to pull in both version 1.1 and version 1.2 of log4j into the same Classpath. Is that the essence of the problem we are talking about here?	0	0	https://issues.jboss.org/browse/ESB-1301
4872	ESB-1271	Would the standard *{{Bundle-Description}}* suffice here? From the spec: "The Bundle-Description header defines a short description of this bundle." This header would already be visible in the default osgi:headers output	0	0	https://issues.jboss.org/browse/ESB-1271
4873	ESB-1220	Hey Gert, would it be possible to also move the external dependencies and properties to the parent/pom.xml file as well?	0	0	https://issues.jboss.org/browse/ESB-1220
4874	ESB-1211	Gertv this is implemented in the source code? Its just that it will be in FUSE ESB 4.3.0-fuse-01-00 release?	1	1	https://issues.jboss.org/browse/ESB-1211
4875	ESB-1185	Hey Guillaume, is there a snapshot of pax logging we can test out? Thanks!	1	1	https://issues.jboss.org/browse/ESB-1185
4876	ESB-1182	Gullaume, Couldn't we just make the Camel NMR endpoint implement the AsyncProcessor interface already? It would only be useful when doing a .toAsync("nmr:EndpointName") for now, but at least we could get that bit done for ESB 4.3... Regards, Gert	1	1	https://issues.jboss.org/browse/ESB-1182
4877	ESB-1176	Could you update the JBI component at the Camel wiki page?	1	0	https://issues.jboss.org/browse/ESB-1176
4878	ESB-1152	Chapter 7 comments page 34: Apache Camel 4.2 -> Apache ServiceMix 4.2 (and shouldn't it be FUSE ESB 4.2 ?) page 35: Customizing the Spring configuration. Sounds a bit unclear about the root replace? What you actually just have to do is to replace the namespace from the old 1.x style to the 2.x style. See more at: http://fusesource.com/wiki/display/ProdInfo/Fuse+Mediation+Router+2.2+Migration+Tips And its very annoying that you refer to another document for more details, as this is a mandatory migration thing and I think we should have all that detailed in the migration guide. Then for any optional or more in depth you can refer to other guides. page 35: Blueprint? Should we really mention blueprint at this time. Ask gnodet if that is ready for enterprise and something we support/recommend already. page 36: The commons-managment is already in central maven repo, so no need to mention it and that you need to add a maven repository to your pom. In fact do not mention it at all. page 36: Is this migration guide for running Camel in FUSE ESB 4.2? If so it comes with a camel-spring feature which means it install all the right bundles for your out of the box. Those .jar dependencies are only for users not using FUSE ESB 4.2, eg. running in Tomcat or standalone etc. page 40: The exchange copy methods is really only for internal usage or really hardcore advanced Camel stuff, mostly if you develop your own component and have a very special case. I would simply just remove this section as it has no relevant for regular Camel end users. page 45: I do not think we should mention Spring 3.0 support as its not officially supported in all our products. So I think this section should be removed. page 45: Interaction between filer and split: This was a new feature in 2.0 and was later removed. So there is no migration needed between Camel 1.x and 2.2 page 45: error handling. Camel 2.x uses a new DefaultErrorHandler instead of DeadLetterChannel as in 1.x, as the default error handler. This new DefaultErrorHandler does *not* catch and handle thrown exceptions, which means any exception thrown will be propagated back to the caller. page 45: Stream caching. The interaction between SMX and Camel is now handling streams in such a way that Camel does not have to use stream caching anymore. Its thus disabled by default.	1	1	https://issues.jboss.org/browse/ESB-1152
4879	ESB-1149	Complete draft of Fuse ESB 4.2 "Migration Guide" for review.	1	1	https://issues.jboss.org/browse/ESB-1149
4880	ESB-1149	Flintan I just want to note that users upgrading from FUSE ESB 4.1 to 4.2 may have problems with 2 bundles - camel-spring - camel-osgi Have been merged into 1 single bundle in FUSE ESB 4.2 - camel-spring-osgi Which is the bundle they *must* used, and the others should *not* be used. So when you upgrade there must be some procedure in place to ensure this. There may be some SMX / Karaf configuration file in ESB 4.1 which lists the old bundles. Which you must upgrade / ensure only lists the new single bundle. However this is just a hunch. Get in touch with the SMX / Karaf experts to be sure. (gnodet, gertv, willem jiang, ccustine, freeman etc.)	0	0	https://issues.jboss.org/browse/ESB-1149
4881	ESB-1138	Section "Defining Service Beans" notes : If you are using the Spring DM container version 2.0 or later, it is actually possible to mix both kinds of bean element under the beans root element, (as long as you define the bean elements using the appropriate namespace prefix). I was just temporarily confused by thinking it was referring to the commercial Spring DM 2.0 server...May be it is possible to change "If you are using the Spring DM container version 2.0 or later, it is actually possible to mix both kinds.." to something like "Note that Spring DM specification 2.0 allows for mixing both kinds..."	0	0	https://issues.jboss.org/browse/ESB-1138

#	Requirement	Questions	Answered	Successfully Answered	URL
4882	ESB-1134	the basic deployable unit by users already familiar with OSGi. It might be better to re-phrase as something like: "it is often convenient to aggregate inter-dependent or related bundles into a larger unit of deployment." --- p50. "Essentially, a feature is created by adding a new feature element to a special kind of XML file, known as a feature repository." Often referred to synonymously as as a "features URL". Neither terminology is really satisfactory, especially the former as it connotes a centralized location where all the bundles are stored (like a maven repository or the OBR) which of course it isn't. So it might make sense to emphasize the point that a features repository is really just an aggregation of _references_ to inter-dependent or related bundles, not a location where the bundles _themselves_ are stored. "Create a *local* feature repository" The reference to locality may be confusing as the standard features repos shipping with the ESB would also be available locally (under the <smx_install_dir>/system dir) as well as being remotely accessible via the fusesource maven repo. You might want to call it a _custom_ features repository instead. "<features> </features>" The top-level features element may optionally be decorated with a name attribute. See for example {code} <smx_install_dir>/system/org/apache/felix/karaf/apache-felix-karaf/1.4.0-fuse-01-00/apache-felix-karaf-1.4.0-fuse-01-00-features.xml: <features name="karaf-1.4.0-fuse-01-00"> {code} If the name isn't specified, Karaf will default to a generic name like "repo-0". "Add the local repository URL to the features service" Cart before the horse somewhat? Surely some feature elements should be defined in the new features repo _before_ running features:addUrl? "In order to make the new feature repository available to the Apache Felix *kernel* ..." Repeated used of 'kernel' in this sentence may confuse, given that we switched over from the old ServiceMix Kernel to Apache Felix Karaf for this release. May be better as: "In order to make the new feature repository available to the Karaf features service ..." --- p51. {code} karaf@root> features:listUrl mvn:org.apache.servicemix.nmr/apache-servicemix-nmr/1.1.0-psc-01-00RC1/xml/features mvn:org.apache.servicemix.camel/features/4.1.0-psc-01-00RC1/xml/features file:C:/Projects/features.xml mvn:org.apache.ode/ode-jbi-karaf/1.3.3-psc-01-00RC1/xml/features mvn:org.apache.felix.karaf/apache-felix-karaf/1.2.0-psc-01-00RC1/xml/features mvn:org.apache.servicemix/apache-servicemix/4.1.0-psc-01-00RC1/xml/features {code} Replace all "psc-01-00RC1" with "fuse-01-00". "You can optionally specify a version attribute on the feature element, if you want to keep track of the feature's version number." It would be more a case of assigning a non-zero version to the feature, as opposed to just keeping track of the version. When versions are used, a specific version of a particular feature can be specified, e.g. {code} features:install cxf-jaxrs 4.2.0-fuse-01-00 {code} "To check whether the *kernel* successfully parses the new feature entry" Similar comment to the above, probably best to refer to it as the features service. "but you should be able to find the entry for your new feature (in this case, example-camel-bundle) by scrolling back through the listing." or by simply shortening the list to only those features are actually installed via the \-i,\-\-installed option: {code} karaf@root> features:list -i {code} or by grep'ing for the particulat feature {code} karaf@root> features:list | grep example-camel-bundle {code} "The features:refreshUrl command forces the kernel to reread *all* the feature repositories" Unless you specify a URL argument, in which case only that repo is refreshed. --- p52. "Each child feature element contains the name of a feature on which the current feature depends." A version can be specified as well, e.g. {code} <feature name='camel-core' version='2.2.0-fuse-01-00'> <feature version="2.5.6.SEC01">spring</feature> ... <feature> {code} This encodes a dependency of the camel-core feature (v. 2.2.0-fuse-01-00) on the spring feature (v. 2.5.6.SEC01). "When you deploy a feature with dependent features, the dependency mechanism checks whether or not the dependent features are *available* in the container. If not, the dependency mechanism automatically *loads* the missing dependencies (and any recursive dependencies)." Maybe better to use "installed" and	1	1	https://issues.jboss.org/browse/ESB-1134
4883	ESB-1134	Giving a blueprint example of property-placeholder substitution sounds like a good idea, but I don't have any examples for it. The only think I could find on it is the following page from Karaf: http://felix.apache.org/site/45-security-framework.html This example seems to exploit a non-standard feature of Apache Geronimo. Is this the recommended approach?	1	1	https://issues.jboss.org/browse/ESB-1134
4884	ESB-1088	Ulhas From looking at the comments on DEV-1775, it looks like the format of the configuration filename should be: org.apache.servicemix.components.<component>.cfg For example, org.apache.servicemix.components.jms.cfg and org.apache.servicemix.components.file.cfg Am I correct?	1	1	https://issues.jboss.org/browse/ESB-1088
4885	ESB-1068	Has this been fixed in 4.2? How can i check? Pedro	1	0	https://issues.jboss.org/browse/ESB-1068
4886	ESB-963	Updated versions of commons-* libraries. Updated from ODE's custom build of saxon to 9.1.0.8. I have a patch to also update: - xerces to 2.9.1 - xmlbeans to 2.3 - wsdl4j to 1.6.2 but we haven't done extensive testing on this yet so it may be too late in the release cycle to apply this change.	1	1	https://issues.jboss.org/browse/ESB-963
4887	ESB-958	Hello Aileen, Do I need to start working on karaf? Also, Gert commented earlier about releasing FileInstall, what has to be done on that? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4888	ESB-958	Hello, Can Gert provided the instructions of releasing FileInstall? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4889	ESB-958	Hello, Karaf 1.2.0-psc-01-00M2 has been released. Repo URL: http://repo.open.iona.com/restricted/org/apache/felix/karaf/ SVN URL: http://fusesource.com/forge/svn/kernel/tags/karaf-1.2.0-psc-01-00M2/ Source: http://fusesource.com/forge/svn/kernel/trunk/ Can you please let me know when NMR is ready for release? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4890	ESB-958	Hello Aileen, I am using the mentioned component source tree. However, I am getting test failures while doing release:prepare. I am attaching the report and the prepare run log file for your reference. Can you have someone look at it? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4891	ESB-958	@Chris, you maybe right I ran it again and it failed at some other tests. So am trying it for the 3rd time and hopefully it completes successfully. @Aileen, I am working on components. Should I wait or at-least complete components? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4892	ESB-958	@Aileen, can you mention where can I find the source branch for BPEL? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4893	ESB-958	Hello, While releasing Features, SNAPSHOT was detected in one of the example poms. <ode-version>1.3.3-fuse-SNAPSHOT</ode-version> Can I change this to BPEL version released? <ode-version>1.3.3-psc-01-00M2</ode-version> Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4894	ESB-958	Yes, can you change this to the bpel version released on Friday. Aileen	1	1	https://issues.jboss.org/browse/ESB-958
4895	ESB-958	Hello, While doing a release of features, there is a missing artifact. http://teamcity.boston.amer.iona.com:8111/viewLog.html?buildId=248856&tab=buildResultsDiv&buildTypeId=bt903 Artifact: org.apache.servicemix:apache-servicemix:pom:4.1.0-psc-01-00M2 This artifact has not been created as part of features deploy but its looking for it. So as part of the build we are missing, http://fusesource.com/forge/svn/fuseesb/smx4/features/trunk/cxf/cxf-transport-osgi/ Can some one let me know what has to be done here? Rahul	1	1	https://issues.jboss.org/browse/ESB-958
4896	ESB-944	If I understand this issue correctly, the customer has implemented its own JAAS LoginModule which basically makes all their users known to the container and they now want to limit access to the JMX Console to only a subset of those users (e.g. users that are a member of some group). Is this correct? Would a solution like the one proposed in attachment ESB-944.diff be sufficient or do we still need the per-call authorization check as is suggested in the second scenario in the word document?	1	1	https://issues.jboss.org/browse/ESB-944

4897	ESB-944	Ashwin, If the goal is to allow users access based on the group they belong to, that should be possible by just looking at the subject - after a successful login with the JAAS LoginModule, the Subject will have Principal added for the groups so we can just look at those to determine if a user is a member of the admin group or whatever group we configure. Your example uses a call to doPrivileged() for the subject, but I'm not entirely sure what the goal of that block of code is. Why does the code need to executed with additional permissions granted? Regards, Gert	1	1	https://issues.jboss.org/browse/ESB-944
4898	ESB-944	Dave, Do you have any more details concerning this problem in JDK 1.5 (what happens? are they seeing exceptions or is the authorization just not being handled correctly without any errors in the log? ...) Thanks, Gert	1	1	https://issues.jboss.org/browse/ESB-944
4899	ESB-882	> Camel 1.6.1.0M1-fuse (new release) Aileen is this a bit confusing? Are you saying it should use a Camel 1.x version? I thought it was the first release to use Camel 2.0	1	1	https://issues.jboss.org/browse/ESB-882
4900	ESB-882	Hello Aileen, We do not have any instructions to build Karaf. Can you let me know with whom can I work to get those instructions for releasing Karaf? Rahul	1	1	https://issues.jboss.org/browse/ESB-882
4901	ESB-882	Aileen, While building nmr, I an getting some snapshots detected error. ./pom.xml: <felix.karaf.version>1.1.0.0-fuse-SNAPSHOT</felix.karaf.version> ./pom.xml: <servicemix.eip.version>2009.02-fuse-SNAPSHOT</servicemix.eip.version> ./pom.xml: <servicemix.http.version>2009.02-fuse-SNAPSHOT</servicemix.http.version> ./pom.xml: <servicemix.jsr181.version>2009.02-fuse-SNAPSHOT</servicemix.jsr181.version> ./pom.xml: <servicemix.shared.version>2009.02-fuse-SNAPSHOT</servicemix.shared.version> ./nmr/fuse-management/pom.xml: <version>1.0-SNAPSHOT</version> Can you confirm to what these SNAPSHOTs are to be changed? 4910	ESB-725	Thanks very much Freeman! I just wanted to verify the following: Will the next version of sf (with the codegen pom fix) definitely be released before the next version of esb 4.1 features is released? Will the next version of esb 4.1 features be upgraded to the sf with the fix (once sf is released)? Just wondering because I am doing a certification for aix 64bit, and when I see an error like this in the teamcity aix nightly build for instance, I don't want to assume that it will be fixed by the time the release happens if it is possible that esb will be released without sf being released, or without being upgraded to the new version of sf. Would be best for me to be able to see a green build in teamcity for the aix nightly for instance, well in advance of the release process. :) By the way, I asked in another jira, but didn't get much response, do you know if its documented anywhere exactly which FUSE branches are used for which releases? i.e. will the next version of activemq (5.3.0.3-fuse) be released from this branch: https://projects.open.iona.com/projects/svn/iona/activemq/branches/activemq-5.3.0-fuse/ or from trunk: https://projects.open.iona.com/projects/svn/iona/activemq/trunk/ Even if you only know the answer of which branches are used for the servicemix releases, or can only point me to who I can ask who might know the answers, that would be a great help!	1	1	https://issues.jboss.org/browse/ESB-725
4911	ESB-710	Can you add a link to the docs that have been updated. Thanks.	1	1	https://issues.jboss.org/browse/ESB-710
4912	ESB-710	HI Orlan, Ok and when will they be available in FUSE? And what would be the FUSE link. ALso, can the 'fix version' be set to 4.2. Currently there is no plan for a 4.2 and this may be misleading to FUSE customers. Thanks, Matt	1	1	https://issues.jboss.org/browse/ESB-710
4913	ESB-686	Hi Torsten, One problem of this patch is that if we don't use X509Certificate from ws-security to do the authentication, we just sign the message, then will get some exception like java.lang.SecurityException: Unable to locate a login configuration at com.sun.security.auth.login.ConfigFile.<init>(ConfigFile.java:97) at sun.reflect.NativeConstructorAccessorImpl.newInstance0(Native Method) at sun.reflect.NativeConstructorAccessorImpl.newInstance(NativeConstructorAccessorImpl.java:39) at sun.reflect.DelegatingConstructorAccessorImpl.newInstance(DelegatingConstructorAccessorImpl.java:27) at java.lang.reflect.Constructor.newInstance(Constructor.java:494) at java.lang.Class.newInstance0(Class.java:350) at java.lang.Class.newInstance(Class.java:303) at javax.security.auth.login.Configuration$3.run(Configuration.java:216) at java.security.AccessController.doPrivileged(Native Method) at javax.security.auth.login.Configuration.getConfiguration(Configuration.java:210) at javax.security.auth.login.LoginContext$1.run(LoginContext.java:237) at java.security.AccessController.doPrivileged(Native Method) at javax.security.auth.login.LoginContext.init(LoginContext.java:234) at javax.security.auth.login.LoginContext.<init>(LoginContext.java:367) at javax.security.auth.login.LoginContext.<init>(LoginContext.java:444) at org.apache.servicemix.jbi.security.auth.impl.JAASAuthenticationService.authenticate(JAASAuthenticationService.java:52) Seems we still need add a flag in CxfBcConumer to indicate if we need the X509Certificate to do the authentication, Regards Freeman	1	1	https://issues.jboss.org/browse/ESB-686

4914	ESB-612	Here's a first set of comments. I had been hoping to try the logisticx demo with 4.1 but I don't think a 4.1 version is available yet. 'Getting started with FUSE product family' - the legal notices talk about IONA Technologies Plc. I don't know if that should be Progress Software Inc if they want to get permission to re-use it. p1 - why Use Integration I found the first reason very difficult to read and understand. Is the second part 9'... and implementing') necessary. While It's in the dictionary all right, I'd never heard the word foundational before. But that could be because it's used more in American English p1. Using an ESB in Integration An ESB often uses XML but doesn't really have to I don't think. Later on, should the E of 'enterprise Java Beans' be capitalised. I don't know what the Progress style guide says about how to write Web service, I just remember IONA used to capitalised the W, so I just wanted to ask if we're now doing it in lower case. p15 FUSE ESB - very small issue. Do we want to put OSGi support before JBI since that's the way we want to push people? p16 - Usage in the Demo - 'to a client web application that provides a web browser for customer interface' confused me, should it be a web interface, not a web browser? p17 FUSE SF - REST seems out of places in the list of JAX-RS, JavaScript, REST, or POJOs, since it's more an approach than a technology like the others. p22 - FUSE Dev Models JMS messaging - XML isn't the only thing you can send on JMS, you can send streams of bytes, Java Objects amongst others. Later on in that paragraph, should it be message broker or messaging broker. p25 - should we encourage people to download ESB 3, or always suggest ESB 4 now? I don't know if JBI support in 4 is complete though. p26 - run ESB as a standalone - the standalone section sems to be FUSE ESB being the container, whereas in the intro for this section we talk about 'Standalone or in an FUSE ESB container' (and should that be a not an?) p26 - EIP (JBI Container) if it's deploying as JBI, then it's not really standalone is it? It's probably going ot be in ServiceMix/ESB 3 or another JBI container. p27 - Should we provide a brief paragraph or reference about Spring in case the user got this far without knowing what Spring is p27 - Can you deploy your JBI or OSGi apps directly in an app server? Are we in dnager of telling the user too many ways to deploy but not recommending some over others. p31 - why poll filing system	0	0	https://issues.jboss.org/browse/ESB-612
4915	ESB-612	Sorry this next bit took so long. I was hoping to get to try it in version 4.1 but I'm getting too many weird errors on startup. Anyway, here it is. I tried it in FUSE ESB 4.0.0.4 but have a couple of 4.1 related comments p31 - polling a file system seems to be an implementation issue rather than a business task, maybe some context p34 - Data directory doesn't always have \ could be / if on Unix. This appears on other pages too, e.g. p35 p34 - When we tell users to remove SAs deployed, is that not just SAs relating to this demo? They may have their own SA's, or are we assuming that if they are reading a getting started guide that they won't have anything important in there? p35 - deploying the app before servicemix has started up has caused me problems in the past (with the underlying system not being initiated in time) and there are problems like this in the 4.1 kit so maybe change the order if it's easy. [Update, they are hoping to fix this in 4.1 today, Apr 21st] p36 - The servicemix shell appears before startup is really complete in SMX4. it is still deploying most of the bundles in teh background. for example, the command 'jbi list' won't work when the console first appears for me, I need to wait a few seconds p36 - For ESB 4.1, command likes 'jbi list' are now 'jbi/list'. Not sure how you will handle it if it is meant to work in SMX 4.0 too p37 - I got the following error when I tried tomcat6.exe start (presumably because I didn't have catalina_home set or something similar [2009-04-21 12:22:41] [427 prunsrv.c] [error] The system cannot find the file specified. [2009-04-21 12:22:41] [1336 prunsrv.c] [error] Load configuration failed typing 'startup' did work though. This was with tomcat 6.0.0.18 (which admittedly is not completely up to date) p40 - Clicking the link to the webapp in the PDF results in the page being opened in the same web browser, thus you lose the ability to read the next instructions. You either have to go to the footnote and copy and paste or open it, copy and paste, then go back then open a new window. p42 - You refer to the web server (Tomcat or Jetty) as the client console, when I read it first I assumed you meant the web browser, not the web server. p42-p45 I didn't get a message that it was in stock in the UI even though it did appear in Servicemix. I just get told my order is confirmed, not any news about it being in stock so my output in the web console looks quite different p42 again - you talk about the FUSE ESB products and how each is used, but all I have installed is FUSE ESB. Maybe we need to make it clearer that FUSE ESB contains the other FUSE products p44 - I think the stockinventory directory location is in the directory from which you launched FUSE ESB - give you had been saying to launch it with bin\servicemix, the location for me was directly under the FUSE ESB 4 p48 - the web app container doesn't appear in the diagram. it shows the web browser talking directly to FUSE ESB. p50 - in the diagram CORBA should be all in capitals. I don't know if it's worth showing FUSE SF and FUSE MR in the diagram, maybe within the green FUSE ESB box	0	0	https://issues.jboss.org/browse/ESB-612
4916	ESB-587	Hi Paul, We just need to change the wording on the jars for servicemix 3.3.1 => 3.4 So under API Changes New jars: (Needs to change to the following) The Servicemix-jbi.jar was removed from the FUSE 3.4. The classes that were packaged in this jar were moved to a new jar called org.apache.servicemix.specs.jbi-api-1.0-1.2.0.1-fuse.jar The servicemix-services.jar was also removed. The classes in this jar were moved to a new jar called servicemix-utils-1.0.0.2-fuse.jar we need to maybe put x in for the versions here in the above like jbi-api-1.0-1.2.0.x and 1.0.0.x Next change - just a spelling mistake in ws-addressing under FUSE Services Framework Changes EnpointReferenceType => EndpointReferenceType Next changed under Product Version The camel version should be the same 1.5.0.x Are we doing a different guide for 4.0 as some more jars changed there ? We dropped servicemix-core jar of which the classes moved throughout or removed as it was a refactor/rewrite of the core and mixed into different projects such as the kernel, nmr etc Servicemix-common.jar was a new jar introduced.	0	0	https://issues.jboss.org/browse/ESB-587
4917	ESB-559	Is this fixed?	1	1	https://issues.jboss.org/browse/ESB-559
4918	ESB-526	From looking at all the plugins - yes they are all on different versions currently. We have the following which all have the same parent of maven-plugins-pom (1.0.0.0-fuse) checksum-maven-plugin => 1.0.0-fuse-SNAPSHOT depends-maven-plugin => 1.1-fuse-SNAPSHOT features-maven-plugin => 1.0.0-fuse-SNAPSHOT jbi-maven-plugin => 4.0.0.3-fuse-SNAPSHOT res-maven-plugin => 4.0.0-fuse-SNAPSHOT servicemix-build => 1.1.0-fuse-SNAPSHOT xfire-maven-plugin => 4.0.0-fuse-SNAPSHOT So I think it would be good to sync them all back up for 4.1. Do we need to update the maven-plugins-pom as well ? the jbi-maven-plugin is the only one that has dependencies on other servicemix code namely Servicemix-common (Here we only depend on 3 classes in common which could be moved to the jbi src too in order to elimate the cyclic dependency between components and the jbi plugin) Servicemix-core - it depends namely on the management classes and the JBIContainer class. The management classes now exist in the NMR also but I guess we share the plugins also with servicemix 3 so this dependency could remain for now. So to clean up some of the versioning what we could do is remove the cyclic dependency on the components and a proposal of the following versions for 4.1 bundles - individually versioned specs - individually versioned utils - 4.1.0.0-fuse Plugins - 4.1.0.0-fuse Components - 2009.01.0.0-fuse Kernel - 1.1.0.0-fuse NMR - 1.1.0.0-fuse Features - 4.1.0.0-fuse Comments ? Edell.	1	1	https://issues.jboss.org/browse/ESB-526
4919	ESB-514	Do we need the latest version of CXF\FUSE SF with the various patches to get this to work? Here's a test that is failing.	1	1	https://issues.jboss.org/browse/ESB-514

#	Requirement	Questions	Answered	Successfully Answered	URL
4920	ESB-512	I presume this isn't fixed in 3.3.0.12, since version is never likely to be released. Should this have a fix version of 3.3.1.13?	1	0	https://issues.jboss.org/browse/ESB-512
4921	ESB-473	what architecture does is AIX supported on? Are there any required OS patch levels?	1	1	https://issues.jboss.org/browse/ESB-473
4922	ESB-466	Hi Eric, Where can we find the attachment for reviewing? Regards Freeman	0	0	https://issues.jboss.org/browse/ESB-466
4923	ESB-425	Hi Freeman, Sabre made the following comment: "It seems that JLine has been separated, but Geronimo GShell is still bundled as an internal part of SMX 4.1 Kernel." Can you please clarify? Thanks, Pedro	1	0	https://issues.jboss.org/browse/ESB-425
4924	ESB-390	I've been researching this issue and believe that I can put forward the following analysis. Based upon SM-1554 there are two outstanding issues regarding this Improvement request; 1) SM-1607 : JBI container should be able to initialize all SAs first and then start them. And, 2) SM-1608 : Support inter-SA dependency declaration in order to tweak the SA startup order. SM-1607: should be possible to implement. SM-1608: The JBI spec does not specify a way to introduce dependencies between SAs, hence a solution to this issue may not be immediately forth coming. Would the implementation of SM-1607 be a suitable solution to meeting your immediate requirement for ESB-390?	1	1	https://issues.jboss.org/browse/ESB-390
4925	ESB-384	After reading through DEV-943 I see that there is no specific list of components to apply this to. I would hate to spend energy in the wrong area so it would be nice to document the specific components that are causing pain and address them directly. Would it be possible to get such a list?	1	0	https://issues.jboss.org/browse/ESB-384
4926	ESB-350	Is there any reason why this is 9MB smaller than the 3.3.1.2 repo Darren?	1	0	https://issues.jboss.org/browse/ESB-350
4927	ESB-331	On Page 15 - it should be "The following JBI Components....." and we no longer ship the jsr181 component either so we probably should add that to the list there. On page 17 - Is the java2wsdl still available in Cxf 2.1 - has this not changed to java2ws http://cxf.apache.org/21-migration-guide.html - If they do swich over to use the jars from servicemix 4 - I found that I could no longer use the cxf-codegen-plugin with java2wsdl - I had to change this to use cxf-java2ws-plugin with the goal as java2ws put an example at the end On Page 25 - it should be "In FUSE ESB 3 your...." "a level of persistence and failure tolerance out of ....." It might be useful to mention API Changes - One that I have hit with the Logisticx Demo is the MessageExchangeListener If you use the Servicemix-bean component and implement the MessageExchangeListener. This Class has now moved to a different package. It use to be in org.apache.servicemix and is now in org.apache.servicemix.jbi.listener I have got this change backported to Servicemix 3.3.1.x (3.3.1.10) but if people are on older version they will hit this. Another thing that might be worth mentioning is that you cannot put a dependency on servicemix-core and servicemix-jbi any longer as they no longer exist. The equivalent would be to put a dependency on servicemix-utils and servicemix-common The code is generally the same just moved to different jars. <plugin> <groupId>org.apache.cxf</groupId> <artifactId>cxf-java2ws-plugin</artifactId> <version>${cxf-version}</version> <dependencies> <dependency> <groupId>org.apache.cxf</groupId> <artifactId>cxf-rt-frontend-jaxws</artifactId> <version>${cxf-version}</version> </dependency> </dependencies> <executions> <execution> <id>generate-wsdl</id> <phase>process-classes</phase> <configuration> <className> com.iona.fuse.demo.logisticx.service.warehouse.Warehouse </className> <outputFile> ${project.build.directory}/generated-sources/jaxws/warehouse.wsdl </outputFile> <verbose>true</verbose> <argline>-classdir ${project.build.directory}/classes</argline> </configuration> <goals> <goal>java2ws</goal> </goals> </execution> </executions> </plugin> We mention that we don't support the wsn2005 component but we do ship that in Servicemix 4 GA - so we should probably remove that.	1	1	https://issues.jboss.org/browse/ESB-331
4928	ESB-331	On Page 15 - it should be "The following JBI Components....." and we no longer ship the jsr181 component either so we probably should add that to the list there. On page 17 - Is the java2wsdl still available in Cxf 2.1 - has this not changed to java2ws http://cxf.apache.org/21-migration-guide.html - If they do swich over to use the jars from servicemix 4 - I found that I could no longer use the cxf-codegen-plugin with java2wsdl - I had to change this to use cxf-java2ws-plugin with the goal as java2ws put an example at the end On Page 25 - it should be "In FUSE ESB 3 your...." Another thing that might be worth mentioning is that you cannot put a dependency on servicemix-core and servicemix-jbi any longer as they no longer exist. The equivalent would be to put a dependency on servicemix-utils and servicemix-common The code is generally the same just moved to different jars.	1	1	https://issues.jboss.org/browse/ESB-331
4929	ESB-331	There appears to be differences in the trademark and copyright notices between the migration guide and jbi guide - should we have one to be consistent or is this because there are different dates for the these guides etc ?	1	1	https://issues.jboss.org/browse/ESB-331
4930	ESB-329	On Page 15 - it should be "The following JBI Components....." and we no longer ship the jsr181 component either so we probably should add that to the list there. On page 17 - Is the java2wsdl still available in Cxf 2.1 - has this not changed to java2ws http://cxf.apache.org/21-migration-guide.html - If they do swich over to use the jars from servicemix 4 - I found that I could no longer use the cxf-codegen-plugin with java2wsdl - I had to change this to use cxf-java2ws-plugin with the goal as java2ws put an example at the end On Page 25 - it should be "In FUSE ESB 3 your...." "a level of persistence and failure tolerance out of ....." It might be useful to mention API Changes - One that I have hit with the Logisticx Demo is the MessageExchangeListener If you use the Servicemix-bean component and implement the MessageExchangeListener. This Class has now moved to a different package. It use to be in org.apache.servicemix and is now in org.apache.servicemix.jbi.listener I have got this change backported to Servicemix 3.3.1.x (3.3.1.10) but if people are on older version they will hit this. Another thing that might be worth mentioning is that you cannot put a dependency on servicemix-core and servicemix-jbi any longer as they no longer exist. The equivalent would be to put a dependency on servicemix-utils and servicemix-common The code is generally the same just moved to different jars. <plugin> <groupId>org.apache.cxf</groupId> <artifactId>cxf-java2ws-plugin</artifactId> <version>${cxf-version}</version> <dependencies> <dependency> <groupId>org.apache.cxf</groupId> <artifactId>cxf-rt-frontend-jaxws</artifactId> <version>${cxf-version}</version> </dependency> </dependencies> <executions> <execution> <id>generate-wsdl</id> <phase>process-classes</phase> <configuration> <className> com.iona.fuse.demo.logisticx.service.warehouse.Warehouse </className> <outputFile> ${project.build.directory}/generated-sources/jaxws/warehouse.wsdl </outputFile> <verbose>true</verbose> <argline>-classdir ${project.build.directory}/classes</argline> </configuration> <goals> <goal>java2ws</goal> </goals> </execution> </executions> </plugin>	1	1	https://issues.jboss.org/browse/ESB-329

4931	ESB-329	**** COMMENTS For the JbI pdf **** Page 13 : The functional units are deployed into JBI components that "ARE" hosted within the JBI environement. Page 15: Service Engines - Service engines are components that provide some "OF" the logic needed to provide services, Page 16: service assembly - The root element of the JBI descriptor is "A" service-assembly service unit - The root element of the JBI descriptor is "A" service-unit Page 19: Second paragraph: spelling mistake form should be from Page 23: under Managing service units - shoutdown should be shutdown last line of the first paragraph = In the started state, the functionality defined by the service unit "is" accessible. Second para - "A" service ..... Page 27: The JBI specification defines a number of the Ant tasks that can be used "TO" manage ..... Are we supporting these Ant tasks in servicemix 4 ? Page 33 the description is in the wrong box in Required. There appears to be inconsitently with the tables in that in some we say yes/no for the required fields and others we say nothing. Page 42: Creating a JBI Maven Project - The archetype will generate the proper file structure for the projecct and a POM file containing the essential metadata "Remove for" required..... Page 50: The modules element contains one module element for each service unit - "and a module element" might just as easy to give an example <module>app1</module> Page 53: First paragraph: The contents of a service unit(S) ..... Page 55: Specifying the target components - "Remove You" Add a dependency child element..... Page 56: First paragraph: Maven "WILL" download..... You can only use one target ComponentName for a service unit so not sure that you can say it can target two components here.	1	1	https://issues.jboss.org/browse/ESB-329
4932	ESB-329	The sections Specifying a Fuse project is also listed in http://fusesource.com/issues/browse/ESB-245 Can you apply the changes for that jira to the same here as well. Changes needed for the "A service unit Project" thanks, Edell.	0	0	https://issues.jboss.org/browse/ESB-329
4933	ESB-324	Will this release include the most recent releases of camel, cxf, and activemq? camel -> 1.4.1.0 cxf -> 2.1.1.0 activemq -> 5.1.0.0	1	1	https://issues.jboss.org/browse/ESB-324
4934	ESB-295	Can this be closed?	1	1	https://issues.jboss.org/browse/ESB-295
4935	ESB-282	Can you do this upgrade - assuming that it doesn't introduce any incompatibilities?	0	0	https://issues.jboss.org/browse/ESB-282
4936	ESB-282	This has already been upgraded for the FUSE ESB 4.0 release. Can we also get this upgraded for the 3.4 release? I think it would be OK to break some backward compatibility there?	0	0	https://issues.jboss.org/browse/ESB-282
4937	ESB-279	We already have a more generic solution in place, which is using XA transactions instead of JMS transactions. It looks like the customer recently asked for some sample/demo code on using XA transactions for the JMS endpoints. Is there any reason why they can't use the solution proposed there?	1	0	https://issues.jboss.org/browse/ESB-279
4938	ESB-272	Hi Matt, There is now substantially more information available about how to use Camel in ServiceMix than there used to be--for example, see http://fusesource.com/products/enterprise-servicemix4/ . Do you think this is enough? Can we close this JIRA item now?	1	1	https://issues.jboss.org/browse/ESB-272
4939	ESB-257	Working on getting the smx4 samples running. Hit a few different snags depending on which version of smx4 is used. Get a build error with the apache smx4 trunk http://svn.apache.org/repos/asf/servicemix/smx4/features/trunk . It's unable to resolve a 5.2.0-SNAPSHOT version of activemq. A checkout of the fuse smx4 trunk builds fine, but I see errors like this: servicemix features> install nmr ERROR BundleException: Unresolved package in bundle 39: package; (&(package=javax.xml.stream.events)(version>=1.0.0)) which looks a lot like this jira: https://issues.apache.org/activemq/browse/SMX4-20 maybe the fuse version hasn't quite picked up that fix yet?	1	1	https://issues.jboss.org/browse/ESB-257
4940	ESB-257	What's the latest status - did you get past these build errors?	1	1	https://issues.jboss.org/browse/ESB-257
4941	ESB-257	Are these demos in 4.0 distribuition now?	1	1	https://issues.jboss.org/browse/ESB-257
4942	ESB-257	Can you also add these into CPI?	0	0	https://issues.jboss.org/browse/ESB-257
4943	ESB-229	Aileen, Has someone been assigned to look at this? Thanks, Eric	1	1	https://issues.jboss.org/browse/ESB-229
4944	ESB-227	Hi Torsten, Can you verify this fix ok with customer? We have a CxfBcSecurityJAASTest to illustrate it works Freeman	0	0	https://issues.jboss.org/browse/ESB-227
4945	ESB-227	Hi Torsten, What's your jdk and maven version? Did you run the command from servicemix-cxf-bc? Did you build the whole trunk before run the test? You should build trunk first mvn -Dmaven.test.skip=true -Pstep1 install mvn -Dmaven.test.skip=true -Pstep2 install then cd deployable/bindingcomponents/servicemix-cxf-bc to run the test mvn install -Dtest=CxfBcSecurityJAASTest	0	0	https://issues.jboss.org/browse/ESB-227
4946	ESB-213	Can this be closed now Darren?	1	1	https://issues.jboss.org/browse/ESB-213
4947	ESB-212	Umm... why would they be a camel-cxf endpoint? That seems strange. Why wouldn't it be a spring-dm module plugged into SMX4 as per gnodet's sample?	0	0	https://issues.jboss.org/browse/ESB-212
4948	ESB-203	Looks good Fintan. Can we add something about how you can return an exception. There is a brief section on this {quote} Fault message—a message that travels from a target endpoint back to a source endpoint for the purpose of indicating an exception or error condition (usually in response to an In message). {quote} It could do with an example to make it a bit more clear. I recently discovered you can add an exception in this manner on a exchange that is being returned: {code} org.apache.camel.wsdl_first.types.UnknownPersonFault personFault = new org.apache.camel.wsdl_first.types.UnknownPersonFault(); personFault.setPersonId(""); org.apache.camel.wsdl_first.UnknownPersonFault fault = new org.apache.camel.wsdl_first.UnknownPersonFault("Get the null value of person name", personFault); exchange.getFault().setBody(fault); {code}	1	1	https://issues.jboss.org/browse/ESB-203
4949	ESB-202	Eric, I notice you just closed this bug. Can you add a link to the documentation from here? It would be useful for anyone who comes across this through a search. Cheers, -M	1	0	https://issues.jboss.org/browse/ESB-202
4950	ESB-198	HI, I've sent you notices.txt by email. Can you add into kits?	1	1	https://issues.jboss.org/browse/ESB-198
4951	ESB-197	Hi Ulhas, have you had a chance to review this yet? When can you get comments back to Eric?	1	0	https://issues.jboss.org/browse/ESB-197
4952	ESB-197	Ulhas, Have you had a chance to look at this doc? I'd appreciate it if you could provide some feed back. Thanks, Eric	1	0	https://issues.jboss.org/browse/ESB-197
4953	ESB-194	These are the following examples I have run and they appear to be ok Bridge, Cluster Basic Wsdl-first Vfs-binding Rss-binding File-binding Cxf-wsdl-first Cxf-ws-security Problems: ========== Camel ? James is looking at this Wsn-http-binding - sent you a separate question on it Loan-broker - should I have to CTRL-C the client - ???? run: [echo] Running exsample client [java] Connecting to JMS server. [java] Sending request. [java] Response was: 6.110767707946193 from bank4 [java] Closing. [java] Java Result: 1 Ws-notification - When I attempt to run the second instance - it complains about stuff missing - need to re-look at this one - it also needs README updates. To Do: ========== Servicemix-web Loan-broker-bpel	0	0	https://issues.jboss.org/browse/ESB-194

#	Requirement	Questions	Answered	Successfully Answered	URL
4954	ESB-194	either of these. http://localhost:8192/Broker/ http://localhost:8192/CreatePullPoint/ I download the SoapUI project and launched the Test and it fails on step 4. 2) servicemix-web - Needs README updates 3) loan-broker-bpel - There is a version released now so you should no longer need to build the src but when I attempt to deploy the apache-ode-jbi-1.1.zip - it fails to deploy - complains that it can't find the deployment descriptor and the jbi.xml is within the zip. 4) loan-broker - Do I have to CTRL-C the client - if so then this demo is fine. 5) Camel - Hi, I was trying to run the Camel example that's in the FUSE ESB kit. (http://repo.open.iona.com/maven2-snapshot/com/iona/fuse/fuse-esb/3.3.1-SNAPSHOT/) I was following the instructions at http://servicemix.apache.org/camel-example.html Welcome to the ServiceMix Camel Example ========== This example shows how to use Apache Camel to deploy EIP routes You can run this example using an embedded ServiceMix install via cd camel-sa mvn jbi:servicemix => THIS THROWS THE ERROR Or if you prefer you can start a ServiceMix server (if not already started) by r unning bin/servicemix in the root dir of this ditribution. To start this sample, run: mvn install jbi:projectDeploy For more information on running this example please see: http://servicemix.apache.org/camel-example.html Edell. ---------- From: Strachan, James Sent: 21 April 2008 16:55 To: Nolan, Edell Cc: eng-fuse Subject: Re: Error running the camel example in todays 3.3.1 kit BTW which camel example are you trying? On 21 Apr 2008, at 14:49, Nolan, Edell wrote: Hi, I am trying to run the camel example in todays fuse-esb-3.3.1-SNAPSHOT kit and if I try to run the example in embedded Servicemix container mode I get the error below. It runs fine if I launch servicemix and then run mvn install jbi:projectDeploy Is this a known issue ? 4955	ESB-185	Is this already done?	1	1	https://issues.jboss.org/browse/ESB-185
4956	ESB-171	This was fixed in 3.3.1 not 3.3.0. Are you seeing the problem in 3.3.1?	1	1	https://issues.jboss.org/browse/ESB-171
4957	ESB-171	The JMS Spec does not allow "." in property names as outlined in sections 3.5.1 and 3.8.1.1 of the spec, so Camel and ServiceMix both check for valid Java identifier names when populating JMS properties. Current behavior ignores any property that has an invalid name and that is what is being exhibited here. Is there a particular problem with setting a non-default sequenceNumberKey on the default comparator? I would usually recommend doing this anyway, so I am wondering if there is a particular reason that this isn't acceptable?	0	0	https://issues.jboss.org/browse/ESB-171
4958	ESB-170	FWIW, we can make the process homogeneous for servicemix-bean, servicemix-jsr181 and servicemix-cxf-se, but other components do not use POJOs in the same way, so it would not be possible to have the same thing. However, https://issues.apache.org/activemq/browse/SM-1289 is related and applies to all servicemix components. It is currently solved in apache 3.3-SNAPSHOT only.	0	0	https://issues.jboss.org/browse/ESB-170
4959	ESB-155	Attached is our CustomTraceComponent which does what we want. Could you please review it and consider adding it to Fuse distribution? Technical comments: This class overrides TraceComponent, adding processing of properties. These changes should probably be moved to the TraceComponent class itself. Maybe a property specifying whether to print the properties could be also introduced. Additional questions: - is it enough to only convert values of class Source to String, or should Objects of other types be also transformed somehow (see attached source file)? - why is the TraceComponent class located in servicemix-core, not in servicemix-components? The package prefix is common for classes defined in servicemix-components and the TraceComponent - org.apache.servicemix.components.	1	0	https://issues.jboss.org/browse/ESB-155
4960	ESB-154	Adrian, can you review and apply patch?	0	0	https://issues.jboss.org/browse/ESB-154
4961	ESB-149	Adrian - can you review and apply patch?	1	1	https://issues.jboss.org/browse/ESB-149
4962	ESB-132	But those deploying the cxf-se will want to enable this on the xbean, not in any cxf.xml? How would you configure the cxf.xml picked up by the service engine?	1	1	https://issues.jboss.org/browse/ESB-132
4963	ESB-131	Can this one be closed?	1	0	https://issues.jboss.org/browse/ESB-131
4964	ESB-124	Hi, when is this likely to be complete? We are releasing SF 2.1 end May and need to have CPI in place to test demos. thanks, Aileen	1	1	https://issues.jboss.org/browse/ESB-124
4965	ESB-124	Can you prioritise CXF demos? we releasing 2.1 next week and it would be good not to have to test all the demos by hand!	1	1	https://issues.jboss.org/browse/ESB-124
4966	ESB-120	Could you provide an update on your status please Greg? Two weeks to implement may be okay, but you also had one week off :-) Do you have a target date for completion? What tests have been implemented to date?	0	0	https://issues.jboss.org/browse/ESB-120
4967	ESB-120	What's the latest status on these?	0	0	https://issues.jboss.org/browse/ESB-120
4968	ESB-120	Can we have someone look into the integration demos. I am getting failures running the demos by hand and as a result, cannot confirm that the cpi setup for them is completely correct. Thanks.	1	1	https://issues.jboss.org/browse/ESB-120
4969	ESB-120	What failures are you seeing?	1	1	https://issues.jboss.org/browse/ESB-120
4970	ESB-104	Eric, I notice you just closed this. Can you add a link to the updated docs from here? It would be useful for anyone who comes across this through a search. Thanks, - M	1	0	https://issues.jboss.org/browse/ESB-104
4971	ESB-96	Do you feel that this could be a little easier to do using the CXF BC in the 3.3.1 branch Bruce? I would imagine so.	1	0	https://issues.jboss.org/browse/ESB-96
4972	ESB-71	Eric, can you please re-save the PDF with editing features enabled?	1	1	https://issues.jboss.org/browse/ESB-71
4973	ESB-48	Oisin, can you please address this issue? We will be performing the next incremental release of the Fuse components next week and it would be nice to have the versioned Eclipse update sites available for the customer that requested access to older versions.	1	1	https://issues.jboss.org/browse/ESB-48
4974	ESB-27	I did quick scan of the code, and I don't see an HttpClient in the consumer endpoint. Do you mean the provider endpoint maybe?	1	1	https://issues.jboss.org/browse/ESB-27

#	Requirement	Questions	Answered	Successfully Answered	URL
4975	ESB-27	Hi Bruce, Just one last question, I'm not really sure, but is the soTimeout different from the exchangeTimeout in the HttpClient? Just making sure that the right property is being configured. :)	1	1	https://issues.jboss.org/browse/ESB-27
4976	HQ-386	What is a portss?	0	0	https://issues.jboss.org/browse/HQ-386
4977	HQ-360	Hi Jack, Can you ask her to clean data folder from HQ agent folder? If that doesn't solve the problem ask her to reinstall agent again. I am working on Linux so never tried it on Windows. If the problem doesn't get resolved by Monday I will give it a try on Windows. It is worth asking for HQ agent log to find out if anything visibly wrong could be found. Regards, Ulhas Bhole	1	1	https://issues.jboss.org/browse/HQ-360
4978	HQ-360	Hi Jack, Can you ask Debbi to delete data folder and call {code} hq-agent.bat install {code} and then on subsequent attempt to {code} hq-agent.bat start {code} will run initial setup and ask you for server ip and other details. Something link below: {quote} [Running agent setup] What is the HQ server IP address: mantra Should Agent communications to HQ always be secure [default=no]: What is the HQ server port [default=7080]: - Testing insecure connection ... Failure What is the HQ server IP address: 10.5.1.10 Should Agent communications to HQ always be secure [default=no]: What is the HQ server port [default=7080]: - Testing insecure connection ... Success What is your HQ login [default=hqadmin]: What is your HQ password: What IP should HQ use to contact the agent [default=10.5.1.26]: What port should HQ use to contact the agent [default=2144]: - Received temporary auth token from agent - Registering agent with HQ - HQ gave us the following agent token 1266835166690-1986179072184931521-7864810437137618626 - Informing agent of new HQ server - Validating - Successfully setup agent {quote}	1	1	https://issues.jboss.org/browse/HQ-360
4979	HQ-360	Hi Jack, Did you ask them to remove camel-plugin.xml from both server and agent? Are they seeing Camel 2.x being discovered? Logs from agent and server would help in this case to shed more light. I will see if I can run here again myself on windows. Regards, Ulhas Bhole	1	1	https://issues.jboss.org/browse/HQ-360
4980	HQ-320	Name of the Server currently observed is 'Sonic(1099/karaf-root)' by default for ESB4.1-M2. Is this all expected?	1	0	https://issues.jboss.org/browse/HQ-320
4981	HQ-319	Please see Attached Screenshot. Is this all that is expected?	0	0	https://issues.jboss.org/browse/HQ-319

4984	HQ-281	Swathy...David says in his comment above the "normal" values in their install are ~24 hours, yet you say it's (15 mins currently) in your comment...can you clarify what the value is out-of-the-box? Thanks Amanda	1	1	https://issues.jboss.org/browse/HQ-281
4985	HQ-267	As well as the two buttons there needs to be a Monitoring Metrics state This should be either on or off - (if on would it be possible to have a link to the metrics tab for the resource ? - this is a nice to have) I have updated the graphic attached with the on/off state	0	0	https://issues.jboss.org/browse/HQ-267
4986	HQ-230	Implemented as in http://fusesource.com/wiki/display/FUSEINT/HQU_Plugins with some minor changes * Name is "Active Exchanges" instread of "Exchanges" * Action is "Cancel Exchanges" instead of "Cancel" * Status column is not there as there is no status returned from the API (only active exchanges are returned)	1	1	https://issues.jboss.org/browse/HQ-230
4987	HQ-222	Amanda, Is this still valid? Should we close it?	1	0	https://issues.jboss.org/browse/HQ-222
4988	HQ-196	We are able to see the skelton of the Routes tab but not able to get any data into this page. Refer - HQ-348. Amanda, can we close this leaving the issue to be tracked in HQ-348 ?	1	0	https://issues.jboss.org/browse/HQ-196
4989	HQ-163	Can you leave this one open until Murali investigates whether there is a plugin approach available to us that might allow this? Tx Amanda	1	0	https://issues.jboss.org/browse/HQ-163
4990	HQ-152	Murali We actually discussed this item on yesterdays call if you remember. Can you look at how you might include this in the Fuse-operator dashboard? Thanks Amanda	1	1	https://issues.jboss.org/browse/HQ-152
4991	HQ-147	Can this issue be marked Resolved?	1	0	https://issues.jboss.org/browse/HQ-147

#	Requirement	Questions	Answered	Successfully Answered	URL
4992	HQ-140	Agreed - there is no need for a Best Practice Guide for the Sonic 8 release. Should we sit down and go through the doc plan with the updated requirements? John From: David Porter Sent: 06 November 2009 11:16 To: Amanda Hall; John McHugh Cc: Orla Fitzgerald Subject: RE: Feature Freeze date looming - October 30th Amanda, John Since HQ is no longer "our" product, and since there will no longer be a separate HQ install guide. I don't think this is a requirement any more. David	1	0	https://issues.jboss.org/browse/HQ-140
4993	HQ-139	Can this be maked Resolved?	1	1	https://issues.jboss.org/browse/HQ-139
4994	HQ-101	As suggested I have tested if the help links work. 1.Selected Browse from the Resources masthead and clicked on the help link . It takes you to the hyperic help on Browse Resources. 2. Selected a resource (Fuse Message Broker) and set an Alert Definition and clicked on the help link - it takes you to the help link of hyperic on how to set alerts. 3. Created a new group from the resources screen (Tools Menu - New Group) and clicked on the help link. It gives you help on how to create group from Hyperic. Should this issue then be considered as closed?	1	1	https://issues.jboss.org/browse/HQ-101
4995	HQ-85	I just tried this fix on Windows. I copied mysql-connector-java-5.0.4-bin.jar to \fuse-hq-installer\installer-3.2.5.2-fuse\bin and I still get the same error. Am I doing something wrong?	0	0	https://issues.jboss.org/browse/HQ-85
4996	HQ-57	With the fix for HQ-332 the CXF services are now discovered using only their Mbeans. So all that is needed is the JMX url needs to be added to the etc/agent.properties fusesource.jmx.urls property .	0	0	https://issues.jboss.org/browse/HQ-57
4997	HQ-55	Is this issue still in progress or was it completed? Tx Amanda	1	0	https://issues.jboss.org/browse/HQ-55
4998	HQ-46	Gerard I'm not sure what you're asking for here. Does this write up from Heather help at all? http://fusesource.com/wiki/display/HDOX/Monitoring+multiple+CXF+servers+in+HQ Or are you looking for something different? Thanks	1	0	https://issues.jboss.org/browse/HQ-46
4999	HQ-28	The link used to monitor progress is a dead link..... Unclear on this process for migrating.... Are you going to convert the wiki mark-up to PDF, Word, and text? Or is this conversion from the XML? Why Word and text? IONA documentation is provided in HTML and PDF. All of the numbered statements save (2) talk about wiki marked up content. How does this relate to moving the content into XML? (3) -- the second one -- talks about articles still being in wiki format but rearranging the "include" statements. Do you mean the xincludes in docbook or simply links in the wiki?	1	0	https://issues.jboss.org/browse/HQ-28
5000	HQ-14	Hi, Eric- Where is the FUSE HQ doc source. I don't see it in http://svn.boston.amer.iona.com/repos/docs_inferno/trunk, which is where the other FUSE doc is. Are you working from home today? Howard	0	0	https://issues.jboss.org/browse/HQ-14
5001	OSFUSE-606	Susan, where is the cacert installed? Seems it's being picked up by oc since it's installed in the OS somewhere. Which OS was this on? Have you guys been able to re-create?	0	0	https://issues.jboss.org/browse/OSFUSE-606
5002	OSFUSE-598	Any considerations to use [agent-bond|https://github.com/fabric8io/agent-bond] to combine Jolokia and Prometheus agent (as we already do for the fabric8 upstream images) ? What's about security ? Don't think that Prometheus has SSL client cert support out of the box.	1	1	https://issues.jboss.org/browse/OSFUSE-598
5003	OSFUSE-598	Last I peeked at agent-bond, it seems to be just a packaging exercise so that user would only need to use 1 agent. Is that still correct? If that's the case I think it would be simpler to document and maintain if we just enable both the jolokia and prometheus agents separately on the java CLI. Part of this issue would should be to identify what are the options for securing prometheus.	1	0	https://issues.jboss.org/browse/OSFUSE-598
5004	OSFUSE-595	[~nibbio84] you mentioned on FIS call that there was a never release of f-m-p that should be used for Fuse 7. Can you follow up with [~tcunning] to get this into the Fuse 7 pipeline?	1	1	https://issues.jboss.org/browse/OSFUSE-595
5005	OSFUSE-595	What version of kubernetes client do we use for Fuse 7 0 is it 2.4 ?	1	1	https://issues.jboss.org/browse/OSFUSE-595
5006	OSFUSE-577	[~rhuss], can you comment on the impact on an update to jolokia 1.3.6 in the first FIS rollup patch after 2.0 release?	1	1	https://issues.jboss.org/browse/OSFUSE-577
5007	OSFUSE-577	[~djcoleman] Is Jolokia built from source? How much effort is it to upgrade for Rolllup?	1	1	https://issues.jboss.org/browse/OSFUSE-577
5008	OSFUSE-577	I've updated the Docker files to include the latest version of the jolokia-jvm agent jar already, but it looks like camel references jolokia as well, platforms/commands/commands-jolokia/pom.xml for example. I take it these references will need updating to the latest version as well, is that correct?	0	0	https://issues.jboss.org/browse/OSFUSE-577
5009	OSFUSE-557	Do you only refer to OSFUSE-492 or are there also other spots where we can improve error messaging ? For OSFUSE-492 I think I have good news, as there is now a 3.6.0 release so that we can f-m-p and kubernetes-client. The build error message problem should be fixed then.	0	0	https://issues.jboss.org/browse/OSFUSE-557

5011	OSFUSE-557	Any update on this? Are there any improvements to error reporting that we could include in next patch?	0	0	https://issues.jboss.org/browse/OSFUSE-557
5012	OSFUSE-542	Jan, Karaf framework is not baked into the builder image {{jboss-fuse-6/fis-karaf-openshift}}. So it's not exactly the same as Java version environment variable. So technically, the same builder image could be used with a later Karaf framework version. Or, a user project could be misconfigured to use an older version of Karaf framework as well. In light of this fact, does it make sense to still add this variable? We could bake it in as part of the build pipeline, but I'm wondering what purpose would that serve exactly if the version can't be guaranteed?	1	0	https://issues.jboss.org/browse/OSFUSE-542
5013	OSFUSE-542	Perhaps it would make sense to include a "released with" version number for JBoss Fuse/Karaf framework. So users know which specific Karaf build it was released with, i.e. the preferred version to use with that image. Or, maybe we should instead include the FIS Karaf BOM version that was built with the image, which is actually meant to be used in user poms to import JBoss Fuse/Karaf dependencies. Does that make more sense?	1	0	https://issues.jboss.org/browse/OSFUSE-542
5014	OSFUSE-514	At this stage we are approaching code freeze and want to minimise change. Are there specific critical fixes you recommend we take in?	1	1	https://issues.jboss.org/browse/OSFUSE-514
5015	OSFUSE-514	[~iocanel] end of sprint is tomorrow, would be nice if these could be merged in before then. Could close this this out once that's done?	1	1	https://issues.jboss.org/browse/OSFUSE-514
5016	OSFUSE-510	[~roddiekieley] Does David's suggestion work for you? Can I close this?	1	1	https://issues.jboss.org/browse/OSFUSE-510
5017	OSFUSE-507	Certainly, but which mechanism will be used to update the Fuse version? * Will we release a new FIS Karaf BOM for every Fuse patch/rollup? * or should the customer instead prepend the patched Fuse BOM to the dependency management?	0	0	https://issues.jboss.org/browse/OSFUSE-507
5018	OSFUSE-504	This breaks Salesforce apps for FIS and iPaaS. Can we bump the priority? Please. :-)	1	1	https://issues.jboss.org/browse/OSFUSE-504
5019	OSFUSE-504	[~kcbabo], can you point me to your project source? I just checked the camel-2.18.x.redhat [branch|https://github.com/jboss-fuse/camel/tree/camel-2.18.x.redhat/components/camel-salesforce], and I don't see a JodaTime dependency in the component or the plugin.	0	0	https://issues.jboss.org/browse/OSFUSE-504
5020	OSFUSE-492	So, I added a more detailed message in the client: https://github.com/fabric8io/kubernetes-client/pull/607. In the particular case it will display something like: "Can't instantiate binary build, due to error reading stream." This is as descriptive as it can get from the client side, as in the particular case all the client see is that it can't read the tarball.	1	1	https://issues.jboss.org/browse/OSFUSE-492
5021	OSFUSE-492	[~chirino] as we now have a fix, how would be the procedure to get this into the v3.1.80-redhat branch ? Is the kubernetes-client also productized ? Or should the v3.1.80-redhat branch simply include the lates kubernetes-client as soon as the fix is included within a release ? To be more specific the kubernetes-client is a dependency of fabric8, which the productised f-m-p v3.1.80-redhat depends on as version 2.2.170 (current version is 2.2.192). So the question is more whether we should productis: * fabric8 * kubernetes-client * kubernetes-model (a dep from kubernetes-client) or depend on the latest version with this fix ?	1	1	https://issues.jboss.org/browse/OSFUSE-492
5022	OSFUSE-492	[~chirino] so what are the next steps now ? You would need that fix on branch v1.4.14.redhat now. [~iocanel] could you add an extra PR for cherrypicking your fix to this branch, too ? If this fix than is merged, does it then automatically propagate to fabric8v2 (v2.2.170.redhat) and then to fabric8-maven-plugin (v3.1.80-redhat) ? BTW, is the difference between ".redhat" and "-redhat" as suffix intentional ?	1	1	https://issues.jboss.org/browse/OSFUSE-492
5023	OSFUSE-492	Do we not know the Build object that was created? (its status and/or logs would be helpful to show to users...)	0	0	https://issues.jboss.org/browse/OSFUSE-492

#	Requirement	Questions	Answered	Successfully Answered	URL
5024	OSFUSE-492	Now that we found out why the FileInputStream was closed (it was because of a RetryInterceptor which then caused to read from an already closed stream a second time in the first retry), we can tackle the real problem ;-) With the latest update to the kubernetes-client the error message looks now like {code} [ERROR] Failed to execute goal io.fabric8:fabric8-maven-plugin:3.1.80.redhat-SNAPSHOT:build (default-cli) on project spring-boot-webmvc: Execution default-cli of goal io.fabric8:fabric8-maven-plugin:3.1.80.redhat-SNAPSHOT:build failed: Can't instantiate binary build, due to error reading/writing stream. Can be caused if input stream points to a missing resource or output stream closed by the server. Broken pipe -> [Help 1] {code} [~iocanel] I would maybe remove the part on the "input stream pointing to a missing resource" as this can be safely detected by a FileNotFoundException which already includes the warning. Since the server still sends a response even when he closes its own inputstream (and do not accept anything anymore on the HTTP request), he still sends a response on the other stream (his outputstream). Thats what the CLI shows. I wonder how the kubernetes-client could capture this ? Maybe simply ignoring a "broken pipe" exception and continue, then failing because of the error code in the HttpResponse ?	1	1	https://issues.jboss.org/browse/OSFUSE-492
5025	OSFUSE-492	[~chirino] [~aileenc] [~iocanel] How should we proceed here ? As said, we would need a new kubernetes-client with support for OkHttp 1.6.0-SNAPSHOT (current used version: 1.4.2). Unfortunately with 1.5.0 OkHttp totally changed the WebSocket handling so its a bit of work to update kubernetes-client for that (and that maybe for both branches ?). IMO there are two solutions: * We live with the somewhat unspecific error message in FIS 2.0 (which is still better than the original one). For FIS 2.1 (when OkHttp 1.6 hopefully is released) we then update the kubernetes-client for this more fine grained error message. * We "backport" the specific "Expect: 100-continue" handling to kubernetes-client directly. This is quite some effort and I'm not 100% sure whether its possible at all. Don't know whether we make it until Friday. My suggestion would be option 1, to delay this specific handling. wdyt ?	1	1	https://issues.jboss.org/browse/OSFUSE-492
5026	OSFUSE-492	"This late in the game it seems like we need to live with "the somewhat unspecific error message". Let put upgrading OkHttp as a new issue for Fuse 7." Can we reconsider it to include it perhaps not in FIS 2.0 but in FIS 2.1 or 2.0.1? Today [~tsedmik] is trying to use FIS, he has the same kind of error reported initially, this time it is not related to the docker insecure registry and we have no clue on what is happening.	0	0	https://issues.jboss.org/browse/OSFUSE-492
5027	OSFUSE-491	Is there anything more to be done for this issue?	0	0	https://issues.jboss.org/browse/OSFUSE-491
5028	OSFUSE-475	Is there any update on this? FIS 2.0 code freeze is in 1.5 weeks so we may need to defer.	1	1	https://issues.jboss.org/browse/OSFUSE-475
5029	OSFUSE-424	Or even better create a new Camel HA issue umbrella under which we can move ENTESB-6320 and this one ?	1	1	https://issues.jboss.org/browse/OSFUSE-424
5030	OSFUSE-418	Do we want to have these images preconfigured in the fabric8-maven-plugin, or will we just say in the docs to use -Dfabric8.generator.from= ?	1	0	https://issues.jboss.org/browse/OSFUSE-418
5031	OSFUSE-380	So I'll answer question with a question. :-) What's the estimated effort to do an offline Maven repo for FIS 2.0? AFAIK, the other xPaaS images provide one, but I think those are mostly (completely?) inherited from the corresponding standalone product.	1	1	https://issues.jboss.org/browse/OSFUSE-380
5032	OSFUSE-380	Can I close this now?	0	0	https://issues.jboss.org/browse/OSFUSE-380
5033	OSFUSE-371	Which Jenkins env do GSS use to build patches?	1	1	https://issues.jboss.org/browse/OSFUSE-371
5034	OSFUSE-371	[~janstey]Will you be able to help us set this up?	1	1	https://issues.jboss.org/browse/OSFUSE-371
5035	OSFUSE-359	[~djcoleman] Is this still an issue? Should I schedule for 7.0?	1	0	https://issues.jboss.org/browse/OSFUSE-359
5036	OSFUSE-358	it means extra effort to be portable across OS. Are we running all tests on Windows too?	0	0	https://issues.jboss.org/browse/OSFUSE-358
5037	OSFUSE-354	Is the question whether we support a plain CXF app in FIS 2.0 that doesn't use Camel? We definitely support use of Camel + CXF in a Spring Boot FIS app.	0	0	https://issues.jboss.org/browse/OSFUSE-354
5038	OSFUSE-342	I talked to Diogenes and he agreed this is something we should focus on from a top-level xPaaS standpoint. [~rettori] Where would you like to see this tracked?	1	1	https://issues.jboss.org/browse/OSFUSE-342
5039	OSFUSE-339	The question is, where would the karaf micro-container come from? If it is being built using the karaf maven plugin, it would be a lot easier to just add f-m-p to that project. Since Spring Boot is a third party framework, it's possible that customers could want to deploy stand alone jars from non-Fuse projects. Can you describe a reasoning for a Fuse customer using Karaf, just wanting to deploy a pre-built assembly? One concern is that users might misuse this ability to deploy monolithic bloated JBoss Fuse 6.x/Apache Karaf containers with a Broker, etc. in a docker image and shoot themselves in the foot.	1	1	https://issues.jboss.org/browse/OSFUSE-339
5040	OSFUSE-336	Should the f-m-p be able to get the current namespace from the oc configuration? (so that one does not have to explicitly configure users' namespace? (maybe we should add some new property to f-m-p to represent "current namespace"?	1	1	https://issues.jboss.org/browse/OSFUSE-336
5041	OSFUSE-334	Guillaume, would this be possible?	0	0	https://issues.jboss.org/browse/OSFUSE-334
5042	OSFUSE-334	Can we drop it as part of the pipeline build? Is it only brought in when the assemblies are created? Should we just skip building the Karaf assemblies?	0	0	https://issues.jboss.org/browse/OSFUSE-334
5043	OSFUSE-334	Is this stil an issue or has Gemini been removed on product branch?	1	1	https://issues.jboss.org/browse/OSFUSE-334
5044	OSFUSE-334	Gregor has just committed something to the Apache Karaf master branch: https://github.com/apache/karaf/commit/560147a78c1a3ac3a4f0cd0bd7c59f6429b511b8 Which karaf branch should that be backported to ?	1	1	https://issues.jboss.org/browse/OSFUSE-334
5045	OSFUSE-334	Can I mark this as Resolved now?	0	0	https://issues.jboss.org/browse/OSFUSE-334
5046	OSFUSE-332	How often do we update Jolokia? In the past we've done one off builds but if we update it frequently then it makes more sense to have it in pipeline.	1	1	https://issues.jboss.org/browse/OSFUSE-332
5047	OSFUSE-332	I was going by what Roland had done for the Java s2i image. Do you need me to change it to 1.3.5 released today?	0	0	https://issues.jboss.org/browse/OSFUSE-332
5048	OSFUSE-332	We are currently using jolokia-jvm-1.3.2.redhat-1-agent.jar in all images AFAIK , do we need to productise a newer 1.3.x one for anything?	1	1	https://issues.jboss.org/browse/OSFUSE-332
5049	OSFUSE-332	[~maschmid] correctly pointed out that the current version of jolokia used across MW products is 1.3.2.redhat-1. Is there a need for 1.3.6? I'd rather we standardised on one version please!	1	1	https://issues.jboss.org/browse/OSFUSE-332
5050	OSFUSE-332	Is this related to https://issues.jboss.org/browse/ENTESB-6052 ? [~sonicaaaa] had requested a version matching upstream 1.3.5. I don't see this as a problem but would this suite our needs for FIS 2.0? 6.3.0 was released with 1.3.2.redhat-2 (which is 1.3.2 built with an extra profile to produce sources jar, which was originally omitted)	1	1	https://issues.jboss.org/browse/OSFUSE-332
5051	OSFUSE-332	The S2I images now include the latest Jolokia Red Hat version built by the release pipeline. Is there any additional work required for this issue? If not, I'll mark it as resolved.	0	0	https://issues.jboss.org/browse/OSFUSE-332
5052	OSFUSE-320	Which version of Undertow are we planning to use?	0	0	https://issues.jboss.org/browse/OSFUSE-320

#	Requirement	Questions	Answered	Successfully Answered	URL
5053	OSFUSE-320	How are we going to override the version? Will we have a productized version of spring-boot-starter-undertow (and/or spring-boot-starter-web)?	0	0	https://issues.jboss.org/browse/OSFUSE-320
5054	OSFUSE-320	Can this be closed? I think we decided to stick with Tomcat.	1	1	https://issues.jboss.org/browse/OSFUSE-320
5055	OSFUSE-319	Note also https://issues.jboss.org/browse/OSFUSE-323 , we probably need to consider * image change triggers that already contain an explicit namespace in the image stream tag reference, to reference some common images (e.g. images installed in the "openshift" namespace, such as openshift/jboss-amq-6.2:1.3) * image streams in the user's namespace (different than the test one) (Should it always be a single namespace, or can there be more?) * image streams populated by the test itself (if we want to support such a thing) The fundamental question is: Should fabric8 tooling expect all the user's builds (image streams) are in the same namespace? * If we do, we can have a single property for f8-arquillian to import the imagestreamtags from. (note that users can still do "oc tag" on their own to import imagestreams from other namespaces into their namespace) * If we don't, we need users to provide a mapping between all artifacts and the namespaces in which they are being built, so that f8-arquillian can do proper "oc tag"	1	1	https://issues.jboss.org/browse/OSFUSE-319
5056	OSFUSE-311	[~lfuka], I and [~lburgazzoli] recently pushed some changes to the spring-cloud-kubernetes project and in the meantime we added much more documentation about the supported features in https://github.com/fabric8io/spring-cloud-kubernetes/blob/master/readme.md#kubernetes-propertysource. Do you think we should add more information (or doing something different)?	1	1	https://issues.jboss.org/browse/OSFUSE-311
5057	OSFUSE-310	Converted to enhancement since this is not really a bug. Users can manually create routes if they want to. Not all services have to be exposed to external users. But I do agree, it would be nice to exposing services to external users by default. This is actually slightly complex as we have to pick from creating a Route|LoadBalancer|Ingress|NodePort. The type you pick is based on the environment. The best way to do this is to annotate the service with expose and then run the exposecontroller pod. But this means we need to productize this go binary/Docker image: https://github.com/fabric8io/exposecontroller [~aileenc], [~kcbabo] What do you guys think? Should we add this to FIS?	1	1	https://issues.jboss.org/browse/OSFUSE-310
5058	OSFUSE-295	When camel-spring-boot-starter is used, should camel-core still be explicitly depended on? (amq and teiid quickstarts still contains explicit camel-core dependency even when using the starter, IIUC, camel-core dependency is redundant then...)	1	1	https://issues.jboss.org/browse/OSFUSE-295
5059	OSFUSE-290	Which part - adding user-supplied libs that are not Maven dependencies or specifically the SAP jars. If the latter, do we know where that filename check is that causes it to puke when adding the jar in the normal Maven way?	1	0	https://issues.jboss.org/browse/OSFUSE-290
5060	OSFUSE-289	Seems that if you change order of listed features, you can work around this. Can we make this work order, independent?	0	0	https://issues.jboss.org/browse/OSFUSE-289
5061	OSFUSE-277	We are in the process of migrating the old FIS 1.0 test suite to FIS 2.0 (spring boot conversion and updating the quickstarts). We can try to integrate them into the pipeline after we are done with the conversion and have them stabilised. Note however, that since our tests are mostly end-to-end tests, they require a properly configured OpenShift Enterprise environment. The best way of integrating our test suite with the build pipeline would probably be using the CI bus, so the tests would still run in our environment, but would be automatically launched by a CI bus event. (see https://mojo.redhat.com/docs/DOC-986839#jive_content_id_CI_Message_Hub , https://mojo.redhat.com/docs/DOC-948824 , https://mojo.redhat.com/docs/DOC-1023866)	1	1	https://issues.jboss.org/browse/OSFUSE-277
5062	OSFUSE-277	Marek, could you point us to git repo with a pipeline that we can use?	1	1	https://issues.jboss.org/browse/OSFUSE-277
5063	OSFUSE-276	What is in fabric8-annotations and fabric8-devops? Any concerns about supporting these?	0	0	https://issues.jboss.org/browse/OSFUSE-276
5064	OSFUSE-276	Can we just move the few annotations used by fabric8-arquillian to fabric8-arquillian?	1	1	https://issues.jboss.org/browse/OSFUSE-276
5065	OSFUSE-270	Hi [~chirino], looking at ER1 f-m-p. There's a few new additions to goal's mix. Can you please verify that everything should go to product? Already opened OSFUSE-414 for import goal. {code} Fabric8 Maven :: Plugin 3.1.80.fuse-000001 Fabric8 Maven :: Plugin This plugin has 17 goals: fabric8:apply Base class for goals which deploy the generated artifacts into the Kubernetes cluster fabric8:build Builds the docker images configured for this project via a Docker or S2I binary build. fabric8:debug Ensures that the current app has debug enabled, then opens the debug port so that you can debug the latest pod from your IDE fabric8:deploy This goal forks the install goal then applies the generated kubernetes resources to the current cluster. Note that the goals fabric8:resource and fabric8:build must be bound to the proper execution phases. fabric8:distro Generates a tarball of all the dependent kubernetes and openshift templates fabric8:help Display help information on fabric8-maven-plugin. Call mvn fabric8:help -Ddetail=true -Dgoal=<goal-name> to display parameter details. fabric8:import Imports the current project into fabric8 so that it can be automatically built via Jenkins and appears in the fabric8 developer console fabric8:log This goal tails the log of the most recent pod for the app that was deployed via fabric8:deploy To terminate the log hit Ctrl+C fabric8:push Uploads the built Docker images to a Docker registry fabric8:resource Generates or copies the Kubernetes JSON file and attaches it to the build so its installed and released to maven repositories like other build artifacts. fabric8:resource-apply This goal forks the compile goal then applies the generated kubernetes resources to the current cluster. Note that the fabric8:resource goal must be bound to the proper execution phases. fabric8:run This goal forks the install goal then applies the generated kubernetes resources to the current cluster, builds the images, waits for the new pod to start and tails it to the console. Pressing Ctrl+C will then terminate the application. You can think of this goal as like a combination of `fabric8:deploy`, `fabric8:logs` then `fabric8:undeploy` once you hit Ctrl+C Note that the goals fabric8:resource and fabric8:build must be bound to the proper execution phases. fabric8:start Starts the application that was previously created via fabric8:deploy and then stopped via fabric8:stop fabric8:stop Stops the application that was previously created via fabric8:deploy fabric8:undeploy Undeploys (deletes) the kubernetes resources generated by the current project. This goal is the opposite to the fabric8:run or fabric8:deploy goals. fabric8:watch Used to automatically rebuild Docker images and restart containers in case of updates. fabric8:watch-spring-boot Runs the remote spring boot application {code}	1	1	https://issues.jboss.org/browse/OSFUSE-270
5066	OSFUSE-266	Does fabric8 need Jetty and Zookeeper? Can these dependencies be removed?	1	1	https://issues.jboss.org/browse/OSFUSE-266
5067	OSFUSE-266	I've completed a first cut of this. The updated versions should show up on the next release. However, I spoke to Darren and it seems most of the redhat versions listed in the spreadsheet are not available in the usual Nexus repositories yet. So for now, I've got the build pipeline to plug in the equivalent community versions. Versions that I have not updated (yet): *Sundrio* - It's used to generate Maven BOMs and code for the Kubernets Client. Not something an end user will interact with. There's a bug which currently prevents the version used in the kubernetes-client project being updated. Darren was fine with leaving it as-is. *Jetty* - Do we really need to bump Jetty to 9.3? Can we not stick with 9.2? Camel compiled ok, but there were some strange test failures, which makes me nervous about other unforeseen changes that may go unnoticed.Why do we need to diverge from the version used in the community release?	1	1	https://issues.jboss.org/browse/OSFUSE-266

#	Requirement	Questions	Answered	Successfully Answered	URL
5068	OSFUSE-266	My main concern for jetty was the difference between the versions used by Camel and Fabric8 - 9.2.x vs 8.1.x. The redhat version was more of an advisory for the closest version that has been built internally. Are there any issues with Camel and Fabric8 using different jetty versions?	1	1	https://issues.jboss.org/browse/OSFUSE-266
5069	OSFUSE-265	Do we need to do this for the tech preview?	0	0	https://issues.jboss.org/browse/OSFUSE-265
5070	OSFUSE-265	Does this cover both the current 2.x CDK and the new 3.x version based on minishift?	0	0	https://issues.jboss.org/browse/OSFUSE-265
5071	OSFUSE-265	Did this get done? I think I saw that there were in CDK 3.	1	1	https://issues.jboss.org/browse/OSFUSE-265
5072	OSFUSE-260	Should this work already with the latest image (docker-registry.usersys.redhat.com/fabric8/fis-java-openshift:2.0 6ffda078502b), or do we need a rebuild?	0	0	https://issues.jboss.org/browse/OSFUSE-260
5073	OSFUSE-260	Doesn't seem to work with the current image (was working previously) Tried with both the current docker-registry.usersys.redhat.com/fabric8/fis-java-openshift:2.0 and the prod build ER2 image brew-pulp-docker01.web.prod.ext.phx2.redhat.com:8888/jboss-fuse-6/fis-java-openshift:2.0-0 getting {noformat} $ oc logs sti-sb-build-1-build -f Pulling image "brew-pulp-docker01.web.prod.ext.phx2.redhat.com:8888/jboss-fuse-6/fis-java-openshift:2.0-0" ... Pulling image "brew-pulp-docker01.web.prod.ext.phx2.redhat.com:8888/jboss-fuse-6/fis-java-openshift:2.0-0" ... Receiving source from STDIN as file sti-sb.jar ========== Starting S2I Java Build ..... 5074	OSFUSE-257	Is this for multi-module builds? If so, that would require more than just a directory name.	0	0	https://issues.jboss.org/browse/OSFUSE-257
5075	OSFUSE-257	Ok, which "auto generated" build configuration are you guys referring to exactly? What is it that generates them?	1	1	https://issues.jboss.org/browse/OSFUSE-257
5076	OSFUSE-245	Can this be closed now?	1	1	https://issues.jboss.org/browse/OSFUSE-245
5077	OSFUSE-243	[~maschmid], I just added these to the known issues in the Release Notes. I tweaked the text of the last issue as follows: {quote} The Java runtime does not respect the container's memory limits and this can be a problem, because OpenShift will kill a container that tries to allocate memory over the container limit. This problem can be mitigated by customizing the ratio of available memory for Java heap space using the `JAVA_MAX_MEM_RATIO` option. By default, FIS images are configured to allocate half the available memory for Java heap space, but the ideal ratio is application-specific. {quote} Does that make sense?	1	1	https://issues.jboss.org/browse/OSFUSE-243
5078	OSFUSE-243	Can this be closed now?	1	1	https://issues.jboss.org/browse/OSFUSE-243
5079	OSFUSE-233	What's the forge command to do this?	1	1	https://issues.jboss.org/browse/OSFUSE-233
5080	OSFUSE-233	Can you demo this on call on Friday? [~kcbabo] [~chirino] Do we want to make this default approach in quickstarts, doc etc? Seem much more user friendly.	1	0	https://issues.jboss.org/browse/OSFUSE-233
5081	OSFUSE-231	This includes version aligning to the Fuse 6.3 redhat ER versions.	1	1	https://issues.jboss.org/browse/OSFUSE-231
5082	OSFUSE-226	Hi, I've seen tried your camel-amq quickstart with Spring Boot. There's some problem during starting the context and the work directory is not created. Resulting in periodical exception from timer route. {code} 2016-06-28 13:56:11.070 INFO 1 --- [main] o.a.c.impl.DefaultStreamCachingStrategy : StreamCaching in use with spool directory: /tmp/camel/camel-tmp-ff956b99-a1a6-4756-b8d1-c245527ea793 and rules: [Spool > 128K body size] 2016-06-28 13:56:11.115 WARN 1 --- [main] o.a.camel.component.file.FileEndpoint : Cannot auto create starting directory: work/jms/input {code}	0	0	https://issues.jboss.org/browse/OSFUSE-226
5083	OSFUSE-226	It's very strange, I double checked it and cannot experience the problem. I tested the following scenarios: - running the "main" from the IDE - using the spring-boot maven plugin "spring-boot:run" from cmd - deploying to openshift using -Pf8-local-deploy - generating a sample project using the archetype and deploying it to openshift using -Pf8-local-deploy In every case, I did not have any issue and the directory structure is created normally. Can you provide me with more details about the environment you are using? The creation of files is not mandatory for this quickstart, it was inherited from the karaf example...	0	0	https://issues.jboss.org/browse/OSFUSE-226
5084	OSFUSE-221	[~rhuss], do you have any example projects using the fabric8 mvn plugin /w binary builds?	1	1	https://issues.jboss.org/browse/OSFUSE-221
5085	OSFUSE-221	[~rhuss] I tried building git@github.com:fabric8-quickstarts/spring-boot-camel.git with -Dfabric8.mode=openshift, but the os build failed with: {code} The value of ALLOWED_UIDS is [] The value of DROP_CAPS is [] Creating a new S2I builder with build config: "Builder Image:\t\t\tfabric8/java-alpine-openjdk8-jdk\nSource:\t\t\t\tfile:///tmp/s2i-build826140978/upload/src\nOutput Image Tag:\t\tdefault/spring-boot-camel-1:fcbf8f88\nEnvironment:\t\t\tOPENSHIFT_BUILD_NAME=spring-boot-camel-1,OPENSHIFT_BUILD_NAMESPACE=default\nIncremental Build:\t\tdisabled\nRemove Old Build:\t\tdisabled\nBuilder Pull Policy:\t\tif-not-present\nPrevious Image Pull Policy:\talways\nQuiet:\t\t\tdisabled\nLayered Build:\t\t\tdisabled\nWorkdir:\t\t\t/tmp/s2i-build826140978\nDocker NetworkMode:\t\tcontainer:3b51bbfdb796264e54e3859a862b09549e84b3b2e8f0a966754f68f029934c11\nDocker Endpoint:\t\tunix:///var/run/docker.sock\n" warning: Image does not contain a value for the io.openshift.s2i.scripts-url label Receiving source from STDIN as archive ... error: build error: failed to install [assemble run] {code} Are you planning to S2I enable the fabric8/java-alpine-openjdk8-jdk image? If not then we need an easy way to switch the base builder image that the fabric8 plugin defaults to.	1	1	https://issues.jboss.org/browse/OSFUSE-221
5086	OSFUSE-221	Have you removed the build config from the previous run (if running f-m-p [3.1.11, otherwise it will be automatically updated ? Otherwise it will reuse the old one (which points to a Docker image). Your best bet is {{-Dfabric8.build.recreate=all}} (see also docs). However, if you are using the latest f-m-p then the buildconfig should be automatically updated when you change the buildStrategy (e.g.from docker --] s2i). Which version are you using ? 3.1.11 is the latest.	1	1	https://issues.jboss.org/browse/OSFUSE-221
5087	OSFUSE-221	We could change the generator that it looks up a property from a resource property file for the default value, so that we can have different resource property files for the different branches of f-m-p (master and redhat branch have different prop fils with different base images). Could this be a solution ? In that case it would be backed into f-m-p and should refer not to a specific version (but 'latest' or a major version like '2' which constantly is moved along when new base images are created). So the switch would not be in the quickstart but in f-m-p directly.	1	1	https://issues.jboss.org/browse/OSFUSE-221

#	Requirement	Questions	Answered	Successfully Answered	URL
5088	OSFUSE-221	Verified that s2i karaf builds work with the last change to s2i scripts. The s2i build commands to test with {{jboss-fuse-camel-log}} were: {code} mvn clean install -Dfabric8.generator.karaf.from=fabric8/s2i-karaf -Dfabric8.mode=openshift -Dfabric8.build.recreate=all oc new-app --image-stream=jboss-fuse-camel-log {code} Note the following: * The _fabric8_ options had to be specified. I thought there were being defaulted. Will check in the f-m-p generator to see what's going on. * The new-app command was required to deploy the image stream generated by the f-m-p. [~pirx] any specific reason why the f-m-p didn't create the deployment config? Does it have to do with the f8 ci/cd workflow from fabric8 forge? The s2i script is working, and the resultant image contains an extracted Karaf container, which will be useful for debugging the image.	0	0	https://issues.jboss.org/browse/OSFUSE-221
5089	OSFUSE-218	[~fbolton] Should this be reassigned to some one in doc team? Do you have all the info you need?	1	1	https://issues.jboss.org/browse/OSFUSE-218
5090	OSFUSE-217	3.2.16.RELEASE --> 4.2.5.RELEASE (for all modules) - fixed log configuration to use spring-boot defaults (slf4j with logback) - fixed test dependencies on camel-spring3-test to camel-spring-test (needed to run unit tests with the correct spring version) - hacks to overcome https://issues.apache.org/jira/browse/CAMEL-10060 (they are needed in order to run unit tests in a fat-jar, not needed in production) Packaging: - module packaged in a spring-boot fat-jar - additional dependencies included in the fat jar (and transitive dependencies): -- camel-spring-boot-starter -- camel-core-xml -- shrinkwrap-api -- shrinkwrap-impl-base -- junit - test classes and resource left on file system and included in classpath Dependency Management: - camel dependency management only I've done some tests with spring-boot dependencies first, then camel ones. The result is a different "downgrading" maven hell (eg. camel components requiring Jetty 8, while spring-boot brings Jetty 9). As conclusion: when the dependency management is inverted, different problems arise, but a solution can, of course, be found (except for components included in point 4). 1) The following components are not supposed to work with Spring-Boot: camel-blueprint: it's OSGi-related. camel-cdi: afaik, CDI is not supposed to be used in Spring (while Spring beans can be used in a CDI container). camel-eventadmin: it's OSGi-related. camel-jibx: known compatibility issues with JDK 8, and we don't have S2I images with JDK 7. The only way to make it work with JDK 8 seems to be including a SNAPSHOT lib (BCEL-6.0-SNAPSHOT). camel-paxlogging: it's OSGi-related. 2) The following components work with some lib version hacks: camel-ahcws: Including optional libs grizzly-websockets and connection-pool (bom version). If not included, many unit tests *assertions* fail. camel-cassandraql: Set netty-all version at 4.0.27.Final, Removed dependecies com.codahale.metrics:*, Added io.dropwizard.metrics:metrics-core:3.1.0 camel-jclouds: Downgraded guice 4.0 --> 3.0 and guava 19.0 --> 17.0 camel-jcr: Downgraded lucene-core 5.4.1 --> 3.6.2.redhat-8 camel-mongodb: Added spring-data-mongodb v. 1.9.2.RELEASE camel-mongodb-gridfs: Added spring-data-mongodb v. 1.9.2.RELEASE camel-olingo2: Upgraded javax.ws.rs-api 2.0-m10 --> 2.0.1 camel-servlet: Added spring-boot-starter-web v. 1.3.3.RELEASE, upgraded spring-web to 4.2.5.RELEASE camel-spring-redis: Upgraded spring-data-redis 1.3.4.RELEASE --> 1.6.4.RELEASE camel-spring-ws: Added spring-boot-starter-web v. 1.3.3.RELEASE, upgraded spring-webmvc to 4.2.5.RELEASE camel-swagger (deprecated): Scala 2.11.7 --> Scala 2.10.4 3) the following components require a more sophisticated hack: camel-jpa --> The component has some classes marked as @Entity both in the test folder and in the main folder (eg. JpaTraceEventMessage or MessageProcessed, required to create an idempotent JPA consumer), but maven is configured to post-process only the test folder, so classes in the main folder are not "enhanced" at compile time. To enhance entity classes at runtime with OpenJPA, afaik, we need to pass a "javaagent:" configuration in the launch script, specifying the openjpa agent jar. So, the images at https://github.com/fabric8io-images/s2i/tree/master/java should be modified to download such agent and we need to provide at least a quickstart that uses the JAVA_AGENT or JAVA_OPTIONS property to include the openJPA agent. Why does it work when running tests in surefire or Idea? Don't know, but the integration test uses the "installed" artifact and classes included there are not enhanced. If the "main" classes are not enhanced, the error thrown at runtime is: org.apache.openjpa.persistence.ArgumentException: This configuration disallows runtime optimization, but the following listed types were not enhanced at build time or at class load time with a javaagent: " org.apache.camel.processor.interceptor.jpa.JpaTraceEventMessage" camel-ejb --> In theory, it can work in Spring, but the unit tests fail. *** Need to create a sample application *** camel-jgroups --> There are 5 Unit tests failing in surefire, IntelliJ-Idea and spring-boot integration tests. 4) The following components (most likely) will not work: camel-optaplanner --> Requires an old logback version 1.0.x, as it depends (internally, it doesn't have a logback.xml file) on a removed class:	1	1	https://issues.jboss.org/browse/OSFUSE-217

#	Requirement	Questions	Answered	Successfully Answered	URL
5091	OSFUSE-217	providing the wrong logback libraries. I've also run the full integration test again to check all other modules. *camel-spark* The logging problem can be solved by excluding log4j:apache-log4j-extras (imported by Hive), a library that ideally should provide additional appenders for log4j, but actually is a log4j replacement, as it embeds log4j classes, and they replace the ones in the slf4j bridge at runtime (goodbye OSGi, welcome Maven hell). So it's a standard logging problem (like the others that I have ignored because a simple workaround exists). *But Spark has some other issues, see point 2.1.* *1.1)* The following components are not supposed to work with Spring-Boot: camel-blueprint: it's OSGi-related. camel-cdi: afaik, CDI is not supposed to be used in Spring (while Spring beans can be used in a CDI container). camel-ejb: ejbs are not well suited to run in spring-boot. camel-eventadmin: it's OSGi-related. camel-paxlogging: it's OSGi-related. *1.2)* Modules that have known compatibility issues with JDK 8 (we don't have S2I images with JDK 7): camel-jibx: the only way to make it work with JDK 8 seems to be including a SNAPSHOT lib (BCEL-6.0-SNAPSHOT). *2.1)* These components are affected by a problem with dependency management. When a component requires a specific version of a library, different from the one specified in the *camel-parent* project, maven simply ignores it. The reason is that the *user* application pom should also import the dependency management from camel-parent, so Maven takes in consideration that version, ignoring the one required by the module (transitively). So, in order to make the following modules work, versions must be *overriden again* in the user application pom. camel-jclouds: guice 4.0 --> 3.0 and guava 19.0 --> 17.0 camel-jcr: lucene-core 5.4.1 --> 3.6.2.redhat-8 camel-spark: jackson-core, jackson-databind, jackson-annotations 2.6.3 --> 2.4.5 camel-swagger (deprecated): scala 2.11.7 --> scala 2.10.4 *2.2)* The following components have dependency issues like the ones in 2.1, but they are not related to transitive imports: camel-cassandraql: Set netty-all version at 4.0.27.Final, Removed dependecies com.codahale.metrics:*, Added io.dropwizard.metrics:metrics-core:3.1.0 camel-mongodb: Added spring-data-mongodb v. 1.9.2.RELEASE (because of a spring-boot issue fixed in 1.3.6.RELEASE) camel-mongodb-gridfs: Added spring-data-mongodb v. 1.9.2.RELEASE (because of a spring-boot issue fixed in 1.3.6.RELEASE) camel-servlet: Added spring-boot-starter-web v. 1.3.3.RELEASE, upgraded spring-web to 4.2.5.RELEASE camel-spring-redis: Upgraded spring-data-redis 1.3.4.RELEASE --> 1.6.4.RELEASE camel-spring-ws: Added spring-boot-starter-web v. 1.3.3.RELEASE, upgraded spring-webmvc to 4.2.5.RELEASE *3)* the following components require a more sophisticated hack: camel-jpa --> The component has some classes marked as @Entity both in the test folder and in the main folder (eg. JpaTraceEventMessage or MessageProcessed, required to create an idempotent JPA consumer), but maven is configured to post-process only the test folder, so classes in the main folder are not "enhanced" at compile time. To enhance entity classes at runtime with OpenJPA, afaik, we need to pass a "javaagent:" configuration in the launch script, specifying the openjpa agent jar. So, the images at https://github.com/fabric8io-images/s2i/tree/master/java should be modified to download such agent and we need to provide at least a quickstart that uses the JAVA_AGENT or JAVA_OPTIONS property to include the openJPA agent. Why does it work when running tests in surefire or Idea? Don't know, but the integration test uses the "installed" artifact and classes included there are not enhanced. If the "main" classes are not enhanced, the error thrown at runtime is: org.apache.openjpa.persistence.ArgumentException: This configuration disallows runtime optimization, but the following listed types were not enhanced at build time or at class load time with a javaagent: " org.apache.camel.processor.interceptor.jpa.JpaTraceEventMessage" camel-jgroups --> There are 5 Unit tests failing in surefire, IntelliJ-Idea and spring-boot integration tests. *4)* The following components are deprecated, so it's preferable not using them: camel-gae camel-ibatis camel-javaspace camel-jetty8 camel-kestrel camel-mina (tests failing, but we have a mina2 component, so I didn't check it) camel-	1	1	https://issues.jboss.org/browse/OSFUSE-217
5092	OSFUSE-213	Do you also need a datasource component? That is a component which is used when you call getConnection on a database or message broker that results in XAResource enlistment with the Transaction Manager.	1	1	https://issues.jboss.org/browse/OSFUSE-213
5093	OSFUSE-213	Are there any other specific use cases for this feature? (is it only about having a supportable transaction manager (narayana) with camel, or does it also enable any new use cases?) (should QE just verify existing functionality doesn't break with different TM, or are there any new use cases to cover with narayana?)	0	0	https://issues.jboss.org/browse/OSFUSE-213
5094	OSFUSE-213	[~nibbio84], In our last call you mention you think every thing should just works with exiting FIS 2.0 bits for the simple, non-scaled case with an attached PV. Could you validate and comment on this issue the list all the restrictions you would place around supporting that case?	1	0	https://issues.jboss.org/browse/OSFUSE-213
5095	OSFUSE-213	The standard Narayana service available on spring-boot 1.4.1 allows to configure automatically a transaction manager and recovery manager using a file system based transaction log. For a single pod, the location of the transaction log can be set using the 'spring.jta.log-dir' property to a mounted PV. The 'spring.jta.transaction-manager-id' should be set to a fixed value (e.g. '1', and not to the host name as in the "scalable" scenario). In this scenario, the transaction manager id should not change on pod restart. Openshift guarantees that only one pod is running for a given deployment config, but there are some situations where a pod may be considered "dead", allowing Openshift to create another pod. This results in a total of 2 pods running for the same deployment config, and it is a problem, since you'll have 2 recovery managers active for the same transaction manager id ('1'), and this is not allowed by Narayana. One common scenario where this can happen is when the node hosting the pod loses contact with the Openshift master (think to a network partition). After a given timeout, Openshift declares the node disconnected and the pod deleted, but the pod may be still running on that node. To avoid such situation, you need to do some "fencing" actions on the lost pod. Openshift does not currently support fencing (although it is in the roadmap). A working way to do fencing and avoid write concurrency between multiple recovery managers should be: # Using a RWO persistent volume # Use a storage provider that support native locking, to allow only one pod to mount the volume at time This way, even if two pods are active, only one is allowed to see the transaction log (and so, only one recovery manager should be able to recover transactions). Afaik RWO only is not sufficient, as Openshift does not implement any constraint if the storage provider does not have native locking. I've not investigated which providers/configurations provide these guarantees, but there should exist some good combination. Does it make sense?	0	0	https://issues.jboss.org/browse/OSFUSE-213
5096	OSFUSE-211	Is it evolving due to changes in the Kubernetes API itself or for other reasons? One way I've seen that handled in the past is to include the version number in the package name for your classes/interfaces. I wouldn't recommend it for something that is changing constantly though.	0	0	https://issues.jboss.org/browse/OSFUSE-211
5097	OSFUSE-211	Do we have a list of FIS artifacts / packages for which we do want to guarantee API compatibility?	0	0	https://issues.jboss.org/browse/OSFUSE-211
5098	OSFUSE-210	Does this layer on top of EP image from CE team?	1	0	https://issues.jboss.org/browse/OSFUSE-210
5099	OSFUSE-207	[~kcbabo] Hi Keith, can you clarify what you had in mind here?	1	1	https://issues.jboss.org/browse/OSFUSE-207
5100	OSFUSE-177	We're hoping there won't be a next build for GA. This does not look like a critical issue - can it come in the next update post-release?	0	0	https://issues.jboss.org/browse/OSFUSE-177
5101	OSFUSE-173	CR1 should be a release candidate, so all the image versions in pom.xml and templates should be whatever we expect to be the final GA name and versions. Will the released GA images be 1.0-7 ? Also, the templates should be updated as well. Currently there is still BUILDER_VERSION set to 1.2.5 in https://github.com/fabric8io/ipaas-quickstarts/blob/redhat/quickstart/cdi/cxf/quickstart-template.json#L41 , which is suspicious.	1	1	https://issues.jboss.org/browse/OSFUSE-173
5102	OSFUSE-173	Good point. I will set then version to 1.0-10 (which doesn't exist yet. is this a problem for testing ?) and the release this image version when going GA (when will this be ?) I'll also update the templates accordingly	1	1	https://issues.jboss.org/browse/OSFUSE-173

#	Requirement	Questions	Answered	Successfully Answered	URL
5103	OSFUSE-173	I wonder whether the final images that will be available via registry.access.redhat.com really need to have the same version tag as the ones we currently use? Can they just be retagged during the process of shipping the images to registry.access.redhat.com? (So they would end up with some nice version like 1.2 or something to align them versions with the other xPaaS images?)	1	1	https://issues.jboss.org/browse/OSFUSE-173
5104	OSFUSE-173	[~maschmid], I can change the image streams to use the 1.0-10 tag. Not sure whether/how the 1.0 stream corresponds to the docker tag version though. [~kconner], can you help us and explain how the OSBS stream and tag versions work for image streams?	1	1	https://issues.jboss.org/browse/OSFUSE-173
5105	OSFUSE-168	None. Would it fix OSFUSE-166 ?	1	1	https://issues.jboss.org/browse/OSFUSE-168
5106	OSFUSE-168	Would it really fix OSFUSE-166? (I would expect the transitive dependency to still be the same, it would just not be explicitly mentioned in our repository...)	0	0	https://issues.jboss.org/browse/OSFUSE-168
5107	OSFUSE-168	[~iocanel] this is now an old thread and in the meantime the _fabric8_project_bom_full_ has been used by _function_ and _portswizzler_ (an also by a CDI quickstart). Do you think that projects can be converted to use the platform bom?	1	1	https://issues.jboss.org/browse/OSFUSE-168
5108	OSFUSE-162	[~maschmid] Not sure I get the need for annotation processors here. Probes can be defined via the fabric8-maven-plugin configuration. Would this satisfy the requirement?	1	1	https://issues.jboss.org/browse/OSFUSE-162
5109	OSFUSE-149	[~janstey] wonder if you know how those -redhat builds of fabric8 works. Do you need to manually keep those camel/amq versions up to date yourself?	1	1	https://issues.jboss.org/browse/OSFUSE-149
5110	OSFUSE-144	Given then we will use different dependencies for spring boot (camel 2.18) and Karaf (Fuse 6.3), how many BOMs should we have in FIS? I guess we need * A single BOM file for spring boot + productized camel 2.18 + fabric8 stuff * A separate BOM with only the fabric8 stuff to be used with a Fuse 6.3 BOM for Karaf correct?	1	1	https://issues.jboss.org/browse/OSFUSE-144
5111	OSFUSE-143	I just checked the Fuse distribution and confirmed what Ioannis is seeing - Fuse uses 1.11. Is there a reason why we can't use that version? Agree with Nick's original comment that we need to sync on one version within Fuse Integration Services.	1	1	https://issues.jboss.org/browse/OSFUSE-143
5112	OSFUSE-143	So should we use 1.15 version for FIS ?	0	0	https://issues.jboss.org/browse/OSFUSE-143
5113	OSFUSE-142	What about https://github.com/fabric8io/fabric8/blob/redhat/pom.xml#L161 ?	1	1	https://issues.jboss.org/browse/OSFUSE-142
5114	OSFUSE-136	[~kcbabo], we can do this, but it would add a dependency on {{jboss-image-streams.json}} or {{xpaas-streams}} such that users have to install that template before they can use any of the quickstart templates. Need PM guidance on this. Also, [~chirino], what do you think?	1	1	https://issues.jboss.org/browse/OSFUSE-136
5115	OSFUSE-136	Is there any PR yet to put these into the ansible installer? https://github.com/openshift/openshift-ansible	1	1	https://issues.jboss.org/browse/OSFUSE-136
5116	OSFUSE-118	* Isn't ARTIFACT_DIR the final directory ? The MAVEN_BUILD_DIR is more specific as it points to the, well, maven build dir from where artefacts are copied to the target dir. Since we have all maven relevant configurations all prefixed with MAVEN_ it would make sense to keep that. But we could add ARTIFACT_DIR as alternative configuration to MAVEN_BUID_DIR (if it means the same, didn't check that yet) * The decision was not to allow the usage of a simplified mirror or proxy configuration, but to put that into the project to build so support for that is the responsibility of the project, not of the builder image. Please ask [~dbokde] and [~chirino] for a more detailed reasoning about this. * The difference between $MAVEN_ARGS and $MAVEN_EXTRA_ARGS are, that $MAVEN_ARGS overwrites the default (which doesn't make sense often, since e.g. certain plugins need to be called), $MAVEN_EXTRA_ARGS adds to the default instead of overwriting it, so it has some value. Since this is maybe only a minor difference, we could remove that, if decided. * Could you please elaborate on the point with the binary deployments ? Didn't get this, sorry. * We avoid /home/jboss because of certain permission problems when running under OpenShift. * Deleting the artifacts makes sense if you don't need incremental builds but want your images small (i.e. without a populate maven repository). remember, the image layer is checked in only after the assemble script has been finished. So that's also an extra feature. * BUILD_LOG_LEVEL support (i.e. setting 'set -x') could be added to karaf, right. will do that.	1	1	https://issues.jboss.org/browse/OSFUSE-118
5117	OSFUSE-118	Agreed that this shouldn't be a lonely decision (so what I stated above also solely expresses my personal opinion and mentions the decisions taken so fa ;-) * Ok I see the point. I wouln't mind to switch to ARTIFACT_DIR, too (maintaining two vars in parallel doesn't make sense probably) * Good point with MAVEN_ARGS_APPEND. If there are no objections I would change to this, too. * binary deployments: I see your point, that could be easily changed, too. * Are you sure that /tmp is not part of the commited image after the bulld ? My experience is that the complete source dir below /tmp is still there after the s2i build has finished and the pod is run from the then comitted image. * BUILD_LOG_LEVEL: Here I have the opposite opinion: BUILD_LOG_LEVEL is already used by s2i (and set when --log-level=5 is given for s2i or oc new-app), so why not hook into this s2i intrinsic mechanism to provide debug info on the finest grained log level ? btw, just remarked that is should be called BUILD_LOGLEVEL, so I will fix that (ref: https://docs.openshift.com/enterprise/3.0/dev_guide/builds.html#accessing-build-logs). This can also helps in (a) using the images and more importantly in (b) issue reports against the images.	1	1	https://issues.jboss.org/browse/OSFUSE-118
5118	OSFUSE-118	We don't currently use MAVEN_ARGS_APPEND nor MAVEN_CLEAR_REPO in the CE images, can you provide a link to the MAVEN_ARGS_APPEND modifications? I don't believe there will be a problem in adding them both. I'm not sure why we copy the source to the home directory but will find out, there doesn't appear to be any reason for it that I can determine.	0	0	https://issues.jboss.org/browse/OSFUSE-118
5119	OSFUSE-118	CE will use configuration/settings.xml for the location of the settings.xml (and not .m2/settings.xml as we do) --> https://gitlab.mw.lab.eng.bos.redhat.com/cloudenablement/jboss-dockerfiles/merge_requests/469 Should we do align our image (and then quickstarts), too ?	1	1	https://issues.jboss.org/browse/OSFUSE-118
5120	OSFUSE-109	Would it help, if I add an option e.g. '--probeRead <host>:<port>:<mBeanName>:<attribute>' to the JVM agent which: * Binds to the given IP and port (localhost:9779 in our case) * Allows only READ access to the given MBean and attribute That would be *safe* and *simple*, but maybe too simple as it couples the specific OS livenessCheck of how the image is started (i.e. a corresponding environment variable must be set for the image, too). Any opinion on this ? Would this be sufficient ? My goal is to have it as simple as possible on the Jolokia configuration side, since the number of available configuration options are already overwhelming.	1	1	https://issues.jboss.org/browse/OSFUSE-109
5121	OSFUSE-101	The fabric8-cdi is also able to inject a service via querying the k8s API if the environment variable doesn't exist (e.g. if the "injectee" service has been created after the "injector" has been deployed) Should this work also with the camel {noformat}{{service:name}}{noformat} ? Where does the {noformat}{{service:name}}{noformat} feature come from? Is it a camel core feature, or does it require a specific fabric8 bundle to be present?	0	0	https://issues.jboss.org/browse/OSFUSE-101
5122	OSFUSE-101	So, considering that we have the CDI+Camel and Karaf system properties support for accessing k8s service injection, can we mark this as a non-issue?	1	1	https://issues.jboss.org/browse/OSFUSE-101

#	Requirement	Questions	Answered	Successfully Answered	URL
5123	OSFUSE-90	[~dbokde] [~kconner] As mentioned previously, 3.0.5 is not good enough for the quickstarts (we need at least 3.2). How can we solve this ? Isn't there a newer, productised Maven version ? Any ideas ?	1	1	https://issues.jboss.org/browse/OSFUSE-90
5124	OSFUSE-81	From IRC {noformat} [11:08:23] <ro14nd> dsimansk: need some help to understand the issue :) so, the productised image fabric8/s2i-java-rhel will eventually in a registry registry.access.redhat.com ? [11:08:41] <dsimansk> ro14nd: yes [11:08:56] <ro14nd> but why are non-rhel user are supposed to access this image ? [11:09:26] <ro14nd> isn't fabric8/s2i-java targeted for them ? [11:10:03] <ro14nd> (which is available also on docker hub, the 'community' image) [11:10:44] <dsimansk> ro14nd: I would expect something like developers within the company not using rhel on their laptops etc. [11:11:28] <dsimansk> ro14nd: the thing is that fabric/s2i images can be used localy with docker plugin [11:11:42] <dsimansk> ro14nd: which is not the case for other products [11:11:56] <dsimansk> ro14nd: so I'm not sure how to tackle it actually :) [11:12:53] <ro14nd> ok, only on a rhel docker daemon, this registry is registered as a default registry. any other docker installation (fedora, docker) requires explicit qualified registries (as part of the same). Is this correct ? [11:13:04] <ro14nd> s/same/name/ [11:13:27] <dsimansk> ro14nd: yes [11:14:39] <ro14nd> what you can do is a 'mvn package docker:build -Pdocker.registry=registry.access.redhat.com' on such systems. [11:14:54] <dsimansk> ro14nd: sure [11:15:11] <dsimansk> ro14nd: so maybe mentioning it in documentation is enough [11:15:24] <ro14nd> this will transparently pull the base image from this registry and retags it locally to fabric8/s2i-java-rhel (hope so ;-) [11:15:34] <ro14nd> yeah, but I have no idea what documentation ;-) [11:16:10] <dsimansk> ro14nd: once there will be product docs rewritten from upstream, I hope :) [11:17:07] <ro14nd> We could put it into the README of the quickstart's redhat branch, but this will end up on github, too (which is probably not so nice because of internal information ?) [11:17:58] <dsimansk> ro14nd: hmm, I believe registry.access.redhat.com is public information [11:18:06] <ro14nd> Also, this '-Ddocker.registry=...' won't currently work if you do docker:build (which needs to pull the base image) and docker:push (which pushes the quickstart image to openshift) in the same step (e.g. with [11:18:14] <dsimansk> ro14nd: well at least you can't access it without subscription [11:18:16] <ro14nd> 'mvn -Pf8-deploy' [11:19:26] <ro14nd> haven't tested this use case (base image from other registry as the one the built image should pushed to) yet. I'll need probably a second configuration property for that so that both registries could be specified. [11:20:53] aileenc (~aileenc@vpn1-6-192.ams2.redhat.com) left IRC (Ping timeout: 612 seconds) [11:20:58] <ro14nd> dsimansk: ok, I'll update the issue to update the README documentation (but won't be able to do it on my own since i'll be on pto next week ...) {noformat}	0	0	https://issues.jboss.org/browse/OSFUSE-81
5125	OSFUSE-81	I can't seem to find the right value for -Ddocker.from for the productized images. Even falling back to "docker pull" with just the qualified image name fails for me: {code} docker pull fabric8-registry.usersys.redhat.com:5000/fabric8/s2i-java-rhel:1.2.0 {code} What am I screwing up here?	1	1	https://issues.jboss.org/browse/OSFUSE-81
5126	OSFUSE-81	Do you have fabric8-registry defined in insecured registries for docker deamon? It has to be with port also.	1	0	https://issues.jboss.org/browse/OSFUSE-81
5127	OSFUSE-77	Hi Marek, I thought about providing templates like you describe, but users would first have to use an archetype to generate a project then add it to a git repo before they could use it. As I have configured them now, users can directly point to the templates in GitHub like so: {code} oc create -f https://github.com/fabric8io/ipaas-quickstarts/blob/redhat/quickstart/cdi/camel/quickstart-template.json {code} I know we are not distributing the source, but it's not like users won't discover where the source lives in GitHub. Also, I agree that the templates are quite similar, but there are enough differences in parameter values between quickstarts to have a template per module. If we want to provide generic templates, we'll have to come up with a way to distribute them. One option could be to use a separate maven module for templates, and deploy the xml files in maven with a custom classifier, like openshift-template or something. Do you know how other RedHat projects are distributing theirs other than GitHub?	1	1	https://issues.jboss.org/browse/OSFUSE-77
5128	OSFUSE-77	Should the templates be present in the latest DR build in the archetypes already? (2.2.0.redhat-058) They don't seeem to be there in the archetypes, so I wonder if the templates commit antecedes the build tag, or if there might be some bug in the archetype assembly filter that skips the .json files.	1	1	https://issues.jboss.org/browse/OSFUSE-77
5129	OSFUSE-73	Can we remove this dependency?	0	0	https://issues.jboss.org/browse/OSFUSE-73
5130	OSFUSE-73	What are our options? Do we need to productise devops or can we move the functionality that ApiMan needs over into one of the projects that we are already productising?	0	0	https://issues.jboss.org/browse/OSFUSE-73
5131	OSFUSE-72	[~ceposta], can you check the file {{target/assembly/etc/org.ops4j.pax.logging.cfg}} to make sure it has the line: {code} # Root logger log4j.rootLogger=INFO, out, osgi:* {code} I actually do not see a difference in that file between plugin version 4.0.2 and 4.0.1, and version 4.0.2 seems to be logging correctly. Note that karaf s2i builder redirects the log output to {{stdout}} after extracting the assembly for the app docker image.	1	1	https://issues.jboss.org/browse/OSFUSE-72
5132	OSFUSE-72	[~dbokde] this seems fixed in 4.0.3 , should we close this jira ?	1	1	https://issues.jboss.org/browse/OSFUSE-72
5133	OSFUSE-69	Yep, the Karaf 4 plugin is released with the OS Fuse build. Branch is at https://github.com/jboss-fuse/karaf/tree/4.0.x.redhat-6-2-x-patch. [~davsclaus] where did you see that error?	1	1	https://issues.jboss.org/browse/OSFUSE-69
5134	OSFUSE-66	[~kcbabo] How important is this for 1st release?	0	0	https://issues.jboss.org/browse/OSFUSE-66
5135	OSFUSE-61	I guess the question is what is the point of having the MAVEN_MODULE in the first place? IMHO the point of MAVEN_MODULE should be to have an easy way of defining a specific submodule of a multi-module project as the thing that gets deployed. The mechanism doesn't need to be perfect and it can operate under a set of reasonable (and documented) constraints (such as directory names must match artifactIds, etc...) Perhaps instead of MAVEN_MODULE being the maven coordinates, it could instead mean the subdirectory of a multi-module project? Getting the maven coordinates from the given pom.xml would perhaps be easier than the other way around? (to consturct -pl argument) Having to specify both MAVEN_MODULE and OUTPUT_DIR will probably be OK too, however it does feel like a DRY violation (repeating same information twice)	0	0	https://issues.jboss.org/browse/OSFUSE-61
5136	OSFUSE-61	In the wild, this is rarely the case that artefactId and directory name correspond, especially not for multi module builds with many modules. These are typically grouped into other directory levels (e.g. the quickstarts project mentioned above). These extra directory levels are impossible to guess. The only authorative instance who can answer the question which Maven project belongs to which directory is the Maven reactor, which is queried with the call above. I suggest to use the mvn call above, and use the detected base directory if it exists. If not, the build will exit with an error message that the OUTPUT_DIR should be specified explicitely. wdyt ?	1	1	https://issues.jboss.org/browse/OSFUSE-61

#	Requirement	Questions	Answered	Successfully Answered	URL
5137	OSFUSE-53	There is a bunch of components at https://github.com/fabric8io/fabric8/tree/master/components Some of those should be disabled/not supported in OSFUSE. Could we come up with a list for that?	0	0	https://issues.jboss.org/browse/OSFUSE-53
5138	OSFUSE-53	[~iocanel] you have disabled some more. Are there anymore left or should we be good? https://github.com/fabric8io/fabric8/blob/redhat/components/pom.xml Ah you haven't disabled the devops stuff. Also [~rajdavies] should all of ActiveMQ/MQ be disabled as well? There is a mq module https://github.com/fabric8io/fabric8/blob/redhat/components/pom.xml#L53	0	0	https://issues.jboss.org/browse/OSFUSE-53
5139	OSFUSE-48	DR3 is ready now. * Which image should be used for "Java" applications using fabric8 workflow? * Which image should be used for "Karaf" applications using fabric8 workflow? * Which image should be used for "Java" applications using S2I workflow? * Which image should be used for "Karaf" applications using S2I workflow? * Is there any other image to be tested with DR3? (API Registry?, APIMan?, any other image that is planned but not done yet for this release 3.1 ?)	1	1	https://issues.jboss.org/browse/OSFUSE-48
5140	OSFUSE-48	Just found an issue in fabric8/sti-java-jboss-jdk8:1.0.12. Could you please test fabric8/sti-java-jboss-jdk8:1.0.13 ?	0	0	https://issues.jboss.org/browse/OSFUSE-48
5141	OSFUSE-48	Was java image pushed already too? I'm getting not found message. However, karaf image is present in the registry with 1.2.1 tag. {code} $ docker pull fabric8-registry.usersys.redhat.com:5000/fabric8/s2i-java-rhel:1.2.1 Trying to pull repository fabric8-registry.usersys.redhat.com:5000/fabric8/s2i-java-rhel ... not found Tag 1.2.1 not found in repository fabric8-registry.usersys.redhat.com:5000/fabric8/s2i-java-rhel {code}	0	0	https://issues.jboss.org/browse/OSFUSE-48
5142	OSFUSE-45	[~aileenc] [~chirino] - should the Fuse BOM manage dependency versions for Karaf?	1	1	https://issues.jboss.org/browse/OSFUSE-45
5143	OSFUSE-45	Is there anything more needs to be done for this?	0	0	https://issues.jboss.org/browse/OSFUSE-45
5144	OSFUSE-39	[~djcoleman] Are you familiar with this? Would it be useful for Fuse 7?	1	0	https://issues.jboss.org/browse/OSFUSE-39
5145	OSFUSE-33	I agree that for real world setup a fabric8.imagePullPolicySnapshot with 'Always' is absolutely useful. However, for a quick win when people are using the image with a local (meaning single node, possibly Vagrant based setup) this will require an otherwise unnecessary push to the OpenShift registry. Configuring the usage of the OpenShift registry is quite involved so it is likely that the 'quick' aspect gets lost. I will add some documentation to the (revamped) quickstart documentation on the fabric8.io site how the registry can be configured. But maybe with the new profiles added to all quickstarts today ('f8-build', 'f8-deploy' and 'f8-local-deploy' for a one-stop usage of all required plugin goals) one could add this property to the 'f8-deploy' profile and leave out for 'f8-build' and 'f8-local-deploy' ?	1	1	https://issues.jboss.org/browse/OSFUSE-33
5146	OSFUSE-12	[~janstey] Can you update handover doc?	1	1	https://issues.jboss.org/browse/OSFUSE-12
5147	OSFUSE-12	[~janstey] Can we run OS Fuse Perfectus with JDK8 to catch these issues earlier?	1	1	https://issues.jboss.org/browse/OSFUSE-12
5148	OSFUSE-12	Have a perfectus build going now with JDK 1.8.0_40. Let's see if everything else passes :-)	0	0	https://issues.jboss.org/browse/OSFUSE-12
5149	OSFUSE-8	The fabric8 project is using a maven plugin the generates 2 boms: i) artifacts we ship (pure bom). ii) artifacts we ship with all transitive dependencies (full). is there anything else that should be done in that front?	0	0	https://issues.jboss.org/browse/OSFUSE-8
5150	OSFUSE-1	& just to clarify what is the benefit of aligning with EAP dependencies? Seems unrelated to me.	0	0	https://issues.jboss.org/browse/OSFUSE-1
5151	OSFUSE-1	If we don't use the components from EAP, then will OpenShift Fuse commit to support the other versions? Or can EAP support e.g. Hibernate 5 for EAP 6.4 ?	1	1	https://issues.jboss.org/browse/OSFUSE-1
5152	OSFUSE-1	What CDI implementation does camel-cdi use when used as a plain java-main?	1	1	https://issues.jboss.org/browse/OSFUSE-1
5153	OSFUSE-1	Which implementation is supposed to be used in the product though? Do we want to support all of them? (I probably makes sense to limit the supported set to a single Weld version)	1	1	https://issues.jboss.org/browse/OSFUSE-1
5154	OSFUSE-1	Where do you expect to get this definitive list from? As far as I am aware there is no such list.	0	0	https://issues.jboss.org/browse/OSFUSE-1
5155	FUSEJON-126	[~tplevko], can you attach the log file? It would help to see the full stack trace. This looks like the fixed timeout of 60 seconds is not enough to wait for the server to start or stop. Perhaps it needs to be made configurable so that customers can adjust it to the amount of time their containers take to start/stop.	1	1	https://issues.jboss.org/browse/FUSEJON-126
5156	FUSEJON-126	[~tplevko], I ran some local tests, and it looks like the {{Failed with error code null:}} error will happen only when the start.bat/stop.bat script itself takes more than 15 seconds to finish. Unfortunately the 15 seconds is hardcoded. But more importantly, from your log output it looks like the actual Karaf JVM is being launched within your start script. The {{start.bat}} script I see in JBoss Fuse simply launches another shell in the background and returns immediately. So it is most likely a configuration issue and not a plugin issue. Can you verify whether your start script is configured to use start.bat, instead of karaf.bat and that no other parameters are being used that might launch the server within the {{start.bat}} script? I have opened an enhancement request FUSEJON-129 for the next release of the plugin to make the start/stop script and availability retries and timeouts configurable in the plugin.	1	1	https://issues.jboss.org/browse/FUSEJON-126
5157	FUSEJON-126	I attached the debug log file from rhq-agent. I am still hitting the described issue, the start script I used for starting the JBoss AMQ and also JBoss Fuse is the {{start.bat}} script. Can you please provide more information, how should the AMQ/Fuse be configured so the JON operation would be executed correctly?	1	1	https://issues.jboss.org/browse/FUSEJON-126
5158	FUSEJON-126	[~tplevko], the default start.bat script should just call the karat.bat script, launching another shell and quitting immediately. What happens when you try to run the start.bat script from a CMD console? Does it return immediately, or do you see Karaf being started in the same shell?	1	1	https://issues.jboss.org/browse/FUSEJON-126
5159	FUSEJON-122	Is this working now?	1	1	https://issues.jboss.org/browse/FUSEJON-122
5160	FUSEJON-94	Hi Dhiraj, I have just committed a84d74e , could you tell me if it's fine for you? Tested against AMQ 5.1 and 5.9	0	0	https://issues.jboss.org/browse/FUSEJON-94

#	Requirement	Questions	Answered	Successfully Answered	URL
5161	FMC-499	The problem with changing all the various profile ids (so close to 6.1 going out) is we have to test absolutely every profile again from scratch to check things don't break. I'm all for easier to browse/understand stuff; just right now its not a good time to completely change all the profile IDs (and ensure all the profile metadata, docs and demos are in sync). Though for 6.2 I'd like to replace the "-" is a folder hack we've got right now and use "/" for folders; plus I'd like to switch the import folder layout to the real git file layout (e.g. example/quickstart/cbr.profile versus the single directory containing "example-quickstart-cbr" which is the legacy layout). How about you just create a nice single wiki page that does what you need; and links to whatever you want? e.g. turn your issue into a wiki page; but use the current links/profile IDs)? Right now we have a simple top level page: https://github.com/jboss-fuse/fuse/blob/master/fabric/fuse-fabric/src/main/resources/distro/fabric/import/fabric/configs/versions/1.0/profiles/ReadMe.md Maybe we just need a full Overview.md page (maybe in the docs folder: https://github.com/jboss-fuse/fuse/tree/master/fabric/fuse-fabric/src/main/resources/distro/fabric/import/fabric/configs/versions/1.0/profiles/docs) which looks as you suggest with links to the actual profiles. See the various ReadMe.md files to see how to link to folders or link to profiles. e.g. here's the markdown to link to a particular quickstart: {code} [cbr](/fabric/profiles/example/quickstarts/cbr.profile) {code}	0	0	https://issues.jboss.org/browse/FMC-499
5162	FMC-478	Stan, you said you upgrade features by updated the feature repository version in the repositories tab, but I don't see how I can update the feature repository version. Are you saying that because there is only ever one version of a feature, Fabric will always use the latest one, based on what's available in the features repositories?	1	1	https://issues.jboss.org/browse/FMC-478
5163	FMC-339	There actually is a concept of abstract profiles in fabric and I just happened to add some filtering for abstract profiles so they can't be assigned to containers yesterday (go figure!). However at the moment, only the "mq-base", "mq-example-base" and the "fabric-ensemble-0000" profiles are abstract, and I don't have a toggle exposed in the UI to change it, so I'll keep this open. We should also open a ticket in FABRICPRV about setting some of the "base" profiles to abstract as well, I'll do that.	0	0	https://issues.jboss.org/browse/FMC-339
5164	FMC-320	Can you have a look at the install guide as well when you get a chance? Thanks!	1	1	https://issues.jboss.org/browse/FMC-320
5165	FMC-318	Luis, can you have a look at the admin guide as well when you get a chance?	1	1	https://issues.jboss.org/browse/FMC-318
5166	FMC-254	I think all the cases are covered... Will create additional tickets if anything else shows up.	0	0	https://issues.jboss.org/browse/FMC-254
5167	FMC-237	James: {quote} I wonder for the non-fabric version; should we have an easy way of running the Console + Fabric (and a single node ZK ensemble), then have a way to just register agents into the registry via a command line / web UI. Kinda like discovery, like HQ does. Then from Console's perspective everything is the same whether you're really using Fabric or not; its just if not using Fabric there's a little manual configuration step required. Even if folks are not using fabric to configure/provision stuff; it'd be much easier to just add the fabric-agent feature into each JVM, provide the ZK URL and then you don't have to manually configure agents to get Console to work. i.e. you can use Fabric purely as a discovery registry and not use any of the provisioning/configuration/elastic stuff. We should encourage folks to dip their toes in (or maybe walk barefoot on our soft Fabric is a better metaphor :) - particularly as I can see a really common use case of Fabric just being really easy discovery of JVMs/brokers, load balancing & Console registration - even if folks hardwire all their configs & deployment units, so its a fairly static system. {quote}	0	0	https://issues.jboss.org/browse/FMC-237
5168	MR-861	Can you show me the whole camel route? If your camel route never send response back to the client, the continuation on the CxfConsumer side will be blocked for ever. I added a new option in [camel 2.14.0.| https://issues.apache.org/jira/browse/CAMEL-7401] to specify the continuation timeout. But I'm not sure if it relates to your question.	0	0	https://issues.jboss.org/browse/MR-861
5169	MR-849	[~willem.jiang] Can this be marked resolved?	0	0	https://issues.jboss.org/browse/MR-849
5170	MR-825	Isn't there a context-suspend command? If so you can start it after a suspend	1	1	https://issues.jboss.org/browse/MR-825
5171	MR-822	Did you get a chance to work on this yet? I would like to get into next round of kits.	0	0	https://issues.jboss.org/browse/MR-822
5172	MR-814	Hooman - can you create PATCH request for the 2nd change related to quickfix component? To add the dependency on mina to 6.0 branches.	1	1	https://issues.jboss.org/browse/MR-814
5173	MR-796	Roman, can you verify that the fix works in the next fuse 6.1 build? Thanks, Dhiraj.	1	0	https://issues.jboss.org/browse/MR-796
5174	MR-791	Willem is there more work on this, or can this ticket be resolved?	1	1	https://issues.jboss.org/browse/MR-791
5175	MR-791	Willem is this fixed? And did you fix this at Apache also? https://issues.apache.org/jira/browse/CAMEL-6925 If so can you assign and resolve the Apache ticket?	0	0	https://issues.jboss.org/browse/MR-791
5176	MR-784	Wouldn't it be better to host Smooks component at Camel Extra, as we used to do? We release Camel Extra every time we release the Apache Camel. If Smooks will be hosted under Camel Extra, then Camel Extra team will make sure that there is a Smooks component working with every possible version of ASF Camel.	1	1	https://issues.jboss.org/browse/MR-784
5177	MR-596	I have attached a camel-jms JAR that has this improvement merged. If you for example use the latest Fuse MR 2.8 release, 2.8.0-fuse-03-06, then you can possible just renamed this -SNAPSHOT JAR as that version, and use it as a drop in replacement. Then you should have the replyToType option you can configure, accordingly to documentation at http://camel.apache.org/jms	0	0	https://issues.jboss.org/browse/MR-596
5178	MR-530	I checked the Jetty version of latest CXF (2.4.x, 2.3.x) , they are using 7.4.5.	0	0	https://issues.jboss.org/browse/MR-530
5179	MR-525	Yes Jetty 7.4.1 causes a NPE on startup. Using the 7.4.5 from the 2.8 onwards release works fine.	0	0	https://issues.jboss.org/browse/MR-525
5180	MR-414	Hi Lowry, Do you need anything else? Or can we close this JIRA?	1	1	https://issues.jboss.org/browse/MR-414
5181	MR-413	Willem can you take a look at this when you got a bit time.	1	1	https://issues.jboss.org/browse/MR-413
5182	MR-411	I've fixed the issue at Apache. Can we backport that in all our active camel branches?	1	1	https://issues.jboss.org/browse/MR-411
5183	MR-404	Is there any other dynamic placeholders thats useable, other than replyTo which would be the queue name defined in the jms endpoint, eg {code} <to uri="activemq:queue:foo"/> {code} That would mean the {{replyTo}} would be {{foo}}, and thus the example would use a persistent reply queue named {{foo.reply}} based on the pattern. So is there other placeholders we need to support in that name pattern?	0	0	https://issues.jboss.org/browse/MR-404
5184	MR-388	20549 merged to fuse 2.4 branch in rev: 22324.	0	0	https://issues.jboss.org/browse/MR-388

#	Requirement	Questions	Answered	Successfully Answered	URL
5185	MR-368	It was in fact Camel 2.4 which uses Spring 3.0.3 by default. Camel 2.5 now uses Spring 3.0.4 by default. Spring 3.0 is backwards compatible with Spring 2.5, and therefore you only need to change the namespace schemas if you want to take advantage of some of the new features in Spring 3.0. But its a good idea to keep the schema version in sync with the Spring version used. Order of dependency. TIP: The <camelContext> tag also has a depends-on attribute you can use. > The XML namespace for the Spring DSL schema has changed between Apache Camel 1.x and Apache Camel 2.2, as follows: A typo, it should be Camel 2.x instead of Camel 2.2 Or maybe just Camel 2.0 instead. > Apache Camel 2.2 uses the new DefaultErrorHandler, instead of the A typo, it should be Camel 2.x instead of Camel 2.2 Or maybe just Camel 2.0 instead.	1	1	https://issues.jboss.org/browse/MR-368
5186	MR-368	Thanks for the speedy review, Claus! Just one thing puzzles me: where is the reference to Spring 3.0.3 in the doc? In the draft I attached here, it only references 3.0.4.	0	0	https://issues.jboss.org/browse/MR-368
5187	MR-352	That is odd because CAMEL-3057 is only fixed recently and hence will be part of Camel 2.5.0. But I guess there has been other commits after the Camel 2.2.0 which could have resolved the customer issue. But you are 100% sure the attached zip contains the patch against MR 2.2.0 which fixes the customer issue? Do you have commit rights to the branch? If so you could most likely build the patched camel-cxf .jar and provided it to the customer.	1	1	https://issues.jboss.org/browse/MR-352
5188	MR-295	Willem have you implemented this? If so can you verify that the fix got synced to FUSE? I can see the wiki page has been updated with a new {{chuncked}} option you can set to {{false}} to force it to not use it http://camel.apache.org/jetty	1	1	https://issues.jboss.org/browse/MR-295
5189	MR-291	Jonathan what is status of this one?	1	1	https://issues.jboss.org/browse/MR-291
5190	MR-291	Isnt it possible to skip this then? Spring Javaconfig is going to be @deprecated and become standard in Spring 3.0 so we might just wait a bit till its mainstream and then base it on Spring 3.x .	1	1	https://issues.jboss.org/browse/MR-291
5191	MR-277	Hi Can you post a sample what you want please. And pin point out exactly what your problem is?	1	1	https://issues.jboss.org/browse/MR-277
5192	MR-273	Is the list okay Paul?	1	1	https://issues.jboss.org/browse/MR-273
5193	MR-262	Martin, and you want to reuse that session why? Is the TO endpoint on the same host? etc. I wonder why you want to reuse that session if you send something to a totally different sever? Or maybe MINA is totally capable of handling this using a single session? You can do request/reply like this anyway from(mina?sync=true) -> processor Since we have sync=true Camel will send the reply back from the OUT of the processor.	1	1	https://issues.jboss.org/browse/MR-262
5194	MR-260	Hi all, The latest Camel unit & ESB integration testing has passed. We still need the bundles thou... could someone add a note here when the bundles/specs are released? MR trunk needs to be updated to use these before it can be released. After that update we should be good to go though. Cheers, Jon	1	1	https://issues.jboss.org/browse/MR-260
5195	MR-260	Hello, Thanks Jonathan for changing the versions and checking them. I am waiting for the camel trunk checkin build to pass and then I will start working on releasing camel trunk. But can we ensure there are no further checkins while I will be working on the release? Thanks, Rahul	1	1	https://issues.jboss.org/browse/MR-260
5196	MR-252	Also check camel examples - do we need to ship them all - or just keep to core examples - like jms/cxf/osgi/spring etc	0	0	https://issues.jboss.org/browse/MR-252
5197	MR-252	Good report - are we doing the same for the other bits too - ESB, CXF and all that? Is there any way to consolidate them into a single report? And - how do I run it ? :) A lot of space gets taken up with Maven plug-in prerequisites too. I'd expect this for Enterprise to come in at > 500MB. This is the kind of stuff that Nexus doesn't supply, and it's fairly vital to controlling our dependencies, as well as producing legal trails for approval. I think that we still need to put the test dependencies in, right? People who are building the software will most likely need to test it :)	1	1	https://issues.jboss.org/browse/MR-252
5198	MR-250	What kind of persistent capabilities are customers looking for, to have out of the box? - Database using JPA? - JMS (I wonder how to do this nicely) - Local files For JPA we have some code for the Tracer and IdempotentRepository. So I think we should provide at least this one. JMS is interesting as most people using JMS messaging.	1	1	https://issues.jboss.org/browse/MR-250
5199	MR-246	Hmmm.. its downloaded fine for me. I just changed {code} --- parent/pom.xml (revision 16393) +++ parent/pom.xml (working copy) @@ -41,7 +41,7 @@ <activemq-version>5.3.0.5-fuse</activemq-version> <apacheds-version>1.5.4</apacheds-version> <axiom-version>1.2.8</axiom-version> - <cxf-version>2.2.2.2-fuse</cxf-version> + <cxf-version>2.2.4-psc-01-00</cxf-version> {code} But now it fails to compile and I'm not sure if its a simple fix or not. Looking at the trunk version of camel-cxf, a major refactor was done updating to a 2.2 SNAPSHOT of CXF. Wondering if a similar fix will be needed for the 1.x branch...	1	1	https://issues.jboss.org/browse/MR-246
5200	MR-246	Hello, There are SNAPSHOT dependencies which need to be resolved. Can someone have a look and let me know SNAPSHOTS are to be replaced with which version? components/camel-blueprint/pom.xml {code} <dependency> <groupId>org.apache.aries.blueprint</groupId> <artifactId>aries-blueprint</artifactId> <version>1.0.0-incubating-SNAPSHOT</version> </dependency> {code} Also, this needs to be changed from {code} <parent> <groupId>org.apache.camel</groupId> <artifactId>camel-parent</artifactId> <version>1.6.2-SNAPSHOT</version> </parent> {code} to, {code} <parent> <groupId>org.apache.camel</groupId> <artifactId>camel-parent</artifactId> <version>1.6.2.0</version> </parent> {code} platforms/karaf/features/pom.xml {code} <parent> <groupId>org.apache.camel</groupId> <artifactId>karaf</artifactId> <version>1.x-fuse-SNAPSHOT</version> </parent> {code}	1	1	https://issues.jboss.org/browse/MR-246
5201	MR-246	Hello, The deploy build for camel is failing, http://teamcity.boston.amer.iona.com:8111/viewLog.html?tab=buildLog&buildTypeId=bt845&buildId=254966 Can someone have a look at it? Rahul	1	1	https://issues.jboss.org/browse/MR-246
5202	MR-246	Jonathan can you take a look? Looks weird? Hadrian was able to cut a 1.6.2 release at Apache the other day	0	0	https://issues.jboss.org/browse/MR-246
5203	MR-220	What is the rational to route payloads that you cannot de serialize? As soon any content based router is hit then Camel needs access to the payload. So you can really only use it as a pass through scenario? And in many cases it can be an oversight that the class is needed. And thus you want this exception. If you want to send data without having the classes etc. then send it as a neutral payload such as byte[]. And assemble it manually on the client side that has the needed classes.	1	1	https://issues.jboss.org/browse/MR-220
5204	MR-215	Since most work will be done on the CXF side, I think it will not take much time to port it from Camel 2.0 to Camel 1.x branch.	0	0	https://issues.jboss.org/browse/MR-215
5205	MR-185	Is there a deadline when this should be done, the review? I suppose I am one of the reviewers :)	1	1	https://issues.jboss.org/browse/MR-185
5206	MR-185	Hi Claus, The sooner the better. Is a week enough time? Next Monday (7/13)? If you need more time, let me know. --Paul DiSabito	1	1	https://issues.jboss.org/browse/MR-185

#	Requirement	Questions	Answered	Successfully Answered	URL
5207	MR-185	*What are components* > Exchange objects also provide a means of correlating messages, because related messages are stored in the same Exchange. Hmm I dont see it like that. For instance using JMS messages are correlated using the JMSCorrelationID. Each message is stored in their own Exchange but they have a header with the CorrelationID so you can correlate them if needed. > The Consumer, Endpoint, Consumer, Producer, and Exchange classes comprise a component Consumer is duplicated	0	0	https://issues.jboss.org/browse/MR-185
5208	MR-185	*General Dependencies* Its the full list of .jars. Many of these .jars are component specific and thus not always needed. But yes they can be included anyway. camel-core.jar activation-1.1.jar commons-logging-1.1.1.jar Is the mandatory .jars at a minimum. If using Java 6 then the activation-1.1.jar is included with Java itself and thus can be omitted.	0	0	https://issues.jboss.org/browse/MR-185
5209	MR-185	General observations The consumer / producer is mentioned a lot. I think some more basic examples is needed for the components covered. Some very basic and then some more commonly used examples. How to poll a folder and its subfolder. Do some basic processing and send to a JMS queue How to consume from a JMS queue, use a processor to set a file name and write to a file How to consume from a JMS queue, use a processor to set a file name and upload to a FTP server How to poll a folder and upload to a FTP server How to use a Processor to do message transformation, maybe as part of the consume from JMS write to file How to poll a folder but only filter specific files, eg all .txt files. I think people best learn and understand Camel when they see small and a little bigger routing samples. So it makes sense to focus on good samples. The options for each component would be advised to divide into multiple tables. 1 table for commonly used options. And another for seldom/advanced usages. The .jars needed in CLASSPATH has too many. It includes stuff needed for unit testing only such as easymock etc. Maybe try reducing the number of .jars to what is actually needed. The command: {{mvn dependency:list}} can help as it can list what is needed for = compile = what you need in CLASSPATH Maybe we should add a sample how to use Camel JMS with Sonic MQ now that its also a Progress product.	0	0	https://issues.jboss.org/browse/MR-185
5210	MR-183	The intercept() works between the EIP. So its basically like this from -> interceptor -> to -> interceptor -> cbr (when A, when B, otherwise C) -> interceptor -> to A -> interceptor -> to B -> interceptor -> to C The intercept() is not designed to work *inside* the EIP patterns. What is your use case? Looks like you need somekind of debug logging or what? And besides the when .. when .. otherwise does not work like a java/C style case. There are *no* fall through. Camel will only pick *one* output from the CBR and go this direction.	0	0	https://issues.jboss.org/browse/MR-183
5211	MR-166	This was fine for 1.x, however now in 2.x sslSocketConnector has been replaced with a map containing a separate SSLSockectConnector instance per endpoint. So the work around doesn't work as well for 2.x., you've got to create a map and use the port your jetty endpoint listens on as the key: {code} <bean id="jetty" class="org.apache.camel.component.jetty.JettyHttpComponent"> <property name="sslSocketConnectors"> <map> <entry key="8043"> <bean class="org.mortbay.jetty.security.SslSocketConnector"> <property name="password" value="..." /> <property name="keyPassword" value="..." /> <property name="keystore" value="..." /> <property name="needClientAuth" value="..." /> <property name="truststore" value="..." /> </bean> </entry> </map> </property> </bean> {code}	1	1	https://issues.jboss.org/browse/MR-166
5212	MR-162	What are the the dependencies for this?	1	1	https://issues.jboss.org/browse/MR-162
5213	MR-161	Hi Ulhas, I didn't quit understand this issue, can you give me a test case or more specific example for it. Thanks, Willem	1	1	https://issues.jboss.org/browse/MR-161
5214	MR-161	Willem, thanks for sharing your findings. What exactly is the Format processor, its is some XPath/XML specify or just a regular Camel processor where we fix it by hand?	1	1	https://issues.jboss.org/browse/MR-161
5215	MR-136	I just added support for a basic set of operators in the simple language. http://issues.apache.org/activemq/browse/CAMEL-1338 However the equals operator will be like java, so you should use == (two =) Will be in included as standard in Camel 2.0 in the camel-core so no need for any special .jars on the classpath.	1	1	https://issues.jboss.org/browse/MR-136
5216	MR-122	Is this task focused on the Camel data handlers? Or is this for something more like implementing a message transform scenario?	1	1	https://issues.jboss.org/browse/MR-122
5217	MR-112	Perfect! I would add CXF to the list. Thanks, Jaime On 2/27/09 2:47 PM, "Eric Johnson" <EMJOHNSO@progress.com> wrote: Jaime, Does this look like a good list of components to focus on? Eric ---------- From: Linda Stinson Sent: Friday, February 27, 2009 2:33 PM To: Eric Johnson Cc: Adrian Trenaman; David Greco Subject: Top 10 components Hi Eric, Here is the top ten that we are including in the Camel course, give or take a few. #	Requirement	Questions	Answered	Successfully Answered	URL
5222	MR-85	Hi Fintan, I think you need to update this Service Activator Pattern , since there some enhancements[1] of Camel bean-integration in the apache camel 1.5.0, specially we added some annotations which could be much convenience for the end user. BTW, you didn't mention any Spring Remoting related things in the doc, could you add some descriptions about it ? [1]http://activemq.apache.org/camel/bean-integration.html Cheers, Willem	1	1	https://issues.jboss.org/browse/MR-85
5223	MR-83	Hi Fintan, Camel supports a pluggable DataFormat[1] to allow messages to be marshalled to and from binary or text formats. I think it is an implementation of the Messaging Mapper Pattern. Can you add some description about it in this charpter? After went through the EIP book's Messaging Mapper section, I found DataFormat[1] make a connection between domain objects and the messaging infrastructure and the user will not touch any dirty work of the mapping staff. [1] http://activemq.apache.org/camel/data-format.html Willem	1	1	https://issues.jboss.org/browse/MR-83
5224	MR-75	@Fintan, I am pretty sure this is taken care of. Can we close it?	1	1	https://issues.jboss.org/browse/MR-75
5225	MR-72	Current Camel will take care of the URI will even the URI has the unsafe codes, Please double check with your example :) It could be much easy for user with {code:language=java} from("jms:dispatcher?selector=CountryCode='US'").to("cxf:bean:replica01"); {code} instead of {code:language=java} from("jms:dispatcher?selector=CountryCode%3d%27US%27").to("cxf:bean:replica01"); {code}	1	1	https://issues.jboss.org/browse/MR-72
5226	MR-70	That's what I was referring to in the block labelled "Scheduled poll component". Should I just rename this block to "Scheduled poll consumer" to make it clearer what I am talking about?	1	1	https://issues.jboss.org/browse/MR-70
5227	MR-68	Thanks for this update, Willem! There is something else I meant to ask in connection with this pattern, though. I have no idea how to define a multicast route in Spring XML. Can you give me an example of the correct syntax? E.g. how would you translate your Java DSL route (above) into Spring XML?	1	1	https://issues.jboss.org/browse/MR-68
5228	MR-66	Thanks very much, Jonathan and Willem, for investigating the correctness of the XML examples and for fixing the bug. Just as a matter of interest, is it now possible to place the load balance strategy tag at _either_ location (beginning or end of the loadBalance element contents)?	1	1	https://issues.jboss.org/browse/MR-66
5229	MR-50	Fault message - how about adding a note to the effect that Fault messages are _deprecated_ and will be removed in a future release of Camel? That might be more useful for the current users of Camel who want to know what a Fault message is for. First mention of Java DSL - the Java DSL is covered in another book, "Defining Routes". Would it be Ok simply to insert a cross-reference to that book here? (The cross-reference should be mapped to a clickable link, if our book-building system behaves properly :-)	1	1	https://issues.jboss.org/browse/MR-50
5230	MR-50	In the block where I discuss "Message Structure", shouldn't I also mention attachments (I only found out about them recently)?	1	1	https://issues.jboss.org/browse/MR-50
5231	MR-49	Fixed in rev http://projects.open.iona.com/projects/trac/iona/changeset/45779 The fix employs a technique similar to that of the pipeline processor to preserve the exchange type. Basically, in order for a type of Exchange to be propagated, it must override the newInstance method so the routing slip has a way to create a clean instance of it (this is the case for the JbiExchange). The test case I came up with was purely routing slip specific. The stack shown above does not include the routing slip. Is there a more specific test case that the customer was hitting this stack against?	0	0	https://issues.jboss.org/browse/MR-49
5232	MR-30	General comments: - I didn't see any reference to the EIP book. Very important! Camel page (http://activemq.apache.org/camel/enterprise-integration-patterns.html) has a reference to the book. - Check unfinished parts with YOUR_ABSTRACT_HERE - Chapters 5-10 contain type hierarchies, but the role of different classes is not really clear. I would add at least links to javadocs. - Maybe more info on endpoint configuration would be helpful ? - a few typos * Preface | Open Source Project Resources - CXF no longer in incubator :). Links to be udpated * 1 | Exchanges - "On the request leg of the route (left to right), only the In message is accessible from the exchange and on the reply leg of the route (right to left), both the In message and the Out message (if any) are accessible." This is not actually true. At every moment the whole exchange is available. There isn't really a request and response path per se. The route is composed out of a series of processors. In general the in is the previous out before calling the processor and the out/fault gets populated by the processor. - believe setFault() is missing * 1 | Messages - Definition of marshalling/unmarshalling. Isn't it the other way around? In my interpretation, lower level is closer to the hardware. I would remove the analogy between type conversion and marshalling as it could get confusing. * 2 | Custom Processor - pre-post. Use an interceptor for that or you own extension of DelegateProcessor. * 2 | ExchangeHelper - I would not add big chunks of code, as it can change and can quickly get out of sync. I guess people don't read such big chunks of code anyway. I link to the javadocs on the apache site may be better. * 2 | RecipientList Processor Example - talks about the MulticastProcessor ?! - implementation should not be there - this is actually more useful: http://activemq.apache.org/camel/recipient-list.html * 3 | Implementing a Custom Type Converter - "Remember to import the org.apache.camel.Converter annotation type [...]". Not really necessary, as the compiler tells that. - You could note that the method name is not really relevant, the @Converter annotation and argument and return types are! * 4 | How to Implement a Component - see http://activemq.apache.org/camel/writing-components.html * 6 | Endpoint Interface - Endpoints are actually singletons per CamelContext - The code you're looking for is in DefaultCamelContext.getEndpoint(). The newly created endpoint is not added to the endpoints map if it's not a singleton, hence a subsequent getEndpoint won't find it and will create a new one. * 6 | Implementing the Endpoint Interfaces - again, i would not put implementations there * 9-10 - More detail on when/why one would implement her own Exchange/Message would help. Other than that it looks pretty good. There are some places where more details would help, and some inspiration could come from the questions users ask on the mailing lists http://www.nabble.com/Camel-f22882.html	1	1	https://issues.jboss.org/browse/MR-30

#	Requirement	Questions	Answered	Successfully Answered	URL
5233	MR-30	(http://activemq.apache.org/camel/enterprise-integration-patterns.html) has a reference to the book. - Check unfinished parts with YOUR_ABSTRACT_HERE - Chapters 5-10 contain type hierarchies, but the role of different classes is not really clear. I would add at least links to javadocs. - Maybe more info on endpoint configuration would be helpful ? - a few typos * Preface | Open Source Project Resources - CXF no longer in incubator :). Links to be udpated * 1 | Exchanges - "On the request leg of the route (left to right), only the In message is accessible from the exchange and on the reply leg of the route (right to left), both the In message and the Out message (if any) are accessible." This is not actually true. At every moment the whole exchange is available. There isn't really a request and response path per se. The route is composed out of a series of processors. In general the in is the previous out before calling the processor and the out/fault gets populated by the processor. [Fintan] I think there is a problem with my figure. I understand how an exchange works, but I think the figure gives the impression that there are two different channels for the request leg and the reply leg. I think I need to describe explicitly how processors are connected together in a chain. That should help to clear up any confustion. - believe setFault() is missing [Fintan] Actually it's missing in the source code(!) I should probably log a JIRA for this. You wouldn't necessarily notice it is missing, because it is defined in a sub-class (that is, in DefaultExchange). * 1 | Messages - Definition of marshalling/unmarshalling. Isn't it the other way around? In my interpretation, lower level is closer to the hardware. I would remove the analogy between type conversion and marshalling as it could get confusing. [Fintan] You're absolutely right. I got it backwards. Thanks for spotting this! * 2 | Custom Processor - pre-post. Use an interceptor for that or you own extension of DelegateProcessor. [Fintan] I'm still not entirely sure what I should do here. I'll send you an e-mail to ask you about it further. (By the way, this chapter is probably the weakest in the book. I really need to straighten it out.) * 2 | ExchangeHelper - I would not add big chunks of code, as it can change and can quickly get out of sync. I guess people don't read such big chunks of code anyway. I link to the javadocs on the apache site may be better. [Fintan] I will break this big chunk of code into smaller chunks and re-distribute it throughout the rest of the section. I will also include a link to the Javadocs. * 2 | RecipientList Processor Example - talks about the MulticastProcessor ?! [Fintan] Yes, I know this is confusing. Didn't I just say this is the weakest chapter? :-) - implementation should not be there [Fintan] Actually the main problem I have here is that I am not sure what to use as an example. But I will get back to you on that. - this is actually more useful: http://activemq.apache.org/camel/recipient-list.html * 3 | Implementing a Custom Type Converter - "Remember to import the org.apache.camel.Converter annotation type [...]". Not really necessary, as the compiler tells that. [Fintan] Hmm! I don't understand what you mean here (probably due to my ignorance of annotations). Do you mean the compiler will give you a warning? But surely you need to import the type anyway? - You could note that the method name is not really relevant, the @Converter annotation and argument and return types are! [Fintan] Good point! * 4 | How to Implement a Component - see http://activemq.apache.org/camel/writing-components.html [Fintan] This reminds me, I should remember to ask you how auto-discovery of components works in combination with Spring configuration of a component. * 6 | Endpoint Interface - Endpoints are actually singletons per CamelContext - The code you're looking for is in DefaultCamelContext.getEndpoint(). The newly created endpoint is not added to the endpoints map if it's not a singleton, hence a subsequent getEndpoint won't find it and will create a new one. [Fintan] Thanks, Hadrian! I had tried and failed to track down this snippet of code on my own. * 6 | Implementing the Endpoint Interfaces - again, i would not put implementations there [Fintan] Yes, but... there is no demo code that I can use in place of this example. I appreciate that implementation code is not ideal to use as a demo, but there don't seem to be any alternatives in this case. And I think it is helpful to see a complete example of an endpoint. Is this a reasonable	1	1	https://issues.jboss.org/browse/MR-30
5234	MR-25	How does it happen that so many jars are left out??	1	1	https://issues.jboss.org/browse/MR-25
5235	MR-25	Hi Aileen I know that the packaging of binary distributions versus the maven download needs to be resolved (esp for customers without Internet access). Should we be considering two separate modes of delivery? Eric	1	1	https://issues.jboss.org/browse/MR-25
5236	MR-25	Should you not be pointing at FUSE versions of AM & CXF rather than Apache?	1	1	https://issues.jboss.org/browse/MR-25
5237	MR-25	Hi Peter, what's the rationale behind which jars we include in the kit and which we pick up from other distribiutions?	0	0	https://issues.jboss.org/browse/MR-25
5238	MR-22	Are the route definition and the message containing the fault and/or a trace log available? Thanks.	0	0	https://issues.jboss.org/browse/MR-22
5239	MR-18	David, could you please add a few details about what the expectation is? I am mostly interested in the case where non camel producers/consumers are involved, say a native mina client of server. How would the correlation id be propagated? Should this address *only* the timeout situation?	1	1	https://issues.jboss.org/browse/MR-18
5240	MB-1066	HI Eric, So where did you all end up documenting "soWriteTimeout"? I checked here: http://fusesource.com/docs/broker/5.5/connectivity_guide/FMBConnectTransportRefWire.html I'm afraid I'm not seeing it ... Kindest regards, Susan	1	1	https://issues.jboss.org/browse/MB-1066
5241	MB-1066	Susan, I couldn't find it either. I've made the update for the 7.1 version of the content. Does this need to get pushed out to the Fuse Message Broker docs as well? Cheers, Eric	1	1	https://issues.jboss.org/browse/MB-1066
5242	MB-1009	I have applied the fix for this issue in the 5.5.x branch. I was also going to fix this in Trunk but noticed it was no longer there, is that expected?	1	1	https://issues.jboss.org/browse/MB-1009
5243	MB-988	@Claudio Here is a revised version of your patch. I added the ability for the servlet on the broker to inform the client transport that it accepts compression so that the client can also compress the outbound POST message payloads using gzip. Could you review and let me know what you think of this addition.	0	0	https://issues.jboss.org/browse/MB-988
5244	MB-967	Thinking on this a bit, the delivery flag needs to be treated like a message ack. Currently the broker becomes aware of redelivery when a consumer closes and provides the broker sequence id of the last message delivered to the consumer. Any inflight messages with id > that that sequence are deemed to be redelivered. In the even of a consumer failure, the close info from the consumer is lost, all unconsumed are deemed redelivered and there can be false positives. In the event of a broker failure, all redelivery information is lost. The change would have the consumer send an delivered_ack before a message is consumed, this would be a sync call that would require the broker to sync to disk. This will be as costly as a transaction commit! There is a chance of a false positive on the redelivered flag, if the consumer fails after the delivered ack is persisted by the broker but before delivery of a message. It may not be necessary to track updates in the index, in the event of failure we could always rebuild the index if this feature is enabled as it will be a rare event. Question: is fast recovery vital in this case?	0	0	https://issues.jboss.org/browse/MB-967
5245	MB-852	Awesome work Fintan. I think it's good as it is. Can you just let me know when you post it online, it'd be good to link it from Apache site and maybe blog/tweet about it.	1	1	https://issues.jboss.org/browse/MB-852
5246	MB-838	Is there a corresponding JIRA ticket to add documentation for a Fuse library JMX Management guide?	1	1	https://issues.jboss.org/browse/MB-838

#	Requirement	Questions	Answered	Successfully Answered	URL
5247	MB-822	Hi Gary, Thanks for all your help with this, we are still seeing a stack trace: {code} 2011-03-04 08:41:07,962 [38.171.43:58640] WARN ProtocolConverter - Exception occured processing: SUBSCRIBE ... {code} java.lang.SecurityException: User system is not authorized to read from: topic://c531dd48e123fd545516f496655781af at org.apache.activemq.security.AuthorizationBroker.addConsumer(AuthorizationBroker.java:119) at org.apache.activemq.broker.MutableBrokerFilter.addConsumer(MutableBrokerFilter.java:95) at org.apache.activemq.broker.TransportConnection.processAddConsumer(TransportConnection.java:549) at org.apache.activemq.command.ConsumerInfo.visit(ConsumerInfo.java:349) at org.apache.activemq.broker.TransportConnection.service(TransportConnection.java:310) at org.apache.activemq.broker.TransportConnection$1.onCommand(TransportConnection.java:184) at org.apache.activemq.transport.TransportFilter.onCommand(TransportFilter.java:69) at org.apache.activemq.transport.stomp.StompTransportFilter.sendToActiveMQ(StompTransportFilter.java:81) at org.apache.activemq.transport.stomp.ProtocolConverter.sendToActiveMQ(ProtocolConverter.java:140) at org.apache.activemq.transport.stomp.ProtocolConverter.onStompSubscribe(ProtocolConverter.java:425) at org.apache.activemq.transport.stomp.ProtocolConverter.onStompCommand(ProtocolConverter.java:188) at org.apache.activemq.transport.stomp.StompTransportFilter.onCommand(StompTransportFilter.java:70) at org.apache.activemq.transport.TransportSupport.doConsume(TransportSupport.java:83) at org.apache.activemq.transport.tcp.TcpTransport.doRun(TcpTransport.java:222) at org.apache.activemq.transport.tcp.TcpTransport.run(TcpTransport.java:204) at java.lang.Thread.run(Thread.java:619) {code} Was there any reason to leave this one? Ideally it would just be a one or two line message that the user is not authorized. Kindest regards, Susan	1	1	https://issues.jboss.org/browse/MB-822
5248	MB-728	Hi Tim, Do we have a snapshot build of this? Seán	1	0	https://issues.jboss.org/browse/MB-728
5249	MB-666	Thanks Dejan! Do you think this information will make it into the FUSE documentation set at some point?	1	1	https://issues.jboss.org/browse/MB-666
5250	MB-641	Hi Matt, yes, it is visible in the current fuse snapshot. Can you point David at my previous comment so we can validate that the proposed solution (implemented in AMQ-378) will meet their requirements. It would be great if they could validate a [5.4.0-fuse-SNAPSHOT|http://repo.fusesource.com/maven2-snapshot/org/apache/activemq/apache-activemq/5.4.0-fuse-SNAPSHOT/] with their use case and provide some feedback that it will or will not meet their strategic need. I am aware of the need for some JMX visibility (AMQ-2741) but I want to be sure we are on the same page and on the right track before completing that out. The relevant xml config for the new policy is:{code} <policyEntry ... ... <slowConsumerStrategy> <abortSlowConsumerStrategy /> </slowConsumerStrategy> ... </policyEntry>{code}	0	0	https://issues.jboss.org/browse/MB-641
5251	MB-594	Hello Aileen, Can you let me know how the notice file should be named? Rahul	1	1	https://issues.jboss.org/browse/MB-594
5252	MB-594	Hello Aileen, After unzipping the installer from previous version, http://repo.open.iona.com/maven2/org/apache/activemq/apache-activemq/5.3.0.4-fuse/apache-activemq-5.3.0.4-fuse-bin.zip I could only see a file called, NOTICE. (this also can be located at, http://fusesource.com/forge/svn/fusemq/branches/activemq-5.3.0-fuse/) Do you want me to replace this file or add the new file as "notices.txt"? Rahul	1	1	https://issues.jboss.org/browse/MB-594
5253	MB-590	Dejan, Can you update the 'fixed version' for this issue. It's only 5.3.x, correct? Thanks, Matt	1	0	https://issues.jboss.org/browse/MB-590
5254	MB-546	Hello Dejan, There is a SNAPSHOT dependency in one of the pom files. Can you let me know if this is right? File: activemq-5.3.1-fuse/assembly/pom.xml <!-- fuse web console --> <dependency> <groupId>org.fusesource</groupId> <artifactId>fuse-web-console</artifactId> <version>1.0-SNAPSHOT</version> <type>war</type> <classifier>war</classifier> </dependency> Rahul	1	1	https://issues.jboss.org/browse/MB-546
5255	MB-511	Could you provide specifics on what kind of corruption and when/how it it happens.	1	1	https://issues.jboss.org/browse/MB-511

#	Requirement	Questions	Answered	Successfully Answered	URL
5256	MB-511	file and it works for the first issue with "missing Journal files". However, it does not work for the second one and the broker still could not recover if a Journal file became corrupted. Here is some way to corrupt a Journal file: 1. Open it in an editor and randomly delete portions of the file. Since the file is binary, it doesnt really matter what I delete. What I saw was that the broker could not recover from this condition. Or 2. Randomly append some junk to the end of the file (with some output redirection like >>). This also results in a condition where the broker cannot recover and I have to delete all data files to make things work again. Below is exact steps I did: repeate steps from my previous comments; 5. wait for at least 3 or 4 db log files appear under "data\amq" directory; 6. stop the activemq broker and then open db-2.log file in a text editor. Then randomly delete some parts of the file and save the file again. 7. restart the activemq broker; 8. restart the consumer and the consumer continue receives messages till stops; Note, the consumer will only consume small part of messages before it stops and the broker starts to throw below exceptions: {quote} 2009-08-18 09:56:54,684 [ue://test.queue] ERROR Queue - Failed to page in more queue messages java.lang.OutOfMemoryError: Java heap space at org.apache.activemq.openwire.v5.BaseDataStreamMarshaller.looseUnmarshalByteSequence(BaseDataStreamMarshaller.java:639) at org.apache.activemq.openwire.v5.MessageMarshaller.looseUnmarshal(MessageMarshaller.java:229) at org.apache.activemq.openwire.v5.ActiveMQMessageMarshaller.looseUnmarshal(ActiveMQMessageMarshaller.java:101) at org.apache.activemq.openwire.v5.ActiveMQTextMessageMarshaller.looseUnmarshal(ActiveMQTextMessageMarshaller.java:101) at org.apache.activemq.openwire.OpenWireFormat.doUnmarshal(OpenWireFormat.java:368) at org.apache.activemq.openwire.OpenWireFormat.unmarshal(OpenWireFormat.java:279) at org.apache.activemq.store.kahadb.KahaDBStore.loadMessage(KahaDBStore.java:536) at org.apache.activemq.store.kahadb.KahaDBStore$KahaDBMessageStore$4.execute(KahaDBStore.java:230) at org.apache.kahadb.page.Transaction.execute(Transaction.java:728) at org.apache.activemq.store.kahadb.KahaDBStore$KahaDBMessageStore.recoverNextMessages(KahaDBStore.java:223) at org.apache.activemq.broker.region.cursors.QueueStorePrefetch.doFillBatch(QueueStorePrefetch.java:81) at org.apache.activemq.broker.region.cursors.AbstractStoreCursor.fillBatch(AbstractStoreCursor.java:227) at org.apache.activemq.broker.region.cursors.AbstractStoreCursor.reset(AbstractStoreCursor.java:99) at org.apache.activemq.broker.region.cursors.StoreQueueCursor.reset(StoreQueueCursor.java:157) at org.apache.activemq.broker.region.Queue.doPageIn(Queue.java:1279) at org.apache.activemq.broker.region.Queue.pageInMessages(Queue.java:1419) at org.apache.activemq.broker.region.Queue.iterate(Queue.java:1103) at org.apache.activemq.thread.DeterministicTaskRunner.runTask(DeterministicTaskRunner.java:84) at org.apache.activemq.thread.DeterministicTaskRunner$1.run(DeterministicTaskRunner.java:41) at java.util.concurrent.ThreadPoolExecutor$Worker.runTask(ThreadPoolExecutor.java:650) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:675) at java.lang.Thread.run(Thread.java:595) 2009-08-18 09:56:54,980 [ue://test.queue]	1	1	https://issues.jboss.org/browse/MB-511
5257	MB-488	Thanks very much Dejan! One question: Do you know if changes to apache trunk (like this one) will get merged back to the activemq-5.3.0-fuse branch? I believe that's the branch that 5.3.0.3-fuse will be released off of, and I just want to make sure. Thanks again for committing this!	1	1	https://issues.jboss.org/browse/MB-488
5258	MB-452	p71. "where the relevant user security data is stored in a pair of flag files" the use of 'flag file' is a little odd to me, property file? p84. On the Note: "The requirement for Broker A to be configured with credentials holds, even if Broker B is not configured to require authentication." - Is it possible to expand on this? I Don't understand what it adds. - Otherwise all great.	0	0	https://issues.jboss.org/browse/MB-452
5259	MB-451	typo: space needed, p12: Immunity to man-in-the-middle attacksbecause p13: Selfif (This space issue seems to be generic, may be in my viewer - a bullet point and an italic seems to not be followed by a space. Is this text correct?: I don't understand it: "There is no way for the attacker to obtain the target's private key, which makes it impossible for the attacker to authenticate itself to the client." On "a self-signed certificate", possibly mention that this is typically for a root cert and useless otherwise unless you have prior knowledge that the cert is good. On "Setting properties by programming" p24 see some additional info on setting up an SSLContext via code at: http://www.nabble.com/Alternatives-for-deprecated-setKeyAndTrustManagers-in-ActiveMQSSLConnectionFactory-td22724170.html#a22741202 and note the SSLContext thread local, accessed by set/getCurrentContext The activeMQ SSLContext is a thread local wrapper around a JSSE SSLContext, this is the same class that is configured through XML injection. Looks good otherwise,	0	0	https://issues.jboss.org/browse/MB-451
5260	MB-449	I used code-prettify project (suggested earlier) and made a few more modifications on the page. It should be more readable now. !Picture 4.png|width=800!	0	0	https://issues.jboss.org/browse/MB-449
5261	MB-365	Joe, can you give a few lines that describes "This way we would get exactly the behavior we expect the MB to have." given master/slave with jdbc persistence. start db, start master, start slave. master has lock, slave waits to aquire lock. DB dies. master see db failure and stops. Slave (I think) should see db failure and stop. Then using some intervention, DB restarts, master restarts, slave restarts. How different is the customer expectation. In what way does the proposed improvement fit into this scenario. to fully understand this I need to start with a test case so I will attempt to create one now, but I need to fully understand the expectations. Thanks for your help.	0	0	https://issues.jboss.org/browse/MB-365
5262	MB-331	If you look at the status page for the FUSE May releases, "activemq trunk" is building ActiveMQ 5.1.0-fuse-SNAPSHOT http://teamcity.boston.amer.iona.com:8111/statusPage.html?filterName=FUSE+May+Releases&Filter=filter So is this task done, or are you looking for something different? :)	0	0	https://issues.jboss.org/browse/MB-331
5263	MB-325	ok. good work. So the second send will block ? is it possible to have a failure on the second send, failIfLimitReached or something option? Can the large message get consumed? So long as the behaviour is deterministic up to a point we have something to test/verify/document. Without a systemUsage limit and with a very large message, what happens?	1	1	https://issues.jboss.org/browse/MB-325
5264	MB-319	Eric - we'd like to ship this tool in next FUSE MB patch. Can we get doc for it?	0	0	https://issues.jboss.org/browse/MB-319
5265	MB-319	There has been talk on and off about productising this tool for a long time, but it hasn't happened yet (has it really been four years?). Sure, we can close this issue. If the tool ever gets productised, we can open a doc issue for it then.	0	0	https://issues.jboss.org/browse/MB-319

#	Requirement	Questions	Answered	Successfully Answered	URL
5266	MB-315	hi Geoff, Eric, Some comments on the patch, first off the test looks good and second, we need Rob or Hriam to have a look at this one. My first impression is that the code that blocks in addMessageLast on reaching the limit should first check to see if it will block, then release locks and then block waiting for free space. So all the changes that make the cursor use a lock rather than sync methods make sense. However the: {code} while (!addMessageFirstImpl(node)) { Thread.sleep(1); }{code} idiom looks wrong to me. It is really a busy loop. Could it be more like:{code} if (systemUsage.getTempUsage().isFull()) { releaseLockThatStopsMessageComsumption(); systemUsage.getTempUsage().waitForSpace(); aquireLockThatStopsMessageComsumption(); } getDiskList().add(node);{code} I imagine this is not trivial but sort of what you are attempting to do. All other examples of Usage limits seem to be in the position where they can make some space available. In the TempStore case, the only thing that can make space available is to expireOldMessages() or to consume a Message. So these activities need to happen in parallel. Is there a case for adding a call to exporeOldMessages() before waiting? I guess that is another test! Hope this helps, Gary.	1	1	https://issues.jboss.org/browse/MB-315
5267	MB-315	Are the new issues logged anywhere in JIRA?	0	0	https://issues.jboss.org/browse/MB-315
5268	MB-309	Can you set these up to run against 5.0 branch as well?	1	1	https://issues.jboss.org/browse/MB-309
5269	MB-308	Have we made a definitive decision on how we are going to do these. Are they going to reflect the README template guidelines and provide more details in the README.txt files of the examples? Or are we going to just provide basic instructions of how to run the example with a link to FUSE or Apache documentation describing the example in detail, as it is now?	0	0	https://issues.jboss.org/browse/MB-308
5270	MB-304	We assumed that setAlwaysSyncSend was the property of the ActiveMQConnection, while trackMessages and maxCacheSize (not cacheSize) are the ones in FailoverTransport. Is there any documentation on the use of those properties ?	0	0	https://issues.jboss.org/browse/MB-304
5271	MB-304	do you think it is worth spending some time to try and make the test fail more consistently, all producers share the same proxy, if each had its own proxy that failed randomly over a period of a few seconds, would that help? I have run this a few times on windows but it always works :-(	0	0	https://issues.jboss.org/browse/MB-304
5272	MB-299	The information looks good though there is a lot of white space/blank pages in the document. Is it possible to reduce this ?	0	0	https://issues.jboss.org/browse/MB-299
5273	MB-289	Hi Aileen, this feature is now complete and in will make it into the 5.0.0.11 release but it needs doco. Could you create an issue for that and assign it to the right person? Thanks.	0	0	https://issues.jboss.org/browse/MB-289
5274	MB-280	Has this been fixed? 5.0.0.7-fuse has been released as of today.	1	1	https://issues.jboss.org/browse/MB-280
5275	MB-263	Hi Hiram, What is the create <broker-name> task suppose to do? Is it to allow running multiple broker instances in the same distribution? I guess an overview of the directory structure would help. :) Thanks!	1	1	https://issues.jboss.org/browse/MB-263
5276	SF-487	Is there any more work to be done on this or can it be closed?	1	1	https://issues.jboss.org/browse/SF-487
5277	SF-480	[16:57:42] <+tdiesler> ppires, the jaxrs runtime processes jaxrs annotations to setup the endpoint, right? [16:58:41] <+jstrachan> tdiesler once its been registered with the CXF service, yes - the issue is getting the DS component object into the CXF service so it can have its JAXRS stuff applied [17:00:17] <+tdiesler> jstrachan, can we not have a generic jaxrs component that, based on a set of jaxrs specific properties, sets up the jaxrs endpoint as part of the comp lifecycle? [17:01:08] <+jstrachan> tdiesler thats what that issue was for ;)	0	0	https://issues.jboss.org/browse/SF-480
5278	SF-463	Thanks super awesome thanks! :) Gonna start using it as soon as the next perfectus completes... Will this API call only work for WSDL endpoints; or should it work for both WADL and WSDL?	1	0	https://issues.jboss.org/browse/SF-463
5279	SF-396	Is this really the best we can do? If they have soap:faults in their WSDL contract, then that is an expected reply type. I would prefer that CXF have some easy to configure option to control the "noise". When people monitor their logs, and see huge stacktraces, they think its an error and want to have it fixed etc. For unexpected exceptions it may be desireable to have it log a stacktrace etc as that was not expected to happen.	1	1	https://issues.jboss.org/browse/SF-396
5280	SF-357	Can the fix version for this issue be updated to 2.3.x so this gets picked up in the 4.3.1 SP2 release. Thanks - Matt	1	0	https://issues.jboss.org/browse/SF-357
5281	SF-245	Attaching patch and test case. I ran the patch against the trunk and against the cxf-2.2.5-psc-01-xx-HF branch. The branch passes all RT tests. There were some test failures in the RT modules in the trunk, but I beleive them to be unrelated to the changes in the patch.	0	0	https://issues.jboss.org/browse/SF-245
5282	SF-239	The 2 tests that are failing are security related tests & Dan thinks we may need to add strong cypto to JDK for AIX We switched to JDK 6 recently Eamonn - can you investigate?	0	0	https://issues.jboss.org/browse/SF-239
5283	SF-239	I'm attaching the log of a successful run on pdrhas4-64 using ibm jdk 1.6 (SR7) with the unrestricted export jars installed in the JDK. As this test works fine with the ibm 1.5 jdk, can we just release note thet there is a bug in the ibm 1.6 jdk when using the restricted jars? If so will I put code into the test to skip it when the restricted jars are installed for the ibm 1.6 jdk?	1	1	https://issues.jboss.org/browse/SF-239
5284	SF-194	Is any progress being made on the review?	0	0	https://issues.jboss.org/browse/SF-194
5285	SF-194	Dan, do you have any free cycles to work on these technical reviews? Can you estimate a time of delivery? Cheers, Fintan	1	1	https://issues.jboss.org/browse/SF-194
5286	SF-172	Consumers making asynchronous requests will not receive the same exceptions returned *than* when they make synchronous requests. Should a ExecutionException not be an ExecutionException? In the section Catching an Exception, I think we should say that the get() method is used to get the response from the service and it is only at this point an exception is discovered. I guess this is a subjective thing but I think using the word exception after ExecutionException is a bit redundant. Like saying a basketball ball or a football ball..	1	1	https://issues.jboss.org/browse/SF-172
5287	SF-162	Is this for JDK 1.5?	1	0	https://issues.jboss.org/browse/SF-162
5288	SF-158	It should be possible to add this to FUSE SF 2.0.x, which will allow it to be included in FUSE ESB 3.3.x. If this is not possible, can we please state why?	0	0	https://issues.jboss.org/browse/SF-158
5289	SF-158	Are you saying that the support is already there Dan? In that case can we add some documentation around this?	0	0	https://issues.jboss.org/browse/SF-158
5290	SF-144	Hi Eric, I just went through this chapter, It looks good. Here are my comments for the chapter: 1. We need more examples to show how to configure the serviceName with the namespace and how to set the binding or servicefactory. It's difficult for the new user to write a right one without an example. 2. Can you add simple frontend configurations description such as <simple:server> <simple:client> ? Or you can tell some difference between <simple> and <jaxws>:) Cheers, Willem	1	1	https://issues.jboss.org/browse/SF-144
5291	SF-144	Willem, Can you point me to some good examples of configuring the binding and the serviceFactory? Thanks, Eric	1	1	https://issues.jboss.org/browse/SF-144
5292	SF-140	Was this resolved in the release 2.0.9.0? [CXF-1776|http://issues.apache.org/jira/browse/CXF-1776] is resolved.	1	1	https://issues.jboss.org/browse/SF-140
5293	SF-104	Jon, I've just sent you notices & license file - can you add into the kit? thanks, Aileen	1	1	https://issues.jboss.org/browse/SF-104
5294	SF-104	I didn't get the notices & license file... did you send them to janstey@iona.com?	1	1	https://issues.jboss.org/browse/SF-104

5301	FUSEDOC-911	Hello [~jmurphey], I probably didn't describe stuff around encryption service correctly. Sorry for confusion. Can you please take look on following merge request [https://gitlab.cee.redhat.com/fuse-docs/amq/merge_requests/1] ?	1	1	https://issues.jboss.org/browse/FUSEDOC-911
5302	FUSEDOC-911	Can you merge the request then?	1	0	https://issues.jboss.org/browse/FUSEDOC-911
5303	FUSEDOC-900	{quote} Options Password encryption for JAAS login modules can optionally be enabled by setting the following login module properties: {quote} Where should users set those properties? {{$FUSE_HOME/etc/org.apache.karaf.jaas.cfg}} or somewhere else?	1	1	https://issues.jboss.org/browse/FUSEDOC-900
5304	FUSEDOC-900	[~jmurphey], about my [first comment|https://issues.jboss.org/browse/FUSEDOC-900?focusedCommentId=13100125&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13100125]: You might mention that users can either edit properties in {{$FUSE_HOME/etc/org.apache.karaf.jaas.cfg}} or deploy their own blueprint.xml as described in section "Example of a login module with Jasypt encryption". Can you let me know, when it's ready for review again? Thanks, Josef	1	1	https://issues.jboss.org/browse/FUSEDOC-900
5305	FUSEDOC-871	Freeman, in your description above, what exactly do you mean "without login" in "... to automatically encrypt the passwords in users.properties without login ..."?	0	0	https://issues.jboss.org/browse/FUSEDOC-871
5306	FUSEDOC-871	Freeman, where in the example blueprint file (Example of a login module with jasypt encryption) does this bean go? Assuming that is the place you were pointing to in the description.	0	0	https://issues.jboss.org/browse/FUSEDOC-871
5307	FUSEDOC-871	So what triggers the autoencryption event? When does it happen?	0	0	https://issues.jboss.org/browse/FUSEDOC-871
5308	FUSECDC-20	Hey Gert, What is meant by invalid profile? Are you referring to a missing profile or a profile with bad properties?	0	0	https://issues.jboss.org/browse/FUSECDC-20
5309	GTNMGMT-58	Scheduling for 2.1.0 as 2.0.0 is scheduled to be included into JPP 6.1 and it was more work then expected to move to the newer version of CRaSH. Curious what features/issues you are looking forward to in upgrading to newer version ?	1	0	https://issues.jboss.org/browse/GTNMGMT-58
5310	GTNMAVEN-8	I just kept the original assignment ;) Can you review the tasks you are assigned and don't plan to work on please ?	0	0	https://issues.jboss.org/browse/GTNMAVEN-8
5311	GTNPORTAL-3539	I find that this happens when we pass username with NULL value to UserHandler#findUserByName() method. It indirectly calls org.picketlink.idm.api.PersistenceManager.findUser(String) as below: {code} try { foundUser = session.getPersistenceManager().findUser(userName); } catch (Exception e) { handleException("Cannot obtain user: " + userName + "; ", e); } {code} The #findUser() method throws an exception, then the rollback of IDM transaction is performed inside the #handleException method (by indirectly calling #recoverFromIDMError method). That's why it reverts the new user was created before. This not only impacts to UserHandler#findUserByName() BUT also for every place that is using PersistenceManager#findUser() --> So the *workaround* is to remove the #handleException in the try-catch block. ========== However, what really concerns me is about the org.exoplatform.services.organization.idm.PicketLinkIDMOrganizationServiceImpl.flush() which is already called before PersistenceManager#findUser() performed. It looks like the pending changes should be saved at this time, then the transaction rollback should not be a problem. Is there any IDM expert who can help to confirm this ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-3539

#	Requirement	Questions	Answered	Successfully Answered	URL
5312	GTNPORTAL-3509	When importing automatically all applications, it only replaces slashes by underscores in Application Name and Display Name in [ApplicationRegistryServiceImpl.java|https://github.com/gatein/gatein-portal/blob/3.7.1.Final/component/application-registry/src/main/java/org/exoplatform/application/registry/impl/ApplicationRegistryServiceImpl.java#L382-L385] {code:title=ApplicationRegistryServiceImpl.java} // Need to sanitize portlet and application names in case they contain characters that would // cause an improper Application name portletApplicationName = portletApplicationName.replace('/', '_'); portletName = portletName.replace('/', '_'); {code} While adding an application to a category on UI, it must pass the rule of length limit and character validation. For example, in [UIApplicationForm.java|https://github.com/gatein/gatein-portal/blob/3.7.1.Final/portlet/exoadmin/src/main/java/org/exoplatform/applicationregistry/webui/component/UIApplicationForm.java#L58-L61] {code:title=UIApplicationForm.java} public UIApplicationForm() throws Exception { addUIFormInput(new UIFormStringInput("applicationName", "applicationName", null).addValidator(MandatoryValidator.class) .addValidator(StringLengthValidator.class, 3, 30).addValidator(NameValidator.class)); addUIFormInput(new UIFormStringInput("displayName", "displayName", null).addValidator(StringLengthValidator.class, 3, 30).addValidator(NotHTMLTagValidator.class)); addUIFormInput(new UIFormTextAreaInput("description", "description", null).addValidator(NullFieldValidator.class) .addValidator(NotHTMLTagValidator.class)); } {code}	1	1	https://issues.jboss.org/browse/GTNPORTAL-3509
5313	GTNPORTAL-3495	Yes, I know the default value is set to true. Sorry for the copy/paste in TestCase, but the first one attached in jbossexo ML didn't get the same page. Anyway, did you reproduce the problem using skipPaginationInMembershipQuery=false? (After test case change)	1	1	https://issues.jboss.org/browse/GTNPORTAL-3495
5314	GTNPORTAL-3495	Ok, I understand. So you intentionally didn't implement the membership pagination using LDAP store. (as seen in method LDAPIdentityStoreImpl.resolveRelationships). Can we make a change in GateIN so that in case we use LDAP/AD in PL IDM, the "skipPaginationInMembershipQuery" is switched automatically, or at least a "log.warn" to say: "Hey, you are using LDAP, switch this flag to 'true' ".	1	1	https://issues.jboss.org/browse/GTNPORTAL-3495
5315	GTNPORTAL-3397	What do you mean by "And SecureRandomService is configurable component" ? I see the service is being used in org.exoplatform.web.security.security.AbstractTokenService and OAuth providers implementation (such as facebook, google) The purpose of external configuration file gatein/conf/configuration.xml is to re-define/override default configuration. That means portal should still work w/o it.	1	0	https://issues.jboss.org/browse/GTNPORTAL-3397
5316	GTNPORTAL-3315	as COR-317 has been resolved, [~haint] could you please make a final check ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-3315
5317	GTNPORTAL-3285	I am not sure what the last sentence of the previous comment means for the linked pull request. It means that the PR is unnecessary, right? Could you please comment and close the PR if so?	0	0	https://issues.jboss.org/browse/GTNPORTAL-3285
5318	GTNPORTAL-3283	Thanks for your comment, Marko. I vote for reporting this under the appropriate container project. Do you know which one is it?	1	0	https://issues.jboss.org/browse/GTNPORTAL-3283
5319	GTNPORTAL-3260	Please add (1) some string which uniquelly identifies the portlet, e.g. fq class name plus some kind of steps to reproduce (while doing what is this a problem?) (2) Why is this an issue? What is wrong now? What should be better after fixing? (3) One or two sentences how it could/should be done (if you know)	0	0	https://issues.jboss.org/browse/GTNPORTAL-3260
5320	GTNPORTAL-3145	Boleslaw Dawidowicz <bdawidow@redhat.com> made a comment on [bug 920553|https://bugzilla.redhat.com/show_bug.cgi?id=920553] Can you add documentation section about this too?	0	0	https://issues.jboss.org/browse/GTNPORTAL-3145
5321	GTNPORTAL-2852	We find that removing of *_en.properties and only keeping base ones will raise an issue: English translations would not be displayed anymore when specifically requested (by the browser or by the user setting) IF "en" is not the default locale of GateIn. The big issue by removing "_en" is that information is simply *lost*. The system doesn't know anymore that the base bundle file is English locale. Therefore we decided to keep *_en* bundle files only (do NOT generate base ones anymore) AND the *_en* locale will be taken as a last fallback locale by ResourceBundleService. So the overall sequence of candidate locales will be : - User locale - Portal locale - Base files - *_en* locale	0	0	https://issues.jboss.org/browse/GTNPORTAL-2852
5322	GTNPORTAL-2765	Hi Matt, I gave another try to the login page, I'll save it as an attachment in the next comment. Can you please review it? When it's fine and finished, I'll make a pull request to your mobile fork. The blue form header is now less detailed, if we want to make it the same as before, I can try to extract the pattern from original image. However, I'm not clear about some of the rules: 1, Any ideas what's the most sophisticated way how to do it? I've found this http://www.broken-links.com/2010/06/14/using-svg-in-backgrounds-with-png-fallback/, but I don't like that the bitmap is showed on the page anyway - covered with svg. 3, not really sure what this is for, if you have some jquery plugin/javascript lib/article discussing this, please share. For the record: * The registration portlet has ugly HTML markup, too. I should rewrite it after login screen is finished. * Nice presentation for everyone interested in responsive design: http://www.youtube.com/watch?v=H6z7vpgkCZw * Page for previewing the page in several sizes at once (works with localhost): http://mattkersley.com/responsive/	1	1	https://issues.jboss.org/browse/GTNPORTAL-2765
5323	GTNPORTAL-2765	The commit with my recent changes is located here: https://github.com/vrockai/gatein-portal-master/commit/a06f16a59a8d8fe99b94b65187da757f5e8209be I didn't test this on retina page. Do you use any emulator or tool for this purpose?	1	1	https://issues.jboss.org/browse/GTNPORTAL-2765
5324	GTNPORTAL-2765	What browsers are having troubles with svg for you? I'm testing with latest FF, latest Chrome and IE10.	1	1	https://issues.jboss.org/browse/GTNPORTAL-2765
5325	GTNPORTAL-2765	And does the key svg look smooth in all of them? or does it look pixelated in some?	1	1	https://issues.jboss.org/browse/GTNPORTAL-2765

5332	GTNPORTAL-2406	Is this issue still valid?	1	0	https://issues.jboss.org/browse/GTNPORTAL-2406
5333	GTNPORTAL-2373	Kien is the patch commited in gatein? Could you confirm and resolve?	0	0	https://issues.jboss.org/browse/GTNPORTAL-2373
5334	GTNPORTAL-2373	printing "null" is an expected behavior from Groovy template engine world. I don't really like to change this default behavior (And I can see that JSP syntax does the same.) For me, the proper fix is to check non-NULL value before printing if we don't want to write "null". So I prefer to take "Won't Fix" for this. WDYT ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-2373
5335	GTNPORTAL-2358	I am adding new patch GTNPORTAL-2358-fullName.patch as previous patches can work only with "displayName" support in OrganizationService API on interface User, which is not option for now. New patch is using fullName as temporary persistent field, so fullName is placeholder for non-existing displayName. What exactly is done in patch is: - Adding new UI field with name "displayName" to all UI forms, where you can create or edit user (UIRegisterInputSet, UIAccountProfiles, UIAccountInputSet, UIAccountEditInputSet). So name of UI field is "displayName" and name of localization label is also "displayName". I added localizations only for "en" and "cs" properties bundles as I don't know other languages :) - UI components are communicating with User interface via "setFullName" and "getFullName". So fullName is now used as temporary placeholder until methods "getDisplayName" and "setDisplayName" will be available in Organization API. I added "TODO: GTNPORTAL-2358" in all pieces of code, which needs to be changed once displayName will be available in Organization API. This will allow us to use getDisplayName and setDisplayName and get rid of fullName as temporary placeholder. - IDM integration is changed to support persistent implementations of "getFullName" and "setFullName". For this purpose I forked class UserImpl from Organization API (I made a subclass of eXo UserImpl class with overriden methods getFullName and setFullName). Again, name of new attribute at DB level is "displayName", which will assure compatibility with future versions (after support for displayName in Organization API will be added).	1	1	https://issues.jboss.org/browse/GTNPORTAL-2358
5336	GTNPORTAL-2358	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 794235|https://bugzilla.redhat.com/show_bug.cgi?id=794235] Marek Posolda <mposolda@redhat.com> made a comment on jira GTNPORTAL-2358 I am adding new patch GTNPORTAL-2358-fullName.patch as previous patches can work only with "displayName" support in OrganizationService API on interface User, which is not option for now. New patch is using fullName as temporary persistent field, so fullName is placeholder for non-existing displayName. What exactly is done in patch is: - Adding new UI field with name "displayName" to all UI forms, where you can create or edit user (UIRegisterInputSet, UIAccountProfiles, UIAccountInputSet, UIAccountEditInputSet). So name of UI field is "displayName" and name of localization label is also "displayName". I added localizations only for "en" and "cs" properties bundles as I don't know other languages :) - UI components are communicating with User interface via "setFullName" and "getFullName". So fullName is now used as temporary placeholder until methods "getDisplayName" and "setDisplayName" will be available in Organization API. I added "TODO: GTNPORTAL-2358" in all pieces of code, which needs to be changed once displayName will be available in Organization API. This will allow us to use getDisplayName and setDisplayName and get rid of fullName as temporary placeholder. - IDM integration is changed to support persistent implementations of "getFullName" and "setFullName". 5340	GTNPORTAL-1937	Have you tried using an empty producer configuration? {code} <producer-configuration/> {code}	1	1	https://issues.jboss.org/browse/GTNPORTAL-1937
5341	GTNPORTAL-1867	for Lucene 2.9.4 The 3.1 version is available. http://lucene.apache.org/ : "31 March 2011 - Lucene Core 3.1 and Solr 3.1 Available" would it be possible to have this version in the portal ? or it involves a major change, config and API changes, etc... and cannot be done for GateIn 3.2.0 ? Thanks, Antoine	1	0	https://issues.jboss.org/browse/GTNPORTAL-1867
5342	GTNPORTAL-1816	Dimitri, what do you want to do with this issue ?	1	0	https://issues.jboss.org/browse/GTNPORTAL-1816
5343	GTNPORTAL-1808	why i do not see any commit in GateIn trunk for this ? btw could you specify Fix Version/s for this issue ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1808
5344	GTNPORTAL-1805	Can you verify if this patch is applied and resolve?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1805
5345	GTNPORTAL-1805	Does WCI cover the REST API ({{/portal/rest/sso/authcallback/auth/_username_/_password_}})? I've looked at http://anonsvn.jboss.org/repos/gatein/components/wci/trunk/wci/src/main/doc/wci-authentication.pdf but it seems to me the answer is "no". So, in order to count calls to aforementioned REST URL where the return value is {{false}}, it seems to me {{UserDaoImpl.authenticate(username, password)}} would be the best place to register failed login attempts, much in the same way that {{User.setLastLoginTime(_now_)}} is called after succesful authentication. You could then expand {{org.exoplatform.services.organization.UserEventListener}} with the methods {{preAuthenticate(User user)}} and {{postAuthenticate(User user, boolean success}}, and trigger these at the start and end of {{authenticate}}. Then you could do any logic like sending mail or blocking the user in the listener, and developers would be able to easily extend this functionality.	0	0	https://issues.jboss.org/browse/GTNPORTAL-1805

#	Requirement	Questions	Answered	Successfully Answered	URL
5346	GTNPORTAL-1788	It seems like Chris' idea should work great. The portlets on all tabs need to be initialized, but the render method should only be invoked on the visible portlets. The non-visible portlets will then be able to process events and actions and serve resources, but avoid rendering which is obviously a waste of CPU time. This assumes the portlet developer is not changing any state in the render method, which is the best practice anyway. How difficult would it be to *not* call render on the non-visible portlets? That should be the behavior of any tabbed container.	1	0	https://issues.jboss.org/browse/GTNPORTAL-1788
5347	GTNPORTAL-1762	@Khoi Nguyen : Can you please fix this issue ASAP?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1762
5348	GTNPORTAL-1746	Is this planned for release of GateIn 3.2-beta1 ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1746
5349	GTNPORTAL-1684	I am seeing change only in noncluster configuration but not in cluster profile configuration - http://anonsvn.jboss.org/repos/gatein/portal/trunk/web/portal/src/main/webapp/WEB-INF/conf/organization/picketlink-idm/jboss-cache-cluster.xml only in noncluster. Is it some issue why not add exp.algorithm here as well?	1	0	https://issues.jboss.org/browse/GTNPORTAL-1684
5350	GTNPORTAL-1662	could you give an usecase that needs such UI Component ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1662
5351	GTNPORTAL-1570	I am testing with EPP 5.1 ER2 and I am seeing performance improvement after applying patch. More info in email. I am seeing that jira is now in state "Won't fix"? Is there any regression founded?	1	0	https://issues.jboss.org/browse/GTNPORTAL-1570

5353	GTNPORTAL-1539	I really am confusing on this. In my side, I can get service methods and then bug just appear because of parsing json data, so i have logs (see Description of bug), I guess it can be 'Network Proxy' that affect to retrieve osapi available services. In this bug, we only want to remove console logs because they are not the sign of a real problem. Could you please patch another 2010-10-18-GTNPORTAL-1539-shindig-update-comment-logs.patch. Thanks	1	1	https://issues.jboss.org/browse/GTNPORTAL-1539
5354	GTNPORTAL-1486	Could you make a patch or pack those files with directory structure? So assignee need not arrange the files in relevant folder	1	1	https://issues.jboss.org/browse/GTNPORTAL-1486
5355	GTNPORTAL-1468	What are missing ? can you clear ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1468
5356	GTNPORTAL-1450	Is there any news please ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1450
5357	GTNPORTAL-1450	Is this patch validated? Can you please tell us when it will be integrated?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1450
5358	GTNPORTAL-1397	Let see if the extension mechanism could help to do this ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1397
5359	GTNPORTAL-1362	Marc, do you mean that this bug doesn't exist anymore in 5.2 or that you don't need to delete your DB and don't face it ? I'm not able to reproduce so far.	1	0	https://issues.jboss.org/browse/GTNPORTAL-1362
5360	GTNPORTAL-1297	@Prabhat Jha, could you provide a mockup to make this clear ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1297
5361	GTNPORTAL-1290	spaces after comma is removed now	0	0	https://issues.jboss.org/browse/GTNPORTAL-1290
5362	GTNPORTAL-1134	Can this be made a priority as it will help with scalability?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1134
5363	GTNPORTAL-1134	I will let you know at the beginning of next week. Are you fine with that?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1134
5364	GTNPORTAL-1106	Actually this is a feature and it is still used. For instance, in WCM they configured two Portal templates are : Classic and ACME So we should revert this commit and configure a new basic portal template in GateIn default to show the feature. WDYT ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-1106
5365	GTNPORTAL-1070	Check again images: 4.jpg, 3.jpg,11.jpg	1	1	https://issues.jboss.org/browse/GTNPORTAL-1070
5366	GTNPORTAL-1060	Why not using Application registry identifier ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-1060
5367	GTNPORTAL-1006	Why do we need that task ? I removed the notfound node before 3.0 GA release because it was not working correctly and there were many bugs.	0	0	https://issues.jboss.org/browse/GTNPORTAL-1006
5368	GTNPORTAL-992	Marek, did you eventually manage to get JOSSO work with 1.8.2-rev1573?	0	0	https://issues.jboss.org/browse/GTNPORTAL-992

#	Requirement	Questions	Answered	Successfully Answered	URL
5369	GTNPORTAL-918	For example, why is it possible to add a gadget to several categories at once directly from the gadget page but it's not possible to do so from a portlet page?	0	0	https://issues.jboss.org/browse/GTNPORTAL-918
5370	GTNPORTAL-916	Could you provide a mockup to show how the feature looks like in UI ? BTW, UI team could give some proposals for this too.	1	0	https://issues.jboss.org/browse/GTNPORTAL-916
5371	GTNPORTAL-888	And how/where exactly would these automatically imported portlets go? And why would we need to make an exception for the WSRP case and not for locally deployed portlets? There might be a way to get these portlets without them being imported into categories but it's not clear to me how to do it at this time. Maybe I just need more time to play with the Application Registry first. I can't help but feel that if it's not clear how to do this immediately, it won't be clear either for our users. :(	1	0	https://issues.jboss.org/browse/GTNPORTAL-888
5372	GTNPORTAL-870	on my opinion, the round-trip configuration have been asked and discussed a lot for JBoss Portal... and it is not really feasible. the trouble is : centralization. if you have several bags of rock stones, and you put all of them together in one bag... how do you separate them back in each of their origin bag ? especially if you add one or two stone directly in the big bag : in which original bag to you attribute it ? so... round-trip configuration could be done... but it would be a huge and complex tool... and it is not really useable then. on my opinion, the focus is : - configuration of a new portal and new portlets can be done in GateIn, even if a bit more complicated than in JBoss Portal : may be allow/add some more simple way. - globally maintain a focus and high priority on this way of making portal and portlet deployment. - hot deploy of these artifacts (cf jira GTNPORTAL-315) not sure there a lot to do in this jira itself.	1	1	https://issues.jboss.org/browse/GTNPORTAL-870
5373	GTNPORTAL-770	Note to ExoJBossCache configuration in common-configuration.xml. Now I am seeing "classpath:/conf/jbosscache/cluster/config.xml" as value of cache.config.template for both cases (cluster profile enabled and disabled). I guess it is typo and should be "classpath:/conf/jbosscache/local/config.xml" ? Maybe I am wrong since local configuration for jboss cache is empty and it has not specified cluster name. But then why is this specified with same value for both cases.	0	0	https://issues.jboss.org/browse/GTNPORTAL-770
5374	GTNPORTAL-741	- Now, with SNF_PRL_25,26,27 fixed and move to candidate directory (but have not right to commit) and I send file for Arthur - SNF_PRL_21: still fail with verifyTextNotPresent - SNF_PRL_29,30: I cann't run because have problem with gatein in Dashboard page and fixed by GTN_PORTAL- 768. I will return to check it tomorrow.	0	0	https://issues.jboss.org/browse/GTNPORTAL-741
5375	GTNPORTAL-721	Acknowledged. Major focus is screenshots, primarily re-XMLing to cater for different format renderings but also reshooting many. Also fixing some fairly catastrophic publican-build failures. Luc, where did you log the bugs you mentioned? (can't see anything in svn log)	0	0	https://issues.jboss.org/browse/GTNPORTAL-721
5376	GTNPORTAL-633	Fixed with attached patch file (2010-08-09-GTNPORTAL-633.patch) Solution: Don't display PageId field if create page, display PageId field (in Label type) if edit page	0	0	https://issues.jboss.org/browse/GTNPORTAL-633
5377	GTNPORTAL-509	Hi, can you please specify with which variables you are running the tests? I have following results on my side (only selenium folder tests): - localhost (JBoss): failures at tests 2, 7, 35 - hudson: - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_jboss5/44/ (2,7,35) - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_tomcat6/42/ (2,7,35) - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_jboss5_db2/22/ (2,35) - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_jboss5_mssql/19/ (33,35) - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_jboss5_mysql/27/ (33,35) - http://hudson.jboss.org/hudson/job/gatein_portal_ui_selenium_tests_jboss5_postgresql/14/ (33,35) All tests were running on GateIn trunk version (rev. 2030). In hudson I run the tests with following command: mvn clean install -Pselenium -Dbrowser="*firefox" -Dselenium.port=6666 -Dselenium.timeout=100000 -Dselenium.speed=2000 Can you please verify my results? Thanks	1	0	https://issues.jboss.org/browse/GTNPORTAL-509
5378	GTNPORTAL-505	do you mean you want to overwrite the @Config template definition in UIComponent ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-505
5379	GTNPORTAL-479	Should we apply that patch ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-479
5380	GTNPORTAL-324	I did not see Miro in assignee list. Can you pls have him work on this? He should use the location you have for other UI tests.	0	0	https://issues.jboss.org/browse/GTNPORTAL-324
5381	GTNPORTAL-315	I don't understand why this is out of date ? Does the deployement (and re-deployement) of the artifacts of the "Extension Mechanism" can be hot ? You know, the feature of hot deployement of the portal definition (pages, navigation,...) that we had with JBoss Portal, before the reshape with Exo portal. This was a very important feature that is not anymore available. For development of portals in companies, getting this feature back would be a great dev productivity jump. Tug (of Exo) told me a few months ago that the feature was under thinking, even if not sure it could be done as full hot redeployment. What could be done is : - hot redeployement of the EAR, for update of the page and navigation definition (and locale resource bundle, etc...) - this is for an existing portal only, yet deployed What could not be done is : - not possible to hot redeploy to add or suppress a portal container or a portal (site) definition This would be great. The need is hot redeployement for Page/Nav development (with xml definition) and the tuning of all this. Creating a new portal container or portal (site) can be done with stop and restart of the server. This was Tug say,... if you want to check about what's on for this feature. ******** This feature is related with the update of the page/nav definition in the JCR, from the XML definition. As far as I know, this can be done only with suppression of the JCR content, and recreation,... for the time being. Did I missed something about this ? Thanks for all the dev of the product. Antoine www.sysemo.com	1	1	https://issues.jboss.org/browse/GTNPORTAL-315
5382	GTNPORTAL-307	How is that progressing ? I'm willing to help if needed (This is an important feature)	0	0	https://issues.jboss.org/browse/GTNPORTAL-307
5383	GTNPORTAL-94	Can we drop this one ? Sounds more like a WCM concern	1	1	https://issues.jboss.org/browse/GTNPORTAL-94
5384	GTNPORTAL-66	Thanks a lot for looking into this. I havent't followed too closely but have 2 questions: - Is there a workaround for the JDK6 bug ? Did you get Sun interest to fix it ? - Can this be used to precompile the groovy templates and reduce the first time access when unzipping and running GateIn ?	0	0	https://issues.jboss.org/browse/GTNPORTAL-66
5385	GTNPORTAL-66	- Is there a workaround for the JDK6 bug ? Did you get Sun interest to fix it ? I signalized the problem in the bugs resolution application of the sun and actually there is no response actually. Some day ago I've seen some interest to this in the sun forums (http://forums.sun.com/thread.jspa?threadID=5416155&tstart=0). I think in theese days I will know something more. Actually to resolve this problem you should delete the 'default' operator by the enums. An example of 'default' operator is inside the org.exoplatform.webui.event.Event.Phase class - Can this be used to precompile the groovy templates and reduce the first time access when unzipping and running GateIn ? It compiles the groovy scripts through the exo groovy compiler, so I suppose it builds new class files. I have verify if the achievement is the same as for the runtime compiling (verify where the class files are created)	0	0	https://issues.jboss.org/browse/GTNPORTAL-66
5386	GTNPORTAL-27	Is there someone on windows who can try to apply the attached patch on gatein portal trunk to see if fixes the issue ?	1	1	https://issues.jboss.org/browse/GTNPORTAL-27

5400	GTNWSRP-285	Martin Weiler <mweiler@redhat.com> made a comment on [bug 824032|https://bugzilla.redhat.com/show_bug.cgi?id=824032] Closing as fixed in JPP 6.0.0, as GTNWSRP-285 has been fixed in WSRP 2.2.0.CR01. JPP 6.0.0 includes GateIn WSRP 2.2.2.Final-redhat-1.	0	0	https://issues.jboss.org/browse/GTNWSRP-285
5401	GTNWSRP-258	Hi Chris, I have tried with 2 cluster nodes (on different machines) + loadbalancer + consumer on other machine. I'm still getting same behavior - create consumer (with wsdl of loadbalancer), registration is done with node1, add portlet on page - ok, kill node1, refresh - portlet not displayed, refresh of consumer -> could not transmit message. I'm using EPP 5.2.2 ER03 with WSRP 2.1.7 included, is this fixed at following version of WSRP (2.2.0)? Thanks for information	1	0	https://issues.jboss.org/browse/GTNWSRP-258
5402	GTNWSRP-225	I'm getting another error when accessing page with remote portlet after failover. java.io.IOException: Could not transmit message (Connection refused) And when I try to refresh the consumer, I'm getting the same error (Problem getting service description for producer cluster, please see the logs for more information. Could not transmit message) My environment: - 2 EPP 5.1.1 instances in cluster (lab) - 1 loadbalancer (lab) - 1 EPP 5.1.1 local instance (using WSDL from loadbalancer to register consumer)	1	1	https://issues.jboss.org/browse/GTNWSRP-225
5403	GTNWSRP-219	How do you produce this error? The wsrp admin doesn't exactly work right now with AS6	1	1	https://issues.jboss.org/browse/GTNWSRP-219
5404	GTNWSRP-218	What do you mean by: "did not work"? Were you not able to run the app or did you it exhibit the issue? I'm not interested in the behavior in AS 7 at the moment, it needs to run in AS 6. Regarding the fact that the EL impl seems to be correct, I tend to agree with you since I doubt that an issue as big as this one would have gone undetected until now. This might have something to do with the PortletBridge... :/	1	1	https://issues.jboss.org/browse/GTNWSRP-218
5405	GTNWSRP-218	at org.gatein.test.ELBug.isB(ELBug.java:17) [classes:] seems to imply that isB is evaluated, which is definitely wrong. Am I missing something?	1	1	https://issues.jboss.org/browse/GTNWSRP-218
5406	GTNWSRP-192	Is this something GateIn specific, though?	0	0	https://issues.jboss.org/browse/GTNWSRP-192
5407	GTNWSRP-181	Are there steps to have GateIn work on AS 6 somewhere? It's failing way before WSRP gets a chance to fail here :)	1	1	https://issues.jboss.org/browse/GTNWSRP-181
5408	GTNWSRP-168	Do you mean display the URL at which the Producer publishes its WSDL? If yes, it might not be as easy as first thought since I am not sure if there's a standard way to retrieve that information from JAX-WS and I would rather not code something specific to a particular WS stack.	1	1	https://issues.jboss.org/browse/GTNWSRP-168
5409	GTNWSRP-69	Do we still need this? We do use an in-memory ExportPersistenceManager as part of the tests, and I don't see how an in-memory only implementation would do much good outside of the tests.	0	0	https://issues.jboss.org/browse/GTNWSRP-69
5410	GTNWSRP-67	Should now work properly. No need to deploy external jars anywhere. Added bonus NetUnity event test portlets should also work! :)	0	0	https://issues.jboss.org/browse/GTNWSRP-67
5411	GRAVEL-31	Would you ever want to read a document from someplace other than either the servlet root or the classpath? Which is to say, why a URL?	1	0	https://issues.jboss.org/browse/GRAVEL-31
5412	GRAVEL-28	I don't see this as a good idea - a given component can currently reasonably expect all of its children to be rendered within the same page as the component itself. By breaking this guarantee, I can only picture bad things happening - labels that refer to IDs that exist within the component tree, but not within the HTML document, for example. When would you use such a thing? Perhaps it would be better to provide a means to render a complete Facelet into a buffer instead. Can you give your use case(s)?	1	1	https://issues.jboss.org/browse/GRAVEL-28
5413	GRAVEL-28	The first use case can be done with existing facelets templating facilities pretty easily. I'm not interested in the second use case - a section of HTML cannot be assumed to be valid without its enclosing context. Sure it can be if you're careful, but don't want to go there. Any others?	1	1	https://issues.jboss.org/browse/GRAVEL-28

#	Requirement	Questions	Answered	Successfully Answered	URL
5414	GRAVEL-28	Facelets templating will cause evaluating same EL expressions many times in first case. I'm not sure why you are discarding second use case: Let's say you need to render a big table (which takes long time using JSF "as is") on a screen and send it via email using Seam email tag on same click. In that case you just could render it into buffer stored in backing bean and use it in 2 places. How could you do it better? ;) Thanks	0	0	https://issues.jboss.org/browse/GRAVEL-28
5415	GRAVEL-27	Can you give an example of a case where evaluating an expression at render time is preferable? I don't see any case where such a thing would be relevant for performance improvements.	0	0	https://issues.jboss.org/browse/GRAVEL-27
5416	GRAVEL-24	Perhaps this patch could help. It will add a targetFileName and targetContentType attributes to gd:inputFile. Also, it would be good to have a targetFileSize but I haven't find an easy way of doing it. I also have problems with tld documentation. I have added tld annotations. Do I need something else to add this attributes to tlds?	1	0	https://issues.jboss.org/browse/GRAVEL-24
5417	GRAVEL-18	Why is this not documented in TLD doc on gravel web site? Please, update the docs on web site to the docs from the latest release	1	1	https://issues.jboss.org/browse/GRAVEL-18
5418	GUVNOR-3305	[~manstis], I'm surprised that marshalling doesn't work with List<Object>. Do you have a simple example of it breaking I could look at?	1	1	https://issues.jboss.org/browse/GUVNOR-3305
5419	GUVNOR-3305	Hi, thank you for these investigations! The role of this extension is to allow end user to put additional data into their DMN model as needed. Mostly is for meta-data of the business. A pragmatical example: I might embed as byte[] in one of those extension, in order to attach BLOB of Words or PDF to any DMN node. However is not only that, because for instance other partner editor tooling of DMN diagrams, do use this extension mechanism to extend the DMN specification with additional execution semantics. There is a basic example in our test suite: https://github.com/kiegroup/drools/blob/master/kie-dmn/kie-dmn-core/src/test/java/org/kie/dmn/core/compiler/extensions/DMNExtensionRegisterTest.java#L121-L125 and related resource: https://github.com/kiegroup/drools/blob/master/kie-dmn/kie-dmn-core/src/test/resources/org/kie/dmn/core/compiler/extensions/0001-input-data-string-with-extensions.dmn#L36-L38 At this point I have a question, please? How can I make sure when I write an extension element, like for example the following: https://github.com/kiegroup/drools/blob/master/kie-dmn/kie-dmn-core/src/test/java/org/kie/dmn/core/compiler/extensions/FirstNameDescription.java that is portable?	1	1	https://issues.jboss.org/browse/GUVNOR-3305
5420	GUVNOR-3290	Hey [~manstis] What you mean by a "top-level" item? The palette is displayed as for a given palette model, this palette model actually provides 3 levels: categories, morph base types and finally the items. Actually you can drag a category or any of the items in the palette, so it means you can drag from the "big" palette icons and from each of the stencil icons as well. Saying that, what's a "top-level" item? Not sure if I'm following you sorry...	1	1	https://issues.jboss.org/browse/GUVNOR-3290
5421	GUVNOR-3290	Ah ok I think I undestand [~manstis]. Well first of all say that actually you can drag from the top-level/categories items into the canvas, so this part seems that already fits you needs. On the otrher hand, as commetned, the displayed palette is built from a palette model, so you can try to use a custom PaletteDefinitionBuilder class, that instead of generating items for each of your stencils, it skips that part and only generate a palette model that contain "categories", so the top-level menu items. Tbh I never tried this, not sure what happens if you provide a palette model only with categories, it should work... but not sure if the floating div will still appear even if empty. So that's what you can probably do... create a custom palette definition model builder, that builds a model which contains your categories (top-level) items, but do not have any children (no morph base types, no items at all). Doing that, you should be able to drag from the top-level icons, as it's actually supported, but probably you'll have to fix some bug on t he palette rendering, as if no children, no floating div should appear, it only has to display top-level items. Does that makes sense? Just brainstorming, feel free to change whatever you need.	1	1	https://issues.jboss.org/browse/GUVNOR-3290
5422	GUVNOR-3290	Oh ok I see, well this happens for me with, for example, my IDE, I have to change some of the default OS keyboard shortcuts to make the ones from the IDE work. So not sure if that's a bug in Stunner to be reported and fixed, or it's just about changing your OS keyboard shortcuts settings? WDYT? Did you try with Shift too, does the window manager intecepts it too? :(	1	1	https://issues.jboss.org/browse/GUVNOR-3290
5423	GUVNOR-3265	p.s. Google Maps has an on-demand slider as well, kinda nifty. Have folks discussed using a slider?	1	0	https://issues.jboss.org/browse/GUVNOR-3265
5424	GUVNOR-3265	[~roger600] * I reached out to another team who has worked on canvases. It looks like they are using a button control. They have posted some work on this topic to PF that isn't shown on patternfly.org, yet, but it's available as an Angular Patternfly example: http://www.patternfly.org/angular-patternfly/#/api/patternfly.canvas.directive:pfCanvas. * I also talked to [~mstevens1] who has some feedback that he'll be posting. * I couldn't find the UI controls in anything other than the GDT, so I'm at a little bit of a loss. If there's any pics you could post that would be super. * Would it be possible to put the zoom controls in or near the canvas? They seem a little hidden, or I'm not finding them. ;) In GDT, I'm not sure placing them within the menu item "View" is ideal. View> Zoom seems like a difference action, than View > Audit Log, so they might not even belong in the same menu. So pulling the control out of that menu and placing it on the canvas (or the canvas header) might help the user. [~mstevens1] Wdyt?	1	0	https://issues.jboss.org/browse/GUVNOR-3265
5425	GUVNOR-3264	[~roger600] Hi Roger, how does "pan" work in Stunner? I see {{PanControl}} however pressing {{alt}} and moving the mouse around appears to have no effect.	1	1	https://issues.jboss.org/browse/GUVNOR-3264
5426	GUVNOR-3264	[~roger600] I talked with [~mstevens1] about this and we're both aligned on these points: * Canvas should be infinite. It should grow when I reach the edges. * Users can use scrollbars to pan. * Users can use the little "preview" window to pan. * [Matthew] As a bonus, users could use keyboard. For this, I am accustomed to the spacebar. Though it looks like GenMyModel uses Shift. A side question that I have: Why does the panned selection get a little gray border after it's dropped? I get why it would be there during the panning, but not sure why it should persist?	1	0	https://issues.jboss.org/browse/GUVNOR-3264
5427	GUVNOR-3264	Hey [~uxdlc] [~mstevens1], Thanks for the feedback! I'm agree on the above points, just a few comments: * *Canvas should be infinite. It should grow when I reach the edges* -> Still not supported. [There already exists a task for this|https://issues.jboss.org/browse/JBPM-5536]. * *Users can use the little "preview" window to pan* -> That's a good improvement, I think it's neither identified as a task yet, so does not exist a ticket for this. Actually the preview and the main canvas are "decoupled", you can pan/zoom in both panels but have no effect between each other. Would be nice when doing zoom/pan in the preview panel, that it would reflect in the main one. For example being able to select a region in the preview panel, and that region gets automatically zoomed/pannel into screen's center for the main panel. Does it makes sense?	0	0	https://issues.jboss.org/browse/GUVNOR-3264

#	Requirement	Questions	Answered	Successfully Answered	URL
5428	GUVNOR-3222	Hi [~roger600] working on this now :-) I want most DMN Elements to show the "Name" text however one in particular ("Text Annotation") to show the "text" property of the definition and not "name". This seems quite easy to achieve by re-using most of {{CanvasNameEditionControlImpl}} and {{NameEditBoxWidget}} to read from and write to the correct property on the definition. I'd need to expose this new "Text" editor as a _new_ handler on {{CanvasControlRegistrationHandler}} and have it only register itself for the applicable types of Shape. Sound about right to you? Or.... I might make {{CanvasNameEditionControlImpl}} and {{NameEditBoxWidget}} support a configurable ({{String}}) property to edit and not tied to "Name". WDYT?	1	1	https://issues.jboss.org/browse/GUVNOR-3222
5429	GUVNOR-3222	[~roger600] Oh, as an aside... do you have a JIRA already for when the text to edit is an empty {{String}}? For example, if I edit the name of a node from "Subprocess" (or whatever) to simply "" then I can no longer edit the text "in place". Presumably it's because the event handlers for double-click etc are attached to a Lienzo {{Text}} Shape and when this represents an empty {{String}} there is nothing in the selection layer to respond to mouse events...	1	1	https://issues.jboss.org/browse/GUVNOR-3222
5430	GUVNOR-3222	Hey [~manstis], my comments :) * Yeah for me sounds good making the CanvasNameEditionControlImpl more generic, so as you say, for example, by adding the name of the property to edit (probably you can even change the class name then, it's not just for "name"...). So having the property name to editr, you can use the adapters (DefinitionAdapter etc) to obtain and to set the value for that property, * On the other hand, not sure if using that PropertyMetaTypes or whatever you think could work, but you need to know on the client side, for a given bean, which is that property to edit. So basically to figure out, in some way, when you have a bean, to obtain the name of the property you want to edit. * About the bug on empty text - good point! I don't remember any existing bug for this, so can you please open it if so? You can even put it on top of backlog, if you need this, this way we'll see it on next Monday's meeting and will take into account for fixing it sooner than latter :) And yeah, I think it's due to what you say, the handler is added to the text instance, so we should ensure the text, although empty, is being drawn in the selection layer with some size, sounds a bug to fix in lienzo side. Thanks for the feedback!	1	1	https://issues.jboss.org/browse/GUVNOR-3222
5431	GUVNOR-3222	Hi [~roger600] I've made the property used as the "display text" for nodes in the diagram and edited by the "in-place popup" configurable on a [branch|https://github.com/manstis/kie-wb-common/commit/710f9729694da97fbdfc599098574066e2cf69d6] in my fork. I have an adaptor factory that is used by {{BaseCanvasHandler}} and the "in-place popup" that returns read/write adaptors for different {{Elements}}. The default (and fallback) implementation of an adaptor uses the old code that was tied to the {{NAME}} meta-property. I have a custom implementation for DMN that reads/writes the {{String}} from a different field on the definition. What I am not sure about however is how to update a property. The {{propertyId}} I use is statically [defined|https://github.com/manstis/kie-wb-common/commit/710f9729694da97fbdfc599098574066e2cf69d6#diff-d03fe0c68d6601e5d56d002255e537f8R88]. Is this OK or should I be looking it up from one of Stunner's adaptors somewhere!?!	1	1	https://issues.jboss.org/browse/GUVNOR-3222
5432	GUVNOR-3222	See https://github.com/manstis/kie-wb-common/commit/1de061f1841a2317e8d9f0c335bb98dc2730efd3 This commit introduces a mechanism to lookup a "provider" of text to be used in the following by {{Element}} type:- * As the caption for nodes in the diagram * As the text edited in the "in-place" caption editor * As the text shown in Explorer The default (and fall-back, should no specific provider be found) falls back to the {{NAME}} MetaProperty.	1	1	https://issues.jboss.org/browse/GUVNOR-3222
5433	GUVNOR-3221	Hey [~manstis] Not sure if current features are enough to achieve your needs, I think so.. but lemme just share a few comments about how this SVG stuff works: * Therre is no resize support yet for rounded borders or for shapes based on canvas arcs. We're working on [this issue|https://github.com/ahome-it/lienzo-core/issues/140] in lienzo to natively support it. But due to this limitations stunner did some work-arounds.. * Due to the above limitation, and due to a WiresShape is composed by a MultiPath, currently Stunner a concrete [WiresScalableContainer|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-client/kie-wb-common-stunner-lienzo/src/main/java/org/kie/workbench/common/stunner/client/lienzo/shape/view/wires/WiresScalableContainer.java] implementation, in case you create the SVG shape views by setting resizable = true, see [this flag here|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-sets/kie-wb-common-stunner-bpmn/kie-wb-common-stunner-bpmn-client/src/main/java/org/kie/workbench/common/stunner/bpmn/client/resources/BPMNSVGViewFactory.java#L48]. * The WiresScalableContainer just check if the lienzo shape instance supports width and height attributes, if so, it sets the new ones (that makes the shape rendering size fine), otherwise, it just scales the instance. See [this logic here|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-client/kie-wb-common-stunner-lienzo/src/main/java/org/kie/workbench/common/stunner/client/lienzo/shape/view/wires/WiresScalableContainer.java#L49]. * In case the SVG declaration contains more than one element, it's possible to specify a layout position and make the element scale as well on resize. This is done by adding a custom attribute on the SVG declaration, you can find here an example for [custom layout declaration|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-sets/kie-wb-common-stunner-bpmn/kie-wb-common-stunner-bpmn-client/src/main/resources/org/kie/workbench/common/stunner/bpmn/client/resources/images/event/event-start.svg?short_path=3e4906c#L21] and for [an scalable element|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-sets/kie-wb-common-stunner-bpmn/kie-wb-common-stunner-bpmn-client/src/main/resources/org/kie/workbench/common/stunner/bpmn/client/resources/images/event/event-intermediate.svg?short_path=aded512#L75]. So after all that comments.. hehe , let's focus on your issue - I understand you're using an svg path for the InputData svg file, which path displays rounded corners? Is this svg path element the first one is your svg file (if it is, it's considered as the shape's constructor multipath argyment)? In that case, I think that providing the right svg path, which renders the rounded corners using the right size as from the whole svg , and you create the SVGShapeView instance from by setting the resizable argument as true (in SVGViewFactory) -> the multipath will just scale as the user resizes the shape, so it will keep "ratio", isnt it? (This is because MultiPath does not contain width/height attributes, so WiresScalableContainer just scales it).	1	1	https://issues.jboss.org/browse/GUVNOR-3221

#	Requirement	Questions	Answered	Successfully Answered	URL
5434	GUVNOR-3221	Yeahhh [~manstis] good point!! That was why I added the WiresScalableContainer, to be able to do NOT scale, where possible, the shapes once resizing, because the borders were scaled too! So I moved to use of rectangles, circles etc for the main svg shape and added support for resizing those using attributes, rather than scaling. But did not realized about these kind of details once resizing, like updating corner sizes etc.... Well I'm just thinking on a quick solution for this, not sure if too overkilling, but what you think about adding support for the "CORNER_RADIUS" in addition to the actual WIDTH and HEIGHT, once scaling the svg shape? Look [here|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-client/kie-wb-common-stunner-lienzo/src/main/java/org/kie/workbench/common/stunner/client/lienzo/shape/view/wires/WiresScalableContainer.java#L55]. So even not specifying a custom ratio update for this CORNER_RADIUS attribute, probably updating it as using same ratio as for WIDTH and HEIGHT works for you, because then you can move back to the use of the SVG rectangle, instead of the path, and the border will be not scaled. WDYT?	1	1	https://issues.jboss.org/browse/GUVNOR-3221
5435	GUVNOR-3212	Do we need such feature? Should Advanced users have a possibility to edit the pom in empty project? There might be a case when the users would like to edit the pom. [~paulovmr] [~manstis] What is your opinion to this?	1	0	https://issues.jboss.org/browse/GUVNOR-3212
5436	GUVNOR-3178	Does this mean we will have just two different WARs - worbench + controller, even for non-cloud deployments? Or will we have three WARs: the current one (combining both workbench and controller) and then the additional ones?	1	0	https://issues.jboss.org/browse/GUVNOR-3178
5437	GUVNOR-3168	Hi [~tirelli] and [~manstis]. This task seems to me as nice example of too big task for one sprint if we assume coding, testing, PR review. I would like to ask you to split this to smaller parts. My suggestion would be: - Write unmarshaller for Data Inputs - Write unmarshaller for Decisions - Write unmarshaller for Knowledge Sources - Write unmarshaller for Business Knowledge Models - Write unmarshaller for Connections - Write unmarshaller for Annotations? (Not sure if present) What do you think? Missed I some elements? Or should we split more for particular properties of given nodes?	1	0	https://issues.jboss.org/browse/GUVNOR-3168
5438	GUVNOR-3167	Hi [~tirelli] and [~manstis]. This task seems to me as nice example of too big task for one sprint if we assume coding, testing, PR review. I would like to ask you to split this to smaller parts. My suggestion would be: - Write marshaller for Data Inputs - Write marshaller for Decisions - Write marshaller for Knowledge Sources - Write marshaller for Business Knowledge Models - Write marshaller for Connections - Write marshaller for Annotations? (Not sure if present) What do you think? Missed I some elements? Or should we split more for particular properties of given nodes?	1	1	https://issues.jboss.org/browse/GUVNOR-3167
5439	GUVNOR-3162	Just to clarify: should keep the simple properties based authentication (like we have now)? Or should we completely move to Keycloak as default?	1	0	https://issues.jboss.org/browse/GUVNOR-3162
5440	GUVNOR-3105	Hi [~jomarko] what browser was this with?	1	1	https://issues.jboss.org/browse/GUVNOR-3105
5441	GUVNOR-3105	Thanks [~jomarko] Could you please advise whether the V&V panel state changes where you say shortcuts stop working? e.g. a rule becomes invalid/valid etc Keyboard operations require the canvas to have the "focus". I suspect when performing some operations the V&V panel updates causing focus to be lost.	1	1	https://issues.jboss.org/browse/GUVNOR-3105
5442	GUVNOR-3029	[~porcelli] Could you please provide more details? Will each project have such configuration? Will it be possible to edit this configuration in the UI, or will it be provided automatically and opaquely for every workbench project? What will be configuration possibilities available for use? Any Idea who will be working on this feature?	0	0	https://issues.jboss.org/browse/GUVNOR-3029
5443	GUVNOR-3028	[~porcelli] Could you please clarify the note regarding HA not being covered? What are the supported scenarios and what are the not supported? What's the impact on scalability?	1	1	https://issues.jboss.org/browse/GUVNOR-3028
5444	GUVNOR-3025	[~dward], [~porcelli] Is this somehow related to issues in this epic BPMSPL-656 ? Which of these new images do we plan to use in Guvnor ALA?	1	0	https://issues.jboss.org/browse/GUVNOR-3025
5445	GUVNOR-3025	[~porcelli] Thank you for your answer. It is good idea to have images also for community. Is there Jira(s) for these image(s)? Maybe it would be good to not duplicate effort and coordinate work with [~KrisVerlaenen] on OpenShift images. It seems that we will have at least 10 images produced by Kris. See subtasks for BPMSPL-656. In my opinion it will be hard to test and understand to this huge number of images. It will be even harder if we will have separate images produced specially for Guvnor ALA.	0	0	https://issues.jboss.org/browse/GUVNOR-3025
5446	GUVNOR-3023	Hello [~dward] I'm working on test automation for Guvnor ALA. Can you be more specific about kie-server provisioning? On which application server do you expect it will run (EAP, JWS, other platforms)? Where it will be possible to provision kie-server using Guvnor ALA (docker, OpenShift, Wildfly, EAP, others)? Can you describe basic scenario how Kie-Server will be used with Guvnor ALA? Will it be possible to somehow deploy kjar or kwar into this kie server and how?	1	1	https://issues.jboss.org/browse/GUVNOR-3023
5447	GUVNOR-3022	[~porcelli] Hello, do we have PL Jira or document about "kwar"? What is it and how to use it? What is the difference between kjar and kwar? Will be execution server embedded into kwar? Maybe this Jira is related to GUVNOR-3023. Do we expect to embed Kie server into kwar and then deploy it into app. server using Guvnor ALA. Or will we deploy kie server on app. server and then deploy kjars and kwars into it using Guvnor ALA?	1	0	https://issues.jboss.org/browse/GUVNOR-3022
5448	GUVNOR-3021	[~wmedvede] Hello Walter, I'm working on test automation for Guvnor ALA. Can you please be more specific about GUI. Will it be part of workbench or do you plan to create new standalone GUI for Guvnor ALA? What features will this GUI provide? Will it be possible to model and run application life cycle in this GUI? Is this Jira somehow related to GUVNOR-3028 or GUVNOR-2933?	1	0	https://issues.jboss.org/browse/GUVNOR-3021
5449	GUVNOR-2933	[~wmedvede] Hello Walter, which platforms do we plan to support? Currently Guvnor ALA is able to work with Docker and Wildfly. Which additional platforms do you plan to use?	0	0	https://issues.jboss.org/browse/GUVNOR-2933
5450	GUVNOR-2876	Team, Do you have any plans for this ?	1	0	https://issues.jboss.org/browse/GUVNOR-2876

#	Requirement	Questions	Answered	Successfully Answered	URL
5451	GUVNOR-2854	Hi [~Rikkola]. I played a little bit with guided decision tables using Resolved HP. I found out one use case I would like to discuss with yoy: # Lets say you have guided decision table like this: ||RC||Description||Has priority over|| |1|a| | |2|b|1| |3|c|1| # Now swap the first and second row and you will obtain ||RC||Description||Has priority over|| |1|b|1| |2|a| | |3|c|2| # However, if you save and reopen the table, you will obtain the expected: ||RC||Description||Has priority over|| |1|b| | |2|a| | |3|c|2| Do you think could be possible to achieve this without reopening the table? I had look also into the source code. For me are suspicious these two lines of code: [1] I think there shouldn't be *-1* because values stored in Number and Priority columns have no offset. Both assumes number 1 as the first row of the table. [2] I think we should compare also for equality like *oldValue >= rowNumber* because if the row X had priority over row Y (Y < X) but after moving X <= Y it is no needed to have in table that row X has priority over row Y because row Y is now under row X. I also admit, that my thoughts are wrong and the problem is on another place. Please tell me what do you think. [1] https://github.com/droolsjbpm/drools-wb/blob/master/drools-wb-screens/drools-wb-guided-dtable-editor/drools-wb-guided-dtable-editor-client/src/main/java/org/drools/workbench/screens/guided/dtable/client/widget/table/model/synchronizers/impl/PrioritySynchronizer.java#L67 [2] https://github.com/droolsjbpm/drools-wb/blob/master/drools-wb-screens/drools-wb-guided-dtable-editor/drools-wb-guided-dtable-editor-client/src/main/java/org/drools/workbench/screens/guided/dtable/client/widget/table/model/synchronizers/impl/PrioritySynchronizer.java#L71	1	0	https://issues.jboss.org/browse/GUVNOR-2854
5452	GUVNOR-2854	Hi [~Rikkola]. I was increasing the coverage for moving rows and I think that I managed to fix the issue form the comment above. Here is the PR: https://github.com/kiegroup/drools-wb/pull/425. Please could you have a look when you have a moment?	0	0	https://issues.jboss.org/browse/GUVNOR-2854
5453	GUVNOR-2832	Hi [~karreiro]. Few days ago, I discussed this a little bit with [~manstis] and he found out that there should be introduced two cases. The one that I am describing. It means that user is not interested in operator and the corresponding cells in the table should offer just check boxes. And the second case when user can define the operator directly in the table cell. [~manstis] proposed to name this like "per cell". He told me you are rewriting column definitions of dtable. Please could you incorporate these changes? [~manstis] please could you confirm I remember correctly our thoughts?	1	0	https://issues.jboss.org/browse/GUVNOR-2832
5454	GUVNOR-2832	[~jomarko] In this scenario we'd normally recommend defining the column as {{Player($s : score != null)}} and use the "is not null" operator. However as discussed on IRC there *may be* occasions when the User is also interested in {{null}} values. [~karreiro] Jozef and I discussed that you are refactoring the column definition *screens* ([~jomarko] not the column definitions themselves). My proposal was that we replace the "(no operator)" operator with "(per cell)" as this is a better indication of where the operator is expected. "No operator" would give what [~jomarko] is requesting BUT the "operator" in our model is a {{String}} where an empty of null value currently represents "(per cell)" so we do not have a way to specify "no operator" without a "magic string" (e.g. we store operator as "_none" and use this magic value to mean, erm, no operator. Personally, this type of JIRA just adds more support to removing all the "simple" columns all together and only supporting "BRL fragments" (as the internal representation; we still may have the Wizard showing "New field constraint" etc type stuff; but internally we build a "BRL Condition fragment" rather than a {{ConditionCol52}}.. anyway.. this hasn't been agreed or scheduled yet.. and if it does happen it'll probably be closed to 8.x).. I'm just rambling ;-)	0	0	https://issues.jboss.org/browse/GUVNOR-2832
5455	GUVNOR-2774	Hi [~Rikkola], I uploaded screenshot with PopUp dialogue where user creates new Guided Decision Table. Is it intentional that there is no _Label_ for _Hit Policy_ dropdown? I think it would be worth to add some _Label_ to describe purpose of the newly added dropdown. What do you think?	0	0	https://issues.jboss.org/browse/GUVNOR-2774
5456	GUVNOR-2673	[~mcimbora] Probably easier to discuss this on IRC. Question is did the handler not get invoked or the popup not displayed? The handler should definitely work in @AfterInitialization.	1	1	https://issues.jboss.org/browse/GUVNOR-2673
5457	GUVNOR-2637	[~karreiro] Hi, can this be closed?	1	1	https://issues.jboss.org/browse/GUVNOR-2637
5458	GUVNOR-2626	Can you please advise: 1) {{eval("$param" == "$param")}} etc is just to support conversion to Guided Decision Tables? 2) Do you have a XLS that works OK (when used as a XLS) in Drools? Can you provide it? There should be no need to "work around" things. 3) What purpose does, for example, B13:B26 serve? AFAIK this won't create a constraint when used as a XLS file; only columns C, E and F in "RuleTable Reason Codes LT Evaluation" seem to serve any function.	1	1	https://issues.jboss.org/browse/GUVNOR-2626
5459	GUVNOR-2626	Thanks. Is it possible to have you XLS without the workaround (use of $param==$param)? The issue is you are needing to try to workaround an issue with the conversion. You should not need to workaround anything; so I see the "fix" for this is to convert to a Guided Decision Table that works functionally equivalent to your unaltered XLS file.	1	1	https://issues.jboss.org/browse/GUVNOR-2626
5460	GUVNOR-2584	It is also possible to show everything in the white list. Then automatically add the imports into the file when a class is selected. This would require us to change all the data model selectors/lists. Most likely not a quick task.	0	0	https://issues.jboss.org/browse/GUVNOR-2584
5461	GUVNOR-2558	[~karreiro] Hi.. the crux is [this|https://github.com/droolsjbpm/kie-wb-common/blob/master/kie-wb-common-widgets/kie-wb-metadata-widget/src/main/java/org/kie/workbench/common/widgets/metadata/client/KieMultipleDocumentEditor.java#L547]. We iterate all "open documents" and save each one in turn.. calling to the {{SavePopup}}. Ideally we'd need to use {{SavePopup}} once and have the command passed to that then iterate all "open documents".. Some special care would be needed to handle - and report to Users - concurrent lock failures (when another User 2 had documents 'C' and 'D' open and edited, when User 1 has documents 'A', 'B', 'C' and 'D' open)...	1	0	https://issues.jboss.org/browse/GUVNOR-2558
5462	GUVNOR-2529	[~Rikkola] I believe this is done; can we close this (yes, sorry.. I'm looking for a JIRA and stumbled across this).	1	0	https://issues.jboss.org/browse/GUVNOR-2529
5463	GUVNOR-2507	For the first iteration; it's probably easiest to have a menu bar entry for (for example) "Open..." which launches a popup listing the other decision tables in the same package. When one is opened Conditions are scanned, checking for where they use a Field that's set in the Action of another (open) table; and vice-versa. These form the links. Things that need some tweaking:- * LockManager needs to operate per table * Version dropdown needs to operate per table * MetaData tab needs to operate per table * Data Objects needs to operate per table * BasicFileMenuBuilder is fixed to a single Path * .. any other tabs.....?	0	0	https://issues.jboss.org/browse/GUVNOR-2507
5464	GUVNOR-2494	A picture paints a thousand words.. even if the words are lost in translation ;)	1	1	https://issues.jboss.org/browse/GUVNOR-2494
5465	GUVNOR-2463	[~porcelli] Is this out of date? complete?	0	0	https://issues.jboss.org/browse/GUVNOR-2463

#	Requirement	Questions	Answered	Successfully Answered	URL
5466	GUVNOR-2460	Okay, I see your point. Is it feasible to make the fields at least ineditable, disabled? Similarly to the Save and Cancel buttons - they are disabled if the server template doesn't have process capabilities. Leaving them editable and at the same time not allowing the user to save the changes really is confusing.	0	0	https://issues.jboss.org/browse/GUVNOR-2460
5467	GUVNOR-2450	What webapp is this?	1	1	https://issues.jboss.org/browse/GUVNOR-2450
5468	GUVNOR-2450	[~jlocker] you may know, is this still valid issue?	1	0	https://issues.jboss.org/browse/GUVNOR-2450
5469	GUVNOR-2450	No idea. I never work with optaplanner-wb. Where can I get the WAR?	1	1	https://issues.jboss.org/browse/GUVNOR-2450
5470	GUVNOR-2385	Eh? Don't we look-up implementations with IOCBeanManager.getBeans(ResourceHandler.class) or something?!? How could NewResourceHandler try to instantiate a handler that cannot be instantiated?	1	1	https://issues.jboss.org/browse/GUVNOR-2385
5471	GUVNOR-2353	Toni, if you're looking at improvements to PNWL then there have also been a number of related JIRAs raised by QE recently. Did you want to consider them all?	1	0	https://issues.jboss.org/browse/GUVNOR-2353
5472	GUVNOR-2348	[~manstis] Hi Mike. In this case, I think it would be weird to have a dropdown to execute the actions "Add all" or "Add none", considering they are actions and not states. What do you think about adding a little cog button inside every cell to show those actions (similar to the one in the Project Explorer bar), and only when it is clicked this actions are shown?	1	1	https://issues.jboss.org/browse/GUVNOR-2348
5473	GUVNOR-2290	[~manstis] [~jsniezek], just realized, can' t really combine simple and advance search into the same screen. Problem is that the current simple search is context aware, that means it only filters out data that is currently displayed. Each view is responsible for reacting to when a search term is requested. How about its currently functionality but combining both options in the UI? Advanced search would be tied together with the simple search input box, via a dropdown, something like this: http://getbootstrap.com/components/#input-groups-buttons-segmented	1	1	https://issues.jboss.org/browse/GUVNOR-2290
5474	GUVNOR-2290	[~manstis] [~jsniezek] have a look on what I got so far, trying to keep it simple. Search box gets located at the primary nav bar, always visible, independently from the selected perspective. Find is removed from utility nav bar and moved into Authoring context nav bar, right aligned. We could also relabel Find to Advanced Search in there. What do you think?	1	1	https://issues.jboss.org/browse/GUVNOR-2290
5475	GUVNOR-2283	Hello [~Rikkola], this jira is marked as complete in BPMSPL-257 gdrive document. Could you please add pull requests which concerns this jira? Thanks.	1	0	https://issues.jboss.org/browse/GUVNOR-2283
5476	GUVNOR-2274	Is the goal to ignore WEB-INF/lib when building? This would make it possible to build legacy projects (or not, depends if the Maven KIE build plugin has support for using an older version). Editors might not work 100%, but the build would.	1	0	https://issues.jboss.org/browse/GUVNOR-2274
5477	GUVNOR-2224	Thanks again, is neither possible to send out the database userName?	1	1	https://issues.jboss.org/browse/GUVNOR-2224
5478	GUVNOR-2181	[~jomarko] Yes, I guess you are right... however we should probably stop adding new JIRAs to GUVNOR-2181 at some point (shouldn't we?!)	1	1	https://issues.jboss.org/browse/GUVNOR-2181
5479	GUVNOR-2107	Marco, I saw your comment about drools-wb-webapp being closer to the source; but in reality it is no closer to the source (guvnor-rest) than kie-drools-wb. drools-wb-distribution-wars is really not maintained (as nobody other than you!) uses it.. kie-drools-wb is what we rely on to "work". I'm still in favour of deleting drools-wb-distribution[-wars].	1	1	https://issues.jboss.org/browse/GUVNOR-2107
5480	GUVNOR-2094	Michael, Should the javax.security dependency in jbpm-human-task-core also be changed? See the pom.xml [here|https://github.com/droolsjbpm/jbpm/blob/master/jbpm-human-task/jbpm-human-task-core/pom.xml#L54].	1	1	https://issues.jboss.org/browse/GUVNOR-2094
5481	GUVNOR-2089	No, you cannot import a 5.5 repository.xml direclty into 6.0. There is a migration utility (https://github.com/droolsjbpm/drools-wb/tree/master/drools-wb-jcr2vfs-migration) that can convert a repository.xml into a git repository suitable for use with 6.0.x. The migration utility is part of the drools-workbench download available from https://www.jboss.org/drools/downloads	1	1	https://issues.jboss.org/browse/GUVNOR-2089
5482	GUVNOR-2067	Thanks but I tried, still no luck: java.lang.RuntimeException: Cannot find a default KieSession at org.drools.compiler.kie.builder.impl.KieContainerImpl.findKieSessionModel(KieContainerImpl.java:302) at org.drools.compiler.kie.builder.impl.KieContainerImpl.newKieSession(KieContainerImpl.java:295) at org.drools.compiler.kie.builder.impl.KieContainerImpl.newKieSession(KieContainerImpl.java:278) at com.austin.test.TestDemoStrata.main(TestDemoStrata.java:55) Cannot find a default KieSession I suspect something wrong in my kmodule.xml (shown in attachment) In fact I got RuleFlow running fine using 6.0.0.Final distribution (drools + guvnor). But with kie-drools-wb 6.1.0 created RuleFlow, it doesn't work. Or wonder if there is sample project based on 6.1.0?	1	1	https://issues.jboss.org/browse/GUVNOR-2067
5483	GUVNOR-2043	Jervis Liu <jliu@redhat.com> made a comment on [bug 996905|https://bugzilla.redhat.com/show_bug.cgi?id=996905] 6.0 has no problem to upload a jar file into Guvnor m2 repo. But it has problem to extend from a pojo class from a third-party jar. How to reproduce: 1. Upload includingSuper.jar (attached) into Guvnor m2 repo 2. Open demo -> uf-playground -> GuvnorM2RepoDependencyExample1, goto "Dependencies:dependencies list" editor, add includingSuper.jar as a dependency (use "add from repository"). 3. Use data modeller or modify Bean.java directly, to make it extends from com.sample.SuperClass. the result is like below: public class Bean extends com.sample.SuperClass implements java.io.Serializable { static final long serialVersionUID = 1L; @org.kie.api.definition.type.Position(value = 0) private java.lang.Integer value; public Bean() { } public Bean(java.lang.Integer value) { this.value = value; } public java.lang.Integer getValue() { return this.value; } public void setValue(java.lang.Integer value) { this.value = value; } } 4. project "build & deploy" fails.	0	0	https://issues.jboss.org/browse/GUVNOR-2043
5484	GUVNOR-1991	Is Apache Log4J on Guvnor's classpath? IIRC adding to your Application Server's /lib folder or uploading as an asset to Guvnor should both work.	1	0	https://issues.jboss.org/browse/GUVNOR-1991
5485	GUVNOR-1954	Prakash Aradhya <paradhya@redhat.com> made a comment on [bug 958396|https://bugzilla.redhat.com/show_bug.cgi?id=958396] Mike, can you take a look at this issue and see if ti can be fixed in 6.0 ? The work around is a little frustrating.	0	0	https://issues.jboss.org/browse/GUVNOR-1954
5486	GUVNOR-1948	Edson Tirelli <etirelli@redhat.com> made a comment on [bug 958398|https://bugzilla.redhat.com/show_bug.cgi?id=958398] Pedro, can you check if someone in your group can tackle this one? The core engine has a configuration option to define the severity of rule name duplication build result message: ERROR, WARN, INFO. Maybe all that is missing here is to properly catch that message and present to the user in the UI?	0	0	https://issues.jboss.org/browse/GUVNOR-1948
5487	GUVNOR-1945	Should this be on GUVNOR JIRA? That aside, I assume you need the ability to double-click the tab (or something like "maximize") and have the Panel expand to full screen. Double clicking reverts to the previous layout?	0	0	https://issues.jboss.org/browse/GUVNOR-1945
5488	GUVNOR-1940	Basically, the "workbench" needs to accept that developers' screens might be buggy and hence capture any java.lang.Exception and report it with a popup. Would you agree? This would apply to any method on a developers' screen that is invoked by the workbench; e.g. Constructors, @OnStart, @OnReveal etc etc.	0	0	https://issues.jboss.org/browse/GUVNOR-1940

#	Requirement	Questions	Answered	Successfully Answered	URL
5489	GUVNOR-1936	will the following use case be covered by this? On the RHS more attributes are set, than are used in the condition on the LHS (one could say the LHS shows the "unique key"). At the moment the element on the RHS is constructed manually and bound, in order that additional attributes can be set. //from row number: 1 //Hierarchie rule "Row 1 1_Anlage Gruppen & Hierarchiebaum" no-loop true dialect "mvel" when $h : Hierarchie(art == "RISK") not Hierarchie(name == "GR_FIL1" , parent == "GKMA_FIL1") then Hierarchie $h1 = new Hierarchie(); $h1.setArt($h.art); $h1.setName("GR_FIL1"); $h1.setParent("GKMA_FIL1"); $h1.setTyp("Gruppe EK"); $h1.setMinanzahl(1); $h1.setLevel(1); insert($h1); end	0	0	https://issues.jboss.org/browse/GUVNOR-1936

5491	GUVNOR-1903	Sorry Toni, can you explain this a little more - so when we come to fix it we remember what the exact issue is?	0	0	https://issues.jboss.org/browse/GUVNOR-1903
5492	GUVNOR-1892	Can you please provide some more information? Guvnor (where this JIRA has been raised) is an authoring tool, and hence being able to insert a new event (presumably into working memory) doesn't make much sense - unless you're talking about from the right-hand-side of an authored rule or something, but you are not clear.	1	1	https://issues.jboss.org/browse/GUVNOR-1892
5493	GUVNOR-1875	@Edson, silly question possibly... changing from use of RuleBase to KnowledgeBase (and related KnowledgeSession implementations) is obvious. I am however a little confused over the use of Package[]. We extend PackageBuilder too and have references to Package[] floating around (PackageBuilder.getPackages). Is this part of the deprecated API too? Should we look to change to KnowledgeBuilder and Collection<KnowledgePackage>?	0	0	https://issues.jboss.org/browse/GUVNOR-1875
5494	GUVNOR-1837	Should we adjust the Ballroom theme to follow the new GWT changes or follow the current style? Ballroom might be unusable to us because of GWTP, but the styles were made for the custom components we have (popups, tabs, panels).	0	0	https://issues.jboss.org/browse/GUVNOR-1837
5495	GUVNOR-1834	One more thing... what is your expectation of how XMLGregorianCalendars might be used? It does not implement Comparable so normal operators on the object itself won't work - e.g. MyFact(myGregorianCalendarField > "01-01-2000") etc. You'd need to handle the date components separately - e.g. $m : MyFact(myGregorianCalendarField.eonAndYear > 2000)... $m.setEonAndYear(2012); etc. Did you envisage the coercion between object (used in the UI) and fields (in the DRL) to be handled implicitly - then things like this: "myGregorianCalendarField1 > myGregorianCalendarField2" become difficult in the LHS - mapping to "myGregorianCalendarField1.day > myGregorianCalendarField2.day && myGregorianCalendarField1.month > myGregorianCalendarField2.month && myGregorianCalendarField1.year > myGregorianCalendarField2.year && myGregorianCalendarField1.eon > myGregorianCalendarField2.eon" (plus time parts I've omitted here) etc. Also CEP functions become almost impossible: MyEvent( ) after $myBoundGregorianCalendarObject...	0	0	https://issues.jboss.org/browse/GUVNOR-1834
5496	GUVNOR-1834	Any ideas how you expected this to operate when XMLGregorianCalendar does not implement Comparable? I bumped into a couple of guys at the BRMS 2012 event in London, who said they were responsible for this requirement coming to light (they'd been liaising with you or something, I forget the detail). They were not entirely sure how this feature may actually work in practice either. Can you advise any further (otherwise I fear this JIRA runs the risk of being rejected - essentially a XMLGregorianCalendar becomes just another "business domain" class - for which we provide the ability for custom editors to be configured already - see Working Set definitions).	0	0	https://issues.jboss.org/browse/GUVNOR-1834
5497	GUVNOR-1809	@Bill Thanks. Gwendo (a community member) is giving this issue a go. The hope is that RESTEASY-704 will allow us to do what we need. Here's what I was struggling with (possibly fixed by 704) http://article.gmane.org/gmane.comp.java.resteasy.user/121/match=geoffrey {code} Hi guys, We're moving from cxf with Abdera for Atom to RestEasy with RestEasy's atom support. So far, most of the migration has been a breeze, but this part is unclear: In Cxf Abdera we got: Entry e = factory.newEntry(); ... //generate meta data ExtensibleElement extension = entry.addExtension(METADATA); ExtensibleElement childExtension = extension.addExtension(ARCHIVED); //childExtension.setAttributeValue("type", ArtifactsRepository.METADATA_TYPE_STRING); childExtension.addSimpleExtension(VALUE, p.isArchived() ? "true" : "false"); childExtension = extension.addExtension(UUID); childExtension.addSimpleExtension(VALUE, p.getUUID()); ... Content content = factory.newContent(); ... entry.setContentElement(content); How does the ExtensibleElement stuff translate to RestEasy's atom support? Entry e = new Entry(); ... // TODO ExtensibleElement stuff ... Content content = new Content(); ... e.setContent(content); The manual does seem to imply that's possibly, only just not how: "Feeds are composed of a number of items, known as "entries", each with an extensible set of attached metadata." http://docs.jboss.org/resteasy/docs/2.3.1.GA/userguide/html_single/index.html#Atom Thank in advance for any help. {code}	1	1	https://issues.jboss.org/browse/GUVNOR-1809
5498	GUVNOR-1802	6.0.x REST API does not support asset operations (i.e. get assets for a category). Asset operations should be conducting using a GIT library to manipulate the underlying VFS directly.	0	0	https://issues.jboss.org/browse/GUVNOR-1802
5499	GUVNOR-1785	What is the problem in this issue? Guvnor 5.3 uses XmlElement and builds fine with JDK 5 because there is this dependency in the parent pom: {code} <dependency> <groupId>javax.xml.bind</groupId> <artifactId>jaxb-api</artifactId> <version>2.2.1</version> </dependency> {code}	1	1	https://issues.jboss.org/browse/GUVNOR-1785
5500	GUVNOR-1785	I'd love to see you guys support Java 6. Is there a policy in place for JRE support for Drools in general? Or Maven versions?	1	0	https://issues.jboss.org/browse/GUVNOR-1785
5501	GUVNOR-1756	You can already build DRL akin to this:- 1. | rule "test" 2. | dialect "mvel" 3. | when 4. | $r : java.util.List( ) from collect (Applicant(age > 35)) 5. | then 6. | end You need to use the "from collect" option and ensure you have java.util.List added as a package import. You are unable to select properties of the List though (like "size") so I'll leave this JIRA open to fix that.	0	0	https://issues.jboss.org/browse/GUVNOR-1756
5502	GUVNOR-1746	Toni, can we reject this?	0	0	https://issues.jboss.org/browse/GUVNOR-1746
5503	GUVNOR-1741	Does the linked JIRA suffice? Can this be closed, or is there something more to it?	0	0	https://issues.jboss.org/browse/GUVNOR-1741
5504	GUVNOR-1735	Michael, is there anyway I can change the GWT defaults so that the >> button will work for rows less than 1000? If so where would this code change need to be made and then how would I submit this change to GUVNOR? -Wendell	1	1	https://issues.jboss.org/browse/GUVNOR-1735
5505	GUVNOR-1735	Hi Wendell, It isn't a complicated change - GuvnorSimplePager is the class and the zero parameter constructor called by GWT's UiBinder delegates to another taking the 'fast forward' step size. We can simply change this to a sensible size (1000 is quite large for Guvnor's general usage - I'd say 100, would you agree?) Don't forget I've already added the ability to go to the last page as this JIRA requested. I'll make the change - to 100 - this evening.	1	1	https://issues.jboss.org/browse/GUVNOR-1735
5506	GUVNOR-1735	Thank you Michael, How would I go about downloading this updated version with the change? Or, is it slated for the next release? I ask because I have a client who would like the update in their production environment as soon as possible. -Wendell	1	1	https://issues.jboss.org/browse/GUVNOR-1735

#	Requirement	Questions	Answered	Successfully Answered	URL
5507	GUVNOR-1733	This is not entirely clear: {code} create snapshot by name (should compile and create a snapshot with a specific name). getPackageBinary doesnt work in production because if a DTABLE takes some time to compile then it will halt the prod system while it compiles {code} Does this mean, that when calling this new method createPackageSnapshot(), you expect the method to return immediately (and do the compilation as async - which can cause other problems) or return after compilation?	1	1	https://issues.jboss.org/browse/GUVNOR-1733
5508	GUVNOR-1733	{code} @Get @Path("{packageName}/assets/{assetName}/binary") - is this the .pkg binary? or the .xls... the work "binary" is not explicit enough {code} This is certainly the pkg, which is considered the binary. Update: looks like it might not be returning the pkg {code} @Get @Path("{packageName}/assets/{assetName}/source") - is this a binary .xls source or a text drl? the word "source" is not explicit enough {code} This should be the source file (the .xls), but is currently always .drl (which is not always the real source file). Update: throws exception if there is no plain text source.	1	1	https://issues.jboss.org/browse/GUVNOR-1733
5509	GUVNOR-1723	You can always "view" the actual version to drill down into the real nitty-gritty meta-data. Is that possible today, or in the future? Last Contributor is the most important part.	0	0	https://issues.jboss.org/browse/GUVNOR-1723
5510	GUVNOR-1716	What would you propose? This JIRA is very subjective. "Chapter 5. Managing Assets" of the user guide covers the new screen and use. Perhaps this chapter should be moved nearer the front of the documentation?	0	0	https://issues.jboss.org/browse/GUVNOR-1716
5511	GUVNOR-1710	Looks good. How is the lifecycle assigned? For each asset in the module, each asset or can you change the lifecycle if you want to?	0	0	https://issues.jboss.org/browse/GUVNOR-1710
5512	GUVNOR-1700	Should we rename it to EAP instead? Problem is most community users don't know what EAP means...	0	0	https://issues.jboss.org/browse/GUVNOR-1700
5513	GUVNOR-1675	*Parse definition* {code} List<Map<String, Object>> workDefinitionsMaps = (List<Map<String, Object>>) MVEL.eval(content, new HashMap()); for (Map<String, Object> workDefinitionMap : workDefinitionsMaps) { if (workDefinitionMap != null) { WorkDefinitionImpl workDefinition = new WorkDefinitionImpl(); workDefinition.setName((String) workDefinitionMap.get("name")); workDefinition.setDisplayName((String) workDefinitionMap.get("displayName")); workDefinition.setIcon((String) workDefinitionMap.get("icon")); workDefinition.setCustomEditor((String) workDefinitionMap.get("customEditor")); Set<ParameterDefinition> parameters = new HashSet<ParameterDefinition>(); if(workDefinitionMap.get("parameters") != null) { Map<String, DataType> parameterMap = (Map<String, DataType>) workDefinitionMap.get("parameters"); if (parameterMap != null) { for (Map.Entry<String, DataType> entry : parameterMap.entrySet()) { parameters.add(new ParameterDefinitionImpl(entry.getKey(), entry.getValue())); } } workDefinition.setParameters(parameters); } if(workDefinitionMap.get("results") != null) { Set<ParameterDefinition> results = new HashSet<ParameterDefinition>(); Map<String, DataType> resultMap = (Map<String, DataType>) workDefinitionMap.get("results"); if (resultMap != null) { for (Map.Entry<String, DataType> entry : resultMap.entrySet()) { results.add(new ParameterDefinitionImpl(entry.getKey(), entry.getValue())); } } workDefinition.setResults(results); } if(workDefinitionMap.get("defaultHandler") != null) { workDefinition.setDefaultHandler((String) workDefinitionMap.get("defaultHandler")); } if(workDefinitionMap.get("dependencies") != null) { workDefinition.setDependencies(((List<String>) workDefinitionMap.get("dependencies")).toArray(new String[0])); } workDefinitions.put(workDefinition.getName(), workDefinition); } } {code} *Runtime registration* {code} ksession.getWorkItemManager().registerWorkItemHandler("Notification", new NotificationWorkItemHandler()); {code} *Runtime invocation* {code} WorkItemManager wim = ksession.getWorkItemManager(); KnowledgeSessionConfiguration sessionConfiguration = ksession.getSessionConfiguration(); Map<String, org.drools.runtime.process.WorkItemHandler> handlers = ((SessionConfiguration) sessionConfiguration).getWorkItemHandlers(); WorkItemHandler wih = handlers.get("Notification"); wih.executeWorkItem(workItem, wim); //TODO Where does workItem come from? {code}	0	0	https://issues.jboss.org/browse/GUVNOR-1675
5514	GUVNOR-1595	This can be accompished by using an external source for the enumeration's values. See http://docs.jboss.org/drools/release/5.5.0.Final/drools-guvnor-docs/html/ch04.html#d0e1927. The mentioned "SampleDataSource" could read from a database. Do you however request the means to achieve this with no code? e.g. you can create data sources in Guvnor directly and select tables\fields\stored procedures\views etc from which the data should be obtained.	0	0	https://issues.jboss.org/browse/GUVNOR-1595
5515	GUVNOR-1588	<ge0ffrey> manstis: ^^ someone should be appointed time to delete that old RestApiServlet really... <manstis> ge0ffrey, is there a JIRA for it? <ge0ffrey> manstis: yes <manstis> ge0ffrey, can you assign to 5.5.0.Beta2 and jliu?	1	0	https://issues.jboss.org/browse/GUVNOR-1588
5516	GUVNOR-1567	Only a thought, but having BRMS push to a HA store moves the single-point of failure from a single BRMS instance to a HA node in the system architecture, although admittedly you do eliminate the race condition you describe too. This http://community.jboss.org/wiki/PublishDroolsArtifactsFromAProductionEnvironment would achieve the same result; using an intermediate pull mechanism? Furthermore can the same resilience not be equally achieved by deploying BRMS in such a way that it is not the single-point of failure in the first place; the HA store becoming the JCR cluster fronted by a BRMS web-server cluster? http://blog.athico.com/2011/01/configuring-multiple-guvnor-instances.html?utm_source=feedburner&utm_medium=feed&utm_campaign=Feed%3A+DroolsAtom+%28Drools+-+Atom%29	1	0	https://issues.jboss.org/browse/GUVNOR-1567
5517	GUVNOR-1521	How did you migrate the rules from Derby to Oracle? I assume you exported the repository whilst running with Derby (to an XML file), re-configured and then imported into Oracle; both using the Admin Import\Export feature? If this is correct did you get any errors performing the import?	1	1	https://issues.jboss.org/browse/GUVNOR-1521

#	Requirement	Questions	Answered	Successfully Answered	URL
5518	GUVNOR-1521	Dear Michael, Firstly, before deploying the Drools guvnor in weblogic11g , I set the repository configuration in components.xml.below is the path i mentioned for repositoryConfiguration <component name="repositoryConfiguration"> <property name="homeDirectory">E:/GuvnorRepo/</property> Deployed the Drools guvnor in weblogic11g , and in E drive GuvnorRepo folder has created with 3 sub folders workspaces,repository,version and repository.xml. Now i updated the repository.xml for changing the database from derby to oracle. Below are the changes <PersistenceManager class="org.apache.jackrabbit.core.persistence.bundle.OraclePersistenceManager"> <param name="driver" value="oracle.jdbc.driver.OracleDriver"/> <param name="url" value="jdbc:oracle:thin:@rsa10gserver:1525:ifpub34"/> <param name="user" value="drools_repository"/> <param name="password" value="drools_repository"/> <param name="schema" value="oracle"/> <param name="schemaObjectPrefix" value="version_"/> <param name="tableSpace" value=""/> <param name="errorHandling" value=""/> </PersistenceManager> Now i restarted the weblogic11g and it successfully deployed and entered into the login page and but i could not see any rules in the left navigation page. Is there any other procedure rather than what I have done? Whether I should import/export new repository.xml ? Please help me regarding this.	1	0	https://issues.jboss.org/browse/GUVNOR-1521
5519	GUVNOR-1521	@Deepak, can you create new rules when configured to use Oracle? If so your configuration, I'd assume, to be correct. AFAIK the repository folder is only relevant if you're using JCR's file-system storage - if configured to use a database I doubt it has much relevance. So you'll need to export the repository XML first (your comment above implied you know how) from Derby, re-configure for Oracle and import. I don't know if the binary form stored by JCR on RDBMS's BLOB fields can be migrated used a database script - that would be a question for the JCR forums not Drools. Please also see Rikkola's comment about where this should be tracked - I am happy to continue the conversation there. @Rikkola, I agree. We shouldn't be tracking this on JIRA. Closing this one....	0	0	https://issues.jboss.org/browse/GUVNOR-1521
5520	GUVNOR-1509	How do we want to keep track of the valid flag, should we add it as a MetaData field to be stored and recalculated when we save the rule/enumeration? Where should the visual indicators be shown? In the asset list? When you open an asset? Next to status in the title bar? It seems like the unsaved changes indicator might be solved by https://issues.jboss.org/browse/GUVNOR-1263. So that leaves only the validation part for this issue.	1	1	https://issues.jboss.org/browse/GUVNOR-1509
5521	GUVNOR-1417	Can you elaborate or close?	0	0	https://issues.jboss.org/browse/GUVNOR-1417
5522	GUVNOR-1414	Pray tell, where might this issue be experienced? I tried the various DSL screens with which I am familiar and failed to identify where this issue might occur.	1	1	https://issues.jboss.org/browse/GUVNOR-1414
5523	GUVNOR-1404	In order to make search easy as possible, we would like to have automatic meta data collected during the process of importing rules from files or during the save process from UI, to repository back end. The whole idea here is to keep the concept of Category only for business purposes. Besides the category concept , we could have attributes set into the repository attached with its components. With that we mean, that we could automatically (The saver to repository is a suggesiton on doing this), to extract Columns (Could be OTN also?) from rules, and create lists of all column types a given rule uses and even other type of data could be extracted from rule files and definitions With that we could be able to link in searches, business desciptions and categories to real implementation, giving very usefull results (A Better search engine than Google).... This woudl apply to any rule change/save. The meta data would need to be refreshed. We could use a structure like RuleNode / ColumnNode -field list (String[]) -name	0	0	https://issues.jboss.org/browse/GUVNOR-1404
5524	GUVNOR-1382	Is this a duplication of GUVNOR-1381?	0	0	https://issues.jboss.org/browse/GUVNOR-1382
5525	GUVNOR-1381	Is this a duplication of GUVNOR-1382?	1	0	https://issues.jboss.org/browse/GUVNOR-1381
5526	GUVNOR-1356	Have you looked at "Working Sets"?	1	1	https://issues.jboss.org/browse/GUVNOR-1356
5527	GUVNOR-1355	Can you please explain what your request is in a little more detail? Do you mean to select many fields on the screen and change their value en-mass?	0	0	https://issues.jboss.org/browse/GUVNOR-1355
5528	GUVNOR-1355	The issue came up in the class/lab at JBW that a student had an enumeration drop down in the UI. In their use case they were looking at Cities, imagine a list of cities, and you want to select 10 of 100. In the current version of this I would need to create 100 when lines, selecting only one at a time, they were hoping that even if under the covers this could be managed, from a UI perspective, they would just have selected and unselected cities in that list of 100 without needing to create 10s of when lines. I hope this makes sense to you, if not let me know.	0	0	https://issues.jboss.org/browse/GUVNOR-1355
5529	GUVNOR-1322	Fixed row heights for all tables that can have the second "description" row. Obviously last page, if having fewer than the PAGE_SIZE of rows, still needs some mouse movement but otherwise original issue resolved. A happy compromise.	0	0	https://issues.jboss.org/browse/GUVNOR-1322
5530	GUVNOR-1247	Will the non checkin saves be public for all or just for the user who edited? This would help to make GUVNOR-1067 possible (Asset Editor: Auto save when editing a rule). It would also help to do big changes to the package/module without breaking everything for everybody else.	1	1	https://issues.jboss.org/browse/GUVNOR-1247
5531	GUVNOR-1220	Good idea, but there is a pitfall: If you add the modeshape impl jar to the war, the war might not work for jackrabbit on JDK 1.5 and guvnor must keep working on JDK 1.5 on jboss AS (at least for this year, let's hope we can loose JDK 1.5 soon after). => Test if this change still allows the war to run on a JDK 1.5 on jboss AS before pushing it.	1	1	https://issues.jboss.org/browse/GUVNOR-1220
5532	GUVNOR-1205	Isn't this almost complete for 5.3.0.Beta1?	1	1	https://issues.jboss.org/browse/GUVNOR-1205
5533	GUVNOR-1168	Geoffrey De Smet <gdesmet@redhat.com> made a comment on [bug 724493|https://bugzilla.redhat.com/show_bug.cgi?id=724493] For drools 5.4, several improvements by Mat Allen (the original author of the bulk importer) were merged into the bulk importer. Is this issue still valid?	0	0	https://issues.jboss.org/browse/GUVNOR-1168
5534	GUVNOR-1125	Hi Toni, I was thinking about how to use Guvnor to govern assets from other project, eg JBOSS ESB. Will this fall into the category of perspective as well? For example, Drools perspective and JBOSS ESB perspective. Or its sth bigger than perspective?	1	1	https://issues.jboss.org/browse/GUVNOR-1125
5535	GUVNOR-1103	Geoffrey.. this is getting escalated by many users.. please take a look	0	0	https://issues.jboss.org/browse/GUVNOR-1103
5536	GUVNOR-1076	Kris Verlaenen <kverlaen@redhat.com> made a comment on [bug 958408|https://bugzilla.redhat.com/show_bug.cgi?id=958408] This related to how metadata for files is stored in Guvnor for BRMS/BPMS6. Is metadata stored in an additional file on the file system (so it can be editor from Eclipse using for example EGit)?	0	0	https://issues.jboss.org/browse/GUVNOR-1076
5537	GUVNOR-1038	Marcos: can we have some more details on this?	1	1	https://issues.jboss.org/browse/GUVNOR-1038
5538	GUVNOR-1030	Interesting. I see this use case all the time. Are you proposing automatic WSDL generation? Another factor to consider is the possible need for ruleset parameters, a la ILOG JRules, since many of these services are backed by rule flows.	1	1	https://issues.jboss.org/browse/GUVNOR-1030

#	Requirement	Questions	Answered	Successfully Answered	URL
5539	GUVNOR-1029	Would it not be an idea to allow for some other JBOSS Rules DRL keywords to be available in the JBRMS? For example, this specific issue could be resolved by exposing "from" in the editor. This would allow for static lists, database queries and whatever else. exposing other keywords too (such as "accumulate" etc) would allow for sophisticated rules to be defined graphically - of course the GUI design would be the stumbling block!	1	1	https://issues.jboss.org/browse/GUVNOR-1029
5540	GUVNOR-1029	This comment follows on from my interpretation of Michael N's original post (25/4) which as I read it would result in a rule with a single value hard coded in the condition. Michael A's post, if I understand it correctly, is asking for some of the more powerful features like 'from' to be added which provide dynamic conditions derived at time of rule execution. This idea was prompted by the user requirement for drop down lists within JBRMS which we are proposing to provide by importing a java bean into the package. This enables a drop down list as shown in the attached document. Would it be possible to introduce shared code+descriptor table(s) that could be used both by JBRMS for the LHS rule conditions and the application that will be asserting objects for the rules to process. Rather than hard coding conditions in rules : Person(country=="IRQ") This would permit drop down lists using the descriptor Person(country==IRAQ) INDIA POLAND which when IRAQ was selected would generate the same rule Person(country=="IRQ") This would have 2 advantages : 1) the same code "IRQ" would be used in all rules for Iraq 2) the calling application would use the same table for populating country in the object to be asserted ie."IRQ" thus ensuring the rule would be fired.	1	1	https://issues.jboss.org/browse/GUVNOR-1029
5541	GUVNOR-1012	Email from Manik (from Michael). > > I had a question regarding jboss cache - we are looking at it as a mechanism to "publish" rule bases to anyone who is interested (ie runtime engines look in a distributed cache for a rulebase, and the rule server pushes out changes into the cache). I'm presuming a "rulebase" is represented by a simple Java object? > Firstly, I am making the assumption this is a sensible use of jboss cache (seems ok to me) - but do you have any thoughts? Yes, except JBC is more of a P2P system rather than a client-server type thing. Any node running JBC can put stuff in the cache it would be visible on every cache in the cluster. That said, one node in the cluster could always be designated as the "server" and be responsible for adding rulebases while the others just read rulebases from the cache. > Secondly, the "runtime engines" ideally will need to be cold started - in a sense that the rule server may not be up. So they need some persistent cache in a local database or something. Does JBoss Cache have an facilities to have local persistence? or is this best left up to a specific app? Cold starts can be dealt with in 2 different ways - persistence (which we do support - lots of plugins for different engines, see [1] and [2]) - or state transfer (see [3] and [4]). For the latter, this is when a cache instance starts up and asks its' neighbours for their in-memory state, which then gets streamed across the wire. [1] Crappy old documentation from the "current" 1.4.x series on cache loaders http://labs.jboss.com/file-access/default/members/jbosscache/freezone/docs/1.4.1.SP2/TreeCache/en/html/cache_loaders.html [2] Newer docs from the 2.0.0.BETA series on cache loaders http://labs.jboss.com/file-access/default/members/jbosscache/freezone/docs/2.0.0.BETA1/JBossCache-UserGuide/en/html/cache_loaders.html [3] Crappy old documentation from the "current" 1.4.x series on state transfer http://labs.jboss.com/file-access/default/members/jbosscache/freezone/docs/1.4.1.SP2/TreeCache/en/html/state_transfer.html [4] Newer docs from the 2.0.0.BETA series on state transfer http://labs.jboss.com/file-access/default/members/jbosscache/freezone/docs/2.0.0.BETA1/JBossCache-UserGuide/en/html/clustering.html#d0e1356 -- Manik Surtani Lead, JBoss Cache JBoss, a division of Red Hat	1	1	https://issues.jboss.org/browse/GUVNOR-1012
5542	GUVNOR-1002	Was talking to Fernando today about the ROM -> Descr conversion and we came to a conclusion. Besides all we talked about supporting directly ROM->Descr without serializing to DRL, if a rule is "contaminated" by a single DSL sentence, the whole rule MUST be expanded to a DRL and use the parser to convert it to a descriptor. That is because someone could write in the BRMS (mixing DSL and DRL sentences) something like: rule xyz when Cheese() // drl sentence - whose type is "brie" // dsl sentence then // RHS end In the above case, the DSL sentence is a constraint (type == "brie") that needs to be added to the Cheese() pattern. So, once contaminated by a DSL sentence, the direct conversion can't be done. Once we understand that we need to have a ROM -> DRL dumper for cases where the ROM is contaminated, the question that rises is "what good does us to have a ROM->Descr converter? does the performance gain of not using the parser justifies the disadvantage of code complexity and maintanance of another 'converter'?". I know I pushed for direct ROM->Descr conversion, but I didn't know about the DSL/DRL sentence mixing possibility. I would say now that we should simply: 1. drop the BRXMLtoDescrConverter 2. make BRLPersistence an interface and rename the current implementation to something like XMLBRLPersistence. 3. implement a DRLBRLPersistence to dump ROM to DRL format 4. create a new BRXMLtoDescrConverter that is simply a helper, higher level API that does ROM->DRL->Descr conversion using above class + drl parser. What do you think?	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5543	GUVNOR-1002	I know I pushed for direct ROM->Descr conversion, but I didn't know about the DSL/DRL sentence mixing possibility. I would say now that we should simply: MN: yes its a bit unfortunate - would could drop the DSL for that, or just restrict it in a lot of ways (but either is painful) 1. drop the BRXMLtoDescrConverter 2. make BRLPersistence an interface and rename the current implementation to something like XMLBRLPersistence. MN: yes, thats a better name no matter what. 3. implement a DRLBRLPersistence to dump ROM to DRL format MN: OK, initially this would be one way of course - but eventually round trip (but not that concerned) 4. create a new BRXMLtoDescrConverter that is simply a helper, higher level API that does ROM->DRL->Descr conversion using above class + drl parser. MN: Yes that was my initial idea, but I was badly jetlagged at the time, so I still like your descr idea, but as you say, DSL messes it up. \ What do you think? Well, originally I invented this specifically to spit out DRL to show what it looks like, so I don't see a problem with this as long as its not too hard. I don't see a problem with that approach, I never thought the direct to Descr really helped that much for performance anyway, parsing is very fast, its the compiling that kills us.	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5544	GUVNOR-1002	Michael, I added the persister capable of doing ROM -> DRL transformation. Although, the round trip is something that worries me a bit. Basically, we delliberatelly added some restrictions to the modeller and to the ROM (like no arbitrary nesting of CEs) that don't exist in the pure core engine (and in the DRL). How do you think we should handle such restrictions when "importing" DRLs into the BRMS? I'm asking that because the round trip code is where this needs to be implemented, right? []s Edson	1	1	https://issues.jboss.org/browse/GUVNOR-1002

#	Requirement	Questions	Answered	Successfully Answered	URL
5545	GUVNOR-1002	Michael I added the integration of the conversion to the BRXMLContentHandler and added the test case in ServiceImplementationTest. Look for the test named: testBinaryPackageCompileAndExecuteWithBRXML. The only thing I'm not sure is how you differentiate Strings from other constants, like numbers in the model. For instance, in the test, I wanted to set the integer "age" field of the person object. As a way to differentiate the value from a regular String value, I made it a "formula", adding the "=" as the first character. Although, I'm not sure that this is the best way of doing it. Can you plz advise what you imagined for that? Example: This: ActionSetField action = new ActionSetField("p"); ActionFieldValue value = new ActionFieldValue("age", "=42"); action.addFieldValue(value); Is converted to (in DRL): p.setAge(42); Thanks.	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5546	GUVNOR-1002	Well we can augment the model to express if its literal etc... but then the issue is how to know what to put in the model - do we ask the user? or look at the type/variable names etc.	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5547	GUVNOR-1002	Ok, commited and it is working. What else needs to be done under this ticket?	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5548	GUVNOR-1002	OK, I woke up this morning in a panic (I tend to wake up like that - I hate the clarity and perspective that waking up brings): What about date literals? Dates are also kind of a special case I think. On the LHS in drl dates are pretty easy, we just slap quotes around them and the compiler takes care of it. But on the RHS we need to new java.util.Date() - although MVEL may take care of it. Some general questions I am not sure about (regarding the RHS): * Do we allow a field to be set to a bound variable? * We can deal with string/number literals, but what about dates? * Say we want to set a field to a calculation, for a non String, this should work as it is now right? so we have a "value" of "x *3.0 - someVar" then that will be: boundVariable.setSomeField(x * 3.0 - someVar) UNLESS it is a string, in which case it will try to wrap quotes around it (which is not really a problem, as you generall don't do calculations with a string). I guess my original question remains: shoudl we ask the user to classify if they are doing a literal, a formula or choosing from a list of variables? or is that overkill and unhelpful?	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5549	GUVNOR-1002	My suggestion is the obvious one: lets start simple and build over it. > What about date literals? Dates are also kind of a special case I think. On the LHS in drl dates are pretty easy, we just slap quotes around them and the compiler takes care of it. But on the RHS we need to new java.util.Date() - although MVEL may take care of it. Yes, the old java Date issue. I think what we need to do is to define a general (maybe configurable) mask for dates and automatically parse strings into dates in the input fields. This can be based on the field type, as we already do manipulations for strings (adding quotes) and formulas (removing the = sign). > Do we allow a field to be set to a bound variable? Sure. From a code generation perspective, it is already supported. Just a matter of allowing users to chose or type variables in the Web GUI. > We can deal with string/number literals, but what about dates? See above. > Say we want to set a field to a calculation, for a non String, this should work as it is now right? so we have a "value" of "x *3.0 - someVar", then that will be: boundVariable.setSomeField(x * 3.0 - someVar), UNLESS it is a string, in which case it will try to wrap quotes around it (which is not really a problem, as you generall don't do calculations with a string). The way it is now, from code generation perspective, it is already working. The key thing is that if the field type is String and you want to do manipulations, you MUST use the '=' sign prefixing the expression so that the engine knows it is a formula. If it is not a String, that the '=' is optional. It will work both with and without it. > I guess my original question remains: shoudl we ask the user to classify if they are doing a literal, a formula or choosing from a list of variables? or is that overkill and unhelpful? Lets do something similar to what Excel does... if it is a literal, variable, etc, the user simply types/selects it. If it is a formula, user can start the expression with '=' (exactly like excel) or maybe use a wizard when we build one. Only thing is not there yet, but easy to implement as soon as we define how it will work is Date parsing. Regarding the "type" field in ActionSetField, I think it is a useful declarative information for the model and it is good to have it there, independent of the SuggestionCompletionEngine. I think we may not have the SCE always available everywhere to use and having the field type information makes it kind of "self-contained". So, what we do regarding Dates? Does JodaTime has anything useful we can use here?	1	1	https://issues.jboss.org/browse/GUVNOR-1002
5550	GUVNOR-1002	Yes, best thing would be to support a specific Date type in the SCE. Will look into doing that... do you see any problem? Yes, everything else is covered from an engine perspective, IMO.	0	0	https://issues.jboss.org/browse/GUVNOR-1002
5551	GUVNOR-996	Michael, Looking at the SuggestionCompletionEngine, it is a quite heavy object o populate. I imagine if a package has a model with just a few tens of classes, it will take a long time to inspect them, populate the map with all the attributes and transmit over the network, reparsing it in the browser side before presenting it to the user. Wouldn't be the case to do it on demand? Since each rule uses just a few facts, we could possibly inspect and offer completion for the classes effectivelly in use by the rule. What do you think?	1	1	https://issues.jboss.org/browse/GUVNOR-996
5552	GUVNOR-937	in the "then" part - if you put an "=" at the start (a bit like in excel) you can do a calculation (it won't be a text field). Is that what you want?	1	1	https://issues.jboss.org/browse/GUVNOR-937
5553	GUVNOR-937	The calculation box does not take in any alphabets,but it takes in special characters and numerals, as the "SI" is of float data type. If the variable is of string type it takes all the keys. can you please suggest me in how to remove the data type validation in jbrms. What my idea is, in the "when" part, we have an option of "bound with variable", similar to it can we have "computation on variables" in "then" part.The functionality will be same, just the difference in usage.	1	1	https://issues.jboss.org/browse/GUVNOR-937
5554	GUVNOR-937	I have not been able to reproduce it. If you type "=" as the first character in the text box (talking about "then" of course) then it WILL let you put in numbers (or should). If not, then it is a bug (and we should log it as such). Can you provide more details on this? Yes I like your idea of the "literal/formula" thing similar to the "when" part (but we want to keep it simple - as most of the time it is literal values or calculations).	0	0	https://issues.jboss.org/browse/GUVNOR-937
5555	GUVNOR-912	As GWT is still 1.4 RC1 (and a bit bugged) we should wait for a stable version before change anything. agree ?	1	1	https://issues.jboss.org/browse/GUVNOR-912
5556	GUVNOR-912	What happened when you tried to update it? Yes its still RC1, but we NEED to know what the issues are, so we can log them with the GWT team (I have already logged on on the Rich Text one) so they can do another RC. So please let me know what issues are so we can report them.	1	1	https://issues.jboss.org/browse/GUVNOR-912
5557	GUVNOR-901	Some concrete tasks: * i18n any class, using the eclipse "externalise strings" feateure * Take the generated Messages class, make it work with GWT (not sure exactly how, GWT has lots of ways) * test performance of rendering using this The above will prove that using the externalise feature can work well (GWT has another way, but it is not automated from Eclipse - perhaps there is another plug in to do that, I don't know).	1	1	https://issues.jboss.org/browse/GUVNOR-901
5558	GUVNOR-888	Barry - what do you mean by testing a rule? My take on this is that in different environments you have different rules included/excluded (not just different versions of rules) - my point of confusion is how this can work? How do you isolate testing to just a rule or rules - aren't you testing the system behaviour as a whole?	1	1	https://issues.jboss.org/browse/GUVNOR-888
5559	GUVNOR-888	How are the rules marked as "tested" and who sets the effective dates for testing? is it manual?	1	1	https://issues.jboss.org/browse/GUVNOR-888

#	Requirement	Questions	Answered	Successfully Answered	URL
5560	GUVNOR-888	> How are the rules marked as "tested" and who sets the effective dates for testing? is it manual? The rules will be manually updated with "Tested", Effective Date, Expiration Date, Test Effective Date and Test Expiration Date by the business user. In the long run I would like to automate the tested flag to true when the snapshot containing that rule is deployed to the test environment, but no time for that right now. :-) [Show »] Michael Neale [15/Aug/07 10:09 PM] How are the rules marked as "tested" and who sets the effective dates for testing? is it manual? > have a config file on the classpath that specifies the selectors available. They are a class that implements certain interfaces. Out of the box there > are none, but if you add one in, then you can choose it in the GUI when you go to build a package (it will show up a list of them, you pick the > appropriate one) - that allows users to define them in any way they see fit. > This does NOT however address fields that don't currently exist (like tested dates etc). This would probably work well for me, since the application will give my class control where I can look up in a custom database table or repository extension for my custom rule properties and values. > That or we can allow admins to configure a properties file with a fixed list of selectors to choose from - which option sounds better? The admin configuration of the properties file would be perfect. The selective deployment script are tightly tied to the rule management process and rule life cycle. These will be defined one time by IT and probably see little change after that.	1	1	https://issues.jboss.org/browse/GUVNOR-888
5561	GUVNOR-882	need more info - logs etc... what is it doing and why can't it load up.	0	0	https://issues.jboss.org/browse/GUVNOR-882
5562	GUVNOR-863	Hi Tihomir, Did the ant task you did help with this?	0	0	https://issues.jboss.org/browse/GUVNOR-863
5563	GUVNOR-859	Could we have some more info on what you do on production BRMS? (ie why you need the full BRMS in the production environment, not just .pkg or drl files).	0	0	https://issues.jboss.org/browse/GUVNOR-859
5564	GUVNOR-859	Is this capability actually implemented? In which release? How does it work? Through the Admin Import / Export/	0	0	https://issues.jboss.org/browse/GUVNOR-859
5565	GUVNOR-859	Isn't this related to the bulk-import-util module, which we want to make obsolete by implementing that feature in the GWT gui?	0	0	https://issues.jboss.org/browse/GUVNOR-859
5566	GUVNOR-859	Summary of what need to fix to be able to partial imports and re-imports (=> sync 2 guvnor repo's): - Modules (= packages) need to be versioned - Global package is just a module, so it needs to be versioned too - Versioned dependencies between modules (which includes a dependency of a package to the global package). Restrictions for the user: - Imports can only occur on module level granularity. This is actually good for a user, as assets depends on each other and it makes sense to import them in that granularity atomically. - Modules need to be released (= get a fixed, unique, unalterable version) before they can be imported into another repository. In later versions we can look into supporting timestamped SNAPSHOTS to avoid the need for explicit releases. Once we have this metadata, the partial import is a matter of transferring the needed version (and it's dependency versions) from the sourceRepo to the destinationRepo. Things that make it harder: - categories reused across all modules - how do they get synced? - permission nodes reused across all modules - how do they get synced?	0	0	https://issues.jboss.org/browse/GUVNOR-859
5567	GUVNOR-763	Hi Toni. Able to take a look at this? I am sure you used to be able to do this - there should be a create new option for functions.... otherwise its just a GUI stuff up.	0	0	https://issues.jboss.org/browse/GUVNOR-763
5568	GUVNOR-763	Did this change go into M3? I've uploaded a function, but still don't see any way to modify nor verify the function. Attaching a screen shot. Am I missing something?	1	1	https://issues.jboss.org/browse/GUVNOR-763
5569	GUVNOR-761	Permission check has been added. And corresponding test cases.	0	0	https://issues.jboss.org/browse/GUVNOR-761
5570	GUVNOR-725	1. and 3. are something that could use the improvements that you are talking about. Not sure how to do 1. without breaking backwards compatibility. 2. Can you describe the situation where you are missing the date picker? Just in case it is something that we have missed.	0	0	https://issues.jboss.org/browse/GUVNOR-725
5571	GUVNOR-711	Is this an optional thing - ie an option to disable ruleflows - or just ALWAYS disable them for scenarios?	0	0	https://issues.jboss.org/browse/GUVNOR-711
5572	GUVNOR-710	mic, Is this fixed?	0	0	https://issues.jboss.org/browse/GUVNOR-710
5573	GUVNOR-628	Please find a translated 5.1 file. I don't have the 5.1 code to check labels usage (because 5.1 fails to compile my rules, see GUVNOR-578), so I have some problems regarding the usage context of some labels : - l.1011 : Causes=Causes : Is it used as a verb ("something causes something else") or as a noun ("The causes of X are Y"). I suppose this is the second option - l.1045 : TemplateKey=Template key : don't know how to translate ... Is key like 'identifier' or something like that ? Tagged all previous remarks with comments in the translated file Otherwise, a lot of technical term have been kept 'as this', or translated with siplificiation, instead of finding some weird academician translation understood only by language ayatolas (who won't use drools anyway)... For instance, "package", "working sets", "rule flow", "rule flow group"... Some others, like "upload", are quite difficult to translate. In common french, most of us simply uses the english word (with a strong french accent). For this one, I chose "Envoyer", which means "Send" literraly ... "	1	1	https://issues.jboss.org/browse/GUVNOR-628
5574	GUVNOR-622	Hello, here is my pull request. From the package screen, the snapshot creation takes in account the build selector configuration as for the build. What it does : 1) It copies the whole workspace in the snapshot (as before) 2) it removes all asset which do not apply to the selector configuration So the snapshot only contains the good asset list. A second thing I corrected is in the status list, selecting more than one status was not possible : Q1,Q2 was looking for a state "Q1,Q2". Now all asset that are in status "Q1" or Q2" are selected. Thanks Nicolas	1	1	https://issues.jboss.org/browse/GUVNOR-622
5575	GUVNOR-612	Was that for two separate guides or for creating a part1 and part2 in the guvnor guide ? There was some email discussion about this. I haven't been able to look at these docs for a few months. Also when is this required by ?	0	0	https://issues.jboss.org/browse/GUVNOR-612
5576	GUVNOR-612	Ok, I'll provide a patch for just a reorganization of the guide into 2 parts, Administrator Guide & User Guide. I'm pretty occupied with releases for the next couple of weeks, but it shouldn't take too long. You guys are in git now ? Should I fork https://github.com/droolsjbpm/guvnor.git do the work in master and send a pull request when done ? Are there any particular git rules I need to abide by ? Also is it cool if I re-org the files a little to ensure they are compatible with Publican ? It will make future productization easier.	1	1	https://issues.jboss.org/browse/GUVNOR-612
5577	GUVNOR-605	Could you add an additional checkbox (or a radio button for the 3 states?) that does reverse ordering (or negates the number, same effect)? That way the rules would be evaluated top-down, instead of bottom-up. Also, thank you for implementing this!	1	1	https://issues.jboss.org/browse/GUVNOR-605
5578	GUVNOR-602	Unfortunately neither GWT nor Mosaic provides a TabPanel close to what Gwtext provides. Firstly, the tabPanel from GWT/Mosaic looks different (of course), not as fancy as Gwtext tabs. For what does the TabPanel look like in Gwt and Mosaic, please check http://gwt.google.com/samples/Showcase/Showcase.html#!CwTabPanel and http://mosaic.analytical-labs.com/#CwTabLayoutPanel. Secondly, tab from GWT and Masaic does not have a close icon/button. Mosaic can remove a tab programmatically, but its not obvious where to put this close button. The second problem is a blocker for us.	0	0	https://issues.jboss.org/browse/GUVNOR-602
5579	GUVNOR-584	Do you have plans for another 5.1.x release? If so, do you have a timeframe? I would like to get a formal release with this patch included if possible since this bug make Oryx useless for FF users.	0	0	https://issues.jboss.org/browse/GUVNOR-584

#	Requirement	Questions	Answered	Successfully Answered	URL
5580	GUVNOR-584	Does anybody know when there be a stable version of Oryx that works fine with drools 5.1 and all browsers?	0	0	https://issues.jboss.org/browse/GUVNOR-584
5581	GUVNOR-581	Do we really need sub-package? If the reason why you need sub-package is to use inheritance, then similar result can be achieved by using dependency.	0	0	https://issues.jboss.org/browse/GUVNOR-581
5582	GUVNOR-581	This was mainly because of the display "problem" (the parent package appearing twice when one of the package in path is not empty). I think that 5.2 does not have the problem anymore But your dependency function is very interresting (did not know it exists). How do you achieve that ?	1	1	https://issues.jboss.org/browse/GUVNOR-581
5583	GUVNOR-581	Vincent, can you please check you are happy this issue is resolved in 5.2 so we can close this JIRA? Discussions for "dependency" should be discussed either on one of the mailing lists or IRC, but not the history of a specific JIRA. Thanks. Mike	1	1	https://issues.jboss.org/browse/GUVNOR-581
5584	GUVNOR-580	Hi, 5.0.1 was created 21st of May 2009. Is it possible to get a patch for a later release or the trunk? SVN URL for the trunk http://anonsvn.jboss.org/repos/labs/labs/jbossrules/trunk/	1	1	https://issues.jboss.org/browse/GUVNOR-580
5585	GUVNOR-580	Is it for testing or for include it in future releases ? If it is only for testing, may be the faster is to provide a war that works this way, and then see if you are happy with that. (The war is big, and I don't think it can be placed in the JIRA. Are you ok to download it from a FTP server ?) If you are already convinced, I will try to get time to do that (otherwise it will be on my own time and then delays are longer :)) Should I include my other modification (GUVNOR-576 , which has an impact on the service classes) ?	1	1	https://issues.jboss.org/browse/GUVNOR-580
5586	GUVNOR-580	I have tried to download from trunk After fighting with some wrong pom files (referencing badly their parent pom) and let maven do its stuff, I was facing 1 problem : - drools-bpmn2 does not compile (some unknow methods on XML objects) So I simply go and download the generated jar from your maven repo and make drools-guvnor depends from it instead of the project After that, drool-guvnor is OK (no java problems identified by eclipse) But when I try to compile (using latest GWT 2.0.4 eclipse plugin, under Helios), I got the error : java.lang.NoSuchFieldError: warningThreshold at com.google.gwt.dev.javac.JdtCompiler.getCompilerOptions(JdtCompiler.java:312) ... I have found some forum posts that identify this problem as a JDT version package in GWT ... (or something like that). I aplied a solution based on the one described at end of http://code.google.com/p/google-web-toolkit/issues/detail?id=4479, using a JDT 3.4 file downloaded from google code, and then compilation runs. At that time, I still don't know if it works, but I find all these solution really ugly. Do you have some tips to make that cleaner ?	1	1	https://issues.jboss.org/browse/GUVNOR-580
5587	GUVNOR-580	Compilation is OK. Then I tried hosted mode, with firefox. Got the message indicating that firefox has to download the GWT plugin, installed it ... and now the same error message appears as error in hosted mode console... So I suppose that the GWT plugin for firefox comes with the same bad JDT as GWT SDK ... How do I change this ?	1	1	https://issues.jboss.org/browse/GUVNOR-580
5588	GUVNOR-580	GWT plugins and Drools use a different version of the JDT. You can solve this problem by loading the GWT SDK before Drools modules in the class path. How to do this: Go to Properties -> Java Build Path -> Order and Export, select GWT SDK and click Top. Click OK. It should work now. Some more help in case you need it: http://community.jboss.org/wiki/RulesRepositoryBuildInstructions	1	1	https://issues.jboss.org/browse/GUVNOR-580
5589	GUVNOR-580	Is it the normal guvnor skin (see guvnor appearance capture above)? I think I have still a problem (no border around block in package view is suspicious). Any ideas ?	1	1	https://issues.jboss.org/browse/GUVNOR-580
5590	GUVNOR-580	Done, based on a source last updated on Wednesday (20th october). What is the most convenient for delivery ? I will post "svn diff" patches. Hope it will work even if you have done modifications since this date...	1	1	https://issues.jboss.org/browse/GUVNOR-580
5591	GUVNOR-541	Hi Esteban, I believe this has been completed (by you?) a long time ago. Can we close this JIRA? Cheers, Mike	1	1	https://issues.jboss.org/browse/GUVNOR-541
5592	GUVNOR-485	Work around exists for Drools 5.0: https://community.jboss.org/wiki/DroolsGuvnor50Installation Drools 5.1 M2 works with JBOSS AS 5.1 out-of-box.	0	0	https://issues.jboss.org/browse/GUVNOR-485
5593	GUVNOR-451	Hi Len, I don't really understand the title. Could you please attach a screen-shot or something?	1	1	https://issues.jboss.org/browse/GUVNOR-451
5594	GUVNOR-419	<jliu> mic_hat, regarding the shareable artifact stuff. <jliu> mic_hat, from the prospective of gui, what u think a user need to do . <jliu> mic_hat, how he/she operates to share an artifact <mic_hat> jliu: good question <jliu> mic_hat, what i have in my mind is: 1. every artifact has a perm link. <mic_hat> yes <jliu> 2. say the mortgage module under mortgage package. if we want to share mortgate module for testpackge, <mic_hat> I think you choose to create an item of type "link" - and then you get to browser for what you are linking to... <mic_hat> ok <jliu> what we need to do is to copy the perm link of this module. <mic_hat> yes <mic_hat> jar you mean <mic_hat> model even ;) <mic_hat> I know what you mean <jliu> then open testpackage, click add a new model. <mic_hat> but yes <mic_hat> and we have an option to add in a link <jliu> then a new model can be created from scratch or imported from a perm link <mic_hat> yes <mic_hat> that sounds good <mic_hat> alternative is to allow drag and drop from one package to another <jliu> mic_hat, drag and drop? never tried that. sounds a fancy feature. ;-) does gwt supports this? <mic_hat> yeah - its doable <mic_hat> easier then it sounds <mic_hat> just an idea <mic_hat> might be dumb <mic_hat> dunno <mic_hat> but you get the idea <jliu> mic_hat, we may want to avoid browsering stuff: "I think you choose to create an item of type "link" - and then you get to browser for what you are linking to." <mic_hat> yeah <jliu> as potentially the browser can bring too many artifacts on one screen. can be very slow.	0	0	https://issues.jboss.org/browse/GUVNOR-419
5595	GUVNOR-392	As a workaround, would it make sense for you to use status instead of category? Selecting by status works fine.	0	0	https://issues.jboss.org/browse/GUVNOR-392
5596	GUVNOR-392	Does this solve your issue? Looks like it is possible to filter for categories.	0	0	https://issues.jboss.org/browse/GUVNOR-392
5597	GUVNOR-370	Hi Prem, I've fixed the multiple rules problem in archieved manager. so that ppl can now delete/restore multiple rules in one go. But I am not sure what this jira is proposing. Did you mean the AssetItemGrid that is used to display search result as well as the AssetItemGrid that is used to display assets under a package or category? If this is what u mean, are you suggesting that we add delete/copy operations in AssetItemGrid? (at the moment, the AssetItemGrid used by search results and package/category only has two buttons: refresh list/open selected).	1	0	https://issues.jboss.org/browse/GUVNOR-370
5598	GUVNOR-357	It doesn't work as expected. The timestamp displayed after successful build is the time of the package's last modification BEFORE this build. I think it'd be better just to update the "Last Modified" field after a successful build. When a user checks the tab to see if the build has finished and sees the green mark and the message "Package built successfully." then he would obtain the time of build from the updated "Last Modified" field. What do you think?	0	0	https://issues.jboss.org/browse/GUVNOR-357

#	Requirement	Questions	Answered	Successfully Answered	URL
5599	GUVNOR-355	Also, this is the comment that gets written out to the server log when an upload happens: 09:13:21,477 INFO [STDOUT] DEBUG 25-06 09:13:21,476 (ServiceImplementation.java:loadRuleAsset:491) Load time taken for asset: 2 Could this be improved please with more details such as file name, package name, etc. It could also be a nice log for tracking various events in a friendly log4j format, as it has nice tools such as ChainSaw etc to watch them.	0	0	https://issues.jboss.org/browse/GUVNOR-355
5600	GUVNOR-352	Should now be better in every other browser than IE.	0	0	https://issues.jboss.org/browse/GUVNOR-352
5601	GUVNOR-338	Works for lists. Nicolas, can you give an example of what you were trying to do and what is missing? It is possible that I hid something when I refactored the codes.	1	1	https://issues.jboss.org/browse/GUVNOR-338
5602	GUVNOR-338	Hi Toni, I will do a few screen captures and put it in attachement. Is it ok of I do this tomorrow ?	1	1	https://issues.jboss.org/browse/GUVNOR-338
5603	GUVNOR-318	does this work in regular DRL - or do you mean just in GUI?	1	1	https://issues.jboss.org/browse/GUVNOR-318
5604	GUVNOR-239	"Also - this link should be immutable - always the same, even if we import it into another repo (ideally). But most importantly: should this link always include a version number so it always returns the same content?" how to make the link immutable? For example, the URL http://servername:9000/repository/atom will be changed if we switch to another host or change the port name. In this case, is it still immutable? we can include the version number. If we dont have the version number in the URL, that means the latest version. Does that make sense?	1	1	https://issues.jboss.org/browse/GUVNOR-239
5605	GUVNOR-165	Mic, do you still remember what this patch is for? I mean what problem this patch is to fix? is this patch still valid? Thanks.	0	0	https://issues.jboss.org/browse/GUVNOR-165
5606	GUVNOR-164	So this feature is described in http://community.jboss.org/wiki/OptionalExternalcontentstores Was this feature implemented? Any details?	0	0	https://issues.jboss.org/browse/GUVNOR-164
5607	GUVNOR-158	GWT is on 1.5.3. , Jackrabbit is on 1.6. Is there a need to upgrade GWT-ext? (As we are moving away from GWT-ext anyway).	1	1	https://issues.jboss.org/browse/GUVNOR-158
5608	GUVNOR-113	OK I made it so it would work - but it has to show the actual value in the grid (not ideal). So part way there at least...	0	0	https://issues.jboss.org/browse/GUVNOR-113
5609	GUVNOR-109	+1 - would be easier to understand and to use. Would the users ones still be preloaded? I mean, would the user have to reload the webapp to have the custom selectors show up in the drop down list? Couldn't selectors be part of a package, hence created like a regular asset? Sure, you would have to create several duplicate selectors for every particular package then...	0	0	https://issues.jboss.org/browse/GUVNOR-109
5610	GUVNOR-109	This is kind of related to: https://jira.jboss.org/jira/browse/GUVNOR-90 Yes - I don't see why it can't be stored as a resource - I think with enough built in ones mostly people won't need to tweak their own ones. Can you think of a list of common things that would be needed for deployment?	1	1	https://issues.jboss.org/browse/GUVNOR-109
5611	GUVNOR-91	Here is the issue for sharing assets between packages. Would be nice to create a new asset by linking to an existing one. when linking, can choose a soft link (follow the latest) or hard link (lock it to a specific version - ie copy ?) - but when opening the "linked" item, be able to follow the link to the real one.	0	0	https://issues.jboss.org/browse/GUVNOR-91
5612	GUVNOR-91	This is the proposed way how it works: 1. create a global area. an asset can belong to a package intially. When we want to share it, we prompt it to the global area using node.move(). 2. The package will have a depenceny link attribute. This dependency attribute points to an asset under global area. When u do a package build, we iterate through package's depencency list, retrieve corresponding asset from whatever location the dependency link points to, to form a package bundle. 3.The asset (who lives in the global area) potentially can have a method called getDependant() which returns UUIDs or URLs of these packages that have a depencency link to this asset. 4. As we changed jcr structure, we may need to provide a migrate tool on start up to migrate existing data. 5. We need to change GUI as well. Add a root node called "common" on the same level of where "packages" node stays.	0	0	https://issues.jboss.org/browse/GUVNOR-91
5613	GUVNOR-90	Should have GUI for selectors - selectors can select on status, category, meta data. Those are stored as "smart views" - can then use those "smart views" to build from. Optionally, if rule in "wrong" status, can either warn, or ignore, or use "last known good version".	0	0	https://issues.jboss.org/browse/GUVNOR-90
5614	GUVNOR-86	Wow thanks david ! Patch applied. I am still in 2 minds on this - will the appearance of "this" confuse people? if all the other names have intrinsic meaning - "this" really only makes sense to a java programmer (or javascript, perhaps ?). Thoughts?	1	1	https://issues.jboss.org/browse/GUVNOR-86
5615	GUVNOR-84	I couldn't find it in the docs: https://hudson.jboss.org/hudson/job/drools/lastSuccessfulBuild/artifact/trunk/target/docs/drools-guvnor/html_single/index.html Is it possible to disable WebDAV access (GUI, xml)?	0	0	https://issues.jboss.org/browse/GUVNOR-84
5616	GUVNOR-2	Do you have any further explanation of this? I'm looking into the WebDav interface at the moment, and have some ideas, but don't want to re-state goals/tasks that are already ongoing.	1	1	https://issues.jboss.org/browse/GUVNOR-2
5617	GUVNORSOA-12	If the metadata type is in use, I think people would expect a warning to the effect of "This metadata type is being used on N artifacts. Are you sure you want to delete it?". If they still choose to delete the metadata, the system would clean it up (i.e., remove that property from any node that contains it).	0	0	https://issues.jboss.org/browse/GUVNORSOA-12
5618	HAL-1279	Are you sure it's already on HAL.next? I can't find it on any attribute.	1	1	https://issues.jboss.org/browse/HAL-1279
5619	HAL-1279	I see it now, thanks. I was thinking about the Management Model. In HAL.next the access type is shown. If there's read-write access for an attribute, a new text (requires reload/requires restart) could me added. The same would apply for operations. Should I move this discussion to the .next repository?	0	0	https://issues.jboss.org/browse/HAL-1279
5620	HAL-1278	I'm a bit confused about you not having the time when I'm the one trying to fix those issues (albeit not directly) by working on this. Is hal.next planned to be included in 7.2?	1	0	https://issues.jboss.org/browse/HAL-1278
5621	HAL-1253	I've suggested a modification of the transaction subsystem to add a warning to the operation response's header: {code:json} [standalone@localhost:9990 /] /subsystem=transactions:write-attribute(name=use-jdbc-store, value=true) { "outcome" => "failed", "response-headers" => { "warnings" => [{ "warning" => "Please note that only journal store or jdbc store can be used, thus 'use-journal-store' has been disabled.", "level" => "WARNING", "operation" => { "address" => [("subsystem" => "transactions")], "operation" => "write-attribute" } }], "process-state" => "restart-required" }, "failure-description" => "WFLYTX0032: jdbc-store-datasource must be defined if use-jdbc-store is 'true'.", "rolled-back" => true } {code} However, this does not lead to a message being displayed in HAL. Do you I need to use a specific message template for the message to be displayed in HAL ? Or is there some change required in HAL too ?	1	1	https://issues.jboss.org/browse/HAL-1253
5622	HAL-1226	Hi [~jstefl], can you provide a reproducer ? I did some deploys (managed and unmanaged), everything works.	1	0	https://issues.jboss.org/browse/HAL-1226
5623	HAL-1216	[~harald.pehl], TextBoxItem is a bit confusing, the message says "No whitespace, no special chars allowed" however the item doesn't check for any special characters apart from spaces. Does the validation need improving?	1	1	https://issues.jboss.org/browse/HAL-1216

#	Requirement	Questions	Answered	Successfully Answered	URL
5624	HAL-1216	What kind of improvement do you have in mind?	1	1	https://issues.jboss.org/browse/HAL-1216
5625	HAL-1198	I was thinking about it as well. It would be HAL specific added value so this would require HAL specific configuration in model. Is it doable? The configuration should be persistent and available for all users so we cannot use local browser storage.	0	0	https://issues.jboss.org/browse/HAL-1198
5626	HAL-1177	[~claudio4j], I see, I'll get on it. Should I file a new issue?	1	1	https://issues.jboss.org/browse/HAL-1177
5627	HAL-1177	Reverted the previous changes and moved the management to runtime under the Messaging subsystem. As the subsystem now shows more than metrics should the descriptions be changed? (if so to what?)	0	0	https://issues.jboss.org/browse/HAL-1177
5628	HAL-1147	> Claudio Miranda shouldn't this be marked as resolved? The wildfly upstream feature branch is not merged yet https://github.com/wildfly/wildfly-core/pull/1675 https://github.com/wildfly/wildfly/pull/9063 So the feature branch for HAL was not submitted https://github.com/claudio4j/hal-core/tree/HAL-1147	1	1	https://issues.jboss.org/browse/HAL-1147
5629	HAL-1141	Please set "Fix Version/s" for tracking purposes. btw, what's the ETA for 2.9.0 release + inclusion in WF master ?	1	0	https://issues.jboss.org/browse/HAL-1141
5630	HAL-1091	The server configuration in domain mode is able to configure some attributes (socket binding, port offset, server group), however those attributes doesn't exists in standalone mode. What do you think should be there in view mode for standalone ?	0	0	https://issues.jboss.org/browse/HAL-1091
5631	HAL-1064	So what about filtering by regex? May be with possibility to predefine them?	1	0	https://issues.jboss.org/browse/HAL-1064
5632	HAL-1056	Do you mean last field in same step 3/3 or in the last summary page before clicking finish button ?	1	1	https://issues.jboss.org/browse/HAL-1056
5633	HAL-976	Just one more suggestion, as I see work hasn't been finished. If I understand correctly, subdeployments are only relevant for EAR's. In that case, could it be disabled if the deployment is not an EAR?	1	1	https://issues.jboss.org/browse/HAL-976
5634	HAL-972	This has been merged into master but it's still missing on 2.8.x branch. Could you please apply the patch to it?	0	0	https://issues.jboss.org/browse/HAL-972
5635	HAL-972	The problem is, if i replace a deployment, the previously choosen 'runtime name' (in my case i choosed ROOT.war when i deploeyd the first time) isnt used again for the replacement. Instead, the runtime name is generated out of the war file i use to replace. do i am missing sth.? to replace a deployment i have to remove and re-add the deployment to be able to set the correct runtime name.	0	0	https://issues.jboss.org/browse/HAL-972
5636	HAL-738	[~heiko.braun] In my opinon, actions like Assign, View are the primary actions in the Finder view and it'd be better that we always show them. As a result, users can browse the preview content and still see the primary button in the column, so they know what they could do in the next step. One reason of bringing this up: I gave the prototype to one another designer in our team who run the same usability test at Summit. He said that when he played around with the prototype he accessed the Application view at the very beginning and then he forgot how to access it again and at that time he was locked in the Finder view. I think this might happen to a lot novice users who are not familiar with the Finder and Application model and we should make the primary buttons more prominent if that won't harm anything else on the screen. What do you think?	1	1	https://issues.jboss.org/browse/HAL-738
5637	HAL-621	Will this also be in the EAP 6.4 release?	0	0	https://issues.jboss.org/browse/HAL-621
5638	HAL-604	What's the content for the both Domain and standalone runtime?	1	1	https://issues.jboss.org/browse/HAL-604
5639	HAL-564	This seems to require a restart to change ANYTHING about a datasource. What happens to the Admin console ability to edit a datasource for testing/tuning runtime perfomance before making them permanent in the XML.?	1	0	https://issues.jboss.org/browse/HAL-564
5640	HAL-551	so, whats the issue here? do you guys want to keep re-assigning it? jim, please elaborate. i've said "there is a test connection button". what else do you need? what's the real issue?	1	0	https://issues.jboss.org/browse/HAL-551
5641	HAL-551	Where in the set of error messages is the problem in the JDBC driver in that I did not supply a password. Instead of a blank password mistype it. I get no idea in the thread dumps that I fat fingered the password. I would expect to see a MySQL driver exception around the lack of authenticating the database, but that never occurred in a reasonable fashion as it used to. About 1/3 of the way in the stack dump I get this: [Server:server-one] at java.lang.Thread.run(Thread.java:662) [rt.jar:1.6.0_32] [Server:server-one] Caused by: java.sql.SQLException: Access denied for user 'root'@'localhost' (using password: NO) But how is a user in a console, with a test connection button that didn't show this error supposed to find this. I would expect in domain mode, I might not have access to the local console, it is only through the contrived usage of this lab that the console is front and center. I am pretty sure I also got into a state where the test console button got this into a place I could not update this, as I first at to undeploy the datasource, make a change, and then redeploy it. Why can't I test it before it deploys? I just think there is/was some usability around datasources that needs to be thought through. This is the one area in the console someone will hit every time they use the console. Jim	1	0	https://issues.jboss.org/browse/HAL-551
5642	HAL-551	Jesper, would a failure during prefill result in a StartException from a service?	1	0	https://issues.jboss.org/browse/HAL-551
5643	HAL-551	So - everyone including Jim - is the answer to provide an optional prefill? (It sounds like we already have that.) Do we just need to document this more clearly for the users? I'm guessing that making this a mandatory prefill is way too restrictive, right?	0	0	https://issues.jboss.org/browse/HAL-551
5644	HAL-551	Comment from Jim: I do see your comment, but the problem to me is that I need to be "more locally" told that the password I put in is incorrect or not valid. Having that info buried in logs that when using the console I typically can not see is a big problem. Question - How can the error be displayed directly to the user via the console?	0	0	https://issues.jboss.org/browse/HAL-551
5645	HAL-551	[~jesper.pedersen] What's the conclusion on this? Should we close the issue?	1	0	https://issues.jboss.org/browse/HAL-551
5646	HAL-551	As the problem is related to the datasource usage feedback, there is nothing the web console could do to correctly show the cause. The datasource subsystem must provide the cause.To provide some context, I did three tests and its results, as logged in server.log 1) server not started {code}Caused by: org.postgresql.util.PSQLException: Connection refused. Check that the hostname and port are correct and that the postmaster is accepting TCP/IP connections.{code} 2) wrong username {code}Caused by: org.postgresql.util.PSQLException: FATAL: autentica????o do tipo password falhou para usu??rio "admin"{code} 3) wrong password {code}Caused by: org.postgresql.util.PSQLException: FATAL: autentica????o do tipo password falhou para usu??rio "timekeeper"{code} But the reason displayed by HAL and CLI are the same {code} "failure-description" => "WFLYJCA0040: failed to invoke operation: WFLYJCA0047: Connection is not valid", {code} The main issue is that the original cause is buried in log, do not show in the webconsole or CLI. The user must open the log and search for the cause. Therefore I suggest to open an issue for datasource subsystem (to show the original cause) and let this issue depends on that.	0	0	https://issues.jboss.org/browse/HAL-551
5647	HAL-550	Can we expect anything for 7.1? Otherwise we might re-schedule this issue.	0	0	https://issues.jboss.org/browse/HAL-550
5648	HAL-547	Should I report this issue to HAL project instead?	1	1	https://issues.jboss.org/browse/HAL-547
5649	HAL-547	Not reproducible in wildfly 10, Rémi, can you try it with wildfly 10 ?	1	1	https://issues.jboss.org/browse/HAL-547

#	Requirement	Questions	Answered	Successfully Answered	URL
5650	HAL-547	I see your point. I didn't know about the specific setting {{jbossws.undefined.host}}. I always set the reverse proxy hostname in {{wsdl-host}}, can you set this on your webservices configuration ? This is not a HAL (web console) bug, but a wildfly issue. I will talk to the team, about this.	1	1	https://issues.jboss.org/browse/HAL-547
5651	HAL-531	Hi [~hbraun]! Do you think such feature is not useful for now in Management Console?	1	1	https://issues.jboss.org/browse/HAL-531
5652	HAL-503	I can understand the use case and it make complete sense. But wouldn't the actual server name be sufficient? Why do you think do we need an extra title attribute?	1	1	https://issues.jboss.org/browse/HAL-503
5653	HAL-459	Can this be resolved?	1	1	https://issues.jboss.org/browse/HAL-459
5654	HAL-424	duplicate of #HAL-391 ?	1	0	https://issues.jboss.org/browse/HAL-424
5655	HAL-408	Can you attach a screenshot please? Also, you note in the JIRA that this is AS 7.1.1.Final. Have you tried against the latest released WildFly (JBoss AS has been renamed to WildFly) version http://wildfly.org/downloads/	0	0	https://issues.jboss.org/browse/HAL-408
5656	HAL-398	Can we close this as a duplicate of HAL-390?	1	0	https://issues.jboss.org/browse/HAL-398
5657	HAL-390	There are 39 screens to scroll through and there is no way to sort or filter and it isn't even in order. 5. How would the user like to achieve this? (List the functional requirements here) a) Either increase the list (or) b) Add a Filter/Sorter to sort the list	1	1	https://issues.jboss.org/browse/HAL-390
5658	HAL-380	Is this available in EAP 6.x?	0	0	https://issues.jboss.org/browse/HAL-380
5659	HAL-372	I don't know what your are talking about. Can you elaborate?	1	1	https://issues.jboss.org/browse/HAL-372
5660	HAL-372	As you can see the Server Runtime instances shows as expected, the server and profiles list do not work as shown. Is this a firefox issue or a gwt issue. If we know something does not work we should pop up a warning telling people that this combo does not work. Does this make sense?	1	0	https://issues.jboss.org/browse/HAL-372
5661	HAL-372	can you verify this happens with a clean browser cache?	0	0	https://issues.jboss.org/browse/HAL-372
5662	HAL-367	What "startup options"?	1	1	https://issues.jboss.org/browse/HAL-367
5663	HAL-367	Can you elaborate on this?	1	1	https://issues.jboss.org/browse/HAL-367
5664	HAL-367	The domain.xml has an ability to define a series of services that are started, for slimming purposes it would be nice to expose these in the UI. Data sources are set/stored in this file. Really wondering out loud if we are hiding too much of the mapping between domain.xml and what is in the UI. The UI does not call out domain.xml or that notion in any meaningful way. Does that make sense.	1	0	https://issues.jboss.org/browse/HAL-367
5665	HAL-363	Is there a system I can reference to review this?	1	1	https://issues.jboss.org/browse/HAL-363
5666	HAL-363	Thanks Heiko. I took a look and overall I really like the idea behind this page and the visual layout of the content. The issues I noted are below from most severe to least severe, and I also attached a PDF with comments embedded so the comments can be seen in context of the element they are referring to. I can turn these into new separate JIRAs if that would help. 1. The pagination jumps up and down the page vertically as you use it based on the length of the content of that page. This makes the user "chase" the pagination rather than being able to leave their mouse in one place and click it without really looking at it to jump through multiple pages. Possible solutions: - have pagination at the top of the table as well - Make the table fixed size and it will scroll vertically if there is more content than can fit, and whitespace at the bottom if there is less. (not a visually pleasing option) - Use a horizontal scroll bar to scroll through all of the hosts rather than pagination. This means the table will automatically be loaded at the maximum length it requires. (SUGGESTED) 2. The page does not meet 508 compliance. The table is not tagged appropriately for headers and content, the actions are not actionable in non-styled mode which screen readers use (disable CSS), and the layout of content in non-CSS view would likely not translate well. 3. The 'Stop Group, Start Group, Restart Group' functionality in the groups row headers are hidden and some users might miss this feature. Options: - Always show options, but this adds a lot of clutter when they are not always needed - Add an "Actions" icon or dropdown that allows users to hover over/click and choose these actions. (SUGGESTED) 4. More likely that users will end up hovering over the server instance blocks and see the actions show up, but still a bit hidden. Suggestions: - Maybe use the same "Actions" icon/dropdown as in the row header. 5. One column header has a star. What does this star mean? It doesn't show up on every controller. Is this the "master" or something? A hover-over label of this star should be added for better understanding. 6. When a "Restart is required" (text from hover-over of an exclamation point icon) - why don't we have the Restart action rather than the stop action?	1	1	https://issues.jboss.org/browse/HAL-363
5667	HAL-354	I would like to help on this. There is the following attribute, should be displayed alongside each server name, see attachment. It will show in units: seconds, minutes, hours, days /host=master/server=srv-1/core-service=platform-mbean/type=runtime:read-attribute(name=uptime) Is that good ?	1	1	https://issues.jboss.org/browse/HAL-354
5668	HAL-354	Should it be displayed alongside each server in topology view or in jvm runtime view ? I think the server topology view can display the uptime for all servers. If displayed in the jvm runtime view, the user must choose each server individually.	1	1	https://issues.jboss.org/browse/HAL-354
5669	HAL-354	Should the uptime be displayed under "Operating System" and "Processors" ?	1	1	https://issues.jboss.org/browse/HAL-354
5670	HAL-322	You mean on the <svg .../> element itself, or the nested elements (<g><rect/></g>) as well? What exactly do you need to test? Just the existence of the svg elements?	0	0	https://issues.jboss.org/browse/HAL-322
5671	HAL-311	Why was this closed? I don't see the feature in Wildfly 8.1 either.	0	0	https://issues.jboss.org/browse/HAL-311
5672	HAL-293	Exposing the provider attribute in the console, leads to the question whether and how to restart the domain and refresh the console in order to make use of the new provider. I can see several options: # Let the user change the provider, but do not automatically restart. Instead notify the user that she must manually restart everything and after that refresh the console. Most of the work will be left over to the user. In addition the steps to activate the new provider need to be executed in a given order. # Let the user change the provider and ask whether to restart all hosts. However restarting *all* hosts (particularly in large domains) is an operation which might be problematic to do using the console. It might be that the restart must happen in a given order (first DC than all other host - or vice versa), some hosts might not come up again, there might be a network error, etc. It's hard to control the restart using the console. # Show the current provider and give the user some kind of checklist what steps are necessary to change the provider. Changing the provider is quite a complex workflow which needs some preparation and one of the last steps in this workflow is to change the provider attribute. So all in all I think we should go with option 3. WDYT?	0	0	https://issues.jboss.org/browse/HAL-293
5673	HAL-265	Should it better to submit a single PR with all enhancements or a individual PR for each enhancement ? I prefer a single PR, as most of them enhancements are very small (2 to 5 lines).	0	0	https://issues.jboss.org/browse/HAL-265
5674	HAL-196	Is this done?	1	1	https://issues.jboss.org/browse/HAL-196

#	Requirement	Questions	Answered	Successfully Answered	URL
5675	HAL-174	Brian, can you comment on the last section "system properties (addressable=false)" and then re-assign to me?	1	1	https://issues.jboss.org/browse/HAL-174
5676	HAL-174	Can you explain what you mean by "cannot access the system properties (addressable=false)"? There are different system property resources; children of the server group and otherwise, so I'm not clear on the context. And from looking at the SensitivityClassification they should be addressable. I can see how the wildcard handler would lead to issues. I'll think a bit on that one, but probably won't be fixed today.	0	0	https://issues.jboss.org/browse/HAL-174
5677	HAL-98	addition of runtime metrics for runtime services in JGroups (channels) and Infinispan (cache-managers, caches) - addition of cluster-related information and operations (cluster membership, shared transport, other cluster-specific operations) 1.1 For JGroups: /subsystem=jgroups/stack=* /subsystem=jgroups/channel=* /subsystem=jgroups/cluster=* The stack resource exists already and represents a persistent stack configuration. It exposes transport and protocol configuration attributes. The channel resource will be new and each child resource instance represents a run-time Channel instance created from a given stack. It will expose transport and protocol read-only,runtime metrics as well as read-only versions of transport and protocol configuration attributes from the associated stack (a la JMX in previous versions of AS). The cluster resource will represent a cluster (a set of JGroups channels, possibly on different nodes). Attributes of a cluster may expose the group view or other cluster-wide attributes; operations may perform cluster-wide operations. Cluster children represent cluster members and expose the channel=* resources on that node. /subsystem=jgroups/channel=X /subsystem=jgroups/cluster=X/member-address=192.168.0.100 /subsystem=jgroups/cluster=X/member-address=192.168.0.101 The way in which cluster members are identified may require more than IP address (e.g. two JGroups channels on the same node). Cluster differs from channel in that channel exposes only the JGroups resources on a single node, whereas cluster exposes resources across the cluster. The user may thus view cluster-wide information from a single CLI window. A JGroups RPC mechanism and appropriate handler can be used to obtain management info from other nodes, in domain or standalone modes. Because JGroups starts services on-demand, channels and clusters need to be implemented as custom resources which are presented iff the runtime services which back them up have been started. 1.2 For Infinispan /subsystem=infinispan/cache-manager=* /subsystem=infinispan/cache-manager=*/local-cache=* /subsystem=infinispan/cache-manager=*/invalidation-cache=* /subsystem=infinispan/cache-manager=*/replicated-cache=* /subsystem=infinispan/cache-manager=*/distributed-cache=* /subsystem=infinispan/cluster=* The cache-manager and x-cache resources already exist and represent persistent cache manager and cache configurations. Unlike channels, which are represent runtime instances and whose configuration is tied to a stack definition, cache-managers and caches can represent both a configuration as well as a run-time instance. So existing cache-manager and cache resources may be extended with read-only, runtime metrics without defining any new resources. As in the case of JGroups, an Infinispan cluster can represent cluster-wide attributes associated with the cluster (e.g. transport) and cluster wide operations. Cluster children represent cluster members and expose the cache-manager=* resources (and cache children) on that node. /subsystem=infinispan/cluster=X /subsystem=infinispan/cluster=X/member-address=192.168.0.100 /subsystem=infinispan/cluster=X/member-address=192.168.0.101 Why have a cluster=* resource defined in two subsystems? An Infinispan cluster presents a view of a cluster from the Infinispan level(transactions, evictions, etc); a JGroups cluster from the JGroups level(RPCs, bytes sent, etc). 1.3 Comments Introduction of the cluster resource is experimental only and presented now for discussion. I think its natural for a user to want to see what is happening in a cluster, as opposed to only on a single node. Feedback appreciated. Introduction of the channel resources and extension of the cache-manager and cache resources is planned and needs to be completed asap. 2. Implementation Issues (Brian, Kabir, Tomas) 2.1 Paul and I discussed the placement of channel=* and felt that locating them on the same level as stack=* was better than as a child, as when looking at a channel, we don't really care which stack is being used. This is instead of locating channel as children of stack. Any objections? 2.2 In the case of channel, I would like to expose all of the stack attributes (transport/protocols) in read-only fashion, and append the runtime metrics to that. Why? So that (i) for example, all protocol=MPING information, both	1	1	https://issues.jboss.org/browse/HAL-98
5678	HAL-98	Dennis, thanks for the feedback! > That should already be available in domain mode, or using any other tool (JON) that looks at multiple nodes. At least for now, IIUC, a server group and a cluster are really orthogonal concepts. A server group is a set of servers, which may or may not be clustered, and a cluster is also a set of servers, which may or may not equate to a single server group. Whether or not the notion of a cluster as described above is rejected until such time as it gets integrated into domain mode is another issue altogether. Brian? Also, there are already features in the management api (starting/stopping server groups, deploying to server groups) which look at multiple nodes and also appear in JON. This would simply be yet another. Not everyone who wants to manage servers as a group need use JON, right?. > And it's not specific to the JGroups/Infinispan subsystems. The same argument of wanting to see data across nodes would apply to most subsystems. Hmm. I think the need is greater when the nodes interact - as in a cluster - where the behaviour of one node can directly impact the other. So can we say this applies to all clustering subsystems, as opposed to subsystems in general? > I don't think that functionality should be duplicated in a different way. Agreed. > Don't duplicate the information already available under stack=! The only reason for duplicating the configuration info was to avoid the user having to swap back and forth between the configuration for a channel (in the stack=* resource) and the runtime information for the channel (in the channel=* resource). This was the state of affairs in the old JMX view of channels where the two were integrated. You could see all configuration elements as well as runtime elements. If you feel its too much, it could be left out. > What would be useful under the runtime part would be exposing the actual JGroups protocol info (the current data, which could be different from the configuration if things were changed at runtime). This is what is planned - the channel=* resource's purpose is to expose the runtime info of each channel instance. > It would also be nice to see the runtime part not be limited to channels created by the AS JGroups subsystem, but also include any custom JGroups channels (maybe limited to those channels using the shipped JGroups version to avoid version mismatch complications). IIUC, only EJB, ISPN and other clustering subsystems should be creating channels and this is done via the ChannelFactoryService. The channel=* resources will expose all channels so created.	1	1	https://issues.jboss.org/browse/HAL-98

#	Requirement	Questions	Answered	Successfully Answered	URL
5679	HAL-98	> At least for now, IIUC, a server group and a cluster are really orthogonal concepts. Yes, my argument against the cluster=* section is really that management and clustering should stay orthogonal. Leave the management tasks (including aggregating data across nodes) to the management layer, unrelated to the cluster. > Hmm. I think the need is greater when the nodes interact - as in a cluster - where the behaviour of one node can directly impact the other. > So can we say this applies to all clustering subsystems, as opposed to subsystems in general? I agree that you may care more about data across nodes that interact. But not that it's limited to clustering subsystems. As an example, maybe you'd want to look at the stats of JDBC pools across the cluster (an undersized pool could end up bringing down the cluster). I agree that the functionality is wanted, just at a higher level in the management layer, not specific to clusters or clustering subsystems. > The only reason for duplicating the configuration info was to avoid the user having to swap back and forth between the configuration > for a channel (in the stack=* resource) and the runtime information for the channel (in the channel=* resource). I don't have anything against putting the configuration and runtime data near each other. I'm just against the duplication of the same data in different places (more work to maintain, QA, document, support, etc). I'd like to see it in just one place (wherever that is). > This is what is planned - the channel=* resource's purpose is to expose the runtime info of each channel instance. Sorry, my explanation was kind of vague in this section. What I was specifically referring to was to make sure we show the runtime version of the protocol list and configurations, as opposed to just a copy of the stack= configurations. Quite a few protocol settings could be changed at runtime for a specific channel, and protocols themselves could even be added or removed (don't think we currently do that in AS subsystems, but JGroups supports it). > IIUC, only EJB, ISPN and other clustering subsystems should be creating channels and this is done via the ChannelFactoryService. > The channel=* resources will expose all channels so created. I was mainly referring to any channels used by customer code. We do have a handful of customers using JGroups for other things outside the AS uses. (and that one would really be a "nice to have", certainly not critical).	0	0	https://issues.jboss.org/browse/HAL-98
5680	HAL-98	Re Richard's comment at 05/Dec/12 9:18 PM: * As you mentioned in 1.1/1.2, we're exposing a JGroups and Infinispan cluster. But, perhaps, we should expose the cluster as a top level subsystem, and JGroups channels / Infinispan caches as children ? E.g. /subsystem=cluster/name=session-cluster/channel* /subsystem=cluster/name=session-cluster/caches=Session*/attr=numOwners * With probe.sh, we can currently modify attributes and invoke operations cluster-wide. Is this something you want to support, too ?	1	1	https://issues.jboss.org/browse/HAL-98
5681	HAL-96	Is this still being considered ?	0	0	https://issues.jboss.org/browse/HAL-96
5682	HAL-96	Current state: - Client side: Deprecated branch https://github.com/hpehl/console/tree/cloud needs to be copied into master / new HAL-96 branch. This old branch contains the server selection described here: http://hpehl.info/independent-jboss-admin-console.html - Server side: Branch https://github.com/hpehl/wildfly/tree/keymaker is pretty much wip. The basic implementation for keymaker is in place. What's missing is the configuration and the precedence of digest over keymaker PRs have yet to be created.	1	1	https://issues.jboss.org/browse/HAL-96
5683	HAL-64	from #wildfly-management hpehl: darranl: If a user is assigned to multiple roles, which role will be used? Or will all roles be taken into account? darranl: hpehl, at the moment I believe the default is actually multiple roles will be used, the role mapping maps all it can and then there is a config option for the authorizer to decide if this is acceptable (although the config attribute may not have been exposed) darranl: hpehl, will need to check with Brian I think as we were going to support both modes - personally I don't see a reason to prevent a user having multiple roles ... hpehl: darranl: Is there an operation to read all roles a user belongs to? darranl: hpehl, I am going to be updating the whoami operation shortly to report the current users roles	1	1	https://issues.jboss.org/browse/HAL-64
5684	HAWKULAR-1207	@hrupp - you were involved in this on the agent side I believe. Do you think we need to create another agent-level property called "container-id" for this? Or am I missing something?	0	0	https://issues.jboss.org/browse/HAWKULAR-1207
5685	HAWKULAR-1202	I understand these flags should be set in an wildfly/eap container with the agent installed. Should these also be set in the hawkular-services container?	1	1	https://issues.jboss.org/browse/HAWKULAR-1202
5686	HAWKULAR-1200	How MiQ can manage certificates? Even if the certificate is pre-created (or created using MiQ) and stored somewhere in the MiQ, how to propagate it to the hawkular server and import to the keystore/truststore file or vault? With ansible? Or this is the jira talking about? I.e. via mounting the volume into docker then it wouldn't work for the normal case when we don't use any docker, is this desired? So is there a silent assumption that it will work only for containerized h-services at first? What about OpenShift? Can we assume it's running in openshift so that the Secret could be used?	1	1	https://issues.jboss.org/browse/HAWKULAR-1200
5687	HAWKULAR-1189	[~pilhuhn], What is the difference between this and HAWKULAR-1188? I sent a PR to 1188 (waiting for your review) but maybe it should have been this one?	1	1	https://issues.jboss.org/browse/HAWKULAR-1189
5688	HAWKULAR-1183	On this I was wondering if: * ManageIQ "detect" if a MW server is running in a container and then "hide" the operations or * We configure the agent with a new property "immutable:yes/no" and then let ManageIQ decide to show/hide operations IMO the second solution may be better since: * It's a bit more generic (an agent on baremetal may need to be immutable) * More "secure", the agent can forbid operations that happen through the command gateway * More "flexible", if someone really want a container to be mutable (knowing he would lose his changes on new image deployment), he could do so... What do you think ? [~mazz] [~pilhuhn] [~jkremser]	1	1	https://issues.jboss.org/browse/HAWKULAR-1183
5689	HAWKULAR-1183	There might be also a hybrid (container and bare metal) case in case of managed domain. Where one host can live in container and other doesn't. In this case it's safer to set the immutable flag I guess. I like the idea of making this configurable rather than implicit auto-magic. Having this immutable flag hard coded during the image build time is one option, other option would be the system env property that is read by the agent. Oh and there is also the jolokia scenario. Correct me if I am wrong, but so far it's only read-only pull-based mechanism so this should be ok, right? If we support also invoking some jmx ops via the jolokia, perhaps it make sense also to introduce some attribute in that remote-jmx tag (https://git.io/vDGyb) !20170203_124020.jpg|thumbnail!	1	1	https://issues.jboss.org/browse/HAWKULAR-1183
5690	HAWKULAR-1183	This makes sense to me. It'd be easy to run the WF with immutable agent (-Dhawkular.agent.immutable=true) and with a little bit more effort this JVM param can be added if the env property is defined in the system. So that one can run both mutable and immutable containers based on the env property (I can add that.) [~mazz] and how to read this flag in MiQ? Can you store it as a configuration of the feed itself in the inventory? Or some additional metadata in the /status endpoint? Hmm, the latter doesn't make much sense, because 1 h-services can have multiple agents connected that are either mutable or immutable.	1	1	https://issues.jboss.org/browse/HAWKULAR-1183

#	Requirement	Questions	Answered	Successfully Answered	URL
5691	HAWKULAR-1183	[~jkremser] > and how to read this flag in MiQ? I could add this as a resource configuration property on the agent resource itself - https://github.com/hawkular/hawkular-agent/blob/master/hawkular-wildfly-agent-feature-pack/src/main/resources/subsystem-templates/hawkular-wildfly-agent.xml#L824 Or I could add a CLI operation to the agent "getImmutable" which you could execute via the command gateway ExecuteOperation command. Let me know which you prefer. [~pilhuhn] > In MiQ we need both immutable and in-container. that is a separate JIRA: https://issues.jboss.org/browse/HAWKULAR-1185	1	1	https://issues.jboss.org/browse/HAWKULAR-1183
5692	HAWKULAR-1183	Why doing a shutdown of EAP inside a container ?	0	0	https://issues.jboss.org/browse/HAWKULAR-1183
5693	HAWKULAR-1183	I'm going to make all power ops the agent supports to be disabled if immutable. I think it would be confusing to people to have SOME power ops disabled but not others. "So, if the agent is in a container, I can shut down EAP but not restart it. Or is it I can restart it but not shut it down? Can I reload it or not?" For consistency, if we want some power ops to be disabled, all of them should, IMO. The user should go through the container to perform power ops (if you want to restart EAP, restart the container. If you want to shut it down, shutdown the container).	0	0	https://issues.jboss.org/browse/HAWKULAR-1183
5694	HAWKULAR-1182	Where the yaml template should go? 1) new repo jboss-dockerfiles/hawkular-services 2) hawkular/hawkular-services	1	1	https://issues.jboss.org/browse/HAWKULAR-1182
5695	HAWKULAR-1182	Put that somewhere in hawkular/hawkular-services and make it work with the pilhuhn/hawkular-services for now. Once we have automated hawkular/hawkular-services builds we switch over. Create a parameter for that image (with the pilhuhn/.. one as default)	1	1	https://issues.jboss.org/browse/HAWKULAR-1182
5696	HAWKULAR-1176	[~pilhuhn] that is certainly possible, but that is what I meant when I said, "won't cause us to do alot of work and to alot of refactoring and splitting out code. " - because what you propose is not how the current backport_eap6 branch is structured. We'd have to do a lot more work to get things refactored out into separate parts. We can do it, but it would take time. So, the question is: How much time do we have? When are we required to have an EAP6 agent build and EAP7 agent build (with all the installer enhancements that need to go with them?)	1	1	https://issues.jboss.org/browse/HAWKULAR-1176
5697	HAWKULAR-1161	Can someone add details to this JIRA? The agent already has two sets of metrics that appear relevant - "WildFly Aggregated Web Metrics" and "Undertow Metrics" which include the following: WildFly Aggregated Web Metrics: - Aggregated Active Web Sessions - Aggregated Max Active Web Sessions - Aggregated Expired Web Sessions - Aggregated Rejected Web Sessions - Aggregated Servlet Request Time - Aggregated Servlet Request Count Undertow Metrics: - Active Sessions - Sessions Created - Expired Sessions - Rejected Sessions - Max Active Sessions See: https://github.com/hawkular/hawkular-agent/blob/master/hawkular-javaagent-wildfly-feature-pack/src/main/resources/featurepack/content/standalone/configuration/hawkular-javaagent-config.yaml#L93-L154	1	1	https://issues.jboss.org/browse/HAWKULAR-1161
5698	HAWKULAR-1161	@[~mazz] iiic based on your comments above, the agent already collects the required metrics in both eap 6 and 7. is this correct? Should there anything additional be done on agent/hawkular side to report/enable those metrics (so miq can request/collect them), or this task is completed on agent/hawkular side?	1	0	https://issues.jboss.org/browse/HAWKULAR-1161
5699	HAWKULAR-1155	[~karel.hala] [~pilhuhn] [~theute] [~jdoyle] this happened during my leave - I see that this is the only sub task that was not completed out of the 4 subtasks for https://issues.jboss.org/browse/JMAN4-117 was the development stopped intentionally? if yes, should it be resumed or should this JMAN be closed or deferred?	0	0	https://issues.jboss.org/browse/HAWKULAR-1155
5700	HAWKULAR-1154	I just added the command *update_collection_intervals*, as used them on my EAP6 testing. Is there any other command that needs to be supported on the gem?	1	1	https://issues.jboss.org/browse/HAWKULAR-1154
5701	HAWKULAR-1153	The requeriment does not explicitly define but I read that it implies that also an user may want to show/use in reports/graphs the selected metrics. Today, Manage UI miq_report engine uses static yaml files to define the supported layout and metrics. If this requirement also implies to dynamically build reports and graphs, the current use of miq_report needs to be revisited and probably study/define an alternative implementation. Can you confim ?	1	1	https://issues.jboss.org/browse/HAWKULAR-1153
5702	HAWKULAR-1153	From the past discussion on IRC I guess it is clear that this requirement does not involve that an user can create a custom chart with the metrics selected to collect. Please [~jdoyle], [~theute], [~pilhuhn], can you confirm ?	1	1	https://issues.jboss.org/browse/HAWKULAR-1153
5703	HAWKULAR-1141	BTW, I got a question: Is this Jira limited to work only for WildFly servers hosted in managed VMs, hosts, etc.? or should it also work if the underlying host is not in ManageIQ inventory? cc [~alissabonas]	1	0	https://issues.jboss.org/browse/HAWKULAR-1141
5704	HAWKULAR-1093	To get started it will be helpful to have an idea of what sort of auto-detectable stuff can be used to tie together clustered resources. Is there anything we can grab from a WF Server's config? jgroups settings, ispan cache info? I'll start looking. And also to get a better idea of what we want to generate relationship-wise. If we already have some fairly firm ideas of what we want [~pilhuhn], [~jdoyle2] can you add your thoughts or requirements.	1	1	https://issues.jboss.org/browse/HAWKULAR-1093
5705	HAWKULAR-1085	Is that still a thing?	0	0	https://issues.jboss.org/browse/HAWKULAR-1085
5706	HAWKULAR-1081	[~jmazzitelli], I removed the maven-war-plugin part from the Agent Download WAR and got this diff. Are those entries needed by something (like the installer?), or may this maven-war-plugin part be removed entirely? {code} $ diff ../tmp1/META-INF/MANIFEST.MF META-INF/MANIFEST.MF 7d6 < Specification-Vendor: Red Hat, Inc. 9d7 < Specification-Title: Hawkular Agent: WildFly Agent Download WAR 11c9 < Built-On: 2016-06-02T17:25:10+02 --- > Built-On: 2016-06-02T17:27:46+02 15d12 < Specification-Version: 0.18.1.Final-SNAPSHOT {code}	0	0	https://issues.jboss.org/browse/HAWKULAR-1081
5707	HAWKULAR-1081	Pull 197 was merged long time ago. Is this Jira still a thing - especially after Mazz' last comment?	0	0	https://issues.jboss.org/browse/HAWKULAR-1081
5708	HAWKULAR-1034	The new sparkline charts have ALL of the capability of the normal charts just that they are scaled down. For instance, you can see the pink alert areas and if you click and drag the time range actually changes to what you have selected. One code base, multiple purposes.	0	0	https://issues.jboss.org/browse/HAWKULAR-1034
5709	HAWKULAR-1022	[~uxdlc] sure. Your proposal is much better. This part was made without design, that's why it ended up like that :P Based on your design, I propose one change, which is to remove the Hide/show metrics and put it as a collapse / expand arrow before the panel header. This interaction pattern is well-known, saves us vertical space and looks better. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-1022
5710	HAWKULAR-1021	[~mithomps], can u sign it to someone from your team?	1	0	https://issues.jboss.org/browse/HAWKULAR-1021
5711	HAWKULAR-983	An iteration on this flow might be to do the same, but all within a dialog window So it would be: * Click Export JDR... * Dialog window pop-ups: It has a title, explanatory text and a spinner. * Once the file is ready for download, replace the spinner with File Dialog fields. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-983
5712	HAWKULAR-983	I am not sure how it is done on the server, but can the server somehow either send progression while generating the JDR, or guess the time? So we can show toastr message and then loading bar at the top similar to youtube's loading bar. I guess you saw it on couple of sites, we can actually use this http://victorbjelkholm.github.io/ngProgress/ Once it is finished, we can either prompt the user to immediately download the file (just as we do now). Or we can place some download button like: !Selection_013.png|thumbnail!	1	1	https://issues.jboss.org/browse/HAWKULAR-983

#	Requirement	Questions	Answered	Successfully Answered	URL
5713	HAWKULAR-983	And should I somehow dismiss the "Generating..." message once it's completed?	0	0	https://issues.jboss.org/browse/HAWKULAR-983
5714	HAWKULAR-983	[~karel.hala] Are these 3 stacked messages all relating to the same process? Can we dismiss/replace one toast with another as the process goes through its cycles? Please refer to: https://issues.jboss.org/browse/HAWKULAR-870	1	1	https://issues.jboss.org/browse/HAWKULAR-983
5715	HAWKULAR-960	[~uxdlc], [~mithomps], [~pilhuhn] what do you think? Did I missed anything? Is there anything else you would like to see?	1	1	https://issues.jboss.org/browse/HAWKULAR-960
5716	HAWKULAR-960	+1 * I like that these messages are only for the current session, otherwise there might be confusion/overlap with Alert Center or other notifications. * We might want to consider another icon for the "drawer." I found these at font-awesome: icon-notification & icon-flag-alt. Or we could use a text label instead ("Notifications", "Message" or etc.)? Wdyt? * Fyi: if you don't already have it, here's a link to the PatternFly pattern for toasts (though it doesn't cover this use case): https://www.patternfly.org/patterns/toast-notifications/	1	1	https://issues.jboss.org/browse/HAWKULAR-960
5717	HAWKULAR-960	[~karel.hala] RE: "merging" to some degree we have already confronted this issue with: https://issues.jboss.org/browse/HAWKULAR-870. For a single user action, that might have multiple events tied to it (like Export JDR), it could make it easier for the user if one corresponding toast updated itself - rather than stacking a series of event updates for the same user action. Totally unrelated tasks/events would still stack up in the queue though. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-960
5718	HAWKULAR-954	[~mithomps] Question: * This applies to what you initially see on lote, with the reflective server view? * And/or after an agent install process? In the case of the agent install, perhaps the redesign of this view should also be included/considered as part of #918 work flow. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-954
5719	HAWKULAR-954	Do we have any sense of what an average load time might be? Or are we able to calculate progress as the data is loading. I'm trying to figure out whether we should include either an indeterminate or determinate progress indicator (aka spinner or progress bar). Thanks!	1	1	https://issues.jboss.org/browse/HAWKULAR-954
5720	HAWKULAR-930	This is done. It's now possible to select a date for the expiration of the token. We might iterate this again, to fine tune it. For instance, do we want to make it easier to select a specific time as well, or date is fine? Also, slider or date picker? And so on. For now, I'm resolving this, as the base code is in Hawkular master already.	0	0	https://issues.jboss.org/browse/HAWKULAR-930
5721	HAWKULAR-929	Would this be more of a title, or comment/description (a few words, or a paragraph description)? I ask, because I'm wondering if I could use the token "title" in the drop-down for the agent-install flow (rather than key/secret pair)?	1	1	https://issues.jboss.org/browse/HAWKULAR-929
5722	HAWKULAR-929	By the way, we could have two ways of displaying the token info on a dropdown: * My token name (3b3f4f08-be83-11e5-9ee9-3c970e9648d7) * Token created at Tue 19. Jan 09:04:27 CET 2016 (4b8a027c-be83-11e5-90e0-3c970e9648d7) The first one has a custom title (My token name), the second doesn't. I realize that this is somewhat big (specially because of the size of the token key itself), but I think it provides enough context to the user. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-929
5723	HAWKULAR-929	Make it required/unique only on the UI, right? Tokens can also be provisioned on demand, so, it doesn't make much sense to require a name field there, as it would be an extra effort for an admin to come up with a "meaningful" random name for the token (changes are that they will just fill the name field with garbage). I'd do it one step at a time, and see if we really have this naming problem in the real world.	1	1	https://issues.jboss.org/browse/HAWKULAR-929
5724	HAWKULAR-929	[~jpkrohling] The token-key is basically not human-readable. What do you mean with "on demand"? In the context of creating a customized agent-installer? We came to the conclusion today that we don't want ad-hoc creation in that workflow, but the user should do that before on the tokens screen. We can't prevent the user from entering garbage in the title field, but then it's users labeling system. Forcing the user to remember which token key is what, is not user friendly at all.	0	0	https://issues.jboss.org/browse/HAWKULAR-929
5725	HAWKULAR-929	I still think my previous suggestion would be better than just displaying the key/code. {quote} By the way, we could have two ways of displaying the token info on a dropdown: * My token name (3b3f4f08-be83-11e5-9ee9-3c970e9648d7) * Token created at Tue 19. Jan 09:04:27 CET 2016 (4b8a027c-be83-11e5-90e0-3c970e9648d7) {quote} Attached is a screenshot from the "Tokens" screen. Note that two of the tokens have no name nor description, and an "auto generated" name for those are used (Token generated ...). Is that a viable solution?	1	0	https://issues.jboss.org/browse/HAWKULAR-929
5726	HAWKULAR-929	[~juraci.costa] - I'm sorry, could you recap your "previous suggestion"? :-} - The two ways of currently showing the token in the dropdown, aren't really very readable (user friendly) due to the long string length. - Thanks for sharing the attached screenshot: The general design seems fine, although some questions: * What does the Edit button do: Edit only the name or other fields? * Will the design break if the Name or Description field text wraps? * If you can "auto generate" a name for this, and we can refer to an auto-generated name in a dropdown, then why can't the token name be required? I would much rather refer to the name in the dropdown than these really long text strings?	1	0	https://issues.jboss.org/browse/HAWKULAR-929
5727	HAWKULAR-929	{quote} I'm sorry, could you recap your "previous suggestion"? :-} The two ways of currently showing the token in the dropdown, aren't really very readable (user friendly) due to the long string length. {quote} Sure, the suggestion was: {quote} By the way, we could have two ways of displaying the token info on a dropdown: * My token name (3b3f4f08-be83-11e5-9ee9-3c970e9648d7) * Token created at Tue 19. Jan 09:04:27 CET 2016 (4b8a027c-be83-11e5-90e0-3c970e9648d7) The first one has a custom title (My token name), the second doesn't.{quote} Those are big, but they can shortened. The code itself, for instance, could show only the first part (everything before the first dash). So, it would be something like this: {code} - My token name (3b3f4f08-...) - Token generated at Jan 27, 2016 2:33:45 PM (a632102c-...) {code} If they are still too big, we can try to use the ISO representation for the date, such as "2016-01-27T02:33:45Z" {quote} * Thanks for sharing the attached screenshot: The general design seems fine, although some questions: * What does the Edit button do: Edit only the name or other fields? * Will the design break if the Name or Description field text wraps? {quote} The edit button opens the name, description and expiration date fields. It currently breaks the screen and it gets really ugly. The JIRA HAWKULAR-979 is for fixing those quirks on the screen. {quote} * If you can "auto generate" a name for this, and we can refer to an auto-generated name in a dropdown, then why can't the token name be required? I would much rather refer to the name in the dropdown than these really long text strings? {quote} I would also prefer that we'd have an usable name and description for every token, but realistically, users will add a meaningful name and description to only a few tokens. So, it doesn't make sense to require the user to enter a name. Specially for environments where the token is created in a big batch, or via an automated system (ie: not via the UI), this is an unnecessary burden to the system administrators. I also absolutely agree that referring to tokens by their code is not a good way to present the information. Hence, the "auto generated name". If the user hasn't bothered setting a name to a token, we can at least show something like "Token generated at Jan 27, 2016 2:33:45 PM", as a way for the user to have an idea which token to select (was it the one I created yesterday? the one I just created?).	0	0	https://issues.jboss.org/browse/HAWKULAR-929

#	Requirement	Questions	Answered	Successfully Answered	URL
5728	HAWKULAR-921	* Yes, the admin receives an email notification about an user requesting to join the organization * You mean, on the screen shown in screenshot-4? I was thinking that we could change the listing of organizations to use a Card layout. What do you think ? * Users can apply again to join an organization, in case they first got rejected. Agree about marking the rejected as label-danger. Would you change it and add to the PR? The code would be like this: on organizations.html , http://paste.fedoraproject.org/317408/54405175/ * Yes, sounds reasonable. Are you able to change that as well ?	1	1	https://issues.jboss.org/browse/HAWKULAR-921
5729	HAWKULAR-921	* Yes, I meant the screenshot-4. The table has only the "Name" column, we could add "Privacy" and a new column (without heading) that shows in a "label label-info" the info "1 request pending". I would keep using the table. We are currently using cards when there are charts. * Can you apply the label-danger to rejected status? In the code you are using a tag, you'll need to split in two conditions, which I don't know how to do :) * Updated the select in a new PR + other small fixes, just needed to add pf-select :)	1	1	https://issues.jboss.org/browse/HAWKULAR-921
5730	HAWKULAR-918	this is a hawkular-accounts token key (it is NOT the user's username; it is the user or organization token's key value) 2. "security-secret" - this is a hawkular-accounts token secret (is it NOT the user's password; it is the user or organization token's secret value). 3. "encryption-key" - this is a passcode that the user will provide in order to encrypt the security-secret inside the installer. This is any string the user wants to give. You will need to know this when you then run the installer. These can be provided as FORM POST name/value pairs (if accessing the installer download URL via HTTP POST), or they can be query string parameters (if accessing the installer download URL via HTTP GET). The installer download URL that the UI must access is: {noformat} http://<hawkular-server>:8080/hawkular/wildfly-agent/installer {noformat} When downloading the installer via the URL above using a browser or some other utility like wget or curl, you store that file somewhere on your file system and call it "hawkular-wildfly-agent-installer.jar" (that is the content-disposition name the installer download URL will provide - so if you download using a browser, that will be the filename you get automatically). If you store it in the same directory where your WildFly server instance is, it makes the command line to run the installer simpler (because you won't need to tell it a --target-location - the default is the current working directory). But suppose you saved the installer jar in /tmp and your WildFly Server where you want to install the agent is located in /opt/wildfly and the passcode (encryption-key) you passed into the installer download URL is "foobar" - then the installer command you run to install the agent inside that WildFly server would be: {noformat} java -jar /tmp/hawkular-wildfly-agent-installer.jar --target-location=/opt/wildfly --encryption-key=foobar {noformat} If you copy the jar file in that same location where your WF server is installed (/opt/wildfly), then you can just do this: {noformat} cd /opt/wildfly java -jar hawkular-wildfly-agent-installer.jar --encryption-key=foobar {noformat} NOTE: if you only say "--encryption-key" rather than also give it its value, the installer will ask you on the console for the encryption key passcode. This way, it won't be stored in your bash history. There are optional values you can pass into the installer (in addition to the three required ones mentioned above). Whether we want the user to be able to specify these or not, I do not know. Up to the UXD team to figure out what's best. Perhaps the less amount of data to ask for, then the easier it is for the user to understand what is going on. But these would help pre-configure the installer further which could make it easier for the person running the installer. * managed-server-name - the name of the local WildFly endpoint the agent will monitor. This is the name of the <local-dmr> as defined in the agent configuration file. The default is "Local". * target-location - the location where your WildFly Server is located and where you want the agent to be installed. If all wildfly servers in the user's organization are always installed in the same place (say, "/opt/wildfly" is a standard within their organization) you can pre-configure the installer to use this. This would then allow you to omit the "--target-location" command line argument you pass to the installer command line (so the command would look like "java -jar /tmp/hawkular-wildfly-agent-installer.jar --encryption-key=foobar") * enabled - if specified, you are telling the installer to configure the agent to either be enabled or disabled. The default is true - the agent will be enabled and will deploy and run when you next restart the WildFly server. If you pass in a value of false the agent will not run when the WildFly Server is restarted. You can later manually enable the agent later. Note that all of the properties (even the two required security-key and security-secret ones) can be overridden by the user running the installer by simply passing in the property on the command line. For example, suppose in the UI you specified "target-location" of "/opt/wildfly" so the installer will install the agent in WF servers it finds in /opt/wildfly. But suppose you are on a machine where your WildFly server is located someplace different - like "/usr/share/wf". You can tell the installer to install in that location by simply passing in a different value for --target-location on the command line: "java -jar /tmp/hawkular-wildfly-agent-	1	1	https://issues.jboss.org/browse/HAWKULAR-918
5731	HAWKULAR-918	[~mazz] Is the "encryption-key" a one-time thing? If the user runs this again, will they need to generate a new encryption-key each time?	1	0	https://issues.jboss.org/browse/HAWKULAR-918
5732	HAWKULAR-918	[~mazz] [~pilhuhn] I attached an interim design proposal, as something to use while we're working on the final wizard flow. I ran it by Mike T. already and have incorporated his feedback. There's one variant proposal in which I've changed the title to "WildFly Server Agent," to try to make things more clear in the short-term. Wdyt?	1	0	https://issues.jboss.org/browse/HAWKULAR-918
5733	HAWKULAR-918	Good. How did u think the interaction of "Create token" in step 2? It is just added to the list automatically?	1	1	https://issues.jboss.org/browse/HAWKULAR-918
5734	HAWKULAR-918	[~gcardoso] That would match the interaction in the "Tokens" section, so that seems reasonable. One question is whether to allow Token edits in this view or require the user to go to the Tokens section. Wdyt?	1	0	https://issues.jboss.org/browse/HAWKULAR-918
5735	HAWKULAR-918	Your solution regarding the name sounds good. The need for login at this stage is not optimal however. At least some users will not understand why they have to login again if they are already logged in. Isn't there another solution that runs this login in background, like you do by just going to the accounts area, where you don't need to put login information again?	1	1	https://issues.jboss.org/browse/HAWKULAR-918
5736	HAWKULAR-918	How does this process of redirecting the user to Keycloak and redirect back appears to the final user? Just a loading in the modal or would he see something different?	1	1	https://issues.jboss.org/browse/HAWKULAR-918
5737	HAWKULAR-909	[~lkrejci] any idea, how should we name the new Commons Maven module that will contain CanonicalPath?	1	1	https://issues.jboss.org/browse/HAWKULAR-909
5738	HAWKULAR-901	Hi [~mazz] [~uxdlc] FYI, the patternfly team has added this issue to the backlog and will be designing this pattern in a future sprint. Please see it here: https://patternfly.atlassian.net/browse/PTNFLY-639 Could you please let me know if there is a determined timeframe of implementing this feature? If this is urgent, I can communicate to the PatternFly team and ask the product owner to reprioritize it. Thanks!	1	0	https://issues.jboss.org/browse/HAWKULAR-901
5739	HAWKULAR-901	[~pilhuhn] Are you envisioning a "message center" that is distinct from the "alert center" (by location and etc.), or something that is part of it? And which types of notifications are toasts, versus other types of messaging?	1	0	https://issues.jboss.org/browse/HAWKULAR-901
5740	HAWKULAR-885	Hi, I probably was not very clear, but I didn't mean to use different widgets together in the same panel. I meant to pick one of them and try to apply to our context. Your proposal presents the information in a clear way but I didn't see anything similar in patternfly (with the lines dividing, one heading above, chart in the middle and legend below). I attached a prototype that follows more the Utilization Trend Card. It feels more like patternfly to me, and also presents the information clearly. WDYT? Thanks	1	1	https://issues.jboss.org/browse/HAWKULAR-885

#	Requirement	Questions	Answered	Successfully Answered	URL
5741	HAWKULAR-884	Let's say I want the Heap Usage metric, how do I query inventory for such thing without hard-coding a string which identifies it ? All I know it's the ID, which is "MI~R~[bucephalus/Local~~]~MT~WildFly Memory Metrics~Heap Used".. so that pretty much will need to be concatenated/hardcoded somewhere. I can query all metrics for the resource "bucephalus/Local" and then look for the ID I care about (eg: "~MT~WildFly Memory Metrics~Heap Used") but IMHO, it increases the queries while not providing a major improvement since if the metric id changes, it still breaks. I tried to minimize the damages of changes by using this MetricsService.getMetricId(type: string, feedId: FeedId, resId: ResourceId, metricId: MetricId) method (https://github.com/hawkular/hawkular/blob/master/console/src/main/scripts/plugins/metrics/ts/services/metricsService.ts#L94-L104) so that it is less error prone and we can easily change if the metric id changes.	0	0	https://issues.jboss.org/browse/HAWKULAR-884
5742	HAWKULAR-882	Do we want to perform it via UI ? I can add the support for the component and un-assign this for an UI tasks once component support it.	0	0	https://issues.jboss.org/browse/HAWKULAR-882
5743	HAWKULAR-881	The original problem with "adding an user to an organization" is that it allows for users to know about the existence of other users. If this is not seen as a problem, then this could be implemented. About the new user requesting access to an organization: should then the list of organizations be visible to everyone? Or should there be a setting, with the organization's visibility ? Should there also be a "public" possibility, so that people would join without the need for an approval?	1	1	https://issues.jboss.org/browse/HAWKULAR-881
5744	HAWKULAR-870	[~mazz] We can talk to the PatternFly people to see if they're working on a "message ctr" pattern. In the meanwhile, do we have a clear definition around what "messages" are (versus alerts and alert notifications)? Just want to make sure we don't get into the place in the future where the user is confused about where to look to get messaging and alert information. [~jdoyle] John, do you think we should start working up designs for a message center, I imagine one that's similar to the EAP message queue in the upper-right?	1	1	https://issues.jboss.org/browse/HAWKULAR-870
5745	HAWKULAR-870	[~alexandrem] Thanks for minimizing the stacking. WRT to stacking etc., we're trying to align with PF wherever possible and reasonable, when they do have stated recommendations. This is a patterns where they do provide clear guidance: * "Toast notifications should be transient and stay on the screen for 8 seconds, so that they do not block the information behind them for too long, but allows the user to read the message. Ideally, the user can decide what kinds of notifications appear and how long they remain on the screen. Toast notifications should remain on the screen when the user is hovering on them.Generally, there shouldn't be more than one toast notification shown at the same time. If two notifications are triggered at the same time, they should be shown one by one." https://www.patternfly.org/patterns/toast-notifications/ What would be great if rather than having Hawkular deviate from these recommendations, if you could raise them with Patternfly. I'm including the pattern lead on this thread. [~joqian] Josephine, is there some way that Alex can contribute his concerns/suggestions to the pattern work? That said, perhaps the message queue (Jira #901) might also help address the issues/concerns that you raise?	1	1	https://issues.jboss.org/browse/HAWKULAR-870
5746	HAWKULAR-870	* [~alexandrem] Alex, is one of your points that a toast shouldn't persist for 8 seconds, if a new toast is generated from a user action? If so, I agree with that, the new toast should replace the old one even if its 8 secs aren't up. I don't think there's anything it the pattern that precludes that? * [~mazz] John, the message ctr discussion should probably go on #901 :) I filed this Jira for the "quick fix" with the hope of moving the larger message ctr discussion to another Jira. I think we do need to discuss messaging in the UI holistically (toasts, email, inline messages, alerts, flags, badges and etc.).	0	0	https://issues.jboss.org/browse/HAWKULAR-870
5747	HAWKULAR-870	Change request: Align more closely with PF recommendation not to stack. If a compromise position is needed (until there's a message ctr or some such): Perhaps we could show more than one, by allowing the old message to phase out while a new message fades in, like a vertical carousel. I think if there's some transition effects that might help communicate that these things are coming and going, wdyt? I think that could help resolve the case where many are coming in at the same time, but not stacking them. Here are some examples: * https://amazingcarousel.com/examples/jquery-vertical-scroller-id15/ * https://amazingcarousel.com/examples/jquery-carousel-id5/ * "Example 1 or 2" http://wmh.github.io/jquery-scrollbox/ * http://jsfiddle.net/spliter/g2PE7/ [~alexandrem] How about this for a compromise/ interim solution? Perhaps this carousel queue could store up to 3-5 toasts max, but only show one at a time. And the whole toast carousel could clear after a minute or two. If only one toast is spawned in any given 1 - 2 minute interval, then just show the regular toast. wdyt?	0	0	https://issues.jboss.org/browse/HAWKULAR-870
5748	HAWKULAR-858	[~gcardoso] Thanks for picking this up! Could we also resolve the multi toast presentation in this Jira? According to PF: "Generally, there shouldn't be more than one toast notification shown at the same time. If two notifications are triggered at the same time, they should be shown one by one." Currently we present a whole bunch at the same time, I attached a screen grab.	1	1	https://issues.jboss.org/browse/HAWKULAR-858
5749	HAWKULAR-855	Is that still a thing?	0	0	https://issues.jboss.org/browse/HAWKULAR-855
5750	HAWKULAR-850	* Are you interested in an alternative presentation of the text inside the tooltip? * One question on the hovers themselves - would it be possible to present the hover over any part of the vertical axis line in the chart (regardless of whether the bar is there or not)? See: https://www.patternfly.org/widgets/#basic-charts	1	1	https://issues.jboss.org/browse/HAWKULAR-850
5751	HAWKULAR-833	[~gcardoso] In working on moving the trigger definitions back into a dialog, as we discussed, I realized that we need to address alert details as well. Because in the current UI clicking the (>) chevron icon takes the user to the Alert Details, not the triggers. So I was thinking that along the lines of what we discussed, perhaps clicking the (>) could take the user to the dialog - which could include the details as well as the triggers. We could separate these by using tabs, and extend that further by using a tab for "notifications" as well. Wdyt?	1	0	https://issues.jboss.org/browse/HAWKULAR-833
5752	HAWKULAR-833	[~gcardoso] Cool, thanks for your help! [~mithomps] Mike, which release version do you think this change could get in?	1	0	https://issues.jboss.org/browse/HAWKULAR-833
5753	HAWKULAR-816	Isn't this task done? Or should there be something more implemented? Currently there is Response Time and Availability as separate tabs and sidebar with alerts in it. [~uxdlc] or do you think that there should be something more to be done?	1	1	https://issues.jboss.org/browse/HAWKULAR-816
5754	HAWKULAR-815	Hi [~uxdlc], I implemented the delete on: http://cardosogabriel.github.io/hawkular-client/urls-list.html To do so I moved the alerts icon to the left, since the action makes more sense in the right. Consistency wise, we should probably use the same approach for the datasources tile, but with the 3 dots instead of the trash can. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-815
5755	HAWKULAR-815	[~gcardoso] +1, to alerts badge on the left, actions on the right. And I agree that we should make this change to Datasources as well - using some kind of actions icon (either the three dots or a dropdown arrow). Do you know if they're using either action menu icon in PF tiles or cards?	1	0	https://issues.jboss.org/browse/HAWKULAR-815
5756	HAWKULAR-815	Is there a JIRA for the delete button ? I see that comments were added after it was actually implemented and resolved. And the delete icon is still missing	1	1	https://issues.jboss.org/browse/HAWKULAR-815
5757	HAWKULAR-803	[~uxdlc] [~gcardoso] How should this new capability of context chart/zoom be incorporated into the existing screens. I'm assuming a fairly simple insert of it somewhere.	1	1	https://issues.jboss.org/browse/HAWKULAR-803

#	Requirement	Questions	Answered	Successfully Answered	URL
5758	HAWKULAR-803	I believe we had some early designs for this, I'll search around for them. Could you move forward with the implementation and then we could refine the presentation/interaction after?	1	0	https://issues.jboss.org/browse/HAWKULAR-803
5759	HAWKULAR-803	Very nice Mike! In the video, you have a Context Chart that you use to zoom in and the other charts reflect the zoom. How would that work for Hawkular? For example, in the Response Time screen, would you need to have two charts, one to manipulate and another with the changes? In terms of UI, I'd initially hide the chart controls (threshold, data points...) under some button that open these options.	1	1	https://issues.jboss.org/browse/HAWKULAR-803
5760	HAWKULAR-803	I'm looking to UxD for design for this, so whatever you think. We can have individual controls on charts, if that makes more sense (and can even make the context chart smaller if need be). Should these be top/bottom. Static/expanding?	1	1	https://issues.jboss.org/browse/HAWKULAR-803
5761	HAWKULAR-803	[~mithomps], I discussed with [~uxdlc] this simple approach for chart zooming. The approach would be the same as Google Maps, so basically you zoom in/out (also with the slider), and can drag the chart left/right to see backwards/forward. WDYT about this approach, is it feasible? Tried to make it very simple, so we don't need this second contextual chart. Also add a ballon that explains how to use in the first time.	1	1	https://issues.jboss.org/browse/HAWKULAR-803
5762	HAWKULAR-803	Question - does "zooming" change the date range selection for just the one chart or everything on the page?	1	0	https://issues.jboss.org/browse/HAWKULAR-803
5763	HAWKULAR-796	[~gcardoso] First pass. Similar to the URL view, the user could click on a tile to view a details screen. The details screen would show what's in the expand panel now - the metrics and the Alerts side bar. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-796
5764	HAWKULAR-796	Prototype on: http://cardosogabriel.github.io/hawkular-client/application-datasources-new.html [~mithomps], will we use c3 for this chart? If so, I'll investigate how to fix the hover issue that only displays the tooltip inside the tile (thus hiding part of the tooltip)	1	1	https://issues.jboss.org/browse/HAWKULAR-796
5765	HAWKULAR-796	[~gcardoso] I'm still seeing the scrollbars, FF 43.0.1 on OSX 10.8.5. P.S. Is the title set to truncate or wrap to a second line when its too long?	1	1	https://issues.jboss.org/browse/HAWKULAR-796
5766	HAWKULAR-796	[~gcardoso] I have noticed that there is problem with number of available connections. They are not shown because there is fixed height of each tile to 300px, changing this to height: 100% fixes this problem, but I am not sure if it won't break anything else. Could you double check, please?	1	1	https://issues.jboss.org/browse/HAWKULAR-796
5767	HAWKULAR-796	Another thing I noticed with tiles: When you hover over part of chart, the hover is not visible and is hidden. This is done because of overflow: hidden and overflow: auto for classes .tiles-view-pf .tile-content. I disabled these two options and it is good, but we should add word-wrap: break-word; for .hk-tile-info .hk-data, so long info at bottom of tile will not go outside tile. What do you think [~gcardoso] are these things viable or could it break anything? I will PR this without these changes and let them to be discussed later on, since it is not that much related to this task.	1	1	https://issues.jboss.org/browse/HAWKULAR-796
5768	HAWKULAR-792	Are the data being collected? I am looking trough the responses from server and I can't see any bucket with data inside them. Or if you could point me out what the REST URL should look like.	1	1	https://issues.jboss.org/browse/HAWKULAR-792
5769	HAWKULAR-792	[~pilhuhn] I have shown the data for platform and I have been changing the UI. For now I have two possible ways to show filesystems graphs. Option A: !option_a_collapsed.png|thumbnail! !option_a_expanded.png|thumbnail! Option B: !option_b_collapsed.png|thumbnail! !option_b_expanded.png|thumbnail! Option A looks better expanded, but option B looks better collapsed. What do you think would be better?	1	1	https://issues.jboss.org/browse/HAWKULAR-792
5770	HAWKULAR-792	I guess I can wrap up the platform tab. Just couple of things which might need some tweaking, but that is more or less back-end stuff. * The CPU usage for whole processor is wrong, it shows all data combined together, rather than average. * File systems can't show data for less than hour, still don't know why. * There is no way how to create trigger alert for combined resource, so alert triggers for processor are created for each core. This might be a bit clunky, but you have more power over individual core. I will keep the branch up to date with master and once you say [~pilhuhn] that it is ready to go I will PR this.	0	0	https://issues.jboss.org/browse/HAWKULAR-792
5771	HAWKULAR-790	[~pilhuhn] Could it be a central "settings" link off of the Server Overview screen? If so, it could link to /open up a "Metrics Settings" dialog (or etc.), which would have toggle buttons for each subsystem: Metrics Settings * WEB [ON/OFF] * TRANSACTIONS [ON/OFF] * DATASOURCES (for each): [ON/OFF] * CACHE (for each): [ON/OFF] * though I don't know what this is in the UI? * EJB3 (for the subsystem as a whole):[ON/OFF] * is this the whole thing? * JMS MESSAGING (for each server):[ON/OFF] Am I understanding this correctly?	1	1	https://issues.jboss.org/browse/HAWKULAR-790
5772	HAWKULAR-790	[~mazz] Hi, I attached a first pass, mockup. I placed the toggles up-front on the overview page, but not sure it works like that... I was thinking that the user could hit the "settings" link, to bring up a dialog with more granular settings. Wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-790
5773	HAWKULAR-790	[~mazz] Thanks for checking it out, and for the backend jira. Does it need the "settings" link & dialog to fine-tune the timing intervals for each metric? If so, I'll mock that up along with the tabs view.	1	1	https://issues.jboss.org/browse/HAWKULAR-790
5774	HAWKULAR-790	[~gcardoso] * Good point, in the individual tab view currently you can only turn ON metrics. We could add a toggle when metrics are displaying to turn them off at the tab level. wdyt? * +1 to rewording the title to "Web Collection is turned off."	1	1	https://issues.jboss.org/browse/HAWKULAR-790
5775	HAWKULAR-790	For the sake of simplicity, I would not add one more control in the tab, but rather leave the possibility of turning of in the overview (as it is). We can observe if there is really a need to have it in the screen. One good practice would be to display a message when we first turn on a collection, like: "You can turn off metrics collection in the overview tab." wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-790
5776	HAWKULAR-774	Prototype on: http://cardosogabriel.github.io/hawkular-client/application-url.html [~uxdlc], don't we need a link for "Alert Settings" on this screen? - The kind of cards that patternfly provide for our needs (number + label below) are these smaller ones. But if you think they should be taller I can customize a bit. - Updated the date-picker box, placing the icon inside at the right (as it was suggested in that thread about this component) - I'll update the header area with your white background as another task. Can you create a JIRA for that? Can you check how it looks for all screens (including organizations, user settings)?	1	1	https://issues.jboss.org/browse/HAWKULAR-774
5777	HAWKULAR-773	[~uxdlc], how would be the interaction to delete the URL? For datasources, we are using a dropdown in the title. We could use the same approach, my only concern is that urls can be long. What are your thoughts?	1	0	https://issues.jboss.org/browse/HAWKULAR-773

#	Requirement	Questions	Answered	Successfully Answered	URL
5778	HAWKULAR-761	what I did today: * Made a couple of changes [1] in hawkular-parent, i.a. to upgrade to WF 10 * moved nest to new repo [2] to solve the circular dependency introduced by moving it to HK main * Started rebuilding the components one by one with the new parent ** encountered no problems with commons [3], bus [4] and the new nest component ** Found out that there is no WF10 compatible Keycloak release ** spoke with mposolda and mstruk figuring out that they have a wf10 branch https://github.com/keycloak/keycloak/commits/wildfly-10 ** they did not name any specific date when the work in the branch will be released, so Thomas (probably) should speak with them to make sure that they release ASAP ** For now, I am trying to build with a Keycloak srcdep from that branch ** Anyway, I am quite skeptic that I will be able to build a working Accounts without Juca's help ** This is what I have so far in accounts: [4] [1] https://github.com/hawkular/hawkular-parent-pom/pull/55 [2] https://github.com/hawkular/hawkular-nest [3] https://github.com/hawkular/hawkular-commons/pull/21 [4] https://github.com/hawkular/hawkular-accounts/pull/64	0	0	https://issues.jboss.org/browse/HAWKULAR-761
5779	HAWKULAR-755	This is already supported to some degree in the Alerts component. It's possible to define a CompareCondition using 2 metrics such that if (metric1 <oper> (somePercentage * metric2) then the condition matches. The metrics can be from any resource. Some examples: If activeSessionsDS1 > 150% of activeSessionsDS2 then match If heapUsedJVM1 > 80% heapMaxJVM1 then match Is this the sort of thing you're looking for? Of course there is no real provision for anything like this in the UI right now, which is very single-resource, single-condition oriented.	1	1	https://issues.jboss.org/browse/HAWKULAR-755
5780	HAWKULAR-737	Do you believe they want to manage organization and review user settings being an organization? If so, we leave it. But the text can be reduced a bit, we don't need to explain where is the switch, they already used it to switch to an organization :)	1	0	https://issues.jboss.org/browse/HAWKULAR-737
5781	HAWKULAR-732	[~john.sanda] the migration to Artemis has been reached and the present issue is resolved, is it not?	1	1	https://issues.jboss.org/browse/HAWKULAR-732
5782	HAWKULAR-732	I see that the one PR marked as open (in the jira) has been closed on GitHUb. Where do we stand here? If the PR is not needed, then please remove it from the jira and forward the jira into the resolved state.	1	1	https://issues.jboss.org/browse/HAWKULAR-732
5783	HAWKULAR-729	[~gcardoso] Gabriel, what do you think of iconic buttons? Example: "Apply2AlertC.jpg"	1	1	https://issues.jboss.org/browse/HAWKULAR-729
5784	HAWKULAR-729	[~gcardoso] Gabriel, yes I think going with the drop-down might be a safer bet from a consistency standpoint. I also mocked up Heiko's suggestion of adding all the actions in an Actions drop-down (Apply2AlertDb.jpg), I think this could work as well. Wdyt? [~mithomps] I totally hear your point about a consistent widget to initiate the action, but in the context of a table view having a dropdown is a pretty standard model so I think we'll be OK. Once PF has some/more guidelines around actions toolbars, perhaps this could be something to explore in the future.	1	1	https://issues.jboss.org/browse/HAWKULAR-729
5785	HAWKULAR-727	[~gcardoso] Great, thanks for checking it out! For the apply interaction - could we have some that behaves something like this: https://twitter.github.io/typeahead.js/examples/	1	1	https://issues.jboss.org/browse/HAWKULAR-727
5786	HAWKULAR-727	[~jdoyle] I'd like to mark this as done, and pass it along to Gabriel. Does it look OK to you too?	1	1	https://issues.jboss.org/browse/HAWKULAR-727
5787	HAWKULAR-727	[~theute] Thomas, should I mark this as done so Gabriel can start coding or wait for additional feedback? Thx!	1	1	https://issues.jboss.org/browse/HAWKULAR-727
5788	HAWKULAR-721	Do we want to use Alerts tagging feature to view/manage custom groupings of Alerts?	1	0	https://issues.jboss.org/browse/HAWKULAR-721
5789	HAWKULAR-721	AFAIK, Tagging is still largely undefined, but in the longer term I do that that we would want to be able to sort and a filter by tags. Is there something we can do in the coming milestone?	1	1	https://issues.jboss.org/browse/HAWKULAR-721
5790	HAWKULAR-715	Thanks, though I'm still confused. I understand that the only user actions for System generated labels would be Apply/Remove. But aren't we supporting users being able to Add (create) a label? If so, then they can Create a label but they cannot Delete it?	1	1	https://issues.jboss.org/browse/HAWKULAR-715
5791	HAWKULAR-715	[~jayshaughnessy]Is it possible to add tags to an alert, or are they truly static?	1	1	https://issues.jboss.org/browse/HAWKULAR-715
5792	HAWKULAR-715	[~jdoyle] I could imagine that one might want to group alerts as part of generating a trouble report, is that true?	1	1	https://issues.jboss.org/browse/HAWKULAR-715
5793	HAWKULAR-712	Can we please rename this epic to "trouble report" , [~jdoyle] ?	0	0	https://issues.jboss.org/browse/HAWKULAR-712
5794	HAWKULAR-711	There is a list of drivers and those can be deleted individually, but it doesn't specify the version. Should we add the version to the list or is it expected to have more details ?	1	0	https://issues.jboss.org/browse/HAWKULAR-711
5795	HAWKULAR-710	[~gcardoso] Gabriel, I wanted to run them by you before marking them as done. I made them a while back, and I'm concerned they might be a little diff than the current screens. Wdyt? Thanks.	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5796	HAWKULAR-710	I comment about both screens in different posts. exampleurl.com - Breadcrumbs are nice :) - date picker and last update seem to be in inverted position. For server overview you placed them differently. - IMO this design have too similar styles for the url (exampleurl.com), widget heading (availability metrics) and the status boxes. It is hard to differentiate the information and know straight away what is important. I'd try some variations on font-sizes / weight / opacity. For the status boxes, I'd try to use the blue top borders that they have on patternfly. I believe the font-size of the status numbers should be bigger than the box heading. Not sure if we need the horizontal / bottom borders, probably spacing should resolve this. Somehow the layout seem to have too many boxes. Maybe because all information are in boxes, we don't need the white background at the top? Can you try a variation? - chart title is too distant from the chart (availability), information doesn't seem related. - in server overview screens you presented the time range information inside the box title, at the right. We should keep it consistent. I'd say remove from the chart heading. - [~mithomps], when clicking on "update" button, does it update only one chart, both charts, or also the status bar numbers?	1	1	https://issues.jboss.org/browse/HAWKULAR-710
5797	HAWKULAR-710	myapplication server - somehow the url widgets feel too small, it is expected to monitor many urls and show as much as possible in the screen? I'd make them bigger (probably 3 per line on this width). the way we present urls are: http://www.goawake.org , so we might need more space (it is not ideal to break the line of the url) - the circle around the up/down icon feel like a button to me (download), my first impression - what was the reason to hide the last downtime? - would place the alert badge at the top right (we are usually placing at the right side, also app icons are usually top right, more commom location) - not sure how useful is the graph without a reference (minimum and maximum value). I know that it looks nice though. [~mithomps], in terms of performance, how is to load all this graphs at the same time? - is the iP/apache information more important than the response time? I don't think so. hierachy should be inverted. - I'd use another design for the hover effect (maybe background color, blue border). this layer above with one arrow above another is confusing. we can also make the box grow a bit and make the shadow darker (think material design uses something like this :) - since URLs is highlighted in the menu, do we need the heading below? Can you try a variatiion?	1	1	https://issues.jboss.org/browse/HAWKULAR-710

#	Requirement	Questions	Answered	Successfully Answered	URL
5798	HAWKULAR-710	Response to your feedback: * I agree, it's not ideal to break the URL onto a second line but I don't think a larger tile is the answer. For one, larger tiles means less URLs per view, and 2 it's just a work around. If displaying the URL name on one line is a priority then I think we should move back to a list view. [~jdoyle] John, are you OK with using a list view instead of a tile view for the URL's list? * Icon + circle was used in the design that this was derived from. * Last downtime is now on the details view. * Moving badge to right sounds good. * I think Mike is already working on sparkline charts. * Apache/IP is at the bottom of the tile to avoid having too much text at the top. I'll play around with it a bit though, depending on which layout we decide to go with. * Talked to one of the visual designers about the hover, he just said to make the click icon opaque which should resolve any potential confusion. * I used the URL heading, because it's on other secondary pages. It would be good to get consensus on list versus tile view before I spend too much time revising the tile presentation details.	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5799	HAWKULAR-710	Nice, URL details feels better. The only thing it is not cool here is the visual style of the agregates (boxes with shadows inside a box). If we could improve this presentation would be great! For the URL tile, in terms of hierarchy, the status (up) and response time are presented as having less importance than the IP. I thought it was the opposite, is this correct? I'm still not really confortable with the hover. Is that patternfly style? Otherwise I'd like to try a variation. Thanks!	1	1	https://issues.jboss.org/browse/HAWKULAR-710
5800	HAWKULAR-710	In the spirit of progress, could we please move forward with implementation and fine tune the visual details in an iterative fashion? These screens have been through a few reviews/revisions and I think we're in a good place to move forward.	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5801	HAWKULAR-710	I attached a pair of alternate/additional mockups: * Tile view without URL details. * Details view with URL details added. We should probably provide the URL Details on the details view, to resolve the linked Jiras. wdyt?	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5802	HAWKULAR-710	[~uxdlc], yes, I saw that the two tabs were consolidated in one screen, but I think the usage of panels for each one is not optimal, since as a result we have a design which is not consistent with other screens. Also, placing the aggregates below the charts again breaks our consistency. I attached a prototype that consolidate the two tabs in one screen but keeps the consistency of hawkular. I presented it to Andres and he also believes it is a better solution due to consistency matters. How about heading this direction?	1	1	https://issues.jboss.org/browse/HAWKULAR-710
5803	HAWKULAR-710	[~gcardoso] Hi, I saw the CSS version of the URL tile view. It looks nice, I like the hover effort. I noticed the circles around the boxes turned to squares. Something doesn't feel right about that, I can't put my finger on it. How about just showing the icon, no box or circle? I attached an example. WDYT?	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5804	HAWKULAR-710	[~uxdlc], thanks! The hover effect comes from patternfly itself :) Weird, it works here. Can you tell me your browser version? Attached a screenshot of what I see.	1	1	https://issues.jboss.org/browse/HAWKULAR-710
5805	HAWKULAR-710	Sure we can talk. Actually I don't see 3 level tab-sets. We have the primary nav (black top bar), secondary nav (tb below the page heading), and some contextual nav (like go to details etc.). What I'm proposing is to keep the secondary nav for the detail screens. Practical example: I'm inside an application URL and want to see datasources. Currently I need to click "All URLs", and then the tab that contains the link to datasources is available and I can get there (2 clicks). However, if the tab is available in the details level, it is only one click. Also good because inform the user where he is. Not sure why we need a back link. Let's talk a bit about this after our normal meeting on Thursday?	1	1	https://issues.jboss.org/browse/HAWKULAR-710
5806	HAWKULAR-710	Yes, the sparkline graphs were intended to be for "Response Time." It is a variant design, based on the following PatternFly pattern: https://www.patternfly.org/patterns/utilization-trend-card/. [~mithomps] Mike, are the sparklines something we are able to use now?	1	0	https://issues.jboss.org/browse/HAWKULAR-710
5807	HAWKULAR-710	I guess this task can be changed to unassigned, since we don't have URLs specific for one server. Do we?	0	0	https://issues.jboss.org/browse/HAWKULAR-710
5808	HAWKULAR-703	[~ppalaga] you assigned that to me - what do you need?	1	1	https://issues.jboss.org/browse/HAWKULAR-703
5809	HAWKULAR-692	And the alert definition would be retained, but in a disabled state? That seems reasonable to me. Where you would incorporate this? Any UI that has a list of alerts? Alert Center, WildFly subsystem pages, etc..	0	0	https://issues.jboss.org/browse/HAWKULAR-692
5810	HAWKULAR-679	[~uxdlc], regarding this detail screen, how did you designed the interaction to change state, the user change in the dropdown AND needs to Save, or doesn't need to Save? Since this is not really a form, I'd suggest to not require saving to change the status (as it happens in the alert list). I'd not present the buttons Save/Cancel upfront. For the description, I'd do like jIRA, first you present only the text, if the user wants to edit, he clicks on a "Edit" icon next to the text, it becomes an textarea component, and he confirms the edition. Actually we are using this interaction in some modal (maybe deployments).	1	1	https://issues.jboss.org/browse/HAWKULAR-679
5811	HAWKULAR-670	[~mithomps], can you put them back in the deployments wizard? I can work on the design then :)	1	1	https://issues.jboss.org/browse/HAWKULAR-670
5812	HAWKULAR-670	[~mithomps], what is the name of the wizard component that you used? I can move the steps to the top via css, but would like to check if the component allow specifying the position. Thanks	1	1	https://issues.jboss.org/browse/HAWKULAR-670
5813	HAWKULAR-665	What happens when the user clicks on: - the > icon next to Open/Acknowledged ? - see all alerts link? - display resolved alerts?	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5814	HAWKULAR-665	We're using this icon on the Alert Center (to view details): https://issues.jboss.org/secure/attachment/12393242/AlertCenter3.jpg John preferred the icon, for the visual "call to action." I think we should be consistent across the screens, and in particular the Alert Center screen. Is there another icon that you think could work better?	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5815	HAWKULAR-665	[~gcardoso] Gabriel, I reassigned this to you in the hope that you could begin the basic screen layout set up. Is this possible, or do you need to wait for high fidelity mockups for each tab?	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5816	HAWKULAR-665	Marked as "done". [~gcardoso] * When making the updates, would it be possible to reduce the padding between the left and right panels so there is less of a margin between them? It seems like if: "div class "col-md-9" had padding-left, and padding-right, of just 10px that would work. wdyt? * And could we make the overall screen content (container?) area wider, so that there's less empty space on the left and right of the screen? With the new screen layouts, I think we'll need more screen area... Not sure what the right way is to accomplish that, but hoping you can help. Thanks!	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5817	HAWKULAR-665	Updated prototype with these changes: http://cardosogabriel.github.io/hawkular-client/application-jvm.html Some differences: - Put last update in the same line as the heading (as in applications overview) - Kept the Alert settings link on the UI - Didn't update the style of the status panels, due to your new proposal for uRL screen inside application. Are we moving to that style? [~uxdlc], please test also how the layout behave for smaller screen (up to tablet), since there was no specification I did something. It's good also to compare with the application overview and alert details screens, which also have this sidebar.	1	1	https://issues.jboss.org/browse/HAWKULAR-665

#	Requirement	Questions	Answered	Successfully Answered	URL
5818	HAWKULAR-665	[~gcardoso] * RE: Alert Settings. There's a Jira request view Trigger Definitions (Alert Settings) through the Alert Details instead: https://issues.jboss.org/browse/HAWKULAR-617. From there, I believe that there was an interest in redirecting the user to specific Trigger definition details screen. This would be good to check with JD about, and there are some navigation issues to discuss as well. * Not sure I understand the question about the status panels. The URL view proposal is unique to URL's if that helps. * As far as tablet view goes, I guess the potential concern is that the alerts panel drops to the bottom of the view. Perhaps that could be mitigated if the Alerts total in the particular status panel jump-linked to its related Alert panel. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5819	HAWKULAR-665	[~uxdlc], did not understand what you are talking about alert settings inside this JIRA... Can u clarify? - I looked at our current views and your new design for URL details and would like to ask you why we need different views for them, since the elements are the same (status tiles + chart/charts). IMO we should propose a solution that works for both cases, this consistency is better in terms of implementation and also for the user. Otherwise we will have two styles to present the same kind of information, + the datasources screen, I think it was not specified how it would look if we add the margins to the tiles. - Sorry, could not understand the proposal for your concern (last topic). Can you clarify? Thanks!	1	1	https://issues.jboss.org/browse/HAWKULAR-665
5820	HAWKULAR-662	[~uxdlc] Can you attach the designs for this?	1	1	https://issues.jboss.org/browse/HAWKULAR-662
5821	HAWKULAR-662	Can I get more of a description? I want to make sure that I post the right design.	1	0	https://issues.jboss.org/browse/HAWKULAR-662
5822	HAWKULAR-657	[~gcardoso] That sounds good, thanks! P.S. I noticed that the subhead font sizes differ, in the modal. I attached a screenshot. Is there any technical barrier to making those consistent.	1	1	https://issues.jboss.org/browse/HAWKULAR-657
5823	HAWKULAR-655	What is the behavior of Cancel button?	0	0	https://issues.jboss.org/browse/HAWKULAR-655
5824	HAWKULAR-653	[~theute] [~jayshaughnessy] Thomas, Jay - it's just a first pass, but would like to get your feedback early. Does it seem to be headed in the right direction? Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-653
5825	HAWKULAR-653	I'm assuming that the list view, will just provide the most important basic information. Then we will show the details on a dedicated definitions details screens, which includes actions. The details screen would also provide an overview of the conditions configurations, which would be editable. Similar to the Master/Details model used for Alerts: https://issues.jboss.org/browse/HAWKULAR-617 The Jira for Definition details is: https://issues.jboss.org/browse/HAWKULAR-655 Does that sound about right?	1	1	https://issues.jboss.org/browse/HAWKULAR-653
5826	HAWKULAR-653	[~pilhuhn], [~mithomps] I'm trying to follow Lucas's and Jay's comments. I thought we had decided to use "hard-coded" definition settings for the next/current milestone, rather than the generic/dynamic ones. Is there a question/concern about that?	0	0	https://issues.jboss.org/browse/HAWKULAR-653
5827	HAWKULAR-653	Lucas is expanding on what I was talking about as he is also starting to discuss triggers that the user will be able to create "from scratch", via a wizard. Ignoring that use case for a moment we have the issue I tried to describe. The trigger definition screens in the UI today are customized to the resource and metric they are dealing with. For JVM Heap the code knows which metric to query in order to get the Max value that it then uses to let the user define upper and lower range condition values. And implicit in that statement is that the code knows it wants to use a Range condition type (as opposed to Threshold, Availability, etc). Finally, the views are both modal and in some cases, like app server, tabbed. There is no url that will bring you directly to a desired trigger definition page. Hopefully this is more clear than my first comment. Now consider the Alert Center's Trigger List view. It is a list of all Triggers and for each we want to have a link to get to the trigger detail. The way to do this is not immediately obvious. We could do some really hacky thing and, using the trigger id or some other information we store in the trigger context, perhaps pop up the proper, existing modal. Maybe it's worth doing this as a quick interim solution. But this approach will break down when we add wizard-generated triggers that have no existing definition page. And it will require maintenance as we add new built-in triggers. The solution is likely to create a generic trigger generation view based on the trigger characteristics. This would likely drive off of Trigger context information we store at trigger creation time. Let's take the JVM Heap trigger as an example. We'd likely need to store information something like this, in the trigger context: hawkular.condition-count: 1 hawkular.condition1-type: RangeByPercentOfMax hawkular.condition1-resource: <theResourcePath> hawkular.condition1-metric: <metricIdForJvmHeap> Given this info we might be able to generate the proper detail view. You can ignore the count=1, that's just maybe thinking ahead to having multiple conditions. The really important thing is that we introduce these hawkular-level condition types, like 'RangeByPercentOfMax', 'ResponseTime', etc. Something that indicates how we want to test the given metric. A RangeByPercentOfMax is basically what we do today. We then know to present a widget that will take the Max of the relevant metric and generate a Range condition based on the user's desired percentage setting for high/low, with the ability to disable either. In short, we want a trigger detail page that renders properly for any trigger that we send to it. It may need to query inventory and/or metrics to present itself. If we have that we should then be able to use it everywhere and get rid of the existing, custom, trigger definition code that we currently have buried in the specific javascript code for each metric we support. Feasible? Desirable? Thoughts?	1	1	https://issues.jboss.org/browse/HAWKULAR-653
5828	HAWKULAR-651	[~pilhuhn] For this specific story, could you please define "resources"? Is that EAP Application Servers, and their related components/metrics only?	1	1	https://issues.jboss.org/browse/HAWKULAR-651
5829	HAWKULAR-651	@Thomas John is out this week, would you please update this story to include those requirements? It wasn't clear to me whether it should be a group of resources, and which resources specifically.	0	0	https://issues.jboss.org/browse/HAWKULAR-651
5830	HAWKULAR-651	Revised draft, with the following changes: * Removed "description" field (is system generated.) * Added Search input box. * Added Category dropdown, although there is one resource type to choose from: Application Servers.	0	0	https://issues.jboss.org/browse/HAWKULAR-651
5831	HAWKULAR-651	[~jayshaughnessy], [~rutlucas], do you guys want me to generate a static html or you guys want to try to implement it and I can review it later?	1	1	https://issues.jboss.org/browse/HAWKULAR-651
5832	HAWKULAR-651	Before embarking on this I need to confirm that in face this will offer the user something they don't already have. We have a lot of "built-in" triggers for the types, metrics, and avail we already discover and report on. Is there in fact a decent population of types/metrics that don't have built-in triggers and for which none are planned? It only makes sense, I think, to add an ad-hoc trigger creation mechanism if in fact there is stuff we monitor that is not covered by a built-in.	1	0	https://issues.jboss.org/browse/HAWKULAR-651

#	Requirement	Questions	Answered	Successfully Answered	URL
5833	HAWKULAR-651	Even adding one ad-hoc trigger is a new feature. But the essence of my question is whether we are offering anything new in that we already have built-in triggers for the resources we are discovering and monitoring. For example, for the App Server JVM we already add triggers for heap used, non-heap, GC duration etc... Do we have a significantly high number of (or any) resources and metrics that will "appear" in this list that we don't already have built-in triggers for? Perhaps I'm just thrown off by the example in the PDF showing JVM Heap as the selected metric, because we already have that built-in and adding it as ad-hoc doesn't make sense to me. Also, I have to mention that in reality the impl can't match the PDF mock. In this case it's showing Heap used as a percentage range against Heap Max. That's not actually trivial. To do what the mock is showing you'd need to: # Select that you want to perform a percentage range sort of alerting. # Specify the metric against which you are comparing (Heap Max). This complexity is hidden in our built-in Heap Max handling for App Server JVM. But in an ad-hoc scenario this sort of complexity, I think, can not be hidden. Anyway, I suppose we can move forward on the assumption that there will be resource metrics that we monitor, for which we do not plan to have built-in triggers, and on which users may want to perform alerting.	0	0	https://issues.jboss.org/browse/HAWKULAR-651
5834	HAWKULAR-650	Can we already get that token somehow?	1	1	https://issues.jboss.org/browse/HAWKULAR-650
5835	HAWKULAR-646	[~gcardoso], which icon should be used for that? The name of the FA icon would be helpful.	1	0	https://issues.jboss.org/browse/HAWKULAR-646
5836	HAWKULAR-646	Is this still relevant? As part of HAWKULAR-661 / HAWKULAR-67 , there will already be an icon next to the username.	1	0	https://issues.jboss.org/browse/HAWKULAR-646
5837	HAWKULAR-638	[~mithomps], with whom could I talk about the implementation? I found an component that provides what we need (autocomplete, multiple items, tag the item selected): https://brianreavis.github.io/selectize.js/ Go to the email contacts example. It seems that there are options in angular also :)	1	1	https://issues.jboss.org/browse/HAWKULAR-638
5838	HAWKULAR-638	[~gcardoso]why don't you work with [~alexandrem] on this one.	1	0	https://issues.jboss.org/browse/HAWKULAR-638
5839	HAWKULAR-638	Sounds good! [~alexandrem], do u want me to do something or perhaps you implement and if needed I refine?	1	1	https://issues.jboss.org/browse/HAWKULAR-638
5840	HAWKULAR-638	That can work, [~gcardoso]. Not sure if a user can access the list of users.. or is this for users belonging to the same organization ? [~juraci.costa], can you tell what are the possibilities here ?	1	0	https://issues.jboss.org/browse/HAWKULAR-638
5841	HAWKULAR-638	OK, that's what I think that makes sense as well, users from the same organization. Do we need to do anything on the accounts side to achieve that currently ? I know from organizations we can list the users belonging to it, but maybe that's just for the owner ?	0	0	https://issues.jboss.org/browse/HAWKULAR-638
5842	HAWKULAR-638	As of now, the only solution would be to get a list of organizations, then a list of memberships for the organization. But I can add an endpoint at GET /hawkular/accounts/users that would retrieve the visible users based on the current user's permissions. One extra information: we do not have the user's email on the database, unless each user has added the email as the "preferred email" in the user settings. So, don't count on the user object containing an email address :) I can investigate how feasible would it be to get the user's emails from Keycloak.	0	0	https://issues.jboss.org/browse/HAWKULAR-638
5843	HAWKULAR-623	Don't we have that now?	1	0	https://issues.jboss.org/browse/HAWKULAR-623
5844	HAWKULAR-622	Hi, While working on a related task (HAWKULAR #665), I made a layout change request. Just wondering if we should make that here as well? Here's what I proposed: "would it be possible to reduce the padding between the left and right panels so there is less of a margin between them? It seems like if: "div class "col-md-9" had padding-left, and padding-right, of just 10px that would work. wdyt?"	1	1	https://issues.jboss.org/browse/HAWKULAR-622
5845	HAWKULAR-622	[~rutlucas] I think your suggestion of "once the user select Ack or Resolve, the Open state is not show in the select option list." works well. The Open option could either be disabled in the list, or simply not shown. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-622
5846	HAWKULAR-621	[~uxdlc], regarding this detail screen, how did you designed the interaction to change state, the user change in the dropdown AND needs to Save, or doesn't need to Save? Since this is not really a form, I'd suggest to not require saving to change the status (as it happens in the alert list). I'd not present the buttons Save/Cancel upfront. For the description, I'd do like jIRA, first you present only the text, if the user wants to edit, he clicks on a "Edit" icon next to the text, it becomes an textarea component, and he confirms the edition. Actually we are using this interaction in some modal (maybe deployments).	1	1	https://issues.jboss.org/browse/HAWKULAR-621
5847	HAWKULAR-621	I have just seen the addition of the Edit button. I have the opinion that in this case it can be redundant. The Edit means that the Alert could be editable, and it's not the case, we can change the state and add comments. In the first implementation I've uploaded into hawkular, the comments textarea and the save button is inactive until the state change from open to acknowledged or resolved. That can save clicks to an user. What do you think ?	1	1	https://issues.jboss.org/browse/HAWKULAR-621
5848	HAWKULAR-619	[~uxdlc], some doubts about your prototype: - The comment icon used is usually used as "attachment" by other apps. How about using the "chat bubble" icon to indicate comment? - How is the flow to acknowledge/close an item an add a comment? - What was the reason to put Acknowledge/Resolve in a dropdown? Before was easier imo.	1	1	https://issues.jboss.org/browse/HAWKULAR-619
5849	HAWKULAR-619	[~gcardoso], I've updated the JIRA as in the 616 umbrella there are two JIRAs per task, one per UxD work, and other for UI development. I was assigned to both of them, I update the UxD to Liz or you, just to tidy up and validate we don't have any missing thing. I guess with the proptotype is mostly done for UxD, now it's on my side. Please, could you update the status as the UX codes used (UXD provided or what do you think is appropiate) ? Thanks,	1	1	https://issues.jboss.org/browse/HAWKULAR-619
5850	HAWKULAR-617	Can we have a couple of small changes for this design ? - We have added in the alerts backend the possibility to add generic comments on an alert, so instead to have one comment, we might have a list of then with the data (comment, user, timestamp), if we have some design I can add it to the UI nicely to have it on MS6 cut. - Normally a notification occurs on a state (open, ack, resolved) so it can we worth to add the state also in the notification list. I can start implementing this on the UI and we can refine the design later, or wait until you have some design proposal. I think these two modifications were commented on the UX calls so it can be worth to implement something.	1	1	https://issues.jboss.org/browse/HAWKULAR-617
5851	HAWKULAR-617	[~rutlucas] Just a couple of questions about the enhancements: RE: Comments with user, timestamp and etc. * I thought we decided to add this in the next rev., do you remember why? * If it's a list, do you plan to show it in a scrolling input box, or etc., so the list presentation has a max height? Or are you thinking of showing all of the list content with no scrolling, so it would increase as much as it need and then increase the overall page height? RE: Notification & state: * So you are suggesting that we present the alert state in the notification? It's not that notifications have their own state? Thanks	1	1	https://issues.jboss.org/browse/HAWKULAR-617
5852	HAWKULAR-605	Based on Mazz's comment on the mailing list, can we just refer to Resource Name?	0	0	https://issues.jboss.org/browse/HAWKULAR-605
5853	HAWKULAR-601	Also, in a preliminar scope, I can see that alertManagers.ts could be simplified. There are some methods that are duplicated like addEmailAction() / createAction() or with similar function like createTrigger() / createAlertDefinition(). I think this can be revisit and unified to make it more easy to work with and maintain. What do you think [~mithomps] and [~alexandrem] ?	1	1	https://issues.jboss.org/browse/HAWKULAR-601

#	Requirement	Questions	Answered	Successfully Answered	URL
5854	HAWKULAR-590	In my opinion, in your prototype it is less noticeable being so close to the headings / tab. As we discussed in the call, I believe that the results you got from the test where a reflection of the question (to change the date/range in the chart context). Actually we found that people expect to navigate directly on the chart (for this use-case), but I'd not say that the issue is the position of the date picker (from what I heard from sj). As I suggested, I would investigate more if that's a real issue. I would test with the following scenario: "You accessed hawkular and is in the availability screen. How do you do to see the information related to the last 12h?". My bet is that the date-picker position won't be an issue, but let's check.	1	1	https://issues.jboss.org/browse/HAWKULAR-590
5855	HAWKULAR-590	Two alternatives for presenting date/time presets: # "Preset" buttons. (ref. JON) # Dropdown menu - which was inspired by: Consider Whether You Really Need Customers to Specify Dates - See more at: http://www.uxmatters.com/mt/archives/2011/08/date-filters-successful-calendar-design-patterns.php#sthash.3goz9kAo.dpuf * Note: I also moved the location of the date widget to try to increase its visibility. Wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-590
5856	HAWKULAR-590	In response to: 1) I'm not sure I understand the comment. If a preset button is selected, wouldn't that tell users which date/time range is selected? 2) You can check with SJ but some numbers of users did not understand that the text field was interactive. RE: Usability results. Please confirm with Sj. I observed all of the sessions, and noticed users having the following problems with the date picker: * Afore-mentioned problem with it not being understood as interactive. * Due to its location in the upper-right, users often didn't notice it. * The text was difficult for users to parse, particularly wrt it expressing a date RANGE.	1	1	https://issues.jboss.org/browse/HAWKULAR-590
5857	HAWKULAR-590	[~mithomps] Clicking on the calendar icon does expose the date picker buttons. Are you suggesting making this icon a button instead?	1	0	https://issues.jboss.org/browse/HAWKULAR-590
5858	HAWKULAR-587	Prototype on http://cardosogabriel.github.io/hawkular-client/application-datasources.html Some aspects of the interaction/visual design to be defined/clarified: - what happens when the user clicks on Edit? - how is the feedback for deleting it? I would guess a transition... - Inform visually which ones are disabled, so the user doesn't need to go into actions to know?	1	1	https://issues.jboss.org/browse/HAWKULAR-587
5859	HAWKULAR-587	RE: 1) Edit - I need to add that. I should be able to post it today. 2) Some feedback would be good. A transition effect when being removed from the list would be nice. wdyt? 3) Yes, inform visually. Serena suggested using "disabled" text color for the datasource name. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-587
5860	HAWKULAR-586	[~theute] How do you feel about using a dashboard style layout for this? Also, this "Overview" tab is replacing the server "Alerts" tab but it includes the alerts info.	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5861	HAWKULAR-586	Something along those lines sounds great to me. Few comments/suggestions after a quick look: * I would not allow for personalization anytime soon (So I would remove the part about "Customize tasks"), but this doesn't prevent that dashboard style layout. * We'll need to clear what charts we put there (what is useful)l, we can start small, maybe with what we already show in subsequent tabs. * We need to be able to edit the tags. * Export JDR report may be part of the common tasks, even though it would directly propose to save the file. * Should we reuse the date picker ? (Or change it everywhere)	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5862	HAWKULAR-586	Great, I'll keep iterating on this design then. Thanks for the comments/suggestions, some followup questions: * I'll remove the "Customize" link. * RE Charts: Yes starting small sounds good. * RE Label editing - Do you think it should be inline like the OS example that you posted? Or would it be useful to have a dialog that could be re-purposed for assigning/editing labels for other resources as well? * RE JDR button: I added it to the common tasks section as well. * RE Date picker: TBD. There is a JIRA for revisiting some Date Pickers issues: https://issues.jboss.org/browse/HAWKULAR-590 As part of that, we're thinking about alternate date picker presentations that showcase date presets. One idea is to use a drop-down, and another using preset buttons. Additionally, maybe it would make sense to use different widgets for different contexts/use cases? For example: - Using the preset dropdowns, for in-context views where space is limited. Or when changing dates for a subset of data instead of the whole view. - Using preset buttons, for where a user might want to quickly toggle between date ranges. - Using a fully featured custom-date, picker for more detailed troubleshooting or reporting.	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5863	HAWKULAR-586	re: 90% being good are bad, you have a good point. Can we skew the numeric values on the doughnut such at the 90 - 100 persent section is large and the smaller values take less and less space? I'm not wedded to a doughnut, but do want an eye catching graphic. I'm OK with the alerts on the right. We're building an alert center that will present existing alerts in a good amount of real estate. We should be able to link directly to that view from the server summary such that the view limits the alerts to alerts on the individual server. Let's reuse that view. In the summary I think we should prioritize critical issues.	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5864	HAWKULAR-586	Attached a version using gauges instead of doughnuts for URL metrics. And placing the alerts in a sidebar. I'm thinking the other tabs should also place the alerts in the right sidebar. What do others think?	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5865	HAWKULAR-586	[~uxdlc], didn't look in detail, but visually looks nice :) I see that the bg color of the top area changed to white. Also the breadcrumb changed, plus some spacing below the nav items. How will these changes affect other screens?	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5866	HAWKULAR-586	[~gcardoso] I noticed a little nit - the panel titled "Notifications" should be called "Common Tasks." And do you think we should use a badge in the header of the Alerts panel that presents the total number of alerts [3] ?	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5867	HAWKULAR-586	Ah ok, I updated it in the prototype. Regarding the badge, I think it makes sense to count the opened alerts. But how many will we list there? Another question, are they related to only the selected range, or all opened until now? I didn't put it cause we had alert badges in other places but it was not implemented, so if we want it we need to check with the dev team if they have this capability (counter).	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5868	HAWKULAR-586	What's missing for the labels ?	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5869	HAWKULAR-586	Btw any idea what kind of alerts should be visible in right panel? Are we going to have specific alerts defined for overview tab or should I display all opened alerts for this machine? I have merged all alerts that happened (for current machine and it's datasources) to the status overview panel (center panel which will show bar chart of alerts that were triggered), but I am not sure about the right panel with alerts. I guess we have 3 options * All alerts that are not resolved (including alerts for datasources) * All alerts for current machine that are not resolved * We will have definition which will handle alerts for overview panel And also, I guess the chart with data sources should show used connections for individual datsrouce (if there will be more than one datasource, there will be more than one chart with used connections) What to do you think [~theute], [~uxdlc], [~mithomps]	1	1	https://issues.jboss.org/browse/HAWKULAR-586
5870	HAWKULAR-581	bus and agent has been released with the new auth stuff (using the new accounts auth stuff). All that is left is the UI to now start passing in credentials via the "authentication" node in the JSON of all messages sent over WebSockets Assigning to Mike so he can figure out how the UI team will implement this. What this means is that all JSON messages from UI to the server via WebSockets needs to have something like this now: "authentication":{"username":"jdoe","password":"password"} or "authentication":{"token":"blah-blah-blah"}	1	1	https://issues.jboss.org/browse/HAWKULAR-581

#	Requirement	Questions	Answered	Successfully Answered	URL
5871	HAWKULAR-555	Taking the registered users into account, can we provide an "autocomplete" solution when inserting the email? Is that possible [~jpkrohling], [~mithomps]?	1	1	https://issues.jboss.org/browse/HAWKULAR-555
5872	HAWKULAR-555	[~gcardoso], would it be possible to annotate the mockups with the name of the components and/or with a sample markup? For instance: "this icon is called 'users' in FA, this is a 'well'/'jumbotron'/... wrapped in a .row > col-sm-6 " , or even "please use the layout 'xyz' from PatternFly".	1	1	https://issues.jboss.org/browse/HAWKULAR-555
5873	HAWKULAR-555	[~juraci.costa], the way we usually work is, I create a static html prototype + css, then mike/alex take that and integrate. Would you like to try that way? Then you don't need to guess html elements ;)	0	0	https://issues.jboss.org/browse/HAWKULAR-555
5874	HAWKULAR-552	Hi Liz. It's nice to see the effort to consistency. Suggestions inline: - As you said yesterday, the red background worked well for people. I believe we should keep it, specially for the open alerts, they call attention comparing with the other white boxes. - Another suggestion, to save space, you could remove the "created" text. If you only put the date, it is still understandable (like we have currently). - If I understood correctly, it was said that seeing the resolved alerts is not the focus of the user. In this sense, I would do the opposite, not displaying the Resolved alerts initially, and presenting an action "Show resolved alerts". I'm attaching Wunderlist's design as reference, which I consider a good solution. We have a style for this in the Datasources tab, the toggle "View/Hide Metrics". I think it could be positive to use the same interaction style. That way we also don't need to move the Alert Settings link. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-552
5875	HAWKULAR-552	If we were to take your idea a step further, I think there might be an argument for using alert "notifications" in this context (area) instead of a filtered alerts list. And by that I mean something more akin to the toaster notifications, rather than a static list that's a subset of the list alert center. If we went with something more like a notification, then we could deviate from the alert center list format. From what I've observed from the usability studies, the toaster notifications aren't noticed a lot of the time. And in the patternfly work, there has been some discussion about moving them into the main area of the screen. So maybe we can bring all of this together for hawkular. And by doing so it would help resolve JIRA 439. Wdyt?	0	0	https://issues.jboss.org/browse/HAWKULAR-552
5876	HAWKULAR-552	What is the little down arrow after the status? The URL area will need to be much larger than what is shown.	1	1	https://issues.jboss.org/browse/HAWKULAR-552
5877	HAWKULAR-552	My question is more why to use such component (checkbox) for filtering? How about a select dropdown, that we already use in other places? And if we want to allow a more powerful filter, it could be even the multi-select, where the user could choose open, acknowledged or resolved, or a combination of some. https://www.patternfly.org/widgets/#bootstrap-select	1	1	https://issues.jboss.org/browse/HAWKULAR-552
5878	HAWKULAR-551	[~uxdlc], I looked at the pattern and actually they don't have something like us (object + label). What they have is object (top) + part of the object / action (content). I personally think that our current presentation is easier to read than what you proposed, and considering that they don't have something like us, I'd check with Serena, but it should be fine to leave like this. What is beneficial and make as closer to PF is to have the spaces between the tiles. I personally like the blue stripes above for aggregators in page view (which is kind of a dashboard), it calls attention in a positive way for aggregators IMO. As for the url list for example, they don't make sense. How about trying to see? Regarding the larger font, I'm considering to reduce the narrative values. "a few seconds ago" could be "a few ago", and "2 minutes ago" could be "2 min ago". wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-551
5879	HAWKULAR-551	Example attached: * Reduced Value text to 20px. * Reduced Alert text to 12px, with reduced margins to 10px. * Reduced alert icon size to 18px. * Added margin between tiles, but not as big as patternfly. Made it 5px, to preserve space for tiles. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-551
5880	HAWKULAR-551	[~uxdlc], you can check on the livingontheedge instance. I didn't apply the new style in two designs that are different: - URLs list - Application Datasources For the urls list, it makes sense to migrate to the new tiles design. The application datasources might need some adjustments. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-551
5881	HAWKULAR-544	[~gcardoso] Gabriel, can you verify that this doesnt break any of the layouts visually? Also verify that controls like date picker still work.	1	1	https://issues.jboss.org/browse/HAWKULAR-544
5882	HAWKULAR-544	[~mithomps], updated to the last patternfly (2.2.0) in my prototype, made a few adjustments and it looks fine, anything broken. What u have to do on dev: - update patternfly - update links in the <head>. Some paths changed, and also the less/css files, due to a patternfly update - in hawkular.less, import patternfly-additions.less instead of patternfly.less: - @import "../bower_components/patternfly/less/patternfly.less"; + @import "../bower_components/patternfly/less/patternfly-additions.less"; - update metrics.less With that it should work. Please let me know if you need something else.	1	1	https://issues.jboss.org/browse/HAWKULAR-544
5883	HAWKULAR-544	[~gcardoso] Why don't you take a stab at this in a branch it can't hurt anything. And even if Alex or I need to tweak, it will be close.	0	0	https://issues.jboss.org/browse/HAWKULAR-544
5884	HAWKULAR-541	What is the status of this, [~ppalaga]	1	1	https://issues.jboss.org/browse/HAWKULAR-541
5885	HAWKULAR-540	Is it a datasource related to JDBC? I'm trying to figure out how related this flow would be to the "Add JDBC" driver flow: https://issues.jboss.org/browse/HAWKULAR-516	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5886	HAWKULAR-540	By studying your design, I believe we should provide inline actions for datasources, as we provide for the URLs list. The edit button doesn't work well with multi-select, given that you only edit one datasource at a time. Moving to inline would keep consistency with similar screen (url). Space is not a problem, we can adjust to fit. Also, we would not need to introduce a new visual style for Add, we could keep using the button with text. Could you try a variation [~uxdlc]?	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5887	HAWKULAR-540	Its an atypical use case, and I'm not saying that we should optimize for it. But we should make considerations for *many* datasources to ensure we can scale well. In this design I'm not sure how even 30 datasources would scale. Is that in the design currently?	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5888	HAWKULAR-540	Implemented the modal for Add Datasource: http://cardosogabriel.github.io/hawkular-client/application-datasources.html [~uxdlc], we usually have the labels at the side of the inputs. Should we keep the first screen with labels above? I'll start implementing the datasources screen. Will you provide a hi-fi prototype?	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5889	HAWKULAR-540	[~ppalaga] Peter, what is the correct Datasource Type list for the drop down in step 1?	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5890	HAWKULAR-540	[~ppalaga] Peter, which step/screen of the wizard did you end up adding "xa-datasource-class" to? Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5891	HAWKULAR-540	Is this UxD done, [~uxdlc], [~gcardoso] ?	1	1	https://issues.jboss.org/browse/HAWKULAR-540
5892	HAWKULAR-538	[~uxdlc]: how is the interaction to go from the list to the details screen? Right now when the user clicks anywhere in the row (but the checkbox) it becomes selected. Maybe we should do like gmail, click on the row, it goes to details, and select only on the checkbox?	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5893	HAWKULAR-538	Could you run this idea by Patternfly/Serena? I didn't see anything in her wireframe doc that outlined the selection behavior so I can't say what her recommendation for the selection behavior is. PF states this about table selection: https://www.patternfly.org/patterns/table/	1	1	https://issues.jboss.org/browse/HAWKULAR-538

#	Requirement	Questions	Answered	Successfully Answered	URL
5894	HAWKULAR-538	RE: Alert Details screen, alert details section - the HTML prototype does not match the wireframe. Uses a 2-col. layout center-aligned text, instead of single column left-aligned... Were there technical issues?	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5895	HAWKULAR-538	I would like to title the alert details with the Alert ID, so I asked Jay if alerts have unique ID's. Here's what Jay said (edited snippets): “they do. Every alert has an alertId. It's currently generated as a concatenation of the triggerId+createTime. What makes an alert unique is the tenant, triggerId, alert create time. The tenant is likely an implied value that already limits your view. The triggerId is not really for display purpose, So, I'd say the trigger name and the alert create time. In the table you linked to me I don't see a trigger name anywhere. I'm not 100% sure what the "Alert Message" column is supposed to be but I presume it is supposed to be any note that has been put on the alert for the current State. So, for Open I'm not sure, maybe it's unset or maybe it's the trigger description. For Acknowedged/Resolved it would be the optional not added by the ack-er or the resolver. if you needed to save real estate I'd probably drop the Alert Message column and add the trigger name. Or perhaps combine the created and resolved columns into just a single State Time, which would show the timestamp associated with the current state. First, it makes a big assumption that there is a message, which ties it very much to the actions performed for the alert. Second, the alert does no carry that information around, so you'd somehow have to make separate calls to get the info. third, it's likely big and would never fit nicely in a column, it could even be html. ...but mainly, I just don't think it's available..." --jshaughn So a proposal for the Alerts Center table then is to: - Remove/reword the "Alert Message" column and add a "Trigger Name" column. - Combine the created and resolved columns into just a single "State Time", which would show the timestamp associated with the current state. Feedback?	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5896	HAWKULAR-538	[~mithomps][~jdoyle] Based on Jay's input, we need to make some modifications. Mike, does this match your understanding? 1) Alert Center > Alerts List screen: Data columns for alert center should be changed to: * State * Severity * Ancestry (replaces host name & resource type) * Trigger Name (replaces Alert message) * Created Date (remove Resolved date) 2) Alert Center > Alert Details screen: * Should be titled with Trigger Name. * Include ancestry path details. * Link to specific trigger settings screen. ("nice to have").	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5897	HAWKULAR-538	[~uxdlc], as soon as you clarify, can you provide a protoype?	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5898	HAWKULAR-538	[~gcardoso] I created a mockup using the current presentation that you've implemented, here's the change-list: * Revised the columns based on new requirements. * Added Acknowledge" button. * Removed color coding for alert states after a discussion with John. We don't need to call attention to the states so dramatically any more. In addition, the new PF hover/select colors might conflict. So instead, I simply bolded the open state. * Added an example ancestry path - we'll need to allow for truncating, but the string should be truncated in the middle if possible. * I added an icon to guide users to click to view more details. Wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-538
5899	HAWKULAR-538	[~mithomps], saw that you closed it. How about the last updates that I didn't implement?	1	0	https://issues.jboss.org/browse/HAWKULAR-538
5900	HAWKULAR-537	Is that still a thing?	1	0	https://issues.jboss.org/browse/HAWKULAR-537
5901	HAWKULAR-527	While I like the idea of linking, I wonder what the semantics and value of the link is in the described case of {quote} access the URL itself, so if Hawkular reports the URL as being down, I could just click on it and access the target server. {quote} When e.g. http://hawkular.org is reported as down, how would accessing it via browser (in new tab!) improve the situation? How would we deal with urls with a local part like https://issues.jboss.org/browse/HAWKULAR-527 -- link to the full url, the server or .. ? Especially as in theory the server could be up, but that specific local part could have vanished (e.g. corresponding web-app undeployed)	0	0	https://issues.jboss.org/browse/HAWKULAR-527
5902	HAWKULAR-519	From de backend perspective, does the server need to wait for one action to finish to start another one, or can the user start various at the time? That's important to define the interaction.	1	1	https://issues.jboss.org/browse/HAWKULAR-519
5903	HAWKULAR-519	I'm looking at my prototype, and the uxd team had decided that in that table we would not have inline actions. So basically we will only have the top "actions" button, that work when one item is selected at least. Considering this approach, I suggest us to block the action(s) until the process/processes are finished. The visual representation would be the spinner inside the actions button and make it disable. Important, that depends on how the WildFly server behaves with multiple actions. [~mithomps], could you check how does it work? If it doesn't, we should get rid of the multiple actions and use only inline actions...	1	1	https://issues.jboss.org/browse/HAWKULAR-519
5904	HAWKULAR-516	RE: the wireframes that I posted, I was principally concerned with making sure the flow and fields are correct. The chevrons are in there because that's one of the canned indicators that I found in Balsamiq. Any effective step indicator should be fine. If the general flow is ok, we could port the flow to whatever wizard framework makes the most sense. Do you have more screenshots, or a pointer, to an interactive example?	1	1	https://issues.jboss.org/browse/HAWKULAR-516
5905	HAWKULAR-516	Yes, but probably next week only. I'm finishing something else now. When would you need to have it?	1	1	https://issues.jboss.org/browse/HAWKULAR-516
5906	HAWKULAR-516	Thanks for the screens, [~uxdlc] and [~gcardoso]. Two things: (1) To create a minimal driver, we need at least one more field called "Driver Class". WF wizard has it too. The screen "Step 3 of 5: Datasource Driver Add Driver: Define Parameters" seems to be the best place for it. (2) There is a couple of other things that are configurable on the backend, when adding a new JDBC driver. The question is how good do we want to cover all options supported by the backend? Let me explain it in detail: Creating a JDBC Driver on WF is a two step process: (2.1) Create a JBoss Module containing the driver.jar and (2.2) Register the driver in the Datasources subsystem. (2.1) Create a JBoss Module containing the driver.jar is basically a filesystem operation: one copies one or more jar files to {{$JBOSS_HOME/modules/my/module/name/main}} directory and creates a {{module.xml}} file there that describes the module. ATM the screens do not cover the following options (see https://docs.jboss.org/author/display/MODULES/Module+descriptors for what they mean): * {{slot}} - used so that one can have two variants for one module name. The dafault slot is "main" * {{resources}} - typically a list of jar files, we have field for a single jar file, which is IMO typically enough for JDBC drivers. * {{dependencies}} - a list of other modules this module depends on. The user should IMO be able to be able to edit this. It can be a simple * {{properties}} - I have no idea if we need them. (2.2) Register the driver in the Datasources subsystem - see http://wildscribe.github.io/Wildfly/9.0.0.Beta1/subsystem/datasources/jdbc-driver/index.html > Operations add. The options, we do not have ATM: * {{driver-class-name}} the "Driver Class" I named in (1) - we need it. * {{driver-datasource-class-name}} The fully qualified class name of the javax.sql.DataSource implementation - no idea if we need this. * {{driver-xa-datasource-class-name}} The fully qualified class name of the javax.sql.XADataSource implementation - no idea if we need this. * {{profile}} Domain Profile in which driver is defined. Null in case of standalone server - no idea if we need this. [~theute], [~pilhuhn] and [~jdoyle] could you please comment?	1	1	https://issues.jboss.org/browse/HAWKULAR-516

#	Requirement	Questions	Answered	Successfully Answered	URL
5907	HAWKULAR-516	[~gcardoso] Per Peter's input - we need to add a "Driver Class" form fields to "Step 3 of 5: Datasource Driver Add Driver: Define Parameters." Do I need to update the wireframes or are you good with the change? P.S. I still need to look at your prototype, but the changes sound good. Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-516
5908	HAWKULAR-516	[~uxdlc], which list are u talking about?	1	1	https://issues.jboss.org/browse/HAWKULAR-516
5909	HAWKULAR-501	this might be difficult right now because there isn't a DMR resource to obtain this from that I know of. So there is no way to to provide <resource-type-dmr> or <resource-config-dmr> metadata to which you can attach this. It might require some custom "ad-hoc" coding inside MonitorService or... somewhere. I don't know where.	1	1	https://issues.jboss.org/browse/HAWKULAR-501
5910	HAWKULAR-488	[~theute] and/or [~pilhuhn], could you please confirm that "IP Address" and "Powered By" should really be added to Application Servers table? In case they should, it would help me a lot to get some kind of a definition of the data to show. The info we present in the App servers list ATM comes from the Agent (cc [~mazz]) and I guess, it should be the Agent providing this info rather than Pinger. The Agent probably can get the list of IP addresses the AS is bound to using internal APIs of WildFly. However, there is no guarantee that any of these addresses would make sense to present in the list of Application Servers in the UI. I doubt that showing 127.0.0.1 tells the user something interesting? Private addresses 10.0.0.x, 192.168.0.x, etc. can be interesting to some extent and there is no doubt that showing (one or more) public addresses accessible globally would make sense. So, please provide some directions which IP addresses to show. As for "Powered by", it makes no sense to me at all. If you insist on displaying it, please define where to get that data.	1	1	https://issues.jboss.org/browse/HAWKULAR-488
5911	HAWKULAR-483	right now, I think the prototype is actually able to work. Requires bus 0.3.2.Final and agent 0.3.2.Final UI needs to pass the following over the websocket: {code}ExecuteOperationRequest={"resourceId":"the-id", "operationName":"the-op"}{code} I'm working on getting this to work better. Needs to probably utilize inventory API so I can get the feed ID (right now I rely on the resource ID to be prefixed with the feed ID followed by "~" but that means it only works with inventory from wildfly agents. Also eventually will need to hook into alerts. How/where to store the operation results? Don't know the answer to that either.	0	0	https://issues.jboss.org/browse/HAWKULAR-483
5912	HAWKULAR-478	I provided my input above: Date/time stamp, for the reasons stated, and referring to #336 for formatting. Mike - if we need Catherine's input, could you please add her to the watchers? Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-478
5913	HAWKULAR-478	[~uxdlc], in my understanding this is something that most services are using, while they could all use timestamps. Are timestamps really more readable ? can a user quickly tell that "2015-07-26 16:00:00" is different from "2015-07-28 16:00:00", or is it easier to distinguish "3 days ago" and "3 hours ago" when you read/glance over it ? Obviously at some point, "X time ago" is not helping, thus we move to a more concrete date as you've shown in the screenshot with "April 1".. and that's what other major services do (eg, see HAWKULAR-463 Dates on the column to the right.. created is a full timestamp, updated is fuzzy). The way I see it, the page should be talking to the user, I read that as the user asking "\[When was\] Last downtime?" and the page answering "\[It was\] 2 days ago", as a person would naturally answer, not with a timestamp.. unless it was asked, "But when exactly?". As for not providing precise information, I think these boxes are about providing an overview, a first glance at data.. the user should know if he sees the last downtime as "2 days ago" if he expects it or not, and if not go investigate it where the actual full, precise data is at. Because we are actually just showing the last downtime, which even may be something he expected (like an upgrade or reboot), but before that last one, there were several others that are unexpected and are not shown.. so these values should not be taken as the place for precise data. Regarding the tooltips, 1.5s is the time a "regular" tooltip takes to display in Chrome, I just did as Chrome. I'm fine with lower delay, as long as it's not immediate tooltip, as it's not good to be moving the mouse around and tooltips popping out.	1	0	https://issues.jboss.org/browse/HAWKULAR-478
5914	HAWKULAR-474	Prototype done on http://cardosogabriel.github.io/hawkular-client/url.html, tabs Availability and Response Time. [~uxdlc], I adjusted the design to be consistent with the other modal boxes, so the on/off switch is placed at the side of the time input. We should define what happens when the switch is off. You said to turn the input disabled (which I agree), but in the case when all switches are off, it doesn't make sense to expose Alert / Notification. WDYT about hiding these areas in this case?	1	1	https://issues.jboss.org/browse/HAWKULAR-474
5915	HAWKULAR-468	About password confirmation: on the usual scenario, it should be possible. But what about the scenarios where the user is logged in via SAML or Kerberos for instance? On this situation, neither we nor Keycloak have access to the user's password. What should be done in such cases?	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5916	HAWKULAR-468	[~uxdlc], it was suggested to have this when we have the alert center. Do you have some prototype for it already, or something that can give some basis to think about the settings screen?	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5917	HAWKULAR-468	I agree that alerts is diff in that it's in context. Could you post a wireframe/prototype of the sidebar idea, to illustrate the full interaction?	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5918	HAWKULAR-468	Created https://issues.jboss.org/browse/HAWKULAR-638. [~theute], are the screens in accordance to what we spoke?	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5919	HAWKULAR-468	what "our side" means here ? Where will it be stored ?	0	0	https://issues.jboss.org/browse/HAWKULAR-468
5920	HAWKULAR-468	I am trying to follow the thread and I have some doubts. In the triggers, we are going to define email as actions/users/both ? I understand that we might have something like email:jdoe@hawkular.org or user:jdoe. For the second one there is defined a JIRA https://issues.jboss.org/browse/HWKALERTS-80 to work on it. Basically the preferred idea would be a service that a plugin can invoke to resolve if user:jdoe should be an email, and sms, or other preferred transport. I guess that perhaps today we want something simple but in the future preferences could be more complex (i.e. email by day, sms by night, or other kind of rules). Also, I don't know if this is the proper JIRA to comment an important feature of alerts that might be interesting for the UX. Today, the UI creates an action per email in a very simple way, and in the forms look like you have to specify the email always. Alerts offer to create an action definition (i.e. group-of-admins) and specify in the definition the details (recipients or other properties supported by the plugin). In that way, when you are creating a trigger, you might want to select an existing group. This has the advantage that tomorrow you can add/remove recipients of an action in a more easy way.	0	0	https://issues.jboss.org/browse/HAWKULAR-468
5921	HAWKULAR-468	Are we OK then with the approach of storing this data on Accounts? If so, I'll assign this JIRA to me and work on both the backend and frontend (based on the screen provided by [~gcardoso]). Other components would then be able to retrieve a "UserSettingsService" via CDI, that would return a Map<String, String> with all settings, or a more specialized method returning a simple "String" for a given user and given setting name (ie: "hawkular.settings.alerts.notificationemail").	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5922	HAWKULAR-468	Well, I guess that with this change, then the alerts definition form will change. Does anybody know if with the email defined in the user settings, then the alert definition form will let the user to choose between an specific email or implicit user ? If this is discussed in other JIRA, please let me know the # as perhaps this is off-topic for this one. But from alerts perspective is interesting to know to decide which implementation is more appropiate and what we should ask to accounts for it .	0	0	https://issues.jboss.org/browse/HAWKULAR-468

#	Requirement	Questions	Answered	Successfully Answered	URL
5923	HAWKULAR-468	Guys, this JIRA is related to https://issues.jboss.org/browse/HAWKULAR-638. Can you take a look at this other one?	1	1	https://issues.jboss.org/browse/HAWKULAR-468
5924	HAWKULAR-468	PR submitted for the Hawkular console, based on the HTML provided by [~gcardoso]. I'm not sure what the "Cancel" button should do, though. Perhaps should I remove it, as it was possibly done with the idea that this settings screen would be outside of the console? For Accounts, it can be used via the UserSettingsService . You can also inject a setting via CDI. There's some documentation in the format of javadoc, as well as a sample here: https://github.com/hawkular/hawkular-accounts/blob/master/sample/src/main/java/org/hawkular/accounts/sample/boundary/SampleEndpoint.java#L96-L101	0	0	https://issues.jboss.org/browse/HAWKULAR-468
5925	HAWKULAR-465	[~uxdlc], we don't have these two levels of headings in the other modals. Also, they basically replicate the content of the tab. Can we do like you did for JVM, an introductory text? Or improve the labels in tabs?	1	1	https://issues.jboss.org/browse/HAWKULAR-465
5926	HAWKULAR-463	Gabriel - Mike suggested that we use spin boxes instead of sliders, so I'm attaching a revised mockup for non-heap. Wdyt? If you agree, I'll update Heap as well.	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5927	HAWKULAR-463	[~uxdlc], as an improvement, I would make more clear that an alert is a message that appears in the UI, and a notification is an email sent. How about changing the label "Create Alert" to "Display Alert in the UI", and "Notify" to "Notify via Email"? How did u define the behaviour for Save? Does it apply to the current tab, or all tabs?	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5928	HAWKULAR-463	Implemented, prototype on: http://cardosogabriel.github.io/hawkular-client/application.html > JVM > JVM Alert Settings [~uxdlc], I implemented with small changes, trying to improve when I found something confusing/inconsistent. Please let me know if there is something that you disagree. We are proposing some default values (usage percentages, alert duration, garbage duration). Where these numbers put intentionally or just to illustrate?	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5929	HAWKULAR-463	* Thanks for adding the "Save All," I didn't update the wireframes with that change. I noticed that you changed the button order (Cancel is left now.) Either way works for me as long as it is consistent throughout. * Could we change the form label weight from 600, to 500? Please see attached image. At 600, I think they visually compete with the other labels. * New spin boxes look good to me. * When Toggle is in OFF state, could we disable the corresponding form input? * Garbage Collection - I would prefer if we kept with the wireframe design because I would like to avoid wrapping form labels where possible. And I think it's helpful to emphasis Major vs. Minor. I made a mockup, attached.	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5930	HAWKULAR-463	* PF button documentation is conflicting then, please see: https://www.patternfly.org/wikis/patterns/forms/form-layout/ Again, I am agnostic on this point so whatever PF aligns on. * Can I see your latest version? I would like to verify its readable. PF doesn't cover every use case, so I need to verify it works for ours. * Please see the attached mockup for Major.	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5931	HAWKULAR-463	- Yes, I'm using the patternfly widgets (code), that should be more recent than the documentation itself. - You can see my latest version in the same link for my prototype that I posted above, just refresh it. - Will update according to major. We need a text for Garbage Collection, it is a placeholder now. Can you send it to me Liz?	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5932	HAWKULAR-463	Regarding "Considering that we will not have minor GC, we don't need to have the major/minor headings anymore. Updated the prototype without the minor input": We don't know if the WF 'Accumulated GC Duration' is combined major + minor GC or... Can someone confirm this? [~mazz] [~pilhuhn] [~alexandrem]	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5933	HAWKULAR-463	Could someone verify if the current HTML, or other coded version, includes the checkbox for the email notification. Or any other type of ON/OFF setting?	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5934	HAWKULAR-463	[~uxdlc], can you please file a separate JIRA for the on/off notification thingy?	1	1	https://issues.jboss.org/browse/HAWKULAR-463
5935	HAWKULAR-439	For error I think it is nice, cause the user can go back and try again. But for success not so cool, cause the user already finished what he had to do in that modal (and still has to close the modal). I would rather close it when clicking on Save and show the toastr of success, it is more fluid interaction. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-439
5936	HAWKULAR-431	I personally like this dark tooltip, which is the same style we already have in the console and similar to what patternfly is proposing for graphs. However, [~uxdlc] was proposing a white tooltip for response-time graph. IMO it would be good to use the same visual style in both graphs. Liz, in which direction do you want to go? The white one is more suitable if we have the graph zoomed-in. Mike, will this feature be available for response time charts?	1	1	https://issues.jboss.org/browse/HAWKULAR-431
5937	HAWKULAR-431	Could you post a link to the prototype? Thanks!	1	1	https://issues.jboss.org/browse/HAWKULAR-431
5938	HAWKULAR-431	[~mithomps], for the white widget, do you want me to provide the html / css of the widget? Please let me know which way is nice to work.	1	1	https://issues.jboss.org/browse/HAWKULAR-431
5939	HAWKULAR-431	[~uxdlc], [~mithomps], what do you think about using a tooltip with white background for this graph, in order to have the same visual style as the response-time tooltip? chart-availability-hover.png [~mithomps], will we have the tooltip for the response time graph also in this milestone?	1	1	https://issues.jboss.org/browse/HAWKULAR-431
5940	HAWKULAR-431	Yes. So what do you propose?	1	1	https://issues.jboss.org/browse/HAWKULAR-431
5941	HAWKULAR-429	Looks like {{com.github.marschall:jdeps-maven-plugin}} does not have a goal that makes the build fail in case of internal deps. The last of the three plugins {{org.codefx.maven.plugin:jdeps-maven-plugin}} has just this: https://github.com/CodeFX-org/JDeps-Maven-Plugin	1	1	https://issues.jboss.org/browse/HAWKULAR-429
5942	HAWKULAR-422	While I think it's a good idea, and I prefer the visual communication most of the times, I don't think it will be trivial to communicate some things.. eg, 99.999% is not a "bad" thing. 100% is perfect, but, 99.999% is still good. How do we differentiate ? The same applies for the "Last Downtime", it may have been 6 months ago, which again, is not perfect (Always Up) but is not bad, and should not be marked in red or as something less positive.	1	0	https://issues.jboss.org/browse/HAWKULAR-422
5943	HAWKULAR-399	Is that still relevant?	0	0	https://issues.jboss.org/browse/HAWKULAR-399
5944	HAWKULAR-398	The wildcard is handled "special" inside the agent. Are you using an older agent build by any chance? This should be working in the latest agent release, I looked at it yesterday and I was seeing non-zero values getting sent to metrics.	0	0	https://issues.jboss.org/browse/HAWKULAR-398
5945	HAWKULAR-393	This happened when we adopted the gray color for the down status of an application server (see attachment). [~uxdlc] had a rationale for that. Does this apply to the urls list?	1	1	https://issues.jboss.org/browse/HAWKULAR-393
5946	HAWKULAR-393	[~pilhuhn], why was the PR declined?	0	0	https://issues.jboss.org/browse/HAWKULAR-393
5947	HAWKULAR-389	What do you mean by alert dialog boxes? Can you elaborate the usecase?	1	1	https://issues.jboss.org/browse/HAWKULAR-389
5948	HAWKULAR-389	When you click on 'Alert Settings' link it pulls up a dialog box to allow the user to set various alerts on metrics. We never decided what those screens should look like? Probably too late now for this sprint.	0	0	https://issues.jboss.org/browse/HAWKULAR-389

#	Requirement	Questions	Answered	Successfully Answered	URL
5949	HAWKULAR-389	Revised "add deployments" alert settings to remove dampening. Doesn't seem to make sense in this case. wdyt?	1	1	https://issues.jboss.org/browse/HAWKULAR-389
5950	HAWKULAR-378	[~uxdlc] I'm not familiar with Jira - how do I see the linked Jira with new designs? Thanks.	1	0	https://issues.jboss.org/browse/HAWKULAR-378
5951	HAWKULAR-370	Was this flow already discussed? Let me know if or when I can start.	1	1	https://issues.jboss.org/browse/HAWKULAR-370
5952	HAWKULAR-370	[~mithomps], sent the PR:https://github.com/hawkular/hawkular/pull/437. The html structure changed a bit. I just did small changes to fit better in our modals for now, since we don't have a proper design for it. In step 2 you need to hide the "discard/confirm buttons" after clicking on editing. Please check the behavior in my implementation: http://localhost:1337/application-deployments.html . Also, the tooltips are not working for the buttons. [~uxdlc], a visual style for this new steps component need to be defined (see attachment). Does patternfly have something? Probably makes sense to place it at the top and remove our current heading (step 1 of 3), which is redundant right now.	1	1	https://issues.jboss.org/browse/HAWKULAR-370
5953	HAWKULAR-367	[~jayshaughnessy] or [~lponce], could you please give me some exact URLs and payloads to create (trigger -> dampenings -> condition for) such scenario?	1	1	https://issues.jboss.org/browse/HAWKULAR-367
5954	HAWKULAR-367	Thanks [~jayshaughnessy] for you comments and again for the [docs|http://www.hawkular.org/docs/dev/alerts.html] which are really helpful. [~mithomps], I can see now two ways to go: # Provide a default {{autoResolve}} dampening/condition for threshold and availability. The threshold value would be based on the existing {{firing}} dampening/condition value. The time would be a constant right now (let's say, N minutes). There are several use cases for that: #* *Threshold _Every time the maximum time is exceeded_*: No {{autoResolve}} condition would be provided and we will fire alerts the same way as we do now. #* *Threshold _Only when exceeded for greater than_*: The {{autoResolve}} condition would be: _when below threshold for N minutes_. #* *Downtime*: The {{autoResolve}} condition would be: _when UP for N minutes_. # Make the {{autoResolve}} part configurable by users. Since we don't have UI mockups I would vote for #1 with N = 5 minutes. Once #1 is implemented, #2 would be very easy to implement. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-367
5955	HAWKULAR-367	Do you need some UXD for this milestone? Can you clarify what needs to be done?	1	1	https://issues.jboss.org/browse/HAWKULAR-367
5956	HAWKULAR-362	Should we revert that to "new" as 1.3.0 is busted and then re-submit an updated-PR?	1	1	https://issues.jboss.org/browse/HAWKULAR-362
5957	HAWKULAR-361	Would it be possible to have a regular scale (starting at -0-, with the y axis including the threshold), but offer a "macro lens" tooltip to zoom in on detailed info? Please see attached mockup. My concern with the logarithmic (as I understand it), is that it might still cause some confusion: https://en.wikipedia.org/wiki/Misleading_graph#Improper_use_of_logarithmic_scaling Zooming aside - I think we could also make the chart easier to "read" if we used background shading to illustrate "exceeded threshold" rather than line fills.	1	0	https://issues.jboss.org/browse/HAWKULAR-361
5958	HAWKULAR-356	Is that still an issue [~gcardoso] ?	0	0	https://issues.jboss.org/browse/HAWKULAR-356
5959	HAWKULAR-355	Definitely more info on hover is necessary. Thinking about the user's need, I think it is valuable to inform the exact time and exact response time on hover. WDYT?	1	0	https://issues.jboss.org/browse/HAWKULAR-355
5960	HAWKULAR-355	It looks better. I uploaded a suggestion with the following changes: - added a circle that explicits the intersection between time and response time in the chart (that should be the color of the line also...) - replicated this same circle in the tooltip - updated the color of the vertical line (hover) to match the color of the line inside the tooltip - removed the black circle from the time axis. WDYT?	1	0	https://issues.jboss.org/browse/HAWKULAR-355
5961	HAWKULAR-355	How would this look in a multi-line chart?	1	1	https://issues.jboss.org/browse/HAWKULAR-355
5962	HAWKULAR-355	Last mockup didn't come. I like your last comment because it is exactly what patternfly did. Have you seen this? https://rawgit.com/patternfly/patternfly/master/tests/charts.html	1	0	https://issues.jboss.org/browse/HAWKULAR-355
5963	HAWKULAR-355	We agreed to use the white background in both to be consistent. [~mithomps], do you need something from me?	1	0	https://issues.jboss.org/browse/HAWKULAR-355
5964	HAWKULAR-355	[~mithomps], how do we proceed here, it was assigned to me.	1	0	https://issues.jboss.org/browse/HAWKULAR-355
5965	HAWKULAR-351	One issue issue is during startup, where C* is not yet up and the pinger is pinging already 17:09:01,300 INFO [com.datastax.driver.core.RequestHandler] (New I/O worker #11) Query SELECT triggerId, triggerMode, type, conditionSetSize, conditionSetIndex, conditionId, dataId, operator, data2Id, data2Multiplier, pattern, ignoreCase, threshold, operatorLow, operatorHigh, thresholdLow, thresholdHigh, inRange, tenantId FROM hawkular_alerts.conditions WHERE tenantId = ? 5966	HAWKULAR-343	Attached is the design for a response time alert notification. Besides an email for availability alert, will we send any other emails?	1	1	https://issues.jboss.org/browse/HAWKULAR-343
5967	HAWKULAR-343	[~rutlucas], I had understood that we would NOT send an email when an alert is resolved, in alpha2. [~theute], can you clarify? I sent you an email that is a suggestion for the plain text. For the email experience, is it possible: - To have the sender defined as "Hawkular"? - To display the url and problem already on the subject? E.g: "Alert message: http://www.google.com is down" / "Alert message: http://www.google.com has response time above the threshold" Thanks	1	1	https://issues.jboss.org/browse/HAWKULAR-343
5968	HAWKULAR-343	Attached a prototype for success. [~theute], I opted to display the total time alert duration and when it was recovered. Think we can leave the initial time in this email if we have these 2 pieces of information. Also, the initial time is in the email that the user received previously. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-343
5969	HAWKULAR-343	[~gcardoso], +1 on the designs [~rutlucas] I am still unclear on how alerts/events are managed and why we would keep "intervals", it seems related to HAWKULAR-130 ? Is there a part of this JIRA that can be delivered in Alpha 2 ?	1	1	https://issues.jboss.org/browse/HAWKULAR-343
5970	HAWKULAR-328	Is this still relevant [~ppalaga] and [~lkrejci] ? The mentioned inventory jira seems in and the pinger seems still to work?	0	0	https://issues.jboss.org/browse/HAWKULAR-328
5971	HAWKULAR-321	[~alexandrem] Does that suit your needs? Is that reflected in the UI somewhere?	1	1	https://issues.jboss.org/browse/HAWKULAR-321

#	Requirement	Questions	Answered	Successfully Answered	URL
5972	HAWKULAR-288	When I discussed this topic the other day with Heiko, it got thinking about the driver's Session object. Should each Hawkular service, i.e., metrics, alerts, etc., be creating its own Session, or should it be shared? I think it should be one Session object per physical cluster. The fact that each of our services might be using their own keyspaces is not as important as the fact that we are sharing the same physical cluster. There was a related discussion on an internal mailing list about having something like "NoSQL" data sources. We need to investigate this.	1	0	https://issues.jboss.org/browse/HAWKULAR-288
5973	HAWKULAR-264	Which tests are targeted ? All ? There are tests where verbosity is useful, I agree that we can remove calls to System.out with a proper log4j or similar. I can review this for alerts component (as it was scheduled). But, is this creating some conflict (excess of verbosity on tests?) or it is to control where to store them (configure the appender) ? Thx	0	0	https://issues.jboss.org/browse/HAWKULAR-264
5974	HAWKULAR-259	Status: {code} <jpkroehling> stianst, morning! I'm building a PoC for the tokens filter/proxy that we discussed the other day, and I have a question... our frontend is a single-page app built on top of hawt.io, and uses keycloak.js for auth, and the backend is configured as a bearer-token client <jpkroehling> it seems that the refreshToken is not available for the backend (for bearer token clients) <jpkroehling> I can kinda of imagine a reason, but I think it's worth asking if it's indeed intended * msavy (~msavy@redhat/jboss/msavy) has joined #keycloak <stianst1> it's indeed intended and it wouldn't make sense to sense refresh token to the service <jpkroehling> stianst1, so, I should change the backend to not be a bearer token <stianst1> jpkroehling: the proxy should use direct grant api to obtain the token on behalf of the agent <jpkroehling> I think the refreshToken is not available for basic auth as well <stianst1> jpkroehling: it would give the agent a reference id, not the full token <jpkroehling> stianst1, for the direct grant, I'd need the user's password, wouldn't I ? <jpkroehling> let me check the docs again <stianst1> jpkroehling: basically the proxy manages tokens on behalf of the agents <stianst1> jpkroehling: ah, yes that's one piece of the puzzle I didn't consider :/ <jpkroehling> stianst1, I can work it around, as we either receive a request from the frontend (and we can send the refreshToken along with the create-token request), or we get a backend call with user:pass <jpkroehling> so, I have a way to get the refresh token, *but*, that feels bad :) <stianst1> jpkroehling: that's not correct either though <jpkroehling> no? <jpkroehling> ah, rihgt <stianst1> jpkroehling: you shouldn't share the refresh token - it should be created specifically for the agent <stianst1> jpkroehling: when you link an agent you should use direct grant api to create a refresh token for that "link" <jpkroehling> right, that's what you mean by "not correct" :) agreed <stianst1> so, only way to do it atm is to ask the user for username/pass again :(<stianst1> lemme think about this a bit ;) <jpkroehling> okay <stianst1> jpkroehling: I got it :) <jpkroehling> that was quick <stianst1> jpkroehling: you don't even need to use direct grant and it'll support sso <stianst1> jpkroehling: now, just need to explain it * lfryc is now known as lfryc|lunch <jpkroehling> stianst1, we do can a hangout, if it's easier <stianst1> jpkroehling: think so {code}	0	0	https://issues.jboss.org/browse/HAWKULAR-259
5975	HAWKULAR-259	Status: a local branch with some draft commits was made, but I'm currently "blocked" on a conceptual issue. Will ping stian again later for clarification. What is already done on the branch: - token-store-api with models - token-store with endpoint, that generates a secret/key and stores it along with the refresh token - undertow-filter , which gets the refresh token and tries to convert it into an access token To consume it, a module (like, "sample") can just add undertow-filter as a dependency. This filter detects that the incoming request has secret/key credentials and transparently injects an appropriate set of KC credentials into the incoming request, if the secret/key is valid. Right now, the token-store is a module on Accounts and we are also storing the persona information, but other than that, it could be split into a separate project and reused by other projects. Once the first iteration is done, we can consider splitting it. {quote} <jpkroehling> stianst, context: that proxy/token store for offline tokens (for hawkular agents) <jpkroehling> you might remember the discussion we had before I went for PTO, regarding storing the refresh token and getting a new access token based on it <jpkroehling> the issue I'm having right now is: when the user hits the token-store endpoint, the endpoint requests a refresh token from the KC adapter, and it comes with the token-store client on it <jpkroehling> on the undertow filter, I read the deployment's keycloak.json , and use it for replacing the refresh token by an access token <jpkroehling> this seems to not be appropriate, as I get an exception here: https://github.com/keycloak/keycloak/blob/88f14b39a71e679fe7ed1699d7b2acb8c1c4742a/services/src/main/java/org/keycloak/protocol/oidc/TokenManager.java#L136 <jpkroehling> so, which would be appropriate: to have the token-store to share the client credentials with the hawkular backend, or to make the undertow filter to use the token-store client? <jpkroehling> I think the second option would hit the same problem later on the request, but wanted to understand which would be the correct scenario in your view <jpkroehling> (btw, hawkular backend is a bearer only, so, perhaps it's indeed appropriate to have the token-store client on the undertow-filter){quote}	0	0	https://issues.jboss.org/browse/HAWKULAR-259
5976	HAWKULAR-245	Seems done and released https://github.com/hawkular/hawkular-agent/tree/0.1.0 ?	0	0	https://issues.jboss.org/browse/HAWKULAR-245
5977	HAWKULAR-232	the tests don't pass because WF9 changed the way attribute names can be named (from the way it was in 8.2). I didn't get a response to this in #wildfly, but I confirmed by changing code in your branch thomas and it passed (I changed the attribute names so they had a "-" instead of a ".") 03:23:11 PM) mazz: I need a sanity check please. I'm trying to run unit tests on my module subsystem (via my subclass of org.jboss.as.subsystem.test.AbstractSubsystemBaseTest). My test DID work on WF8.2 but FAIL when I move to WF9 CR2. (03:23:11 PM) mazz: The error is : (03:23:11 PM) mazz: failure description: "WFLYCTL0201: Unknown attribute 'org'" (03:23:11 PM) mazz: in my custom subsystem, I have several attributes of the form "org.abc.xyz" such as: (03:23:11 PM) mazz: <element org.hawkular.package.name.foo="test1" org.hawkular.another.package.blah-blah="test2" /> (03:23:44 PM) mazz: could it be possible that attribute names can no longer have "." in their names? (03:24:11 PM) mazz: I have no attributes called "org" but plenty that look like "org.some.name.here" (03:47:24 PM) mazz: uh-oh. Yeah, I thikn that's a problem (03:47:48 PM) mazz: in WildFly 9 CR2, it is no longer possible to have a dot (".") in attribute names. (03:47:50 PM) mazz: This makes me sad (03:48:06 PM) mazz: this was possible in WildFly 8.2.Final (03:48:36 PM) mazz: I just changed all my "." to "-" in my custom module subsystem extension (in the java code and the .xml) and now my tests pass (03:50:06 PM) mazz: I don't know if that is also true for element names. (03:50:25 PM) mazz: I have "org.abc.xyz" element names as well. but the error message I got just mentioned attribute name	1	1	https://issues.jboss.org/browse/HAWKULAR-232
5978	HAWKULAR-226	Shouldn't they go onto the details screen? IP could perhaps go in fine print to the right of the url , but all the other things (powered by can have more than 1 item) would be too much for here.	0	0	https://issues.jboss.org/browse/HAWKULAR-226
5979	HAWKULAR-226	Details screen yes that is a possibility as well. Will the users want to sort the urls list by these attributes? For instance, grouping by Powered by so all Apache servers are grouped together? [~uxdlc] [~gcardoso] WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-226

#	Requirement	Questions	Answered	Successfully Answered	URL
5980	HAWKULAR-226	Thanks for the specs. Just to make sure that I understand correctly: I should implement what is on URL-list_plus.jpg [12391301], disregarding all other mocks, right? [~uxdlc]: > For table column order, proposing: State, App name, Server IP, Type, Powered By, Host. I do not understand this statement - was it missplaced maybe? This is about list of URLs where App name and Type make no sense. In URL-list_plus.jpg, I can see only Powered by and Server IP. Could you please clarify that?	1	1	https://issues.jboss.org/browse/HAWKULAR-226
5981	HAWKULAR-222	[~jdoyle] I made it one chart just to group all of the Topics chart info in one view, but they can certainly be separated. Are you envisioning them stacked or side by side? Other than the Topic chart, or charts, I had figured that all of the other queue charts would stack on top of each other, running vertically down the page.	1	1	https://issues.jboss.org/browse/HAWKULAR-222
5982	HAWKULAR-222	[~mithomps] Mike, I think this is in pretty good shape. I marked it as "uxd done", do I need to reassign it to Karel or Gabriel?	0	0	https://issues.jboss.org/browse/HAWKULAR-222
5983	HAWKULAR-222	Wow, that was fast! P.S. I had posted some alternative visuals for the tiles: https://issues.jboss.org/secure/attachment/12395240/JMS3b.jpg Did you decide to go with the no icon version instead?	0	0	https://issues.jboss.org/browse/HAWKULAR-222
5984	HAWKULAR-222	Updated the prototype. Actually I thought with icons was a first design, and without was a newer design. I updated our clickable icons in the console to patternfly blue (as patternfly does). I kept the informative icons (non-clickable) in light gray. Considering the icons from this tile are not clickable, shouldn't they be light gray?	0	0	https://issues.jboss.org/browse/HAWKULAR-222
5985	HAWKULAR-221	Another mockup using a % based chart, stacked bar. [~mithomps] wdyt, does this work?	1	1	https://issues.jboss.org/browse/HAWKULAR-221
5986	HAWKULAR-220	[~uxdlc], is this the last version?	1	1	https://issues.jboss.org/browse/HAWKULAR-220
5987	HAWKULAR-220	Do enable and timestamp need to be in the same cell? Otherwise it is easier to have it in two cells.	1	1	https://issues.jboss.org/browse/HAWKULAR-220
5988	HAWKULAR-219	I attached a proposal with a more minimal half-donut graph. Think we don't need the 0% and 100%. Looks cleaner and still easily understandable to me. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-219
5989	HAWKULAR-219	Yes, % should be rounded off. Do you think it should even offer the decimal, or simply rounded to the whole: "5%"?	1	1	https://issues.jboss.org/browse/HAWKULAR-219
5990	HAWKULAR-217	RE: Badge in the tab. Would the tally in the badge change when you change the date range? And does changing a date range change it for all the tabs (and their badges)?	0	0	https://issues.jboss.org/browse/HAWKULAR-217
5991	HAWKULAR-217	Looks good! I saw that you added the date in the "JVM Status" and "JVM Memory Metrics" headings. I understand, our current date picker is not prominent at all. I worked on a more prominent date-picker (attached), I think we solve this problem with the change. WDYT?	0	0	https://issues.jboss.org/browse/HAWKULAR-217
5992	HAWKULAR-215	Does that also "unify" the schema creation and keyspaces? I can imagine that the schema definition data should stay in the respective projects, while the code that applies those definitions should be in the common code(?)	1	1	https://issues.jboss.org/browse/HAWKULAR-215
5993	HAWKULAR-203	Which certificates do you consider trustworthy for a pinger? Do you anticipate a configuration property for that? We are talking about Pinger. Its main goal is to find out whether some address can be pinged or not. IMHO it is not Pinger's responsibility to tell which certificate to trust. How would you imagine its output in a case when it was possible to ping the target but it had an untrusted certificate? If we were to add this to the Pinger, I would suggest changing its API to not only verify the ping ability but to also throw an exception when the certificate is untrusted (passing a "special" value in the HTTP response status code would be a dirty solution ;-)). Having said that, I believe that Pinger does its work properly and it is not up to its responsibility to judge the certificates.	0	0	https://issues.jboss.org/browse/HAWKULAR-203
5994	HAWKULAR-194	Draft 1 was published here: https://github.com/jpkrohling/hawkular-accounts/tree/HAWKULAR-194 [~jkremser], would you say that it's better to have one event object for each event, or would you say that having one event object, with different "action" properties is enough? This here would be the CDI event: https://github.com/jpkrohling/hawkular-accounts/blob/2ad015f0a0dab1a82b4e28fc532cfefc894d1938/events-listener/src/main/java/org/hawkular/accounts/events/listener/AccountsEvent.java And this is an example of a topic listener: https://github.com/jpkrohling/hawkular-accounts/blob/2ad015f0a0dab1a82b4e28fc532cfefc894d1938/events-listener/src/main/java/org/hawkular/accounts/events/listener/internal/AccountsMessageListener.java	0	0	https://issues.jboss.org/browse/HAWKULAR-194
5995	HAWKULAR-189	Question: The header on the initial (welcome) URL list screen should remain vertically centered within the page, is that still the case? It's the screen that you see after registering. I can't bring up the instance to verify.	0	0	https://issues.jboss.org/browse/HAWKULAR-189
5996	HAWKULAR-185	This is blocking UI automation in Hawkular MS1. Can we get this addressed in MS2??	0	0	https://issues.jboss.org/browse/HAWKULAR-185
5997	HAWKULAR-178	[~alexandrem], which approach do you think would be better?	1	1	https://issues.jboss.org/browse/HAWKULAR-178
5998	HAWKULAR-158	Is this still valid?	1	1	https://issues.jboss.org/browse/HAWKULAR-158
5999	HAWKULAR-156	Wasn't that already done some time ago?	0	0	https://issues.jboss.org/browse/HAWKULAR-156
6000	HAWKULAR-156	Is that still a thing?	0	0	https://issues.jboss.org/browse/HAWKULAR-156
6001	HAWKULAR-155	Where do we stand here?	1	0	https://issues.jboss.org/browse/HAWKULAR-155
6002	HAWKULAR-155	The issue that I believe is still outstanding is that the current Artemis bus is not secured. Anyone can put messages on the bus (AFAIK). This JIRA should address the question "should we put KeyCloak/Accounts in front of bus as an authentication mechanism forcing a bus client to log in so it can put messages on the bus and read messages off the bus" I haven't looked into how Artemis supports authentication plugins, or how the WildFly integration of Artemis can help here.	0	0	https://issues.jboss.org/browse/HAWKULAR-155
6003	HAWKULAR-152	Is this intended for the current MVP run?	1	1	https://issues.jboss.org/browse/HAWKULAR-152
6004	HAWKULAR-152	[~nstefan], I've been looking into the failing tests issue. The problem may be in the CORS support on the server side. i.e. when trying to create a gauge, the browser makes a ["preflight" OPTIONS request|http://stackoverflow.com/questions/12111936/angularjs-performs-an-options-http-request-for-a-cross-origin-resource/12112294#12112294] which doesn't seem to handled right and thus resulting into a CORS issue. My guess is, the problem may in the response of the OPTIONS request, which is not a json object: bq. HEAD, POST, GET, OPTIONS What do you think?	1	1	https://issues.jboss.org/browse/HAWKULAR-152
6005	HAWKULAR-152	I was able to fix the issue on the server side. After adding {{"hawkular-tenant"}} to CORS supported headers list, we got only two failing tests in the {{hawkular-ui-services}} rest metrics test-suite but no more strange CORS issues. Now, I need to revisit the test-suite itself, fix failing stuff and find a better way to set the {{"hawkular-tenant"}} header, so it doesn't effect all {{$http}} requests made from AngularJS. The PR with the CORS fix is here: https://github.com/hawkular/hawkular-metrics/pull/248 [~nstefan], is it possible to pass the hawkular-tenant as an argument through URL parameters?	1	1	https://issues.jboss.org/browse/HAWKULAR-152
6006	HAWKULAR-152	Is this already in Hawkular-master?	1	1	https://issues.jboss.org/browse/HAWKULAR-152

#	Requirement	Questions	Answered	Successfully Answered	URL
6007	HAWKULAR-132	Question is: should OrganizationService automatically remove the sub-organizations, or should the caller be responsible for that? I think the caller should make sure that there are no sub organizations before calling the "delete" method, so, the "delete" method should just remove the sub organizations automatically, in the assumption that the caller really wants to delete this organization, no matter what.	0	0	https://issues.jboss.org/browse/HAWKULAR-132
6008	HAWKULAR-130	You are talking implementation, I am talking user experience :) I don't understand your a) b) since it's based on the implementation. Would be clearer if we stick to user experience, I am not sure how to properly explain again but let me try (and ignore some "corner case" issues for now) Hypothesis: - response time is collected every minute - I have a threshold set for 1s with alert set if the threshold is above that value for 5 min that sends me an email - from t=0 to t=2h the response time is always measured as 2s, from t=2h to t=4h it is measured at 0.5s From a *user* point of view: - I should receive an email at t=5min - If I go to the admin console at t=2min there should be no notification there (only the graph could tell me that I am above the threshold) - If I go to the admin console at t=1h I should have a notification in the UI that a problem is currently happening at started at t=0 is still open (and may require immediate action) - if I go to the admin console at t=3h I should have a notification in the UI that a problem happened between t=0 and t=2h but resolved by itself. Do we agree on that ? If so, the "corner cases" such as response time being below the threshold for a short period of time should be handled without affecting this basic scenario. As of now, if the previous scenario happens, a user gets an alert entry every 40s in my environment. This is likely again related to the notion of alerts and events, I think those are separate concerns that we need to address. We will also need to add escalation capabilities (if the issue still exist at t=1h and noone "acked" we could send an SMS to the manager)	0	0	https://issues.jboss.org/browse/HAWKULAR-130
6009	HAWKULAR-129	[~uxdlc], any ideas how to progress? Do we have a mock-up or any other information which can help me to resolve this JIRA? Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-129
6010	HAWKULAR-129	Hi [~uxdlc], is this JIRA still relevant?	1	1	https://issues.jboss.org/browse/HAWKULAR-129
6011	HAWKULAR-128	Those are there by default, from Keycloak. Should I keep only the fields from the previous version of Keycloak (username, email, first name, last name, password, password confirmation), or do you have a set of fields that you'd want to keep ?	0	0	https://issues.jboss.org/browse/HAWKULAR-128
6012	HAWKULAR-127	[~theute] I don't see any resources for this in Alpha6. Push to Alpha7? CC: [~pilhuhn]	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6013	HAWKULAR-127	[~uxdlc], are you aware if patternfly updated the search/filter behavior? Serena was working on something...	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6014	HAWKULAR-127	[~gcardoso] it looks good, but it bothers me that whenever you switch from text search to select list (in the example from name to birth month) it flickers. Won't this be a problem?	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6015	HAWKULAR-127	I have created new directive for searching over tables, this directive can be used with any table. Filter which matches 0 fields: !Selection_001.png|thumbnail! Filter which matches some fields: !Selection_003.png|thumbnail! What do you think, should I create also the basic/advanced mode? Where you would type something like 'state = up and type=wildfly and byText=local' which would create 3 filters. Switching between basic and advanced would not change current filters. We should agree on some kind of search form. I guess only some simple search values would be possible (e.g. no !=, OR, LIKE, IS, IN ... operands). If I am overthinking this just let me know, I will implement just some simple search in advanced mode. Also I would need [~gcardoso] new .less rule, as you can see there is top border with the active filters, which is a bit stretched and the border is bigger than the table itself. I was unable to break the filters apart, so you would have to select what filter you want to use (State, Type) and then either type or select value. I have used the http://angular-patternfly.rhcloud.com/#/api/patternfly.filters.directive:pfSimpleFilter as Gabriel suggested but there is slight bug when switching between text and select filter. I have looked into the source codes and I think I know why is this happening, but it looks like it is desired behavior.	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6016	HAWKULAR-127	Very nice Karel! How does this "By text" works? Does it search in all columns and filter? If not, this is something desirable, for the user to be able to type something and it filters in all columns (like it is the current search input). Regarding the advanced search, I'll extend this question to [~mithomps], but I would start with a simple and add it later if we feel the need. Once you merge this on master I can fix this line issue :) Completely fine that you didn't break the filters apart, since this is the patternfly approach (my design was prior to them).	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6017	HAWKULAR-127	That's great! My question is specifically regarding the label "By text", did u created this text or it came from patternfly? Cause to me it is a bit confusing, it is not clear that it filters in all fields, u know what I mean? Yes, inform them. Thanks	1	1	https://issues.jboss.org/browse/HAWKULAR-127
6018	HAWKULAR-125	As a separate thing, can you look into sizing the table pagination to the screen height. So if there is more height we can see more rows. Is this correct @Lclayton@redhat.com?	1	1	https://issues.jboss.org/browse/HAWKULAR-125
6019	HAWKULAR-111	Liz, Jay has some good ideas here that the durations are confusing for the simple view and should probably be an advanced option. WDYT?	0	0	https://issues.jboss.org/browse/HAWKULAR-111
6020	HAWKULAR-108	[~ppalaga] Our artifacts seem to show up on Central right now - so is this still needed? I understand that signing has it own benefits, but is it required?	1	0	https://issues.jboss.org/browse/HAWKULAR-108
6021	HAWKULAR-97	What exact steps are needed to see the header before the redirection? Everything looks fine when I try to test it (with latest Chrome, FF).	0	0	https://issues.jboss.org/browse/HAWKULAR-97
6022	HAWKULAR-91	The messaging subsystem has been deprecated... not sure if we should spend time on this: http://wildscribe.github.io/Wildfly/9.0.0.Beta1/subsystem/messaging/index.html "Deprecated Since 1.4.0 The messaging subsystem is deprecated and may be removed or limited to managed domain legacy server use in future versions."	0	0	https://issues.jboss.org/browse/HAWKULAR-91
6023	HAWKULAR-85	My one concern is performance. Firing all those queries but it is async so maybe not an issue. WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-85
6024	HAWKULAR-77	How does that work with say 100 urls already in place? Browsers usually allow scrolling though the list. Wouldn't the "Add .." be sort of hidden in that case?	0	0	https://issues.jboss.org/browse/HAWKULAR-77
6025	HAWKULAR-71	Would be interesting to investigate if it's possible to have two .gitignore files . A default one, marking the files in dist/ as ignored, and a "release" one, that accepts the files in dist/. This way, a developer won't commit changes to the dist/ files during the usual development cycle, while the release process still generate those files, which are required in order to be consumed by other modules as bower dependency.	0	0	https://issues.jboss.org/browse/HAWKULAR-71
6026	HAWKULAR-71	I agree this is a problem (and should be solved). How about instead of .gitignore the dist folder just *not* have the connect-* task update the dist folder. Instead, you need to publish, to update the dist folder. So do a 'gulp publish' which I guess would just be a 'gulp build' (and maybe its a default task).	1	0	https://issues.jboss.org/browse/HAWKULAR-71
6027	HAWKULAR-70	[~vrockai] Can you update with git pull # and resolve if this is done. Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-70
6028	HAWKULAR-68	[~gcardoso], I just noticed that there's no update to the "Account Management" screen. Is it intended? You can access this by booting the hawkular-accounts distribution and opening the following URL: http://localhost:8080/auth/realms/hawkular/account	1	1	https://issues.jboss.org/browse/HAWKULAR-68
6029	HAWKULAR-68	[~juraci.costa], thanks for the reminder. Just to know, is this for June 3rd or future release?	1	1	https://issues.jboss.org/browse/HAWKULAR-68
6030	HAWKULAR-68	[~theute], do you have any idea about when we'll expose accounts?	1	1	https://issues.jboss.org/browse/HAWKULAR-68

#	Requirement	Questions	Answered	Successfully Answered	URL
6031	HAWKULAR-67	Hi Juca! What is an organization? Is this somehow related to Keycloak?	1	1	https://issues.jboss.org/browse/HAWKULAR-67
6032	HAWKULAR-65	{quote} <jpkroehling> stianst, morning! on the keycloak-dev list, you said that "If you're requiring programmatic setup directly to Keycloak you're doing it wrong IMO." <stianst> jpkroehling: yup <jpkroehling> stianst, I wonder if the context applies to an older thread on keycloak-users, where Marek mentioned this approach as a possibility to change the master admin password <jpkroehling> http://lists.jboss.org/pipermail/keycloak-user/2015-March/001770.html <stianst> jpkroehling: nah, for that you should only do it if KC is embedded in your project <jpkroehling> stianst, it's not "embedded in the project", but it's embedded in the distribution we are currently building, ie, we provide the possibility of using an external KC <stianst> jpkroehling: what I mentioned to Stan was that he's working on a simple way to get started with the WF adapter, in which case it should work for local and remote servers, so should use rest api's <jpkroehling> as far as Hawkular is concerned, KC can be anywhere, but we'd want to either disable the master's admin user or change its password on a first boot <stianst> jpkroehling: omayto, tomahto ;) <stianst> jpkroehling: tomayto even <jpkroehling> O_o <stianst> jpkroehling: when you embed it you want to disable master admin and should do so by "changing" the embedded KC war <stianst> jpkroehling: for embedding the idea is that you build your own war and "modify" it to fit your needs <jpkroehling> but that's the point: we are not embedding it as part of our project, we are embedding it as an easy way to quick start using hawkular <jpkroehling> for a production usage, KC will probably be a remote instance <stianst> jpkroehling: irc confusion setting in here ;) <stianst> jpkroehling: hawkular will have a dist/download that contains both hawkular and kc right? for devs and quick starts and such <jpkroehling> what I'm currently toying with is to ship with master-realm.json + master-users-0.json a,d import it on first boot, just to disable the admin's user <jpkroehling> right <stianst> jpkroehling: right, that should be built like: https://github.com/aerogear/aerogear-unifiedpush-server/tree/master/servers/auth-server <stianst> jpkroehling: and you can add whatever initial config you want like this: https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/servers/auth-server/src/main/java/org/jboss/aerogear/unifiedpush/keycloak/UpsKeycloakApplication.java <jpkroehling> does that work also for remote KC instances ? <stianst> jpkroehling: no, that's for building the embedded KC <stianst> jpkroehling: connecting to a remote KC instance is a separate issue <stianst> jpkroehling: for that you obviously don't disable master admin user, but instead you want to import your app and such into an existing realm <stianst> jpkroehling: I'm looking at creating a rest endpoint that lets you "link" hawkular (or any app) with a keycloak realm <stianst> jpkroehling: thing is you want to add an app to an existing realm, not create a new realm - as otherwise you don't get sso between consoles <jpkroehling> stianst, good point /me jpkroehling thinking about how that would affect multi tenancy <jpkroehling> but yes, you are right <stianst> jpkroehling: you'll need to explain me more about how multi tenancy works in hawkular <stianst> jpkroehling: but I imagine you'd have to "link" each tenant to a kc realm <jpkroehling> hawkular is not using multi tenancy features from KC, I'm thinking more about multi tenancy in KC itself :) <jpkroehling> but that's a problem for later, I guess <stianst> jpkroehling: now I'm really confused <jpkroehling> stianst, forget about the multi tenancy part :) it just just me thinking out loud about multi tenancy in KC, not related to Hawkular at all <stianst> jpkroehling: I reckon by default the mechanism to link hawkular to KC would take the hostname of KC, it would then link with master realm <stianst> jpkroehling: but, you could also link to a specific realm <stianst> jpkroehling: for example you may have one realm with KC admin, 2 x wildfly servers and a hawkular server <stianst> jpkroehling: then another realm with 2 x wildfly servers and a hawkular server <stianst> jpkroehling: in most cases though I'd say all servers would be managed through the same realm <jpkroehling> make sense <jpkroehling> stianst, is that automatic linking planned for 1.x? <stianst> jpkroehling: I hope to have some mechanism to make it easy to link a jboss project	0	0	https://issues.jboss.org/browse/HAWKULAR-65
6033	HAWKULAR-53	I verified this works. Shows proper version and git sha for hawkular-ui-components. How difficult would this be to add for hawkular repo git sha as well? So we can make sure the kettle and ui-components are matching up properly.	0	0	https://issues.jboss.org/browse/HAWKULAR-53
6034	HAWKULAR-47	[~alexandrem], can you please test this branch, if it fulfills your requirements? https://github.com/vrockai/hawkular-ui-components/tree/HAWKULAR-47 If you're happy with it, I'll make a PR. Thanks.	1	1	https://issues.jboss.org/browse/HAWKULAR-47
6035	HAWKULAR-47	[~mithomps], can you please test this? If it works for you, you can cherry-pick this commit and I'll set the JIRA status to resolved. https://github.com/vrockai/hawkular-ui-components/commit/ce732fdd43b58d719556e7de82f4041f743b9863	1	1	https://issues.jboss.org/browse/HAWKULAR-47
6036	HAWKULAR-27	Sure. It is already implemented in the HTML prototype: http://cardosogabriel.github.io/hawkular-client/application.html I sent an email with updates on Friday, did you receive it?	1	1	https://issues.jboss.org/browse/HAWKULAR-27
6037	HAWKULAR-24	This is my concept: https://github.com/vrockai/hawkular-ui-services/commit/1bb925881c32aec83d49eb4696e72915f19fc289 I'll add it other gulp projects. Should I add it to the slush generator, too?	1	1	https://issues.jboss.org/browse/HAWKULAR-24
6038	HAWKULAR-24	Can the file begin with the reference or does it need to have copyright first? For example: /// <reference path="metricsPlugin.ts"/> Can that be at the top or need to be after header?	1	1	https://issues.jboss.org/browse/HAWKULAR-24
6039	HAWKULAR-24	I've never seen files with something before the license itself. Is there a problem with that in TS?	1	1	https://issues.jboss.org/browse/HAWKULAR-24
6040	HAWKULAR-16	Is that still a thing?	1	1	https://issues.jboss.org/browse/HAWKULAR-16
6041	HAWKULAR-13	I was able to run the rhq-metrics server, so I'm able to look at the REST API by myself. I've got several issues. Some of the examples from the doc are not working for me. Like using the {{"numeric.5min": 100m}} when creating tenant, or accessing the metrics itself like "http://localhost:8080/rhq-metrics/{tenantId}/metrics/availability/{id}/meta" (what's the ID of metrics? in the examples, it has just name, and it won't allow me to create metrics with an "id" field). Is there something from Hawkular REST available yet? Can I try that interface by myself? By testing, do you mean integration tests? For unit tests, I think it's usual to use some mock back-end (because the situation above would be actually testing the server-side, not the client side in my opinion).	1	1	https://issues.jboss.org/browse/HAWKULAR-13
6042	HAWKULAR-13	Cool, so to conclude, I will: 1. Create ngResource services for all known endpoints (described in the readme file above). 2. Create a test-suite, which will actually check if those services work against a live server. I can create a separate gulp task for this. We can run it on our own, once we start the REST server, but it won't be part of the build. For that I need to know: Do we have a preferred project structure (where to put services)? Do we have preferred testing framework?	1	1	https://issues.jboss.org/browse/HAWKULAR-13
6043	HAWKULAR-13	I'm thinking that there will be many more services to come so we should probably have a 'services' directory at the root that services like this reside in. services/hawkular-rest-service WDYT?	1	1	https://issues.jboss.org/browse/HAWKULAR-13
6044	HAWKULAR-4	This does not yet work as expected / described snert:metrics hrupp$ npm install -g bower gulp typescript /usr/local/bin/tsc -> /usr/local/lib/node_modules/typescript/bin/tsc > v8flags@1.0.8 install /usr/local/lib/node_modules/gulp/node_modules/v8flags [...] snert:metrics hrupp$ gulp [13:05:03] Local gulp not found in /h/hawkular/ui/console/metrics [13:05:03] Try running: npm install gulp snert:metrics hrupp$ npm install gulp [..] snert:metrics hrupp$ gulp Error: Cannot find module 'wiredep' at Function.Module._resolveFilename (module.js:338:15) at Function.Module._load (module.js:280:25) at Module.require (module.js:364:17) at require (module.js:380:17) at Object.<anonymous> (/h/hawkular/ui/console/metrics/gulpfile.js:2:15) at Module._compile (module.js:456:26) at Object.Module._extensions..js (module.js:474:10) at Module.load (module.js:356:32) at Function.Module._load (module.js:312:12) at Module.require (module.js:364:17)	0	0	https://issues.jboss.org/browse/HAWKULAR-4

#	Requirement	Questions	Answered	Successfully Answered	URL
6045	HWKAGENT-180	The underlying error is: org.hawkular.dmr.api.DmrApiException: java.io.IOException: java.net.ConnectException: WFLYPRT0053: Could not connect to http-remoting://127.0.0.1:9990. The connection failed whose cause is: org.xnio.http.RedirectException: XNIO000816: Redirect encountered establishing connection We build the client via: new org.jboss.as.controller.client.ModelControllerClientConfiguration.Builder().setProtocol("http-remoting")....build() which gets the config which is passed to: org.jboss.as.controller.client.ModelControllerClient.Factory.create(theconfig)	0	0	https://issues.jboss.org/browse/HWKAGENT-180
6046	HWKAGENT-165	I was JUST thinking about address this today! And then you created this JIRA. Great minds think alike! :) I was thinking more along the lines of waiting for the remote server to be available (so for every local-dmr, remote-dmr, local-jmx, remote-jmx defined, try to connect to the server and if it can't just wait). But then your idea of waiting for an MBean made me realize that for things like local-jmx the MBeanServer is always going to be there so that won't help. [~tcunning] how do you propose we do this for JMX? Do we define a specific MBean(s) for the agent to wait for in remote-jmx or local-jmx entry? Something like: {code} managed-servers: local-jmx: name: Local JMX enabled: true wait-for: - my.domain:type=MyMBean - my.other.domain:type=MyOtherMBean {code} Where the "wait-for" defines a list of MBeans that must be registered before that managed server begins discovery and collecting data?	1	1	https://issues.jboss.org/browse/HWKAGENT-165
6047	HWKAGENT-160	I will submit this PR shortly - but I wanted to document what you will now see if the credentials are incorrect: {noformat} 12:40:33,182 WARN [org.hawkular.agent.monitor.service.MonitorService] (Hawkular WildFly Agent Startup Thread) HAWKMONITOR010081: Cannot get Hawkular Server status - does the agent have proper credentials? (401/Unauthorized) {noformat}	0	0	https://issues.jboss.org/browse/HWKAGENT-160
6048	HWKAGENT-151	What JMX support specifically are you looking for? If this was discussed on a mailing list can you point me to the thread?	0	0	https://issues.jboss.org/browse/HWKAGENT-151
6049	HWKAGENT-151	Do we need Jolokia support or JMX support ? And do you 'ship' Jolokia with Fuse on EAP ?	1	1	https://issues.jboss.org/browse/HWKAGENT-151
6050	HWKAGENT-140	"rate" metrics are not persisted, they are derived. Nothing for the agent to do. Closing this issue. From: http://www.hawkular.org/hawkular-metrics/docs/user-guide/#_metric_types "Rate data points are not persisted. They are computed at query time."	0	0	https://issues.jboss.org/browse/HWKAGENT-140
6051	HWKAGENT-85	[~jayshaughnessy] and [~bobmcwhirter] are currently very close to getting a swarm build for the agent that only requires the agent subsystem snippet .xml rather than a full standalone.xml. It also is a much smaller bundle than a full blown WildFly (should be just a simple uber-jar that runs with the "java -jar" command with some configuration file passed in perhaps on the command line). I don't know all the details yet, once we get something working, we'll post here with some details.	1	1	https://issues.jboss.org/browse/HWKAGENT-85
6052	HWKAGENT-80	[~mwringe] can you give more details on what these bearer tokens look like and where we get them? e.g. are they just simple strings that someone defines in the standalone.xml in the agent's <remote-jmx> or <remote-dmr> elements (like we do today with username/password)? Or do we need to involve SSL/security realms in Wildfly? Right now the DMR and JMX endpoints fully support SSL as long as someone configures the agent wildfly instance with the proper security realm definitions (basically just a reference to the truststore). They also support basic auth (at least they should, you can provide a username/password in the configs). I don't know what other functionality we need. The Prometheus endpoints do NOT support anything but http right now - not even basic auth. We'd just have to add some code to the connection stuff.	1	1	https://issues.jboss.org/browse/HWKAGENT-80
6053	HWKAGENT-79	[~mwringe] - can you give more details about what you are looking for? Before I figure out how to label the metrics, I have to figure out how the user is going to tell me what labels to attach to what metric. My first question would be - are these labels dynamic or can they be statically defined in the standalone.xml settings? I have a feeling these labels are dynamic - if so, what are they dependent upon and what do they look like and how do I determine what they are? Are these labels defined on a per-metric basis or per-resource basis? In other words, will ALL metrics from a specific resource have the SAME labels? Or will each individual metric have different labels, even if those metrics come from the same resource? Are there going to be more than one label per metric? Or is there only a single label per metric? Any other details let me know. I don't know what I don't know - so I may not be asking all the right questions.	1	1	https://issues.jboss.org/browse/HWKAGENT-79
6054	HWKAGENT-79	When I talk about 'labels' here what I really mean is 'tags' in the Hawkular Metrics sense. Not using the right term may have been confusing things here. Eg see http://www.hawkular.org/docs/rest/rest-metrics.html#PUT__gauges__id__tags In essence you can add a string key and value pair to a metric. This allows for specifying metadata about the metric and allows for querying based on this data. bq. My first question would be - are these labels dynamic or can they be statically defined in the standalone.xml settings? I have a feeling these labels are dynamic - if so, what are they dependent upon and what do they look like and how do I determine what they are? The idea here is that for a normal situation, they would specify these in the standalone.xml file. This would allow an admin to specify some information about the metrics they are gathering. On the OpenShift integration side, nothing really comes from the standalone.xml (except pointing to where the OpenShift server is). In essence this piece would interface with the java objects to programtically specify what would normally be done in the standalone.xml file. I am currently hacking around in the code right now to pull out the tag information from a running OpenShift cluster. bq. Are these labels defined on a per-metric basis or per-resource basis? In other words, will ALL metrics from a specific resource have the SAME labels? Or will each individual metric have different labels, even if those metrics come from the same resource? Labels would be applied on a per-metric basis. Each individual metric would have different labels. bq. Are there going to be more than one label per metric? Or is there only a single label per metric? More than one per metric. See the tags support in Hawkular Metrics	1	1	https://issues.jboss.org/browse/HWKAGENT-79
6055	HWKAGENT-79	[~mwringe] Can the tags be the same across all metric instances of a specific metric type? Or must the tag names be unique across even metric instances? For example, consider a EAP/WildFly case. There is a resource type called "WildFly Server" that represents WildFly app servers. This "WildFly Server" resource type has an associated metric type called "Heap Memory Used". If I am monitoring three WildFly Server instances (thus they are all of the type "WildFly Server"), each of those instances will have one metric instance of metric type "Heap Memory Used" (call the metric instances "Heap Memory Used #1" for WildFly Server #1, "Heap Memory Used #2" for WildFly Server #2, and "Heap Memory Used #3" for WildFly Server #3). Thus there is one metric type but because I have three resource instances being managed, I have three metric instances. Can the tags of those three metric instances be the same? Or must they somehow be unique among all three? If I want to tag my Heap Memory Usage metric with "foo=bar", can "Heap Memory Used #1", "Heap Memory Used #2" and "Heap Memory Used #3" all have the tag "foo=bar" or must they be something like "foo1=bar1" for "Heap Memory Used #1", and "foo2=bar2" for "Heap Memory Used #2", etc.??	1	1	https://issues.jboss.org/browse/HWKAGENT-79
6056	HWKAGENT-78	Question: why don't we just send this 'fancy id' to inventory when registering the metric? Clients should not assume the M~foo%bar[baz]~ format, but query inventory	1	1	https://issues.jboss.org/browse/HWKAGENT-78

#	Requirement	Questions	Answered	Successfully Answered	URL
6057	HWKAGENT-71	According to Brian, we can now run the agent subsystem in a host controller or domain controller. We need to add a call to setHostCapable() in our extension initialization. From HipChat: John Mazz 2:08 PM @BrianStansberry hey - I know I've asked you this several months ago (and several months before that :)) but I'm being asked about it again to see if its changed, so doing my due diligence, I'm asking for confirmation. The Domain Controller and Host Controller - they are NOT extensible by injecting my own custom subsystem in it (like I could do in a standard WildFly installation). Correct? I have a subsystem that I can configure in WildFly by adding my own <subsystem> element to standalone.xml and putting the module code under modules/ - I assume Domain and Host Controllers still cannot support such an extension. Brian Stansberry 2:08 PM @JohnMazzGuest you can add extensions to an HC; our standard host.xml has one for jmx John Mazz 2:09 PM really???? this is new. Brian Stansberry 2:09 PM since WF 9, maybe 10 John Mazz 2:09 PM ok. glad I asked. this is NOT true for domain controler, correct? or is it? Brian Stansberry 2:09 PM there's no difference a DC is just a HC with some config settings John Mazz 2:10 PM ok, so both domain and host controllers can take a standard WildFly subsystem extensions. I think you just made my life easier :) Brian Stansberry 2:11 PM there are some tweaks necessary; @KabirKhan are there docs? tweaks meaning we need to be sure the extension was written for this use case but I don't think they are a big deal Brian Stansberry pokes to refresh his memory John Mazz 2:12 PM ok, any docs you guys can provide would be appreciated. Brian Stansberry 2:13 PM @JohnMazzGuest I think this is the key bit: https://github.com/wildfly/wildfly-core/blob/master/jmx/src/main/java/org/jboss/as/jmx/JMXExtension.java#L101 javadoc of that method: /** * Mark a subsystem as host capable. This will only take effect if running on a HC, and be ignored on a standalone or managed server. * The standard behaviour on the HC is to register the subsystem resource definitions in the domain model under the {@code /profile=*} address. * If this method is called, the standard behaviour happens, but in addition the resource definitions are registered in the local host model * so that the subsystem can be added there as well. */ void setHostCapable(); John Mazz 2:14 PM nice. actually... awesome :D Brian Stansberry 2:15 PM if you look at our standard host.xml files, they include the jmx subsystem so that's kind of an example Kabir Khan 2:21 PM That is a good start. Sorry am afk There is also a test case https://github.com/wildfly/wildfly-core/blob/master/testsuite/domain/src/test/java/org/jboss/as/test/integration/domain/suites/HcExtensionAndSubsystemManagementTestCase.java	1	1	https://issues.jboss.org/browse/HWKAGENT-71
6058	HWKAGENT-62	HipChat between me/Peter and Brian: === Peter Palaga 9:37 AM @BrianStansberry we'd need some advice where in the WF installation tree our Hawkular Monitoring Agent should be placed John Mazz 9:37 AM ^^ refering to https://issues.jboss.org/browse/HWKAGENT-62 Peter Palaga 9:37 AM @BrianStansberry are you the best addressee for this kind of questions? Brian Stansberry 9:38 AM @PeterPalaga yes it should not be in the base layer the base layer is owned by the WildFly or EAP distribution Peter Palaga 9:39 AM @BrianStansberry OK @BrianStansberry the Agent should go to base layer even though it will not be maintained/patched by EAP/WF team? John Mazz 9:39 AM the question we then had is - is it a layer or add-on. The current thinking is "add-on" Brian Stansberry 9:40 AM @PeterPalaga it should *not* go in the base layer because it's not part of the base dist Peter Palaga 9:41 AM @BrianStansberry ah, overseen the "not". Sorry Brian Stansberry 9:41 AM np :) John Mazz 9:41 AM @BrianStansberry the agent can be installed in any WF instance (normal out-of-box WF distro, EAP product, BRMS, blah blah) - so I assume the agent shouldn't be in its own layer but rather an add-on. correct? Brian Stansberry 9:41 AM @JohnMazz the key difference between a layer and an addon is the modules in a layer take precedence over those in the base, and can override John Mazz 9:42 AM @BrianStansberry and yo have to identify it in layers configuration file right? Brian Stansberry 9:42 AM yes John Mazz 9:42 AM add-ons do not need to be identified anywhere? correct? or did I miss the add-ons config file? :) Brian Stansberry 9:42 AM right John Mazz 9:42 AM ok. makes sense. then that JIRA is correct then, that it should go in add-ons Brian Stansberry 9:43 AM layers.conf isn't so much about identifying, it's about declaring the precedence order since layers can take precedence add-ons can't so there's no add-ons.conf	1	1	https://issues.jboss.org/browse/HWKAGENT-62
6059	HWKAGENT-18	Is that still a thing?	0	0	https://issues.jboss.org/browse/HWKAGENT-18
6060	HWKAGENT-18	I can remember that i-testing reload was tricky because during the reload, the container closes the management connection which AFAIK the wf-maven-plugin was not able to handle properly (it somehow force-failed the whole build on reload). Are we still using the wf-maven-plugin to start the container? I can remember we were migrating to pure Arquillian in some components, but I am not sure if that was the case here in Agent too. I any case, the reload functionality should be properly i-tested and one should look again how wf-plugin or Arquillian can help.	0	0	https://issues.jboss.org/browse/HWKAGENT-18
6061	HWKAGENT-6	Can you explain this further? I don't know what the description means.	1	1	https://issues.jboss.org/browse/HWKAGENT-6
6062	HWKAGENT-6	Is it understandable?	1	1	https://issues.jboss.org/browse/HWKAGENT-6
6063	HWKAGENT-4	So what needs to be done on the invnetory side to enable HTTPS? Does it work in metrics, so that I can try to copy some config over? I believe this should be a stadalone.xml/web.xml config thing, right?	1	1	https://issues.jboss.org/browse/HWKAGENT-4
6064	HWKALERTS-265	[~rutlucas], what do you think? Assuming my thinking here is correct, I think this could be pretty important for a truly federated trigger consisting of event-style conditions (like logging). There are a couple of ways we could go about it, and I don't think it would be too bad to do. We could have a single setting on the trigger, or I suppose we could have condition-level granularity where condition could override a global trigger setting. We'd basically throw out condition evals that were too old, likely in a lazy way when checking for a firing.	0	0	https://issues.jboss.org/browse/HWKALERTS-265
6065	HWKALERTS-240	This seems like a good approach. Just to make sure I understood correctly, I think there was a typo in your comment. Did you mean: node/node1/disc.network.in.bytes[eth0] {name: disc.network.in.bytes, node: node1, adapter: eth0} node/node1/disc.network.in.bytes[eth1] {name: disc.network.in.bytes, node: node1, adapter: *eth1*} node/node2/disc.network.in.bytes[eth0] {name: disc.network.in.bytes, node: *node2*, adapter: eth0} node/node2/disc.network.in.bytes[eth2] {name: disc.network.in.bytes, node: *node2*, adapter: *eth1*} We Are not tagging the dynamic metrics at the moment but we can, and should (Implementation is still under discussion) So if we tag all the metrics and write the tag query as described, we would get a different alert for each of the adapters? and have a way to identify which node/adapter triggered the alert? Another question, can we set auto-resolve query for such alerts? Will it fire on every metric that satisfies the condition, or only once until resolved, etc?	1	1	https://issues.jboss.org/browse/HWKALERTS-240

#	Requirement	Questions	Answered	Successfully Answered	URL
6066	HWKALERTS-240	[~zgalor], yes, you are totally correct, I'm sorry for the confusion in the example tagging. Each metric would be tagged with name-value pairs that reflect the metric name. It is probably clear but to be explicit, the tagging would be applied on the metric definitions, not each data point. Tagging on each data point is possible, but it adds a lot of overhead, it is not meant for repeated tagging of the same information. By verbosely tagging the metric definitions it adds a lot if query flexibility, not just for this feature but in general. > So if we tag all the metrics and write the tag query as described, we would get a different alert for each of the adapters? I should mention that everything is still constrained by tenant. So, the query would be for all of the adapters under a tenant. We could further narrow the set of adapters by adding more criteria, as allowed by hMetrics' tag query language. By using the 'evalType: EACH' clause we are telling the alerter to test each adapter individually, so each offender generates an alert. If we used 'evalType: ALL' the alerter would combine all of the metric data and perform the test one time against the aggregate. > ...and have a way to identify which node/adapter triggered the alert? In this approach we have only the single trigger defined in alerting, and it can generate alerts for any adapter. The offending adapter can be found in the context data of the event generating the alert, The context data is basically a map with information lending context to an alert, or the data that fired the alert. In this case you'd have a context map entry like, {{context=\{"MetricName":"node/node1/disc.network.in.bytes\[eth0\]"\}.}} > can we set auto-resolve query for such alerts? Will it fire on every metric that satisfies the condition, or only once until resolved, etc? Right, this is a critical point in the design difference between the alerter approach and the group trigger approach. The alerter approach uses a single trigger that defers evaluation work to the external alerter. The group trigger approach creates a member trigger for each metric. The alerter approach is nice because it has only one trigger to manage regardless of whether metrics come or go. And that trigger does not require any forwarding of data from metrics to the alerting engine. Instead, we query the persisted data on a schedule. The group trigger approach introduces the overhead of synchronizing our member trigger population with the potentially large number of metrics we want to alert on. But it does have the advantage of more granular control. Using our example, you can use auto-resolve with the alerter-based trigger; but with the realization that if it fires for *any* adapter it would go into autoresolve mode and will not fire alerts until the autoresolve conditions are met (in this case probably a MissingCondition ensuring no more offending events are being received). If you don't use auto-resolve or auto-disable, you could get a repeating alert for, say, the same bad adapter. If you do use auto-resolve or auto-disable, you could potentially miss alerts for different adapters. So, the alerter approach does have this potential drawback. Using the group trigger approach, each member trigger can be handled separately, and so auto-resolve would probably work more as expected. A useful enhancement may be to add a sort of auto-disable feature into the metrics alerter. For example, we could add something like, "quietCount: N" and "quietDuration: Duration" options into the expression. The "quietCount" feature would mean: after a send, stay quiet (no resend) until after we see N false evaluations. The "quietDuration" feature would mean: after a send, stay quiet (no resend) until after we see false evaluations for the specified duration. For the ALL option is would stop any send. For the EACH option (our use case) it would stop sends for the relevant metrics. Perhaps this would be enough for us, it would stop repetition, although it would not automatically set alerts to RESOLVED, that would be done manually. Thoughts?	1	1	https://issues.jboss.org/browse/HWKALERTS-240
6067	HWKALERTS-240	> I think this could collides with the purpose of the Dampening... I agree that it is not an important extension when using "EvalType=ALL" on the Metrics Alerter condition. In this case you have a single trigger and the event generated by the alerter applies to the data for the entire set of target metrics. In this case I would recommend using dampening, autoDisable and autoResolve as usual, and there probably is no need to use quietCount. The critical use case is for "EvalType=EACH". This is the use case for this Jira, In this situation the external condition evaluates the condition expression for each target metric individually, and could generate events for multiple offenders. In essence this is like having a condition for multiple dataIds. We can't really use dampening, autoDisable or autoResolve effectively in this situation because we've got a single trigger dealing with multiple metrics. Adding quietCount to the alerter falls somewhere in between autoDisable and autoResolve. It's not really dampening because it doesn't delay a trigger firing. Instead, it prevents multiple firings *for the same metric* until we return to a steady state for that metric, as defined by a specified number of false evaluations. During this time the trigger remains active in order to service events for other metrics in the target set. Originally I had proposed quietCount and quietDuration but quietDuration isn't really useful. We already have evaluation frequency, so duration is just count * frequency. So, at this point I only propose quietCount. [~rutlucas], does this help explain the motivation?	1	1	https://issues.jboss.org/browse/HWKALERTS-240
6068	HWKALERTS-219	Hi Daniel, The update of single conditions was discussed in preliminar versions of Alerting and it has some implications in the internal process. What is the use case ? Take into account that a put operation is not heavy, and in terms of efforts it is even costly to update an attribute rather to update the full conditions set.	1	1	https://issues.jboss.org/browse/HWKALERTS-219
6069	HWKALERTS-201	Do you have some tests where we can check before/after ? Changes sound good, but it would be good to have something to get measures. Something like Perf*ITest could be good to follow a convention for these scenarios.	1	1	https://issues.jboss.org/browse/HWKALERTS-201
6070	HWKALERTS-137	Docs say Endpoint /actions/plugin/{actionPlugin} Find all action ids of an specific action plugin How can I distinguish between * no id available for this plugin -> 200 + empty colleciton * plugin not deployed -> 404 not found	1	1	https://issues.jboss.org/browse/HWKALERTS-137
6071	HWKALERTS-123	I haven't thought about this very much. Is this tied to a feature request for Hawkular? Anyway, I agree that conditions and dampening are possible paths but I'm thinking we may want to pull this up higher, and be able to "time-decorate" triggers. Although adding time aspects to individual conditions is intriguing, it could also get complicated to manage. And for dampening, even more complicated. If it gets too difficult to understand why a trigger didn't fire then value may be diminished. Instead, I can imagine letting a trigger fire, and then handling it in time-dependent ways like suppressing it, changing severity, or performing a different action set depending on the time. This would keep the existing model the same and fairly simple. The trigger severity and actions would act as defaults which could optionally be overridden by a time-decorator, or something like that. We need to look at some use cases. (it would be nice if Jira showed who was logged in, this comment is actually from [~jayshaughnessy])	1	1	https://issues.jboss.org/browse/HWKALERTS-123
6072	HWKALERTS-107	I think we don't have a clear way to not use the VFS library. In our scenario, a .jar deployed in a .war, should have visibility of the WEB-INF/classes to find specific annotations. So, classes are vfs resources and I don't know another way to inspect the vfs resources without using the propietary library. [~richard_opalka] or [~ropalka] what do you think ? This code is tested against EAP62, Wildfly9 and Wildfly10 versions. Would you suggest a different way to inspect classes folder package as VFS resource ?	0	0	https://issues.jboss.org/browse/HWKALERTS-107
6073	HWKALERTS-80	[~rutlucas], Is this still relevant or can it be closed?	1	0	https://issues.jboss.org/browse/HWKALERTS-80
6074	HWKALERTS-68	Can't accounts be used independently of the bus, and of hawkular? Would keeping accounts give standalone users an option for security? If we kept accounts how easy is it to ignore if a consumer doesn't care?	1	1	https://issues.jboss.org/browse/HWKALERTS-68

#	Requirement	Questions	Answered	Successfully Answered	URL
6075	HWKALERTS-65	Can you explain this a little bit further? Why would an action plugin have any dependency on alert status? I thought action plugins supported the definition of an action and that actions were assigned to triggers (currently, implicitly for open status). The actions were then requested by the engine and performed by the plugin. Why does the plugin care about the alert status in that model?	1	1	https://issues.jboss.org/browse/HWKALERTS-65
6076	HWKALERTS-65	Are you saying that a single action would perform differently based on alert status? I was assuming that different actions would be defined. It's not obvious to me that a single action should perform different tasks, this may be something to discuss in a broader group if that is the design.	1	1	https://issues.jboss.org/browse/HWKALERTS-65
6077	HWKALERTS-57	I don't think it is necessary to provide anything but a generic alert message out of box, with the ability for the user to create custom messages for specific triggers. The alerts component won't know about different kinds of triggers. Of course Hawkular does have different kinds of built-in triggers, for thresholds and avail, so Hawkular could define more messages. What is the "alertLink" in the generic message? What may be good is the ability to really pretty-print the Alert, or portions of the Alert (header, evals), in the message.	0	0	https://issues.jboss.org/browse/HWKALERTS-57
6078	HWKALERTS-52	Interoperability, great. Have you considered a particular system? Nagios checks maybe?	1	1	https://issues.jboss.org/browse/HWKALERTS-52
6079	HWKALERTS-49	> Type - this is used to categorise the situations, e.g. Exception, SLA Violation, etc. > Subject - the subject of the Situation, generally relates to a service These do sound like Tags to me. The values seem open-ended. If the Trigger were to be tagged the subsequent alerts could be accessed via the trigger's tags. > Timestamp > Assigned to We timestamp alerts at each lifecycle point: create/ack/resolved. And I think the ackBy field could be the assignedTo value. > Severity This should likely be an enhancement. low,medium,high,crtitical seem like good values. We can discuss and likely generate an enhancement Jira. > Link to associated activity event id - used to retrieve any associated message I'm not sure about this. It would differ for each Alert, I think, and so a Trigger tag is probably not appropriate. Perhaps it could be derived from the information already on the alert, like the condition evaluation information? It's not clear to me where this information would come from but perhaps it would require the need for alert-specific tags, something we don't have at the moment. > Are tags the equivalent concept? Should there be a way to define a tag as private? Tags can be flagged as visible=false, although the actual semantic for that is unclear. The thinking was that it should not be presented in a gui. * Properties (e.g. order item code, order value, customer id) Again, this seems like it would be alert-specific. And again, I'm not sure at which point this would be assigned. We'll need to discuss further. * Resolution State (unresolved, in progress, resolved) Yay, an existing mapping! * Context/Correlation Ids (e.g. order id) Perhaps already in the captured Alert information? * Parent alert id This is also something we should discuss. This sounds like a resubmission of a business transaction? If so, it would seem the alert id would be stored on some new BTResubmission object?	1	1	https://issues.jboss.org/browse/HWKALERTS-49
6080	HWKALERTS-49	Does the Action have access to the source event(s) that triggered the Alert? Otherwise not sure the Action would be able to establish the link. To give a concrete example, if the source event was an object representing a business transaction trace, and it had an id, then it would be useful to place that id within the Alert in a properties field - then (for example) the BTM UI could retrieve Alerts containing the 'btm id' property to present to its users, and then when the user selects a particular alert, the "btm id" property value can be used to retrieve the business transaction trace. Currently it appears the Alert does not have a properties type field - would it be ok to add this, to enable adhoc information to be added to Alerts?	1	1	https://issues.jboss.org/browse/HWKALERTS-49
6081	HWKALERTS-47	One behavioral point that needs to be formalized. Currently Tag.category is optional and can be null. The question is whether a null category when fetching should act as a value or as a wildcard. Do we match tags that are explicitly null:name or tags that are *:name ?	0	0	https://issues.jboss.org/browse/HWKALERTS-47
6082	HWKALERTS-43	Hi Mike, On which items would be interested ? Just new alerts ? or also some change in the definitions ? We have like two domains in alerts: the definitions part, that is mostly static, and the "live" part fhat is the alerts/actions as a result of a trigger. If you can ellaborate the idea, I can work on that as well. Thanks, Lucas	1	1	https://issues.jboss.org/browse/HWKALERTS-43
6083	HWKALERTS-43	Ok, ¿ in the technical side, which preferred mechanism could be for the implementation ? From what I understand from webhooks the point is that as a result of a new alert we should invoke a defined endpoint. right ? Do you have a previous webhook what I can take a look ? Normally, the notification/callback mechanism is made via actions-plugins, my first try will be to create a new one but if you point me how in other parts is doing today I can see what is the preferred way. Thanks !	1	1	https://issues.jboss.org/browse/HWKALERTS-43
6084	HWKALERTS-29	[~rutlucas] first draft jmeter script is attached. It just sends 1 request per endpoint. Could you please take a look and provide any feedback? Currently 2 issues noticed: 1. Endpoint /actions/send -> POST -> Parameter body Required false -> request without body returns Internal Server Error 2. If we have >1 trigger conditions for the same trigger: GET http://127.0.0.1:8080/hawkular/alerts/triggers/1/conditions [: { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-1", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-2", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-3", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-4", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-5", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-6", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-7", : : "dataId":"10", : : "ignoreCase":false : }, : { : : "triggerId":"1", : : "triggerMode":"SAFETY", : : "type":"STRING", : : "conditionId":"1-SAFETY-8-8", : : "dataId":"10", : : "ignoreCase":false : }] I try to update one condition (by PUT): PUT http://127.0.0.1:8080/hawkular/alerts/triggers/1/conditions/1-SAFETY-8-10 PUT data: { "conditionId" : "8", "type" : "STRING", "dataId" : 10, "triggerId" : "1", "triggerMode" : "SAFETY" } The following response is received: { : "errorMsg":"Condition 1-SAFETY-1-1 doesn't exist" } Response code: 400	0	0	https://issues.jboss.org/browse/HWKALERTS-29
6085	HWKALERTS-18	Lucas, is this now done, did it go in with the cassandra impl?	1	1	https://issues.jboss.org/browse/HWKALERTS-18
6086	HWKALERTS-17	Is this still valid? If so this needs some more information as to what the motivation is, and what the priority may be.	1	1	https://issues.jboss.org/browse/HWKALERTS-17
6087	HWKALERTS-17	Perhaps, with the status of the project this JIRA has not much sense. I think that this JIRA can be re-arrange to study if we can unify the packaging from a .ear to a .war, as we can add the EJB3 used as .jar. This has no priority at the moment as there is not issue related, it's just a suggestion to follow same package (if possible as other components).	1	1	https://issues.jboss.org/browse/HWKALERTS-17
6088	HWKALERTS-9	Would a simple Sauce Labs automated test validate this as well?	0	0	https://issues.jboss.org/browse/HWKALERTS-9

#	Requirement	Questions	Answered	Successfully Answered	URL
6089	HWKALERTS-4	So I've spent some time this morning looking at how PagerDuty we could integrate with PagerDuty. h5. Email The simplest solution is to use their email integration. In your PagerDuty account, you create a new email integration, and they give you a special email address. Then you simply configure the Hawkular email sender to use this address. PagerDuty has a rule system to help the user determine when an email is the signal for a new or existing incident. h5. API They also have a REST API. In this case, the caller must provide an incident key. I'm not sure yet how we could provide this information. If we use the triggerId then all actions will be sent to PagerDuty as the same incident. Which is wrong. On the other hand, it would also be a bad idea to send every action as a new PagerDuty incident. Is it possible with the current API to determine when a trigger (in the Hawkular sense) goes into the "alerted" state?	1	1	https://issues.jboss.org/browse/HWKALERTS-4
6090	HWKALERTS-4	[~jayshaughnessy] [~lponce] : I don't know if you get notifications for all JIRAs. Can we talk about that next week? Here, or maybe better on the phone? Thanks.	1	1	https://issues.jboss.org/browse/HWKALERTS-4
6091	HWKALERTS-2	Is it natural to think in some kind of polling ? I am thinking in something like this: 1.- I have a trigger checking if disk is full. 2.- Once disk is full, an alert is thrown and trigger is disabled to avoid multiple and unnecessary alerting. 3.- Then we can set up a rule like "if trigger was disabled by an alert, check each X interval if it should be re-enable". With [3] I see that an user doesn't need to define a explicit rule to enable a trigger, and this rule can be also generic.	1	1	https://issues.jboss.org/browse/HWKALERTS-2
6092	HWKAPM-892	Doesn't openshift (and possibly kubernetes) have a way to understand dependencies between the services - and therefore only indicate service is 'ready' only if its dependencies are also ready? Reason for question is to understand whether the server readiness probe only needs to indicate its own state, or also internally interrogate the readiness of its storage (i.e. cassandra)? If it does take into account the readiness of its dependencies, then can't we just keep the readiness of each component simple and (if a matter of milliseconds) just report readiness and liveness as both being when ready to handle requests?	1	1	https://issues.jboss.org/browse/HWKAPM-892
6093	HWKAPM-891	So is it not possible to get the client Provider automatically registered? If it is possible then would be good to support that aswell, to make simple instrumentation of Jax-rs app as non-intrusive as possible.	1	0	https://issues.jboss.org/browse/HWKAPM-891
6094	HWKAPM-873	The Hawkular project has a grafana datasource (https://github.com/hawkular/hawkular-grafana-datasource) for presenting metrics information, so potentially it would be possible for us to provide a datasource above Jaeger (regardless of underlying datastore). Would it be possible for you to outline the type of information you were looking to display in Grafana, so that we could assess what might be possible?	1	1	https://issues.jboss.org/browse/HWKAPM-873
6095	HWKAPM-873	What we want to achieve is, to store all logging information via span.log, so it would be amazingly easy to investigate issues when having the traceId. Following the semantic conventions of opentracing, the statuscode of http requests (i.e. 500) would be the starting point and we could list all logs of all services involved in this operation. Another important aspect is a high level view, that just shows failed requests with statuscode 4xx or 5xx per hour. Allowing a drill down with a view per service name / operation name. Grafana is our current choice, cause we also could build all kinds of metric dashboard with the same tool. If it would be possible to query jaeger with grafana via hawkular datasource, this would be awesome. One thing that comes to my mind is to build a high level dashboard which aggregates the before mentioned data and also having a drilled down dashboard per trace, which could be visualized with https://github.com/jdbranham/grafana-diagram (hehe just thinking loud, maybe it makes no sense). Grafana has some nice templating features, so other diagrams on the detailed dashboard could automatically show metrics of involved services. What do you think about my ideas? Maybe you guys have some better recommondations? Martin	1	0	https://issues.jboss.org/browse/HWKAPM-873
6096	HWKAPM-873	Hi Martin, thanks for the additional information. Your first requirement seems a better fit for the tracing UI itself, which would allow you to filter out the trace instances you were interested in and then view the individual spans and their logs/tags. Is there any particular reason why you would want this all in the Grafana UI, rather than finding a way to use both UI's together? The second requirement is more metrics based - Jaeger provides the ability for its clients to provide a way to capture certain metrics, and I believe in the near future it will be possible to provide these via a Prometheus endpoint, which would enable metric systems (such as Hawkular) to capture this info - and in the case of Hawkular present those details via Grafana. So in this particular case I don't think we even need a Grafana datasouce sitting above Jaeger itself. The grafana-diagram looks interesting, and if having close integration between a tracing UI (e.g. Jaeger) and Grafana was not possible, then it might provide a future solution - but would need to investigate other options first.	1	1	https://issues.jboss.org/browse/HWKAPM-873
6097	HWKAPM-873	Hey Gary, now I can come back to you with a more sophisticated answer :) Yeah, I agree on your points. The support team will probably not dig that deep into analysis when monitoring system performance. To switch UIs for in-depth analysis is okay, I guess. While tihinking about best approaches some other thoughts came to mind and you already answered som in your response: In general there are 3 types of metrics one would want to gather: - Timebased Metrics - Tracing information - Logging information And there are different use cases, where a different metric type applies best: 1) general system performance - distribution of response times (<200ms, >200, >1000, etc.) - distribution of http status codes (2xx, 3xx, 4xx, 5xx) - alerting rules 2) in-depth analysis, when alerts are triggered - find requests that have unwanted characteristics (i.e. 5xx server error, response is slow) - find the causing service in the chain of all invoked services for this request - find the root cause by analysing all logs that are attached to the identified trace So the idea is to have alle information for use case 1) in grafana, so we could build dashboards that show the state of our services, maybe group them by labels and so on. So for use case 1 a metrics system would be sufficient. My first idea was to aggregate tracing information for use case 1), but since tracing can be sampled it is probably not the best idea.Tracing and in-depth analysis is not needed at this point. For use case 2) we need the tracing information and all attached logs linked together. This is what Jaeger is already doing, so this should work fine. If i get this right, a connection from grafana to a Jaeger datasource/Cassandra is not needed at all for this constellation. We could build a scripted grafana dashboard which provides a link that prefills for example time range and desired filters like response status codes for the jaeger ui, if the ui supports it (didn't check it yet), so we could achieve a quite good integration. Can you provide more details about the jeager metrics and a possible prometheus endpoint? Sounds really good. Thanks for your time. This discussion helps a lot to refine our tracing concept.	1	0	https://issues.jboss.org/browse/HWKAPM-873

#	Requirement	Questions	Answered	Successfully Answered	URL
6098	HWKAPM-873	bq. We could build a scripted grafana dashboard which provides a link that prefills for example time range and desired filters like response status codes for the jaeger ui, if the ui supports it (didn't check it yet), so we could achieve a quite good integration. If it doesn't then just create an issue in the https://github.com/uber/jaeger-ui repo, as this sounds like a useful feature. bq. Can you provide more details about the jeager metrics and a possible prometheus endpoint? Sounds really good. I've just created an issue for this on the Jaeger Java client: https://github.com/uber/jaeger-client-java/issues/172 Its something we are interested in supporting in the near future - so feel free to add your ideas to that issue. Once Java is implemented, we could look at other languages such as Node.js.	0	0	https://issues.jboss.org/browse/HWKAPM-873

We'll break those all if we just change from "jdoe" to "admin". Is it worth it?	1	1	https://issues.jboss.org/browse/HWKAPM-861
6100	HWKAPM-861	How about adding admin:password as a second user? so jdoe is still supported.	0	0	https://issues.jboss.org/browse/HWKAPM-861
6101	HWKAPM-847	[~objectiser] I see the list being updated, the only situation where that doesn't happen is having a service selected (in the dropdown) and a new buildstamp exists, it will need to select a different service and then back to the previous to see the new buildstamps. Is this what you are observing as well ?	0	0	https://issues.jboss.org/browse/HWKAPM-847
6102	HWKAPM-837	I will start as always with my why questions... Are users(developers) of OT interested in a text representation of returned HTTP 500 codes? Why is it good to capture this text message returned to API users? In my opinion this text often say something like "Some error happened and we are working on it...", but internally you might want log different data/text/error code to find a real problem..... Is returned text information helpful for operators to find the root of the error? Probably not, but if they look at trace data they would find more information how the request flowed through system, even better if all exceptions are logged. This is an instrumentation issue right? In jaxrs a business error would be probably represented by an exception. Which is handled by exception mapper. It would make sense to add a "error" log "event" with payload like exception message and stack trace? I did this for spring instrumentation: https://github.com/opentracing-contrib/java-spring-web/pull/1/files#diff-caa4c5580cd6b8b30a1362ec751c474cR91 Would it make sense to use log instead of `fault` tag? Would it be possible to write rules to capture exceptions? [1]: https://docs.oracle.com/javaee/7/api/javax/ws/rs/ext/ExceptionMapper.html	0	0	https://issues.jboss.org/browse/HWKAPM-837
6103	HWKAPM-835	I think that it's important to keep performance impact of instrumentation as low as possible. In other projects they even care about the performance of spans serialization... Data on UI can be processed easily to the most appropriate form (e.g. timeline view or nodes) while keeping data model clear and consistent and self-describing. I don't see that this approach will put more work on the server. Other thing about the consideration should be processing of reported data on the server. Concretely we use JMS retry mechanism to wait for "all" fragments being reported to be able to calculate trace completion time. Processing of the spans could be simplified to keep as minimal state as possible e.g. first span arrives we can derive so called "TraceCompletionTime" and publish it. Next span arrives, use data from previous event and publish next event. When claiming putting more work on the server I would like to see why. The current solution is not performance tuned either. I'm bit scared how JMS with our retry approach would perform when monitoring big systems. Yes, I'm talking about our own data model supporting all OT features including the possibility of multiple references (parents). This model should replace the whole Trace model (step by step). We could start simple: 1. well define model, Think about all aspects, especially about our "analytics" events, what impact it will have. 2. implement REST/DB handling 3. analytics handling on top of span model. + unit/integration test for it. 4*. use model in our providers js+java 5*. teach UI to use new model 6. merge branches from 4+5 and remove Trace model.	0	0	https://issues.jboss.org/browse/HWKAPM-835

#	Requirement	Questions	Answered	Successfully Answered	URL
6104	HWKAPM-835	> Support for baggage... whether the baggage and tags should be treated as separate concepts Correct me if I'm wrong: * Tags are designed to add data to the span which are reported to the server and are not passed to children spans either available for reading to the API consumer. * Baggage is designed to add data to the span which is available for reading by API consumer and it's not reported to the server. Does it answer the question? > Trace id We discussed this, currently OT spec assumes all spans are assumed from one traceId. About the transactions. For me it makes sense that one trace traverses multiple transactions. E.g. in microservices each team is responsible for a particular service and can define transactions for their service. Then usually to fulfill some business task more "transactions" can be involved (get users->get content of shopping cart->). Does it make sense?	0	0	https://issues.jboss.org/browse/HWKAPM-835
6105	HWKAPM-835	Could you point me at the time in the video when there is baggage shown in UI? What I saw was {{log}} payload, concretely mutex queue on fryer which contains ordered dunuts favours with client ids.	0	0	https://issues.jboss.org/browse/HWKAPM-835
6106	HWKAPM-830	I'm not UX expert by it seems reasonable to me that filter would stay if I selected something. I will play more with it and see how it goes... Proposed tab names look good. Could we find a better name for "Distributed Tracing? The whole tool is for distributed tracing. I'm proposing: Latest Traces +2, Traces +1. Tab would by default sort traces from latest to oldest.	0	0	https://issues.jboss.org/browse/HWKAPM-830
6107	HWKAPM-799	Is this the right way to do it? Sort ascending on server side and on client side re-sort do a descending order?	1	1	https://issues.jboss.org/browse/HWKAPM-799
6108	HWKAPM-779	Looks good to me - have you asked Heiko for comment? I haven't had any experience with fractions - does it provide some way to provide configuration, e.g. sampling, recorder?	1	1	https://issues.jboss.org/browse/HWKAPM-779
6109	HWKAPM-779	So it would not be possible to have a generic opentracing fraction where users would provide their favorite tracer implementation. The best what we can do is to implement opentracing-hawkular fraction. Should I proceed with it?	1	1	https://issues.jboss.org/browse/HWKAPM-779
6110	HWKAPM-764	Just to clarify, will the sampling decision be applied prior to the trace fragment being submitted to the recorder (which may potentially be batching fragments)?	1	1	https://issues.jboss.org/browse/HWKAPM-764
6111	HWKAPM-762	Just to clarify, are you thinking the HAWKULAR_APM_SERVICE_* can be used in place of the HAWKULAR_APM_URI? So we update the opentracing providers to be aware of these vars aswell? Also - the OPENSHIFT_BUILD_NAME could be used as a default 'service' tag/property - but should it be qualified by the project name (OPENSHIFT_BUILD_NAMESPACE) - I guess this will depend upon how the projects are used.	1	1	https://issues.jboss.org/browse/HWKAPM-762
6112	HWKAPM-759	Just to clarify, are you saying that we can rename the book, and it will update the URI to the book? but is not dependent upon the gitrepo name?	1	1	https://issues.jboss.org/browse/HWKAPM-759
6113	HWKAPM-758	What are the cons/pros compared to Apache Kafka?	1	1	https://issues.jboss.org/browse/HWKAPM-758
6114	HWKAPM-754	[~pavol_loffay] Would be good to get a consistent Sampler api and implementations across providers. Is the proposed API ok? {noformat} Sampler { SampleLevel getSampleLevel(Trace); } {noformat} (probably will rename ReportingLevel to SampleLevel) Also does the rate limiting implementation make sense as the initial simple implementation that we provide out of the box?	1	1	https://issues.jboss.org/browse/HWKAPM-754
6115	HWKAPM-754	Could you please define `SampleLevel` semantics? Sampler should basically tell if the trace should be reported e.g. passed to the underlying reporter or not. What you designed returns a level and client code would have to decide whether report the data or not. Something like this would make more sense to me: {code:java} Sampler { boolean isSampled(Trace); } {code}	1	0	https://issues.jboss.org/browse/HWKAPM-754
6116	HWKAPM-754	Sure no problem. Could you please describe that your rate limiting impl in some pseudo code?	1	0	https://issues.jboss.org/browse/HWKAPM-754
6117	HWKAPM-753	Discussion from opentracing gitter channel: {noformat} Pavol Loffay @pavolloffay 16:36 Hey, I have a question: Is it valid to pass spans from different traces to tracer.startSpan("foo").addReference(span1).addReference(span2)? Gary Brown @objectiser 18:26 The spec says "A Span may reference zero or more other Spans that are causally related. OpenTracing presently defines two types of references: ChildOf and FollowsFrom. Both reference types specifically model direct causal relationships between a child Span and a parent Span". It does not directly say whether those spans belong to the same or different trace instances. But I believe in a 'join' scenario, the spans could belong to different trace instances. It would be good to get clarification from the spec authors. bhs @bensigelman 23:43 @objectiser I agree that the spec should be clearer. By definition, Spans are in the same trace if they have transitive references to each other. The fact that Dapper/Zipkin choose trace_ids at the root and expect them to be unique throughout a trace is a little problematic but not a dealbreaker here… I personally really regret this aspect of Dapper's design, FWIW, as it limited the design space and for no (very) good reason I've filed an issue about improving the spec: opentracing/specification#19 {noformat}	1	0	https://issues.jboss.org/browse/HWKAPM-753
6118	HWKAPM-743	Is OpenTracing making use of the ServiceLoader API? If so, that's enough for an implementation to be chosen at runtime by just plugging it in. As a provider, we might chose to provide an additional CDI integration, but I would keep those separate: the actual implementation in a library (with META-INF/services/io.opentracing.Tracer) and a CDI integration. As a consumer, I might have several reasons why I'd want to have my own CDI producer for the Tracer.	1	1	https://issues.jboss.org/browse/HWKAPM-743
6119	HWKAPM-743	[~juraci.costa] For clarity, could you provide an example of why a developer would want their own CDI producer? The current opentracing impl can be obtained via service loader, but the opentracing spec (or abstract java impl) does not make any recommendations on how the tracer should be obtained by the app.	1	1	https://issues.jboss.org/browse/HWKAPM-743
6120	HWKAPM-743	One case could be to provide it in a different scope as the one provided by the implementation: I might want to make it request-scoped or session-scoped in a multi tenant application, but as application scoped for a single-tenant solution. Or I might want to report different data to different servers. Or I might just want to wrap it on my own implementation, to workaround a possible bug. {quote}The current opentracing impl can be obtained via service loader, but the opentracing spec (or abstract java impl) does not make any recommendations on how the tracer should be obtained by the app.{quote} How does it look like? I tried to find an example on OpenTracing's repo, but couldn't find one.	1	1	https://issues.jboss.org/browse/HWKAPM-743
6121	HWKAPM-736	"Do we want to make it easier for an APM user to create alert triggers? If so, what types of trigger should be supported, and how should they be managed in the UI (i.e. to enable edit/deletion)." Bringing some experience from ManageIQ integration. In ManageIQ we use the concept of alert template which maps with a groupt trigger (in Hawkular Alerting terminology), this means that trigger is created once and propagated in several instances with the benefit to modify the group trigger and see the change propagated at members level. This can also helps to reduce the steps to deal with triggers definitions.	1	1	https://issues.jboss.org/browse/HWKAPM-736
6122	HWKAPM-736	Could you provide some examples of what an alert template may look like, based on the scenario I have mentioned? e.g. creating an alert trigger to check if the completion time is above a particular threshold, possibly also with some property filter? For example, if the trigger was for: transaction=Place Order url=/x/y/z operation=POST property(name=item,value=car), duration over 50ms	1	0	https://issues.jboss.org/browse/HWKAPM-736

#	Requirement	Questions	Answered	Successfully Answered	URL
6123	HWKAPM-736	Can we somehow reuse those things from MiQ? IIRC, it was done as web components, so, there's a chance we might be able to reuse a lot of the stuff from there.	0	0	https://issues.jboss.org/browse/HWKAPM-736
6124	HWKAPM-736	"Can we somehow reuse those things from MiQ? IIRC, it was done as web components, so, there's a chance we might be able to reuse a lot of the stuff from there." I don't think so. ManageIQ integrates Hawkular Alerting from backend-to-backend. So ManageIQ UI is only talking with ManageIQ model of Alerts/Alerts profiles and their own Events semantic. What we do, is to translate those models into Hawkular Alerting. Some of them are pure 1to1 (i.e. MiQ Alert into a Group Trigger) and others need some adjustments.	1	1	https://issues.jboss.org/browse/HWKAPM-736
6125	HWKAPM-736	"For example, if the trigger was for: transaction=Place Order url=/x/y/z operation=POST property(name=item,value=car), duration over 50ms" On this case, how are modelling the events ? I mean, this transaction is coming from several services / applications ? Do we want to be notified per service/app ? Or we want a single trigger per all the possible events of or possible services ? I think that is the main point to discuss how we want to model. In a nutshell, Hawkular Alerting operates at dataId level. That means that a condition is linked with a dataId. If it is too generic (i.e. dataId="apm") a condition will process everything, and it we personalize it (i.e. dataId="service-a", dataId="service-b"). We can operate to such degree of granularity to define what we want to evaluate for alerting.	1	1	https://issues.jboss.org/browse/HWKAPM-736
6126	HWKAPM-736	[~jayshaughnessy] [~rutlucas] We are going to be looking at a change to the way we generate trace completion events - currently a single event is generated when the end to end trace is built and the time derived - however there is a delay in reporting the event, as we need to be sure we have received all possible data related to the trace. We are considering taking a different approach where we may produce a trace completion event earlier, and in the case where further trace data is received we then send one or more update events. So potentially for a single trace instance, there may be a series of events - but ideally from an alerts perspective we would like it to be processed as a single event? For example, the event has an id - so if the alerts engine receives multiple events for the same id - does it re-process the event and any subsequent effect - i.e. if the first event didn't meet the criteria, but the second one does, then it triggers after the second event - but then if a third update for the same event arrives that means the criteria is no longer valid, is the alert (that was triggered) cancelled? Alternatively, if during the updates, the alert is triggered, is it possible to then suppress further processing of the event, so that the alert actions are not performed for each subsequent update?	1	0	https://issues.jboss.org/browse/HWKAPM-736
6127	HWKAPM-731	Looks good - I think just using the single unit on the service dependency diagram is probably best. How do the durations show up in the tooltips? In the same way as in the nodes?	1	1	https://issues.jboss.org/browse/HWKAPM-731
6128	HWKAPM-731	[~objectiser], I've attached two screenshots for the DT and Instance diagrams, with single and two units, for comparison. WDYT ? For me, I'm not sure about this (and it's kind of a general feeling I'm having with this change) as sometimes it's hard to compare due to different units.. maybe with a different range, like not switching immediately to seconds after 1000ms, but a higher value, like 5000.	1	1	https://issues.jboss.org/browse/HWKAPM-731
6129	HWKAPM-731	It would not need to apply the same pattern for all units ([~gcardoso], can you confirm?), so we could have different rules for different units. I think above some threshold (let's say when we enter the minutes), second unit make sense.. 1.25 minutes is not clear that is actually 1m 15s. Before that, I think we can go with single unit (as 1.234 seconds is actually 1s 234ms). My concern is when we see a 700 value, we need to be carefully looking if it's 700µs or 700ms.. same for ms vs s.	1	1	https://issues.jboss.org/browse/HWKAPM-731
6130	HWKAPM-722	[~gcardoso], looks good to me. Is there any patternfly component we might (re)use for this or should be done from scratch ?	1	0	https://issues.jboss.org/browse/HWKAPM-722
6131	HWKAPM-722	I'm going to add some my thoughts: * it should be possible to expand/collapse spans from one service -- EDIT actually it should be possible to expand/collapse any span which has children. * logs(event in time) should be highlighted in span. How to deal with events which start/end time is out of span time span? We can show them at beginning/end of span or show them at right place within the trace - in case they are in trace <start, end> interval, or show them at beginning/start of trace (in line of given span) if they are outside of span timespan. * Highlight critical path * consider showing a vertical line across all expanded spans. It should help to see which spans started at the same time.. Color scheme: * each span with different color or the same color for spans from the same service?	0	0	https://issues.jboss.org/browse/HWKAPM-722
6132	HWKAPM-721	[~gcardoso] Hi Gabriel - we are thinking about adding an extra level - do you have any thoughts on another colour that could be introduced in the scale?	1	1	https://issues.jboss.org/browse/HWKAPM-721
6133	HWKAPM-721	Currently we have 4 colors. Do u want to go for a 5 color scheme? The extremes would still be green and red, correct?	1	1	https://issues.jboss.org/browse/HWKAPM-721
6134	HWKAPM-721	Yes - we have in interim solution which adds pf-orange-500 just before the red. Is this an acceptable addition, or should a different set be used?	1	1	https://issues.jboss.org/browse/HWKAPM-721
6135	HWKAPM-721	[~gcardoso], I guess you've missed attaching the image. As I've discussed with Gary before, I think it's harder to distinguish between what is a good/better green than between darker yellow/orange. I'm attaching a sample with the currently used colors, [Get Account] is the lighter orange (gold), Account Manager is the middle orange and AccountsDB[RetrieveAccount] is the newly introduced darker orange. !8TscfQPPP.png|thumbnail! WDYT ?	1	0	https://issues.jboss.org/browse/HWKAPM-721
6136	HWKAPM-720	I uploaded two images using the same color code based on patternfly colors. Also we should use the same font sizes / colors / icon sizes for both charts. We can even define same spaces inside the boxes for both (they are slightly different now) if possible. What do u think about the colors?	1	1	https://issues.jboss.org/browse/HWKAPM-720
6137	HWKAPM-720	Difficult to say - I think the colours are fine, but personally prefer the single left strip rather than the whole node being in the colour. But think we need to get a wide range of views to see what is preferred. Would it be possible to provide an image using these colours but just down the left hand side of the symbols, to provide a comparison?	1	1	https://issues.jboss.org/browse/HWKAPM-720
6138	HWKAPM-720	Good, thank you. What do you mean by this minor change? Perhaps I took and old screenshot to make my proposal. I don't intent to change anything but the color strip and the background color itself (all gray now).	1	1	https://issues.jboss.org/browse/HWKAPM-720
6139	HWKAPM-711	What do you exactly mean by logging provider? Span Logs contextually enrich trace instance. Why would one want to send/store logs in a separate system? Could you please create a separate jira to discuss this.	1	1	https://issues.jboss.org/browse/HWKAPM-711
6140	HWKAPM-703	A tooltip has the downside of not being easy to copy it's content (due to it's nature of show/hide on mouser over or even on click). Maybe it'd help if we truncate the properties to a max number of chars (eg, 20) and then on click expand them, would that be good ? but still showing the multiple instances of it.	0	0	https://issues.jboss.org/browse/HWKAPM-703
6141	HWKAPM-693	Should this be put on hold, because of the possible integration with Metrics? Or will we also be sending data to Alerts, even with integration with Metrics?	1	0	https://issues.jboss.org/browse/HWKAPM-693

#	Requirement	Questions	Answered	Successfully Answered	URL
6142	HWKAPM-683	The http query string will now be in a property called "http.query". If the query string contains multiple property/value pairs, and you would (also) like these individual values defined as separate properties, could you raise a separate jira so that the issue can be discussed.	1	1	https://issues.jboss.org/browse/HWKAPM-683
6143	HWKAPM-664	Hi Gary, Since I'm not so familiar with APM, I could not find what you are talking in the UI. Could you send some screenshots, including of Zipkin? If u want we can also schedule a meeting and we can discuss this.	1	1	https://issues.jboss.org/browse/HWKAPM-664
6144	HWKAPM-630	Issue may be the length of the list if a large number of services are involved, and may not be clear to the end user which list items represent the entry points. What about if the list contains the endpoints that are initially used to trigger a trace?	0	0	https://issues.jboss.org/browse/HWKAPM-630
6145	HWKAPM-602	I think milliseconds should be the lowest unit. If the value is over 1 second, then use seconds. If the value is over 60 seconds use minutes If the value is over 60 mins then use hours. If value is over 24 hours then days Although probably never used, might aswell support years awell? All values to 3 decimal places? NOTE: This issue is dependent upon HWKAPM-638 which is standardising all time units on microseconds. [~pavol_loffay] ok with you?	1	1	https://issues.jboss.org/browse/HWKAPM-602
6146	HWKAPM-602	In terms of distributed tracing and analyzing timing data, when you want to find the service which took the longest time maybe it's better to start with micro seconds. If you are running some highly optimized services written in Go/C++ I think It can happen that you expect durations in microseconds, then you can easily distinguish which took longer(milli) than expected unit (micro). What do you think? The upper bound probably won't happen a lot. My concern is about using years/days/hours/minutes with decimal numbers. Isn't it strange representation? e.g. 54,235 hours? Would'n be better to say 54h Xmin Y.YYYs? I was also thinking about using only seconds. Here are some numbers: 60mins = 3600s 24h= 86400s 1year=31536000s	1	1	https://issues.jboss.org/browse/HWKAPM-602
6147	HWKAPM-602	Is there any reason why not to start with micro seconds? Imagine your services run in micro seconds, then when there is ms somewhere in the UI you can find it quicker.	1	1	https://issues.jboss.org/browse/HWKAPM-602
6148	HWKAPM-602	We should think more about usability, and also what would we prefer to see in UI, what can make UI more useful..	1	1	https://issues.jboss.org/browse/HWKAPM-602
6149	HWKAPM-598	Currently the node does not have an explicit id, but could create and use an id based on the relative position of the node in the hierarchy. Do we need the fragment id to be stored separately - is there a benefit of being able to identify these separately? If a composite id, then would need to extract the fragment before being able to locate the fragment and navigate to the node, so more efficient if separate. Only issue is to ensure that these relative ids are not unstable (i.e. if a change occurs to the structure after an id has been derived and used).	0	0	https://issues.jboss.org/browse/HWKAPM-598
6150	HWKAPM-577	I'm wondering which would be the use cases for it. Is it to make it easier for developers to replace their dev instances of zipkin with APM? Or for production? For production, it's usual to have a router/reverse proxy in front of backends, to serve as SSL termination points and to "map" HTTP ports to backend ports (80 -> 9411, 80 -> 8080). I couldn't find on OpenShift a place to configure the port mapping, but I suspect there's such an option. For the developer case: would it suffice to provide a "zipkin-compat.cli" , where the port mapping would be applied to Wildfly?	0	0	https://issues.jboss.org/browse/HWKAPM-577
6151	HWKAPM-562	Could we have a quick chat to discuss this? I think a far simpler, easier to implement and consume would be to just add an HTTP header to the response, like: "Hawkular-APM-Missing-Records: 1". This is generic enough to be easily implemented by any endpoint, and generic enough to have the UI show a toast to the user if any responses contains this: "Note that the results you are seeing are not complete. We estimate that 1 record could not be shown."	0	0	https://issues.jboss.org/browse/HWKAPM-562
6152	HWKAPM-562	So no exception, just the endpoint reporting the number of missing records? How would the AnalyticsService API change? Have a special list type that includes the extra field?	1	1	https://issues.jboss.org/browse/HWKAPM-562
6153	HWKAPM-556	Potentially later on but we could have a static version for client side initially if we wanted to replace the PropertyUtil mechanism? For now maybe keep the PropertyService as a backend server component that uses PropertyUtil to retrieve values it does not have in the cache. And client instrumentation code use PropertyUtil. We can then review this later. Yes infinispan cache.	0	0	https://issues.jboss.org/browse/HWKAPM-556
6154	HWKAPM-555	This is not clear to me: "Add method that can return all comms details with an id field of a particular value" -> but there is already {{public CommunicationDetails get(String tenantId, String id)}} or should it return all comms details which id contains some string?	1	1	https://issues.jboss.org/browse/HWKAPM-555
6155	HWKAPM-495	Given the focus on cloud, it may be interesting to explore options around the test applications being provided as registered docker images - so the test framework/harness would take a (list of) docker image(s) and create an instrumented version which is then deployed and tested. Things to consider: * how would the version of technology be choosen? possibly via an environment variable supplied when building the image - but it may be that the version is simply associated with the image version - so to use a new version will require a new docker image version * instrumenting a docker image is discussed here (http://www.hawkular.org/blog/2015/12/01/hawkular-btm-instrument-docker-image.html) and (https://hawkular.gitbooks.io/hawkular-apm-user-guide/content/installation/CLIENT.html#_instrumenting_a_docker_image) - although this could be done by creating a derived image for each technology app image being tested, it would be good to see if there is a general purpose way of doing this (as a separate jira) that could be provided as a tool to users to help them automate the instrumentation of their own images	0	0	https://issues.jboss.org/browse/HWKAPM-495
6156	HWKAPM-462	This may not be necessary - should be able to run the 'add-user.sh' script externally on the container - but needs to be tested. But how will this work when the image is deployed in openshift/kubernetes?	1	1	https://issues.jboss.org/browse/HWKAPM-462

#	Requirement	Questions	Answered	Successfully Answered	URL
6157	HWKAPM-449	server. Spans contain identifying information such as traceId, spandId (id), parentId, and RPC name. I have tried only dropwizard-zipkin [2] with http transport. It seems that instrumented app reports only complete traces (It report them as complete list of spans). Annotation: Is used to record an occurance in time cs - Client Start. The client has made the request. This sets the beginning of the span. sr - Server Receive: The server has received the request and will start processing it. The difference between this and cs will be a combination of network latency and clock jitter. ss - Server Send: The server has completed processing and has sent the request back to the client. The difference between this and sr will be the amount of time it took the server to process the request. cr - Client Receiver: The client has received the response from the server. This sets the end of the span. The RPC is considered complete when this annotation is recorded. lc(binary annotation)- is the component or namespace of a local span. While structurally the same, local spans are fundamentally different than RPC spans in how they should be interpreted. For example, zipkin v1 tools center on RPC latency and service graphs. Root local-spans are neither indicative of critical path RPC latency, nor have impact on the shape of a service graph. By flagging with "lc", tools can special-case local spans. Binary annotation: Does not have timestamp, provide extra information about RPC Scenario 1: Client -> Service1 -> Service2 [https://github.com/smoketurner/dropwizard-zipkin/blob/4adc5435e28b3b7f8284f31585bd2d14e617c422/zipkin-example/src/main/java/com/example/helloworld/resources/HelloWorldResource.java#L24] produces: {code:java} [{ "traceId": "3ad0b2acb841c26c", "name": "get", "id": "064c292e02db027c", "parentId": "3ad0b2acb841c26c", "timestamp": 1467297761131000, "duration": 785000, "annotations": [{ "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297761131000, "value": "sr" }, { "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297761916000, "value": "ss" }], "binaryAnnotations": [{ "key": "http.status_code", "value": "204", "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 } }, { "key": "http.url", "value": "http://127.0.0.1:8888/result", "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 } }] }, { "traceId": "3ad0b2acb841c26c", "name": "get", "id": "064c292e02db027c", "parentId": "3ad0b2acb841c26c", "timestamp": 1467297761128000, "duration": 789000, "annotations": [{ "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297761128000, "value": "cs" }, { "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297761917000, "value": "cr" }], "binaryAnnotations": [{ "key": "http.url", "value": "http://127.0.0.1:8888/result", "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 } }] }, { "traceId": "3ad0b2acb841c26c", "name": "get", "id": "3ad0b2acb841c26c", "timestamp": 1467297760278000, "duration": 1639000, "annotations": [{ "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297760278000, "value": "sr" }, { "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 }, "timestamp": 1467297761917000, "value": "ss" }], "binaryAnnotations": [{ "key": "http.status_code", "value": "204", "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 } }, { "key": "http.url", "value": "http://localhost:8888/fetch", "endpoint": { "serviceName": "dropwizard-zipkin", "ipv4": "127.0.0.1", "port": 8888 } }] spanId (span name) -> parent id timestamp	1	1	https://issues.jboss.org/browse/HWKAPM-449
6158	HWKAPM-449	For the second scenario, I've just produced an abbreviated version of the hierarchy: {noformat} Trace Consumer (no correlation id as parent id is null) (not sure what the URI should be, or whether it related to http, as there is not enough info) Component (lc should be mapped to a component - ideally of type Database, but not sure if enough info here) Component (type = Database, query = "select distinct .....") - normally I would say cs/cr would map onto a Producer, but in special cases (e.g. jdbc.query) it may be best to just map it onto a Component with the Database type? Component (type = Database, query = "select distinct .....") Component (type = Database, query = "select distinct .....") {noformat} When building this type of Trace structure, where it is a multi level hierarchy, it will be necessary to keep track of the span id associated with a node, so that new nodes can be attached as child nodes based on the parent id. The only case where parent id should not be used in this way is where the annotation type is sr/ss, where a new Trace should be created with it being mapped to the top level Consumer node.	0	0	https://issues.jboss.org/browse/HWKAPM-449
6159	HWKAPM-449	The challenges I see with building these Trace structures from the spans, is: 1) If multiple proxy servers are running in a cluster, how to construct the traces when potentially the different spans required for a specific trace may be received by different servers - so possibly requires some caching - but that gets complicated when needing to update the same nodes, requiring synchronisation/transactions - which would impact performance. 2) How to know when a particular Trace fragment has been completed? May need to be some time delay after last update - not ideal. The other option is to deal with each span as a separate asynchronous action, which would result in one Trace per span. I'll see if I can provide an alternate example of each scenario encoded in this way. It would overcome the issues above, but the downside is it would create more Trace objects than necessary.	0	0	https://issues.jboss.org/browse/HWKAPM-449
6160	HWKAPM-449	An alternative plan - as mentioned above, one approach would be to create Trace fragments using a simple non-clusterable solution, but this may run into issues if needing to scale. The other approach is to not create the Trace fragments, but instead use the span information to create the derived information which is currently created from the Trace fragments. The Trace fragments themselves are not extensively used at the moment, but will be used more when focusing in on displaying the individual end to end Trace for a single invocation of the application. The other purpose of the Trace fragment is to record business properties and message content (if extracted) both of which are not relevant for zipkin clients. If we could this approach, then the spans could be used to create (and publish) the following pieces of information: NodeDetails - an instance is created per node in the trace fragment - so in the case of a zipkin span, it would be one per span. The type of the Node would be determined based on the examples shown above. FragmentCompletionTime - this records the time taken within a particular fragment, which is equivalent to a service. As zipkin primarily seems to deal with synchronous applications currently, this could simply be recorded for each Consumer node (i.e. sr/ss) with the duration between those two annotations. TraceCompletionTime - this is similar to the fragment completion time above, except only record for the span that has a null parent id - again assumes a synchronous invocation, but that seems to be the case at the moment - will need to investigate more complex solutions (as implemented in APM) when dealing with asynchronous cases. CompletionDetails - this information represents the latency between client and server - so this will require some information to be cached, as it will be necessary to calculate the different between the client's span duration and the server's span duration for a particular shared span id. Using this approach it will short cut creating the Trace at this stage - but would mean it may need to be constructed at a later stage when displaying information about an individual application invocation. Performance is less of an issue in this case, so this is probably the better solution. Have a think about both options and we can discuss if you want.	0	0	https://issues.jboss.org/browse/HWKAPM-449

#	Requirement	Questions	Answered	Successfully Answered	URL
6161	HWKAPM-445	The other issue is how we determine a property has numerical values - should this be inferred or recorded in the config somewhere - but then if the config changes, or the business txn config is removed, this info would be lost. This may be a good motivation to change the way properties are recorded, so rather than map of name/value, could be list of objects with name/value/type enumerator. This does assume that all properties values recorded for the property name have a consistent type though.	0	0	https://issues.jboss.org/browse/HWKAPM-445
6162	HWKAPM-444	Following chat with Andrew Dinn, there are a couple of issues we need to take into account: 1) The keys used to link the application hooks to the rules (at runtime) are uniquely created. Normally as the application instrumentation, and initialisation of the rules, are performed at the same time (using a javaagent when the application is executed), this is not an issue - i.e. they will share the same value. In this case, the hooks are being introduced at build time, and rules initialised at runtime, so the keys could potentially be different. From initial experiments, the keys used appear to be consistent based on rule script name and position of rule in the script, but Andrew warned that if a particular jar is duplicated in multiple wars (for example), then each jar (i.e. its classes) will have a different key. So we will need to ensure that each jar is only presented for processing once. 2) Classloading - as the rule compilation uses the classloader of the instrumented class to associate the helper, this would be a problem initialising the rules are runtime. Therefore at the moment it may only work if the system classloader is being used to run the app - so does swarm just use the system classloader?	0	0	https://issues.jboss.org/browse/HWKAPM-444
6163	HWKAPM-423	Currently an 'application' equates to a business transaction fragment triggered by consuming a message - so the application is effectively known by its URI. A business transaction configuration can be created to 'name' an end to end business transaction comprised of multiple fragments (i.e. application invocations). So we need to decide how best to 'name' an application (i.e. the fragment associated with a particular URI). Business transaction names are configured (along with other info used for pre-processing a business transaction) in the server and pushed out to clients environments being instrumented, so in this case the 'name' is applied as the information is captured. We need to decide whether the same should apply for applications - as we capture a fragment associated with a particular URI, do we name the application (i.e. record the name in the fragment), or do we take a late binding approach and just have the association between URI and application remain in server side configuration? I think it will depend upon what types of queries we may want to perform on the data - whether knowing the URI for an application is enough, or whether actually querying the name (if used for multiple URIs for example) may be of benefit. Once we are able to associate names against URIs, then the new communication graph could leverage those names when displaying the nodes/links. We would also probably want/need a separate application UI, containing the list of applications, some metrics and this new Apdex index.	1	1	https://issues.jboss.org/browse/HWKAPM-423
6164	HWKAPM-423	Just to help understand the aims, when we refer to an "application", are we primarily interested in a micro-service world, and therefore just focusing on things that consumer messages (and potential interact with other 'applications')? If so, generally (although not necessarily) a micro-service would have more than one endpoint. Should the Apdex be applied to the endpoint or to the collection of endpoints associated with the 'application'? The reason for asking is that performance of individual (e.g. REST) endpoints may be considerably different as they are performing different tasks involving varying levels of work, so my assumption is that we want to apply the Apdex at the application/endpoint level?	1	1	https://issues.jboss.org/browse/HWKAPM-423
6165	HWKAPM-386	If internal producer/consumer nodes are created to represent concurrent activities, then need to ensure that the producer/consumer nodes are marked as internal, and have a URI that correctly scopes the node to the outer (non internal) fragment URI, to ensure aggregation tasks correctly distinguish the internal nodes as being part of the outer (fragment). However when visually displaying the information about the internal fragments, it may be useful to strip away the scoping to just represent each fragment by its unique part (e.g. if the internal fragment is scoped to /trades:scheduler, then the initial fragment would be associated with the URI /trades and then it could be linked to a second fragment with name 'scheduler'.	0	0	https://issues.jboss.org/browse/HWKAPM-386
6166	HWKAPM-386	Current approach uses a thread count associated with the fragment - however its possible that the 'spawned' activities may be completed before the next activity is started - so when the next activity starts it may seem like there is no concurrent threads, so will directly record the activity in the parent fragment. Is this an issue? Would it be better to be consistent, and once the activities have started being recorded concurrently, then it should continue? Need to try out using a fork/join example - but possibly as a separate issue.	0	0	https://issues.jboss.org/browse/HWKAPM-386
6167	HWKAPM-269	There will be two types of events - the 'fragment' completion times which represent the durations for the individual services being invoked in a chain, and the "trace" completion times which are for the end to end instance. Both may be required, as the user may be interested in monitoring the individual service times or the overall "business transaction" (i.e. trace instance) time.	0	0	https://issues.jboss.org/browse/HWKAPM-269
6168	HWKAPM-161	This issue may be occurring because, even if inclusion filters are defined, if non-named txns are allowed, then the initial components are still being recorded when it reaches the Producer, which could potentially have named the txn. If non-named txns are not permitted, then the initial components would not have been recorded, and when the Producer is reached, it matches the inclusion filter, so begins recording. So the issue is, how do we overcome the first described scenario? - while at the same time avoiding doing constant checks for the inclusion filters.	0	0	https://issues.jboss.org/browse/HWKAPM-161
6169	HWKAPM-66	Has not been necessary when building end to end view, so closing.	0	0	https://issues.jboss.org/browse/HWKAPM-66
6170	HWKAPM-1	[~partenon] Would you be able to review the PR? Main changes are adding accounts to the REST service, getting the persona and propagating the persona.id as tenant id through all of the backend components - which are all placeholders currently so don't actually do anything with it, and then updating the integration tests to supply the basic auth credentials.	1	1	https://issues.jboss.org/browse/HWKAPM-1

#	Requirement	Questions	Answered	Successfully Answered	URL
6171	HWKINVENT-198	One other very important feature I forgot to mention. We need to be able to ignore roots, even of the same type of entity. For example, a feed could do the following (this is what the hawkular wildfly agent does) - it could independently manage different roots and their children and thus needs to sync different roots at different times. For example, suppose a feed's entire inventory tree looks like this: {code} Feed "foo" |___OperatingSysetm | |___ File System [/opt] | |___ CPU 1 | |___ Memory |___ WildFly Server ABC |___ Deployment hello-world.war |___ Stateless EJB MyEjb |___ Stateless EJB MyOtherEjb |___ Datasource MyDatabase |___ Transaction Manager |___ WildFly Server XYZ |___ Deployment my-app.war |___ Deployment another.war |___ Stateless EJB SomeEjb |___ Transaction Manager {code} We need to support the ability of a feed to ONLY sync SOME of those roots but NOT ALL. In other words, I would like to say, "Here are SOME roots of the tree - sync the roots I give you (including all the children) but DO NOT delete any roots that are missing. You should ignore any missing roots." This allows the feed to sync some roots but not all. In other words, now my feed can send up just information about WildFly Server XYZ but no others: {code} Feed "foo" |___ WildFly Server XYZ |___ Deployment my-app.war |___ Deployment another.war |___ Stateless EJB SomeEjb |___ Transaction Manager {code} Sending that tree as part of the sync should NOT cause WildFly Server ABC nor Operation System roots to be deleted - they and their children should remain as-is. You only sync those resources at or below the WildFly Server XYZ level. What if a root really is missing? The feed would have to sometimes to a full sync (with the entire tree) or the feed or some outside agency (like a user in some UI screen) would have to manually delete roots. It would be up to the feed or a user to know to delete missing roots. This can be done outside of sync if need be.	1	1	https://issues.jboss.org/browse/HWKINVENT-198
6172	HWKINVENT-198	[~lkrejci] BTW: just so I'm clear - today, resource types do NOT have parent-child relationships correct? In other words, all resource types must be peers at the root level. For example, this is not supported: {code} + WildFly Server Type |___ Deployment Type |___ Stateless EJB Type |___ Stateful EJB Type {code} Instead, all types are root types, with no children, even though logically some types are always children of another: {code} + WildFly Server Type + Deployment Type + Stateless EJB Type + Stateful EJB Type {code} Correct?	1	1	https://issues.jboss.org/browse/HWKINVENT-198
6173	HWKINVENT-166	Should this be a strict match on type name/id or do we require substring matching? The latter will require some research into Titan indices and cooperation with Elastic Search, because titan cannot do substring matching on just Cassandra. Currently we start ES locally within the Hawkular JVM because we currently don't really use any Titan features that require ES but should we start doing that, we should externalize ES so that all Hawkular cluster members can reach that. From POV of inventory, this is just a config change (+ some new fancy indices and queries) but from the POV of managing the hawkular cluster, this is a potentially big new component - apart from our C* cluster, we'd also need an ES cluster.	0	0	https://issues.jboss.org/browse/HWKINVENT-166
6174	HWKINVENT-165	I believe this has been sort of done. Am I right [~pavol_loffay]?	1	1	https://issues.jboss.org/browse/HWKINVENT-165
6175	HWKINVENT-165	SwitchElementType is still in base.spi package. Should I move it to api.filters?	0	0	https://issues.jboss.org/browse/HWKINVENT-165
6176	HWKINVENT-123	What is the status of this, [~pavol_loffay]? I think this has been already fixed on the inventory side, but not sure. Could you please try again with the latest inventory if this still is an issue?	1	1	https://issues.jboss.org/browse/HWKINVENT-123
6177	HWKINVENT-63	Can we make this a bit more explicit? This jira is for *operation definitions*. Meaning neither actual parameters nor returned values are stored in this data structure. Actual operation outcome will be discussed in a different jira.	0	0	https://issues.jboss.org/browse/HWKINVENT-63
6178	HWKINVENT-49	What is the preferred solution? (a) Single entity add only (b) Multiple entity add only (c) Both Single entity add and multiple entity add	1	1	https://issues.jboss.org/browse/HWKINVENT-49
6179	HWKINVENT-34	[~mazz], could you comment on the above? I think the app servername, type, hostname, and running state can be or even are already all published by your agent. Could you provide Mike with some instructions on the names of the properties, etc.? Total number of servers I think can be achieved by reading the info from the paged results when searching for all resources of the app server type. The number of servers with given running state is not currently possible as that is search query which has not yet been implemented in inventory.	1	0	https://issues.jboss.org/browse/HWKINVENT-34
6180	HWKINVENT-34	Is this still valid, [~mithomps]?	0	0	https://issues.jboss.org/browse/HWKINVENT-34
6181	HWKINVENT-33	Is there some agreed upon way of doing pagination? Headers? Query params? Both? Response formatted as {code:js} {"data": {...}, "paging": {...}} {code} or something else? I am not too well versed in REST so I'd rather follow some agreed upon way of doing things than invent my own here..	1	1	https://issues.jboss.org/browse/HWKINVENT-33
6182	HWKINVENT-21	no qe activity ATM - will be covered with integration rest tests (end-to-end scenarios)	0	0	https://issues.jboss.org/browse/HWKINVENT-21
6183	HWKINVENT-7	Why have you closed this as having no QE activity?	1	0	https://issues.jboss.org/browse/HWKINVENT-7
6184	HWKMETRICS-693	I have a question about the last example. Doing the {{a1 = 'defg'}} query first makes sense. I believe it hits metrics_tags_idx. The results we get back from metrics_tags_idx do not have the full set of tags for each metric. We still need a query against metrics_idx for the {{nost hostname}} query. We can avoid avoid a full table scan though. While using the CQL clause is generally discouraged, it is probably ok when querying against a single partition as would be the case here. The query would be something like: {noformat} select ... from metrics_idx where tenant_id = $tenantId and type = $type = and metric in (/* metric names from the a1 = 'defg' result set */) {noformat} Is my analysis here correct?	1	1	https://issues.jboss.org/browse/HWKMETRICS-693
6185	HWKMETRICS-682	[~rvargasp] what is the status on this? We have another meeting with the OpenShift ops team on Wednesday, and I am hoping that we will have something to share and/or discuss. Don't hesitate to ping me if you have questions. Let me you have other tasks you are working on, and I can take over the ticket if need be. Thanks.	0	0	https://issues.jboss.org/browse/HWKMETRICS-682
6186	HWKMETRICS-680	Can you let me know what the final prometheus.yaml should look like? We need to trim this down to only the metrics we are interested in. Do you also know if we can secure this endpoint using the prometheus java agent?	1	1	https://issues.jboss.org/browse/HWKMETRICS-680
6187	HWKMETRICS-668	Ops would like to consume the metrics with Zabbix, are the metrics exposed in a format that can be pulled by them ? We will need a doc to explain what metrics are available and what they mean (what to look for to identify an issue)	1	1	https://issues.jboss.org/browse/HWKMETRICS-668
6188	HWKMETRICS-668	Since we have decided to store the metrics in the same Cassandra cluster in which we store user metrics, they will be accessible using Hawkular Metrics REST API. They will be stored under the admin tenant though which means client requests will also need to supply the admin token in addition to the admin tenant id. Is the REST API suficient? Should we consider for example building something on top of the [Go client|https://github.com/hawkular/hawkular-client-go], or something that could integrate more directly with Zabbix? Whatever metrics we expose will certainly be documented. Right now I am still working through some of the implementation details as well as trying to figure out what all to expose.	1	1	https://issues.jboss.org/browse/HWKMETRICS-668

#	Requirement	Questions	Answered	Successfully Answered	URL
6189	HWKMETRICS-668	There is not a 1-to-1 mapping between metric types in Hawkular Metrics and in DropWizard. Hawkular Metrics only supports a subset of those in DropWizard. I want to point out how things from DropWizard get mapped in Hawkular Metrics *Counter* Counters map directly into Hawkular Metrics. *Gauge* DropWizard gauges can have anything as a value. Right now we are only using doubles which map directly to Hawkular Metrics. We could also support strings. *Meter* Suppose we have a DropWizard meter named MyMeter. This will map to the following in Hawkular Metrics: || Generated Metric || Description || | MyMeter-1min | 1 minute moving average, stored as gauge | | MyMeter-5min | 5 minute moving average, stored as gauge | | MyMeter-15min | 15 minute moving average, stored as gauge | | MyMeter-mean | average since start, stored as gauge | | MyMeter | count, stored as counter | *Timer* Suppose we have a timer named MyTimer. This will map to the following in Hawkular Metrics: || Generated Metric || Description || | MyTimer-1min | 1 minute moving average, stored as gauge | | MyTimer-5min | 5 minute moving average, stored as gauge | | MyTimer-15min | 15 minute moving average, stored as gauge | | MyTimer-mean | average of timed values, stored as gauge | | MyTimer | count, stored as counter | | MyTimer-median | median of timed values, stored as gauge | | MyTimer-min | min of timed values, stored as gauge | | MyTimer-max | max of timed values, stored as gauge | | MyTimer-stdDev | standard deviation of timed values, stored as gauge | | MyTimer-75p | 75th percentile of timed values, stored as gauge | | MyTimer-95p | 95th percentile of timed values, stored as gauge | | MyTimer-98p | 98th percentile of timed values, stored as gauge | | MyTimer-99p | 99th percentile of timed values, stored as gauge | | MyTimer-999p | 99.9th percentile of timed values, stored as gauge | *Histogram* Suppose we have a histogram named MyHistogram. This will map to the following in Hawkular Metrics: || Generated Metric || Description || | MyHistogram-mean | average of timed values, stored as gauge | | MyHistogram | count, stored as counter | | MyHistogram-median | median of timed values, stored as gauge | | MyHistogram-min | min of timed values, stored as gauge | | MyHistogram-max | max of timed values, stored as gauge | | MyHistogram-stdDev | standard deviation of timed values, stored as gauge | | MyHistogram-75p | 75th percentile of timed values, stored as gauge | | MyHistogram-95p | 95th percentile of timed values, stored as gauge | | MyHistogram-98p | 98th percentile of timed values, stored as gauge | | MyHistogram-99p | 99th percentile of timed values, stored as gauge | | MyHistogram-999p | 99.9th percentile of timed values, stored as gauge | A timer maps to 14 different time series. A meter maps to 5 different time series. This will add up quickly. Cassandra also uses DropWizard Metrics; so, we face a similar situation for collecting/store Cassandra metrics. Do we want to store all of these metrics. If not, which ones do we store?	1	1	https://issues.jboss.org/browse/HWKMETRICS-668
6190	HWKMETRICS-666	It sounds reasonable. What kinds of endpoints would you be adding?	1	0	https://issues.jboss.org/browse/HWKMETRICS-666
6191	HWKMETRICS-650	Is there a productization requirement to update to older versions and newest bugfixed version wasn't going to be used in 0.26.x?	1	1	https://issues.jboss.org/browse/HWKMETRICS-650
6192	HWKMETRICS-650	Is this still relevant? master is at 1.3.0	1	1	https://issues.jboss.org/browse/HWKMETRICS-650
6193	HWKMETRICS-628	[~nstefan] can you provide some more details on what you have in mind and the use case(s) that you are trying to address? What are you proposing that cannot already be accomplished with tags, be it metric or data point tags? Granted data point tags only support string values currently; however, we easily extend that to support arbitrary values.	1	0	https://issues.jboss.org/browse/HWKMETRICS-628
6194	HWKMETRICS-622	Can you please create a ticket and/or PR for origin-metrics to upgrade to 3.0.12 and link it to this ticket?	1	1	https://issues.jboss.org/browse/HWKMETRICS-622
6195	HWKMETRICS-614	What about out of order writes? Someone writes something to the past during the next day for example.	1	1	https://issues.jboss.org/browse/HWKMETRICS-614
6196	HWKMETRICS-614	{quote}What about out of order writes?{quote} [~burmanm] Not sure yet. How do we currently handle this scenario with the compression job? And once the compression block has passed, any data received for that block would be considered out of order right?	1	1	https://issues.jboss.org/browse/HWKMETRICS-614
6197	HWKMETRICS-597	I want to provide some additional background since my initial description is rather short on details. I am not sure that reactive backpressure is what we need here. As I understand backpressure is a mechanism for dealing with situations where an observable is emitting items faster than they can be consumed downstream. A good example for backpressure would be we execute a query that returns a big result set, too big for available memory. We are then performing long running tasks on rows we get back. Rather than the driver return all rows at once, we would request rows in chunks/pages via reactive back pressure. The situation this ticket aims to address is a bit different though. We want to deal with the situation when we try to execute a query and the C* driver does not have sufficient resources to execute it. It is not the downstream operator/subscribe that needs to slow down but rather the upstream observable. The first question we need to answer is, why do we need to do this. Consider the following example. We execute our queries using asynchronously via {{Session.executeAsync}}. Suppose we have a burst of writes as is the case with ingesting metrics. We can very easily fire off enough queries asynchronously such that we wind up with queries failing with the infamous NoHostAvailableException. Let's say that if we try to execute 1,000 writes concurrently we wind up with a NoHostAvailableException on the 900th write. If we can determine that we need to slow down a bit when we get to the 900th write, we should be able to execute all queries without error. Assuming we can detect when the C* driver is at capacity what should we do? We could simply reject the request with a better exception that is more descriptive than NoHostAvailable (which can mean different things). Alternatively we can queue up requests until driver resources become available. Even with the queue approach we might still have to reject requests if the queue gets full (assuming we use a bounded queue which I think we want to do). The queue approach however should allow us to avoid failures in some of the temporary spike scenarios. We ought to use a priority queue. In general, user facing, i.e., real time, requests should take higher priority than requests being executed by a background job that is not as sensitive too per request latency spikes. Possibly the most important thing we need to do is log when we hit or exceed capacity. By log, I mean record the event. We should write something meaningful to the log file and also store metrics. We are already doing some of the latter with HWMETRICS-668. {{CassandraDriverMetrics.java}} captures some load metrics. The metric names look like {{localhost|org.hawkular.metrics|Load_127.0.0.1:9042}} and {{localhost|org.hawkular.metrics|MaxLoad_127.0.0.1:9042}}. We should be able to use the Load and MaxLoad metrics (and possibly) others when the driver is at or over capacity. And if those metrics are getting persisted, we can look at past data to determine whether or not changes are needed. I covered a lot of detail because there is a lot of background. I am in no way suggesting we tackle everything in this ticket.	0	0	https://issues.jboss.org/browse/HWKMETRICS-597
6198	HWKMETRICS-597	Can we break this up into more manageable smaller pieces? I think the first thing to do is to figure out how to monitor Cassandra to know if its under too much pressure or not. And then make sure we are logging and collecting metrics for this. I think after that we can then determine how we want to handle things based on this knowledge. We may also want a priority queue for writes over reads	1	1	https://issues.jboss.org/browse/HWKMETRICS-597
6199	HWKMETRICS-563	Is this functionality already covered by HWKMETRICS-373?	1	0	https://issues.jboss.org/browse/HWKMETRICS-563
6200	HWKMETRICS-563	Hi John, I've tried with both counters and gauges, still the same, 204. I've looked, but can't see any endpoints which return datapoints with their tags, only metric definitions with their tags. Does this endpoint exist? i want to try this to prove that the tags should match.	1	1	https://issues.jboss.org/browse/HWKMETRICS-563

#	Requirement	Questions	Answered	Successfully Answered	URL
6201	HWKMETRICS-563	Notice in my previous example that I used {{method:*}} which essentially means that a separate bucket will be created for each different value of the {{method}} tag that is found. If you only wanted buckets for {{DELETE}} and {{PUT}}, you would instead use: {{method:DELETE|PUT}} {noformat} curl -X GET http://localhost:8080/hawkular/metrics/counters/my_counter/stats/tags/method:DELETE%7CPUT -H "Content-Type: application/json" -H "Hawkular-Tenant: com.acme" {noformat} and get back: {code:javascript} { "method:PUT": { "tags": { "method": "PUT" }, "min": 18, "avg": 18, "median": 18, "max": 18, "sum": 18, "samples": 1 }, "method:DELETE": { "tags": { "method": "DELETE" }, "min": 10, "avg": 10, "median": 10, "max": 10, "sum": 10, "samples": 1 } } {code} You can also group by multiple tags. I hope this helps.	1	0	https://issues.jboss.org/browse/HWKMETRICS-563
6202	HWKMETRICS-561	[~mwringe] do you think we might see additional gains from batching across multiple tenants? I realize that doing so goes against the concept of multi-tenancy to a degree, but if we can achieve better throughput then I think it is worth considering. Maybe the endpoint could require a special header. [~nstefan] what do you think?	1	0	https://issues.jboss.org/browse/HWKMETRICS-561
6203	HWKMETRICS-561	Wouldn't HTTP/2 help in this ? A single HTTP connection with multiple inserts.	0	0	https://issues.jboss.org/browse/HWKMETRICS-561
6204	HWKMETRICS-537	Is is already done and can be closed, right?	1	1	https://issues.jboss.org/browse/HWKMETRICS-537
6205	HWKMETRICS-525	This kinda defeats the whole purpose of tenancy if you can avoid it. Then it's no longer a safeguard, without authentication/authroization at least. Why does ManageIQ need to fetch multiple projects at once?	1	1	https://issues.jboss.org/browse/HWKMETRICS-525
6206	HWKMETRICS-525	Oh, sorry, I created this JIRA on metrics instead of Alerting. "Why does ManageIQ need to fetch multiple projects at once?" Because ManageIQ wants to fetch alerting from all the projects (potentially high) at single step. We are proposing alternatives to this, as for alerting, multi-tenancy is a strong partition too. P.S.: I am going to move this JIRA to Alerting. It was a mistake from my side to create it here.	0	0	https://issues.jboss.org/browse/HWKMETRICS-525
6207	HWKMETRICS-523	I just read through the [kubernetes labels doc|http://kubernetes.io/docs/user-guide/labels/] which provides a lot of context. Labels in kubernetes according to the aforementioned doc are very similar if not the same as our key/value tags. All labels are stored under a single tag named {{label}}. Tags are a formal concept in hawkular-metrics. Labels are not, and there is work being done in this ticket to implement informal semantics for labels. This concerns me a bit as it could be a source of problems down the road. Suppose other clients decide to store a {{label}} tag that is a simple key/value pair. Will that break anything? Should we introduce labels as formal concept to avoid ambiguity? And/or can we simply flatten a label storing each of the key/value pairs separately and possibly enabling us to use our existing tag filtering capabilities more easily? I have not fully thought this through, but consider this idea. Suppose I want to query for all metrics tagged with 'type=pod_container' and 'descriptor_name=memory/usage' and where the labels match 'deployment=frontend' and 'deploymentconfig=frontend' and 'name=frontend'. As things our implemented today, we will have a partition in metrics_tags_idx with label (as part) of the partition key. Why not flatten the labels storing each one in separate partition where the tname column will have a prefix of something like {{label#}} followed by the label name. I need to go through some of the query use cases to see if/how this might work, but I think it is worth considering.	1	1	https://issues.jboss.org/browse/HWKMETRICS-523
6208	HWKMETRICS-500	How does job scheduler allow providing back pressure to prevent next run starting before previous one has finished (although I don't think this is what you meant, but maybe that should be tackled at the same time)	1	1	https://issues.jboss.org/browse/HWKMETRICS-500
6209	HWKMETRICS-482	{quote}Doing so would finally allow querying by tag in a restful manner, instead of the current POST endpoint on ".../raw/query".{quote} Could this replace the POST endpoint?	1	1	https://issues.jboss.org/browse/HWKMETRICS-482
6210	HWKMETRICS-480	What use case could that possibly be? The only category of the query is that it does not have a certain tag? That could return tens of thousands or hundreds of thousands of metric ids.	1	1	https://issues.jboss.org/browse/HWKMETRICS-480
6211	HWKMETRICS-447	Hawkular Metrics. Since I was running against a 0.8.2 schema, this scenario simulates trying to apply schema changes while {{upgradesstables}} runs. Interestingly the tests ran without error, but {{upgradesstables}} aborted with the following error: {noformat} error: Unknown column n_value in table hawkulartest.data -- StackTrace -- java.lang.AssertionError: Unknown column n_value in table hawkulartest.data at org.apache.cassandra.db.LegacyLayout.readLegacyAtom(LegacyLayout.java:1013) at org.apache.cassandra.db.UnfilteredDeserializer$OldFormatDeserializer$AtomIterator.readAtom(UnfilteredDeserializer.java:518) at org.apache.cassandra.db.UnfilteredDeserializer$OldFormatDeserializer$AtomIterator.hasNext(UnfilteredDeserializer.java:504) at org.apache.cassandra.db.UnfilteredDeserializer$OldFormatDeserializer$UnfilteredIterator.readRow(UnfilteredDeserializer.java:447) at org.apache.cassandra.db.UnfilteredDeserializer$OldFormatDeserializer$UnfilteredIterator.hasNext(UnfilteredDeserializer.java:423) at org.apache.cassandra.db.UnfilteredDeserializer$OldFormatDeserializer.hasNext(UnfilteredDeserializer.java:289) at org.apache.cassandra.io.sstable.SSTableSimpleIterator$OldFormatIterator.computeNext(SSTableSimpleIterator.java:145) at org.apache.cassandra.io.sstable.SSTableSimpleIterator$OldFormatIterator.computeNext(SSTableSimpleIterator.java:97) at org.apache.cassandra.utils.AbstractIterator.hasNext(AbstractIterator.java:47) at org.apache.cassandra.io.sstable.SSTableIdentityIterator.computeNext(SSTableIdentityIterator.java:100) at org.apache.cassandra.io.sstable.SSTableIdentityIterator.computeNext(SSTableIdentityIterator.java:30) at org.apache.cassandra.utils.AbstractIterator.hasNext(AbstractIterator.java:47) at org.apache.cassandra.db.rows.LazilyInitializedUnfilteredRowIterator.computeNext(LazilyInitializedUnfilteredRowIterator.java:100) at org.apache.cassandra.db.rows.LazilyInitializedUnfilteredRowIterator.computeNext(LazilyInitializedUnfilteredRowIterator.java:32) at org.apache.cassandra.utils.AbstractIterator.hasNext(AbstractIterator.java:47) at org.apache.cassandra.utils.MergeIterator$TrivialOneToOne.computeNext(MergeIterator.java:484) at org.apache.cassandra.utils.AbstractIterator.hasNext(AbstractIterator.java:47) at org.apache.cassandra.db.rows.UnfilteredRowIterators$UnfilteredRowMergeIterator.computeNext(UnfilteredRowIterators.java:419) at org.apache.cassandra.db.rows.UnfilteredRowIterators$UnfilteredRowMergeIterator.computeNext(UnfilteredRowIterators.java:279) at org.apache.cassandra.utils.AbstractIterator.hasNext(AbstractIterator.java:47) at org.apache.cassandra.db.transform.BaseRows.hasNext(BaseRows.java:112) at org.apache.cassandra.db.ColumnIndex.buildRowIndex(ColumnIndex.java:93) at org.apache.cassandra.io.sstable.format.big.BigTableWriter.append(BigTableWriter.java:161) at org.apache.cassandra.io.sstable.SSTableRewriter.append(SSTableRewriter.java:135) at org.apache.cassandra.db.compaction.writers.DefaultCompactionWriter.realAppend(DefaultCompactionWriter.java:65) at org.apache.cassandra.db.compaction.writers.CompactionAwareWriter.append(CompactionAwareWriter.java:141) at	0	0	https://issues.jboss.org/browse/HWKMETRICS-447

#	Requirement	Questions	Answered	Successfully Answered	URL
6212	HWKMETRICS-418	Considering most of our deployments are likely going to be on Linux (I of course am the odd ball here working on a Mac) I think this makes sense. Does this mean we will have to have a separate distro that includes this, or we can include it without harm on all platforms?	1	1	https://issues.jboss.org/browse/HWKMETRICS-418
6213	HWKMETRICS-393	[~tsegismont] what do you have in mind for the metric id parameters?	1	1	https://issues.jboss.org/browse/HWKMETRICS-393
6214	HWKMETRICS-375	Can we hold off on this? I am finally starting on HWKMETRICS-360. There is some overlap and it looks like it'll probably be easier for me to remove this stuff during that work. I am going to be reusing some of the classes.	1	1	https://issues.jboss.org/browse/HWKMETRICS-375
6215	HWKMETRICS-369	It's not clear to me yet, would we create a new metric type, like "Increment"? Or would we use the existing "Counter" type?	1	0	https://issues.jboss.org/browse/HWKMETRICS-369
6216	HWKMETRICS-369	How would the server know if the counter to be created/updated is an increment or an absolute number?	1	0	https://issues.jboss.org/browse/HWKMETRICS-369
6217	HWKMETRICS-369	If we use the existing counter type, then we need to store some meta data indicating that the metric is an incrementing counter. We would need to do this on each write since we do not require metrics to be explicitly created before storing data for them. We can probably store this in metrics_idx and possibly as a system-defined tag. Furthermore, it would be the client's responsibility to ensure that it does not mix update types. I do not think this is a big issue, but it is something about which users will need to be aware. When fetching data points, do we return the raw data points which are the increments? I am inclined to think that users are typically interested in the total count and rate. If we want to return counts, we could compute and return per-minute counts by default. Rate queries would then also use those per-minute counts. We will need to do this additional work regardless of whether or not we store incrementing counters as a new, distinct metric type. If we treat it as an implicit type using the existing counter type, then we will have to do a little extra work at query time to determine that the metric is an incrementing counter. The endpoint that supports adding data point for mixed metric types will need to be modified. If we go with an implicit type, then something like, {code:javascript} { "gauages": { ... }, "availabilities": { ... }, "counters": { "set": { ... }, "increment": { ... } } } {code} versus {code:javascript} { "gauages": { ... }, "availabilities": { ... }, "counters": { ... } "increment-counters": { ... } // or whatever we would choose to call them } {code}	0	0	https://issues.jboss.org/browse/HWKMETRICS-369
6218	HWKMETRICS-369	Incrementing counters by definition are not idempotent. Using PUT is probably a bad idea since it is supposed to be idempotent. Since we already use POST for our current counters, I think the best course of action is to introduce a new metric type. In lieu of a better name, I am going to go with inc-counter. I am still undecided as to whether we should store the raw increment values. The upside is that we can provide the count at any given point in time. The downside is that this could result in a lot of additional storage. A middle ground solution might be something like, {noformat} CREATE TABLE counters (tenantId text, id text, bucket timestamp, count counter, PRIMARY KEY ((tenantId, id), bucket)); {noformat} The bucket column is a timestamp that by default could rounded down to the minute. This would keep the number of data points fixed and still allow a good level of granularity for finding the count at any point in time. There are a couple of other considerations. HWKMETRICS-368 added support for per-data point tagging. Outside of the primary key, counter tables cannot have non-counter columns. This is an unfortunate limitation that make Cassandra's native counters less than ideal. Of course per-data tagging might be a bit different with per-minute counts. For example, let's say we receive three data points for the same minute, each having some tags. How do we handle the tags? We could merge them together. If the data points include tags with the same tag key though, what should we do? Presumably we do not want any of the tag values to be overwritten. One solution could be to include the timestamp in the tag key. We probably want to use a time UUID to avoid timestamp collisions. Now back to how/where counters are stored. If we want to support data point tagging (and I think we do), then Cassandra's native counters are not an option. And storing the raw increments concerns me due to the potentially large increase in storage. We could use an in-memory distributed cache for maintaining the per-minute counts. The cache should effectively be write through so that any time we update a counter we have the counter value in long term storage.	0	0	https://issues.jboss.org/browse/HWKMETRICS-369
6219	HWKMETRICS-368	One thing I have not considered is what we want to do with the tags at query time other than HWKMETRICS-373. If the client is querying for raw data points, then it certainly makes sense to include any tags. What do we do though with bucketed data points and with counter rate data points? A bucketed data point is made up of one or more data points. Maybe we don't need to do anything. If we need to do something, I am inclined to think we can do it as a follow up ticket.	0	0	https://issues.jboss.org/browse/HWKMETRICS-368

#	Requirement	Questions	Answered	Successfully Answered	URL
6220	HWKMETRICS-361	be summarized as follows, * Enable us to perform schema changes incrementally. Currently we have to reset the schema to apply new changes. ** Incremental changes is key for application upgrades * Version the schema changes so that we can easily determine the state of a schema * Verify the schema version by checking that changes are applied in the expected order * Support multiple upgrade paths Everything except the last item is more or less already handled by Cassalog. Supporting multiple upgrade paths and also verifying that changes are applied in the correct order gets tricky, and that is what I want to discuss. I need to present some examples to illustrate. Suppose the schema in master 1, 2, 3 (these are the version numbers assigned to the changes). We then release v1.0 of our application, which means we now have a v1.x branch. We then make schema change 4 in master. The next release from master will be v2.0. Now we need a schema change in v1.0 that will necessitate a v1.1, which will be released out of the v1.x branch. The schema change is also needed for v2.0, so we make schema change 5 in master and back port it to the v1.x branch. *Scenario* For a user installing v2.0, the schema will be 1, 2, 3, 4, 5. For a user upgrading from v1.0 to v1.1, the schema will be 1, 2, 3, 5. Everything is fine so far. Cassalog applies changes in the order that they are declared, and since schema change 5 is back ported to the v1.x branch, it is expected to come after change 3. Now let's say we want upgrade from v1.1 to v2.0. The expected order of changes for v2.0 is 1, 2, 3, 4, 5, but coming from v1.1 the order is 1, 2, 3, 5. Cassalog will complain about this. We can adopt a convention with tags along with some changes to Cassalog to handle this scenario. Each schema change will be tagged with the application version branch in which it is being applied. Changes 1, 2, and 3 will be tagged with v1.x. Change 4 will be tagged with v2.x. Change 5 will be tagged with both v1.x and v2.x. New installations will run Cassalog without specifying any tags which should result in all changes being applied in the order declared. For upgrades Hawkular Metrics specifies some version tags when running Cassalog. Cassalog will only look at and execute the changes with the specified tags. When upgrading from v1.0 to v1.1, we specify the v1.x tag to indicate that we want any new changes on the v1.x branch to be applied. When we upgrade to v2.0 from v1.x, we first run Cassalog with the v1.x tag to make sure we have the latest v1.x schema. Cassalog will find that changes 1, 2, 3, 5 are tagged with v1.x. This matches are schema so we are good to go. Then we run it with the v2.x tag. Only change 4 has the v2.x tag, so only it is applied, which is what we expect. There is a question of how the tags that get passed to Cassalog are specified. We do not want to impose that on the user as it could be error prone. It should be done programmatically within Hawkular Metrics. See the section at the end on determining tags to pass to Cassalog. *Scenario* Let's extend the previous scenario by adding a v1.2 which requires a schema changes that also should go into v2.0. This will be change 6. I am currently on v1.1. I want to upgrade directly to v2.0, skipping v1.2. Recall that our v1.1 schema is 1, 2, 3, 5. In v2.0 we now have 1, 2, 3, 4, 5, 6. Changes 5 and 6 are tagged with v1.x and v2.x. The schema verification is still good to go. When applying updates, changes 4 and 6 are applied since they are both tagged with v2.0. We end up with changes 1, 2, 3, 5, 4, 6. If we had upgraded from v1.1 to v1.2 to v2.0 our schema would be 1, 2, 3, 5, 6, 4. I think that the difference in order here is ok as long as both 4 and 6 come after 5. *Scenario* We have v1.0 already released with schema changes 1, 2, 3. The we have v2.0 already released with 1, 2, 3, 4, 5. The next release in master will be v3.0. We are providing patch release support out of both the v1.x and v2.x branches. Schema changes 6 and 7 will go into v3.0. We have a bug in v1.0 that requires a v1.1 release and requires schema change 8. We need the change in master and in the v1.x branch, but we do not need it in the v2.x branch. Since we do not need the change in v2.x, we want to avoid forcing a v2.x release since putting out patch releases is costly. If we do not put the change in the v2.x branch, then what does this mean? In master/v3.0 we will have 1, 2, 3, 4, 5, 6, 7, 8. In v1.1 we will have 1, 2, 3, 8. In v2.0 we have 1, 2, 3, 4, 5. Changes 6 and 7 will be tagged with v3.x.	0	0	https://issues.jboss.org/browse/HWKMETRICS-361
6221	HWKMETRICS-361	I think I follow although the tag terminology is a little confusing. Combining scenarios 1 and 2, and expressing the tags as a map, I can envision mappings like this: { 2.0: { schemaBase: 6, schemaPatches: nil }, 1.2: { schemaBase: 3, schemaPatches: [5,6] }, 1.1: { schemaBase: 3, schemaPatches: [5] }, 1.0: { schemaBase: 3, schemaPatches: nil } } To get from one version to another you just take the increments between schemaBase versions, add patches for the new version, and remove patches for the old version. So, from V1.0 to V2.0 you must increment from baseVersion 3 to 6, so [4,5,6]. Add V2.0 patches []. Remove V1.0 patches []. So [4,5,6] + [] - [] = [4,5,6]. From V1.1 to V1.2 you must increment from baseVersion 3 to 3, so []. Add V1.2 patches [5,6]. Remove V1.1 patches [5]. so [] + [5,6] - [5] = [6]. So, from V1.1 to V2.0 you must increment from baseVersion 3 to 6, so [4,5,6]. Add V2.0 patches []. Remove V1.0 patches [5]. So [4,5,6] + [] - [5] = [4,6]. Overall, I think this could work and in map form like this the upgrade matrix is fairly clear. Of course there is danger in that the matrix must be updated as you go, but without a lot of patches it would be fairly straightforward. You've mentioned only schema changes I think. Are you considering also that an upgrade step could apply some sort of data change? Also, just to be clear, I assume that a new install would simply get a new schema and not have to have any upgrade steps applied.	1	1	https://issues.jboss.org/browse/HWKMETRICS-361
6222	HWKMETRICS-361	{quote} think I follow although the tag terminology is a little confusing. Combining scenarios 1 and 2, and expressing the tags as a map... {quote} What is confusing about the tag terminology. The tags are simply labels. Don't confuse them with the key/value pair tags that exist in Hawkular Metrics or in Hawkular Alerts. Some of the concepts here, like tagging, are adopted from how things are done in Liquibase. And by "here", I am referring to Cassalog, not Hawkular Metrics. The use of tags as I have previously described allows us to support non-linear upgrade paths and still verify that changes have been applied in the expected order. The first scenario is a pretty typical upgrade scenario. We are on the latest v1.x release and want to upgrade v2.0. In the second scenario we are *not* on the latest v1.x release and want to upgrade to v2.0. {quote} You've mentioned only schema changes I think. Are you considering also that an upgrade step could apply some sort of data change? {quote} Yes, we have considered data changes. And more importantly changes that we might prefer to do at runtime vs installation time such as data migrations that could take an arbitrary amount of time. I will try to provide an example of a scenario that involves making changes post-installation a little later today when I have some more time. {quote} Also, just to be clear, I assume that a new install would simply get a new schema and not have to have any upgrade steps applied. {quote} There aren't really separate steps for new installations vs upgrades. The version from which we upgrade is important so that we can support non-linear upgrades. Since there is no previous version for a new install, we apply changes in linear order.	1	1	https://issues.jboss.org/browse/HWKMETRICS-361
6223	HWKMETRICS-361	> What is confusing about the tag terminology Probably just me reading it. Represented it in the map above was just my way of representing the tag idea in a format that was really clear to me. The use cases fell out pretty easily after that. > There aren't really separate steps for new installations vs upgrades. Are you saying that a new install will actually start with schema V1 and apply every upgrade step? And not just start with/apply the most current full schema definition?	1	1	https://issues.jboss.org/browse/HWKMETRICS-361
6224	HWKMETRICS-361	{quote} Are you saying that a new install will actually start with schema V1 and apply every upgrade step? And not just start with/apply the most current full schema definition? {quote} That is correct. New installations will get the latest schema, but the schema is always applied incrementally so that we can version the the changes and support various upgrade paths.	0	0	https://issues.jboss.org/browse/HWKMETRICS-361

#	Requirement	Questions	Answered	Successfully Answered	URL
6225	HWKMETRICS-358	For the most part the time on the Hawkular Metrics server doesn't really matter too much as its the client's sending the timestamps. But, we do use the Hawkular Metrics' time when handling things like when the start or end time are not specified and we resort to using defaults. So there is some precedent here in using the servers clock. Would it be possible to expose the current timestamp on the status page? I think we should also add the option to specify the 'start' or 'end' time relative the server time by having this value start with a '+' or '-'. That way we don't even need to introduce new parameters, we can just use the current ones. Eg: start=-30000 -> the start time is 30 seconds behind the current server's clock time start=1456843111234 -> the UTC time like normal Any thoughts?	1	1	https://issues.jboss.org/browse/HWKMETRICS-358
6226	HWKMETRICS-342	Do we need to be concerned with accounts integration any more?	1	1	https://issues.jboss.org/browse/HWKMETRICS-342
6227	HWKMETRICS-335	Can't this be done with two requests using the limit and order params introduced in HWKMETRICS-334? Let's say my start time is x and my end time is y. I could do one request with start=x&limit=1&order=desc to give me the closest data point at or before x. My second request could be with start=y&limit=1&order=asc to give me that cloest data point at or after y. [~mwringe] is this what you want to do?	0	0	https://issues.jboss.org/browse/HWKMETRICS-335
6228	HWKMETRICS-334	[~nstefan] I noticed you started working on this. Could you update the REST documentation as part of this PR ({{api/metrics-api-jaxrs/src/main/rest-doc/base.adoc}}) ? Thanks!	1	1	https://issues.jboss.org/browse/HWKMETRICS-334
6229	HWKMETRICS-330	verified asynchronously. It seems it won't be straightforward as RestEasy doesn't like you to start the {{AsyncContext}}. 6230	HWKMETRICS-324	Can you explain where the issue is? We expect users to send data points with timestamps as milliseconds since January 1, 1970, 00:00:00 UTC. See http://www.hawkular.org/docs/rest/rest-metrics.html#_timestamps Where is the value messed up?	0	0	https://issues.jboss.org/browse/HWKMETRICS-324
6231	HWKMETRICS-319	Could you point me to the report where the performance drop was noticed? I am aware of two pull requests related to bus integration: - https://github.com/hawkular/hawkular-metrics/pull/393 - https://github.com/hawkular/hawkular-metrics/pull/398 The corresponding perf job results: - http://209.132.178.156/report394.html - http://209.132.178.156/report416.html The reports linked above do not show any regression or big drop.	0	0	https://issues.jboss.org/browse/HWKMETRICS-319
6232	HWKMETRICS-300	[~tsegismont] and [~john.sanda] : Sorry for the late response, but yes I am positive to look into this issue. Thanks for the hint :-)	0	0	https://issues.jboss.org/browse/HWKMETRICS-300
6233	HWKMETRICS-297	Unless this is a requirement for the OpenShift work, can we move the fix version to 0.9.0?	0	0	https://issues.jboss.org/browse/HWKMETRICS-297
6234	HWKMETRICS-291	Unless this is a requirement for the OpenShift work, can we move the fix version to 0.9.0?	1	0	https://issues.jboss.org/browse/HWKMETRICS-291
6235	HWKMETRICS-290	Is there anything we are planning to get done for this for 0.8.0? Or can this be moved to 0.9.0 instead?	1	1	https://issues.jboss.org/browse/HWKMETRICS-290
6236	HWKMETRICS-263	What would be a good address for this functionality? {{GET /hawkular/metrics/gauges/tags/<tags>/data}}?	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6237	HWKMETRICS-263	{quote} What would be a good address for this functionality? {{GET /hawkular/metrics/gauges/tags/<tags>/data?}} {quote} I would say no in large part because the filtering might be expanding beyond tags. For instance, Matt and I briefly querying with the ids specified. If the client already knows the metric ids, then it would be much more efficient to specify the ids rather than a tags query.	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6238	HWKMETRICS-263	[~mwringe] can you elaborate on the expectations? Do we want the REST interface to return down sampled data for multiple metrics in a single request? Or do we want to, somehow, "merge" the data coming from the metrics?	1	1	https://issues.jboss.org/browse/HWKMETRICS-263

#	Requirement	Questions	Answered	Successfully Answered	URL
6239	HWKMETRICS-263	{quote}This ticket only covers gauges. Matt Wringe do we need similar functionality for counter rates?{quote} Yes, of course, a 'gauge' or a 'counter' is still essentially both a data point. I do think we need to handle some functionality differently between a gauge and a counter, but something like this should be handled equally in both situations. With the delta function we can applied against a counter, its essentially a gauge. If for whatever reasons counters need to be tracked separately, the counter jira is: https://issues.jboss.org/browse/HWKMETRICS-264 {quote}What would be a good address for this functionality? GET /hawkular/metrics/gauges/tags/<tags>/data{quote} I would have thought something like /hawkular/metrics/gauges/data?{queryString} Where the query string could be the same as a tag query, or it could be something like metrics=foo,bar,baz Doing with this tag queries is probably the better option, but we may want to leave this open to listing the metrics directly for future support. What ever it is, it should be consistent with our existing we REST interface. {quote}Matt Wringe can you elaborate on the expectations? Do we want the REST interface to return down sampled data for multiple metrics in a single request? Or do we want to, somehow, "merge" the data coming from the metrics?{quote} An example could be something like I have network errors. I have tx errors being stored in metricA and rx error being stored in metricB, what I want is to be able to graph all network errors (eg tx and rx) as a single metric. Right now if I wanted to do this I would have to do a query on the server based on a tag, then perform two separate get requests to get the metrics, and then merge the data on the client side. We are trying to make this a bit more streamlined and perform it in one request. I am not entirely sure if that answers your question or not. On the server side I would expect this to be just as simple as performing the separate requests to Cassandra to get the data, and then just merging the buckets together before doing things like calculating the average/min/max etc, but I don't know if it can be handled more directly in with a Cassandra query or not.	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6240	HWKMETRICS-263	[~mwringe] thanks for the lengthy clarification post. I have one more question about the merging process. Let's say the downsampling is applied over three metrics. How does downsampling work when one of the metrics does not have data in a bucket or one metric has more data points in a bucket? 1) Just work with the data in a bucket (do not care about individual data point weight); bucket data first and then apply downsampling 2) Take into account the number of metrics first; downsample at metric level first, bucket, and then downsample again over downsampled data (one data point per metric) The last URL proposed makes perfect sense. My URL was based on the assumption that is to be applied to tags only. And we can probably implement this for tags and ids at the same time. After we get this done for gauges, I expect to be a fairly simple exercise for counters. I would like to focus on this ticket first and then replicate most of the stuff to counters afterwards.	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6241	HWKMETRICS-263	{quote}How does downsampling work when one of the metrics does not have data in a bucket or one metric has more data points in a bucket?{quote} Hmm, I don't know how to handle an empty bucket. If a bucket is empty for one metric, It might make sense to leave the aggregated bucket as empty (since we don't have enough information for the aggregated bucket). This would at least indicate to the client that some data is missing rather than trying to ignore the empty bucket and returning potential confusing results. I don't know if one bucket has more data points or not should make a difference. I view this essentially as just getting the buckets for each individual metric, and then 'adding' them together (well, something along those lines, it might not be as simple as that) Does that make sense? Eg in bucket1, metricA has an average of 50, metricB has an average of 100, so the average for A+B is 150?	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6242	HWKMETRICS-263	Why would you aggregate/down sample each metric first? That sounds wrong to me. If we want the 95th percentile, are you going to take the 95th percentile of all the 95th percentiles? As the user I would not expect that. I think that we should execute the queries to determine the metrics that match the tag filters. As those results arrive, we start fetching the data points. Then merge those results and then do the down sampling. Going back to Matt's example, I would expect each bucketed data point to contain an average of all network errors, not an average of averages. It might useful to provide some meta data for the data points in each bucket. With max and min for example, it might be useful to know from which metrics own the respective data points. I am suggesting this be done right now, but something to think about.	1	1	https://issues.jboss.org/browse/HWKMETRICS-263
6243	HWKMETRICS-260	What are the steps involved with setting up a remote connect? Will I first need to obtain the certs from the Cassandra container so that I can generate a key? Whether it is a local or remote connection, I am hoping we can minimize the number of manual steps involved. How much effort is involved with this? I do not consider this a high priority, but it would be nice to have before 0.7.0 if it is not too much work in order to facilitate development/testing.	1	1	https://issues.jboss.org/browse/HWKMETRICS-260
6244	HWKMETRICS-260	{quote} What are the steps involved with setting up a remote connect? Will I first need to obtain the certs from the Cassandra container so that I can generate a key? Whether it is a local or remote connection, I am hoping we can minimize the number of manual steps involved. {quote} You would need to generate your certificate, add it to the Cassandra trust store (available in the Cassandra secret), update the Cassandra secrets to include the updated trust store, and then restart al the Cassandra instances. (or cheat and use either the already existing Cassandra or Hawkular certificate which is already authorized)	1	1	https://issues.jboss.org/browse/HWKMETRICS-260
6245	HWKMETRICS-251	Why do you think system wide defaults need to be associated to a system tenant ? Can't it be stored with no relation to a tenant?	1	1	https://issues.jboss.org/browse/HWKMETRICS-251
6246	HWKMETRICS-251	{quote} Why do you think system wide defaults need to be associated to a system tenant ? Can't it be stored with no relation to a tenant? {quote} We have a tiered system for configuration settings - system default, tenant, metric. If no data retention is specified for a tenant, the system wide default is used. If I create a metric and specify the data retention, then that will override the tenant setting; otherwise, the tenant setting is used. Tenant settings are stored in the tenants table. Per metric settings are stored in metrics_idx. I proposed the system tenant because this is where we are storing other, similar configuration settings. I think of a system tenant as something for internal, system wide configuration settings that should not be visible to users. I am not committed to a particular solution at this point. What do you have in mind?	1	1	https://issues.jboss.org/browse/HWKMETRICS-251
6247	HWKMETRICS-247	[~mithomps] I don't remember discussing tagging particular datapoints for the UI, it doesn't mean it didn't happen but I don't remember a UI usecase But IIRC, the idea was that instead of having metrics such as hostname1_cpu1,hostname1_cpu2,... we would just have a cpu metric and each data points would be tagged as hostname=X, cpu=Y and we would query a single metric to get the values about all CPUs of a single host for instance (by filtering down on the hostname only). This also doesn't require to know how many CPUs in advance. So that was more about the architecture and Metrics API IMO (Should get the input from [~pilhuhn]). Apparently BTM may have needs	0	0	https://issues.jboss.org/browse/HWKMETRICS-247
6248	HWKMETRICS-247	Just for clarification, when you say "transaction" are you talking about the transaction type (i.e. an order management process) or the instance (i.e. joe bloggs ordering a laptop)? If you are referring to 'transaction' as the type, then when retrieving the whole metric id, it would imply I could then filter the information associated with that metric id to determine which data points belong to a particular transaction instance. Is that correct? I thought that was the purpose of the tag on the data point? or is there another mechanism to filter the data points?	1	1	https://issues.jboss.org/browse/HWKMETRICS-247

#	Requirement	Questions	Answered	Successfully Answered	URL
6249	HWKMETRICS-247	Thats fine with me - I was primarily looking for recommendations on how BTM should be reporting the metrics, but that can be done as a separate exercise, and once understand create the appropriate requirements. Should I create a separate jira to discuss the BTM use case?	1	1	https://issues.jboss.org/browse/HWKMETRICS-247
6250	HWKMETRICS-237	what is the update on this?	1	1	https://issues.jboss.org/browse/HWKMETRICS-237
6251	HWKMETRICS-237	[~mwringe] can you provide some more details on what exactly is needed here. I looked over the references you cited, but it still is not clear to me. Do we need to verify that we can query for container metrics using a tag filter query?	1	1	https://issues.jboss.org/browse/HWKMETRICS-237
6252	HWKMETRICS-218	Just to be sure, there should be more "N/A" cells in the "Rate" column, right? Because the current table does not reflect the explanation coming after it or the code in the pull request (invalid tuples are ignored). Or did I misunderstand the table?	1	1	https://issues.jboss.org/browse/HWKMETRICS-218
6253	HWKMETRICS-218	Sorry, my explanation is a bit unclear. The table only illustrates my originally proposed approach. I switched to using tuples to illustrate the approaches taken in the PR because I thought that viewing the data as tuples is easier to understand. For the purposes of this ticket and the changes introduced, forget about the tables. The window operator gives us the following stream of values, (1, 2), (2, 3), (3, 1), (1, 2), (2, 3), (3, 1), (1, 2), (2, 3) We want to filter out any tuple in which the second value is less than the first. This yields, (1, 2), (2, 3), (1, 2), (2, 3), (1, 2), (2, 3) for the example.	1	1	https://issues.jboss.org/browse/HWKMETRICS-218
6254	HWKMETRICS-211	I started to make the changes that allow the Golang client to send different tenantId per fetched metric, but after thinking about the Heapster integration, there's a one serious flaw I don't have an answer to. The process of Heapster starts so that the Hawkular sink is initialized. At this init we fetch from the metrics all the metric definitions that have been set and then update the tags if necessary (and cache the results since they're needed everytime we write something to keep the definitions up-to-date). Now, this works fine with a single tenant that we now in the start. But in the case of label[project.id] -> tenantId, how do we pre-fetch all the metrics? I'm not sure if there's a way from the Heapster instance to request all the available projectIds from the Openshift. Or are there? If there isn't, there's a quite a bit more job to do (and it'll cause delays on the first time after Heapster restart a new projectId is met, which I would like to avoid) as we need to monitor the seen projectIds and when we met a new one we need to fetch all the metrics definitions, cache them, update them etc before we can continue with the metrics insertion. All in all, while label.Value -> tenantId is a fine idea and should work fine in theory, this process will increase the amount of REST-calls a lot. So much that I'm not sure if the synchronous JAX-RS 1.1 implementation will keep up without increased CPU requirements.	0	0	https://issues.jboss.org/browse/HWKMETRICS-211
6255	HWKMETRICS-208	[~mwringe] I saw that you bumped this to 0.9.0, but I almost wonder if we should get this into 0.8.0. If we introduce this into a later release (and I do think we need this), do we have to working about introducing changes that could break 0.8.0 installations when they upgrade? I am inclined to say no. The changes or restrictions would be around writing data. We would not allow ids, metric names, tag names, etc. that include reserved characters; however, I do not a problem with querying for data from a tenant/metric whose name includes reserved characters.	1	1	https://issues.jboss.org/browse/HWKMETRICS-208
6256	HWKMETRICS-206	I know that there was a good bit of discussion on IRC about some of the changes. I was unable to keep up with those discussions. If possible, can you provide a brief summary? It will help provide some context while reviewing the PR.	1	1	https://issues.jboss.org/browse/HWKMETRICS-206
6257	HWKMETRICS-205	We are going to support aggregated metrics. The plan is to allow for the aggregation functions used to be configurable. Can the cpu usage metrics be identified by tag? One of the things I want to support is specifying the metrics by tags in addition to the function(s) to apply.	0	0	https://issues.jboss.org/browse/HWKMETRICS-205
6258	HWKMETRICS-200	We're not implementing this in 0.7, are we?	0	0	https://issues.jboss.org/browse/HWKMETRICS-200
6259	HWKMETRICS-195	Using Infinispan with a replicated cache seems like an obvious choice here; however, I consider/discuss at least one other alternative approach for comparison. Is there another caching mechanism we could implement/utilize just using HTTP/REST for example? Or what about implementing some sort of gossip protocol between H-Metrics nodes?	0	0	https://issues.jboss.org/browse/HWKMETRICS-195
6260	HWKMETRICS-193	Is this really going in 0.7 ?	1	0	https://issues.jboss.org/browse/HWKMETRICS-193
6261	HWKMETRICS-191	What's up here? If this is no dev-done, then click on "reopen" and/or remove the wrongly linked PR. Also keep in mind that in RHQ, the delete per schedule was very expensive in ways of wall clock time (which was one reason to go with TTL in the first place).	1	0	https://issues.jboss.org/browse/HWKMETRICS-191
6262	HWKMETRICS-184	I had tested the running service case like this: {noformat} mvn clean install -Drunning.service {noformat} When you do that, both the {{rest-tests-integration-tests}} and {{wildfly.deployment}} profiles are activated. So Maven disables profiles active by default only if you explicitly activate another one (with {{-P}}). Well done, Maven. And sorry Matt, I wasn't aware of that I'm looking into another solution right now. Do you happen to know how we can use the enforcer plugin? I've googled a bit and couldn't find an existing rule.	0	0	https://issues.jboss.org/browse/HWKMETRICS-184
6263	HWKMETRICS-179	Wasn't this solved with [~john.sanda]'s documentation update?	1	1	https://issues.jboss.org/browse/HWKMETRICS-179
6264	HWKMETRICS-166	I'm not seeing any efficiency gains here. We still do the same 3 different writes on our side, we've forced the client to do the difficult and time consuming sorting and using named array on top of the common entity classes. What have we won here compared to doing three different REST-calls? Also, the errors happening have to be from the same as from three different calls as we can't leave the client without that information. Do we stop at the first encounter of the error? Do we resume to the next type? What parts were written and which should be repeated by the client?	1	1	https://issues.jboss.org/browse/HWKMETRICS-166

6266	HWKMETRICS-160	Did not happen since the issue was reopened. Closing (hopefully for good).	0	0	https://issues.jboss.org/browse/HWKMETRICS-160
6267	HWKMETRICS-131	[~mazz] I had a quick look, it seems that in master, most of metrics artifact ids start with {{hawkular-metrics}} I wouldn't change the Openshift related module coordinates, nor those of {{ptrans}}. But I'm fine with renaming {{clients}} and {{clients-common}} to {{hawkular-metrics-clients}} and {{hawkular-metrics-clients-common}}. Is that ok for you?	1	1	https://issues.jboss.org/browse/HWKMETRICS-131
6268	HWKMETRICS-120	Sounds like we still need to investigate the shutdown issue. [~lkrejci] what version of metrics are you using? In earlier versions we may not have been closing the {{Session}}. We do now though. And alerts was not shutting down their {{Session}} either. I recently submitted a PR for alerts.	1	0	https://issues.jboss.org/browse/HWKMETRICS-120
6269	HWKMETRICS-113	{quote}There is still some tight coupling between the REST API and the core API which I think should be broken. I think we introduced some of that coupling in the past to avoid what we perceived as an unnecessary mapping back and forth between the REST API model and the core domain model which in turn leads to greater code reuse as both the REST API and core API share a set of common model classes. This presents problems though. When we change the core model implementation, we should not have to worry about it breaking the REST API, provided we are not changing the core model API. {quote} +1000 In the end the core modules should have no dependency on Jackson and Swagger. {quote} The Metric.dpart field needs to be altogether removed. It should be a calculated value based on the date partition size for the metric and the timestamp of its data points. The MetricData.timeUUID field should not be exposed in the API classes. We support unix timestamps in the API. The usage of time UUIDs is an implementation detail that should not be exposed to clients. The same goes for the writeTime and ttl fields. Those are specific to the storage implementation and should not be visible in the API. These are implementation details that should be changeable without impacting clients. That is not possible right now though. {quote} Wouldn't a REST dedicated model solve this isssue? Or maybe you think that even core library users shouldn't see those details?	1	1	https://issues.jboss.org/browse/HWKMETRICS-113
6270	HWKMETRICS-113	{quote} In the end the core modules should have no dependency on Jackson and Swagger. {quote} Right. Jackson and Swagger are specific to the REST API; therefore, those dependencies do not belong in the core. I suppose a counter argument could be made that we are only support JSON and a REST API and so having those dependencies is not a big deal. The problem with that thinking though is sooner or later other aspects of the REST API leak in the core that could prove more problematic. \\ \\ {quote} Wouldn't a REST dedicated model solve this isssue? Or maybe you think that even core library users shouldn't see those details? {quote} Right, even clients of metrics-core should not be concerned with these details. They are very much specific to the core implementation. For example, we might find that it is more efficient to manually purge data rather than relying on Cassandra's TTL feature. This is a very plausible scenario. TTL requires an additional 4 bytes overhead per cell and at least in earlier versions of Cassandra could lead to problems with compaction. If we were to change how we purge/expire data, that should not change clients' ability to to configure a metric's data retention. The REST API should have its own dedicated model. That does not preclude reusing core API classes, but the REST model should be driven by its API and not by the core API and vice versa.	1	1	https://issues.jboss.org/browse/HWKMETRICS-113

#	Requirement	Questions	Answered	Successfully Answered	URL
6271	HWKMETRICS-113	{quote} I have pushed a commit to the PR branch the removes the Jackson dependencies from metrics-core. The model classes in both the core and in the jaxrs modules are immutable for the most part. I was not going out of my way to do that, but it just kind of fell into place. I think it is a good idea though as the majority of metrics code is async. {quote} I just had a brief look so far, and it seems there are not "completely" immutable. Is that intended? {quote} We still have the swagger annotations in core-api. I am not sure of a good way to do it. Thomas Segismont do you have any suggestions? {quote} There are two ways around this, AFAIK: 1. Create a specific model for the REST API In this case, we can annotate the specific model with Swagger annotations straight away. Then we need a data binding tool (preferably MapStruct for performance). Given the little difference expected between the core model and rest model, databinding should require very little code/config. 2. Use mixins and write our own Swagger models Have a look at: org.hawkular.metrics.api.jaxrs.swagger.filter.JaxRsFilter#JaxRsFilter You can force a Swagger model by hand writing the JSON file and declaring it in the conversion filter. My preference goes to #1 as: - in both cases we have to write a class (a JavaBean for #1, a Mixin for #2) - maintaining external JSON files is error prone: any change in the model and you'll forget to update it	1	1	https://issues.jboss.org/browse/HWKMETRICS-113
6272	HWKMETRICS-113	{quote} I just had a brief look so far, and it seems there are not "completely" immutable. Is that intended? {quote} I was aware of one or two places like {{Metric.addData}}. It is not intended. I will go through and make the necessary changes. {quote} My preference goes to #1 as: * in both cases we have to write a class (a JavaBean for #1, a Mixin for #2) * maintaining external JSON files is error prone: any change in the model and you'll forget to update it {quote} I have only looked at MapStruct very briefly (since I read your comment about it). Maybe I do not understand correctly, but wouldn't we have to introduce the mapper interface in core-api? If so I do not see that as being any better off than having Swagger in core-api. And for option 2, we would writing extra JSON files, not Java classes, right? Just want to make sure I understand what you are proposing.	1	1	https://issues.jboss.org/browse/HWKMETRICS-113
6273	HWKMETRICS-103	Hey Matt, in order to help closing issues I'd like to test this locally. Is the Openshift v3 setup and metrics deployment documented somewhere? If it's not, could you help me to get started? Thanks!	0	0	https://issues.jboss.org/browse/HWKMETRICS-103
6274	HWKMETRICS-90	Same here, can you help me to setup a test environment on my box? Thanks	1	1	https://issues.jboss.org/browse/HWKMETRICS-90
6275	HWKMETRICS-74	"we may want to change endpoints to do streaming" - what endpoints? How would that change look like?	0	0	https://issues.jboss.org/browse/HWKMETRICS-74
6276	HWKMETRICS-50	There have already been discussion around endpoint changes. And as the UI is the primary client for reading data, we need to take into consider what makes sense for the UI in terms of those changes. I have a couple questions. 1) What availability states do we need to represent? 2) There was no bucketing for HWKMETRICS-36, just an aggregation. Is that what we want here as well?	0	0	https://issues.jboss.org/browse/HWKMETRICS-50
6277	HWKMETRICS-35	Right now we (still) have the issue that we don't really have the concept of availability. For the pinger we have http status codes (and should perhaps even have some pseudo codes). And classic availability of 0=down, 1=up. So how to map the http status codes (and perhaps ping times) into 0 and 1? There is an email "Computed resource state" on hawkular-devel that deals with this. For the moment we an probably assume 1xx,2xx,3xx = up , otherwise down. But this won't fit for the future. And as we discussed today at the Watercooler, we may in the future even have more sources to compute availability from. If it helps, we can improve the pinger to also deliver availability with the above rule into metrics and put on the bus for alerts.	1	1	https://issues.jboss.org/browse/HWKMETRICS-35
6278	HWKMETRICS-35	Could we continue this conversation on hawkular-dev? My opinion is that availability should not be part of the Metrics. I believe we should open the series capabilities to store more than just numeric points. And then H* components could store availability series as it makes most sense. I'm really not sure Metrics should try to model what availability means.	1	1	https://issues.jboss.org/browse/HWKMETRICS-35
6279	HWKMETRICS-34	_avg_ is already supported at _/\{tenantId\}/metrics/numeric/\{id\}/data_ if you provide a _buckets_ param. By default, _buckets_ is zero, and data points are returned as they are stored. [~mithomps] : if we add _median_ and _95percentile_ to the statistics object, would the endpoint API fit your needs?	1	1	https://issues.jboss.org/browse/HWKMETRICS-34
6280	HWKMETRICS-34	I am not sure that I agree that the current endpoint is a problem with respect to the data format. It is common enough for an endpoint to support different formats - xml, json, yaml, etc. If we introduce a second endpoint, e.g., /data/statistics, that endpoint is going to have different data formats, so does it really simply the API from a client perspective? We also need to consider what things will look like once we start adding support for aggregate metrics. Should /metric/Id/data only return raw data? Suppose for some metric, we have 5 min, 15 min, 1 hr, etc. aggregate metrics. Should all of those be handled by the /data/statistics endpoint? I don't think so, and here is a compelling reason. Let's say I send a request /metricId/data with a date range of a year. That could wind up being too many data points. We should by default perform downsampling to reduce the granularity of the data. How exactly we do the downsampling has yet to be determined, but it is something to consider.	0	0	https://issues.jboss.org/browse/HWKMETRICS-34
6281	HWKMETRICS-32	[~jkandasa], is this still an issue for you?	0	0	https://issues.jboss.org/browse/HWKMETRICS-32
6282	HWKMETRICS-31	Stefan is already in the process of refactoring and cleaning up the REST API. Do we really need another ticket and two people working on it? The API is not that large.	1	1	https://issues.jboss.org/browse/HWKMETRICS-31
6283	HWKMETRICS-31	Can this ticket be closed? [~nstefan] what do you think?	1	1	https://issues.jboss.org/browse/HWKMETRICS-31
6284	HWKMETRICS-24	In addition to retrieving data for a metric, I think we also need to be able to retrieve the metric's meta data independently of fetching any data. Meta data current includes tags (for the metric itself, not for individual data points) and data retention. It might also be useful to include some information about any pre-computed aggregates that get generated from the metric. I suppose we could have something like {{/hawkular/tenants/\{tenantId\}/metrics/numeric/\{id\}}} for retrieving data, and something like {{/hawkular/tenants/\{tenantId\}/metrics/numeric/\{id\}/meta}} for retrieving the meta data. What do you think?	0	0	https://issues.jboss.org/browse/HWKMETRICS-24
6285	HWKMETRICS-24	I have a few thoughts to share. First, since this is a breaking API change, we probably ought to give a chance for some discussion on the dev list before merging. Secondly, the change results in an increase in endpoints. At what do we (or should we) become concerned about the API becoming too complex due to the number of endpoints? I am necessarily suggesting that it is a problem, but I think it is something we should consider whenever we are making these sorts of API changes. Lastly, the last part does not make sense to me. I thought that the idea of a {{/raw}} endpoint was to facilitate querying raw data points. Why would we also use that same endpoint for querying aggregated data points? Right now we only compute aggregates at query time. In the future we will add the ability to pre-compute them. I really think that is an implementation detail. If the user wants to see a fixed number of aggregated data points, we have an endpoint for that. Whether those data points are computed at query time or pre-computed is an implementation detail with which the user should not be concerned IMO.	0	0	https://issues.jboss.org/browse/HWKMETRICS-24

#	Requirement	Questions	Answered	Successfully Answered	URL
6286	HWKMETRICS-7	I had a look at both insertion methods. To make sure I've understood the requirement correctly, what we want is to avoid calling {{DataAccess#insertData}} and {{DataAccess#updateMetricsIndex}} multiple times for the same metric, correct? And this should be done by grouping data points in case the same metric was supplied multiple times by the client? In this case, while grouping data of the same metric, what should be done with the tags and interval fields? I'm asking because these fields are part or the row specification in the update query. Perhaps, if there's no reason to specify this every time we want to insert points and only points, we should change DataAccess and REST API?	1	1	https://issues.jboss.org/browse/HWKMETRICS-7
6287	HWKMETRICS-7	Let me describe the current behavior of {{MetricsService.addGaugeData}}. The behavior is basically the same for {{addAvailabilityData}}, despite the the inconsistencies introduced from the RxJava refactoring. Each metric can have one more more data points. We execute a separate batch insert for each metric. The we call {{DataAccess.updateMetricsIndex}} which does another batch insert for all of the metrics. We are already batch inserts that are getting written to the same partition, so to some extent this ticket is a little out of date. On the other hand, there are some questions that this ticket brings up that we need to answer. When if at all should we be used batch inserts? The conventional thinking I hear coming from the Cassandra community is that batch statements should be avoid and doing async inserts in parallel should be preferred. I do not think that batch inserts should altogether avoided, particularly when all of the mutations are for the same partition (which means that will be applied atomically). If a metric has only a single data point, should we still use a batch insert? I am not sure if there is any overhead for an unlogged batch statement. If there is, then that overhead could easily outweigh the benefits of batching when we are only inserting a single data point. How does cluster topology affect the usage of batch inserts? I mentioned the conventional thinking on batch inserts vs async, parallel inserts. I think there is an implicit assumption there of a multi-node cluster. With respect to Cassandra we need to support a somewhat atypical use case of a single node cluster. It might be for example, that batch inserts offer better performance for a small cluster, like up to 3 nodes, but for larger clusters async, parallel inserts are better. Do we need to call {{DataAccess.UpdateMetricsIndex}} every time we insert data? It is true that writes are cheap in Cassandra, and it is common to perform multiple writes of the same data in order to optimize for reads; however, that does not mean those writes come for free. We use (or will use) the metrics_index table to answer different queries, like what metrics exist. There is no requirement to explicitly create a metric before storing data for it. By updating metrics_index on each write, we can answer queries about metrics that have not been explicitly created. I am not sure this is necessary now because in reality at least with Hawkular and with the Heapster client, metrics are explicitly created. I think we need to get a better feel for what the overhead is of performing that index update on every write. Maybe we do want to update the index for the purpose of knowing about which metrics exist, but may we can relax how often we do the update. Maybe we update it periodically in a background job. I do not expect these questions to be answered with this ticket. In fact I should probably create a separate ticket for each one. With respect to this ticket, I think we need to with trying to answer some of these questions.	1	0	https://issues.jboss.org/browse/HWKMETRICS-7
6288	HWKMETRICS-3	[~burmanm] What is the status of this work? I want to get this done in plenty of time for 0.7.0. I know that you are juggling a things right now. If you do not think you will be able to get to this soon, could you reassign it? Thanks.	0	0	https://issues.jboss.org/browse/HWKMETRICS-3
6289	HWKMETRICS-1	Can we please first discuss use cases for the pre-computed aggregates? We should not implement them just because RHQ has them. I am not saying that they are not useful, but we should try to better understand what we get from them, when they are used (e.g. you have 1h, 6h, 1d avg and 7 days raw retention. What data from what aggregate (raw, 1d, 6h,..) is used for e.g. a display range of 15days ago to 6days ago; this clearly spans the whole range. Also do we know that min/max/avg is really what we want? What about 99%ile or such?	0	0	https://issues.jboss.org/browse/HWKMETRICS-1
6290	HAWKULARQE-8	FYI: Update chat on the Jira Alissa Bonas added a comment - 6 days ago Where does this requirement stand? I don't see any activity on it, but it's still targeted to 4.5 Permalink pilhuhn Heiko Rupp added a comment - 9 hours ago This is in my opinion mostly a documentation issue on how to point the external MM instead of the one inside of OCP. As resources inside OCP can talk to IPs outside, I think this is solved engineering-wise Permalink jdoyle John Doyle added a comment - 1 hour ago Yes, I agree Heiko.	1	0	https://issues.jboss.org/browse/HAWKULARQE-8
6291	HIBERNATE-132	Hi, can I get a comment about this issue? It is resolved within ten minutes or so :-) Regards A	0	0	https://issues.jboss.org/browse/HIBERNATE-132
6292	HIBERNATE-88	Should this also go in the release notes?	0	0	https://issues.jboss.org/browse/HIBERNATE-88
6293	HIBERNATE-85	I don't know what led you to believe Cache 1.3 was used. Here is the information from the log, courtesy of Mike (from Release Engineering): 0:jboss-cache-1.4.1-4.SP8_CP01.1jpp.ep1.1.el4.noarch You can see what was used in the build in: http://porkchop.devel.redhat.com/brewroot/packages/hibernate3/3.2.4/1.SP1_CP02.0jpp.ep1.1.el4/data/logs/noarch/root.log On the other hand, we did use JBoss 4.0.5 so we could build it with JDK 1.4: Also, from the same log, we haven't used the JBoss AS at all, see same log above. We have this in the spec file: # FIXME Some circular dependencies here... #BuildRequires: jboss4-jmx >= 0:4.0.2 #BuildRequires: jboss4-system >= 0:4.0.2 as emmanuel gave us the following incantation on irc: ant init jar javadoc refdoc dist and it works fine. Perhaps we need those for testing? In any case, we only built Hibernate with JDK 1.4 due to a request from Dimitris that is probably not any longer applicable. So we can rebuild with JDK 1.5 if you want. This will cause a hige number of alarms to set off on QE tests (the change of JDK 1.4 to JDK 1.5), so please let Rajesh know it is comming. Do you want us to add the jboss-mx and jboss-system as build dependencies? They don't seem to be used. Perhaps we should now use a different ant target to build hibernate (different from the above)?	0	0	https://issues.jboss.org/browse/HIBERNATE-85
6294	HIBERNATE-55	I just upgraded from hibernate 3.0.5 to 3.2.4.sp1 (included with JBoss 4.2.1) and now my application which has been running for two years is getting the "Closing a connection for you. Please close them yourself" log message and a STACKTRACE. I am also running hibernate as an MBean. 1) Is there a workaound for this issue? 2) Is it OK to just call hsession.close() at the end of the EJB method getting this warning? Or is this indicative of some other problem. Thank you.	0	0	https://issues.jboss.org/browse/HIBERNATE-55
6295	HIBERNATE-17	Shouldn't we simply add a couple of "attributes" in the hibernate-service.xml? like: <attribute name="PostUpdateListerner"> net.objectlab.safemargin.persist.util.AuditInterceptor </attribute> and the Hibernate.java would do the following: private void buildSessionFactory() throws Exception { log.debug("Building SessionFactory; " + this); Configuration cfg = new Configuration(); .... cfg.setlistener("post-update", getPostUpdateListener()); ... etc for all listeners? I'm quite surprised this is not supported... I am really looking for this functionality... Can I help? Thanks Benoit	1	1	https://issues.jboss.org/browse/HIBERNATE-17
6296	HIBERNATE-17	Thanks Steve, Would be good to have an example of how you see it working for say, an EJB application that requires a post-update listener... where would you put that code? How could it be set without the application knowing? The app is using a jboss-service.xml from HAR; all .hbm.xml files are automatically detected so my application code does not know anything about listeners... Moving away from configuration file to programmatic setup raises a few questions in my mind... help... Many thanks Benoit.	1	0	https://issues.jboss.org/browse/HIBERNATE-17

#	Requirement	Questions	Answered	Successfully Answered	URL
6297	HIBERNATE-17	Huh? <mbean code="org.jboss.hibernate.jmx.Hibernate ...> ... <attribute name="listenerInjector">MyListenerInjector</attribute> </mbean> MyListenerInjector implements ListenerInjector { public void injectListeners(ObjectName objectName, Configuration configuration) throws DeploymentException { configuration.setListener("post-update", getPostUpdateListener()); } } Not sure why your code needs to know about listeners. This class is orthogonal to your application. But regardless, you are missing the point, I think. Say that not only do you have a post-update listener, but also a flush listener that needs to know about your post-update listener so that it can get information from it. How can that possibly gracefully be acheived by code within the MBean instantiating them? Or what if your post-update listener needs access to a seperate datasource. Again, how could generic instantiation code inside the MBean ever handle that gracefully?	1	0	https://issues.jboss.org/browse/HIBERNATE-17
6298	HIBERNATE-17	Thanks Steve, I now see how it is working, I did not get the fact that the interceptor would have been an attribute to the MBean; that was why I was wondering how you'd do it programmatically. May be it was clear on the forum but not from the comments here... I understand your comments on the need of having more flexibilty in defining the listeners, we also need 'easy' ways to deploy simple listeners. Anyway, this looks good! Thanks! Will it be part of JBoss 4.0.3? Benoit	1	0	https://issues.jboss.org/browse/HIBERNATE-17
6299	HIBERNATE-14	I think this feature is very easy to implement and would help many developers to simplify configuration files maintenance. Why it was removed from all versions?	0	0	https://issues.jboss.org/browse/HIBERNATE-14
6300	HORNETQ-1535	There is not much we can do with just 2 phisical nodes. There's is a voting schema between the broker to ellect if the node is really down.. but with just 2 nodes there's not much to be done. We could add a feature maybe to live to stop live whenever the connection to the backup goes down.. but even though it would have a tradeof to have live going down if backup is down. The only possible way to fix this would be to either add more brokers, or to add a sentinel to the topology (a new feature).. but such thing would require a 3rd and 4th nodes to look over the network and decide when things are down. It would be a new feature and I don't think it could be done on 2.3.x.	1	1	https://issues.jboss.org/browse/HORNETQ-1535
6301	HORNETQ-1535	Hi guys, I have an interest in this issue (unfortunately I dont have much knowledge on how the replication cluster works). The direction here seems to be focused on preventing the backup becoming live. In general when the connectivity between the backup an live is broken the backup activates. Here is possibly naive suggestion. Is there any merit is making the live-backup continually ping for the originally configured live and to revert to backup mode if it rediscovers the originally configured live....? I guess some form of message reconciliation would also be required for this revert-to-backup mode event was triggered. Also your suggestion [~clebert] seems similar to the way VCS NetworkHosts attribute works to monitor NICs "List of hosts on the network that are pinged to determine if the network connection is alive" ..? your comment "if the network is gone.. all nodes will be gone. (which is better than a split brain)." ....possibly..? , but only if its not possible to dynamically reform the cluster.	1	1	https://issues.jboss.org/browse/HORNETQ-1535
6302	HORNETQ-1535	(Well... ok, we could keep pinging the addresses and start whenever is active again.. problem solved :)) This is just an idea I had over coffee yesterday. I didn't see any other similar features out there.. so I'm still learning the possibilities.	1	1	https://issues.jboss.org/browse/HORNETQ-1535
6303	HORNETQ-1461	What does this mean: "activemq6 which is now upstream for hornetq"?	1	0	https://issues.jboss.org/browse/HORNETQ-1461
6304	HORNETQ-1452	It's optional.. and we have a requirement for compilation and whatever is available at runtime. Perhaps you just need the dependency to be runtime? Do you have a fix? we could merge it. With activemq6 this is moot as we are removing the dependency from the codebase and placing it elsewhere. Check the activemq6 repo: https://github.com/apache/activemq-6/	1	0	https://issues.jboss.org/browse/HORNETQ-1452
6305	HORNETQ-1452	Thanks for getting back at me. If It's an optional dependency, adding {{<optional>true</optional>}} for that dependency in the {{hornetq-jms-server}} pom would be enough. Are you going to release a maintenance release for it still?	0	0	https://issues.jboss.org/browse/HORNETQ-1452
6306	HORNETQ-1428	this would fit better on the user's forum instead of a bug report... The receive(0, true) will make a roundtrip to the server what will then immediately go to the server and return if there is any message available. I would need a couple more information about your case.. such as version of hornetq, your testcase.. etc. It could be an old issue that was already fixed on blocking producers... or any other number of factors... I will close this now... we certainly don't ignore timetous on receive.. if there is any issue this is not the issue. so, please open an user forum (or support ticket if you have EAP support) with some more information about your case.	0	0	https://issues.jboss.org/browse/HORNETQ-1428
6307	HORNETQ-1420	Andy is it not sensible to show that the node is continuously trying to reconnect? I could see this being useful when trying to figure out what is happening in the cluster and to ensure that the node is still retrying?	0	0	https://issues.jboss.org/browse/HORNETQ-1420
6308	HORNETQ-1387	command line errors? hornetQ doesn't have a command line tool... what are you referring to? Wildfly CLI?	1	1	https://issues.jboss.org/browse/HORNETQ-1387
6309	HORNETQ-1383	Is there any doc/webpage that explains how is this going to work? What qualifies as a slow consumer? Is it a consumer that is hung and has no associated connection (we do have occasional abandoned/orphaned consumers), or is it a consumer that is simply not able to keep up with the message publish rate. If its the former, to close abandoned consumers, then this would be a great feature. But if we would end up reaping slow but active consumers, then this is not desirable. What does it mean to remove a slow consumer? Will the server close the connection or just that specific consumer? How will this impact other consumers/producers that are associated with the same session or with the same JMS connection? In the case of a reaping an active (but slow) consumer, what exception would be thrown back to the JMS client? When HQ is used in a normal enterprise deployment with multiple independent producers and multiple independent consumers on multiple destinations, paging is a fact of life. You could have multiple destinations that are paging simultaneously - these could be JMS queues or durable subscribers on a JMS topic. And the server should be able to handle this. All indications are that it already does. My suggestion is that if there are certain functions that are slow when paging is in effect, then we should address the efficiency of the paging design. A JMS server should never unilaterally close any active JMS resource such as a consumer or a connection. Thanks Aspi Engineer	1	1	https://issues.jboss.org/browse/HORNETQ-1383

#	Requirement	Questions	Answered	Successfully Answered	URL
6310	HORNETQ-1383	bq. Is there any doc/webpage that explains how is this going to work? Clebert provided one link. Here's another: https://github.com/hornetq/hornetq/blob/master/docs/user-manual/en/queue-attributes.xml#L160 bq. What qualifies as a slow consumer? Is it a consumer that is hung and has no associated connection (we do have occasional abandoned/orphaned consumers), or is it a consumer that is simply not able to keep up with the message publish rate. A slow consumer is a consumer whose rate of message acknowledgement falls below the specified {{slow-consumer-threshold}}. This assumes that the message production rate meets or exceeds the {{slow-consumer-threshold}} as well. I'm not clear about what you mean when you say, "a consumer that is hung and has no associated connection (we do have occasional abandoned/orphaned consumers)." Can you clarify that a bit more? My understanding is that a consumer must be associated with a connection on the broker. bq. If its the former, to close abandoned consumers, then this would be a great feature. But if we would end up reaping slow but active consumers, then this is not desirable. Actually, reaping slow-but-active consumers is exactly what some users want. bq. What does it mean to remove a slow consumer? Will the server close the connection or just that specific consumer? The connection will potentially be closed. However, you can configure instead for a notification to be sent to the management address with details about the slow consumer so that different action can be taken if desired. bq. How will this impact other consumers/producers that are associated with the same session or with the same JMS connection? If the broker is configured to close the consumer's connection then any other session on that connection would be closed as well. bq. In the case of a reaping an active (but slow) consumer, what exception would be thrown back to the JMS client? The consumer would receive an {{org.hornetq.api.core.HornetQObjectClosedException}}. bq. When HQ is used in a normal enterprise deployment with multiple independent producers and multiple independent consumers on multiple destinations, paging is a fact of life. What you consider "normal" is not the same for all users. Some users want to avoid paging for slow consumers. bq. You could have multiple destinations that are paging simultaneously - these could be JMS queues or durable subscribers on a JMS topic. And the server should be able to handle this. The server can and does handle this, but there are performance implications which some users wish to avoid. bq. My suggestion is that if there are certain functions that are slow when paging is in effect, then we should address the efficiency of the paging design. Paging is slower than not paging by it's very nature. I'm sure there are efficiency gains to be made in our design and I'm open to investigating that angle. However, I believe that some users still would want to avoid the performance penalty associated with paging for slow consumers. bq. A JMS server should never unilaterally close any active JMS resource such as a consumer or a connection. This feature is configurable. If you don't want it to close the connection of slow consumers it doesn't have to.	1	1	https://issues.jboss.org/browse/HORNETQ-1383
6311	HORNETQ-1383	Looking in Git, it appears this fix was cherry-picked into the 2.3 release branch and featured in 2.3.24. Should the fix versions in this issue be updated? Will it be cherry-picked into the next 2.4.x release too?	0	0	https://issues.jboss.org/browse/HORNETQ-1383
6312	HORNETQ-1383	This feature has been implemented in the 2.3.x branch but not in the 2.4.x branch. Is it normal? It does not seem correct to have new features in older branches that are not in the upstream branch.	0	0	https://issues.jboss.org/browse/HORNETQ-1383
6313	HORNETQ-1374	Can the specified address be a wildcard?	1	1	https://issues.jboss.org/browse/HORNETQ-1374
6314	HORNETQ-1327	Hm how can I assign this feature request to Justin Bertram as requested by him in the forum thread ? Any ideas ?	0	0	https://issues.jboss.org/browse/HORNETQ-1327
6315	HORNETQ-1307	I'm also having this issue running embedded. I could alternatively use xml file for configuration, but cannot find any clear documentation on the xml config with embedded, and have tried a few different, and cannot connect (creating a client session). Could anyone point me to some help on that? {color:red}Update:{color} [this | http://stackoverflow.com/questions/21397534/embedded-hornetq-with-persistence-enabled-fails-to-start-with-programmatic-confi/21398118#21398118] is the workaround for programmatic config running embedded.	1	1	https://issues.jboss.org/browse/HORNETQ-1307
6316	HORNETQ-1265	Hi, Do you have any error messages? If you download EAP, you shouldn't have any problem installing HornetQ, the script should always work as far as I know. Thanks Howard	1	1	https://issues.jboss.org/browse/HORNETQ-1265
6317	HORNETQ-1265	You need to get approval from the PM to backport a feature... The JIRA should be open on the EAP proper channel (either Bugzilla or JIRA for EAP5), not on hornetq, since it's a backporting on EAP. This is a feature.. so likely to be rejected.. EAP5 is a stable branch.. no features.. bug fixes only!	0	0	https://issues.jboss.org/browse/HORNETQ-1265
6318	HORNETQ-1243	@Jim, From a HornetQ pov we don't delete any messages or the journal so its not an issue with HornetQ. However, Splitting hairs aside and considering my above comments how would you see either of the above as a possible solution, taing into consideration the constraints we have?	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6319	HORNETQ-1243	I'm operating a number of layers above HornetQ itself (using immutant), but it honestly never occurred to me that a "clustered" MQ wouldn't be able to meet its obligations given changing cluster membership. My deployment target is EC2, using autoscaling of prebaked AMIs for deployment. Whether you consider that a PaaS or not (I personally don't, but that's neither here nor there), nodes do simply disappear. And, even given perfect "upstream" operations (i.e. AWS not yanking bare metal out from undeath you, which of course happens), the objective of autoscaling automation (whatever the provider) is as much to minimize overallocation as it is to cope with usage spikes. e.g. when half my users go away on Friday afternoon, I surely don't want to be paying for those CPU hours all weekend. I feel like a bit of an ass quoting from [the HornetQ docs|http://docs.jboss.org/hornetq/2.2.5.Final/user-manual/en/html/messaging-concepts.html#d0e398], but: {quote} With reliable messaging the server gives a guarantee that the message will be delivered once and only once to each consumer of a queue or each durable subscription of a topic, *even in the event of system failure*. {quote} How is message loss acceptable given that objective, even in a relatively "hostile" (but, common, and increasingly so) deployment scenario?	1	0	https://issues.jboss.org/browse/HORNETQ-1243
6320	HORNETQ-1243	If a node failed, you have to bring it back... either by a backup node... or by returning the node back. when you bring a node down.. you have to send us some option to tell us the node is going down and we would then do the proper cleanup. A fully synced cluster is useless on messaging.. just use a database if that's what you want. Message are supposed to be asynchronous.. and they stay on the journal when persistent. I don't mean to be pedantic as well.. but If you don't provide us persistent on the cloud.. then the problem is on the cloud.. we can do IO and we need the IO mechanism to guarantee delivery.	1	1	https://issues.jboss.org/browse/HORNETQ-1243

#	Requirement	Questions	Answered	Successfully Answered	URL
6321	HORNETQ-1243	[~jcrossley] as I said, we have a storage IO for the messages. You have to provide HornetQ a storage folder. if you provide me an ephemeral storage, that's what you get.. ephemeral messages! HornetQ is not a database where messages can be replicated to every other node. That would require you a sync cluster as I said and that woudn't work. Not only I don't want to redesign HornetQ as a sync cluster (as it doesn't work).. nor I have resources to do it (which I wouldn't anyways). We can do our part on the design for scale down nodes.. but you also have to do your part same way you would do with any other database (such as NoSQL, mySQL.. or anything else.. you have to keep the IO somehow for these guys) where you would provide storage IO.	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6322	HORNETQ-1243	There are plenty of databases that are robust to loss of primary storage by using N-way replication to ensure durability. Full cluster sync is not the only alternative to reliable, persistent storage. For example, is there a reason you can't de-couple slaves and physical nodes? For example, if I'm willing to pay per-node bandwidth, could a given physical node act as both a master and a slave to N other nodes (where N is small and much less than the total cluster size)? In this way, any node going down causes one active node to become a live slave that could then choose to do a clean shutdown via the existing shutdown hook. If durability is more important than absolute network throughput (often the case for the EC2 / JBoss setting I think folks here are talking about), then the extra message replications at each node are not necessarily a critical performance issue. There are also replication strategies used by many replicated data stores which use rings (e.g. Riak) where durability is guaranteed by registering copies received in memory in N >= 2 servers; you don't need fsync guarantees except perhaps in a master node. I'm not sure this would work with the current HornetQ internal architecture of course.	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6323	HORNETQ-1243	>> should not assume they can somehow be reactivated. That's impossible.. we can't do magic! We can't sync every message to every other node... you would maximize the throughput of a single node. JBoss MQ acted like that and it sucked on performance! a message belongs to the node where it came from. If you provided the storage up until the folder is graceful normally, then we would transfer messages. Otherwise you would need backup nodes.. or make sure the node will reapear after failed (say a VM crashed). As I said a few times... if you want persistent messages, you need to provide a persistent folder or a backup server with replication. otherwise you get what you provide!	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6324	HORNETQ-1243	>>For example, is there a reason you can't de-couple slaves and physical nodes? For example, if I'm willing to pay per-node bandwidth, could a given physical node act as both a master >>and a slave to N other nodes (where N is small and much less than the total cluster size)? In this way, any node going down causes one active node to become a live slave that could >>then choose to do a clean shutdown via the existing shutdown hook. you can already do this, a jboss/Wildfly application server can have n hornetq servers, we call this the colocated topology and we have users who leverage this, altho typically its in a stable cluster, i.e. 2 jboss servers with a live/backup hornetq pair. How you would decide what nodes back up which live servers would be problematic. >>If durability is more important than absolute network throughput (often the case for the EC2 / JBoss setting I think folks here are talking about), then the extra message >>replications at each node are not necessarily a critical performance issue. Most of our serious messaging customers/users want both, durability and performance which is why HornetQ was architected the way it is.	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6325	HORNETQ-1243	Is there a fundamental reason you can't have a master node also serving as a backup node for another master so we don't have to maintain a separate tier of backup servers? I think it's the doubling of nodes and figuring out how to recover from fail over that is tough for people. Can we simplify the administration of live backup nodes via some other method?	0	0	https://issues.jboss.org/browse/HORNETQ-1243
6326	HORNETQ-1243	> Is there a fundamental reason you can't have a master node also serving as a backup node for another master so we don't have to maintain a separate tier of backup servers? I think it's the doubling of nodes and figuring out how to recover from fail over that is tough for people. Can we simplify the administration of live backup nodes via some other method? Right now we offer the collocated topology, which I reckon needs a lot of manual config, which we already have a task to improve on the next release, where a node can act as a backup as well with manual config. a node would have two sets of journals and would assume the other node by transferring the messages in case of a failure. What I was planning to tackle this before next release (2.5) was: - collocated topology, but with improved configs - Maybe we still need scale down where you can gracelly shutdown a node with messages transfer. My schedule for this was still 2.5 as I talked to you guys earlier. Maybe we could squeeze something earlier (like a snapshot for you guys to test it and collaborate with us). Again: I'm all up to collaborate.. The discussion so far here wasn't being very productive with pointing database expectations which wouldn't work on messaging. Maybe we should reboot the discussion and start over? ;)	1	1	https://issues.jboss.org/browse/HORNETQ-1243
6327	HORNETQ-1243	You will need backup nodes on each node... you will need at least two nodes to preserve messages. The way we suggested you is - configure a backup on each node.. - use collocated topology. If you had an option to provide a persistent folder (that will survive a shutdown of the node, you won't need collocated topology.. maybe just a restart on a node). With these two options things will already work well with the current setup. What we plan on going forward: - Facilitate configuration on the collocated backup - Implement graceful shutdown with message transfers.	0	0	https://issues.jboss.org/browse/HORNETQ-1243
6328	HORNETQ-1243	So, let's drill into those three points more. 1) Reasonable perf. What's reasonable? Is there a number of messages per second, minute, etc. per node that we should hit? 2) No message loss I believe this is assuming no persistent messages are lost. Applications could be using volatile messages, and they would expect to have message loss. 3) Ephemeral network What's provided here? There must be some storage capability here. What is it, and is it only available locally i.e. visible only on that node? If we get more detail on the requirements, we may be able to come up with a temporary solution, through configuration, while we come up with the long-term solution that makes this much easier and smoother, out-of-the-box.	0	0	https://issues.jboss.org/browse/HORNETQ-1243
6329	HORNETQ-1225	If we kick the connection how should we handle this with HA? still disconnect, disconnect without recreating the consumer on failover or should we maybe just close the consumer rather than disconnecting the whole connection?	1	1	https://issues.jboss.org/browse/HORNETQ-1225
6330	HORNETQ-1210	Possibly a blocker.. we will talk about it	0	0	https://issues.jboss.org/browse/HORNETQ-1210
6331	HORNETQ-1208	Yong Hao Gao <hgao@redhat.com> made a comment on [bug 959216|https://bugzilla.redhat.com/show_bug.cgi?id=959216] Hi Mirek, Actually your test is not a valid one. You have to initialize your char array before constructing a string with it, like: char[] chars = new char[1024]; for (int i = 0; i < 1024; i++) { chars[i] = 'a'; } String text = new String(chars); Otherwise the char array may have contain invalid values that cause the Stomp connection to be reset. Can you adjust your test? Howard	1	1	https://issues.jboss.org/browse/HORNETQ-1208

#	Requirement	Questions	Answered	Successfully Answered	URL
6332	HORNETQ-1208	Yong Hao Gao <hgao@redhat.com> made a comment on [bug 959216|https://bugzilla.redhat.com/show_bug.cgi?id=959216] Hmm, strange. Can you attach the new test code? The line-number seems to point to the old test at org.hornetq.tests.integration.stomp.StompTest.testSendManyMessages(StompTest.java:63)	1	1	https://issues.jboss.org/browse/HORNETQ-1208
6333	HORNETQ-1208	Hi Mirek, What you need to do is replace this line: String text = new String(new char[32 * 1024]); with the following char[] chars = new char[32*1024]; for (int i = 0; i < 32*1024; i++) { chars[i] = 'a'; } String text = new String(chars); And the test will pass. If you intend to send binary data in the frame body, you have to add the content-length header so that the server can correctly extract the body of the message. Howard	1	1	https://issues.jboss.org/browse/HORNETQ-1208
6334	HORNETQ-1193	Martin Svehla <msvehla@redhat.com> made a comment on [bug 962264|https://bugzilla.redhat.com/show_bug.cgi?id=962264] Netty 3.6.6.Final is part of EAP 6.1.1.ER3 build 7a6066a78659581facb35874915bf1f9 modules/system/layers/base/org/jboss/netty/main/netty-3.6.6.Final-redhat-1.jar	1	1	https://issues.jboss.org/browse/HORNETQ-1193
6335	HORNETQ-1179	Is this really correct? The {{[javax.jms.Session|http://docs.oracle.com/javaee/6/api/javax/jms/Session.html]}} JavaDoc states, "If a client desires to have one thread produce messages while others consume them, the client should use a separate session for its producing thread." Isn't {{org.jboss.as.test.smoke.messaging.client.jms.JmsClientTestCase}} doing exactly this albeit implicitly with the MessageListener?	1	0	https://issues.jboss.org/browse/HORNETQ-1179
6336	HORNETQ-1179	am I missing something, or this is exactly what Justin said, meaning... breaking session constraint on threading? you have the listener for receiving and still using the same session on producing? That could lead to other issues.. that's why we added the warning. I know there are valid scenarios where the warning is appearing, but I don't think this is a valid case. Again: I may be missing something... let me know on that case.	1	1	https://issues.jboss.org/browse/HORNETQ-1179
6337	HORNETQ-1152	baranowb <bbaranow@redhat.com> made a comment on [bug 917606|https://bugzilla.redhat.com/show_bug.cgi?id=917606] There is such beauty: @LogMessage(level = Logger.Level.WARN) @Message(id = 222133, value = "There is no connector deployed with name '{0}'. The broadcast group with name '{1}' will not be deployed." , format = Message.Format.MESSAGE_FORMAT) void broadcastGroupNoConnector(String connectorName, String bgName); It seems like its intended behavior to skip offending group. Seems like patch Ive created for https://issues.jboss.org/browse/HORNETQ-1152 is a way to go. Clebert?	1	1	https://issues.jboss.org/browse/HORNETQ-1152
6338	HORNETQ-1145	Not quite sure about the setup(since quickstart guide content did not change). All(tested trunk, CR1 and Alpha) are affected. Program will exit. {noformat}	1	0	https://issues.jboss.org/browse/HORNETQ-1145
6339	HORNETQ-1031	This is a customer request... Basically a server will replicate to two servers.. it's backup failover, and to another server where there's is no automatic failover... That server would have to be manually activated in case of a disaster (that means a real disaster.. say.. Hurricanes, Earthquakes... etc). So the data will be backed up to an offline site. in case of a disaster that site will be manually activated. It can be part of the topology for clients to reconenct but the start will be manual (by administrators). This is a tentative for 2.3.0.GA. That means.. if we can do it.. otherwise it can wait 2.3.1.GA... I'm leaving it on 2.3.0.Beta for now, but it will be certainly moved.	1	1	https://issues.jboss.org/browse/HORNETQ-1031
6340	HORNETQ-960	It exists a JMX mbean to pause an resume a destination. it works very well with Queue but not with topic. Is it supposed to work with topic ?	0	0	https://issues.jboss.org/browse/HORNETQ-960
6341	HORNETQ-942	iirc DeliveryActive was a MDB property in JBoss Messaging to prevent MDB to receive messages on deployment. It was possible to call start/stopDelivery() on the MDB MBean to toggle message delivery. There is no similar properties in HornetQ RA. Is there a workaround for it or is it something to implement?	1	1	https://issues.jboss.org/browse/HORNETQ-942
6342	HORNETQ-921	The issue you linked to as a duplicate is marked as fixed. As far as I can tell this issue is not fixed, or else I wouldn't have opened it in the first place. Can you please confirm with a link to the maven artifact in question?	1	1	https://issues.jboss.org/browse/HORNETQ-921
6343	HORNETQ-909	@Howard: I believe this issue is done, right? I will ask you two things> Talk to Jeff Mesnil and look if there is anything to be done on the configs at AS7. Also: make sure this jira is marked on the upgrades at the EAP, so QA will be able to track it down. Close it when you finish these two things please?	0	0	https://issues.jboss.org/browse/HORNETQ-909

#	Requirement	Questions	Answered	Successfully Answered	URL
6344	HORNETQ-908	Usecase: A web application running in Jboss7 needs to send to or receive from a queue on a remote HornetQ server. The javaee/jca-config example seems to address this. What we can do is define a pooled connection factory in jboss7: {code} <connectors> <connector name="remote-jmsxa"> <factory-class>org.hornetq.core.remoting.impl.netty.NettyConnectorFactory</factory-class> <param key="host" value="<remote_host_ip>"/> <param key="port" value="5445"/> </connector> <netty-connector name="netty" socket-binding="messaging"/> <netty-connector name="netty-throughput" socket-binding="messaging-throughput"> <param key="batch-delay" value="50"/> </netty-connector> <in-vm-connector name="in-vm" server-id="0"/> </connectors> <pooled-connection-factory name="remote-hornetq-ra"> <transaction mode="xa"/> <connectors> <connector-ref connector-name="remote-jmsxa"/> </connectors> <entries> <entry name="java:/RemoteJmsXA"/> </entries> </pooled-connection-factory> {code} This allows use to access the remote connection factory with a local jndi lookup: {code} Context ic = new InitialContext(); ConnectionFactory = ic.lookup("RemoteJmsXA"); {code} However, there's no way to lookup the queues we want to send messages to or receive messages from. Currently the javaee/jca-config example seems to work around this by manually constructing the Queue objects from java code. {code} HornetQQueue destQueueA = new HornetQQueue("A"); HornetQQueue destQueueB = new HornetQQueue("B"); {code} This makes the code less portable because we're not programming against the API but against the implementation. In Jboss.4/5 we could lookup queues by importing the remote jndi as an external context: {code} <mbean code="org.jboss.naming.ExternalContext" name="jboss.jndi:service=ExternalContext,jndiName=remote/pangaea"> <attribute name="JndiName">remote/pangaea</attribute> <attribute name="Properties"> java.naming.factory.initial=org.jnp.interfaces.NamingContextFactory java.naming.provider.url=jnp://remote_host_ip:1099 </attribute> <attribute name="RemoteAccess">true</attribute> </mbean> <mbean code="org.jboss.jms.jndi.JMSProviderLoader" name="jboss.jms:service=JMSProviderLoader,name=PangaeaJMSProvider"> <attribute name="ProviderName">PangaeaJMSProvider</attribute> <attribute name="ProviderAdapterClass">org.jboss.jms.jndi.JNDIProviderAdapter</attribute> <attribute name="FactoryRef">remote/pangaea/XAConnectionFactory</attribute> <attribute name="QueueFactoryRef">remote/pangaea/XAConnectionFactory</attribute> <attribute name="TopicFactoryRef">remote/pangaea/XAConnectionFactory</attribute> </mbean> <tx-connection-factory> <jndi-name>PangaeaJmsXA</jndi-name> <xa-transaction/> <rar-name>jms-ra.rar</rar-name> <connection-definition>org.jboss.resource.adapter.jms.JmsConnectionFactory</connection-definition> <config-property name="SessionDefaultType" type="java.lang.String">javax.jms.Topic</config-property> <config-property name="JmsProviderAdapterJNDI" type="java.lang.String">java:/PangaeaJMSProvider</config-property> <security-domain-and-application>PangaeaJmsXARealm</security-domain-and-application> <max-pool-size>20</max-pool-size> </tx-connection-factory> {code} But this is not possible with JBoss.7. Redhat support pointed us to this jira issue to raise our vote and explain our usecase. One thing that comes to mind us to construct an InitialContext via the url of the remote hornetq server: {code} java.naming.factory.initial=org.jnp.interfaces.NamingContextFactory java.naming.provider.url=jnp://remote_host_ip:1099 {code} but that depends on what the remote server is (jboss5, jboss7, standalone, etc) and possibly conflicting jar versions when using remoting for example.	0	0	https://issues.jboss.org/browse/HORNETQ-908
6345	HORNETQ-894	Why is this reopened if it's not an issue?	0	0	https://issues.jboss.org/browse/HORNETQ-894
6346	HORNETQ-887	We had that discussion in the past.. there isn't really a real need for that. We have had a few JIRAs that were closed with a similar discussion in the past. We have recently added a XMLExporter that will give us better managment of the data on the JOurnal. Wouldn't that cover any concern users have about it?	1	1	https://issues.jboss.org/browse/HORNETQ-887
6347	HORNETQ-887	In addition to Clebert's question about the XMLExporter, I'm curious to know about the use-case here. What specific functionality are you supporting which requires the use of DB persistence? There are multiple strong architectural reasons why we don't support persistence to a database so I'm keen to here any counter-argument.	0	0	https://issues.jboss.org/browse/HORNETQ-887
6348	HORNETQ-887	I scoured every jboss documentation about the jdbc persistance in hornetq. but there are two discussion related with that. even if I read those things I found, I couldn't understand the reason why this requirements for jdbc data store is rejected. it had discussed for two years. but why did the request is rejected eventually? please let me know if you have any document about rejecting jdbc persistance in hornetq.. I'm urgent.. help me.. thanks in adavance...	0	0	https://issues.jboss.org/browse/HORNETQ-887
6349	HORNETQ-854	We have several possibilities to speed up HornetQ UUID generation 1. we could ditch org.hornetq.utils.UUIDGenerator and uses java.util.UUID instead (+) we remove the network resolution which is the speed bottleneck (-) java.util.UUID is Java 1.5 only (aiui, it's not an issue for AS7 integration) (-) we switch from a name-based UUID (based on the MAC address) to a pseudo-random UUID. Collision can happen... 2. we could parallelize the network resolution. For each network interface, we try to check it in a thread and wait for the 1st matching one. (+) we speed up the network resolution (+) we keep the 1.4 compatibility (+) we continue to use name-based UUID (-) some minor thread management wdyt?	1	1	https://issues.jboss.org/browse/HORNETQ-854
6350	HORNETQ-854	interesting read one important thing that I did not mention is that we must generate UUID *fast* (each message generates a message ID). For that reason alone, I don't think we can use random UUID (using either Random or SecureRandom). The best way for that would be to migrate to the latest version of JUG. Previously, we forked it into HornetQ code base. Do we want to do the same (and streamline the code) or do we add another dependency to hornetq-code and use JUG from the Maven repository? *But* even using the latest code, this would not solve the boot time issue. JUG is looping around the network interfaces the same way than HornetQ does. In any case, we need to change that bit of code to parallelize the code finding a suitable network interface.	1	1	https://issues.jboss.org/browse/HORNETQ-854
6351	HORNETQ-854	Tomaz, I have provided a patch to HornetQ to speed up the loop finding the hardware address. The performance are not conclusive on my laptop (linux with 3 network interfaces). I have not modified anything else (still using the same UUID generator) I've attached the patched hornetq-core.jar, could you give it a go on you Windows machine please and tells me if it improves AS7 boot time?	1	1	https://issues.jboss.org/browse/HORNETQ-854
6352	HORNETQ-854	Great! What's the Fix Version?	1	0	https://issues.jboss.org/browse/HORNETQ-854
6353	HORNETQ-831	AndyTaylor: ok, what would the default be? [4:39pm] clebert: AndyTaylor: JCA/MDBs/inVM = unblocked... remote = Blocked [4:39pm] clebert: remote Factories outside of JCA I meant	1	1	https://issues.jboss.org/browse/HORNETQ-831
6354	HORNETQ-804	Can dev team take this JIRA on high priority? Thanks.	0	0	https://issues.jboss.org/browse/HORNETQ-804
6355	HORNETQ-763	Will this be is in the next EAP 5 roll-up patch due in Feb?	0	0	https://issues.jboss.org/browse/HORNETQ-763
6356	HORNETQ-759	BTW: We are already doing some work to stop delivering messages on the cluster once the node is dead. But for messages already scheduled to be delivered to that node are as good as on that node, hence you have to restart the node (or a copy of the node) to receive the messages. This issue is likely a duplicate unless you find a better description that tells me this is something different. Can you summarizethe issue?	1	1	https://issues.jboss.org/browse/HORNETQ-759

#	Requirement	Questions	Answered	Successfully Answered	URL
6357	HORNETQ-759	Hi Clebert, Iin simpler words, I need some mechanism in HornetQ so that the messages in the queue of one node of the cluster should be redelivered to the other node of the cluster if in case one node of the cluster goes. We cannot afford to wait to till the node restarts because that is something which is uncertain. It can/cannot happen. BTW i donot understand why you are avoiding live to live delivery like Jboss messaging. Please let me know what you are proposing in future releases of HornetQ which can address this problem. Thanks alot, Vineet	1	1	https://issues.jboss.org/browse/HORNETQ-759
6358	HORNETQ-721	> All you would need is message redistribution when slow consumers are not being fast > enough. That's why I renamed the JIRA here Agreed. > If you configured the MDB remotely, you would have an instance on each box, but > I don't think that would fix your issue as you would still have the MDBs created > evently across the cluster. I don't quite understand this. It doesn't fix the issue from a Single Point of Failure perspective (because now there's only one queue), but it *does* fix the issue from a 'MDBs consume as fast as possible' point of view. Because some MDBs run faster than others. What do you mean by 'you would still have the MDBs created evenly across the cluster'?	1	1	https://issues.jboss.org/browse/HORNETQ-721
6359	HORNETQ-720	Hi, Can you take a look at ReplicatedFailoverTest.testNonTransacted()? Right now, I've already fixed all steps that I understand from the HA code set-up. However, now the test will timeout while waiting for a {{SessionFactory}} from {{ServerLocator}}. (actually it times-out while waiting for the topology during {{SessionFactory}} creation). My problem is that I don't know where to go from here, and neither am I sure whether this is caused by something missing from the 'test set-up' or at the actual code.	1	1	https://issues.jboss.org/browse/HORNETQ-720
6360	HORNETQ-698	I just went to look into this. All classes with names *FileFactory had already been moved to hq-journal. Is there something left to move?	0	0	https://issues.jboss.org/browse/HORNETQ-698
6361	HORNETQ-695	@Andy: Is this really an issue?	0	0	https://issues.jboss.org/browse/HORNETQ-695
6362	HORNETQ-675	Hi Clebert, Thanks for the quick response. Not sure if the issue is related to Glassfish or our application. My guess is that this problem affects any container using XA transactions with the resource adapter. Do you know if anyone is actually using the hornetq-ra for XA ? Thanks Thomas	1	0	https://issues.jboss.org/browse/HORNETQ-675
6363	HORNETQ-663	What's the different between this and HORNETQ-662 ?	0	0	https://issues.jboss.org/browse/HORNETQ-663
6364	HORNETQ-662	It doesn't hang any more. There are cursors on the page-files now. However dead subscriptions will definitely cause performance issues, as the messages will build up on the folder. However, I'm not sure we can reap dead subscriptions automatically like that. Is this something you mean for rest only?	0	0	https://issues.jboss.org/browse/HORNETQ-662
6365	HORNETQ-653	This is because we changed the functionality to not call listeners on failover, how ever ive been thinking off adding an interface, say FailoverExceptionListener, that extends ExceptionListener so users can still be notified of a failover event. wdyt?	1	1	https://issues.jboss.org/browse/HORNETQ-653
6366	HORNETQ-651	Is HQ 2.3.0 (or later) the version that will go into EAP 6 ?	0	0	https://issues.jboss.org/browse/HORNETQ-651
6367	HORNETQ-651	This issue is marked as fixed in 2.2.8 but also unresolved. Which is it?	0	0	https://issues.jboss.org/browse/HORNETQ-651
6368	HORNETQ-650	What's going on with this issue guys?	0	0	https://issues.jboss.org/browse/HORNETQ-650
6369	HORNETQ-650	Hi guys, I'm not sure I have any idea about how to do this. Can anyone shed a bit more light on this? Any example in AS7? Thanks Howard	0	0	https://issues.jboss.org/browse/HORNETQ-650
6370	HORNETQ-650	What workaround? Seriously? How hard is it to add a callback interface?	0	0	https://issues.jboss.org/browse/HORNETQ-650
6371	HORNETQ-650	why do we have to, its already taken care of, see JMSQueueService	1	1	https://issues.jboss.org/browse/HORNETQ-650
6372	HORNETQ-650	Hi guys, I didn't try this 2.2.5 version yet, but is this change backwards compatible with JBoss6? Do we need to change our hornetq-jboss-beans.xml?	0	0	https://issues.jboss.org/browse/HORNETQ-650
6373	HORNETQ-640	Hi Andy, could you provide more info what was done here please? I've just got task to look at this and develop tests for it if necessary. Thank you, Mirek	1	0	https://issues.jboss.org/browse/HORNETQ-640
6374	HORNETQ-640	Thanks Andy for quick answer. Is there also a situation when xa recovery resource is unregistered from transaction manager?	1	0	https://issues.jboss.org/browse/HORNETQ-640
6375	HORNETQ-626	I've just noticed that IDEA has shuffled around the import statements a fair bit. I used the existing IDEA project file that is checked in to svn, but this appears to have code style settings that don't match the source formatting. Is this an issue? Does someone have an (or is able to update the existing) ipr file with the correct settings? If so I'll update the patch with the corrected imports.	0	0	https://issues.jboss.org/browse/HORNETQ-626
6376	HORNETQ-580	Clebert, what's the JIRA id for the duplicate? Thanks.	1	0	https://issues.jboss.org/browse/HORNETQ-580
6377	HORNETQ-569	Clebert, can you please check if this could go into 2.3? The effort seems to be rather small but the benefit is much higher. We need this for statistical purposes. Otherwise we must patch this by ourselves what we want to avoid. Thanks!	0	0	https://issues.jboss.org/browse/HORNETQ-569
6378	HORNETQ-569	Justin, many thanks for jumping in an providing a quality implementation including proper documentation and unit tests! Please let me ask a few questions regarding the implementation. Is my general understanding of the interceptors (incoming and outgoing) correct that the return value is used to combine two separate semantics in one: a) determine whether the next interceptor in the chain shall be called (if present) b) determine whether the packet processing shall be continued or aborted So for example in order to skip processing of an incoming message (packet), an interceptor has to return false. What are use cases to do the same on the outgoing message? I noticed the different implementations of blocking and non-blocking processing of outgoing packets #send versus #sendBlocking regarding interceptor evaluation. While in the non-blocking send the execution is just skipped using a return statement, in the non-blocking implementation an IllegalStateException is thrown if an interceptor returns false. Who is supposed to handle/receive this exception and what is the intended purpose? Is it considered to be a programming error if an interceptor returns false to abort any blocking send call (and this runtime exception will rush through the different layers up to the API consumer) or will any above layer handle the runtime exception and convert it to a checked HornetQException? In any case I think the error message "Interceptor failed" could be a bit misleading. If there is an error in the interceptor implementation causing an exception, this will only be logged and have no impact on both interceptor chain and packet processing - it will just be continued. If the interceptor intentionally returns false to abort, I think in both cases the message could give a better indication about the actual purpose.	1	1	https://issues.jboss.org/browse/HORNETQ-569
6379	HORNETQ-563	Please, always discuss issues on the user's forum before open them... Also: can ou provide a testcase?	1	1	https://issues.jboss.org/browse/HORNETQ-563
6380	HORNETQ-562	This description makes it sound like additional tests for STOMP are some sort of feel-good measure. I think my tickets HORNETQ-726 and HORNETQ-742 show that clearly there are important cases not covered by the tests. Is hornetQ STOMP support not intended for production use?	0	0	https://issues.jboss.org/browse/HORNETQ-562
6381	HORNETQ-556	Isn't this fixed?	0	0	https://issues.jboss.org/browse/HORNETQ-556
6382	HORNETQ-547	When will the Version2.3 come to release? Hope the Version2.3 will include the function.	0	0	https://issues.jboss.org/browse/HORNETQ-547

#	Requirement	Questions	Answered	Successfully Answered	URL
6383	HORNETQ-542	What is your expected semantics for this? Having the sender's username or the current user's. If it's the current user on the session of the receiver (like you're proposing), I see no point on this feature. As for the sender's user... you could achieve this with an interceptor.	1	0	https://issues.jboss.org/browse/HORNETQ-542
6384	HORNETQ-515	You could just have three values of signature, i.e. signature="queue|topic|generic" where the default is generic. I'm guessing xa should be an element rather than an attribute. Wdyt? Also, I don't think delegation is necessary. Simply keep the current HornetQConnectionFactory class, but create a set of sub classes, HornetQQueueConnectionFactory, HornetQTopicConnectionFactory, HornetQXAConnectionFactory, HornetQXAQueueConnectionFactory, HornetQXATopicConnectionFactory which do not have any methods but simply implement the appropriate interfaces.	1	1	https://issues.jboss.org/browse/HORNETQ-515
6385	HORNETQ-510	This may not be a bug, but it definitely is restriction that serves no purpose. The spec does state that setClientId must be the first thing that must be called. But its vague in the sense that it does not explicitly define what cannot be called before a call to setClientId is made. For example, would a call to "<connection>.toString()" also prevent subsequent calls to setClientId? I am guessing that the intent of the spec is to ensure that setClientId() cannot be called after any sessions have been opened from the connection. Restricting the sequence of getClientId followed by setClientId serves no purpose. This seems to be same conclusion that folks at Weblogic, SunMQ, and Tibco EMS have come to.	0	0	https://issues.jboss.org/browse/HORNETQ-510
6386	HORNETQ-462	Andy, do you have an outline for this chapter? Can I help in any way?	0	0	https://issues.jboss.org/browse/HORNETQ-462
6387	HORNETQ-447	What is this task? It seems very hand wavy and general. Please can we have a proper title and description, I have no idea what it involves.	1	1	https://issues.jboss.org/browse/HORNETQ-447
6388	HORNETQ-446	Clebert, the only thing I see these changes impacting is the release notes. Do you see any of these subtasks adding/removing from the current HornetQ User Guide?	1	1	https://issues.jboss.org/browse/HORNETQ-446
6389	HORNETQ-426	Hi guys, as far as I know tim is not working on this anymore and the 2.1.1 fix version seems weird to me since hornetQ 2.1.1 is released. Can someone plus reassign and update this ticket? Also, deploying that on the main maven repository would be needed.	1	0	https://issues.jboss.org/browse/HORNETQ-426
6390	HORNETQ-426	Cool, good to hear! Can you change the fix version then?	1	0	https://issues.jboss.org/browse/HORNETQ-426
6391	HORNETQ-426	come on guys. Is it that hard to get the proper poms metadata? Can I help?	1	0	https://issues.jboss.org/browse/HORNETQ-426
6392	HORNETQ-416	To add more details around this feature request. What is desired is that ability to retrieve back: - a list of connections and connection data that includes connection id (a unique identifier for this connection), client IP, jms user id with which client connected, JMS clientid - a list of sessions and session data that includes the connection id, session id (a unique identifier for this session), session mode (transacted or non-transacted) - a list of producers and producer data that includes session id and/or connection id, destination name, producer id - a list of consumers and consumer data that includes session id and/or connection id, destination name, consumer id, boolean indicating if its durable or not, durable subscription name.	0	0	https://issues.jboss.org/browse/HORNETQ-416
6393	HORNETQ-402	Andy, it looks like Tim has outlined the features you plan to implement in the thread - do you have an outline of the changes to your documentation with these updates?	0	0	https://issues.jboss.org/browse/HORNETQ-402
6394	HORNETQ-394	Why is this appropriate?	0	0	https://issues.jboss.org/browse/HORNETQ-394
6395	HORNETQ-393	Ive been playing around with this today by pulling out network cables etc and cant seem to recreate the issue. Each lookup creates a new initial context and does a lookup. If there are network issues at this point then this will throw a network exception with a no route to host and retry as per the normal code. For this to hang the network would have to go down in a very small window, after the lookup had hit the server but before the response had been returned. I'm not sure if this would actually hang either as its difficult to recreate. Terry, how were you actually seeing this happen?	1	1	https://issues.jboss.org/browse/HORNETQ-393
6396	HORNETQ-392	I know Andy added more tests, so I'm closing this as done. @Andy: You can never have enough tests ;-) but if you want more, can you add a new task for 2.3.0 please?	0	0	https://issues.jboss.org/browse/HORNETQ-392
6397	HORNETQ-374	there is already documentation for STOMP (in interoperability.xml). Do you want to move it to its own section?	0	0	https://issues.jboss.org/browse/HORNETQ-374
6398	HORNETQ-340	Andy, Finally got around to testing this under TRUNK, and the patch seems to fix the problem. Many thanks. Is this going to be added to the next release?	1	1	https://issues.jboss.org/browse/HORNETQ-340
6399	HORNETQ-329	@Bill: I believe you created some sort of Pool at your spring integration (as far as i remember from the SVN commits) Can you assign it me back please if you didn't? Or close it if you did it please?	0	0	https://issues.jboss.org/browse/HORNETQ-329
6400	HORNETQ-323	It's not a patent issue. Patents and copyrights are quite different things. What does Red Hat use in other documentation? Are you 100% sure there are no free fonts available?	1	1	https://issues.jboss.org/browse/HORNETQ-323
6401	HORNETQ-323	Did you ask the Red Hat documentation team what they use?	1	1	https://issues.jboss.org/browse/HORNETQ-323
6402	HORNETQ-323	Did you ask the Red Hat documentation team what they use? No I didn't. I'll ask them if they can help.	0	0	https://issues.jboss.org/browse/HORNETQ-323
6403	HORNETQ-316	Hi Howard! Do you have an outline of the config documentation this will require? Can I give you a hand with anything?	1	1	https://issues.jboss.org/browse/HORNETQ-316
6404	HORNETQ-316	JGroups (and so Infinispan) have implemented various strategies which work fine on AWS (and others), and more are coming, wouldn't it make sense to reuse the same code? In all cases I'd love to use HornetQ with applications which also use Infinispan and JGroups, so it would be great if the cluster discovery was consistent across all involved technologies.	0	0	https://issues.jboss.org/browse/HORNETQ-316
6405	HORNETQ-316	Hi Paul, I haven't got time working on it yet. If you have a working solution, that's great. Would you mind put your here for discussion purpose? Thanks, Howard	0	0	https://issues.jboss.org/browse/HORNETQ-316
6406	HORNETQ-316	Hi Clebert, that sounds great. I've been trying to work the JGroups Discovery through trunk, but it's very tightly coupled. A Discovery abstraction will be very useful. What's the timeline for releasing with the Discovery abstracted? Also, where is the abstracted Discovery code at so I can code up a JGroups implementation for you? Thanks, Paul.	1	1	https://issues.jboss.org/browse/HORNETQ-316
6407	HORNETQ-316	Cool... where's the dev thread at? Thanks.	0	0	https://issues.jboss.org/browse/HORNETQ-316
6408	HORNETQ-316	Will this be released with 2.3? Is there any work that needs to be done that I can help with?	0	0	https://issues.jboss.org/browse/HORNETQ-316
6409	HORNETQ-302	How is this different to creating queues using JMX, Jconsole connected to HornetQ broker? I don't remember having to specify explicitly the configuration attributes.. but I could be forgetting	0	0	https://issues.jboss.org/browse/HORNETQ-302
6410	HORNETQ-302	Judging from the issue on the JMS Spec, it seems that they agreed to the changed in the docs for JMS 2.0. How does this leave this issue?	0	0	https://issues.jboss.org/browse/HORNETQ-302
6411	HORNETQ-279	Isn't this already done?	1	1	https://issues.jboss.org/browse/HORNETQ-279
6412	HORNETQ-273	How is this different from HORNETQ-255 ? Why has a new JIRA been opened?	1	1	https://issues.jboss.org/browse/HORNETQ-273

#	Requirement	Questions	Answered	Successfully Answered	URL
6413	HORNETQ-255	there is indeed a problem with the server resources. here is the scenario: the client deletes the temp queue -> the server will handle the destuction and remove the resources associated to the queue (credit managers, paging store) the client closes the producer -> the client producer will release its outstanding credits -> the server session will handle the request and calls getCreditManagerHolder() -> this method will recreate a paging store and the CreditManagerHolder for the temp queue which was deleted These resources will then remain in the server forever and accumulate until a OOME occurs. I'm not sure what is the proper fix but we should be more careful about creating server resources when calling getCreditManagerHolder(). E.g. shouldn't we check that there are queues bound to the address before calling this method?	1	0	https://issues.jboss.org/browse/HORNETQ-255
6414	HORNETQ-243	Thanks for responding Tim. Maybe, I am having difficulty finding the information I need then in the documentation. Other than specifying hornetq-queues.xml within the classpath when starting up JBoss, can you explain how HornetQ can load 2 separate (different named) XXX-jms.xml and possibly 2 separate XXX-configuration.xml files that complement eachother? Again, we are trying to keep all of our application specific configurations separate from the default that installed in the deploy\hornetq.sar deployment in JBoss. Thanks, Dave	0	0	https://issues.jboss.org/browse/HORNETQ-243
6415	HORNETQ-229	Hi Andy, Excellent work ... pulled it down and am playing with it now. Why have I reopened the ticket? The second example in the messages.xml file examples.message-group2 isn't in the examples.xml (I'm guessing on this) file so when the pdf doc generates you get a ??? instead of a reference to the example. Please let me know if you need any more information. Cheers, Brian.	1	1	https://issues.jboss.org/browse/HORNETQ-229
6416	HORNETQ-216	I am confused about what you are suggesting here. Can you outline what test you would like to see, then I can tell you if we already have it. Not sure what you mean by "There is no sync on sendMessages on the Bridge".	1	1	https://issues.jboss.org/browse/HORNETQ-216
6417	HORNETQ-216	By "There is no sync on sendMessages on the Bridge" I mean, the Bridge will use setBlockOnTransaction(false). I was referring this will be probably be ok since it uses the SendAckHandler. Also, All I'm saying is I didn't find a test validate message consistency after failover on the Bridge. So that would mean.. we don't have a test to support it works. This task is about making sure we have a test. All the failover tests I found so far were about reconnecting the bridge, and not over consistency on the message transfers. Then is simple.. or we have a test, on this case I just couldn't see it and we don't have an issue and we just reject this issue. (no postponing needed) Or we don't have it on which case we need to write tests where a failure happens *while* messages are being transferred through the bridge and we validate consistency here. On which case I wouldn't suggest postponing.	1	0	https://issues.jboss.org/browse/HORNETQ-216
6418	HORNETQ-195	isn't there a chicken-and-egg thing here? We need the Ant libs to run the Ant script which invokes Maven which will download the library files. We cannot remove the Ant libs and let Maven download them only when (if?) our build setup use Maven as its top build tool.	1	0	https://issues.jboss.org/browse/HORNETQ-195
6419	HORNETQ-195	The build script would call mvn initialize first which downloads the packages, you then set ant home to .m2/and whatever and then run ant, i think? tbh, i think we should totally mavenize the build when we have time.	1	1	https://issues.jboss.org/browse/HORNETQ-195
6420	HORNETQ-195	should this really be done for 2.1.0.CR1 or can it be postponed?	1	0	https://issues.jboss.org/browse/HORNETQ-195
6421	HORNETQ-193	wow.. you're fast! I will review this weekend.. I have taken a quick look and it looks good.	1	1	https://issues.jboss.org/browse/HORNETQ-193
6422	HORNETQ-191	Is this part of the Failover improvements? It should probably be a sub task then?	1	1	https://issues.jboss.org/browse/HORNETQ-191
6423	HORNETQ-189	All in all the patch looks good. I had to tweak a few things to get your example to work, classpath etc and actually it never received the incoming tweet. u may need to check this. also the post office api had changed so i had to change your code slightly. Here are a few minor issues 1. Make sure all your parameters and fields are final where appropriate, i noticed a few places where they weren't 2. I notice in OutgoingTweetsHandler constructor you set up quite a but stuff, maybe this would be better in the start method. Also in OutgoingTweetsHandler whats the reason for creating a temp queue if it doesn't exist, should this just throw an error? 3. i noticed a few format differences with '}catch(Exception e)' should be on a new line. 4. in OutgoingTweetsHandler handle you are ignoring a few exceptions, is there a better way to do this. 5. IncomingTweetsHandler same as point 2 6. a few magic numbers, i.e. this.paging.setCount(1); and ServerMessage msg = new ServerMessageImpl(this.storageManager.generateUniqueID(), 50);, make these and any others constants or reuse existing constants. 7. The example and test use the titter hornetq account i guess u created. The tests may not work on hudson because of firewall restrictions and i am not sure whether having a public account is a good idea. Is there any way to use a fake twitter URL that we can fake. Might be best to raise this issue on the dev forums and w can all discuss it.	0	0	https://issues.jboss.org/browse/HORNETQ-189
6424	HORNETQ-176	Do you think you could provide a testcase for it? Also.. there is some code for that on the HornetQMessage. Basically, we just need to move that to the CoreMessage. IMO the code should also deal with conversions. and the test should also do it. This should be a quick change. Let me know if you can do it...	0	0	https://issues.jboss.org/browse/HORNETQ-176
6425	HORNETQ-174	Does the paging manager already contain this information? If not, how will you compute it?	0	0	https://issues.jboss.org/browse/HORNETQ-174
6426	HORNETQ-174	Bijith, could you attach a patch instead of the files? svn diff > HORNETQ-174.diff It is easier for us to review and apply your changes with a patch.	1	1	https://issues.jboss.org/browse/HORNETQ-174

#	Requirement	Questions	Answered	Successfully Answered	URL
6427	HORNETQ-173	> > Not sure what you mean "the default behaviour is significantly flawed". > Then run the attached program with the line "cf.setBlockOnPersistentSend(true);" commented out and see yourself what happens after the HornetQ server is shut down. > > Bear in mind that: > > a) HornetQ is not just a JMS system. Many users are not interested in strict JMS compliance. However, do not forget that many users are interested in strict JMS compliance! Actually I think that if the users choose to use the JMS API, they usually appreciate the proper implementation (according the the JMS specification). > > 2) With the default setting of block-on-persistent-send set to false, as I have mentioned before, coupled with asynchronous send acknowledgements (read the user manual) you can get much higher throughput without losing any of the once and only once guarantees you get with blocking. This is certainly not "flawed" Of course that in this scenario there is nothing flawed. I was writing about a different scenario - behaviour of MessageProducers when the connection to the server fails. > Different users require different things, some want JMS compliance, some don't. The point of HornetQ is that it is configurable to all these types of users, but to say one way is "correct" and another is not is ridiculous. > I completely agree with you that it is nice to have a configurable behaviour, so that users can configure what suits them best. If somebody is willing to change the architecture of the application to be able to benefit from the improved performance of asynchronous send acknowledgements, let them do it. Feel free to make the default parameters whatever you think is the best for your proprietary core API. However, when you claim that HornetQ supports an industry standard API (JMS), I do not understand why you don't provide the proper default behaviour which is required by the API specification. Should I understand it so that you are knowingly trading improved performance for decreased reliability and violation of the JMS API specification? That would seem to be a terribly wrong decision to me... Let me sum it: I think that if you claim that HornetQ is JMS compliant, you should do your best to have the default settings for the JMS clients as conforming to the JMS specification as possible. Sure, make it configurable to be able to do many weird things, many advanced users appreciate it, but do not let the basic users who use the default settings to fall into some stupid trap like loosing messages because of some ridiculous performance improvements... The reliability should be the basic requirement of any serious messaging system IMO.	1	1	https://issues.jboss.org/browse/HORNETQ-173
6428	HORNETQ-161	fixed in the trunk. (see changelog) The jms/embedded example demonstrates the POJOification of the JMS server config. Kenny, could you have a look at the jms/embedded example to check that this new way to configure would work fine with Spring? Please close this issue if that's fine for you.	1	1	https://issues.jboss.org/browse/HORNETQ-161
6429	HORNETQ-161	Would this mean that the use of hornet-jms.xml would no longer be necessary? The jms/embedded example still uses hornet-jms.xml, but then instantiates a Destination POJO which refers to the destination that had been previously configured in that file.	1	1	https://issues.jboss.org/browse/HORNETQ-161
6430	HORNETQ-157	Did you envision to use a different mbean server for each embedded hornetq server? I understand your use case but I think this would make the API more brittle as the JMX clients would have to be aware of the specific domain name as opposed to only connect to different mbean servers. wdyt?	0	0	https://issues.jboss.org/browse/HORNETQ-157
6431	HORNETQ-128	Is there any news on that implementation? IMO web-socket is still not production ready and comet (for example with netty nio) fits the current mainstream need well.	1	0	https://issues.jboss.org/browse/HORNETQ-128
6432	HORNETQ-126	I believe that the spec has been released is there any more talk about implementing amqp? We are looking at ways we can implement messaging between a .net system and a java system. We originally chose hornetq with this in mind, because at that point it was on the HornetQ's future radar and we didn't need it at the time. Now about a year later we are starting to get to the point that it is on our radar to do. An all of the possibilities are getting put on the table (Using Stomp, Replacing HornetQ, Use rest). I personally would not like to have to throw away our investment around hornetq. We are sending serialized protocol buffer objects as the body of the messages, and would really like a protocol the fully supported binary messaging. Are there any thoughts or timeframes?	1	0	https://issues.jboss.org/browse/HORNETQ-126
6433	HORNETQ-89	Jeff does it mean that the persistence part will be implemented for 2.3.0.Final?	0	0	https://issues.jboss.org/browse/HORNETQ-89
6434	HORNETQ-82	In release for JBoss AS 6.1.0, this release seems to be broken again, as although the JMX console and the Administrative console both report that the queue is in a Paused state, the subscribers are still able to consume from the queue. Is this behavior as expected? Looking back at JbossMessaging, when "Start/StopDelivery" modes were activated, the queue could still receive objects, but those objects could not be consumed.	1	0	https://issues.jboss.org/browse/HORNETQ-82
6435	HORNETQ-77	Is this issue fixed in 2.3.0 RC1 ? Rajika	1	0	https://issues.jboss.org/browse/HORNETQ-77
6436	HORNETQ-72	Thanks for that Tim. Let me run it back at you to be sure I understand the caveat. When we use this "local VM object ref" feature, it would be wise to destroy the message immediately after send to avoid any misadvertant change to the message, correct? P.S. When do you anticipate 2.0 Beta to be available? And will 2.0 be shipping with EAP 5.0? Cheers	1	1	https://issues.jboss.org/browse/HORNETQ-72
6437	HORNETQ-72	Would be great to have this evolution in a next version of HornetQ (another JMS implementation offers this kind of feature). Performances are really important in my current project. Is it possible to reopen this bug ?	0	0	https://issues.jboss.org/browse/HORNETQ-72
6438	HORNETQ-67	Hmmm, Jeff Mesnil sent me an email saying: "Hi Galder, We're preparing the release of JBoss Messaging and there is this old issue you reported. Is it still a concern for you? If it is, I'll fix it for JBM 2.0 otherwise, can you close it? thanks, jeff -- Jeff Mesnil <jmesnil@redhat.com> Core Developer (JBoss Messaging) JBoss by Red Hat" It's not a concern for me any more, hence I closed it :) Maybe Jeff should talk to you instead? :)	1	1	https://issues.jboss.org/browse/HORNETQ-67
6439	HORNETQ-67	What is the target ant version? JBMESSAGING-725 refers to version 1.65. Is that still the plan?	1	1	https://issues.jboss.org/browse/HORNETQ-67
6440	HORNETQ-67	Thanks Ben- Could you attach patch files for the changes? as it's a harder to see what has changed otherwise. Thx	1	1	https://issues.jboss.org/browse/HORNETQ-67
6441	HORNETQ-67	Ben - question on your patch- Why are you requiring that JAVA_HOME is set?	1	1	https://issues.jboss.org/browse/HORNETQ-67
6442	HORNETQ-67	Ben- I have made the changes so all the examples now also use the distributed ant. I also updated all the examples readmes that referred to the old way of building and also the documentation (user manual and quick start). I don't actually have Windows here, so I was only able to test on Linux. Could you test everything seems ok on Windows - including running the examples both from inside TRUNK and the distro? If all is ok, we can then close the task.	1	1	https://issues.jboss.org/browse/HORNETQ-67
6443	HORNETQ-62	Can we close this ticket? JBPAPP-7083 shows the trace is added.	0	0	https://issues.jboss.org/browse/HORNETQ-62
6444	HORNETQ-36	Hi Tim, We have a similar requirement and I see you mentioning, this is already possible MDBs - Can you please throw some light on this. Awaiting your response. My issue is similar to the above and as mentioned in here - https://community.jboss.org/message/748220 From WS: http://pic.dhe.ibm.com/infocenter/wasinfo/v6r0/index.jsp?topic=%2Fcom.ibm.websphere.nd.doc%2Finfo%2Fae%2Fae%2Ftjt0007_.html -Jain	0	0	https://issues.jboss.org/browse/HORNETQ-36

#	Requirement	Questions	Answered	Successfully Answered	URL
6445	HORNETQ-34	One thought here. Would it be possible to have this functionality working across a cluster too? I.e. all messages sent using a particular value of JMSXGroupid go to the same consumer on the cluster?	1	1	https://issues.jboss.org/browse/HORNETQ-34
6446	HORNETQ-32	Sorry to Correct, The current functionality is Queue - exception is thrown with a descriptive message when the message is put on the queue. Topic - Message is dropped due to the implementation of the Topic. That is the only case where we actually just drop the message. The current functionality works, but I see the following problems with it... 1. Hard to execute custom logic when you hit MaxSize a. When an exception is thrown for a Queue add and the max hits, a very generic jms exception is thrown. There's little way to know what the problem is without having to parse the exception message.. b. when an exception is thrown for a Topic, since each subscription is a queue, the way that it happens gives no way to find out that you hit max size in any of the subscriber queues 2. I'm not sure hitting max size represents an exception after thinking about it. IMO: Hitting max size is a rule, not an exception state. 3. Using an exception for max size will possibly make users embed some part of their business flow into an exception logic. For instance if they want to send a mail or put the message in another queue, they will have to embed that business flow whereever they have logic to put something on a queue. This would lead to spreading logic in a lot of different places. For these reasons, it seems that some cross cutting solution needs to be done. I can only think of the two already listed(make an overflow queue, add a place where we could put a point cut for aop). The question that I have is for a topic. Since each subscriber queue will get the Max size, if I have 100 subscriptions, will that mean if we 1. use the overflow, we will put a message in the overflow for each subscription(there will be 100 of them) 2. use the overflow, would we need to keep track of the subscriptions that didn't get it and the ones that did? 2. use the aop, we will call the pointcut 100 times. I'm sure these are some of the difficulties that this design has also raised in the past. Jay:)	1	0	https://issues.jboss.org/browse/HORNETQ-32
6447	HORNETQ-32	When the "drop-messages-when-full" option is enabled, will it be possible to detect when messages are dropped? If not, then would it be possible to please reopen this Jira? The motivation behind the request is as follows. For non-durable subscribers, we would typically prefer to drop messages, rather than page, for performance reasons. Therefore, I expect the "drop-messages-when-full" setting would be useful here. However, we need to detect this situation and take the appropriate corrective action (e.g. raise a system alarm). Also, more generally, for any subscriber (durable or non-durable) we ultimately need to limit the use of physical resources, whether that be a database or file system. Therefore, at some point, messages will be dropped, with a similar requirement to detect that this has occurred.	0	0	https://issues.jboss.org/browse/HORNETQ-32
6448	HORNETQ-31	From a user perspective I have a problem on my hand if I cannot accurately determine the number of messages on a single JMS destination. And it should be a single operation. That is one should not have to get the MessageCount from the address and the MessageCount from the JMS queue or topic to come up with the "real" count. Assuming that there are no filtering rules in place, the message count attribute for the JMS queue or topic should be the total number of messages that were published to the JMS destination. Your original plan was to add a MessageCount attribute to the Address mbean with the intent that a user could make the calculation: Total Messages on Single JMS destination = MessageCount from Queue/Topic + MessageCount from Address Why can we not change this so that the MessageCount attribute of the Queue/Topic includes the MessageCount from the Address?	0	0	https://issues.jboss.org/browse/HORNETQ-31
6449	HORNETQ-31	How would this MessageCount attribute work for a address corresponding to a JMS topic that has multiple durable subscriptions? At this time there is only one address for each JMS topic, irrespective of the number of durable subscriptions. So would there be just a single MessageCount for the entire address or would we get different counts for each durable subscription?	0	0	https://issues.jboss.org/browse/HORNETQ-31
6450	HORNETQ-31	If counting the messages isn't possible that easily, what about some kind of processing time (i.e. time a message was queued) measuring? JMS messages already have the JMSTimestamp field (HornetQMessage appear to have something similar, too), all we need would be some code that calculates the processing time as soon as a message is being received resp. acknowledged/committed (TBD) by the client. The values could be exposed per address/queue/topic-subscriber via JMX. It would be nice, if the average processing time in the past 1, 5, 15 minutes or so could be reported to get some kind of trend information. It would be nice as well, if there would be dedicated values for messages, that haven't been scheduled and for messages that have been scheduled to get realistic values.	1	0	https://issues.jboss.org/browse/HORNETQ-31
6451	DEVELOPER-4315	[~paul.robinson] [~adelaarreola] [~jessk] - This is important...can we get it in the sprint ASAP?	1	1	https://issues.jboss.org/browse/DEVELOPER-4315
6452	DEVELOPER-4315	[~james.cobb] when does it need to go live? [~adelaarreola] can you make this a high priority once its ready to implement?	1	1	https://issues.jboss.org/browse/DEVELOPER-4315
6453	DEVELOPER-4315	[~paul.robinson] - ASAP... Can we have it for Monday (July 24th)? [~jessk] - This ok with you? [~adelaarreola] - Here is the mockup: http://design.jboss.org/redhatdeveloper/marketing/eap7_cheatsheet/website/images/RHDP_hero_introEAP7cheatsheet_r1v1.png	1	1	https://issues.jboss.org/browse/DEVELOPER-4315
6454	DEVELOPER-4315	[~james.cobb] I added the horizontal repeat and forced the height to be same as image, can you check that it looks as it should on smaller windows? Here is a link to review: https://developers-pr.stage.redhat.com/pr/1958/export/ [~jessk] I used /cheat-sheets/advanced-red-hat-jboss-enterprise-application-platform-7/ as the CTA link, is this the correct one? thanks :)	1	1	https://issues.jboss.org/browse/DEVELOPER-4315
6455	DEVELOPER-4315	[~adelaarreola] - The desktop looks good but on the smaller sizes, they aren't designed to repeat. Can we use the existing scaling method for tablet and mobile?	1	1	https://issues.jboss.org/browse/DEVELOPER-4315
6456	DEVELOPER-4281	Because of the current status of the Adobe Implementation we are not able to do this. A few words from Marcia on this subject "We use Clicktale to track scrolling on a page. We use Adobe Analytics to capture previous page scroll. If we did use Adobe Analytics, it would mess up the Bounce rate on the page. If someone came to an Article and scrolled all the way down and then left, that would be considered a Bounce because the didn't interact with the page to move to another page. If there was a link tracking server call that fires at the bottom of the page, then Adobe doesn't consider that a bounce because two server calls fired. One on page load and one on link track to capture scroll. Also, we would have to put something in place to only fire that link tracking once as it could fire more than once if the person scrolled up and back down again. "	1	1	https://issues.jboss.org/browse/DEVELOPER-4281
6457	DEVELOPER-4281	How about we have a 'page read' event that the page fires (once) when the Javascript thinks the person has read the page? Would this work around the Workspace limitation of no "greater than" comparisons?	1	0	https://issues.jboss.org/browse/DEVELOPER-4281
6458	DEVELOPER-4280	Is it possible to take the feedback on Mondays and implement them the same day? If not I can hold on sending the deck out until you are able to implement up until, say, Wednesday. I'd like to think that most of these things are a top priority and I believe many of the requests are do-able within a few hours. That requires you have the time put aside to do them Monday (and possibly Tuesday), let me know if you don't have that time.	1	1	https://issues.jboss.org/browse/DEVELOPER-4280

#	Requirement	Questions	Answered	Successfully Answered	URL
6459	DEVELOPER-4280	I don't have any free time to do this on Mondays. Could we discuss to move our Friday meeting to Thursday to have a bit more time to have able to prepare any remaining items before Monday? Thus we probably won't need to make changes on the same day as the Monday Metrics meeting.	0	0	https://issues.jboss.org/browse/DEVELOPER-4280
6460	DEVELOPER-4254	[~ldary]: expecting a user to have a YouTube channel, in order to join the chat, seems to much to expect. Am I miss-understanding?	1	1	https://issues.jboss.org/browse/DEVELOPER-4254
6461	DEVELOPER-4243	[~hwindzio][~jessk] - I moved this to DEVELOPER because it's website related. On the URL: Currently, the URL "/events/javaone/" redirects to "/events/javaone/2015/" [~jessk] - The graphic header was intentionally year neutral. Do we want to reuse this or replace it with one for 2017?	1	1	https://issues.jboss.org/browse/DEVELOPER-4243
6462	DEVELOPER-4238	Yep. [~visuale] - Can you take a look at fixing this? Should be straight forward. Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-4238
6463	DEVELOPER-4238	Sorry, I forgot to note that I had changed this script several days ago. The 'cancel reply' links now start with /blog. Have the 404 errors ceased?	1	1	https://issues.jboss.org/browse/DEVELOPER-4238
6464	DEVELOPER-4231	[~tnolan] Hello Tiffany, does the blog hyperlink color scheme match the rules now? I think most of this was already up to spec but the blue link color now applies to the sidebar as well. I'm not exactly sure if I'm getting the accessibility-focus correct, though.	1	1	https://issues.jboss.org/browse/DEVELOPER-4231
6465	DEVELOPER-4228	Thanks [~visuale]. Can you let us see a preview of what this will look like, when you get chance? Thanks.	1	0	https://issues.jboss.org/browse/DEVELOPER-4228
6466	DEVELOPER-4219	[~lkoranda] Lukas, To make it easy for me to develop the Ansible playbooks that provide the configuration to our main Jenkins slave, I was going to create a simple development environment that can be used locally for easy development and testing. I was planning on using a Vagrant environment with a CentOS 7 VM and the Ansible provisioner to be able to do this. Vagrantfile would be committed into GitHub so that it can be easily shared with other team members. Are you happy with that approach? cheers, Rob	1	1	https://issues.jboss.org/browse/DEVELOPER-4219
6467	DEVELOPER-4218	[~visuale], [~paul.robinson] - Sorry I totally missed this JIRA. Agree with Paul I don't think we need it here. Would it be helpful for bloggers and audiences to be able to list out expertise areas?	1	0	https://issues.jboss.org/browse/DEVELOPER-4218
6468	DEVELOPER-4218	[~visuale] Thinking they should be able to pick from our standard categories but also have option to add some in. Will that work?	1	0	https://issues.jboss.org/browse/DEVELOPER-4218
6469	DEVELOPER-4204	[~ldary] Notice that this Epic now has a high-ish PDD priority. Please can you take this into account when doing sprint planning?	0	0	https://issues.jboss.org/browse/DEVELOPER-4204
6470	DEVELOPER-4202	[~hwindzio] I have the first draft of some content for when a user comes to the Search page without entering a search yet. For example, this could happen if a user "hacks" the URL and just tries to go to /search. Currently, if this happens, a search is performed that pulls in ALL the results across the site. I do not feel like this is a good use of server resources and it is not helpful to the user to just get everything if they haven't even tried to search yet. Would you like to either (1) wait until the Marketing/Content team has a chance to review this or (2) go live with my suggestion after you do a quick review and provide feedback and we can then revisit this as we look at the voice and tone on the site? I will add some notes to the InVision Project and @ mention you for further review and comments. The InVision project is linked to the JIRA issue, but here is also the direct link: https://redhat.invisionapp.com/share/SPB9XRKGD#/238490555_12-Search_-Empty_State-	1	1	https://issues.jboss.org/browse/DEVELOPER-4202
6471	DEVELOPER-4200	[~james.cobb] I think this will need some minor V+D. Can you add your self or [~brock] to the Team info in the description?	1	0	https://issues.jboss.org/browse/DEVELOPER-4200
6472	DEVELOPER-4200	[~james.cobb] This is something different than the back to results link. We"re looking for a way that user can quickly get to the top of the page to use filters, change search criteria etc. With the lazy loading, it's possible the user may be way down the page and this would ease the pain of having to manually scroll all the way back to the top. The Customer Portal has an example of this type of interaction on their KB pages. Example: https://access.redhat.com/articles/63269 !2017-06-19_12-09-36.png|thumbnail! Would you be ok with re-using this style?	1	0	https://issues.jboss.org/browse/DEVELOPER-4200
6473	DEVELOPER-4200	[~ihamilto] Is it enough to say that this should look and function exactly how it does on the Customer Portal? What additional details would you need beyond that?	1	0	https://issues.jboss.org/browse/DEVELOPER-4200
6474	DEVELOPER-4200	[~ldary] - [~tnolan] and I walked through this and cleared up my misunderstanding of how this functions. Reviewing the wireframes, I was under the impression that this worked like pinterest where the page always adds new results to the bottom and we never see the footer. I'm ok with this pagination free version where the user selects to get additional results. As far as the access use of the up arrow, I'm comfortable with that too. Tiffany and I agreed that it should match the styling of access for a more seamless transition between sites. They use the font awesome "icon-circle-arrow-up" for the icon. Their code for styling queues: height: 44px; width: 44px; padding: 10px; background-color: #333; background-color: rgba(0,0,0,0.8); -webkit-transition: opacity 0.218s; -o-transition: opacity 0.218s; transition: opacity 0.218s; font-size: 24px; line-height: 24px; vertical-align: middle; color: #fff; text-decoration: none; cursor: pointer;	0	0	https://issues.jboss.org/browse/DEVELOPER-4200
6475	DEVELOPER-4188	[~akandel] "This version in Klipfolio doesn't take into compensate with the % of trackable. I do believe we should show the raw numbers in klipfolio without alteration." I don't know what you're asking. Are you saying that the current view in Klipfolio is taking into account the % trackable?	1	0	https://issues.jboss.org/browse/DEVELOPER-4188
6476	DEVELOPER-4186	During review Heinz noticed that first iteration was using the registrations Row 19 "target" instead of active users in row 10 "target # active". In https://docs.google.com/spreadsheets/d/1ylY1Zu2xdraMKfy84upNXfliqeNzqerWl2A1SCrWjWE This has now been corrected. Can this be now closed [~hwindzio]?	1	1	https://issues.jboss.org/browse/DEVELOPER-4186
6477	DEVELOPER-4185	[~lkrzyzanek] Is there a way to split JBD Registrations by channel in order to split them into: * Net New * Existing Red Hat Account * Existing RHD Member Registrations Similar to what is done with RHT user profile? https://github.com/searchisko/configuration/blob/master/data/query/rht_user_profile_metrics.md	1	1	https://issues.jboss.org/browse/DEVELOPER-4185
6478	DEVELOPER-4154	[~ihamilto] / [~paul.robinson] Not sure I see the value in doing a spike to get the requirements for this story. For me it's as simple as we don't have all of the requirements for this story and as such it can't be played. Putting in a spike to solve that would (in my opinion) simply result in the person that owns the spike going around various members of the team and asking them how to integrate a proposed plan of action. The plan of action however I believe should be agreed by anyone impacted on this and then we can decide if we need to spike any of it (chance are we won't need to, we can simply decompose the work down into stories as I don't expect many surprises here). So in conclusion, is it just easier to call a time-boxed meeting and agree on an implementation and then create the implementation stories from there?	1	1	https://issues.jboss.org/browse/DEVELOPER-4154
6479	DEVELOPER-4154	Thinking about it, wouldn't this process be done during issue refinement, before the issue gets added to the sprint? I think this is what Rob is saying also.	1	1	https://issues.jboss.org/browse/DEVELOPER-4154

#	Requirement	Questions	Answered	Successfully Answered	URL
6480	DEVELOPER-4154	[~ldary] [~ihamilto] I think we need to agree on the version of Node to be used here. I think the project is currently using 10.0.45 (I need to check this). I know it's out-of-date, but does that work for us [~ldary] until we can schedule an upgrade? [~ihamilto] A couple of extra tasks that I took from that meeting: * Create a PR configuration for the test framework to default to headless, single run test execution * Select and configure a test reporter to provide clear output of the test results (and ensure this is archived by the build) I also think it's worth us having a think about any more code that gets written to run these tests. We've already kinda duplicated the code for running the acceptance tests for running Blinkr. If we're going to duplicate it again, then that is saying to me that we should re-factor it into a common approach that can be used to execute our code, or look at a simpler way of running these things. cheers, Rob	1	1	https://issues.jboss.org/browse/DEVELOPER-4154
6481	DEVELOPER-4149	Is there any value in doing anything with this besides simply leaving it as HTML?	1	0	https://issues.jboss.org/browse/DEVELOPER-4149
6482	DEVELOPER-4148	Is there any value in doing anything with this besides simply leaving it as HTML?	1	0	https://issues.jboss.org/browse/DEVELOPER-4148
6483	DEVELOPER-4147	Is there any value in doing anything with this besides simply leaving it as HTML?	1	1	https://issues.jboss.org/browse/DEVELOPER-4147
6484	DEVELOPER-4145	[~adelaarreola] [~ldary] [~james.cobb] Can this one be marked as done and any additional items added to DEVELOPER-4205?	1	1	https://issues.jboss.org/browse/DEVELOPER-4145
6485	DEVELOPER-4143	Hi [~ecurley] – sure, easy to do. Is the '?intcmp=' URL parameter included to record the # of clicks from the blog to the signup page?	1	1	https://issues.jboss.org/browse/DEVELOPER-4143
6486	DEVELOPER-4143	[~visuale] - Thanks. Do you know what date that went live? I'm seeing 53 leads in salesforce. Will be interesting to see how that grows. :)	1	1	https://issues.jboss.org/browse/DEVELOPER-4143
6487	DEVELOPER-4125	Thanks [~visuale], I think this is a lot easier to read. Can you ask [~ecurley] to give the final review?	1	1	https://issues.jboss.org/browse/DEVELOPER-4125
6488	DEVELOPER-4122	[~visuale] I've put this in review, as I think [~ecurley] and I need to review it. Can you follow this workflow for other issues, and notify the appropriate reviewer to take a look?	1	1	https://issues.jboss.org/browse/DEVELOPER-4122
6489	DEVELOPER-4122	This looks good to me. Can you email [~ecurley] to review too? She probably won't see this notification as JIRA sends a lot of emails!	1	1	https://issues.jboss.org/browse/DEVELOPER-4122
6490	DEVELOPER-4122	Thanks [~visuale] and [~paul.robinson]. I'm super excited to see these updates! !Screen Shot 2017-06-02 at 8.52.21 AM.png|thumbnail! !Screen Shot 2017-06-02 at 8.52.31 AM.png|thumbnail! Two quick questions and wondering if it doing it only on my end. The featured image on some of them seem to have greatly enlarged when moving to the new layout. Are you seeing this as well? (attached screenshot) If yes, is there anything we can do to have them not be so large? And when we scroll down past where the right column has material the blog has a good amount of white space (see attached). Is there a way to make what is in the right hand column adjust down as the infinite scrolling happens? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-4122
6491	DEVELOPER-4122	[~ecurley] I'm not sure the exact behaviour of making the right-bar adjust down. Given that the right-bar is quite long, when will that scroll? It's a bit hard for me to explain here. Maybe you have an example website that does this behaviour?	1	1	https://issues.jboss.org/browse/DEVELOPER-4122
6492	DEVELOPER-4118	Axel, can you do a mock up of the chart for the weekly dashboard deck? I believe we may need a couple of adjustments to get it best visualized before thursday's deck that you send out	1	1	https://issues.jboss.org/browse/DEVELOPER-4118
6493	DEVELOPER-4114	Thanks [~visuale]. I think this is a good start, but I worry that the widget is a little hidden. Should we also add a version of it towards the top of the post? Notice how DZone has it in the header of the post: https://dzone.com/articles/three-rules-of-my-api-communication-strategy. Do you have flexibility in the layout of the widget? I.e. can you change what the vote up and down icons look like? Can you change what text is displayed?	1	1	https://issues.jboss.org/browse/DEVELOPER-4114
6494	DEVELOPER-4114	[~visuale][~paul.robinson] - Are these something we can edit?	1	0	https://issues.jboss.org/browse/DEVELOPER-4114
6495	DEVELOPER-4114	[~james.cobb] do you mean like the which kind of icons can we use? Yes, the current ones have some CSS tweaks applied as it is but they can be swapped for something else entirely.	1	0	https://issues.jboss.org/browse/DEVELOPER-4114
6496	DEVELOPER-4111	[~hwindzio] I think you said you had no more requirements. Correct? [~ldary] Can you try prioritise DEVELOPER-4197 towards the top of the stories on this Epic?	1	0	https://issues.jboss.org/browse/DEVELOPER-4111
6497	DEVELOPER-4109	Thanks [~ihamilto]. Does this story need anything else then so it can be groomed and added to a sprint?	1	0	https://issues.jboss.org/browse/DEVELOPER-4109
6498	DEVELOPER-4109	[~tnolan] Looks fine to be added to a sprint. Will we be working on this or will it be [~lkrzyzanek]?	1	1	https://issues.jboss.org/browse/DEVELOPER-4109
6499	DEVELOPER-4105	[~ecurley] [~jessk] - Can you review and add some additional details if I'm missing something? Is this the same as the salesforce id? It looks like redhat.com uses something called an internal campaign id (intcmp). Is that the direction you'd like to take as well?	1	1	https://issues.jboss.org/browse/DEVELOPER-4105
6500	DEVELOPER-4105	[~jessk] Ok, thanks for the details. I remember [~ecurley] talking about this recently in a meeting so that makes sense. My schedule is pretty packed this week, so I'm more than ok with not being included in the meeting. I just said that I would create a JIRA story for this, so I did. Once you figure out which one or if you need both, can you just update this JIRA with that info? I think Drupal can and should be able to support having a field for this info that is then used to create the links for the buttons.	1	1	https://issues.jboss.org/browse/DEVELOPER-4105
6501	DEVELOPER-4082	[~ecurley] [~andreacarmona] - Does this email come from Eloqua? If so, who would work on these changes? !RHDP-welcome-email.png|thumbnail!	1	1	https://issues.jboss.org/browse/DEVELOPER-4082
6502	DEVELOPER-4079	[~paul.robinson] This should be a quick edit. Can someone on your team complete this during the current sprint?	1	1	https://issues.jboss.org/browse/DEVELOPER-4079
6503	DEVELOPER-4078	[~paul.robinson] Thanks for including that list. Very helpful. Yes, cheat-sheet and video should be fixed. I checked .com too and they also do use the plural where appropriate. If we could get the cheat-sheets one prioritized first, I think that would assist with our transition to the Drupal format. Is there something that should be done on the backend for that or is it just a matter of updating the URLs in Drupal?	1	0	https://issues.jboss.org/browse/DEVELOPER-4078
6504	DEVELOPER-4078	Current work is done at https://github.com/lightguard/developers.redhat.com/tree/feature/cheatsheet-alias. Do we need to change things that area already published? What about redirects?	1	1	https://issues.jboss.org/browse/DEVELOPER-4078
6505	DEVELOPER-4078	[~lightguard] Yes, we will need one redirect for the Advanced Linux Commands one, since that one is published already. Is that something you would do? Current URL - /cheat-sheet/advanced-linux-commands-cheatsheet New URL (not live yet) - /cheat-sheets/advanced-linux-commands	1	0	https://issues.jboss.org/browse/DEVELOPER-4078
6506	DEVELOPER-4078	[~paul.robinson] RE: bq. The person working on this issue needs to create an RHDENG ticket, requesting the redirect. They should then work with Lukas Koranda to coordinate the changes so as to minimise 404s. Does this mean that Jason or I should do this?	1	0	https://issues.jboss.org/browse/DEVELOPER-4078
6507	DEVELOPER-4078	[~lightguard] Is the cheat sheet alias live in Drupal? Is there something I should approve to get that rolled out? I just tried creating a new one and it did not use the new format.	1	0	https://issues.jboss.org/browse/DEVELOPER-4078
6508	DEVELOPER-4072	[~paul.robinson] would it be us that needs to write these, or do we need to find someone else to do this?	1	0	https://issues.jboss.org/browse/DEVELOPER-4072

#	Requirement	Questions	Answered	Successfully Answered	URL
6509	DEVELOPER-4059	[~paul.robinson] - This has been approved by [~ecurley]. [~ecurley] - Can you please supply the date which you want to go to this hero? Mockup: http://design.jboss.org/redhatdeveloper/marketing/reactivemicroservices_book/website/images/RHDP_hero_reactivemicroservices_r1v1.png header: Get Reactive! subhead: Building Reactive Microservices in Java. CTA: Download Book Link: https://developers.redhat.com/promotions/building-reactive-microservices-in-java Desktop: http://static.jboss.org/images/rhd/hero/RHDev_homehero_desktop_reactivemicroservices_25apr2017.jpg Tablet: http://static.jboss.org/images/rhd/hero/RHDev_homehero_tablet_reactivemicroservices_25apr2017.jpg Mobile: http://static.jboss.org/images/rhd/hero/RHDev_homehero_mobile_reactivemicroservices_25apr2017.jpg	1	1	https://issues.jboss.org/browse/DEVELOPER-4059
6510	DEVELOPER-4058	[~ecurley] - Are you still wanting this to go live June 6?	1	1	https://issues.jboss.org/browse/DEVELOPER-4058
6511	DEVELOPER-4058	[~ecurley] James has approved the VD for this hero but wasn't sure if the content is still current. Can you let me know if this is ready to go live or if I should change anything? thanks. https://developers-pr.stage.redhat.com/pr/1885/export	1	1	https://issues.jboss.org/browse/DEVELOPER-4058
6512	DEVELOPER-4055	[~mikgue] - Can we get the final approved text for [~adelaarreola]?	1	1	https://issues.jboss.org/browse/DEVELOPER-4055
6513	DEVELOPER-4052	# Search for "JBoss Sandbox BOMs" # The second item should be labeled as BOM, instead of QUICKSTART The URL of the result has /boms/ in it: https://developers.redhat.com/quickstarts/sandbox/boms/ -- Is this labeled incorrectly in the DCP for the type? That may be an issue outside this.	1	1	https://issues.jboss.org/browse/DEVELOPER-4052
6514	DEVELOPER-4052	[~paul.robinson] Thanks for the info. Who's making the decision to remove those? Is that [~hwindzio]? If we're removing content from the site, I fell like that should probably be part of a larger discussion around how long content should stay on the site and when/if it should be archived. I'm not sure we've ever documented a strategy for this. I think these have some good content, especially the EAP BOMs, so I'm not sure the best strategy is for us to get rid of content that could be helpful just because they have low pageviews. These also seem to tie into some of the tasks related to Job 1. Perhaps there's a better way to present these...	1	1	https://issues.jboss.org/browse/DEVELOPER-4052
6515	DEVELOPER-4050	[~tnolan] we currently have this scheduled for the next sprint (starting 2017-06-26). Will you have the wireframe ready for end of this week, or should I push back a sprint?	1	1	https://issues.jboss.org/browse/DEVELOPER-4050
6516	DEVELOPER-4050	[~paul.robinson] I'm assigning this one to [~gdoyle] for the UX. [~james.cobb] Initial thought is that we review what is being done on the Customer Portal and come up with something similar. I think it's likely that we would look into using an icon for this. If we went that direction, is this something you think you or [~brock] would assist with as the visual designer?	1	0	https://issues.jboss.org/browse/DEVELOPER-4050
6517	DEVELOPER-4050	[~james.cobb] I talked to the customer portal team about their choice of icon (patternfly key : pficon-key), asking if there is a reason they use that instead of something like a lock. They said it is a more friendly representation of premium content. To be consistent with customer portal, UX thinks it would be best to stick with a key for the icon (doesn't have to be the same one). What are your thoughts on this?	1	1	https://issues.jboss.org/browse/DEVELOPER-4050
6518	DEVELOPER-4041	[~unibrew] Can you update this file on the file management server? I've just got a new laptop and I forgot to copy across my SSH keys! They are in my backup, but that's at home, so I won't be able to this until the weekend.	1	1	https://issues.jboss.org/browse/DEVELOPER-4041
6519	DEVELOPER-4033	[~visuale]: can you do a quick investigation to scope this out? We are curious if it's an easy fix (install a plugin), or something more complex. Also, can you provide screenshots of what it would look like? I'd like [~ecurley] and [~tnolan] to see what it would look like before it goes live.	1	1	https://issues.jboss.org/browse/DEVELOPER-4033
6520	DEVELOPER-4033	[~paul.robinson] My thinking with using a 0 for thumbs-down is that the score would then be a simple percentage score of total likes out of total votes cast. Would the idea for a thumbs-down equalling -1 be that popularity is determined by deviation instead? Also with regard to a "trending" column, whether all-time or month-by-month, how would an article's overall popularity vs. its rating factor into its place in the list? For example, _Article ABC_ could have a 90% positive rating but only have 200 total votes whereas _Article XYZ_ could have a 72% positive rating but more than 4000 total votes. To me, it would seem that the latter post has the bigger impact.	1	1	https://issues.jboss.org/browse/DEVELOPER-4033
6521	DEVELOPER-4032	[~dcoughlin1], [~adelaarreola]: Can you update the description with the steps required to achieve this?	1	1	https://issues.jboss.org/browse/DEVELOPER-4032
6522	DEVELOPER-4032	How long to be available in: https://developers.redhat.com/stack-overflow/#!q=? *Camila Macedo | Red Hat Mobile* *IRC:* cmacedo Phone: +55 11 3529-6052 *Mobile: *+55 11 96151-3631 [image: Red Hat] On Wed, Apr 26, 2017 at 7:29 PM, Daniel Coughlin (JIRA) <issues@jboss.org>	1	1	https://issues.jboss.org/browse/DEVELOPER-4032
6523	DEVELOPER-4031	I added links to the wireframes in the Description. I have alternate (MVP) versions of this page as well. Can you let me know what's feasible? If we do the preferred version, [~james.cobb] or [~brock] should be able to provide the mock-up and graphics by Friday, April 21 at the latest. Let me know if you would need it sooner.	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6524	DEVELOPER-4031	Tiffany - great stuff! Question: During an event, there's commonly a short line of people waiting to enter their emails. What's the best way to reset the form? Set it as Home? Or maybe add a "Try again"?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6525	DEVELOPER-4031	[~james.cobb] That works for me as long as we can easily see it! It would be great if it was large and green/red for yes/no so it's easy to see. My old eyes can't read text on mobile devices. haha! Any chance you or Jason could work on a mock-up early this week? If not, would you be ok with me taking a stab and sending it to you for review?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6526	DEVELOPER-4031	[~ldary] can you take a look at this? Can you see if someone is available to work on it this week?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6527	DEVELOPER-4031	Success and failure look the same to me. What am I missing?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6528	DEVELOPER-4031	Thanks James. I think those work. Can you do the mobile design too for font sizing, since that's how most of our users will be accessing this? I didn't see them but I'm on my phone so maybe I missed them. ~ TIFFANY	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6529	DEVELOPER-4031	They still look the same - what am I missing?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6530	DEVELOPER-4031	helpful - thanks. Should we create a short link for this so people can easily get to it on their phone? Maybe "bit.ly/RHDP-verify" or whatever.	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6531	DEVELOPER-4031	Have we settled on the final URL: https://developers.redhat.com/verify-member ?	1	1	https://issues.jboss.org/browse/DEVELOPER-4031
6532	DEVELOPER-4030	[~mikgue] Does this promo count for this ticket or would you like something in addition? http://design.jboss.org/redhatdeveloper/marketing/summit_2017/images/RHDev_homepromo_summit2017.png	1	1	https://issues.jboss.org/browse/DEVELOPER-4030
6533	DEVELOPER-4030	I see this is due to go live tomorrow. We need everything confirming today if we want to hit this deadline. CC: [~ldary], [~adelaarreola].	1	1	https://issues.jboss.org/browse/DEVELOPER-4030
6534	DEVELOPER-4030	[~mikgue][~ecurley][~jessk] - Shouldn't we be promoting the live streamed keynote? Headline: Red Hat Summit is for developers Sub-head: Live Keynote feed, major news, and deep dives < I'm spit balling here. :P CTA: Learn more Target URL: https://developers.redhat.com/summit-is-for-developers/	1	1	https://issues.jboss.org/browse/DEVELOPER-4030

#	Requirement	Questions	Answered	Successfully Answered	URL
6535	DEVELOPER-4030	[~mikgue] - Updated the mockup... please refresh. http://design.jboss.org/redhatdeveloper/marketing/summit_2017/website/images/RHDP_hero_summit_r1v1.png Do we have the landing page staged?	1	1	https://issues.jboss.org/browse/DEVELOPER-4030
6536	DEVELOPER-4030	Yes - see here: https://developers.redhat.com/summit-is-for-developers/ I used a promo page format - is that the correct one or do I need to change it?	1	1	https://issues.jboss.org/browse/DEVELOPER-4030
6537	DEVELOPER-4020	Isn't this a duplicate of DEVELOPER-4019?	1	1	https://issues.jboss.org/browse/DEVELOPER-4020
6538	DEVELOPER-4019	[~dhladky] Can you provide example data for what is stored in some of the variables? I'm trying to decide which ones to use. Specifically: * tcUser * tcDownloadFileName	1	0	https://issues.jboss.org/browse/DEVELOPER-4019
6539	DEVELOPER-4017	[~paul.robinson] [~hwindzio] I don't think I see this one on the PDD Reprioritization list and it does not have a priority. However, it looks like this Epic is slated for Q2. Should this be added to the spreadsheet?	1	1	https://issues.jboss.org/browse/DEVELOPER-4017
6540	DEVELOPER-4017	[~paul.robinson][~hwindzio] From our discussion the other day, I believe we decided to still give this one a priority, but not include it in the PDD. Heinz - Can you assign a Q2 priority number to this one here and in the prioritization doc? I added a row for it as the last item in the Q2 list.	1	1	https://issues.jboss.org/browse/DEVELOPER-4017
6541	DEVELOPER-4017	[~tnolan] I assign this a priority of 4, since last week it seemed like you had been asking about next epics to work on and I think the timing is right to start on this one. We are seeing people leave the site after viewing the cheatsheet page: https://docs.google.com/presentation/d/1ciZ7NPhfP9WXKtdaYBUQ1V6OeKXh5kaIVjFH-RJcFUc/edit#slide=id.g1d607e393c_0_12 From your comments in the previous weekly dashboard : "We have an Epic that is focused on improving this experience https://issues.jboss.org/browse/DEVELOPER-4017 and we planned to add a section to the cheat sheet page for "more cheat sheets"." Can we find other ways to keep them on the site as well? I would think that developers want to stay on topic, so maybe provide related links?	1	0	https://issues.jboss.org/browse/DEVELOPER-4017
6542	DEVELOPER-4017	For example, this one for containers - should we maybe provide links to the Containers topic and also a download for the CDK? https://developers.redhat.com/promotions/docker-cheatsheet/	1	0	https://issues.jboss.org/browse/DEVELOPER-4017
6543	DEVELOPER-4012	If it's essentially the same, does it make sense for it to be a new content type? Sounds like it might be easier to include a dropdown in the current content type to specify what it is or where it should go. We can then determine which layout to use based on that info.	1	1	https://issues.jboss.org/browse/DEVELOPER-4012
6544	DEVELOPER-4012	[~lightguard] That was what i was thinking originally too. However, are you able to change the default URL based on what the user would select from the drop-down? Also, they may be the same now, but I'm not sure that will always be the case. For example, I'd still like to look into some options to embed the actual cheat sheet on the page. This is not something we would want to do with an eBook. Can you come up with a quick list of benefits/drawbacks for doing a new content type vs. adding some logic to the current one? I'm just not sure what the overall difference would be to recommend/request one over the other for usability and future-proofing.	1	1	https://issues.jboss.org/browse/DEVELOPER-4012
6545	DEVELOPER-4012	[~tnolan]are there fields that are only required for ebooks? Are there fields that should not be included for print books or ebooks? How do we want those displayed? Do we want the form to change once you tick the ebook checkbox?	1	1	https://issues.jboss.org/browse/DEVELOPER-4012
6546	DEVELOPER-4012	[~tnolan] [~james.cobb] thanks! should the page also follow the same layout as cheat-sheets for mobile and tablet? and can you let me know which are the must-haves, and lessed priority items like you did with the cheat sheets? Also, just to be sure, should the published date be the date the book's page was published, link in the cheat sheets, or the date the book was published?	0	0	https://issues.jboss.org/browse/DEVELOPER-4012
6547	DEVELOPER-4012	Don't we already have this? http://developer-drupal.web.prod.ext.phx2.redhat.com/node/add/books	1	1	https://issues.jboss.org/browse/DEVELOPER-4012
6548	DEVELOPER-4010	[~adelaarreola] Sorry, but I'm not able to see the downloads section via the provided URL. Is there another way for [~hwindzio] and I to review? !eap-no-downloads.png|thumbnail!	1	1	https://issues.jboss.org/browse/DEVELOPER-4010
6549	DEVELOPER-4010	[~tnolan] Here is a screenshot https://www.dropbox.com/s/crjv5s17r4kxbkh/Screenshot%202017-04-12%2008.39.34.png?dl=0 The 'Try It' only shows up on pages with download links, so for example, it wouldn't show in /openshift/download page. Is that correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-4010
6550	DEVELOPER-4010	[~adelaarreola] The font size for TRY IT in the screen capture looks slightly larger than the ALL DOWNLOADS. These should be the same and use the existing ALL DOWNLOADS size. Approved once this change is made. No need for additional review/sign-off. bq. The 'Try It' only shows up on pages with download links, so for example, it wouldn't show in /openshift/download page. Is that correct? Correct. Middleware products are the main focus of this for now.	1	1	https://issues.jboss.org/browse/DEVELOPER-4010
6551	DEVELOPER-4008	[~lkoranda] This issue captures the work to get the configuration for our Jenkins slave in the Boston labs managed by Ansible. Is there anything else that you would like to add to this story? cheers, Rob	1	1	https://issues.jboss.org/browse/DEVELOPER-4008
6552	DEVELOPER-4002	[~paul.robinson], how much do we care about having links to the contributor's/author's JBoss Developer profile? We actually don't have that information currently in Drupal and going out and fetching it like we do in awestruct is probably going to be complicated.	1	1	https://issues.jboss.org/browse/DEVELOPER-4002
6553	DEVELOPER-4002	[~paul.robinson] also, do we want to display the commit history as well?	1	1	https://issues.jboss.org/browse/DEVELOPER-4002
6554	DEVELOPER-3997	Didn't someone in IT or DevOps build something already that monitors our page score? I thought they were saying they wanted to build out email notifications too.	1	0	https://issues.jboss.org/browse/DEVELOPER-3997
6555	DEVELOPER-3995	Not a lot we can do with this until we have some context. Is this going into the next sprint or shall we bump it?	0	0	https://issues.jboss.org/browse/DEVELOPER-3995
6556	DEVELOPER-3994	[~lightguard], I've updated the description. Does that make more sense now? I'm not fully sure what Caffelli are suggesting we do. Hoping you or [~ldary] understand this.	1	1	https://issues.jboss.org/browse/DEVELOPER-3994
6557	DEVELOPER-3994	[~lightguard], [~paul.robinson]: Is this a Drupal or an export thing?	1	1	https://issues.jboss.org/browse/DEVELOPER-3994
6558	DEVELOPER-3994	As component lead, I think [~ldary] needs to refine this issue. [~ldary]: Can you refine before the end of this week?	1	1	https://issues.jboss.org/browse/DEVELOPER-3994
6559	DEVELOPER-3991	Are you sure you want to take this one, Paul?	1	1	https://issues.jboss.org/browse/DEVELOPER-3991
6560	DEVELOPER-3991	[~lightguard] I think this is a Drupal thing, right? Can you schedule it for completion before the end of the quarter? That's when we want all the SEO fixes done by.	1	1	https://issues.jboss.org/browse/DEVELOPER-3991
6561	DEVELOPER-3978	You can see the videos I created at https://drive.google.com/drive/u/1/folders/0Bwx86SOh3ez-TEotVjlXYTJheIU [~mikgue] has looked at the first one I did. [~paul.robinson], [~mikgue] what else would you two like to see?	1	1	https://issues.jboss.org/browse/DEVELOPER-3978
6562	DEVELOPER-3974	[~adelaarreola] I'm not sure if you've pinged [~james.cobb] about this yet, but do you need more specific details for this beyond what is documented in the Unified Style Guide?	1	1	https://issues.jboss.org/browse/DEVELOPER-3974

#	Requirement	Questions	Answered	Successfully Answered	URL
6563	DEVELOPER-3974	[~tnolan] I think I got it :) [~james.cobb] Here is a link to review the CTAs: http://stumpjumper.lab4.eng.bos.redhat.com:36819/ctas The two things that were not clear from the guide were if the black CTA's have a hover color and the same thing for the white *light* CTA. Please let me know if I need to change anything. That /ctas page is only for the review of this Jira, it will be removed but the styles will stay once approved.	1	1	https://issues.jboss.org/browse/DEVELOPER-3974
6564	DEVELOPER-3974	[~adelaarreola] [~james.cobb] Thanks Adela. Heavy and Medium CTAs - The button sizes look off to me as the Medium CTA ends up being larger in height (46px vs 37px). I know you based this on the specs in the Style Guide so I'd like a few days to take this back to the UX Working group for review. I think we need to update the guide to include more information. The line height seems to be making the biggest difference for these. Light CTAs - Please make these bold (font-weight: 800;). I just added this info to the guide. I think the white should use the lighter hyperlink blue (#73BCF7) and black should use the default hyperlink blue (#0066CC) for the hover. Refer to the Tried.Tested. Trusted section on .com for examples: https://www.redhat.com/en	1	1	https://issues.jboss.org/browse/DEVELOPER-3974
6565	DEVELOPER-3974	[~adelaarreola] I heard back from the .com team and they are using line-height: 1.44 for both heavy and medium CTA, which is their default body style. We're updating the guide to reflect this. The difference between the medium CTA and the heavy CTA then is the the medium one is normally just the border like the Medium CTA outline ones you currently have on the ctas example page. I'm not sure we have plans to use a medium CTA solid at this time on this site. If we did, these would be a different color palette than the heavy CTAs. [~james.cobb] - Do you agree that we don't need to define the medium CTA solid styles/colors as part of this story?	1	1	https://issues.jboss.org/browse/DEVELOPER-3974
6566	DEVELOPER-3974	[~adelaarreola] - desktop looks fine. On mobile though... 1) Shouldn't wrap text. 2) [~tnolan] - I'm a fan of full width buttons on the mobile experience although RH.com doesn't do this. Should we advocate that or default to their style?	1	1	https://issues.jboss.org/browse/DEVELOPER-3974
6567	DEVELOPER-3974	bq. I'm a fan of full width buttons on the mobile experience although RH.com doesn't do this. Should we advocate that or default to their style? [~james.cobb] I'd like to go with the recommendation from the Unified Style Guide (maintain the button size across devices) for now so we're consistent with the other sites. If this is something you feel strongly about, it would be great to have you come to the next UX Working Group meeting to bring it up. I can see both sides. Other option is to use the recommendations for now and A/B test this. That way we'd have data to support a change if the results came back in favor of the full width button. This is something we could execute on pretty quickly if we found a good page to test this with. I can also check with Patty Behre to see if they've done testing already about the button. The .com team has a Mojo page for their tests which has some really interesting info.	1	1	https://issues.jboss.org/browse/DEVELOPER-3974
6568	DEVELOPER-3973	[~james.cobb] [~ecurley] [~adelaarreola] Nice! I really like the v8, but the "Interested in..." is still getting lost on me. What would it look like if you removed that from the blue box and put it underneath?	1	1	https://issues.jboss.org/browse/DEVELOPER-3973
6569	DEVELOPER-3973	[~adelaarreola][~tnolan][~ecurley]- We could remove the text out of the excerpt box but we'll have to be careful of the wording so we aren't redundant with "download" OPTION 4: Want to see more? Get the full cheat sheet. [LOG IN TO DOWNLOAD] Personally, I don't think we need the text as we say "Cheat Sheet Excerpt" with a quote mark/styled box and a CTA button. If folks can't figure that out, they may not be smart enough to use the cheat sheet. :P	1	1	https://issues.jboss.org/browse/DEVELOPER-3973
6570	DEVELOPER-3970	[~akandel], [~visuale] can I get an update on this please?	1	1	https://issues.jboss.org/browse/DEVELOPER-3970
6571	DEVELOPER-3970	[~paul.robinson] I'm still stuck trying to figure out how to get this banner to show. As I pointed out in an email yesterday or day before, I do actually cause it to show up, but only when I hit the 404 page (using local, non-EU proxies with or without the VPN on). Is it possible this is related to the fact that I see two cache headers at odd with one another (private and public)?	1	1	https://issues.jboss.org/browse/DEVELOPER-3970
6572	DEVELOPER-3970	[~paul.robinson] if I can't make the RH/Adobe-based cookie banner work for this, would it be ok to go with a PHP/JS-based workaround? For instance, I saw this plugin while poking around the other day: [https://wordpress.org/plugins/creare-eu-cookie-law-banner/|https://wordpress.org/plugins/creare-eu-cookie-law-banner/]	1	1	https://issues.jboss.org/browse/DEVELOPER-3970
6573	DEVELOPER-3970	[~ldary] I don't know it's something I'm totally missing but that same error as before continues and as a consequence the banner is still not coming up on the test link that was provided. I can't find anything in Stack Overflow about this other than it might be a timing issue. I'm not sure how I might be able to adjust that as it's coming from an external source. Is there anything you could think of that I might be missing? If all else fails, I've tested out "plan B" a little (on a test site), wherein I use a WP plugin with formatting to look consistent with the RH/Adobe EU Cookie banner.	1	1	https://issues.jboss.org/browse/DEVELOPER-3970
6574	DEVELOPER-3970	Yes, I think that errors gone but Adobe might be doing something on their end and once fixed we should know one way or another whether it works or if I go to plan B. Am I right about this [~ldary] ?	1	1	https://issues.jboss.org/browse/DEVELOPER-3970
6575	DEVELOPER-3966	[~ldary] I've fleshed this out a bit now. Some of the issues still need some figuring out before they can be implemented though. Can you take over the coordination of this now please?	0	0	https://issues.jboss.org/browse/DEVELOPER-3966
6576	DEVELOPER-3946	I think it;'s something for my team. Basically we need to make a page like https://github.com/redhat-developer/developers.redhat.com/blob/master/register.html.slim	1	1	https://issues.jboss.org/browse/DEVELOPER-3946
6577	DEVELOPER-3946	[~mikgue] when do you need this for?	0	0	https://issues.jboss.org/browse/DEVELOPER-3946
6578	DEVELOPER-3933	[~tnolan], [~hwindzio]: This needs a link to the PDD and a priority. Do we have this information?	0	0	https://issues.jboss.org/browse/DEVELOPER-3933
6579	DEVELOPER-3922	[~ldary] I agree with your concerns. I'm a little confused as to why we needed this? Was this to help fix for the failing downloads in PR environment? i.e. not being redirected to PR environment when attempting to download? (and download not triggering). If so, it still fails for me: {code} Not Found The requested URL /pr/1796/export/downloads/products/cdk/hello-world/ was not found on this server. Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request. {code} {code} https://developers-pr.stage.redhat.com/pr/1796/export/downloads/products/cdk/hello-world/?tcUser=Wendell+Braun&tcWhenSigned=January+17,+2017&tcWhenEnds=January+17,+2018&tcEndsIn=308&tcDuration=365&tcDownloadFileName=cdk-2.4.0.zip&tcRedirect=5000&tcSrcLink=https://developers.stage.redhat.com/download-manager/content/origin/files/sha256/ec/ec9169717d9785d3df6254d55a340f2a9af25b9dc446a680b376a5303028ac0c/cdk-2.4.0.zip&p=Red+Hat+Container+Development+Kit+(CDK)&pv=2.4&tcDownloadURL=https%3A%2F%2Faccess.cdn.redhat.com%2Fcontent%2Forigin%2Ffiles%2Fsha256%2Fec%2Fec9169717d9785d3df6254d55a340f2a9af25b9dc446a680b376a5303028ac0c%2Fcdk-2.4.0.zip%3F_auth_%3D1489616157_8a83ba5b8910cf38bb5ebdc36a7884e8 {code}	1	1	https://issues.jboss.org/browse/DEVELOPER-3922
6580	DEVELOPER-3906	[~hwindzio] [~paul.robinson] I wonder if this one can be marked as done since the .io team is handling what I believe this epic was supporting for Summit? Do we have any specific work for the RHDP site?	1	0	https://issues.jboss.org/browse/DEVELOPER-3906

#	Requirement	Questions	Answered	Successfully Answered	URL
6581	DEVELOPER-3906	i have to admit i have no visibility into the openshift.io work, and how the site should tie into this. I'm assuming openshift.io will have a landing page post-summit, but that doesn't deserve an epic. If we close this, can we reopen it later if needed? If yes, i suggest we close it.	1	0	https://issues.jboss.org/browse/DEVELOPER-3906
6582	DEVELOPER-3904	hrm...i think it should be either [~tnolan] or I. And Tiffany seems exceptionally busy and could use the help. Is it possible to have both of us responsible?	1	1	https://issues.jboss.org/browse/DEVELOPER-3904
6583	DEVELOPER-3900	Where should the CTA link to?	1	1	https://issues.jboss.org/browse/DEVELOPER-3900
6584	DEVELOPER-3894	BOMs and Architypes complicated this a bit. [~paul.robinson] [~tnolan] [~james.cobb] where can I see the UI and UX for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3894
6585	DEVELOPER-3881	Should this issue be moved to https://issues.jboss.org/projects/RHDEVDOCS or DEVELOPER? cc: [~paul.robinson] [~rkratky]	1	0	https://issues.jboss.org/browse/DEVELOPER-3881
6586	DEVELOPER-3881	[~unibrew] I think you are tracking this work in RHDENG. Is that right?	1	1	https://issues.jboss.org/browse/DEVELOPER-3881
6587	DEVELOPER-3881	[~paul.robinson] I'm wondering what the next steps are for this epic? Will your team be working with James on getting the header and footer in the docs? Ideally we'll want this completed before the docs show up in the search results page that [~tnolan] is working on.	1	0	https://issues.jboss.org/browse/DEVELOPER-3881
6588	DEVELOPER-3881	Yes, I think that's what needs doing by my team. It looks like we didn't plan this into the work for this quarter. Do you want to add it in and re-prioritise the current work?	1	1	https://issues.jboss.org/browse/DEVELOPER-3881
6589	DEVELOPER-3880	Thanks Axel. I will be sure to let Caffelli know this. Can we correct this today? I will then have Caffelli send a report. Do you think a meeting with FB help would be advantageous?	0	0	https://issues.jboss.org/browse/DEVELOPER-3880
6590	DEVELOPER-3878	[~rblake] My plan for the broken link check was to do something similar to what you did with the acceptance tests. 1. create _blcheck directory - create an environments dir containing docker-compose file. - Create Dockerfile containing the nmp download of blc and stuff it requires. 2. Create ruby scripts with a `_blcheck/run_blc.rb` and `blc_test_options.rb` that is used to run the tests (either run within docker or outside?). {code} opts.on('--update-github-status SHA1', String, 'The SHA to report test results for on GitHub') do |sha1| test_configuration[:github_sha1] = sha1 end {code} 3. Unit tests. 4. Catch up with you regarding the job creation. Initially pointing the results of the tests to the console output until we have better reporting. Was this what you had in mind? I'll catch up with you tomorrow.	1	1	https://issues.jboss.org/browse/DEVELOPER-3878
6591	DEVELOPER-3878	[~paul.robinson] Just an update on this ticket since our last 1-1: I decided to resurrect Blikr I think for what we need it does exactly that. It just needs a little work. I am currently refactoring the code, I added RuboCop (static code analyser) and there were > 700 offences. Mainly due to the syntax being more for Ruby 1.8.7. Given we're now on Ruby 2.4.1 it's time to update. There are also no unit-tests so It's been difficult to refactor it without knowing if I've broken it. What am I doing and what do I plan to do? In priority order: 1. Fix Rubocop errors (almost done). 2. Add unit-tests (should have been #1 however thought best update code first) 3. Add options for --ignore-external, --ignore-internal links. 4. Dockerize 5. Update Gem README.md and release an update version.	0	0	https://issues.jboss.org/browse/DEVELOPER-3878
6592	DEVELOPER-3878	[~paul.robinson] the work for this is complete. However, after a discussion with [~rblake] we recommends that I finish the work on [fixes/improvements to Blinkr|https://issues.jboss.org/browse/DEVELOPER-4138]. Shall I put this in blocked?	0	0	https://issues.jboss.org/browse/DEVELOPER-3878
6593	DEVELOPER-3877	[~tnolan] can you provide the UX for this? Also, what page types should this be applied to? All?	1	1	https://issues.jboss.org/browse/DEVELOPER-3877
6594	DEVELOPER-3873	[~tnolan] Dan is working on getting the cheat sheets on the dcp so I should be able to start working on this ticket soon. Is the wireframe for this approved?	1	0	https://issues.jboss.org/browse/DEVELOPER-3873
6595	DEVELOPER-3873	[~paul.robinson] I added a link to the InVision project. Do you know who on your team will be working on this? Both [~james.cobb] and I can add some developer notes to the InVision mockup and tag him/her.	1	1	https://issues.jboss.org/browse/DEVELOPER-3873
6596	DEVELOPER-3870	[~lightguard], [~rblake], [~ldary]: Who do you think should own the requirements gathering for this work? I'm thinking it's one of you three?	1	1	https://issues.jboss.org/browse/DEVELOPER-3870
6597	DEVELOPER-3868	[~hwindzio] can you review these requirements. Are they approved?	1	0	https://issues.jboss.org/browse/DEVELOPER-3868
6598	DEVELOPER-3868	[~hwindzio] I'd like us to push on with this when [~akandel] returns from PTO (8th May). Can you review the requirements by then? It's hard for us to press on without firm requirements.	1	0	https://issues.jboss.org/browse/DEVELOPER-3868
6599	DEVELOPER-3868	A couple of comments: * The contact sales button brings you here: https://www.redhat.com/en/about/contact/sales. It is part of the sub-header on the product pages. Not sure why that link shows the link to the 'Help' tab. * "Register for contributor program" - Agreed, ideally we see when they register. But, if we can't attach to submit button then just starting the process is probably good enough. Later, we can see the drop off rate for the form submissions. * "CTA for consulting, training, certification" - In addition, I think we will want to see the engagement broken out for each of these. A couple of additional things we wanted to track, based on the original spreadsheet: *Viewing a StackOverflow question on devs.rh.com. I would think that is similar to viewing a KCS article. Can we track that as a level of engagement? https://developers.redhat.com/stack-overflow/#!q= *Posting a StackOverflow question. We should have their stackID if they are logging in using social log in - StackOverflow. We can then compare that to the post that is being slurped in to see if they have posted the question for a red hat product tag. *Viewing a video at least 25%: https://developers.redhat.com/resources/#!type=video	1	0	https://issues.jboss.org/browse/DEVELOPER-3868
6600	DEVELOPER-3868	{quote} * The contact sales button brings you here: https://www.redhat.com/en/about/contact/sales. It is part of the sub-header on the product pages. Not sure why that link shows the link to the 'Help' tab. {quote} The example page, provides an example location of where this activity can be started from. I've clarified the description, which should make this clearer. {quote} * "CTA for consulting, training, certification" - In addition, I think we will want to see the engagement broken out for each of these. {quote} Done. {quote} *Viewing a StackOverflow question on devs.rh.com. I would think that is similar to viewing a KCS article. Can we track that as a level of engagement? https://developers.redhat.com/stack-overflow/#!q= {quote} Added. {quote} *Posting a StackOverflow question. We should have their stackID if they are logging in using social log in - StackOverflow. We can then compare that to the post that is being slurped in to see if they have posted the question for a red hat product tag. {quote} This will be hard as we don't have a way of getting this data into Adobe Analytics. Also, I would argue that the user is engaging with StackOverflow, not the RHDP site. {quote} *Viewing a video at least 25%: https://developers.redhat.com/resources/#!type=video {quote}	0	0	https://issues.jboss.org/browse/DEVELOPER-3868
6601	DEVELOPER-3862	Just happened to see this JIRA. One caution from UX is that many users have their full email address as their username. What happens with longer "usernames" on Mobile? What use cases/scenarios have you explored for this? FYI [~hwindzio]	1	1	https://issues.jboss.org/browse/DEVELOPER-3862
6602	DEVELOPER-3862	[~velias] Would you be able to attach a screenshot? I'm just curious how it looks.	1	1	https://issues.jboss.org/browse/DEVELOPER-3862

#	Requirement	Questions	Answered	Successfully Answered	URL
6603	DEVELOPER-3854	[~adelaarreola] [~ldary] [~dcoughlin1] [~rblake] would you all try running the following SQL and letting me know if everything is correct as per the comments? {code:sql} -- Removing videos BEGIN; CREATE TEMPORARY TABLE video_id (nid INT(10), INDEX(nid)) AS SELECT SUBSTR(source, 7) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; -- These should all return >= 1 (1 due to node_revision__body) SELECT COUNT(1) FROM `node` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; DELETE FROM `node` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); DELETE FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); DELETE FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `url_alias` WHERE alias LIKE "/video%"; -- All of these should return 0 SELECT COUNT(1) FROM `node` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; DROP TABLE video_id; COMMIT; {code}	1	1	https://issues.jboss.org/browse/DEVELOPER-3854
6604	DEVELOPER-3854	[~lightguard] I assume you want this tested against the full database dump and not the "lite" version? My other comment here is a more general "how does the project make database schema changes now and moving forwards". As with most things, what I'd like to see is automation of schema changes and testing of changes before they get applied to production. I'd also like visibility and an audit trail of changes to production schema. So: * Changes to the production database schema are stored in version control using a defined naming pattern * Changes to database schema are raised as pull requests that are reviewed before being applied * Changes to database schema are applied in a testing environment first before being applied to a production database * Changes to database schema are applied using an automated tool and never by hand Coming from a Java background, I have always used [Liquibase|https://www.liquibase.org] to perform database migrations, but I see that PHP offers something similar e.g. [Phinx|https://phinx.org/]. My suggestion would be to use a PHP tool so that we can keep the Drupal container footprint to a minimum. From initial reading it also looks like Phinx is installed using Composer as well, so again that fits in nicely with the way we manage Drupal. Using a tool like Phinx would mean that we can store the DB migrations in Git and then have them automatically applied as part of the Drupal boot sequence. So with some tweaks to the drupal_install_checker.rb, update flow could be: # Start the container # run drush cim # run drush updb # run phinx schema migrations Doing that means that we can automate schema migrations and have them tested in our normal PR build pipeline before applying them to the production database. It feels beyond the scope of this story to do the above. However I think we need to consider it sooner rather than later so that we have an audit trail of the changes that have been made to the Drupal database over time and is it worth playing another user story before this one to setup a database schema migration pattern for Drupal?. [~paul.robinson] what are your thoughts here?	1	1	https://issues.jboss.org/browse/DEVELOPER-3854
6605	DEVELOPER-3847	[~ecurley] Looking at the styling for the excerpt block that [~james.cobb] provided compared (blue background) with your selected excerpts from the cheat sheets (also has a mix of blue background), we may need to modify the excerpt block background color on the page. Also, with the tables from the actual cheat sheets, this does add some complexity as to who can enter that info in the Drupal field. I'm guessing HTML knowledge may be needed to do this. I think it would be good to circle back with [~adelaarreola] on this next week. Adela - Maybe work on the most difficult looking of these first so we can see the worst case scenario and adjust things if needed? Who knows...maybe this isn't an issue?	1	1	https://issues.jboss.org/browse/DEVELOPER-3847
6606	DEVELOPER-3847	[~adelaarreola] [~james.cobb] [~tnolan] So trying to understand correctly, no tables, no headings, nothing that has a two column layout. Is that correct? If yes, that is going to be a bit challenging because many of these don't have paragraphs and the paragraphs they do are often just a basic intro info - not a great excerpt. Thoughts?	0	0	https://issues.jboss.org/browse/DEVELOPER-3847
6607	DEVELOPER-3846	[~paul.robinson] [~adelaarreola] - I updated the staging query to show what the cheatsheets dcp config looks like. Can you review at http://dcp.stage.jboss.org/v2/rest/search?sys_type=cheatsheet&field=_source? Staging doesn't seem to have cheatsheets by default, so you may need to add one to test if a merge overwrites the cheatsheet I added.	1	1	https://issues.jboss.org/browse/DEVELOPER-3846
6608	DEVELOPER-3846	Can this be closed? I see it up in both staging and production.	0	0	https://issues.jboss.org/browse/DEVELOPER-3846
6609	DEVELOPER-3844	[~paul.robinson] I fixed a spelling error in the URL for "cheet". Since Cheat Sheet is 2 words, shouldn't the URL be "/cheat-sheet/" rather than "cheatsheet". If we make it one word in the URL, I think it might be confusing and add more confusion to the "is it one word or two words" question. I know I get confused.	1	1	https://issues.jboss.org/browse/DEVELOPER-3844
6610	DEVELOPER-3844	[~adelaarreola] - Can you tell us the differences between the widget for www and the plugin on wordpress? Can we port that one over... or style the widget on www to match the blog?	1	1	https://issues.jboss.org/browse/DEVELOPER-3844
6611	DEVELOPER-3843	[~james.cobb] Which image usage? Can this be resolved today? I'd like the engineering work to go into the sprint starting Monday.	1	1	https://issues.jboss.org/browse/DEVELOPER-3843
6612	DEVELOPER-3843	OK. Sounds like it shouldn't hold up Engineering work? Do you expect the UX/VD to change beyond what image appears there?	1	1	https://issues.jboss.org/browse/DEVELOPER-3843
6613	DEVELOPER-3843	[~james.cobb] [~tnolan] where can I find the VD or layout (if styles don't change) for the tablet and mobile sizes? Also, can I get the specifications of text sizes, images heights/widths, colors, if buttons are heavy CTAs or light, etc so I can implement it as best as possible?	1	1	https://issues.jboss.org/browse/DEVELOPER-3843
6614	DEVELOPER-3840	In Drupal's core developers' infinite wisdom (and after how many rewrites??) they have decided not to give you a means of getting all revisions from an entity. What you need to do is create an query to pull in all the revisions (because....?). Here's the basic idea: {code:php} $node_storage = \Drupal::entityTypeManager()->getStorage('node'); $nids = \Drupal::entityQuery('node')->condition('type','page')->execute(); $nodes = $node_storage->loadMultiple($nids); foreach ($nodes as $node) { $result = $node_storage->getQuery() ->allRevisions() ->condition($node->getEntityType()->getKey('id'), $node->id()) ->sort($node->getEntityType()->getKey('revision'), 'DESC') ->pager(50) ->execute(); $revisions = array_keys($result); foreach ($revisions as $vid) { // version id $node_storage->deleteRevision($vid); } } {code} We could do this in a controller and create a route only admins can get to. We may also need to do that in a batching manner.	0	0	https://issues.jboss.org/browse/DEVELOPER-3840
6615	DEVELOPER-3838	[~ldary] will be working on this. Can you try discuss it with him today? We need to get the sprint planned for early Monday.	1	1	https://issues.jboss.org/browse/DEVELOPER-3838

#	Requirement	Questions	Answered	Successfully Answered	URL
6616	DEVELOPER-3818	Paul Robinson, thanks for the ordering fix! For pushing artifacts to DM I am creating issues in RCM Jira (like this one RCM-12018). AFAIK there is an "unpush" process for such artifacts. I was cautious to ask RCM for unpush to not end with a broken link for this artifact on "Downloads" page. Assuming that such changes are propagated to DM automatically, will it be convenient if I will create a RCM issue to unpush this specific artifact (8u111-3 ZIP bundle)?	1	1	https://issues.jboss.org/browse/DEVELOPER-3818
6617	DEVELOPER-3817	More work than you probably think is my guess. The proposed solution looks good and seems fine, but trying to come up with the correct implementation could take a bit. Balancing the ease of use for content creators and development work to implement it is not going to be easy. Do we add this as a widget you can use in the editor? Do we add another paragraph (to all of the steps) you can fill out? I think those two things need to be figured out first.	1	1	https://issues.jboss.org/browse/DEVELOPER-3817
6618	DEVELOPER-3817	[~lightguard] [~paul.robinson] Just a reminder that the MVP for this is some working HTML/code that can be inserted in the existing form field. Sure, it would be great to have something easier down the road, but I don't want that to hold up getting something out soon. The only page we currently need this on is RHEL. CDK has something similar, but with only 3 options vs 22, we don't need the drop-down there. Is there existing show/hide functionality like what is written for the blue bars on that page that can be leveraged? Will the text editor strip out class tags for the divs if we use that as part of the solution? Just did a quick test and the editor did not strip class tags from div. However it did remove the <option> tag. [~lightguard] Can that one be added to the RHD Approved list?	1	1	https://issues.jboss.org/browse/DEVELOPER-3817
6619	DEVELOPER-3817	[~ldary] This is looking really good. I have a working version on the RHEL page in this environment now: http://stumpjumper.lab4.eng.bos.redhat.com:36748/products/rhel/hello-world#fndtn-bare-metal_build-something-today The only thing that is missing the the divider line between the drop-down and the content. Can this be added to the styling for the drop-down? !2017-02-09_10-40-12.png|thumbnail! Once that's added, I think this is good to go after a quick review/final approval from [~james.cobb] for V+D.	1	1	https://issues.jboss.org/browse/DEVELOPER-3817
6620	DEVELOPER-3810	Have you contacted Wordpress VIP? It's a real pain we can't redirect https://developerblog.redhat.com.	1	1	https://issues.jboss.org/browse/DEVELOPER-3810
6621	DEVELOPER-3810	Can the admin console be accessed by using a different domain/IP in the URL?	1	1	https://issues.jboss.org/browse/DEVELOPER-3810
6622	DEVELOPER-3804	[~adelaarreola] I've marked you as the lead on this Epic. Can you work with [~lkrzyzanek] when he is ready to add this to the forums. Please help him to ensure the right collector is used in the footer vs 404 page.	0	0	https://issues.jboss.org/browse/DEVELOPER-3804
6623	DEVELOPER-3803	Hi [~visuale]. This is implemented on the main site pages. Can you make the same change on the blog?	1	1	https://issues.jboss.org/browse/DEVELOPER-3803
6624	DEVELOPER-3803	Actually the link is there, but it's not working properly. Can you coordinate with [~adelaarreola] and [~paul.robinson] to get this fixed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3803
6625	DEVELOPER-3803	[~visuale] this is still broken, can you take a look?	1	1	https://issues.jboss.org/browse/DEVELOPER-3803
6626	DEVELOPER-3803	[~visuale] this doesn't seem to work anymore. Can you investigate?	1	1	https://issues.jboss.org/browse/DEVELOPER-3803
6627	DEVELOPER-3795	[~james.cobb] Per notes, I've revised this script. Would the attached screenshot from a local test be the correct presentation for list items? !Screen Shot 2017-05-21 at 5.35.04 PM.png|thumbnail!	1	1	https://issues.jboss.org/browse/DEVELOPER-3795
6628	DEVELOPER-3792	[~james.cobb] I believe this behavior is already in place across the site. Do you know anywhere in specific where this behavior is needed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3792
6629	DEVELOPER-3792	[~adelaarreola] - The current buttons on our site are set to 100% for width on desktop. They should be actually have a fixed padding on the left or right as per the document. the "Heavy CTA" = Red buttons. Button dimensions: • Button width flows with length of text • Padding: Top is 9 pixels; bottom is 9 pixels; sides are 40 pixels Examples where it's not working correctly... 1) Homepage "join" button at the bottom (has overrides) 2) Product page "Hello World" section (has overrides) 3) Product detail download page (has overrides) 3) Downloads page "Popular Downloads" (has overrides) 4) Downloads page "Download" buttons (has overrides) -These should actually be medium CTAs. 5) Events page "learn more" buttons (has overrides) etc... etc.	1	0	https://issues.jboss.org/browse/DEVELOPER-3792
6630	DEVELOPER-3791	[~james.cobb] I believe this behavior is already in place across the site. Do you know anywhere in specific where this behavior is needed?	0	0	https://issues.jboss.org/browse/DEVELOPER-3791
6631	DEVELOPER-3781	[~ldary] I've marked you as lead on this Epic. Can you keep an eye on the issues and ensure a few of them get done each sprint? I'd like to see this done by the end of Q1FY17 if we can. You'll also need to work with the Blog, Forums and Keycloak engineers to get their changes in. Also note, that this has a very low PDD priority, so don't let it delay other Epic-level work.	0	0	https://issues.jboss.org/browse/DEVELOPER-3781
6632	DEVELOPER-3780	[~adelaarreola] [~paul.robinson] Thanks. I moved the doc (a copy) to: https://drive.google.com/drive/folders/0B_QaDtRa6sAkTTB2V2VFQmgwWUU Can one of you provide edit access so I can add a new tab and/or some notes?	1	1	https://issues.jboss.org/browse/DEVELOPER-3780
6633	DEVELOPER-3780	Thanks [~tnolan], can you work with [~adelaarreola] on this?	0	0	https://issues.jboss.org/browse/DEVELOPER-3780
6634	DEVELOPER-3768	When you say "mysql" are you talking about it starting up or actually running? If it's startup time, which it very well may be, that SQL file we're loading is nearly 7G.	1	1	https://issues.jboss.org/browse/DEVELOPER-3768
6635	DEVELOPER-3753	[~ldary] can you check if we need this or not? If not, I'd like to understand why not.	0	0	https://issues.jboss.org/browse/DEVELOPER-3753
6636	DEVELOPER-3749	[~paul.robinson] I believe this is in the actual code for the Drupal pages and not editable via the form for the product content type. If I'm setup with GitHub, is this a change that I could make myself via a PR?	1	1	https://issues.jboss.org/browse/DEVELOPER-3749
6637	DEVELOPER-3749	Thanks [~adelaarreola]. Can you add a comma before "which" to make this more grammatically correct? That was my bad for not seeing it sooner. Otherwise, this looks great. Approved. "and conditions of the Red Hat Developer Program{color:red}*,*{color} which provides no-cost subscriptions for development use only."	1	1	https://issues.jboss.org/browse/DEVELOPER-3749
6638	DEVELOPER-3738	[~paul.robinson] [~lightguard] Re: should every get-started page have it's first section marked as complete, when visiting it via a download? - No, since not all the products have a Get Started where the first step is to Download. In the future, I would like to get all of products using that format though. The checkbox Jason provided should give us the flexibility needed currently, as well as allow for future changes.	1	1	https://issues.jboss.org/browse/DEVELOPER-3738
6639	DEVELOPER-3738	[~tnolan] I see the 'Pending Download Section' option now. Have you confirmed that this does what you need it to do?	1	1	https://issues.jboss.org/browse/DEVELOPER-3738
6640	DEVELOPER-3714	how do we close JIRAs as duplicate and/or other?	1	1	https://issues.jboss.org/browse/DEVELOPER-3714
6641	DEVELOPER-3714	[~hwindzio] I've removed what I see as the duplicate tasks from this issue. See the description. There are still three places that the OpenShift product name appears outside of the drupalised product pages. Can this change go live now, or does it need to be done at the same time as the name change on the OpenShift product page?	1	1	https://issues.jboss.org/browse/DEVELOPER-3714
6642	DEVELOPER-3714	Yes we can do it at the same time. Can we try get this out today?	1	1	https://issues.jboss.org/browse/DEVELOPER-3714
6643	DEVELOPER-3708	Great, Can you create the Story(s) on this Epic and schedule them?	1	1	https://issues.jboss.org/browse/DEVELOPER-3708
6644	DEVELOPER-3704	[~hwindzio] when do you need this by? It will need a Mockup and maybe UX work. CC [~tnolan], [~james.cobb].	1	1	https://issues.jboss.org/browse/DEVELOPER-3704

#	Requirement	Questions	Answered	Successfully Answered	URL
6645	DEVELOPER-3702	[~adelaarreola] can you review this issue and makes sure you have all you need to implement it on Monday? It needs to go live on the 14th of Dec, do you have the time to achieve this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3702
6646	DEVELOPER-3702	[~hwindzio] please review the deprecated text added to each forum: https://developers-pr.stage.redhat.com/pr/1663/export/forums/ Do you want the latest forum posts removing from the help pages of these four products also? I.e just show SO content on the help pages of these 4 products.	1	1	https://issues.jboss.org/browse/DEVELOPER-3702
6647	DEVELOPER-3702	[~hwindzio] This is ready to be merged. Do you want it to go live today or tomorrow?	0	0	https://issues.jboss.org/browse/DEVELOPER-3702
6648	DEVELOPER-3696	What technology tab? What page?	1	1	https://issues.jboss.org/browse/DEVELOPER-3696
6649	DEVELOPER-3696	[~lightguard] we should probably update the Product category name option here: https://github.com/redhat-developer/developers.redhat.com/blob/c37c7b1c9e5f6d3a8b410c6a2004769eae2930c5/_docker/drupal/drupal-filesystem/web/config/sync/field.storage.node.field_product_technology_group.yml#L30. Otherwise it's going to get confusing when assigning a Product to a category. Does this cause problems with any existing Product content using the old "Private Cloud" field name?	1	1	https://issues.jboss.org/browse/DEVELOPER-3696
6650	DEVELOPER-3688	[~rblake] had noticed a few things didn't match up in the PR with the "Definition of Done", good catch Rob, thanks! [~paul.robinson] where are we with the redirects?	1	1	https://issues.jboss.org/browse/DEVELOPER-3688
6651	DEVELOPER-3678	Can you add a description for why this is blocked?	1	1	https://issues.jboss.org/browse/DEVELOPER-3678
6652	DEVELOPER-3678	Is this still blocked?	0	0	https://issues.jboss.org/browse/DEVELOPER-3678
6653	DEVELOPER-3678	[~ldary] It may not be related, however I am still having issues getting results on /resources. On my local machine both inside and outside of docker testing against a pr-site preview it is fine! However when the tests run on Jenkins (PR build)I do not get results. I'm baffled! One thing I noticed with the stubbed responses was the search and stack overflow pages have an access-control-origin of `https://developers-pr.stage.redhat.com` However the /resources page has an access-control-origin of http://developers-pr.stage.redhat.com. Should that be https?	0	0	https://issues.jboss.org/browse/DEVELOPER-3678
6654	DEVELOPER-3677	Is this still blocked?	0	0	https://issues.jboss.org/browse/DEVELOPER-3677
6655	DEVELOPER-3673	[~paul.robinson] some products have multiple videos, is there a list or something where I can see which video is a product intro?	1	1	https://issues.jboss.org/browse/DEVELOPER-3673
6656	DEVELOPER-3673	I added an extra step above: {quote} Change the thumbnail to a frame that has the person's name displayed and one in which the interviewee doesn't look silly. You will likely need to pause the video at a suitible point and upload a screenshot to use as the thumbnail. I couldn't find a better way to do this with the YouTube API. {quote} Can you make this change too?	0	0	https://issues.jboss.org/browse/DEVELOPER-3673
6657	DEVELOPER-3670	When can you get this done? The Getting Started instructions now point to a broken link as 9.0.2 was removed.	1	1	https://issues.jboss.org/browse/DEVELOPER-3670
6658	DEVELOPER-3655	[~lightguard] is this feasible? Can you schedule it.	1	0	https://issues.jboss.org/browse/DEVELOPER-3655
6659	DEVELOPER-3655	[~mikgue] we can now archive items. Everything that was "deleted" before has now been archived. Content Admins can bring content back from being archived. Are you happy with this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3655
6660	DEVELOPER-3655	[~mikgue] how does https://drive.google.com/open?id=0B9M2ZSLcm2xXcFpLY1MxTU5QQU0 help?	0	0	https://issues.jboss.org/browse/DEVELOPER-3655
6661	DEVELOPER-3650	Sooner than later. Is it possible for this or next sprint?	0	0	https://issues.jboss.org/browse/DEVELOPER-3650
6662	DEVELOPER-3643	[~ldary] I've just merged the PR. Is this ready to mark as done?	1	1	https://issues.jboss.org/browse/DEVELOPER-3643
6663	DEVELOPER-3643	[~ldary] I think this is ready to resolve. Is that right?	0	0	https://issues.jboss.org/browse/DEVELOPER-3643
6664	DEVELOPER-3642	[~ldary] is this now done? If so, can you update the issue status please.	1	1	https://issues.jboss.org/browse/DEVELOPER-3642
6665	DEVELOPER-3642	[~ldary] with https://github.com/redhat-developer/developers.redhat.com/pull/1600 merged, is this now done?	0	0	https://issues.jboss.org/browse/DEVELOPER-3642
6666	DEVELOPER-3628	I think it's good enough for you or Rob to execute. [~rblake], do you agree?	0	0	https://issues.jboss.org/browse/DEVELOPER-3628
6667	DEVELOPER-3626	[~adelaarreola], [~lightguard]. If we stop pushing the homepage via Awestruct (as we have planned), how will the hero background image be changed? I believe it is currently part of the style. Can this particular style be in-lined in the HTML, such that it can be edited via Drupal when editing the homepage HTML?	1	1	https://issues.jboss.org/browse/DEVELOPER-3626
6668	DEVELOPER-3626	[~james.cobb] we can up the JBD banner also as the build is now working. Can your team do that via a PR?	1	1	https://issues.jboss.org/browse/DEVELOPER-3626
6669	DEVELOPER-3622	[~adelaarreola] do you know why this behaviour has been reverted? I'm sure you fixed this a while ago. Do you remember?	1	1	https://issues.jboss.org/browse/DEVELOPER-3622
6670	DEVELOPER-3622	When we switched to Drupal, the default email reverted to the old email. Could this be the same cause?	1	1	https://issues.jboss.org/browse/DEVELOPER-3622
6671	DEVELOPER-3617	I've just re-ran the report. See: https://docs.google.com/spreadsheets/d/16bqTsaUr-PAJMvM2RdWlEsXnPED0YWanIk6G-8uW82I/edit#gid=1350294889. It looks like the articles are still showing http links. Can you take a look? Maybe something funny is happening with the export?	1	1	https://issues.jboss.org/browse/DEVELOPER-3617
6672	DEVELOPER-3614	What is email needed for? Is it part of the content change workflow?	0	0	https://issues.jboss.org/browse/DEVELOPER-3614
6673	DEVELOPER-3587	[~ihamilto] I understand the slowness of this page is affecting the tests. How urgent is it that we fix this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3587
6674	DEVELOPER-3580	[~ldary] are you working on this for this sprint? If so, Can you add to the current sprint. We don;t normally add stuff after the start, but I prefer the sprint to reflect reality.	1	1	https://issues.jboss.org/browse/DEVELOPER-3580
6675	DEVELOPER-3578	[~tnolan] and/or [~james.cobb] could we get the information for these colors and icons for this (background, borders, text, fonts, etc.)? I didn't see them listed in the linked issue. Also, closing "X" vertical alignment? Seems like middle is the one on the Patternfly example, but wasn't sure because that wasn't specified in the RH Unified Style Guide (which I've made a comment on).	1	1	https://issues.jboss.org/browse/DEVELOPER-3578
6676	DEVELOPER-3578	[~james.cobb] Can you double check the way you labeled the colors? I think you have the Error and Warning mixed up above with the terms. I think it should be Warning (Yellow) and Error (Red). Color-wise, these all look good to me, except the yellow one. Is there more of a shade of orange rather than brownish that can be used for the icon/border? Since it's a warning, I feel like it should have a slightly brighter icon color to draw attention. The brownish gets kinda lost to me.	1	0	https://issues.jboss.org/browse/DEVELOPER-3578
6677	DEVELOPER-3578	[~ldary] Any update on this one? Is there anything else you need from the design team to get this implemented?	1	0	https://issues.jboss.org/browse/DEVELOPER-3578
6678	DEVELOPER-3578	[~paul.robinson] [~ldary] [~hwindzio] - Can we get this story added to the next sprint? I think the styles are already defined and approved by [~james.cobb] and it's just a matter of implementing it. I am going to need these styles as part of the progressive profiling work I'm doing, and the page designs for the registration flows.	1	0	https://issues.jboss.org/browse/DEVELOPER-3578
6679	DEVELOPER-3578	[~paul.robinson] [~ldary] Can you provide an update on this? Is it falling through the cracks since it has an old Sprint number already assigned to it? It would be very helpful to have these so we can utilize for both the progressive profiling work and the new site outage alerts.	1	0	https://issues.jboss.org/browse/DEVELOPER-3578

#	Requirement	Questions	Answered	Successfully Answered	URL
6680	DEVELOPER-3578	Thanks [~ldary]. I see that [~adelaarreola] is assigned to work on this. :) It would be great to have a document or mojo location where we documented these so that we can easily refer to them for implementation from other systems such as the Blog and KeyCloak. Do you have any suggestions for this?	1	0	https://issues.jboss.org/browse/DEVELOPER-3578
6681	DEVELOPER-3567	[~jessk] - I assigned this to [~brock] . Do we also want to add this to JBoss Developer's hero since it applies to JBoss?	1	1	https://issues.jboss.org/browse/DEVELOPER-3567
6682	DEVELOPER-3567	Thank you [~james.cobb] and [~brock] Do you think it will be hard to read? I'll check traffic to it with Tiffany in a week or so and see how it's doing. I do like that it matches the event page header though. [~paul.robinson] I will open a jira to implement this.	1	1	https://issues.jboss.org/browse/DEVELOPER-3567
6683	DEVELOPER-3560	[~adelaarreola] It looks really nice. Thanks so much for doing it quickly (so quickly!) One question - The pages that host the videos (like http://developers-pr.stage.redhat.com/pr/1481/build/2365/video/youtube/tEvzJBFIzV4/) have title and speaker names running together. See attached screenshot. Can we adjust the font for the speaker name or some other formatting to distinguish between the two? Thanks so much! !screenshot-1.png!	1	1	https://issues.jboss.org/browse/DEVELOPER-3560
6684	DEVELOPER-3560	Also, would it look better if "Red Hat Developers at JavaOne 2016" was white, larger and in the header graphic? I'm not sure how amenable the header is for this, due to the variation in colours used.	1	1	https://issues.jboss.org/browse/DEVELOPER-3560
6685	DEVELOPER-3560	[~adelaarreola]It looks great. Thank you. A few questions/comments... * I removed speakers names from the YouTube video titles. I moved them to the description area so we still had them. * The landing page that hosts the videos - hasn't updated yet....guessing it will just take some time? (http://developers-pr.stage.redhat.com/pr/1481/build/2372/video/youtube/35_yWad7IiQ/) * On the landing page that hosts the video I noticed there's a speaker field but we don't have speaker names there. How is that populated? Assuming it's being fed from the youtube data also? If the default is the YouTube account name (Red Hat Developers), Lets just remove it. Thanks again!	1	1	https://issues.jboss.org/browse/DEVELOPER-3560
6686	DEVELOPER-3555	[~paul.robinson] This looks like it should be a fairly quick task. Can it get added to a sprint and completed before March 1? We're still going to need this for when we combine the search/resources pages.	1	1	https://issues.jboss.org/browse/DEVELOPER-3555
6687	DEVELOPER-3554	[~paul.robinson] The SOLP is definitely the priority. However, we do have a lot of ads floating around that are driving people to the EAP Downloads page, specifically. If this could get implemented by the end of next week, I think that would be fine. Does that work from your end?	1	1	https://issues.jboss.org/browse/DEVELOPER-3554
6688	DEVELOPER-3553	[~james.cobb] what pages are you referring to, and which titles? Do you mean titles like: https://www.dropbox.com/s/0ct24nv1ndputik/Screenshot%202016-11-23%2012.48.28.png?dl=0 on http://developers.redhat.com/projects/?	1	1	https://issues.jboss.org/browse/DEVELOPER-3553
6689	DEVELOPER-3550	[~paul.robinson] It would be great if we could get this work prioritized for this week/next week. The urgency is because we'd like for this to be in place before all the promos for Don's book start going out. There's a big opportunity here to improve conversions. One other thing to note is the "Email Link" button. [~ecurley] and I talked about this along with Mark's team. For the initial release of that button, we'd like for it to be a mailto link that has some body text which includes a link back to the promo page. [~ecurley] - Would be able to provide the copy? Paul or someone on his team should be able to let you know what all the parameter options are such as subject line, body text, etc.	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6690	DEVELOPER-3550	[~paul.robinson] I'm not sure how to get links for [~tnolan] and [~james.cobb] to review, [this PR |https://github.com/redhat-developer/developers.redhat.com/pull/1572/files] has the CSS changes, and I have the html changes on my laptop. In order to get Tiffany a staging link to preview, I would need my PR to be merged into staging, but not production (it would possibly break the current microsite styles) and then I could go into the staging drupal gui and update the HTML pages. In other words, how should I handle the review of pages that were migrated as pure HTML?	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6691	DEVELOPER-3550	[~adelaarreola][~paul.robinson] Agreed on only having to implement the change in Drupal, not the other HTML pages. Do you have a URL [~james.cobb] and I can review?	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6692	DEVELOPER-3550	[~james.cobb] which version of fireforx are you running? It looks fine on mine https://www.dropbox.com/s/jklt9qug79666l6/Screenshot%202016-11-04%2007.46.39.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6693	DEVELOPER-3550	[~adelaarreola][~tnolan] Desktop: the image usage is very large. We're going to set the rule that we size the image at 270px wide as the source. We'll need to adjust the columns to 6/18 so the spacing is ~30px between the image and the content. Mobile: 1) I've attached a screenshot to illustrate but the vertical spacing is quite inconsistent. We need to adjust the space above and below the content and the titles so it is consistent with the product mobile views. 2) Can we center the "email link" button below the download button. Global: We shouldn't force all caps on the title. Is this a drupal template change?	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6694	DEVELOPER-3550	[~adelaarreola] Just getting to this as I was in training today. What promotions are live with this change and is there HTML changes that need to occur in order for things like the email link to show up? Is this info documented anywhere so we don't have to bug you about it? :)	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6695	DEVELOPER-3550	[~tnolan] We have that doc here: https://docs.google.com/spreadsheets/d/1v-DNZvjpyw69Gx_2t2rgeALWjbt2_dnme6k2M5PXLS8/edit#gid=2016133270. Is this what you were thinking about?	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6696	DEVELOPER-3550	Thanks [~james.cobb]. Did you delete the old versions of the page too?	1	1	https://issues.jboss.org/browse/DEVELOPER-3550
6697	DEVELOPER-3540	[~james.cobb] - Is this still an issue? I've looked through a couple of the product pages and compared them on a local build vs. production. The pages look like they are pulling in the correct graphics, maybe we're having caching issues?	1	1	https://issues.jboss.org/browse/DEVELOPER-3540
6698	DEVELOPER-3536	http://static.jboss.org/_root/images/rhd/topic/RHDev_topics_primopromo_microservicesicon_20sept2016.png How is this? [~james.cobb] [~lincolnthree]	1	1	https://issues.jboss.org/browse/DEVELOPER-3536
6699	DEVELOPER-3503	For 10.0, I was required to hard code [0] a bunch of links in this file [1] ... will that be required for 10.1? If so, will the people creating the new docs also be responsible for adding/replacing links in that file so they'll appear here [2] ? [0] https://github.com/redhat-developer/developers.redhat.com/commit/3bfc172ec4129d70d57e2f30b61eac2c0b03d6ec [1] https://github.com/redhat-developer/developers.redhat.com/blob/master/products/devstudio/_common/product.yml#L17-L68 [2] http://developers.redhat.com/products/devstudio/docs-and-apis/	1	1	https://issues.jboss.org/browse/DEVELOPER-3503
6700	DEVELOPER-3503	Internal doc looks good (at least as far as there's a 10.1 section which duplicates the 10.0 content). Redirect still not in place. Will these be live before EOD today? Announcements are supposed to be tomorrow.	1	1	https://issues.jboss.org/browse/DEVELOPER-3503
6701	DEVELOPER-3503	[~nickboldt] I'd prefer to go live today, as long as it's not too soon. There's been some outages the last few days that have impacted our ability to push changes. I wouldn't want these to come back tomorrow and prevent this change going through. Who needs to make the call?	1	1	https://issues.jboss.org/browse/DEVELOPER-3503
6702	DEVELOPER-3498	[~paul.robinson] Happens automatically? Then what is this variable used for? https://github.com/redhat-developer/developers.redhat.com/pull/1442/files#diff-58cf26cee5226e736168698e99de542eL4	1	0	https://issues.jboss.org/browse/DEVELOPER-3498

#	Requirement	Questions	Answered	Successfully Answered	URL
6703	DEVELOPER-3496	I don't see the change live on http://developers.redhat.com/products/devstudio/overview/ ... does some other magic have to happen to make it go to production?	1	1	https://issues.jboss.org/browse/DEVELOPER-3496
6704	DEVELOPER-3496	[~dcoughlin1] I made a mistake and supplied the wrong URL link. Can you update it to this please? http://developers.redhat.com/products/cdk/overview/ (LMK if I should create a new ticket)	1	1	https://issues.jboss.org/browse/DEVELOPER-3496
6705	DEVELOPER-3496	The source I put into the page (via my PR) had this: {code}link:../../devsuite/overview/{code} But when the page is rendered, the link is bad -- it includes a 3rd ../ segment and sends the user to [1] instead of [2]. {code}<a href="../../../devsuite/overview/">{code} Is it expected that the adoc, when rendered as html, injects another ../ segment? [1] http://developers.redhat.com/devsuite/overview/ [2] http://developers.redhat.com/products/devsuite/overview/ ... I see this issue is fixed. Must have been looking at an old cached copy.	1	1	https://issues.jboss.org/browse/DEVELOPER-3496
6706	DEVELOPER-3496	What exactly was deployed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3496
6707	DEVELOPER-3496	Should we link to the devsuite page so we can tell people there's an online installer for devstudio (which is inside the devsuite installer) ? cc: [~dgolovin] If so, PR: https://github.com/redhat-developer/developers.redhat.com/pull/1462 for review/approval.	0	0	https://issues.jboss.org/browse/DEVELOPER-3496
6708	DEVELOPER-3495	[~james.cobb] Would you or someone on your team be able to make 2 mock-ups of the alert message using one of the product pages, like: http://developers.redhat.com/products/fuse/overview/ I think we could either put the alert directly above or directly below the "Hello World" banner, but I'm not sure which would look better without seeing it. I was originally thinking that we could place the alert at the top of the first "white" background section, so it's not above the page title banner, but then I saw that a lot of the pages being redirected to are currently the product pages.	1	1	https://issues.jboss.org/browse/DEVELOPER-3495
6709	DEVELOPER-3495	[~paul.robinson] - Why is this marked done? I haven't seen this in action. [~ldary] - Was this marked as done by accident?	1	1	https://issues.jboss.org/browse/DEVELOPER-3495
6710	DEVELOPER-3495	Sorry [~lightguard] but we all don't monitor the PRs on Github for changes. It's been customary for links to page/elements for review to be posted in the JIRA comments for the non-devs to view. Can we please get a link to a page with this element in place?	1	1	https://issues.jboss.org/browse/DEVELOPER-3495
6711	DEVELOPER-3495	[~ldary] Can you update the JS to cover every page on the site? They will most likely all be redirected to as part of the JBD to RHD migration.	1	1	https://issues.jboss.org/browse/DEVELOPER-3495
6712	DEVELOPER-3495	Looks like [~tnolan]'s request has not yet been addressed: http://stumpjumper.lab4.eng.bos.redhat.com:36563/events/devnation/2016?referrer=jbd Otherwise, is this ready to go once the tests pass?	1	1	https://issues.jboss.org/browse/DEVELOPER-3495
6713	DEVELOPER-3491	current page shows version "10.0" - should be 1.0 It also refers to running DevSuite on OpenShift - but it should likely be running DevStudio on OpenShift. What is "JBoss AS application server on OpenShift"? Is this redundant?	1	1	https://issues.jboss.org/browse/DEVELOPER-3491
6714	DEVELOPER-3491	Paul, Thanks. Three things: 1. Can you also remove the "get a production subscription" part? It's inconsistent with the other products. 2. Updated text: To download DevSuite you must have an account and accept the terms and conditions of the Red Hat Developer Program which provides $0 subscriptions for development use only. 3. why does it say "Restricted"?	0	0	https://issues.jboss.org/browse/DEVELOPER-3491
6715	DEVELOPER-3477	[~paul.robinson] Will this include all possible page filters (Type, keyword, product, date(s), sort and # results) or a subset of those?	1	1	https://issues.jboss.org/browse/DEVELOPER-3477
6716	DEVELOPER-3477	[~adelaarreola] It's great to see this progressing. I'm curious about the minimum of 2 parameters though as that makes the URL "messy". I'd like to see sys_type displayed as just "type" in the URL. What is the minimum 2 parameters and is there a way to just have a default value if one of them is not included? Ideally, I'd like to see something like "type=blogpost" or "keyword=eap". I'm still in all-day meetings tomorrow (Thurs) but could make some time on Friday to chat more about this. I totally understand system constraints, but maybe we can come up with some alternative options here to make this a little more user friendly?	1	1	https://issues.jboss.org/browse/DEVELOPER-3477
6717	DEVELOPER-3477	[~adelaarreola] Sorry, I meant to send this sooner, but my laptop was constantly crashing on Friday. Thanks for scheduling the meeting. As discussed, please make the following name changes to the parameters in the URL: (this is required for UX sign-off) * change change sys_type to "type" * change project to "product" * change sortBy to "sort" * For the sorting, change most-recent to "most_recent" (for consistent use of the underscore vs a dash) * change query to "q" so it's consistent with search Nice to have as it's very "ugly": (not required for UX sign-off) * For code artifact, can we combine all the jboss developer parameters and just have that as “type=code” or type=”code_artifact”?	1	1	https://issues.jboss.org/browse/DEVELOPER-3477
6718	DEVELOPER-3471	[~paul.robinson] - Can you reset the cache when you get a chance? The project.properties have been updated.	1	1	https://issues.jboss.org/browse/DEVELOPER-3471
6719	DEVELOPER-3471	Which cache do you mean?	1	1	https://issues.jboss.org/browse/DEVELOPER-3471
6720	DEVELOPER-3471	[~paul.robinson] - The project.properties file was updated by the project manager. Don't we need to remove Undertow from DCP and reindex?	1	1	https://issues.jboss.org/browse/DEVELOPER-3471
6721	DEVELOPER-3455	[~james.cobb] Sounds great! Do you happen to know the best way to see what pages currently have alerts other than poking around? As one of the next steps, and once we have the designs, I'd like to document which versions (info, warning, etc.) should be used where. Right now, I think almost all of our alerts use the same style.	1	1	https://issues.jboss.org/browse/DEVELOPER-3455
6722	DEVELOPER-3455	[~james.cobb] [~morgan_thomas] I think this is a great first pass. Can we use the same background colors and text colors (if they pass contrast tests) as the Portal? Those should be brand compliant. I think we could also go a little smaller with the icon sizes to allow for enough padding (whitespace) between them and the border. For the error one, I think that one should be an "x" instead of reusing the "!".	1	1	https://issues.jboss.org/browse/DEVELOPER-3455
6723	DEVELOPER-3455	Hello Hello, Here is v2 with edits, can you review [~tnolan] [~james.cobb] ? http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_alertstyle_r1v2.png	1	1	https://issues.jboss.org/browse/DEVELOPER-3455
6724	DEVELOPER-3455	[~tnolan] Maybe we can keep those dismissible alerts as an "info" and then they can have the "x". Is the image you attached already apart of RHD?	1	1	https://issues.jboss.org/browse/DEVELOPER-3455
6725	DEVELOPER-3455	[~james.cobb] I think this is ready to go to the implementation side. I'm guessing that we will need JIRAs in both RHDENG and DEVELOPER to make sure we get these updated, as well as the location for the main site, and Keycloak pages. Are you aware of any existing alerts on the blog or in the forums?	1	1	https://issues.jboss.org/browse/DEVELOPER-3455
6726	DEVELOPER-3451	[~paul.robinson] I took a look at the online checker and I think that anything smaller that our base font size (16px) should be considered as "smaller text". [~james.cobb] - Do you agree?	1	1	https://issues.jboss.org/browse/DEVELOPER-3451
6727	DEVELOPER-3441	So how would the images be added to the system when a new Topic is being created? Sounds like a PR would need to be raised on the CSS before the content creator can make the topic. Also, I guess the image would break when a content creator changed the title (such that it no longer matches an image name)?	0	0	https://issues.jboss.org/browse/DEVELOPER-3441
6728	DEVELOPER-3416	[~lightguard] [~paul.robinson] - Are we putting redirects into place for this or is there another solution? Just curious as this has been blocking for a quite a bit now.	0	0	https://issues.jboss.org/browse/DEVELOPER-3416
6729	DEVELOPER-3411	I like it. Is there a place to try it?	1	1	https://issues.jboss.org/browse/DEVELOPER-3411

#	Requirement	Questions	Answered	Successfully Answered	URL
6730	DEVELOPER-3408	I generally understand your comment, [~rblake], but missing some details. I've found this, but nothing is working for me and possibly a user error/issue: https://www.aspedia.net/faq/how-do-i-create-anchor-link-drupal Can you point to a file that has this in place? Thanks, Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6731	DEVELOPER-3408	Can I assume we can do this in Drupal HTML mode? If so, cool. Can you supply a sample?	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6732	DEVELOPER-3408	Yes, you can do this with Drupal. When you're editing something you can switch to source mode, it's a button on the right of the WYSIWYG editor. What you need to do is create a link with an id attribute: {code:html} Google {code} Next, when you want to link to that within the same document you'd created text similar to: {code:html} Link to Google {code} You'll notice the `href` in the second link starts with a `#` it is then followed by the id of the first link. This actually works for any element within a document. You can link to any HTML element that has an id.	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6733	DEVELOPER-3408	[~mikgue], does my previous comment fulfill what you need?	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6734	DEVELOPER-3408	I'm still missing some context. What would really help is a sample RHDev drupal page where I can see the code and results. Would you mind assembling something simple? Thanks, Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6735	DEVELOPER-3408	Ids can only be added to h2, h3, h4, h5, and h6 currently. Should we decide we need to allow other elements to have an id we can make that change within Drupal.	1	1	https://issues.jboss.org/browse/DEVELOPER-3408
6736	DEVELOPER-3394	[~mbenitez] do you need anything from my team now, or are you all set?	1	1	https://issues.jboss.org/browse/DEVELOPER-3394
6737	DEVELOPER-3394	[~paul.robinson] [~mbenitez] I see I've been assigned this issue. What is the selected solution? It's a bit rambling and I'm not sure what's going on with this or if it applies to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-3394
6738	DEVELOPER-3382	Hi [~adelaarreola] Can we take the word 'free' out of this line: Stop by booth 5301 to snag a free t-shirt, stickers or other Red Hat freebies we'll be handing out. So it's: Stop by booth 5301 to snag a T-shirt, stickers or other Red Hat freebies we'll be handing out. Also, Can we do something to denote sessions that are on different days? Like a bold "Tuesday" and a horizontal line or something similar to separate the days of the week in our schedule? Does that make sense?	1	1	https://issues.jboss.org/browse/DEVELOPER-3382
6739	DEVELOPER-3377	Is this a duplicate of https://issues.jboss.org/browse/DEVELOPER-3274?	0	0	https://issues.jboss.org/browse/DEVELOPER-3377

6747	DEVELOPER-3321	Did you try the linkchecker from https://github.com/linkcheck/linkchecker as well? This looks like a fork basically because the maintainer of the original abandoned it and others in the community have picked it up. Try this one as well and let us know how it stacks up with the other one. I think either linkchecker or brokenlinkchecker are my top picks. Not sure why VPN is an issue for monkeytest. Couldn't we run it on a server inside our vpn or is this a hosted service?	1	1	https://issues.jboss.org/browse/DEVELOPER-3321
6748	DEVELOPER-3321	[~ihamilto] I'm slightly skeptical that all the broken links on the site have a single cause. I had expected us to have way more. Are you sure BLC is finding them all? For example, does it find broken links that are created by JS? E.g in the results of /resources?	1	1	https://issues.jboss.org/browse/DEVELOPER-3321
6749	DEVELOPER-3321	There's a bunch of 404s and 403s on here: https://developers.redhat.com/products/dotnet/hello-world/. Does BLC find them?	1	1	https://issues.jboss.org/browse/DEVELOPER-3321
6750	DEVELOPER-3321	[~paul.robinson] how are you testing to get the 403 & 404s? I am ignoring external url's, otherwise there would be 50+ more broken links. blc does find the 403 on this page as reported in DEVELOPER-3819. All occurrences where the "DOWNLOAD" button is visible on mobile layout fail with a 403 on staging. {code} Getting links from: https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/hello-world/ ├─BROKEN─ https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/downloads/ (HTTP_403) ├─BROKEN─ https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/download/ (HTTP_403) Finished! 120 links found. 118 excluded. 2 broken. {code} Does this match what you see? Currently there is no way of automated (that I can find) link checking JS created links. This can be done with the ScreamingFrog premium standalone app.	1	1	https://issues.jboss.org/browse/DEVELOPER-3321
6751	DEVELOPER-3321	I use https://chrome.google.com/webstore/detail/check-my-links/ojkcdipcgfaekbeaelaapakgnjflfglf. You can then browse to https://developers.redhat.com/products/dotnet/hello-world/ and click the 'check my links' button, to see: https://www.dropbox.com/s/7wppoygyuzry78x/Screenshot%202017-02-03%2011.25.45.png?dl=0 and https://www.dropbox.com/s/f51nszzgxbwwq9f/Screenshot%202017-02-03%2011.26.18.png?dl=0 and https://www.dropbox.com/s/conkgmx2nw5hhxq/Screenshot%202017-02-03%2011.26.30.png?dl=0. We had issues with Blinkr when checking JS generated links also. I think this was because we needed to run PhantomJS or similar to render every page. I'm happy to mark this Spike as done. Can you create a story for incorporating BLC into our build?	0	0	https://issues.jboss.org/browse/DEVELOPER-3321
6752	DEVELOPER-3312	I know the details, but I'm honestly not sure how to describe that it's done :(Do we say we have groups in place and people can follow a prescribed workflow? Do we say content must flow in a prescribed workflow to be published?	1	1	https://issues.jboss.org/browse/DEVELOPER-3312
6753	DEVELOPER-3312	Maybe describe the manual tests we need to follow in order to check it's working? We need that anyway in order to do a review.	0	0	https://issues.jboss.org/browse/DEVELOPER-3312
6754	DEVELOPER-3287	[~tnolan] what do you suggest here?	1	1	https://issues.jboss.org/browse/DEVELOPER-3287
6755	DEVELOPER-3287	[~paul.robinson] I'd like to understand more about requirements for products like CDK. They have to start with some sort of download, even though it's not the actual "product", right? Where is this request coming from and do you happen to know who would be the best resource to figure requirements?	1	1	https://issues.jboss.org/browse/DEVELOPER-3287
6756	DEVELOPER-3287	[~paul.robinson] We do have a default download for CDK now, as of May. Is this an issue still for any other products?	1	1	https://issues.jboss.org/browse/DEVELOPER-3287
6757	DEVELOPER-3279	[~drieden] when does this need to go live? We need a variety of content pieces to do this. I would suggest working with [~lincolnthree] to get this together, then my team can implement the page on the site. You can take a look at http://developers.redhat.com/products/eap/ for an example of what we need. There's a number of pages, all linked from the left-hand navigation.	1	1	https://issues.jboss.org/browse/DEVELOPER-3279
6758	DEVELOPER-3273	I think this is going to be quite a lot of work to change. What's the impact of leaving this unchanged?	1	1	https://issues.jboss.org/browse/DEVELOPER-3273

#	Requirement	Questions	Answered	Successfully Answered	URL
6759	DEVELOPER-3273	It's confusing for users, and I'm pretty sure that corporate marketing wouldn't be too happy about products being presented using different version specifications than those that have been chosen by product teams. That said, the mandatory z-numbers can be overlooked, I guess. But the ".GA" at the end is really weird. It looks like something internal, not intended for public eyes. When I showed it to people, the almost universal reaction was "What's that GA doing there?". If we could get rid of the ".GA", that'd be great. (I understand this already works, only the number must be in quotes because the system expects a string.)	1	1	https://issues.jboss.org/browse/DEVELOPER-3273
6760	DEVELOPER-3273	Ok, we can probably drop the GA relatively easily. Do any of the products need the GA suffix?	1	1	https://issues.jboss.org/browse/DEVELOPER-3273
6761	DEVELOPER-3273	[~rkratky] - Can you please review http://developers-pr.stage.redhat.com/pr/1273/build/1762/? If you notice any issues, please let me know.	1	1	https://issues.jboss.org/browse/DEVELOPER-3273
6762	DEVELOPER-3256	[~jessk] - Do you approve of this text change?	1	1	https://issues.jboss.org/browse/DEVELOPER-3256
6763	DEVELOPER-3236	Ack to Andy's target for this link (https://access.redhat.com/documentation/en/red-hat-jboss-a-mq/?version=7.0-alpha). Can we add this link to http://www.jboss.org/products/amq/overview/ please.	0	0	https://issues.jboss.org/browse/DEVELOPER-3236
6764	DEVELOPER-3213	[~unibrew] Great thanks for reviewing it so quickly! Also, Paul was aiming to have this in production by tomorrow, do you think you will be finished with the boosting updates today? or when should we expect those changes?	1	1	https://issues.jboss.org/browse/DEVELOPER-3213
6765	DEVELOPER-3207	Isn't this work already covered by: DEVELOPER-3197, DEVELOPER-3157 & DEVELOPER-3158?	1	1	https://issues.jboss.org/browse/DEVELOPER-3207
6766	DEVELOPER-3207	PRs to set current_version = 10.0.0.GA: https://github.com/redhat-developer/developers.redhat.com/pull/1204 https://github.com/jboss-developer/www.jboss.org/pull/1039 [~paul.robinson] does this change still need to happen? Is this how the Resources page [1] decides which doc to show? Or does it just load the latest, making this variable (and these PRs) irrelevant? [1] https://www.jboss.org/products/devstudio/resources/	1	1	https://issues.jboss.org/browse/DEVELOPER-3207
6767	DEVELOPER-3207	I've added some doc links (as collected from [1]) into the https://github.com/redhat-developer/developers.redhat.com/pull/1204 PR. Is that what you were expecting? [~mhusnain] please review. I can apply the same list of docs for the second PR, too. [1] https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/?version=10.0	1	1	https://issues.jboss.org/browse/DEVELOPER-3207
6768	DEVELOPER-3206	Alternatively, we could provide a service that returns the HTML for the header and footer. That way any changes to them will automatically propagate to the other services. The customer portal team do this. They call it "The Chrome Service". Would this work better for your needs?	1	0	https://issues.jboss.org/browse/DEVELOPER-3206
6769	DEVELOPER-3179	Can this item be closed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3179
6770	DEVELOPER-3172	[~james.cobb], I see you assigned this to me. I believe this is just a SOLP, can your team handle it?	1	1	https://issues.jboss.org/browse/DEVELOPER-3172
6771	DEVELOPER-3161	[~dcoughlin1] Did you push these updates to RHD as well? The .NEt content page on RHD has the old content. Can you check for me? Thank you so much!	1	1	https://issues.jboss.org/browse/DEVELOPER-3161
6772	DEVELOPER-3161	[~jessk] - Can you review http://developers-pr.stage.redhat.com/pr/1362/build/1966/dotnet/ when you get the chance?	1	0	https://issues.jboss.org/browse/DEVELOPER-3161
6773	DEVELOPER-3159	Can I close this? This is live in production.	0	0	https://issues.jboss.org/browse/DEVELOPER-3159
6774	DEVELOPER-3143	[~jessk] [~burrsutter] where can I find the content for the third white box?	1	1	https://issues.jboss.org/browse/DEVELOPER-3143
6775	DEVELOPER-3143	[~james.cobb] where can I find the image for the topic's grey top banner/hero?	1	1	https://issues.jboss.org/browse/DEVELOPER-3143
6776	DEVELOPER-3143	[~adelaarreola] is this just blocked on that image, or are other things needed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3143
6777	DEVELOPER-3141	[~velias] Thanks for the review I have now updated scenarios based on your comments: Login Page: https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/basic_login.feature Registration Page: https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/basic_registration.feature Social Registration Page: https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/social_registration.feature Can you please have a quick review if they are OK give me a thumbsup on the PR? https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/social_registration.feature Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-3141
6778	DEVELOPER-3130	[~james.cobb] Can you add the latest mockups here so [~hwindzio] can take a look?	1	1	https://issues.jboss.org/browse/DEVELOPER-3130
6779	DEVELOPER-3130	Thanks [~james.cobb]. I think I remember seeing a version for when the user isn't logged in. Do you have that mockup handy too?	1	1	https://issues.jboss.org/browse/DEVELOPER-3130
6780	DEVELOPER-3130	Great, there is the single sheet of paper as the Knowledgebase icon I was looking for! I guess Tiffany and I were looking at the lock icon when guests are locked out (which is really not the icon for Knowledgebase but for being locked out). I'm just noticing this, but in the link James sent we have another 'Article' link/icon at the top. Does that bring you to the Knowledgebase articles (is it a dup?), or is another type of content with the same name?	1	1	https://issues.jboss.org/browse/DEVELOPER-3130
6781	DEVELOPER-3130	[~hwindzio][~tnolan] - To answer your second question but yes, we have another type called "Article" and now we're adding "Knowledgebase Article/Solution". It is a bit confusing... Should it just say "Knowledgebase"?	1	1	https://issues.jboss.org/browse/DEVELOPER-3130
6782	DEVELOPER-3128	Just stumbled across this ticket. I assume this should apply to all RHD articles, Get Started, etc. content that links to any RHCP protected articles? Should there be a macro similar to #{cdn(site.base_url)} to make it easy to put the right links in content that will do SSO to the right prod/staging environment?	1	1	https://issues.jboss.org/browse/DEVELOPER-3128
6783	DEVELOPER-3128	[~rterzi] yes It does apply to all links. I agree, a function would be useful, can you raise a separate JIRA ticket for that? You make a good point about the other places that link to these articles. We should search for such occurrences.	1	1	https://issues.jboss.org/browse/DEVELOPER-3128
6784	DEVELOPER-3112	Attached the files, but whats next? [~james.cobb]	1	1	https://issues.jboss.org/browse/DEVELOPER-3112
6785	DEVELOPER-3108	[~tnolan] how important is this for summit?	1	1	https://issues.jboss.org/browse/DEVELOPER-3108
6786	DEVELOPER-3108	[~james.cobb] Looking good! A few things: * Font size for the outside location: Sorry, it's hard to tell from the mockup, but is the font size also slightly smaller from the main size once it moves into the upper position? I think it would help to see an example with input plus the label on the outside too for comparison. * With KISS in mind, I'm not sure we need the "x" or the 'Show" button either. I know the Warby Parker example had these, but I feel like they add unnecessary visual clutter for features that are probably not used very often. I can try to see if there is some UX research on their usage.	1	1	https://issues.jboss.org/browse/DEVELOPER-3108

#	Requirement	Questions	Answered	Successfully Answered	URL
6787	DEVELOPER-3108	[~james.cobb] Sounds good. Can we also change the border color of the active field to a blue? I'm not sure if this is a standard form style, but right now, the active field gets a blue border and a soft "glow". The soft glow may not work here, but I'd still like to see the blue border to indicate an active field. Thoughts?	1	1	https://issues.jboss.org/browse/DEVELOPER-3108
6788	DEVELOPER-3108	[~james.cobb] +1 to the grey, especially since we'll probably have a red button for the primary action. Is the "Case Sensitive" styled on that one as well? If so, I'd like to see that with less contrast (lighter grey) so it does not conflict with the field or draw the eye too much. Other than that, I think this is good to go!	1	1	https://issues.jboss.org/browse/DEVELOPER-3108
6789	DEVELOPER-3108	[~adelaarreola] It's done? Should I review it? Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-3108
6790	DEVELOPER-3108	[~adelaarreola] I'm finishing implementation on keycloak and here are few things: 1. min-width - remove it. It's breaking layout on mobile. https://github.com/adelasofia/developers.redhat.com/blob/2011b71ee84aee03b5f036629aedd399811ca6e4/stylesheets/_adaptive-placeholder.scss#L10 2. label is not correctly positioned for <select> form field can you add that "bottom" magic for "select" as well? Thanks. 3. text-align for last element: https://github.com/adelasofia/developers.redhat.com/blob/2011b71ee84aee03b5f036629aedd399811ca6e4/stylesheets/_adaptive-placeholder.scss#L69 what for this is? Preview here: https://rhdssodev-lkrzyzan.itos.redhat.com/auth/realms/rhd/account/	1	0	https://issues.jboss.org/browse/DEVELOPER-3108
6791	DEVELOPER-3105	[~sgilda] when do you want this live? ASAP?	1	1	https://issues.jboss.org/browse/DEVELOPER-3105
6792	DEVELOPER-3099	[~ganandan-Redhat] I see switchyard here: https://www.dropbox.com/s/u1bkmdumhp2xyke/Screenshot%202016-05-29%2013.00.39.png?dl=0 on http://developers.redhat.com/products/fuse/community/. Did you expect it to appear somewhere else?	1	1	https://issues.jboss.org/browse/DEVELOPER-3099
6793	DEVELOPER-3099	[~tcunning] - Can you please provide a one-line description for SwitchYard?	1	1	https://issues.jboss.org/browse/DEVELOPER-3099
6794	DEVELOPER-3098	[~aileenc], [~ganandan-Redhat], what in particular would you like the focus of this video to be? Otherwise we will just come up with a script of questions to have Hiram answer.	1	1	https://issues.jboss.org/browse/DEVELOPER-3098
6795	DEVELOPER-3098	I think the topics covered in the current video with James are good, but the answers will have changed a bit in the last 3 years since that video was shot. What is Fuse? What can you do with the current release of Fuse? What is the focus for the next releases? Adding [~chirino] for his input.	1	1	https://issues.jboss.org/browse/DEVELOPER-3098
6796	DEVELOPER-3096	[~ganandan-Redhat] I was unable to find the videos you are referring to. Could you verify that they are still there? Also, if I understand you correctly, you want to remove all resources from the learn page, beginning with "JBoss Fuse on OpenShift - How to Connect to Twitter" including any "older" resource?	0	0	https://issues.jboss.org/browse/DEVELOPER-3096
6797	DEVELOPER-3096	Please remove anything from 2 years and older. Also, can we add Christina Lin's videos from the Getting Started pages? Please also ensure https://vimeo.com/150873903 is present - its new and relevant as we moved forward in the product line.	1	0	https://issues.jboss.org/browse/DEVELOPER-3096
6798	DEVELOPER-3095	The currently linked page does have a link to https://access.redhat.com/products/red-hat-jboss-fuse/, but I agree it would be better to go direct. Fixing this requires a change to the layout and product configuration. I see this as a nice-to-have prior to Summit. Agree?	1	1	https://issues.jboss.org/browse/DEVELOPER-3095
6799	DEVELOPER-3095	[~tnolan] Please can you do this as part of your migration of this content to Drupal?	0	0	https://issues.jboss.org/browse/DEVELOPER-3095
6800	DEVELOPER-3094	[~tnolan] Please can you do this as part of your migration of this content to Drupal?	1	1	https://issues.jboss.org/browse/DEVELOPER-3094
6801	DEVELOPER-3093	Who on Docs team is building the REST API, is there a tracker for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3093
6802	DEVELOPER-3093	Is there any update on this?	1	1	https://issues.jboss.org/browse/DEVELOPER-3093
6803	DEVELOPER-3093	If you can move to 6.3 easily then that works for me. I only suggested the redirect as I thought we were stalled waiting for the REST API. When you have draft of the Developer site updates can you share it for review?	1	1	https://issues.jboss.org/browse/DEVELOPER-3093
6804	DEVELOPER-3087	[~rblake] - The module seems to be working as intended; however, I didn't make any changes here. Jason suggested that I update the README. Is there anything else that needs to be completed here, or should I just plan on adding a quick walkthrough of how to view the diffs? Also, I don't know that I have access to that Phase2 documentation.	1	1	https://issues.jboss.org/browse/DEVELOPER-3087
6805	DEVELOPER-3085	What metrics and in which reporting tools are we talking about in this context?	1	1	https://issues.jboss.org/browse/DEVELOPER-3085
6806	DEVELOPER-3080	[~paul.robinson] I have a bit of a problem with product pages. DCP reported on missing descriptions and titles for quite a list of paths under /products/* but almost all of them are about index files that automatically redirect to overview.html e.g. http://developers.redhat.com/products/amq/ . I believe we shouldn't have those index files in sitemap as giving them descriptions/titles and making searchable doesn't make sense IMO. Moreover, the overview.html files were not reported as those with missing descriptions because they are automatically generated by this code: {code} - page.description ||= truncate_para(page._overview, 150) {code} Still, I'd argue we should provide better descriptions for those. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-3080
6807	DEVELOPER-3080	I think the right approach is: 1) Put the redirects into Apache for redirecting http://developers.redhat.com/products/X/ to http://developers.redhat.com/products/X/overview. Please use a wildcard/variable for 'X' so that it works for all current and future products. 2) Delete all the html redirects that are now redundant. Will this issue be complete after this work?	1	1	https://issues.jboss.org/browse/DEVELOPER-3080
6808	DEVELOPER-3080	Well staging is part of the standard releasing process so I was counting this in already. Nevertheless, I have no idea how your PR envs are done. Is Lukas K. the person to handle this as well or somebody from your team? As for now I have this task created for Lukas https://issues.jboss.org/browse/ORG-3312	1	1	https://issues.jboss.org/browse/DEVELOPER-3080
6809	DEVELOPER-3080	Sounds good to me. I started thinking though. What's the point of having overview pages if by the content they are really the index pages? Why lengthen the url with additional word?	1	1	https://issues.jboss.org/browse/DEVELOPER-3080
6810	DEVELOPER-3077	I assume that the only way to tell that a page is a topic page is by checking that its title contains "topic" word. What if somebody will use this word in any other random title? Or is there a convention that forbids that and we should be good ? Otherwise, it would require quite a bit of changes to add some new field in document that tells whether this is a topic page and then propagate it with data.	1	1	https://issues.jboss.org/browse/DEVELOPER-3077
6811	DEVELOPER-3077	[~unibrew]: I agree, testing for 'Topic' in the title is going to be brittle. However, I'm not sure of another way to programmatically detect a topic page from the DCP documents. Is there a way to hard-code the boosts? There won't be that many topic pages added to the site, so we might be able to handle that manually.	1	1	https://issues.jboss.org/browse/DEVELOPER-3077
6812	DEVELOPER-3066	[~tnolan] - I appears that the changes to the product overview pages don't involve either the new StackOverflow or Forums integration. Isn't this out of scope for the Summit release?	1	1	https://issues.jboss.org/browse/DEVELOPER-3066

#	Requirement	Questions	Answered	Successfully Answered	URL
6813	DEVELOPER-3066	A quick question about the "Latest Resources" section. Currently it's represented with just blogs in the wireframe. Is it correct to assume this will cover all resources? I assume so but just want to clarify so functionality is correctly built.	1	1	https://issues.jboss.org/browse/DEVELOPER-3066
6814	DEVELOPER-3060	[~tnolan] Where can I find the content and links for the "Professional services and support" section of the Product Help pages?	1	1	https://issues.jboss.org/browse/DEVELOPER-3060
6815	DEVELOPER-3060	[~tnolan] can you point me to a wireframe or whatever that needs the content? Also, when is it needed?	1	1	https://issues.jboss.org/browse/DEVELOPER-3060
6816	DEVELOPER-3059	[~james.cobb] where can I find the icons/graphics for this page?	1	0	https://issues.jboss.org/browse/DEVELOPER-3059
6817	DEVELOPER-3046	[~burrsutter] you're the reporter, would you mind checking http://developers-pr.stage.redhat.com/pr/1115/build/1220/dotnet/ to see if it meets your criteria please?	0	0	https://issues.jboss.org/browse/DEVELOPER-3046
6818	DEVELOPER-3045	[~rblake], [~lightguard]: After talking to Phase2, it seems like this is not needed anymore? I'm thinking this due to: 1) The user's session is stored in the DB. 2) Changes to the Drupal config are done in-place without restarting the web server. Am I missing something?	1	1	https://issues.jboss.org/browse/DEVELOPER-3045
6819	DEVELOPER-3044	[~rterzi] This should now be fixed in master as a by-product of DEVELOPER-2933. Could you please re-test when you have time. cheers, Rob	1	1	https://issues.jboss.org/browse/DEVELOPER-3044
6820	DEVELOPER-3039	Can you login to the site manually, when it's running on Drupal on your computer? I suspect you just need 'localhost' adding to the staging KeyCloak instance. [~lkrzyzanek] should be able to help.	1	1	https://issues.jboss.org/browse/DEVELOPER-3039
6821	DEVELOPER-3039	[~lkrzyzanek] - Can you add http://docker:4242? I think this should solve the keycloak issues on local docker instances.	1	1	https://issues.jboss.org/browse/DEVELOPER-3039
6822	DEVELOPER-3039	[~lkrzyzanek] - Can we add http://stumpjumper.lab4.eng.bos.redhat.com:32778/ as well? I noticed that the login is broken here as well. Also, is it possible to add all of the docker ports in the 32000 range (or at least 32700 - 32900)? Sorry to ping you with all these, but the ports are assigned dynamically. And can the same be done for http://stumpjumper.lab4.eng.bos.redhat.com?	1	1	https://issues.jboss.org/browse/DEVELOPER-3039
6823	DEVELOPER-3039	This is my error log from the acceptance test target...I can't seem to get it to work properly locally. [~ihamilto] - have you been able to get tests running locally?	1	1	https://issues.jboss.org/browse/DEVELOPER-3039
6824	DEVELOPER-3035	[~james.cobb] Thank you James, can I get the static urls for the images you attached?	1	1	https://issues.jboss.org/browse/DEVELOPER-3035
6825	DEVELOPER-3035	[~adelaarreola] - Can we adjust the link color for the "Need Help" strip? .stack-help a { color: #08C0FC; Hover: color: #46a1da;	0	0	https://issues.jboss.org/browse/DEVELOPER-3035
6826	DEVELOPER-3022	Feels like we need the docker-compose per environment for this. Maybe we simply create new files and edit the control.rb script for v1? [~rblake] what do you think?	1	1	https://issues.jboss.org/browse/DEVELOPER-3022
6827	DEVELOPER-3019	[~james.cobb]: The page is being requested to go live on the 15th of May. Can you get this image ready CoB Thursday 12th May?	1	1	https://issues.jboss.org/browse/DEVELOPER-3019
6828	DEVELOPER-3019	[~ecurley] I think James is going to need more details. What do you want on the image?	1	1	https://issues.jboss.org/browse/DEVELOPER-3019
6829	DEVELOPER-3012	Maybe just #1 until GA? WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-3012
6830	DEVELOPER-3007	[~dcoughlin1] I was working on this last week and noticed some fields are not on the DCP, * Number of votes for each question * Number of views * Name of the answer's author is it possible to add these? [~paul.robinson] [~tnolan] I noticed that most questions don't have an 'accepted answer'. So, does the answer need to be 'accepted' in order for it to show up on this page? If not, should I skip that question?	1	1	https://issues.jboss.org/browse/DEVELOPER-3007
6831	DEVELOPER-2988	I like it. Do we use a period at the end of Survey? [~rayploski-launch] - thoughts?	1	1	https://issues.jboss.org/browse/DEVELOPER-2988
6832	DEVELOPER-2988	[~james.cobb]Do we have social banners for the Developer Survey also? Can we add text to the promo banner to say, "How do you stack up?" ? Thank you! Jess	0	0	https://issues.jboss.org/browse/DEVELOPER-2988
6833	DEVELOPER-2987	[~ecurley] [~paul.robinson] what should the URL be for this page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2987
6834	DEVELOPER-2987	[~adelaarreola] - Link we will link to for document is TBD. [~newtonm] is working on getting it up in download manager. [~paul.robinson] - what URL would you like? promotions/developerssalarysurvey2016?	1	1	https://issues.jboss.org/browse/DEVELOPER-2987
6835	DEVELOPER-2977	Is this for the RHSCL 2.2 release? Do you want all the existing content to be updated for the new release? Or do you want to provide instructions on how to access tha beta until the release happens?	1	1	https://issues.jboss.org/browse/DEVELOPER-2977
6836	DEVELOPER-2977	Sounds good. What's the rough/approximate schedule for beta and GA? Do you want the RHSCL/DTS TTHWs updated for GA?	1	1	https://issues.jboss.org/browse/DEVELOPER-2977
6837	DEVELOPER-2977	Red Hat Software Collections 2.2 Beta is now available and includes these additions and updates: open source databases (MariaDB 10.1, MongoDB 3.2, and PostgreSQL 9.5); open source languages (Node.js v4.2.2, Python 3.5, Ruby 2.3, and Rails 4.2); and Maven 3.3; plus updates of MongoDB 2.6, Python 2.7, Apache 2.4, and Thermostat 1.4. Instructions for installing them can be found here[https://access.redhat.com/site/documentation/en-US/Red_Hat_Software_Collections/2-Beta/html-single/2.2_Release_Notes/index.html#sect-Installation-Subscribe].	1	1	https://issues.jboss.org/browse/DEVELOPER-2977
6838	DEVELOPER-2977	Rob - looks great. Can you rephrase "Release highlights" to something like "New additions". We have a number that are brand new and more that are updated, so I want to distinguish these as brand new. Use some other wording if you prefer. Otherwise, good to go.	1	1	https://issues.jboss.org/browse/DEVELOPER-2977
6839	DEVELOPER-2976	[~mikgue] Can you add the specifics for this and let [~paul.robinson]'s team know exactly what needs to be added. I'm not sure what's involved here.	1	1	https://issues.jboss.org/browse/DEVELOPER-2976
6840	DEVELOPER-2976	[~rterzi] you've shared a number of emails on this. Do you already know the answers here? ^^ If not, I'll look into it. Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-2976
6841	DEVELOPER-2976	Sorry, I'm not sure if I understand what is being asked. I'll be glad to update the page once I'm sure what you want. The CDK downloads page, http://developers.redhat.com/products/cdk/download/, Step 3 links to RHCP for the vagrant boxes. Do you want me to replace those with download manager links like the Get Started Page has? What's the plan to keep these pages updated? The Downloads page is mostly an out of date clone of the Get Started page. If there has to be a Download link/page, maybe it should just redirect to the Get Started page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2976
6842	DEVELOPER-2970	Do you have a recommendation on which way we should redirect? Should we favour https over http?	1	1	https://issues.jboss.org/browse/DEVELOPER-2970
6843	DEVELOPER-2970	[~martymartin]: I'm not sure redirecting all traffic to use HTTP is the right approach. We have some activities that must be done over HTTPS (e.g. login, registration, etc). If we wanted to use HTTPS for everything, why would we need to switch to using relative URLs? Couldn't we just ensure that the fully-qualified URLs use HTTPS?	1	1	https://issues.jboss.org/browse/DEVELOPER-2970
6844	DEVELOPER-2970	What is going to happen with http redirects created on developers.redhat,com? For example we use in DevSuite online installer: * http://developers.redhat.com/redirect/to/virtualbox-5.0.26.download * http://developers.redhat.com/redirect/to/virtualbox-macos-5.0.26.download Will they continue to work? The problem is virtualbox download is not available over https. Can we configure https redirect for http URL? Is that possible? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-2970
6845	DEVELOPER-2970	[~dgolovin] the HTTPS version of the links work for me, downloading via a web browser: * https://developers.redhat.com/redirect/to/virtualbox-5.0.26.download * https://developers.redhat.com/redirect/to/virtualbox-macos-5.0.26.download Is the problem that these files are being downloaded by something else (i.e not a web browser) that can't handle HTTPS?	1	1	https://issues.jboss.org/browse/DEVELOPER-2970

#	Requirement	Questions	Answered	Successfully Answered	URL
6846	DEVELOPER-2970	[~paul.robinson] Thank for creating the redirects! They work for me. I have one question though. How does it work after this issue is fixed and developers site force to use https? I assume when devsuite installer hits http://developers.redhat.com/redirect/to/whatever redirect it is going to be redirected to https://developers.redhat.com/redirect/to/whatever and if latter is configured as redirect to external URL it would trigger download. Does that sound right? If it does then current release has already taken care of with https redirects in place, but we still have to take care of four previous releases and create https redirects to match listed below: 1. http://developers.redhat.com/redirect/to/virtualbox-5.0.8.download 2. http://developers.redhat.com/redirect/to/vagrant-1.7.4.download When those two are created DevSuite Instsallers should have no issues with using redirects on developers.redhat.com.	0	0	https://issues.jboss.org/browse/DEVELOPER-2970
6847	DEVELOPER-2969	[~martymartin] thanks for the report. Can you explain in more detail what the problem is here, as I'm not seeing it.	1	1	https://issues.jboss.org/browse/DEVELOPER-2969
6848	DEVELOPER-2960	Hi [~paul.robinson], Are these two scenarios that David outlined still valid? According to David a user should NOT need be logged in, in order to download JBoss/Red Hat Developer Studio. However this is not the case currently. Could you confirm whether or not these two scenarios are still valid? Also do we really need to be logged in to download cheat sheets? Both cases currently require a site visitor to log in or register.	1	1	https://issues.jboss.org/browse/DEVELOPER-2960
6849	DEVELOPER-2951	[~lightguard] Apparently it will be MariaDB 10.0.14 that we'l be provided with. Can you update from MySQL to a version of Maria DB close to 10.0.14? Sorry for messing around :-(	1	1	https://issues.jboss.org/browse/DEVELOPER-2951
6850	DEVELOPER-2942	[~paul.robinson]/[~lightguard] Things that still are unclear about this issue that need to be resolved before we can estimate: * What is the actual deployment mechanism e.g. is the do we simply update the current Drupal instance in-place or is there a blue/green deployment scenario * What is acceptable to content editors for v1 when a deployment happens e.g: ** The site may go down briefly why it happens and they lose content ** They absolutely cannot lose content they are working on and therefore deployments take place at scheduled times	1	1	https://issues.jboss.org/browse/DEVELOPER-2942
6851	DEVELOPER-2915	[~tnolan] I think this is covered by your re-working of the topics page UX. Correct? If so, I suggest closing this as a duplicate.	1	1	https://issues.jboss.org/browse/DEVELOPER-2915
6852	DEVELOPER-2913	Oh perfect. That is much easier! Do you want as Visual JIRA's or Website JIRA's?	1	1	https://issues.jboss.org/browse/DEVELOPER-2913
6853	DEVELOPER-2911	There's a related issue to this: how do we handle a/b testing and metrics javascript? I don't know of a way to do for a dev/staging/prod check as that doesn't exist in drupal (that I'm aware of anyway). I'm also worried about this possibly messing up metrics if it's included in a non prod environment.	1	1	https://issues.jboss.org/browse/DEVELOPER-2911
6854	DEVELOPER-2905	Can this be done today [~adelaarreola] [~paul.robinson]? The site has been updated for CDK 2 GA, but the download links point to beta (which are no longer available). cc [~rterzi]	1	1	https://issues.jboss.org/browse/DEVELOPER-2905
6855	DEVELOPER-2905	What's needed: 1. Download manager needs links for CDK 2.0.0 GA files. (cdk-2.0.0.zip and the 3 vagrant boxes) 2. The Downloads page needs to updated to point to cdk-2.0.0.zip instead of (-beta5.zip). http://developers.redhat.com/downloads/	1	1	https://issues.jboss.org/browse/DEVELOPER-2905
6856	DEVELOPER-2904	[~rblake], [~lightguard]. Is this still an issue, now that we don't run Blinkr?	1	1	https://issues.jboss.org/browse/DEVELOPER-2904
6857	DEVELOPER-2901	[~dhladky] - There will be a new GA version of CDK 2 - targeted for Tuesday. Will that have a new URL? Also, per the question above, I submitted a ticket here: https://issues.jboss.org/browse/ORG-3028. It needs a better ticket name as that was just a guess when I created it earlier this week. Regardless, please see David's questions there and correct/clarify anything I had put in. BTW - in addition to the 2 downloads mentioned in the description (JBDS and CDK), did we discuss this morning adding a 3rd item for a "JBDS for container development" download thingy? This is what ORG-3028 would relate to. Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-2901
6858	DEVELOPER-2901	[~paul.robinson] The version for JBoss Dev Studio updated as expected today but the date is showing April 2 instead of April 19. See: https://db.tt/fuSzt0BY The date looks correct though on: http://developers.redhat.com/products/devstudio/download/ Are we using a different date field on the main downloads page than is on the individual product download page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2901
6859	DEVELOPER-2900	[~tnolan] I don't know which download URLs you're referring to but the latest configuration in the Download Manager for JBDS is 9.1.0.Beta 2. Who made the request to create the Download URLs as they should know what the status is.	1	1	https://issues.jboss.org/browse/DEVELOPER-2900
6860	DEVELOPER-2900	Can someone clarify what this means? [~tnolan] [~adelaarreola] {quote}For the Tech preview link, the url should take the user through the Full User flow. Other URLs stay the same and use the same flow as they do now.{quote} Does that mean "require SSO login & check entitlements before allowing the download", like we do for the JBDS EAP installer (but not for the other zips & jars, which are 100% free)?	1	1	https://issues.jboss.org/browse/DEVELOPER-2900
6861	DEVELOPER-2900	Is JBDS-3665 == "the same workflow as CDK and RHEL which makes sure they are a full user" ?	1	1	https://issues.jboss.org/browse/DEVELOPER-2900
6862	DEVELOPER-2900	[~paul.robinson] How can we make the docs listed on http://developers.redhat.com/products/devstudio/docs-and-apis/ (shows latest 9.1.0.GA docs) also appear on https://www.jboss.org/products/devstudio/resources/ (still showing old 9.0.0.GA docs) ? Seems like the code's the same in both .adoc pages and in the _common/product.yml files for both repos.	1	1	https://issues.jboss.org/browse/DEVELOPER-2900
6863	DEVELOPER-2896	[~ecurley], [~james.cobb]: Do we have the graphics for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2896
6864	DEVELOPER-2892	[~ecurley] - I also have graphics for jboss.org. Do we want a promo there too? [~paul.robinson][~adelaarreola]	0	0	https://issues.jboss.org/browse/DEVELOPER-2892
6865	DEVELOPER-2886	I have completed a first draft of the IoT topics page on the noted Google doc. @Lincoln, Please review and feel free to provide any text edits or recommendations (you can ignore the current comments, these are reference from the internal review process with IoT team stakeholders). Can you please provide a timeline as to when we think we can get this first iteration of the page published? Also, Note that the tags that should be used to populate the dynamic content areas of the page should be any/all IoT related tags: * iot * IoT * internet of things * Internet of Thins * Internet of Things (Industry)	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6866	DEVELOPER-2886	I suggest the following process: 1. Michelle and Lincoln work together to finalise the content 2. Adela builds the IoT Topic page from the finalised content 3. Any further content changes are made directly by Lincoln or Michelle. 4. The Page is pushed to production once Lincoln is happy that it is good enough. 5. Future edits will be made directly via the content team. Essentially, I'd like a process where Adela touches this once. Does this work?	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6867	DEVELOPER-2886	[~lincolnthree], [~mdiserio]: can you confirm that you are happy with my above proposed approach?	1	1	https://issues.jboss.org/browse/DEVELOPER-2886

#	Requirement	Questions	Answered	Successfully Answered	URL
6868	DEVELOPER-2886	Hi Paul, I am happy with the above approach, but to clarify #5. Future edits will be made directly via the content team. Is the process that I submit a Jira request? Any additional details I should be aware of? Additionally, it would be super awesome if we could go live with the page by the end of next week because we will then promote develepers.redhat.com on the collateral, etc. at IoT World Congress May 10 (10k attendees). Ambitious or do-able? [~lincolnthree] I made some updates to the draft content per your recommendation (forcing James Falkner, TMM, to assist with reducing the marketing tone). As part of that, I changed the content in one of the white boxes in order to make the content that was there the first link in the Blue Box (because I wanted the CTA in the text to be immediately relevant). Please let me know what you think at your earliest convenience. -Michele	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6869	DEVELOPER-2886	[~lincolnthree] Is the content for this page still in progress, or is it ready?	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6870	DEVELOPER-2886	[~mdiserio] Do you know which Red Hat Products you'd consider to be related to IoT? Could you list them here? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6871	DEVELOPER-2886	[~adelaarreola] is this still blocked? If so, can you add an explanation so we can chase it up?	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6872	DEVELOPER-2886	In the bottom 2 rows of the dynamically populated content boxes there are duplicate entires ([screenshot attached|^IoT_Topic_duplicate-entries.png]). The 2 blue circles show the duplicates for "Re-Watch: Messaging for IoT - Virtual JBoss User..." and the red circles show the duplicates for "An Enterprise Developer's Journey to the IoT". Are these duplicates because they have more than one of the IoT tags? Can we fix this to avoid duplicate content appearing? Thanks again, the page looks great!	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6873	DEVELOPER-2886	Hi Adela, When I click on the Orange box it just re-loads the IoT Topics page. The URL should be http://developers.redhat.com/video/youtube/mli5c-oTN1U/ Is that happening for you? Thanks so much for the quick turn-around, it is greatly appreciated. -Michele	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6874	DEVELOPER-2886	Looks great, thank you. What are the next steps? When will this page go live?	1	1	https://issues.jboss.org/browse/DEVELOPER-2886
6875	DEVELOPER-2880	[~mikgue] it looks like you have the Ascidoc, can you raise a PR for it? [~adelaarreola] should be able to help you out with it if you have problems.	1	1	https://issues.jboss.org/browse/DEVELOPER-2880
6876	DEVELOPER-2874	[~mikgue] we don't do camel case for URLs, does http://developers.redhat.com/promotions/devnation-discount-code work for you?	1	1	https://issues.jboss.org/browse/DEVELOPER-2874
6877	DEVELOPER-2870	[~lincolnthree] [~dcoughlin1] Do we have a clear idea of what items originate from *.redhat.com domains? If so could they be added to the definition of done?	1	1	https://issues.jboss.org/browse/DEVELOPER-2870
6878	DEVELOPER-2869	[~adelaarreola] I've added the content in PR #988 [https://github.com/redhat-developer/developers.redhat.com/pull/988] Do any of the templates need to change to add the 5th tab?	1	1	https://issues.jboss.org/browse/DEVELOPER-2869
6879	DEVELOPER-2869	[~adelaarreola] Mike found some typos. I tried to edit on GitHub, but it keeps marking entire sections as changed that I haven't been touched. (The section starting with the alternate install instructions (all 5 copies of it gets marked as changed and I think it's loosing the headings/links in the process. Can you please pick up the file from [https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-combined.adoc] (Raw: https://raw.githubusercontent.com/rctrh/rh-tthw/master/install-rhel7-combined.adoc). I verified that there were no changes against the `get-started.adoc` in your PR. You can view the commit to see the diff here: [https://github.com/rctrh/rh-tthw/commit/90ad209850c7854b8973ed3c7dd116537d7013cf] Thanks & sorry for the trouble.	1	1	https://issues.jboss.org/browse/DEVELOPER-2869
6880	DEVELOPER-2868	I think this issue has been resolved. I don't see the book error on Blinkr anymore. EDIT: [~paul.robinson] - Can this be closed? http://developers-pr.stage.redhat.com//pr/1004/blinkr/887/report.html	0	0	https://issues.jboss.org/browse/DEVELOPER-2868
6881	DEVELOPER-2866	[~james.cobb] If I understand #1 correctly, you want the word 'download' on the 'Try Red Hat Enterprise Linux' box to by a link to download RHEL... However, since the box itself is a link, should I remove the box's link? [~ecurley] Please let me know when the content is ready so I can add it :)	1	1	https://issues.jboss.org/browse/DEVELOPER-2866
6882	DEVELOPER-2866	[~adelaarreola] - Can the supplied text be formatted as a smaller <p> tag?	1	1	https://issues.jboss.org/browse/DEVELOPER-2866
6883	DEVELOPER-2862	what is the content for the new hero?	1	1	https://issues.jboss.org/browse/DEVELOPER-2862
6884	DEVELOPER-2847	So you've now got a URL which will cause the right sections to be visible? Do you change the change the "current URL" when a tab is selected? How does the download manager get the URL to return to?	1	1	https://issues.jboss.org/browse/DEVELOPER-2847
6885	DEVELOPER-2847	[~adelaarreola] Links to the tabs looks and works great! One edit/question: * On the second big box at the top (the one that changes) now, can the title on the corresponding blue bar (further down the page) be updated as well? Right now it says "2. Install, Configure, and Verify" and does not change with the tab selection like the top big blue box does.	1	1	https://issues.jboss.org/browse/DEVELOPER-2847
6886	DEVELOPER-2837	Wow - big section. Is this really a "troubleshooting". Should there be a point above that says "If you see something different, blah, blah...go to this section..."?	1	1	https://issues.jboss.org/browse/DEVELOPER-2837
6887	DEVELOPER-2830	[~rterzi] I was expect 4 steps. How do we get there?	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6888	DEVELOPER-2830	[~paul.robinson] I'm happy to do PRs. However last time I submitted one you decided since I couldn't see the output I should just be handing the changes to Adela. I don't think automatic CI builds were happening on PRs then. How much effort is it to setup a development environment? I'm comfortable with docker/vagrant boxes/RHEL, etc. I have a RHEL VM box that I do all my Red Hat VPN work in.	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6889	DEVELOPER-2830	[~rterzi] are you all set? Need anything?	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6890	DEVELOPER-2830	I thought [~adelaarreola] was working on this to deal with the template/design questions at least for the getting-started pages. Did it ever get integrated in stage? I haven't seen anything. (The 4 CDK TTHWs changes are straightforward, I can do a PR for those if necessary)	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6891	DEVELOPER-2830	Is there a branch for the CDK updates?	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6892	DEVELOPER-2830	Ok, what's the new target date for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6893	DEVELOPER-2830	[~adelaarreola] - Should the tabs still have the blocks [.large-17.columns.recommended] and [.large-17.columns.recommended]	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6894	DEVELOPER-2830	[~rterzi] Adela needs to know: do we want all links including internal ones to open in a new window? She doesn't understand your asciidoc.	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6895	DEVELOPER-2830	[~adelaarreola] - Yes, the links should open in new tabs similar to RHEL. I've updated [https://github.com/rctrh/rh-tthw/blob/master/cdk-get-started-combined.adoc] Just like the RHEL getting started guide the first download should NOT open in a new window, it should trigger the download manager / registration flow. Sorry, I forgot about the new download flow when updating this. Where there any other problems with the AsciiDoc?	1	1	https://issues.jboss.org/browse/DEVELOPER-2830

#	Requirement	Questions	Answered	Successfully Answered	URL
6896	DEVELOPER-2830	[~adelaarreola] I picked up your changes. What are the many syntax errors? I see you removed the sections I left in, but commented out, is // not valid for leaving comments in the AsciiDoc? I don't get an error when I run it through asciidoctor or in github's renderer. This is the diff between your version and mine. [https://github.com/rctrh/rh-tthw/commit/007f52f328803ac0c56c1e092eaf1af424278eb8] Note: Most of the changes are related to the _window='_blank' which I had added to my version. Where do you want me to submit the changes to add back the window='_blank'? [https://github.com/rctrh/rh-tthw/blob/master/cdk-get-started-combined.adoc] is now up to date. Let me know if you want me to submit a PR and which branch/repo I should submit it against at this point. Also, What tool are you using for editing AsciiDoc? Do you have something that is checking syntax? Thanks	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6897	DEVELOPER-2830	Yes, the tabs in step 4 look fine. Should "NODEJS" be changed to "NODE.JS"? Otherwise, good by me.	1	1	https://issues.jboss.org/browse/DEVELOPER-2830
6898	DEVELOPER-2829	[~paul.robinson] [~adelaarreola] - I've tweaked a screenshot to reflect the new color bands. Can we put these changes in the queue for FE?	1	1	https://issues.jboss.org/browse/DEVELOPER-2829
6899	DEVELOPER-2829	[~james.cobb] this looks like a small tweak, is it something you or your team can do?	1	0	https://issues.jboss.org/browse/DEVELOPER-2829
6900	DEVELOPER-2828	[~adelaarreola], [~wesbos]. I don't think it's feasible to return the user to the previous section. However, I think we can make the tab-selection more sticky. How about: 1. When a user selects a tab, or the page is loaded with a tab specified in the URL: Save the selected tab in local browser storage. 2. When the user visits the page (and no tab is specified in the URL): Select the tab specified in local browser storage (if one set for that product).	1	1	https://issues.jboss.org/browse/DEVELOPER-2828
6901	DEVELOPER-2828	This is certainly better than what we have. Would it be possible to return people to the section within a tab (1 through 4)?	1	1	https://issues.jboss.org/browse/DEVELOPER-2828
6902	DEVELOPER-2819	[~paul.robinson], can we put these up on Jboss.org? http://static.jboss.org/images/hero/hero_desktop_1175x400_devnation2016.png http://static.jboss.org/images/hero/hero_mobile_480x500_devnation2016.png	1	1	https://issues.jboss.org/browse/DEVELOPER-2819
6903	DEVELOPER-2809	[~james.cobb] Thanks a lot! [~ecurley] what should the url be?	1	1	https://issues.jboss.org/browse/DEVELOPER-2809
6904	DEVELOPER-2808	[~james.cobb] Where can I find the graphic?	1	1	https://issues.jboss.org/browse/DEVELOPER-2808
6905	DEVELOPER-2805	Just to confirm, so we want to link to Customer Portal for the Red Hat Enterprise Linux 7.2 CDK Vagrant Box? Is there a way to include that on our site too at some point? If we are going to the Portal, I'd like for the link to have the little external link indicator and then open in a new window/tab.	1	1	https://issues.jboss.org/browse/DEVELOPER-2805
6906	DEVELOPER-2803	[~mikgue] Where should I place this content? Also, GoogleDocs does not allow me to save images from it's documents.	1	1	https://issues.jboss.org/browse/DEVELOPER-2803
6907	DEVELOPER-2803	Sorry - I thought I had written it down - this will be at the very beginning of Step 2. For all tabs. How shall I get you the image?	1	1	https://issues.jboss.org/browse/DEVELOPER-2803
6908	DEVELOPER-2803	Is there a way to add a local file to a Jira ticket?	1	1	https://issues.jboss.org/browse/DEVELOPER-2803
6909	DEVELOPER-2789	Does this still need to be done?	1	1	https://issues.jboss.org/browse/DEVELOPER-2789
6910	DEVELOPER-2786	This made sense a month ago, but no longer (longer story). Can we change the text to read: Got a technical CDK question? Please join the CDK beta mailing list, container-tools@redhat.com, and get answers from the Red Hat CDK Team. Thanks, Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-2786
6911	DEVELOPER-2784	Are you happy with the left-side nav and content jumping up, when on the get-started page? E.g: view https://www.dropbox.com/s/lxp7wqu26m8b9aa/Screenshot%202016-03-18%2010.42.54.png?dl=0 then view: https://www.dropbox.com/s/2u0bkuz39eu7dhm/Screenshot%202016-03-18%2010.43.14.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-2784
6912	DEVELOPER-2780	[~ecurley][~ray.ploski] - Can you please review? ^^^^	1	1	https://issues.jboss.org/browse/DEVELOPER-2780
6913	DEVELOPER-2779	Is this complete?	1	1	https://issues.jboss.org/browse/DEVELOPER-2779
6914	DEVELOPER-2776	What 'associated content' are you expecting at this stage? I didn't think there would be anything beyond the individual topic pages?	1	1	https://issues.jboss.org/browse/DEVELOPER-2776
6915	DEVELOPER-2769	Design approved: https://issues.jboss.org/browse/DEVELOPER-2768 Approved design: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_downloads_r2v5.png psd: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/working/RHD_downloads_r2v5.psd Need any graphics processed?	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6916	DEVELOPER-2769	[~wesbos] Feel free to ping me on HipChat if you have any questions. For the product names, order and description text, you can use the wireframe: https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/Downloads [~mikgue] Can you or someone on your team provide the version and date information for each download? Is one easier than the other to get? I believe we have a different story to make this automated, so we would just need something for the interim.	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6917	DEVELOPER-2769	[~tnolan]how should I capture them? BTW - I know nothing about these version numbers and dates so will need to find someone who knows.	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6918	DEVELOPER-2769	[~mikgue] Ok, let's not worry about them for this version of the page then. [~wesbos] For the sections where we have a version or date being displayed, can you add placeholders for them in the code, but not display any information for now?	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6919	DEVELOPER-2769	That's great news about the versioning and dates. It looks like the PR finished and the page can be previewed via: http://developers-pr.stage.redhat.com/pr/965/build/681/downloads/ [~wesbos] Is this ready for feedback or are you still working on a few things?	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6920	DEVELOPER-2769	[~wesbos] Are the descriptions being pulled in dynamically from somewhere? [~mikgue] provided ones to be specifically used on this page. I also noticed that the banner background does not extend past 1800px now. Can this be fixed? Additional updates to the text: * JBOSS DEVELOPMENT AND MANAGEMENT should be: ACCELERATED DEVELOPMENT AND MANAGEMENT * CLOUD PRODUCTS should be "PRIVATE CLOUD" * The products within each section should be ordered alphabetically now as shown in the wireframe. [~james.cobb] "I'm for having the link there but it goes to the actual download. Folks see the name, click on the name and get the download." I'd like to remove the link for now as I requested and will keep an eye on heatmaps especially the first few weeks this is live to see if users try to click it.	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6921	DEVELOPER-2769	[~tnolan] - 1) All of the header graphics on the main pages are designed to tile horizontally. [~wesbos] - Can we change the css to have it repeat for larger sizes? 2) The title link - sure... monitoring the heat maps sounds good to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6922	DEVELOPER-2769	im not sure then - the code is there and working locally. I can't see staging and no one seems to know why. I'd just merge this and worry about the bg	1	1	https://issues.jboss.org/browse/DEVELOPER-2769
6923	DEVELOPER-2768	I like the first one r2v1 better for the All section since that puts more focus on the download button. The header styles well to separate the categories so I'm ok with the icons being removed. ;) Can you come up with an alternate option for the Most Popular? I'm losing that section in the header as it looks like it's part of the header as opposed to page content.	1	1	https://issues.jboss.org/browse/DEVELOPER-2768
6924	DEVELOPER-2767	Can we aim to have the review completed today on this? This would allow us to ideally start the implementation next week.	0	0	https://issues.jboss.org/browse/DEVELOPER-2767

#	Requirement	Questions	Answered	Successfully Answered	URL
6925	DEVELOPER-2767	I like it and good by me. Well done [~tnolan] Will this page become editable via Drupal down the road?	1	1	https://issues.jboss.org/browse/DEVELOPER-2767
6926	DEVELOPER-2767	[~mikgue] Thanks for adding these so quickly. Can you make a few minor wording tweaks to have them all start with nouns so they are consistent? I think a few of them start with an action verb instead. If it's easier to keep the short with using a verb, then we can do that across the board too. Either way, I think they should use a consistent format.	1	1	https://issues.jboss.org/browse/DEVELOPER-2767
6927	DEVELOPER-2762	[~ray.ploski] - Can you please confirm this content is complete and accurate?	1	1	https://issues.jboss.org/browse/DEVELOPER-2762
6928	DEVELOPER-2761	[~ray.ploski] and [~akandel], it looks like one of the promos either has been changed out already or hasn't been changed out yet. It's not prescribed in the Google doc, but would you like me to remove Red Hat from the CDK image as well?	1	1	https://issues.jboss.org/browse/DEVELOPER-2761
6929	DEVELOPER-2761	Thanks Ray. [~paul.robinson][~akandel] - How do we proceed from here?	1	1	https://issues.jboss.org/browse/DEVELOPER-2761
6930	DEVELOPER-2757	[~morgan_thomas] - Please note this goes out before the .NET related work.	1	1	https://issues.jboss.org/browse/DEVELOPER-2757
6931	DEVELOPER-2757	[~ecurley] I can do the top banner for JBoss, is there a Jira for that?	1	1	https://issues.jboss.org/browse/DEVELOPER-2757
6932	DEVELOPER-2753	[~ecurley] Have these links been created? If so, where can I find them?	1	1	https://issues.jboss.org/browse/DEVELOPER-2753
6933	DEVELOPER-2753	Put them on the .NET mock up: https://docs.google.com/a/redhat.com/presentation/d/1hNJ4v8dTxhns1yZmvm5arQ-bDgSY_s2mrstJIeu3F9c/edit?usp=sharing	1	1	https://issues.jboss.org/browse/DEVELOPER-2753
6934	DEVELOPER-2750	Thanks [~adelaarreola]. Is it possible to change the font color for the side links to highlight which section you're in as the user scrolls down the page, like on the Quickstarts? http://developers.redhat.com//quickstarts/unifiedpush/push-helloworld-ios/index.html Other than that, this looks great!	1	0	https://issues.jboss.org/browse/DEVELOPER-2750
6935	DEVELOPER-2734	Thanks [~adelaarreola] A few minor changes: Get an invite as Red Hat co-hosts cocktail hour. - remove "." Can we pull the YouTube link? And the register for DevNation is hitting a redirect page - is that because it's in staging?	1	1	https://issues.jboss.org/browse/DEVELOPER-2734
6936	DEVELOPER-2734	[~ecurley] here's the latest, can you review? http://developers-pr.stage.redhat.com/pr/903/build/581/events/msbuild/2016/ Once you approve, I'll push it into production.	1	1	https://issues.jboss.org/browse/DEVELOPER-2734
6937	DEVELOPER-2734	[~adelaarreola] Link wasn't showing updates. Am I missing them?	1	1	https://issues.jboss.org/browse/DEVELOPER-2734
6938	DEVELOPER-2734	[~ecurley] That's very odd, are you sure you were looking at the right preview link? I know I sent you too many yesterday :D Here is a screenshot of what has changed https://www.dropbox.com/s/j2oswov1u47dbh1/Screenshot%202016-03-24%2009.01.16.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-2734
6939	DEVELOPER-2732	Content available here: https://docs.google.com/a/redhat.com/document/d/1orWHd6ELOGYqExh2LWjrvtuyoCL5lkSc1DozWS4PVSg/edit?usp=sharing [~ray.ploski] - Mike did a once through. Do you want to review or shall [~adelaarreola] move forward?	0	0	https://issues.jboss.org/browse/DEVELOPER-2732
6940	DEVELOPER-2716	Thanks [~dcoughlin1]. Does your import process handle sub directories? I don't see many new quickstarts there. The beginner, camel, cxf and switchyard directories (at https://github.com/jboss-fuse/quickstarts/tree/6.2.1.GA) contain numerous quickstarts each.	1	1	https://issues.jboss.org/browse/DEVELOPER-2716
6941	DEVELOPER-2716	[~dcoughlin1] this latest version looks great - thanks! Could you pass on some details on the QSTools checks we need to pass for the switchyard quickstarts?	1	1	https://issues.jboss.org/browse/DEVELOPER-2716
6942	DEVELOPER-2716	[~rafabene] - The fuse quickstarts have a nested file structure. Is it possible to run qstools on that? We are currently having problems rendering the switchyard directory because the READMEs don't follow the qstools conventions.	1	1	https://issues.jboss.org/browse/DEVELOPER-2716
6943	DEVELOPER-2716	Hey [~aileenc], would you like me to point the "Demo Source" link to https://github.com/jboss-fuse/quickstarts/tree/master/beginner?	1	1	https://issues.jboss.org/browse/DEVELOPER-2716
6944	DEVELOPER-2711	This is really looking great, [~adelaarreola]! Some updates for the next iteration: # Change the Thank you message to "Thank you for downloading Red Hat Enterprise Linux." (first line) and "Your download should start automatically. If you have any problems with the download, please use the [direct link]." (second line). All other text should be removed. # Virtual Box is one word "VirtualBox" # Step 1 boxes should be "Download Red Hat Enterprise Linux". # Remove the times (10 minutes, etc) from the boxes, both up top and within the page text. Only on this Get Started page not throughout the site. # Collapse step 1 text if the Thank you message is there. # Change the step 4 layout to use vertical tabs. See the latest wireframe. https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20Started%20%28post-download%29. [~james.cobb] Can you provide the styling for these? # For the step 4 content, can we keep them all the same height? I think Python is the tallest one, so maybe use that height as a gauge? # We talked about moving the Troubleshooting and FAQ at the bottom of the page elsewhere. [~mikgue] Is that something we still plan to do?	1	1	https://issues.jboss.org/browse/DEVELOPER-2711
6945	DEVELOPER-2711	We're really getting there! Thanks [~adelaarreola] Some additional edits/fixes: # The Thank you message at the top looks like it repeats "Red Hat Enterprise Linux" in the text. I see "Thank you for downloading Red Hat Enterprise Linux {color:red}Red Hat Enterprise Linux{color}". # We need a space between _the_ and _direct_ in the additional sentence in the Thank you message. "please use thedirect link." # Step 4 content: [~mikgue] It looks like we're using "CPP" now instead of C/C++. Is that intentional? # Step 4 layout/style: A few things and [~james.cobb] please chime in. A) I'd to see a different font color for "Recommended" to highlight it and make it stand out more. B) I'd like to see a larger font size used for the first item in the list, the recommended one, to differentiate it more from the others. See the Perl tab. C) Can we add lines or some other separation between the items like on the Perl tab?	1	1	https://issues.jboss.org/browse/DEVELOPER-2711
6946	DEVELOPER-2710	[~paul.robinson] Paul, what are you looking for me to do? It looks like you just re-assigned this to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-2710
6947	DEVELOPER-2710	I set you as the assignee, as you are the one working on it. Are you asking Tiffany to review it? If so, can you mark it as 'in review'. See: https://www.dropbox.com/s/se0c3laxpauk8qr/Screenshot%202016-03-14%2013.57.17.png?dl=0 for a pointer on how to do it.	1	1	https://issues.jboss.org/browse/DEVELOPER-2710
6948	DEVELOPER-2710	Can we aim to have the review completed today on this? This would allow us to do the implementation next week.	1	1	https://issues.jboss.org/browse/DEVELOPER-2710
6949	DEVELOPER-2710	[~adelaarreola] what time should we get updates to you to be part of Prod on Monday?	1	1	https://issues.jboss.org/browse/DEVELOPER-2710
6950	DEVELOPER-2709	Due to some changes to the content and learning that both steps 2 and 3 could change depending on the user's desired configuration, I made a new version of the wireframe and am placing this sub-task back into review status. Here is the proposed new wireframe: https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20Started%20%28post-download%29 Because I'd like to keep this to a single page for the RHEL "Get Started", I also made a few modifications: # I added a primary tab bar to the top of the page. - It is very important that we are able to swap the content for the tabs WITHOUT reloading the entire page. This is due to people hitting this page directly after download. We want to retain the "Thanks" as well as showing step one completed no matter which primary tab they select after the download. [~paul.robinson] - Is this possible? # We would need a new secondary tab style for the Languages section. [~james.cobb] is looking into some options for this.	1	1	https://issues.jboss.org/browse/DEVELOPER-2709

#	Requirement	Questions	Answered	Successfully Answered	URL
6951	DEVELOPER-2709	Thanks [~james.cobb]. Do you consider that style a primary or secondary style then? We need to go two levels deep on the RHEL Get Started pages. Tab set one: Bare Metal, Hyper-V, VirtualBox, VMware Each of those has multiple steps (1-4) Within Step 4, we would need another set of tabs for the language selection, which I think would be considered a secondary set of tabs. So it would go Primary Tabs > Steps > Secondary Tabs. Feel free to ping me if this doesn't make sense (which is quite likely, lol)	1	1	https://issues.jboss.org/browse/DEVELOPER-2709
6952	DEVELOPER-2709	Why are we trying to put all of this content on one page? We already have a multi-language selection method for Getting Started as seen here: http://developers.redhat.com/products/rhel/get-started-rhel7-perl/ Is there a business need to have all of this content on "one page"? Seems to me that we're adding visual complexity and load time as we'll need to load all of the tabbed content.	1	1	https://issues.jboss.org/browse/DEVELOPER-2709
6953	DEVELOPER-2709	Can we aim to have the review completed today on this? This would allow us to do the implementation next week.	1	1	https://issues.jboss.org/browse/DEVELOPER-2709
6954	DEVELOPER-2703	[~mikgue] Where can I find this content?	1	1	https://issues.jboss.org/browse/DEVELOPER-2703
6955	DEVELOPER-2703	[~mikgue] is this the issue you are working on here: https://github.com/redhat-developer/developers.redhat.com/pull/964 I think the plan was for [~adelaarreola] to take Mike's code from that PR and fix the problems. [~adelaarreola] do you have everything you need to do that? For example, do you know what it is intended to look like?	1	1	https://issues.jboss.org/browse/DEVELOPER-2703
6956	DEVELOPER-2703	A few things: # delete all of the old stuff - everything above "New to RHEL" (except the title) # can you standardize on the table widths? # can you align the columns of the various tables (similar to item above) # can you remove a space/line above each table so that it's closer to the text above it? # For the Perl table, can you replace "docker pull rhscl/perl-520-rhel7" with this "docker pull registry.access.redhat.com/hscl/perl-520-rhel7" Looks great! Thanks. Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-2703
6957	DEVELOPER-2699	[~paul.robinson] Did it change from what we had in design? $0 in multiple languages/currency Text below: Getting RHEL is easier than ever. New $0 RHEL Developer Suite. CTA: Learn more. 3- 5 assets: Get started with a Read Me. Download now Using the languages you know. GOOGLE DOC: https://docs.google.com/a/redhat.com/document/d/1AswVoPh1gAxrcc2m3fYtoxxfjYn-YHzCE_WvPllAdXo/edit?usp=sharing Scroll down past blue bar.	1	1	https://issues.jboss.org/browse/DEVELOPER-2699
6958	DEVELOPER-2699	[~adelaarreola] Paul has marked this as done. Might you know when it will show on Prod? cc [~ecurley]	0	0	https://issues.jboss.org/browse/DEVELOPER-2699
6959	DEVELOPER-2698	[~ecurley] - Do we have content for the .NET topic page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2698
6960	DEVELOPER-2698	[~james.cobb] [~brock] where can I find the graphics?	1	0	https://issues.jboss.org/browse/DEVELOPER-2698
6961	DEVELOPER-2696	[~brock] Survey report isn't done yet. Sorry. Let's swap with a blog that has been getting tons of hits: http://developers.redhat.com/blog/2016/02/24/10-things-to-avoid-in-docker-containers/ Work for you [~lincolnthree]?	1	1	https://issues.jboss.org/browse/DEVELOPER-2696
6962	DEVELOPER-2695	Here are the homepage backgrounds for .NET [~james.cobb] do you approve? Also the desktop version does pattern.	1	1	https://issues.jboss.org/browse/DEVELOPER-2695
6963	DEVELOPER-2695	[~ecurley] - Do we have new content for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2695
6964	DEVELOPER-2691	[~paul.robinson] I can take a look during my next sprint which starts mid-week next week. Does that work ok for timing?	1	1	https://issues.jboss.org/browse/DEVELOPER-2691
6965	DEVELOPER-2691	[~tnolan] No problem, waiting makes sense as we should consider uniformity across RH properties. What throw-away work are you thinking about?	1	1	https://issues.jboss.org/browse/DEVELOPER-2691
6966	DEVELOPER-2686	Hey Jason, this looks interesting so far! Do you want to sit us down for a demo at some point? It's a little hard to guess with confidence at what this means. Wdyt?	0	0	https://issues.jboss.org/browse/DEVELOPER-2686
6967	DEVELOPER-2685	[~lightguard] what's the status of this? Do you have a URL at which I can view the site?	1	1	https://issues.jboss.org/browse/DEVELOPER-2685
6968	DEVELOPER-2685	Is it this job that will build the pilot environment of Drupal? If so, I think it will be triggered on a change to master, in the same way our current production job is rebuilt. So, it's not really a 'nightly' job. Perhaps the scope of this issue has changed since it was first envisaged?	1	1	https://issues.jboss.org/browse/DEVELOPER-2685
6969	DEVELOPER-2685	Random permission issue * http://atholl.eng.hst.ams2.redhat.com:33777/projects -- Fixed with new data dump * JS not firing on http://atholl.eng.hst.ams2.redhat.com:33777/community/contributor/ -- Still an issue * Only one (badly styled) connector on: http://atholl.eng.hst.ams2.redhat.com:33777/products/fuse/connectors -- JS issue is breaking this, not sure what though * No latest content on http://atholl.eng.hst.ams2.redhat.com:33777/ -- Probably just needs to be updated * No Events on http://atholl.eng.hst.ams2.redhat.com:33777/events * Links on left wrong on http://atholl.eng.hst.ams2.redhat.com:33777/products/cdk/get-started * Javascript on topics pages for adding news items doesn't work * Acceptance tests failing: {code} @site_user @logout @javascript Scenario: Customer verifies their account # _cucumber/features/login_register/basic_registration.feature:10 Given I am on the Registration page # _cucumber/features/step_definitions/common/navigation_steps.rb:1 Expected page title to be Register | Red Hat Developers, but was Red Hat Developers | Red Hat Developers (RuntimeError) ./_cucumber/lib/pages/base_page.rb:37:in `loaded?' ./_cucumber/lib/pages/register_page.rb:26:in `rescue in open' ./_cucumber/lib/pages/register_page.rb:22:in `open' ./_cucumber/features/step_definitions/common/navigation_steps.rb:2:in `/^(I am|they are) on the ([^"]*) page$/' _cucumber/features/login_register/basic_registration.feature:11:in `Given I am on the Registration page' And I complete the registration form # _cucumber/features/step_definitions/register_steps.rb:9 Then I should be logged in # _cucumber/features/step_definitions/common/navigation_steps.rb:10 HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-36.334.html Image screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-36.334.png HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-52.330.html Image screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-52.330.png The test failed on page: Red Hat Developers \| Red Hat Developers @site_user @logout @javascript Scenario: Newly registered site visitor navigates to product Download page and clicks on download, accepts Redhat T&C's should initiate download. # _cucumber/features/downloads/featured_downloads.feature:12 Given I register a new account # _cucumber/features/step_definitions/register_steps.rb:1 And I am on the Product Download page for eap # _cucumber/features/step_definitions/downloads.steps.rb:1 When I click to download the featured download of "Enterprise Application Server" # _cucumber/features/step_definitions/downloads.steps.rb:16 @site_user @javascript Scenario: Password validation # _cucumber/features/login_register/basic_registration.feature:17 Given I am on the Registration page # _cucumber/features/step_definitions/common/navigation_steps.rb:1 Expected page title to be Register \| Red Hat Developers, but was Red Hat Developers \| Red Hat Developers (RuntimeError) ./_cucumber/lib/pages/base_page.rb:37:in `loaded?' ./_cucumber/lib/pages/register_page.rb:26:in `rescue in open' ./_cucumber/lib/pages/register_page.rb:22:in `open' ./_cucumber/features/step_definitions/common/navigation_steps.rb:2:in `/^(I am\|they are) on the ([^"]*) page$/' _cucumber/features/login_register/basic_registration.feature:18:in `Given I am on the Registration page' When I try to enter passwords that do not match # _cucumber/features/step_definitions/register_steps.rb:18 Then I should see a warning that "Passwords don't match" # _cucumber/features/step_definitions/register_steps.rb:24 HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-36-16.042.html Image screenshot:	1	1	https://issues.jboss.org/browse/DEVELOPER-2685

#	Requirement	Questions	Answered	Successfully Answered	URL
6970	DEVELOPER-2685	Can you assign those issues to the 'Drupal Live' release? If it's a blocker for the pilot, then put it on the 'Drupal Pilot' release. Thanks!	0	0	https://issues.jboss.org/browse/DEVELOPER-2685
6971	DEVELOPER-2681	How is this different than a link?	1	1	https://issues.jboss.org/browse/DEVELOPER-2681
6972	DEVELOPER-2681	[~lightguard] did you mean to mark as 'implemented'? If so, what's the rational?	1	1	https://issues.jboss.org/browse/DEVELOPER-2681
6973	DEVELOPER-2680	[~paul.robinson] [~dhladky] When will RHEL have a DM link from here? http://developers.stage.redhat.com/downloads/ Or is it somewhere else that I don't see.	1	0	https://issues.jboss.org/browse/DEVELOPER-2680
6974	DEVELOPER-2679	[~wesbos] is this feasible? [~lkrzyzanek] when do you need this by?	1	1	https://issues.jboss.org/browse/DEVELOPER-2679
6975	DEVELOPER-2679	Is it pushed to production already ?	1	1	https://issues.jboss.org/browse/DEVELOPER-2679
6976	DEVELOPER-2677	[~mikgue] - Does this work for you? ^^	1	1	https://issues.jboss.org/browse/DEVELOPER-2677
6977	DEVELOPER-2676	Can you let me know what the URL will be for this page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2676
6978	DEVELOPER-2669	[~rblake] it seems like #2 relates to DEVELOPER-2541? Can you tidy these issues up, as you are suggesting? Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-2669
6979	DEVELOPER-2666	"Developers have multiple options when seeking to obtain a Red Hat Enterprise Linux developer subscription - see the details here[link]" - Where should I direct the link on this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2666
6980	DEVELOPER-2666	Do I need to make any changes to this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2666
6981	DEVELOPER-2666	[~mikgue] I submitted a new PR for this, but I think I'm a little confused on the requirement. Is it supposed to mirror the RHEL downloads page and include that extra line?	1	1	https://issues.jboss.org/browse/DEVELOPER-2666
6982	DEVELOPER-2666	[~dcoughlin1] This looks good. Can you make the first lines bold to make sure people read it? other than that - good to go.	1	1	https://issues.jboss.org/browse/DEVELOPER-2666
6983	DEVELOPER-2665	Is http://developers.redhat.com/downloads/ really the right place? Isn't http://developers.redhat.com/products/rhel/download/ better?	1	1	https://issues.jboss.org/browse/DEVELOPER-2665
6984	DEVELOPER-2662	[~paul.robinson] We'd like to link to 2 different PDFs from this page. What's the process to get these added and indexed on RHD? PDF 1: http://static.jboss.org/rhd/docs/rhel_developer_getting_started_guide.pdf PDF 2: http://static.jboss.org/rhd/docs/selinux_for_red_hat_developers.pdf	1	1	https://issues.jboss.org/browse/DEVELOPER-2662
6985	DEVELOPER-2662	Can we aim to have the review completed today on this? This would allow us to do the implementation next week.	1	1	https://issues.jboss.org/browse/DEVELOPER-2662
6986	DEVELOPER-2662	[~tnolan] You've assigned this to me - what is it you need me to do? :)	1	1	https://issues.jboss.org/browse/DEVELOPER-2662
6987	DEVELOPER-2656	[~mikgue] how will this link from the overview page? Is it a link on the left-hand side? If so, what text should be displayed on the link?	1	1	https://issues.jboss.org/browse/DEVELOPER-2656
6988	DEVELOPER-2653	A couple of things. 1. Shouldn't DTS and SCL stuff be on their own respective Update pages? 2. The other items are don't feel like they'd be part of a RHEL update page, as they really fall under "latest news" (like the page is called). Do we have site plans for "news" items"?	1	1	https://issues.jboss.org/browse/DEVELOPER-2653
6989	DEVELOPER-2653	[~mikgue] We can remove the 2 that are related to DTS and SCL, but that only leaves 2 on the page then, unless you have others to add? How old are these updates anyway and is it really worth including them other than not losing legacy content? For a DTS and SCL Updates tab, I don't think it's worth it to add that tab right now for just one item on those tabs. Same question as above...how old are these? I was also thinking about a "news" item but we do not have that on the site yet. It's possible the blog could fill that need.	1	1	https://issues.jboss.org/browse/DEVELOPER-2653
6990	DEVELOPER-2653	I'm getting confused. Isn't the point for an Updates tab to show history? What's there for DTS and SCL are from the Fall timeframe. If one is insufficient, then we can add a prior release, too. The two other items are less important by themselves, but RHEL does have an obvious history as well.	1	1	https://issues.jboss.org/browse/DEVELOPER-2653
6991	DEVELOPER-2653	[~mikgue] Ok, thanks for the additional info about the dates on those. It was hard to tell how recent they were from the CP site. We can add updates tabs for those other 2 then, but would need a separate JIRA for each and we would need to make sure we maintain those too as updates roll out. For RHEL Updates, we would only display 2 items for now, unless you have new ones that we can add. Please let me know if we need more items on this page than the 2. With the DTS and SCL landing pages being removed from the menu, how are users supposed to get to those pages now anyway? This is probably a side convo. :)	1	1	https://issues.jboss.org/browse/DEVELOPER-2653
6992	DEVELOPER-2653	So I guess I should create 2 Jira's for SCL and DTS Updates pages, yes? I'll assemble the content. As for the RHEL Update, I'll see what else I can find. I don't follow you on this one: "With the DTS and SCL landing pages being removed from the menu, how are users supposed to get to those pages now anyway? Being removed from which menu. If you mean, the CP site, it's up to us. (that's why I started this convo. :)) Much of the content is also available in a PDF/product brief but I recall that you don't like PDFs - would like understand why someday. Maybe during our side convo. :)	0	0	https://issues.jboss.org/browse/DEVELOPER-2653
6993	DEVELOPER-2644	[~paul.robinson] I can't define the definition of done for this ticket as there is no description. Could you please provide some context?	1	1	https://issues.jboss.org/browse/DEVELOPER-2644
6994	DEVELOPER-2644	[~adelaarreola] the content is here: https://issues.jboss.org/browse/DEVELOPER-2699. Can you confirm that you have all you need to implement this today?	0	0	https://issues.jboss.org/browse/DEVELOPER-2644
6995	DEVELOPER-2642	[~adelaarreola] This looks very good. Can you insert a line under "Download Red Hat Enterprise Linux 7"? I want the text underneath to not be associated with the link. After that, good to go.	1	1	https://issues.jboss.org/browse/DEVELOPER-2642
6996	DEVELOPER-2632	[~lightguard] this seems unnecessary now. WDYT? please close if you agree.	0	0	https://issues.jboss.org/browse/DEVELOPER-2632
6997	DEVELOPER-2617	[~mikgue] do you want any changes to the Spotlights or 'FEATURED CONTENT' area of the homepage? If so, can you create new issues under this Epic.	1	1	https://issues.jboss.org/browse/DEVELOPER-2617
6998	DEVELOPER-2617	[~ecurley] For Octopus, we need move the JEE book to a spotlight. What should come off?	1	1	https://issues.jboss.org/browse/DEVELOPER-2617
6999	DEVELOPER-2615	Where will this link from?	1	1	https://issues.jboss.org/browse/DEVELOPER-2615
7000	DEVELOPER-2615	I'm not sure what you mean by 'resource'. Specifically what type of resource? Blog post, article, or something else? Can you provide a link to the page you would like it linking from and indicate where on the page you want the link? This might help me to understand what your requirements are.	1	1	https://issues.jboss.org/browse/DEVELOPER-2615
7001	DEVELOPER-2615	[~paul.robinson] - What branch to use as the base? Where should images (screenshots) go?	1	1	https://issues.jboss.org/browse/DEVELOPER-2615

#	Requirement	Questions	Answered	Successfully Answered	URL
7002	DEVELOPER-2615	FYI - for anyone tracking this. There are three pieces that are part of this: # Install RHEL 7 (physical machine) - Is this a ticket for this one? # Install RHEL 7 VirtualBox VM - DEVELOPER-2613 # Install RHEL 7 VMware, this one, DEVELOPER-2615 This one, VMware, will be the *last one published*. The first one will be the Install RHEL 7. (located here: [https://github.com/rctrh/rh-tthw/blob/master/get-started-rhel7-install.adoc]. However, These were originally formatted to be TTHWs with the 3 sections/3 boxes. I will reformat and update for an article layout since that is the new direction. On the TTHWs there was an AsciiDoctor macro I think for locating the image. Is it the same for articles? It doesn't work in the local repo, it just gives broken images. Is there a trick for that? I've cloned the repo, but I don't have a development site setup to test against, so I won't be able to see what it looks like until it gets staged. {{ image:#{cdn(site.base_url + '/images/products/rhel/rhel7-install/rhel_7_1_a_0.png')}[Screenshot Boot Splash]}}	1	1	https://issues.jboss.org/browse/DEVELOPER-2615
7003	DEVELOPER-2615	Is there a naming and/or directory hierarchy for articles? These three articles will be for RHEL Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-2615
7004	DEVELOPER-2614	What link are you waiting for? I suggest getting the PR in if you don't get the link before the end of the week.	0	0	https://issues.jboss.org/browse/DEVELOPER-2614
7005	DEVELOPER-2614	([~mikgue] I should probably take this to a separate email thread. That sentence needs a little minor improvement. You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com [https://developers.redhat.com] and download Red Hat Enterprise Linux Developer Suite[https://developers.redhat.com/products/rhel/download/] Or maybe make it simpler: You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, get Red Hat Enterprise Linux Developer Suite[https://developers.redhat.com/products/rhel/download/] after registering at developers.redhat.com [https://developers.redhat.com] (both gloss over that you will get/still need a subscription, but it's $0/no-cost/free for developers.) Note: This also should go in the FAQ. It's in all the others, but I left it out of the Java one until we figured out what the text should be. Old: I don't have a current Red Hat subscription, can I get an evaluation? + If you don't have a Red Hat Enterprise Linux subscription, you can try it for free. Get started with an evaluation at link:https://access.redhat.com/products/red-hat-enterprise-linux/evaluation[]. Developers should select the Red Hat Enterprise Linux Developer Workstation option to ensure your evaluation includes additional tools from the Red Hat Developer Toolset and Red Hat Software Collections. New: As a developer, how can I get a Red Hat Enterprise Linux subscription? + If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com [https://developers.redhat.com] and download Red Hat Enterprise Linux Developer Suite[https://developers.redhat.com/products/rhel/download/]	1	1	https://issues.jboss.org/browse/DEVELOPER-2614
7006	DEVELOPER-2614	As discussed, use these: You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, get Red Hat Enterprise Linux Developer Suitehttps://developers.redhat.com/products/rhel/download/ after registering at developers.redhat.com https://developers.redhat.com. As a developer, how can I get a Red Hat Enterprise Linux subscription? + If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com https://developers.redhat.com and download Red Hat Enterprise Linux Developer Suitehttps://developers.redhat.com/products/rhel/download/	1	1	https://issues.jboss.org/browse/DEVELOPER-2614
7007	DEVELOPER-2611	Can you double check the redirect? I'm getting "Not Found - The requested URL /solutions/ was not found on this server." instead of being redirected to the homepage.	1	1	https://issues.jboss.org/browse/DEVELOPER-2611
7008	DEVELOPER-2611	Can we change this back to In-Progress until the redirect is added? I don't want us to lose track of this one, since it's marked as Done currently.	1	1	https://issues.jboss.org/browse/DEVELOPER-2611
7009	DEVELOPER-2607	Good deal! That works. Is there an .svg or .eot file for jboss.org? We need to replace the font icon on http://www.jboss.org/products/webserver/overview/ as well.	1	1	https://issues.jboss.org/browse/DEVELOPER-2607
7010	DEVELOPER-2607	[~brock] - Can you take care of this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2607
7011	DEVELOPER-2607	[~james.cobb] and [~dcoughlin1] Here's a full color .svg: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/illustrations/svg/products_apache_v2.svg Do we want to make it grayscale to match the other icons?	1	1	https://issues.jboss.org/browse/DEVELOPER-2607
7012	DEVELOPER-2607	[~wesbos] [~adelaarreola] - do you know integrate this into images/icons/fontcustom on jboss.org? I am having some difficulty getting this to work properly.	0	0	https://issues.jboss.org/browse/DEVELOPER-2607
7013	DEVELOPER-2602	[~james.cobb] Where do I put the carousel graphics in static?	1	1	https://issues.jboss.org/browse/DEVELOPER-2602
7014	DEVELOPER-2598	[~dcoughlin1] - Can you share a link were it can be reviewed?	1	1	https://issues.jboss.org/browse/DEVELOPER-2598
7015	DEVELOPER-2598	[~james.cobb] - Should be reviewable here: http://developers-pr.stage.redhat.com/pr/837/build/367/	1	1	https://issues.jboss.org/browse/DEVELOPER-2598
7016	DEVELOPER-2586	[~dcoughlin1] - Hey Dan... this is marked as in review, where can I review it?	1	1	https://issues.jboss.org/browse/DEVELOPER-2586
7017	DEVELOPER-2586	[~paul.robinson][~wesbos] [~dcoughlin1] - The spacing looks fine between the promos and the associated text but another related question came up. At desktop sizes, the width of the promos are much narrower that the rest of the page. I looked into the css and I question why we have a calculated width for these elements. Current CSS... .spotlight-item { width: calc(20% - 16px); I changed it in my inspector to this and it looked great... .spotlight-item { width: calc(20%); Why are we adding the " - 16p" at desktop sizes? Granted, I'm using chrome on mac and there may be a browser concern for this.	1	1	https://issues.jboss.org/browse/DEVELOPER-2586
7018	DEVELOPER-2586	[~james.cobb] if the above turns out to be an issue, can you create a new JIRA?	1	1	https://issues.jboss.org/browse/DEVELOPER-2586
7019	DEVELOPER-2584	[~mikgue] where should this article be linked from? Is due to go live on Project Octopus launch or ASAP?	1	1	https://issues.jboss.org/browse/DEVELOPER-2584
7020	DEVELOPER-2568	Both the items in the screenshot are in the spreadsheet with 2016 dates. If these are wrong, can you update the dates in the spreadsheet?	1	1	https://issues.jboss.org/browse/DEVELOPER-2568
7021	DEVELOPER-2568	Was digging into this - and noticed a few things that aren't pulling up. Not letting me add attachment so will send to you. But dates for DevNation are off. Saying June 25-27th on the site. http://developers.redhat.com/events/ JavaLand should be March 8 - 10th but on site saying the 7th - 17th. And the month listed above the cards isn't matching up with the card. Would it be helpful to screenshare?	1	1	https://issues.jboss.org/browse/DEVELOPER-2568
7022	DEVELOPER-2561	Should I move this to blocking in the meantime?	0	0	https://issues.jboss.org/browse/DEVELOPER-2561

#	Requirement	Questions	Answered	Successfully Answered	URL
7023	DEVELOPER-2561	Yes, I have some notes from a meeting yesterday regarding the breadcrumbs and will be creating a few JIRAs as a result later today. For this story specifically, we do not want to rename the breadcrumbs but to remove them instead. [~paul.robinson] - Should this Story be removed and a new one created or should this one just be revised? Our plan is to remove all breadcrumbs from the site because the content does not go deep enough now to have users get “lost” as to where they are in the sitemap. The new menu and IA really flattened the structure so breadcrumbs no longer add significant value.	1	1	https://issues.jboss.org/browse/DEVELOPER-2561
7024	DEVELOPER-2558	[~wesbos] it looks like the switch to using the REST API on the DL-Man didn't consider the green button. Can you add this pack in please? It should download the featured artefact for that product.	0	0	https://issues.jboss.org/browse/DEVELOPER-2558
7025	DEVELOPER-2557	[~lincolnthree] what new content? Is this now added to the staging build? Can you review it?	0	0	https://issues.jboss.org/browse/DEVELOPER-2557
7026	DEVELOPER-2550	Are you still creating one?	1	1	https://issues.jboss.org/browse/DEVELOPER-2550
7027	DEVELOPER-2545	[~lightguard] have you got enough info to know what the issue is? I know we discussed it on the call. If so, can you confirm with Olly that there is already a feature in Awestruct to do this. Otherwise, it might be worth adding the feature at the same time as the logging improvements you are doing this week.	1	1	https://issues.jboss.org/browse/DEVELOPER-2545
7028	DEVELOPER-2545	Is that working alright for you [~oshaw]?	1	1	https://issues.jboss.org/browse/DEVELOPER-2545
7029	DEVELOPER-2544	[~tnolan] is this in progress? If so, can you update the status please?	1	1	https://issues.jboss.org/browse/DEVELOPER-2544
7030	DEVELOPER-2532	Article or 1 page Microsite would work here i think. When does this need to go live?	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7031	DEVELOPER-2532	[~mikgue] - Are you moving forward with a Blog post for this content instead? I think we discussed that as an option instead of using an Article.	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7032	DEVELOPER-2532	[~paul.robinson] this would be needed in a couple of weeks. Don't have a date handy. [~tnolan] I'm afraid I don't recall that. If it's a blog, everyone would see the discount code and we don't want that. With an article, we'd want it behind the Reg wall to force people to register. We can use a blog to announce the discount code, however. Which reminds me how are articles assigned to the front/behind the reg wall?	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7033	DEVELOPER-2532	[~mikgue] [~lincolnthree] - We haven't talked about where articles would fit with the reg wall. I figured that they would be like most of the content, which does not require you to be logged in, right? Do you have a doc in progress for what should/shouldn't require registration? I don't think I've seen that plan yet or that we have a way to support that from the back-end. I understand the reluctance to use a blog for this, as what you say about not revealing the code to the world makes sense. What's to prevent someone from just sharing the code elsewhere, though? I'm not sure what we can do short-term, but long-term I think we should have a "promotion" content type that would require users to be logged in to see it. I still don't think an article is the right place for something like this that is short-lived content.	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7034	DEVELOPER-2532	Have we done anything like this in the past? One other option would be for the user to fill out a form, verify they are a member and we email them the code.	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7035	DEVELOPER-2532	I'm not aware of us doing this before. The form/email would be good. Should we get approval from Harry if he wants to collect more info for the discount?	1	1	https://issues.jboss.org/browse/DEVELOPER-2532
7036	DEVELOPER-2532	[~mikgue] [~paul.robinson] I think we have a promo page live for this now. Is that correct? Can this be closed?	0	0	https://issues.jboss.org/browse/DEVELOPER-2532
7037	DEVELOPER-2529	[~crobson], [~tnolan]: Can you review that this is something we want to do?	1	1	https://issues.jboss.org/browse/DEVELOPER-2529
7038	DEVELOPER-2520	[~mikgue] - Should I plan on just removing those product folders? Or, do I need to remove references to these products as well?	0	0	https://issues.jboss.org/browse/DEVELOPER-2520
7039	DEVELOPER-2511	[~paul.robinson][~wesbos] The new home page promos are ready for implementation. What is RHD? http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_whatisrhd.png DevNation : Registration open http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_devnation_registrationopen.png Dive into Java http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_diveintojava.png EAP7 beta is here http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_eap7betaishere.png New Containers Course http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_containercourse.png Content and links can be found here: https://issues.jboss.org/browse/DEVELOPER-2510	1	1	https://issues.jboss.org/browse/DEVELOPER-2511
7040	DEVELOPER-2511	* Previously What is Red Hat Developer about? Change to: About Red Hat Developers. * DevNation with dates - change to DevNation 2016. Text below - Why wait when you can register now? * Change Java one to Hot Topics - text below Dive into Enterprise Java * Change EAP image to "Download JBoss EAP 7 Beta" * Change text below containers course to "New no-cost containers course from Red Hat Training" [~james.cobb]	1	1	https://issues.jboss.org/browse/DEVELOPER-2511
7041	DEVELOPER-2510	[~james.cobb] What is Red Hat Developers about? <<developers.redhat.com/about>> DevNation registration <<https://rh2016.smarteventscloud.com/portal/createAccount.ww?>> Dive into Java <<http://developers.redhat.com/enterprise-java/>> JBoss EAP 7 Beta is here <<http://developerblog.redhat.com/2016/01/18/jboss-eap-7-beta-is-now-available/>> New containers course <<http://wp.me/p2WBxv-1KWJ>>	1	1	https://issues.jboss.org/browse/DEVELOPER-2510
7042	DEVELOPER-2500	As this ticket currently stands, is it still valid?	1	1	https://issues.jboss.org/browse/DEVELOPER-2500
7043	DEVELOPER-2493	This is done when all problems are in JIRA, that are discovered from: 1. Acceptance tests 2. Visiting all major pages on the site and checking they look right, and the key functionality works I appreciate the above is still a bit vague.	0	0	https://issues.jboss.org/browse/DEVELOPER-2493
7044	DEVELOPER-2491	[~lightguard], [~oshaw]: can you review this description please. Does it give us what we need to review where the bottlenecks are in the system?	1	1	https://issues.jboss.org/browse/DEVELOPER-2491
7045	DEVELOPER-2491	Could we log these to a different file instead? Logging to the console slows things down, it's been observed before, Doing a perf logging in .awestruct probably isn't a bad idea in general, but I'm not sure how much we want to log to the console. Awestruct used to log every page as it was created, but others in the community didn't want that level of granularity in their builds. There's a verbose flag (`-w`) currently, but it doesn't do much if you're not in debug. We could add some additional logging to the console that way without too much trouble.	0	0	https://issues.jboss.org/browse/DEVELOPER-2491
7046	DEVELOPER-2491	I agree logging every page to the console is too much. We have about 1200 pages. What do you think about logging the extension just before it executes?	0	0	https://issues.jboss.org/browse/DEVELOPER-2491

#	Requirement	Questions	Answered	Successfully Answered	URL
7047	DEVELOPER-2491	Sure, verbose is fine. There would be ~50 lines of output if you included all the extensions, helpers and transformers registered in pipeline.rb. Would verbose log any other stuff that we don't want?	0	0	https://issues.jboss.org/browse/DEVELOPER-2491
7048	DEVELOPER-2491	What would we use the perf.log for? I'm wondering if we need that now? The verbose logging of when an extension, helper or transformer runs fulfills the requirements I think. [~oshaw] agreed?	1	1	https://issues.jboss.org/browse/DEVELOPER-2491
7049	DEVELOPER-2491	Do we need it now? I don't know, maybe not but if we're trying to diagnose performance problems (I've had at least one person in the community ask for help) it would be good to have that option. We wouldn't log it every time. While I've worked on the RHD site I've had a few times where I needed to measure performance. I hacked the branch I was working on, but that's as far as it ever went.	0	0	https://issues.jboss.org/browse/DEVELOPER-2491
7050	DEVELOPER-2491	Can you expand on what this perf.log is? Is it a dump from ruby to be analysed by some tooling, or is it a tonne of log statements, kind of like a TRACE level log in Java?	0	0	https://issues.jboss.org/browse/DEVELOPER-2491
7051	DEVELOPER-2488	[~lkrzyzanek], I think we want a named query like: http://dcp2.jboss.org/v2/rest/search/developer_materials. That also includes sys_type of 'blogpost' and sys_type of 'book'. We'd also need to be able to filter by tags (optional) and a query string (optional). Can you create this for us please?	1	1	https://issues.jboss.org/browse/DEVELOPER-2488
7052	DEVELOPER-2488	Shouldn't this be in DONE state? I finished implementing this last week, it was reviewed and pushed to all possible DCP instances.	0	0	https://issues.jboss.org/browse/DEVELOPER-2488
7053	DEVELOPER-2487	BTW, I see the big green "download now" buttons don't exist anymore. Is that a consequence of this change to REST API, too?	1	1	https://issues.jboss.org/browse/DEVELOPER-2487
7054	DEVELOPER-2487	[~paul.robinson] Seems my PR failed to build... can you tell me what's wrong with those URLs I added? https://github.com/jboss-developer/www.jboss.org/pull/1023 Or is the problem this? {code} fatal: could not read Username for 'https://github.com': No such device or address {code} -- https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/www.jboss.org-pull-player-executor/2331/console	1	1	https://issues.jboss.org/browse/DEVELOPER-2487
7055	DEVELOPER-2487	I've submitted a new version of PR 1023 with the links to Beta1 (not Beta2) docs updated so we can at least see what that looks like on staging. Of course that might not be strictly necessary if we just use http://www.jboss.org/products/devstudio/resources/ with its "See More Documentation" link to https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/ ... which shows by default the Beta1 docs (later this week, the Beta2 docs). [~mhusnain] What do you think? Do we want to call out the Beta docs on http://www.jboss.org/products/devstudio/resources/ or just "hide" them under the "See More" link? Here's what the resources page would look like if my PR above is applied to change all the links to 9.1.Beta1 versions instead of 9.0.0.GA versions: http://www-stg.jboss.org/pr/1023/build/2333/products/devstudio/resources/	1	1	https://issues.jboss.org/browse/DEVELOPER-2487
7056	DEVELOPER-2487	Looks like with the latest import of 9.1.0 Beta(space)2 we lose the filesize of the EAP bundled installer and the "2" of Beta2 wraps to the next line. Can we fix those? http://developers.redhat.com/products/devstudio/download/ !alignment-and-filesize-problems.png! https://www.jboss.org/products/devstudio/download/ !alignment-and-filesize-problems2.png!	1	1	https://issues.jboss.org/browse/DEVELOPER-2487
7057	DEVELOPER-2480	[~james.cobb] can you review: http://it-developers-pr.stage.redhat.com/pr/715/build/678/products/. It looks done to me. I believe the mockup is based on an old wireframe where the primary CTA was for 'Downloads'. Correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-2480
7058	DEVELOPER-2473	[~mikgue] I'm also confused by this. Can you explain what you want doing with this adoption page? We could convert it to an article maybe?	1	1	https://issues.jboss.org/browse/DEVELOPER-2473
7059	DEVELOPER-2472	[~tnolan], [~crobson], can you advise on where this content should go?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7060	DEVELOPER-2472	[~paul.robinson] This git hub source is in the TTHW format, so is it not the RHEL product "get started" page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7061	DEVELOPER-2472	[~tnolan] I agree, it should go as another square (in the first position, before 'CPP') on http://developers.redhat.com/products/rhel/get-started. What text and image should be on the button?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7062	DEVELOPER-2472	Can we get this one on staging ASAP? The other 2 (in separate JIRAs) are a lower priority but we'd like to have this one to test the user flow. Also, the title of it should be: *Install Red Hat Enterprise Linux for Development*. We're not going to use quick start or quickstart for this since we have other content that use those terms.	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7063	DEVELOPER-2472	Hi [~rterzi], I noticed that sections for the updated https://github.com/rctrh/rh-tthw/blob/master/install-rhel7.adoc still have FIX ME lines. Is that content still in progress or what should I change those to? cc: [~mikgue]	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7064	DEVELOPER-2472	Yes, it's still a WIP, but we need to see it in template. * Note: Before registration can proceed, you will be required to agree to the terms and conditions at www.redhat.com/wapps/ugc/ if you haven't already done so. [*FIXME* hopefully this can be deleted.] -- *Keep this for now * * Step 4 Content - [*FIXME* - Where do the tabs come from?] This should be replaced by the tabs you are integrating. * FAQ question 4: {noformat} link:http://developers.redhat.com/products/developertoolset/get-started-rhel7-cpp/[Get started developing with C++ and Eclipse from the Red Hat Developer Toolset] {noformat} * FAQ question 5 - [FIXME Note: I didn't give this much testing], that can be deleted.	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7065	DEVELOPER-2472	Note: I will supply some additional VirtualBox FAQs that need to be added to the troubleshooting and FAQ section. [~adelaarreola] [~paul.robinson] - Do you have any suggestions on better formatting/markup for the FAQs? In particularly to differentiate the questions from the answers?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7066	DEVELOPER-2472	[~rterzi] Thanks for the clarification!... Also as I was adding the content for https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-vbox.adoc I noticed that you have multiple broken links for images. I looked in your images folders and could not find some of the missing images (ubuntu-vbox-06-settings1.png and ubuntu-vbox-04-settings4.png). Can you email them to me so I can add them to the site? Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7067	DEVELOPER-2472	Was there an updated build last night where I can see how it all looks?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7068	DEVELOPER-2472	[~adelaarreola] Ok, that looks good. I have a bunch of edits that I need to make across all the sections of the RHEL getting started guide. What's the easiest way to do this? Is PR #922 the most recent version?: [https://github.com/adelasofia/developers.redhat.com/blob/DEVELOPER-2472-b/products/rhel/get-started.adoc] I could make a copy of that in my repo, and then commit edits against it which would like you pick up diffs or the whole file.	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7069	DEVELOPER-2472	[~adelaarreola] - when do you need this to make it into Stage tonight? cc [~rterzi]	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7070	DEVELOPER-2472	[~adelaarreola] - I need to make some edits to the rhel-install guide. Did you make any changes? Which repo/branch has the latest version?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7071	DEVELOPER-2472	Looks good. Can it be promoted to staging for testers?	1	1	https://issues.jboss.org/browse/DEVELOPER-2472
7072	DEVELOPER-2471	[~mikgue] what do you want the label to be under each item on http://developers.redhat.com/products/rhel/get-started/? Also, what image should we use?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7073	DEVELOPER-2471	[~tnolan] [~james.cobb] I'm not sure where or how to place these, is there a wireframe or mockup I can look at?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471

#	Requirement	Questions	Answered	Successfully Answered	URL
7074	DEVELOPER-2471	They need to link from: http://developers.redhat.com/products/rhel/get-started/ I suggest these labels: * Containerized Python * Containerized PHP * Containerized Node.js * Containerized Ruby [~mikgue] do you approve these labels? If not, can you approve a different set? [~mikgue] can you also confirm what you want the images to look like? You suggested the technology's logo, somehow incorporated with a shipping container. [~james.cobb] is that achievable this week?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7075	DEVELOPER-2471	Are these using the regular format for getting started or the new Article format? regular getting started format: http://developers.redhat.com/products/rhel/get-started-rhel7-perl/ If we are combining two different types of page layouts here, should we make some sort of visual indicator? [~tnolan] ^^ Thoughts? [~paul.robinson] We can get the four images this week.	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7076	DEVELOPER-2471	I'm not sure. Can we have a quick meeting to discuss when [~mikgue] is available?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7077	DEVELOPER-2471	Sorry, I'm confused. Are these 4 new Getting Started pages being linked from the CDK page or on the RHEL page?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7078	DEVELOPER-2471	Where do you mean by "from here"?	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7079	DEVELOPER-2471	[~rterzi] Rob, can you review these? They look good to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-2471
7080	DEVELOPER-2471	These look good to me. What links to these? Will the new Step 4 in RHEL be the only place?	0	0	https://issues.jboss.org/browse/DEVELOPER-2471
7081	DEVELOPER-2470	[~wesbos] how can we review this?	0	0	https://issues.jboss.org/browse/DEVELOPER-2470
7082	DEVELOPER-2468	OK. Can you ping the reviewer please. is it [~james.cobb]?	0	0	https://issues.jboss.org/browse/DEVELOPER-2468
7083	DEVELOPER-2457	[~crobson] [~ray.ploski] [~ecurley] [~mikgue] [~james.cobb] [~paul.robinson] [~burrsutter] Here's a first draft of the updated center content section for the homepage: https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Home Some method to my madness... *New CTAs* When I was in Raleigh a few weeks ago, Ellie and Laura from RH.com talked with us one day and made an comment that really struck home with me. I've heard this from a few other people as well. When a user comes to our homepage, how do they know who we are and what we offer? Yes, we have the new about page which will answer this is more detail, but there isn't any static, consistent content so that users know they are in the "right" place. I think it's great that we have a lot of news, events, etc highlighted, but there is nothing there to anchor the user and give them that initial context. I made an attempt to help solve this by creating a place for 3 primary Call-to-Action cards. I am open to other ideas here too and just wanted to get the conversation going. I am ok with not including this section for Hard Launch. *New header and intro text for the content section* I added in the content Emily provided a while ago. However, I feel like this could also use a header to that entire section to help separate it and again to give the user some context. *Suggested* I gave this section more real estate, as well as some room for a description and thumbnail. I think these are more important than the Latest items, especially since this is a curated list, and thus gave them more space and details. *Latest* I felt like this could appear more as a news feed, with just an icon, title and date. It also seemed to be less important as the suggested content, so we can show more of them but with less detail. One final thought when looking at the homepage is that the Join RHD is way down the page. I can tell you from the heatmaps so far, that people are not making it down there. If we had this as a much smaller banner (less height) we could potentially move this right under the 5 featured items. GitHub developer does a great job with this: https://developer.github.com/	1	1	https://issues.jboss.org/browse/DEVELOPER-2457
7084	DEVELOPER-2457	I think we're straying away from the original intent of the site. We've gone away from trying to get folks to the information they need quickly (remember our commitment to TTHW?) and have decided we're going to market to the developers... or more accurately spoon feed stuff WE think is important. I look at our successful competitors and they aren't overloading their home page of content, they are directing traffic to areas of interest by their users. https://developer.github.com/ https://developers.google.com/ https://developer.salesforce.com/ https://developer.apple.com/ https://developers.facebook.com/ I keep thinking back to my discussions with developers at JavaOne. They HATE being marketed to and I'm afraid we may be slipping down that slope further.	1	1	https://issues.jboss.org/browse/DEVELOPER-2457
7085	DEVELOPER-2445	Do you need any more details? I just added a description.	1	1	https://issues.jboss.org/browse/DEVELOPER-2445
7086	DEVELOPER-2442	[~paul.robinson] What is the best URL to use for the most recent version of search?	1	1	https://issues.jboss.org/browse/DEVELOPER-2442
7087	DEVELOPER-2426	[~adelaarreola] is this still blocked? If so, do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-2426
7088	DEVELOPER-2420	[~adelaarreola] is this still blocked? If so, do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-2420
7089	DEVELOPER-2414	[~adelaarreola] is this still blocked? If so, do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-2414
7090	DEVELOPER-2405	Are these approved or in review? Can you update the issue status accordingly please.	1	1	https://issues.jboss.org/browse/DEVELOPER-2405
7091	DEVELOPER-2403	[~adelaarreola] looks like this is unblocked now. Correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-2403
7092	DEVELOPER-2393	Thanks for getting this sorted! Where abouts can we review it? Can you add this to Wes' branch for the HardLaunch work?	1	1	https://issues.jboss.org/browse/DEVELOPER-2393
7093	DEVELOPER-2392	I just noticed that the title word/s "About" or "About us" are not in the hero. Are we still planning to include those or are they being added in implementation instead?	0	0	https://issues.jboss.org/browse/DEVELOPER-2392
7094	DEVELOPER-2391	Is this close enough for [~james.cobb] and team to also complete VD by the 29th?	1	1	https://issues.jboss.org/browse/DEVELOPER-2391
7095	DEVELOPER-2391	[~tnolan] was this approved? If so, can you mark as done. FYI, there' another issue for the copy, so this just covers the wireframe.	1	1	https://issues.jboss.org/browse/DEVELOPER-2391
7096	DEVELOPER-2385	[~adelaarreola] is this still blocked? If so, do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-2385
7097	DEVELOPER-2379	[~adelaarreola] is this still blocked? If so, do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-2379
7098	DEVELOPER-2371	[~adelaarreola] - This is marked as blocked... what do we need to do to move it forward?	1	1	https://issues.jboss.org/browse/DEVELOPER-2371
7099	DEVELOPER-2371	[~adelaarreola] Sorry... I thought Wes was working on this and tagged him instead. The are ready... https://issues.jboss.org/browse/DEVELOPER-2511 Specifically... The new home page promos are ready for implementation. What is RHD? http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_whatisrhd.png DevNation : Registration open http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_devnation_registrationopen.png Dive into Java http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_diveintojava.png EAP7 beta is here http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_eap7betaishere.png New Containers Course http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/makerfile/images/RHDev_homepromo_containercourse.png Content and links can be found here: https://issues.jboss.org/browse/DEVELOPER-2510	1	1	https://issues.jboss.org/browse/DEVELOPER-2371

#	Requirement	Questions	Answered	Successfully Answered	URL
7100	DEVELOPER-2371	[~ecurley] where can I find the 'titles' (or text that goes under the image) for each of the spotlights?	1	1	https://issues.jboss.org/browse/DEVELOPER-2371
7101	DEVELOPER-2370	*Main CTA - Book: Modern Java EE Design Patterns. Download now. *Side CTA: What is RHD all about? 20-min live demo on containers - register now Developers Salary Survey (delete for launch if the quality isn't what we expect) Become content contributor Complementary containers course <<this new from RH Training>> *Video: Getting started with JBoss EAP 7 Beta http://developerblog.redhat.com/2016/01/20/screen-cast-getting-started-with-jboss-eap-7-beta/	1	1	https://issues.jboss.org/browse/DEVELOPER-2370
7102	DEVELOPER-2369	[~james.cobb] *Main CTA - Book: Modern Java EE Design Patterns. Download now. <<http://developers.redhat.com/promotions/distributed-javaee-architecture/>> *Side CTA: What is Red Hat Developers all about? <<developers.redhat.com/about>> 20-min live demo on containers - register now <<coming soon>> Become content contributor <<http://developers.redhat.com/community/contributor/>> Complementary containers course <<http://wp.me/p2WBxv-1KWJ>> *Video: Getting started with JBoss EAP 7 Beta <<http://developerblog.redhat.com/2016/01/20/screen-cast-getting-started-with-jboss-eap-7-beta/>>	0	0	https://issues.jboss.org/browse/DEVELOPER-2369
7103	DEVELOPER-2366	[~paul.robinson], I think that since the Resources page updates are a lower priority than other items for Hard Launch, we can probably wait until Build. Agree?	1	1	https://issues.jboss.org/browse/DEVELOPER-2366
7104	DEVELOPER-2359	[~lightguard], [~oshaw]. Can you review please.	0	0	https://issues.jboss.org/browse/DEVELOPER-2359
7105	DEVELOPER-2355	[~ecurley] [~ray.ploski] Can you let us know by EOD today (Mon.) or first thing tomorrow if the wireframe is approved and ready for Front-end and Visual Design? Any changes you'd like to be made?	1	1	https://issues.jboss.org/browse/DEVELOPER-2355
7106	DEVELOPER-2355	Great! Thanks [~ecurley]! I'm going to mark this as "Completed", then. [~paul.robinson] - Will this trigger emails to people that own sub-tasks then? Or do I still need to notify people that the wireframe is done and work can begin on Front-end and Visuals?	1	1	https://issues.jboss.org/browse/DEVELOPER-2355
7107	DEVELOPER-2353	[~rayploski-launch], where should this image go now that the get-started page is no longer present?	0	0	https://issues.jboss.org/browse/DEVELOPER-2353
7108	DEVELOPER-2352	Latest is up: http://developers-pr.stage.redhat.com/pr/133/build/306/mobile/overview/	0	0	https://issues.jboss.org/browse/DEVELOPER-2352
7109	DEVELOPER-2352	Thanks, I think it looks good. Just a few minor update requests: 1. Can you please get rid of the : after the titles of the five narratives? We don't need them since the titles are bold. 2. Can you please make the black call out box the same height as the left hand overview text, so that the two are vertically aligned, rather than the same size horizontally? I've sent this link to Steve O'Keefe and Conor O'Niel for one last review.	1	1	https://issues.jboss.org/browse/DEVELOPER-2352
7110	DEVELOPER-2352	[~rebecca1021] What did you have in mind for those links?	1	1	https://issues.jboss.org/browse/DEVELOPER-2352
7111	DEVELOPER-2350	[~dhladky] is this also covered by our review earlier today? Can it be marked as resolved?	1	1	https://issues.jboss.org/browse/DEVELOPER-2350
7112	DEVELOPER-2349	[~rebecca1021] There was a lot of changes made to the solution pages in the run-up to the summit release. Can you let me know if there is anything outstanding on this issue or wether it can be resolved?	0	0	https://issues.jboss.org/browse/DEVELOPER-2349
7113	DEVELOPER-2345	[~paul.robinson] do you really need a new registered query? You can use a minor modification of your URL example to get what you need: {{http://dcp.stage.jboss.org/v2/rest/search?field=sys_title&field=sys_url_view&type=rht_website&query=cdi&size=10&query_highlight=true}} If the data were available on existing dcp the URL would be: {{http://dcp.jboss.org/v1/rest/search?field=sys_title&field=sys_url_view&type=rht_website&query=cdi&size=10&query_highlight=true}} It is possible to create a new registered query but if the above URL gives you all you need then I think you can start using it right away without need for new query. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-2345
7114	DEVELOPER-2340	Duh. Question, [~paul.robinson]: While these are "tags" at the RHD end, are you referring to the "categories" or "tags" in WordPress? Or both? My recollections is the former.	1	1	https://issues.jboss.org/browse/DEVELOPER-2340
7115	DEVELOPER-2339	[~james.cobb] Can you review this screenshot: https://www.dropbox.com/s/ufz8ft5z9scw7px/Screenshot%202015-05-26%2009.23.34.png?dl=0 Is that the right thing to show when a user is logged in? Clicking on the user's name will take them to their profile page.	1	1	https://issues.jboss.org/browse/DEVELOPER-2339
7116	DEVELOPER-2337	[~ecurley] I believe there is a requirement for this Microsite. Can you provide the content please?	0	0	https://issues.jboss.org/browse/DEVELOPER-2337
7117	DEVELOPER-2335	[~james.cobb] I think this is a duplicate? Do you have link to the issue(s) it duplicated?	1	1	https://issues.jboss.org/browse/DEVELOPER-2335
7118	DEVELOPER-2333	[~rebecca1021] Can you review the above link please?	1	1	https://issues.jboss.org/browse/DEVELOPER-2333
7119	DEVELOPER-2333	[~rebecca1021] What did you have in mind for those links?	1	1	https://issues.jboss.org/browse/DEVELOPER-2333
7120	DEVELOPER-2312	[~adelaarreola] Can you take a look at the container solution (now merged) and: 1) Add a link to it to the bottom of the homepage. See other solution links for an example. 2) Improve the L&F on the overview and adoption pages 3) Add an illustration to the overview if you have time and one is available.	0	0	https://issues.jboss.org/browse/DEVELOPER-2312
7121	DEVELOPER-2297	Can you look into adding logic to render _partials/solution-left-menu.html.slim selectively like you did with the learn and buzz?	1	1	https://issues.jboss.org/browse/DEVELOPER-2297
7122	DEVELOPER-2289	Okay, just one quick change. Can you please change the slash (/) in the first sentence of the intro to a comma (,)? Thanks	1	1	https://issues.jboss.org/browse/DEVELOPER-2289
7123	DEVELOPER-2287	[~adelaarreola] how was it incorrect? Intentionally it's almost the same as JBDS.	1	1	https://issues.jboss.org/browse/DEVELOPER-2287
7124	DEVELOPER-2282	I created the necessary graphics for Fedora and OpenShift Commons (both regular sized and featured size). I put them on the design site. http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_500x400.png http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_200x150.png http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_500x400.png http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_200x150.png [~paul.robinson] Paul, should we host them on static.jboss.org/foo? I tried to post them there but I don't have the access privileges to create new directories at the root level. Should they be posted there or do we need to have an equivalent for RHD (static.developers.redhat.com)?	1	1	https://issues.jboss.org/browse/DEVELOPER-2282
7125	DEVELOPER-2280	This has been merged into master - can close.	0	0	https://issues.jboss.org/browse/DEVELOPER-2280
7126	DEVELOPER-2278	What are we to do about the mobile view of this banner? I'll create a mobile size image based on the sizes we use for jboss developer.	0	0	https://issues.jboss.org/browse/DEVELOPER-2278
7127	DEVELOPER-2275	[~dhladky] the chrome on http://developers.redhat.com/ is current. Can you update the download-manager please?	1	1	https://issues.jboss.org/browse/DEVELOPER-2275
7128	DEVELOPER-2275	Hi [~james.cobb], I was not able to find the place you mentioned in the html. Also I should not be the one modifying the CSS. I would be a little worried, that I screw up other development. Will you, please, ping me when you are on-line so we can have a look on it?	0	0	https://issues.jboss.org/browse/DEVELOPER-2275
7129	DEVELOPER-2273	[~crobson], [~kpassmore]: Do you know what categories we decided to use here?	1	1	https://issues.jboss.org/browse/DEVELOPER-2273
7130	DEVELOPER-2273	Thanks, Are we copying these categories from somewhere? For example, how do we know which product to put in which category?	0	0	https://issues.jboss.org/browse/DEVELOPER-2273
7131	DEVELOPER-2267	By mobile do we also mean tablets (Ipad, Chromebooks)? Or do we test them as desktop? Should we have a separate issue for tablets?	0	0	https://issues.jboss.org/browse/DEVELOPER-2267

#	Requirement	Questions	Answered	Successfully Answered	URL
7132	DEVELOPER-2267	Looks good! Can we have it trigger at tablet size (~975px) as the current header starts collapsing ungracefully at around that size and the mobile nav doesn't switch over until around 475px. Are there any changes to the html that we'll have to make for the login screens or are all the changes just in our CSS files?	1	1	https://issues.jboss.org/browse/DEVELOPER-2267
7133	DEVELOPER-2267	What is the widht for mobile device? Is it going to be same as "small" column widht? I'm asking because zurb foundation comes with small, medium and large column sizes and PR build has different min-widht compared to min-widht for large columns. I would say that new compacted header should be only on width where small column size is active. Header on medium size should be similar to large but slightly compacted by less padding/margins.	1	1	https://issues.jboss.org/browse/DEVELOPER-2267
7134	DEVELOPER-2267	Or are you pushing the change into production right now ?	1	1	https://issues.jboss.org/browse/DEVELOPER-2267
7135	DEVELOPER-2267	[~lkrzyzanek] Okay- will send another PR fixing this	1	1	https://issues.jboss.org/browse/DEVELOPER-2267
7136	DEVELOPER-2267	Thanks Libor... can you share this with David so it gets pushed to the T&C's page as well?	1	0	https://issues.jboss.org/browse/DEVELOPER-2267
7137	DEVELOPER-2264	OK, can you investigate the feasibility? Then we can decide on wether it's worth implementing now or later.	1	1	https://issues.jboss.org/browse/DEVELOPER-2264
7138	DEVELOPER-2252	Was it ever discussed how we would gather the email addresses of the people that submit this form? Given that we show this when everything is screwed, what infrastructure can we use?	1	1	https://issues.jboss.org/browse/DEVELOPER-2252
7139	DEVELOPER-2252	I got a note from Ray the other day asking if I could support this with an Eloqua form, the answer is yes. He said this was not Lead gen but he did want the email addresses to be stored in Eloqua. Because is not Lead gen we don't need to worry about picking up Campaign tracking codes out of the cookies and passing them in the form submit nor an Offer ID. This means that submitting this form will not result in a Lead be created in SalesForce nor will it result in a Campaign Membership record in SalesForce. But this does beg the question, what do you want to do with the people who submit this form? Usually, in situations like, this we just have 3 processing steps in the form in Eloqua: 1- Save the email address to the database 2- Add the email address to a Shared List so you can email all of the people, if needed 3- Send an email to someone @redhat.com telling them about the form submission Its seems like we are going to need #1 and #2, do you want #3? If so, what email address? Thanks, Greg	1	1	https://issues.jboss.org/browse/DEVELOPER-2252
7140	DEVELOPER-2252	[~gregmanetti], I suppose this choice doesn't affect the way this form will be integrated with Eloqua. We're very short on time here so I'd like to integrate it ASAP, while we wait for an answer from Ray, Paul or Mark if they want #3. My guess however would be that only #1 and #2 will be needed. Either way, could you tell me how to integrate this ?	0	0	https://issues.jboss.org/browse/DEVELOPER-2252
7141	DEVELOPER-2252	[~james.cobb] is this still needed? Is it out of date, or maybe already resolved?	1	1	https://issues.jboss.org/browse/DEVELOPER-2252
7142	DEVELOPER-2237	Should this be in the Review board? Note that this is for indexing non-middleware developer materials, which i don't yet think we have a plan for.	1	1	https://issues.jboss.org/browse/DEVELOPER-2237
7143	DEVELOPER-2235	Hi [~crobson], This page has been marked as approved on both the deliverables spreadsheet and in the wireframe itself. Is it ready to be handed over to front-end? Thanks, Adela	1	1	https://issues.jboss.org/browse/DEVELOPER-2235
7144	DEVELOPER-2230	A ticket has been filed to web@redhat.com (SN Incident INC0270155) for the initial redirect of the top pages. We also need to redirect from developer.redhat.com. There are MANY subpages that will require redirects - that will take time to sort through and I suggest post-launch. Are there other redirects you're thinking about?	1	1	https://issues.jboss.org/browse/DEVELOPER-2230
7145	DEVELOPER-2217	How should this work? Is this really back-end part of the website?	0	0	https://issues.jboss.org/browse/DEVELOPER-2217
7146	DEVELOPER-2217	This is usually a checkbox during registration. I thought this could be added to User Profile in KC (Not implemented yet - KEYCLOAK-311). [~pmuir] What is requirement from UX perspective? How (un)subscribe should work?	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7147	DEVELOPER-2217	In that case we should remove both checkboxes on account page. Subscribe happens automatically and unsubscribe happens on link in mail. Is it correct ?	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7148	DEVELOPER-2217	If you'd like to keep those checkboxes what is the API that we should call when user will "doing" subscribe and unsubscribe by clicking checkboxes? If there is no such API I would prefer to replace those checkboxes by text explaining how it works something like "You're automatically subscribed to newsletter. You can unsubscribe by clicking on link in newsletter"	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7149	DEVELOPER-2217	Can we find all email addresses for people that have the "Subscribe to Newsletter" ticked in the profile?	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7150	DEVELOPER-2217	Also, can we ensure the two tick-boxes default to ticked? In my account they are both un-ticked. I don't think i changed them.	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7151	DEVELOPER-2217	[~paul.robinson] Answering to your question "Can we find all email addresses for people that have the "Subscribe to Newsletter" ticked in the profile?" Yes it's possible. I can query Keycloak DB to get such list. But you mentioned earlier including information who signed Terms & Conditions. If you'd like to get list of e-mails who have "subscribe to newsletter" and have singed T&C then it's *not* technically possible to do that.	1	1	https://issues.jboss.org/browse/DEVELOPER-2217
7152	DEVELOPER-2207	[~dhladky] from talking to you yesterday, it seems like setting this up is in-progress. Would it be more accurate to move this to the 'back-end' board and mark as 'in progress'? If so, can you make the change please.	1	1	https://issues.jboss.org/browse/DEVELOPER-2207
7153	DEVELOPER-2194	[~rebecca1021], Ray was saying you've done this. Can you provide us a link to the copy so that we can put it on the site?	1	1	https://issues.jboss.org/browse/DEVELOPER-2194
7154	DEVELOPER-2193	Hi Paul, I just wanted to ask, what is the status of this ticket and I found out it was automatically assigned to me. Which is not the proper person to solve it. I am not sure, if it should be handled by you or by the Visual team. Whoever should be responsible for this page, it would be useful for me, if such page existed. I do not need its final version, but I would like to add it to DM staging configuration, so we can see how it works.	1	1	https://issues.jboss.org/browse/DEVELOPER-2193
7155	DEVELOPER-2193	The thank you pages are created. Here's the one for EAP: http://rhd.jboss.org/products/eap/get-started/#!project=eap We just need to have the download manager redirect to here for Red Hat Developer downloads. Do you have docs that tell me how to do this?	1	1	https://issues.jboss.org/browse/DEVELOPER-2193

#	Requirement	Questions	Answered	Successfully Answered	URL
7156	DEVELOPER-2193	Hi Paul, I have not updated the documentation yet, but Download manager behaves the same way as in the case of JBoss Developer thank you pages. You as the administrator only need to fill the additional field in the product page of the administration, and the user needs to request the file using RHD domain. One example from my local environment. I entered [http://rhd.jboss.org/products/eap/get-started?] to the product dialog of Enterprise Application Server product. After some debugging I found out you add the part after hash and if I do that myself, your page does not work properly. So this is it for admin. As the user I requested [http://developer-stg.redhat.com:8080/download-manager/file/jboss-eap-6.4.0.Beta.zip] (developer-stg.redhat.com is my testing domain for RHD requests). Download manager investigated the requested file and found out, that this file is to be served with "No terms and conditions" model, which results in following redirect: [http://rhd.jboss.org/products/eap/get-started?tcUser=David+Hladky&tcDownloadFileName=jboss-eap-6.4.0.Beta.zip&tcRedirect=5000&tcSrcLink=http%3A%2F%2Flocalhost%3A8080%2Fdownload-manager%2Fcontent%2Forigin%2Ffiles%2Fsha256%2Ff0%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip&p=Enterprise+Application+Server&pv=6.4.0+Beta&tcDownloadURL=https%3A%2F%2Faccess.cdn.redhat.com%2Fcontent%2Forigin%2Ffiles%2Fsha256%2Ff0%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip%3F_auth_%3D1431554550_50d2215d6c67e06065e0c3c34c2676d2] Your web page is working as well, because the download started for me. But let us investigate the link a bit further: - I realized, that I incorrectly encoded parameters using URI encoding in the past, that is not correct for query parameters. So I fixed it - I noticed you are adding #!project=eap to the end of the requests. This is not correct, because you do this even for links, that are not EAP (tested on Data Virtualization). That is why I added two new parameters p=product name and pv=product version name. I suppose those two can actually help you solving this issue and eventually help wit the customization of the page as well. Instead of product name, I could give you product code, if it would be better for you (the same code Eloqua uses) - for RHD-64 we created a feature called Featured artifact - see RHD-151. I suppose this link might be useful here as well? Now when it is already implemented it would be trivial to add it here. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-2193
7157	DEVELOPER-2192	[~paul.robinson] for the pages with the old layout, should the developer materials at the bottom also still show?	1	1	https://issues.jboss.org/browse/DEVELOPER-2192
7158	DEVELOPER-2171	[~ray.ploski] I think you said this was done. Is that right? You need to move it through the workflow to mark sit as done. "Handover to review" -> "start work" -> "Done"	0	0	https://issues.jboss.org/browse/DEVELOPER-2171
7159	DEVELOPER-2165	Wireframed approved. Should use same template as learn page for Products.	0	0	https://issues.jboss.org/browse/DEVELOPER-2165
7160	DEVELOPER-2159	Is this ready to go then? Are we using the svg or the png version? Anywhere specific you want this on the overview page?	0	0	https://issues.jboss.org/browse/DEVELOPER-2159
7161	DEVELOPER-2036	[~ecurley], [~newtonm]: is this now done?	1	1	https://issues.jboss.org/browse/DEVELOPER-2036
7162	DEVELOPER-2036	[~newtonm] did you add this to GTM? If so, who's the best person to debug this? Axel?	0	0	https://issues.jboss.org/browse/DEVELOPER-2036
7163	DEVELOPER-2031	Ok [~lvlcek]. Are you waiting on anything to start the indexing? I appreciate that we need to tidy up the sitemap, but can that come slightly later?	1	1	https://issues.jboss.org/browse/DEVELOPER-2031
7164	DEVELOPER-2031	[~paul.robinson] I created a new indexer for RHD website and installed it on staging (http://dcp.stage.jboss.org/). It indexed 1192 pages for the first (full-reindex) run. Do you think you can have a look at the data and tell me if it looks ok to you? Ping me on IRC if you need mot help with this.	1	1	https://issues.jboss.org/browse/DEVELOPER-2031
7165	DEVELOPER-2031	[~lvlcek] could yo please clarify what river you have installed in dcp.stage ? Could you please push it to dcp2 as [~paul.robinson] needs it in production (since whole website in production already uses dcp2). Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-2031
7166	DEVELOPER-2030	[~brock] are these graphics approved? [~c.wong]: where should this link to? I'm assuming http://developers.redhat.com/products/eap/download/.	1	1	https://issues.jboss.org/browse/DEVELOPER-2030
7167	DEVELOPER-2030	[~paul.robinson]Not approved as of yet. [~c.wong] and [~mikgue], could you weigh in? Let me know if you'd like something different.	1	1	https://issues.jboss.org/browse/DEVELOPER-2030
7168	DEVELOPER-2030	This one looks like it's missing a space between "JBoss" and "Enterprise". Or is it just me? https://issues.jboss.org/secure/attachment/12396642/hero_desktop_1175x400_eap_01112016.png BTW, there's a "Wildfly 9 Now Available" banner on JBoss.org. Will this replace the Wildfly banner? Probably makes most sense... Could we also place a banner on the Wildfly site? Or is that something I need to bring up directly with Wildfly team members? We might want to tweak the wording for the Wildfly site. Something like, "Like Wildfly? Try Red Hat JBoss Enterprise Application Platform for your enterprise Java applications." Maybe I should open up a separate JIRA for that? Thanks, Christina	1	1	https://issues.jboss.org/browse/DEVELOPER-2030
7169	DEVELOPER-2030	Looks good Adela. Will this be the same one for RHDev?	1	1	https://issues.jboss.org/browse/DEVELOPER-2030
7170	DEVELOPER-2029	Hi Jason - Can we see something with a guy in it? I know odd request but 90%+ of our contributors will likely be male and I'd like something they will more identify with. Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-2029
7171	DEVELOPER-2029	Thanks Jason. Can we ditch the tie look? These contributors will be more developers contributing content. Audience this will target: Enterprise developers - some with presentation skills but more computer focused skills. They love a good t-shirt at a conference and likely will grab stickers. They will be primarily writing blogs, maybe creating a few videos, and submitting screen captured demos.	1	1	https://issues.jboss.org/browse/DEVELOPER-2029
7172	DEVELOPER-2029	[~ecurley][~paul.robinson], Should we assign this over to the front-end dev team to put it up?	1	1	https://issues.jboss.org/browse/DEVELOPER-2029
7173	DEVELOPER-2029	What text do you want under the image, and what spotlight should it replace?	1	1	https://issues.jboss.org/browse/DEVELOPER-2029
7174	DEVELOPER-2029	[~ecurley] : Can you supply the content requested by Paul?	0	0	https://issues.jboss.org/browse/DEVELOPER-2029
7175	DEVELOPER-2027	Perhaps I missed the meeting on Mega Menus but when was it decided we were to have a mega menu? It was my understanding that we were using simple flyouts. Current flyout design: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_home_final_flyout.png I have real problems with them for our site. 1) The "featured content" on the right comes off as marketing fluff which I believe our developer audience would likely reject. I personally feel navigation needs to be about way finding only. 2) The current mockups in Balsalmiq don't display any overview page for the sections. This would mean the user goes directly to subpages or we have to include a link to the overview pages. RedHat.com does this by adding a button for the main sectional pages. I find this VERY frustrating as it adds a click between me and the content. I think we'll just be creating barriers. 3) This sort of mega menu is a nightmare on Mobile. This Redhat.com site is AWFUL on mobile as it injects an additional hamburger icon for these navigation pages. It's a nightmare.	1	1	https://issues.jboss.org/browse/DEVELOPER-2027

#	Requirement	Questions	Answered	Successfully Answered	URL
7176	DEVELOPER-2023	What do you mean by 'landing page'? Is this an article, microsite, product page, topic, or something else?	1	1	https://issues.jboss.org/browse/DEVELOPER-2023
7177	DEVELOPER-2023	I'm adjusting the scope of this issue as we are not sure yet what the output of this issue will be. Some things that would help to know: * What is the business objective for this section of the site? * What are the driving factors for the timing? * Do we have an existing page that is similar to what you're looking to do? * How do we expect and want users to get to this content? * What do we want users to do next? Once we know/discuss this information, I can work on some user flows to support this.	1	1	https://issues.jboss.org/browse/DEVELOPER-2023
7178	DEVELOPER-2023	[~paul.robinson] I can't seem to be able to move 2 existing issues to this Epic. Can you take a look? Both https://issues.jboss.org/browse/DEVELOPER-2023 and https://issues.jboss.org/browse/DEVELOPER-2584 should be listed here.	1	1	https://issues.jboss.org/browse/DEVELOPER-2023
7179	DEVELOPER-2022	[~morgan_thomas] what's the status of this? Is it done? CC [~james.cobb]	1	1	https://issues.jboss.org/browse/DEVELOPER-2022
7180	DEVELOPER-2021	[~crobson], [~tnolan]. Do you have an ETA on this? I'm in the process of planning [~wesbos]' work.	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7181	DEVELOPER-2021	Ok, that sounds good [~paul.robinson]. [~ecurley] - Can you update the wireframe text in Balsamiq to fill out the: * sub-title text * the brief descriptions for each of the resource types Instructions, but feel free to ping me if you'd like me to walk you through it. # Go to: https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Resources%20%28more%20information%29 # Click the Edit link located near the top right # Click on the text you would like to change. It will then get a box around it. Only the text that you can edit is clickable. All other elements are locked. # When finished, click the save icon that has a cloud at the top left of the screen. # You can add a note then in the pop-up as to your changes and check the Send email notifications option if you're all done and want to let the group know.	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7182	DEVELOPER-2021	[~mikgue] - Can you assist with the content? - see above.	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7183	DEVELOPER-2021	I have to ask this question. How is this page different than the search page? If we present them with a full list of the content, then ask the user to filter down until they find it useful, it sounds a lot like "search" to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7184	DEVELOPER-2021	[~tnolan] - I get where you are coming from on the browsing nature of this page being how folks will intend to use it but don't agree with the current presentation. When a person gets to this page, they will HAVE to filter it to get ANY useful information if we don't luckily strike on some content of interest with the default. If they are clicking and filtering anyway, why don't we give them categories to select from (can't by topic as that's what the "Topics" section should cover). In the current design we show this sort of prefiltering at the top but it looks like it's in a hidden pane. To me, the content in the hidden pane should be the primary way for folks to browse and therefore given primary status on the page. If a user clicks on "Videos" then they land on a page of default videos that has the keyword and other filter options.	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7185	DEVELOPER-2021	[~tnolan] I reviewed what RH.com did with their resources and I find it much more logical and intuitive. I say we lift that pattern. I strongly disagree with pushing this if we aren't 100%. This would mean front end would have to implement this page TWICE. We have seen a pattern of "release this now and fix it later" that never gets re-addressed because the teams are too busy to circle back. Can we discuss this at the Wednesday meeting?	1	1	https://issues.jboss.org/browse/DEVELOPER-2021
7186	DEVELOPER-2020	Do we have videos for RHEL that we can add to the site?	1	1	https://issues.jboss.org/browse/DEVELOPER-2020
7187	DEVELOPER-2020	[~paul.robinson] Paul, I think I'll be needing privs to the youtube account (at least it appears, per the instructions, that I should not index videos via the group account. Also, can we use videos from ANY YouTube playlist? Add to Octopus launch please.	1	1	https://issues.jboss.org/browse/DEVELOPER-2020
7188	DEVELOPER-2019	[~ecurley] [~ray.ploski] [~mikgue] - Do we have content suggestions for these three new promos?	1	1	https://issues.jboss.org/browse/DEVELOPER-2019
7189	DEVELOPER-2019	#1 - This will be on the top 12 articles: http://developerblog.redhat.com/2015/12/14/12-top-blog-articles-of-2015/ #2 How about learn Node.js? Not sure we have enough articles to assemble for this. #3 Should people be directed to the DN site? Or could we get away with having them register first? (I'm thinking no, but asking anyway)	1	1	https://issues.jboss.org/browse/DEVELOPER-2019
7190	DEVELOPER-2019	1) Devnation, we need the dates and location for the event. We'll address this again once we work out the revised branding. 2) Node.JS... Do we want to the copy to be more directed to the vacationing developers? "Have some downtime? Learn Node.js" 3) on the 12 top posts graphic... use he darker red verses the grey for the bars (ribbon simulation).	0	0	https://issues.jboss.org/browse/DEVELOPER-2019
7191	DEVELOPER-2019	I'd like to use the gray ribbon for the blog article and will schedule it for next week. If someone needs to manually post the banner, then let's wait until the first week of January. Can I download the pic as is, or does anyone need to do anything to it first?	0	0	https://issues.jboss.org/browse/DEVELOPER-2019
7192	DEVELOPER-2019	Do we have links. [~newtonm] - Do you need a separate JIRA for this to push them live?	1	1	https://issues.jboss.org/browse/DEVELOPER-2019
7193	DEVELOPER-2018	[~brock] are these approved or in review? Can you update the issue status accordingly please.	1	1	https://issues.jboss.org/browse/DEVELOPER-2018
7194	DEVELOPER-2018	[~adelaarreola] is the CDK page just going to be another product detail page? Is there going to be more than one CDK page?	1	0	https://issues.jboss.org/browse/DEVELOPER-2018
7195	DEVELOPER-2018	[~adelaarreola] No problem! Would you like me to append the header images to this Jira or wait for one to come down the line for the CDK page?	0	0	https://issues.jboss.org/browse/DEVELOPER-2018
7196	DEVELOPER-2018	Will the CDK be in the hard launch?	0	0	https://issues.jboss.org/browse/DEVELOPER-2018
7197	DEVELOPER-2008	[~crobson], [~james.cobb]. What do you think about this? This idea came from feedback by Mark Little and Julien Ponge.	1	1	https://issues.jboss.org/browse/DEVELOPER-2008
7198	DEVELOPER-2003	[~james.cobb] where can I find the assets for this page? i.e. the dotted graphic and the 'Join the red hat developer...' graphic? Thanks!	1	0	https://issues.jboss.org/browse/DEVELOPER-2003
7199	DEVELOPER-1997	So the first 2, I understand and like. For the 3rd, it feels like the "X" is telling me that videos will be hidden. Is the "X" displayed quickly so it would not be interpreted this way?	1	1	https://issues.jboss.org/browse/DEVELOPER-1997
7200	DEVELOPER-1997	This is looking great! I just have a few things though when comparing the design to the wireframe. *Initial view* * Code icon - I'm not familiar with the one being used here. Will all our developers understand this one (including .netters)? * Get Started icon - What other options do we have here? A lightbulb conveys more of an "idea" to me. * The sorting elements should be under the horizontal line. This allows for the # of results to be displayed above the line and so it matches the positioning on the search results page. * The wireframe had a 1 px border box around each of the individual results to help scanability. I'm open to other ideas than a border, but would like to see some clearer separation here. * Description text for each result should only show 3 lines of text, the VD show 4. 3 lines allows for plenty of room to get an idea of what the resource is about, and reduces the amount of space used for each result. It would also match up better, space-wise with the ones that have a thumbnail. *Filtered view* * Same comments as above * I'm concerned about the spacing for the Products drop-down. Are we going to have enough space if we plug in the longest titled one? * Actually, I'm not sure if we will have any data to fill in the Programming Language drop-down, so we may have more space. [~paul.robinson] - Are we able to use the Language currently? * The spacing around the Custom publish date fields seems odd to me. Do we have enough room to have these next to the date field instead of under it...like the wireframe? [~mikgue] - I believe the type filters would work just like on RH.com. You can see how they work: http://www.redhat.com/en/resources	1	1	https://issues.jboss.org/browse/DEVELOPER-1997

#	Requirement	Questions	Answered	Successfully Answered	URL
7201	DEVELOPER-1993	[~adelaarreola] was this ever done? Is it still needed?	1	1	https://issues.jboss.org/browse/DEVELOPER-1993
7202	DEVELOPER-1977	Who needs to review this? Also, is the next step to produce the actual header graphic?	1	1	https://issues.jboss.org/browse/DEVELOPER-1977
7203	DEVELOPER-1973	We added "Developer Blog" under "Community" once we noticed it was missing last week. It's on the wireframe but doesn't look like it's made it into the build yet. Can you add this in? It should be listed first. https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Navigation	1	1	https://issues.jboss.org/browse/DEVELOPER-1973
7204	DEVELOPER-1973	[~wesbos]: When the menus appear, and I click on a link (such as the for the EAP product page), nothing happens. Can you fix this as a priority, as it's making it harder for other people to review the rebrand and topics work.	1	1	https://issues.jboss.org/browse/DEVELOPER-1973
7205	DEVELOPER-1967	I think the issue here was setting page specific stuff in the global header (i.e 'chrome'). For example, the Facebook and Twitter meta-data is set by the page, and is not global across the site. This allows us to set, for example, a video page's thumbnail as the twitter card image. Have you got this working in Drupal?	1	1	https://issues.jboss.org/browse/DEVELOPER-1967
7206	DEVELOPER-1967	Is this done, or a dup?	1	1	https://issues.jboss.org/browse/DEVELOPER-1967
7207	DEVELOPER-1946	We need to decide how to handle the categories. In particular, is the current list correct, and how do we specify which project goes into which category?	1	1	https://issues.jboss.org/browse/DEVELOPER-1946
7208	DEVELOPER-1945	[~newtonm] Who's working on this? Can you update the Assignee?	0	0	https://issues.jboss.org/browse/DEVELOPER-1945
7209	DEVELOPER-1940	[~wesbos] do you need any visual design work doing for the global re-brand, or will it just be needed for the specific changes to specific pages?	1	1	https://issues.jboss.org/browse/DEVELOPER-1940
7210	DEVELOPER-1934	[~paul.robinson] and [~tnolan] I have added first draft of acceptance criteria for your review. I also have the following questions: 1. What are the Publish date drop down items? 2. What are the sort results drop down items? 3. Tags, are they clickable? What happens when you click on the tag? Should each have zero or more tags? 4. Contributor, is it clickable? where does it go? 5. What is the maximum number of characters that can be entered into the keyword search box?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7211	DEVELOPER-1934	{quote} Scenario: All results must have a label that relates to that product. Given I am on the Resources page When I enter "Red Hat Container Development Kit" into the Keyword's box Then the results should contain the label "Red Hat Container Development Kit" {quote} What do you mean by 'label' here? Is it 'tag' that you mean? If so, I don't think it's a requirement that all results must be tagged with a related product. Not all our content has this tag.	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7212	DEVELOPER-1934	{quote} # IH: I'm not sure about this one, needs more detail from Paul or Tiffany Scenario: Videos should show thumbnail only - if they are unique. Given I am on the Resources page When I click to filter results by "Video" Then the results should contain a thumbnail {quote} The requirement here is that items of type video must have a thumbnail, others must not.	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7213	DEVELOPER-1934	[~paul.robinson] Scenario: All results must have a label that relates to that product. Given I am on the Resources page When I enter "Red Hat Container Development Kit" into the Keyword's box Then the results should contain the label "Red Hat Container Development Kit" PR Q: What do you mean by 'label' here? Is it 'tag' that you mean? If so, I don't think it's a requirement that all results must be tagged with a related product. Not all our content has this tag. IH A: This was a scenario that we discussed in our meeting?, By the Author link there is a product label in the wireframes of "Red Hat Container Development Kit"?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7214	DEVELOPER-1934	[~tnolan], [~paul.robinson] and I have completed the scenarios for this ticket. Can you have a quick review of the AC so that [~adelaarreola] can start work on it this week.	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7215	DEVELOPER-1934	Okay just pushed the latest. A few outstanding issues: 1) Contributors endpoint is always empty - is this still working I've hidden the contributors for now. 2) Not sure how to turn off case sensitivity. Pinging [~lkrzyzanek] about this. 3) We need to add 'blog' and 'book' to the developer materials query. [~lkrzyzanek] can you do this for us? 4) We need to add `activity_date_interval` to the developer materials query. Again [~lkrzyzanek] can we add this? I commented on GitHub	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7216	DEVELOPER-1934	[~unibrew], OK, maybe I misunderstood. What additional content will come in? Will there be more than just Blogposts?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7217	DEVELOPER-1934	Because one of the sys_types is 'article' then you'll also get all documents from https://developer.jboss.org. Other sys_types names that are listed for the query are not used in jbossorg provider. Would this be ok for you?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7218	DEVELOPER-1934	So you mean, things like this will appear: https://developer.jboss.org/people/tremes/blog/2016/06/03/tracking-your-cdi-extension-actions? What about: https://developer.jboss.org/wiki/StudentResearchProjects. Would that appear?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7219	DEVELOPER-1934	What is PR build URL for review please ?	1	1	https://issues.jboss.org/browse/DEVELOPER-1934
7220	DEVELOPER-1934	I now see blog post, but no books. Outstanding issues: 1. No books returned 2. if I do a search, select a result, then hit 'back', I see: https://www.dropbox.com/s/18rh57tnkb8h1rx/Screenshot%202016-06-20%2016.18.28.png?dl=0 3. Dates appear to render incorrectly. See 'October 9, 113' on the first item when visiting http://developers-pr.stage.redhat.com/pr/1100/build/1449/resources/ I think all three of the above are blockers for release. Also, I spotted these regressions: 1. Video thumbnails are no longer displayed in the result (where present, e.g videos) 2. The result type icon is missing from the results 3. I'm seeing results of type 'jbossorg_contributor_profile'. Notice how Libor and Rysiek's profiles appear at the top of the results: https://www.dropbox.com/s/n2c7eb62f6w7vzj/Screenshot%202016-06-21%2008.16.54.png?dl=0 And finally, I notice that you are now using 'http://dcp.stage.jboss.org/v2/rest/search?' instead of the registered query 'http://dcp2.jboss.org/v2/rest/search/developer_materials?'. Has that always been the case or was it a casualty of the merge?	0	0	https://issues.jboss.org/browse/DEVELOPER-1934
7221	DEVELOPER-1931	Below is the product description which can be used for OpenShift online. Is there other content needed for this page? If so, please give me the specific requirements and I will create content Thanks, Rebecca Faster Application Delivery with Red Hat OpenShift Online Break down IT productivity barriers. Trying to deliver more apps faster is often met by chronic productivity roadblocks. We believe the path to better IT efficiency and innovation lies in the cloud—via public Platform-as-a-Service (PaaS) with OpenShift Online by Red Hat®, or private PaaS with Red Hat's award-winning OpenShift Enterprise.	1	1	https://issues.jboss.org/browse/DEVELOPER-1931
7222	DEVELOPER-1929	Who needs to review this? Also, is the next step to produce the actual header graphic?	1	1	https://issues.jboss.org/browse/DEVELOPER-1929
7223	DEVELOPER-1925	[~paul.robinson] - is this issue a duplicate of 384?	1	1	https://issues.jboss.org/browse/DEVELOPER-1925
7224	DEVELOPER-1922	Is this ready for review? If so, can you update the status please.	1	1	https://issues.jboss.org/browse/DEVELOPER-1922
7225	DEVELOPER-1922	[~brock], I really like the darker banner in r2v1. This is looking great! One of my concerns though is how we can visually differentiate the cards from the Follow Red Hat block. Have you guys talked about maybe adding a shadow, small image or watermark to the cards that would help identify these as cards and be used throughout the site?	1	1	https://issues.jboss.org/browse/DEVELOPER-1922

#	Requirement	Questions	Answered	Successfully Answered	URL
7226	DEVELOPER-1922	[~james.cobb] or [~brock] Where can I find the assets these pages, like the page header images and the background images for the primary promos? or are those in a separate upcoming jira?	1	0	https://issues.jboss.org/browse/DEVELOPER-1922
7227	DEVELOPER-1921	We'd never planned to pull it from the DCP. It just comes from categories.yml. Can you take a look at how we implement it now and advise on wether the a-z ordering is possible?	0	0	https://issues.jboss.org/browse/DEVELOPER-1921
7228	DEVELOPER-1916	That job failed. Did you manage to review this with another job?	1	1	https://issues.jboss.org/browse/DEVELOPER-1916

7246	DEVELOPER-1821	[~mikgue] what do you mean by 'callout'? Is it this: https://www.dropbox.com/s/xhgpwoxauoh0adi/Screenshot%202016-02-17%2007.51.12.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-1821
7247	DEVELOPER-1821	yes. Is there a more common term for it??	1	1	https://issues.jboss.org/browse/DEVELOPER-1821
7248	DEVELOPER-1820	Handing over to Visual Design. [~james.cobb] - Can you create an ad or card treatment style for the "Need help?" It will be located under the left nav. [Wireframe | https://jboss.hotgloo.com/projects/73926/editor#/ux228a33xxft2bq]	1	1	https://issues.jboss.org/browse/DEVELOPER-1820
7249	DEVELOPER-1820	How about this [~paul.robinson], [~tnolan] ? "Got a technical CDK question? Head on over to Stack Overflow (linux-containers) to ask and Red Hatters will be on the lookout." Also, what about if we added something like "Got Stack privileges? Thank you for creating a new 'cdk' tag!" Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-1820
7250	DEVELOPER-1820	We discussed this on HipChat. We felt this was better: {quote} Got a technical CDK question? Head on over to Stack Overflow (tag: linux-containers) to ask and Red Hatters will be on the lookout. {quote} Also, is 'Red Hatters' the right language?	1	1	https://issues.jboss.org/browse/DEVELOPER-1820
7251	DEVELOPER-1820	I see where you're headed now with this. How about this? Got a technical CDK question? You can submit questions on Stack Overflow (tag: linux-containers) and get answers from the Red Hat CDK Team.	1	1	https://issues.jboss.org/browse/DEVELOPER-1820
7252	DEVELOPER-1820	[~tnolan], [~mikgue]. Are we still happy with this approach?	1	0	https://issues.jboss.org/browse/DEVELOPER-1820
7253	DEVELOPER-1820	[~burrsutter] Burr - what do you think on this? Stack overflow, or the mailing list, or both? Or should the Stack portion be deferred until CDK GA (March)? To promote the CDK 2 beta mailing list, here's some text we can use: "We want your CDK beta feedback so join the upstream mailing list, container-tools@redhat.com. Go and join at https://www.redhat.com/mailman/listinfo/container-tools." Thoughts?	1	0	https://issues.jboss.org/browse/DEVELOPER-1820
7254	DEVELOPER-1809	Beyond the speed and testing (very important!) are there any business drivers that we're unable to achieve without this?	0	0	https://issues.jboss.org/browse/DEVELOPER-1809
7255	DEVELOPER-1809	[~ldary] so it seems like this is done. In addition there should be a JIRA issue for having Drupal select what JS to deliver on a per-page basis? Can you create an issue for that please?	0	0	https://issues.jboss.org/browse/DEVELOPER-1809
7256	DEVELOPER-1806	Is this now resolved?	1	1	https://issues.jboss.org/browse/DEVELOPER-1806
7257	DEVELOPER-1805	Can this be closed? Should be fixed by https://github.com/awestruct/aweplug/commit/a05d111bc1cdced301610bbfe75ea37cdc29d3c2	0	0	https://issues.jboss.org/browse/DEVELOPER-1805

#	Requirement	Questions	Answered	Successfully Answered	URL
7258	DEVELOPER-1805	Check the tags on the video links. Why aren't they showing Red Hat tags?	1	1	https://issues.jboss.org/browse/DEVELOPER-1805
7259	DEVELOPER-1799	[~paul.robinson] - So, it doesn't look like the blogs are being pushed to dcp1 anymore (my guess is because most of the Rivers are configured for DCP2). Should I incorporate dcp2 for this? Both RHD and jboss.org use dcp2 for their buzz sections.	1	1	https://issues.jboss.org/browse/DEVELOPER-1799
7260	DEVELOPER-1799	So, it looks like https://github.com/searchisko/configuration/blob/resources_query/data/query/resources.md can now be used on dcp2. Should I implement this on the page, or should I wait until it has been merged into the master searchisko configuration?	1	1	https://issues.jboss.org/browse/DEVELOPER-1799
7261	DEVELOPER-1799	[~wesbos] is this still blocked? If so, what's blocking it?	0	0	https://issues.jboss.org/browse/DEVELOPER-1799
7262	DEVELOPER-1797	I added a small block to the Video Presentation wireframe. Basic idea is to reuse the style from the Hello World on the product pages and add it to the top right of the page. We may need to play around with the height depending on the amount of content. I'm hoping that we can keep these succinct though. [~crobson], any additional feedback or comments before we move this issue along in the workflow? [https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8]	1	1	https://issues.jboss.org/browse/DEVELOPER-1797
7263	DEVELOPER-1797	[~paul.robinson], I updated the wireframe with some more realistic content. The idea is that we add the title of the related item in the first line, then reuse the same middle text and button action, that are on the full width bar. I can add in the sales-y stuff too if you think we need it, but would rather keep this simple. Does that help? https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8	1	1	https://issues.jboss.org/browse/DEVELOPER-1797
7264	DEVELOPER-1797	Can we also include a hover effect of going to solid red so it will look like the current buttons?	1	1	https://issues.jboss.org/browse/DEVELOPER-1797
7265	DEVELOPER-1795	This is coming along. Thanks for your work on this. Additional data: Can we get the publish date added and an author (if available)? Descriptions: # What is the number of characters being returned right now for the descriptions? We should be able to go up to at least 3 lines. # The descriptions also seem like they are being truncated oddly. For example, in a "jboss fuse" search, I see a result with the title of "Watch JBoss Fuse : Loan Broker Demo : on laptop". The description displayed in the search results starts with "1 Early Access running on a laptop." while the actual description starts with "This demo shows JBoss Fuse 6.1 Early Access". # Extra spaces are being removed after sentences for some reason. Example: "CDI has proven itself to be a great asset for Java.The many features it provides " is missing a space between Java and The. There are others that look like this too.	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7266	DEVELOPER-1795	Further questions that need to be added to AC: 1. If there is no search text entered, will the 'Search' button be disabled? 2. Do we have wireframes for mobile? Will there be a search field? If so how should it look?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7267	DEVELOPER-1795	[~tnolan] We would need content approval on the below scenario (I just made the message up myself) Scenario: I search for something should return *no* entries, such as "bfehwfbhbn" Given I am on the Home page When I search for "bfehwfbhbn" Then I should see a message "Sorry there were no results found matching bfehwfbhbn" And there will be no results displayed	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7268	DEVELOPER-1795	[~paul.robinson] [~tnolan] We should also have a scenario to check the maximum characters for the search box. Can you provide me with that number?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7269	DEVELOPER-1795	Is there a URL I can use to review this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7270	DEVELOPER-1795	[~james.cobb] For the search term highlight color in the description text, I see that the Customer Portal uses #fcf8e3, are you ok with using this same color or do you have an alternative you'd like to be used here?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7271	DEVELOPER-1795	[~tnolan] - should the search box on the Search page also contain a Search and X button? The wifeframe includes them? https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Search	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7272	DEVELOPER-1795	[~tnolan] - Do we have an example of the usage?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7273	DEVELOPER-1795	[~james.cobb] do we have a visual design for the search box in the chrome? See: https://www.dropbox.com/s/o8fc0nypzywpdd3/Screenshot%202016-05-26%2014.49.52.png?dl=0 Also, [~tnolan]: What should the text in the site-chrome search-box show? It's currently 'Filter by Keyword', which I don't think is right.	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7274	DEVELOPER-1795	[~tnolan] I think this is looking good. Do you have any other feedback (other than the quality of the results)?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7275	DEVELOPER-1795	[~paul.robinson] [~wesbos] This is definitely looking good! I reviewed this as the latest build: http://developers-pr.stage.redhat.com/pr/1086/build/1284/ * The dates with each result: They all say "about 19 hours ago". I think we should only have dates appear on resource-type content, such as videos, blog posts etc. and not appear for general pages like product overview etc. I'm not sure what date options you have access to, but this should be a publish date or something similar. The dates should also be formatted as mon day year (like we use on the homepage) instead of using "time ago". * [~james.cobb] Is there a slightly larger font size we can use for the date on the results? Do you have a recommendation? * Can we fill in 2 full rows of the description? The second line seems to stop only after a few words. Maybe increase the max length for the data being returned here? Other than those minor things. Looks good!	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7276	DEVELOPER-1795	[~wesbos], [~james.cobb]: Do you have an update on [~tnolan]'s feedback?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7277	DEVELOPER-1795	[~wesbos] [~paul.robinson] Here's some additonal feedback based on the most recent implementation. I queried containers: http://developers-pr.stage.redhat.com/pr/1086/build/1327/search/?q=containers # The date being used for both pages (like CDK - Updates) and resources (like cmt: Container Managed Transactions (CMT)) are all showing up as the same date. Is there another date field option that can be used here? The cmt: Container Managed Transactions (CMT), when you click through, has a publish date of Apr 22, 2016. The web pages (Like CDK -Updates) don't need to show a date as I'm guessing these would all be the same. # I'm not seeing a change in the font size for the date. Per [~james.cobb], this should be 14px. #-Many of the pages being returned for containers are all using the same description. "Red Hat Container Development Kit Hello World! Build Something Today Let's walk through everything you need to build your first application. Get Started" : Can we content from the page to create the description instead?- Nevermind on this one. I see why this is happening. [~paul.robinson] : Can we have the Get Started band removed in this build so we can see how these pages show up in search?	1	1	https://issues.jboss.org/browse/DEVELOPER-1795
7278	DEVELOPER-1795	[~tnolan] we'd need to remove the 'Get Started' bar from production to have that updated in the search results. Can we do that now, or do we need to wait for the new product overview pages (currently scheduled for post-summit).	0	0	https://issues.jboss.org/browse/DEVELOPER-1795
7279	DEVELOPER-1793	[~lvlcek] - Just looking at this now - the pagination seems to be working - did you implement this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1793
7280	DEVELOPER-1793	[~lvlcek] - I'm a bit confused as to the difference between `size` and `from`. It seems the API only returns 9 documents at a time? If so, what is the point of having `size25=true` if it only gives a max of 9? Are we supposed to make multiple requests if we want to show more than 9 at once? Would we have to do the math to figure out how to show page 25 items on page 5? Seems a overly complicated if that is true.	1	1	https://issues.jboss.org/browse/DEVELOPER-1793
7281	DEVELOPER-1793	[~wesbos] which server are you testing your queries against? Try http://dcp2.jboss.org/v2/rest/search/developer_materials?size15=true	1	1	https://issues.jboss.org/browse/DEVELOPER-1793

#	Requirement	Questions	Answered	Successfully Answered	URL
7282	DEVELOPER-1793	Ah - I'm using this url: http://dcp2-searchisko.rhcloud.com/v2/rest/search/developer_materials?size25=true Should I not be?	1	1	https://issues.jboss.org/browse/DEVELOPER-1793
7283	DEVELOPER-1791	Looks like the plugin is in place. What's left to be done on this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1791
7284	DEVELOPER-1788	[~dhladky] Does this sound feasible, or will we hit problems doing this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7285	DEVELOPER-1788	Ideally staging PR builds should use an instance of the dl-man as close as possible to production. This will ensure that when we tests PR build, it behaves the same as it will in production. For this reason, we've used production instances of DL-man and SSO up until now. However, a problem came when we started doing regular testing of login and downloads on every PR build. These extra requests started to interfere with statistics in production data. Therefore we decided it best to move PRs to use staging instances of the back-end services. To make this work we need: 1) Data to be synced regularly from production dl-man to staging dl-man. Ideally nightly. 2) The staging instance of DL-man to be reliable. I.e it needs to stay up and functional. 3) New versions of DL-man to be backward compatible with client's configured to use previous version. This ensures that PR builds continue to work when a new version of the DL-man is put into staging prior to a release. Does this sound sensible?	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7286	DEVELOPER-1788	{quote} It does sound sensible, however it would require implementing the automatic sync between production and staging, which is not trivial, especially due to firewall problems. {quote} This will be less of a problem once we start using the REST API. At least then we will not have broken links. How often do you currently push production data back to the staging instance? {quote} Another approach would be adding a specific query parameter, that would opt out request from being processed by statistics. {quote} This is possible. However, we have similar issues for SSO as well. If we move to using the staging instance of SSO, we also need to use staging instance of DL-man.	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7287	DEVELOPER-1788	Is this okay to switch over now? What are the staging urls for the DL manager?	0	0	https://issues.jboss.org/browse/DEVELOPER-1788
7288	DEVELOPER-1788	[~dhladky] we are nearly done with tidying up the data in the production download manager. When this is done, can you push the changed data to the staging download manager?	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7289	DEVELOPER-1788	[~vladimir_v] are you able to copy the production data for dl-man to the staging instance? This will help our testing as we'll be using up-to-date data. Ideally this task would be done nightly, is that possible?	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7290	DEVELOPER-1788	I created this ticket for syncing the data: https://engineering.redhat.com/rt/Ticket/Display.html?id=386065 [~dhladky]: can you please confirm that you are happy with my suggested approach?	1	1	https://issues.jboss.org/browse/DEVELOPER-1788
7291	DEVELOPER-1788	Thanks [~dhladky], As i also mentioned in the ticket, a one-off data copy would get us a long way here. Do you now have the permissions to do that?	0	0	https://issues.jboss.org/browse/DEVELOPER-1788
7292	DEVELOPER-1786	[~james.cobb], Can you add the event card header image to the right location on static.jboss.org? I believe we need 2 sizes, one for RHD and the other for JBD?	1	1	https://issues.jboss.org/browse/DEVELOPER-1786
7293	DEVELOPER-1786	[~james.cobb]: can you point me to the location of these on the filemgmt server's file system? Also, don't we need a JBD version too? I'll try write up some docs around this, as there seems to be some confusion among the team.	1	1	https://issues.jboss.org/browse/DEVELOPER-1786
7294	DEVELOPER-1784	Thanks [~lvlcek]. Do you know how this compares to JBD? Also can you provide a list of the offending pages?	1	1	https://issues.jboss.org/browse/DEVELOPER-1784
7295	DEVELOPER-1784	[~lvlcek] using the jboss-developer account, I don't have access to the queries above. Can you save off the results from the queries above (just the ones for the data_rht_website content)? Hopefully we'll just need to run it once, so probably not worht giving me admin access.	1	1	https://issues.jboss.org/browse/DEVELOPER-1784
7296	DEVELOPER-1784	Thanks [~lvlcek], Might be easier to make it public. Are there any security concerns here?	1	1	https://issues.jboss.org/browse/DEVELOPER-1784
7297	DEVELOPER-1783	[~velias] can you review Adela's PR? Also, does this need to go live at the same time as the CDK 2 Beta download, or can it go live before?	1	1	https://issues.jboss.org/browse/DEVELOPER-1783
7298	DEVELOPER-1783	[~velias] it was done in error. I thought I fixed it shortly after though. Can you check this issue and RHD-1072 to make sure they make sense?	1	1	https://issues.jboss.org/browse/DEVELOPER-1783
7299	DEVELOPER-1777	[~crobson], is RHEL the only one that has/will have "children"? Maybe, since that's such a big product, we style that one a little different and then keep the sub-product ones (now being indented in the design) like the others on the page? I would love to hear more ideas from [~james.cobb] and team though.	1	1	https://issues.jboss.org/browse/DEVELOPER-1777
7300	DEVELOPER-1777	Thanks [~tnolan]. Is it ready for front-end dev? If so, please handover to front-end (using buttons above): https://www.dropbox.com/s/yyqh4w87ss8qnqu/Screenshot%202015-11-24%2009.01.39.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-1777
7301	DEVELOPER-1777	Idea for the Note text style for the Get Started page that we talked about in the CDK meeting this morning: [https://db.tt/MZvOz6mt] [~james.cobb], can you provide the border and/or background colors for this based upon our site theme?	1	1	https://issues.jboss.org/browse/DEVELOPER-1777
7302	DEVELOPER-1777	[~tnolan] is this for all of the 'Notes' in the multiple CDK Get Started pages? or is this a new style for the 'Notes' in ALL products' get started pages?	1	1	https://issues.jboss.org/browse/DEVELOPER-1777
7303	DEVELOPER-1777	Will this callout only appear on the Get Started pages then?	0	0	https://issues.jboss.org/browse/DEVELOPER-1777
7304	DEVELOPER-1776	Add video game to 404 page? https://github.com/leereilly/games https://mattsurabian.com/duckhunt/ http://www.dougmcinnes.com/html-5-asteroids/	0	0	https://issues.jboss.org/browse/DEVELOPER-1776
7305	DEVELOPER-1776	Ping [~lightguard] - how do we add a 404?	1	1	https://issues.jboss.org/browse/DEVELOPER-1776
7306	DEVELOPER-1776	Hey [~newtonm] - looks like we need to add a line to the Apache .htaccess - something like `ErrorDocument 404 /404.html` Could we do this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1776
7307	DEVELOPER-1772	Can you provide a link to the PR in here please. We need a way to track the review process.	0	0	https://issues.jboss.org/browse/DEVELOPER-1772
7308	DEVELOPER-1771	What's the status of this?	0	0	https://issues.jboss.org/browse/DEVELOPER-1771
7309	DEVELOPER-1771	I think ideally we would pull these from `app.namespace`. We could have these set on page load in the body, right before we load the JS files. Is that doable?	1	1	https://issues.jboss.org/browse/DEVELOPER-1771
7310	DEVELOPER-1771	Are you hard coding localhost here? Or is that just generated?	1	1	https://issues.jboss.org/browse/DEVELOPER-1771
7311	DEVELOPER-1771	I don't want to generate any JavaScript in .js files - just the code that is embedded into a script tag on the page- does that make sense?	0	0	https://issues.jboss.org/browse/DEVELOPER-1771
7312	DEVELOPER-1770	Pete, When is this needed by? Can you give it a fix version?	1	1	https://issues.jboss.org/browse/DEVELOPER-1770
7313	DEVELOPER-1770	[~pmuir], [~maxandersen]: Is this still a requirement? I'm not saying it's something we plan to work on soon, just deciding wether to close as 'out of date' or not.	1	1	https://issues.jboss.org/browse/DEVELOPER-1770
7314	DEVELOPER-1736	[~james.cobb], [~myfear]: When does this need to go live?	1	1	https://issues.jboss.org/browse/DEVELOPER-1736

#	Requirement	Questions	Answered	Successfully Answered	URL
7315	DEVELOPER-1736	What is the URL? It seems, nothing is working: http://jboss.org/events/events/judcon/2015/brno/ http://jboss.org/events/events/judcon/2016/brno/ <= the expected one :) http://developers.redhat.com/events/events/judcon/2015/brno/ http://developers.redhat.com/events/events/judcon/2016/brno/ Thanks, m	1	1	https://issues.jboss.org/browse/DEVELOPER-1736
7316	DEVELOPER-1733	What do you mean: they are no longer issues with it as all the current product have featured artifact (this can change when a new product will be added) or you check this state and the page does not break up when the featured artifact is not present. If it is the second case, then this ticket can be closed. If it is the first case, then it needs to be fixed still.	1	1	https://issues.jboss.org/browse/DEVELOPER-1733
7317	DEVELOPER-1729	[~crobson] is this approved yet? If not, is it close enough for [~adelaarreola] to start work on it?	1	1	https://issues.jboss.org/browse/DEVELOPER-1729
7318	DEVELOPER-1729	[~paul.robinson] Wireframe is complete and approved. Should I pass off to Visual Design or Front End? There is a banner needed by visual team at the top, and the pictures for the speaker may need to be created/edited.	1	1	https://issues.jboss.org/browse/DEVELOPER-1729
7319	DEVELOPER-1729	Thanks Adela. Comments: * Are these white bits expected? https://www.dropbox.com/s/86l7zzsw00mcty4/Screenshot%202015-10-12%2017.09.21.png?dl=0. Looks like the top of another word is being chopped off. * Should the heading be 'full bleed'? It looks quite 'intense' at the moment. However, I'l defer to someone with a 'design eye'. * Remember to add content to share button Otherwise, looks great!	0	0	https://issues.jboss.org/browse/DEVELOPER-1729
7320	DEVELOPER-1729	Is the resolution on the banner high enough? I'm viewing it on a retina display, so that might be the issue. Here's a screenshot, not sure if you will see the change in sharpness between the banner text and the rest of the page: https://www.dropbox.com/s/6vh6ovndoazz63u/Screenshot%202015-10-14%2011.14.51.png?dl=0	1	1	https://issues.jboss.org/browse/DEVELOPER-1729
7321	DEVELOPER-1718	If we're going to use these on the site too, should they be the illustration styling, or will we make separate images for that use? (example: http://developers.redhat.com/products/eap/overview/)	0	0	https://issues.jboss.org/browse/DEVELOPER-1718
7322	DEVELOPER-1718	Are these ready to go on the CDK product page?	1	1	https://issues.jboss.org/browse/DEVELOPER-1718
7323	DEVELOPER-1717	What about this: https://origin-it-developers.redhat.com/auth/js/keycloak.js ?	0	0	https://issues.jboss.org/browse/DEVELOPER-1717
7324	DEVELOPER-1716	Markus, did they supply you with a mockup of the cover we can use in the banner?	0	0	https://issues.jboss.org/browse/DEVELOPER-1716
7325	DEVELOPER-1716	[~brock] Those images are sized for JBoss Developer. Can you create a set for RHD?	1	1	https://issues.jboss.org/browse/DEVELOPER-1716
7326	DEVELOPER-1716	Are we to run this promo on both RHD and jboss.org?	0	0	https://issues.jboss.org/browse/DEVELOPER-1716
7327	DEVELOPER-1716	[~brock] The links for the RHD mockups don't work, is it different than the JBoss.org mockup?	1	1	https://issues.jboss.org/browse/DEVELOPER-1716
7328	DEVELOPER-1713	David, We have a series of yaml files containing this data. Here's an example for EAP: https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L26-L171 Would that be enough to recreate most of the data?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7329	DEVELOPER-1713	I am afraid it is not readable for me. I do not see a way how to map the things in it to the actual files. Would you be able to create let us say a spreadsheet, that contains lines with columns: product, product version, file name (including the access.cdn path), description (optional), TC model (anonymous/no tc/Zero Dollar) (optional)?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7330	DEVELOPER-1713	[~dcoughlin1] - Have you inputted the data for this DL manager?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7331	DEVELOPER-1713	Also, there are quite a few that are being displayed on http://it-developers-pr.stage.redhat.com/pr/332/build/826/products/devstudio/download/ (e.g. https://www.dropbox.com/s/bdblkdtoxv22q5q/JBoss_Developer_Studio_-_Downloads.jpg?dl=0) that are not displayed on http://developers.redhat.com/products/devstudio/download/. Should I just be ignoring those for now?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7332	DEVELOPER-1713	[~paul.robinson] [~dhladky] I can link the products together. Should I add those products and set them as master for the zero dollar/No T&C?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7333	DEVELOPER-1713	Can this be closed?	1	1	https://issues.jboss.org/browse/DEVELOPER-1713
7334	DEVELOPER-1712	[~ecurley] Is the content for this microsite ready? If so, where can I find it? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-1712
7335	DEVELOPER-1712	Hi Paul - Here was the feedback I had sent Adela. My apologies as we were communicating in hipchat back and forth. Can we add a line space in the red hat booth band between the 17:00? and the "Meet the ..." Devoxx for Kids - should say "Devoxx4Kids" And that band will need to be hidden until Wednesday of the conference In the "Meet Markus" headline. Can we swap "BUY" for "GET"?	1	1	https://issues.jboss.org/browse/DEVELOPER-1712
7336	DEVELOPER-1701	[~mikgue] Can you respond to Libor's query?	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7337	DEVELOPER-1701	Will this work? https://en.support.wordpress.com/export/	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7338	DEVELOPER-1701	[~mguerri] just read the answer from wordpress and I'd like to give a try the export file: https://en.support.wordpress.com/export/ Could you please export whole blog and send me to my RH e-mail? Thanks.	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7339	DEVELOPER-1701	[~mikgue] Thanks a lot. I had to fix few character issues but it works for me. [~paul.robinson] here is output of all entries from feed. Please check: https://planet-stg.jboss.org/#tags=feed_group_name_nonmiddleware The archive is perfect but I just realised that current feed (https://developerblog.redhat.com/feed/) doesn't provide whole content and has only "description" which is short version of it. Planet doesn't index whole content then (e.g. https://planet-stg.jboss.org/post/behind_the_internet_of_things_middleware_demo_at_red_hat_summit). [~mikgue] is it possible to change the setting of this actual feed to serve whole content as well?	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7340	DEVELOPER-1701	Also, will this process ensure the posts are re-indexed as new tags are added? Someone will need to go through all the existing posts and assign product tags to the ones we need to appear on a product page.	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7341	DEVELOPER-1701	[~lkrzyzanek] I've created a PR for 4. https://github.com/redhat-developer/developers.redhat.com/pull/353 Note, that it will pull data from dcpbeta-searchisko.rhcloud.com. Is that a problem?	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7342	DEVELOPER-1701	Actually the last link should be working (you need to be on the VPN): http://it-developers-pr.stage.redhat.com/pr/353/build/1294/products/softwarecollections/buzz/ Does that look right?	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7343	DEVELOPER-1701	Could you please create jira issue for it and link it. Thanks. I'll create separate issue about using "snippet" in planet.	1	1	https://issues.jboss.org/browse/DEVELOPER-1701
7344	DEVELOPER-1701	Can we try one out? Does UX need to do anything??	0	0	https://issues.jboss.org/browse/DEVELOPER-1701
7345	DEVELOPER-1697	Why is this a 'nice to have', isn't it critical to the Q1FY16 release? Or did you have an alternative way to view entitlements?	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7346	DEVELOPER-1697	I changed the class of work based on Deliverables table. This similar one RHD-63 is Must have.	0	0	https://issues.jboss.org/browse/DEVELOPER-1697
7347	DEVELOPER-1697	Thanks David. I notice you also released the mock API too. Do we need the Mock one, now that this is ready?	1	1	https://issues.jboss.org/browse/DEVELOPER-1697

#	Requirement	Questions	Answered	Successfully Answered	URL
7348	DEVELOPER-1697	Hi [~wesbos], I just added the cors header to the available downloads response. I allowed it for all origins and GET requests (other methods are not supported anyway). The RPM is being built As for 2 it is definitely a bug, that should be addressed. I will create a ticket for it and fix it as soon as possible. Ideally today. [~paul.robinson], will you mind, if I simplify and fix the response? I am not sure if the service is already used somewhere as it is.	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7349	DEVELOPER-1697	[~dhladky] what do you mean by "simplify and fix the response"? Neither JBoss Developer or Red Hat Developers are using this API yet in production. So I don't have a problem with you changing the API.	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7350	DEVELOPER-1697	How does it differ to the previous version of the response?	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7351	DEVELOPER-1697	[~paul.robinson] I've just pushed another version - right now I'm linking to the generic release notes page because there is not way to dynamically generate this url - they are all too different. We need the data to go into the DCP. [~dhladky] - Could we get the ability to add a "download" to the download manager that isn't a file, but a link? We need each release to have a link to the release notes.	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7352	DEVELOPER-1697	Why do you need a download manager for it? Do you want to enforce some subscription on the release notes as well? If so, you can put the release notes to access.cdn just like any other file. If you do not need the release notes to be protected, then you do not need DM for the release notes.	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7353	DEVELOPER-1697	Hi, so how about adding the link to the product version then (I suppose this is the right place for the info) and adding it to the available downloads rest service (another property of product version). Are you aware of any other links you would like to be added? Please, create a new ticket for this feature as it is definitely not part of this ticket.	1	1	https://issues.jboss.org/browse/DEVELOPER-1697
7354	DEVELOPER-1696	OK, Some additional comments. Carousel... 1) The switcher should be turned off once a person clicks on a link in the carousel bar. As it works now, I click on an item in the bar that looks interesting and it goes to that slide (yeah!) then after 5 seconds it starts rotating again (boo!). 2) The block quote is actually a super light blue and the bold copy is white. The blue hex color: #eafbff 3) The job title /company spacing is still far to much "Vice President, Software Engineering / Red Hat Inc." The company should be much tighter to the job title. 4) Hmmm... the download icon is titled "Icon_RH_Software_Transfer-Download_RGB_Shiny.svg" and I'll separately attach it to this jira. 5) "The SVG icon can't have a gradient in the BG unless we use images." Not following you here. What icon's have gradients? Do you mean the photo in the carousel?	1	1	https://issues.jboss.org/browse/DEVELOPER-1696
7355	DEVELOPER-1683	I just checked a bunch of these and the dates and ordering seems correct - can we close this?	0	0	https://issues.jboss.org/browse/DEVELOPER-1683
7356	DEVELOPER-1667	[~paul.robinson] For the descriptions, should I just plan on pasting in information from the about sections of the websites? I noticed that most of the descriptions start with "Join Redhat..." and have been customized. For now, I am just leaving the descriptions blank.	0	0	https://issues.jboss.org/browse/DEVELOPER-1667
7357	DEVELOPER-1663	[~james.cobb], [~crobson]: should this live at http://developers.redhat.com/resources?	1	1	https://issues.jboss.org/browse/DEVELOPER-1663
7358	DEVELOPER-1663	[~james.cobb], [~crobson]: Can you review: http://it-developers-pr.stage.redhat.com/pr/419/build/837/. Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-1663
7359	DEVELOPER-1662	[~brock] Do you have an update on how this is going? Are any of the icons available?	1	1	https://issues.jboss.org/browse/DEVELOPER-1662
7360	DEVELOPER-1662	Sure thing, Paul! I've completed a handful but I haven't made them available yet. DevNation has been taking up a lot of my focus this week. Please let me know if there is are any that you need more than others so that I can prioritize them accordingly.	0	0	https://issues.jboss.org/browse/DEVELOPER-1662
7361	DEVELOPER-1656	Do I close this? I am moving on to pushing this into the staging environment. There are some things that need to be done beforehand (mainly just getting Rysiek approve the template), but I think I'm ready to move onto the next step here.	1	1	https://issues.jboss.org/browse/DEVELOPER-1656
7362	DEVELOPER-1652	Please can you add a description?	0	0	https://issues.jboss.org/browse/DEVELOPER-1652
7363	DEVELOPER-1647	[~paul.robinson] Hey Paul, can you provide me with access to this Youtube account?	1	1	https://issues.jboss.org/browse/DEVELOPER-1647
7364	DEVELOPER-1647	You were invited to be a manger a while ago. Can you search your email, maybe in the spam.	1	1	https://issues.jboss.org/browse/DEVELOPER-1647
7365	DEVELOPER-1647	[~paul.robinson] So, many of the generic "Virtual: JBUG" are presentations that either don't have slides or don't actually have a good view of the presentation. I have changed a few, but is it acceptable to pull a snapshot of just the presenter or should I plan to leave the generic thumbnail?	1	1	https://issues.jboss.org/browse/DEVELOPER-1647
7366	DEVELOPER-1644	[~ecurley] can you take a look at the copy on the Wireframe. The JBoss EAP one talks about RHEL. Can you also check you are happy with the rest of the text?	1	1	https://issues.jboss.org/browse/DEVELOPER-1644
7367	DEVELOPER-1644	[~lkrzyzanek] once we create the page, is it you that will wire it into the registration flow?	1	1	https://issues.jboss.org/browse/DEVELOPER-1644
7368	DEVELOPER-1644	Conceptually I'm good with it but the text will need to change on them. OSE doesn't have a getting started experience. Shall I change it here or in hotgloo?	1	1	https://issues.jboss.org/browse/DEVELOPER-1644
7369	DEVELOPER-1644	[~ecurley], [~ray.ploski]: are you happy with this page? See: http://it-developers-pr.stage.redhat.com/pr/545/build/1130/confirmation/ I've checked the process, and the user is directed to this page after verifying their email.	0	0	https://issues.jboss.org/browse/DEVELOPER-1644
7370	DEVELOPER-1644	It looks like the text gets cut off behind the button for the EAP get started. Can we set it up so that the text has an upper size limit and becomes ellipsis (...) if it overflows that limit?	1	1	https://issues.jboss.org/browse/DEVELOPER-1644
7371	DEVELOPER-1641	Can you tell me where this wrong link is?	0	0	https://issues.jboss.org/browse/DEVELOPER-1641
7372	DEVELOPER-1638	Keycloak login server doesn't provide a single URL right now. However I think we can achieve this UX requirement by a single static page http://developers.redhat.com/register which would either have some text plus button "Register Now" or display nothing and put javascript that will immediatelly redirect user to register page. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-1638
7373	DEVELOPER-1636	[~velias] The issue reporter field was mandatory. I set it to [~dcoughlin1] as he'll be working on setting this up. Can you make it optional, or create a new user for this. It's not ideal that the crazy comments, that we'll inevitably get, will be accredited to dan ;-)	1	1	https://issues.jboss.org/browse/DEVELOPER-1636
7374	DEVELOPER-1636	can you use my email address initially. We can re-think that later.	1	1	https://issues.jboss.org/browse/DEVELOPER-1636
7375	DEVELOPER-1636	[~crobson], [~james.cobb]: can you review: http://it-developers-pr.stage.redhat.com/. Notice the feedback link in bottom right. I went for the least obtrusive option. We can select something with more visibility if you prefer. Maybe we walk through the options in a quick call?	1	1	https://issues.jboss.org/browse/DEVELOPER-1636
7376	DEVELOPER-1636	[~paul.robinson][~crobson] - So I click the link and only see the homepage that doesn't have a "got feedback option. Is there a direct link to a page where I can see this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1636
7377	DEVELOPER-1634	Are we looking to do this now, or after initial launch?	1	1	https://issues.jboss.org/browse/DEVELOPER-1634
7378	DEVELOPER-1633	I think we should change the icons to illustrations. Shall we create a separate JIRA?	1	1	https://issues.jboss.org/browse/DEVELOPER-1633
7379	DEVELOPER-1631	[~crobson] is this approved? Can it be handed over to front-end?	1	1	https://issues.jboss.org/browse/DEVELOPER-1631

#	Requirement	Questions	Answered	Successfully Answered	URL
7380	DEVELOPER-1631	These look great. And agree on the card version. [~crobson] What area of the headers are you looking at? My two cents - There is a lot going on up top on this one: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg A couple of options (would love both of your thoughts) -Delete the "let's walk through..." in the Hello World section. With 4 things there it is hard to know what to do. -I'm normally a fan of allowing folks to easily contact sales but I wonder if it is premature up top. This is a first getting started. Maybe something down below? On this page: http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg I would consider shortening "How to get started with Red Hat..." to just "Get started with Red Hat..." small change but more actionable and will reduce some of the wrap. Are you in need for shorter header copy from what exists now? I can trim if needed.	1	1	https://issues.jboss.org/browse/DEVELOPER-1631
7381	DEVELOPER-1628	Can this go into production now?	1	1	https://issues.jboss.org/browse/DEVELOPER-1628
7382	DEVELOPER-1628	[~lkrzyzanek] Can we push the RHD change live now, and the JBD change later today or tomorrow?	1	1	https://issues.jboss.org/browse/DEVELOPER-1628
7383	DEVELOPER-1623	Do we still plan to run these tests against production? Not sure it makes sense anymore?	1	1	https://issues.jboss.org/browse/DEVELOPER-1623
7384	DEVELOPER-1603	Hi Paul. I'm working to get the Hello world approved this week and if yes we will need a RH Mobile section within products. We are planning on promoting the Hello World for Mobile at NodeConf on Sept. 6th. Do you have a URL that we will use when that section goes up? James and I are working on a postcard to hand out directing people there. Thanks! Emily	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7385	DEVELOPER-1603	{quote} Is there a way to make the 4 icons in a row across the bottom or would 2 on each row work? {quote} For consistency with other products, I think it would be better to go with 3. Otherwise we'll end up with having to resize the content. Can one of those items be dropped?	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7386	DEVELOPER-1603	Also, would it be better to move the 3 key feature further up? We added those to the other product pages as a way to quickly grab the reader and use it as a way of getting them interested enough to read the more detailed information below. I would suggest adding it after the opening paragraph.	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7387	DEVELOPER-1603	[~james.cobb], [~brock]: Can you advise on what images to use on here: http://it-developers-pr.stage.redhat.com/pr/381/build/790/products/mobileplatform/overview/. I'm looking at these ones that are scaling badly: https://www.dropbox.com/s/b4qsh8i9o21gsvb/Screenshot%202015-09-03%2020.30.40.png?dl=0 Do we have illustrations?	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7388	DEVELOPER-1603	[~ecurley]: should the link to Mobile learn, really filter on 'iOS'? See this link on the overview page: {quote} See Mobile in action http://developers.redhat.com/mobile/learn/#!query=iOS {quote}	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7389	DEVELOPER-1603	Thanks Jason, I don't know wether we want scalable .svg or transparent .png. Can you check with [~james.cobb]? We want to push this live tomorrow, not sure if it's feasible to get the illustrations in that time-frame?	1	1	https://issues.jboss.org/browse/DEVELOPER-1603
7390	DEVELOPER-1599	Given that we plan to use Drupal's CDN integration, do we still need this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1599
7391	DEVELOPER-1595	Can we list the languages in alphabetical order: node, Python, Ruby? Otherwise, good to go. Mike	1	1	https://issues.jboss.org/browse/DEVELOPER-1595
7392	DEVELOPER-1592	[~brock] Can you review Adela's build: http://it-developers-pr.stage.redhat.com/pr/613/build/197	1	1	https://issues.jboss.org/browse/DEVELOPER-1592
7393	DEVELOPER-1464	One minor addition, can we add the month and year under the title? This was on the CDK wireframe and I just noticed it was missing here. It should be the smaller font size and a slightly lighter grey color. [https://db.tt/VHXDP7aN]	1	0	https://issues.jboss.org/browse/DEVELOPER-1464
7394	DEVELOPER-1463	Content from Markus [about judcon] JUDCon is coming to town! After some time of silence, it is about time to have another JUDCon. 2016 will start off with JUDCon Brno and we're very proud to be part of the DevConf.cz conference with a full day track of Microservices, Mobile, Cloud and Java EE. The JBoss Users and Developers Conferences are developer gatherings held around the globe to give JBoss users the chance to talk to and collaborate with leaders in the JBoss Community, and to allow the project leads and engineers to learn from and collaborate with end users. The JBoss Core Developers, along with the open source community, create and support the projects that drive innovation and help lead development in standards bodies like the Java Community Process, the Apache Software Foundation, OASIS, W3C and other open standards organizations. [JUDCon Schedule] Friday, February 5th 2016 9:50 Knowledge driven micro services - Maciej Swiderski [Microservices] 10:40 SilverWare: Microservices - Martin Swiech [Microservices] 11:30 Docker, Vagrant and Kubernetes walks into an Eclipse'd bar - Max Rydahl Andersen [Mobile & Cloud] 12:20 Java Enterprise'ish development without hassle - Jakub Marchwicki [JavaEE] 13:10 Getting S#it Done With JBoss Forge: A Gentle Path into Java EE 7 Applications - Koen Ars + Sebastien Blanc [Java EE] 14:00CI/CD with Openshift and Jenkins - Ari LiVigni, Aaron Weitekamp, Michal Fojtik [Mobile & Cloud] 14:50 Red Hat Mobile Application Platform + OpenShift Online - John Frizelle [Mobile & Cloud] 15:40 You've Got Microservices Now Secure Them - Steven Pousty [Microservices] 16:30 Taming Microservices Testing with Docker and Arquillian Cube - Aslak Knutsen [Mobile & Cloud] 17:20 WildFly Swarm: does my fatjar look big in this? - Mark Little [JavaEE] 18:10 Are you ready for a new WildFly security? Elytron! - Josef Cacek [JavaEE] [talk category description] Microservices As an architectural pattern, Microservices has graduated from being an esoteric buzzword and has great potential in many organizations - ranging from startups and large consumer internet organizations to enterprises. The microservices talks help bring in real world experience and first hand information from the engineers working on the future. Mobile & Cloud While mobile left the real hype and turned into commodity for many users, the combination with cloud and changing requirements in today's enterprises still influence the way we built mobile applications. The mobile and cloud talks by our engineers help you to make the best out of both. JavaEE As the backbone of Red Hat JBoss Middleware and used by literally every enterprise in the world we added the most interesting talks about latest developments to this category and invite you to brush up your knowledge and experience first hand information from our engineers. [more] Information about the city and venue: http://devconf.cz/city-and-venue Link to the code of conduct: http://devconf.cz/code-conduct	1	1	https://issues.jboss.org/browse/DEVELOPER-1463

7395	DEVELOPER-1463	constantly growing business demands more and more focus is put on gathering business knowledge and making use of it in IT. Knowledge Is Everything - that's a slogan that lots of business domains is catching up right now. On the other hand, recent trends in software development are shifting into micro services environments where loosely coupled, standalone and independent services provide access to various business assets. With that in mind, knowledge driven micro service idea came into live to combine couple of great technologies together to satisfy such needs: - vert.x - toolkit for building reactive applications on JVM - jBPM and Drools flexible process and rule engines that provide excellent execution environment for business assets - the knowledge - hazelcast - in memory data grid - various programming languages (Java, JavaScript, Scala, Groovy) to attract various development teams This session is about illustrating how easily and fast you can build knowledge driven micro services and scale them to almost no limits. All in reactive and polyglot fashion with powerful clustering. Scale individual knowledge micro services without a hassle and allow various languages to easily interact with business knowledge without a need to know where they are located. It all goes via clustered event bus provided by Vert.x, backed by deployable knowledge archives provided by jBPM and Drools, clustering delivered by hazelcast data grid and allow polyglot client side access. It's all about business knowledge that can be delivered as software solution with: - flexibility - speed of development - isolated scalability - manageability Come and see how to transform your IT solutions into knowledge driven micro services with Vert.x, jBPM, Drools and Hazelcast. This session will be full of life demos to actually show the running micro services driven by business knowledge. Speaker info: Maciej Swiderski Red Hat, Senior Software Engineer Speaker image: https://static.sched.org/a7/950423/avatar.jpg.320x320px.jpg?e9e _____ Session #2: SilverWare: Microservices 10:40 - 11:20 Description: SilverWare.io is a minimalistic, yet powerful, modularized, highly configurable and container-free implementation of Microservices. Builds on technologies you are familiar with. Start creating the Internet of Things today! Speaker Info: Martin Swiech I am working for RedHat since 2014 as middleware QE. Speaker image: None _____ Session #3: Docker, Vagrant and Kubernetes walks into an Eclipse'd bar 11:30 - 12:10 Description: Todays software industry is booming with tools like Docker, Kubernetes, Vagrant and more to enable faster turnaround times via virtualization. How does Eclipse the IDE deal with that ? Can it deal with it ? How should it and its users deal with it ? Come to this talk and hear how and what Eclipse Linux Tools and JBoss Tools are doing in the area. It will give a brief overview on the Docker and Vagrant tooling in Linux Tools and then how that is used and combined in Kubernetes and OpenShift Tools. The talk will show how you can use Docker and Vagrant practically today with plain Eclipse to improve your own local development experience and then shortly cover how it all comes together in the cloud and container space. Some basic understanding of the container and virtualization technologies are recommended, but not an absolute requirement. Speaker Info: Max Rydahl Andersen Born and raised in Denmark, worked on health care software systems for some time. In that work I bumped into this small project called Hibernate and had to fix a couple of things in it to make it useful Since then I've been working on Hibernate Core, Hibernate Tools, Seam and now lately JBoss Tools and Developer Studio Speaker image: https://static.sched.org/a7/2534492/avatar.jpg.320x320px.jpg?512 _____ Session #4: Java Enterprise'ish development without hassle 12:20 - 13:00 Description: This happens in every community: You don't need Rails, to build a web application in Ruby. You don't need templating engine for PHP - PHP is a templating language! We over engineer and over engineer, again and again. Same happens in Java. Hibernate + EJB + JSF is not the only blessed stack for development of web application… one can argue it's the	1	1	https://issues.jboss.org/browse/DEVELOPER-1463
7396	DEVELOPER-1463	[~myfear]: do you want the above content adding to the page?	1	1	https://issues.jboss.org/browse/DEVELOPER-1463
7397	DEVELOPER-1461	I can add code to pull this image into the site; however, all non-default card banners are currently coming from http://static.jboss.org/images/rhd/events/event_{*_picturename_*}.png. If possible, can you place the file under http://static.jboss.org/images/rhd/events? Also, is it possibles to rename the file to *_event_*_makerfile_judcon2016brno.png instead of events_makerfile_judcon2016brno.png? Sorry for all the changes. If it's not possible, please let me know and I'll add in the javascript logic to do this.	1	1	https://issues.jboss.org/browse/DEVELOPER-1461
7398	DEVELOPER-1442	[~dcoughlin1] Can you work on this today please?	1	1	https://issues.jboss.org/browse/DEVELOPER-1442
7399	DEVELOPER-1437	Hi [~james.cobb], can the text on these graphics be moved a little to the left? Right now it gets cut off once the window becomes smaller because the text is positioned outside the page's content area	1	1	https://issues.jboss.org/browse/DEVELOPER-1437
7400	DEVELOPER-1436	Can we make this as a developers.redhat.com microsite?	1	1	https://issues.jboss.org/browse/DEVELOPER-1436
7401	DEVELOPER-1435	Looks good overall. It would have been nice if the new section included the standalone installer from 9.0.0.GA too so users wouldn't have to click show downloads. Is that possible ?	1	1	https://issues.jboss.org/browse/DEVELOPER-1435
7402	DEVELOPER-1435	How about we add a new "release notes" entry, which links to the blog? PR: https://github.com/jboss-developer/www.jboss.org/pull/1006 This mirrors what EAP does, eg., on this page http://www.jboss.org/products/eap/download/	1	1	https://issues.jboss.org/browse/DEVELOPER-1435
7403	DEVELOPER-1434	[~sparulka] when is this due by? We have some other high priority stuff on at the moment. Would late this week or early next week work?	1	1	https://issues.jboss.org/browse/DEVELOPER-1434
7404	DEVELOPER-1434	This is due today. Product GA was yesterday Dec 7 and I had communicated this earlier and had already submitted the content changes except the actual links to the bits. Very minor content changes. I received the CDN links for the GA bits yesterday night (Dec 7). I sent the GA availability announcement today at noon (Dec 8). So appreciate if this is posted by atleast Dec 9 EOD. Doable?	1	1	https://issues.jboss.org/browse/DEVELOPER-1434
7405	DEVELOPER-1434	[~sparulka] Can you review the build ^^	1	1	https://issues.jboss.org/browse/DEVELOPER-1434
7406	DEVELOPER-1434	[~sparulka] Adela is working on the fixes know. Are you going to be available to do a final review over the next 2hrs? I'll keep an eye out and merge the PR once you approve.	1	1	https://issues.jboss.org/browse/DEVELOPER-1434
7407	DEVELOPER-1428	Should I plan on adding this to the download table?	1	1	https://issues.jboss.org/browse/DEVELOPER-1428
7408	DEVELOPER-1418	Can this be closed?	0	0	https://issues.jboss.org/browse/DEVELOPER-1418
7409	DEVELOPER-1408	Where does the /content/... link suppose to reside? Is that a location where the CSP puts their files?	1	1	https://issues.jboss.org/browse/DEVELOPER-1408
7410	DEVELOPER-1398	Why is it out of date?	0	0	https://issues.jboss.org/browse/DEVELOPER-1398
7411	DEVELOPER-1379	Hey [~nickboldt] - I've got an updated ascii-doc and image for this - I need credentials to test (running into the vault): Request the following values from the JBoss Developer team: vimeo_access_token_secret vimeo_client_secret vimeo_access_token dcp_user dcp_password google_api_key Who could provide these tokens?? Thkx	1	1	https://issues.jboss.org/browse/DEVELOPER-1379
7412	DEVELOPER-1371	[~nickboldt] Hey Nick, can you provide the download links (i.e. /content/origin/files/sha256/3d/3d115879e3be646a563d05452c3a22bac394652e40260a3b43d9dd5c3ba7121e/jboss-devstudio-9.0.0.Beta1-installer-eap.jar) when you get the chance?	1	1	https://issues.jboss.org/browse/DEVELOPER-1371
7413	DEVELOPER-1371	[~cpob] The download manager should be working now. Can you try and add the last remaining download?	1	1	https://issues.jboss.org/browse/DEVELOPER-1371
7414	DEVELOPER-1371	Has anyone tried it again? I responded on the same issue in the ticket tracker. Based on the hour it happened I suspect the ongoing reconfiguration of the network might have caused that.	1	1	https://issues.jboss.org/browse/DEVELOPER-1371
7415	DEVELOPER-1349	Can this be closed?	0	0	https://issues.jboss.org/browse/DEVELOPER-1349

#	Requirement	Questions	Answered	Successfully Answered	URL
7416	DEVELOPER-1348	[~paul.robinson] or [~pmuir], Should this be added to downloads.jboss.org or can I link directly to dropbox? Thanks! Dan	1	1	https://issues.jboss.org/browse/DEVELOPER-1348
7417	DEVELOPER-1348	Who can add the download to downloads.jboss.org since it isn't stored with download-manager (https://www.jboss.org/download-manager/ui/administration/products.jsf?renew=1)? Is Paul the only one? The current one should be added, which is on dropbox, PREVIEW-DataVirtWebUI-11Jun2015.war. Prior JIRAs for updating webui: https://issues.jboss.org/browse/DEVELOPER-1305 https://issues.jboss.org/browse/DEVELOPER-1224	1	1	https://issues.jboss.org/browse/DEVELOPER-1348
7418	DEVELOPER-1348	[~lightguard] Hey Jason, do you know who would be able to upload this to downloads.jboss.org?	1	1	https://issues.jboss.org/browse/DEVELOPER-1348
7419	DEVELOPER-1347	Thanks [~nickboldt]. Please can you email me when they are ready? I've got quite a lot of other things to coordinate over the coming days, so don't want to miss this. [~dcoughlin1] can you prepare the same change for http://developers.redhat.com please.	1	1	https://issues.jboss.org/browse/DEVELOPER-1347
7420	DEVELOPER-1340	Can this be closed?	1	1	https://issues.jboss.org/browse/DEVELOPER-1340
7421	DEVELOPER-1328	Pete - Since this was deployed, shall I go in and create a new macro for this new Data Layer Variable "product_code" within GTM? After that, I will update the macro {{Eloqua High Value URL}} with the updated URL values (with new macro) in the Lookup Table. After that, I will create a new version and have you review and Publish. Does this sound ok?	1	1	https://issues.jboss.org/browse/DEVELOPER-1328
7422	DEVELOPER-1324	[~paul.robinson] I know where to update it, but is there a good place to pull it. I just want to make sure that I have the correct profile information.	1	1	https://issues.jboss.org/browse/DEVELOPER-1324
7423	DEVELOPER-1324	Can this be merged and closed?	0	0	https://issues.jboss.org/browse/DEVELOPER-1324
7424	DEVELOPER-1316	[~paul.robinson] I have the PR ready, should I just hold onto it and rebase when requested?	1	1	https://issues.jboss.org/browse/DEVELOPER-1316
7425	DEVELOPER-1309	Do you have a web page that represents the Devoxx4Kids stuff done by your JUG? We can put your details in this area: https://www.dropbox.com/s/wgqi0jwzfvla244/Screenshot%202015-04-17%2009.14.33.png?dl=0 of http://www.jboss.org/devoxx4kids/. A link isn't essential (the Vancouver one doesn't have one). But if you have it then great!	1	1	https://issues.jboss.org/browse/DEVELOPER-1309
7426	DEVELOPER-1309	Sorry Paul, my bad. Our event was described here: http://rivierajug.org/xwiki/bin/view/Main/201411-devoxx4kids, we don't have a dedicated page for it yet but the whole team wants to do it on a regular basis so it won't be the last. I did not quite understand what you told me: how do I actually edit that page? I mean, I do see where it should go, but not how I can get the page's source.	0	0	https://issues.jboss.org/browse/DEVELOPER-1309
7427	DEVELOPER-1304	[~paul.robinson] That sounds good. Which banner should I replace on the main site?	1	1	https://issues.jboss.org/browse/DEVELOPER-1304
7428	DEVELOPER-1300	[~paul.robinson] We're already late on our release schedule (mea culpa), so is it something you can process ASAP? Do you have any ETA? Thanks for your help!	1	1	https://issues.jboss.org/browse/DEVELOPER-1300
7429	DEVELOPER-1295	Product: JBoss BRMS 6.1.0 Description: Minor release in the JBoss BRMS 6.x series Tag_Line: TBD Date of Release: 16-Apr-2015 CDN: (The set of files match what we currently upload for JBoss BRMS) /content/origin/files/sha256/2d/2db626b179f62a66911416ba173d1fd8c9c71c2f7285cbc45336c6a35bc673de/jboss-brms-6.1.0.GA-quickstarts.zip /content/origin/files/sha256/36/36d1f9ad97cec59168ff7812e71bed723cbf679f3e4086063fe7f19e73603564/jboss-brms-6.1.0.GA-sources.zip /content/origin/files/sha256/5c/5cd3c155110c5560ea26d7bfb6276e2d5f9504b54fa0494b3b2e5e4f6b80229c/jboss-brms-6.1.0.GA-deployable-eap6.x.zip /content/origin/files/sha256/85/85cee66d0dc3a50970b4b59c2230783fd31191d353a66c24d3c6fd82df201857/jboss-brms-6.1.0.GA-planner-engine.zip /content/origin/files/sha256/c1/c1c2fbbfdb95c2f74b71fe9b95b200d777cd956e7f244d206ee0406aaa4bbaf5/jboss-brms-6.1.0.GA-supplementary-tools.zip /content/origin/files/sha256/de/de5d17fb5ac679d175c1967b8375f48fbc7c6b427c20dd034937347e21a49501/jboss-brms-6.1.0.GA-installer.jar With this release, we no longer bundle EAP within the BRMS installer. To get started BRMS users will also need access to EAP 6.4 zip. Can this also be included in the downloads section? /content/origin/files/sha256/27/27a6fd62a8bc4f660970ab282a4bc013934275e47a850a974db6c7d2c62cc50e/jboss-eap-6.4.0.zip Release Notes Link: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_BRMS/6.1/html-single/6.1.0_Release_Notes/index.html Date to go live: Now	1	1	https://issues.jboss.org/browse/DEVELOPER-1295

To get started BRMS users will also need access to EAP 6.4 zip. Can this also be included in the downloads section? /content/origin/files/sha256/27/27a6fd62a8bc4f660970ab282a4bc013934275e47a850a974db6c7d2c62cc50e/jboss-eap-6.4.0.zip Release Notes Link: https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_BPM_Suite/6.1/html-single/6.1.0_Release_Notes/index.html Date to go live: Now	1	1	https://issues.jboss.org/browse/DEVELOPER-1295
7431	DEVELOPER-1295	Rajesh, Can you give a link to what tag line was used for 6.0 ?	0	0	https://issues.jboss.org/browse/DEVELOPER-1295
7432	DEVELOPER-1295	{quote} With this release, we no longer bundle EAP within the BRMS installer. To get started BRMS users will also need access to EAP 6.4 zip. Can this also be included in the downloads section? {quote} I think we need to update the get-started instructions to include this step. This is where we normally put installation instructions like this.	1	1	https://issues.jboss.org/browse/DEVELOPER-1295
7433	DEVELOPER-1295	Instructions to download EAP under get-started works as well. It would fit well under the "Installation Instructions" section. This would probably be step no.2. Could we link to the EAP 6.4 downloads page on jboss.org? Does the wording below look good? "JBoss BPM Suite from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page and obtain EAP version 6.4 before using the JBoss BPM Suite installer"	1	1	https://issues.jboss.org/browse/DEVELOPER-1295
7434	DEVELOPER-1295	Did we manage to get in that note about EAP ?	1	1	https://issues.jboss.org/browse/DEVELOPER-1295

#	Requirement	Questions	Answered	Successfully Answered	URL
7435	DEVELOPER-1295	Should "JBoss BPM Suite from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page and obtain EAP version 6.4 before using the JBoss BPM Suite installer" be posted under both BRMS and BPM Suite? I have it added to BPMSuite right now, but I'll wait to submit the PR in case you'd like it under both.	1	1	https://issues.jboss.org/browse/DEVELOPER-1295
7436	DEVELOPER-1295	[~rrajesh], I think having it as step 2 is confusing. The first step tells the user to download the installer. Many will then try and run the installer, which won't work as step 2 is not done yet. Also, I think it needs to be made clearer that EAP needs installing as well as downloading. How about: 1. JBoss BRMS from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page to download and then install EAP version 6.4 before using the JBoss BRMS installer. 2. Visit the JBoss BRMS download page and download the installer. 3. Make sure you have a JDK of your choice installed. We recommend OpenJDK or Oracle JDK. 4. You can now (optionally) install the Integration Stack for JBoss Developer Studio. This provides IDE support for developing JBoss BRMS applications. For more details, see the installation instructions.	1	1	https://issues.jboss.org/browse/DEVELOPER-1295
7437	DEVELOPER-1285	Do you know when you expect the CDN links to be available?	1	1	https://issues.jboss.org/browse/DEVELOPER-1285
7438	DEVELOPER-1273	[~kpeeples] Can you provide the full information that we need? There's a handy checklist here: https://github.com/jboss-developer/www.jboss.org/blob/master/CONTRIBUTING.md#how-to-request-a-new-product-download	1	1	https://issues.jboss.org/browse/DEVELOPER-1273
7439	DEVELOPER-1273	Are there source or maven repo links that need to be added as well, or should I just add the installer?	0	0	https://issues.jboss.org/browse/DEVELOPER-1273
7440	DEVELOPER-1273	I'd assume it's just a single download, as Kenny would have said otherwise. Can you proceed on this understanding. Kenny, please correct us ASAP if this isn't the case.	0	0	https://issues.jboss.org/browse/DEVELOPER-1273
7441	DEVELOPER-1271	Yes we can do this. Can you work with [~james.cobb], who's team will produce the graphics.	1	1	https://issues.jboss.org/browse/DEVELOPER-1271
7442	DEVELOPER-1271	[~philsimpson] Are we looking at two different releases here? BPM Suite 6.1 BRMS 6.1 How do we want to word this exactly?	1	1	https://issues.jboss.org/browse/DEVELOPER-1271
7443	DEVELOPER-1271	These look great! Couple of things - - Can we add JBoss to the product name? JBoss BPM Suite 6.1 - For the CTA button can we have "Learn More" instead of "Try It Now"? Since its not going directly to a download page. Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-1271
7444	DEVELOPER-1271	[~paul.robinson] Should I plan on adding this in place of another banner or in addition to the others? Also, what should I put for the "alt" on the image links?	1	1	https://issues.jboss.org/browse/DEVELOPER-1271
7445	DEVELOPER-1271	Looks like the release is delayed a couple days due to dependency on EAP 6.4. Can we push this banner to April 16? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-1271
7446	DEVELOPER-1270	Which pages in particular do you want to change? http://www.jboss.org/products/bpmsuite/overview/ is based on: https://github.com/jboss-developer/www.jboss.org/blob/master/products/bpmsuite/overview.adoc. If you look carefully you can see where the various sections of the asciidoc file are inserted into the page layout. You could edit the adoc file maybe?	1	1	https://issues.jboss.org/browse/DEVELOPER-1270
7447	DEVELOPER-1269	[~paul.robinson] why is this still trying to do deployments? We released Beta1 on Mar 5, and CR1 last week. Surely this shouldn't be still staging old PRs?	1	1	https://issues.jboss.org/browse/DEVELOPER-1269
7448	DEVELOPER-1266	Looks like you've had a copy-and-paste catastrophe ;-) Can you provide the right link?	0	0	https://issues.jboss.org/browse/DEVELOPER-1266
7449	DEVELOPER-1266	Hi [~mfusco], It seems like the link you provided isn't working. Both safari and chrome say the server for the page isn't responding. Is there another link I can use? (I'll try it again later to see if it works) Adela	1	1	https://issues.jboss.org/browse/DEVELOPER-1266
7450	DEVELOPER-1266	Do you mean this url? http://www.ated.ch/corsi/8/devoxx4kids_3142.html Weird, I just tried it both Firefox and Chrome and it works for me. Please let me know. Thanks, Mario	1	1	https://issues.jboss.org/browse/DEVELOPER-1266
7451	DEVELOPER-1266	Hi [~mfusco] Sorry to bother you again. I am adding the event to the http://jboss.org/events/ page, but I need a description for the thumbnail. Can you send me one when you get a chance so I can add the event to this page as well? Thanks!	0	0	https://issues.jboss.org/browse/DEVELOPER-1266
7452	DEVELOPER-1266	How about you create a generic Devoxx4Kids image that we can use for all such events?	0	0	https://issues.jboss.org/browse/DEVELOPER-1266
7453	DEVELOPER-1258	In general, this seems sensible to me. I think we can work-around the expensive nature of doing this indexing, by doing it infrequently and outside of the main indexing. Do you need access to quickstart versions prior to those available today?	1	1	https://issues.jboss.org/browse/DEVELOPER-1258
7454	DEVELOPER-1258	Doesn't it make sense to address this as part of the issue we have to add versionning to all developer materials, thus allowing JBDS to select the materials by target product version?	1	1	https://issues.jboss.org/browse/DEVELOPER-1258
7455	DEVELOPER-1258	[~pmuir], [~tmancini], [~maxandersen], [~akazakov]: dear fearless leaders, what priority should we put on to making quickstarts/examples available *per* runtime version, in Devstudio (and the website)? As currently only the latest version is available. I'm asking because [~paul.robinson] and I need to do some sensible planning for implementing this feature.	1	1	https://issues.jboss.org/browse/DEVELOPER-1258
7456	DEVELOPER-1249	Can this be deleted?	0	0	https://issues.jboss.org/browse/DEVELOPER-1249
7457	DEVELOPER-1248	this is about right. As I mentioned in JBDS-3273, couldn't we get a quickstart_id collection instead? AFAIK, some quickstarts are meant to be used together (typically client & server). Also, how can we add more metadata for each client? I'm thinking JBoss Tools specific things, like eclipse plugin/server requirements	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7458	DEVELOPER-1248	Can you give me some specific examples of where you need the "quickstart_id collection"?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7459	DEVELOPER-1248	{quote} Also, how can we add more metadata for each client? I'm thinking JBoss Tools specific things, like eclipse plugin/server requirements {quote} This would be harder. We'd need a deterministic way of picking that content out of the quickstart code. For example, in this file: https://github.com/jboss-developer/jboss-eap-quickstarts/blob/6.4.x-develop/bean-validation/README.md. For the other meta-data we look for required text patterns (e.g: 'Author: Karel Piwko').	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7460	DEVELOPER-1248	Daniel, how do you get these fields show up in the response to http://dcp.jboss.org/v1/rest/search?content_provider=jboss-developer&content_provider=rht&&field=github_repo_url&field=sys_title&field=sys_tags&query=sys_type:(jbossdeveloper_quickstart)&size=1 ?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7461	DEVELOPER-1248	[~fbricon] what should the value of the 'download' attribute contain?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7462	DEVELOPER-1248	This link downloads the entire repo containing the QS, not the individual QS. Is this what you want? E.g: https://github.com/jboss-developer/jboss-eap-quickstarts/archive/6.3.0.GA.zip BTW, there's no way, that I know of, to download just the quickstart dir from Github as a zip.	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7463	DEVELOPER-1248	[~paul.robinson] the git_commit is being pushed through for all of them that I can tell. I ran a straight print out to a local file and double-checked these items. It's peculiar that the first half of them don't seem to get the updates. Could it have to do with the rest endpoint not actually updating the database? Would Lukas know how to go about this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248

#	Requirement	Questions	Answered	Successfully Answered	URL
7464	DEVELOPER-1248	Can you provide a reproduction steps for us to investigate?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7465	DEVELOPER-1248	Can you provide an update on where you are with this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1248
7466	DEVELOPER-1246	[~paul.robinson] Currently, the /events page has calendar ranges that can be used and by default is showing only current/future events. Is this issue still relevant, or can I close it?	0	0	https://issues.jboss.org/browse/DEVELOPER-1246
7467	DEVELOPER-1242	When will this go into production?	1	1	https://issues.jboss.org/browse/DEVELOPER-1242
7468	DEVELOPER-1218	[~manaRH] We still need Ticket Monster updating. Can you create a separate issue for that?	1	1	https://issues.jboss.org/browse/DEVELOPER-1218
7469	DEVELOPER-1204	Can you assign to Adela, once the wireframes are approved.	0	0	https://issues.jboss.org/browse/DEVELOPER-1204
7470	DEVELOPER-1187	[~paul.robinson] So the Red Hat Event does show up, but the shadowman logo is not appearing next to it (https://www.dropbox.com/s/e9m8n4dlpkvj0p1/Events_featuring_JBoss.png?dl=0). We eventually want it to display like https://www.dropbox.com/s/vezzw1s4gahko1s/jbossdeveloper_getinvolved_events-1200px_png__1728%C3%972160_.png?dl=0, right? Should this be done by styling? The ruby block already differentiates between Red Hat and non-Red Hat events, the css doesn't show any references to the logos.	1	1	https://issues.jboss.org/browse/DEVELOPER-1187
7471	DEVELOPER-1181	Which dcp instance is this? I'm wondering if we have lingering quickstarts where we've changed an id or something. Chances are they aren't returned anymore when people search for them.	0	0	https://issues.jboss.org/browse/DEVELOPER-1181
7472	DEVELOPER-1180	https://github.com/jboss-developer/jboss-stacks/commit/02149f933af5d3b3df2ca40823875e1af6f99efc fixed it for me. Thanks a lot Rafael!	1	1	https://issues.jboss.org/browse/DEVELOPER-1180
7473	DEVELOPER-1170	Yes, it is possible. I would suggest to update relevant mapping configurations and store it into a new branch of Searchisko. I will be happy to review it and then we elaborate a plan of releasing it into production (and staging of course) and merge it. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-1170
7474	DEVELOPER-1166	I think I see what you mean: 1. Visit: http://www.jboss.org/products/datavirt/get-started/ 2. Click on the link to 'Download JBoss Data Virtualization 6.0.0.GA Jar (Installer).' 3. This downloads jboss-dv-installer-6.0.0.GA-redhat-4.jar, yet the instructions tell you to unzip. Is this the issue you are referring to? If so, it's already happening in production, so not relevant to this particular issue. I've opened a new issue for it: https://issues.jboss.org/browse/DEVELOPER-1182 DEVELOPER-1182 aside, is this change good to merge?	0	0	https://issues.jboss.org/browse/DEVELOPER-1166
7475	DEVELOPER-1165	Where abouts would you like this text putting?	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7476	DEVELOPER-1165	Actually, we already have a feature in place to show this, although there are no examples live at the moment. This data normally goes in the blue early release box on the right-hand side of the product page. However, you don't get as much space as you would need for the text above. How about we put a summary in the blue box and then add the text above to the body of the overview page? I can't easily provide you with a mockup at the moment, so this is probably best holding until January. However, we are not pushing any more changes to the site until the 5th of January anyway so it makes little difference. [~dcoughlin1], if you understand what I'm getting at, and you have time, you could raise a PR with these changes: 1) Add the full text above to the body of the product overview page. Maybe straight after the 3 icon block: https://www.dropbox.com/s/8kmn8hdj9yaqes0/Screenshot%202014-12-19%2017.17.53.png?dl=0 2) Add 250 characters of "lorem ipsum" to the tag_line property on the 6.1 Beta download (once you've added that download, as requested in the another issue) in the DV product.yml. See here for an example: https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L49. 250 characters might be too much, but it will give us an idea of what it looks like and how much is a sensible amount of text.	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7477	DEVELOPER-1165	Also, let us know if you want the full text (in the description) adding to the overview page. If you do want it, I have some queries about the text: 1) The text "Big Data technology including Cloudera Impala ..." seems a bit confusing to me. It sounds like DV includes these technologies. I think you mean something like "New Integration with Big Data technologies including ...". Can you clarify this? 2) This sentence is confusing me: "Improving Productivity and Deployment with a new Security audit log dashboard, simplified custom translator, EAP 6.3, RHEL 7, MariaDB and Azul JVM". I think these are separate new things: * Improving Productivity and Deployment with a new Security audit log dashboard * simplified custom translator * EAP 6.3 * RHEL 7 * MariaDB * Azul JVM In which case I understand how the first two items are new things in DV. However, it's not clear to me what you mean with the following four items. Is it support for these technologies that is new? If you do decide to have this text on the main body of the overview page, then you would have a bit more space available than you probably thought you had when producing the original text. Therefore you could make use of lists to clarify the text if you want.	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7478	DEVELOPER-1165	[~dcoughlin1] yes please. Can you add it add the end of the 'detail' section: https://github.com/jboss-developer/www.jboss.org/blob/master/products/datavirt/overview.adoc#detail so that it appears before resources.	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7479	DEVELOPER-1165	How about this: https://www.dropbox.com/s/vetwhfs5eeiz0sl/Screenshot%202015-01-15%2009.36.11.png?dl=0 Changes: * Added the title: "What's new in JBoss Data Virtualization 6.1 Beta?" * Moved the current title down to the beginning of the section * Collapsed the bullets into the opening sentence: "For JBoss Data Virtualization 6.1 Beta, we focused on Big Data, Cloud and other Productivity and deployment improvements.". [~kpalko] and [~kpeeples]: are you happy with these changes?	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7480	DEVELOPER-1165	This screen shot looks good. Will this text be displayed close to the "download" button so that users will know what they are getting when they download? thanks, Kim	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7481	DEVELOPER-1165	Hi Syed, Can you please help craft a short (100 - 250 char) text around What's New in JDV 6.1 for the beta download button? thanks, Kim	1	1	https://issues.jboss.org/browse/DEVELOPER-1165
7482	DEVELOPER-1165	[~srasheed], We've had a think about this and we think the best we can offer at this moment is to add the the ~250 chars description, that you provided above, to the right-hand-bar, with a "read more" link that points to the full list of new features. Can you create a customer portal article for the full feature list? This would be better than linking to the PDF. I appreciate that this might not be exactly what you were hoping for. In which case, can you open a new issue explaining your requirements in some detail. We'll do our best to get to it, but I can say that with our current workload it's unlikely to be in the next few weeks.	0	0	https://issues.jboss.org/browse/DEVELOPER-1165
7483	DEVELOPER-1159	This is in reference to the ../index reference that has been giving jboss.org issues with all of the quickstarts.	1	1	https://issues.jboss.org/browse/DEVELOPER-1159
7484	DEVELOPER-1154	Those links seem to have an erroneous trailing '0'. However, looking at http://www.jboss.org//products/fsw/overview/ and http://www.jboss.org//products/fsw/ I don't see the broken links. Can you double check? It might be fixed now.	1	1	https://issues.jboss.org/browse/DEVELOPER-1154
7485	DEVELOPER-1148	[~paul.robinson] Can I comment this out in Blinkr.yaml?	1	1	https://issues.jboss.org/browse/DEVELOPER-1148
7486	DEVELOPER-1148	I've just given permission to edit via your gmail address. Can you re-check?	1	1	https://issues.jboss.org/browse/DEVELOPER-1148
7487	DEVELOPER-1148	[~paul.robinson] None of these are on the spreadsheet anymore. Do I need to hit Lukas up for a reindex?	1	1	https://issues.jboss.org/browse/DEVELOPER-1148

#	Requirement	Questions	Answered	Successfully Answered	URL
7488	DEVELOPER-1144	{quote} modify the instructions for zip vs install {quote} In step 3, we tell the user how to install from a zip. Are you saying we should add instructions for how to install from an installer too? Ideally we would display different instructions based on what artefact is downloaded, but again we'd need DEVELOPER-712 to do this. In the short term we could add extra instructions for the installer. Is that what you would like?	1	1	https://issues.jboss.org/browse/DEVELOPER-1144
7489	DEVELOPER-1144	Does JBDS 8 and 7, with the IS plugin, work with both datavirt 6.0.0.GA and 6.1.0.ALPHA? If so, given that we can't yet customise the get-started page by download, we could just link to the JBDS 8 and IS instructions: http://www.jboss.org/products/devstudio/get-started/#ExtraSection. Could that work?	1	1	https://issues.jboss.org/browse/DEVELOPER-1144
7490	DEVELOPER-1139	[~paul.robinson] My plan is to comment this out until a new link is provided. Is that okay? If not, who should I contact to get the correct link?	1	1	https://issues.jboss.org/browse/DEVELOPER-1139
7491	DEVELOPER-1131	Are we wanting to use the README.md files for this or something else? The README file isn't quite up to par with the rest of our developer materials.	1	1	https://issues.jboss.org/browse/DEVELOPER-1131
7492	DEVELOPER-1103	{quote} JBoss Developer Studio provides an easy-to-use integration development environment built on Eclipse. The JBoss Developer Studio Integration Stack provides tooling for developing, configuring and deploying Fuse applications. {quote} Is it this text that you want moving? Also, I'm not sure what you mean by the "runtime download button". Can you explain or provide a screenshot?	1	1	https://issues.jboss.org/browse/DEVELOPER-1103
7493	DEVELOPER-1103	Aileen, the jbds page outlines that. Not much room if want some simple button added. Got a suggestion on how to fix it ? /max http://about.me/maxandersen	1	1	https://issues.jboss.org/browse/DEVELOPER-1103
7494	DEVELOPER-1103	Add this tex tunder the JBDS download button? The JBoss Developer Studio Integration Stack provides tooling for developing, configuring and deploying Fuse applications.	1	1	https://issues.jboss.org/browse/DEVELOPER-1103
7495	DEVELOPER-1103	Is it intentional that the 2nd download button is a different size and colour? I'm not a UX person, but would have kept them consistemt.	1	1	https://issues.jboss.org/browse/DEVELOPER-1103
7496	DEVELOPER-1075	[~sparulka] How important is it to change the text under "JBoss xPaaS services for OpenShift"? This is currently generic across all products, and the text you proposed wouldn't make sense for EAP. We can make this more customisable, but it would make maintenance harder and more error-prone.	1	1	https://issues.jboss.org/browse/DEVELOPER-1075
7497	DEVELOPER-1075	[~dcoughlin1] Can you work on this today please? Don't worry about the change to the download page, I can do that.	1	1	https://issues.jboss.org/browse/DEVELOPER-1075
7498	DEVELOPER-1075	[~paul.robinson] For the resources portion, this information is rendered from /_layouts/product-resources.html.slim. I can remove all of the entities in the product.yml and leave the 'See More Documentation' (https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Fuse)? Is there a way to do this without changing the template .slim file? ~Dan	1	1	https://issues.jboss.org/browse/DEVELOPER-1075
7499	DEVELOPER-1063	[~paul.robinson] Would it be better if I address only JBoss Developer in this? For now, I am going to list each authors errors in separate Issues. Ex: "Vimeos with Duplicate/Truncated Descriptions - Eric Schabell" With each of the issues.	1	1	https://issues.jboss.org/browse/DEVELOPER-1063
7500	DEVELOPER-1057	Sameer, The page you are referring to provides results from a search. In this case you are searching for all developer materials that are related to the Fuse product. We don't currently provide customisable ordering, but we could in the future. However, it would more likely be the ability to order by recency, difficulty, duration etc. What ordering algorithm did you use to establish the above order?	1	1	https://issues.jboss.org/browse/DEVELOPER-1057
7501	DEVELOPER-1057	Ok, 1) is now live: http://www.jboss.org/products/fuse/get-started/ 2) We are the process of improving the entire developer-materials UX. In the process we will design how to do DEVELOPER-885. So it's in progress, but it will be a while. Do you have a urgent requirement for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-1057
7502	DEVELOPER-1057	(2) as soon as possible please..lot of pressure to improve the overall getting started experience for Fuse..DEVELOPER-1053 was very important and I am glad we have done that..however we still need to make the videos easily consumable.	1	1	https://issues.jboss.org/browse/DEVELOPER-1057
7503	DEVELOPER-1057	Given that we have alternatives, I think this current issue is a "won't fix". Could you create a new issue for the guides? If you can identify roughly what you want to appear in each guide, we can use it as input for the general design work around the guides infrastructure.	0	0	https://issues.jboss.org/browse/DEVELOPER-1057
7504	DEVELOPER-1056	Jason, Can you provide examples of what you think the RDF should look like for these items? I wasn't totally happy with containsProjects and containedWithinProjects, but couldn't think of anything better. I guess the problem is that it sounds like the codebase is contained within another project, rather than the other project simply uses the other project as a dependency and maybe ships with it in its binary. I think "consumes" and "consumedBy" is better, but feel like there's something clearer that is eluding us. [~pmuir], you are usually good at coming up with names, what do you think?	1	1	https://issues.jboss.org/browse/DEVELOPER-1056
7505	DEVELOPER-1053	After discussion with Sameer and Christina we would like to do the following. I attached the markdown file as well: Replace the 'Try a quickstart or example. Watch a video' with 'Build your first application' and then the content below which is the markdown I tested in a markdown editor: Follow the below series to build your first application. You will build some simple examples as well as build a Home Loan Application using JBoss Fuse to integrate different enterprise systems. The Home Loan Application accepts a loan request from the customer and provides a loan decision including a home mortgage rate. The series walks you through each step of the application development lifecycle from start to finish. |Demonstration Description | Material| |----------|---------| | What is JBoss Fuse? | Demo Source: https://github.com/kpeeples/jboss-fuse-websockets-demo Video 1: http://vimeo.com/user16928011/fusetting-started-part1 Video 2: http://vimeo.com/user16928011/fuse-getting-started-part2 Video 3: http://vimeo.com/user16928011/fuse-getting-started-part3 | | What is Apache Camel? What are Enterprise Integration Patterns (EIP)? | Demo Source: https://github.com/kpeeples/fuse-eip-quickstart | | Build the Home loan application using EIP's | Demo Source: https://github.com/weimeilin79/homeloan-part1 Video 1: https://vimeo.com/99901083 | | Business requirements change. Extend the home loan application. New SaaS applications? No problem.. | Demo Souirce: https://github.com/weimeilin79/homeloan-part2] Video 1: https://vimeo.com/100685377] Video 2: https://vimeo.com/100872412] | | Business expanding. 7506	DEVELOPER-1053	When will this be live?	0	0	https://issues.jboss.org/browse/DEVELOPER-1053

#	Requirement	Questions	Answered	Successfully Answered	URL
7507	DEVELOPER-1047	Some more issues: * Tabbing though the items still (regularly) selects the 'required' text. Reproduce by trying to select the first text-box on the first page and then pressing tab a few times. Notice that it keeps on selecting the 'required' text field. * Hitting on the 'down arrow' on the 'team member role selector' creates a blue rectangle, rather than the drop-down. Clicking further to the left works as expected. This also happens if you click on a person's name in the right hand box. See here: https://www.dropbox.com/s/uxd6412dv1rave3/Screenshot%202014-10-20%2009.19.51.png?dl=0. This isn't a major issue, so just fix if it's simple. * Add this text to the 'Versions' page to make it clearer what we expect here: "Use this page to provide details of recent releases. There's no need to provide every single release for the project. For example, you could provide the latest GA release, the latest early-access release from an upcoming GA release and maybe the latest GA release that is available in a current product. Looking at the RDF produced for Narayana: https://github.com/jbosstm/project-metadata/blob/master/narayana.rdf * Should the 'Project Lead' be in a 'maintainer' block? * Despite adding two releases only one (the second one I added to the form) is present. * The description for the JTA specification is missing I temporarily added a Twitter account (Narayana has no social media). This is the result: {code} <foaf:account> <foaf:OnlineAccount> <rdf:type rdf:resource="http://xmlns.com/foaf/0.1/OnlineChatAccount" /> <foaf:accountServiceHomepage rdf:resource="http://www.twitter.com" /> <foaf:accountName>removeThisSection</foaf:accountName> </foaf:OnlineAccount> </foaf:account> {code} Should the "rdf:resource" be set to "http://xmlns.com/foaf/0.1/OnlineChatAccount"? I'm not sure how important this is.	1	1	https://issues.jboss.org/browse/DEVELOPER-1047
7508	DEVELOPER-1043	[~james.cobb] - do you know when you will be ready to pass this over to me?	1	1	https://issues.jboss.org/browse/DEVELOPER-1043
7509	DEVELOPER-1043	Yes, only some is available at the moment. Does it look OK with the limited info?	0	0	https://issues.jboss.org/browse/DEVELOPER-1043
7510	DEVELOPER-1040	Dan, can you create these as I still don't have access myself.	1	1	https://issues.jboss.org/browse/DEVELOPER-1040
7511	DEVELOPER-1012	I've noticed some of the requests made for contributors are being aborted because there are others going on. Don't we want all of those to go through? cc [~wesbos]	1	1	https://issues.jboss.org/browse/DEVELOPER-1012
7512	DEVELOPER-1012	Don't we basically have this done?	0	0	https://issues.jboss.org/browse/DEVELOPER-1012
7513	DEVELOPER-1012	I think so, [~pmuir] as the reporter, can you confirm?	1	1	https://issues.jboss.org/browse/DEVELOPER-1012
7514	DEVELOPER-1011	I don't think that makes any sense. What do we fallback to?	0	0	https://issues.jboss.org/browse/DEVELOPER-1011
7515	DEVELOPER-1009	[~paul.robinson] Apparently, I can't assign this to you. What are the next steps?	1	1	https://issues.jboss.org/browse/DEVELOPER-1009
7516	DEVELOPER-996	[~james.cobb] will the homepage banners always be either png or jpg, or could they be either in the future?	1	1	https://issues.jboss.org/browse/DEVELOPER-996
7517	DEVELOPER-994	[~pmuir] Where did we decide to host our own extension schema, jboss.org? [~paul.robinson] I'm a bit confused by your #4. What do you mean we don't allow projects to provide a logo?	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7518	DEVELOPER-994	[~lightguard], [~pmuir]: We currently have James make an image at the right size, quality and dimensions and put it on static.jboss.org manually in a predictable location. This is not ideal, but it ensures we get good quality logos that fit correctly on the page. My comment was more a statement of what we do now, to open up discussion. Rather cryptic, I agree ;-) Anyway, if we keep the logo field, what is it used for? I see these options: 1) Grab the logo they suggest and do what we can with it automatically. Maybe we could validate the minimum dimensions in the DOAP form. 2) Have James use the logo as a suggestion. He can chose to use as is, modify it, or recreate entirely, then manually add it to static.jboss.org. I appreciate that 1) is more in-line with our goals around self-service, but I fear we will get a real mess of logos.	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7519	DEVELOPER-994	Also, # Can the description field be made larger? # We should probably limit the number of characters for "Project Name", "Short Description" and "Description". [~james.cobb] do you have any limits imposed by your mockup? # What is "Browse URL"? # Make it clear which are optional and which mandatory. # What is "Community Account"? # Allow people to be removed, currently they can just be added. If you make a mistake, I think you have to start again with the entire form. # The logo URL should not be mandatory # User Forum and Developer forum # IRC/Chat room address # Why does the form need both a "Generate DOAP" and "Download DOAP" link? Isn't the latter enough?	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7520	DEVELOPER-994	I have no character limits in place at this point. Do you have a suggestion for the max number of characters?	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7521	DEVELOPER-994	Before I forget... Should the "release name" be mandatory?	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7522	DEVELOPER-994	Sorry, we have had no requests for design on this page but we can. Do we want this to also have the Developer Look and Feel?	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7523	DEVELOPER-994	Is this a project somewhere? Perhaps we can tweak the css a bit.	1	1	https://issues.jboss.org/browse/DEVELOPER-994
7524	DEVELOPER-994	[~lightguard], [~james.cobb]: Sorry for being unclear. I meant to ask: {quote} James Cobb: do you have any limits imposed by your *upstream projects page* mockup? {quote} The mockup of the upstream projects page has several areas of text. If we allow projects to provide too much text, it will not fit in those areas as currently designed. We can truncate, but better to have the project leads provide something that fits in the first place. I agree, we don't want any visual-design work done on this page as it is internal only. We might need UX input though as a lot of people are going to be filling this in without having one of us sat by their side explaining how to do it.	0	0	https://issues.jboss.org/browse/DEVELOPER-994
7525	DEVELOPER-979	[~paul.robinson] I'm not sure that I fully understand this. So I found the different README.mds that are generating the errors. Should I create separate issues per quickstart and list the respective broken links?	1	1	https://issues.jboss.org/browse/DEVELOPER-979
7526	DEVELOPER-979	How are you getting on with this?	1	1	https://issues.jboss.org/browse/DEVELOPER-979
7527	DEVELOPER-958	I notice you re-opened this 2 days ago. Is there something outstanding on this issue?	1	1	https://issues.jboss.org/browse/DEVELOPER-958
7528	DEVELOPER-958	Should this jira be assigned to [~lvlcek] also ?	1	1	https://issues.jboss.org/browse/DEVELOPER-958
7529	DEVELOPER-958	[~rafabene] Can you specify exactly which items to be removed? A DCP query is probably the best if you can construct one. [~lvlcek] does this make sense, or would you like the list in some other format?	1	1	https://issues.jboss.org/browse/DEVELOPER-958
7530	DEVELOPER-958	[~rafabene] the above link currently selects 29 documents in production DCP. Do you want me to remove all these documents from DCP (production and if available on staging then also on staging)?	1	1	https://issues.jboss.org/browse/DEVELOPER-958
7531	DEVELOPER-958	[~rafabene] I deleted 29 documents from production and 59 from staging. Shall we move the ticket to RESOLVED state now?	1	1	https://issues.jboss.org/browse/DEVELOPER-958
7532	DEVELOPER-956	[~lkrzyzanek] what about urls like these: https://community.jboss.org/people/tomjenkinson https://community.jboss.org/en/datagrid http://community.jboss.org/wiki/MavenGettingStarted-Users Will they be moved to developer.jboss.org? Will redirects be put in place?	1	1	https://issues.jboss.org/browse/DEVELOPER-956
7533	DEVELOPER-949	How about we set it manually and then document that this link needs updating whenever a new TiMo release is added to the site? The documentation would go as an extra step in https://github.com/jboss-developer/www.jboss.org/blob/master/CONTRIBUTING.md#updating-developer-materials-versions. I agree this is still error-prone, but it's simpler and doesn't preclude a more rigorous approach should it prove problematic in the future.	0	0	https://issues.jboss.org/browse/DEVELOPER-949

#	Requirement	Questions	Answered	Successfully Answered	URL
7534	DEVELOPER-935	Does it need to be Font-Awesome? What about this icon: http://theblogicon.com/	1	1	https://issues.jboss.org/browse/DEVELOPER-935
7535	DEVELOPER-933	[~pmuir] - can you create an experiment in Google analytics? The instructions are here: https://developers.google.com/analytics/solutions/experiments-client-side#configure We are doing a javascript swap-out so we don't need urls, just insert fake ones as it says.	1	1	https://issues.jboss.org/browse/DEVELOPER-933
7536	DEVELOPER-933	[~pmuir] did they give you an experiement code? Is it moRTWrZ2RgCt2XT5fJPqrQ?	1	1	https://issues.jboss.org/browse/DEVELOPER-933
7537	DEVELOPER-908	[~wesbos] AM i right in thinking that we now expire this data after a few mins/hrs? If so, do we do that on RHD, JBD or both?	1	1	https://issues.jboss.org/browse/DEVELOPER-908
7538	DEVELOPER-907	What do we want each of those to say, do we have approved text somewhere?	1	1	https://issues.jboss.org/browse/DEVELOPER-907
7539	DEVELOPER-893	Hi [~pmuir], Do you want the link in the technologies secondary navigation to take you to the current /research page or to the current research/centre page? I was a bit confused. * http://www.jboss.org/research/ * http://www.jboss.org/research/centre/	0	0	https://issues.jboss.org/browse/DEVELOPER-893
7540	DEVELOPER-864	Nick, We need the downloads configuring in the download manager, before we can put this on the site. Can you provide us with the CDN urls for each file download you added? We'll get the download-manager updated to handle them.	1	1	https://issues.jboss.org/browse/DEVELOPER-864
7541	DEVELOPER-864	[~paul.robinson], I don't see beta 3 in customer portal yet. Is there another place that I should look to get the SHA-256 numbers?	1	1	https://issues.jboss.org/browse/DEVELOPER-864
7542	DEVELOPER-864	[~nickboldt], [~dcoughlin1]: Thanks, I've merged it now. Did either of you check that the download file sizes are correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-864
7543	DEVELOPER-863	Here's my list of pages: {code} _site/products/datagrid/overview/index.html (wording change?) _site/products/operationsnetwork/community/index.html _site/products/operationsnetwork/developer-materials/index.html _site/products/operationsnetwork/download/index.html _site/products/operationsnetwork/get-started/index.html _site/products/operationsnetwork/overview/index.html _site/products/operationsnetwork/resources/index.html _site/quickstarts/operationsnetwork/index.html _site/quickstarts/operationsnetwork/rhq-client-cli/index.html _site/quickstarts/operationsnetwork/rhq-client-ejb/index.html _site/video/vimeo/16171314/index.html _site/video/vimeo/16182001/index.html _site/video/vimeo/19992280/index.html _site/video/vimeo/19992280/index.html (remove?) _site/video/vimeo/25855285/index.html (is this ON?) _site/video/vimeo/76471307/index.html {code} Let me know what to do with the ones I had questions about	1	1	https://issues.jboss.org/browse/DEVELOPER-863
7544	DEVELOPER-863	What about the quickstarts and videos, those are staying?	0	0	https://issues.jboss.org/browse/DEVELOPER-863
7545	DEVELOPER-848	Can we use this one? http://www.redhat.com/about/events-webinars/webinars/20140619-data-driven-business-decisions-made-easy	0	0	https://issues.jboss.org/browse/DEVELOPER-848
7546	DEVELOPER-819	So, I have been having issues finding the Narayana broken link. Can I use GateIn or another project as the test?	1	1	https://issues.jboss.org/browse/DEVELOPER-819
7547	DEVELOPER-819	Just so that I don't add the links incorrectly into blinkr.yaml, should it look like this? https://www.dropbox.com/s/isz8z2x1pxf1hjc/blinkr_regex.jpg	1	1	https://issues.jboss.org/browse/DEVELOPER-819
7548	DEVELOPER-819	[~dcoughlin1] I'm not sure that ignore is correct. I would have thought you could list the URL verbatim, without having to use a regex or escape sequence. See: https://github.com/pmuir/blinkr/blob/master/README.md#usage. I would do: {code} - url: https://github,com/jbosstm #BLACKTIE-449 message: Couldn't resolve host name {code} @pmuir is this correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-819
7549	DEVELOPER-819	Can I continue creating JIRA's in the respective projects? I am just checking to make sure that no changes need to be made.	1	1	https://issues.jboss.org/browse/DEVELOPER-819
7550	DEVELOPER-807	Sounds good. I have been searching for the actual training demonstrations on Google. It looks like they have been changed over to Eric Schabell's .org page.	1	1	https://issues.jboss.org/browse/DEVELOPER-807
7551	DEVELOPER-807	[~paul.robinson] I don't see any links to howtojboss within the project anymore, it looks like new links were added. Should this be closed?	1	1	https://issues.jboss.org/browse/DEVELOPER-807
7552	DEVELOPER-807	[~paul.robinson] I'm not sure if I should've created a new issue for this DEVELOPER-1117; however, it looks like the domain for howtojboss.com has expired. Should Eric Schabell be looped in on this?	1	1	https://issues.jboss.org/browse/DEVELOPER-807
7553	DEVELOPER-806	[~dcoughlin1]: You need to fix the filename to point to the bpmsuite download. This is already done in brms/product.yml; see this line "filename: jboss-bpmsuite-6.0.1.GA-source.zip". Can you raise a PR , to change the links for each dup. It's a known issue that clicking on the link redirects to the wrong getting-started page.	1	1	https://issues.jboss.org/browse/DEVELOPER-806
7554	DEVELOPER-805	[~c.wong] what would you like us to do with that link? remove it, fix it or replace it?	1	1	https://issues.jboss.org/browse/DEVELOPER-805
7555	DEVELOPER-804	[~dcoughlin1] can you remove these links. [~sparulka] if you decide to add some new ones, after this is resolved, can you create a new issue.	1	1	https://issues.jboss.org/browse/DEVELOPER-804
7556	DEVELOPER-791	I don't see the link at the top of the page. Can you provide a screenshot of the link?	0	0	https://issues.jboss.org/browse/DEVELOPER-791
7557	DEVELOPER-790	[~lightguard]: Sure, I appreciate that we can't get a release of Awestruct just for our stuff. Do you know roughly when the next release is due? I'm thinking it might be safer to wait for that. The current build time of 13m is still pretty good.	1	1	https://issues.jboss.org/browse/DEVELOPER-790
7558	DEVELOPER-782	[~lightguard] We need to be able to identify which projects appear in the featured area. I don't think it makes sense to put this data in Searchisko as the project data is shared, so we shouldn't be adding stuff specific to JBoss Developer in there. How about we make a .yml file that lists the three featured projects? The featured projects are of the page is then generated at site build time, with the "All Projects" area continuing to be populated with JavaScript?	1	1	https://issues.jboss.org/browse/DEVELOPER-782
7559	DEVELOPER-782	[~paul.robinson] it was [~james.cobb] - I think they were 5 max, we can do three no problem. Which three should we feature right now?	1	1	https://issues.jboss.org/browse/DEVELOPER-782
7560	DEVELOPER-782	[~james.cobb] - we are going to use three featured projects - Narayana, Weld and DeltaSpike. Can you gives me the images for those? Or ideally host them? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-782
7561	DEVELOPER-781	Do I need access to dcpbeta-searchisko to add the detail for this webinar? I see that the JSON is coming from here, but I'm not sure how to add the content information.	1	1	https://issues.jboss.org/browse/DEVELOPER-781
7562	DEVELOPER-738	[~maxandersen] My problems with a single overview page were: 1) Where do we weave it into the current navigation? 2) Is it really what a user wants to see? Seems like information overload to me. My preference would be to slice it by product and display the appropriate slice on each product page.	1	1	https://issues.jboss.org/browse/DEVELOPER-738
7563	DEVELOPER-738	[~maxandersen] do you mean https://developer.jboss.org/maven or https://www.jboss.org/maven? Did you have a particular system in-mind to host this page? Either way, I think we need to revisit how we are handling Boms and Archetypes on the developer portals (www.jboss.org and developers.redhat.com). I also take your point that a single page showing everything would be useful as well as the "product view" on the product pages.	1	1	https://issues.jboss.org/browse/DEVELOPER-738
7564	DEVELOPER-733	[~petemuir] [~pmuir] Can you please push this to production ASAP? Thanks!	1	1	https://issues.jboss.org/browse/DEVELOPER-733

#	Requirement	Questions	Answered	Successfully Answered	URL
7565	DEVELOPER-717	Yes, I suppose we could further define what "Stand-alone" means, but when you juxtapose it next to "With EAP" I would like to think that most users would see "ah, it's the same thing but one has EAP and one does not". Explaining the update sites would take more than a couple words... if you've never used JBoss Central within JBDS, a picture is much more helpful. http://tools.jboss.org/documentation/whatsnew/jbosstools/4.2.0.Beta2.html#ui-changes Maybe we could change that column into optional links to a walkthru install guide [1] / more info [2] / getting started guide [3]? URL in the products.yml could vary but the link label could just be "More Info" or "Documentation" ... maybe [~mmurray] or [~maxandersen] have an opinion on how to best use that space? [1] http://tools.jboss.org/documentation/videos/jbds5_installation.html (needs updating to JBDS 8) [2] http://tools.jboss.org/documentation/index.html or https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/8.0/ [3] https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/7.1/html/Getting_Started_Guide/index.html (needs a new version for JBDS 8)	0	0	https://issues.jboss.org/browse/DEVELOPER-717
7566	DEVELOPER-701	We've gone back and forth on this topic many times it feels like. I never remember the final result. At one point we discussed no longer showing these - as they should exist on MeetUp and we would just pull in the events. I think Mark N. advocated for still having some information about the locations of user groups on JBoss Developer, which I could see. If we want something on JBoss Developer, can we talk as a group about what the requirements are - what information do we think JBoss Developer should own in this space? Then it can get assigned to me.	1	1	https://issues.jboss.org/browse/DEVELOPER-701
7567	DEVELOPER-683	[~paul.robinson] new the data has been re-indexed as part of upgrade to 1.1.0. Can you check please? Resolving...	1	1	https://issues.jboss.org/browse/DEVELOPER-683
7568	DEVELOPER-677	I'm not saying stay with the status quo - I'm saying we should add blog title, but not get rid of the blurb. Part of writing good blog posts should be writing the meta-description that search engines use (and we're pretty much acting as a search engine here). http://blog.hubspot.com/marketing/how-to-write-blog-post-simple-formula-ht (meta description section). http://www.socialmediaexaminer.com/26-tips-for-writing-great-blog-posts/ (#4 - description). Now - I can't disagree with the fact that a lot of people don't do this. We can send out of "how to write good blog posts" snippet to the core. But even if they still don't write good descriptions - are we losing anything? If we drop down to just title & name - it means that you don't get any extra useful information even for those bloggers who take the time to do this. If we leave the blurb, it means that some of them are not that useful if people don't use them right (and maybe having useless blurbs shown will help them start to do this right!), but you still have the title/author to look at as we would change all blog posts to show the title that we are not today.	0	0	https://issues.jboss.org/browse/DEVELOPER-677
7569	DEVELOPER-673	Would DEVELOPER-1082 solve this issue?	0	0	https://issues.jboss.org/browse/DEVELOPER-673
7570	DEVELOPER-672	The Vimeo player is HTML5 in browsers that support it (around 65%), and automatically degrades to flash in browsers that don't support it. I suspect that [~ssiddique]'s customers are using old versions of Internet Explorer that doesn't support HTML5 anyway. Vimeo offers the option to download the file using MP4 (270p, 380p, 720p) and MOV (720p), if you visit the vimeo page. We need to understand more from [~ssiddique] about what in particular is locked down in this environment - is it old browsers? Is it the ability to install Flash? Is it that particular websites (inc vimeo) are banned?	0	0	https://issues.jboss.org/browse/DEVELOPER-672
7571	DEVELOPER-668	Which JS are we talking about? I'm a bit confused there. Would this be displayed when they download something?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7572	DEVELOPER-668	I'm seeing js that references thank you, maybe it's the same as the T&C, can anyone verify?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7573	DEVELOPER-668	I've read these three or four times now and I'm still not 100% sure what needs to be done here, sorry (maybe because the title and description no longer have much to do with the current ideas in the comments). We have a javascript call that does something for thankyou after we download, and we have a REST call to determine the status of the T&C for the logged in user. Are we saying we need to check the status, display the T&C if they haven't agreed, log that somewhere then proceed to the download?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7574	DEVELOPER-668	My understanding is that we need to add a banner of some-sort to here: http://www.jboss.org/terms-and-conditions/. The banner would identify if the user has already signed the $0 subscription. This information is discovered by a REST call, to Libor's service. I think Libor's service requires you to specify a download file to see if the user has agreed to the licence on that file. I guess we could pick a file with the $0 licence, but that seems a bit brittle as that file's license could change or it could be removed. Am I missing something here?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7575	DEVELOPER-668	What we need is: 1) User logs in 2) User visits /terms-and-conditions in their web browser by typing in the address 3) If user has signed the t&c show, using a banner, that they have signed the t&c, and on what date. Specifically, Libor's service is one you can query based on the logged in user. David's service requires you to do a download to get thie info.	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7576	DEVELOPER-668	[~lightguard] Make sure you login to the right SSO server. I got this to work: 1) Visit https://community-stg.jboss.org 2) Login 3) Visit https://community-stg.jboss.org/api/custom/v1/account/info However, I have not signed the agreement in the community-stg environment. [~lkrzyzanek] how would I do that?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7577	DEVELOPER-668	[~lkrzyzanek], does this endpoint support CORS? Looks like I'm blocked by not actually being able to make the call to the service.	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7578	DEVELOPER-668	My understanding is that this page is on Magnola: http://www.jboss.org/developer-program/termsandconditions. [~lkrzyzanek] is this correct? [~lightguard] is there some other T&C page that you were thinking about and if so, where is it linked from?	1	1	https://issues.jboss.org/browse/DEVELOPER-668
7579	DEVELOPER-664	[~petemuir] ok, it is logo :-) If I am not mistaken then all is needed is something like: {code} var template = "<li class=\"upstream\">" + "<div class=\"defaultprojectimage\">" + "<img onerror=\"this.style.display='none'\" src=" + "\"http://static.jboss.org/" + (props.specialIcon || props.sys_project) + "/images/" + (props.specialIcon || props.sys_project) + "_200x150.png\"> " + "<h3 class=\"solution-name\">" + props.projectName + "</h3> "; {code} [here|https://github.com/jboss-developer/www.jboss.org/blob/master/javascripts/projects.js#L76]. Of course this is hack-ish but illustrates the idea. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-664
7580	DEVELOPER-664	so specialIcon essentially overrides the project name in this case? Wouldn't it just be better to put the correct icon in the correct place on static?	1	1	https://issues.jboss.org/browse/DEVELOPER-664
7581	DEVELOPER-664	{quote} Wouldn't it just be better to put the correct icon in the correct place on static? {quote} From MPOW yes.	1	1	https://issues.jboss.org/browse/DEVELOPER-664

#	Requirement	Questions	Answered	Successfully Answered	URL
7582	DEVELOPER-664	[~dhladky] [~lvlcek] we don't seem to have specialIcon field available in http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?sys_type=project_info&field=_source&query=NOT+archived%3Atrue+AND+hibernate&size=500 at all. Do you know why?	1	1	https://issues.jboss.org/browse/DEVELOPER-664
7583	DEVELOPER-664	BTW, the thing with {{project_info}} data is that we do not have fully automated way of updating it right now. The way how the data gets from the source (like property files on github and Magnolia) to DCP is quite complicated right now and some scenarios need careful manual interaction: - like renaming project or project keys - what should happen if one project is removed from the sources? We probably should not remove it from DCP automatically - etc ... I do not like it but can not think of quick fix for now. It can be quite a pain to keep all DCP instances in sync due to this as well. This all being said we would appreciate if you can report us all changes to {{project_info}} data that you are aware of. This can help us in keeping the data in shape. Hopefully we will have better and more transparent way of getting this data to DCPs.	0	0	https://issues.jboss.org/browse/DEVELOPER-664
7584	DEVELOPER-655	How can I filter by tags via the DCP? Seems this url (a regular buzz url + sys_tags on the end), doesn't filter for that tag http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?field=sys_url_view&field=sys_title&field=sys_contributors&field=sys_description&field=sys_updated&field=author&field=sys_tags&query=&size=8&sys_type=blogpost&sortBy=new-create&sys_tags=EAP	0	0	https://issues.jboss.org/browse/DEVELOPER-655
7585	DEVELOPER-635	Hi Pete: Attached is image file. I am still waiting for URL for whitepaper from web team to upload to resource center. Is there a place where I can review the new page? Thanks you so very much. Regards, Syed Rasheed Ph: 978.589.1032(o) | 206-696-6266(m) Business Innovation Powered By Red Hat JBoss Middleware	1	1	https://issues.jboss.org/browse/DEVELOPER-635
7586	DEVELOPER-632	{quote} (6) Under the downloads page https://www.jboss.org/products/fsw/download/ Unde the 'Prefer to use Upstream product version? Add Apache Camel (6) Under community https://www.jboss.org/products/fsw/community/ Include links to following projects (in addition to the existing projects): Apache Camel, Apache ActiveMQ, Apache CXF {quote} Requested [~rdavies] to submit the data so we can link to it.	0	0	https://issues.jboss.org/browse/DEVELOPER-632
7587	DEVELOPER-628	Is this a duplicate of DEVELOPER-628? Or maybe it should be rolled into that issue.	1	1	https://issues.jboss.org/browse/DEVELOPER-628
7588	DEVELOPER-626	Do the table cells have to be so narrow as to cause line wrapping? Why not make *Version* and *Release Date* narrower and use the recovered horizontal space to not have to wrap "Stand- alone)" ? In fact if you drop the *Description* column entirely, since it's redundant to the *Download* column, you will likely have enough horizontal space to not have to line-wrap anything in the *Download* column. Is that doable?	1	1	https://issues.jboss.org/browse/DEVELOPER-626
7589	DEVELOPER-620	[~ray.ploski] what do you mean by "Out of sync"? Can you provide some specific examples?	0	0	https://issues.jboss.org/browse/DEVELOPER-620
7590	DEVELOPER-605	I am confused on this. The fusebyexample link redirects to http://www.jboss.org/products/amq/resources/. What information should I be adding?	1	1	https://issues.jboss.org/browse/DEVELOPER-605
7591	DEVELOPER-587	We have it in the address bar, but that's probably not intuitive for people. Should we add this to the metadata section?	0	0	https://issues.jboss.org/browse/DEVELOPER-587
7592	DEVELOPER-565	Is this relevant any longer?	0	0	https://issues.jboss.org/browse/DEVELOPER-565
7593	DEVELOPER-565	[~dcoughlin1] What did you have in mind for this issue?	1	1	https://issues.jboss.org/browse/DEVELOPER-565
7594	DEVELOPER-565	[~ray.ploski] I know you wanted me to add this a while back. Did you want documentation on how to add new releases to the products pages?	0	0	https://issues.jboss.org/browse/DEVELOPER-565
7595	DEVELOPER-552	[~kpeeples] Are you providing Fuse docker stuff? If not, do you know who is?	1	1	https://issues.jboss.org/browse/DEVELOPER-552
7596	DEVELOPER-549	[~kpeeples] are you providing A-MQ docker stuff? If not, do you know who is?	1	1	https://issues.jboss.org/browse/DEVELOPER-549
7597	DEVELOPER-517	Can you fix this [~wesbos] please?	1	1	https://issues.jboss.org/browse/DEVELOPER-517
7598	DEVELOPER-505	[~crobson] This is on the site now, but we still need it in the download manager (http://www-beta.jboss.org/download-manager) - as [~paul.robinson] is away, can you add it there? Assign back to me when done.	1	1	https://issues.jboss.org/browse/DEVELOPER-505
7599	DEVELOPER-505	[~james.cobb] - Can you take a look at the beta info in the right rail? It appears we really could use some sort of grouping mechanism in this case so the description & the downloads look like a single message in the right rail, not two separate entities.	1	1	https://issues.jboss.org/browse/DEVELOPER-505
7600	DEVELOPER-491	I think most of the code is there to do this now (if we have the info on their profiles of course). However, we don't have a standard way to display this. [~crobson] what do you think?	1	1	https://issues.jboss.org/browse/DEVELOPER-491
7601	DEVELOPER-491	I put together a quick mock-up of how I'm thinking this should work from an interactive standpoint. I think this works for the quickstarts, videos, etc where you have authors, and the get involved page quite well. We might need to consider how this would apply to to technology overview page, videos on the product overview pages, etc. where we have more dedicated space today to show the user information. [~james.cobb] - can you take this and consider the visual styling?	1	1	https://issues.jboss.org/browse/DEVELOPER-491
7602	DEVELOPER-491	Will do some design work on this. [~wesbos] - Would this be a fixed overlay box size? If so, we'll need to make it large enough to handle long names. [~lkrzyzanek] - Libor, is there any way to find out our longest username?	1	1	https://issues.jboss.org/browse/DEVELOPER-491
7603	DEVELOPER-468	[~crobson] [~wesbos] - I reviewed the changes in hotgloo and I think you're right and we should be able to incorporate those elements we already have on other pages. Does that work for you Wes or do you want a specific PSD of this?	1	1	https://issues.jboss.org/browse/DEVELOPER-468
7604	DEVELOPER-465	[~crobson] [~james.cobb]: Can you review?	1	1	https://issues.jboss.org/browse/DEVELOPER-465
7605	DEVELOPER-462	Hrm, i see we are specifying _source as the field, does that mean it searches all the subfields? I was getting partials back when doing the searchbar	0	0	https://issues.jboss.org/browse/DEVELOPER-462
7606	DEVELOPER-462	Cool, [~lvlcek] or [~velias], is there something we need to do in our searching to make that work without always doing a wildcard search behind the scenes, or is that just the way need to make this work?	1	1	https://issues.jboss.org/browse/DEVELOPER-462
7607	DEVELOPER-462	I think we want to wildcard either side of the query string. So a search for "cloak" should return "KeyCloak". Correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-462
7608	DEVELOPER-462	Don't think this feature is now used on the preview site built but I would like to point out regarding the second API (project name suggestions api) it can also return something like "did you mean" if the user query is not an exact match of project name substring. For example: Search: fie Results: Infinispan, Blacktie, JBoss Profiler However, we should check that the project name suggestion API does not return projects that we do not want to list on upstream projects page (for example archived projects?). I do not think this API now takes any restrictions into account, IIRC it works with all available project info data equally. If any restrictions are needed we would need to extend this API.	1	1	https://issues.jboss.org/browse/DEVELOPER-462
7609	DEVELOPER-462	[~paul.robinson] in that case we need to open a new ticket for project name suggestion API. Currently it does not allow to filter baed on {{archived}} field (or any other field). How critical is this?	1	1	https://issues.jboss.org/browse/DEVELOPER-462

#	Requirement	Questions	Answered	Successfully Answered	URL
7610	DEVELOPER-462	[~lvlcek] We seem good for now. Although I am confused. This approach: http://www-stg.jboss.org/pr/392/build/397/projects/ using project name suggestions api, doesn't return archived projects. Try searching for Narayana and notice that only one result comes back This approach: http://www-stg.jboss.org/pr/392/build/396/projects/ using wildcard on both sides of the keyword search, does return archived projects. Try searching for Narayana and notice that two result comes back (one is the archived jbossts project). Here it seems the suggestion API is obeying the archived filter. Correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-462
7611	DEVELOPER-443	Did DEVELOPER-412 fix this?	1	1	https://issues.jboss.org/browse/DEVELOPER-443
7612	DEVELOPER-443	I can't reproduce this issue. 1) If I control-click a link, it just opens a context sensitive menu (see http://guides.macrumors.com/control-click). I'm assuming you are actually saying it's broken when you try to open a link in a new tab 2) If I select open in a new tab from the context senstive menu, it opens a new tab with the link in it in Chrome, Safari and Firefox. Can you let me know how to reproduce properly?	1	1	https://issues.jboss.org/browse/DEVELOPER-443
7613	DEVELOPER-437	Not a fan of having the callout box floating up above the line for the page content title (we don't do it anywhere else). How about we put them side by side like the modified screen grab?	0	0	https://issues.jboss.org/browse/DEVELOPER-437
7614	DEVELOPER-414	I have added the following downloads to the beta download manager: EAP 6.3.0 Alpha A-MQ 6.1.0 GA Fuse 6.1.0 GA JBDS 8.0.0 Beta (no T&C's) JBDS 8.0.0 Beta (with EAP - Zero dollar sub/T&C's needed)	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7615	DEVELOPER-414	Dan, can you add these new downloads to the site and create appropriate short urls in here: http://www-beta.jboss.org/download-manager. I don't think it's changed much, if at all, since you last did it. But if you are unsure, you could do one first and have me review it.	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7616	DEVELOPER-414	[~crobson] what should the download page look like, when a Alpha or Beta is available? Does the Alpha or Beta appear on that page? Is it before or after the latest GA?	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7617	DEVELOPER-414	[~petemuir] - Will the above approach work since the right rail will go away when the alpha/beta period is over - or will this not work because we need to keep those downloads available to people after the period is over? Not sure based on discussions we've had about alpha/beta/promoted build availability what the right direction is here!	0	0	https://issues.jboss.org/browse/DEVELOPER-414
7618	DEVELOPER-414	Are alphas and betas removed or kept once the GA is out?	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7619	DEVELOPER-414	Hey Paul, Is this what you are looking for on the website portion? https://github.com/Dantheman720/www.jboss.org/commit/7d9be44e17fdbbd06d0930c306201b52e56deb43	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7620	DEVELOPER-414	[~dcoughlin1], this looks right to me. Have you checked the file sizes are right?	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7621	DEVELOPER-414	[~dcoughlin1], i've merged the PR and updated www-stg.jboss.org. Can you go make the links work? BTW, it's a known issue that some of the downloads appear out of order.	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7622	DEVELOPER-414	[~dcoughlin1] are you adding the alphas and betas? Can you give me an ETA?	1	1	https://issues.jboss.org/browse/DEVELOPER-414
7623	DEVELOPER-408	Pete, what do we need to achieve in order to consider this issue resolved?	1	1	https://issues.jboss.org/browse/DEVELOPER-408
7624	DEVELOPER-372	[~crobson], with respect to pt. 3, what would you recommend as the optimum number, both for mobiles and desktops ? I'll try and adapt the items in the page to suit both.	0	0	https://issues.jboss.org/browse/DEVELOPER-372
7625	DEVELOPER-360	[~lightguard], [~pmuir]: Do we now have target_product set for all types now?	1	1	https://issues.jboss.org/browse/DEVELOPER-360
7626	DEVELOPER-357	[~pmuir] I nearly finished the mapper. But to use it we have to upgrade content type configurations in jboss-developer.json But to do this I need to know structure of data you push there to be able to correctly update configurations. Do you plan to use it for {{jbossdeveloper_quickstart}} type only as we talked over IRC, or for any other type also? Send me structure of input data please.	1	1	https://issues.jboss.org/browse/DEVELOPER-357
7627	DEVELOPER-297	[~wesbos] - Right now we don't swap to the hamburger icon at 1024, so tablets won't be able to use dropdown navigation well if we switch to this. Is there a way to recognize the device and use the hamburger for tablets and regular nav for PCs?	1	1	https://issues.jboss.org/browse/DEVELOPER-297
7628	DEVELOPER-281	[~lightguard] If you are running low on things to do, can you take this?	1	1	https://issues.jboss.org/browse/DEVELOPER-281
7629	DEVELOPER-281	[~crobson] where are we placing the stars for people to rate an item? I just went through the wireframes and I don't see a location for people to rate things. I see where we're displaying the average rating, but I'm not seeing where we expect people to rate them.	1	1	https://issues.jboss.org/browse/DEVELOPER-281
7630	DEVELOPER-281	[~lightguard] {{'Access-Control-Allow-Origin'}} header is added to the response from DCP when request contains {{'Origin'}} header. Check it is present there. It is also necessary to set {{withCredentials: true}} into XMLHttpRequest. I tested my tutorial code which uses http://dcp-stg.jboss.org just now, and it works as expected in both Firefox and Chrome. Which browser do you use?	1	1	https://issues.jboss.org/browse/DEVELOPER-281
7631	DEVELOPER-273	[~ray.ploski] Also, is it possible to get higher-res profile images from these guys?	1	1	https://issues.jboss.org/browse/DEVELOPER-273
7632	DEVELOPER-266	Is this issue still relevant?	0	0	https://issues.jboss.org/browse/DEVELOPER-266
7633	DEVELOPER-262	cool - what is the actual rss.url ? would like to check if jbds "just works" with it or need some yahoo pipes filtering in worst case ;)	0	0	https://issues.jboss.org/browse/DEVELOPER-262
7634	DEVELOPER-258	Where do I get the credentials from, and how do I set them in my environment? Once that is done, do I just do this: {code} rake clean preview[staging] {code} I think it would be useful to have something documented. I'm not suggesting you paste in the credentials, but knowing what env vars to set and who to ask for the values would be handy.	0	0	https://issues.jboss.org/browse/DEVELOPER-258
7635	DEVELOPER-252	Should this issue also cover having the buzz you generate be exposed as an RSS feed so we can show the same in jbds central ?	1	1	https://issues.jboss.org/browse/DEVELOPER-252
7636	DEVELOPER-244	[~pmuir] I look at Developer Materials on www-beta.jboss.org and I see no pagination, it seems to be neverending. Am I looking at the right place?	1	1	https://issues.jboss.org/browse/DEVELOPER-244
7637	DEVELOPER-243	How's this coming along [~vineet.reynolds]?	1	1	https://issues.jboss.org/browse/DEVELOPER-243
7638	DEVELOPER-238	Is there an example of what the correct URL string is supposed to be? For instance, they all carry this portion: "http://www.jboss.org/download-manager/f/", as in "http://www.jboss.org/download-manager/f/fuse/6.0.0.GA/(Full%20Zip)". I can find these projects at http://www.jboss.org/projects but is there some sort of download-manager component, as the URL indicates, that's not currently available?	0	0	https://issues.jboss.org/browse/DEVELOPER-238
7639	DEVELOPER-238	Is there by chance already login redirect functionality in the development site? And can it be incorporated into the same popup feature that was just put in for the event buttons?	0	0	https://issues.jboss.org/browse/DEVELOPER-238
7640	DEVELOPER-236	[~crobson] what type of popup should we use here?	1	1	https://issues.jboss.org/browse/DEVELOPER-236
7641	DEVELOPER-233	[~james.cobb] I noticed: https://github.com/jboss-developer/jboss-developer-site/commit/f348c98ecca2813a09bd51e4f7a9c84444c1939c. Can Cheyenne also wire up this page to the links on the videos in http://www-stg.jboss.org/products/eap/resources/, or do we need to do that bit?	1	1	https://issues.jboss.org/browse/DEVELOPER-233

#	Requirement	Questions	Answered	Successfully Answered	URL
7642	DEVELOPER-233	Jason, Can you make it so that when the user clicks on the video's title, it goes to the detail page? For example... 1) Go to: http://localhost:4242/products/eap/resources/ 2) Click on "London JBUG, April 2012: Developing Apps the JBoss Way" 3) Observe that it shows a jpg, not the detail page Also, the breadcrumb seems to still be broken. It shows: {code} Get Started > Developer Materials > Video Name {code}	0	0	https://issues.jboss.org/browse/DEVELOPER-233
7643	DEVELOPER-224	Okay I've implemented this. Can someone check the copy before it's merged? https://github.com/jboss-developer/www.jboss.org/pull/156 Currently setup like this: Subject: Why Subscribe to JBoss? Body: Here are a few reasons to subscribe to JBoss. You can view them all at http://jboss.org/why-subscribe More capability, less cost Delivered via subscription. So you pay for what's most important to you. Service Software that works. No vendor lock-in The development process is open. The technology is open. There are no secrets, no surprises, no lock-in. Award-winning support Ranked highest in customer satisfaction over Oracle, IBM, and BEA in an independent study 2 years running. Performance Just ask our customers why they trust Red Hat JBoss Middleware with their mission-critical applications. Modular architecture Robust enough to handle large, complex Java™ EE workloads, yet agile and flexible enough to run lighter ones.	1	1	https://issues.jboss.org/browse/DEVELOPER-224
7644	DEVELOPER-223	Ray, Is Dan in Jira? I don't seem to see him, so can't assign it to him.	0	0	https://issues.jboss.org/browse/DEVELOPER-223
7645	DEVELOPER-223	Are we still waiting for data for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-223
7646	DEVELOPER-222	I think we need to explore our options on where to store the image. Do we store a link to the original or a copy of the original?	1	1	https://issues.jboss.org/browse/DEVELOPER-222
7647	DEVELOPER-222	sys_description has all the html stripped, so we'd need to add in sys_content, which will increase the payload, possibly quite a bit depending on the size of the blogs we're pulling down. Pulling out images will certainly be easier if we parse the content as HTML, but that opens us up to possible XSS issues. We could attempt to use Regexp to find the image, but JavaScript doesn't support lookbehind assertions which may further complicate the regex we'd need to write :(I also went through some results from the DCP and many blogs look like the first image is a tracking image. I can craft up some javascript regex, just tried, to grab the sources and find images then take the first one that's an actual image. Shall we proceed with that attempt and see what comes out the other side?	1	1	https://issues.jboss.org/browse/DEVELOPER-222
7648	DEVELOPER-222	To be able to get "hero" image for blog posts would be very useful and is cool idea. Though, I have couple of questions: # If the blog post contains more than one image, how we select the best one? May be we should store also metadata of this image (size, number of colors, alt value?) which can help us use some heuristics to automate hero detection. A manually verified flag for hero image should be considered as well. # Where we will store the images? I am against storing binary image data into DCP (Lucene index). We should store it somewhere where each image can have a public URL (so browsers can load them quickly without need to interact with DCP at all). # How about copyrighted images? # Are we going to download (and override) all images again with every reindexing? What if the blog post becomes unavailable as time goes? Shall we still keep its images?	1	1	https://issues.jboss.org/browse/DEVELOPER-222
7649	DEVELOPER-222	I think we should think a little bit about making this more general (yet simple). I can imagine this can be useful for any kind of content (and since we want to introduce a new {{sys_}} field, it should be more generic). How about this. Let's introduce two new fields: # {{sys_featured_image_url}}: is expected to contain at most a single URL (or is empty or not provided at all) # {{sys_image_urls}}: is expected to contain any number of image URLs In your case you would check only {{sys_featured_image_url}} field and use it if provided. On the other hand this will also support other use cases, for example tweet can contain several image urls and it can make sense to display all of them while none of them is featured (as twitter does itself - [example here|https://twitter.com/AngLandiMoSobra/status/555334969241776129]). In compact search results it make sense to display only {{sys_featured_image_url}} and in more detailed search results it can make sense to display more images. This will also allow to disable individual featured image while all image URL links are still kept with the document. Moreover if we could rely on the order of images in {{sys_image_urls}} field then we could turn {{sys_featured_image_url}} field to a field called {{sys_featured_image_number}} which would only contain position (number) in the {{sys_image_urls}} list. But I am not sure about this option. I think Elasticsearch returns list items in consistent order but I am not sure if this is "officially" guarantied (thus might change in the future?). WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-222
7650	DEVELOPER-221	I see this is for 1.1, but I know something was done in the buzz section with filters, did we fix this one?	0	0	https://issues.jboss.org/browse/DEVELOPER-221
7651	DEVELOPER-219	I think this might be possible using histogram facet and might be already supported in Searchisko. But before I try to give you some query examples, do you think you can provide me more info about what type of chart/data do you want to present on the page? I am not sure I fully follow.	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7652	DEVELOPER-219	One thing we should pay attention to in this case is how many XHR requests this page will need to execute to get all the data. Right now it seems it will be one or two requests per product forum. There are 11 forums on the page ATM. Firing that many requests may not be very good idea. Not only it will be probably slowed down by the browser (do they still allow only two concurrent requests per domain?) but also the risk is at our public webproxy which throttles number of requests a client can do per second. Unfortunately, I can not think of some quick workaround now but going forward situations like this should be avoided. I think this could be addressed by https://github.com/searchisko/searchisko/issues/123 (specifically by the multi_search).	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7653	DEVELOPER-219	[~lightguard] did you see this query: http://dcp-stg.jboss.org/v1/rest/search?facet=activity_dates_histogram&project=jbosseap&sys_type=forumthread&size=0&activity_date_interval=month&activity_dates_histogram_interval=day Notice the 'date_histogram' section. It gives you the number of posts (count entry) on a particular date (time entry). It is returning too many results at the moment so we would need to filter those out. I think it also omits an entry for days with no posts created. Is this enough? {code} activity_dates_histogram: { _type: "date_histogram", entries: [{ time: 1381968000000, count: 1 }, { time: 1382054400000, count: 2 }, { time: 1382572800000, count: 1 }, ... {code}	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7654	DEVELOPER-219	Wouldn't it be simpler to just add the project id to: https://github.com/jboss-developer/www.jboss.org/blob/master/_config/forums.yml? for example: {code} eap: name: 'JBoss EAP' id: jbosseap url: https://community.jboss.org/en/jbosseap description: 'An application platform for hosting your apps that provides an innovative modular, cloud-ready architecture, powerful management and automation, and world class developer productivity.' {code}	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7655	DEVELOPER-219	Why do we have the wrong codes for some products?	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7656	DEVELOPER-219	[~petemuir] What you mean? Think of it as hash ID. They could have been MD5 hash codes as well.	1	1	https://issues.jboss.org/browse/DEVELOPER-219
7657	DEVELOPER-219	[~petemuir] OK, good to know. We will need to change it. Do you know if there is anything similar for projects?	1	1	https://issues.jboss.org/browse/DEVELOPER-219

#	Requirement	Questions	Answered	Successfully Answered	URL
7658	DEVELOPER-219	[~james.cobb] can you review http://www-stg.jboss.org/pr/428/build/635/forums/ please	0	0	https://issues.jboss.org/browse/DEVELOPER-219
7659	DEVELOPER-218	We should use the same method for submitting the data as this form does: http://www.jboss.org/contact.html and use the same server to receive and process the data. One thing of concern is that the jboss.org contact form has AntiSpam control. We might need to work this into our form, in order to get our request accepted by the server. [~visuale], can you find out if the AntiSpam is needed by the server and report back.	1	1	https://issues.jboss.org/browse/DEVELOPER-218
7660	DEVELOPER-218	Do you by chance know if the regular JBoss website was built with Magnolia CMS? I see a lot of script that looks based in Magnolia – don't know if that means the whole site is built on that platform of if it's just some that some of the front-end UI borrows from Magnolia's front end UI. I've asked in the chat room and inquired with Pete Muir as well. If it is the case that JBoss uses Magnolia, then we'll need our own separate solution here, yes?	1	1	https://issues.jboss.org/browse/DEVELOPER-218
7661	DEVELOPER-218	[~visuale] Yes, the current jboss.org does use magnolia. Can't we just re-use the same back-end? I.e the service that the form submits to?	1	1	https://issues.jboss.org/browse/DEVELOPER-218
7662	DEVELOPER-218	I've tried out Magnolia in the past (a very little bit) but if memory serves and as this example shows (http://documentation.magnolia-cms.com/display/DOCS/Form+module#Formmodule-Installing), I believe that Magnolia's form processor would be entirely-self contained and not using some kind of service on in its host environment. This example runs though how to get the form data into a database: http://wiki.magnolia-cms.com/display/WIKI/Storing+form+data+in+the+Data+module There's also, of course, an example for getting the form data processed and sent as a regular email. I guess a question here would be what should the end recipient of the form be? I assume an email, of course, but will submissions also end up in a database?	1	1	https://issues.jboss.org/browse/DEVELOPER-218
7663	DEVELOPER-218	Are you still able to set this up, or shall I assign to someone else?	0	0	https://issues.jboss.org/browse/DEVELOPER-218
7664	DEVELOPER-218	[~newtonm] [~unibrew] what will the URL of this form be after the launch? The same?	1	1	https://issues.jboss.org/browse/DEVELOPER-218
7665	DEVELOPER-216	Do you know of any tools out there to help us with a creation of script like this?	1	1	https://issues.jboss.org/browse/DEVELOPER-216
7666	DEVELOPER-216	Is selenium the right tool for the job? We have over 600 pages in the site. Even doing it in parallel, selenium will take a very long time to go through the site.	1	1	https://issues.jboss.org/browse/DEVELOPER-216
7667	DEVELOPER-216	Sure. We want to make our own using the underlying tools, or do we want to use wraith in our solution? If we can use wraith with the patches you sent (assuming they take them) I'm all for not having to recreate the screenshot capture and diffing, but if not, it isn't the end of the world.	0	0	https://issues.jboss.org/browse/DEVELOPER-216
7668	DEVELOPER-213	There are no resources for EWS - we have not invested in this area for any sort of materials. Would we be able to remove some headers from the page if there is no content in them?	1	1	https://issues.jboss.org/browse/DEVELOPER-213
7669	DEVELOPER-210	I've committed some changes for this here: https://github.com/sbryzak/jboss-developer-site/commit/bfbd85efbb65680652a128081bb0d26292902967 Here's what I've done so far: 1) Implemented the script to close the popup (using JQuery) 2) Added an anchor for the direct download link 3) Added an anchor that links to the terms and conditions page 4) Used the abbreviated product name in the title of the popup (e.g. "Thank you for downloading JBoss EAP") A couple of questions: a) Should the agreement date for the terms and conditions (i.e. September 25, 2013) be hard coded? Or should it be a dynamic value (e.g. the current date)? b) Is the direct link URL correct? I used the same download URL that is used in Step 1 of the Instructions for Installation.	1	1	https://issues.jboss.org/browse/DEVELOPER-210
7670	DEVELOPER-210	I haven't sent a pull request with the changes yet, are you able to see my commit from the URL I pasted? It's possible that GitHub might restrict access since it's a private repo - if that's the case I can send a pull request to the master repo with my changes. On the other issues - a) how do we obtain the date on which the user signed the agreement? b) the download link seems to be the only one we have defined, hopefully it's correct	1	1	https://issues.jboss.org/browse/DEVELOPER-210
7671	DEVELOPER-210	It looks like it's going to be difficult to get the agreement date. I suggest we set the text to: {code} By downloading this product you have agreed with our terms and conditions. See your profile for the date you subscribed. └You will be notified again in 364 days after your subscription ends. {code} Where "your profile" links to the users profile on Jive. I think this is acheivable at the moment? Lets create another Jira issue for looking up the date from Jive. Does this work?	1	1	https://issues.jboss.org/browse/DEVELOPER-210
7672	DEVELOPER-210	Added DEVELOPER-226 for adding the date. [~sbryzak2] I think this issue is ready for merge now? Is the PR ready?	1	1	https://issues.jboss.org/browse/DEVELOPER-210
7673	DEVELOPER-207	What changes if an item is featured? We're looking for a short-term hack, yes?	1	1	https://issues.jboss.org/browse/DEVELOPER-207
7674	DEVELOPER-207	Will this always been a series of images and text? If it is we might be able to get away with a yaml file containing the image url and the text.	1	1	https://issues.jboss.org/browse/DEVELOPER-207
7675	DEVELOPER-202	[~pmuir] I seem to recall you having discussions with Lukas around contributor details in the DCP. Can you update this issue with what details we can get from the DCP?	1	1	https://issues.jboss.org/browse/DEVELOPER-202
7676	DEVELOPER-202	I can imagine some "contributor profile proxy" url on DCP side. This will be used when you can show user profile. You will simply pass identifier from sys_contributor there. When used, then DCP will search for relevant profile, and then redirect browser to final contributor profile in jive. WDYT?	1	1	https://issues.jboss.org/browse/DEVELOPER-202
7677	DEVELOPER-196	[~unibrew2] Can you make a Magnolia form that looks like this: http://design.jboss.org/jbossdeveloper/sitedesign/jbossdeveloper_1_0/concepts/get_involved/images/jbossdeveloper_getinvolved_events_addevent-1200px.png?	1	1	https://issues.jboss.org/browse/DEVELOPER-196
7678	DEVELOPER-194	is this still active?	0	0	https://issues.jboss.org/browse/DEVELOPER-194
7679	DEVELOPER-193	[~wesbos]: Can the "For Linux or Mac" bit be removed from what is displayed? That's now implied by the selected OS. It also adds a lot of cruft as it appears in many places on the page.	1	1	https://issues.jboss.org/browse/DEVELOPER-193
7680	DEVELOPER-179	[~lightguard] where did we get to with querying the dcp for URLs to profile pages on Jive?	1	1	https://issues.jboss.org/browse/DEVELOPER-179
7681	DEVELOPER-179	Do we still have a question where we're at here, do we want to document something?	1	1	https://issues.jboss.org/browse/DEVELOPER-179
7682	DEVELOPER-179	How much more of this is missing/outstanding?	1	1	https://issues.jboss.org/browse/DEVELOPER-179
7683	DEVELOPER-178	Catherine, could you check that you agree I've selected the right endpoints for the URLs?	1	1	https://issues.jboss.org/browse/DEVELOPER-178
7684	DEVELOPER-172	Would a js library help us here? for example highlight.js to give us syntax highlighting. Or maybe something more heavyweight providing line-numbers, a copy-to-clipboard button and a title?	0	0	https://issues.jboss.org/browse/DEVELOPER-172
7685	DEVELOPER-172	We could use a library, but the base font in red looks horrible. Highlight.js work work okay. Is that how we'd like to proceed?	0	0	https://issues.jboss.org/browse/DEVELOPER-172
7686	DEVELOPER-172	Do we need [~james.cobb] or [~crobson] to approve this? My concern would be that going with the OOTB http://highlightjs.org/ is going to look odd, without an appropriate L&F applied.	1	1	https://issues.jboss.org/browse/DEVELOPER-172

#	Requirement	Questions	Answered	Successfully Answered	URL
7687	DEVELOPER-161	Catherine, do you want me to sub this text in?	1	1	https://issues.jboss.org/browse/DEVELOPER-161
7688	DEVELOPER-159	Question for James - should we have "home" as a navigation option in the tray? On the website it is obvious that we don't have a home button on the navigation banner, so people know to click the logo, but on mobile format people might default to opening the tray and then have to close it to get back to the logo for the home page.	1	1	https://issues.jboss.org/browse/DEVELOPER-159
7689	DEVELOPER-155	[~james.cobb] The link to the mobile filtering wireframe is actually the desktop. Can you send me what it should look like on mobile?	1	1	https://issues.jboss.org/browse/DEVELOPER-155
7690	DEVELOPER-151	Are we done with this James?	0	0	https://issues.jboss.org/browse/DEVELOPER-151
7691	DEVELOPER-151	Shane, What is the status of the "Demo's" table?	1	1	https://issues.jboss.org/browse/DEVELOPER-151
7692	DEVELOPER-146	Can this be marked as resolved?	0	0	https://issues.jboss.org/browse/DEVELOPER-146
7693	DEVELOPER-143	Can this be marked as resolved?	1	1	https://issues.jboss.org/browse/DEVELOPER-143
7694	DEVELOPER-141	Does this mean we are killing the dropdowns? Or keeping them?	0	0	https://issues.jboss.org/browse/DEVELOPER-141
7695	DEVELOPER-141	Is this still an issue?	0	0	https://issues.jboss.org/browse/DEVELOPER-141
7696	DEVELOPER-140	Just about to push these changes to github. For the mobile hero, I think we need to look at skinny and tall heros rather than wide ones. We can supply different images for mobile / desktop. Just take the same content and make it stacked rather than wide?	1	1	https://issues.jboss.org/browse/DEVELOPER-140
7697	DEVELOPER-134	Current issues: -1) Time commitment needs removing- 2) Waiting for Searchisco for filtering of "rating, formats, publish date" 3) This needs removing from results somehow (as it's not a real quickstart): http://www-stg.jboss.org//quickstarts/eap/template/index.html. We might need to prevent this item from being indexed in the first place. -3) Remove the "??" time from each result- -4) Populate list with everything on first visit to the page. Currently the page is empty when first visited. Items start to appear once the criteria is changed.- -5) H2 topic is on a new-line. It should be on the same line, like the other items.- -6) Is pagination missing? I can only get a max of 10 results to display.This could simply be that we have only uploaded 10 items to the DCP. Alternatively, there could be some pagination going on, but with no links to navigate through the pages. This is to be investigated.- -7) After clicking on an item to see the details, hitting the 'back' button resets the filter. After hitting back, I think the same result-set should be displayed as was there before clicking on more details.- -8) Check what the skill level selector does. I think it should return just those quickstarts at the selected level. For example, "intermediate" would return just "intermediate" quickstarts, rather than "beginner" ones too. I think this is more obvious to the user.- -9) Every item has the text "VIDEO" next to a star rating. I assume it should say "Rating"?-	1	1	https://issues.jboss.org/browse/DEVELOPER-134
7698	DEVELOPER-130	This page is finished now. Can I close it?	1	1	https://issues.jboss.org/browse/DEVELOPER-130
7699	DEVELOPER-127	If we have authors for pages (quickstarts, bom, etc.) all that info is already in the page (the ruby object) otherwise... are we scraping the html for them, using contributors in git?	1	1	https://issues.jboss.org/browse/DEVELOPER-127
7700	DEVELOPER-127	[~velias], [~newtonm] indicated you are still able to help us out with some tasks. Can you take this one on please? We basically have some pages on the site that don't get indexed ([~lightguard] can you provide a list please?). We need to make sure they get indexed in some form on the dcp, so that when people search, they hit them. I also think [~newtonm] understands this task, so you can ask him for more info as well.	1	1	https://issues.jboss.org/browse/DEVELOPER-127
7701	DEVELOPER-127	[~wesbos] once we have the indexed data in the DCP, we need to be able to search for it on the site. Pete and I were thinking the simplest approach for now would be to use some form of "auto-complete" style search. Here the user would start typing in their criteria in the search box, and results would be suggested. Selecting a result would redirect to that page. The idea was to try and keep it as simple as possible for now. Is this something you can do, once the data is in the DCP?	1	1	https://issues.jboss.org/browse/DEVELOPER-127
7702	DEVELOPER-127	[~paul.robinson] absolutely! I think that approach would be best as well. Please assign me to this (or another issue) once the data is ready. Do you know approximately when it should be ready to go?	1	1	https://issues.jboss.org/browse/DEVELOPER-127
7703	DEVELOPER-127	[~velias] How are you getting on with this?	1	1	https://issues.jboss.org/browse/DEVELOPER-127
7704	DEVELOPER-122	What additional things do we need here? We have emails that GitHub and Travis send out. GitHub is also sending us irc notifications.	1	1	https://issues.jboss.org/browse/DEVELOPER-122
7705	DEVELOPER-105	Do you have a version with the media queries as well? This example isn't mobile ready but http://example.jboss.org/ is	1	1	https://issues.jboss.org/browse/DEVELOPER-105
7706	DEVELOPER-105	I had the blue separator but was asked to take it off. Should I put it back on?	0	0	https://issues.jboss.org/browse/DEVELOPER-105
7707	DEVELOPER-100	I've committed a rough first draft for this page here: https://github.com/sbryzak/jboss-developer-site/commit/32369ce0917ad9b75287a14888c783937ddd8feb There is a new file, _config/forums.yml which contains the data from which the page is generated. I have a few questions: 1) What should the text be at the top for the forum guidelines? 2) How/where can I obtain the posts count for each forum? 3) Where can I get the monthly activity graph for each forum? 4) WFK doesn't seem to have a forum page. 5) The descriptions were copied from http://www.jboss.org/products - are these too verbose? 6) The 'See all JBoss Forums' button links to http://www.jboss.org/projects, is this suitable? 7) Where should the 'Sticky' link in the first row link to?	0	0	https://issues.jboss.org/browse/DEVELOPER-100
7708	DEVELOPER-100	1) I'll look into if we already have something suitable for this, and if not will create some copy for you 2) We should talk to Mark Newton's team about if they have this type of data you can grab through an API or DCP 3) We should talk to Mark Newton's team about if they have this type of data you can grab through an API or DCP 4) WFK can be removed for now. We'll need to make sure the list of products forums we have maps to the products on the site in general at this point. 5) Maybe - but lets start here and we can modify them once we see how it looks on the site 6) No - it should link to: https://community.jboss.org 7) This forum doesn't exist yet - but it was something I thought we should consider creating. For now, lets remove it and we can add it if we get around to creating such a forum area.	0	0	https://issues.jboss.org/browse/DEVELOPER-100
7709	DEVELOPER-100	I agree, that the forum descriptions are too verbose. How about we use the descriptions off /products for the Beta? We can improve them for the GA if we need to. I think we can leave the post count and activity graph for the Beta. It's quite clear what that feature is going to look like. I see there is a discussion in-hand with Mark's team investigating this.	1	1	https://issues.jboss.org/browse/DEVELOPER-100
7710	DEVELOPER-100	Moved 1) and 2) into DEVELOPER-219.	0	0	https://issues.jboss.org/browse/DEVELOPER-100
7711	DEVELOPER-96	Reassigning to me for review of architecture, and will assign to Wes for JS impl as needed	0	0	https://issues.jboss.org/browse/DEVELOPER-96
7712	DEVELOPER-92	Wes implemented this page, but it is not in the right place in the navigation. What is shown today at http://www-stg.jboss.org/get-involved/contribute/ should be moved to http://www-stg.jboss.org/get-involved	1	1	https://issues.jboss.org/browse/DEVELOPER-92
7713	DEVELOPER-92	Jason - Can you move this page to the right place in the navigation? This should overwrite the current get-involved page.	1	1	https://issues.jboss.org/browse/DEVELOPER-92

#	Requirement	Questions	Answered	Successfully Answered	URL
7714	DEVELOPER-91	I've committed the first draft of this page here: https://github.com/sbryzak/jboss-developer-site/commits/DEVELOPER-91 I have a few questions: 1) I've pulled the images from DESIGN-479 just using Gimp to extract the icons - if this isn't acceptable then I'll need the actual icon resources or the PSD file so that I can extract the icons from their layer. 2) Why should happen when you click the "SEND THIS CONTENT TO YOUR BOSS" button? 3) What should the URLs be for all of the content in the side-panel? Specifically: a) Subscription Guide b) Support Satisfaction Report c) Case Studies d) Red Hat JBoss Middleware vs. IBM Websphere e) Red Hat JBoss Middleware vs. Oracle Fusion f) Datasheets and brochures g) Whitepapers h) Webinars 4) What should the URL be for the "Fill out an interest form" link? 5) What should the URL be for the "Find out how to contact sales for your country" link? 6) What should the URL be for the "Customer Portal" link? 7) What should the URL be for the "Contact us" link? (I'm assuming this should be a mailto: address)	1	1	https://issues.jboss.org/browse/DEVELOPER-91
7715	DEVELOPER-91	[~crobson] Also, can you answer Shane about the links? Or maybe you know who we should ask?	1	1	https://issues.jboss.org/browse/DEVELOPER-91
7716	DEVELOPER-91	3) What should the URLs be for all of the content in the side-panel? Specifically: a) Subscription Guide https://www.redhat.com/rhecm/rest-rhecm/jcr/repository/collaboration/jcr:system/jcr:versionStorage/c52b53bb0a05260220b4e3d889f155db/1/jcr:frozenNode/rh:resourceFile b) Support Satisfaction Report https://www.redhat.com/rhecm/rest-rhecm/jcr/repository/collaboration/jcr:system/jcr:versionStorage/5e6e3e7a7f0000011d40cd22e322196b/4/jcr:frozenNode/rh:pdfFile.pdf c) Case Studies https://www.redhat.com/resourcelibrary/results?portal:componentId=2e9e0c58-a437-4c88-b1a8-c492d711eca7&portal:type=action&portal:isSecure=false&navigationalstate=JBPNS_rO0ABXcaAAlTZWFyY2hLZXkAAAABAAAAB19fRU9GX18*&fName=Products&facetValueName=jbossenterprisemiddleware&actionType=addFacetsForProducts&SearchKey=&nestedSearch=false d) Red Hat JBoss Middleware vs. IBM Websphere https://engage.redhat.com/forms/jboss-v-websphere e) Red Hat JBoss Middleware vs. Oracle Fusion https://engage.redhat.com/forms/jb_oracle_fusion_competitive_sheet f) Datasheets and brochures https://www.redhat.com/resourcelibrary/results?portal:componentId=2e9e0c58-a437-4c88-b1a8-c492d711eca7&portal:type=action&portal:isSecure=false&navigationalstate=JBPNS_rO0ABXcaAAlTZWFyY2hLZXkAAAABAAAAB19fRU9GX18*&fName=DocumentType&facetValueName=datasheetsbrochures&actionType=addFacets&SearchKey=&nestedSearch=false g) Whitepapers https://www.redhat.com/resourcelibrary/whitepapers/?portal:componentId=220ad020-88ac-4404-a4e3-d2c19f3bdf22&portal:type=action&portal:isSecure=false&fName=Products&facetValueName=jbossenterprisemiddleware&actionType=addFacetsForProducts&SearchKey=&nestedSearch=false h) Webinars https://www.redhat.com/resourcelibrary/webinars/?portal:componentId=9f1f989c-f322-4db8-bb93-05211ed74970&portal:type=action&portal:isSecure=false&fName=Products&facetValueName=jbossenterprisemiddleware&actionType=addFacetsForProducts&SearchKey=&nestedSearch=false 4) What should the URL be for the "Fill out an interest form" link? http://www.redhat.com/contact/sales.html 5) What should the URL be for the "Find out how to contact sales for your country" link? I'm not sure where this one came from - I think it might have been from our contractor. Let's change the link name to "Find a Red Hat JBoss reseller" and link it here: http://redhat.force.com/finder/Partner_Finder 6) What should the URL be for the "Customer Portal" link? https://access.redhat.com/home 7) What should the URL be for the "Contact us" link? (I'm assuming this should be a mailto: address) Ray creating mailing list - will post back when we have it. Eventually this should be linking to a form on the website (http://design.jboss.org/jbossdeveloper/sitedesign/jbossdeveloper_1_0/concepts/utility/images/jbossdeveloper_contact-1200px.png)	1	1	https://issues.jboss.org/browse/DEVELOPER-91
7717	DEVELOPER-88	I just need a list of ISBNs. Can I get this from the DCP?	0	0	https://issues.jboss.org/browse/DEVELOPER-88
7718	DEVELOPER-85	[~alrubinger]: is this a dup of DEVELOPER-273?	1	1	https://issues.jboss.org/browse/DEVELOPER-85
7719	DEVELOPER-85	[~alrubinger] what's the plan with this? Will you have time to get this done by May 15th?	1	1	https://issues.jboss.org/browse/DEVELOPER-85
7720	DEVELOPER-82	Isn't this a duplicate of DEVELOPER-58?	0	0	https://issues.jboss.org/browse/DEVELOPER-82
7721	DEVELOPER-78	Isn't linking to the original blog post itself enough?	0	0	https://issues.jboss.org/browse/DEVELOPER-78
7722	DEVELOPER-77	Hi [~lightguard], There are some options that we can try to use right out of the box [More Like This|http://www.elasticsearch.org/guide/en/elasticsearch/reference/current/search-more-like-this.html] (or [Suggesters|http://www.elasticsearch.org/guide/en/elasticsearch/reference/current/search-suggesters.html]) and it shouldn't be hard to expose such types of queries. But I would like to understand a little bit more context about what you mean by related materials first. Do you think you can give me some examples?	1	1	https://issues.jboss.org/browse/DEVELOPER-77
7723	DEVELOPER-77	More Like this is exactly what we need. Can we use that the dcpdev instance today?	1	1	https://issues.jboss.org/browse/DEVELOPER-77
7724	DEVELOPER-77	Just to be clear what does "listed field values" mean? I can guess, but ... ;-)	1	1	https://issues.jboss.org/browse/DEVELOPER-77
7725	DEVELOPER-77	To push this ticket forward let's talk about how you would like to make use of "similar" or "related" or "more like this" (or whatever we call it) on the developer material page. Do you think you can give me some idea about how it should be used on the website? For example do you want to display clickable "similar" link for each listed item? Or display "similar" link for each item only if the number of listed items drops down to just a few items? (meaning, user probably can not find what he is looking for). Trying to understand how you want to use/incorporate it on a real use case first.	1	1	https://issues.jboss.org/browse/DEVELOPER-77
7726	DEVELOPER-77	[~lvlcek] we want to use this on the right rail of the "detail" page for the developer material e.g. http://www.jboss.org/ticket-monster/BusinessLogic/index.html Here we would display items similar to the e.g. the tutorial chapter (but could also be for any developer material, such as a quickstart). Does this answer your question?	1	1	https://issues.jboss.org/browse/DEVELOPER-77
7727	DEVELOPER-76	There are a few of things to take into consideration here 1. Have we added content into the slim files, or kept them in asciidoc / markdown (quickstarts)? 2. How far do we want to go with i18n / l10n? Full site translation or just the content? 3. To my knowledge none of slim, kramdown (markdown processor), nor asciidoctor support i18n or l10n We'd certainly be creating our own solution at this point in time.	1	1	https://issues.jboss.org/browse/DEVELOPER-76
7728	DEVELOPER-71	Can this be resolved now?	1	1	https://issues.jboss.org/browse/DEVELOPER-71
7729	DEVELOPER-64	Catherine, could you do a wireframe of a standalone page for this?	1	1	https://issues.jboss.org/browse/DEVELOPER-64
7730	DEVELOPER-64	Also done, though I believe there's still some text that needs to be added. Pete, do you have that text?	0	0	https://issues.jboss.org/browse/DEVELOPER-64
7731	DEVELOPER-63	Catherine, could you do a wireframe of a standalone page for this?	0	0	https://issues.jboss.org/browse/DEVELOPER-63
7732	DEVELOPER-62	[~crobson], could you take a look at http://www.jboss.org/jdf/examples/get-started/ and propose a wireframe?	1	1	https://issues.jboss.org/browse/DEVELOPER-62
7733	DEVELOPER-58	Jason, can you take over this one?	0	0	https://issues.jboss.org/browse/DEVELOPER-58

#	Requirement	Questions	Answered	Successfully Answered	URL
7734	DEVELOPER-58	Outstanding issues: * Thumbnails missing. [~james.cobb] has the images. We need to decide where to store them and how to link to them. * "Show Me" and "Included In" drop-downs not being populated. What should they show? Data missing from DCP: * last update * download link * Additional resources (from view-more) * List of products it's contained in	1	1	https://issues.jboss.org/browse/DEVELOPER-58
7735	DEVELOPER-58	[~james.cobb], the white background seems to always be covering the default logo, even when the project logo is missing. See the attached screen-shot. I think this seems to be a problem with the current approach, as you can only hide the missing image. What I think you need is to also hide the white image as well?	0	0	https://issues.jboss.org/browse/DEVELOPER-58
7736	DEVELOPER-52	What's missing other than the webinar? I've only put in what was in the spreadsheet. BTW, there's a problem with the webinar that is being fixed. I'll chase that.	1	1	https://issues.jboss.org/browse/DEVELOPER-52
7737	DEVELOPER-49	[~paul.robinson], is this still outstanding?	1	1	https://issues.jboss.org/browse/DEVELOPER-49
7738	DEVELOPER-44	[~crobson] Also, I need a graphic for the title, like those on here: http://www-stg.jboss.org/products/. Do you have one or do we need to make it?	1	1	https://issues.jboss.org/browse/DEVELOPER-44
7739	DEVELOPER-34	Are we going to manually create this list for now until we can get it into the dcp?	0	0	https://issues.jboss.org/browse/DEVELOPER-34
7740	DEVELOPER-34	This will be up to us since there is no indexer out of the box, we'll have to create that as well. If the only ones using this are going to us, things we make and possibly other engineers I recommend a simple JSON (well, I guess that depends on where we want the extra library :) on the Java side creating the indexer or on the Ruby side writing XML). Either way works really. Something simple like: {code} book: authors: [name,name] title: title pub_date: date publisher: name topics: [topic, topic] tags: [tag, tag] {code} Is there anything else we need?	0	0	https://issues.jboss.org/browse/DEVELOPER-34
7741	DEVELOPER-34	Do we also want to link to some way of obtaining the book, or do we assume that they are all on Amazon and our audience can will just go and search there? Also, some may have a free eBook and maybe book-src that we can link to?	1	1	https://issues.jboss.org/browse/DEVELOPER-34
7742	DEVELOPER-30	Where has this been added, I'm not seeing it in developer?	0	0	https://issues.jboss.org/browse/DEVELOPER-30
7743	DEVELOPER-30	What was the outcome of this meeting talked about above?	0	0	https://issues.jboss.org/browse/DEVELOPER-30
7744	DEVELOPER-29	I talked about doing angular for this, do we think this might still be a good idea? I see there being a slight problem unless we create a backend for this in that we don't have all the options.	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7745	DEVELOPER-29	Do you see it changing very much, or will it be pretty static once it's done?	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7746	DEVELOPER-29	Do you mean the content, or the code for the finder?	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7747	DEVELOPER-29	What results should we show by default? Just the first ones that show up from a blank search?	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7748	DEVELOPER-29	I've made a start at this: https://github.com/paulrobinson/jboss-developer-site/commit/cdb8d7fd01772b4b6c1c185be88dac2b69426967 Essentially, I've cloned _layouts/product-developer-materials.html.slim and removed the product specific decorations from the page. See the attached screenshot for what it looks like. The result is working, but the formatting is wonky. I suspect it's because the current style expects the length of the page to be dictated by the size of the right-bar. This page has no right bar, so the footer ends up being too high. [~visuale] Can you take my commit and fix it? [~lightguard] can you check my approach is correct?	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7749	DEVELOPER-29	Hi Paul, I'm having a bit of trouble cloning that specific commit. Is there a specific branch I should be working off of?	1	1	https://issues.jboss.org/browse/DEVELOPER-29
7750	DEVELOPER-28	Are we combining information from various sources, or will this be something the product people maintain?	1	1	https://issues.jboss.org/browse/DEVELOPER-28
7751	DEVELOPER-27	Will we be able to limit the buzz shown as to only those items pertinent to the product we are displaying it on?	1	1	https://issues.jboss.org/browse/DEVELOPER-27
7752	DEVELOPER-26	could stacks help here too?	1	1	https://issues.jboss.org/browse/DEVELOPER-26
7753	DEVELOPER-26	Each product has it's own xml file in this model, the uses portion allows a soft tie (put together via finding the actual project reference stored in the site within awestruct. I couldn't think of a good way to tie them together without creating a unified xml file, which I felt like would lead to confusion for those updating the files (I don't know what it uses, why is this extra info in there, there's too many options, etc). We can look at revising it if needed. The tie would be to use site.org(from the project or spec element).(project or spec)name. Each organization (Red Hat, Apache, Eclipse, etc) would have it's own file in _specs and _projects. Does that help?	1	1	https://issues.jboss.org/browse/DEVELOPER-26
7754	DEVELOPER-25	Is this just scraping JIRA and GitHub or do we need more than that?	1	1	https://issues.jboss.org/browse/DEVELOPER-25
7755	DEVELOPER-22	I've added a schema. [~lightguard] I'm wondering if we can reuse your XML parser? Could you look at that?	1	1	https://issues.jboss.org/browse/DEVELOPER-22
7756	HRCPP-364	Vittorio, can you create the same PR for the product please?	0	0	https://issues.jboss.org/browse/HRCPP-364
7757	HRCPP-25	The PR has been integrated, shouldn't you close this issue?	0	0	https://issues.jboss.org/browse/HRCPP-25
7758	HRCPP-20	Isn't this a duplicity for HRCPP-17 ?	0	0	https://issues.jboss.org/browse/HRCPP-20
7759	IMMUTANT-628	[~gantengx] - I have concerns about implementing this - all that will happen is that the call to {{stop}} will return immediately, it won't actually kill any long running jobs (unless you are killing an uberjar/{{lein run}} process with {{^C}}, etc, since that will kill all of the scheduler threads). How are you stopping your system currently? And are you running this as an uberjar or inside WildFly?	1	1	https://issues.jboss.org/browse/IMMUTANT-628
7760	IMMUTANT-628	[~tcrawley] Ah so there's no way to actually force killing the jobs? Currently I'm running this as an uberjar using init script. When stopping the system it's basically calling {{kill}} command	1	1	https://issues.jboss.org/browse/IMMUTANT-628
7761	IMMUTANT-580	This has been implemented, and is available in incremental build #682 and newer. Can you give it a try and confirm it works for you (see http://immutant.org/builds/2x/ for instructions on using incremental builds)? Relevant commits: https://github.com/projectodd/wunderboss/commit/0e6f802debb429d5ffb1537ecffae561fa72fc65 https://github.com/immutant/immutant/commit/be8e1009f51047dae432b7f5136a867871e23418	0	0	https://issues.jboss.org/browse/IMMUTANT-580
7762	IMMUTANT-568	Replying to the mailing list thread [1] here: > I think this option should be separate from `:singleton`, despite the > intuitive implication, and treat it as a local-only option. I can > imagine cases where you want a job running on only one machine, but > concurrently there. [~tcrawley] I'm not sure I understand correctly. Do you mean that setting `:allow-concurrent-exec?` to false would allow the job to execute 'in parallel' on another machine but not the same machine? Intuitively I would expect the option to behave differently by default: if set the job should not execute concurrently cluster wide, thus implying `:singleton` true. It's then up to the user to override by setting `:singleton` to true explicitly. ...just my two cents. [1] http://immutant.markmail.org/thread/n3wnofa6dg4dcgtg	1	1	https://issues.jboss.org/browse/IMMUTANT-568
7763	IMMUTANT-568	This is now available in [incremental build|http://immutant.org/builds/2x/] 591 and newer. Can you give that a try and confirm it works for you?	1	1	https://issues.jboss.org/browse/IMMUTANT-568
7764	IMMUTANT-562	Ah, that's a good idea. Would you mind sharing an example of how you are doing that?	1	0	https://issues.jboss.org/browse/IMMUTANT-562

#	Requirement	Questions	Answered	Successfully Answered	URL
7765	IMMUTANT-456	Immutant uses a custom configurator itself, to return a singleton Endpoint, a feature also described at that link. So if we took in a custom configurator, we would need to override its getEndpointInstance as we do now. That might lead to surprising behavior. What if we just go ahead and make Immutant's configurator put the HttpSession and cookies in the user properties?	1	1	https://issues.jboss.org/browse/IMMUTANT-456
7766	IMMUTANT-456	Another thought: how do you feel about passing a function instead of a custom configurator? Its signature would match that of the Configurator's modifyHandshake method. So we'd introduce another option key, :handshake, which would be a fn that should expect to be passed a ServletEndpointConfig, a HandshakeRequest and a HandshakeResponse. It's more limiting, in that we wouldn't expose the other Configurator methods, but possibly less surprising, and simpler to create a function than an object, I think.	1	1	https://issues.jboss.org/browse/IMMUTANT-456
7767	IMMUTANT-453	I've fixed Immutant to honor META-INF in resources (see IMMUTANT-455), so you no longer need to put he META-INF at the root, and it should work the same for .ima's or on-disk deployments. This will be in the latest incrementals (build #1206 or newer, #1206 is building now) - can you give it a try and confirm?	0	0	https://issues.jboss.org/browse/IMMUTANT-453
7768	IMMUTANT-436	Alex: The latest incremental build implements IMMUTANT-437 (which will load log4j.properties from resources/, or anywhere else on the classpath components that are within the app root) and IMMUTANT-443 (which restores log messages from Immutant namespaces when you use a custom logging configuration). Can you try the latest incremental build and make sure it works for you? You can get it via `lein immutant install LATEST`. I plan to get a 1.1.2 release out this week with these changes.	0	0	https://issues.jboss.org/browse/IMMUTANT-436
7769	IMMUTANT-436	Hmm, actually, since we now detect the presence of c.t.logging for IMMUTANT-443, we could force c.t.logging to use the log4j-factory. The question is: is that a bad idea? I suspect that most c.t.l users don't care which logging provider is being used unless they are providing custom logging configuration.	0	0	https://issues.jboss.org/browse/IMMUTANT-436
7770	IMMUTANT-415	I just pushed (via http://github.com/immutant/immutant/commit/047042ac0) a function that exposes this setting: {{(immutant.jobs/set-scheduler-options {:thread-count 10})}}. Can you see if this works for you? It will be available in incremental build #1166 (building now) or newer. Note that this function must be called before any jobs are scheduled, else it will throw an IllegalStateException.	1	1	https://issues.jboss.org/browse/IMMUTANT-415
7771	IMMUTANT-410	Kanwei: I tried to recreate this issue with https://github.com/tobias/immutant-410/blob/master/src/cookie_store_test/core.clj, but it's working for me. Can you share something that doesn't work, or guide me to make changes to my test app? The "Handler returned nil" error means that the ring handler fn returned nil instead of a response map. That error message could be more helpful. I'll take a look at that.	0	0	https://issues.jboss.org/browse/IMMUTANT-410
7772	IMMUTANT-405	Ian: Do you have any details about what header-based sessions might look like? Is it just a matter of storing a session-id in a header? How is that different than storing the session-id in a cookie header?	0	0	https://issues.jboss.org/browse/IMMUTANT-405
7773	IMMUTANT-390	Why is this ticket got closed? What does it mean "out of date"? Today I redeployed a simplest hello-world application war (built in clojure) on a standalone wildfly 8 (no clusters) and I was getting 404 during 10 seconds. If you think it's an upstream issue, could you link to it here?	1	0	https://issues.jboss.org/browse/IMMUTANT-390
7774	IMMUTANT-359	Have we marked them as deprecated somehow? A grep of the codebase says "nope".	0	0	https://issues.jboss.org/browse/IMMUTANT-359
7775	IMMUTANT-334	What would the workaround be for this? I added {{:lein-profiles [:default]}} to the {{:immutant}} descriptor in my {{project.clj}}, but e.g. {{target/classes}} still isn't on the classpath. (Though, {{target/user+dev+base/classes}} or whatever it is isn't being created anymore...)	1	1	https://issues.jboss.org/browse/IMMUTANT-334
7776	IMMUTANT-334	You shouldn't have seen {{target/user+dev+base/classes}} being generated I don't believe - were you? The issue is that since Immutant doesn't apply the default profile internally when resolving the project, but instead a subset, it expects the classes to be in {{target/user+dev+base/classes}}, where they actually are. I think the fix is to have Immutant always add {{target/classes}} to the effective classpath to cover this case, and the case where users are using a version of lein older than what Immutant uses internally.	1	1	https://issues.jboss.org/browse/IMMUTANT-334
7777	IMMUTANT-334	The latest incrementals are using 2.3.2, and I modified an integ to confirm that {{target/classes}} is on the ECP when no profiles are applied: https://github.com/immutant/immutant/commit/6f6be5cc6567f677b5cc90a99d2a0c3639159682. Chas: can you confirm?	0	0	https://issues.jboss.org/browse/IMMUTANT-334
7778	IMMUTANT-334	Mariano: can you confirm as well? (I forgot that you were the original reporter).	1	1	https://issues.jboss.org/browse/IMMUTANT-334
7779	IMMUTANT-329	I opted to just add the com.sun.net.httpserver.* packages instead of trying to determine a list of all 'public' com.sun packages, since the workaround is simple if more are discovered to be missing. This should be fixed by http://github.com/immutant/immutant/commit/87013ab53 and https://github.com/projectodd/wildfly/compare/56f59b98def1441727d9e797a7db57b65183724c...bd2a5fc891417c355690fe0ee436b6a73b542a46 Note that these changes will only affect the slim build of Immutant. The full build will not have these classes available, since we don't modify that build at all. Chas: can you confirm? These changes are already in the latest incremental builds.	1	1	https://issues.jboss.org/browse/IMMUTANT-329
7780	IMMUTANT-326	Paul, forgive my ignorance, can you give some more details around this notion of a passive listener, please? Are multiple clients supposed to see the same message, but only one ack's it? This sounds more like a topic to me. I'm not opposed to expanding the API, but it'd be nice if it had more application than just testing production traffic without affecting it (which seems kinda risky anyway). I'm not crazy about moving from jms to core, mainly because we may be switching to activemq in the distant future, and i'd like to support both it and hornetq. I would like to make sure that whatever core HornetQ abstractions you need (managers, factories, servers, etc) are within arm's reach of you and convenient, of course.	1	1	https://issues.jboss.org/browse/IMMUTANT-326
7781	IMMUTANT-326	So will it help to expose the ACK mode? It's not clear to me how setting the mode to CLIENT will achieve your goal, though. I don't think the broker will deliver a message to the "real" consumer just because the passive one doesn't ack it. There's no guarantee the passive consumer won't get the same message redelivered multiple times before the real consumer gets it once (though that's unlikely). Makes sense that you can't turn your production queues into topics just to get monitoring, and I hate for you to introduce another topic just for that. You can list the queue contents via the mgmt/jmx interfaces, but it's difficult to map them to actual consumers, if that's the level of granularity you need.	1	1	https://issues.jboss.org/browse/IMMUTANT-326
7782	IMMUTANT-317	I looked into what it would take to do this at deploy-time inside Immutant, and it's currently not straightforward, because: 1) we explicitly strip any Immutant deps from the project before passing them to {{resolve-dependencies}}. If we wanted to get the pedantic output for those deps, we would have to call {{resolve-dependencies}} twice, which is time consuming 2) most apps won't have any explicit Immutant deps, so we would need to add them before passing the project to {{resolve-dependencies}}. That would be possible for versioned releases, but wouldn't work for incremental builds, since the jar artifacts won't be available. 3) {{leiningen.core.classpath}} currently memoizes the pedantic output, which means an app that triggered warnings would not do so on a redeploy, nor would a second app that happens to have the same dependencies Putting this check in the plugin may be a better option, though we would still have the same issue with incremental builds. Maybe we could just support this for versioned builds? I'll give it some more thought.	0	0	https://issues.jboss.org/browse/IMMUTANT-317

#	Requirement	Questions	Answered	Successfully Answered	URL
7783	IMMUTANT-287	Is this still true (from web.org)? bq. NOTE: As of this writing, Pedestal route tables are not context-aware, so unless you deploy them to the root context, you must hard-code the context path in your routes.	0	0	https://issues.jboss.org/browse/IMMUTANT-287
7784	IMMUTANT-287	cache.org: the default locking mode is nil, but the description states: "One of :optimistic or :pessimistic". so what does nil mean?	0	0	https://issues.jboss.org/browse/IMMUTANT-287
7785	IMMUTANT-287	jboss.org: do we need to update the logging section?	0	0	https://issues.jboss.org/browse/IMMUTANT-287
7786	IMMUTANT-219	Should this be resolved as 'Done'? We didn't actually add scheduled delivery to publish.	0	0	https://issues.jboss.org/browse/IMMUTANT-219
7787	IMMUTANT-195	Pragmatically, I'm guessing that filing a bug with tomcat is not likely going to be profitable? (the code is very clearly wrong by design, to deal with a flaw in another part of the system, which is undoubtably even harder to fix) Not that I have any strong desire to do this, but I don't suppose it's possible to easily replace CoyoteAdapter with subclass that works?	1	1	https://issues.jboss.org/browse/IMMUTANT-195
7788	IMMUTANT-195	I've turned on ALLOW_BACKSLASH by default (https://github.com/immutant/immutant/commit/218b85bd4af809e22eb0d44136b03799459208fb). Can you confirm that the latest incremental works for you? If so, I'll resolve this issue.	0	0	https://issues.jboss.org/browse/IMMUTANT-195
7789	IMMUTANT-182	It might be worthwhile to do this by implementing one proper Chef/Pallet/Ansible/Puppet script; this is both practical and documents best practices for configuring a cloud node to be part of a cluster, would include init scripts for common init systems, also EC2-specific stuff for S3PING or AWSPING, logging, debugging, remote nREPL connectivity from a development system, etc. Ideally, if Ansible (my favorite), also shows how to do cluster-wide updates on EC2 through adding domain mode in Immutant or more likely a script to do rolling upgrades across the cluster. Other questions: - Is upgrading an app on an AMI better / worse than just doing a DNS swap across an entire cluster? - Maybe there is a good balance between power cycling an app, immutant, or an entire AMI/Node?	1	1	https://issues.jboss.org/browse/IMMUTANT-182
7790	IMMUTANT-107	Why? If we include deps in archives by default, why would we resolve them by default at deployment? It's too much of a pain to manually create the deployment descriptor just to turn :resolve-dependencies to false.	1	0	https://issues.jboss.org/browse/IMMUTANT-107
7791	IMMUTANT-96	Another reason to consider this change is that using '/' in queue/topic names will make it difficult to use HornetQ REST interface to JMS. See Section 3.1 of http://docs.jboss.org/resteasy/hornetq-rest/1.0-beta-1/userguide/html_single/index.html#d0e162 The URI for a topic/queue resourc would be /queues/jms.queue.{immutant_queue_name} Using '/' clearly doesn't play well in this scheme. Is there a strong reason to continue with '/', and not simply use '.' or some other separator?	1	1	https://issues.jboss.org/browse/IMMUTANT-96
7792	IMMUTANT-96	Right now, I believe the only naming requirement we have is that queues must start with /queue, and topics must start with /topic. We do that so we can recognize the type based on a naming convention. I'm fine with relaxing that, maybe to #"^.?queue". This would make queues starting with "/queue", ".queue", "queue", "xqueue" all legal. How does that sound?	1	1	https://issues.jboss.org/browse/IMMUTANT-96
7793	IMMUTANT-84	I pushed an update to lein-immutant today (0.8.2) that should resolve this. Can you try it and report back that it indeed works for you?	1	1	https://issues.jboss.org/browse/IMMUTANT-84
7794	IMMUTANT-78	Is this one still relevant?	1	0	https://issues.jboss.org/browse/IMMUTANT-78
7795	IMMUTANT-55	What does this even mean?	0	0	https://issues.jboss.org/browse/IMMUTANT-55
7796	IMMUTANT-27	Jim: Isn't this kind of done? Or are is this jira waiting on more formal Immutant support on OS?	1	1	https://issues.jboss.org/browse/IMMUTANT-27
7797	IMMUTANT-24	We already had this discussion in TB about 'at' API design. So I wrote a draft in Clojure. https://gist.github.com/184f7b2eb203df87727a Lemme know if I got the idea.	1	1	https://issues.jboss.org/browse/IMMUTANT-24
7798	IMMUTANT-21	Hey Jimbotron - is there anything else we need to do here?	1	1	https://issues.jboss.org/browse/IMMUTANT-21
7799	IMMUTANT-21	Hey Jimbotron - is there anything else we need to do here?	1	1	https://issues.jboss.org/browse/IMMUTANT-21
7800	ISPN-8004	I suppose sending the class name would solve the problem, but we want to send a numerical id instead to save some bandwidth. Could we use in internal cache as a replicated registry that maintains the mapping of encoder internal numerical id to class name (and the reverse)? Or what approach do you have in mind? I would like to avoid solutions that leave the assignment of ids to the users, like it happens with externalizers now.	0	0	https://issues.jboss.org/browse/ISPN-8004
7801	ISPN-7991	When I was working of REST refactoring (ISPN-7734) I noticed that we are not converting entries retrieved using REST interface. What we do instead is we take raw payload (as bytes) and store it [directly into the cache|https://github.com/infinispan/infinispan/blob/c8c632349a4899d8b6085329288f1615b0c2d33c/server/rest/src/main/java/org/infinispan/rest/operations/CacheOperations.java#L301-L301]. This is exactly the same thing the [old implementation was doing|https://github.com/infinispan/infinispan/blob/8.2.x/server/rest/src/main/scala/org/infinispan/rest/Server.scala#L364]. I'm not sure if this is the correct approach. But with JSON stuff coming soon I'm not sure if it matters. Do we want to put additional effort in fixing this bug or we maybe we should rely on transcoding?	1	1	https://issues.jboss.org/browse/ISPN-7991
7802	ISPN-7991	The current algorithm looks like the following: * We take the input data as bytes * [We create metadata for it|https://github.com/infinispan/infinispan/blob/c8c632349a4899d8b6085329288f1615b0c2d33c/server/rest/src/main/java/org/infinispan/rest/operations/CacheOperations.java#L314], * [We store it in cache with metadata|https://github.com/infinispan/infinispan/blob/c8c632349a4899d8b6085329288f1615b0c2d33c/server/rest/src/main/java/org/infinispan/rest/operations/CacheOperations.java#L325] By using metadata we know how to [convert it back]|https://github.com/infinispan/infinispan/blob/c8c632349a4899d8b6085329288f1615b0c2d33c/server/rest/src/main/java/org/infinispan/rest/operations/CacheOperations.java#L111-L112 when sending to the client. Now the biggest question that bothers me is what format needs to be used to make it working with compatibility? In case of String objects ({{content-type: text/plain}}), shall we put a String in cache? What about other types such as {{content-type: application/xml}}?	1	1	https://issues.jboss.org/browse/ISPN-7991
7803	ISPN-7991	And does it matter? I think the point is that no matter what you send via REST you need to pass a specific marshaller to the HotRod client to understand the data. That was the intended behaviour, IMO. But I'm not sure what you want to achieve exactly.	1	1	https://issues.jboss.org/browse/ISPN-7991

#	Requirement	Questions	Answered	Successfully Answered	URL
7804	ISPN-7990	bq. you won't know which indexes need to be cleaned up That's the issue this JIRA is trying to address. As I found out recently, there are some corner cases (considered rare, during state transfer) where it's not possible to know the type. bq. even cleaning up "all indexes" by id is troublesome as you might not have a full list to define "all indexes" I assume the QueryKnownClasses object would have all types stored? If not, doesn't the searchFactory know about all existent indexes? bq. without the type you don't know how to encode the key -> not matching the right key might lead to various mismatches, like delete the wrong data or not deleting it at all The key encoding is done by the KeyTransformationHandler which is cache-scoped; so I assume the id is consistent across all indexes. bq. what if the index was created by an instance having a different / out of date configuration How this could happen? I have a feeling if clusters have caches with outdated configurations indexing would not be the only problem	1	1	https://issues.jboss.org/browse/ISPN-7990
7805	ISPN-7990	[~sannegrinovero] Still waiting for your reply to my previous comments :) EDIT: Forgot to add, IMO operations across multiple search indices is not something too uncommon. Lucene has support for that and elasticsearch allows to use special placeholder "all" to delete from multiple indices or even use a regex to narrow them down [1]. And in Infinispan, we have the advantage of having unique document ids across all indices (it derives from the cache key). When you mention "unsafe", is it some internal limitation of the Hibernate Search engine, or the QueryKnownClasses (which is backed by a SYNC REPL cache) itself? [1] https://www.elastic.co/guide/en/elasticsearch/reference/current/multi-index.html	1	1	https://issues.jboss.org/browse/ISPN-7990
7806	ISPN-7990	bq. And in Infinispan, we have the advantage of having unique document ids across all indices (it derives from the cache key). When you mention "unsafe", is it some internal limitation of the Hibernate Search engine, or the QueryKnownClasses (which is backed by a SYNC REPL cache) itself? No I'm not referring to some obscure limitation in Hibernate Search. I was merely concerned about the reliability (especially over time and in exceptional cases) of {{QueryKnownClasses}}, but since Adrian clarified this is finally being taken care of I guess I have no more concerns. Incidentally you remind me of the terrible hack that Infinispan Query does to encode keys. We should see if we can improve on that, especially after we've dropped "auto-discovery" of index mapping.	1	1	https://issues.jboss.org/browse/ISPN-7990
7807	ISPN-7971	[~sebastian.laskawiec] What kind of warning did you have in mind? A dialog displayed once a user logs in for the first time?	1	1	https://issues.jboss.org/browse/ISPN-7971
7808	ISPN-7842	h5. High level questions # (?) I assume the intent that - for a given class type {{A}} - it's going to be mapped *either* via annotations *or* via explicit mapping? (I would suggest to expect that, at least for the first iterations, as we don't support integrating the two at the moment) # (/) (follow up on previous question) I hope you'll enforce (validate) against listing the same class in both ways # (flag) We will need to require the actual class definition to be "on classpath" during bootstrap of the Cache. I hope that's fine for the use case? h5. Property mapping # (-) Let's not expose index-time boost. We'll deprecate / remove this soon. # (?) I'm confused about the Spatial mapping example on _city_. Could you add the entity sources to clarify? i.e. you'll need matching {{@Latitude}} and {{@Longitude}} for each Spatial coordinates-set, unless these are embeddables but then you'll need nested mapping. # (i) _norms_, _term-vectors_, etc.. : in the annotations case we use enums. Let's implement the XML schema to match, i.e. don't accept any string. # Being able to support {{@FieldBridge}} is typically quite important. h5. Entity Properties vs Entity Fields Hibernate Search can map either properties and/or fields. We can read/write to Java fields, and this is supported by Infinispan Query as well. When having {code:xml} <property name="name" type="method"> <field ... {code} I guess _type_ refers to a getter? A "method" should typically match the full method name. Yet a "getter" is slang for *property* so the block already hinted about it. Should {{<property>}} be named differently, and have two different identifiers to get rid of the _type_ ? Should the inner _field_ be named _documentField_ or _indexField_ ? The {{@Field}} annotation is not ambiguous as one can see it's not a POJO field, but in this context it reads ambiguously. h5. Nested structures? What if my POJO contains a map/set of many (one/none/null) objects which need to be mapped ? In Hibernate Search we support the recursion into the related types, but the child element doesn't have to be {{@Indexed}} on its own. (!) Careful with polymorphic collections. h5. Analyzer definitions? I don't think we need to expose all of Hibernate Search features, but defining Analyzers is essential. h5. Mapping / converstion of Infinispan *keys* The concept of a separate key is not native in Hibernate Search, yet you need a way to define how key types being used are two-way converted to the index format. This is represented as a {{@ProvidedId}} in the Hibernate Search _internals_ but in this case you might want to expose them in a simpler form.	1	1	https://issues.jboss.org/browse/ISPN-7842

#	Requirement	Questions	Answered	Successfully Answered	URL
7809	ISPN-7842	don't want the index name to be customized, nor two entities to share the same index)? # I think support for class bridges is missing (I guess {{<property type="class">}}, without a property name, would work, but it's hardly elegant). See {{org.hibernate.search.annotations.ClassBridge}} and {{org.hibernate.search.cfg.EntityMapping.classBridge(Class<?>)}} in Hibernate Search. # You need some way to assign analyzers to fields (e.g. {{property name="foo" analyzer="myAnalyzer"}}). See {{org.hibernate.search.annotations.Field.analyzer()}} and {{org.hibernate.search.cfg.FieldMapping.analyzer(Class<?>)}} in Hibernate Search. # As Sanne mentioned, analyzer definitions are absolutely necessary. You may think they don't belong in entity mappings (and I could not agree more), but they should be _somewhere_, so that you can reference the definitions when defining index fields (see above). # As Sanne mentioned, there should probably be some support for embedding other objects in an entity's index, though you could probably add it later. And yes, embedded objects may be mapped to index fields without having their own index (therefore the "indexed-entity-mapping" tag probably wouldn't be a good fit for those). See {{org.hibernate.search.annotations.IndexedEmbedded}} and {{org.hibernate.search.cfg.PropertyMapping.indexEmbedded()}} as well as {{org.hibernate.search.annotations.ContainedIn}} and {{org.hibernate.search.cfg.PropertyMapping.containedIn()}} in Hibernate Search. # As Sanne mentioned, custom field bridges (and custom class bridges, but that's about the same) are an important feature and should probably be supported from the start. See {{org.hibernate.search.annotations.Field.bridge()}} and {{org.hibernate.search.cfg.PropertyMapping.bridge(Class<? extends FieldBridge>)}} in Hibernate Search. h4. Unadvisable features # As Sanne mentioned, it would be best not to include index-time boost, since it will probably disappear soon. On top of that, I seem to remember it's buggy: if you contribute to the same index field from multiple properties, each time with the same boost, I believe the boost will grow exponentially with the number of contributing properties. So... you've been warned. h4. Cosmetics # {{<property name="name" type="method">}} "type" may not be a very explicit name... maybe "access-mode" would be better? # Unless there's a specific reason for that, the "mode" attribute on the "spatial" tag should probably accept lowercase values instead of {{HASH}} and such, so it'll be consistent with other attributes. Also, it's called "spatial-mode" instead of just "mode" when used at a property level; you may want to use the same attribute name in both cases. # The values for the "term-vector" attribute in the "field" tag should probably be "*true/false*/with-offsets/with-positions/with-position-offsets" to be consistent with "norms", "store", etc. h4. Index-driven mapping Also, I'd like to point out that while annotation-based mapping is necessarily entity-driven, XML-based mapping could be index-driven, which may arguably be clearer when contributing to the same index field from multiple entities : {code} <indexed-entities> <!-- annotated entity --> <indexed-entity>org.infinispan.query.queries.faceting.Car</indexed-entity> <!-- non-annotated entity --> <index-entity-mapping index-name="people"> <!-- the FQN of the class to index --> <indexed-entity id="author">my.domain.model.Author</class> <indexed-entity id="fan">my.domain.model.Fan</class> <!-- optional --> <spatial name="place" mode="HASH"> <bridge entity="author"> <!-- class bridge --> </spatial> <!-- list of index fields --> <field name="name" store="true" index="true" analyze="true" norms="true" term-vector="true"> <bridge entity="author" property="name" access-mode="method" impl="my.package.MyBridge"> <bridge entity="fan" property="fullName" access-mode="method"> </field> {code} Of course, it would be a bit confusing for users switching over from annotation-based mapping, and it also may be a bit more challenging to implement. You may not want to do this for various reasons, but I wanted to mention it, since that's probably not something you'll be able to change	0	0	https://issues.jboss.org/browse/ISPN-7842
7810	ISPN-7426	We're reverting -the Hibernate Core- all upgrades since it breaks OSGI integration tests: {code} java.lang.Exception: Could not start bundle mvn:org.infinispan/infinispan-embedded/9.0.0-SNAPSHOT in feature(s) infinispan-embedded-9.0.0-SNAPSHOT: Unresolved constraint in bundle org.infinispan.embedded [46]: Unable to resolve 46.0: missing requirement [46.0] osgi.wiring.package; (&(osgi.wiring.package=javassist)(version>=3.20.0)(!(version>=4.0.0))) {code} The problem seems to be with entitymanager: {code} <lburgazzoli> 2017-02-07 18:15:53,882 | WARN | FelixStartLevel | FeaturesServiceImpl | 20 - org.apache.karaf.features.core - 3.0.4 | Error when installing feature hibernate: org.osgi.framework.BundleException: Jar is not a bundle, no Bundle-SymbolicName mvn:org.hibernate/hibernate-entitymanager/5.2.7.Final {code}	0	0	https://issues.jboss.org/browse/ISPN-7426
7811	ISPN-7418	Something to consider: * If the cache has a MIME type configured for key/value, should a cache write be able to override it? Maybe only if its the first write? Needs some thought...	1	0	https://issues.jboss.org/browse/ISPN-7418
7812	ISPN-7402	[~vblagojevic] The NPE you're getting now seems to indicate the service controller for the given cache-container is null, ie. the cache container is not running yet. Can you check ?	1	1	https://issues.jboss.org/browse/ISPN-7402
7813	ISPN-7359	[~ryanemerson] given that we can and we do use composite operations, should we perhaps close this issue?	1	0	https://issues.jboss.org/browse/ISPN-7359
7814	ISPN-7322	[~belaban] I disagree. Since we actually want to order only writes to each key (without respect to the other keys), full source ordering is excessive - one hiccup (lost/discarded message) delays all subsequent messages (until the problem is handled). About thread creation - do you mean that you deliver (to app) OOB messages received in one batch separately (one msg per thread)? Can we just switch this off and deliver the whole batch sequentially? The processing on backup should be non-blocking (not sure if there's something blocking left yet).	1	1	https://issues.jboss.org/browse/ISPN-7322
7815	ISPN-7276	[~ryanemerson] Why don't we just log out a user on server down event? That should take care of this and bunch of other potential transitory issues that will show up on client-server disconnect.	1	1	https://issues.jboss.org/browse/ISPN-7276
7816	ISPN-7224	hmmmm it's not that easy as you think guys... So let me try to explain my concerns a bit more... The {{Cache}} instance on which SpringCache support is baked can be re-used in many different places. There's nothing that prevents a user from grabbing an instance and locking the entire container for some reason. In that case {{Cache#get(Object, Callable<T>)}} would block forever. The second aspect is asynchronous replication. Imagine you cache is clustered and at the same time you supply object {{A}} on one node and object {{B}} on another one. In that case your clustered code will also invoke the supplier twice. The only thing we _could_ do is to provide "best effort" to synchronize on the key by locking it (with ability to disable this feature in configuration). This still doesn't give you any guarantees that your supplier won't be invoked twice and for me it's any better than {{computeIfAbsent}}. Would it solve your problem [~miken123]?	1	1	https://issues.jboss.org/browse/ISPN-7224
7817	ISPN-7120	bq. Reducing the number of tests may not be so easy... remember that we bq. need to test all versions of the protocol, not just the latest one. bq. And we still need to test stuff that's not explicitly in the protocol, bq. especially around state transfer/server crashes and around query bq. (which the protocol says almost nothing about). The above quote is from [~dan.berindei]. Should these also be included in the TCK?	1	0	https://issues.jboss.org/browse/ISPN-7120
7818	ISPN-7114	IspnPerfTest and RadarGun could use this after a run, to check if consistency is provided between cluster nodes. I'm thinking of a method in AdvancedCache that returns the number of inconsistent keys in a cluster. Perhaps it should return the keys directly (in a set)? Also, the (or an additional) method might return actual keys and values, for a reconciliation strategy to perform repair. Alternatively, as [~NadirX] mentioned, this could be done by shipping user code to the nodes to do repair... Can you propose some API and we'll discuss it on this JIRA?	0	0	https://issues.jboss.org/browse/ISPN-7114

#	Requirement	Questions	Answered	Successfully Answered	URL
7819	ISPN-7037	Here is a brief discussion about this topic, from the infinispan IRC channel, 22-SEP-2016 (EST): (11:09:36 AM) me@freenode: I know you are beyond busy so I don't really want to bug you about this stuff. However, do you recommend doing a unique quickstart based on the embedded and clustered quickstarts? the secure-embedded-cache quickstart only demonstrates granular security of cache nodes, and not really fully secured infinispan/jdg library mode clustering. (11:13:52 AM) ttarrant: mwigglesworth, what features would you like to highlight ? (11:14:30 AM) ttarrant: mwigglesworth, ideally such a quickstart should be able to run both with a SecurityManager and without one (while maintaining the same behaviour((11:15:25 AM) me@freenode: I would like to highlight the use of callbackhandlers to demonstrate how an end-user/developer would enable node-authentication, with infinispan/jdg. (11:16:45 AM) me@freenode: This would be more of a "secure clustering" example, however, since the secure-embedded-cache quickstart is appropriately labeled, and has part of the security enabled, I thought it may make sense to simply fork and update it. (which I have already started to do.0 (11:25:07 AM) jbossbot: new jira [ISPN-7037] Create quickstart that demonstrates library mode node security using callbackhandlers [New (Unresolved) Feature Request, Minor, Demos and Tutorials/Tasks, Unassigned] https://issues.jboss.org/browse/ISPN-7037 (11:34:34 AM) ttarrant: mwigglesworth, I'm not entirely familiar with JDF quickstart policies, but what about, instead of proliferating quickstarts, add to the existing one and enable the node auth via some switch / maven profile (11:35:13 AM) me@freenode: Sounds good.	0	0	https://issues.jboss.org/browse/ISPN-7037
7820	ISPN-6919	[~ksobolew] I'm afraid the functional API's commands can't run without exclusive access to the entries they modify, either. [~pruivo] numOwners == 1 should really be described separately. If we exclude that, the first case becomes "originator != primary" What happens when the backups install a new topology in which they're no longer owners, or if the backups crash? Also, why do we need the replication to the backups to be ordered? That won't help if the primary owner crashes, and another node becomes the primary owner. More general, we should really have some diagrams to discuss how the triangle is supposed to handle the various corner cases that appear when a node joins/leaves/crashes, or when there's a split+merge. I'm not saying this approach won't work with topology changes, it's just that I have no idea how it's supposed to work.	0	0	https://issues.jboss.org/browse/ISPN-6919
7821	ISPN-6797	Is this issue specific to HotRod, or do you plan to evaluate compression for RPCs/storeAsBinary/persistence as well?	1	0	https://issues.jboss.org/browse/ISPN-6797
7822	ISPN-6796	We don't have this information available. We can only access whatever DMR gives us. Closing it. If this is a requirement reopen another issue where this info is provided in DMR. If it is provided it will be automatically shown in error dialog	0	0	https://issues.jboss.org/browse/ISPN-6796
7823	ISPN-6706	Rereading what you wrote, I more understand your case. I would like to ask some more information though. You said the cluster is pausing due to the purge, this seems problematic of itself. The purge shouldn't stop other concurrent operations and in most cases it will be very heavily IO bound so it shouldn't be taking up CPU. How did the pause adversely affect your test? Can you also provide your configuration?	1	1	https://issues.jboss.org/browse/ISPN-6706
7824	ISPN-6706	Yeah that looks like the underlying issue. Can you try adding the index to the column and see if it fixes your issue? Either way it looks like we need a JIRA to add the index when creating the table.	1	1	https://issues.jboss.org/browse/ISPN-6706
7825	ISPN-6706	OK, I'm getting confused :) I too was under impression that the query to purge expired rows picks one node at a time by "manually" scanning the entire table, but I looked at the code more closely and the query indeed limits the rows selected to only those with timestamp in the past, and actually it is a DELETE statement. And indeed the CREATE TABLE statement doesn't create any indices beside the PK on the ID column. So it's much clearer now. Should I add another JIRA about the timestamp index?	1	0	https://issues.jboss.org/browse/ISPN-6706
7826	ISPN-6706	Thankfully I'm not :) So... it looks like these two should satisfy my use case (I hope at least ISPN-6710 is backported to 8.2.x!). Should this JIRA be closed then?	1	0	https://issues.jboss.org/browse/ISPN-6706
7827	ISPN-6677	Yes, retries are the only option. But I think we should implement reties in Core (this way we could use the same approach for both embedded and client server). WDYT? On Wed, Jan 18, 2017 at 10:27 AM, Gustavo Fernandes (JIRA) <issues@jboss.org	1	1	https://issues.jboss.org/browse/ISPN-6677
7828	ISPN-6676	Thoughts on design for this feature: * HTTP/2 [does not support upgrading to another protocol|https://http2.github.io/http2-spec/#rfc.section.8.1.2.2]. [TLS ALPN|https://http2.github.io/http2-spec/#rfc.section.3.1] should be used to ensure this type functionality. * HTTP/1.1 Upgrade header is supported to ensure backwards compatibility. In other words we should consider using [HTTP/1.1 Upgrade|https://http2.github.io/http2-spec/#rfc.section.3.2] or [ALPN|https://tools.ietf.org/html/rfc7301] to support this kind of functionality. * [HTTP/2 client with TLS support must use ALPN|https://http2.github.io/http2-spec/#rfc.section.3.4] * [HTTP/2 supports extensions, which can use new type of Frames, Settings and Error Codes|https://http2.github.io/http2-spec/#rfc.section.5.5]. * HTTP/2 supports [PING|https://http2.github.io/http2-spec/#rfc.section.6.7] and [CLOSE|https://http2.github.io/http2-spec/#rfc.section.6.8] operations out of the box. * [ALPN is considered as a protection for cross-protocol attacks|https://http2.github.io/http2-spec/#rfc.section.10.2] for HTTP/2	0	0	https://issues.jboss.org/browse/ISPN-6676

7829	ISPN-6673	The procedure for OpenShift looks like the following: # Start OpenShift cluster using: {code} oc cluster up {code} Note you are logged as a developer. # Create new Infinispan cluster using standard configuration. Later on I will use REST interface for playing with data, so turn on compatibility mode: {code} oc new-app slaskawi/infinispan-experiments {code} # Node that you should always be using labels for your clusters. I'll call my cluster=cluster-1 {code} oc env dc/infinispan-experiments OPENSHIFT_KUBE_PING_LABELS=cluster=cluster-1 oc env dc/infinispan-experiments OPENSHIFT_KUBE_PING_NAMESPACE=myproject oc label dc/infinispan-experiments cluster=cluster-1 {code} # Scale up the deployment {code} oc scale dc/infinispan-experiments --replicas=3 {code} # Create a route to the service {code} oc expose svc/infinispan-experiments {code} # Add some entries using REST {code} curl -X POST -H 'Content-type: text/plain' -d 'test' http://infinispan-experiments-myproject.192.168.0.17.xip.io/rest/default/1 {code} # Check if the entry is there {code} curl -X GET -H 'Content-type: text/plain' http://infinispan-experiments-myproject.192.168.0.17.xip.io/rest/default/1 {code} # Now we can spin up a new cluster. Again, it's very important to use labels which will avoid joining those two clusters together. The new Docker image with Infinispan Hot Rod server needs to contain the following Remote Cache Store definition: {code} 212,214d214 < <remote-store cache="default" hotrod-wrapping="false" read-only="true"> < <remote-server outbound-socket-binding="remote-store-hotrod-server" /> < </remote-store> 449,451c449 < <!-- If you have properly configured DNS, this could be a service name or even a Headless Service --> < <!-- However DNS configuration with local cluster might be tricky --> < <remote-destination host="172.30.14.112" port="11222"/> {code} # Spinning new cluster involves the following commands: {code} oc new-app slaskawi/infinispan-experiments-2 oc env dc/infinispan-experiments-2 OPENSHIFT_KUBE_PING_LABELS=cluster=cluster-2 oc env dc/infinispan-experiments-2 OPENSHIFT_KUBE_PING_NAMESPACE=myproject oc label dc/infinispan-experiments-2 cluster=cluster-2 oc expose svc infinispan-experiments-2 {code} # At this stage we have 2 clusters (the old one with selector {{cluster=cluster-1}} and the new one with selector {{cluster=cluster-2}}). Both should be up and running (check that with {{oc status -v}}). Cluster-2 has remote stores which point to Cluster-1. # Switch all the clients to the {{cluster=cluster-2}}. Depending on your configuration you probably want to create a new Route (if your clients connect to the cluster using Routes) or modify the Service. # Fetch all remaining keys from {{cluster=cluster-1}} {code} oc get pods --selector=deploymentconfig=infinispan-experiments-2 .. write down oc exec infinispan-experiments-2-3-pc7sg -- '/opt/jboss/infinispan-server/bin/ispn-cli.sh' '-c' '--controller=$(hostname -i):9990' '/subsystem=datagrid-infinispan/cache-container=clustered/distributed-cache=default:synchronize-data(migrator-name=hotrod)' {code} # Disconnect the source cluster {code} oc exec infinispan-experiments-2-3-pc7sg -- '/opt/jboss/infinispan-server/bin/ispn-cli.sh' '-c' '--controller=$(hostname -i):9990' '/subsystem=datagrid-infinispan/cache-container=clustered/distributed-cache=default:disconnect-source(migrator-name=hotrod)' {code}	0	0	https://issues.jboss.org/browse/ISPN-6673
7830	ISPN-6573	Answering to https://developer.jboss.org/message/955416#955416 ("Is this an issue only when cache store is involved, or are the functional operations broken in transactional mode completely?"): yes, it's broken in transactional mode completely. I'm attaching tests that illustrate this. FunctionalInMemoryNonTx passes, while FunctionalInMemoryTx fails.	1	0	https://issues.jboss.org/browse/ISPN-6573
7831	ISPN-6573	Okay. Couldn't you downgrade it to wishlist, though? :)	1	0	https://issues.jboss.org/browse/ISPN-6573
7832	ISPN-6537	Could you post your configuration? Are you using the modules distributed on http://downloads.jboss.org/infinispan/8.1.3.Final/infinispan-as-embedded-modules-8.1.3.Final.zip ?	1	1	https://issues.jboss.org/browse/ISPN-6537
7833	ISPN-6471	Isn't this a duplicate of ISPN-5083 ?	1	0	https://issues.jboss.org/browse/ISPN-6471
7834	ISPN-6457	I think the point of disabling authorization is to allow everything. So why disable access to these caches?	1	1	https://issues.jboss.org/browse/ISPN-6457
7835	ISPN-6433	Sorry Paul, Radoslav, but this slipped under the radar. By when do you need this?	1	1	https://issues.jboss.org/browse/ISPN-6433
7836	ISPN-6433	[~NadirX] It looks like it was erroneously closed - which is how it went unnoticed. Do you have a preferred process for flagging issues to backport to a specific branch?	0	0	https://issues.jboss.org/browse/ISPN-6433
7837	ISPN-6370	Ignored by hotrod connector?	0	0	https://issues.jboss.org/browse/ISPN-6370
7838	ISPN-6358	The entry interator tests are now actually testing the streams. Do we still have the same coverage after removing those tests?	1	1	https://issues.jboss.org/browse/ISPN-6358
7839	ISPN-6252	What do you mean by "manipulate it" and/or change the slot? Can this be done at runtime, on a per-deployment base? We can not patch the static definition of existing modules, that would break other applications. An alternative: as far as I remember the only module which needs both worlds in the same picture is the Infinispan DirectoryProvider for Hibernate Search: that's meant to link to the Hibernate Search instance included in WildFly/EAP, and therefore should be using its Lucene module (rather than the Infinispan/Lucene module). Considering that Infinispan Query has its own very specific needs on how it sets up the Directory, I'm wondering if we should rather not share the DirectoryProvider module for both Query and Hibernate Search. If you make the Infinispan DirectoryProvider compatible with Hibernate Search / WildFly only, and give Infinispan Query a similar alternative we should be good and the two projects would be able to have completely independent Lucene versions.	1	1	https://issues.jboss.org/browse/ISPN-6252
7840	ISPN-6252	> What do you mean by "manipulate it" and/or change the slot? Can this be done at runtime, on a per-deployment base? Infinispan query depends on Hibernate Search that depends on Lucene. Hibernate Search 5.6.0.Alpha1 (the version Infinispan points to now) is currently on Lucene 5.4. The only way to have Infinispan on 5.5 without a Hibernate search release would be to manipulate/hack the Hibernate Search modules zip on our side to include 5.5 instead of 5.4, but this is not very nice.	1	1	https://issues.jboss.org/browse/ISPN-6252
7841	ISPN-6252	> If you make the Infinispan DirectoryProvider compatible with Hibernate Search / WildFly only, > and give Infinispan Query a similar alternative we should be good and the two projects would > be able to have completely independent Lucene versions. That separation makes sense, but I think it'd would not allow Infinispan to have a Lucene version different from Hibernate Search: Infinispan Query using "ram" or "fs" directory will still depends on Hibernate Search that has its own exported Lucene version. I suppose it'd cause issues should Infinispan decides to have a dependency on another Lucene version. Am I right?	1	1	https://issues.jboss.org/browse/ISPN-6252
7842	ISPN-6252	HSearch alpha2 will use Lucene 5.5 (to be release really soo). So that mitigate the issue right? [~sannegrinovero] you lost me on your last comment though: no idea what you're talking about :)	1	0	https://issues.jboss.org/browse/ISPN-6252
7843	ISPN-6057	Migrate Cassandra cache store to the {color:#d04437}6.0{color} cachestore API Update Cassandra cache store to using Infinispan {color:#d04437}7/8{color} Is existed task only about 6x version?	1	0	https://issues.jboss.org/browse/ISPN-6057
7844	ISPN-6027	No! I deprecated this bundler and it will be removed in 4.0. Which perf test are you referring to?	1	1	https://issues.jboss.org/browse/ISPN-6027
7845	ISPN-6027	Was this with Radargun 3.0 which afair only focuses on latency? IMO, throughput should increase a lot by removing DONT_BUNDLE...	1	1	https://issues.jboss.org/browse/ISPN-6027

7846	ISPN-5962	That looks nice. But what does "acts much like a spin" mean exactly, will it still burn CPU time unnecessarily? We want this to lock pessimistically ASAP and free up the current thread.. actually encouraging context switching in this case.	1	1	https://issues.jboss.org/browse/ISPN-5962
7847	ISPN-5935	What's the new name you had in mind?	0	0	https://issues.jboss.org/browse/ISPN-5935
7848	ISPN-5807	[~pzapataf] What did we decide regarding this issue? Are you taking it over from me, are we postponing it or do you want me to address it for 8.2?	1	1	https://issues.jboss.org/browse/ISPN-5807
7849	ISPN-5704	Shall we provide order guarantees for Traversable returned from multi-key (evalMany methods) operations? Right now it's not guaranteed but it's implied.	0	0	https://issues.jboss.org/browse/ISPN-5704
7850	ISPN-5704	Use case: we want to add an element to a List and the list is stored as V in the functional map. You could try using this function: {code} <R> CompletableFuture<R> eval(K key, V value, BiFunction<V, ReadWriteEntryView<K, V>, R> f) {code} But the problem is that the element to add to the list can't be passed in {{value}} since V is List and not the individual element. Could we have a more flexible value type? Could we have this? {code} <R, T> CompletableFuture<R> eval(K key, T value, BiFunction<T, ReadWriteEntryView<K, V>, R> f) {code} The problem then would be that we could not call {{view.set(value)}}... It needs some thought.	0	0	https://issues.jboss.org/browse/ISPN-5704
7851	ISPN-5696	-Hi Tristan, I am still getting the same error i.e. Exception in thread "main" java.lang.NoClassDefFoundError: javax/transaction/TransactionManager I have tried with 'infinispan-7.2.5.Final-all' as I am using Java 1.7 Am i missing something ? Please help me out. Thanks in advance.- Working now. Thanks.	1	1	https://issues.jboss.org/browse/ISPN-5696
7852	ISPN-5545	is there any interest on this issue from other users ? actually on a large cluster (100 nearcache hotrod nodes) the nearcache floods the network	0	0	https://issues.jboss.org/browse/ISPN-5545
7853	ISPN-5535	Hi, could you please attach your wildfly configuration and you pom.xml?	0	0	https://issues.jboss.org/browse/ISPN-5535
7854	ISPN-5535	Can we see your MANIFEST.MF and jboss-deployment-structure.xml ? Infinispan jar files are not automatically exported to WildFly deployments and you need to explicitly add them as dependencies using the techniques described at https://docs.jboss.org/author/display/WFLY8/Class+Loading+in+WildFly	1	1	https://issues.jboss.org/browse/ISPN-5535
7855	ISPN-5520	Could you provide more information on circumstances, which should cause HR clients to use (be redirected to) backup site? Some ideas: 1. All nodes from the primary site go down 2. Administrator's intervention (outside of ISPN) - in fact this has the same effect as #1 as HR clients won't be able to connect to any server from the primary site 3. Status of primary site changes to "offline" - a possible way to avoid #2	1	1	https://issues.jboss.org/browse/ISPN-5520
7856	ISPN-5515	What guarantees do you have for this data to be valid? The definition of "first" seems rather subjective to me, and you have no idea how long ago that data was stored. Maybe this node has been down for the last month, while all other nodes worked and now this is being restarted.	1	1	https://issues.jboss.org/browse/ISPN-5515
7857	ISPN-5515	I think these are really tricky ideas which should be discussed on the mailing list, I noticed this JIRA by pure luck and find it concerning that such decisions are made without any wider discussion. What I find most tricky: - it's possible the new starting node starts while "thinking it's first", but then actually merge with a running cluster. The cluster detection protocols aren't foolproof, and you're relying on timeouts to be configured safely (when are they ever?). - it's unrealistic to push such a requirement to "admin's responsibility" especially but not least because node restarts might not be under their control - even with this design, the majority of cachestores are cleared so there is an assumption that "data loss is fine" for the user: so why even bother trying to keep a small portion of it at risk of consistency trouble? - this design seems to favour something else above correctness, and I'm not sure what "something else" you're aiming at.. why work hard to not wipe a single cachestore? I agree with you that this is an improvement over the current state, but I don't see why you would implement tricky code to provide a tricky solution when all what's needed is remove the preloading option from configuration. You'll be done in much less work and get a better reliable solution. Unless I'm missing the important reason to load this data?	1	1	https://issues.jboss.org/browse/ISPN-5515
7858	ISPN-5515	> I think these are really tricky ideas which should be discussed on the mailing list, I noticed this JIRA by pure luck and find it concerning that such decisions are made without any wider discussion. We already discussed this on the mailing list, and the conclusion was to implement [graceful restart|https://github.com/infinispan/infinispan/wiki/Graceful-shutdown-&-restore]. This issue is not really about implementing new functionality, it's about automating a recommendation we already have _for users who want it_. > it's possible the new starting node starts while "thinking it's first", but then actually merge with a running cluster. The cluster detection protocols aren't foolproof, and you're relying on timeouts to be configured safely (when are they ever?). If a node starts in a separate partition by itself, the behaviour with "purge on join" enabled will be exactly as it is now - not better, but not worse either. > it's unrealistic to push such a requirement to "admin's responsibility" especially but not least because node restarts might not be under their control A node restart will not affect nodes that are already running in any way. Also, this option will be disabled by default, and if the admin can't control the order in which nodes start, he should definitely not enable it. > even with this design, the majority of cachestores are cleared so there is an assumption that "data loss is fine" for the user: so why even bother trying to keep a small portion of it at risk of consistency trouble? In a replicated cache, it's not a small portion of the data, it's all the data. I agree that it makes a lot less sense in a distributed cache: in theory you could shut down the cluster such that all the state is transferred to a single node and all the data is preserved in that node's store, but it's definitely something you'd want to do on a regular basis. > this design seems to favour something else above correctness, and I'm not sure what "something else" you're aiming at.. why work hard to not wipe a single cachestore? These are my assumptions for using this option: * The cache is replicated and the number of nodes is small * Losing data is not fatal, as there is a backing store * Reading a stale value *is* fatal * Reading data from the canonical store is slow I realize these assumptions are quite narrow, and most users will not use it. But for applications who do fit these assumptions, I think this will help. And it would be back-portable to 7.2.x, unlike the graceful restart work. >I agree with you that this is an improvement over the current state, but I don't see why you would implement tricky code to provide a tricky solution when all what's needed is remove the preloading option from configuration. You'll be done in much less work and get a better reliable solution. I renamed the issue, since it's not really about preload - having preload does complicate the code, but stale values are possible with or without preload enabled.	1	0	https://issues.jboss.org/browse/ISPN-5515
7859	ISPN-5515	Thanks Dan, makes sense to consider replication too. But even then, why is it important for non-primary nodes to not load any entry? If any, I'd expect each node - even with REPL - to only load the entities which it is *primary owner* for. Consistency is an issue either way and I simply think one shouldn't trust any state from a shared CacheStore, but let's assume that some users really want this.. wouldn't you at least spread the load of loading operations from CacheStore among the nodes? I simply fail to see how picking any one node's CacheStore helps to improve on consistency.	0	0	https://issues.jboss.org/browse/ISPN-5515

#	Requirement	Questions	Answered	Successfully Answered	URL
7860	ISPN-5467	Is there a design document somewhere that describes this change ?	1	1	https://issues.jboss.org/browse/ISPN-5467
7861	ISPN-5467	[~belaban] it's probably worth a wiki page, but I'm going to add a brief description here :) I've just issued a new [PR|https://github.com/infinispan/infinispan/pull/4520], so that's what I'm going to describe. * Interceptors extending {{CommandInterceptor}} still work, and can use only {{invokeNext(ctx, command)}} to invoke the next interceptor synchronously. * The new base class is {{BaseAsyncInterceptor}}, which defines a single {{visitCommand(InvocationContext, VisitableCommand)}} entry point. * {{DDAsyncInterceptor}} extends {{BaseAsyncInterceptor}} to add the familiar {{visitXCommand(\[Tx\]InvocationContext, XCommand)}} entry points. * The return type of the {{visitXCommand}} methods is {{BasicInvocationStage}}, only allow you to extract a value or convert to a {{CompletableFuture}}. * {{BaseAsyncInterceptor}} defines some methods that return a {{BasicInvocationStage}}, or a more feature-full {{InvocationStage}} instance: ** {{invokeNext(ctx, command)}} works just like {{CommandInterceptor.invokeNext}}, except the invocation may be asynchronous. ** {{returnWith(value)}} returns a value, because we can't just return a value directly. ** {{goAsync(CompletableFuture<BasicInvocationStage>}} continues the invocation asynchronously. ** {{invokeNextAsync(ctx, command, future)}} is a shortcut for {{goAsync(f.thenApply(o -> invokeNext(ctx, command)))}}. ** {{returnWithAsync(value)}} is a shortcut for {{goAsync(f.thenApply(o -> returnWith(ctx, command)))}}. * {{InvocationStage}} extends {{BasicInvocationStage}} with a few more {{CompletionStage}}-like features. The main differences from {{CompletionStage}} are: ** All callbacks receive two extra parameters: the context and the command. In many interceptors, this allows us to store the callback in a field instead of creating a new instance on each invocation. ** Callbacks can throw {{Throwable}}, and received exceptions are not wrapped in `CompletionException`. I'm on the edge about this, but I'm sure a switch to `CompletionException` wrapping should be have a separate issue anyway. ** Not all {{CompletionStage}} methods are implemented, e.g. we don't support combining two invocation stages with {{thenCombine}}. ** We also have one extra method, {{compose((BasicInvocationStage, InvocationStage, VisitableCommand, Object, Throwable) -> BasicInvocationStage}}. It works like {{CompletionStage.thenCompose}}, but the callback gets called even if the invocation stage failed.	0	0	https://issues.jboss.org/browse/ISPN-5467
7862	ISPN-5414	Hi Adrain, A quick query on the scope of this implementation. Will we be avoiding parsing with this implementation. Will the parsed results be stored in query cache and named parameters be applied . We are working on similar modification and we can share our thoughts and design if its solving above two issues	1	1	https://issues.jboss.org/browse/ISPN-5414
7863	ISPN-5414	Can you please share the git url where we can view the code changes if coding is already done ?	1	1	https://issues.jboss.org/browse/ISPN-5414
7864	ISPN-5414	Thanks Adrian, We are presently implementing by keeping parsing result of antlr parser and storing it in Cache. Avoiding internals for AST Processor for now would give us easier way forward. Did some analysis around end to end speed after avoiding parsing we are able to achieve approx 4200 req/sec for 1 Million cache size which looks good for the moment. Our intention for now is not to make solution very generic which would be the final solution from your end but just to provide lookups from multiple keys stored in value part	0	0	https://issues.jboss.org/browse/ISPN-5414
7865	ISPN-5310	Is this another migration from hibernate-search codebase, more specifically [1]? [1] https://github.com/hibernate/hibernate-search/blob/master/modules/src/main/modules/search/infinispan-storage/module.xml	1	1	https://issues.jboss.org/browse/ISPN-5310
7866	ISPN-5310	Please take a look at the preview PR. The module is being produced solely on the migrated hibernate search directory provider and is called {{org.infinispan.hibernate-search.directory-provider}} slot {{ispn-7.2}}. Do you have a hard requirement on the name {{org.hibernate.search.infinispan-storage}} ?	0	0	https://issues.jboss.org/browse/ISPN-5310
7867	ISPN-5309	data consistency semantics in the absence of membership changes on the simplest of caches: no data store, no transactions, no passivation nor eviction. These are all refinements of the more basic model. > > I have a few comments/clarifications on the following issues: > - the expected data consistency for interleavings of gets and puts > - use of cache topology and CH in replicated mode and distributed mode > - some more detail on the processing of get and put operations in the context of a set of infinispan cache instances in distributed mode > - message order assumptions > > > data consistency > ---------- > In order to describe input sequences of get/put operations and the expected output values they return after processing by Infinispan, > I assume the following: > > - operations to be considered are ordered (or not) by the happens-before relation based on causality (as opposed to wall clock time) > - initial data consistency model for get and put operations: > - get(): operation that happens-after a get operation get(k) -> v sees the same value v (or the value of a later write) > - put(): operation that happens-after a write operation put(k=v) will see the updated value v (or the value of a later write) > > NB: this rules out any required data consistency between operations initiated at different nodes, even though one may occur after the other based on wall clock time This sounds good. Because a single client can connect to multiple nodes, in the future we should also model consistency for operations that happen on different but do not overlap (the first operation completely finishes before the other operation starts). > replicated mode vs distributed mode > ---------- > I'm a little unclear on the way in which replicated mode and distributed mode > make use of cache topology information (which we can assume > has been correctly distributed to all nodes): > > - do both of these modes make use the current cache topology (containing the CH) to lookup nodes corresponding to keys they need to access? Yes > - is the only difference in the way that the CH is set up (so that for cluster size N, there is one primary owner and N-1 backup owners)? There is one more difference: replicated mode always uses broadcasts instead of unicasts. It should only be relevant when the JGroups view changes, though. > - I assume only one CH is used in regular mode (as opposed to rehashing mode) Yes, we only have 2 CHs during state transfer. > distributed mode get()/put() design > ---------- > Here is a summary of the way in which get and puts are processed: > > (taken almost verbatim from section 4 of Consistency Guarantees in Infinispan, reorganized a little) > > get(): > - when an originator performs a get(K): > - if originator == owner, return the local value > - if originator != owner, originator sends a remote GET_REQ command to > all its owners in read-CH and uses the first successful non-null > response (GET_RSP) Correct. We do a retry when the topology id changes, but we can ignore that for now. > put:() > - when an originator performs a put(K,V): > - if originator == primary owner > - primary owner acquires the key lock, and replicates (PUT_REPL_REQ) > the write to the backup owner(s) > - backup owners confirm the write to the primary owner (PUT_REPL_RSP) > - primary owner updates the value locally, unlocks the key lock, and > replies to the originator > - if originator != primary owner > - originator will send a remote PUT_REQ to the primary owner of the > modified key (looked up from which CH?) > - primary owner acquires the key lock, and replicates (PUT_REPL_REQ) > the write to the backup owner(s) > - backup owners confirm the write to the primary owner (PUT_REPL_RSP) > - primary owner updates the value locally, unlocks the key lock, and > replies to the originator (PUT_RSP) Correct. > Are there any corrections to these descriptions that you would need to make? > Do you have the actual message types for these messages passed back and > forth? Remote get uses ClusteredGetCommand for replication, and the response is a SuccessfulResponse with the entry value (in some cases with an InternalCacheEntry, but we can ignore that for now). Remote put uses PutKeyValueCommand, both for the originator to talk to the primary and for the primary to talk to the backup owners. The responses are again SuccessfulResponses,	1	1	https://issues.jboss.org/browse/ISPN-5309
7868	ISPN-5298	Do we really want more than millisecond resolution? I doubt we can get millisecond precision with a remote distributed cache, anyway, as the write operation is very likely to take more than 1 millisecond.	1	1	https://issues.jboss.org/browse/ISPN-5298

#	Requirement	Questions	Answered	Successfully Answered	URL
7869	ISPN-5298	Ion, did you get a reply to the JSR issue? I'd wait to get an answer for that before making any immediate changes :| If we really need to implement this, I think Dan's approach is easiest. IOW, adding flags indicating the granularity of the expiration parameter. Seconds and Milliseconds would be enough. Remember what the protocol says: bq. Number of seconds that a entry during which the entry is allowed to life. If number of seconds is bigger than 30 days, this number of seconds is treated as UNIX time and so, represents the number of seconds since 1/1/1970. If set to 0, lifespan is unlimited. Seconds is enough to be able to represent any other expiration that's above it. Let's not complicate things beyond what's required :)	1	1	https://issues.jboss.org/browse/ISPN-5298
7870	ISPN-5298	The TCK issue opened: https://github.com/jsr107/jsr107tck/issues/76 . Based on the reply I think the tests might change to address the issue but not sure when.	1	1	https://issues.jboss.org/browse/ISPN-5298
7871	ISPN-5293	ISPN-5219 has two 'extra' needs when it comes for iterating: * Possibility to configure the batch size * Possibility to pass in the segments of interest * (Potentially) Pass in the server(s) of interest (shortcut for the above) Do you plan to cover these?	1	1	https://issues.jboss.org/browse/ISPN-5293
7872	ISPN-5246	Could you elaborate a bit about this change? (Or add a link to related -dev discussion, or link related JGroups JIRA)	1	1	https://issues.jboss.org/browse/ISPN-5246
7873	ISPN-5234	Isn't this already implemented in cluster-model.services.js, function getAvailability - we need to implement it though? It needs to actually check availability rather than simply returning true.	1	1	https://issues.jboss.org/browse/ISPN-5234
7874	ISPN-5234	Update: I don't understand exactly what functionality to imagine for these requests: - Filter by metrics (node view) - Filter by metrics (cache view) Can we elaborate and discuss it a liitle bit here? Meanwhile I -am working on- finished: - Search node (search as you type) - Search cache (search as you type) -I will issue PR with changes ONLY related to those 2 requests that is easy to understand and review. It should be done today (Tuesday) or tomorrow EOD at latest (Wednesday).- PR sent.	1	1	https://issues.jboss.org/browse/ISPN-5234
7875	ISPN-5167	Takayoshi, with ISPN 8 we have streams. Internally their API defines .count which returns a long. Is it sufficient for you to just call {code} cache.keySet().stream().count(){code} to get the size as a long?	0	0	https://issues.jboss.org/browse/ISPN-5167
7876	ISPN-5159	I can't remember precisely in which test this was causing trouble - probably in larger cluster tests, then. [~mcimbora], could you try to run a simple test without staggered start in LLNL, with e.g. 100 nodes?	1	0	https://issues.jboss.org/browse/ISPN-5159
7877	ISPN-5147	When we configure a new cache under the cache manager in JON, the cache is automatically started immediatelly once the configuration is finished. Just FYI. What we are still missing however is the possibility of changing configuration "on-fly" without restarting the server. Is that ^ what we are trying to achieve in this JIRA?	0	0	https://issues.jboss.org/browse/ISPN-5147
7878	ISPN-5131	{quote} Indeed you don't want to limit users deploying instances of AdvancedLoadWriteStore only. You want to support deploying AdvancedCacheLoader, CacheLoader, AdvancedCacheWriter, CacheWriter and ExternalStore as well. This should be tested to make sure it works as expected. Ideally, you'd make sure you can support all of these with the least amount of internal changes. It will require though supporting multiple META-INF/services/xxx definitions based on which interface the user decides to implement. {quote} I would like to propose slightly different approach. Let's create new interface called CacheStoreFactory: {code} public interface CacheStoreFacory { public CacheLoader createCacheLoader(); public CacheWriter createCacheWriter(); } {code} This interface will need to be implemented in deployable cache store. {{PersistenceManagerImpl}} would use such factories to obtain {{CacheLoader}} and {{CacheWriter}} instances. I think the biggest advantage of this approach is that we have only one service responsible for deployable Cache stores. The client has also the same level of flexibility (one might implement only one {{ExternalStore}} and return the same instance in both methods. The biggest drawback is slightly bigger refactoring in core (but on the other hand we guarded by a lot of unit/interaction tests there) Does it sound reasonable or would you still vote for multiple services?	1	1	https://issues.jboss.org/browse/ISPN-5131
7879	ISPN-5131	Not 100% sure about the factory idea. Although I like the simplification, what happens when you have both a cache loader and writer deployed? The bigger problem is how to tie a deployed cache loader/writer with the configuration itself. How are you going to say, "x" cache loader needs to be plugged into "y" cache? I really think you should write up your design in a design wiki (see https://github.com/infinispan/infinispan/wiki), where it's easier for others to collaborate and comment on the specifics. Also, once the wiki is complete, send it to the dev list to get everyone's input there.	1	1	https://issues.jboss.org/browse/ISPN-5131
7880	ISPN-5103	> Also: if we were to ban such "mixed types" from the same index we could use a straight forward Lucene Update command rather than applying the two commands Delete + Add Yes, that's what I described above :) But we don't necessary need to ban mixed types, it works nicely when the source data lives all in the same cache. The corner case (described above) is when entities with the same Id living in different caches share the same index. Is there any other scenario where delete by id is unsafe?	1	1	https://issues.jboss.org/browse/ISPN-5103
7881	ISPN-5083	Could you elaborate in what situations this should help? It seems to me that you only delegate the work to another thread pool, which will get exhausted soon. What do you intend to use as rejection policy?	1	0	https://issues.jboss.org/browse/ISPN-5083
7882	ISPN-5083	Maybe I realized what you might mean by this. Do you expect that a thread will read the request, issue asynchronous operation and the thread handling this async operation will later write the response to the socket? That would allow server-side multiplexing of several HotRod RPC calls over one connection, which is definitely a good thing! Though, in order to fully utilize such power, you'd need the client to multiplex the calls over this single socket, too. This is what SpyMemcached client does, IIRC, and our server implementation prohibits efficient use of socket connections due to the fact that the connection is owned by thread processing the HotRod call.	1	0	https://issues.jboss.org/browse/ISPN-5083
7883	ISPN-5073	[~NadirX] Isn't this issue obsolete now? It has to do more with the core then the admin console. Would you please update the status?	0	0	https://issues.jboss.org/browse/ISPN-5073
7884	ISPN-5042	Hey [~dan.berindei]! Is this issue still valid? I'm interested in this topic so I would be happy to implement some features here...	1	1	https://issues.jboss.org/browse/ISPN-5042
7885	ISPN-5035	I don't think put operations should be allowed to return arbitrary values, depending on the type of the value inserted into the cache. Couldn't you use {{DistributedExecutorService.submit(task, key)}} instead?	1	1	https://issues.jboss.org/browse/ISPN-5035
7886	ISPN-5035	I believe if the cache is not transactional DeltaAware isn't atomic either, unless the applying the Delta is an idempotent operation (as is the case with AtomicHashMap). Incrementing a counter is definitely not an idempotent operation... Can you expand a bit on how you expect {{cache.replace(key, deltaAwareExpectedValue, deltaAwareNewValue)}} to work?	1	1	https://issues.jboss.org/browse/ISPN-5035

#	Requirement	Questions	Answered	Successfully Answered	URL
7887	ISPN-5016	{quote}Overlapping operations can happen in any order{quote} What does 'happen' mean? I guess that eventually the state will be observed with those operations in certain order but does it mean that all threads will observe the writes in the same order? I think that JMM does not guarantee anything like that, and we should put emphasis on this if it's the case for Infinispan, too. {quote}Note that the transaction manager will hide the exception when the cache is registered as a synchronization (BATCH and NON_XA).{quote} Are you sure about this? I thought that write skew check will fire in prepare phase, and exceptions from prepare are not hidden neither in synchronization mode. {quote}maxIdle behaves similarly, except the reference timestamps are from the last write OR read operation.{quote} We could reference here ISPN-3202, expiration through idle time is not correctly maintained in cache store. {quote}In transactional caches, it also suspends the current transaction, and the next read in the transaction will not see the value.{quote} Sounds a bit like you had to resume the transaction manually after putForExternal read.	1	0	https://issues.jboss.org/browse/ISPN-5016
7888	ISPN-5016	>> Overlapping operations can happen in any order > What does 'happen' mean? I guess that eventually the state will be observed with those operations in certain order but does it mean that all threads will observe the writes in the same order? I think that JMM does not guarantee anything like that, and we should put emphasis on this if it's the case for Infinispan, too. I think JMM does guarantee that, if you consider each cache entry to be a volatile variable. >> Note that the transaction manager will hide the exception when the cache is registered as a synchronization (BATCH and NON_XA). > Are you sure about this? I thought that write skew check will fire in prepare phase, and exceptions from prepare are not hidden neither in synchronization mode. You're right, I'll remove it. >> maxIdle behaves similarly, except the reference timestamps are from the last write OR read operation. > We could reference here ISPN-3202, expiration through idle time is not correctly maintained in cache store. Sure. >> In transactional caches, it also suspends the current transaction, and the next read in the transaction will not see the value. > Sounds a bit like you had to resume the transaction manually after putForExternal read. I'll add "for the duration of the operation".	1	1	https://issues.jboss.org/browse/ISPN-5016
7889	ISPN-5016	{quote}Because data is stored in the shared store after the invalidation command was executed on all the nodes, it's also possible for a node to read the old value from the shared store after it has executed the invalidation.{quote} I don't understand the reason very well, could you elaborate a bit more? {quote}Invalidations triggered by write operations are synchronous and the operation will fail with a SuspectException if another node crashes. The entry will not be updated on the originator, but invalidation will still be performed on the non-crashed nodes.{quote} I thought SuspectExceptions are silently handled, aren't they? {quote}For multi-key operations like putAll(), the operation is sent to all the primary owners of the affected keys. When there is a single primary owner for all the affected keys, the operation succeeds and its effects are visible atomically. When there are multiple primary owners, the operation is not atomic: overlapping read operations will see random subsets of the updated values.{quote} As reads don't acquire any locks, I think that even update on single primary owner can be seen as non-atomic.	1	0	https://issues.jboss.org/browse/ISPN-5016
7890	ISPN-5016	{quote}>> Overlapping operations can happen in any order > What does 'happen' mean? I guess that eventually the state will be observed with those operations in certain order but does it mean that all threads will observe the writes in the same order? I think that JMM does not guarantee anything like that, and we should put emphasis on this if it's the case for Infinispan, too. I think JMM does guarantee that, if you consider each cache entry to be a volatile variable. {quote} OK, my bad, I was not inducing the ordering rules properly...	1	0	https://issues.jboss.org/browse/ISPN-5016
7891	ISPN-5016	{quote}If a node is suspected because of a Full GC, it might go from the initial JGroups view straight to the merge view. If that happens, its topology will be the largest one, and it will not be wiped, neither will it receive new data. Instead, it will keep the (possibly stale) entries it had before the Full GC.{quote} Sorry, this is not very clear to me. Why largest topology ID and why wouldn't that propagate its state to all other members (wiping their data)? {quote}If at least half of the nodes in the stable topology leave in quick succession{quote} What is quick succession? Does that depend on JGroups view installation, any timeout or the duration of rebalance? {quote}And if some of the nodes in the Available partition's consistent hash are not really accessible after the merge, the cache might stay Degraded.{quote} 'the cache'? We should be talking rather about partitions, not the whole cache. I understand the first part of the special case, but not the latter. {quote}If a node joins and becomes a backup owner after a write command was sent from the primary owner to the backups, but before the primary owner updates its own data container, it may not receive the value neither as a write command nor via state transfer.{quote} Sounds like a bug to me - is there a JIRA that could be linked? We could tolerate inconsistencies when the node crashes (if we can't fix it), but join or graceful leave should keep the cluster consistent. {quote}When a write to the store fails, it will fail the write operation.{quote} Does this hold for write-behind, too? {quote}With write-behind or asynchronous replication enabled, store write failures are hidden from the user (unless the originator is the primary owner, with async replication).{quote} When originator == primary and write-behind, how can the failure to write to the store be propagated to the user? I thought that user thread initiates both write to the store and async replication and returns. {quote}When the partitions merge back, there is no effort to replicate the values from one partition to another.{quote} Why is that different from non-tx mode, where the partitions with non-highest topology id are wiped? Moreover, in optimistic tx you write {quote}Same as with pessimistic and non-transactional caches.{quote} - what version, then? {quote}If the primary owners of the keys written by the transaction are all in the local transaction, {quote} local partition? {quote}If one partition stays available, its entries will replace all the other partitions' entries on merge, undoing partial commits in those partitions.{quote} Do I understand correctly that degraded partition may commit transaction, and this transaction will be later ignored (the data will later be overwritten to the previous values). Why is this behaviour desired? {quote}Transactions already prepared, however, will commit successfully even in minority partitions{quote} Is that true even if the originator is not in this minority partition? {quote}When a transaction needs to acquire more than one key lock with the same primary node, they are always acquired in the same order, so this will not cause a deadlock.{quote} If the keys have the same hashCodes, they can be locked in different order, though. ISPN-2491 {quote}The commit is always synchronous on the originator, so a transaction T3 started on node A after T1 finished will see T1's updates.{quote} Will it see all T1's updates, or just updates on those entries owned by A? {quote}The write to the attached cache store(s) is performed during the one-phase prepare command or the commit command, depending on the configuration.{quote} What configuration, exactly?	1	0	https://issues.jboss.org/browse/ISPN-5016

#	Requirement	Questions	Answered	Successfully Answered	URL
7892	ISPN-5016	{quote}TODO What happens if a node is a backup owner for two of the keys?{quote} Hmm? The primary owner sends the PutMapCommand to all nodes that are backup owners of at least one of the keys primary-owned by this node. But you're right that I am not sure whether this command makes the backup node write only {quote}When a node tries to read a key it does not own, it sends a remote get{quote} AFAIK the node checks if the entry is in data container, not whether it is owned. Regarding the situation that an entry is lost, I think that you should note somewhere that further attempts to read it will simply return null, not throwing any exceptions (the user could expect that). I lack explicit resolution on ISPN-4995, regarding reading and writing two (or more) entries and expectation whether any read is already visible. And in the end, I think that there should be a summarized table for the modes and ticks or crosses whether the cache will stay consistent after originator crash, primary owner crash, timeout exception/another exception. I think this is the best design document on Infinispan cache API so far. Thanks a lot, Dan, for the effort to put it together. I hope at least some users will be willing to read it (as it took me several hours just to go through it).	1	0	https://issues.jboss.org/browse/ISPN-5016
7893	ISPN-5016	shared store after it has executed the invalidation. > I don't understand the reason very well, could you elaborate a bit more? Rephrased. >> Invalidations triggered by write operations are synchronous and the operation will fail with a SuspectException if another node crashes. The entry will not be updated on the originator, but invalidation will still be performed on the non-crashed nodes. > I thought SuspectExceptions are silently handled, aren't they? Nope, they are silently handled only in some cases (e.g. L1 invalidation commands), but not in all cases (e.g. prepare commands, or regular invalidation commands). It does sound like a bug, I'll create one. >> For multi-key operations like putAll(), the operation is sent to all the primary owners of the affected keys. When there is a single primary owner for all the affected keys, the operation succeeds and its effects are visible atomically. When there are multiple primary owners, the operation is not atomic: overlapping read operations will see random subsets of the updated values. > As reads don't acquire any locks, I think that even update on single primary owner can be seen as non-atomic. Yeah, I was trying to say that it preserve the semantics of a local cache, but multi-key operations in a local cache aren't atomic either. >> If a node is suspected because of a Full GC, it might go from the initial JGroups view straight to the merge view. If that happens, its topology will be the largest one, and it will not be wiped, neither will it receive new data. Instead, it will keep the (possibly stale) entries it had before the Full GC. > Sorry, this is not very clear to me. Why largest topology ID and why wouldn't that propagate its state to all other members (wiping their data)? It's because the topology with the most nodes is elected as the merge topology. It seemed like a good idea when I implemented it, but perhaps it would have been better to use the one with the largest topology id instead. >> If at least half of the nodes in the stable topology leave in quick succession > What is quick succession? Does that depend on JGroups view installation, any timeout or the duration of rebalance? It means before the stable topology is updated again. In replicated mode there is no state transfer when a node leaves, that means the coordinator just needs to receive the rebalance confirmation from all the nodes. >> And if some of the nodes in the Available partition's consistent hash are not really accessible after the merge, the cache might stay Degraded. > 'the cache'? We should be talking rather about partitions, not the whole cache. I understand the first part of the special case, but not the latter. Changed to 'the merged partition'. >> If a node joins and becomes a backup owner after a write command was sent from the primary owner to the backups, but before the primary owner updates its own data container, it may not receive the value neither as a write command nor via state transfer. > Sounds like a bug to me - is there a JIRA that could be linked? We could tolerate inconsistencies when the node crashes (if we can't fix it), but join or graceful leave should keep the cluster consistent. I don't think it's any worse than the inconsistency in the previous paragraph. >> When a write to the store fails, it will fail the write operation. > Does this hold for write-behind, too? That's the next paragraph... >> With write-behind or asynchronous replication enabled, store write failures are hidden from the user (unless the originator is the primary owner, with async replication). > When originator == primary and write-behind, how can the failure to write to the store be propagated to the user? I thought that user thread initiates both write to the store and async replication and returns. Reworded, I meant with async replication but without write-behind. >> When the partitions merge back, there is no effort to replicate the values from one partition to another. > Why is that different from non-tx mode, where the partitions with non-highest topology id are wiped? Moreover, in optimistic tx you write >> Same as with pessimistic and non-transactional caches. > - what version, then? It's actually the same, I added that to the pessimistic mode description. >> If the primary owners of the keys written by the transaction are all in the local transaction, > local partition? Fixed. >> If one partition stays available, its entries will replace all the other partitions' entries on merge, undoing partial commits in those partitions. > Do I understand	0	0	https://issues.jboss.org/browse/ISPN-5016
7894	ISPN-4919	Does this suggest that cache xml attributes will no longer have default values? Let's say I define a template cache that defines <transaction isolation="REPEATABLE_READ"/> and a cache extension that defines <transaction mode="BATCH"/>. What then is the transaction isolation of the configured cache? The xsd says that transaction isolation defaults to READ_COMMITTED, meaning that <transaction isolation="READ_COMMITTED"/> and <transaction/> should be equivalent xml. However, I think this jira means to imply that the cache will use the "inherited" REPEATABLE_READ isolation. Thus, for the xsd to be correct, it will have to use 2 sets of attribute groups for each cache child resource, one that uses explicit default values (for cache templates) and one without defaults (meaning, the default value is implied by the configured template). That seems confusing to me. Consider too the child resources of a cache. A given resource (e.g. transaction), is fully defined, how would you determine which attributes meant to be "overrides" of the template and which are not, in particular when the template uses a non-default value, and the cache wants to override the value to match the original default?	1	1	https://issues.jboss.org/browse/ISPN-4919
7895	ISPN-4919	[~NadirX] I'm not arguing against the concept, just the usability/implementation. It's not just the schema that implies different behavior, but the Resources themselves. The cache resource and its children don't have nullable attributes. Every attribute of a cache and its children (e.g. transaction, locking, etc.) have default values that are applied to the model if no value was specified via a given operation. So, from the perspective of an add/write-attribute operation, there's no simple way to distinguish a value that is intended to be overridden from one that is intended to be inherited -- /unless/ you create parallel resource definitions for templates vs extending caches, where the resource attribute definitions for extending caches are completely nullable. In general though - the Configuration objects in 4.x did support the concept of overrides - where every property of the cache might be undefined, and thus take a default from some template or default cache. You guys changed this in 5.x-7.0, where Configuration objects are now completely defined. new ConfigurationBuilder().read(configuration) is semantically very different than the 4.x behavior, since a new configuration builder is already completely defined, and the read(Configuration) operation is effectively a means for cloning the entire configuration. Overriding is only every supported via programmatic calls to the resulting configuration builder - which is now a clone of the read configuration. It sounds like you guys want to revert the current Configuration behavior to be more like the 4.x configuration behavior. Is that a fair summation?	1	1	https://issues.jboss.org/browse/ISPN-4919
7896	ISPN-4754	Has the hibernate search slot "5.0" already been published?	1	1	https://issues.jboss.org/browse/ISPN-4754
7897	ISPN-4688	Hi Dan, it looks like this ISPN-2255 is not exclusively related to FGAHM but also to AHM which we use in EAP. Could you please check and possibly rebase?	1	1	https://issues.jboss.org/browse/ISPN-4688

#	Requirement	Questions	Answered	Successfully Answered	URL
7898	ISPN-4584	Maybe by rethinking how much of these settings the user should see and for how many use cases. Could we impose or default the names of the index data, metadata and locking caches to <owning-cache>_index_data, <owning-cache>_index_metadata, <owning-cache>_index_locking? Could we infer most of their settings, should they all be interlocked (same time out?, some are always REPL, some are always DIST?). Based on that you can infer things and end up with something like {code} <namedCache name="dist_lucene"> <transaction transactionMode="NON_TRANSACTIONAL"/> <clustering mode="DIST"> <hash numOwners="2" /> </clustering> <locking lockAcquisitionTimeout="3000" concurrencyLevel="1000" /> <indexing enabled="true" indexLocalOnly="true"> <properties> <!-- can we infer this, or make it a more compact setting before |properties| maybe an attribute of |indexing storage="infinispan"| <property name="default.indexmanager" value="org.infinispan.query.indexmanager.InfinispanIndexManager" /> <property name="default.exclusive_index_use" value="false" /> <!-- names inferred from the owning named cache, number of owners inferred from the owner's clustering.hash[numOwners], --> <! should we offer the ability to set replTimeout="30000" or can it be inferred? --> <property name="lucene_version" value="LUCENE_36" /> </properties> </indexing> </namedCache> {code} This approach does not replace the old model where all the guts and gory details are exposed. It just makes it much simpler for new comers that don't need to control and fine tune every quark of their body like Dr Manhattan and Sanne. The drawback is that if you need fine tuning, the complexity grows pretty quickly but that's the price of the backward compatibility. Note that most of this trick can probably be implemented in the configuration parser as a front end that spits out what the fully detailed configuration would have been.	0	0	https://issues.jboss.org/browse/ISPN-4584
7899	ISPN-4547	2 different settings? Wouldn't just the max queue size be sufficient? Or what are you thinking the other would be?	1	0	https://issues.jboss.org/browse/ISPN-4547
7900	ISPN-4534	I don't understand what you're suggesting. Do the embedded types have to be in persistence.xml? Do I have to somehow register those types?	0	0	https://issues.jboss.org/browse/ISPN-4534
7901	ISPN-4449	The PR's are integrated now. Can we close this or do you plan to add more?	1	1	https://issues.jboss.org/browse/ISPN-4449
7902	ISPN-4296	The limitation is restored successful only for REPL caches, as shown in [{{ClientAsymmetricClusterTest}}|https://github.com/infinispan/infinispan/blob/master/client/hotrod-client/src/test/java/org/infinispan/client/hotrod/ClientAsymmetricClusterTest.java] But for DIST caches, a nonexistent cache is started anyway in order to get hold of the {{ConsistentHash}} to write the topology update, as shown in [Encoder2x|https://github.com/infinispan/infinispan/blob/master/server/hotrod/src/main/scala/org/infinispan/server/hotrod/Encoder2x.scala#L100] If in the test we change from REPL to DIST, it fails, not throwing {{CacheNotFoundException}} anymore. Was this intentional? Shouldn't DIST behave the same way as REPL?	0	0	https://issues.jboss.org/browse/ISPN-4296
7903	ISPN-4229	If the question is: "Would it be enough to back port the fix for ISPN-3006?" I would say that I need to test on all supported dbs but I think that it could be enough if and only if we don't change the current default schema in the datasource configuration. For example on db like DB2, you can also use the same database and simply change the current default schema thanks to jdbc url of type jdbc:db2://MYHOST:MYPORT/MYDB:currentSchema=MYSCHEMA; On oracle it is also possible but it is a little bit more tricky https://community.oracle.com/thread/1038211?start=0&tstart=0	0	0	https://issues.jboss.org/browse/ISPN-4229
7904	ISPN-4144	Ok, I was recommend on our IRC chat that clear() would do what I wanted. There is a way to disable rebalancing but that call is only available through JMX which is ok I guess but it is weird to call system internal function through JMX. [~dan.berindei] how can we call LocalTopologyManagerImpl#setRebalancingEnabled as this method is not available through LocalTopologyManager interface or should we even do it to being with? What are you suggestions here?	1	1	https://issues.jboss.org/browse/ISPN-4144
7905	ISPN-4139	Is this preventing you to upgrade Search to Lucene 4.7? {quote}Might be able to create pull request, once I understand the whole Lucene 3 + 4 support thing ...{quote} Lol, that's the reason for me to work on including Search 5 in Infinispan asap: to get rid of that (remove the Lucene3 support) :-) I can take care of this, it's quite a minefield of backwards compatibility requirements.	1	1	https://issues.jboss.org/browse/ISPN-4139

I finally have Infinispan configured in my IDE though and I kind of see what I need to do. I guess I would need something similar to {{DirectoryBuilderImpl#create}} in {{BaseLockFactory}} (or somewhere in this care). Depending on the Lucene version I need to return an appropriate instance of {{Lock}}. I actually tried to implement {{#release()}} and {{#lock}} at the same time in {{BaseLuceneLock}}, but that did not work :-(The class is still not compatible then when run with Lucene 4.7. Just let me know if you fix this, then I leave it for now. {quote} BTW If you can't upgrade Search to 4.7 without an Infinispan release first, it's getting messy. We would need an Infinispan release, and the Infinispan patch would need to support both Lucene 3, and Lucene 4.6 and	1	1	https://issues.jboss.org/browse/ISPN-4139
7907	ISPN-4139	{quote} Lol, that's the reason for me to work on including Search 5 in Infinispan asap: to get rid of that (remove the Lucene3 support) {quote} How is this even related?	1	1	https://issues.jboss.org/browse/ISPN-4139
7908	ISPN-4132	"So at any time it might make sense to keep in memory some of the attributes of S, but not all of them." Not really. In WF/EAP, the sessions to be passivated are primarily expected to be abandoned sessions, that is, session that I expect to eventually expire. Our primary use case for passivation is *not* as a means to handle more active sessions that a given server can keep in memory - but rather to handle the abandoned, but not yet expired sessions. In this way, I would typically prefer to evict all entries of a presumably abandoned session over the attributes of an active session that have not been accessed recently. The likelihood that the former will be accessed before the latter is typically low. But no, there isn't anything in the JEE standard about how one specifies how sessions are passivated. Your point about this being too complex is certainly valid, so let's try a different tack... What if we had the ability to specify that a given cache entry was never to be passivated automatically (i.e. like an immortal cache entry, but for eviction purposes)? Infinispan would then passivate based on a max-size of "auto-evictable" cache entries (i.e. some subset of the total entries in memory). This way, I can leverage a passivation callback to manually passivate the non-auto-evictable session attributes for a given session and still be able to define my eviction settings based on a maximum number of sessions. WDYT?	0	0	https://issues.jboss.org/browse/ISPN-4132
7909	ISPN-4022	[~dan.berindei] and [~mircea.markus] I thought about this a bit further and I concluded there are additional benefits to this approach. I would call this enhancement "staggered combine". Just as Dan suggests we should invoke combine on certain thresholds (say 1K entries in a combiner) during map phase and move intermediate KOut/VOut values around cluster as these thresholds are reached. The benefit is that not only we will relieve memory pressure, we will also never run out of RAM storing map output in a Collector. In addition staggered migration of KOut/VOut to intermediate cache should alleviate some of the insertion stress we have observed in performance tests. If we are able to combine this feature with ISPN-3999 Sanne suggested this should be awesome! WDYT?	1	1	https://issues.jboss.org/browse/ISPN-4022
7910	ISPN-4021	Dan, we have two options here: a) we can pass intermediate cache directly to MapReduceTask and thus force correct typing b) pass the cache name only Option b) gives more flexibility in the future if things change internally while option a) minimizes potential errors on the behalf of user at the expense of flexibility b) has. What should we do?	1	1	https://issues.jboss.org/browse/ISPN-4021
7911	ISPN-4021	[~vblagojevic], can't we support both?	1	1	https://issues.jboss.org/browse/ISPN-4021
7912	ISPN-4011	[~mgencur] This issue has now become pretty much obsolete since the introduction of a proper mechanism to define protobuf schemas in a much nicer and friendlier way that does not require the use of JMX (see ISPN-4357). JMX support is still there but I think we should deprecate it in 7 and eventually remove it. Wdyt?	1	1	https://issues.jboss.org/browse/ISPN-4011
7913	ISPN-3954	From Hibernate docs: {quote} Collections are ignored by a stateless session {quote} Doesn't this mean that if I have entity with @ElementCollection, the collection won't get loaded/updated?	1	1	https://issues.jboss.org/browse/ISPN-3954
7914	ISPN-3953	I've noticed that when implementing the process operation. In my current implementation (see http://github.com/rvansa/infinispan-cachestore-jpa) I load only all keys and then load each entry in transaction. But this is far from optimal approach. Shouldn't we rename the cachestore to infinispan-persistence-hibernate instead, then, if we start using hibernate API? I have to write to infinispan-dev for the green.	1	1	https://issues.jboss.org/browse/ISPN-3953
7915	ISPN-3937	Setting the result set type and concurrency shouldn't be a problem. Are you worried about the lock on the table being held while we are processing the results? {{process()}} doesn't do that much work on the caller's thread, so our iteration over the result set should be only slightly slower than the driver's fetching of the entire result set.	0	0	https://issues.jboss.org/browse/ISPN-3937
