11895	ENTESB-1060	Generally it works out of the box after changing the dependencies to: {code:xml} <dependency> <groupId>org.apache.hadoop</groupId> <artifactId>hadoop-common</artifactId> <version>2.3.0</version> </dependency> <dependency> <groupId>org.apache.hadoop</groupId> <artifactId>hadoop-hdfs</artifactId> <version>2.3.0</version> </dependency> {code} but the key is - will this work inside OSGi? Checking it right now.	1	1	https://issues.jboss.org/browse/ENTESB-1060
11896	ENTESB-1060	I'm working on correct smx/bundles for hadoop 2.3.0 version. After that there's only a question - should we provide separate components: * {{camel-hdfs}} * {{camel-hdfs2}} or just force using 2.3.0 version of hadoop client libraries? The difference is only in pom (change from {{hadoop-core:1.2.1}} to {{hadoop-client:2.3.0}}.	1	1	https://issues.jboss.org/browse/ENTESB-1060
11897	ENTESB-1046	Does this apply to standalone containers only, or are these options configurable for fabric containers too?	1	1	https://issues.jboss.org/browse/ENTESB-1046

#	Requirement	Questions	Answered	Successfully Answered	URL
11898	ENTESB-1046	Looking at the etc/org.apache.karaf.shell.cfg file in my jboss-fuse-6.1.0 installation, there are no {{mac =}} or {{cipher =}} entries in it. So are the defaults shown in Guilaume's comment ^^ understood? I would only make *mac* and *chipher* entries if I wanted to change those defaults? As far as I can tell, the other options are *hmac-ripemd160* for mac, and *arcfour128* and *arcfour* for cipher ([https://access.redhat.com/site/solutions/420283]). Is this correct, or are there more?	1	1	https://issues.jboss.org/browse/ENTESB-1046
11899	ENTESB-1031	Can this one be closed? I think everything is in the 370 build.	0	0	https://issues.jboss.org/browse/ENTESB-1031
11900	ENTESB-1031	From reading through the JIRA comments I take it that action item #3 {quote} 3. Patch process allows us to purge unused artifacts. Ie.. activemq-osgi.5.8.0.redhat-60024 gets replaced by activemq-osgi.5.8.0.redhat-60033.. the -60024 artifact is deleted from system/ repo {quote} was not implemented? I am further wondering if point #1 got implemented fully as its not clear from the further case history. And in case it got implemented, how does it work and whose task is it to use the Maven plugin?	0	0	https://issues.jboss.org/browse/ENTESB-1031
11901	ENTESB-1030	What are the valid values for these properties? btw, in the above linked file, there seems to be an error/mismatch between command and property name in line 109 {{cm.setConnectionMaxIdleMinutes(getInt("aries.xa.connectionMadIdleMinutes", 15));}} where the command has *Max*, the property has *Mad*. Is that intentional or a typo?	1	1	https://issues.jboss.org/browse/ENTESB-1030
11902	ENTESB-1030	Torsten, can you provide me more info on what other properties than the pooling ones (I see three of those) I need to document, and some examples of how to use them? Where can I find a detailed description of each?	1	1	https://issues.jboss.org/browse/ENTESB-1030
11903	ENTESB-1008	Can you provide some background for why one would want to configure remote JMX SSL on JBoss Fuse. What value/benefit/advantage does it provide, and is there risk/downside associated with it? Is it a recommended management approach? Is it an alternative to using the Management Console? Trying to determine where this information should be presented.	1	1	https://issues.jboss.org/browse/ENTESB-1008
11904	ENTESB-1008	@Jane, - *What value/benefit/advantage does it provide, and is there risk/downside associated with it?* JMX allows us Remote monitoring and management via MBeans. (local/remote access) Remote monitoring and management requires security, to ensure that unauthorized persons cannot control or monitor your application. So in a secured environment it is a most needed functionality to make sure that the JMX Communication happens over SSL so that the data provided by the MBean Server to the JMX client (like JConsole) should not be read by some hacker. - *Is it a recommended management approach?* - Yes, In most of the secured production environment it is recommended to have the JMX access over the SSL, Sothat a hacker can not decrypt the data communicated b/w the MBean Server and JMX Client. SSL communication will make sure that the data is properly encrypted and decrypted. - *Is it an alternative to using the Management Console?* - Management console is a HTTP based utility however in some scenarios users wants to write their JMX / MBean based clients for notification/management logic. Like if some one wants to get the Activemq statistics using a java based JMX Client (like JConsole) then in that case as well SSL communication will be useful/recommended for a secured environment.	1	1	https://issues.jboss.org/browse/ENTESB-1008
11905	ENTESB-1008	Jay, in the step 1 code example, I assume that the string after -dname "....." is specific to your test environment. Can you give me an example that is more generic to demo the command for customers?	0	0	https://issues.jboss.org/browse/ENTESB-1008
11906	ENTESB-1000	Did Guillaume's comment help? Wondering if we can close this one.	0	0	https://issues.jboss.org/browse/ENTESB-1000
11907	ENTESB-736	For the JDF Quickstarts project, they also created a BOM POM, cfr. https://github.com/jboss-fuse/quickstarts/blob/master/bom/pom.xml Apart from some naming conventions differences for properties, the main difference is that this includes some of our main dependencies (like Camel, CXF, ...) in dependencyManagement, so it can be used in combination with <scope>import</scope> (e.g. https://github.com/jboss-fuse/quickstarts/blob/master/cbr/pom.xml) instead of having to use it as a parent pom. Perhaps we should add those dependencies to this BOM's dependency management section as well, so we can reuse the same POM for the quickstarts?	1	1	https://issues.jboss.org/browse/ENTESB-736
11908	ENTESB-448	Do other people see this on their system?	0	0	https://issues.jboss.org/browse/ENTESB-448
11909	ENTESB-414	Is there a good reason to upgrade? As we're already past code freeze we need to keep changes to a minimum to minimise risk of introducing regressions.	1	0	https://issues.jboss.org/browse/ENTESB-414
11910	ENTESB-374	Is this an issue for versions later than 7.0.x?	0	0	https://issues.jboss.org/browse/ENTESB-374
11911	ENTESB-264	Is this something we could include in the 7.1 release (the upgrade to Blueprint 1.0)?	1	1	https://issues.jboss.org/browse/ENTESB-264
11912	ENTESB-125	Is this true for all of our releases? I'm not sure where we would put the requirement for the 32-bit XP requirement since we do not list XP in our list of supported platforms. See http://fusesource.com/downloads/platforms-supported/	1	1	https://issues.jboss.org/browse/ENTESB-125
11913	ENTESB-61	Stan has a windows7 machine and the windows terminal is improved as you can customize the ansi colors. But on XP you cannot. Only the foreground / popup colors. See screenshot.	0	0	https://issues.jboss.org/browse/ENTESB-61
11914	JBID-206	Not in API but in core. Why is it difficult for folks to understand API means API? ;)	1	1	https://issues.jboss.org/browse/JBID-206
11915	JBID-194	Committed to main trunk with revision: 809. Forum thread about the refactoring: http://www.jboss.org/index.html?module=bb&op=viewtopic&t=161637	0	0	https://issues.jboss.org/browse/JBID-194
11916	JBEE-168	Where is the upstream repository for synching up with the new 1.3 release source changes? I couldn't open the [http://search.maven.org/#artifactdetails%7Cjavax.annotation%7Cjavax.annotation-api%7C1.3%7Cjar] link. Our repo for jboss-annotations-api is [https://github.com/jboss/jboss-annotations-api_spec]. [~wolfc], when we release a new jboss-annotations-api_1.3_spec, should we create a new branch for EAP 7.x, so that we have an upstream for EAP 7.x changes to jboss-annotations-api_spec, that is separate from the new EE 8 changes?	1	0	https://issues.jboss.org/browse/JBEE-168
11917	JBEE-140	Hi Shelly, I've being working with the JBoss JASPI 1.1 API review, specially the javadocs. The following PR holds all javadoc changes: https://github.com/jboss/jboss-jaspi-api_spec/pull/2 I've discussed with Stefan about the TCK signature tests. How can we run them considering all changes I did ? I could not find a way to run them locally. Thanks in advance.	1	1	https://issues.jboss.org/browse/JBEE-140
11918	JBEE-106	I noticed that Geronimo also made their servlet 3.0 spec jar into an OSGi bundle [1]. They export the javax.servlet packages as both version 2.6 and 3.0. Is there some official OSGi list of package versions? I'm just wondering why they used the 2.6. [1]http://repo1.maven.org/maven2/org/apache/geronimo/specs/geronimo-servlet_3.0_spec/1.0/geronimo-servlet_3.0_spec-1.0.pom	0	0	https://issues.jboss.org/browse/JBEE-106
11919	JBEE-97	BTW, just for the sake of curiosity, why is Xalan there ?	0	0	https://issues.jboss.org/browse/JBEE-97
11920	JBEE-97	If we are going to fork Xalan, wouldn't it make sense to also change the group ID to "org.jboss.xalan"? That way we could deploy this version to maven central.	0	0	https://issues.jboss.org/browse/JBEE-97

#	Requirement	Questions	Answered	Successfully Answered	URL
11921	JBEE-92	Hi Marcus, this project has moved to github (https://github.com/jboss/jboss-jacc-api_spec). Can you send a pull request which includes the changes in svn? https://source.jboss.org/changelog/JBossAS6?cs=112258 https://source.jboss.org/changelog/JBossAS6?cs=112264 Thanks!	0	0	https://issues.jboss.org/browse/JBEE-92
11922	JBEE-92	Where is the jboss-jacc-api_1.4_spec-1.0.1.Final tag? The version is published: https://repository.jboss.org/nexus/content/groups/public/org/jboss/spec/javax/security/jacc/jboss-jacc-api_1.4_spec/1.0.1.Final/ and used currently in AS7: <version.org.jboss.spec.javax.security.jacc.jbossjacc-api_1.4_spec>1.0.1.Final</version.org.jboss.spec.javax.security.jacc.jboss-jacc-api_1.4_spec> But I could not locate the tag here: https://github.com/jboss/jboss-jacc-api_spec/tags or https://svn.jboss.org/repos/jbossas/projects/specs/tags/	1	0	https://issues.jboss.org/browse/JBEE-92
11923	JBEE-91	Ping?	1	1	https://issues.jboss.org/browse/JBEE-91
11924	JBEE-91	Marek, we're in the process of migrating the Java EE APIs to git. http://community.jboss.org/wiki/JBossJavaEESpecsGitMigration The specs parent will no longer be used. What's the issue?	0	0	https://issues.jboss.org/browse/JBEE-91
11925	JBEE-91	Marek, is it ok to just add the license file to the trunk of the specs parent? I don't think we want to modify the tag.	1	1	https://issues.jboss.org/browse/JBEE-91
11926	JBEE-73	Shouldn't this be handled by the Surefire Manifest JAR? Which only applies when forking tests in a new VM, I suppose.	0	0	https://issues.jboss.org/browse/JBEE-73
11927	JBEE-73	You could create a separate project called something like jboss-javaee-6.0-all, then make the main artifact for that project an assembly that just unzips all dependencies (with scope set to 'provided' in that dependencySet). In the POM, you'd just put a single dependency on the jboss-javaee-6.0, with a scope of 'provided'. The configuration for the assembly plugin in the POM should be appendAssemblyId == false. The assembly descriptor should set includeBaseDirectory == false. The only caution here is that if a client builds an application using jboss-javaee-6.0-all as a dependency, and _doesn't_ mark that dependency as scope == provided, then those API classes may wind up in the deployable (EAR, WAR, etc.)...duplicating those already in the core classloader for the server. So, if we document that case really well, it should be very simple to create this project. Is this a problem beyond running JUnit tests? If not, is there a simple way to create a test launcher for Arquillian or something? Maybe that's the lazy way out, but I wanted to ask.	1	1	https://issues.jboss.org/browse/JBEE-73
11928	JBEE-67	of course....but where is the source project? Here a better writing in the MANIFEST: Bundle-SymbolicName: JTA API Bundle-Version: 1.0.1.GA Export-Package: javax.transaction;version="1.0.1.GA",javax.transaction.xa;version="1.0.1.GA"	1	1	https://issues.jboss.org/browse/JBEE-67
11929	JBEE-67	Luca, The sources for the jboss-transaction-api project are here: http://anonsvn.jboss.org/repos/jbossas/projects/specs/trunk/jboss-transaction-api_1.1_spec/ Do you have a patch ready?	0	0	https://issues.jboss.org/browse/JBEE-67
11930	JBEE-47	The interceptors 1.1 APIs are here: https://svn.jboss.org/repos/jbossas/projects/specs/trunk/jboss-interceptors-api_1.1_spec/ Latest release: https://repository.jboss.org/nexus/content/groups/public/org/jboss/spec/javax/interceptor/jboss-interceptors-api_1.1_spec/1.0.0.Beta1/ Is that what you need?	1	0	https://issues.jboss.org/browse/JBEE-47
11931	JBEE-33	Anil, can you confirm if there are updates need to these APIs?	1	1	https://issues.jboss.org/browse/JBEE-33
11932	JBEE-23	Why? As spec lead, we are the maintainer and guardians of javax.validation, why would we want to duplicate this work? Is there a way to create a "pom redirect" from your description to <dependency> <groupId>javax.validation</groupId> <artifactId>validation-api</artifactId> <version>1.0.0.GA</version> </dependency> Again, we are the one building the javax.validation:validation-api artifacts	1	0	https://issues.jboss.org/browse/JBEE-23
11933	JBEE-22	The API sources have been added to this project: http://svn.jboss.org/repos/jbossas/projects/specs/trunk/jboss-jaxrs-api_1.1_spec/ These APIs have not been released nor yet added to the javaee6-specs-bom. Would like to do so for the next AS 6 milestone release and add the APIs to jbossas/client and common/lib dirs. WDYT?	0	0	https://issues.jboss.org/browse/JBEE-22
11934	JBEE-21	Not following the purpose of this. We already have this under hibernate. Why do we need another?	1	1	https://issues.jboss.org/browse/JBEE-21
11935	JBEE-19	Carlo, this issue should be resolved with the compliant release of the EJB 3.1 APIs here: https://repository.jboss.org/nexus/content/groups/public/org/jboss/spec/javax/ejb/jboss-ejb-api_3.1_spec/1.0.0.Beta2/ I plan to do a Final release after JavaDoc review. Is there other work this OPEN JIRA represents?	0	0	https://issues.jboss.org/browse/JBEE-19
11936	JBEE-16	connector-api 1.5 has dependency on jboss common-core for SerialVersion class ejb 3.0 and 3.1 have a dependency on jbossws native jacc 1.1 has a dependency on jboss common-core for SerialVersion class jad-api has a dependency on jboss common-core for SerialVersion class jaxr-api has a dependency on javax.activation, can this be replaced?	1	1	https://issues.jboss.org/browse/JBEE-16
11937	JBEE-8	see r82194 comment: add new JCA 1.6 api into javaee/trunk and remove 1.5 api, it based on JCA 1.6 pr-to-pub version and change *InflowContext to *WorkContext	0	0	https://issues.jboss.org/browse/JBEE-8
11938	JBEE-4	Shelly, since i've changed the method signature to: public Object lookup(String name) throws IllegalArgumentException; from public Object lookup(String name); can you please make sure it won't break the tck signature test when we upgrade to 3.0.0.GA ?	1	1	https://issues.jboss.org/browse/JBEE-4
11939	JBJMX-108	Hi how can I send a patch with this feature request? thanks	1	0	https://issues.jboss.org/browse/JBJMX-108
11940	JBJMX-105	This issue is still present in JBoss5.0.0 GA. Does the new MicroContainer have the ability to resolve this?	0	0	https://issues.jboss.org/browse/JBJMX-105
11941	JBJMX-53	SourceForge Username: frimfram . Logged In: YES user_id=950487 How do I go about fixing this bug?	1	1	https://issues.jboss.org/browse/JBJMX-53
11942	JBKERNEL-16	This is related to the "related classes" (sic!) What is required is that DescribeAction adds dependencies for the related classes (not just AOP dependencies as per JBMICROCONT-22) Then the GenericBeanFactoryMetaData automatically adds the "beanClass" as a "related class".	0	0	https://issues.jboss.org/browse/JBKERNEL-16
11943	JBLAB-1003	Mark little responded with: "James, sorry it took so long to get back to you, but we've been busy. The team didn't really like any of the current ideas, but put something together themselves. Can you take a look and maybe suggest something along these lines?"	1	1	https://issues.jboss.org/browse/JBLAB-1003
11944	JBLAB-1003	I (Cheyenne) have created a third round of logos (13 versions), and submitted them to Mark Little on April 4th, 2008. http://www.jboss.org/files/jbosslabs/design/ESB/index.htm - Mark Little responded: "Thanks, I'll pass them along. One question: why is the j in JBoss lowercase in the examples when the BOSS is uppercase? Is this some new corporate logo approach?" - I fixed the upper/lower case issue :) - Mark's Response 4/4/08: "OK, thanks :-)"	1	0	https://issues.jboss.org/browse/JBLAB-1003
11945	JBLAB-1002	What's the status of this? Haven't heard anything on it since Meriah left (which has been a while)...	0	0	https://issues.jboss.org/browse/JBLAB-1002
11946	JBLAB-1001	Tom has added 1 reference from Rebecca's list. He's also checked Salesforce and there are a large number of companies that could be contacted. Who should do this? The requirements for the references page are: It should be editable by anyone, like a wiki. It should be part of the main jBPM project pages on JBoss.org.	0	0	https://issues.jboss.org/browse/JBLAB-1001

#	Requirement	Questions	Answered	Successfully Answered	URL
11947	JBLAB-994	September 17, 2008 Hello, artist-types! Folk keep asking me for a logo for JBoss Cache that they want to use in articles, etc. Could I bug you guys to come up with one? Currently I use the very cruddy attachment, but something with a bit more flair and catchiness would be good. Thanks!	1	1	https://issues.jboss.org/browse/JBLAB-994
11948	JBLAB-994	September 17, 2008 Mark Newton: Hi Manik, Do we want to create a logo for JBoss Cache or are we going to change the name of the community project to something else? Perhaps we should create a logo that can be used either with or without the JBoss Cache name so that we are free to make that kind of decision in parallel? cheers, Mark	1	1	https://issues.jboss.org/browse/JBLAB-994
11949	JBLAB-994	September 17, 2008 James Cobb: Hey Manik, We can definitely create a logo for you. I know we've discussed this in person before and I've had "JBoss Cache Logo" on our whiteboard as a project we need to do. If you're ready... we'll move this project to the front of the list. Do you have time tomorrow to discuss this via skype or IRC? James	1	1	https://issues.jboss.org/browse/JBLAB-994
11950	JBLAB-994	A couple more comments: re: 1, the cross section looks like the letter A. Was this intentional, and if so, what does it represent? :-) Maybe it would look better without the crossing bar? re: 4, it actually does look reasonably good, possibly because if it's simplicity. It's really just the colours that are Terracotta-esque. Perhaps using JBoss colours here may help?	0	0	https://issues.jboss.org/browse/JBLAB-994
11951	JBLAB-991	Hi James, sorry for following up so late. So, if you volunteered to build the initial (empty) pages, that would be a great help for us. We could pick the project up from there. Do you require access to our development environment or will you create it locally? regards, Christian	0	0	https://issues.jboss.org/browse/JBLAB-991
11952	JBLAB-991	Hi Christian, Thanks for picking up this project. Once you get the templates from James, can you provide an estimate on how long it will take to complete - or at least get everything into a sandbox for QA? Thanks, - Jon	0	0	https://issues.jboss.org/browse/JBLAB-991
11953	JBLAB-804	is this in progress?	0	0	https://issues.jboss.org/browse/JBLAB-804
11954	JBLAB-787	Sam, Can we get the list of content and whether or not it has been added? I'd like to resolve this issue quickly. Sincerely, Damon	1	0	https://issues.jboss.org/browse/JBLAB-787
11955	JBLAB-757	Isn't this issue resolved on dev?	0	0	https://issues.jboss.org/browse/JBLAB-757
11956	JBLAB-722	The link takes me to the main labs page. Have a different link?	1	1	https://issues.jboss.org/browse/JBLAB-722
11957	JBLAB-718	"In fact, we had this conversation months ago." Who is we? This is the *first* I'm hearing about this... and TomBen was quite surprised when I mentioned this to him also. Are you saying you had this converted and tested? Ignoring the fact that this was never communicated to the rest of us, how did you get around the problems below: 1) paths incorrect 2) load fails, even after basedir creations ? If you have some insight here, please share so we can get this resolved. I've included info from my testing, as well as where to find the copied repos and test dumps for your review in the next comment.	1	1	https://issues.jboss.org/browse/JBLAB-718
11958	JBLAB-718	Where's the copied repos and test dumps? I don't see any other comments.	1	0	https://issues.jboss.org/browse/JBLAB-718
11959	JBLAB-718	And, we're not suggesting you make any "major changes to the current repositories." We're suggesting you give him his own repository, just like all the rest, using the dump. Which is what this task is all about. How does that affect everyone else?	1	0	https://issues.jboss.org/browse/JBLAB-718
11960	JBLAB-687	The downloads section is actually a portlet that uses the downloads.xml of a project. To access projects downloads you'd go to: http://labs.jboss.org/jbosstm/downloads That said, what I think you are asking for is the general ability to browse directory structures in any given project's freezone directories (i.e., where they store all their content). Maybe by adding a flag in a project like "directories browsable" with a default of true (like in Apache httpd) where we generate an 'index.html' type page if one doesn't exist. As it is now, anyone can create an index.html in any directory, but the way we have it now is that we don't allow browsing of directories for security reasons, not that there's anything in there to worry about, but I chose to err on the safe side. Also, currently, the downloads portlet allows a user to choose to put their downloads in a non-browsable directory or put them in the freezone (or sourceforge for that matter). We are consolidating these directories. I think what we will do is consolidate the downloads and freezone directories, and add a feature that generates html to browse the directory structure of the freezone. Would these changes address your issue?	0	0	https://issues.jboss.org/browse/JBLAB-687
11961	JBLAB-666	nice work. Where is the usage doc?	1	0	https://issues.jboss.org/browse/JBLAB-666
11962	JBLAB-584	Adam, last time I looked at this, there was an issue with putting an image in the tags for our JSF components for the contributor apps. Can you look into this? Or, at least comment? Thanks, Damon	1	1	https://issues.jboss.org/browse/JBLAB-584
11963	JBLAB-579	I would like to sum up needed stats for forum: - total number of posts/topics in forum - number of new posts/topics in last 7/31 days Other ideas: - avg (topic views / number of topics) or avg (topic views) - number of users watching this forum - (number of users watching topic) X number of watched topics are those interesting for you? any other requests?	1	0	https://issues.jboss.org/browse/JBLAB-579
11964	JBLAB-519	Thomas, Just checking in again. Did you replace the ampersand? Does it work now? I'd like to turn on your project page. Application Server has already gone live. Cheers, Damon	1	0	https://issues.jboss.org/browse/JBLAB-519
11965	JBLAB-483	svn asks for a pwd. is this going to be sent to me automatically or do we have to take action to get one ? regards, tom.	1	1	https://issues.jboss.org/browse/JBLAB-483
11966	JBLAB-418	Ah, ok... I was just going from the comments above. Can this servlet be protected by something other than a password that has to be stored plain text (and in an open repo currently, but I realize this is just for testing)? Some sort of IP ACL at least, or some key based auth?	0	0	https://issues.jboss.org/browse/JBLAB-418
11967	JBLAB-403	Can you describe the problem? I might fix it in Kosmos, but don't want to duplicate before it gets clarified.	1	0	https://issues.jboss.org/browse/JBLAB-403
11968	JBLAB-403	Can anybody tell me what it is about ? Nobody knows... What does it mean "by project dnot by directory" ? Every project has it's own directory, so... i don't get it. Tomek	0	0	https://issues.jboss.org/browse/JBLAB-403
11969	JBLAB-400	what abvt this ? how about "Out of date" ?	0	0	https://issues.jboss.org/browse/JBLAB-400
11970	JBLAB-399	What colors are not right, and what are the "right" colors? I can replace them in the main Kosmos code, if it's something generic.	0	0	https://issues.jboss.org/browse/JBLAB-399
11971	JBLAB-399	I'm not sure what this has to do with localization. I'm just talking about adding the label that is on the left... which I assume is a list of JIRA types.. from the JIRA server... and put them *inside* the graph. That's all. There shouldn't be any server configuration--since the labels are *already* on the left of the chart anyway. Am I missing something?	0	0	https://issues.jboss.org/browse/JBLAB-399
11972	JBLAB-396	Oh.. probably should be implemented as jsp taglib tag.	1	1	https://issues.jboss.org/browse/JBLAB-396
11973	JBLAB-355	Adam, I removed a few things in the JSP. Instead of drastically modifying prj-info.jsp or whatever, I'd rather give certain projects the ability to use a freezone for the project info page. But, that will be an admin's decision (i.e., it will be in the 'projects.xml' rather than in the project.xml). What do you think?	0	0	https://issues.jboss.org/browse/JBLAB-355

#	Requirement	Questions	Answered	Successfully Answered	URL
11974	JBLAB-342	These requirements somewhat conflict with the current Kosmos implementation, so here are some questions: Q1: is it required to have a SINGLE portlet per project and implement everything inside that single one? - if N, then we can use one JIRA monitoring portlet and one SVN monitoring portlet from Kosmos per project. It means almost zero modifications, only feature additions -> small workload, high reuseability and easy testing - if Y, then it requires first developing a new "composite" portlet which incorporates both functionality -> higher workload, lower reuseability, harder to maintain for the long run and separate testing for this (My suggestion: definitely N, especially because the portlet titlebar are not visible on the Labs Portal, so it really doesn't make too much difference. Also, for the long run it's better for both parties: free bugfixes and features from both sides [Labs community, Kosmos community].) Q2: is it allowed to run a separate server component like in Kosmos? (It can run in the same JBoss AS instance as a separate web-app!) - if N -> low performance (rescanning the SVN repo is VERY expensive), extra workload to develop this "serverless" behaviour - if Y -> high performance, no extra work, a bit more complicated to deploy (have to do it only once!) (My suggestion: Y, I think the more complicated deployment and management doesn't matter for us, and invisible for users.) If you accept both my suggestions, then I just have to add the new features to Kosmos and reuse it as it is. It also means, that I can deploy the current implementations immediately, so apart from the new features, it can be played with.	1	1	https://issues.jboss.org/browse/JBLAB-342
11975	JBLAB-342	> 1. The same stats/graphs that you have in your JIRA porlet.. for the project... so people can see things like recently resolved tasks/bugs. "recently resolved tasks/bugs" is a new requirement, as it doesn't exist in Kosmos. (Doesn't seem difficult though.) > 2. The number of active committers for that project. How do you define "active"? A committer who committed a modification to SVN in the last X days? This is also new, but probably easy. > 3. A summary log for the last x commits What would that log contain? I can show the following info: date, committer, message, touched files [path and modification type (add/delete/modify)]. This is also new, probably easy (a bit difficult to find out a good UI (a lot of info goes to small screen-space), but I have some ideas). 2) Yes, a committer who committed a modifcation to SVN in the last X days. 3) We just need the date, committer, message, touch files as you say. That's exactly what I'm looking for.	1	1	https://issues.jboss.org/browse/JBLAB-342
11976	JBLAB-342	> Only requirement at the moment is that everything goes into the "NORMAL" view as that is the only view of a portlet that we support on Labs. OK, no problem. 1. Can you give me a list of project which you want to see monitored by the portlet(s)? 2. How do you want to group the projects to the portlet window(s)? a - a single window b - one window per project c - other (plz list the projects by group in this case)	0	0	https://issues.jboss.org/browse/JBLAB-342
11977	JBLAB-255	What do we need to do to get "everything in one place" ?? Get rid of downloads/document/freezone distinction? Make them all a freezone portlet? Can we get this done for the release on the 26th? I need answers! ;)	1	1	https://issues.jboss.org/browse/JBLAB-255
11978	JBLAB-255	yes, technically the documentation portlet and freezone are almost identical with the only difference being the types of links both parse - so if we take all current html pages hosted on labs in the Freezone section and use the freezone to translate them to HTML, we can then override those pages and simply use the 'docs' portlet to parse them - so instead of <a href = "/myDocs/index.html> it will have portal-relative link. And we won't use the ${link: format anymore - so docs becomes Freezone and users can upload/write/link any HTML document they like (in their directory or external) now to make it a bit clearer - it can be done for the release and will be done by then, I just need to know what do we want to support - only regular HTML pages, the way people have always been writing them or combine freezone style with it. that's all	1	1	https://issues.jboss.org/browse/JBLAB-255
11979	JBLAB-245	In the JIRA home page, should not be Kosmos listed in the "Category : JBoss Labs Projects" category?	1	0	https://issues.jboss.org/browse/JBLAB-245
11980	JBLAB-237	Isn't it related to JBLAB-228? Besides, because of having the blog entries in the repo (which would always be central, I suppose), multiple machines shouldn't be a problem.	1	0	https://issues.jboss.org/browse/JBLAB-237
11981	JBLAB-237	... regarding... multiple... machines... hmmm... I have to think about that. You may be right. I'm just wondering about just simple synchronization... can they get out of synch? I suppose there might be some cases where that might happen... but it might not matter as it will only happen/last for a minute. Interesting point.	0	0	https://issues.jboss.org/browse/JBLAB-237
11982	JBLAB-223	Tomek, can you clarify this task a little? I'm not sure what this is referring to, or what you would like to see.	1	1	https://issues.jboss.org/browse/JBLAB-223
11983	JBLAB-167	Can we close this issue? It looks to be done.	0	0	https://issues.jboss.org/browse/JBLAB-167
11984	JBLAB-128	Consider such scenario: we want to generate this report for a given period of time. The following actions happen: 1. developer A closes an issue somewhere between the start and end of the period that the report covers 2. developer B reopens the (same) issue after the end date of the report 3. developer C closes the issue Now, should developer A have this issue counted on his "issues closed" account or not?	0	0	https://issues.jboss.org/browse/JBLAB-128
11985	JBLAB-78	What exactly is missing for projects to safely use the forums ?	1	1	https://issues.jboss.org/browse/JBLAB-78
11986	JBLAB-74	From email from Eric Brown: Ivelin: "BTW, do you anticipate further delay of the Forge hardware deployment? What is the current ETA?" Eric's response: We are testing the base network and firewall setup now. We want to test and validate the failover of the switch infrastructure and firewalls (OpenBSD running CARP and pfsync for stateful failover). We've completed most of this (I should say TomBen has completed most of this) and we hope to wrap up a few remaining details over the weekend. We hope to have this deployed at the hosting facility next week before I go on my trip to China. TomBen will be following up the next week to get the hardware for labs and network in place (the easy part;).	1	1	https://issues.jboss.org/browse/JBLAB-74
11987	JBLAB-28	Can we look at LDAP vs. the existing user db from the website? I'd like to move this off to a directory so we can have a branch for Employees, Community, Partners and Customers. This will allow us to replicate portions of the directory for different systmes, with a single master. Thoughts?	1	0	https://issues.jboss.org/browse/JBLAB-28
11988	JBLAB-13	Marc initiated discussion with Bajz??t R??bert - rbajzat@freemail.hu. Robert is interested. Andy will follow up.	0	0	https://issues.jboss.org/browse/JBLAB-13
11989	LOGMGR-139	This is a rather complicated problem to solve. Since the suffix can be set to nearly any supported by {{java.text.SimpleDateFormat}} it makes it very difficult to parse file names to determine which files would be available for purging. There are some things that could be done to make some assumptions about file names, but having a log manager make assumptions about files on a file system seems wrong. You wouldn't want your log manage to delete files it shouldn't be deleting because it made an assumption about a file name. One option besides a custom handler is to use tools on the OS, like a cron job on Linux, to purge older files. As far as not getting your custom handler to work I'm guessing you mean on WildFly or JBoss EAP. What seems to be the issue there?	1	0	https://issues.jboss.org/browse/LOGMGR-139

#	Requirement	Questions	Answered	Successfully Answered	URL
11990	LOGMGR-139	The trick is given the file name {{server.log.20161606}} how do you get {{20161606}} back into a date format? It's possible you could assume the current {{suffix}} would be the date format, but now there's potential to miss purging files. For example say you get 5 days of log files and shutdown the server every Friday and restart it Monday. If you just take {{current_date - 5 days}} then you'd always miss purging Monday and Tuesdays log files. What I meant more by OS tools was using a cron job to delete files older than x days. For example {code} find ${JBOSS_HOME}/standalone/log -name "server.log.*" -mtime +5 | xargs -I {} rm "{}" {code} Given the configuration that should only rotate when the file reaches 1GB in size and keep 1 back up. So you should only ever have {{server.log}} and {{server.log.1}}. If it's got a date pattern suffix then something else is rotating the file.	0	0	https://issues.jboss.org/browse/LOGMGR-139
11991	LOGMGR-131	It looks like the {{StackTraceElement.toString()}} will already include the module and version. {code:java} public String toString() { String mid = ""; if (moduleName != null) { mid = moduleName; if (moduleVersion != null) mid += "@" + moduleVersion; mid += "/"; } return getClassName() + "." + methodName + "(" + mid + (isNativeMethod() ? "Native Method)" : (fileName != null && lineNumber >= 0 ? fileName + ":" + lineNumber + ")" : (fileName != null ? ""+fileName+")" : "Unknown Source"))); } {code} Do we still want format options for it?	1	1	https://issues.jboss.org/browse/LOGMGR-131
11992	LOGMGR-120	Is the goal here to pass messages through a filter regardless of the log level?	1	1	https://issues.jboss.org/browse/LOGMGR-120
11993	LOGMGR-120	Hi guys, This is the patch I have for this new feature. Can you guys take a look at it? [^force_logging.patch] Thanks! Thiago.	1	0	https://issues.jboss.org/browse/LOGMGR-120
11994	LOGMGR-120	Hi David, Thanks for the quick feedback. Regarding performance: * I added a system property for that so the user can opt-in. * When the system is enabled, the callback interface will be used to dynamically determine whether to force the log or not. It means that a custom implementation of this interface should take care of it; Example: an implementation could use memoization. {quote} ... the core of the logging system itself is the place that this modification should be happening, ... {quote} Hmmmm, I didn't quite get that. Where is the core of the logging system? :)	0	0	https://issues.jboss.org/browse/LOGMGR-120
11995	LOGMGR-120	It sounds like what you're describing is more along the lines of consulting a Filter (instead of doing a level check) to determine if a message is logged during certain operations. Would you say that is an accurate assessment?	0	0	https://issues.jboss.org/browse/LOGMGR-120
11996	LOGMGR-30	Just for curiousity: how is the progress on this issue?	1	1	https://issues.jboss.org/browse/LOGMGR-30
11997	LOGMGR-29	Can you briefly explain why the current behavior is not satisfactory (with use case)? It seemed to me that this method would not likely be used in the container environment.	1	1	https://issues.jboss.org/browse/LOGMGR-29
11998	LOGMGR-29	Interesting. And what is the expected behavior of the returned logger? Are its log messages expected to ultimately appear in the server log?	1	1	https://issues.jboss.org/browse/LOGMGR-29
11999	LOGMGR-29	Is there still a chance this patch could get applied? I did go to the trouble to patch the issue.	1	0	https://issues.jboss.org/browse/LOGMGR-29
12000	JBLOGGING-123	I have downloaded the latest JBoss Logging JAR (3.3.0.Final), but there is no "META-INF/services" folder. Which JAR exposes the interface LoggerProvider as service?	1	0	https://issues.jboss.org/browse/JBLOGGING-123
12001	JBLOGGING-107	No clue .. however I made a small change. basically I changed this line to : this.logger.log(translatedLevel, parameters == null || parameters.length == 0 ? this.messageFactory.newMessage(message) : this.messageFactory.newMessage(String.valueOf(message), parameters), and this works like a charm. I guess the problem is the parameters that are passed. The first parameter which is "null" in fact is the LEVEL... and I guess this is the issue causing the NPE, maybe log4j2 changed something for the final release ? You can see this on the screenshot https://dl.dropboxusercontent.com/u/887821/IDEA.png	0	0	https://issues.jboss.org/browse/JBLOGGING-107
12002	JBLOGGING-99	there are some extra jars which i have added for infinispan...is this issue due to some jar conflict?	0	0	https://issues.jboss.org/browse/JBLOGGING-99
12003	JBLOGGING-99	So ..how can i go forward with it..?should i downgrade infinispan version?will that be stable with jboss 5.1	1	1	https://issues.jboss.org/browse/JBLOGGING-99
12004	JBLOGGING-99	Sorry for the very long delay. Is this still an issue?	0	0	https://issues.jboss.org/browse/JBLOGGING-99
12005	JBLOGGING-95	Wanted to get someone's opinion before I start writing code... Log4j 2 defines an {{AbstractLogger}} with a {{log}} method that takes level, message, arguments, throwable, etc. that should be used for this improvement. (this is nearly identical to how Log4j 1 / {{org.jboss.logging.Log4jLogger}} works). However, this method is abstract, so it can only be called A) from a subclass, or B) from a class in the same package. So, the best/most correct/best performing way to implement this improvement is to add an {{org.apache.logging.log4j.spi.Log4j2Logger}} in the JBoss Logging source. The {{Log4j2LoggerProvider}} could still go in the {{org.jboss.logging}} package. Is this acceptable?	1	1	https://issues.jboss.org/browse/JBLOGGING-95
12006	JBLOGGING-95	Can we please get this merged and backported to 3.1, and release 3.1.4.GA?	1	1	https://issues.jboss.org/browse/JBLOGGING-95
12007	JBLOGGING-95	Huh. I didn't even notice that this had been merged and close. Guess I didn't get the email update or something. Thanks! Since this didn't get backported and included in 3.1.4.GA (sad face), when do we expect 3.2.0 to come out? Log4j 2 is going GA in the next couple of weeks, my book goes to the printers next week, and I'd really like this to all line up. I'd at least like to get 3.2.0.Beta1 rolling in the next week or two. There haven't been many changes at all to this version. :-) Is there anything I can do to help move things along?	1	0	https://issues.jboss.org/browse/JBLOGGING-95
12008	JBLOGGING-88	Can you describe the use case you have in mind?	1	1	https://issues.jboss.org/browse/JBLOGGING-88
12009	JBLOGGING-88	Reviewing pull requests today. I still don't see a clear use case that is solved this way; also, the usage of META-INF/services is not consistent with the ServiceProvider mechanism which uses this directory. Can you clarify a bit?	1	1	https://issues.jboss.org/browse/JBLOGGING-88

#	Requirement	Questions	Answered	Successfully Answered	URL
12010	JBLOGGING-84	I believe this RFE is related to the case I will describe, if not I will open a new RFE. Having come from a JBoss AS background, so it is more related to it. The needs come to have a property to set the default locale of jboss logging, and not depend upon default locale (-Duser.country=BR and -Duser.language=pt). However I see from the current code, it is not possible. org.jboss.logging.Messages.java public static <T> T getBundle(Class<T> type, Locale locale) { String language = locale.getLanguage(); String country = locale.getCountry(); String variant = locale.getVariant(); The simplest case to solve it to create a property at jvm level and in the describing code above, check for that property and use it, using as fallback the current implementation, what do you think ? Why I ask that ? From a application server point of view. 1. Its kind of weird to deal with some translations for technical terms, they just don't sound right. I am not blaming the translation text, only that it doesn't fit in the technical view to analyze logs and messages. 2. Not all messages are localized, so printing only english messages looks more consistent [org.jboss.as.naming] (MSC service thread 1-2) JBAS011802: Iniciando o Serviço de Nomeação [org.jboss.as.connector.subsystems.datasources] (ServerService Thread Pool -- 27) JBAS010403: Implantação do driver compatível-JDBC class org.h2.Driver (versão 1.3) [org.jboss.as.webservices] (ServerService Thread Pool -- 48) JBAS015537: Ativação da Extensão WebServices [org.jboss.as.mail.extension] (MSC service thread 1-4) JBAS015400: Sessão de correio limitado [java:jboss/mail/Default] [org.jboss.as.connector.subsystems.datasources] (ServerService Thread Pool -- 27) JBAS010404: Deploying non-JDBC-compliant driver class org.postgresql.Driver (version 9.1) [org.jboss.ws.common.management.AbstractServerConfig] (MSC service thread 1-3) JBoss Web Services - Stack CXF Server 4.0.4.GA-redhat-1 [org.apache.coyote.http11.Http11Protocol] (MSC service thread 1-4) Starting Coyote HTTP/1.1 on http-localhost/127.0.0.1:8080 [org.jboss.as.connector.subsystems.datasources] (MSC service thread 1-4) JBAS010400: Limite da fonte de dados [java:jboss/datasources/ExampleDS] [org.jboss.as.connector.subsystems.datasources] (MSC service thread 1-4) JBAS010400: Limite da fonte de dados [java:jboss/datasources/KitchensinkQuickstartSSO] [org.jboss.as.server.deployment] (MSC service thread 1-2) JBAS015876: Iniciando a implantação do "jboss-as-cdi-injection.war" [org.jboss.as.remoting] (MSC service thread 1-1) JBAS017100: Escutando no 127.0.0.1:9999 [org.jboss.as.remoting] (MSC service thread 1-3) JBAS017100: Escutando no 127.0.0.1:4447 3. If the user wants to search in the internet for help, it is not going to have success with this term "Sessão de correio limitado" 4. The user who uses an application servers is expected to understand many technical terms in english language, so he already understand relevant english terms to read the english log messages. 5. There are accents in many translated words, when they are displayed in terminal consoles (with different charset encoding), it only show a binary character instead of the accented char.	1	1	https://issues.jboss.org/browse/JBLOGGING-84
12011	JBLOGGING-84	I am looking to contribute this feature, should I fork which version at https://github.com/jboss-logging/jboss-logging ?	1	1	https://issues.jboss.org/browse/JBLOGGING-84
12012	JBLOGGING-78	Can you be specific about what version you are using?	0	0	https://issues.jboss.org/browse/JBLOGGING-78
12013	JBLOGGING-51	no problem....it's my work :) where are the sources of 3.x?	1	1	https://issues.jboss.org/browse/JBLOGGING-51
12014	JBLOGGING-6	I send you .java file for DatasourceAppender class	1	1	https://issues.jboss.org/browse/JBLOGGING-6
12015	JBLOGGING-6	Hi David. where I find jboss logging spi source codes? I would send a patch to transform it in a OSGI bundle	1	1	https://issues.jboss.org/browse/JBLOGGING-6
12016	JBMAIL-194	Is this admin tool has a GUI?	1	1	https://issues.jboss.org/browse/JBMAIL-194
12017	JBMAIL-147	okay so I'm down from > 100 errors to only 63... Will complete it by tommorrow I think.	0	0	https://issues.jboss.org/browse/JBMAIL-147
12018	JBMAIL-146	So I haven't figured out how we're going to autoinstall this in existing copies of JBoss. So for the moment let us just assume: 1. Most but NOT ALL users will install the JBAS that we give them (Probably true for milestone releases). 2. The ones that don't probably don't need the installer to do this and can follow the wiki instructions for now. Issues/difficulties: LDAP login module doesn't "create" schemas and we will NEVER make this config straightforward (but presumably if you are using LDAP you won't find it hard) until/unless we distribute our own. While I really prefer to have an out of the box "it runs" install, I'm not convinced LDAP configuration is something not best left to post installation configuration (preferably via a GUI with a "TEST" button). DB login module doesn't create tables. Easy enough for us to extend/enhance it, but then there are DB portability issues. A Hibernate/EJB3/Whatever login module would be our standard MO for database portability and centralized persistence configuration, unfortunately, I bet this would cause a circular dependency within JBAS. For the moment: I think a "jbms" realm with a users/roles template (see src/GRAPHICAL/templates/....) which replaces the login-config.xml and contains the users from the "define your 5 favorite users" screen in the installer is probably a good idea. Moreover we can switch the default configuration from the StaticUserRepository to the JAASUserRepository. As mentioned I do not wish to confuse JBMS with JEMS at the moment. Question: Do you want to do this? Are you able to do this? Do you want me to do this? Long term: I need to talk to scott about an alternative JAAS configuration system. While I understand the potential security issues that can be avoided by static load configuration, I think that the simplicity of installation/configuration is itself a security feature. However we have enough to bite off and chew this month!	1	1	https://issues.jboss.org/browse/JBMAIL-146
12019	JBMAIL-142	where is this?	0	0	https://issues.jboss.org/browse/JBMAIL-142
12020	JBMAIL-92	I actually want to talk this over with some of the folks who do this for a living. We have all the hooks, its just a matter of plugins. However, not by end of march.	0	0	https://issues.jboss.org/browse/JBMAIL-92
12021	JBMAIL-60	what about cheese ?	0	0	https://issues.jboss.org/browse/JBMAIL-60
12022	JBMAIL-60	We need a common key generation panel/config as this is something we need for jbossas setup of tomcat, jms, remoting ssl. Is this something that can be integrated into the jboss-izpack module for use across installer users?	1	1	https://issues.jboss.org/browse/JBMAIL-60
12023	JBMAIL-42	Hmmm... this looks, er, "interesting"... Have you looked at "Reinventing Email using REST"? http://www.prescod.net/rest/restmail/ Alternatively, one could simply route regular email protocols through HTTP's CONNECT, no? http://www.w3.org/Protocols/rfc2616/rfc2616-sec9.html#sec9.9	1	0	https://issues.jboss.org/browse/JBMAIL-42
12024	JBMAIL-36	Shouldn't a hash function (ie SHA-1) be more appropiate for this task?	1	0	https://issues.jboss.org/browse/JBMAIL-36
12025	JBMAIL-33	I think Mr. Rupp was working on this.. . Where is this? Is it done?	0	0	https://issues.jboss.org/browse/JBMAIL-33
12026	JBMAIL-22	Mike, where is this? Please update.	1	1	https://issues.jboss.org/browse/JBMAIL-22
12027	JBMAIL-9	Do we really need this? JBoss har deployer will do it automatically.	1	0	https://issues.jboss.org/browse/JBMAIL-9
12028	JBMAIL-7	We have stuff for JAAS, what is its state? Has it been tested? This is a feature we should be able to run wiht in M3.	0	0	https://issues.jboss.org/browse/JBMAIL-7
12029	JBMAIL-6	Sending to local user is fixed as well as received: header checking. There is still a problem with header body separation: basically the message looses its header body separation and the body part is a few characters too short. Do I need to add the normally terminating dot to have it being removed by creating the Mail() object? What about dot-escaping?	1	1	https://issues.jboss.org/browse/JBMAIL-6

#	Requirement	Questions	Answered	Successfully Answered	URL
12030	JBMAIL-6	Where is this?	1	1	https://issues.jboss.org/browse/JBMAIL-6
12031	JBMAR-157	I'm wondering if JBMAR should really need to reconstruct the exact same types, or if it would be acceptable to relax the requirement and allow to deserialize into alternative implementation, when a more suited structure is available. Example: an UnmodifiableList which wraps a LinkedList is being marshalled. Wouldn't it be more sensible to unmarshall this is an ArrayList, and wrap with an UnmodifiableList? Generally I think (hope) we pick LinkedList vs ArrayList making a performance decision based on how the list is filled in initially, but once the content is defined (as when it's marked by wrapping into unmodifiable) and a copy is needed, an ArrayList should always be a better choice. When marshalling an unmodifiable list, I'd say it could have a bit in the header to switch modifiable/immutable. Same thoughts could be applied to any concurrent collection which is wrapped into UnmodifiableCollection: we could pick the non-concurrent implementation as it's safe for reads, especially considering that after it being marshalled it's impossible for other threads to mutate the underlying collection.	1	1	https://issues.jboss.org/browse/JBMAR-157
12032	JBMAR-120	I have an issue with some of these changes. # Commits should not reorganize imports; it obscures the actual change. # Are you certain that reporting missing fields as "defaulted" and defaulting them on read matches the JDK behavior and is correct? # Are you certain that simply skipping the exception has predictable and correct semantics? What is the effect on the protocol? Are there cases where the writer could write user data, and the reader (by not reading fields) ends up with corruption, or vice-versa? # Have you tested this in detail at all? The reason I'm cautious is that the marshallers/unmarshallers are at a level of complexity that there are interactions which might be surprising or unpredictable.	0	0	https://issues.jboss.org/browse/JBMAR-120
12033	JBMAR-120	Commits should not reorganize imports; it obscures the actual change. Can fix. Are you certain that reporting missing fields as "defaulted" and defaulting them on read matches the JDK behavior and is correct? Absolutely, from what I remember there is an example of this in the JDK in TimeZone class (could be one of the other time related classes) going from version 6 to 7. JDK 7 did not complain at all when it deserialized a jdk 6 version but river did and after looking I narrowed it down to that issue. Will need to test covariant reads too. Are you certain that simply skipping the exception has predictable and correct semantics? What is the effect on the protocol? Are there cases where the writer could write user data, and the reader (by not reading fields) ends up with corruption, or vice-versa? I tested this before, and I did not have any problems, but it was a simple test using jdk classes going from version 6 to 7. There might be a problem if the protocols/(un)marshallers expect that there are no cases where there can be no fields read or written, if there is any serializable fields that the protocol/(un)marshaller expects certain bytes to be written regardless if they are written or not, if getFields() lazily sets some state that other parts of the unmarshaller needs other than the new/off/fields states that are read in the finish() methods. Have you tested this in detail at all? Enough to pass a simple test case.	0	0	https://issues.jboss.org/browse/JBMAR-120
12034	JBMAR-118	Actually infinispan call the marshallerFactory so: (MarshallerFactory) Thread.currentThread().getContextClassLoader().loadClass("org.jboss.marshalling.river.RiverMarshallerFactory").newInstance(); is it ok for you? What do you think?	1	1	https://issues.jboss.org/browse/JBMAR-118
12035	JBMAR-38	Hi, I would like to fix this bug. can you show me the fixing procedure..	1	0	https://issues.jboss.org/browse/JBMAR-38
12036	JBMESSAGING-1929	This would certainly be due to the 2 timeouts. With the write timeout set (not infinite), maybe a test that used to failed is now passing. I'd be surprised if the other settings affected a test. Is there anything that I can do to help?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1929
12037	JBMESSAGING-1929	Howard, I updated the remoting-bisocket-service.xml file. Could that be pulled into the latest tag? Thank you, Doug	1	0	https://issues.jboss.org/browse/JBMESSAGING-1929
12038	JBMESSAGING-1929	Hi Doug, The tag has been just made so It's too late for it. Could you create a separate Jira? Thanks Howard	0	0	https://issues.jboss.org/browse/JBMESSAGING-1929
12039	JBMESSAGING-1908	Howard, could you commit this file to the JBM source tree so one can easily copy it over the original one when desired?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1908
12040	JBMESSAGING-1890	Can you give org.jboss.jms.server.recovery.MessagingXAResourceRecovery2 a more descriptive name? I'm thinking something like org.jboss.jms.server.recovery.ClusteredMessagingXAResourceRecovery. What do you think?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1890
12041	JBMESSAGING-1890	Why not use a configuration like this: <mbean code="org.jboss.jms.jndi.JMSProviderLoader" name="jboss.messaging:service=JMSProviderLoader,name=JMSProviderRemote"> <attribute name="ProviderName">ClusteredRecoveryJMSProvider</attribute> <attribute name="ProviderAdapterClass">org.jboss.jms.jndi.JNDIProviderAdapter</attribute> <attribute name="FactoryRef">java:/ClusteredXAConnectionFactory</attribute> <attribute name="QueueFactoryRef">java:/ClusteredXAConnectionFactory</attribute> <attribute name="TopicFactoryRef">java:/ClusteredXAConnectionFactory</attribute> <attribute name="Properties"> java.naming.factory.initial=org.jnp.interfaces.NamingContextFactory java.naming.factory.url.pkgs=org.jboss.naming:org.jnp.interfaces java.naming.provider.url=${jboss.bind.address}:1099 </attribute> </mbean> Since the local ClusteredXAConnectionFactory is part of cluster its stub should have all the necessary information to contact all the other nodes in the cluster, right?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1890
12042	JBMESSAGING-1860	Hi Howard, could you please look at this enhancement and implement new behaviour. This enhancement will make our JBM cluster solution more HA. Thank you, Mirek	0	0	https://issues.jboss.org/browse/JBMESSAGING-1860
12043	JBMESSAGING-1857	Hi Roger, Is it a HornetQ issue? It's a different project than JBoss Messaging. Howard	1	0	https://issues.jboss.org/browse/JBMESSAGING-1857
12044	JBMESSAGING-1857	Howard, Yes, this is HornetQ, how do I switch to HornetQ? Should I reopen one?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1857
12045	JBMESSAGING-1841	Gerald, I'm speculating, and don't have time to test it for you, but I think I can imagine a scenario in which the JBM_MSG_REF table would have two rows with the same message ID: clustered topics. How has your modification stood-up to testing? I wouldn't mind trying the performance improvement myself if it has worked consistently for you (and it isn't subject to the hypothetical weakness above). queue the "this should be a forum discussion, not a bug comment" reply from a committer...	0	0	https://issues.jboss.org/browse/JBMESSAGING-1841
12046	JBMESSAGING-1802	[~jsightler], did you see the code comment in Howard's previous comment? It says: {noformat} We DO NOT support Strings written to BytesMessages or StreamMessages or written as keys or values in MapMessages, or as String properties or other String fields having serialized length >= 64K {noformat}	1	1	https://issues.jboss.org/browse/JBMESSAGING-1802

#	Requirement	Questions	Answered	Successfully Answered	URL
12047	JBMESSAGING-1802	Hi Justin, The comment itself essentially describes the bug, IMO. It's described as for "performance reasons", but I don't see how that could apply to only StreamMessage. Why would we support writeObject for an ObjectMessage (containing a String) of >65535, but not for a StreamMessage of the same? Performance concerns and considerations would be the same for both of those cases, IMO. I've tried this with HornetQ, and large messages are accepted with StreamMessage. I believe that competing products do as well (this came up in a recent WebLogic migration). Isn't the fix fairly straightforward anyway (pass the longStrings boolean all the way down)? Or is there more here that I'm not seeing?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1802
12048	JBMESSAGING-1772	JBM is supposed to be in bug fix only mode - i.e. no new features. So there needs to be very good justification for implementing any new features. What is the justification in this case?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1772
12049	JBMESSAGING-1667	We can check the name in DestinationServiceSupport.startService(), if it contains forward slash, throw an exception, that make the deployment fail. if (name.contains("/")) { throw new IllegalStateException("The " + (isQueue() ? "queue" : "topic") + " " + "name should not contain forward slash " + name); }	1	1	https://issues.jboss.org/browse/JBMESSAGING-1667
12050	JBMESSAGING-1667	Nobody called Justin has commented on this issue? Did you enter this comment in the wrong issue? :)	1	0	https://issues.jboss.org/browse/JBMESSAGING-1667
12051	JBMESSAGING-1615	I check the code and this is synchronous - i.e. there is no delay. Have you verifed this?	1	0	https://issues.jboss.org/browse/JBMESSAGING-1615
12052	JBMESSAGING-1591	How is this a JBM bug? Looks like this is a JBR bug in which it doesn't clean up after itself.	1	1	https://issues.jboss.org/browse/JBMESSAGING-1591
12053	JBMESSAGING-1546	Hi, JBM 1.4.3.GA is released specifically for JBOSS AS 5.1. Can you check the version of your JBoss AS? Thanks.	1	1	https://issues.jboss.org/browse/JBMESSAGING-1546
12054	JBMESSAGING-1546	So I think you are using the EAP version, this version has JBM 1.4.0.SP3-CP03 built in. You should be able to see something similar to the following line have appeared in your console: 09:46:16,709 INFO [ServerPeer] JBoss Messaging 1.4.0.SP3-CP03 server [0] started Supposed you are using the correct version as indicated above, the problem seems your network has something blocking your application. Did you check the connection or firewall settings? If the network is OK. can you please upload the piece of code by which you are looking for the connection factory? Also if you have an EAP support account, you can also raise the issue through the support channel, I believe you will get more help on this, and fast. :)	1	1	https://issues.jboss.org/browse/JBMESSAGING-1546
12055	JBMESSAGING-1546	Hi I am new to Jboss, sorry will you please tell me where do i find it and what should be in connection factory. Please let me know the path and file name in Jboss 4.3 1. file path 2. file name 3. what should be the content. if i put that will it resolve my issue? thanks	1	0	https://issues.jboss.org/browse/JBMESSAGING-1546
12056	JBMESSAGING-1546	does it related to the error that i am getting? how do i fix or re-configure this connection-factories-service.xml file to resolve my issue?	1	0	https://issues.jboss.org/browse/JBMESSAGING-1546
12057	JBMESSAGING-1513	Hi Len, Can you brief me what this script for? I had a look at SOA-310 but I don't know much about SOA project. Thanks. Howard	0	0	https://issues.jboss.org/browse/JBMESSAGING-1513
12058	JBMESSAGING-1491	Hi Folks, I've finished working on JBoss Messaging and running the test suite against Ingres community edition 9.2 build 134 on linux 32 bit. I've been using the './build.sh report' version of the tests and have been tuning Ingres so that it works correctly and passes all tests. For those that are interested, the settings that should be used/configured in Ingres are: 1/ DBMS->system_locklevel = row 2/ DBMS->connect_limit = 512 3/ DBMS->table_auto_structure = ON 4/ DBMS->qsf_guideline = huge 5/ Locking->per_tx_limit = 2500 It should be noted that any version on Ingres lower than 9.2 will not work correctly due to the enhancements made in 9.2 specifically around (C/B)LOB's. I have also tried using build 140 and 141 on linux 32 bit and 64bit. That release of Ingres has some problems and should not be used. Ingres is currently in our release cycle for the 9.2 enterprise version(as opposed to the community version). Releases come out for all our different platforms one by one. It is my intention to support JBoss Messaging on Ingres 9.2 enterprise edition going forth. I will continue to test running the JBoss Messaging test suite against Ingres 9.2 enterprise editions that are released if I have hardware and community editions, again if I have hardware. I've made a svn diff file for adding ingres support against the JBoss-Messaging-1.4.2.GA code line for people to use/commit etc. It is attached to this jIRA. I'd like to also add a file documenting suggested Ingres settings for use with JBoss Messaging, and I would think that other db's also have recommended settings, but not sure where to put this. Would it be possible to get this patch applied to the 1.4.3 code so it is included in that release? If not, is there anything I need to do to help out in getting Ingres added to the supported database options?	1	0	https://issues.jboss.org/browse/JBMESSAGING-1491
12059	JBMESSAGING-1491	Murray, great job! I agree we add this DB support in JBM. Tim what's your opinion?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1491
12060	JBMESSAGING-1491	THanks, I've been putting in a lot of hours over this at work(gotta love beening able to do open source as your job at work...) I'm certainly interested in also looking at version 2 and testing ingres against that code line too. Is version 2 code in a good position to look at this, or is it a little early before going there? Cheers Howard. Take care, Murray	1	0	https://issues.jboss.org/browse/JBMESSAGING-1491
12061	JBMESSAGING-1491	Hi Howard, How are things? Just wondering how things are going with getting a QA test setup going for Ingres. The version to use is the enterprise 9.2 version which is a licensed product. I have chased up making some arrangement for the QA testing to use this with an allowable license. Is there anything I can help with? Take care, Murray	1	0	https://issues.jboss.org/browse/JBMESSAGING-1491
12062	JBMESSAGING-1491	Hi Folks, Just wanting to touch base on this issue and try and get things moving along. I've chased up a legitimate Ingres enterprise license for the JBoss Messaging project to use for a copy of Ingres for the continuous test centre. Where do we go from here? Is there anything that I need to do or get done? My aim is to be able to offer Ingres as a supported database platform for JBoss Messaging. Take care, Murray	1	0	https://issues.jboss.org/browse/JBMESSAGING-1491
12063	JBMESSAGING-1416	Hi Howard, The customer has following questions to your comment (03/Feb/09 05:11 AM): Q1. In "The Programming Way" , you show us a way to produce messages in an ordering group with JBossMessageProducer API. It seems that the API is for the producer side. How about the consumer side then? Q2. In "The Configuration Way", is it complete transparent both for producers and consumers without JBoss specific API? Q3. The last line says "In case of Distributed Queue, user should use HASingleton to make sure ordering group works properly". Does this simply mean that this task covers the single server case in the JBoss Messaging 1.4 and not cover the clustered queues, which is targeted for 2.0? Regards, Fusayuki	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416
12064	JBMESSAGING-1416	Hi Howard, Let me confirm the error scenario in JBoss Messaging 1.4. Does your comment (03/Feb/09 05:11 AM) cover the following scenario stated in this JIRA's description ? "In order to guarantee strict ordering, even on rollback or in the presence of multiple consumers or with xa transactions, the queue needs to ensure that no more than one message with the value of ordering group is being delivered at any one time. " Our customer requires that even in the singleton's case. Regards, Fusayuki	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416
12065	JBMESSAGING-1416	Howard, Thanks a lot for the clarification. Now I'd like to write the customer's requirements for Distributed Queue. Should I input them here or in a new JIRA for it? Regards, Fusayuki	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416

#	Requirement	Questions	Answered	Successfully Answered	URL
12066	JBMESSAGING-1416	Hi Howard, I have a requirement from the customer about "selector" limitation of you idea (03/Feb/09 05:11 AM). >* Ordering group shouldn't be used together with message selectors and scheduled delivery. We guess this statement means those just change the messagin ordering. But the customer need to use "selectors" because JBoss ESB uses selectors quite often for request-reply message pattern with queues: http://www.redhat.com/docs/en-US/JBoss_SOA_Platform/4.3.GA/html-single/Programmers_Guide/index.html#sect-SOA_ESB_Programmers_Guide-What_is_a_Service-ServiceInvoker For example, a user sends requests such as req-1, req-2, req-3 then should get the reply-1, reply-2, reply-3 in order, even with selectors for the reply queue. So the customer requires JBM keeps order of messages and doesn't throw exceptions when we even use selectors with ordering group function. Is that OK with you? Regards, Fusayuki	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416
12067	JBMESSAGING-1416	Hi Fusayuki, Thanks for the info. "message selectors" in ordering group has been discussed before here: http://www.jboss.org/index.html?module=bb&op=viewtopic&t=144872 So the decision is not to support 'selector' at all. Can you take a look at the discussion and see if there is any feedback on this? I'll be glad to here any thoughts on this. Howard	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416
12068	JBMESSAGING-1416	Howard, Would you elaborate "not to support selector at all" a little more, please? If JBM ignores the Ordering Group when we create consumers with selectors, it is fine for us. If JBM throws exceptions, then we cannot use the queues with JBoss ESB. Let me explain our background using with message selectors. For request-replay message pattern, we should specify connection factory names for a JBoss ESB service. But we can only specify one connection factory name applying both for request and reply queues. In other words, we cannot simply specify a connection factory name only for the reply queue. So we would like to use the queues with selectors even though it breaks FIFO. Could you just ignore the message ordering when using with selectors, as if Ordering Group is not used? Best regards, Fusayuki	1	1	https://issues.jboss.org/browse/JBMESSAGING-1416
12069	JBMESSAGING-1416	Hi Fusayuki, "Would you elaborate "not to support selector at all" a little more, please? If JBM ignores the Ordering Group when we create consumers with selectors, it is fine for us. If JBM throws exceptions, then we cannot use the queues with JBoss ESB." --- If we turn Ordering Group on, it always tries to keep strick ordering of the messages. Using selectors on ordering group will not result in exceptions, but may result in messages never being delivered. "Let me explain our background using with message selectors. For request-replay message pattern, we should specify connection factory names for a JBoss ESB service. But we can only specify one connection factory name applying both for request and reply queues. In other words, we cannot simply specify a connection factory name only for the reply queue. So we would like to use the queues with selectors even though it breaks FIFO. Could you just ignore the message ordering when using with selectors, as if Ordering Group is not used?" --- I don't understand the use case. If ordering can be ignored, why we turn it on? We just use normal delivery. Can you give a very simple concrete case where ordering and selector are both needed and also must be used together? I don't think single connection factory would be a problem, because we can use JBossMessageProducer's API to control ordering, if you don't want ordering all over the connection factory scope.	0	0	https://issues.jboss.org/browse/JBMESSAGING-1416
12070	JBMESSAGING-1415	Can we have more info on this? I can't see any param numberOfRetries in the pasted config....	1	1	https://issues.jboss.org/browse/JBMESSAGING-1415
12071	JBMESSAGING-1415	Ron - if numberOfRetries is no longer used, what is it replaced by? This was quite an important config param for JBM. Thx	1	1	https://issues.jboss.org/browse/JBMESSAGING-1415
12072	JBMESSAGING-1407	And sorry Howard! Related to your svn account I thought Howard was your last name. Greets from Germany Markus	1	1	https://issues.jboss.org/browse/JBMESSAGING-1407
12073	JBMESSAGING-1359	Have you actually tried googling this? http://www.google.co.uk/search?hl=en&q=mssql+not+reclaiming+space&btnG=Google+Search&meta= It brings up lots of hits. Seems this is not an isolated problem.	1	1	https://issues.jboss.org/browse/JBMESSAGING-1359
12074	JBMESSAGING-1359	I'm assuming we have a MS support contract. Can we just use that? If not, we *should* have a MS support contract, since MS is one of our supported platforms ;)	1	1	https://issues.jboss.org/browse/JBMESSAGING-1359
12075	JBMESSAGING-1359	Have you tried "sp_dboption '<your db>', 'trunc. log on chkpt.', 'true';"?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1359
12076	JBMESSAGING-1359	Alex's suggestion doesn't work. It was already tried before. Nobody was able to tell me whether there's some MS support for RedHat. Len do you have any new information on this?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1359
12077	JBMESSAGING-1359	Changed component to doc - Martin - can you open linked JIRAs in EAP and SOA-P projects - also in doc component - so we can get the information into the relnotes? Thanks!	1	1	https://issues.jboss.org/browse/JBMESSAGING-1359
12078	JBMESSAGING-1356	I can take a stab at it. On which branch do you want it implemented?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1356
12079	JBMESSAGING-1356	How's this going? Have you implemented this using the OrderedExecutorFactory? Should just be a few lines of code...	0	0	https://issues.jboss.org/browse/JBMESSAGING-1356
12080	JBMESSAGING-1356	Do you want me to merge? If yes, where?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1356
12081	JBMESSAGING-1356	Could this be made available in 1.4 branch ? This causes scaling issues.	1	0	https://issues.jboss.org/browse/JBMESSAGING-1356
12082	JBMESSAGING-1296	Make sure we support the equivalent of the JBoss Remoting 2.x functionality from JBM 1.4: I.e. we should be able to specify the port the client binds to. secondaryconnectport in jbr 2.x	1	1	https://issues.jboss.org/browse/JBMESSAGING-1296
12083	JBMESSAGING-1296	Are you sure? We're talking about the *client socket* here - a range.	1	1	https://issues.jboss.org/browse/JBMESSAGING-1296
12084	JBMESSAGING-1293	Question - are we seeing a related issue with MS-SQL Server DB - where the limit is 8K?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1293
12085	JBMESSAGING-1255	Jay- Can you make this change on Branch_Stable too?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1255
12086	JBMESSAGING-1254	Can you make this change on Branch_Stable too?	1	1	https://issues.jboss.org/browse/JBMESSAGING-1254
12087	JBMESSAGING-1247	Brian, I did what you suggested (replacing the ObjectName property channelFactory by a property of type org.jgroups.ChannelFactory). However, I still need to figure out 2 things: * how to I inject this new property in JBAPP postgresql-persistence-service.xml? if I replace <attribute name="ChannelFactoryName">jgroups.mux:name=Multiplexer</attribute> by <depends optional-attribute-name="JChannelFactory">jgroups.mux:name=Multiplexer</depends> I still expect to be injected a JChannelFactoryMBean, not a JChannelFactory. * in our own tests, we recreate "manually" a configuration based on the MBean exposed. In that case too, the only thing I can inject is a JChannelFactoryMBean, not a JChannelFactory. Using a MBean instead of an ObjectName is an improvement but it falls short from what you're suggesting. I think I missed something :)	0	0	https://issues.jboss.org/browse/JBMESSAGING-1247
12088	JBMESSAGING-1238	I don't really understand why it should be set to false. If a server is dead, do we really want to be pinging it ad infinitum?	0	0	https://issues.jboss.org/browse/JBMESSAGING-1238
12089	JBMESSAGING-1217	Is this issue already solved ? It is markes as duplicate but can't find the original one. I've the same problem with JBoss ESB Server 4.5 (AS 4.2.3 + JBM 1.4.0.SP3).	0	0	https://issues.jboss.org/browse/JBMESSAGING-1217
12090	JBMESSAGING-1202	when moving to DLQ, original headers are stored in JBOSS_MESSAGING_ORIG_MESSAGE_ID and JBOSS_MESSAGING_ORIG_DESTINATION headers (plus JBOSS_MESSAGING_ACTUAL_EXPIRY_TIME when the message is moved to the expiry queue) in ServerSessionEndpoint.makeCopyForDLQOrExpiry method	0	0	https://issues.jboss.org/browse/JBMESSAGING-1202

12100	JBMESSAGING-981	Great! Exactly what i needed, thank you. Should i close the bug or are you going to do it yourself?	0	0	https://issues.jboss.org/browse/JBMESSAGING-981
12101	JBMESSAGING-964	I uncommented the tests but they are of course failing since the functionality they are testing (pre-configured client IDs) is apparently not implemented or not configured. Should I implement it?	1	1	https://issues.jboss.org/browse/JBMESSAGING-964
12102	JBMESSAGING-957	>but I can no longer get to jconsole How do I do that?	0	0	https://issues.jboss.org/browse/JBMESSAGING-957
12103	JBMESSAGING-957	A logical JMS quueue in JBoss Messaging is actually composed of a set of individual queues, one for each node in the cluster that the logical queue is deployed on. Each queue fragment is owned by that node and will contain a different set of messages than other queue fragments. This is why we need a persistent node id, so the node knows which queue fragments in the database it owns so it can load the queue state on startup and add/remove messages. I'm beginning to think the tomcat approach of specifying the node id in a system property is the best. This allows the actual JBM config to remain the same across each node. Do you see any problems with this approach. In particular I'm thinking cluster installation will become more complex since the user will have to manually specify the unique node id on each run.sh - which they currently don't have to do with AS cluster install. Another possibilty would be for JBM to generate a unique id on startup if it can't find one in some config file. Once it's generated it, it would save it locally. This has the difficulty of guarantee uniqueness of the id across the cluster (the id is currently an int, not a string for performance reasons). Any comments?	1	1	https://issues.jboss.org/browse/JBMESSAGING-957
12104	JBMESSAGING-957	Brian - I've been trying to find the place in the tomcat config (AS 4.0.5) that substitutes the node id, but can't find it. Can you point me to the right file? (And place in the file). Thx	1	1	https://issues.jboss.org/browse/JBMESSAGING-957
12105	JBMESSAGING-957	Brian - why would need a int property *and* a string property? JBM just needs an int property. What are these "other uses"?	1	1	https://issues.jboss.org/browse/JBMESSAGING-957
12106	JBMESSAGING-956	Hi Tim, I assume temporary queue is working for clustered queue. We are trying to implement request/response queues. 1. One clustered request queue. 2. One temporary response queue. Currently we have: 1. jboss-4.2.2.GA / jboss-messaging-1.4.0.SP3 / jboss-remoting-2.2.2.SP4 2. PostOffice is clustered. On the requester: 1. The sender creates a temporary queue: tmpQueue = session.createTemporaryQueue(); 2. The sender creates receiver on this temporary queue: session.createReceiver(tmpQueue); 3. The sender sends messages by setting replyto in the message. 4. The sender periodicly retrieve the message using: msg = receiver.receiveNoWait() On the handler: 1. Receive the message. 2. Get the queue from the message: (Queue)msg.getJMSReplyTo() 3. Send the reply back to queue. The issue is, at step 4 above, the msg that the requester got is always null. But I did not see any exceptions in the log. Do you have any ideas? Thanks.	0	0	https://issues.jboss.org/browse/JBMESSAGING-956
12107	JBMESSAGING-942	Do we need to benchmark ActiveMQ and QPid colocated?	0	0	https://issues.jboss.org/browse/JBMESSAGING-942
12108	JBMESSAGING-893	The logic on the Valve is correct: You can't acquire a write lock until all the readLocks are released, and this will happen when: - All threads leave the valve - All thread try to close the valve while they detect a failure. And this is expected behavior... we can't start failover until all threads using a connection fail. I would reject this issue now... but I will talk to you first.	0	0	https://issues.jboss.org/browse/JBMESSAGING-893
12109	JBMESSAGING-806	Jeff - has Trustin fixed the issues in Netty yet? If so, can you close this task?	1	1	https://issues.jboss.org/browse/JBMESSAGING-806
12110	JBMESSAGING-806	the issue is fixed in netty but we have not integrated the fixed version yet (3.1.0.alpha4). I'll close this issue when we integrate this version and I uncomment the corresponding test. is that ok?	0	0	https://issues.jboss.org/browse/JBMESSAGING-806
12111	JBMESSAGING-804	Tim briefly described what we need. That's correct. This issue planned for 1.2.0.SP2 according to this jira entry. And it's marked as "closed". Is the workaround described by Ovidiu the solution? I'd prefer the Tim's proposal as maintenable solution. Is any work planned for it?	1	1	https://issues.jboss.org/browse/JBMESSAGING-804
12112	JBMESSAGING-653	Do we really need this? We can certainly do it if there are requests for it, but for the time being we could start from the assumption that we provide XARecovery from 4.0.5 on. Also see http://jira.jboss.org/jira/browse/JBMESSAGING-655	0	0	https://issues.jboss.org/browse/JBMESSAGING-653
12113	JBMESSAGING-651	Finally tracked down and now appears to be fixed. Redundant Tx callback registration removed from path JBMESSAGING-407. Should now correctly behave and register callbacks while transactions are replayed on the channel.	0	0	https://issues.jboss.org/browse/JBMESSAGING-651

12114	JBMESSAGING-640	I don't like the idea of SVN links... If we want to fix that it would be through repository.jboss.com, and we would still have two repositories anyway. Can't we just reject this issue?	0	0	https://issues.jboss.org/browse/JBMESSAGING-640
12115	JBMESSAGING-624	Tomaz, We don't currently have a QA set up to test messaging against DB2. Is it possible for you to checkout the current Branch_1_0, build, and verify that the changes were applied correctly to work against DB2? Thanks, -- Juha	1	1	https://issues.jboss.org/browse/JBMESSAGING-624
12116	JBMESSAGING-607	Can you add new member's name to the page also? :-)	1	1	https://issues.jboss.org/browse/JBMESSAGING-607
12117	JBMESSAGING-601	Ovidiu Could you please set this up today if possible. I would like to commit changes to get the messaging configuration running tomorrow, so I can start testing my refactored test cases tomorrow as well.	1	1	https://issues.jboss.org/browse/JBMESSAGING-601
12118	JBMESSAGING-601	Hi Ovidiu The artifacts did end up in the repository, however, a couple of problems: 1. you forgot to update the component-info.xml file with the new artifacts which were added in version 1.0.1.GA - I added these this morning. If the artifacts aren't listed in component-info.xml, they don't get processed by the buildthirdparty mechanism (if my understanding is correct) By the way, until I saw in fisheye that you made a change to the version number, I thought I was going crazy - I noticed the incorrect CR5 after I had comitted my change (and missed the CR5 mistake), and after you had corrected it, but before it made it back into the repository - the versions were different and I couldn't understand why! 2. I mentioned in the JIRA issue that these new artifacts need to be added for each version of Messaging which we want to test. I should have been more clear on this. The main problem is that it's not so easy to work with two versions of Messaging in the same build/testsuite, which is the situation we have at the moment. At present, the snapshot version of Messaging is being pulled in to the AS build, for Prabhat's TCK testing. This has the effect of setting the jboss.messaging.classpath path element, among other things, which is used in the tests.classpath path element in the testsuite. If you then want to run the testsuite against a different version of Messaging, say 1.0.1.GA, this becomes difficult, as we need to define a different path element (different from jboss.messaging.classpath) and adjust the classpath accordingly. Can we : (i) assume that we will run TCK tests and integration tests against the same version of Messaging (if not in the long term, then at least in the short term) (ii) add the additional artifacts into the snapshot directory in the repository Richard	1	0	https://issues.jboss.org/browse/JBMESSAGING-601
12119	JBMESSAGING-601	I noticed a build problem when trying to use 1.0.1.GA with the AS build earlier this morning (i.e. I changed the version of Messaging from snapshot to 1.0.1.GA in build-thirdparty.xml). Specifically, in the component-info for Messaging, 1.0.1.GA requires serialization 1.0.2.GA or 1.0.3.GA, but serialization 1.0.1.GA is getting pulled in to the build, and the build is failing. What is the approach to resolving these sorts of tangled dependencies (as changing the version of serialization which gets pulled in may upset some other component)? Trial and error? Or should these types of changes only be made with consent of the owner? Richard	1	0	https://issues.jboss.org/browse/JBMESSAGING-601
12120	JBMESSAGING-578	>Also, an important test that we should add is to make sure that leaving a shared JChannel doesn't leave it in a incosistent state, especially if other components share the channel Isn't that integration tests? We are creating new JChannels using Multiplexor MBean. If we think JGroups could fail in any sense, I belive this should be done under integration tests. We will probably need to write new ones.	0	0	https://issues.jboss.org/browse/JBMESSAGING-578
12121	JBMESSAGING-572	Not finished yet, where are the failover stress tests?	1	1	https://issues.jboss.org/browse/JBMESSAGING-572
12122	JBMESSAGING-556	What was your intention here, over and above identifying which tests were JBossMQ specific?	1	1	https://issues.jboss.org/browse/JBMESSAGING-556
12123	JBMESSAGING-556	I had a look for some existing JBossMQ functional tests in the JBossMQ source directory (jbossmq) and didn't see any. Is it the case that the only tests (whether functional, stress, performance or smoke) for JBossMQ were in the AS testsuite - that is, those I have been looking at? Thus, is your intention to consider the JBossMQ-specific tests which were running in the AS testsuite to be the 'functional' tests for JBossMQ and that these should cotinue to be run in the AS testsuite, although now grouped together as 'functional tests for JBossMQ', as there is no separately developed stand-alone test framework for them to run in, as there is for Messaging. We would then have several sets of JMS provider tests in the AS testsuite: 1. generic JMS tests run against Messaging 2. generic JMS tests run against JBossMQ 3. JBossMQ functional tests run against JBossMQ	0	0	https://issues.jboss.org/browse/JBMESSAGING-556
12124	JBMESSAGING-555	I've started to move testcases over, and things are progressing smoothly. A number of the testcases move over with no change - in particular, those test cases which only assume the existence of a ConnectionFactory object in JNDI and which also make use of createTemporaryTopic()/createTemporaryQueue(). However, for the test cases I have encountered so far which make use of named topics and queues, I have found that these are all deployed dynamically by the test cases themselves - my making a call to JBossTestCase.getDeploySetup() and passing test-destinations-service.xml file. In fact, in Adrian's server configurations for JBossMQ, he only deploys one Queue, named DLQ. This is why all test destinations are deployed dynamically. In addition to this, some of the test cases rely on defined usernames and roles. At present, the Messaging configuration does not match this arrangement, and if we are to keep the test cases more or less in their present state (i.e. keep existing deployments as they are, keep existing security related features as they are), we are going to have to rework the Messaging configuration to essentially match Adrian's JBossMQ configuration, in the following ways: (i) ensure that only one Queue named DLQ is created by the AS at startup (ii) create deployment descriptors for starting the test Topics and Queues (done) (iii) add the users and roles which Adrian uses to messaging-roles.properties and messaging-users.properties In order not to interfere with your use of the existing Messaging configuration with your tests (functional, stress, etc), it seems as though we need to add a target to release-admin.xml which builds a Messaging configuration for the AS testing. Does this sound reasonable?	1	1	https://issues.jboss.org/browse/JBMESSAGING-555
12125	JBMESSAGING-555	Should these changes to the contents of the jboss-messaging.sar be performed in release-admin.xml or in your build? They are changes to the files in the sar, and not any changes relating to the default configuration, and so you have complete control over their contents. Changing these files in the sar would require introducing a different build artifact for AS testing as opposed to your functional testing.	1	1	https://issues.jboss.org/browse/JBMESSAGING-555
12126	JBMESSAGING-555	> In order not to interfere with your use of the existing Messaging configuration with your tests (functional, stress, etc), it seems as though we need to add a target to release-admin.xml which builds a Messaging configuration for the AS testing. Does this sound reasonable? I would rather keep it separated. I see it more of a function of the testsuite build script. The release admin does need not care of security roles in JBoss AS integration test suite. I can create the ant configuration script fragment for you to use, if you wish, it shouldn't be any big deal The changes should be applied post-deployment.	1	1	https://issues.jboss.org/browse/JBMESSAGING-555
12127	JBMESSAGING-554	Where are you currently checking in your changes? The 4.0 branch or the head?	1	1	https://issues.jboss.org/browse/JBMESSAGING-554

#	Requirement	Questions	Answered	Successfully Answered	URL
12128	JBMESSAGING-554	Ideally, I (or anyone else) should be able to do this: - check out the AS trunk - build the AS: ./build/build.sh - run the Messaging installation procedure (this is reduntant, Messaging should come as default provider, but for the time being, this is fine): ant -f release-admin.xml - run ./build/build.sh tests-messaging (or whatever target name you went for) and get a full set of JMS integration tests passing - run ./build/build.sh test-jbossmq and get a full set of JMS integration tests passing How close are you to this?	1	1	https://issues.jboss.org/browse/JBMESSAGING-554
12129	JBMESSAGING-554	At present, the JBossMQ tests are initiated in various targets within the testsuite - for example, some of the basic tests are in the tests-standard-unit target, and others in the tests-standard-stress. There is no target for executing all JBossMQ tests as a group. This can be easily changed so that a separate JBossMQ target is defined and this will initiate the JMS tests for JBossMQ. The Messaging tests have already been set up as you describe, except that you don't need to create the Messaging configuration by hand - the target calls release-admin.xml on your behalf. How close am I to that way of executing the tests? Very close. I would just need to create a new target for JBossMQ. That's 10 minutes work, but i'd rather leave it until I finish getting the refactoring done, if you don't mind.	0	0	https://issues.jboss.org/browse/JBMESSAGING-554
12130	JBMESSAGING-523	is there any documentation on how to use this feature in JBM 2.0 ? I couldnt find any. Besides I only see a 2.0 alpha release but this JIRA states it was implemented in 2.0 beta...	0	0	https://issues.jboss.org/browse/JBMESSAGING-523
12131	JBMESSAGING-519	This task can probably be split into two: 1) The client side management of failover. The maintenance of the client side list of servers, the client side load balancing policy. 2) The server side management of failover. This is how I think failover should work: On the server side, if a node fails, this needs to be detected by the group. The failover node for the node that failed needs to then take over responsibility for any queues that the failed node was handling - it effectively "becomes" that node. Any non persistent messages will be lost. Any persistent messsages will be loaded for those queues from the database. If in memory message persistence is being used then no need to load them from the db. Thing to consider: When the failed node comes back - how to handle the responsibility for the queues back to the original node? This probably isn't possible since new connections may have connected to the failover node and we can't just boot them off, or move them to the other node since they will lose non persistent messages. Note that we DO NOT need to replicate delivery state of sessions to the failover node. This will be too slow. Instead we can get transparent failover by the client "replaying" the session to the failed over server. On the client side, when the client detects server failure, it chooses a new server to try. This must match the failover server. Something to think about: How can we ensure that the client doesn't failover to the new server *before* the new server has failed over it's queues? The client starts a new JMS connection, then recreates automatically all the sessions it had on the pervious failed connection. For each session, the client then tells the server the ids of all the delivered but unacknowldged messages it had at point of failure. The server then recreates its delivery lisst from this information. The sessions can then continue as normal - with perhaps redelivery of any non persistent messages that were in the failed sessions. (persistent messages will be ok)	1	1	https://issues.jboss.org/browse/JBMESSAGING-519
12132	JBMESSAGING-471	Can't we just upload them by hand for now? You can make this a feature request for your Maven build, but I don't think we should do this now. Ruel will be following up with you about Maven early next week.	1	1	https://issues.jboss.org/browse/JBMESSAGING-471
12133	JBMESSAGING-367	Is it possible to indicate somewhere how to resolve the issue when using different versions of Messaging and AS. For example it would be good if somewhere it stated that AS 4.0.4.GA could only work with Messaging 1.0.1.CR1 and above. Or could it be posted how to resolve the issue oter than downloading the latest Messaging.	0	0	https://issues.jboss.org/browse/JBMESSAGING-367
12134	JBMESSAGING-237	Some (old) thoughts I thought I'd copy and paste into here for completeness: I just wanted to summarise this since I know this is a complex discussion that could probably do with being put in context. I think this may be useful, especially for people getting up to speed with this subject. I have extended this somewhat to include a quick summary of the lazy loading queues idea which is a related subject, even thought the task at hand (for now anyway) is to design and provide a default implementation of the Message Store not implementation of lazy loading queue functionality, but I think this provides a background to how the message store fits into the whole picture. In order to cope with very large queues/subs (currently all message refs for queues are stored in memory at once), Adrian came up with the idea of lazy loading queues: With lazy loading queues/subs, we have "special references" in each queue / sub. When one of these special marker references are read from the front of the queue, they cause the next n message references to be loaded into the queue followed by another marker. Also the messages corresponding to those message references are themselves are loaded into the message store. (In some cases they may be in the store already since a queue/sub can maintain a reference to the same message). (Aside - actually I think we could extend this idea to lazy load *before* the message is popped off the front, this could be done in a different thread in order to smooth things out. I.e. prevent a big pause to the client while refs/messages are loaded from the db) The value of n for a particular queue can be configured by the user to suit the operational environment. If messages are sent to a queue and there are already more than n messages in that queue, they go straight in the persistent store (even in the case of a non-persistent message!) and no reference is added to the queue. So this means if the value of n is tuned well for a particular queue, and the messages in that queue have a similar size then we should be able to avoid running out of memory in the message store in most cases. :) However, if the message store *does* start running out of memory , which messages should it evict first? It's likely a default implementation would want to evict those messages that have been in the store the shortest amount of time since they are towards the back of the queues (MRU). (Needs to be pluggable) I guess we should also be able to support eviction of messages in batches (i.e. batch updates in the db for performance). We should also know if a message is already in the db or not without making a db hit at passivation. (E.g. persistent messages will already be there and non-persistent may not) When memory usage recovers how do we load messages back into the store? Again this needs to be pluggable. Perhaps we don't bother and just wait until the message is actually accessed, this is simple and perhaps should be our default implementation. Other implementations could get more complex. We could batch load a subset of the same messages we evicted back into the store in order to utilise free memory well. This means we would need to keep track of the ids of the messages we evicted. When loading them back in we may not be able to load them all back in since free memory may not have recovered to the same level it was at before. In order to know how many to load we would need to store some kind of cumulative message size in the db. (SELECT * from message_refs where cumulative_size < xyz). This all gets complicated and it's my feeling which should probably just stick to a simple default impl for now.	1	1	https://issues.jboss.org/browse/JBMESSAGING-237
12135	JBMESSAGING-187	Ovidiu, Is there anything I can do to help you get your content certified on Labs? I'm here to help. Cheers, Damon	1	1	https://issues.jboss.org/browse/JBMESSAGING-187

12138	JBMESSAGING-134	Feb 08 2006, London design meeting Spillover: ========== Optimisation: Maintain a reference to the message holder in the message reference to prevent having to do a lookup on every getMessage. We will maintain a high memory limit, and a spillover limit. When memory exceeds the high memory limit, messages are evicted down to the low mem Why is there a channel id as part of the primary key in message reference?	0	0	https://issues.jboss.org/browse/JBMESSAGING-134
12139	JBMESSAGING-134	"get ref from db" markers in the queues when loading refs do we load messages too? we only want to load them if a) They are not already loaded When a new message arrives for a queue, we add the reference in the in memory queue if: 1. the in memory queue size is less than the max in memory queue size and 2. there is sufficient free memory otherwise: we write it to disk keep it simple for 1.0 Case 1: A new message arrives on a queue: 1. The message is referenced, if there is sufficient free memory, the message is store in memory, otherwise it goes immediately to disc (even for non-persistent) 2. If the there is not enough free memory to store the reference, OR, the queue in memory size is greater than maximum in memory size then, a marker reference is written into the queue if there is not one there already, and the reference is written to the database. Case 2: Receiving a message 1. If there is an available ref in the queue the message for that is returned from in memory (it will always be there) 2. If the next ref is a marker ref, then the next x refs are retrieved from the database. x is determined by the queue batch load size, the message corresponding to the message refs are loaded at the same time. However there may not be enough memory to load all the messages or refs, so as messages are loaded from the db (must use a cursor for this) we only create them if there is enough free memory. Case 3: Memory runs low. Memory runs low and the y last messages to be refed are determined to be removed from the in memory store. Since multiple refs can refer to the same message, this isn't necessarily the last refs to to be added. (Important!) We also need to remove and replace with a marker the refs corresponding to the mesages that have been removed. This is done by maintaining in the holder references to the message refs that reference the message. Other method: A new message arrives on queue: 1. The message is referenced, if there is sufficient free memory, the message is store in memory, otherwise it goes immediately to disc (even for non-persistent) 2. If the queue size is greater than the max size, and a marker hasn't already been written then we write a marker and write the ref to disc, otherwise we add the ref to the in memory queue. Receiving a message: 1. If there is an available ref, then try to retrieve the message from memory, if it is not there then retrieve a batch of messages from the db. Problem! How many and which mesages to retrieve? If the server is just started up this is very difficult to calculate. Problem is when the server is started how do we determine which messages to load into memory? possible issue with storing deliveries in separate structure due to passivating message references to disk then on reload, the delivery is cancelled and ends up in the wrong place in the queue remove message reference copy constructor and replace with explicit method on message store that refs given another message reference. Message store takes the decision when memory is low. Each object whose memory size can be measure must implement the interface MemoryMeasurable with operation getBytesSize() The message store or whatever also implements the interface MemoryManager Queue Memory management ---------- - Case 1: Queue Starts spilling over. Memory Manager knows when memory is low so calls message store to ask it to deal with the situation. It would tell message store to reduce memory consumption by 1230000 bytes. MessageStore implements a MRU cache, which is updated on every call to ref to create a new message reference (make sure to remove messagereference copy constructor and replace with an explicit ref(MessageReference other) method on the message store. This means the most recently touched messages in the cache are those that correspond to message references on the ends of queues. The message store is aware of the overall size of the message and any message references that reference it so it knows how many message (and corresponding message references) to evict to bring memory down to the required level. The holder object also needs to keep track of the channel id of any channels that reference the message. When the message is evicted it informs the channel to evict one item from the end of the channel for any channels referencing the message. (This will always be at the end of the channel since the messages are	0	0	https://issues.jboss.org/browse/JBMESSAGING-134
12140	JBMESSAGING-58	Is there a reason why Tim doesn't have cvs access? Also, there is no "remoting" module in jboss-head anymore, so this is obviously a patch against an old version?!?	1	1	https://issues.jboss.org/browse/JBMESSAGING-58
12141	JBMESSAGING-26	JEMS installer currently has a "JMS server" profile which is based on jbossmq. It currently includes jmx microkernel, logging, hsqldb, jndi, jaas, jta, and jbossmq services. So my understanding is that we need to add "JBoss Messaging" profile to the installer. Since user can only select one profile, JBoss Messaging and current jbossmq-based "JMS Server" will be mutually exclusive. Is there a need to have a standalone installer for JBoss Messaging or is it ok to just add a "Standalone JBoss Messaging" profile to the JEMS installer? Which version of JBoss Messaging?	1	0	https://issues.jboss.org/browse/JBMESSAGING-26
12142	JBMESSAGING-26	Needs to be further discussed. Do we really want to support a standalone configuration?	0	0	https://issues.jboss.org/browse/JBMESSAGING-26
12143	JBMESSAGING-25	Initial code drop for pure MC based messaging. Contributed by Arvinder Singh [15/May/06 05:05 PM] Originally attached to JBMESSAGING-26. Comments following attachment: Tim Fox [20/Jun/06 01:47 PM]: I'm not sure what I am looking at here. I don't know much about the MC but it is my understanding that all we need to do is provide POJO versions of our current MBeans. Am I missing something? Arvinder Singh [21/Jun/06 03:39 AM]: Ok it might become clearer with the next set of changes i will upload. Basically I am adding code that belongs in other projects like - NamingService - TransactionService - RemotingService - etc in addition to the MBeans in messaging which I have yet to do. The issue is not providing POJO versions of current messaging MBeans, but other POJO versions from the other sub projects (like above) in order to get this up and running. Let me upload the next set and then we can go over what has been done.	1	1	https://issues.jboss.org/browse/JBMESSAGING-25

12145	JBMETA-366	I am not sure it is OK you remove the classname logic and replace it by interface but the javaee_7.xsd seems to accept both, did I miss something?	1	1	https://issues.jboss.org/browse/JBMETA-366
12146	JBMETA-258	John, i see that jboss-metadata-common 2.0.0-alpha-14 has been released. Is this JIRA still relevant?	1	1	https://issues.jboss.org/browse/JBMETA-258
12147	JBMETA-223	What do we need to do to fix in AS trunk?	1	0	https://issues.jboss.org/browse/JBMETA-223
12148	JBMETA-171	Meaningful difference is between the ordering of proxy-factory-config: Branch_4_2 <!ELEMENT proxy-factory-config (client-interceptors? , activation-config? , endpoint-interceptors? , web-class-loader? , JMSProviderAdapterJNDI? , ServerSessionPoolFactoryJNDI? , metadata (the same in both jboss_4_2.dtd and jboss_5_0.dtd) <!ELEMENT proxy-factory-config (client-interceptors?, endpoint-interceptors? , web-class-loader? , activation-config?, JMSProviderAdapterJNDI? , ServerSessionPoolFactoryJNDI? , I don't know for which reason. In Java proxy-factory-config is represented as org.w3c.dom.Element (so, no ordering is defined in Java binding). I am thinking of changing it back to the ordering as in Branch_4_2. Other changes are added comments for the child elements of cluster-config.	0	0	https://issues.jboss.org/browse/JBMETA-171
12149	JBMETA-146	Alexey: In implementing this change I fixed up the jboss.xsd schema and put in some test coverage, but I'm not sure what else you need (more tests, DTD?) to validate all is working as expected. Additionally I have not added any tests for XML-based input. Could you fill in the gaps?	1	1	https://issues.jboss.org/browse/JBMETA-146
12150	JBMETA-60	If I remember correctly the javadoc was generated at the very last "mvn release:perform" step. If it doesn't produce the javadocs now, then we are fine and you can close the issue. Thanks Paul.	0	0	https://issues.jboss.org/browse/JBMETA-60
12151	JBMETA-50	Does this also include AbstractEJBEverythingTest protected MessageDrivenBeanMetaData assertFullMDB(String ejbName, IEnterpriseBeansMetaData<?, ?, ?, ?> enterpriseBeansMetaData, Mode mode) { throw new NotImplementedException(); } What I am currently missing out is ejb local refs defined on message-driven beans... Does this JIRA take care of it or should I create a new one?	1	1	https://issues.jboss.org/browse/JBMETA-50
12152	JBMETA-33	I don't see any dependencies specified in the parent pom. I guess, it should be the version range. Can you do it?	0	0	https://issues.jboss.org/browse/JBMETA-33
12153	JBMDR-60	Did this happen yet?	1	1	https://issues.jboss.org/browse/JBMDR-60
12154	JBMDR-60	I upgraded to 2.2.16.GA. btw: how "big" of a change is your change? e.g. can it be ported to 2.0.x branch w/o breaking any api?	1	1	https://issues.jboss.org/browse/JBMDR-60
12155	JBMDR-60	I avoided breaking any api as recommended on the design forums. It shouldn't hurt if this change gets merged back as part of another change. However, I think there is more work left to do to get full benefit from this ScopeKey change. I don't think the ScopeKey change is that big. There are still places where I put an OptimizedKey (return value from ScopeKey.getOptimizedKey()) as the Map search key but we later perform a Map search with a plain ScopeKey instead of an OptimizedKey. This causes ScopeKey.equals to be invoked with an OptimizedScopeKey object (or maybe the other way around). This is slower than if we used OptimizedScopeKey.equals with an OptimizedScopeKey object. My plan is to find all of the places that cause the mixed OptimizedScopeKey + ScopeKey based searchs to occur during AS boot and attempt fixing them to pass an OptimizedScopeKey. I got blocked on this effort before when I couldn't figure out how to fix this jira on my own. When we start doing parallel deployment, the performance impact of this ScopeKey change will be even more dramatic (since we avoid the need to synchronize on the Map). Do you need a new jira for moving MDR + MC Kernel to AS trunk?	0	0	https://issues.jboss.org/browse/JBMDR-60
12156	JBMICROCONT-329	Where do you see this usage? The only place I was able to find it was in mc\kernel\pom-jdk14.xml, which I think we don't keep it up to date.	0	0	https://issues.jboss.org/browse/JBMICROCONT-329
12157	JBMICROCONT-261	Alexey, Can you please validate the schema at https://svn.jboss.org/repos/jbossas/projects/microcontainer/trunk/aop-mc-int/src/resources/main/schema/aop-beans_1_0.xsd? The included schema lives at https://svn.jboss.org/repos/jbossas/projects/microcontainer/trunk/kernel/src/resources/main/schema/jboss-beans-common_2_0.xsd	1	1	https://issues.jboss.org/browse/JBMICROCONT-261

12158	JBMICROCONT-259	Alexey, Can you please validate the schema at https://svn.jboss.org/repos/jbossas/projects/microcontainer/trunk/kernel/src/resources/main/schema/temp-bean-deployer_2_0.xsd? If valid, please assign this issue back to me so I can update the main bean-deployer_2_0.xsd before closing this issue. Thanks	1	1	https://issues.jboss.org/browse/JBMICROCONT-259
12159	JBMICROCONT-178	Hi Scott, how are we looking on this task? The work is done and there is just more testing I believe. http://www.jboss.com/index.html?module=bb&op=viewtopic&t=112436&postdays=0&postorder=asc&start=0	0	0	https://issues.jboss.org/browse/JBMICROCONT-178
12160	JBMICROCONT-107	Hi Adrian Will it mkes sense to keep this one open? And leave this to the deployers only?	1	0	https://issues.jboss.org/browse/JBMICROCONT-107
12161	JBMICROCONT-93	Hi Paul Could you confirm that this issue can be closed? Cheers	0	0	https://issues.jboss.org/browse/JBMICROCONT-93
12162	JBMICROCONT-55	Adrian, Is there anything I can do to help you get your content certfied on Labs? Any instructions missing or unclear? Let me know. I'm here to help. Cheers, Damon	1	1	https://issues.jboss.org/browse/JBMICROCONT-55
12163	JBMICROCONT-41	Try it again now and see what you think?	0	0	https://issues.jboss.org/browse/JBMICROCONT-41
12164	JBMICROCONT-40	can use generics in xsd ? <parameter <?> > Some value </parameter> * policy - method or constructor is overridden * resolve rule - is the best match using the type and then its supertypes <parameter <T>="java.lang.Integer"> Some value< /parameter> * policy - isn't overridden must be clear setting * throw an error when it is ambigous	1	1	https://issues.jboss.org/browse/JBMICROCONT-40
12165	JBMICROCONT-25	Should we proceed even further with cleaning - even more into direction of JoinPointFactory api?	0	0	https://issues.jboss.org/browse/JBMICROCONT-25
12166	JBMICROCONT-5	I'm adding a comment here, because the forums are down.. Lets say we have: a.bean |-b.bean |-c.jar And just 3 deployers, registered in that priority order: (C)lassLoadingDeployer -> (B)eanDeployer -> (J)ARDeployer. After the deployment structure is analyzed (by the bean & jar deployers) we have the corresponding DeploymentContext/subcontexts in place with each one having recorded its own url as a classpath. How 2nd stage deployment processing would work in this case, wrt depth and priority (.jar comes before .bean, according to suffix rules) C(c.jar) C(b.bean) C(a.bean) B(c.jar) B(b.bean) B(a.bean) J(c.jar) J(b.bean) J(a.bean) Or C(c.jar) B(c.jar) J(c.jar) C(b.bean) B(b.bean) J(b.bean) C(a.bean) B(a.bean) J(a.bean) Also, in the 1st case, should the MainDeployer control the traversal, or simply pass the base context to each deployer, and he traverses at will? Finally, what would the ClassLoadingDeployer do? Judging from the 3.x/4.x mechanism it seems to be creating a UCL for the base node, then adding the classpath of all subnodes to this UCL. (but processing here is parent first). Should I just go to the top most deployment, create a plain URLClassLoader, add all classpaths, and point to it from subcontexts?	1	1	https://issues.jboss.org/browse/JBMICROCONT-5
12167	JBMICROCONT-4	I've been experimenting with wrapping apache-vfs as a plug-in to jboss-vdf (virtual deployment framework?) As a starting point I made some packages under: org.jboss.vdf.spi org.jboss.vdf.plugins.vfs and I'm trying to re-write a deployment scanner over this, slowly adding the features required. It still needs a lot of work and testing but the result seems interesting, in that we could have a single scanner potentially scanning different filesystem types over the VFS plug-in by simply supplying different URIs, e.g.: file:/c:/jboss/deploy webdav:http://remote.server/deploy smb: ... (samba filesystem) (you could also have a different VDF plug-in, or plug-ins to the VFS plugin...) Then, I'd probably try to re-write one of the deployers using this, assuming this is the only way to come up with a working VDF api. I'm wondering about the proper location for checking in this. Currently I need to have it in HEAD/system to drive the development using a working server. I just chose package names that will presumably move easily to the HEAD/kernel module at a later time. Is there a better location for this code?	0	0	https://issues.jboss.org/browse/JBMICROCONT-4
12168	JBMICROCONT-4	Can we put discussions in the forums and reserve JIRA for conclusions?	1	1	https://issues.jboss.org/browse/JBMICROCONT-4
12169	JBMCTOOL-2	What / where is JBossCommon Graph?	0	0	https://issues.jboss.org/browse/JBMCTOOL-2
12170	MODULES-256	[~dmlloyd] Does that mean people will still be able to use the old way of declaring modules - using the slot attribute, if they stay at the 1.5 version of XSD namespace? Will that work at runtime?	1	0	https://issues.jboss.org/browse/MODULES-256
12171	MODULES-236	[~dmlloyd] Can we use org.jboss.dmr.ValueExpressionResolver instead of the JDK code? If so, can we add a dependency from jboss-modules to org.jboss.dmr, or do you want to keep it pure, and just copy in the ValueExpressionResolver minus the code we don't need?	1	1	https://issues.jboss.org/browse/MODULES-236
12172	MODULES-236	BTW, if you want to see the implementation I have so far, please check here: https://github.com/jasinner/jboss-modules/tree/MODULES-236 I'm not really sure how to make this classes private? Can you provide some details on that?	1	1	https://issues.jboss.org/browse/MODULES-236
12173	MODULES-236	Thanks for your feedback. I made your suggested modifications in my fork. The 'jboss.home.dir' System Property is being passed to the java executable after the -jar argument, so it's not being set a System Property till later. If we change the standalone.sh as follows, using '${jboss.home.dir} in modules.xml works as expected. {code} diff --git a/bin/standalone.sh b/bin/standalone.sh index 5b9e0f8..6cee397 100755 --- a/bin/standalone.sh +++ b/bin/standalone.sh @@ -301,12 +301,12 @@ while true; do eval \"$JAVA\" -D\"[Standalone]\" $JAVA_OPTS \ \"-Dorg.jboss.boot.log.file="$JBOSS_LOG_DIR"/server.log\" \ \"-Dlogging.configuration=file:"$JBOSS_CONFIG_DIR"/logging.properties\" \ + -Djboss.home.dir=\""$JBOSS_HOME"\" \ + -Djboss.server.base.dir=\""$JBOSS_BASE_DIR"\" \ -jar \""$JBOSS_HOME"/jboss-modules.jar\" \ $MODULE_OPTS \ -mp \""${JBOSS_MODULEPATH}"\" \ org.jboss.as.standalone \ - -Djboss.home.dir=\""$JBOSS_HOME"\" \ - -Djboss.server.base.dir=\""$JBOSS_BASE_DIR"\" \ "$SERVER_OPTS" JBOSS_STATUS=$? else {code} Do you think we should raise this as an enhancement? If so, which project should we raise it under? If you've got a better idea of how to handle this, please let me know.	1	1	https://issues.jboss.org/browse/MODULES-236
12174	MODULES-226	Is this a system property that Maven also uses, or is this a property that we added just for JBoss Modules?	0	0	https://issues.jboss.org/browse/MODULES-226
12175	MODULES-219	What's the use case? Is it just to support these tools (i.e. is there a problem with using them that is being solved)? I wonder what the effect of URL-decoding these class paths might have...	0	0	https://issues.jboss.org/browse/MODULES-219
12176	MODULES-204	In my latest test I got the CNFE from `ModuleClassLoader.findClass#205`, and I already have a subclass of `ModuleClassLoader` but that method is final. Just adding a `protected String classNotFoundExceptionMessage(String className, Module currentModule){}` would be enough to override the message. As for the part where I traverse dependencies in order to find that class file (without having to load it, a simple resource-type lookup would work), well I guess I'd have to ask you how to do it ;)	0	0	https://issues.jboss.org/browse/MODULES-204
12177	MODULES-199	At this point the WildFly / EAP codebase constitutes the 'module repository' for said distro. Thus there is no need for a 'central' repo. What I see is an common layer between several projects (/ products), but without any means to govern that common layer. Why is that common layer not being created?	1	1	https://issues.jboss.org/browse/MODULES-199

#	Requirement	Questions	Answered	Successfully Answered	URL
12178	MODULES-199	[~wolfc] That common layer isn't being created because lack of tooling support in the jboss module ecosystem (or lack of documentation/guidelines if that tooling does exists). But that wouldn't solve the real issues: - Suppose EAP 6 doesn't use jfreechart. Suppose BRMS 6 does and it creates a module for jfreechart. Now suppose EAP 7 does use jfreechart => it will create a duplicate (but different) jfreechart module. What is BRMS 7 to do? Why is EAP reinventing the wheel and wasting manpower? - Suppose EAP 6 doesn't use freemarker. Suppose BRMS 6 does and DataGrid 6 does use it. BRMS 6 and DataGrid 6 are siblings, neither includes the other. So both of them create their own jfreechart module (and they choose a different module identifier). When a customer than wants to combine BRMS 6 and DataGrid 6 in the same module repository, that's a problem. We can theoretically solve this problems by "more communication" between the groups, but in practice there is already too much communication/spam. Instead of optional communication, we need enforced module id uniqueness and support to avoid duplicate work, which boils down to a "module search" function.	1	0	https://issues.jboss.org/browse/MODULES-199
12179	MODULES-198	How does this relate to http://www.smartics.eu/smartics-jboss-modules-maven-plugin/index.html ?	1	0	https://issues.jboss.org/browse/MODULES-198
12180	MODULES-158	Currently clients cannot specify file patterns directly. This could easily be added, what do you think? i.e. null == '*'	1	1	https://issues.jboss.org/browse/MODULES-158
12181	MODULES-153	So here's my idea. Would it be possible if I give jboss-modules in a non-running server 1) a modules directory, and 2) a module string (such as org.jboss.as.web), it would return me a basic model or simply a list of best-guess jars? We would be able to provide overrides, for example "com.sun.jsf-impl, slot 1.2" I could read / parse the standalone.xml myself to get the list of top-level modules we want. I forsee something like this, but this is just an example. {code} String[] modulesINeed = new String[]{"org.jboss.as.web" }; File[] allJars = jbossModulesGetJarRecurse(modulesINeed); OR String[] modulesINeed = new String[]{"org.jboss.as.web" }; String[] overrideId = new String[] {"com.sun.jsf-impl" }; String[] overrideSlot = new String[] { "1.2" }; File[] allJars = jbossModulesGetJarRecurse(modulesINeed, overrideId, overrideSlot); {code} We could also have overrideSlot be some type of osgi version string with ranges, if possible. As a return value, we would expect a list of all dependencies (recursive included) in a best-guess manner. Instead of File[], we could return some object array which would include the File, and information on its restrictions, whether the jar itself is public / private, or if public / private is enhanced to be per-package instead of per jar, some list of restricted packages. In this way, it would be up to tools to get the list of top module names, either by asking the user directly in our UI or parsing the standalone.xml ourselves. jboss-modules job is a lot easier, a lot less busy, AS itself requires no additions to api, and tools still maintains some responsibility at the top level. And best of all, a started server is not required. Does this sound feasible? What work would need to be done? Is it possible I can help? ;) (This message edited for formatting and additional info)	0	0	https://issues.jboss.org/browse/MODULES-153
12182	MODULES-125	One requirement which comes from Jigsaw and elsewhere is that we assume that we are loading modules from a filesystem that we do not have write access to. This would certainly violate that. Also note that the distribution of SOs and JARs is the responsibility of the *packager*; thus run time isn't really the appropriate time to do this anyway. There is no reason why these files can't be installed expanded at installation time that I can see. Is there a use case for per-platform JARs outside of native libraries?	1	1	https://issues.jboss.org/browse/MODULES-125
12183	MODULES-125	Would a fallback to *tmp* filesystem in case of readonly location satisfy that need? (Think that jigsaw recommends that, although they say this yet has to be defined) Run time expansion allows to have the same content with expended one depending on the configuration settings or run time environment. Currently it is possible to have only one instance of the modules/org/jboss/as/web/main/lib/os/arch/resource.name Using dynamic expansion that would be possible by choosing the correct version inside configuration eg. moudules/.../main contains resource-1.jar resource-2.jar resource-n.jar and inside module.xml user can choose the correct version <resource-root name="resource-2.jar"/> I'm not aware how else modules can allow to package multiple versions for the same platform which can be chosen by configuration settings.	1	1	https://issues.jboss.org/browse/MODULES-125
12184	MODULES-125	What is the use case for packaging multiple versions of a library for the same platform which can be chosen by configuration?	1	1	https://issues.jboss.org/browse/MODULES-125
12185	MODULES-125	So it looks like you're aiming for two new requirements for Modules: * Support the ability to distribute native libraries inside of a JAR (presumably for the purposes of simplified installation) * Allow the user to pick between many versions of a native library (or maybe any resource root) with a configuration change at run time Is this correct?	1	1	https://issues.jboss.org/browse/MODULES-125
12186	MODULES-125	The question remains - why do we need this functionality? As far as ease of installation, this is a problem better solved at a different layer. And why do we need the ability to change versions of *only* native libraries at run-time?	1	1	https://issues.jboss.org/browse/MODULES-125
12187	MODULES-117	I'm going to assume here that what we are really talking about is the AS launch and not JBoss Modules in some generic sense. In a generic sense, I understand why wanting jboss-modules Main to support a -P param which it the processes the way the AS does sounds nice. Let users aggregate all their sys props in one file instead of requiring a bunch of -D stuff. But what's the practical effect in the AS case? Here's what we pass on the command line now when we start a standalone server, excluding JVM stuff like -Xmx etc: 1) JDK properties -Djava.net.preferIPv4Stack=true -Djava.awt.headless=true 2) JBoss Modules properties -Djboss.modules.system.pkgs=$JBOSS_MODULES_SYSTEM_PKGS -mp \"${JBOSS_MODULEPATH} -jaxpmodule "javax.xml.jaxp-provider" 3) AS properties -Dorg.jboss.resolver.warning=true -Djboss.server.default.config=standalone.xml // standalone -Djboss.domain.default.config=domain.xml // domain -Djboss.host.default.config=host.xml // domain -Dorg.jboss.server.log.file=$JBOSS_LOG_DIR/server.log -Dlogging.configuration=file:$JBOSS_CONFIG_DIR/logging.properties -Djboss.home.dir=$JBOSS_HOME -Djboss.server.base.dir=\"$JBOSS_BASE_DIR The -jaxpmodule "javax.xml.jaxp-provider" one we want to get rid of anyway. Looking at the others, in general JDK ones are unsafe to put in a .properties file and set via -P handling, because that -P handling might execute after the JDK has already read the property. A number of other ones don't have static values. They have values that are set by the script. So there is no way to just put them in a static .properties file. So, a .properties file could include -Dorg.jboss.resolver.warning=true -Djboss.server.default.config=standalone.xml -Djboss.domain.default.config=domain.xml -Djboss.host.default.config=host.xml Those last 3 are really examples anyway, just illustrating how the user could configure the default config file. I don't see a lot of value in separating those out from the existing scripts into a separate file. Tools would still need to understand how to deal with the other ones.	0	0	https://issues.jboss.org/browse/MODULES-117
12188	MODULES-69	Please see the commit at: https://github.com/jbossas/jboss-modules/commit/aaf4017287598acb This provides a basic mechanism for filtering classes and resources. I'm thinking that as a next step, it would make sense to add optional parameters to dependency construction for import/export filters for classes and resources. Would this satisfy the requirements of the OSGi implementation?	1	1	https://issues.jboss.org/browse/MODULES-69
12189	MODULES-60	Do you have a specific reason for this request?	1	1	https://issues.jboss.org/browse/MODULES-60

#	Requirement	Questions	Answered	Successfully Answered	URL
12190	MODULES-22	Are there remaining issues which prevent this blanket JIRA from being closed? If so, can they be created as subtasks or dependent tasks?	1	1	https://issues.jboss.org/browse/MODULES-22
12191	MODULES-20	Ok, I see if I can switch to the manifest metadata for the OSGi/Modules dependency and service integration (XServices) tests. My first requirement would be to use a notation that clearly demarcates these headers as JBoss proprietary so they cannot get confused with existing (i.e. OSGi) and future standards. So it should be JBoss-Module-Name: instead of Module-Name Learning OSGi and its associated headers is hard enough without this possible confusion.	1	1	https://issues.jboss.org/browse/MODULES-20
12192	MODULES-20	David L: are you thinking about additions to the actual MANIFEST.MF or just a file that follows the same format with a different name? In the case of a different file I would recommend using a Properties file instead of the actual manifest file if you want to move away from XML as properties don't have the silly ~76 char line limitation and other manifest idiosyncrasies.	1	1	https://issues.jboss.org/browse/MODULES-20
12193	MODULES-13	You should be able to do this already using DependencySpec.exportExcludes/exportIncludes (yeah I know they're called export* but it's supposed to control the exports of the dependency and thus your imports). Does this not work?	0	0	https://issues.jboss.org/browse/MODULES-13
12194	MODULES-7	Looks good... I think... but can you give a URL that is based on upstream including just this change? I'm not sure how to do that though :)	1	1	https://issues.jboss.org/browse/MODULES-7
12195	MODULES-3	I created a small maven project that 1. wraps the class files from jboss-modules alongside a very small and simple module containing a main class into a jar (effectively creating a JAR-based repository), 2. registers org.jboss.modules.Main as that jar's main class in MANIFEST.MF, 3. registers my own org.jboss.modules.ClassPathModuleLoader in META-INF/services/org.jboss.modules.ModuleLoader (thus telling jboss-modules to use this as its default ModuleLoader-implementation), and 4. runs a simple integrations test that executes "java -jar my-jar-repo.jar my.module" via java.lang.ProcessBuilder and verifies that the Module identified by "my.module" is indeed loaded and started. Since this test passes I herewith proudly declare that loading modules from a single JAR basically works. There is obviously room for improvement (e.g. logging could be improved, the repository root within the jar could be made configurable via a manifest entry and so forth), yet all in all the present solution seems to be basically usable. Where do we go from here?	0	0	https://issues.jboss.org/browse/MODULES-3
12196	MODULES-2	It will be better to reboot this discussion with a question: What additional features is ModuleClassLoader missing that you need?	0	0	https://issues.jboss.org/browse/MODULES-2
12197	JBNAME-42	Exception { if (useAbsoluteName(env)) name = getAbsoluteName(name); final Object obtained = NamingManager.getObjectInstance(obj, name, this, env); if(obtained instanceof Reference) // <=== problem { final Reference ref = (Reference) obtained; throw MissingObjectFactoryException.create(ref.getFactoryClassName(), name); } return obtained; } In particular, org.jboss.ejb.Container sets org.jboss.naming.ENCThreadLocalKey as the factory for non-local references, and ENCThreadLocalKey.getObjectInstance() returns a new LinkRef(target). But LinkRef is a subclass of Reference, so getObjectInstance() throws a MissingObjectFactoryException even if the reference was found. This problem shows up in org.jboss.test.naming.test.EjbLinkUnitTestCase.testEjbNoLink(), which throws 2010-02-26 15:05:15,797 INFO [org.jboss.test.naming.ejb.TestEjbLinkBean] (WorkerThread#0[127.0.0.1:58696]) failed: javax.naming.NamingException: Could not dereference object [Root exception is java.lang.IllegalArgumentException: missing object factory class name is required] at org.jnp.interfaces.NamingContext.getObjectInstanceWrapFailure(NamingContext.java:1591) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:900) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:911) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:749) at javax.naming.InitialContext.lookup(InitialContext.java:392) at org.jboss.test.naming.ejb.TestEjbLinkBean.testEjbLinkCaller(TestEjbLinkBean.java:75) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.jboss.invocation.Invocation.performCall(Invocation.java:386) at org.jboss.ejb.StatelessSessionContainer$ContainerInterceptor.invoke(StatelessSessionContainer.java:233) at org.jboss.resource.connectionmanager.CachedConnectionInterceptor.invoke(CachedConnectionInterceptor.java:156) at org.jboss.ejb.plugins.StatelessSessionInstanceInterceptor.invoke(StatelessSessionInstanceInterceptor.java:173) at org.jboss.ejb.plugins.CallValidationInterceptor.invoke(CallValidationInterceptor.java:63) at org.jboss.ejb.plugins.AbstractTxInterceptor.invokeNext(AbstractTxInterceptor.java:121) at org.jboss.ejb.plugins.TxInterceptorCMT.runWithTransactions(TxInterceptorCMT.java:350) at org.jboss.ejb.plugins.TxInterceptorCMT.invoke(TxInterceptorCMT.java:181) at org.jboss.ejb.plugins.SecurityInterceptor.process(SecurityInterceptor.java:228) at org.jboss.ejb.plugins.SecurityInterceptor.invoke(SecurityInterceptor.java:211) at org.jboss.ejb.plugins.security.PreSecurityInterceptor.process(PreSecurityInterceptor.java:97) at org.jboss.ejb.plugins.security.PreSecurityInterceptor.invoke(PreSecurityInterceptor.java:81) at org.jboss.ejb.plugins.LogInterceptor.invoke(LogInterceptor.java:205) at org.jboss.ejb.plugins.ProxyFactoryFinderInterceptor.invoke(ProxyFactoryFinderInterceptor.java:138) at org.jboss.ejb.SessionContainer.internalInvoke(SessionContainer.java:650) at org.jboss.ejb.Container.invoke(Container.java:1072) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at	0	0	https://issues.jboss.org/browse/JBNAME-42

12199	JBNATIVE-7	Can you attach the hs_err_pidxxx.log file? Thanks.	1	1	https://issues.jboss.org/browse/JBNATIVE-7
12200	JBNATIVE-7	Greg - how did you get that "thread hanging stack"? The hs_ file is for some other bug it seems. When my VM hangs on exit - I don't get an hs_ file - it just hangs my windows cmd prompt as I describe in my comment on 22/Mar/07 07:07 PM	1	1	https://issues.jboss.org/browse/JBNATIVE-7
12201	JBNATIVE-7	There is something specific to my app that causes this hang whenever SIGHT is loaded. I just tried a simple java app to try and replicate and I can't. I added a shutdown hook that terminates the lib and it all works. Trying to see how I can replicate this outside of the agent in a small app. One thing I noticed was that when the agent hangs, its log4j log file gets truncated to file size of 0. I don't know why but I'm sure its a symptom of the problem. Whenver the JVM tries to exit and it hangs, the log file seems to go down to a file size of 0.	0	0	https://issues.jboss.org/browse/JBNATIVE-7
12202	JBNADM-3091	[10:07] <jdob> my first thoughts are that its related to what I emailed you yesterday [10:08] <jdob> in that email, where I say I create the resource to commit it, I dont check to see if there was a previously created on with that key that was marked as deleted [10:08] <jdob> so chances are, its creating a new resource with the same key as one that already exists thats marked as deleted [10:09] <jdob> and thats boogering up our discovery [10:09] <mspritz> and in some queries that deleted record gets returned instead. [10:09] <jdob> if the query doesnt use the ID and just things like key, ya, that'd make sense [10:09] <mspritz> yep. [10:09] <jdob> ResourceFactoryManagerBean:209 [10:09] <mspritz> So why are you done yet? [10:09] <mspritz> not [10:09] <jdob> that method needs to check if a resource with that key exists and is marked as deleted [10:10] <mspritz> :D [10:10] <jdob> and just flip the status to committed	1	1	https://issues.jboss.org/browse/JBNADM-3091
12203	JBNADM-3057	Of course, I agree with Jason. The ui rendering would be nice. However, is it really the UI's responsibility? It might be the only solution, but I don't think the UI should have that kind of logic.	1	0	https://issues.jboss.org/browse/JBNADM-3057
12204	JBNADM-2995	New plan: (1:03:38 PM) ccrouc1: ok so we're going to breakout the license generator into its own module, that doesnt end up in the server distro (1:03:48 PM) ccrouc1: and in the src which goes to RHQ change the salt? (1:04:04 PM) ccrouc1: is that the plan? (1:04:22 PM) ips-lunch: sounds good to me (1:04:23 PM) ghinkle: yea	1	1	https://issues.jboss.org/browse/JBNADM-2995
12205	JBNADM-2958	well, we don't have (won't have?) a full listing of our contributors in a copyright.txt file.	0	0	https://issues.jboss.org/browse/JBNADM-2958
12206	JBNADM-2953	Do we want to have a dbupgrade script here as well? Or would we just start with a blank database again?	0	0	https://issues.jboss.org/browse/JBNADM-2953
12207	JBNADM-2953	We just discussed on the call that we are not doing a dbupgrade step for this, but reset the schema version to 2.0 with no dbupgrade. Question remains: when do we start using dbupgrade scripts again?	0	0	https://issues.jboss.org/browse/JBNADM-2953
12208	JBNADM-2577	C Icon is for Configuration. Do you mean the Operations Icon?	0	0	https://issues.jboss.org/browse/JBNADM-2577
12209	JBNADM-2526	rev7689 JBNADM-2529 - can click "VIEW HISTORY" from inventory tab of some resource group to view list of group plugin configuration updates; JBNADM-2527 - can click on row item from JBNADM-2529 to view group update request details, each of those rows are clickable to the individual PluginConfigurationUpdate; JBNADM-2531 - can click "EDIT" from inventory tab of some resource group, which will initiate an async request to update the all resource plugin configurations in the group;	0	0	https://issues.jboss.org/browse/JBNADM-2526
12210	JBNADM-2368	Jess, it sounded from the status call you were looking at this. Can you close it out?	1	1	https://issues.jboss.org/browse/JBNADM-2368
12211	JBNADM-2040	(9:36:05 AM) ghinkle: its already done in the plugin... just need to add the check in the UI configure page (9:37:56 AM) ccrouch: so is this going to be a configurable minimum (9:38:05 AM) ghinkle: no (9:38:09 AM) ghinkle: hard code it to 30 seconds	1	1	https://issues.jboss.org/browse/JBNADM-2040
12212	JBNADM-1196	Isn't that a 1.4 only issue and could be just closed? In 2.0 there is no more status bar.	0	0	https://issues.jboss.org/browse/JBNADM-1196

#	Requirement	Questions	Answered	Successfully Answered	URL
12213	JBNADM-1143	here's what we need: 1) agent sends up inventory report - we should not schedule any metric collections yet since we don't even have the resources imported yet 2) the server gets the inventory report and populates them as NEW in ON_RESOURCE and puts them in the auto-discovery portlet 3) user clicks "import" to commit resources into inventory 4) we send a message to the agent to say, "this set of resources have been imported, you need to go grab their measurement schedules" - this can be sent asynchronously 5) the agent gets the message and then turns around and sends a request to the server asking for the schedules 6) the agent gets the schedules and populates the ResourceContainer with the new schedules 7) the MeasurementManager needs to be told to now collect the data based on the new schedules Questions: a) how do we identify the resources to the agent? can we send down the resource keys only? the parent resource key and the resource key? b) can we combine 4) and 5)? can the server just send down the schedules after the import button is pressed? it can do this asynchronously	1	1	https://issues.jboss.org/browse/JBNADM-1143
12214	JBNADM-1140	Ran out of time in beta1 so moving to beta2. The last comment on this is from April 10th. Is this still an issue?	1	0	https://issues.jboss.org/browse/JBNADM-1140
12215	JBNADM-1138	One more thing... we're going to need customizable error messages for constraint validations... (why does this field need to be between 1024 and 65556?)	1	1	https://issues.jboss.org/browse/JBNADM-1138
12216	JBNADM-1054	Can this be integrated as part of the regular tasks done during a release or development cycle. For instance, at the end of alpha 1, let's make sure we audit all the code that was submitted for alpha 1.	0	0	https://issues.jboss.org/browse/JBNADM-1054
12217	JBNADM-1049	Some first round things this needs to address: Making sure we've secured all the requests (no changing the resource id parameter) Checking for system end-arounds (agents that don't need to register or the like, unnecessary open ports) Check for trust issues with the agent (e.g do we let the agent update inventory for items not local to the agent? Call damaging server apis) File system dangers documented with plugins and artifacts (e.g. can i request "../../../../etc/something") Config, operations, service starting	1	1	https://issues.jboss.org/browse/JBNADM-1049
12218	JBNADM-1049	Facet Interfaces MeasurementFacet ---------- - Need to change "public MeasurementDataNumeric(MeasurementDataPK md, Double value)" to protected - Need to change "public MeasurementDataTrait(MeasurementDataPK, String value)" to protected ArtifactFacet ---------- - ArtifactType instance can be manipulated when passed into artifact discovery - Possible solution: clone before sending in - Possible solution: only send in pieces of artifact type data - ArtifactType instance can be manipulated when passed through ArtifactDetails (applies to revision discovery, create, etc.) - Possible solution: clone when creating ArtifactDetails (ArtifactUtils.artifactToDetails) - ArtifactRevisionDetails only contains artifact key, not the type. This isn't a problem since the type is known by the ArtifactManager when the revision discovery is made. However, the type is not taken into account when associating the revision with the artifact. This means that if two artifacts + on the same resource + of different types, have the same artifact key, we'll have a problem. The model is set up to maintain that relationship, it's just the revision processing that needs to be fixed. - InputStream passed into create/update. Can this potentially be an issue if the plugin sits on the stream and doesn't use it? DeleteResourceFacet ---------- CreateChildResourceFacet ---------- - ResourceType instance can be manipulated when passed into create method - ArtifactType instance can be manipulated when passed into create method - Should resource and/or plugin configuration in CreateResourceReport return copies when gotten from the report? - createResource shouldn't return the CreateResourceReport, it should be populated in place ConfigurationFacet ---------- OperationFacet ----------	1	1	https://issues.jboss.org/browse/JBNADM-1049
12219	JBNADM-1049	Scenario #5 ========== "Install a fresh agent somewhere else and start it fresh (no token). It registers with the server, but this one also wants to have agent name "A". Server accepts the message even though no token exists in message because it is a register request. Server sees agent "A" already exists and returns to the agent the token for A which is "A2-TOKEN". Now let's say this new "A" agent executed "register regenerate" - the server will give it a new token "ANOTHER-TOKEN". * this is bad, as it means any agent can accidentally (or maliciously) steal the token of another agent and can behave as that agent. If this new agent used "register regenerate", then the original agent's token is now invalid because a new token was assigned to it. If that happens, the original "A" can't talk to the server because its token (A2-TOKEN)is now invalid (the new valid token for A is now "ANOTHER-TOKEN). Is the answer to this to NOT allow an agent to "regenerate" a token? Perhaps a token is created once and from thereafter used for that agent - that token is forever linked to that agent?" ---------- This is currently an issue. The test I ran was very similar to the one described, but I'll quickly summarize it. - Start agent A. It is given a token, for example "123". - Start agent B. Agent B is given the same name as agent A. The server recognized the name and sent agent B the token "123". - Entered the command "register" on agent B. Server reflects that it will not regenerate the token. - Entered the command "register regenerate" on agent B. Server indicates it will regenerate the token. Agent B's new token is "456". Problem: Agent A's token is still "123". The server starts to reject commands from agent A. - Entered the command "register" on agent A. It received token "456" from the server. It was back in sync. This does exhibit the problem as described in the original scenario. An agent can disable another agent and act in its place by simply specifying the same agent name.	1	1	https://issues.jboss.org/browse/JBNADM-1049
12220	JBNADM-1049	Scenario #6 ========== This second agent wants to change its name to "B" and asks to re-register again (say, via register prompt command). Server sees token "ANOTHER-TOKEN" and accepts it as valid. Server sees that no agent is named "B" and creates it and returns to the agent a new token "B-TOKEN". * this is bad - because now there is a ghost agent named "A" in the database. In fact it is worse than that because agent A still has all its resource relationships. So all the resources that once belonged to A in the DB still belong to A. Changing the business key of an agent (its name) is bad. Is the answer to this that, as part of the registration request, the agent should send its current token. If the agent already has a token, the server can check this token in the database and see what agent name is associated with it. If it is different than the name of the agent asking for the registration, the server should abort the registration and tell the agent "you are already registered under the name "A" - you cannot change your name to something else" ---------- This test passed. - Start agent A with name "OriginalName". It successfully handshakes with the server. - Stop agent A. - Change the name of agent A in the Java prefs to "NewName". - Start agent A. - Enter command "register". The following output was seen in the agent console: The agent will now attempt to register itself with the server. Regenerating token=[false] Waiting 30 seconds... The server has rejected the agent registration request. Cause: [org.jboss.on.serverclient.core.AgentRegistrationException:The agent asking for registration is already registered with the name [MyAgent], it cannot change its name to [MyNewAgent]] The agent was not able to register itself. Is the server up? The same output was received for a call to "register regenerate". I checked the database as well. There was no entry that referenced "NewName". The contents of the "OriginalName" row remained in tact and unchanged (i.e. its token was not effected).	1	1	https://issues.jboss.org/browse/JBNADM-1049

Clear the collection - javier 2/24/03 this.FeedLightValues.clear(); } Do we have documented somewhere the changes Hyperic made to Xdoclet? If not, could they be documented here too.	1	0	https://issues.jboss.org/browse/JBNMAN-405
12227	JBNMAN-405	Thanks Javier. When did you guys take the snapshot of xdoclet's CVS, i.e. most of the contents of \xdoclet\xdoclet and \xdoclet\xjavadoc?	0	0	https://issues.jboss.org/browse/JBNMAN-405
12228	JBNMAN-403	Yes, we want those binaries. Please give us those in the next code drop	1	1	https://issues.jboss.org/browse/JBNMAN-403
12229	JBNMAN-385	The following comment we received from a customer is relevant to how accurate our platform availability measurements are... "Last night we installed maintenance on our windows servers. This involved rebooting the machines. Each reboot takes the server out for a few minutes. After the servers came back up I looked at the availability measurements in the manager. There were a couple of grey dots where the server was down for the reboot and the system uptime measurement dropped to a couple of minutes after the reboot. However, the availability measurement still stated 100% available. It looks like you are not sensing the change in availability properly." Since the metric collection interval for availability of a Windows platform is 1minute we should, in theory, be able to take account of any downtimes longer than that. IIRC the gray dots indicate we couldn't collect availability data for that time period. So it appears we don't immediately update the availability metric just because we don't get a complete set of responses. If that's the case, what's our real level of tolerance when it comes to platform availability: "If the platform is down for longer than X minutes then it will begin to affect the availability %"? What is X in our case? Also presumably when it comes to platform availability, we don't differentiate between a platform being down and the agent on that platform not running?	1	1	https://issues.jboss.org/browse/JBNMAN-385
12230	JBNMAN-385	The unavailability does not get reported immediately. There's is a lag time to account for slow networks, server load, etc. The way the platform unavailability gets reported is as follows: An "unavailable filler" runs every 5 minutes on the server. It looks for availability metrics that have not had received any values at the designated intervals and fills the holes with 0% availability. However, it does so only for "holes" that have occurred longer than 3 intervals ago. So, this means that a platform availability metric that is scheduled for 1 minute intervals may get the unavailable metric reported between 3-5 minutes.	1	1	https://issues.jboss.org/browse/JBNMAN-385
12231	JBNMAN-384	I'm having a tough time reproducing this. In my setup, I'm running everything on the same machine: JON Server JON Agent JBoss 4.0.2 stock When I stop and start the server, the results come back as expected. (Using the 2.2.21 codebase). Does your environment differ in any way? One interesting piece of info would be the agent log with DEBUG logging turned on. If you are seeing abnormal delay, a threaddump may help to. For reference this is what I see in my agent log: 2006-01-25 19:57:20,846 DEBUG [SSLConnectionListener] Handling SSL connection from /127.0.0.1 2006-01-25 19:57:20,967 DEBUG [CommandListener] Dispatching request for 'control:controlPluginCommand' 2006-01-25 19:57:20,968 DEBUG [CommandListener] Method 'net.hyperic.hq.agent.AgentCommand@1d85a26' returned an object result 2006-01-25 19:57:20,981 DEBUG [ActionThread] Adding job 10002 to 2-10051 queue 2006-01-25 19:57:20,981 DEBUG [ActionThread] Running job 10002 2006-01-25 19:57:26,019 INFO [JBossServerControlPlugin] doCommand args=[/home/rmorgan/hyperic/hyperic_hq.jboss/build/agent/background.sh, /home/rmorgan/apps/jboss-4.0.2/bin/run.sh, -c, default] 2006-01-25 19:57:26,030 DEBUG [Execute] Waiting process 2006-01-25 19:57:26,049 DEBUG [Execute] End waiting, stop threads 2006-01-25 19:57:26,049 DEBUG [Execute] Watchdog stopped 2006-01-25 19:57:26,213 DEBUG [Execute] Stream handler stopped 2006-01-25 19:57:26,213 DEBUG [Execute] Done exit=0 /usr/bin/env 2006-01-25 19:57:26,220 DEBUG [Execute] Waiting process 2006-01-25 19:57:26,233 DEBUG [Execute] End waiting, stop threads 2006-01-25 19:57:26,233 DEBUG [Execute] Watchdog stopped 2006-01-25 19:57:28,236 DEBUG [Execute] Stream handler stopped 2006-01-25 19:57:28,236 DEBUG [Execute] Done exit=0 /home/rmorgan/hyperic/hyperic_hq.jboss/build/agent/background.sh /home/rmorgan/apps/jboss-4.0.2/bin/run.sh -c default 2006-01-25 19:57:28,236 INFO [JBossServerControlPlugin] doCommand result = 0 2006-01-25 19:57:38,902 DEBUG [ActionThread] Removed job 10002 from the queue	1	1	https://issues.jboss.org/browse/JBNMAN-384
12232	JBNMAN-379	In one of our EM installations, a monitored Apache instance has the snmpCommunity property set to "public." Is this different from the read-only setting you mention? Also, snmpUser, snmpPassword, and snmpAuthType are defined for SNMP v3. Woud it be possible to take advantage of this to further secure the Apache SNMP agent?	1	1	https://issues.jboss.org/browse/JBNMAN-379
12233	JBNMAN-379	There are discrepancies in the SNMP configuration properties listed on EM's Server Configuration page (Administration->Server Configuration) and its resource configuration page for the Apache server. For example, the set of properties that apply to SNMP v3 are different on each page. Shouldn't these be identical? Also, the Server Configuration edit page tailors the list of properties to the selected SNMP version. Would it make sense to have the Apache server configuration edit page behave that way as well?	1	1	https://issues.jboss.org/browse/JBNMAN-379

#	Requirement	Questions	Answered	Successfully Answered	URL
12234	JBNMAN-375	I've uploaded the server.log and a debug agent.log from the machine running IIS. [BTW one crazy thing with the server.log which we haven't been able to figure out is that he lines 2378 thru 3350 are duplicated from lines 3352 to the end of the file. Except the duplicate lines also have the date and the fully qualified class name ????] From looking at the server.log it appears that we initially had problems with many, but not all, of the IIS virtual hosts, e.g. 15:50:19,128 INFO [RuntimeReportProcessor] Merging Service into inventory: name: aisdev1 IIS 6.x A7900 PayrollExpense 15:50:19,128 INFO [RuntimeReportProcessor] Creating new service: aisdev1 IIS 6.x A7900 PayrollExpense 15:50:19,194 WARN [DefaultMetricsEnablerUtil] Error turning on default metrics, configuration ({protocol=http, iishost=D5805 webDeposit, timeout=10, server.log_track.enable=false, installpath=C:\WINDOWS\system32, port=10001, server.log_track.level=Error, service_name=W3SVC, platform.ip=10.160.1.53, server.log_track.pattern=, platform.name=aisdev1.ais.ad.msu.edu, platform.fqdn=aisdev1.ais.ad.msu.edu, hostname=localhost, path=/, platform.type=Win32}) couldn't be validated: Invalid configuration: Resource reports that it is unavailable 15:50:19,202 WARN [DefaultMetricsEnablerEJBImpl] Caught InvalidConfigException in DefaultMetricEnabler MDB: Invalid configuration: Resource reports that it is unavailable 15:50:19,389 INFO [RuntimeReportProcessor] Completed merging service: aisdev1 IIS 6.x A7900 PayrollExpense into inventory. But then by part way through the log these errors have cleared up. In the error messages the path is always to '/', which must be wrong since the ports and hostnames are always the same too. Does this mean the customer has to manually set the path on every virtual host service?	1	1	https://issues.jboss.org/browse/JBNMAN-375
12235	JBNMAN-375	Re-opening to confirm that the fix will work when the value of the HTTP host header parameter is not reachacle from the machine running the agent. Just to clarify there are currently two properties related to hosts in the IIS vhost configurations properties: "hostname" and "iishost" In my comment I talked about adding a third parameter, may "HTTP Host header". Is that the direction you were going in?	1	1	https://issues.jboss.org/browse/JBNMAN-375
12236	JBNMAN-367	Apparently the customer just resolved this himself! Customers... don't you just love 'em.	0	0	https://issues.jboss.org/browse/JBNMAN-367
12237	JBNMAN-362	I have the agent working w/ IBM 1.4 JRE. Changes so far: - changed agent certificate generation code to use keytool rather using deprecated com.sun classes - changed com.sun.ssl.* usage to javax.ssl.* (agent and lather) - removed lib/jdk1.3-compat libs I just need to do some more testing and cleanup. Also, on our side of the problem, works fine w/ WebSphere 5.1, not sure yet what we'll do about WebSphere 4.0 Since this does not impact you guys, I expect the changes to be in the next code drop, I'll mark this resolved once they are in.	0	0	https://issues.jboss.org/browse/JBNMAN-362
12238	JBNMAN-362	The IBM 1.4.2 jre only works on AIX 5.1, 5.2 and 5.3. It does not work on 4.3.x. This is an issue for us, can you guys checks which version(s) your AIX customers are using?	0	0	https://issues.jboss.org/browse/JBNMAN-362
12239	JBNMAN-361	I refactored all the NestedException stuff... it was almost too easy - I'm thinking something just isn't going to work. I'm going to assign this to Charles Lee - Charles - can you tell me what some of the issues were that caused you to pause wrt this issue? What are some of the things you can see going wrong? It compiles fine for me now, but I haven't run with it yet - i'm scared :) What things would you expect to break?	1	1	https://issues.jboss.org/browse/JBNMAN-361
12240	JBNMAN-361	Charles - can you comment and then reassign back to me? Thanks...	1	1	https://issues.jboss.org/browse/JBNMAN-361
12241	JBNMAN-327	ryan - I ran into this last month, unsure if any of the code drops we got since then fixed the problem. But, also, this issue was more to discuss the testing framework. Can you give us a quick blurb on how you guys use it and how we should use it?	1	1	https://issues.jboss.org/browse/JBNMAN-327
12242	JBNMAN-307	Can you provide a test case where there are more errors not shown? The exceptions are displayed with getStack() method.	1	1	https://issues.jboss.org/browse/JBNMAN-307
12243	JBNMAN-304	Jav, can you fill Maz in on how this stuff works?	1	1	https://issues.jboss.org/browse/JBNMAN-304
12244	JBNMAN-303	Thanks! Have you ever had reason to purge an agent from the database? That was something I think I needed yesterday. What if I did the following: It was determined that my DB was hosed because someone tried to import things from an agent (running on the server box) but there was no network connectivity. 1) Have the customer delete the platform from the inventory (so it deletes all servers/services for that platform too) 2) Purge the agent's row from the eam_agent table 3) Run those DB comments you specified in the earlier comment to clear the agent's AI queue If I do those three things, can it be assumed the customer is running from a "clean slate" with respect to that agent. So, if restart the agent (after getting it some network connectivity :-) it will ask for and get a new token and start anew with being the AI queue from things it discovered. ??	1	1	https://issues.jboss.org/browse/JBNMAN-303
12245	JBNMAN-294	I was trying to be too clever :-). As Rich pointed out, removing the '/b' from the script causes everything to work great. So '/b' means exit the batch file but not the cmd.exe process. Does this issue highlight a problem with long running scripts not getting timed out and marked as failed by JBN EM?	1	1	https://issues.jboss.org/browse/JBNMAN-294
12246	JBNMAN-294	exit /b 0 worked fine for me, i got green lights and the metrics, here my agent log: 2005-09-28 09:56:10,989 DEBUG [MeasurementCommandsServer] Getting real time measurement: Script:system.script:Arg=D%3A\dougm\test\test.bat:Availability 2005-09-28 09:56:11,020 DEBUG [Execute] Waiting process 2005-09-28 09:56:11,083 DEBUG [Execute] End waiting, stop threads 2005-09-28 09:56:11,083 DEBUG [Execute] Watchdog stopped 2005-09-28 09:56:11,083 DEBUG [PumpStreamHandler] Joining it 2005-09-28 09:56:11,083 DEBUG [PumpStreamHandler] Joined 2005-09-28 09:56:11,083 DEBUG [PumpStreamHandler] Joining it 2005-09-28 09:56:11,083 DEBUG [PumpStreamHandler] Joined 2005-09-28 09:56:11,083 DEBUG [Execute] Stream handler stopped 2005-09-28 09:56:11,083 DEBUG [Execute] Done exit=0 D:\dougm\test\test.bat 2005-09-28 09:56:11,083 DEBUG [MeasurementCommandsServer] Result was: 1 i added 'sleep 600' to test.bat and it was killed properly after the 30 second timeout: 2005-09-28 10:15:00,098 DEBUG [Execute] Waiting process 2005-09-28 10:15:23,145 DEBUG [RtScheduleThread] Sleeping 60000 to next batch 2005-09-28 10:15:24,583 DEBUG [RunnableTrackThread] Running loggers 2005-09-28 10:15:30,114 DEBUG [Execute] End waiting, stop threads 2005-09-28 10:15:30,114 DEBUG [Execute] Watchdog stopped 2005-09-28 10:15:30,114 DEBUG [PumpStreamHandler] Joining it 2005-09-28 10:15:30,114 DEBUG [PumpStreamHandler] Joining it 2005-09-28 10:15:31,114 DEBUG [PumpStreamHandler] Joined 2005-09-28 10:15:31,114 DEBUG [Execute] Stream handler stopped 2005-09-28 10:15:31,114 DEBUG [Execute] Done exit=1 D:\dougm\test\test.bat 2005-09-28 10:15:31,114 WARN [ScheduleThread] Collection of metric: 'Script:system.script:Arg=D%3A\dougm\test\test.bat:ExecTime' took: 31016ms I guess there should be an ERROR logged if the script is killed due to timeout, is that what you're looking for?	1	1	https://issues.jboss.org/browse/JBNMAN-294

#	Requirement	Questions	Answered	Successfully Answered	URL
12247	JBNMAN-292	We have observed all the suggested alternatives proposed here and elsewhere prior to reporting this issue, and still are encountering deadlocks with the exact same codebase which did not have these issues in 3.2.3. If you review the entity layer of the application's various subsystems, you'll find that every single getter method is marked read-only. This seems consistent with the dtd's for 4.0.2. We are using a rather old version of xdoclet, and are generating 3.2 descriptors in our ear. I was worried that this might perhaps have changed in 4.x but I can not see any differences in this specific area. Mazz, can you please email Alexey the jboss.xml dtd which is produced as part of the HQ build process? It is found in hq/build/dd/jboss.xml etc. thanks.	1	1	https://issues.jboss.org/browse/JBNMAN-292
12248	JBNMAN-292	Richard Friedman asked: "Alexey, I noticed our EJB's are being generated with xdoclet and jboss 3.0 Does it matter? Should this be upgraded for jboss 4.0?" Alexy responded: "It's not problem for me. The DTD version number affects only allowed elements in the DDs. If you don't use features added in 3.2, it's irrelevant. 4.x and 3.2.x are equal in CMP. You could just update to 3.2."	1	1	https://issues.jboss.org/browse/JBNMAN-292
12249	JBNMAN-292	The dd's are for 3.2 (despite the fact that we're telling XD to use 3.0). This is part of the customization we made to xdoclet in our sources. I figured this would be his response (which is good). Has he had a chance to review the descriptors? read-only methods are *definitely* locking in a way they werent in 3.2.3 Thanks. -j	1	1	https://issues.jboss.org/browse/JBNMAN-292
12250	JBNMAN-292	Javier -- Scott Stark is asking if we can come up with a replicatable test case. Is it possible for you to come up with some test that shows the getId() vs. getPrimaryKey().getId() issue?	0	0	https://issues.jboss.org/browse/JBNMAN-292
12251	JBNMAN-276	http://ant.apache.org/faq.html#unknownelement.taskcontainer ---- Why do my custom task containers see Unknown Elements in Ant 1.6 - they worked in Ant 1.5? The objects added in TaskContainer.addTask(Task task) have changed from Tasks to UnknownElements. There was a number of valid reasons for this change. But the backward compatibility problems were not noticed until after Ant 1.6.0 was released. Your container class will need to be modified to check if the Task is an UnknownElement and call perform on it to convert it to a Task and to execute it. (see apache.tools.ant.taskdefs.Sequential) If you want to do more processing on the task, you need to use the techniques in apache.tools.ant.taskdefs.Antlib#execute() This does make use of one 1.6 method call (UE#getRealObject()), you need to use UE#getTask() instead - this will return null for non tasks (types like fileset id=x). So.. iterate over the tasks, if they are UEs, convert them to tasks, using UE#maybeConfigure and UE#getTask() for (Iterator i = tasks.iterator(); i.hasNext();) { Task t = (Task) i.next(); if (t instanceof UnknownElement) { ((UnknownElement) t).maybeConfigure(); t = ((UnknownElement) t).getTask(); if (t == null) { continue; } } // .... original Custom code } This approach should work for ant1.5 and ant1.6.	1	1	https://issues.jboss.org/browse/JBNMAN-276

12253	JBNMAN-263	Have to be honest, not sure I know what a TCP trap is, do you have a reference to something I can look at? Do they mean specifying SNMP traps on different ports on a different TCP port? Here is one definition, but it is relative to some product called Trap Console. From the following site: http://www.cscare.com/TrapConsole/download/readme.txt - TcpTrapPort The TCP trap port on which Trap Console listens for SNMP traps. By default SNMP traps are being sent to the SNMP trap port 162. However, especially for testing purposes or for security reasons, it is possible to configure Trap Console to listen for SNMP traps on a different TCP port. Default: TcpTrapPort=162	0	0	https://issues.jboss.org/browse/JBNMAN-263
12254	JBNMAN-247	resourcetype view -platform 10001 shows me the new metric. I guess this is another one in which I'm probably confused about what this command does. What did I create and why doesn't it show up in my platform 10001 (which is a Linux platform)??	1	1	https://issues.jboss.org/browse/JBNMAN-247
12255	JBNMAN-247	The 'metric create' command allows you to create custom metrics that are derived from other metrics that HQ is collecting. Once you created your derived measurement, did you enable it? It may need to be enabled to show up in the metric list. You'll either need to go through the UI and do: MONITOR -> [configure] to enable your metric Or you can try the 'metric configure -platform 10001' to reschedule all the metrics. Give that a quick try and let me know if it works.	1	1	https://issues.jboss.org/browse/JBNMAN-247

#	Requirement	Questions	Answered	Successfully Answered	URL
12256	JBNMAN-246	The 'metric configure' command within the shell does not deal specifically with metrics. It refers to the metric configuration for a particular resource, or entity. When you configure a resource's metric configuration it will apply the configuration and enable all metrics for that resource using the default metric collection intervals. Note that it does not obey the default on/off flag, as this was added recently. When you see the message: [Configuring metric: 2:10005] 2:10005 configured It means that it has configured resource 2:10005 metric configuration. Each resource has it's configuration broken down into 'product' (which is referred to as shared in the UI), 'metric', and 'control'. The shell breaks these down, so to configure a resource you must do: resource configure -server 10001 metric configure -server 10001 control configure -server 10001 In the UI all these options are in a single form and are committed at once. This is the 'Edit Inventory Properties' page. I've committed a fix to the typo you mention, and that will be in 2.1.13.	1	1	https://issues.jboss.org/browse/JBNMAN-246
12257	JBNMAN-230	I think I found it. ResourceManagerEJBImpl.createResource and removeResource. All roads lead to Rome - where these two seem to be Rome. All code that adds/removes resources from inventory eventually make their way here. Javier - can you confirm if that's true?	1	1	https://issues.jboss.org/browse/JBNMAN-230
12258	JBNMAN-230	Hmm... maybe this isn't the best solution. Under what conditions do these appdef events get sent or not sent? First, I put a breakpoint in the first line in DefaultMetricsEnableEJBImpl.onMessage - just to confirm that I am getting events. I confirmed that events are flowing (I can see periodic heartbeat events coming in). I then moved the breakpoint in DefaultMetricsEnablerEJBImpl.onMessage to the line: AppdefEvent ae = (AppdefEvent) obj At this point in the code, its been determined the event coming in is an Appdef event telling us something has been created, deleted, updated or whatever. However, during runtime, that breakpoint is not getting reached! I am not seeing any AppdefEvents flowing. I manually created a new Platform resource (and deleted it) but neither time did I see an AppdefEvent. I do this by going to "Browse Resourses" and do the "Add Platform". I created my own MDB and the same behavior is exhibited (I see heartbeats but no appdef events). Any ideas? Should this be considered a bug or is something amiss in the understanding of the AppdefEvents?	1	1	https://issues.jboss.org/browse/JBNMAN-230
12259	JBNMAN-225	Added support for 5.5 connectors. Also added JK support for 5.0 and 5.5 and removed some unused classes. Will all be in the 2.1.13 drop.	1	1	https://issues.jboss.org/browse/JBNMAN-225
12260	JBNMAN-224	If any user defined externally in LDAP is allowed to register with JBNEM without admin intervention, would it not create a potential security breach? It could be dangerous if the user can assign himself a role, but if that's not permitted, a malicious user could create some confusion about the JBNEM user base. I understand that the feature is provided with ease of administration in mind, but just wanted to learn what the potential risks would be for the customer.	1	1	https://issues.jboss.org/browse/JBNMAN-224
12261	JBNMAN-216	ryan - can you comment on what those yellow lights are trying to tell me? :)	0	0	https://issues.jboss.org/browse/JBNMAN-216
12262	JBNMAN-215	The following doesn't resolve this issue but it does answer the question 'how do I force a new auto-discovery of "services" (a runtime scan)'. The answer I believe is to go to the Inventory tab for the Server which contains the Services which you wish to auto-discovery and hit the 'EDIT...' button at the bottom of the 'Configuration Properties' section. On the new page which is rendered, make sure the Autodiscovery of embedded services box is checked and then hit the OK button, this should discovery any outstanding Services which are contained by this Server.	1	1	https://issues.jboss.org/browse/JBNMAN-215
12263	JBNMAN-214	Another HQ question. See http://help.hyperic.net/installation.html#GETTING-STARTED-INSTALL-GUIDE-PLANNING It talks about a medium infrastructure environment has up to 25 platforms. Anything more is considered large. If an infrastructure environment has 26 or more platforms, is it recommended: a) to use HA mode (i.e. have more than one server) and/or b) use Oracle? What's typically the recommendation for environments with hundred (or hundreds) or management platforms? How do you know if you should use HA, and if so how many HA servers to configure?	1	1	https://issues.jboss.org/browse/JBNMAN-214
12264	JBNMAN-214	Ryan - I just got off the phone with a customer of ours and they asked about this type of functionality - so can I bump this up to get these questions answered? Did you guys test all of this HA capability now that the server is running JBoss 4.0.2?	1	1	https://issues.jboss.org/browse/JBNMAN-214
12265	JBNMAN-213	If I go to the control tab now, I don't see the control actions (as expected) but instead I see this message: "Control Actions are not enabled. To enable control, set Configuration Properties in the Inventory section." This implies I could reenable the controls if I wanted to. I don't think this message is right. I click on the ConfigProps link there and it takes me to the configuration page but I don't think that's right. I think that message should not be there. Ryan - am I missing something?	0	0	https://issues.jboss.org/browse/JBNMAN-213
12266	JBNMAN-211	Could you please attach a patch for this build.xml change. Thanks.	0	0	https://issues.jboss.org/browse/JBNMAN-211
12267	JBNMAN-209	The SNMP module build process uses the prefix "covalent" in the names of the SNMP DSO's. These names are user-visible as they need to be specified in the LoadModule directives the user is required to add in httpd.conf: LoadModule covalent_snmpcommon_module modules/snmpcommon.so LoadModule covalent_snmpagt_module modules/snmpmonagt.so Can we drop the prefix in the Unix build scripts and also from the pre-built Windows modules?	1	1	https://issues.jboss.org/browse/JBNMAN-209
12268	JBNMAN-162	I see this in apache plugin jar's hq-plugin.xml: <scan registry="SOFTWARE\Apache Group\Apache\2.*"> <include name="ServerRoot"/> </scan> I do have a ServerRoot (whose value is my install dir of apache). Note also my Software node is capitalized (not all caps which is what is in this hq-plugin.xml). Its also under HKEY_CURRENT_USER. Because this registry attribute doesn't specify "HKEY_LOCAL_MACHINE" or "HKEY_CURRENT_USER", I don't know what the default is - where does it know where to look under? I guess it defaults to HKEY_LOCAL_MACHINE; if so, would explain why it can't find it using a registry scan.	1	1	https://issues.jboss.org/browse/JBNMAN-162
12269	JBNMAN-162	Understood about the SNMP thing... I wasn't looking to monitor it... just wanted to see if it could be discovered. Does the apache plugin do process scanning or only registry scanning? The fact that it always looked in HKEY_LOCAL_MACHINE is why it can't find it - it is not there. Its in the CURRENT_USER. I wonder if I installed it using the "only for this user" option, as opposed to "all users" (you know how some software can be installed so only the start menu group appears in the installing user's start menu or in all users' start menus? I wonder if this is related to that kind of thing). I can't remember how I installed it - I do know I installed it using the normal Apache installer.	1	1	https://issues.jboss.org/browse/JBNMAN-162
12270	JBNMAN-162	Yeah, it looks like if you don't install with the "All users", you don't get that HKEY_LOCAL_MACHINE reg. key. Can you add the ptql queries for apache plugin on windows? That would solve the problem should a customer install Apache using that "current user" install mode, as opposed to "all users".	1	1	https://issues.jboss.org/browse/JBNMAN-162
12271	JBNMAN-162	Doug - as per your comment in this issue - can you add the ptql queries for apache plugin on windows? If this is simple to do and can be put in the last code drop prior to our R1 release, great. If you can't, then just move this issue to "fix version" of R2.	1	1	https://issues.jboss.org/browse/JBNMAN-162

#	Requirement	Questions	Answered	Successfully Answered	URL
12272	JBNMAN-161	charles, are you on windows or unix? if windows, did you install tomcat using the .exe installer or use the .zip install bundle? the process query for tomcat should match all platforms. can i see the output from the command below w/ tomcat running: java -jar build/agent/pdk/lib/sigar.jar pargs State.Name.eq=java	1	1	https://issues.jboss.org/browse/JBNMAN-161
12273	JBNMAN-161	>charles, are you on windows or unix? Windows XP > if windows, did you install tomcat using the .exe installer or use the .zip install bundle? The version I was trying to autodetect was installed via zip, so no reg entries obviously. [FWIW I tried doing control actions on this instance, and they failed I think because there wasn't an associated Windows Service, so I guess install via .zip really isn't a supported configuration?] >the process query for tomcat should match all platforms. can i see the output from the command below w/ tomcat running: java -jar build/agent/pdk/lib/sigar.jar pargs State.Name.eq=java Well this command definitely finds it, number 2 in the list... C:\usr\projects\current\jboss_network\private_cvs\jboss-network\jbn-admin\hyperic_hq>java -jar build/agent/pdk/lib/sigar.jar pargs State.Name.eq=java pid=460 exe=C:\usr\apps\j2sdk1.4.2_06\bin\java.exe cwd=C:\usr\projects\current\jboss_network\hyperic\runtimes\jboss-3.2-bin\bin 0=>C:\usr\apps\j2sdk1.4.2_06\bin\java<= 1=>-Dprogram.name=run.bat<= 2=>-Xms128m<= 3=>-Xmx512m<= 4=>-classpath<= 5=>;C:\usr\apps\j2sdk1.4.2_06\lib\tools.jar;C:\usr\projects\current\jboss_network\hyperic\runtimes\jboss-3.2-bin\bin\\run.jar<= 6=>org.jboss.Main<= 7=>-c<= 8=>default<= ----------------------- pid=4172 exe=C:\usr\apps\j2sdk1.4.2_06\bin\java.exe cwd=C:\usr\apps\java\tomcat-5.30\bin 0=>C:\usr\apps\j2sdk1.4.2_06\bin\java<= 1=>-Djava.endorsed.dirs=C:\usr\apps\java\tomcat-5.30\common\endorsed<= 2=>-classpath<= 3=>C:\usr\apps\j2sdk1.4.2_06\lib\tools.jar;C:\usr\apps\java\tomcat-5.30\bin\bootstrap.jar<= 4=>-Dcatalina.base=C:\usr\apps\java\tomcat-5.30<= 5=>-Dcatalina.home=C:\usr\apps\java\tomcat-5.30<= 6=>-Djava.io.tmpdir=C:\usr\apps\java\tomcat-5.30\temp<= 7=>org.apache.catalina.startup.Bootstrap<= 8=>start<= ----------------------- pid=3056 exe=C:\usr\apps\j2sdk1.4.2_06\bin\java.exe cwd=C:\usr\projects\current\jboss_network\private_cvs\jboss-network\jbn-admin\hyperic_hq 0=>java<= 1=>-jar<= 2=>build/agent/pdk/lib/sigar.jar<= 3=>pargs<= 4=>State.Name.eq=java<= ----------------------- C:\usr\projects\current\jboss_network\private_cvs\jboss-network\jbn-admin\hyperic_hq>	1	1	https://issues.jboss.org/browse/JBNMAN-161
12274	JBNMAN-161	The output is below. It definitely finds the instance I was interested in (tomcat-5.30). Maybe the issue is that I didn't try to restart the agent to trigger the discovery? Does this query get run when you hit the auto-discovery scan from the web interface? C:\usr\projects\current\jboss_network\private_cvs\jboss-network\jbn-admin\hyperic_hq>java -jar build/agent/pdk/lib/hq-product.jar -m discover -p servlet -Ddiscover-services=fa lse 2 servers detected =-= Server: JBOSS-32F1AADFE Tomcat 5.0 [C:\usr\apps\java\tomcat-5.30] config... product..{jmxUrl=http://localhost:8080} metric...{} control..{startupScript=C:\usr\apps\java\tomcat-5.30\bin\catalina.sh} =-= Server: JBOSS-32F1AADFE Tomcat 5.0 [C:\Program Files\Apache Software Foundation\Tomcat 5.0.30-beta] config... product..null metric...null control..null C:\usr\projects\current\jboss_network\private_cvs\jboss-network\jbn-admin\hyperic_hq>Here is the output	0	0	https://issues.jboss.org/browse/JBNMAN-161
12275	JBNMAN-156	is this part of the code drop? What is the level of effort for this on windows?	0	0	https://issues.jboss.org/browse/JBNMAN-156
12276	JBNMAN-139	Just realized that we have the agent launcher source code. I see this in cam-agent.h: #define AGENT_CLASSPATH \ "-Djava.class.path=" \ "lib\\AgentClient.jar;" \ "lib\\AgentServer.jar;" \ "lib\\lather.jar;" \ "lib\\jdk1.3-compat\\jce1_2_2.jar;" \ "lib\\jdk1.3-compat\\sunjce_provider.jar;" \ "lib\\jdk1.3-compat\\jsse.jar;" \ "lib\\jdk1.3-compat\\xerces.jar;" which is I think what I saw in the classloader when I was debugging. I saw AgentServer and AgentClient jars as well as those jdk1.3 jars. So, the question is - is there anywhere that we can put our new agent jars that would allow them to be picked up without having to recompile the agent launcher C executable? I looks like (from the source) that the answer is pdk\lib. In cam-agent.cpp, there is a method called getClassPath that not only uses those AGENT_CLASSPATH .jars, but it also appends all jars it finds in pdk\lib. Is that how Hyperic expects it to work? If I have a jar that one of my Commands Server jars needs, should I just put it in pdk\lib?? BTW: I see where it sets that agent.mode system property in cam-engine.cpp: static char *jvm_options[] = { ... "-Dagent.mode=thread", //default is process ... };	0	0	https://issues.jboss.org/browse/JBNMAN-139
12277	JBNMAN-138	Ryan - I have added the icon and 2 images in. The license file is going to take a bit. can we proceed without it, we will update it in our cvs when completed. does it get bundled in any of the binaries which just bundle? Is it used in the unix / shell installers?	1	1	https://issues.jboss.org/browse/JBNMAN-138
12278	JBNMAN-136	I'll remove this from our code base - Javier, you mentioned it wasn't used anymore. Can you confirm? Just reassign this issue to me if you know that is true and I'll take care of it. Thanks.	1	1	https://issues.jboss.org/browse/JBNMAN-136
12279	JBNMAN-134	Are these settings that should then be added to the "ADMINISTRATION" tab for the management console?	0	0	https://issues.jboss.org/browse/JBNMAN-134
12280	JBNMAN-128	The mode parameter is required for a DispatchAction derived class to figure out what action method to call. Obviously, we haven't done a "multipart/form-data" in our application yet, so I'm not sure how it all works. Would it be possible to forward to /platform/Inventory.do with the mode parameter in the request URL? i.e. /platform/Inventory.do?mode=view	1	1	https://issues.jboss.org/browse/JBNMAN-128
12281	JBNMAN-128	I'm not sure why it's not picking up the mode parameter, as it's passed in directly in the query (as defined in forward directive), and not as one of the form parameters. Is it possible to forward NewAction "success" to a JSP that can compose the /platform/Inventory.do?mode=view&eid=1:xxxxx and redirect to it?	1	1	https://issues.jboss.org/browse/JBNMAN-128
12282	JBNMAN-128	Could you please expand on the options above... 1) I don't understand how to remove the action chaining? When using Struts validation the "input" attribute in the action mapping must point to either a jsp page or a tile, since we've seen that having it point to an action which checks the request e.g. "/resource/platform/Inventory.do?mode=new", does not work. How do you setup the portal and portlets correctly from a jsp or tile? 2) I was just using the new platform action as an example. I can't see a way to upload file within the HQ portal framework, while also utilizing Struts validation.	1	1	https://issues.jboss.org/browse/JBNMAN-128
12283	JBNMAN-125	Just starting to look at the JBoss plugin enhancements. Running 4.0.2 with the TrailBlazer app, I see 1 DataSourceBinding instance: MBean: org.jboss.resource.adapter.jdbc.remote.WrapperDataSourceService Name: jboss.jca:name=DefaultDS,service=DataSourceBinding 0. Attribute: JndiName = DefaultDS 1. Attribute: UseJavaContext = true 2. Attribute: JMXInvokerName = jboss:service=invoker,type=jrmp 3. Attribute: StateString = Started 4. Attribute: State = 3 5. Attribute: ConnectionManager = jboss.jca:name=DefaultDS,service=LocalTxCM 6. Attribute: BindName = java:DefaultDS 7. Attribute: Name = WrapperDataSourceService Operation: start Operation: jbossInternalLifecycle Operation: destroy Operation: invoke Operation: create Operation: stop Is this the correct MBean? We can easily provide an availability metric and control actions for start/stop for this service.	1	1	https://issues.jboss.org/browse/JBNMAN-125
12284	JBNMAN-120	Actually, we had changed it to "Notify JBN Users". Would you rather have them be "Notify Users"?	1	1	https://issues.jboss.org/browse/JBNMAN-120

#	Requirement	Questions	Answered	Successfully Answered	URL
12285	JBNMAN-119	I'm particularly interested in step3) and how it relates to our intended development of portions of the JBN. Let me provide a brief recap of the architecture we are intending to use for reading and updating the configuration attributes of resources. Then it would be great if you could describe how "custom attributes" fit in with that. Here is the suggested process for viewing configuration attributes of a resource: 1) The user clicks on the Inventory tab for a particular resource e.g. DataSource, JMS Server. 2) The HQ portal will call the APL (JBN invention) passing in the AppDefEntityID. 3) The APL layer will ask the TFS (JBN invention) to go and retrieve the configuration file associated with the resource. 4) The APL will then process the configuration to pull out the relevant attributes for the resource and return them to the HQ portal 5) The HQ portal will then display the attributes in a new section of the Inventory tab for that resource. Updating an attribute would follow a generally similar flow. So how will "custom attributes" play with this approach? Are "custom attributes" complementary or replacements for the above?	1	1	https://issues.jboss.org/browse/JBNMAN-119
12286	JBNMAN-117	Hoe does the metric bar work in terms of understanding the number of plugins to load? Is it dynamic enough, so when things get removed added it will work. -Rich. _____ From: Ryan Morgan (JIRA) [mailto:jira-events@jboss.com] Sent: Tuesday, June 07, 2005 2:14 PM To: Richard Friedman Subject: [JBoss JIRA] Work logged: (JBNMAN-117) NotReadyValve still has Hyperic HQ Issue (View Online <http://jira.jboss.com/jira/browse/JBNMAN-117>) <http://jira.jboss.com/jira/images/bluepixel.gif> Key: JBNMAN-117 <http://jira.jboss.com/jira/browse/JBNMAN-117> Type: Task <http://jira.jboss.com/jira/browse/JBNMAN-117> Task Status: Resolved<http://jira.jboss.com/jira/images/icons/status_resolved.gif> Resolved Priority: Major<http://jira.jboss.com/jira/images/icons/priority_major.gif> Major Resolution: Done Assignee: Ryan Morgan <http://jira.jboss.com/jira/secure/ViewProfile.jspa?name=rpm> Reporter: John Mazzitelli <http://jira.jboss.com/jira/secure/ViewProfile.jspa?name=mazz%40jboss.com> Time Spent: 10 minutes Operations <http://jira.jboss.com/jira/images/bluepixel.gif> <http://jira.jboss.com/jira/images/icons/bullet_creme.gif> View all <http://jira.jboss.com/jira/browse/JBNMAN-117?page=all> <http://jira.jboss.com/jira/images/icons/bullet_creme.gif> View comments <http://jira.jboss.com/jira/browse/JBNMAN-117?page=comments> <http://jira.jboss.com/jira/images/icons/bullet_creme.gif> View change history <http://jira.jboss.com/jira/browse/JBNMAN-117?page=history> NotReadyValve still has Hyperic HQ <http://jira.jboss.com/jira/browse/JBNMAN-117> Updated: 07/Jun/05 02:12 PM Created: 07/Jun/05 03:01 AM The following comment has been added to this issue: Author: Ryan Morgan <http://jira.jboss.com/jira/secure/ViewProfile.jspa?name=rpm> Date: 07/Jun/05 02:12 PM Time Logged: 10 minutes Comment: Switched the startup valve to report JBN rather than HQ. Changed the plugin deployer to report 'Deploying JBN Plugin xxx'. Also fixed the progress bar to be more accurate. The old code assumed we were deploying all of Hyperic's plugins, not just the ones JBoss has access to. Project: JBoss Network - Management <http://jira.jboss.com/jira/browse/JBNMAN> Components: Olives Description Not sure if this was already brought up or if there's a JIRA on this already. If so, sorry for the dup. Anyway, NotReadyValve.java still has "Hyperic HQ" in there. Need to "reskin" that. Do a search-n-replace on that string - its there in a few places. I encountered this on line 219 (even though the comment says we should not get there - in our case, we can get there. JBN is adding another war to the hq.ear in which case this will be reached on error in that war). <http://jira.jboss.com/jira/images/border/spacer.gif> This message was automatically generated by Atlassian JIRA <http://www.atlassian.com/c/JIRA/10140> Enterprise Edition, Version: 3.0.2-#74 - Bug/feature request <http://jira.atlassian.com/default.jsp?clicked=footer> If you think it was sent incorrectly contact one of this server's administrators <http://jira.jboss.com/jira/secure/Administrators.jspa> .	1	0	https://issues.jboss.org/browse/JBNMAN-117
12287	JBNMAN-115	this variable holds the data parsed from hq-plugin.xml the package scope is very much intentional. there are getters and OO-type access, but not to the variable itself. just look at the references to the variable, all of those get* methods can be overridden by plugins. JBossProductPlugin.getClassPath for example uses super.getClassPath and prepends jboss.installpath to each entry. why does your plugin need to directly access this variable?	1	1	https://issues.jboss.org/browse/JBNMAN-115
12288	JBNMAN-115	I haven't run into any specific use case yet that I need this. However, I noticed that some of the subclasses to GenericPlugin (like ControlPlugin in its getActions() method) go directly to this member - not thru any getters. So, i assumed I'll eventually need access to this data member as well, since the other HQ plugin types seem to need it. But because my plugin class it outside of the package of GenericPlugin, I won't be able to. Am I missing something? Where does that data member get accessed outside of its package? I did a search and couldn't find it. I am not sure why the specific plugins (like ControlPlugin and MeasurementPlugin) access that data member directly.	1	1	https://issues.jboss.org/browse/JBNMAN-115
12289	JBNMAN-114	What's the difference between a ProductPlugin and a GenericPlugin? I see ProductPlugin extends GenericPlugin. I also see ControlPlugin extends GenericPlugin (not the subclass ProductPlugin) but JBossProductPlugin extends ProductPlugin. The thing that's confusing me is that ProductPlugin is the place where the plugin types are defined (TYPE_CONTROL, TYPE_MEASURMENT, etc.). But it seems ProductPlugin is the base class for all products' plugins (like JBoss, Apache, etc.). Would have thought those TYPE_ constants would be defined in GenericPlugin and all the plugin types would extend from GenericPlugin (like ControlPlugin, MeasurementPlugin, etc.). Maybe I'm just confused about the hierarchy.	1	1	https://issues.jboss.org/browse/JBNMAN-114
12290	JBNMAN-114	So, does this mean that ProductPlugin really does not do any of the business logic? If I want to create my own plugin type (ADMIN or whatever), I need to extend GenericPlugin and in that subclass (say, AdminPlugin) I do the work. Do I need to write any classes that extend ProductPlugin to support this new Admin plugin type? I'm trying to find out what gets done "magically" for me and what I need to manually create classes for.	1	1	https://issues.jboss.org/browse/JBNMAN-114

#	Requirement	Questions	Answered	Successfully Answered	URL
12291	JBNMAN-114	Another question - this time on the plugin config in hq-plugin.xml. In the jboss plugin's hq-server.xml, I see this: <server name="JBoss" ... <config> <option name="java.naming.provider.url" description="Naming Provider URL" default="jnp://localhost:1099"/> </config> <plugin type="measurement" class="JBossMeasurementPlugin"/> ... 1) So, just to confirm - that <plugin> tag defines what subclass of GenericPlugin this defined server supports (or, if <plugin> is a child of <service>, what the defined service supports). So, in my example, it will be something like this: <plugin type="admin" class="JBossAdminPlugin" /> where JBossAdminPlugin is a subclass of my generic AdminPlugin - JBossAdminPlugin provides specific functionality to run administration tasks for the JBoss product. I could presumably have an IISAdminPlugin and ApacheAdminPlugin too. 2) That <config> element - is this that ConfigResponse?? How does my GenericPlugin subclass (aka AdminPlugin) get access to that <config> information? 3) Assuming I add my own <plugin> elements, how do I "get" the plugin instance from my CommandsServer? Assume I have a PluginManager (AdminPluginManager) that my CommandsServer has access to (I know how to do that). I just don't get how I go from a CommandsServer/PluginManager to an instance of my GenericPlugin subclass associated with a particular resource so the CommandsServer can actually ask the GenericPlugin subclass to "do" something to manipulate that resource.	1	1	https://issues.jboss.org/browse/JBNMAN-114
12292	JBNMAN-114	Ok. Sounds good. What are the APIs I should be looking at for these things. I see there is GenericPlugin.init(PluginManager, ConfigResponse). My subclass (AdminPlugin) will have its init() method called automatically by the HQ infrastructure I assume - which means that my plugin will automatically gets its ConfigResponse (as entered by the user on the config properties GUI page) without me having to do anything. Correct? I am assuming also that the ConfigResponse is read-only from the plugin perspective - the plugin never modifies ConfigResponse, the user enters the data in the inventory GUI and the persisted configresponse data is handed to the plugin via this init() method. (???) As for getting the plugin, I am looking at PluginManager (which is the object the CommandsServer has initially). I see PluginManager.getPlugin(String name). I see parameters named "name" in some of these methods, and that's what is confusing me. Is this "name" parameter a different name that that which is returned by my PluginManager's getName() method (which is something like "control" or "measurement"). I think it is - but I don't know where this "name" parameter comes from or what it is or who defines valid values for name. So, for example, my CommandsServer needs to get the AdminPlugin. I get my AdminPluginManager: AdminPluginManager apm = ... get it ... then I get the plugin: apm.getPlugin("WHAT IS THIS NAME") Not sure what that "name" parameter is and where I get it. Thanks again - this is a very informative thread - glad its being captured in JIRA :)	1	1	https://issues.jboss.org/browse/JBNMAN-114
12293	JBNMAN-114	Question about packing the product specific plugin jars (jboss-plugin.jar, apache-plugin.jar). I see there is a <hqplugin> task that is used to build the xxx-plugin.jar (right?) The way we have our source laid out, we have: com.jboss.jbossnetwork.product which is analogous to net.hyperic.hq.product. that is to say, files in our .product package are getting placed in the hq-product.jar. Now, we will have packages like: com.jboss.jbossnetwork.product.jboss com.jboss.jbossnetwork.product.apache for our product specific plugin classes. Analogous to net.hyperic.hq.product.jboss, etc. Those classes have to go in their respective xxx-plugin.jar files. In build.xml, I see this: <hqplugin name="jboss" /> How do I ensure that our plugin classes go into that jboss-plugin.xml. Same with the other products. Is the fact that our package names are different (com.jboss, not net.hyperic) going to cause problems in say the hp-plugin.xml generation? How do we get our files picked up?	1	1	https://issues.jboss.org/browse/JBNMAN-114
12294	JBNMAN-114	I just found another class (this time on the agent side) that I think needs to be modified when we add a new plugin type. AgentDaemon.getPluginManager(String) has a series of if-then-else statements - for each type it returns a data member containing that plugin manager. Also, startPluginManagers() in that class has the same type of if-then-else statements for each type. I assume we'll need to add another else-statement for each new type of plugin we add. Is that correct?	1	1	https://issues.jboss.org/browse/JBNMAN-114
12295	JBNMAN-113	I'm a little confused. Is this a recent screenshot? If so, the images weren't unpacked correctly. The zip file includes replacements for the top tabs, in-page tabs, and "tab buttons". Please confirm.	1	1	https://issues.jboss.org/browse/JBNMAN-113
12296	JBNMAN-86	as per our conf call yesterday, assigning to HQ folks so we can capture in this JIRA issue any initial information on how events/actions are generated/executed; any classes, methods we should look at as examples or APIs we should use. Is there anyplace in the data model that we may have to modify to add our own events/actions or is the current data model generic enough for us to extend?	0	0	https://issues.jboss.org/browse/JBNMAN-86

#	Requirement	Questions	Answered	Successfully Answered	URL
12297	JBNMAN-80	I want to document what is going on. I just ran some tests and its clear in my head now, I want to document it before I go into Flower-For-Algernon mode and begin to lose it all. When you "import", you are in effect adding/commiting one set of changes to the HYPERIC branch and tagging the branch after the import as Vx_x_x_xxxx_xx_xx. Since you are committing only a single set of changes (and assuming no one else is committing files on the vendor branch - which they should absolutely not be doing) you will never get Conflicts during the import (where a "Conflict" is what you typically think of as a CVS conflict - that being two sets of changes were made to one file and those changes conflict with one another - the import will still probably say there are "conflicts" but they are conflicts as compared with files in the HEAD branch, not conflicts within the HYPERIC branch). Once the import is complete, you have a new version on that branch. Just as if you did a commit on HEAD after making changes to HEAD. It's no different. If we made no changes to the HQ code, and our HEAD mimics that of the HYPERIC branch, the import will say there were no conflicts and we are done. This will never be the case, though. Now, assume I made some changes on the HEAD branch to files that are coming over on the import. This will be the case always - we are adding/removing/modifying files in the HQ code base all the time. When this happens, the import will say "N conflicts created by this import.". N is the number of files that we changed with those coming over in the import. These "conflicts" are NOT necessarily the typical CVS conflicts that require manual hand merging (although they can be). The N conflicts may simply be merged automatically using the "update -j X -j Y" command. This is similar to the situation where two developers made two set of changes and they need to be merged - in that case, the one set of changes is checked into HEAD and the other sets of changes are sitting on your local filesystem (doing an update may automatically merge the checked in changes with your local changes if they truely don't conflict). In this vendor import situation, the two changes are actually checked in - one in HEAD and one in the vendor branch (HYPERIC) - but the situation is the same. We have two files that each have changes in them and they need to be merged. When you do an "update -j -j" on a workspace with HEAD files (or a checkout -j -j), this is actually merging in two sets of changes to your HEAD copy. The first set of changes is that which occurred between the last vendor import and this current one (i.e. what did the vendor change, from V1_0_0 to V2_0_0). The second set of changes is that which occurred between the new vendor file and our copy (i.e. what did we change, from V1_0_0 to HEAD). It could be that these changes do not actually "conflict" in the traditional sense and CVS will be able to automatically merge the two changes. It will store the file in your working space and its up to you to then commit those changes. If, however, the vendor changed a line that we also changed, then a true "C" conflict has occurred and that update -j -j will act like it normally would - it writes out a file with the <<<< and >>>> characters and you have to manually merge the changes into the working space copy. In essence, update -j X -j Y gets one set of changes (between the two branches, X and Y) and merges those with the changes it sees between the latest vendor branch Y and HEAD. Thus moving HEAD from X to Y and maintaining HEAD changes. Don't forget after doing an update -j -j (or a checkout -j -j) and the merging is complete, you need to commit your changes back into HEAD.	0	0	https://issues.jboss.org/browse/JBNMAN-80
12298	JBNMAN-76	As discussed in the conference call on Nov 15, this will likely not get done in the 1.2 Final timeframe. The issue here is the upgradeability of windows installations that use the internal PostgreSQL database. Windows installations that use external PostgreSQL, or Oracle do not suffer from this limitation. The workarounds are to have the customer install on Oracle (which will usually be the case in a large scale production env). For smaller environments that use PostgreSQL, the database can be exported and re-imported into an external db. We also have instructions to upgrading the DB in place using the no-JRE installer. I will attach those instructions, or provide a link if we have one. The eventual resolution of this issue will result in a re-writing of both the text and MSI installers. Ideally, we would like the installer to just un-roll the files. Currently things are put in place using ant tasks, which makes things unnecessarily complicated. The only obstacle is moving the DBSetup process to occur during server startup, rather than in the installer, which is not a trivial task. Since both JBoss and Hyperic are in a code-freeze, it's not prudent to make sweeping changes like this so close to release.	1	1	https://issues.jboss.org/browse/JBNMAN-76
12299	JBNMAN-73	Do you still need info on this? If so, assign it back to me and we'll take care of it.	1	0	https://issues.jboss.org/browse/JBNMAN-73
12300	JBNMAN-70	Can already be done via the 'script' plugin. Currently captures availabiltiy (did it execute), return value, execution time.	1	1	https://issues.jboss.org/browse/JBNMAN-70
12301	JBNMAN-68	I think we can use password stacking and have ProductConfigService add a "webdav roles only" login module. This will free us from modifying JDBCLoginModule but will allow us to define the roles for a user of the WebDAV system. Some text I found floating around: Password stacking allows modules to skip the actual authentication and just provide supplemental roles if an earlier module has already authenticated the user. The modules require the password-stacking option to useFirstPass for this to work. Here is an example: <application-policy name="todo"> <authentication> <login-module code="org.jboss.security.auth.spi.LdapLoginModule" flag="required"> <module-option name="password-stacking">useFirstPass</module-option> <module-option name="java.naming.factory.initial"> com.sun.jndi.ldap.LdapCtxFactory </module-option> <module-option name="java.naming.provider.url"> ldap://localhost/ </module-option> <module-option name="java.naming.security.authentication"> simple </module-option> <module-option name="principalDNPrefix"> uid= </module-option> <module-option name="principalDNSuffix"> ,ou=People,o=jbossnotebook </module-option> </login-module> <login-module code="org.jboss.security.auth.spi.DatabaseServerLoginModule" flag="required"> <module-option name="password-stacking">useFirstPass</module-option> <module-option name="dsJndiName">java:/DefaultDS</module-option> <module-option name="rolesQuery"> select role, 'Roles' from USER_ROLES where login=? </module-option> </login-module> </authentication> </application-policy> Both the LDAP login module and the database login module are marked as required, and they both have the password-stacking option set. Notice that the LDAP configuration omits the roles query information and the database server module omits the principals query. It is better to provide fallback queries even when they aren't used, but it isn't required.	0	0	https://issues.jboss.org/browse/JBNMAN-68
12302	JBNMAN-66	"Update the specified 'view' method to add the portlet ".resource.NNN.manage.list.detail". - where is this specified? There is no "view" method in either ServiceManageAction or ServerManageAction. I see things like: Portal portal = Portal.createPortal("resource.server.Control.PageTitle.Edit", ".resource.service.control.edit"); Do I need to make "resource.server" and/or "resource.service" to "resource.platform"?	1	0	https://issues.jboss.org/browse/JBNMAN-66
12303	JBNMAN-45	Charles Lee logged work on JBNMAN-45: ---------- Time Worked: 3 days Remaining Estimate: 57600 (was: 144000) Time Spent: 86400 Updated license mechanism to be able to specify the feature(s) enabled. Furthermore, metrics are not automatically enabled if the license does not have monitoring feature supported.	1	1	https://issues.jboss.org/browse/JBNMAN-45

12304	JBNMAN-22	I saw the following screenshot http://www.microsoft.com/presspass/presskits/windowsvista/images/image003.jpg from Windows Longhorn (Vista). I think it is an excellent example of the sort of start page we are looking for. What do people think? I'm going to try to put something together which is in this vein, with a few links to the more obvious areas of JBN EM. If anyone else has suggestions for links which should go on the start page please add them to this JIRA issue.	1	1	https://issues.jboss.org/browse/JBNMAN-22
12305	JBNMAN-10	rich/doug - is this issue on track for R1? If not, please push out to R2.	0	0	https://issues.jboss.org/browse/JBNMAN-10
12306	JBNMAN-9	What about just being able to do detection and list in inventory? No metrics... Not even availability, But at least it will be an asset? -Rich.	1	1	https://issues.jboss.org/browse/JBNMAN-9
12307	JBNMAN-8	Looks like some great metrics. I don't see any instances of the hibernate MBeans in the EJB3Trail app that Rich sent us. Is there a config switch or something simple I can do to enable hibernate stats with this app?	1	1	https://issues.jboss.org/browse/JBNMAN-8
12308	JBNMAN-7	The "Restructure JBoss plugin using new PDK semantics" portion of this task is complete. In order to implement the enhancement sub tasks, would be great if folks could provide some detail for each on which MBeans I should be looking for to provide metrics and control. I've commented on what I found for the DataSource service, I don't see any MBeans for AOP or Hibernate (other than their deployers), nor do I see any jgroups related MBeans. I'm running 4.0.2 with the latest TrailBlazer app. Thanks.	0	0	https://issues.jboss.org/browse/JBNMAN-7
12309	JBNCERT-13	Is the list of configuration files to capture, configurable?	1	1	https://issues.jboss.org/browse/JBNCERT-13
12310	JBOSGI-762	I am not sure to whom can I assign this. Thomas, is it correct to assign it to you?	1	1	https://issues.jboss.org/browse/JBOSGI-762
12311	JBOSGI-699	Thomas, I see you are awaiting volunteers. Depending on the nature of the beast, I may be able offer some of my (albeit limited) skills. How were you thinking of implementing this requirement? What is currently the main obstacle? My understanding was, and I may be wrong, that the Weld OSGi OSGi/CDI integration was going to be used. I have tested the weld-osgi-2.x branch on JBosgi 2 and Wildfly 8 Alpha 3, but I could not get Weld OSGi and the Weld subsystem to run side by side. I described my attempt in more detail on the Weld forum at [https://community.jboss.org/thread/231047]. What I don't understand though, is what JBoss OSGi can do to resolve this conflict. Is it merely a packaging issue, packaging Weld OSGi as modules and enabling them as a cability? Or does it involve re-implementing some of the Weld-OSGi logic in a more Wildfly-friendly way? Or did you have an entirely different approach in mind?	0	0	https://issues.jboss.org/browse/JBOSGI-699
12312	JBOSGI-699	is this issue a duplicate of this https://issues.jboss.org/browse/JBOSGI-656 ?	1	0	https://issues.jboss.org/browse/JBOSGI-699
12313	JBOSGI-697	My concern is being compatible with future versions of the OSGi enterprise JPA requirements. If AS supplies the implementation of the above services, will that be aligned with what the next release of the specification requires? I think that depends on how the stated sub-goal of OSGi enterprise R5 is reached: {quote} * Integration of established Java EE technology into OSGi {quote} I'm not against proceeding like your suggesting, but it might also be a good time to discuss with the OSGi enterprise expert group what the longer term target is for JPA & OSGi. Maybe handling unmanaged JPA access now and managed JPA access later. However, with the unmanaged JPA access being implemented by AS code, we wouldn't use the OSGi "service creation" code in the persistence provider. I'm not sure if that is an alternative that we must support eventually or not.	0	0	https://issues.jboss.org/browse/JBOSGI-697
12314	JBOSGI-697	Do we need AS7-5476 still?	0	0	https://issues.jboss.org/browse/JBOSGI-697
12315	JBOSGI-688	Why has it been removed?	1	0	https://issues.jboss.org/browse/JBOSGI-688
12316	JBOSGI-684	Can you elaborate? I don't understand the issue.	1	0	https://issues.jboss.org/browse/JBOSGI-684
12317	JBOSGI-584	It's actually not the problem I described above. When I remove the {code}<capability name="javax.servlet.api"/>{code} from the configuration it works as expected.	0	0	https://issues.jboss.org/browse/JBOSGI-584
12318	JBOSGI-572	Why is this a problem? AS7 as well as jbosgi define the versions that are actually used.	0	0	https://issues.jboss.org/browse/JBOSGI-572
12319	JBOSGI-520	Is there an aries issue you can cross reference from here?	0	0	https://issues.jboss.org/browse/JBOSGI-520
12320	JBOSGI-462	Is this true are we abanoning the jbosgi umbrella project? I thought we keep offering a stand alone pure OSGi runtime, but remove AS7 as a supported remote test target.	1	1	https://issues.jboss.org/browse/JBOSGI-462
12321	JBOSGI-417	I guess the update should involve updating the dependency on the felix framework from 3.0.1 to 3.0.4 I noticed that the version of this component seems to follow the felix version (as it's currently 3.0.2-SNAPSHOT, while depending on felix 3.0.1). Should the version of this component stay to 3.0.2-SNAPSHOT or move to 3.0.5-SNAPSHOT?	1	1	https://issues.jboss.org/browse/JBOSGI-417
12322	JBOSGI-404	This code is now on http://github.com/jbosgi/jbosgi-resolver/commits/jbosgi404 could you please review? I can also update jbosgi-felix. Is that codebase supposed to contain the plain and unmodified felix classes?	1	1	https://issues.jboss.org/browse/JBOSGI-404
12323	JBOSGI-394	What is the set of bundles that are required to be deployed in order to be able to run the remote example testsuite infrastructure?	1	1	https://issues.jboss.org/browse/JBOSGI-394
12324	JBOSGI-393	Hmmm - jboss-osgi-webapp.jar has a dependency on org.jboss.osgi.vfs. Should we expose this package as well from the framework?	1	1	https://issues.jboss.org/browse/JBOSGI-393
12325	JBOSGI-393	How far should we go with this? If we patch jboss-as-osgi we should probably also patch jboss.osgi:common/deployment/framework/jmx/resolver/spi and vfs And how about their dependencies? I would probably be best to add the patched jar files to the modules directory structure (without replacing what was there) and then update the module.xml file to point to the new file. In that case you can roll back if needed as the original jar is still there.	1	1	https://issues.jboss.org/browse/JBOSGI-393
12326	JBOSGI-393	Wouldn't it be a better idea for people to simply get a SNAPSHOT build of as7 and run the installer over that. This is already supported in the current installer.	1	1	https://issues.jboss.org/browse/JBOSGI-393
12327	JBOSGI-388	How do I get access to the bundle context in the Arquillian based tests? I have the following code: public class StartLevelArquillianTestCase { @Inject public OSGiContainer container; @Test public void testGeneratedBundle() throws Exception { Archive<?> archive = container.getTestArchive("arq194-bundle"); Bundle bundle = container.installBundle(archive); System.out.println("*** " + bundle.getBundleContext()); It turns out that bundle.getBundleContext() returns null...	1	1	https://issues.jboss.org/browse/JBOSGI-388
12328	JBOSGI-388	How can I turn the Archive into an InputStream in the test? The following doesn't work: Archive<?> testArchive = container.getTestArchive("myBundle"); ZipExporter ze = testArchive.as(ZipExporter.class); InputStream is = ze.exportZip(); (It complains that it doesn't know ZipExporter)	1	1	https://issues.jboss.org/browse/JBOSGI-388
12329	JBOSGI-343	Can we revisit this for 1.0.0.Beta9?	1	1	https://issues.jboss.org/browse/JBOSGI-343
12330	JBOSGI-336	Can we revisit this for 1.0.0.Beta9?	1	1	https://issues.jboss.org/browse/JBOSGI-336
12331	JBOSGI-335	Example tests require docs coverage in the user guide. Could you please add a little.	1	1	https://issues.jboss.org/browse/JBOSGI-335

#	Requirement	Questions	Answered	Successfully Answered	URL
12332	JBOSGI-285	What is the jar suppose to use to fix this? I tried to use versions 0.7.1, 0.7.2 and 0.8.0 but I keep getting the same warning message and JSPs still don't work. They appear as HTML pages.	1	1	https://issues.jboss.org/browse/JBOSGI-285
12333	JBOSGI-279	We need logging update then as well. Does it need to be OSGi-zed?	1	1	https://issues.jboss.org/browse/JBOSGI-279
12334	JBOSGI-268	Thomas, could you comment on http://community.jboss.org/thread/146657#523294 Do you think webservices APIs should be fixed there?	0	0	https://issues.jboss.org/browse/JBOSGI-268
12335	JBOSGI-260	Would it be sufficient for a workaround to wrap EclipseLink in a JBoss-Module to enable JPA in the OSGI-Container (since EclipseLink is already OSGified)?	0	0	https://issues.jboss.org/browse/JBOSGI-260
12336	JBOSGI-260	If HHH-7527 is about adding OSGi support to Hibernate ORM and AS7-5405 is about supporting the OSGi Enterprise JPA specification. Which work is this jira for? Can OSGi Enterprise JPA use EE JPA (container) support or do we need a new subsystem for OSGi JPA? Does OSGi require a dynamic implementation of PersistenceProviderResolver (that could change Hibernate/EclipseLink/OpenJPA/other providers on the fly)? I thought that was required but I don't see it in the OSGi Enterprise Release 5 pdf that I'm looking at. {quote}We are most definitely not going to support multiple competing JPA providers in AS7.{quote} I assume you mean with respect to what is possible with OSGi. On the EE side, we need to support different persistence providers for various reasons (e.g. EE TCK compliance testing). Another reason to support EclipseLink, is for migrations. It is easier to migrate an application to run on JBoss AS, if you don't have to switch persistence providers right away.	0	0	https://issues.jboss.org/browse/JBOSGI-260
12337	JBOSGI-260	{quote} Which work is this jira for? {quote} It documents the availability of OSGi JPA in the JBossOSGi umbrella project. You can ignore it for your Hibernate & AS7 work. For the other questions, see [this comment|https://issues.jboss.org/browse/AS7-5405?focusedCommentId=12714861&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12714861]	1	1	https://issues.jboss.org/browse/JBOSGI-260
12338	JBOSGI-260	Is this fix part of JBoss7.1.1?	1	0	https://issues.jboss.org/browse/JBOSGI-260
12339	JBOSGI-258	Hi Andreas, I looked at the attachment and it seems quite unfinished. A number of tests are empty and also the test bundle that's used by the tests is not created by the buildsystem. Could you provide a more finished patch (or zipfile as you did) that works with the current build (git://github.com/jbosgi/jbosgi-framework.git) please? Thanks, David	1	1	https://issues.jboss.org/browse/JBOSGI-258
12340	JBOSGI-209	Could you please create a dependent issue in the MC module that needs to be looked at in order to have this issue resolved. http://www.jboss.org/index.html?module=bb&op=viewtopic&p=4270169#4270169	0	0	https://issues.jboss.org/browse/JBOSGI-209
12341	JBOSGI-179	Can we revisit this for 1.0.0.Beta9?	1	1	https://issues.jboss.org/browse/JBOSGI-179
12342	JBOSGI-178	Wow, that's impressive. I thought you'd say JBoss TM is not yet compatible with OSGi ? At least that's what I though after reading you blog entry: http://jbossosgi.blogspot.com/2009/06/jboss-osgi-runtime-as-integration.html Basically this feature request will be similar with other JEE services : datasources, JNDI, JTA, JMS Should I create a different feature request for these JEE services as well ?	1	1	https://issues.jboss.org/browse/JBOSGI-178
12343	JBOSGI-143	Could you please create a dependent issue in the MC module that needs to be looked at in order to have this issue resolved. http://www.jboss.org/index.html?module=bb&op=viewtopic&p=4270169#4270169	0	0	https://issues.jboss.org/browse/JBOSGI-143
12344	JBOSGI-81	Does it actually fail the test or are you simply seeing the exception? This message is emitted by Aries when it cannot set certain statics in the VM. The reason that it can't set these statics is because AS7 already sets them so this exception (and another one which is also logged at INFO level) can be ignored. So regardless of the exception, the functionality should still work (if the test passes).	1	1	https://issues.jboss.org/browse/JBOSGI-81
12345	JBOSGI-81	I wonder could it be a timeout or something? I haven't been able to reproduce the failure. I've tried on a Mac with JDK 1.6 and on Fedora 16 with OpenJDK 1.7. Should I try to increase the timeout and see if that helps? The Hudson machine is potentially a lot busier than my machine and may therefore take a bit longer to be finished initializing.	1	1	https://issues.jboss.org/browse/JBOSGI-81
12346	JBOSGI-81	Yes, that exception is expected. It's harmless in our case. Does the test pass?	1	1	https://issues.jboss.org/browse/JBOSGI-81
12347	JBOSGI-75	This needs to hook in with the org.jboss.modules.ModularURLStreamHandlerFactory. I also noticed that there exist a org.jboss.osgi.framework.util.VFSStreamHandlerFactory - is that still used?	1	1	https://issues.jboss.org/browse/JBOSGI-75
12348	JBOSGI-71	com.izforge.izpack.installer.ResourceNotFoundException: Cannot find named Resource: '/res/userInputLang.xml_eng' AND '/res/userInputLang.xml_eng_eng' at com.izforge.izpack.installer.ResourceManager.getLanguageResourceString(Unknown Source) at com.izforge.izpack.installer.ResourceManager.getInputStream(Unknown Source) at com.izforge.izpack.panels.UserInputPanel.init(Unknown Source) at com.izforge.izpack.panels.UserInputPanel.panelActivate(Unknown Source) at com.izforge.izpack.installer.InstallerFrame.switchPanel(Unknown Source) at com.izforge.izpack.installer.InstallerFrame.navigateNext(Unknown Source) at com.izforge.izpack.installer.InstallerFrame.navigateNext(Unknown Source) at com.izforge.izpack.installer.InstallerFrame$NavigationHandler.actionPerformed(Unknown Source)	0	0	https://issues.jboss.org/browse/JBOSGI-71
12349	PCACHE-29	Scott, Sorry, but I don't understand the issue here. Why can't you attach profiler (like JProfiler) to CacheAop? -Ben	1	0	https://issues.jboss.org/browse/PCACHE-29
12350	PCACHE-21	I lost my CVS commit rights, but anyway here's a patch to make the Set.contains() add() and remove() implementations be O(1) (more or less.) If for 2.0, it'd be nice if Fqn in PojoCache could be arbitrary types, then there wouldn't be any reason to "toString" on the Long. To fix the List implementation, I guess I would consider two cases separately. There's the LinkedList and RandomAccess styles of Lists. For LinkedList, you wouldn't have to worry about get(int i) being O(1) so removes in the middle could be fast. Could you change the implementation to detect and match closely what the user used?	1	1	https://issues.jboss.org/browse/PCACHE-21
12351	PCACHE-21	Elias, currently collection.ReplicatedSyncSetTest still fails with one more test. Not sure if it is introduced recently or not. I don't have time to fix it. But would you mind to take a look? :-) Thanks! -Ben	1	0	https://issues.jboss.org/browse/PCACHE-21
12352	PCACHE-11	Also how do we intercept the static field variable in the class scope? E.g., if I do: SomeClass.staticVar = 4; how do I intercept it?	0	0	https://issues.jboss.org/browse/PCACHE-11
12353	PCACHE-4	Why should this be coupled to jdk5 support?	1	1	https://issues.jboss.org/browse/PCACHE-4
12354	PCACHE-4	Tim, we are trying to narrow down the 1.3 roadmap. Would you like to take up this task and see JBossCache as whole on how best to do this? Maybe we can create a helper class to handle this.	1	1	https://issues.jboss.org/browse/PCACHE-4
12355	JBPORTAL-2444	Unfortunately, looking into the issue more closely, it won't be possible to change the DB creation scheme for the 2.7 / EPP 4.3 scope as this would imply a change in the Hibernate mapping. I do agree with you that the current mapping is less than ideal but the solution would require changing window states and modes from aggregrated objects to properly persisted entities (which would indeed remove all duplication and performance issue). However, this is not something that can be done in a backward compatible way and is therefore not possible to be done for the 2.7 / EPP 4.3 scope.	1	1	https://issues.jboss.org/browse/JBPORTAL-2444

12360	JBPORTAL-2313	can you add some description how to test URL test? what about secure test... can i close this jire without having it implemented?	1	1	https://issues.jboss.org/browse/JBPORTAL-2313
12361	JBPORTAL-2312	did we find a way how to test this? i think we're not strong enough to beat captcha :) can i close the issue?	1	0	https://issues.jboss.org/browse/JBPORTAL-2312
12362	JBPORTAL-2309	i've created separate class for priority I taks, and added priority II to existing portal admin testcase. what about end 2 end test cases? should they belong to existing testng testsuite or should they have another "end2end" testsuite... i've created such a testsuite, but my question if i should include them in default one still remains.	1	1	https://issues.jboss.org/browse/JBPORTAL-2309
12363	JBPORTAL-2309	i have implemented most of the phase II, but i still have few questions: - adding a listener how can I verify that a listener was successfully added? my current test adds a listener, then reloads a page and verifies that the listener is currently selected. no deeper logic is tested. - error handling this is a tricky one. i can verify that previously selected values are selected, but i guess it is not enough. any quick ideas where can i find (so i can successfully test it) these cases? for portal: When the page is unavailable When there is an error within the page When the page is not found for page: When the window is unavailable When there is an error within the window When the window is not found	1	1	https://issues.jboss.org/browse/JBPORTAL-2309
12364	JBPORTAL-2308	anything in samples doesn't need to be XSS validated. Where is "search inputs"?	1	1	https://issues.jboss.org/browse/JBPORTAL-2308
12365	JBPORTAL-2301	can this issue be closed?	1	1	https://issues.jboss.org/browse/JBPORTAL-2301
12366	JBPORTAL-2299	Where's the screenshot? :P	1	1	https://issues.jboss.org/browse/JBPORTAL-2299
12367	JBPORTAL-2283	portal hasn't a central system to describe admin roles. It let do to external applications. LDAP has an option 'defaultAdminRole' never used into ldap_identity-config.xml file so it could to be used. But about DB authorization we should to create a new option to know that information. What do you think about a new option 'defaultAdminRole' into identity-config.xml?	0	0	https://issues.jboss.org/browse/JBPORTAL-2283
12368	JBPORTAL-2277	Wesley, this would indeed be convenient if people could change the background colors (CSS) without having to modify the images, I'm not too sure about GIF transparency support for IE (I know it's an issue for PNGs). Could you give it a try ? And thanks Fernando for your latest contributions, i appreciate it !	0	0	https://issues.jboss.org/browse/JBPORTAL-2277
12369	JBPORTAL-2263	What do you propose as a fix for this? There is also the stacking tabs issue when there are more tabs than the screen is wide. So it is really a navigation rewrite when you think about it. Also, The dashboard controls would have to be reworked.	1	0	https://issues.jboss.org/browse/JBPORTAL-2263
12370	JBPORTAL-2223	the job using portal builded on linux was created here: http://hudson.qa.jboss.com/hudson/job/jboss-portal-2.7-selenium-winIE7/ there are still many failing tests which i try to resolve continuously, but some of them (i.e. uploading of files) are not supported by selenium right now. should there be a new testsuite for windows created disabling these tests? is the building of portal on windows machine necessary or we just want to do selenium testing (right now implemented as a dependency of basic selenium hudson job)	1	1	https://issues.jboss.org/browse/JBPORTAL-2223
12371	JBPORTAL-2223	Please don't disable any tests now. Let them fail. This gives us idea how much work needs to be done. Regarding fileupload, is it something we can fix if we were commit patches to Selenium? No building on windows is not necessary. You can use the zip from linux.	1	1	https://issues.jboss.org/browse/JBPORTAL-2223
12372	JBPORTAL-2223	i've renamed the job to http://hudson.qa.jboss.com/hudson/view/JBoss Portal/job/jboss-portal-2.7-selenium-winIE7- i wasn't able to find why i can't delete the workspace, this was the easiest way. unfortunatelly, lots of work must be done until i make the suite stable. anyway, we're not building portal on IE machine. i do the build in this job: http://hudson.qa.jboss.com/hudson/view/JBoss%20Portal/job/jboss-portal-2.7-selenium-tests/ save the bundle on qa machine, and IE7 job just make use of this bundle. is it enough or should i spend time on building of portal under windows?	1	1	https://issues.jboss.org/browse/JBPORTAL-2223
12373	JBPORTAL-2197	Samson, Are you still having problems building it because of the problem you mentioned on IRC? From IRC: (06:18:49 PM) samson_: just wanted to ask you what's the role of the *_DTD.xml files generated by the dtd2docbook ANT task? (06:19:26 PM) samson_: prabhat, i need to put a document root in them as they are breaking the build.	1	1	https://issues.jboss.org/browse/JBPORTAL-2197
12374	JBPORTAL-2197	I did a fresh checkout. When I do make pdf-en-US, I get eror. EEND: xml-en-US Thu Nov 13 11:36:01 CST 2008 START: test-en-US Thu Nov 13 11:36:01 CST 2008 warning: failed to load external entity "tmp/en-US/xml/.xml" make: *** [test-en-US] Error 1 I am able to build it using maven. However, the pdf generated does not have same JBoss Logo as it is for the one you generated using publican and you put at https://svn.jboss.org/repos/portal/docs/enterprise/trunk/Reference_Guide/tmp/en-US/pdf/. Is it intentional?	1	1	https://issues.jboss.org/browse/JBPORTAL-2197
12375	JBPORTAL-2197	Prabhat, should we close this issue now?	1	1	https://issues.jboss.org/browse/JBPORTAL-2197
12376	JBPORTAL-2166	As per the bug found by Mike when he entered a "dot" in portlet insttance name, can you please create a test case for it?	1	1	https://issues.jboss.org/browse/JBPORTAL-2166
12377	JBPORTAL-2143	Sohil, I have created a simple portlet that display last login date of a user. You can see it in action at http://perf11.qa.atl2.redhat.com:8080/portal/portal/default/UsersDetailPage. As you can see, I have not logged in as admin yet so you the value for admin is null but for user is some valid date. As expected this value was populated when "user" logged out. I have not applied the patch yet. The way I get this value in portlet is: user = userModule.findUserByUserName(userName); lastLoginDate = (String) userProfileModule.getProperty(user, User.INFO_USER_LAST_LOGIN_DATE); Does this suffice? I will also show you the results with your patch as well but I wanted you to see if I am in write track. But I want to follow up on JMX way as well because that will be handy in other use cases. When you said invoke UserModule remotely, did you mean twiddle or write a java client to do that? In both situation, I will need your help.	1	1	https://issues.jboss.org/browse/JBPORTAL-2143
12378	JBPORTAL-2118	Can you create a new pool called firefox with machines that have firefox installed?	1	1	https://issues.jboss.org/browse/JBPORTAL-2118

#	Requirement	Questions	Answered	Successfully Answered	URL
12379	JBPORTAL-2104	when i want to add some "google portlets" (widget/google) into the page, i can't see them, there are no choices. there were choices before (when i was developing tests for 2.6.6. GA)... is this correct? any suggestions how to test the google portlets functionality?	1	1	https://issues.jboss.org/browse/JBPORTAL-2104
12380	JBPORTAL-2103	the ids of actions in wsrp -> consumer configuration, are not indicating the number of row they are in. thus, i cannot access them by their id's and i must access them by xpath. the differ in one number, but i cannt determine, what those numbers are. on the other hand, the ids in role managment, in the table where the roles are listed are different again in only one number, but the number is indicating the row they belong to (in the table), so i need to know only the "template" of this id ,and the row number. why is the implementation of computation of ids different in those two tables?	1	1	https://issues.jboss.org/browse/JBPORTAL-2103
12381	JBPORTAL-2103	Can you be more specifiic on id part? What I am looking for is let's say I gave bea's WSDL location, which component's id you are looking for? Just a guess: <table class="registration-prop-table inactive"> <tr> <th class="nameColumn">Name</th> <th class="descColumn">Description</th> <th>Value</th> </tr> You expect tr and th to have ids, right?	1	1	https://issues.jboss.org/browse/JBPORTAL-2103
12382	JBPORTAL-2103	Can you give a try with the latest 2.6 version? By the way, do these tests also run on 2.7? When will they be in the main svn repository?	1	1	https://issues.jboss.org/browse/JBPORTAL-2103
12383	JBPORTAL-2103	Have you checked the generated code on that last update, Prabhat? It seems to me that it could result (depending on how forEach is handled) in duplicated ids in the resulting markup...	1	1	https://issues.jboss.org/browse/JBPORTAL-2103
12384	JBPORTAL-2103	i have difficulties with registering a new BEA consumer after the last svn update of JBOSS 2.6 when i register this consumer name: BEA expire: 100 address: http://wsrp.bea.com:7001/producer/producer?WSDL i get Cause: javax.portlet.PortletException: Could not find any registered converter-class by converterId : faces.convert.RegistrationProperty.Status Message: Could not find any registered converter-class by converterId : faces.convert.RegistrationProperty.Status StackTrace: javax.portlet.PortletException: Could not find any registered converter-class by converterId : faces.convert.RegistrationProperty.Status at org.apache.myfaces.portlet.MyFacesGenericPortlet.handleExceptionFromLifecycle(MyFacesGenericPortlet.java:310) at org.apache.myfaces.portlet.MyFacesGenericPortlet.facesRender(MyFacesGenericPortlet.java:502)	0	0	https://issues.jboss.org/browse/JBPORTAL-2103

12393	JBPORTAL-1978	note : portal is delivered with scriptaculous.js v1.7.0 In the RichFaces Faq : \richfaces-ui-3.2.0.GA\docs\faq\en\faq.pdf ... last item "1.73. Why does Java Script conflict?" "RichFaces 3.1.3 is bundled with the same ones as Prototype 1.6.0, Scriptaculous 1.8.0" In the 3.2.0, the scriptaculous.js file says : "script.aculo.us scriptaculous.js v1.8.1, Thu Jan 03 22:07:12 -0500 2008". so upgrade the portal script lib with the scriptaculous lib too...	1	1	https://issues.jboss.org/browse/JBPORTAL-1978

#	Requirement	Questions	Answered	Successfully Answered	URL
12394	JBPORTAL-1972	Hi! If everyone else is happy, I am happy...I made a few tiny changes. I had a few questions: * should "rows containing 'ExceptionPortletinstance?' in the INSTANCE_REF column" be ExceptionPortletInstance (capital I for Instance), like all of the other ones? * does the last section of "4.1.3. Portlet Names", about migrating CMS content, make sense to everyone? * "rows containing NewsPortletInstance2 in the ID column." is this correct, or should it be the "PORTLET_REF" column, like all of the other instances listed? Thanks for your help, Murray.	0	0	https://issues.jboss.org/browse/JBPORTAL-1972
12395	JBPORTAL-1972	Bolek, can i mark resolved or do you still need to look at Murray's questions ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1972
12396	JBPORTAL-1957	This is something we will definitely do for 2.7. Now for 2.6.5 we need to check: 1 - that it doesn't introduce an API change 2 - with QA that it runs successfully If 1 and 2 are ok, we will probably upgrade the jBPM libs for 2.6.5	0	0	https://issues.jboss.org/browse/JBPORTAL-1957
12397	JBPORTAL-1871	Which page names ? You mean portal pages ?	1	1	https://issues.jboss.org/browse/JBPORTAL-1871
12398	JBPORTAL-1858	The portlets are made to be configurable, we don't want to end up with tons of configuration we want to keep the highest flexibility. To achieve that flexibility we use jBPM you can use any workflow (even the one we will never think of). So a) is not possible b) that's what the documentation is for ;) the preferences are usually for end-users anyway, not for the developers. The default settings depends on needs... You can change for *your*portal. OOTB settings are set so that it's easy to start with. Thanks for the feedback.	0	0	https://issues.jboss.org/browse/JBPORTAL-1858
12399	JBPORTAL-1847	Do you think you could contribute that feature ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1847
12400	JBPORTAL-1842	Mmmm, when there is no modal screen is when you directly access a restricted page. So there is no real cancel (we could use back as a form of cancel) Is there a different use case ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1842
12401	JBPORTAL-1842	The page that the modal represents(login.jsp) has a dynamically rendered cancel button. If the page is presented in a modal, it shows the cancel. If a user goes to or is redirected to the login page, then what can they cancel? So, for usability, since this is a page, it did not make sense to have a cancel because the portal made a decision to redirect to that page. Good usability is not trying to write your own back button feature, but to let the browser do its job ;-) Although some browsers still don't do there job very well at times.	0	0	https://issues.jboss.org/browse/JBPORTAL-1842
12402	JBPORTAL-1842	Ok, so here is the question: If a user is redirected to the portal login page (either through a page flow or by clicking a link) what options should they have? We know they need a login form and button. What else? Possibly a register button? In it's simplest form we are clicking a link and going to a page and usually this does not require a cancel or js controlled back button. (i.e - Go to google.com and click on "Sign in", what options do you have? You either login or register. And to go back on track, you must click the browser's back button) and this is the same for most web apps. Maybe I am not getting the mindset of the portal user that you guys are talking about, so please help me out if I am not getting it. One thing we could use is a more intuitive splash screen for the login page, and not just a simple login box. I am open to suggestions.	1	1	https://issues.jboss.org/browse/JBPORTAL-1842
12403	JBPORTAL-1841	Try this: 1. Start up Portal. 2. Access the weather portal page as it is and see Miami weather. 3. Now enter http://localhost:8080/portal/auth/portal/default/Weather/WeatherPortletWindow?windowstate=maximized?mode=edit in browser's address directly and see what you get.	1	1	https://issues.jboss.org/browse/JBPORTAL-1841
12404	JBPORTAL-1799	Where can I find the "basic Richfaces documentation" in the bundled 2.6.3 documentation? I have found some information in the reference guide, but that's only about using the Sun JSF RI and the MyFaces implementation. I know that Richfaces/JBoss Portal has implemented a JSR-301 compliant portlet bridge somewhere (is it in the portal itself, or in the Richfaces API's?). I guess the "basic Richfaces documentation" is about using that bridge when developing JSF Richfaces portlets?	1	1	https://issues.jboss.org/browse/JBPORTAL-1799
12405	JBPORTAL-1799	Too bad you couldn't bundle the RF documentation with the 2.6.3 release. Do you have any estimates when things will be ready for the public?	1	1	https://issues.jboss.org/browse/JBPORTAL-1799
12406	JBPORTAL-1799	Now that this is "fixed" and 2.6.4 is released, where is said documentation? I downloaded the 2.6.4 bundle and binary-only versions and I can't find any documentation. Or does "documentation" simply refer to the code examples here: http://anonsvn.jboss.org/repos/portletswap/portlets/src/framework Am I crazy, or are they not included in any of the JBoss Portal 2.6.4 downloads?	1	1	https://issues.jboss.org/browse/JBPORTAL-1799
12407	JBPORTAL-1797	Do you want me to create another ticket for the missing localized strings ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1797
12408	JBPORTAL-1796	First shot was perfect for the versions ;) Identity relates to the identity services, while your case relates to the UI. But it's a no brainer, thanks for the files ! Also can you please "sign" the contributor agreement : http://labs.jboss.com/contributor/ (You will need to login first then click on "sign an agreement" make sure to select JBoss Portal as a project and if you have any question do not hesitate to ask me) So that i can apply your modifications.	1	1	https://issues.jboss.org/browse/JBPORTAL-1796
12409	JBPORTAL-1794	Can i just apply the latest ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1794
12410	JBPORTAL-1794	Luca, did you apply the patch yourself ? Can i mark this as resolved ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1794
12411	JBPORTAL-1788	What screenshots ? There are only jboss-service.xml files to modify if i remember correctly, and they are shown in the doc, so i don't understand what screenshots you are talking about. If you are talking about using the CMS workflow there are screenshots in the user guide. What is your issue exactly ?	1	1	https://issues.jboss.org/browse/JBPORTAL-1788
12412	JBPORTAL-1777	What would you suggest ? Multiple -object.xml files should demark your transactions. If you don't put this in a transaction you would loose consistency, what if the process breaks in the middle ? Maybe i misunderstood the issue though :)	0	0	https://issues.jboss.org/browse/JBPORTAL-1777
12413	JBPORTAL-1774	What's the status on this?	1	0	https://issues.jboss.org/browse/JBPORTAL-1774
12414	JBPORTAL-1754	Which part exactly is dupplicated? I can't find it	1	1	https://issues.jboss.org/browse/JBPORTAL-1754
12415	JBPORTAL-1747	I think that there should only be one guide that shows the GUI way and the XML way (which is actually expected to progressively disappear) in the same place. It doesn't make much sense to separate that information: why should an admin look at 2 different places to learn everything there is to know about Portal? Chapters could be structured with an overview, then how to proceed in the GUI then a more detailed look (if required). This is kind of the approach I took with the WSRP chapter and I think it works quite well. Moreover, looking at the reference guide, there are already some coverage of the GUI so it's kind of confusing that not everything is in there.	1	0	https://issues.jboss.org/browse/JBPORTAL-1747
12416	JBPORTAL-1730	registerMBean is in charge of registering (and throw an exception in case it's already registered or couldn't register). So the logic shouldn't be there. That said, all the calls to registerMBean are previously called with unregisterMBean which would have the same effect as what you are doing here. So in your case what is happening ? What's calling registerMBean ? What issue do you face, what's the stack trace ?	1	1	https://issues.jboss.org/browse/JBPORTAL-1730

#	Requirement	Questions	Answered	Successfully Answered	URL
12417	JBPORTAL-1730	********** I replace the IdentityServiceController, by another implementation and another JMX description ... but with the same JMXService name. The new service implementation take the place of the jboss original one (replacement). The JBoss original JMX description is put within comment (the original service is off). The replacement service is packaged in another proprietary sar. In the MyIdentityServiceControllerImpl, the IdentityServiceLoader is used exactly the same way as in the original IdentityServiceController code. The extra code in MyIdentityServiceControllerImpl is for specific initialization of the MBeans, not about registering them. When I redeploy the Sar package, this exception is thrown from the IdentityServiceLoader : javax.management.InstanceAlreadyExistsException: portal:service=Module,type=User already registered. at org.jboss.mx.server.registry.BasicMBeanRegistry.add(BasicMBeanRegistry.java:761) at org.jboss.mx.server.registry.BasicMBeanRegistry.registerMBean(BasicMBeanRegistry.java:225) at sun.reflect.GeneratedMethodAccessor1.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) ********** The code I propose will unregister the MBean if needed, before to re-register it, and this solve the problem. ********** Note about the original portal code : In the original code of the portal, it does not seems that the MBean are unregistered before the call of registerMBean. "That said, all the calls to registerMBean are previously called with unregisterMBean " : this does not seems ok... make a test : - run the original JBoss Portal, out of the box - make a touch of the jboss-service.xml files that are in the /server/default/deploy/jboss-portal.sar/portal-identity.sar/META-INF and /server/default/deploy/jboss-portal.sar/META-INF the server start redeploying ... the exception is thrown ... 23:04:21,687 WARN [ServiceController] Problem starting service portal:service=Module,type=IdentityServiceController org.jboss.portal.identity.IdentityException: Cannot initiate identity modules: at org.jboss.portal.core.identity.service.IdentityServiceControllerImpl.startService(IdentityServiceControllerImpl.java:160) at org.jboss.system.ServiceMBeanSupport.jbossInternalStart(ServiceMBeanSupport.java:289) at org.jboss.system.ServiceMBeanSupport.start(ServiceMBeanSupport.java:196) .... Caused by: javax.management.InstanceAlreadyExistsException: portal:service=Module,type=User already registered. at org.jboss.mx.server.registry.BasicMBeanRegistry.add(BasicMBeanRegistry.java:761) at org.jboss.mx.server.registry.BasicMBeanRegistry.registerMBean(BasicMBeanRegistry.java:225) at sun.reflect.GeneratedMethodAccessor1.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:585) at org.jboss.mx.interceptor.ReflectedDispatcher.invoke(ReflectedDispatcher.java:155) at org.jboss.mx.server.Invocation.dispatch(Invocation.java:94) so, I guess that the service is not unregistered before new one is registered ? or did I missed something ? ********** Redeploying the portal sar is not a good idea, as it breaks everything in the portal run. but when the IdentityServiceController is "replaced" by another implementation, that is in another .sar, then it is very usefull (for me) to be able to redeploy this .sar. ********** This problem is the same as the one in the former version. the Identity services have been reprogrammed with MBean instead of JMX services. so it is just about the same solution, that was forgotten to "move" to the new implementation. or I missed something big about all that MBean ? Thanks,	1	1	https://issues.jboss.org/browse/JBPORTAL-1730
12418	JBPORTAL-1713	What't the benefit over setting up JAVA_OPTS ? I guess you do that to get the libraries from repository.jboss.org ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1713
12419	JBPORTAL-1713	Possibly, what do they pass to JAVA_OPTS in the existing? Passing the above did not work for me.	0	0	https://issues.jboss.org/browse/JBPORTAL-1713
12420	JBPORTAL-1713	try ANT_OPTS instead of JAVA_OPS ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1713
12421	JBPORTAL-1712	Can we set that with a higher priority ? At the moment in the 2.6 testsuite, the 2 tests which are failing are related to this issue. For that reason, we are getting used to ignore Hudson error reports which is not good.	1	0	https://issues.jboss.org/browse/JBPORTAL-1712
12422	JBPORTAL-1637	"Mandatory" and "type" are already there :) Nice. Why is it used today ? Does the user portlet check this ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1637
12423	JBPORTAL-1637	If you want to have separate config for UserPortlet I should probably move some of those options to your file because it'll be doubled. But when I think about it.... 2 separate files with similar content - a list of properties but with different parameters... looks like a config nightmare to me :) So to add remove a property you need to put that info into two files. Maybe it would be better to workout common list of meta-data describing user property and extend current property-info.xml. The nature of the API is that its easy to extend and difficult to remove :) The question is: What does it buy us to have separate configuration for UserPortlet for stuff that can be gathered from existing metadata. There will be changes in identity in 2.8 but for this part it should be rather evolution than revolution.	0	0	https://issues.jboss.org/browse/JBPORTAL-1637
12424	JBPORTAL-1631	Note that this solution doesn't aim at only solving the CSS compatibility issues but the different kind of browsers. a) It's actually very easy to have a wrong behavior, try to install IE 5 and IE 6 on a same machine, both will be seen as the latest version you install (i guess it takes it from the windows registry) and the conditonal statement will be fooled. The idea of changing the user-agent is usally to fool the server to avoid some display problem. let's say you get a new for of Netscape called MyGreatBrowser, and the server is trying to send a IE CSS because it doesn't know about this new browser, then the client still has a way to "force" the Netscape stylesheet, it's a feature. The code-like stuff i was talking about should be for all the different themes (actually it should also have a way to define no CSS for some themes on some browsers (maybe you will only have 2 themes for the Opera on the Nintendo Wii, but 10 for traditional browsers) My example about IE8 was to say that if IE8 stop supporting this or do it in another way, you would end up with the same problem as of today, you couldn't define a special CSS for IE8. The additional processing is really cheap, 1 parsing per session is something we can offer. (We can also argue that the other browsers also have to parse this conditional statement to ignore it). Anyway, i am not against supporting the conditional statement, but i didn't see a little change that would make it work (i didn't look very hard). So if we need to do extra work, let's do it the good way, even more since we are re-designing the whole theme/layout support for next major versions. Too bad for the CSS compiler :) JBoss CSS Compiler sounded like a good project name :-D Thanks for your input, don't think i'm just against the idea, i'm trying to get the best from the original idea. I totally agree that not supporting this is a major problem for IE versions. (more than any other browser)	1	1	https://issues.jboss.org/browse/JBPORTAL-1631
12425	JBPORTAL-1618	Do we have obvious use case that it eats a lot of memory the VM ? Writing/reading a file on the filesystem will be also a bottleneck in the scalability side.	0	0	https://issues.jboss.org/browse/JBPORTAL-1618
12426	JBPORTAL-1596	We chose myFaces because we had less troubles with the bridge. What's your motivation for switching ?	1	1	https://issues.jboss.org/browse/JBPORTAL-1596

12432	JBPORTAL-1524	can you explaiin the purpose of this task ? what would you like us to do ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1524

#	Requirement	Questions	Answered	Successfully Answered	URL
12433	JBPORTAL-1524	ok what do you call "send a diff" what tool ?	1	0	https://issues.jboss.org/browse/JBPORTAL-1524
12434	JBPORTAL-1522	What is WebKit ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1522
12435	JBPORTAL-1505	I don't see how the org.jboss.portlet.util.Parameters class is related to CommandFactory class. Can you explain ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1505
12436	JBPORTAL-1505	Sorry, I got confused in the classes. Parameters are not used in the CommandFactory itself... When updating my CommandFactory for 2.6, I got (again) that problem : how to see what params reach to the portlet action or rendering ? (list of keys ?, values ?... no params ?....) So it is still usefull to be able to reach this internal map : to get the list of keys, and view all the params it has in it. JBossRenderRequest has one. I saw a jira about a portlet interceptor, that would show the params that the portlet receive.... Same for org.jboss.portal.common.util.Base64.PortletParametersStateString that contains a private PortletParameters instance. It could be usefull to access this PortletParameters, at least in a inherited class. Without opening widely the API, my idea is : - in custom CommandFactory, put a MySpecialDebugParametersClass inheriting from Parameters (or PortletParametersStateString). - in other classes, use MySpecialDebugParametersClass special debug features to get what's going on etc... So protected would be enough. Public would be the easiest but to much and not clean api. (or with a special method, such as getInternalMap() ?). Thanks,	1	1	https://issues.jboss.org/browse/JBPORTAL-1505
12437	JBPORTAL-1498	I don't really get the point of this issue. What would you like us to change precisely ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1498
12438	JBPORTAL-1486	Patch includes: jsf-portlet/src/java/com/sun/faces/portlet/ViewHandlerImpl.java public String getActionURL(FacesContext context, String viewId) { Object r = context.getExternalContext().getResponse(); if (!(r instanceof RenderResponse)) { logger.info("PS_CSFP0064"); throw new IllegalStateException("Must be a RenderResponse"); } RenderResponse response = (RenderResponse) r; PortletURL actionURL = response.createActionURL(); actionURL.setParameter(VIEW_ID_PARAMETER, viewId); // Patch starts here // A unique value is needed while saving values in the session. // As the render response namespace is unique, it is used. actionURL.setParameter(NAME_SPACE_PARAMETER, response.getNamespace()); //End patch if(logger.isLoggable(Level.FINER)){ logger.log(Level.FINER, "PS_CSFP0065", actionURL.toString()); } return (actionURL.toString()); }	0	0	https://issues.jboss.org/browse/JBPORTAL-1486
12439	JBPORTAL-1486	I changed StringBuilder to StringBuffer so that it can compile with jdk1.4. It's almost there with couple of gotcha. It uses javax/faces/context/ExternalContext#.getRequestCharacterEncoding method which is not in jsf1.1. Same issue with .getRequestCharacterEncoding#encodeAll and javax.faces.application.StateManager#saveView. I am trying the same approach I did with facelet i.e. to proudce just this patched class and update the jar. The project page says 1.2 version depends on jsf1.2. Can we use version 1.1 instead?	0	0	https://issues.jboss.org/browse/JBPORTAL-1486
12440	JBPORTAL-1486	Can this patch be the solution to the error I get mentioned on the forum? http://www.jboss.org/index.html?module=bb&op=viewtopic&p=4060173#4060173	0	0	https://issues.jboss.org/browse/JBPORTAL-1486
12441	JBPORTAL-1466	I don't understand the statement about WAP, can we get more info about that ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1466
12442	JBPORTAL-1466	Bill, yes you have the right information about WAP related to this issue. If you need more information about what WAP does, can we please set up a meeting for that? Thanks!	0	0	https://issues.jboss.org/browse/JBPORTAL-1466
12443	JBPORTAL-1415	I can't really align them without affecting the templates (and i don't want to duplicate stuff). So i just aligned the buttons on the left side. (2 rows)	0	0	https://issues.jboss.org/browse/JBPORTAL-1415
12444	JBPORTAL-1365	In the forthcoming CR2 we have rewritten this function and we delegate it to a JSP page, we also documented it in the doco. Can you please wait CR2 release (it's going to be done beginning next week) and see if it can apply there ? thanks	1	0	https://issues.jboss.org/browse/JBPORTAL-1365
12445	JBPORTAL-1362	Thomas, can you please check this as I don't use Eclipse? Thanks in advance.	0	0	https://issues.jboss.org/browse/JBPORTAL-1362
12446	JBPORTAL-1346	So are you just suggesting just removing the get() method from the parent class and adding it to the child classes (changing the return value for the MultiValuedTestParameterValue to Collection instead of Object): MonoValuedTestParameterValue { public Object get() { return value;}} MultiValuedTestParameterValue { public Collection get() { return value;}} Is this all that all that is required (and of course altering the code that relies on these methods)? or am I missing something else here? I am just a bit confused since a Collection is an Object anyways	1	0	https://issues.jboss.org/browse/JBPORTAL-1346
12447	JBPORTAL-1346	should it only ever get the first element, or should it act like an iterators .next()?	1	0	https://issues.jboss.org/browse/JBPORTAL-1346
12448	JBPORTAL-1325	does it still happen in 2.6 ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1325
12449	JBPORTAL-1325	Antoine, did you check on 2.6 ? I'm not sure i understood your issue, so i cannot try it myself.	1	1	https://issues.jboss.org/browse/JBPORTAL-1325
12450	JBPORTAL-1324	why does values cannot be set on the portal objects rather ? the current implementation use the default object name property to find the default child object.	0	0	https://issues.jboss.org/browse/JBPORTAL-1324
12451	JBPORTAL-1324	The default object name property seems to be (working) only for a page in the portlet. I am quiet sure that it was not working when I did the customization of the factory (jbp2.4.1). (did some test,... ended with this solution). I upgraded without looking at all this for 2.6. Of course it works like that. Sure a better solution is to set it in the portals descriptor file, then the DefaultPortalCommandFactory is set up with the one defined there. For what I remember, the setting of default portal name was kind of hard coded to "default" name. Which is not a bad option... but when the default portal is "your wonderfull portal", marketing wants to have an url with "www.toto.com/.../.../your_wonderfull_portal/..." ;-) CLASSES AND SERVICE INVOLVED ? By the way : what are the classes and services involved in the process of reading the xml descriptor files, and setting the portal object definition ? I may need to add things to this process. example : define a few "windows always in pages", to avoid put these windows definition in all the pages definition. inheriting page definition would be the best... but it is not in the JSR. working at the portal container level would be a more compliant solution, no ? another solution : using some xml include file, and play with these includes (if this works). but anyway interested in tips (documentation ?) about this internal portal process . NAMING SUGGESTION Also : "default" is not a really helping word. when searching in source classes and service descriptors for "where all this is coded", default is a word that is everywhere. using a more specific word would be helpfull. avoiding "portal" also. "defPtal" ? "defaultJBPortal" ? "myPortalName" ? idem for the url with "host/portal/portal/default" all this portal is "search impossible". for my portal, I used : host/pcr/dc/myportalname pcr : portal context root dc : default command for a general jboss release, I suggest : pcr => portalCtx dc => defaultPCommand ending to url : host/portalCtx/defaultPCommand/defaultJBPortal more explicit. ok for newbe that needs to have a nice portal running out of the box helpfull for the one that want to customize helpfull for the guy who write the documentation. loosing the nice : "start with http://localhost:8080/portal" to "start with http://localhost:8080/portalCtx"	1	1	https://issues.jboss.org/browse/JBPORTAL-1324

#	Requirement	Questions	Answered	Successfully Answered	URL
12452	JBPORTAL-1324	I thought i removed all the hardcoded "default" when i closed this task. If not then we need to properly fix this instead of adding a workaround. Did you try "portal.defaultObjectName" on a recent release ? (Say 2.6.4 or later)	0	0	https://issues.jboss.org/browse/JBPORTAL-1324
12453	JBPORTAL-1323	I didn't see any related commit, was it done ?	1	1	https://issues.jboss.org/browse/JBPORTAL-1323
12454	JBPORTAL-1311	ok, thanks for the update. does it really matter for dashboard ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1311
12455	JBPORTAL-1309	I wanted to have an update on this issue for tomorrow's jboss platform call. No rush but when can we have this issue resolved? It would be nice to be able to run testsuite as well. I have a question though, wont we have issue running 2.6 in jboss 4.0.5.GA if we have both Sun JSF and MyFace bundled together?	1	1	https://issues.jboss.org/browse/JBPORTAL-1309
12456	JBPORTAL-1251	Isn't it what I have implemented in the hibernate persistence version ?	1	0	https://issues.jboss.org/browse/JBPORTAL-1251
12457	JBPORTAL-1241	How does the user proceed to login ? is it an explicit login using the user portlet ?	1	0	https://issues.jboss.org/browse/JBPORTAL-1241
12458	JBPORTAL-1241	I think we changed that behavior on purpose. We can add a configuration of the /signout in jboss-portal.sar/META-INF/jboss-service.xml that would allow you to configure it to let you to the current page. Would it be ok ?	1	0	https://issues.jboss.org/browse/JBPORTAL-1241
12459	JBPORTAL-1145	Why not, may I ask? :)	1	0	https://issues.jboss.org/browse/JBPORTAL-1145
12460	JBPORTAL-1141	Can you ask Chris to do work on that on 2.4 ?	0	0	https://issues.jboss.org/browse/JBPORTAL-1141
12461	JBPORTAL-1121	IMHO disabling DnD for shared pages is a good idea. Once users can copy a shared page to a private page, they will be able to use DnD. However, copy is not in 2.6 scope, is it?	1	1	https://issues.jboss.org/browse/JBPORTAL-1121
12462	JBPORTAL-1057	Just wanted to revive an old thread here. Are the JBoss Portal DTDs publicly available? Currently, the URLs to do the DTDs in the documentation do not resolve: http://www.jboss.org/portal/dtd/portlet-instances_2_6.dtd This has a few problems, most important to me being that our IDEs can't resolve and validate our usage of the DTDs. Thanks, Andy	1	0	https://issues.jboss.org/browse/JBPORTAL-1057
12463	JBPORTAL-1004	I'm willing to start working on it. How can we proceed?	0	0	https://issues.jboss.org/browse/JBPORTAL-1004
12464	JBPORTAL-1004	What is the current status of this issue - is anyone working on a solution already? I've been looking at the following use case/potential solution: - a single JBoss server (or cluster of servers) - Apache2 with mod_jk as the front end - multiple `VirtualHost' definitions in Apache2 - each VirtualHost has a JkMount for /portal/* and /portal-core/* - Each virtual site has it's own entry page, template, etc. However, there is no isolation between the sites - a user can construct a URL that let's them see content from any of the sites through any of the VirtualHosts. This is a viable solution if all the sites are related. If the sites are not related (e.g. if one site is for a mining company and another site is for an environment group), then such a solution would be inappropriate.	1	0	https://issues.jboss.org/browse/JBPORTAL-1004
12465	JBPORTAL-895	View the forum thread for more info. Kind regards, dj	0	0	https://issues.jboss.org/browse/JBPORTAL-895
12466	JBPORTAL-895	does it work with the myfaces version that is currently bundled with JBoss 4.0.4.GA ?	0	0	https://issues.jboss.org/browse/JBPORTAL-895
12467	JBPORTAL-895	So that would require to have JBoss Portal 2.4 only works with 4.0.4.SP1 ? What is the release date of 4.0.4.SP1 ? What about 2.2.x which will not upgrade its tomahawk version ?	1	1	https://issues.jboss.org/browse/JBPORTAL-895
12468	JBPORTAL-887	I was planning to add pagination somehow to instances and portlets. Would that improve usability as well ?	0	0	https://issues.jboss.org/browse/JBPORTAL-887
12469	JBPORTAL-882	The Seam portlet is a tricky one, the configuration is not easy. What's wrong with the deployment ?	1	1	https://issues.jboss.org/browse/JBPORTAL-882
12470	JBPORTAL-876	Implementation complete. Will it stand the test of tests? :)	0	0	https://issues.jboss.org/browse/JBPORTAL-876
12471	JBPORTAL-861	What is the encoding of the current file ? Could you use native2ascii to produce a file that would work will all encoding systems.	0	0	https://issues.jboss.org/browse/JBPORTAL-861
12472	JBPORTAL-860	Is it going to be a never closed issue ? which descriptors are targetted by this issue ?	0	0	https://issues.jboss.org/browse/JBPORTAL-860
12473	JBPORTAL-821	This is fixed when using JBoss WS bundled with 4.0.5. Question is what do we do for 4.0.4?	0	0	https://issues.jboss.org/browse/JBPORTAL-821
12474	JBPORTAL-771	We have implemented not a solution of page inheritance, but a solution of "page copy", with possible recursion (meaning copy all sub-pages) and portlet windows. What is the best way to contribute this changes?	1	0	https://issues.jboss.org/browse/JBPORTAL-771

12492	JBPORTAL-455	I have posted on forum about this : http://jboss.org/index.html?module=bb&op=viewtopic&p=4037894#4037894 question : How to workaround this, now ? What class/service are responsible for reading the descriptor and set the role visible in the portlets ? To overload it, knowing it is not JSR-168 compliant... Thanks,	0	0	https://issues.jboss.org/browse/JBPORTAL-455
12493	JBPORTAL-388	Patches to allow the portal (2.0 branch) components to be imported into Eclipse without errors. Is the setup module still used within portal? If not instead of applying the patch for that module the .classpath and .project files should be removed to prevent it from being imported into Eclipse as there are current build errors in the source.	0	0	https://issues.jboss.org/browse/JBPORTAL-388
12494	JBPORTAL-341	Since creating the original patched there has been some ongoing development that has affected the core and cms projects. The attached archive 'Eclipse Patches 002.zip' contains the required patches. At the same time would it be possible to remove the .classpath and .project files from the 'bridge' module. This module is no longer compiled as part of the portal build and it's contents are out of date so is full of errors when imported into Eclipse.	0	0	https://issues.jboss.org/browse/JBPORTAL-341
12495	JBPORTAL-298	solved 2) as well. The portlet can declare a header-content element in jboss-portlet.xml which in turn will be picked up by a component container plugin. in jboss-portlet.xml add markup like: <portlet-app> <portlet> <portlet-name>LinkList</portlet-name> <header-content> <link rel="stylesheet" type="text/css" href="/portlet-styles/LinkList.css" title="" media="screen" /> </header-content> </portlet> </portlet-app> the layout of the page / portal that will render this portlet needs to contain a tag that picks up the content and injects it: <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd"> <%@ taglib uri="/WEB-INF/theme/portal-layout.tld" prefix="p" %> <html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en"> <head> .... <p:headerContent /> </head> ... The tag takes care of resolving the context path etc. so that the link url will be formed appropriately.	0	0	https://issues.jboss.org/browse/JBPORTAL-298
12496	JBPORTAL-286	What do you mean by session replication?	1	1	https://issues.jboss.org/browse/JBPORTAL-286
12497	JBPORTAL-283	Kinda curious, are you guys going to leverage the work on wsrp4j on this?	1	1	https://issues.jboss.org/browse/JBPORTAL-283
12498	JBPORTAL-278	the table renderer was removed (since it has no benefit over the div renderer) improved the divRenderer, and the theme api not sure about the i18n. What are the requirements ? Can we create that as a separate issue: localization and internationalization of layouts and themes ? I definitely need a required feature set to implement this!	0	0	https://issues.jboss.org/browse/JBPORTAL-278

#	Requirement	Questions	Answered	Successfully Answered	URL
12499	JBPORTAL-245	Overall it looks good and the presentation is great. Thanks for the great work! However, I am reading the doc from as a beginner (no knowledge about JBoss portal, only used portals like My Yahoo). So, there are several things I feel need to be clarified in the doc. Here are some specific comments: 1. My understanding is that the portal consists of four parts: the core portal server and database; the core portlets (user, role, permission, CRM); the JBoss packaged portlets (forum); and user installed portlets. I think it will be good if we can make the distinctions clear and explain them in the "overview" and even the "feature list" sections. 2. Is there a distinction between the "admin view" and "user view"? For instance, the portal user should not see the user/role/permission admin interface in normal use. Is that right? It would be nice to show a screen shot of what the portal user see, explain how to get to the admin screen, and show a screen shot of what the portal admin see. 3. Please explain how to install third party portlets. A hello world example will do. 4. I would also like to see discussion of some basic portal features. For instance, can each user customize the portal for his/her preference (i.e., to hide some portlets and re-arrange windows locations). If so, how to do it?	0	0	https://issues.jboss.org/browse/JBPORTAL-245
12500	JBPORTAL-224	define a set or preferences that modify the behaviour of the forums that the user can override to personnalize it. like - how many topic per page - how many post per page - what is the reading direction of the posts : old post to young post or the reverse etc...	1	1	https://issues.jboss.org/browse/JBPORTAL-224
12501	JBPORTAL-213	In adding the Managing Users functionality to the Roles portlet, I decided it needed a redesign. Hence the patch.	0	0	https://issues.jboss.org/browse/JBPORTAL-213
12502	JBPORTAL-184	Looks good. Several notes: 1) I assume exposing the password in the URL is just to illustrate the parameters, but in the implementation the login form will do POST instead of GET. 2) Why is the functionality of creating a ticket token in a filter StoreTicketFilter? Isn't it a one time action following successful authentication?	1	0	https://issues.jboss.org/browse/JBPORTAL-184
12503	JBPORTAL-184	The "Affects version/s" is set to 2.0 Beta, but the "Fix Version/s" is blank. Is it intentional? Only when "Fix version/s" is set a feature will show in the roadmap and release notes.	1	0	https://issues.jboss.org/browse/JBPORTAL-184
12504	JBPORTAL-184	This issue has priority "major". This means that it should not be mentioned in marketing material. Is that the intention? http://www.jboss.org/wiki/Wiki.jsp?page=JBossJIRAIssueTypes	1	0	https://issues.jboss.org/browse/JBPORTAL-184
12505	JBPORTAL-177	Blojsom uses the BSD licence, is it not compatible with LGPL. I wonder.	0	0	https://issues.jboss.org/browse/JBPORTAL-177
12506	JBPORTAL-55	So what i understand from it is that you would like to store an email template in a text file. Then there would be different properties files for internationalizing that template. Some application would read the text file or store its text in memory at startup and apply the correct locale and send out an email. Do you think storing it in a text file is the right thing to do , or would it be a better idea to store the text in the database?	0	0	https://issues.jboss.org/browse/JBPORTAL-55
12507	JBPORTAL-32	Where is the Wiki page or any other document detailing the requirements for this feature? Even inline doc within this issue would suffice.	1	1	https://issues.jboss.org/browse/JBPORTAL-32
12508	JBPORTAL-25	does org.jboss.portal.server.app.spi.UserContext makes sense ?	0	0	https://issues.jboss.org/browse/JBPORTAL-25
12509	JBPORTAL-6	Is there a more detailed description of the functionality of user operations?	1	1	https://issues.jboss.org/browse/JBPORTAL-6
12510	JBPORTAL-2	Isn't this feature big and risky enough to try to fit in Beta?	1	1	https://issues.jboss.org/browse/JBPORTAL-2
12511	JBPORTAL-2	we should break clustering into several parts ? why because the portal state is complex. so that would give us more visibility on that concern, also it would help to identify what is a show stopper.	1	1	https://issues.jboss.org/browse/JBPORTAL-2
12512	JBPROFILER-1	Have this implemented for Memory Profiler already.	0	0	https://issues.jboss.org/browse/JBPROFILER-1
12513	JBTPL-15	brain confusion with JBTPL and portal, could you remove this task please ivelin ?	1	1	https://issues.jboss.org/browse/JBTPL-15
12514	JBTPL-15	What is the confusion?	1	1	https://issues.jboss.org/browse/JBTPL-15
12515	JBREFLECT-39	I'll copy the relevant part of the stack trace to here in case the blog entry disappears Caused by: java.lang.ArrayIndexOutOfBoundsException: 0 at org.jboss.reflect.plugins.MethodInfoImpl.(MethodInfoImpl.java:103) at org.jboss.reflect.plugins.introspection.ReflectMethodInfoImpl.(ReflectMethodInfoImpl.java:78) at org.jboss.reflect.plugins.introspection.IntrospectionTypeInfoFactoryImpl$2.run(IntrospectionTypeInfoFactoryImpl.java:211)	0	0	https://issues.jboss.org/browse/JBREFLECT-39
12516	RELOADED-1	What on earth is "JBoss Reloaded"?	1	1	https://issues.jboss.org/browse/RELOADED-1
12517	JBREM-1283	Is this going to be included in EAP 5.1.1 ? A one-off patch was made available for JBPAPP-6351 . I don't see an equivalent JBPAPP JIRA for EAP 5	1	0	https://issues.jboss.org/browse/JBREM-1283
12518	JBREM-1283	Hi Lami, re: "Is this going to be included in EAP 5.1.1 ?" Yes, it is fixed in Remoting release 2.5.4.SP2, which will ship with EAP 5.1.1. See JBPAPP-5985 "Upgrade to Remoting 2.5.4.SP2". -Ron	1	0	https://issues.jboss.org/browse/JBREM-1283
12519	JBREM-1191	Hey Ben, Setting "socketFactoryClassName" (Remoting.SOCKET_FACTORY_CLASS_NAME) to "org.jboss.security.ssl.JaasSecurityDomainSocketFactory" in the InvokerLocator - i.e., <attribute name="socketFactoryClassName" isParam="true">org.jboss.security.ssl.JaasSecurityDomainSocketFactory</attribute> will cause the Remoting client to create an org.jboss.security.ssl.JaasSecurityDomainSocketFactory. What am I missing?	1	1	https://issues.jboss.org/browse/JBREM-1191
12520	JBREM-1054	Sounds like an interesting idea. Could you show me a conceptual example?	1	0	https://issues.jboss.org/browse/JBREM-1054
12521	JBREM-1054	That will greatly simplify the user code. Is there any reason that we can't do this automatically without annotations?	1	0	https://issues.jboss.org/browse/JBREM-1054
12522	JBREM-1054	Then what happens when a transporter is not used in this case?	1	0	https://issues.jboss.org/browse/JBREM-1054
12523	JBREM-1054	What about @RemoteReference then? I guess it sounds more straightforward but it's up to you. :)	1	0	https://issues.jboss.org/browse/JBREM-1054
12524	JBREM-1054	Are we going to exclude transporter from 3.1.0, or just the annotation?	1	0	https://issues.jboss.org/browse/JBREM-1054
12525	JBREM-975	The following issues have been updated with fix version 2.4.0.Beta1, which reflects when the changes were applied to branch 2.x: [JBREM-653] - allow user to set content-type for http responses [JBREM-732] - When server terminates and has clients, when the server comes back up clients that survived, can't connect. Connection refused when trying to connect the control socket. [JBREM-734] - BisocketClientInvoker constructor should get parameters from InvokerLocator as well as configuration map. [JBREM-741] - Eliminate unnecessary log.warn() in BisocketServerInvoker [JBREM-748] - BisocketClientInvoker should guard agains scheduling on an expired Timer [JBREM-750] - Logger in HTTPClientInvoker should be static. [JBREM-751] - Eliminate unnecessary "Unable to process control connection:" message from BisocketServerInvoker [JBREM-757] - Implement quick Client.removeListener() for polled callbacks. [JBREM-761] - NPE in BisocketServerInvoker$ControlConnectionThread	0	0	https://issues.jboss.org/browse/JBREM-975
12526	JBREM-931	Have created a framework as follows: * server side: A connector is created for each of the transports: bisocket, http, rmi, socket * client side: A launcher periodically creates one of three kinds of clients: 1. MockEJBClient: makes a series of invocations, each of which creates a new org.jboss.remoting.Client 2. MockJBMClient: makes a series of invocations, each of which generates some number of callbacks 3. HeavyComputeClient: makes a single invocation which runs a computationally intensive thread for some period of time	0	0	https://issues.jboss.org/browse/JBREM-931

12528	JBREM-920	Many tests are passing despite access failures. I've added a "tripwire" sort of security manager that logs the violations, with interesting results. For example: java.security.AccessControlException: access denied (java.util.PropertyPermission org.jboss.logging.Logger.pluginClass read) at java.security.AccessControlContext.checkPermission(AccessControlContext.java:264) at java.security.AccessController.checkPermission(AccessController.java:427) at java.lang.SecurityManager.checkPermission(SecurityManager.java:532) at org.jboss.test.security.LoggingSecurityManager.checkPermission(LoggingSecurityManager.java:22) at java.lang.SecurityManager.checkPropertyAccess(SecurityManager.java:1285) at org.jboss.test.security.LoggingSecurityManager.checkPropertyAccess(LoggingSecurityManager.java:191) at java.lang.System.getProperty(System.java:662) at org.jboss.logging.Logger.init(Logger.java:359) Do we need an updated jboss logging? Ours is: Implementation-Version: 4.0.4beta (build: CVSTag=Branch_4_0 date=200601031254) How do we decide which version to use? I presume that we're getting the above problem because the Logger isn't doing System.getProperty within a privileged block.	1	1	https://issues.jboss.org/browse/JBREM-920
12529	JBREM-861	Will not complete - 2.2.2.SP3 will be replaced by 2.2.2.SP4.	0	0	https://issues.jboss.org/browse/JBREM-861
12530	JBREM-728	Proposed solution: Add the following line to org.jboss.remoting.transport.http.HTTPClientInvoker.useHttpURLConnection(): metadata.put(HTTPMetadataConstants.RESPONSE_HEADERS, conn.getHeaderFields()); (where the actual value of HTTPMetadataConstants.RESPONSE_HEADERS is "ResponseHeaders". As a result, there will be a single entry in the metadata map passed to org.jboss.remoting.Client.invoke() with the map of all response headers	0	0	https://issues.jboss.org/browse/JBREM-728

12532	JBREM-663	Ron, is this available on the 2.x branch? If we release 2.2.0.Alpha5 off that branch, is it included?	1	0	https://issues.jboss.org/browse/JBREM-663
12533	JBREM-657	how we will disconnect a client without making a trip to the server without these methods? Also.. I guess you should open a new JIRA.. since this was already in a release.. (I guess)	0	0	https://issues.jboss.org/browse/JBREM-657
12534	JBREM-657	I mean.. .for us at this point ... this JIRA was already released... Ron reopened it and set a new version... What means... we would loose the feature from a previous version. (It was a solved problem for us)	0	0	https://issues.jboss.org/browse/JBREM-657
12535	JBREM-657	what will be the API then? How will be the API to disconnect a client without a server trip, when we know the server is not available? (Failover)	0	0	https://issues.jboss.org/browse/JBREM-657
12536	JBREM-643	Actually, the issue is still open. Here's an example of a multihome InvokerLocator: socket://multihome/?serializationtype=jboss&homes=127.0.0.1:4444!192.168.7.7 The set of host/port pairs is specified as a "!"-separated list. To create a multihome Connector, just use this new notation and create the Connector as usual: InvokerLocator locator = new InvokerLocator("socket://multihome/?serializationtype=jboss&homes=127.0.0.1:4444!192.168.7.7"); connector = new Connector(locator); The only programmatic examples, at this point, are in org.jboss.test.remoting.multihome.MultihomeTestParent Eventually, I'll add documentation to the Remoting Guide. Note, by the way, that this feature is only in Remoting 2.4.0.	0	0	https://issues.jboss.org/browse/JBREM-643
12537	JBREM-624	So I don't need to change my source file headers from their current "JBoss, Home of Professional Open Source..."? Can I just put the EULA file anywhere within the release binary?	1	1	https://issues.jboss.org/browse/JBREM-624
12538	JBREM-543	The response object type in this case is indeed java.lang.String. I have update the test case to print it out (See ServletInvokerTestClient or SSLServletInvokerTestClient). The output I get from JBossAS is: <html><head><title>Apache Tomcat/5.5.17 - Error report</title><style><!--H1 {font-family:Tahoma,Arial,sans-serif;color:white;background-color:#525D76;font-size:22px;} H2 {font-family:Tahoma,Arial,sans-serif;color:white;background-color:#525D76;font-size:16px;} H3 {font-family:Tahoma,Arial,sans-serif;color:white;background-color:#525D76;font-size:14px;} BODY {font-family:Tahoma,Arial,sans-serif;color:black;background-color:white;} B {font-family:Tahoma,Arial,sans-serif;color:white;background-color:#525D76;} P {font-family:Tahoma,Arial,sans-serif;background:white;color:black;font-size:12px;}A {color : black;}A.name {color : black;}HR {color : #525D76;}--></style> </head><body> HTTP Status 500 - Error occurred processing invocation request. <HR size="1" noshade="noshade"> type Status report message <u>Error occurred processing invocation request. </u> description <u>The server encountered an internal error (Error occurred processing invocation request.) that prevented it from fulfilling this request.</u> <HR size="1" noshade="noshade"> Apache Tomcat/5.5.17 </body></html> I agree that would be best for the http/servlet client invoker to thrown an exception as is done with other transports, but was changed a while back to this format per request from the web services team. I am re-opening this discussion with them (http://www.jboss.com/index.html?module=bb&op=viewtopic&p=3958247#3958247).	1	1	https://issues.jboss.org/browse/JBREM-543

#	Requirement	Questions	Answered	Successfully Answered	URL
12539	JBREM-543	IMHO, this has to be changed back - at least to return an Exception message (if you want, let the exception's message be that string). Ideally, have it configurable - let me say whether I want the exception to be thrown, returned as an Exception or returned as a String. I just posted a comment to that forum link you provided. My problem - in my code I don't know (nor do I want to know) what transport I'm using. If you just return a String, how do I know this was an error that occurred? If I am forced to look at the HTTP response code, that requires that my Client code know that I'm using http or servlet transport. My client doesn't know what transport its using - in fact, my customers can configure it anyway they want - they can use sslsocket, socket, http, servlet, whatever they put in the config file. (BTW: this is one of the great features of remoting - you actually don't even have to know how the messages are getting transported! I just pass an opaque locator URL that I get from a config file and connect my Client to it. I let remoting do everything for me - I just pass things in and get things back from invoke.) Forcing me to examine the HTTP response code just to know if the invocation failed or not breaks that separation.	1	1	https://issues.jboss.org/browse/JBREM-543
12540	JBREM-542	From summary: "This is limited in that requires JMX be available within the web container" I don't see how this fix really isolates you from requiring JMX. You will still need your web container to load in JMX classes won't you? Alot of remoting classes require JMX just to load (e.g. Connector implements the JMX interface MBeanRegistration; InvokerRegistry loads ServerInvoker classes which need JMX). e.g. when this new servlet runs, it makes this call: ServerInvoker[] serverInvokers = InvokerRegistry.getServerInvokers(); But ServerInvoker has alot of dependencies on JMX classes. So this servlet will still require JMX classes to be loaded. Or am I missing something?	1	1	https://issues.jboss.org/browse/JBREM-542
12541	JBREM-542	I have put back in the ability to us 'invokerName' param as well as the 'locatorUrl' (which is basically a copy of the patch provided. Only change is to not use the JBoss jmx implementation specific MBeanServerLocator. So is going to still require the servlet have access to jmx classes, but at least won't have to be the jboss specific implementation now (in the case they are using jdk 1.5 implementation). Since the Connector also requires jmx implementation classes (due to imports), this seems acceptable requirements. Also the point about not having to change config out of the box is a compelling one. web.xml config can now be: <?xml version="1.0" encoding="UTF-8"?> <!DOCTYPE web-app PUBLIC "-//Sun Microsystems, Inc.//DTD Web Application 2.3//EN" "http://java.sun.com/dtd/web-app_2_3.dtd"> <!-- The the JBossRemoting server invoker servlet web.xml descriptor $Id: web.xml,v 1.2 2006/07/17 03:44:00 telrod Exp $ --> <web-app> <servlet> <servlet-name>ServerInvokerServlet</servlet-name> <description>The ServerInvokerServlet receives requests via HTTP protocol from within a web container and passes it onto the ServletServerInvoker for processing. </description> <servlet-class>org.jboss.remoting.transport.servlet.web.ServerInvokerServlet</servlet-class> <init-param> <param-name>invokerName</param-name> <param-value>jboss.remoting:service=invoker,transport=servlet</param-value> <description>The servlet server invoker</description> <!-- <param-name>locatorUrl</param-name> <param-value>servlet://localhost:8080/servlet-invoker/ServerInvokerServlet</param-value> <description>The servlet server invoker locator url</description> --> </init-param> <load-on-startup>1</load-on-startup> </servlet> <servlet-mapping> <servlet-name>ServerInvokerServlet</servlet-name> <url-pattern>/ServerInvokerServlet/*</url-pattern> </servlet-mapping> </web-app> where can swap out the 'invokerName' and 'locatorUrl' params.	0	0	https://issues.jboss.org/browse/JBREM-542
12542	JBREM-455	numberOfRetries - specifies the number of times the client invoker will try to get a valid socket connection from the pool to use for invocatoins. Note, if not doing connection checking, which is the default, will not always know if is a valid connection until time of call is made (as in the case where the socket connection has timed out, which will still return true to the Socket.isConnected() method call). Default value is 3 (MicroSocketClientInvoker.MAX_RETRIES). numberOfCallRetries - specifies the number of time the client invoker will try to make an invocation while catching a java.net.SocketException. This is needed because even though the socket connection returned from the pool may appear to be valid, it is possible that it is not (due to timeout), so to protect from this, will retry the call by getting a new socket connection. How socket client invoker works in regards to socket connection checking: When a socket client invoker tries to make an invocation, it will ask its connection pool for the next available socket connection. If the pool does not have a socket connection available for use, a new one will be created. When an invocation has completed, the socket client invoker will see if pool has reached its max capacity (defined by the 'clientMaxPoolSize' property) and if it has not, it will place that socket connection in the pool, else the connection will be closed and disgarded. When the connection pool is asked for a socket connection, it can do one of two checks on the connection to see if it is valid. By default, the pool will just check the socket connection by calling its isConnected() method. This method will just return the state of the socket. It does not however indicate if the connection itself is still valid (as could have timed out, yet still be in connected state). If the 'socket.check_connection' property is turned on, the pool will first make a call to the server sending a single byte to verify that the connection is still good before returning it to the socket client invoker for use. If the connection is not good, meaning the ping to the server failed, the connection will be thrown away and will try again with the next connection in the pool (the number of retries for this is defined by the 'numberOfRetries' property). If the maximum number of retries is reached an no valid connection within the pool could be found, a new socket connection will be created. Therefore, the only way to truely know that the socket connection returned by the pool is valid for use is to check the connection first. Since the socket client invoker can not be absolutely sure that the socket connection from the pool is valid, it will allow for invocation retries. If upon making an invocation on the server a java.net.SocketException is thrown, the socket client invoker will try getting another socket connection and try to make the invocation again. The number of times the socket client invoker will do this is defined by the 'numberOfCallRetries' property. If the socket client invoker reaches its last try before erroring, it will flush the connection pool, so that a new socket connection will be created and will try the invocation one last time with this new connection. In general, not doing the connection check on a socket connection being returned from the pool is more performant as does not require and extra network call before making actual server invocation. In cases where the socket timeout is set to a large number and calls are being made frequently (so that the connections being returned from the pool have not had time to timeout), this can yeild around a 5 percent increase in performance. However, if the socket timeout is set to a low value and calls are not being made frequently, the likelyhood is that the connections within the pool have timeout and are not valid. Therefore, may require several invocation retries and eventually creating a new socket connection before are able to make a sucessful invocation, which is less peformant than the time it takes to check the connection while initially in the connection pool. There are too many factors involved, timeout setting, frequency of calls, size of pool, etc., to be able to make a general recomendation on which configuration would be best for all cases, however the default configuration is targeted for what is considered to provide the best performance under load.	0	0	https://issues.jboss.org/browse/JBREM-455
12543	JBREM-433	This can definitely be done in terms of a one-way invocation. But how would the response aggregation work in a request-reply scenario? Using a connection-oriented protocol, you'd be no better off than if you iterated over a series of connections, sending a request to each, and then waiting until a reply is received for each. It seems like you'd want to utilize UDP broadcast or multicast for this sort of thing. But in this case, you have no reliable way to figure out how many responses to expect.	1	1	https://issues.jboss.org/browse/JBREM-433
12544	JBREM-427	Is this for client, server, or both?	1	1	https://issues.jboss.org/browse/JBREM-427

#	Requirement	Questions	Answered	Successfully Answered	URL
12545	JBREM-366	Invoker Registry reference counting This fundamental change will change the InvokerRegistry to be the true gatekeeper of client invokers. When a Client is created, it will basically be a lame object (meaning it can not perform any real work), until its connect() method is called. The connect() method will call on the InvokerRegistry to get a client invoker to use. The InvokerRegistry will check to see if there has already been a client invoker created for the same invoker locator. If there has been, it will increment the count of Client's that have a reference to that client invoker instance and return it. If not, it will create a new one, set the reference count to one, and return it. When a Client disconnects (via call to disconnect() method), it will call the InvokerRegistry to destory the client invoker. The InvokerRegistry will check the number of Clients that have a reference to the client invoker instance and if is the last one, will disconnect the client invoker instance. Otherwise, it will just return. Client conversational methods (meaning requires being connected before can call it): addConnectionListener() addListener() setMarshaller() setUnMarshaller() If these methods are called before Client is connected, will throw an exception. Note, part of connecting a Client is to create/get the client invoker from the InvokerRegistry. Todos: 1. Set serialVersionUID on Client (only needed if uncomment connect() line within Client.readExternal() method. 2. Test case for multi-threaded, concurrent Client calls to server Issues: 1.Thinking about removing the Client.setInvoker() and Client.getInvoker(). Is there any real need to get this externally? Only problem is that ConnectionValidator uses the getInvoker() directly (and for good reason). 2. Wonder if should automatically connect a deserialized Client within the readExternal() method, which will require user to explicitly call connect on it or try to do it automatically (which would end up throwing serialization exception)? Maybe need a test case for this. 3. Still struggling with having to call connect() before can do invoke() call. Is this really needed? Is it really that big of a pain to do? 4. Should the client invoker ref counter be incremented when local client invoker created? Test case failures: org.jboss.test.remoting.configuration.ClientConfigurationMapTestCase - basically looks like config map passed to Client constructor should be used when creating ClientInvoker instance within InvokerRegistry (which it is), but also looks like this map should impact the end invoker locator value (adding the extra map entries as locator uri parameters). Is this correct? Don't think my changes should impact this. org.jboss.test.remoting.invoker.LocalInvokerTestCase (line160) - this test creates a Client and a Connector with the same locator uri (thus causing a LocalClientInvoker to be created). The Connector is stopped, which will cause the InvokerRegistry to disconnect the LocalClientInvoker. Then a new Connector is created with the same invoker uri and the Client tries to make another call, but fails because its connected state was set to false. So should this be the default behavior or should InvokerRegistry *not* disconnect the LocalClientLocator when the Connector is stopped? org.jboss.test.remoting.lease.LocalLeaseTestCase - invalid test case now because no longer do client leasing for local invokers - http://www.jboss.com/index.html?module=bb&op=viewtopic&p=3945122#3945122 org.jboss.test.remoting.transporter.proxy.TransporterProxyTestCase - failing because connect() is not automatically being called Client in its readExternal() method. Code cleanup: LocalClientInvoker - disconnect() Client - disconnect(), readExternal() MicroRemoteClientInvoker - disconnect()	1	1	https://issues.jboss.org/browse/JBREM-366
12546	JBREM-363	Remaining issues: 1. Need to verify that multiplex is setup to do true multiplex for callbacks 2. Should the CallbackPoller deliver the callbacks on a separate thread? If have a ton of callbacks, could slow down the timer thread (and would possibly even have multiple threads pulling callbacks at the same time). 3. PortUtil.findFreePort() is very slow (and is what is being used by default when creating internal callback server Connector).	0	0	https://issues.jboss.org/browse/JBREM-363
12547	JBREM-316	Assume you are referring to org.jboss.remoting.transport.coyote.ssl.RemotingSSLSupport which reuses code from org.apache.tomcat.util.net.SSLSupport? There is also org.jboss.remoting.transport.coyote.ssl.RemotingSSLImplementation and org.jboss.remoting.transport.coyote.ssl.RemotingServerSocketFactory, which extend tomcat classes, but does not reuse any of that code directly (just via linking). So removing the JBoss header from top of SSLSupport and leaving the rest should be ok?	1	1	https://issues.jboss.org/browse/JBREM-316
12548	JBREM-316	So I totally missed this. Since Remy included them, I thought they were original classes that were needed to comply to the tomcat interface signatures. Didn't realize they were a copy (although looks like were mostly Remy's anyways, so entitled to change license?) . So the following are files that were copied (more or less): org.apache.catalina.connector.ClientAbortException org.apache.catalina.connector.CoyoteInputStream org.apache.coyote.tomcat4.CoyoteOutputStream org.apache.catalina.connector.InputBuffer org.apache.catalina.connector.OutputBuffer I guess Remy did this so didn't have to include the jars they were in on the classpath for just the few classes that were needed? So can we just label the corresponding classes and the RemotingSSLSupport with the original Apache license and leave the rest LGPL? org.jboss.remoting.transport.coyote.CoyoteInvoker, for example, is all JBoss specific. Or is it just easier from management perspective to re-label license for all?	1	1	https://issues.jboss.org/browse/JBREM-316

#	Requirement	Questions	Answered	Successfully Answered	URL
12549	JBREM-311	The following covers which remoting jars and thirdparty jars will be needed depending on what features of remoting will be used. Remoting jars: jboss-remoting.jar (734K) - this binary contains all the remoting classes. This is the only remoting jar that is needed to perform any remoting funtion within JBoss Remoting. Since some may want to better control size of the binary footprint needed to use remoting, the remoting classes have been broken out into multiple remoting binaries based on their function. There are three categories of these binaries; core, detection, and transport. core: jboss-remoting-core.jar (204K) - contains all the core remoting classes needed for remoting to function. If not using jboss-remoting.jar, then jboss-remoting.core.jar will be required. detection: jboss-remoting-detection (40K) - contains all the remoting classes needed to perform automatic discovery of remoting servers. It includes both the jndi and multicast detector classes as well as the network registry classes. transport: jboss-remoting-socket.jar (41K) - contains all the classes needed for the socket and sslsocket transports to function as both a client and a server. jboss-remoting-socket-client.jar (21K) - contains all the classes needed for the socket and sslsocket transports to function as a client only. This means will not be able to perform any push callbacks or sending of streams using this jar. jboss-remoting-http.jar (59K) - contains all the classes needed for the http and https transports to function as a client and a server. jboss-remoting-http-client.jar (18K) - contains all the classes needed for the http, https, servlet, and sslservlet transports to function as a client only. This means will not be able to perform any push callbacks or sending of streams using this jar. jboss-remoting-servlet.jar (10K) - contains all the classes needed for the servlet or sslservlet transports to function as a server only (also requires servlet-invoker.war be deployed within web container as well) jboss-remoting-rmi.jar (20K) - contains all the classes needed for the rmi and sslrmi transports to function as a client and a server. jboss-remoting-multiplex.jar (126K) - contains all the classes needed for the multiplex and sslmultiplex transports to function as a client and a server. Use of this jar also requires jboss-remoting-socket.jar be on classpath as well. Thirdparty jars: This section covers which thirdparty jars are required based on the feature or transport to be used. Remember, whenever see jboss-remoting-XXX.jar mentioned, they can all be replaced with just the jboss-remoting.jar. all remoting servers: - jboss-remoting-core.jar - jboss-common.jar - jboss-jmx.jar - log4j.jar all remoting clients: - jboss-remoting-core.jar - jboss-common.jar - jboss-jmx.jar - log4j.jar - concurrent.jar Note: concurrent.jar needed because of org.jboss.util.id.GUID used to create session id within Client (http://jira.jboss.com/jira/browse/JBREM-549) Remoting requires the use of JMX classes. It does not require the JBoss implementation (jboss-jmx.jar) of JMX in order to function correctly, so can replace jboss-jmx.jar with another JMX implementation library (or exclude it if using jdk 1.5 or higher, which has JMX implementation built in). multicast detection - jboss-remoting-detection.jar - concurrent.jar - dom4j.jar jndi detection - jboss-remoting-detection.jar - concurrent.jar - dom4j.jar - jnpserver.jar (for jndi api classes) The dom4j.jar for use of detection is required because using jboss-jmx.jar. socket server: - jboss-remoting-socket.jar socket client - jboss-remoting-socket-client.jar http server - jboss-remoting-http.jar - tomcat-coyote.jar - tomcat-util.jar - commons-logging-api.jar - tomcat-http.jar Note: need tomcat-apr.jar and tcnative-1.dll/tcnative-1.so on system path if want to use APR based tomcat connector http client - jboss-remoting-http-client.jar servlet server - servlet-invoker.war (deployed in web container) - jboss-remoting-servlet.jar servlet client - jboss-remoting-http-client.jar rmi server and client - jboss-remoting-rmi.jar multiplex server and client - jboss-remoting-socket.jar - jboss-remoting-multiplex.jar if use JBoss Serialization, will need to include jboss-serialization.jar and trove.jar	1	1	https://issues.jboss.org/browse/JBREM-311
12550	JBREM-305	For the user, of course they should be able to use the JAX-WS API - but Remoting does not provide this API. My question is, what does Remoting add here? It sounds like you want Remoting to act not so much as a remote invocation layer, but rather more as a generic transport facade. Is this accurate?	1	1	https://issues.jboss.org/browse/JBREM-305
12551	JBREM-288	Ron, can you add an entry for the multiplex transport and then close this issue? Thanks. -Tom	1	1	https://issues.jboss.org/browse/JBREM-288
12552	JBREM-257	Per my dev mailing list reply: "Remoting will throw the server side exception thrown by the server-side handler as though it was called locally. This is by design and how I believe it should be. Remoting should not force the client caller into handling application exceptions via a different process than calling it locally. This makes it easier for the client caller and is sometimes actually a local call anyways (if running within the same vm). If there is an error that comes from remoting, it will be thrown as a runtime exception and will have the stack trace indicating this came from a remoting error (marshalling error, etc.). I see no good argument for it to be otherwise. " So what is the use case for wanting client stack trace? If is thrown from server, then knowing the call stack on the client side does not seem to be relevant as the issue is on the server side. Is fairly easy to change this behavior to wrap the server side exception in another exception and throw that on the client side, but now need to define what that exception would be. For example, throw RemoteException, like is done with RMI, but now are forcing client user to now know if is a remote vs. local call, which, seems to me to be unnecessary.	1	1	https://issues.jboss.org/browse/JBREM-257
12553	JBREM-257	Why is this needed? Because yes, the exception was initiated on server, but you won't know what piece of code on the client initiated the remote invocation. Also *DO NOT* wrap the exception, why? Well, for EJB for instance, you may be throwing an application exception that you want to be able to catch in the client. Really, setStackTrace is simple.	1	1	https://issues.jboss.org/browse/JBREM-257
12554	JBREM-255	The 'ResponseCode' is present, but is it intenional that there still is key/value pair null=[HTTP/1.1 200 OK] ? 2006-01-16 14:52:09,531 DEBUG [org.jboss.ws.binding.soap.SOAPMessageUnMarshaller] getMimeHeaders from: {X-Powered-By=[Servlet 2.4; JBoss-5.0.0alpha (build: CVSTag=HEAD date=200601101256)/Tomcat-5.5], ResponseCodeMessage=OK, null=[HTTP/1.1 200 OK], Date=[Mon, 16 Jan 2006 13:52:09 GMT], Content-Type=[text/xml], Server=[Apache-Coyote/1.1], HEADER={SOAPAction=", Content-Type=text/xml}, Transfer-Encoding=[chunked], ResponseCode=200}	1	1	https://issues.jboss.org/browse/JBREM-255
12555	JBREM-237	In which environment are you talking (meaning which versin of jboss, which jmx remoting implementation, which jdk, etc.)?	1	0	https://issues.jboss.org/browse/JBREM-237
12556	JBREM-233	Forgot another question. What information do you want about the client? I won't have much available by default, other than client session id and subsystem. You need anything else?	1	1	https://issues.jboss.org/browse/JBREM-233
12557	JBREM-233	I am unsure as to what the API looks like for this. On the server side I register a ConnectionListener, but on what object do I register it? someObject.registerConnectionListener(myServerSideConnectionListener) What is the type of someObject and how do I get a reference to it? Any chance of an example, also more info on the structure of the "client info" would be good.	1	1	https://issues.jboss.org/browse/JBREM-233
12558	JBREM-233	Tom, one thing I don't understand. In our case (JBossMessaging) we call connectionFactory.createConnection() to create a JMS connection. This basically creates a load of JBossMessaging specific objects on the server side, then returns. Then on the client side we create a remoting Client object that represents the physical JMS connection, which is then used for any subsequent traffic for the connection. If no invocations are made on that client object, and then the connection fails, e.g. the client process crashes, then how does the server know the client session id for the client that has failed? If the server doesn't know the client session id then it can't clear up the server side resources. How can we get the client session id plus some arbitrary meta data (in our case the jms connection id) from the client to the server before any invocations have been made? I'm guessing this needs to be done in the Client.connect() method. We need the meta-data so we can map the remoting session id to our connection id, otherwise it is meaningless to us. Am I missing something?	1	1	https://issues.jboss.org/browse/JBREM-233

#	Requirement	Questions	Answered	Successfully Answered	URL
12559	JBREM-233	Once the connect() method is called on the remoting Client class, it will send an initial ping request to the server. Technically, this will happen even if don't call connect() and just start calling invoke(), as will call connect() for you on the first invoke() method. This initial ping request will send the client session id (which is a GUID that is created when the Client is constructed). You are right that there is no good way to correlate this client session id with anything releated to users environment. Since Ron added the code to include metadata Map when creating the client, will see if I can include that information with the ping request, as well as the Client instance that is passed to the ConnectionListener's handleConnectionException() method. Will that work for you?	1	1	https://issues.jboss.org/browse/JBREM-233
12560	JBREM-233	I think there is an edge case here: If the session id/meta-data is passed on the first ping, then what happens if the connection fails after it is established but before the first ping is sent? In that case we still need to clear up server side resources. I'm not sure how we would deal with that apart from doing an application level ping which I'd like to avoid.	1	1	https://issues.jboss.org/browse/JBREM-233
12561	JBREM-233	If I create a Client with some metadata using the new constructor, is that metadata passed on every invocation made using that client? I'm assuming it's only passed on the first invocation, since that's the only time it's needed. (Otherwise we are needlessly pushing data over the wire)	1	0	https://issues.jboss.org/browse/JBREM-233
12562	JBREM-195	Think this was due to a particular implementation problem within the rmi invoker implementation, which should be corrected now. Do you have a specific test case I could use to verify this? Thanks. -Tom	1	1	https://issues.jboss.org/browse/JBREM-195
12563	JBREM-195	Sorry. Deleted previous comment which was: "I wrote a simple test case to try and reproduce (using raw rmi invocations vs jboss remoting rmi). Although is a little better now than was previously, is stil about twice as slow. We have not done any profiling to date to see where can optimize more. Is there any reason that you could not use socket transport? Also same test using raw socket invocations vs jboss remoting sockets and is much better in terms of performance. The test (which just sends and receives simple String), doing 250K calls, produced following on my laptop: rmi remoting: 69821 milliseconds raw rmi: 35661 milliseconds socket remoting: 75118 milliseconds raw sockets: 81277 milliseconds" Was meaning to update the information. These results are actually incorrect. Was meaning to update with correct results. They are hardly comforting. Will be working on optimizations and profiling to get better results. Since this was just a very quick test case I threw together, was wondering if you might have a better "apples" to "apples" test case between plain old rmi and remoting rmi that I could use when profiling? Thanks. -Tom Update results are: rmi remoting: 69821 milliseconds raw rmi: 35661 milliseconds socket remoting (with java serialization): 74567 milliseconds socket remoting (with jboss serialization: 69470 milliseconds raw sockets (1 thread accepting request): 47538 milliseconds raw sockets (10 thread accepting request): 47588 milliseconds	1	1	https://issues.jboss.org/browse/JBREM-195
12564	JBREM-188	Per http://www.ietf.org/rfc/rfc2616.txt?number=2616 9.4 HEAD The HEAD method is identical to GET except that the server MUST NOT return a message-body in the response. The metainformation contained in the HTTP headers in response to a HEAD request SHOULD be identical to the information sent in response to a GET request. This method can be used for obtaining metainformation about the entity implied by the request without transferring the entity-body itself. This method is often used for testing hypertext links for validity, accessibility, and recent modification. The response to a HEAD request MAY be cacheable in the sense that the information contained in the response MAY be used to update a previously cached entity from that resource. If the new field values indicate that the cached entity differs from the current entity (as would be indicated by a change in Content-Length, Content-MD5, ETag or Last-Modified), then the cache MUST treat the cache entry as stale.	1	1	https://issues.jboss.org/browse/JBREM-188
12565	JBREM-185	How was this resolved, where should the keepAliveTimeout be set? Documentation still indicates that keep-alive timeout is not configurable	0	0	https://issues.jboss.org/browse/JBREM-185
12566	JBREM-153	Change committed. Thanks Ron. If you don't mind, could you e-mail me (tom@jboss.org)? Thanks.	1	1	https://issues.jboss.org/browse/JBREM-153
12567	JBREM-152	Made changes to SocketServerInvoker to handle the case that previous invoker has not finished its cleanup. Should be able to click the 'Version Control' link to see the code change. I was unable to create a test case to reproduce this. Would you happen to have one? Would like to check it in as part of the test run.	1	1	https://issues.jboss.org/browse/JBREM-152
12568	JBREM-152	Hey Ron. Think this one is fixed, but wanted to see if you could verify? Don't think I could come up with a test case for it.	1	1	https://issues.jboss.org/browse/JBREM-152
12569	JBREM-93	It just wraps any Throwable thrown when calling callBackClient.invoke(internalInvocation,callback.getRequestPayload()), so can just get original exception by calling getCause() on the HandleCallbackException thrown. Not sure I understand your request. Is it that you want the original exception throw from callBackClient.invoke() to be throw out of handleCallback() method, without wrapping it? Maybe you can explain use case?	0	0	https://issues.jboss.org/browse/JBREM-93
12570	JBREM-93	Yes, I guess I can use getCause() to get the original exception. Is this behaviour documented somewhere, so I can rely on it? Won't it change accross releases? If I didn't look in the code, I had no way of knowing I can do that. Since I wasn't able to find it documentated, I was reluctant to use it. On the other hand, if you have handleCallback() returning an Object, the interface would be much more intuitive. Any chance to include this is any of your upcoming releases?	1	1	https://issues.jboss.org/browse/JBREM-93
12571	JBREM-93	I don't think this is documented anywhere. The real problem lies in that there can be many exceptions that are raised that have nothing to do with the actual callback handler receiving the callback (i.e. network connection problem). Another major issue is that the client may get the callbacks by polling, so even if the client has a problem processing the callback, there is no way to provide this feedback to server (and is up to client if is push or pull, so no way for server side to rely on this behavior). I would prefer to change the HandleCallbackException than return an Object from the handleCallback() method because of the forementioned problem of not knowing if is push or pull (as would always have to return some default value if was pull, like null, since would not be able to get it from the client till sometime later). So if I added something to HandleCallbackException like getUserException() which would return original exception thrown by client (if there was one, otherwise return null), would that work? Also, would it be useful to provide a way of knowing if CallbackHandler is using pull or push model? Maybe a use case would help me understand what you are after a little better.	0	0	https://issues.jboss.org/browse/JBREM-93
12572	JBREM-70	is sun jmx RI and sun jaxp required in classpath?	0	0	https://issues.jboss.org/browse/JBREM-70
12573	JBREM-69	Implementation pretty much done. Only remaining issues are: - is jmxmp required default by spec for the protocol? - what is the default port? Spec says, "0 means a default or anonymous port, depending on the protocol." Assume this mean default port for protocol? For example, 80 for http?	0	0	https://issues.jboss.org/browse/JBREM-69
12574	JBREM-63	Is this just for jboss-head, or is this needed for 4.0 branch as well?	0	0	https://issues.jboss.org/browse/JBREM-63

#	Requirement	Questions	Answered	Successfully Answered	URL
12575	JBREM-51	Have part of the remote classloading implemented for marshall loading from the server. Need to expand this to general remote classloading both ways, but will require implementing security around this.	0	0	https://issues.jboss.org/browse/JBREM-51
12576	JBREM-47	Have part of the remote classloading implemented for marshall loading from the server. Need to expand this to general remote classloading both ways, but will require implementing security around this.	0	0	https://issues.jboss.org/browse/JBREM-47
12577	JBREM-39	Is there an ability to use an external thread pool service like the org.jboss.util.threadpool.ThreadPool, org.jboss.util.threadpool.BasicThreadPool used by jbossmq and naming?	1	1	https://issues.jboss.org/browse/JBREM-39
12578	JBREM-39	Nope. The socket invoker manages threads manually (as is done with the pooled invoker). The http invoker uses the oswego PooledExecutor. The rmi invoker does not have any direct interaction with thread management. I wouldn't mind adding ability to plug in threadpools, only problem is how to make this generic? Would want to be able to accept jboss, oswego, etc., but is no standard interface for these, right?	0	0	https://issues.jboss.org/browse/JBREM-39
12579	JBREM-35	It needs to be discussed who this would work with the WS4EE deployment model for JSE. As a reminder, it uses the <servlet-class> element to the declare the endpoint implemenation bean. What would be the benefit of running server side JBossWS with a dependency on Remoting rather than Tomcat?	0	0	https://issues.jboss.org/browse/JBREM-35
12580	JBREM-27	One additional note: You seem to use the originalURI in the transport() method of HTTPClientInvoker class: String targetURL = getLocator().getOriginalURI(); But i think that getLocator().getURI() is more correct. For example, when using annotations we sometimes use the following: @RemoteBinding(clientBindUrl="http://0.0.0.0:8888/SharedStateManager",jndiBinding="SharedStateManagerhttp") 0.0.0.0 is substituted by the real IP-number of the server during the deployment. Therefore, the originalURI of the locatoris http://0.0.0.0:8888/SharedStateManager, but URI field is correct and set to: http://x.y.z.w:8888/SharedStateManager where x.y.z.w is the IP of the server. With your current code, there is no easy way for a client to get the correct locator, since http://0.0.0.0:8888/SharedStateManager is returned. But may be it is also the same bug somewhere else, which makes use of originalURI, instead of URI. The fix is obvious and we hope to see it soon in the main branch. Best regards, Ivan	1	0	https://issues.jboss.org/browse/JBREM-27
12581	REM3-154	Are you sure it's hanging? This test can take a long time, especially on CPU-constrained hardware. From the stack trace, it looks like it is busy executing the test, not hung.	1	1	https://issues.jboss.org/browse/REM3-154
12582	REM3-154	Is the test using CPU when it times out, or is it idle?	1	1	https://issues.jboss.org/browse/REM3-154
12583	REM3-154	Is it just on Windows or other platforms as well?	1	1	https://issues.jboss.org/browse/REM3-154
12584	REM3-154	Can you give the exact version (or git revision) of Remoting and XNIO being used? I cannot reproduce this locally at all.	1	1	https://issues.jboss.org/browse/REM3-154
12585	REM3-154	Can you include the output of "ifconfig -a" and the contents of your /etc/hosts file? Use a private comment if you wish.	1	1	https://issues.jboss.org/browse/REM3-154
12586	REM3-154	Awesome. Thanks David. Could you link the commit as well?	1	0	https://issues.jboss.org/browse/REM3-154
12587	REM3-89	Here's the patch.. (somewhat dirty due to automatic cleaning in Eclipse)	1	1	https://issues.jboss.org/browse/REM3-89
12588	REM3-56	What MBean properties should be exported? What did R2 expose before?	1	1	https://issues.jboss.org/browse/REM3-56
12589	REM3-56	Here's the draft: http://anonsvn.jboss.org/repos/jbossremoting/remoting3/trunk/jboss-remoting/src/main/java/org/jboss/remoting3/management/ There are two MXBeans: EndpointMXBean and ConnectionMXBean. They are almost identical except that ConnectionMXBean has close/forceClose operations while EndpointMXBean does not and that you can list the registered services with EndpointMXBean while you can't with ConnectionMXBean. They both provide some counters via the Counters object. Once agreed, I will finish documentation. One missing piece though is how we register an MBean for a connection. We could register all EndpointMXBeans automatically but we can't do that for Connections because there will be much more connections and registering that many connections will probably pollute the JMX console with overinformation. What user wants might be to register only the ConnectionMXBeans that meet some criteria..? Long time ago, I wrote a JMX operation that accepts some expression so that only the MBeans that meets the specified condition, but I'm not sure it's a good idea since it's a lot of work.	1	1	https://issues.jboss.org/browse/REM3-56
12590	REM3-56	If the number of connections are expected to be small, it might be fine as you said. As long as we have an option that disables JMX exports, it will be fine. Authentication failures could be represented as rejected clients? (i.e. clientCounters.failure) What information else could be provided by EndpointMXBean / ConnectionMXBean by the way? A user might want to know where exactly the endpoint / connection is pointing at. Will the MBean object name be enough?	1	1	https://issues.jboss.org/browse/REM3-56
12591	REM3-56	Then maybe we could add connectionCounters? +1 for not registering local connections. If we need to provide the information for connections, we could add ConnectionInfo like I did for ServiceInfo. What attribute would you suggest other than the connection ID and its timestamp?	1	1	https://issues.jboss.org/browse/REM3-56
12592	REM3-38	Is this still an issue now that we switched to JBMAR? At least I cannot find CoreSession or any stream detection logic in the stream package.	1	0	https://issues.jboss.org/browse/REM3-38
12593	REM3-29	Is there any progress regarding this issue? Are there other ways/workaround to share client kerberos login credentials amongst all remote sessionbeans?	0	0	https://issues.jboss.org/browse/REM3-29
12594	REM3-29	Are you actually planning to put a new feature in a CR2 release?	0	0	https://issues.jboss.org/browse/REM3-29
12595	REM3-24	What about just returning IoFuture on close()? Perhaps closeAsync() could return IoFuture and close() could be synchronous graceful shutdown. When do we need immediate shutdown btw?	1	0	https://issues.jboss.org/browse/REM3-24
12596	REM3-23	SSLContexts should be allowed to be reused regardless if the connection was dropped, closed cleanly, or there was no prior connection. That is, a user should be able to specify an option when making a connection attempt, just like he/she can do for socket options. On a dropped connection, any in-progress requests should be notified (via IoFuture) so that the client is aware of possibility of duplicate requests on redelivery or dropped requests on non-redelivery. i.e. it should never be retried silently. What other contextual information would we need to retain on disconnection for quick resilence? If it doesn't take much time and it's not CPU intensive, we might not need this feature, except for SSLContext reuse?	1	1	https://issues.jboss.org/browse/REM3-23
12597	JBSER-91	Should we re-package 1.0.2.GA and upload it into sourceforge or should we do it on 1.0.3.GA only?	1	0	https://issues.jboss.org/browse/JBSER-91
12598	CMTOOL-103	Decreasing priority, the server boots if referenced modules are missing, just logging an error: {code} 19:31:21,784 ERROR [org.jboss.as.controller.management-operation] (ServerService Thread Pool -- 49) WFLYCTL0013: Operation ("add") failed - address: ([("subsystem" => "naming"), ("binding" => "java:global/foo/bar/factory")]) - failure description: "WFLYNAM0052: Could not load module org.foo.bar:main" {code}	0	0	https://issues.jboss.org/browse/CMTOOL-103

12599	CMTOOL-85	Does it mean that the default configuration of {{elytron}} subsystem will be added during a migration? Just this and nothing more/less?	0	0	https://issues.jboss.org/browse/CMTOOL-85
12600	CMTOOL-85	I cannot see any other CMTOOL jira linked to EAP7-709. Do you plan any other works related to EAP7-709 support?	0	0	https://issues.jboss.org/browse/CMTOOL-85
12601	JBTIS-1082	Hi [~naciao]! [~pleacu] mentioned on Mattermost that we need to remove the SwitchYard-specific doc/help files from the Fuse Tooling docs and migrate them into the SwitchYard world since we're pulling SY out of Fuse as it moves to Dev Studio. Can you or [~tcohen] or [~jmurphey] create a PR against the Fuse Tools docs and let us know what we do to make this transition? Thank you!	1	1	https://issues.jboss.org/browse/JBTIS-1082
12602	JBTIS-1071	[~lhein] [~apodhrad] - Hey - Id like to execute the following command in the following directories to clean up CI cruft - I wanted to pass it by you first: cd /media/TOOLS-ssh/neon/integration/updates/integration-stack/fuse-tooling/ find . -name "org*.jar" -type f -mtime +10 -delete This will clean up all CI org*.jars greater than 10 days old. WDYT?	0	0	https://issues.jboss.org/browse/JBTIS-1071
12603	JBTIS-1057	10800 seconds timeout is set in _tests/pom.xml_ --> _surefire.timeout_. I tried to prolong it to 21600 seconds.	1	1	https://issues.jboss.org/browse/JBTIS-1057
12604	JBTIS-1044	Do you plan to use sha256 for DevstudioIS 10.1.0.GA?	1	1	https://issues.jboss.org/browse/JBTIS-1044
12605	JBTIS-1040	Hey [~apodhrad] - sorry - still confused. I do this: 1. Install Devstudio 10.2.0.GA 2. Add the following vm args to devstudio.ini -Djboss.discovery.directory.url=https://devstudio.redhat.com/10.0/staging/updates/integration-stack/discovery/10.1.0.CR2/devstudio-directory.xml -Djboss.discovery.site.integration-stack.url=https://devstudio.redhat.com/10.0/staging/updates/integration-stack/discovery/10.1.0.CR2/ 3. Start the Devstudio and open Red Hat Central 4. Type 'fuse' into the text field in the middle of the RH Central (nothing is found) 5. Switch to the tab 'Software/Update' 6. Check 'Enable Early Access' 7. Switch back to the tab 'Getting Started' (now you can see the fuse quickstart) new steps 6. Select 'JBoss Fuse Development' 7. Install it 8. When it restarts into the 'Getting Started' tab - the Fuse quickstarts are available. In your scenario, JBoss Fuse Development still isn't installed, I don't see the Fuse quickstart. I still get nothing found when I perform step 7. If I select 'JBoss Fuse Development' and install it - then go back to 'Getting Started', I see the Fuse quickstarts (without EA enabled). This behavior is as I would expect. Are you using a new workspace?	1	1	https://issues.jboss.org/browse/JBTIS-1040
12606	JBTIS-1040	Thanks [~fbricon] - that looks like it works. Now when we switch Eclipse platforms it's possible that Fuse will return to EA - will we have the original issue again?	1	1	https://issues.jboss.org/browse/JBTIS-1040
12607	JBTIS-1032	I reproduced this issue but I am not able to find a cause of the problem. The issue appears only when you run test via command line with bundle eclipse. I found out that there is weird version of drools eclipse plugin (7.0.0.201701021409) although there should be (6.5.0.CR1). Are there any related changes in plugin installation?	1	1	https://issues.jboss.org/browse/JBTIS-1032
12608	JBTIS-1008	[~pleacu] There might be an issue with the Target Platform or the way I consume it, the new features requires to have one bundle in exploded mode (org.eclipse.cdt.core.win32.x86_64) otherwise we hit a JVM crash as I reported in [JBDS-4227] usually I'm using the TP as directory folder but in this case the bundle is jar. I tried to configure my local TP as an update site but I have several errors: !screenshot-1.png|thumbnail! Do you know if it is an issue with the generated TP which should have the jar exploded? or if it is the way that I'm consuming the TP?	1	1	https://issues.jboss.org/browse/JBTIS-1008
12609	JBTIS-1008	[~aurelien.pupier] - Hey Aurelien - I've released the 4.4.1.CR2 JBTIS TP with the missing openshift plugins. I plan on closing this Jira since it's original issue is resolved - can you open a new Jira on the Eclipse issue with the local TP?	1	1	https://issues.jboss.org/browse/JBTIS-1008
12610	JBTIS-1003	Hey [~apodhrad] - sorry - I'm a little fuzzy today :) Where exactly would I add this id? Your POM defined the repositories (or your settings.xml). There already is a composite at http://download.jboss.org/jbosstools/updates/requirements/neon/ The .target file defines a 'repository location'. --p	1	1	https://issues.jboss.org/browse/JBTIS-1003
12611	JBTIS-949	Hey Andrej - by calling it a 'runtime-installer' it seems to imply that it installs just runtimes and not the tooling as well. Can we combine 'standalone' and runtime somehow - wdyt?	1	1	https://issues.jboss.org/browse/JBTIS-949
12612	JBTIS-848	[~jomarko] please provide more details about this issue. Which test is failing? Is there any stacktrace?	1	1	https://issues.jboss.org/browse/JBTIS-848
12613	JBTIS-844	Hi [~aurelien.pupier], could you provide steps how we can verify the issue. please? Btw is this the only one bug fix whoch was added or are there more commits included?	1	1	https://issues.jboss.org/browse/JBTIS-844
12614	JBTIS-819	[~pleacu], where can I see the new icons?	1	1	https://issues.jboss.org/browse/JBTIS-819
12615	JBTIS-799	[~djelinek] I presume this will be a part of your tests. Am I right?	1	0	https://issues.jboss.org/browse/JBTIS-799
12616	JBTIS-792	Do you have any reason for preserving _WARTest.java_ and _DynamicVdbTest.java_? You commented out all test methods, so these classes are useless. I suggest to remove them completely.	1	1	https://issues.jboss.org/browse/JBTIS-792
12617	JBTIS-784	For which version(s) of integration stack are these targetting? Is it only for Mars? What about Neon? There is no automated update for the ide-config.properties file. We update it by hand in github as needed, then push the updated file to download.jboss.org. You have the correct file, but you may need to update it in more than one place since you probably want to update the jboss.discovery.site.integration-stack-sap.url for devstudio 9 and 10, as well as jbosstools 4.3 and 4.4, If you need to source data from TWO different update sites, then you need a composite update site to merge them into one, which can then be referenced by the jboss.discovery.site.integration-stack-sap.url variable But.. http://download.jboss.org/jbosstools/mars/development/updates/integration-stack/extras/ currently only lists one child site, http://download.jboss.org/jbosstools/mars/development/updates/integration-stack/extras/jboss-fuse-sap-tool-suite/8.0.0.Alpha1/all/ And there's a stable release site as well: http://download.jboss.org/jbosstools/mars/stable/updates/integration-stack/extras/ http://download.jboss.org/jbosstools/mars/stable/updates/integration-stack/extras/jboss-fuse-sap-tool-suite/8.0.0.Beta1/all/ Not sure why you guys aren't linking to the newer release. [~pleacu] can maybe explain why the version available in Central for JBT 4.3.x is your 8.Alpha, not 8.Beta. So, best person to talk to here is Paul. I'll move this issue to JBTIS for you.	1	0	https://issues.jboss.org/browse/JBTIS-784
12618	JBTIS-758	There is a problem with container, because number of edit parts in Camel Editor are same for collapsed/expanded situation (eg. collapse/expand 'Choice' component in fuse project with CBR, Spring). How is possible to test collapse/expand feature of Camel Component ? [~apodhrad]	1	1	https://issues.jboss.org/browse/JBTIS-758
12619	JBTIS-758	What about test size of the choice component CamelComponentEditPart.getBounds()?	1	1	https://issues.jboss.org/browse/JBTIS-758

12627	JBTIS-654	[~pleacu] - is there any chance we can update the summary (step 7) of the installer to include the "additional bits" the user selects? or select all the fuse bits by default on step 6?	1	1	https://issues.jboss.org/browse/JBTIS-654
12628	JBTIS-654	[~pleacu] I'm on fedora and only question I'm asked is to accept the licence. How do I specify to include Fuse?	1	1	https://issues.jboss.org/browse/JBTIS-654
12629	JBTIS-654	[~aileenc] - hmmm - is this what you downloaded? {code} ls -lt jboss-devstudio-is-installer-9.0.0.CR1a.jar -rw-rw-r--. 1 pleacu pleacu 992043163 Apr 14 16:46 jboss-devstudio-is-installer-9.0.0.CR1a.jar {code} downloaded from https://devstudio.redhat.com/9.0/snapshots/updates/integration-stack/jboss-devstudio-is-installer-9.0.0.CR1a.jar Are you running java 1.8? I'm on FC23 - which Fedora are you running? Thkx!	1	1	https://issues.jboss.org/browse/JBTIS-654
12630	JBTIS-654	This is what i see when I run the Installer: no option to select Fuse. What am I missing? ---------- This document can be seen online at http://www.redhat.com/licenses/jboss_eula.html. Archived 2014-07-31 18:00 GMT. press 1 to accept, 2 to reject, 3 to redisplay 1 [Starting to unpack] [Processing package: P2 Director Application (1/3)] [Processing package: Red Hat JBoss Developer Studio 9.1.0.GA (2/3)] [Processing package: Red Hat JBoss Developer Studio 9.1.0.GA Metadata Generation (3/3)] [Unpacking finished] [Console installation done]	1	1	https://issues.jboss.org/browse/JBTIS-654
12631	JBTIS-654	[~aileenc] That's actually good news - you definitely need java 8. Did you try my previous comment on your linux box w/ java 8?	1	1	https://issues.jboss.org/browse/JBTIS-654
12632	JBTIS-654	On the topic of Java 8 vs 7 - based JBoss Tools should actually tell you there are bundles that did not start due to bad java version. Did that not happen ? Also the installer should warn you if using wrong java version - if not that is a bug.	1	1	https://issues.jboss.org/browse/JBTIS-654
12633	JBTIS-654	[~pleacu] Couple of questions regarding runtime configuration in the installer... I agree that not everybody will want a fuse-only tooling installer, but I think from an evaluator point of view it would be awesome to get a one-click-and-go install process that not only installs JBDS + Fuse tooling in a location of the user's choosing, but pre-configures a Fuse runtime as well. If we want to compete in the same space as Mulesoft and Talend, having some sort of all-in-one installer as an option would definitely help get us part of the way. Can we add such options to the installer as we move to the next phase of this effort?	1	1	https://issues.jboss.org/browse/JBTIS-654
12634	JBTIS-654	[~bfitzpat] - that makes sense to me but we would need to proceed carefully. Random thoughts: * We can't get the Fuse Tooling production build (and the JBDSIS build by extension) caught on the Fuse Runtime (we need to preserve the ability to release autonomously). * The stand-alone IS installer today is just shy of 1Gb - do we have an idea what the toal aggregate size would be if we add the Fuse runtime? * If we add the Fuse runtime should we consider a Fuse stand-alone installer (not JBDSIS - just Fuse)? * Should we do both - an aggregate JBDSIS stand-alone installer which includes Fuse Tooling (and the rest of the stack) and a separate Fuse stand-alone isntaller containg just Fuse Tooling and runtime? * Any changes to the JBDS installer mechanism would have to occur in 10.x (Neon) if we find something that needs changes there.	1	1	https://issues.jboss.org/browse/JBTIS-654
12635	JBTIS-654	I'm building this now via Jenkins on-demand: https://devstudio.redhat.com/9.0/staging/updates/integration-stack/9.0.1-SNAPSHOT/devstudio-is-installer-9.0.1-SNAPSHOT.jar Should we close this Jira and create new ones on how we'd like to modify what we now have?	1	1	https://issues.jboss.org/browse/JBTIS-654
12636	JBTIS-654	Why do u want to blow up the size of the installer in that way? Sometimes less is more.	1	1	https://issues.jboss.org/browse/JBTIS-654
12637	JBTIS-654	btw. aren't you also saying it is annoying having to install Fuse after installing devstudio despite it has builtin support to automatically download it when users start the Fuse wizard - does the same reasoning not apply for runtimes ? Some users like it simply to work when installed.	1	1	https://issues.jboss.org/browse/JBTIS-654
12638	JBTIS-654	I guess anything's possible... :) So - it stands to reason that the person who picks the 1.5Gb JBDSIS stand-alone installer with Fuse runtime wants to install Fuse Tooling. Should this installer have *just* Fuse Tooling + Fuse Runtime (or minimally pre-select Fuse Tooling). What about BRMS and Data Virt runtimes? SHould they also have a tooling-specific + runtime stand-alone installer?	1	1	https://issues.jboss.org/browse/JBTIS-654

#	Requirement	Questions	Answered	Successfully Answered	URL
12639	JBTIS-654	That's a good question and a logical extension of this conversation. Can I suggest that we start with the Fuse tooling + runtime installer we've been discussing and use it as a pilot to see if it gets any traction? If it does, we can float this to other product teams as well. Is there any way to track not just downloads but how many time it gets run? We already do some tracking in the tooling... but I would think download tracking of the installer would be one metric we could pretty easily keep track of.	0	0	https://issues.jboss.org/browse/JBTIS-654
12640	JBTIS-654	Just an update - what I've got here [1] is an installer that contains JBDS, JBDSIS (with Fuse Tooling pre-selected) and a Fuse runtime. Running the installer will get you JBDSIS with Fuse Tooling (by just selecting Next). The Fuse runtime is sitting in the jar (used download-maven-plugin/fetch-target--platform to wget it dynamically). What I'm having trouble with is how to extract it out when the installer runs. Basically all I need to do is: {code} jar -xf jbdsis-fuse-installer-9.0.1-SNAPSHOT.jar jbdsis/fuse {code} Which leads me to the other question - should this go into jbdevstudio-install-dir/fuse-runtimes to avoid confusion w/ EAP? Any/all comments welcome... [1] https://devstudio.redhat.com/9.0/snapshots/updates/integration-stack/devstudio-is-fuse-installer-9.0.1-SNAPSHOT.jar	1	1	https://issues.jboss.org/browse/JBTIS-654
12641	JBTIS-654	There are multiple Fuse runtimes - one for karaf, one for eap and separate versins for each supported platform. Which Fuse runtime are you including? Will this be Windows only as that is likely the most common evaluation platform?	1	1	https://issues.jboss.org/browse/JBTIS-654
12642	JBTIS-654	Hey [~dgolovin] [[~akazakov] - I know you guys are extremely busy with the summit release. This is a post-summit enhancement request. I talked with [~maxandersen] about how best to architect this support. He was of the opinion that it would make more sense to parameterize the devstudio installer support to allow it to take a platform-specific runtime as opposed to migrating the p2-director and izpack installer infrastructure over in the integration stack build. Having migrated the two over in a prototype it did amount to a near duplication of the code. I'm currently successfully using Denis' p2 director installer enhancement (AdditionalFeaturesSpec.json) to allow the IS to specify its features into the devstudio installer. We'll release that in the Mars stream. What I'd like is to extend that... Is it possible to get into a future devstudio 10.0.x (neon) release enhanced installer support where a user could specify: 1. A stand-alone installer jar - this would be the devstudio-is (Integration Stack) stand-alone installer. 2. A compressed runtime (zip) that would be expanded into an appropriate runtime folder within the devstudio footprint (using the EAP one or a seperate folder). This would likely go into its own pack ID - "Red Hat JBoss Developer Studio Component Runtime" - something like that? ref: jboss-fuse-full-6.3.0.redhat-075.zip 3. A specific IzPack panel binary - tailored to the platform we're offering. This would be installed into the specified IS installer (1) to create the new extended installer based on what was passed in., The goal would be to provide an abstract way to specify a runtime zip and installer panel associated with the runtime into a pre-existing stand-alone installer. The existing runtime detection would need to be augmented as well. That would allow greater flexibilty in creating full stand-alone installers for Fuse, Teiid Designer, etc and leverage the existing devstudio installer to the greatest extent. I'm open to any other ideas as well. WDYT?	1	1	https://issues.jboss.org/browse/JBTIS-654
12643	JBTIS-654	[~leacu] I really not sure we currently have resources for such enhancements in the devstudio installer code base for the next release. Can you guys try to take care of it yourself? :) [~dgolovin] could help you as a consultant and also help with reviewing your Pull Request.	1	1	https://issues.jboss.org/browse/JBTIS-654
12644	JBTIS-654	As I said when we talked I think reusing all the logic and just allow for in the build to start which runtime to include is better. But what is it that #3 panel is supposed to do that is not just unzipping the content ? Any setup beyond that I would initially have expected to happen inside devstudio. Also, from Aileen it sounds like you have different runtime zips per OS ? is that true ?	1	1	https://issues.jboss.org/browse/JBTIS-654
12645	JBTIS-654	[~akazakov] - reviewed and +1 from Denis. I believe I need your +1 and someone to push my PR. Also - can this get on the 4.4.1.AM3 sprint for Neon? Thkx	1	1	https://issues.jboss.org/browse/JBTIS-654
12646	JBTIS-654	Okay - I can look at the progress bar later - can we get this first one pushed?	0	0	https://issues.jboss.org/browse/JBTIS-654
12647	JBTIS-649	[~apodhrad] - where do you see org.jboss.tools.foundation.security.linux 1.2.1.Beta2 being pulled in? All I can see is {code} [pleacu@pleacu-2-laptop jbosstools-integration-stack]$ grep -R 'org.jboss.tools.foundation.security.linux' * target-platform/src/targets/core-base.target: <unit id="org.jboss.tools.foundation.security.linux.feature.feature.group" version="1.2.1.Final-v20160401-0436-B108"/> {code} !found1.png|thumbnail!	1	1	https://issues.jboss.org/browse/JBTIS-649
12648	JBTIS-648	Hey [~maxandersen] can you give us some guidance here, based on your previous experiences with Eclipse projects & JBDS?	1	1	https://issues.jboss.org/browse/JBTIS-648
12649	JBTIS-602	Andrej, we'll need a lot more here. Can you provide additional details? Or is this a QE-only issue?	1	1	https://issues.jboss.org/browse/JBTIS-602
12650	JBTIS-523	Are we only talking about the install experience via the installer or overall install of Fuse ? The installer is by far the least used afaics so if we only look at this from installer perspective we will not cover the paths of BYOE (bring your own eclipse) for users using eclipse market place. If just caring about installation could be solved by adding a Fuse specific marketplace entry that just contains the Fuse functionallity as done for the IS marketplace entry. This would still install the required JBDS core parts, incl. central. Is this just about having a way to install it easily or also about how Fuse will be configured in eclipse ? Then setting first perspectives are bad/not enough IMO. Maybe Fuse could add entries to JBoss perspective ? and beyond that is making Fuse quickstarts etc. available from JBoss Central so anyone can get to Fuse even without having first installed Fuse and once installed have access to all the Fuse quickstarts.	1	1	https://issues.jboss.org/browse/JBTIS-523
12651	JBTIS-517	Could you unify the background between ga and ea, please?	1	1	https://issues.jboss.org/browse/JBTIS-517
12652	JBTIS-510	And then for 4.2.4/8.0.4, all the content will be 100% released, with nothing still in EA? I wonder... since we're trying to reduce the # of URLs shown in JBT/JBDS, and since we tag EA content w/ "Early Access" in the UI... do we REALLY even need a separate URL for the EA content? Why not simply use ONE URL for everything? [~maxandersen] WDYT? for JBDS 8, could we composite the stuff in /earlyaccess/8.0/ into the /updates/8.0/ site?	1	1	https://issues.jboss.org/browse/JBTIS-510
12653	JBTIS-502	Hey [~bbrodt] - do you have a Mars native version of Drools?	1	1	https://issues.jboss.org/browse/JBTIS-502

#	Requirement	Questions	Answered	Successfully Answered	URL
12654	JBTIS-498	Hey [~nickboldt] - Ref https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/JBTIS-aggregate-disc/421/console - I've added '--del' parameter to the rsync.sh invocation which is copying the IS discovery plugins directory. The Jenkins job script fragment is: {code} # Publish the plugin JARs . ${WORKSPACE}/rsync.sh -s ${WORKSPACE}/sources/${BUILD_KIND}/discovery/generation/target/plugins \ -t ${TARGET_PLATFORM}/${TARGET_DIR}/updates/integration-stack/discovery/${VERSION}/plugins --del {code} which results in: {code} 16:00:45 + . /qa/hudson_workspace/workspace/JBTIS-aggregate-disc/rsync.sh -s /qa/hudson_workspace/workspace/JBTIS-aggregate-disc/sources/jbosstools/discovery/generation/target/plugins -t mars/staging/updates/integration-stack/discovery/4.3.0.Alpha2/plugins --del ... 16:00:57 [INFO] rsync -arzq --protocol=28 --del /qa/hudson_workspace/workspace/JBTIS-aggregate-disc/sources/jbosstools/discovery/generation/target/plugins/* tools@filemgmt.jboss.org:/downloads_htdocs/tools/mars/staging/updates/integration-stack/discovery/4.3.0.Alpha2/plugins/ {code} rsync will disregard the '--del' option if wildcards are present. It looks like rsync.sh always wildcards here: https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/jbosstools-4.3.x/publish/rsync.sh#L72 WDYT?	1	1	https://issues.jboss.org/browse/JBTIS-498
12655	JBTIS-498	You're pulling the rsync script directly from github; we now prefer to fetch the zipped versions from nexus so you can see which version you're getting. I've updated your job here: https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/JBTIS-aggregate-disc/jobConfigHistory/showDiffFiles?timestamp1=2015-09-15_15-14-37&timestamp2=2015-09-17_17-28-27 1. Why do you have 2 jobs for JBTIS-aggregate-disc and JBDS-aggregate-disc ? why not build them at the same time from the same job? 2. Why do you rsync the contents of sources/BUILD_KIND/site-final/target/ [1] AND its child folder sources/BUILD_KIND/site-final/target/repository [2] into the same target folder on dl.jb.org [3]? You're essentially publishing the same repo twice, plus you're publishing a lot of maven metadata that you (probably) will never need. [1] http://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/JBTIS-aggregate-disc/ws/sources/jbosstools/site-final/target/ [2] http://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/JBTIS-aggregate-disc/ws/sources/jbosstools/site-final/target/repository [3] http://download.jboss.org/jbosstools/mars/snapshots/builds/integration-stack/4.3.0.Alpha2/ Do you do anything with category.xml? checkstyle*? local-artifacts? p2agent? p2artifacts? p2content? targetPlatformRepository? or the site*.zip? 3. As to the use of the --del flag... I think the problem is that you're pushing a single folder's contents into a single folder. When I use rsync.sh --del, it's to push a WHOLE folder and replace whatever is already there. So: {code:title=http://jenkins.mw.lab.eng.bos.redhat.com/hudson/view/DevStudio/view/DevStudio_9.0.mars/job/jbosstools-discovery_master/configure-readonly/} . ${WORKSPACE}/sources/publish/rsync.sh --del -s ${WORKSPACE}/sources/jbosstools/org.jboss.tools.central.discovery.earlyaccess/target/discovery-site \ -t mars/snapshots/updates/discovery.earlyaccess/${jbosstools_site_stream}/ {code} becomes {code:title=http://jenkins.mw.lab.eng.bos.redhat.com/hudson/view/DevStudio/view/DevStudio_9.0.mars/job/jbosstools-discovery_master/lastBuild/console} ++ echo '[INFO] rsync -arzq --protocol=28 --del /mnt/hudson_workspace/workspace/jbosstools-discovery_master/sources/jbosstools/org.jboss.tools.central.discovery.earlyaccess/target/discovery-site/* tools@filemgmt.jboss.org:/downloads_htdocs/tools/mars/snapshots/updates/discovery.earlyaccess/master//' {code} and results in this: http://download.jboss.org/jbosstools/mars/snapshots/updates/discovery.earlyaccess/master/ Alternatively, if you use a versioned folder, you'll get an automated composite site and automated cleanup -- no --del flag needed! {code} . ${WORKSPACE}/sources/publish/rsync.sh -s ${WORKSPACE}/sources/jbdevstudio/com.jboss.jbds.central.discovery/target/discovery-site \ -t 9.0/snapshots/builds/jbosstools-discovery.central_${jbosstools_site_stream}/${BUILD_ID}-B${BUILD_NUMBER}/all/repo/ \ -DESTINATION devstudio@filemgmt.jboss.org:/www_htdocs/devstudio {code} results in: https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_master/ and https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_master/compositeContent.xml and https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_master/latest/all/repo/ So... if you can change your method of publishing such that the site you produce in Jenkins is the same as the site you put on dl.b.o or ds.jb.c (without needing a dozen individual rsync/copy/move steps) not only will your local builds == your CI builds, but your release process will be simpler. 4. Why does your CI build sometimes ALSO push bits to /staging/ as well as /snapshots/ ? Surely that promotion step should ONLY ever happen by hand when it's time to do a QE staging release? 5. Why are there two copies of the same directory.xml file?	1	1	https://issues.jboss.org/browse/JBTIS-498
12656	JBTIS-498	Re: #5, I see you now have two identical copies of the directory.xml file: https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-integration-stack-directory.xml https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-directory.xml Why do you create two of them?	1	1	https://issues.jboss.org/browse/JBTIS-498
12657	JBTIS-492	Sure - a couple of questions... [~nickboldt] Where can I find the upstream directory XML file? (jbosstools-directory.xml) - http://download.jboss.org/jbosstools/mars/staging/updates/central/4.3.0.Beta1/jbosstools-directory.xml ? http://download.jboss.org/jbosstools/discovery/staging/4.3.0.Alpha1/jbosstools-directory.xml ? Is this the correct JBTIS update site? http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1	1	1	https://issues.jboss.org/browse/JBTIS-492

#	Requirement	Questions	Answered	Successfully Answered	URL
12658	JBTIS-492	Central Discovery now builds *SNAPSHOTS* here: http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_master/ (master) http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_4.3.mars/ (currently Beta1a, built from Beta1x branch) then when *STAGING* for QE: http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.central/ http://download.jboss.org/jbosstools/mars/staging/updates/discovery.central/4.3.0.Beta1/ There are also equivalent URLs for the *EARLY ACCESS* site: http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_master/ (master) http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/ (currently Beta1a, built from Beta1x branch) http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.earlyaccess/ http://download.jboss.org/jbosstools/mars/staging/updates/discovery.earlyaccess/4.3.0.Beta1/ Once *DEVELOPMENT* milestones are released: http://download.jboss.org/jbosstools/mars/development/updates/discovery.central/ (contains Alpha2) http://download.jboss.org/jbosstools/mars/development/updates/ (contains Alpha2) ---- For JBDS, the URLs are essentially the same as above, but swap http://download.jboss.org/jbosstools/mars/ for https://devstudio.redhat.com/9.0/ and use 9.0 instead of 4.3... https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.master/ https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.mars/ https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.central/ https://devstudio.redhat.com/9.0/staging/updates/discovery.central/9.0.0.Beta1/ https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.master/ https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/ https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.earlyaccess/ https://devstudio.redhat.com/9.0/staging/updates/discovery.earlyaccess/9.0.0.Beta1/ https://devstudio.redhat.com/9.0/development/updates/discovery.central/ (not yet available) https://devstudio.redhat.com/9.0/development/updates/ (not yet available) You can also see this information here: http://download.jboss.org/jbosstools/configuration/ide-config.properties -------- {quote} Is this the correct JBTIS update site? http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1 {quote} Yes, but if you can omit the needless path segment "/aggregate/" that'd be super.	1	1	https://issues.jboss.org/browse/JBTIS-492
12659	JBTIS-492	Sure. [~nickboldt] I was using https://raw.github.com/jbosstools/jbosstools-build-ci/master/publish/publish.sh - now switching to https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/jbosstools-4.3.x/publish/promote.sh correct?	1	1	https://issues.jboss.org/browse/JBTIS-492
12660	JBTIS-487	I have migrated the four features using the guidelines in https://github.com/jbosstools/jbosstools-devdoc/blob/master/source/how_to_use_license_features.adoc and I am getting this during a build: {code} [ERROR] Failed to execute goal org.eclipse.tycho:tycho-packaging-plugin:0.23.1:package-feature (default-package-feature) on project org.switchyard.tools.feature: E:\Users\bfitzpat\github\tools\eclipse\features\org.switchyard.tools.feature\build.properties: bin.includes value(s) [license.html] do not match any files. -> [Help 1] {code} Does JBTIS expose org.jboss.tools.foundation.license.feature in a way that we need to import it as a required feature in downstream projects?	1	1	https://issues.jboss.org/browse/JBTIS-487
12661	JBTIS-487	When I look at the latest JBT IS 4.3. Alpha2 / JBDS IS 9.0.0.Alpha2 bits I see this: * in JBT: !IS-projects-using-old-license.png! * in JBDS: !IS-projects-using-old-license_2.png! is this because you didn't publish your newer bits into the IS composites/aggregates? Or is the problem in SwitchYard itself? What's the latest version available w/ the fixed features / license terms? Something newer than 2.1.0.v20150821-1353-H598-Alpha1 ?	1	0	https://issues.jboss.org/browse/JBTIS-487
12662	JBTIS-484	Hey [~blafond] - once the Mars build is stabilized - can you take a look at this? It's a mechanical change.	1	1	https://issues.jboss.org/browse/JBTIS-484
12663	JBTIS-483	[~bbrodt] - Could you look at this for your Mars build. The instructions are very straightforward. Thkx!	1	1	https://issues.jboss.org/browse/JBTIS-483
12664	JBTIS-483	Hey [~bbrodt] - it looks like your original PR was modified and pushed - is there a Mars build that has this updated? thxk!	1	1	https://issues.jboss.org/browse/JBTIS-483
12665	JBTIS-483	Hey [~bbrodt] - I don't think I can use that URL - it's a nexus internal URL - can I get one captured as a beta someplace friendlier??? Thks!	1	1	https://issues.jboss.org/browse/JBTIS-483
12666	JBTIS-483	Hey [~mbiarnes], [~KrisVerlaenen] - I'm looking for an Eclipse Mars build of drools 6.4.0 that I can access for the Integration Stack. The current version I'm pulling into the stack is: http://download.jboss.org/jbpm/release/6.3.0.Final/updatesite/ Bob found the above site that appears to be not-for-public-consumption. Is there a http://download.jboss.org/jbpm/... drools site (doesn't have to be .Final) that I could use? Also - could the above license issue be addressed as well?? Thkx!!	0	0	https://issues.jboss.org/browse/JBTIS-483
12667	JBTIS-483	Last chance [~KrisVerlaenen] [[~bbrodt] - do you have a released Mars-based 6.4.0 drools that you'd like to include in JBDSIS 9.0.0.Beta1??? i.e. http://download.jboss.org/jbpm/release/6.4.0.Final/updatesite/ # .Final is not required	1	1	https://issues.jboss.org/browse/JBTIS-483
12668	JBTIS-482	[~nickboldt] - cool script - where can I find find.sh ?	1	1	https://issues.jboss.org/browse/JBTIS-482
12669	JBTIS-471	Hey [~bbrodt] - I think org.jboss.tools.runtime.drools.detector.feature org.drools.eclipse.feature org.guvnor.tools.feature org.eclipse.bpmn2.feature org.eclipse.bpmn2.modeler org.jbpm.eclipse.feature org.kie.eclipse.feature need to change. Can you take a look at the version format of those?	1	1	https://issues.jboss.org/browse/JBTIS-471

#	Requirement	Questions	Answered	Successfully Answered	URL
12670	JBTIS-471	Did more digging and I can't see how your tests depend on JMock. So, here's another commit on the PR [1], which runs them but they fail with a curious error: [1] https://github.com/nickboldt/bpel/commit/52652ad8e6079d76d8a7d7c435945a8b25bea649 {code} [INFO] Expected eclipse log file: /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/data/.metadata/.log [INFO] Command line: [/opt/jdk1.8.0_60/jre/bin/java, -Dosgi.noShutdown=false, -Dosgi.os=linux, -Dosgi.ws=gtk, -Dosgi.arch=x86_64, -Xms64m, -Xmx1024m, -XX:MaxPermSize=128M, -Dorg.eclipse.swtbot.search.timeout=15000, -Dosgi.clean=true, -jar, /home/nboldt/.m2/repository1/p2/osgi/bundle/org.eclipse.equinox.launcher/1.1.1.R36x_v20101122_1400/org.eclipse.equinox.launcher-1.1.1.R36x_v20101122_1400.jar, -data, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/data, -install, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work, -configuration, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/configuration, -application, org.eclipse.tycho.surefire.osgibooter.uitest, -testproperties, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/surefire.properties, -testApplication, org.eclipse.ui.ide.workbench, -product, org.eclipse.sdk.ide, -nouithread] Java HotSpot(TM) 64-Bit Server VM warning: ignoring option MaxPermSize=128M; support was removed in 8.0 Launching application org.eclipse.ui.ide.workbench... ---------- T E S T S ---------- java.lang.reflect.InvocationTargetException at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:497) at org.apache.maven.surefire.util.ReflectionUtils.invokeMethodWithArray2(ReflectionUtils.java:208) at org.apache.maven.surefire.booter.ProviderFactory$ProviderProxy.invoke(ProviderFactory.java:156) at org.apache.maven.surefire.booter.ProviderFactory.invokeProvider(ProviderFactory.java:82) at org.eclipse.tycho.surefire.osgibooter.OsgiSurefireBooter.run(OsgiSurefireBooter.java:91) at org.eclipse.tycho.surefire.osgibooter.AbstractUITestApplication.runTests(AbstractUITestApplication.java:44) at org.eclipse.ui.internal.testing.WorkbenchTestable$1.run(WorkbenchTestable.java:71) at java.lang.Thread.run(Thread.java:745) Caused by: java.lang.RuntimeException: Bug in saff's brain: Suite constructor, called as above, should always complete at org.junit.runner.Request.classes(Request.java:72) at org.apache.maven.surefire.junitcore.JUnitCoreWrapper.createRequestAndRun(JUnitCoreWrapper.java:102) at org.apache.maven.surefire.junitcore.JUnitCoreWrapper.executeEager(JUnitCoreWrapper.java:85) at org.apache.maven.surefire.junitcore.JUnitCoreWrapper.execute(JUnitCoreWrapper.java:54) at org.apache.maven.surefire.junitcore.JUnitCoreProvider.invoke(JUnitCoreProvider.java:134) ... 11 more {code} See http://fossies.org/linux/privat/junit-4.12-sources.jar/org/junit/runner/Request.java for the source of that error message.	1	1	https://issues.jboss.org/browse/JBTIS-471
12671	JBTIS-471	Hey again [~bbrodt] - I'm currently picking up a bpel 1.0.5.Final from last August. Are you sure this is 1.0.5? --P	1	1	https://issues.jboss.org/browse/JBTIS-471
12672	JBTIS-471	[~bbrodt] I think the question was: Are these two sites equivalent? * http://download.eclipse.org/bpel/updates/mars/1.0.5 (new with full qualifier) * http://download.eclipse.org/bpel/site/1.0.5 (1.0.5.Final, no qualifier)	1	1	https://issues.jboss.org/browse/JBTIS-471
12673	JBTIS-471	Nick: why can't I call my next 1.0.5 something like 1.0.501 (since you're suggestion a triple digit service release number anyway)? Besides, I'm not planing on making any more changes to BPEL editor - it's basically at EOL anyway (except it still needs to be in Neon) Paul: yes, I haven't changed anything in jbosstools-bpel either.	1	1	https://issues.jboss.org/browse/JBTIS-471
12674	JBTIS-471	I think I've got them all. Can we call this one done?	1	1	https://issues.jboss.org/browse/JBTIS-471
12675	JBTIS-471	[~bbrodt] - Hi Bob - Could you tweak your build versions for consistency? Give a time of 0800 and a build 212: * JBoss Drools Core 6.4.0.201601201107 should be 6.4.0-v201601201107-0800-B212 * BPMN2 Metamodel 1.2.1.Final-v20160119-1829 should be 1.2.1.Final-v20160119-1829-B212 * BPMN2 Modeler - Diagram Editor 1.2.3.CR2-v20160209-2002 should be 1.2.3.CR2-v20160209-2002-B212 * BPMN2 Modeler - jBPM Runtime Extension Feature 1.2.3.CR2-v20160209-2002 should be 1.2.3.CR2-v20160209-2002-B212 [~bfitzpat] - Could you make a small tweak to your versions as well: SwitchYard 2.1.0.v20160211-1448-H632-Beta2 should be 2.1.0.Beta2-v20160211-1448-B632 Same for the other 2 SY features. [~apodhrad] - please comment if the above is correct.	1	1	https://issues.jboss.org/browse/JBTIS-471
12676	JBTIS-447	Hi [~apodhrad], as discussed, I have made the necessary changes to the doc. Can you please have a look? (http://docbuilder.usersys.redhat.com/23023/) Thanks - supriya	1	1	https://issues.jboss.org/browse/JBTIS-447
12677	JBTIS-447	I agree - looks good. One quick thing - we're emphasizing Fuse Tooling - in sections 4 and 5, can we move 'JBoss Fuse Development' to first in the list?	1	1	https://issues.jboss.org/browse/JBTIS-447
12678	JBTIS-438	Hey [~kcbabo] - where did you find jaxb-impl in the TP?? I found a bunch of org.eclipse.jpt.jaxb.feature. for web services but that's not what your want. Just checking... Thkx	1	1	https://issues.jboss.org/browse/JBTIS-438
12679	JBTIS-437	[~maxandersen] [~nickboldt] Seeing what Max and Nick have for an opinion. There appears to be a single required jar (~90kb). Is this a candidate for locus or http://download.jboss.org/jbosstools/updates/requirements/ ??	1	1	https://issues.jboss.org/browse/JBTIS-437
12680	JBTIS-437	Sounds more like 5 jars, if you read Keith's details re: commons-lang(2 or 3) & jackson-* /updates/requirements is where we store p2-mirrored update sites. If these are not p2 artifacts, they'd need to be bundled into Locus for you to use them as osgi dependencies. TPs can only contains osgi plugins/features; AFAIK you can't include maven deps directly w/o first re-wrapping them via Locus (or Orbit). Can you use any of the json/jackson stuff in Eclipse's Orbit? Here's the latest mirror [1] we've pulled, which includes: * com.fasterxml.jackson * org.codehaus.jackson * org.glassfish.jersey.media.jersey-media-json-jackson * com.fasterxml.jackson.jaxrs.jackson-jaxrs-json-provider [1] http://download.jboss.org/jbosstools/updates/requirements/orbit/S20150428165605/plugins/	1	1	https://issues.jboss.org/browse/JBTIS-437
12681	JBTIS-437	Hey [~nickboldt] - could you please :) take a look at this PR: https://github.com/jbosstools/jbosstools-locus/pull/43 I think it's close - need to figure out the dependencies. I've modified the locus TP but can't get an Import-Package to find the two packages I've added: Import-Package: com.fasterxml.jackson.core.jackson-databind, javax.validation.validation-api So - the pom from the import of the package lists a set of dependencies here: https://repo1.maven.org/maven2/org/jsonschema2pojo/jsonschema2pojo-core/0.4.13/jsonschema2pojo-core-0.4.13.pom Most of these dependencies Fuse Data Trans didn't need to specify in their local libs dependencies capture. Should all of these be part of the Import-Package of the jsonschema2pojo manifest? Thkx (in advance...)	1	1	https://issues.jboss.org/browse/JBTIS-437

#	Requirement	Questions	Answered	Successfully Answered	URL
12682	JBTIS-431	Updated JBTIS TP 4.2.3.CR1a repo and nexus. [~phantomjinx] - please try rebuilding teiid designer w/ jbtis tp version 4.2.3.CR1a . Also - Barry gave me a teiid des to use for the first CR1 capture for QE to test: 9.0.2.Beta1 . Should I hold off giving this to QE (waiting for an update with this TP) or should I go ahead with 9.0.2.Beta1? https://github.com/jbosstools/jbosstools-integration-stack/commit/73d3c92caaa66577cc1bacaf6ccf729b2f57d617 http://download.jboss.org/jbosstools/targetplatforms/jbtistarget/4.2.3.CR1a/	1	1	https://issues.jboss.org/browse/JBTIS-431
12683	JBTIS-429	Hey [~bfitzpat] - I've got what I need to spin an initial JBTIS 4.2.2. Do you think you'll have a SwitchYard update soon?	1	1	https://issues.jboss.org/browse/JBTIS-429
12684	JBTIS-429	It's been held up to at least the end of the week. Go ahead without me and let's shoot for a SY update for an 8.0.3?	1	1	https://issues.jboss.org/browse/JBTIS-429
12685	JBTIS-416	Hey [~mhusnain] - I should have generated this in your Jira. Is there any way to get this paragraph into the 8.0.1.GA release notes? If not then just comment as such and I'll close it.	1	1	https://issues.jboss.org/browse/JBTIS-416
12686	JBTIS-416	Thanks Misha - looks good to me. [~apodhrad] - what do you think?	1	1	https://issues.jboss.org/browse/JBTIS-416
12687	JBTIS-412	[~pleacu] where can I find the website with the link to release notes?	0	0	https://issues.jboss.org/browse/JBTIS-412
12688	JBTIS-379	[~nickboldt] - Do you think it's okay to create a stable/ final community p2 update site that has Beta or CR components or should I create two p2 update sites (similar to the jbdevstudio proposal)? What should I name them? http://download.jboss.org/jbosstools/updates/stable/integration-stack/aggregate/4.2.0.Final http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/4.2.0.Final-earlyaccess http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/4.2.0-earlyaccess	1	1	https://issues.jboss.org/browse/JBTIS-379
12689	JBTIS-355	as discussed during f2f this initially would only happen when they are GA, thus this should *not* (at first) need any new updatesite. If we want to expose development/non-final installs on marketplace for IS *then* that will be required - but then we are talking an install that is will be working/targeting development releases of JBoss Tools / Developer Studio content comes from. This might not be a problem since 8.x should be api backwards compatible anyways but it is just something both core and IS team need to be aware about. Thats why at f2f it was discussed as being done for 7.0 first (we need to cleanup the updatesite first so there is just one updatesite like for devstudio 8) and then do it for devstudio 8 when going GA. btw. I'm not following what this item is about: "In JBDS 8.1, add a new com.jboss.devstudio.core.central.feature that packages up com.jboss.devstudio.core.central plugin; include this in com.jboss.devstudio.core.feature instead of the plugin?" ? what is this solving ? what is it needed for ?	1	1	https://issues.jboss.org/browse/JBTIS-355
12690	JBTIS-355	{quote} btw. I'm not following what this item is about: "In JBDS 8.1, add a new com.jboss.devstudio.core.central.feature that packages up com.jboss.devstudio.core.central plugin; include this in com.jboss.devstudio.core.feature instead of the plugin?" ? what is this solving ? what is it needed for ?{quote} This is there to allow a JBDS IS marketplace install to include the JBDS Central feature. Today, the only way to force-install JBDS IS + Central is to install JBDS IS + JBDS, which for more slimmed-down JBDS IS installs (eg., one for just Fuse tooling) would be excessively disk-heavy. So, by splitting out the JBDS Central branding plugin into its own feature, we can have a Marketplace entry that includes JBDS Central w/o also dragging in all of JBDS. (Marketplace entries cannot include plugins, only features.) I have not yet opened a JIRA for that item because we don't have an actual schedule for JBDS 8.1 yet. If we have agreement on the notion of doing a 8.1 release, then I can open a JBDS JIRA and assign it accordingly to the correct target milestone, with dev_ACK enabled..	1	1	https://issues.jboss.org/browse/JBTIS-355
12691	JBTIS-355	I'm not following how creating a com.jboss.devstudio.core.central.feature helps this situation about having a slimmer central. The splitting up is a jboss tools level issue, not devstudio. For me there are two issues: 1) getting the list of toplevel features to install central as it is today 2) looking at cutting down the footprint of these features IF they are found too excessive. Is the above devstudio.core feature #1 ? or also #2 ? #1 my belief (at least during f2f was that this was doable today) , #2 is something we said we would *possibly* look into. neither of these we need a date for to create the jiras - create the jiras first so they can be triaged would be better.	1	1	https://issues.jboss.org/browse/JBTIS-355
12692	JBTIS-355	why are we now creating these feature groupings ? have we solved the problem of updates of these without requiring respin of them ?	1	1	https://issues.jboss.org/browse/JBTIS-355
12693	JBTIS-355	So - to be clear - the list above differs from JBoss Central connectors by: + adding JBoss Fuse Development - removing SOA 5.x Development Would it make things simpler by having the Eclipse Marketplace entries match JBDSIS JBoss Central connectors exactly? All we would need to do is keep SOA 5.x and add JBoss Fuse. Also - please review: https://docs.google.com/a/redhat.com/presentation/d/1DVVAAghJ7w2meTKG9QLA-VtO1j3jdzzKd1gstacih7U/edit#slide=id.g439643f45_2_8	1	1	https://issues.jboss.org/browse/JBTIS-355
12694	JBTIS-355	With this suggested commit [1] in this PR [2], I've added a JBoss Fuse Development connector to JBDS IS in Central. [1] https://github.com/nickboldt/jbosstools-integration-stack/commit/3948e4478abf00f8fb7d46d18f536bebe862087f [2] https://github.com/jbosstools/jbosstools-integration-stack/pull/265 So the only difference therefore between what I've set up in that PR for *JBDS IS on Eclipse Marketplace* vs. *JBDS IS in JBoss Central* is that Marketplace currently does NOT include a soa-legacy (SOA 5.x) feature. [~alansantos] [~maxandersen] [~pleacu] Could you please decide if you want a 5th "wrapper feature" in the JBDS IS Eclipse Marketplace entry to facilitate the installation of SOA 5.x stuff? My understanding from JBTIS-258 (https://issues.jboss.org/browse/JBTIS-358?focusedCommentId=13027520&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13027520) was you only wanted 4 features listed. Shall I prepare a 3rd PR and put the soa-legacy (SOA 5.x) feature back in?	1	1	https://issues.jboss.org/browse/JBTIS-355
12695	JBTIS-355	JDV is currently going GA. My current plan is to wait until B*MS and FSW goes GA and then enable all JBDSIS tooling in Eclipse Marketplace at the same time. Does that sound okay to you? (esp [~maxandersen] [~nickboldt])	1	1	https://issues.jboss.org/browse/JBTIS-355
12696	JBTIS-355	Why do we want to wait with the marketplace entry ? is it not better to get it live and tested/seen live ?	1	1	https://issues.jboss.org/browse/JBTIS-355
12697	JBTIS-355	I didn't want to stress out the first Luna tooling release since it was minimal (just the DataVirt tools) - the rest as EA. I agree it would be better to get some live testing before Fuse comes along. I'll split the difference and plan on an Eclipse Marketplace presence for JBDSIS 8.0.1 (B*MS). Then we can test all of the JDV and BPM stuff. WDYT?	1	1	https://issues.jboss.org/browse/JBTIS-355
12698	JBTIS-355	[~nickboldt] - these two hidden container features are now available (B*MS and JDV) in JBDSIS 8.0.1.GA: {code} <feature id="com.jboss.devstudio.integration-stack.bpr.feature" path="../../devstudio/site-ga/com.jboss.devstudio.integration-stack.bpr.feature"/> <feature id="com.jboss.devstudio.integration-stack.ds.feature" path="../../devstudio/site-ga/com.jboss.devstudio.integration-stack.ds.feature"/> {code} *at your convenience* - can we see what it will take to get thse in Eclipse Marketplace? Thkx	1	1	https://issues.jboss.org/browse/JBTIS-355

#	Requirement	Questions	Answered	Successfully Answered	URL
12699	JBTIS-355	[~pleacu] we just need some text for this entry and we should be okey. Here is my suggestion based on JBDS from https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna {code} Title: Red Hat JBoss Developer Studio w/Integration Stack <version> Red Hat JBoss Developer Studio w/Integration Stack <version> includes https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna[JBoss Developer Studio] plus: * BRMS Tooling * JBoss Data Virtualization JBoss Developer Studio w/Integration Stack adds support for JBoss and related technologies, such as Teiid and Drools. For a quick overview, see <link to docs/overview?> More videos here: http://docs.jboss.org/tools/movies/ See also: http://www.redhat.com/products/jbossenterprisemiddleware/developer-studio/ This release was built with Eclipse 4.4.2 (Luna SR2), but should also work with other Luna or Eclipse 4.4.x versions. Luna SR2 JEE bundle recommended: http://www.eclipse.org/downloads/packages/eclipse-ide-java-ee-developers... NOTE: Use with latest Java 7 higher than jdk-7u45 or Java 8 versions. NOTE: If you encounter problems, please open a https://jira.jboss.org/jira/browse/JBDS[JIRA]! {code} WDYT ?	1	1	https://issues.jboss.org/browse/JBTIS-355
12700	JBTIS-355	I assume the only two features we need are: {code} com.jboss.devstudio.integration-stack.bpr.feature com.jboss.devstudio.integration-stack.ds.feature {code} since they should auto include devstudio, correct ? btw. what does bpr and ds stand for ?	1	1	https://issues.jboss.org/browse/JBTIS-355
12701	JBTIS-354	Should we close this since now not the priority and we will do it for JBDS 8 based installls instead and don't have to reorg JBDS 7 updatesites to support this then ?	1	0	https://issues.jboss.org/browse/JBTIS-354
12702	JBTIS-348	[~mmusaji] - are you able to access [3] above? Those are the correct rel notes - not sure why the customer can't see them or who translates them...	1	1	https://issues.jboss.org/browse/JBTIS-348
12703	JBTIS-348	[~ganandan-Redhat] and [~lcarlon] - The release notes in [3] above are accessible and correct. Is there another step that's missing here - the customer (in Japan) can't download them and I am unaware of any further process. Thkx	1	1	https://issues.jboss.org/browse/JBTIS-348
12704	JBTIS-348	Thanks, [~mmusaji]. [~nmoore], can you work with Paul to convert and stage the release notes on the CSP?	1	1	https://issues.jboss.org/browse/JBTIS-348
12705	JBTIS-348	Hi Paul, I've spoken with Michelle Murray, and she has provided me with a procedure to create a release notes document which can be downloaded and printed. The procedure involves scraping the release notes text from the relevant Jiras using a script. I have noticed that most (if not all) of the Jiras are closed and do not have any release notes text. This procedure is used by the JDBS documentation team and would be a good idea to follow the same procedure as Michelle suggested that the JDBS IS doco should be hosted on the JDBS documentation portal page. Michelle suggested that we reopen the closed Jiras, update the settings to say that the Jiras affect the Release notes, and add sample release notes text to the Jira. After that the developers would need to add the release notes text, then we can close the Jiras again. I'm happy to do the reopening and setting changes, if I have permission, and Michelle has provided sample release notes text, which I can add to each Jira. Would you be able to persuade the developers to add release notes text to the Jiras? The procedure is outlined in this Mojo doc - https://mojo.redhat.com/docs/DOC-944745 Thanks, Nichola Moore	1	1	https://issues.jboss.org/browse/JBTIS-348
12706	JBTIS-348	Hey [~nmoore] - I think the immediate issue is to simply convert the existing 7.0.3.GA JBDSIS release notes ([3] above) into a CSP version. I don't know what the procedure is for that (does docs create a ticket to update the CSP?). As for the extended procedure mentioned above - it appears great but I'd bet there would be a fair amount of angst re-opening all of those Jiras. I also don't have the authority to get the component owners to accept this procedure.	1	1	https://issues.jboss.org/browse/JBTIS-348
12707	JBTIS-348	Paul Leacu - I've created a version of the Release Notes using our usual style sheet. I know Michelle uses a specific release notes style sheet so hers looks slightly different, but this has all we need (plus a few bits we don't but I can't get rid of those!). What we need now is to update the JBoss Developer Studio splash page so that the customer can see the link to the release notes. Are the JDBS and JDBSIS releases numbered the same? I'm afraid I can't even send you a link so you can have a look. There's no presence on our stage server to link to. I'll try to work it out on Monday. I'm just letting you know that work is in progress and it's all not too far away! Regards, Nichola	1	1	https://issues.jboss.org/browse/JBTIS-348
12708	JBTIS-348	Hi Paul, Finally! Please can you have a look at http://documentation-devel.engineering.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio_Integration_Stack/7.0/html-single/7.0.3_Release_Notes/index.html and let me know if there needs to be any changes. Thanks, Nichola	1	1	https://issues.jboss.org/browse/JBTIS-348
12709	JBTIS-339	{quote}Where "direct-references" is what we do now, with a simple <references> block added to content.jar!/content.xml, and "composite-with-references" is the more complex tree structure we're proposing?{quote} Yes. How much do you like it?	1	1	https://issues.jboss.org/browse/JBTIS-339
12710	JBTIS-339	There is no reference at all. Did you apply that on a site where you have some "associateSites" ?	1	1	https://issues.jboss.org/browse/JBTIS-339
12711	JBTIS-339	So how does an IS component pom change from the old/bad assocSites in order to build an independent update site with references?	1	1	https://issues.jboss.org/browse/JBTIS-339
12712	JBTIS-339	Having compositeArtifacts different is normal, because the "references" repo doesn't contain any artifacts, it contains just references. Are IS component inheriting your pom configuration? If yes, then you only need to change the IS parent pom. Note that Mojo is currently a SNAPSHOT version, so we'll probably need to release it before using it more widely.	1	1	https://issues.jboss.org/browse/JBTIS-339
12713	JBTIS-339	Great! So I'm merging my PR, then repository-utils 0.21.1-SNAPSHOT will contain this feature. When do you plan to make a release of JBT-IS ? We'll make a release of the tycho-plugins just before that.	1	1	https://issues.jboss.org/browse/JBTIS-339
12714	JBTIS-339	Ok. technically, I can do it from now on. However, I prefer to make sure we won't do that for nothing and we won't need to re-release tomorrow. Have you validated, on JBT-IS side that the withReferences vs "plain" approach satisfies your use-cases? On JBT, we'm happy with using the plain URL in discovery and having to composite it with whatever seems necessary, and keeping control on the sites we reference/composite.	1	1	https://issues.jboss.org/browse/JBTIS-339

#	Requirement	Questions	Answered	Successfully Answered	URL
12715	JBTIS-339	Ok - good point. So now JBTIS can create a fully resolved "withReferences" composite update site and in theory the existing JBTIS discovery poms should continue to work. I'll verify that. So JBDSIS (which draws from JBTIS) doesn't carry associateSites - it pulls from a mirror-target-to-repo. Is that not affected by this? We pass into our IS poms upstream discovery and composite urls. https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/pom.xml https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/pom.xml The JBTIS/JBDSIS discovery plugins has embedded 8.0-development/central/integration-stack in them - does that need to go? https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/discovery/org.jboss.tools.central.discovery.integration-stack/plugin.xml#L27 https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery/com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L56 I need to get fuseide functional as an independently installable update site (withReferences) and have it supply a "references" plain site to the IS. IS that just adding the same composite reference strategy? So - I need some help from [~mickael_istria] and [~nickboldt] to just look over the IS poms with me if you can spare the time.	1	1	https://issues.jboss.org/browse/JBTIS-339
12716	JBTIS-339	[~leacu] the "fuseide independent installable update site" is *just* for community testing, right ? the supported version will come from JBDSIS updatesites and planned to be put on marketplace. correct ? btw. if fuseide updates into JBTIS anyway - is there a reason for them to not just tell users to use the JBTIS update site ? Just one quick thing I noticed is that jboss.is.update.url should be changed to match the naming in ide.properties.	0	0	https://issues.jboss.org/browse/JBTIS-339
12717	JBTIS-339	btw. why not just have fabric8 in JBTIS ? excluded in JBDSIS like we had for savara ?	0	0	https://issues.jboss.org/browse/JBTIS-339
12718	JBTIS-339	[~mickael_istria] - I see you've merged the PR for this feature in repository-utils 0.21.1-SNAPSHOT. I need to create the JBTIS 4.2.0.Beta1 release early next week so I'll need the updated tycho-plugins - is it available? I believe the withReferences vs "plain" approach satisfies the primary use case. Thanks!	1	1	https://issues.jboss.org/browse/JBTIS-339
12719	JBTIS-339	Yes 0.21.1-SNAPSHOT with this change is already available in JBoss Snapshot repo (https://repository.jboss.org/nexus/content/repositories/snapshots/org/jboss/tools/tycho-plugins/0.21.1-SNAPSHOT/). You can already use it. I can let you have fun with it and unless you find something wrong, I'll release it as 0.21.1 on Monday morning (european time). Is it good for you?	0	0	https://issues.jboss.org/browse/JBTIS-339
12720	JBTIS-332	Merging these changes broke the build at hudson.eclipse.org. After spending about a day on trying to figure this out, I finally gave up and reverted the changes. The existing build did generate an SDK feature which included source jars for all of the plugins - why was that not sufficient? Anyway, unless someone smarter than I can figure out what the problem is, I'm going to leave things as they are...	0	0	https://issues.jboss.org/browse/JBTIS-332
12721	JBTIS-331	what kind of earlyaccess are we talking here ? on jboss tools I assume this is just being added into jbosstools development updatesite - no special thing here (sure we can mark it as earlyaccess since it wont be there when jbosstools GA's). But for it to be visibiel in JBoss Tools Final and from developer studio the earlyaccess content needs to goto the earlyaccess p2 repository, just changing the certificate ID does not do anything on its own. This paragraph: "It is not necessary to refactor (or copy) your plugin to include .earlyaccess in the name, UNLESS you plan to have one plugin for "early access" and one for "released" content, as we do in JBT/JBDS. (You can also include both types of content in the same plugin.)" sounds *very* wrong to me. Why does IS not need to have separate earlyaccess content like core do ? what makes it okey their updatesites gets automatically added ?	0	0	https://issues.jboss.org/browse/JBTIS-331
12722	JBTIS-331	I'm not talking about the discovery file - that one can be one or two (I prefer two since then it is consistent). What i'm talking about is that the PR's I see and the text above talks as if adding the certificate flag to the connector is enough. We can't add the JBTIS-*development* update site url into our Final or GA discovery catalogs. It has to be on earlyaccess otherwise we are going to mix streams/updatesites/TP's afaics. Users Help > Update will be affected without them or us wanting that. Again, why is JBT-IS not doing it like we do for our earlyaccess ?	0	0	https://issues.jboss.org/browse/JBTIS-331
12723	JBTIS-331	{quote} Also - I assume we are going to set jboss.is.update.url to be http://download.jboss.org/jbosstools/updates/development since thats how it would work ever since https://issues.jboss.org/browse/JBDS-3086 have been made in effect ? (central is now composite into / of the main updatesite) {quote} Do we want to consider JBT-IS as one of the main update sites (just like Core or Central)? If so then you suggestion is probably what we'll need to do. When JBT is still in Beta and JBT-IS too: * Set jboss.is.update.url to http://download.jboss.org/jbosstools/updates/development in ide-config.properties * Make http://download.jboss.org/jbosstools/updates/development also reference JBT-IS development site When JBT is released and JBT-IS is still in Beta * Update JBT-IS discovery jar to add Early-Access * Set jboss.is.update.url to JBT-IS develpment site * Remove JBT-IS development site from http://download.jboss.org/jbosstools/updates/releases/luna When JBT is released and JBT-IS too * Update JBT-IS discovery to remove Early Access * Add JBT-IS release site to http://download.jboss.org/jbosstools/updates/releases/luna * Set jboss.is.update.url to http://download.jboss.org/jbosstools/updates/releases/luna in ide-config.properties	0	0	https://issues.jboss.org/browse/JBTIS-331
12724	JBTIS-331	So latest release of JBT-IS is always on Central site and accessible together with latest release of JBT (at the same releases/luna URL). Milestones of JBT-IS are added to Early-Access catalog (and have their own URLs). Is that it?	0	0	https://issues.jboss.org/browse/JBTIS-331
12725	JBTIS-331	no, ...why is this so hard ;) we have the following sites for our plugins: /nightly /staging /development /stable (edited, was release by error before) Each matching the state we are in various development phases. in past we had integration-stack, central, etc. versions of these handed out as public separate sub-urls The change in JBDS-3086 is that these are now composited so we only need to use the root of these sites (/development, /release) when published to users to consume it. Internally we still have individual sites for compositing/testing, but they aren't supposed to be exposed as stable urls to users. Then the intent is that when we do milestones we make it available in the matching category. i.e. right now we got JBoss Tools CR1 in /development and optimally we would get JBoss Tools IS Beta into /development too and thus made available in jboss central for install. when JBoss Tools core goes Final, IS Beta can't just be listed as being installable thus IF we want it available we have /earlyaccess site to provide this and users will have to go and explicit enable EA to get it. Since you can't just have Final central pointing to /development site since then you will be mixing JBoss Tools 4.2.1.x into the release unknowingly. I can see it is probably a bad thing if when are in Core Alpha/Beta/CR1 that IS won't show up as Earlyaccess when it will be that in Final/GA of tools. Thus we could still use the EA marker, but still at GA time integration stack needs to physically be in /earlyaccess location not in /development.	0	0	https://issues.jboss.org/browse/JBTIS-331

#	Requirement	Questions	Answered	Successfully Answered	URL
12726	JBTIS-331	So we've identified that repository references are making things possibly inconsitent. JBIDE-18541 should provide a tool to avoid direct repository references but still providing ability to link other repos silently. But this is a mid-term solution. For a first iteration, here are a few suggested actions: * Have earlyaccess site compositing http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/ * -Have integration stack discovery catalog reference on the JBT URL (from ide-config.properties): jboss.discovery.site.url and jboss.discovery.earlyaccess.site.url (as opposed to what I suggested to Paul with creation of a dedicated property for integration-stack)- We do want to keep the specific is property for testing, and give ability to reference other property, eg: jboss.discovery.site.integration-stack.url|jbosstools|4.2.0=${jboss.discovery.site.url} * Remove references from early-access aggregate site to JBT core development	0	0	https://issues.jboss.org/browse/JBTIS-331
12727	JBTIS-320	Objection noted by Jeff DeLong: On Sep 15, 2014, at 8:58 AM, Alan Santos wrote: Thanks Jeff, does this mean your team is actively using it for partner education Yes or on-boarding? If so can you elaborate on how We have a module in our online FSW training that covers pretty much what is in the video below including a lab as well. I.e. we generate the choreography from a set of scenarios and SY services from the Choreography. We generated service are uploaded into DTGov, and we flush them out in subsequent labs. and are you aware of any partners who are using it in a similar manner? No. Sorry. It is hard to track individual partner usage in all but a few cases with the largest partners where we get engaged with them on supporting their projects. Thanks, Jeff -alan On Sep 15, 2014, at 10:56 AM, Jeffrey DeLong <jdelong@redhat.com> wrote: Alan, - BPMN2 choreography generation from scenario diagrams - SwitchYard service generation from BPMN2 choreography Essentially the features described in http://vimeo.com/53007939 Jeff Jeffrey DeLong Sr. Manager Global Partner Enablement http://www.redhat.com/partners/partner-enablement/ http://youtu.be/EdsvGcfIoJs cell: 801.554.4185 On Sep 15, 2014, at 8:51 AM, Alan Santos wrote: Jeff, can you share how your team and any partners are using Savarra? thanks On Sep 15, 2014, at 10:13 AM, Jeffrey DeLong <jdelong@redhat.com> wrote: I object from removing something we have spent 5 years working on and testing. Jeff Jeffrey DeLong Sr. Manager Global Partner Enablement http://www.redhat.com/partners/partner-enablement/ http://youtu.be/EdsvGcfIoJs cell: 801.554.4185	1	1	https://issues.jboss.org/browse/JBTIS-320
12728	JBTIS-318	Hey [~KrisVerlaenen] - I noticed that jBPM3 is actually generating the source bundles correctly. I think what I need is something like this for each feature pom.xml: <build> <plugins> <plugin> <groupId>org.eclipse.tycho.extras</groupId> <artifactId>tycho-source-feature-plugin</artifactId> </plugin> <plugin> <groupId>org.eclipse.tycho</groupId> <artifactId>tycho-p2-plugin</artifactId> </plugin> </plugins> </build> wdyt?	1	1	https://issues.jboss.org/browse/JBTIS-318
12729	JBTIS-318	Hey Kris - Currently - drools/jBPM6/guvnor are the only IS components not generating source bundles. What's interesting is jBPM3 is generating them correctly. Is this something you could look at fairly soon - it's needed for JBDSIS 8.0.0. Thanks, --paull	1	1	https://issues.jboss.org/browse/JBTIS-318
12730	JBTIS-295	[~maxandersen] - Is this Jira intended for the IS infrastructure itself to add support for integration testing or for the IS components (i.e. SwitchYard) to add packaged bundle testing support?	1	1	https://issues.jboss.org/browse/JBTIS-295
12731	JBTIS-295	[~maxandersen] [~mickael_istria] - Opinions wanted... Looking at some older Jira - I believe all of the IS components now use the IS TP. Both JBTIS and JBDSIS are run through the p2 director install tests here: https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-install-p2director.install-tests.integration-stack.matrix_master/ Also - SwitchYard uses the JBTIS TP and performs their own unit testing prior to being aggregated. Do you guys see a good use for using Mickael's p2installed surefire runtime test support at the IS level or does it not apply given unit testing at the component level? Thkx!	1	1	https://issues.jboss.org/browse/JBTIS-295
12732	JBTIS-295	Whent SwitchYard (as an example) uses the JBTIS TP to run its unit test against it it will *not* necessarily load all parts of JBDS - it will only load/start the bundles your test and its dependencies declare. With Michael's approach here you can run tests inside a specific version of developer studio (i.e. devstudio 9.1 beta) instead of just the dependency set. Thus I think it would help catch other kind of errors - but that would probably need new tests that are more integration level tests (i.e. does SwitchYard start in JBDS without any errors as opposed to testing SY unit level features works).	0	0	https://issues.jboss.org/browse/JBTIS-295
12733	JBTIS-295	[~apodhrad] - Hey Andrej - I know you've got testing infrastructure that utilizes the tycho testing support where it loads a specific JBDS. I think at one point I tried running those but they were too comprehensive for a smoke test tied to the JBDS build. Is it possible to construct some fast smoke tests for Fuse and maybe Teiid Designer? WDYT?	1	1	https://issues.jboss.org/browse/JBTIS-295
12734	JBTIS-295	Actually, the "fast" suite of smoke tests for Fuse tooling is in progress. Our plan is to run such smoke tests for each PR (just with JBTIS dependencies as a verification job). Moreover, every night we execute some subset of tests for the latest build of Fuse tooling with the latest version of JBDS (corrently only with 9.x). Something similar we plan for the Teiid Designer but not for the other components (there are no changes or only small changes). I'm not sure what's the exact goal of this issue. All work mentioned above will be done on Fuse (resp. TD) side so that developers can immediately see what's wrong.	1	1	https://issues.jboss.org/browse/JBTIS-295
12735	JBTIS-290	Paul & Max, I've added the #2 part to the appropriate ModeShape JCR plugin. Will one of you be doing the #1 part for the ModeShape JCR feature? Or would you like me to do that? Also, when I try to build locally now the *{{usage plugin}}* cannot be found. In the past I've used *{{-Punified.target}}* when building locally. Is the usage plugin found somewhere else now? Thanks	1	1	https://issues.jboss.org/browse/JBTIS-290
12736	JBTIS-290	usage plugin have not moved since it was created. What are you trying to build exactly ?	1	1	https://issues.jboss.org/browse/JBTIS-290
12737	JBTIS-290	You must have put a "settings.xml" file at the root of the ModeShape Tools code because there is not one there. And whatever you have in it is making it all magically work:-) Can you send me yours or at least the parts of it that you think would help. Thanks Paul.	1	1	https://issues.jboss.org/browse/JBTIS-290
12738	JBTIS-290	Hey [~elvisisking] - did this ever get resolved? We need at least one feature resolved for Modeshape for 8.0.x. Have you added: org.jboss.tools.usage;resolution:=optional;x-installation:=greedy into your MANIFEST.MF ? We're currently tracking MODESHAPE("org.jboss.tools.modeshape.rest.feature", "org.jboss.tools.modeshape.rest"), thkx, --paull	1	1	https://issues.jboss.org/browse/JBTIS-290
12739	JBTIS-290	I left comments on the PR but I'll repeat it here in summary: A) the names gets appended into a lenght limited string thus we want as *short* names as we can, thus TEIID is better than TEIIDDESIGNER B) we want to limit what we track to truly unique features - for example we don't no more track ARCHIVES since its always part of Server now. In that context, is Guvnor really relevant to track independently ?	0	0	https://issues.jboss.org/browse/JBTIS-290

#	Requirement	Questions	Answered	Successfully Answered	URL
12740	JBTIS-289	Hey [~bfitzpat] - I'm assembling a kepler maintenance release of the IS now (JBTIS 4.1.6/ JBDSIS 7.0.3) - should we build/promote a kepler version of ESB with your examples fix?	1	1	https://issues.jboss.org/browse/JBTIS-289
12741	JBTIS-289	Hey [~bfitzpat] - the staging area's last build is from July - don't know why it didn't stage. Could you rebuild the 4.1.x version again and let me know when it's ready? I'll promote it form staging and update the stack.	1	1	https://issues.jboss.org/browse/JBTIS-289
12742	JBTIS-278	Hey [~nickboldt] - would the link go here [1] or at the download page for jbds 7.1.1? Also - is there a dummy login so I can see what the CSP JBDS download page looks like? [1] https://access.redhat.com/site/products/red-hat-jboss-developer-studio/	1	1	https://issues.jboss.org/browse/JBTIS-278
12743	JBTIS-278	I would list it with the JBDS 7.1.x content. That's what we did for JBDS 5: https://access.redhat.com/jbossnetwork/restricted/listSoftware.html?downloadType=distributions&product=jbossdeveloperstudio&version=5.0.0 As to a login, you can register using your redhat address. Not sure how? Try this link: https://www.redhat.com/wapps/sso/login.html?redirect=%2Fwapps%2Feval%2Findex.html%3Fevaluation_id%3D1002 Then go here: https://access.redhat.com/jbossnetwork/restricted/listSoftware.html?product=jbossdeveloperstudio&downloadType=distributions	0	0	https://issues.jboss.org/browse/JBTIS-278
12744	JBTIS-253	[~phantomjinx] what is that script that sounds like it is "blindly" setting include/exclude versions on all plugin dependencies ? Sounds like that could lead to some funky limitations in upgrade paths....or that you made something great that we could use elsewhere. Got a link ? Great to hear things seem to work even after our major change in server adapters. Did you try run it too or just build it for now ?	1	1	https://issues.jboss.org/browse/JBTIS-253
12745	JBTIS-245	Last years promises was that we would at least get alpha builds running so we are not yet repeating not having IS tooling at all available for next release of JBDS 8. Could we at least do one that contains the components that will work on Luna out of the box ? We have many things that need IS feedback for the changes we are doing in JBT core/JBDS core like based on bug reports from users and IS QE: * Runtime less server to allow defining a server without having a local runtime * Refactored JBoss server adapter to have better management support (incl. wildfly/eap 6.x new requirements) * Allow installation of earlyaccess components from Central Luna itself is what will provide: * Java 8 support * Support for eclipse on newer Linux versions (GTK3 on fedora 20/Ubuntu) - kepler will and does have issues. * much faster maven import/support ...and of course bugfixes etc.	1	1	https://issues.jboss.org/browse/JBTIS-245
12746	JBTIS-241	Shouldn't this be logged against the TEIID project, not JBTIS?	1	1	https://issues.jboss.org/browse/JBTIS-241
12747	JBTIS-241	Bear in mind that the reason that Server Tools went from 2.4 to 3.0 is big api changes and refactorings. Might also precipitate a similar version change in Teiid. Also, I'm not sure that we should expect the same version of Teiid to work on both Kepler and Luna. Should we?	1	1	https://issues.jboss.org/browse/JBTIS-241
12748	JBTIS-241	you have some points. We do wire into AS api to discover Teiid submodule existance and contributing to the Server view contents. Until we investigate/upgrade to Luna target platform and new AS 3.0 version, we won't know for sure. From a Product standpoint, what will we be supporting for the rest of the year? DV6/DV6.1 == JBDS 7.x ? If so, then compatibility with JBDS 8.0 will be left to JBTIS 8.0 build?	0	0	https://issues.jboss.org/browse/JBTIS-241
12749	JBTIS-241	We also have to set expectations. * For a user wishing to use the combination of JBDS 8.0.alpha2 and Teiid - which tooling should he use - and when will it be available? * Must this user wait for JBDSIS 7.0.1? * What about users wishing to use JBDS 8.0.alpha2 and FSW6 - do we think that they can safely use JBDSIS 7.0.0?	0	0	https://issues.jboss.org/browse/JBTIS-241
12750	JBTIS-235	How about a new (optional) update site which contains doc plugins for contributing components? devstudio.jboss.com/updates/4.0/help ?	0	0	https://issues.jboss.org/browse/JBTIS-235
12751	JBTIS-235	The "eclipse" help generated from docbook using Maven, currently has no "branding" applied. Current "Hibernate" help has none. So when we include "Help" from each project in JBDS, do we build it with "JBDS/Red Hat" branding? or leave it generic? If "generic", then there would be no changes required, moving from Project to Product builds. If you want "branding", then there will be a change in Help "source" that needs to be applied for Product. This will be difficult if we're pulling "bits" from projects to directly create the bits for the product.	0	0	https://issues.jboss.org/browse/JBTIS-235
12752	JBTIS-235	[~pleacu] is this something we could move to JBTIS? Are there resources for such a thing? If not we can just close this as Won't Fix or Rejected, I guess.	1	0	https://issues.jboss.org/browse/JBTIS-235
12753	JBTIS-221	Complete list of affected files: [^anonsvn.jboss.org_refs_in_examples_xml.txt] Workspaces in use include: * [~snjeza] (seam, portlet, resteasy, weld, richfaces, jbossas7) * Denny (esb) * [~elvisisking] (teiid designer) * [~jdoyle] (teiid designer) * Grid (bpel, esb) * [~rcernich] (esb) * [~fbricon] (archetypeRepo?) * [~bfitzpat] (SOA 5.2) * [~dgolovin] (richfaces) So... the people mentioned above (except for Denny and Grid) need to migrate this content to a new location in github. Do we want to host all this stuff in a new repo, or just put it into https://github.com/jbosstools/jbosstools-download.jboss.org/tree/master/jbosstools/examples ? Should the JBTIS stuff be split out into a separate repo? (cc: [~pleacu])	1	0	https://issues.jboss.org/browse/JBTIS-221
12754	JBTIS-221	If we move these files, how many older installations of JBDS pointing to those paths will need to be updated? We're going back 3 or 4 years on some of these examples aren't we? I just worry about all the potential breakage coming down the line. As far as the ESB examples from Denny & Grid, I've moved those to github in the esb repository for 4.1.x and master. They are here now: https://github.com/jbosstools/jbosstools-esb/tree/master/quickstarts	1	1	https://issues.jboss.org/browse/JBTIS-221
12755	JBTIS-221	I'm not suggesting we MOVE old stuff, but rather that we COPY the old stuff into a new place from which ongoing maintenance would occur (like when we migrated from SVN -> Github). So the old stuff, if referenced by JBDS 7 and earlier, would still exist in the old/ugly locations, but from JBDS 8 onward only the CORRECT URLs would be used in the examples *.xml files on download.jboss.org. I also like the idea of co-locating these examples in the projects for which they are relevant, as Brian did for ESB. [~bfitzpat] did you also get the examples from Rob C, and the BPEL examples? And what of the floor show that had been spoken of? In an empty house? In the middle of the night? What diabolical plan had seized Fitz' crazed imagination? [1] [1] http://lmgtfy.com/?q=and%20what%20of%20the%20floorshow?	1	0	https://issues.jboss.org/browse/JBTIS-221
12756	JBTIS-219	Support for secure storage password: <appArgLine>-eclipse.password resources/security/password</appArgLine> where password is a file containing the password	1	1	https://issues.jboss.org/browse/JBTIS-219
12757	JBTIS-197	[~apodhrad]: Just noticed that https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-integration-stack-tests.aggregate_41 is COMPILING but not RUNNING the tests. Should it be RUNNING them too? (We could just remove the -DskipTests flag in the maven config.)	0	0	https://issues.jboss.org/browse/JBTIS-197
12758	JBTIS-187	Could you set Fix Version? It is in development but what version it is targeted for?	1	1	https://issues.jboss.org/browse/JBTIS-187

#	Requirement	Questions	Answered	Successfully Answered	URL
12759	JBTIS-152	Hey Phantom - We're trying to isolate the component dependencies to the JBTIS TP. For JBDS-IS, we will only be providing plugins from the TP site, so if it's not there, users won't be able to install. Are you using the latest JBTIS TP? https://repository.jboss.org/nexus/content/repositories/releases/org/jboss/tools/integration-stack/target-platform/4.1.2.Final/ https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/integration-stack-base.target#L111-119 This shows the jackson core/mapper in it.	1	1	https://issues.jboss.org/browse/JBTIS-152
12760	JBTIS-152	This is to allow a user to install Teiid Designer plugins without needing to add the orbit repository as a separate update site in their Eclipse IDE. As it stands, Teiid Designer plugins do not install in a virgin eclipse installation, using the JBT-IS update site, due to lacking access to the jackson plugins. The pull request fixes that -without displaying the contents of orbit to the user- but does insert orbit as an associative update site in the user's available update sites. So is there is another way around this? From Nick, we have had [https://issues.jboss.org/browse/TEIIDDES-1843], which adds the dependencies to the Designer update site. Is that going to be a preferred option, despite my misgivings (see my comment on that JIRA).	0	0	https://issues.jboss.org/browse/JBTIS-152
12761	JBTIS-118	It seems like this is an issue in the target platform (Locus is clean). Can you try including the necessary bundles from Gemini in your target-platform? Locus won't include bundles that are available in other p2 repository.	0	0	https://issues.jboss.org/browse/JBTIS-118
12762	JBTIS-118	[~phantomjinx]: Can you rebuild / reinstall Teiid Designer as you did initially, and report back if the above changes have helped to resolve the missing packages? If not, can you provide steps to reproduce the console messages? I don't see them when building or installing, as noted above.	1	1	https://issues.jboss.org/browse/JBTIS-118
12763	JBTIS-113	Should this issue move to the new JBTIS project? The ability to have more control over dependencies could be resolved by component-specific target platforms (ie each component uses a target-definition or some repositories in its pom to specify dependencies).	0	0	https://issues.jboss.org/browse/JBTIS-113
12764	JBTIS-110	Rob, do you have any ideas on this one?	1	1	https://issues.jboss.org/browse/JBTIS-110
12765	JBTIS-97	Hey Paul - Would you like this for Kepler+ releases (JBTIS 4.1.0 SOA-P 6.0 Beta 1 and beyond)? Is it okay to skip modifying the Juno release? Thanks! --paull	1	1	https://issues.jboss.org/browse/JBTIS-97
12766	JBTIS-93	What version of designer is included in this integration stack build? This change has been implemented in Teiid Designer 8.2.0 (current master). Do you need an alpha release? in what timeframe?	1	1	https://issues.jboss.org/browse/JBTIS-93
12767	JBTIS-93	Hey Barry/Paul - This is needed for the Kepler SOA-P 6.0 Beta 1 which is using the same URL as the Juno Alpha 2: http://download.jboss.org/jbosstools/updates/release/juno/soa-tooling/teiiddesigner/8.1.0.Final/ Would you like me to grab a newer release for the Kepler release? Thanks, --paull	1	1	https://issues.jboss.org/browse/JBTIS-93
12768	JBTIS-93	Hey Barry/Paul - The powers-that-be want a JBDSIS 7.0.0.Beta1 with just SOA 5.3 support in it asap. This replaces the JBDSIS 6.0.0 that was built from Juno. That means I'll need your kepler teiid 8.2.Alpha soon so I can build the production JBDSIS p2 installer for SOA 5.3 support. I'll use the same teiid 8.2.Alpha for the JBTIS 4.1.0 kepler community release (2 for 1!). Please let me know when it's ready (urgency++). Thanks! --paull	1	1	https://issues.jboss.org/browse/JBTIS-93
12769	JBTIS-88	Hey guys, Because emf compare 2.1 and graphiti 0.10 are part of kepler, which is already mirrored, can you just update the target platform to pull these features/bundles from the kepler mirror on jboss.org? Seems like that would be simplest. Also, Paul, once all these changes are complete, can you release a 4.0.1 target platform that I can use for pulling in these dependencies? Thanks, Rob	1	1	https://issues.jboss.org/browse/JBTIS-88
12770	JBTIS-88	Hey [~nickboldt] - No dice on ssh access (to either). I'll work on that - could you mirror these for me so I can create an aggregated TP for JBTIS 4.0.1 (SOA-P 6 Alpha 2)? Thanks!!! --paull http://download.eclipse.org/bpel/site/1.0.3/ http://download.eclipse.org/bpmn2-modeler/updates/kepler/0.2.6/ http://download.eclipse.org/bpmn2-modeler/updates/juno/0.2.6/	1	1	https://issues.jboss.org/browse/JBTIS-88
12771	JBTIS-83	Next up will figure out where to create an examples plug-in and include it in the right places... This is the IRC chat I'm basing some of this on: (6:52:15 AM) maxandersen: pleacu: the idea is not to add *more* connectors, but to make the right examples be part of the *existing* connectors. (6:52:16 AM) pleacu: maxandersen: its commented out anyway - but the idea was to install the exAmples - this will be your legacy-examples connector (6:52:53 AM) pleacu: ahh - ok - could add IUs to the JBoss SOA legacy development connector (6:52:56 AM) maxandersen: pleacu: yeah so the right connector to add these legacy examples is this: https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery/com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L107 (6:53:08 AM) pleacu: yep (6:53:11 AM) maxandersen: but we'll still need some plugin where this extension gets added. (6:53:59 AM) maxandersen: that extension would depend on central/project examples in core. (6:54:08 AM) maxandersen: I mean that plugin would depend on that. (6:55:59 AM) maxandersen: so if we can find a good place for those we should be good. (6:56:37 AM) maxandersen: hava integration-stack.soa-legacy.examples bundle that provides this ? (6:56:54 AM) maxandersen: or push down into esb / bpel to declare it ? (6:57:16 AM) bfitzpat: do we really want to split 'em up or keep 'em together as we've talked about doing? (6:57:35 AM) pleacu: maxandersen: don't know... (6:58:10 AM) maxandersen: bfitzpat: split up : no need to introduce new plguin at IS stack level, keep together: should be done at IS stack level is how i I see it. (6:58:22 AM) maxandersen: doesn't make much sense esb enables bpel examples and the other way around does it ? (6:58:40 AM) maxandersen: then if you install esb you'll get bpel examples that wont work well and/or vice versa ?	1	1	https://issues.jboss.org/browse/JBTIS-83
12772	JBTIS-83	As these are NEW properties to be added to the ide-config.properties file, then we can safely add the above lines to the file so you can test it. https://github.com/jbosstools/jbosstools-download.jboss.org/pull/387 However, I notice your filepath uses a specific commitID and that the filename has "7.1" in the name, rather than 8.0. Is that intentional? If you used "latest in a branch" rather than "specific SHA hash" you would be able to more easily update this on the fly w/o having to update the IDE config file.	1	1	https://issues.jboss.org/browse/JBTIS-83
12773	JBTIS-83	Ok. Have updated all the paths to the zips in the project examples xml file to NOT be the static revision in the latest PR - https://github.com/jbosstools/jbosstools-esb/pull/56/files	1	1	https://issues.jboss.org/browse/JBTIS-83
12774	JBTIS-83	[~pleacu] - Beautiful! Will we have an updated Kepler one as well once we get BPEL worked out?	1	1	https://issues.jboss.org/browse/JBTIS-83
12775	JBTIS-81	Hey Andrej - The SOA-P 6.0 Alpha for JBTIS 4.0.0 (Juno) is closed to all but show-stopper bugs. Can this wait for the SOA-P 6.0 Beta for JBTIS 4.1.0 (Kepler)? If not then you need to raise this to Anne-Louise, Len DiMaggio and the PMs. --paull	1	1	https://issues.jboss.org/browse/JBTIS-81
12776	JBTIS-81	Hi Paul, does it mean that there will be no final JBTIS update site for Juno? By final I mean a version which can be turned into a product for JBDS.	1	1	https://issues.jboss.org/browse/JBTIS-81
12777	JBTIS-73	Nothing has changed for ESB since 4.0, so do we really need to change anything?	1	1	https://issues.jboss.org/browse/JBTIS-73

#	Requirement	Questions	Answered	Successfully Answered	URL
12778	JBTIS-73	Looking at the jbosstools-integration-stack project, there are no "compositeArtifacts.xml" or "compositeContent.xml" files in the devstudio/site directory. What should I do there?	1	1	https://issues.jboss.org/browse/JBTIS-73
12779	JBTIS-71	Hey Bob - We're picking up the updated BPMN2 modeler feature target dependency from http://download.jboss.org/jbosstools/updates/requirements/bpmn2-modeler/0.2.6.201306192132_S20130619_kepler/ The BPEL component feature we're picking up from: http://download.jboss.org/jbosstools/builds/staging/jbosstools-4.0_stable_branch.component--bpel/all/repo/ for Kepler. Is that correct? If yes then you we can close this JIRA. Thanks	1	1	https://issues.jboss.org/browse/JBTIS-71
12780	JBTIS-70	Hey Paul, Were you going to create an individual JIRA for each component? The next tooling release for SwitchYard will be 1.0. Depending on the project schedule, I'm not sure whether or not the 1.0 release will target Kepler or will remain on Juno. I suspect other projects may already be compatible with Kepler. If that is the case, those projects should not have to provide a specific Kepler build (i.e. their current release may work just fine). Rob	1	1	https://issues.jboss.org/browse/JBTIS-70
12781	JBTIS-66	To answer your other questions, Nick: a) Um...good question. Is "I haven't gotten around to doing that" an acceptable answer? ;) Hint: I could use some help with this b) I'm doing maintenance releases on an as-needed basis; there's no fixed schedule. c) I don't believe there's anything in 0.2.5 that SY needs (Rob Cernich?). This latest build was required for Savara. d) Nope, the BPMN2 metamodel is fixed...it's perfect...no bugs here :)	1	1	https://issues.jboss.org/browse/JBTIS-66
12782	JBTIS-66	[~bbrodt] Anything left to be done here? [~pleacu] I see you don't have a version of BPMN2 Modeler in your Kepler-based target platform site [1] or your aggregate update site [2]. What's left to be done to make that happen? [1] https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/integration-stack-base.target [2] http://download.jboss.org/jbosstools/updates/integration/kepler/integration-stack/aggregate/4.1.0/	1	1	https://issues.jboss.org/browse/JBTIS-66
12783	JBTIS-64	Closed/rejected PR - this change will wait for JBTIS-66. It will go into the kepler mainline capture for SOA-P 6.0 Beta/ JBDS 7.	1	1	https://issues.jboss.org/browse/JBTIS-64
12784	JBTIS-64	Hey Gary - Would you like for me to take the Savara 2.1.2.Final for both the SOA-P 6.0 Alpha 2 (Juno) and the SOA_P 6.0 Beta 1 (Kepler) from this update site? http://download.jboss.org/savara/releases/updates/2.1.2.Final/ The BPMN2 Modeler is at 0.2.6 now. Thanks! --paull	1	1	https://issues.jboss.org/browse/JBTIS-64
12785	JBTIS-50	OK, looks like we have the latest BPMN2 modeler (0.2.4) Let 'er rip!	1	1	https://issues.jboss.org/browse/JBTIS-50
12786	JBTIS-44	Hey Barry, Could you please reassign to the responsible party and ask Paul to update the component owner? Thanks, Rob	1	1	https://issues.jboss.org/browse/JBTIS-44
12787	JBTIS-32	commit comment says: "JBIDE-11101 move org.jboss.tools.runtime.esb.detector plugin and feature from jbosstools-runtime-soa project to jbosstools-esb project (master branch 1.5.200)", but runtime-soa jbosstools-4.0.x branch still have the same esb runtime detector plugin. The same state is in master branch for both affected components. Should we remove esb runtime detector plugin from jbosstools-runtime-soa?	1	1	https://issues.jboss.org/browse/JBTIS-32
12788	JBTIS-16	Which version of parent pom and target-platform do you use? I think we can integrate that change in Trunk (3.4.0.M1-SNAPSHOT) and branch (3.3.2-SNAPSHOT) target-platforms. Would it be fine for you? You'd just have to change parent version to 3.3.2-SNAPSHOT.	1	0	https://issues.jboss.org/browse/JBTIS-16
12789	JBTIS-16	Doug, This is a dependency specific to SOA plugins. I don't think we can easily add it to the indigo TP. Can you mirror the graphiti stuff and add it to this site you use http://download.jboss.org/jbosstools/updates/indigo/soa-tooling/SR2 ?	0	0	https://issues.jboss.org/browse/JBTIS-16
12790	JBTIS-16	Pulled a Graphiti 0.10 mirror... can that be used instead of 0.9? http://download.jboss.org/jbosstools/updates/requirements/graphiti/0.10.0.v20121219-0836/	0	0	https://issues.jboss.org/browse/JBTIS-16
12791	JBTIS-16	Which project in JBT core does require Graphiti? If none, we should remove Graphiti from JBT & JBDS target and make it part of the soa target extension suggested in JBIDE-11121.	0	0	https://issues.jboss.org/browse/JBTIS-16
12792	JBTIS-13	Paul, I'm project lead for Teiid Designer org.teiid.datatools.connectivity.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar org.teiid.designer.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar org.teiid.designer.runtime.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar Our latest project release is 8.0 and update site is at: http://download.jboss.org/jbosstools/updates/development/juno/soa-tooling/teiddesigner/8.0.0.Final/ Barry From: "Paul Leacu" <pleacu@redhat.com> To: "Maciej Swiderski" <mswiders@redhat.com>, "Kris Verlaenen" <kverlaen@redhat.com>, "Gary Brown" <gbrown@redhat.com>, "William Collins" <bicollin@redhat.com>, "Brian Fitzpatrick" <bfitzpat@redhat.com>, "Lars Heinemann" <lheinema@redhat.com>, "Barry Lafond" <blafond@redhat.com>, "Mark Drilling" <mdrillin@redhat.com>, "Paul Richardson" <parichar@redhat.com>, "Ted Jones" <tejones@redhat.com>, "Dan Florian" <dflorian@redhat.com>, "John Verhaeg" <jverhaeg@redhat.com>, "Bob Brodt" <bbrodt@redhat.com>, "Rob Cernich" <rcernich@redhat.com> Sent: Monday, January 7, 2013 11:33:03 AM Subject: JBoss Integration Tools info Hey - I've been working with Rob C to produce an aggregate/composite update site project for the layered release of the JBoss tools integration stack. The good news is that we've made sufficient progress that we need to know the particulars in more detail. You're receiving this email because I believe that you can provide some portion of the specifics I need. The aggregated IS capture is 162 plugins - could you please review the attached features and plugins file and... 1. Identify which features/plugins you are responsible for (or which most closely 'belong' to you). 2. Specify the location of the most recent stable update site/repository. 3. Identify the full version of the lates release of your plugins. I'll update the target dependencies, composite and site files and see if we can produce an independent layered IS release! Thanks in advance! --paull	1	1	https://issues.jboss.org/browse/JBTIS-13
12793	JBTIS-11	Hi Paul Could you remove the pi4soa feature from site.xml. compositeArtifacts.xml - looks fine, although found it interesting that all other urls were download.jboss.org, except savara which was downloads.jboss.org. Both seem to map onto the same location though, so it is fine, or you might want to change it to be consistent with the others. The target platform looks ok - although worried about the BPMN2 feature still being based on a nightly build. I think we need to coordinate with Bob Brodt to make sure there is a stable release of this project (although Bob is not the lead he may be able to help), and also that the latest version of the BPMN2 modeler is released before the integration stack is released.	1	1	https://issues.jboss.org/browse/JBTIS-11

#	Requirement	Questions	Answered	Successfully Answered	URL
12794	JBTIS-11	Hi Paul The Savara features/plugins all start with org.savara and org.scribble. The stable release is here: http://downloads.jboss.org/savara/releases/updates/2.x (version 2.0.0.Final) This site also bundles the Eclipse BPMN2 and BPEL editors, as well as the WS-CDL tools (features/plugins beginning with org.pi4soa). The BPMN2 and BPEL editors have been available as separate releases for some time, so the ones in this update site can be ignored. However if you could also include the org.pi4soa feature/plugins. The dev release is here: http://downloads.jboss.org/savara/releases/updates/milestones/current (version 2.1.0.M2 currently) In M3 the number of plugins will be reduced and the org.scribble plugins will no longer be distributed as plugins, but embedded in a savara plugin. Regards Gary ----- Original Message ----- > > Hey - > I've been working with Rob C to produce an aggregate/composite > update site project for the layered release of the JBoss > tools integration stack. 12799	JBTIS-2	Is this a done issue?	0	0	https://issues.jboss.org/browse/JBTIS-2
12800	JBTIS-1	Hey Nick, Mickael, We're working on putting a process together for handling things like this for SOA tools. That said, this looks OK with the following exceptions: * The guvnor/jbpm entries should be removed * The bpmn2 modeler need to be from ../site/0.1.0 I have not verified the specific versions of some of the other dependencies (e.g. OCL, bpel). Thanks for putting this together. Rob	1	1	https://issues.jboss.org/browse/JBTIS-1

#	Requirement	Questions	Answered	Successfully Answered	URL
12801	JBTIS-1	[~elvisisking]: how do you know that it's using the suggested soa target platform? That's why I'd like you to try step 1 to 4, so we are sure you are actually testing the new SOA target-platform.	1	1	https://issues.jboss.org/browse/JBTIS-1
12802	JBTIS-1	No problem, Dan. Your use case just shows that I should find a more direct way for you to test. I've worked on something simpler, can you please *ALL* give it a try asap? Just follow *exactly* those instructions: If you're using JBT parent pom # change parent pom version to 4.1.0.JBIDE-11121-SNAPSHOT # run "mvn clean verify -P soa -Dno.jbosstools.site -Dtycho.localArtifacts=ignore" If you're *not* using JBT parent: # Remove/comment from your pom all <repositories> and target-platform-definition-configuration # put in your pom.xml: {code:xml} <plugin> <groupId>org.eclipse.tycho</groupId> <artifactId>target-platform-configuration</artifactId> <version>${tychoVersion}</version> <configuration> <target> <artifact> <groupId>org.jboss.tools.target-platforms.soatools</groupId> <artifactId>multiple</artifactId> <version>4.2.1.a-SNAPSHOT</version> <classifier>multiple</classifier> </artifact> </target> </configuration> </plugin> {code} # Run a "mvn clean verify" Please post your build log there.	1	1	https://issues.jboss.org/browse/JBTIS-1
12803	JBTIS-1	Hey y'all...I know you THINK I'm supposed to know what all of this means, but really I don't have much of a clue. I know there's this thing called a ".target" file which I can create using an eclipse wizard, but beyond that...all of the words here parse like english (well, most of them) but they don't really make much sense to me. What exactly am I supposed to do here? I tried following the steps 1-5 described by Mickael above, but haven't gotten very far. What I see is [ERROR] Plugin org.jboss.tools.tycho-plugins:target-platform-utils:0.0.1-SNAPSHOT or one of its dependencies could not be resolved: Failed to read artifact descriptor for org.jboss.tools.tycho-plugins:target-platform-utils:jar:0.0.1-SNAPSHOT: Could not find artifact org.jboss.tools.tycho-plugins:tar get-platform-utils:pom:0.0.1-SNAPSHOT in tycho-snapshots (https://oss.sonatype.org/content/groups/public/) -> [Help 1] which makes not much sense to me HELP 1!	1	1	https://issues.jboss.org/browse/JBTIS-1
12804	JBTIS-1	Based on what I see here [0], your Juno-based target platform requires: Graphiti 0.9.1 Guava 10.0.1 (from Orbit R20120526062928) OCL 4.0.1 EMF Compare 1.3.2 -> requires EMF 2.8 EMF Query OCL 1.6 -> requires EMF 2.8, OCL 4.0, UML2 4.0 All of which is included in here [1]. As well as: BPMN2 0.7.0 and BPMN2 Modeler 0.1.0 [2] BPEL 1.0.2 [3] and of course... JBT 4.0 JBT Tests 4.0 --- Questions: 1. EMF Compare 1.3 is only compatible w/ Eclipse 3.8, not 4.2 [4]. What depends on this, and can version 2.0 be used instead, which works w/ Eclipse 3.8 AND with 4.2? Or 2. UML2 4.0 is not in your TP, though if I recall correctly (and they haven't removed the requirement) Teiid Designer requires UML2. Should it be added to your TP? I suspect you're resolving that dependency because it's already included in the JBT target platform [5] ? If that's the case then I believe it should be removed from ours and added to yours instead. 3. Graphiti 0.9 is in both your TP and the JBT one [5], yet I don't think anything in JBT requires it. It was most likely added to support something in the SOA-P/BRMS tooling space before you started having your own TP. It too should probably be removed from ours in favour of it being in yours - no need to be in both. Observation: 1. I've added a mirror on download.jboss.org for the only requirement I saw above that's not already there - the older version of the bpmn2 stuff, now mirrored here [2]. As such, you should be able to have all the URLs in your TP point to download.jboss.org URLs instead of the 8 eclipse.org ones, and get better performance when building the target platform site. You can even simplify the TP since of those 8 URLs, 6 can be collapsed down into a single one [1], leaving only BPEL and BPMN2 as separate entries, followed by the JBoss Tools stuff. -- [0] https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/pleacu-jbosstools-intstack-aggregate/ws/sources/target-platform/integration-tools.target/*view*/ [1] http://download.jboss.org/jbosstools/updates/requirements/juno/201209280900-R/ [2] http://download.jboss.org/jbosstools/updates/requirements/bpmn2-modeler/201211132058/ *NEW* [3] http://download.jboss.org/jbosstools/updates/requirements/bpel/1.0.2.v20121121-1634-CI/ [4] http://wiki.eclipse.org/EMF_Compare#Compatibility [5] http://download.jboss.org/jbosstools/updates/juno/SR1a/REPO/	0	0	https://issues.jboss.org/browse/JBTIS-1
12805	LOCUS-46	not following why you say JBDS has jboss-tools-locus as name and JBT has something different. JBDS naming is for *product artifacts*, thus not really relevant here. and the jbt consistent name would be jbosstools-locus-1.3.0-<version|SNAPSHOT>-updatesite.zip afaik. What other artifacts are you seeing the jbosstools-1.3.0-SNAPSHOT-updatesite-locus.zip format ?	1	1	https://issues.jboss.org/browse/LOCUS-46
12806	LOCUS-45	i'm lost - we did not have locus publish to dl.jboss.org before did we ? why do we need to have these urls configured and linked now ?	1	1	https://issues.jboss.org/browse/LOCUS-45
12807	LOCUS-42	doesn't this require addiitonal dependencies in locus or are they already provided from somewhere else ?	1	1	https://issues.jboss.org/browse/LOCUS-42
12808	LOCUS-42	Hey [~nickboldt], [~mickael_istria] - I know you guys are finishing up on the Beta1 9.0 TP. Could you assign this so it's not lost - it's needed so I can spin a 9.0.x Beta1 JBTIS TP for use with Data Trans in Fuse Tooling. There's only the one jar. Thkx!	1	1	https://issues.jboss.org/browse/LOCUS-42
12809	LOCUS-42	[~pleacu] Which jar(s) do you need us to add from Orbit into the JBT/JBDS target platforms for 4.50.0.Beta1 ? You said there were 4 6 days ago, and today you say there's only one jar. Can you submit a PR to update our TP so I know exactly what you need/want? https://github.com/jbosstools/jbosstools-devdoc/blob/master/building/target_platforms/target_platforms_updates.adoc https://github.com/jbosstools/jbosstools-target-platforms/pulls Or, if this is something that ONLY IS needs, why not just add the jar(s) to your JBTIS/JBDSIS TP? Why does it need to be upstream in JBT/JBDS TP?	1	1	https://issues.jboss.org/browse/LOCUS-42
12810	LOCUS-42	I wasn't thinking of adding it to the JBT TP, I was thinking it belonged in Locus (where I could pick it up from the JBTIS TP). I can find org.apache.commons.lang3_3.1.0.v201403281430.jar and the three jackson jars. It looks at this point like we need the jsonschema2pojo-core jar and two jaxb libraries (ref: https://issues.jboss.org/browse/JBTIS-438) - 3 total Project page/sources: https://jaxb.java.net/ Version: 2.2.7 (no hard requirement on this specific version that I know of) License and owner: CDDL v1.1 and GPL v2 Original p2 repo: unknown JBoss mirror: unknown Include Sources: Yes Affected projects: Fuse IDE Include in JBDS: unknown Type of dependency: unknown non-p2 repository: https://repo1.maven.org/maven2/com/sun/xml/bind/jaxb-xjc/2.2.7/jaxb-xjc-2.2.7.pom I thought the way to add the jars to JBTIS/JBDSIS TP was through Locus - how can I add them directly into my TP??	1	1	https://issues.jboss.org/browse/LOCUS-42
12811	LOCUS-42	Sorry, misunderstood. Thought you meant all the things you needed were already in Orbit (and therefore could be directly added to your TP). So to confirm, you want three new jars in Locus 1.3.0: * jsonschema2pojo-core jar, * jaxb-xjc jar and * jaxb-impl jar I don't see anywhere else in this JIRA or in JBTIS-438 where you've explicitly asked for these three, so I wanted to confirm I've successfully read the tea leaves of this cryptic request. (It'd be cool if you could update your issues' descriptions/titles when they evolve to include more work . :D) Is that correct?	1	1	https://issues.jboss.org/browse/LOCUS-42
12812	LOCUS-42	woow now ....CDDL and GPL v2 ? these are *not* kosher to use. is that truly their license ?!	1	1	https://issues.jboss.org/browse/LOCUS-42
12813	LOCUS-42	actually CDDL is possibly okey, I need to check - we've had issues with it in past. And is jaxb *absolutely* required ? What is it used for ? is it just for annotations or actually needed by jsonschema2pojo ?	1	1	https://issues.jboss.org/browse/LOCUS-42

#	Requirement	Questions	Answered	Successfully Answered	URL
12814	LOCUS-42	Hey [~kcbabo] - hoping that we can revisit this now that Fuse Tooling has shipped. Can you respond to Max's question above concerning JAXB? Also it appears that we're good to go with the jsonschema2pojo-core jar - [~mickael_istria] can we look into getting that into locus? Thkx	1	1	https://issues.jboss.org/browse/LOCUS-42
12815	LOCUS-42	[~mickael_istria] - what's the version branch for the next mars locus release? Is it still 1.3.0.Final? 1.3.1.?? Thkx	1	1	https://issues.jboss.org/browse/LOCUS-42
12816	LOCUS-42	Hey [~kcbabo] - I'd like to use version 0.4.13 of jsonschema2pojo - looks like it came out last week. If it causes trouble we can back off of it. WDYT?	1	1	https://issues.jboss.org/browse/LOCUS-42
12817	LOCUS-42	[~maxandersen] [~kcbabo] [~nickboldt] [~mickael_istria] This is a cleaned up version of the #42 PR. It adds jsonschema2pojo 0.4.13 and modifies the internal locus target platform to add referenced jars from eclipse orbit: com.fasterxml.jackson.core.jackson-annotations com.fasterxml.jackson.core.jackson-core com.fasterxml.jackson.core.jackson-databind javax.validation org.junit https://github.com/jbosstools/jbosstools-locus/pull/47 *This is less than the list of dependencies listed in the source dependencies list:* https://repo1.maven.org/maven2/org/jsonschema2pojo/jsonschema2pojo-core/0.4.13/jsonschema2pojo-core-0.4.13.pom I built this into a local IS TP: https://github.com/jbosstools/jbosstools-integration-stack/pull/386 I also modified the Fuse Data Trans editor plugin to ref the updated IS TP: https://github.com/pleacu/fuseide/tree/LOCUS-42 Everything compiles successfully. If this is agreeable I'd suggest we build a -SNAPSHOT locus and a -SNAPSHOT JBTIS TP and see someone from Fuse Data Trans wants to complete my branch changes. WDYallT?	1	1	https://issues.jboss.org/browse/LOCUS-42
12818	LOCUS-40	Would https://code.google.com/p/powermock-osgi/ fit your needs?	1	1	https://issues.jboss.org/browse/LOCUS-40
12819	LOCUS-40	[~jcantrill] Is this something you would see being installed OOTB in JBoss Tools? Also in JBDS? Or something that we could add to Central as an optional add-on for both JBT/JBDS users?	1	1	https://issues.jboss.org/browse/LOCUS-40
12820	LOCUS-40	The PR only includes one feature - for mockito-junit. What about the other three mocks? {code} org.powermock.easymock-junit.feature.feature.group 1.5.4.1 org.powermock.easymock-testng.feature.feature.group 1.5.4.1 org.powermock.mockito-testng.feature.feature.group 1.5.4.1 {code} Would anyone in JBTIS or JBT benefit from those? WDYT, [~adietish], [~xcoulon], [~phantomjinx] (ref: JBIDE-12971, JBIDE-14315)	1	1	https://issues.jboss.org/browse/LOCUS-40
12821	LOCUS-40	[~nickboldt] I think it depends on what is currently be used in the code base. Do we have any unit tests that utilize 'testng'? Do we have any unit tests that utilize easymock? It is my opinion for uniformity across the code base we should promote one or the other and limit the feature group. The alternative is to add them since it doesn't 'cost' us anything right?	1	1	https://issues.jboss.org/browse/LOCUS-40
12822	LOCUS-40	[~phantomjinx] The use with files is only an example. I am also using the approach where I create tmp-files and kick them off afterwards. There are plenty of cases where you cannot rely on interfaces, you need more power than proxies. Mockito has such means but afaik powermock goes far beyong what mockito has to offer. So far mockito was fully sufficient to me. Up to [~jcantrill] to weigh the benefits/costs. Can you elaborate? [~nickboldt] I dont think that there's any need for the additional testng (we use junit) and easymock (comparable to mockito, no benefit) features.	1	0	https://issues.jboss.org/browse/LOCUS-40
12823	LOCUS-40	btw. why is multiple junit 4.x versions needed? shouldn't we be okey using one specific 4?	0	0	https://issues.jboss.org/browse/LOCUS-40
12824	LOCUS-40	is that mockito-core/javaassist not supposed to be the one from our locus ? it seem to still be the one from powermock?	0	0	https://issues.jboss.org/browse/LOCUS-40
12825	LOCUS-39	[~mickael_istria] I believe it is actually possible to "aggregate" any amount of maven call in one using maven-invoker plugin. Basically it lets you to invoke maven from maven, but from user perspective it looks like single maven call. That would first call EBR builds for required bundles, install them into local repo and then call maven again to build p2repository. I am also curious why we don't use inclusion of actual jar inside bundle and then expose it through OSGi, for examle like that https://github.com/jbosstools/jbosstools-locus/compare/jbosstools:master...dgolovin:locus-dmg-question?expand=1. Are there any class loading related problems?	1	0	https://issues.jboss.org/browse/LOCUS-39
12826	LOCUS-39	{quote}I am also curious why we don't use inclusion of actual jar inside bundle and then expose it through OSGi, for examle like that https://github.com/jbosstools/jbosstools-locus/compare/jbosstools:master...dgolovin:locus-dmg-question?expand=1. Are there any class loading related problems?{quote} This has an extra cost on Equinox performances. It's the main reason why Orbit does this as well. Also, nested jars can confuse PDE which doesn't add them correctly in the classpath and so on. So overall, it's not as good aa repackaging in plain OSGi.	1	0	https://issues.jboss.org/browse/LOCUS-39
12827	LOCUS-39	https://wiki.eclipse.org/Tycho/Packaging_Types#p2-installable-unit Would this feature help?	1	0	https://issues.jboss.org/browse/LOCUS-39
12828	LOCUS-36	This JIRA lacks information. What does this do, why do we need it, and do we want it in the upcoming 1.0.0.Final release, or in master branch for 1.0.1 / 1.1.0?	1	1	https://issues.jboss.org/browse/LOCUS-36
12829	LOCUS-36	It adds Eclipse-SourceReferences to bundles. Cf * http://wiki.eclipse.org/PDE/UI/SourceReferences * http://wiki.eclipse.org/Tycho/FAQ#How_to_generate_Eclipse-SourceReferences_MANIFEST_header.3F Another benefit of this Eclipse-SourceReferences is that it puts in the MANIFEST.MF a reference to the commit/tag that was used to build the bundle. As for the version, I'd be tempted to say 1.0.0.Final, but is it an extra-effort compared to only 1.0.1. As it's a non-blocking improvment, I'd vote for the easiest solution.	0	0	https://issues.jboss.org/browse/LOCUS-36
12830	LOCUS-35	[~fbricon], [~rob.stryker] and [~adietish] you are the users of the dmr library. Can you test that the bundles produced by the #39 PR works with your usecases ? Should be done by removing your embedded dmr or dependency to as.dmr and see if things works.	1	1	https://issues.jboss.org/browse/LOCUS-35
12831	LOCUS-35	So do you want dmr 1.3 or is it ok to merge the PR for 1.2.2 ?	1	1	https://issues.jboss.org/browse/LOCUS-35
12832	LOCUS-28	Here are several possible approaches: * Embed jars in bundle * Explode jars and put the .class files in bundle * Get source and recompile [~maxandersen] Which one do you want?	1	1	https://issues.jboss.org/browse/LOCUS-28
12833	LOCUS-28	As your PR has already been applied, I checked it out, built it, and discovered that there are no class files in the fest jars. So here's a fix for that and a few others cleanup items: https://github.com/jbosstools/jbosstools-locus/pull/2 Unfortunately, it appears I don't have push rights. [~maxandersen], [~mickael_istria] or [~phantomjinx], can you review and apply the PR? [~maxandersen] is there a reason I don't have commit rights? :(	1	1	https://issues.jboss.org/browse/LOCUS-28
12834	LOCUS-25	Cool - not sure why I didn't spot that big blue attachement yesterday :) WDYT about the issue of a possible race condition on this static variable when running concurrent tests ? Is there no way in Mockito to refer to the "current configuration" to set it per mockito 'instance' instead of globally ?	1	1	https://issues.jboss.org/browse/LOCUS-25
12835	LOCUS-25	okey so Mockito keeps it state per-thread ? thats comforting at least.	0	0	https://issues.jboss.org/browse/LOCUS-25
12836	LOCUS-24	anyone know how the eclipse orbit is setup ? do they have a one big source repo with builds for these we could look at ?	1	1	https://issues.jboss.org/browse/LOCUS-24
12837	LOCUS-24	when they update do they do a full rebuild of orbit for this ? i assume not, which would be a reason to have various versions/tags of it.	1	1	https://issues.jboss.org/browse/LOCUS-24

#	Requirement	Questions	Answered	Successfully Answered	URL
12838	LOCUS-24	Nice but why do we need the source for *all* of these ? wouldn't a reference to their maven central GAV be enough for most cases ?	1	1	https://issues.jboss.org/browse/LOCUS-24
12839	LOCUS-24	Hey, if we migrate this to a new project, https://github.com/jbosstools/jbosstools-locus, and fix the namespaces such that s/org.jbosstools/org.jboss.tools/g, do we need all the 1:1 feature wrappers? * We can add plugins to our TP (features are not needed). * We can have our plugins depend on locus plugins, and be installed to an update site, then to a user's Eclipse. * We can have our features include or depend on locus plugins, and be installed to an update site, then to a user's Eclipse. * We only need features IFF there's a use case for a user to be installing Mockito or another Locus component *DIRECTLY*, via p2 Install, or JBoss Central, and you need the *additional metadata that only a feature provides*. So, is there a reason to have org.jboss.tools.locus.*.feature features? As of Tycho 0.16 and Kepler, we can publish all the individual plugins to an update site w/o the need for feature wrappers. Then those plugins can be installed via p2 Install. (Not sure about Central however.) Ref: https://bugs.eclipse.org/bugs/show_bug.cgi?id=378338#c21	1	1	https://issues.jboss.org/browse/LOCUS-24
12840	LOCUS-24	Who should the provider be for these? Sourceforge? Google Code? or JBoss by Red Hat? I would think us, but IANAL.	1	1	https://issues.jboss.org/browse/LOCUS-24
12841	LOCUS-24	+1, this looks good. About license, there is not such license attribute in plugin itself, so I guess p2 installer doesn't show anything for bundles. The remaining question is about qualifiers. Maybe it would make sense to use the jgit-timestamp provider for those since we don't want them to contain some BUILD_STREAM and other JBT specific labels. WDYT?	1	1	https://issues.jboss.org/browse/LOCUS-24
12842	LOCUS-24	on first look this looks very awesome! I want to try execute this and see the actual result. I can't make that today unfortunately. Is the screenshots missing ? the links are broken here and I see no attachements. with respect to license - what does Orbit do ? and with respect to installing - I hope all in locus are stuff that is included by others, not something to install manually.	1	1	https://issues.jboss.org/browse/LOCUS-24
12843	LOCUS-24	the biggest remaining issue is the mockito stuff which breaks the API of that bundle. can we exclude that for M7 without any bad sideffects ? [~phantomjinx] did you ever hear back from mockito guys - seem both your and my recent comment went completely unanswered :(	1	1	https://issues.jboss.org/browse/LOCUS-24
12844	LOCUS-24	I've finally gotten around to publish my README.md PR at https://github.com/nickboldt/jbosstools-locus/pull/1 This is/was very much based on what is found on Orbit docs about how to do these bundles. In doing so i've found some discrepencies compared to Orbit we'll need to react to. 1) we are adding jar's inside a bundle instead of using the actual real jar with updated manifest.mf - and advantage/disadvantage to this ? 2) fest contains multiple jar's incl. javadoc jar - that seems wrong. Why is it not one bundle per jar ? 3) Required execution environment is set to java 6 - is that true for all ?	1	1	https://issues.jboss.org/browse/LOCUS-24
12845	LOCUS-24	I'm looking at locus this morning and noticed when building both http://download.jboss.org/jbosstools/updates/juno and http://download.jboss.org/jbosstools/updates/kepler and both their associated TP sites gets added to the build. Why is that ? Everything in locus is supposed to have *zero* dependencies on these so why are they included ?	1	1	https://issues.jboss.org/browse/LOCUS-24
12846	LOCUS-23	[~mickael_istria] Have tested the PR. * Built it in jenkins under the jbosstools-locus.site_branch-testing project (build #2) - successful * Build published to http://download.jboss.org/jbosstools/updates/nightly/locus/provisional - successful * Re-generated Teiid Designer's target locally against this new provisional build and validated - successful * Executed Designer build and tests - successful On that basic happy for it to be merged. Assuming it is merged, what is the turnaround going to be for seeing this in the integration-stack?	1	1	https://issues.jboss.org/browse/LOCUS-23
12847	LOCUS-23	[~maxandersen] re. JBTIS. No problem. I can raise a JIRA on Paul to take the new version of locus. When would that new version of locus be available to take? re. provisional. I set up this link some time ago so that devs would not have to generate a local TP for Teiid Designer and that the 'new' saxon version would be available to builds in jenkins. It seemed a logical addendum to the publishing script in jenkins to set the TARGET_FOLDER variable, ie. -PARENT_FOLDER locus -TARGET_FOLDER provisional. The objective was to get new versions of Teiid Designer building with the new target-platform (new saxon version) until at such point the JBTIS version can be updated in the former's poms use the new version containing the new locus containing the new version of saxon. Thus, the current Teiid Designer target-platform pom looks like this https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/pom.xml - note the commented-out sections and the attaching of the [teiid-designer-extras-4.2.0.Final.target|https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/teiid-designer-extras-4.2.0.Final.target] If this objective can be achieved in a better way, can you point it out for me. Apologies if this was the incorrect protocol.	1	0	https://issues.jboss.org/browse/LOCUS-23
12848	LOCUS-21	Can this wait until Kepler M6 is out, or is it more urgent?	1	1	https://issues.jboss.org/browse/LOCUS-21
12849	LOCUS-21	[~mgagyi] Matej, is this something that you could use in your test? FestAssert adds nice syntactic sugar to assertions, my guess is that this is something that you could nicely use when doing tests? If yes, then what about trying this out and report to [~nickboldt] in this jira?	0	0	https://issues.jboss.org/browse/LOCUS-21
12850	LOCUS-21	We don't want to add things that people could use in TP, we really to add things that people want or need to use, so that it's sure they will use them. So [~mgagyi], do you want or need festassert? Will you use it if we introduce it in TP?	1	0	https://issues.jboss.org/browse/LOCUS-21
12851	LOCUS-21	Are you aware of anyone who could use assertJ in an OSGi world? Does it have OSGi bundles? A p2 repo? If yes, then we can probably include it in next (4.50.0.Alpha2-SNAPSHOT) TP. Please make another Jira request dedicated to AssertJ and close this one as out-of-date.	1	0	https://issues.jboss.org/browse/LOCUS-21

#	Requirement	Questions	Answered	Successfully Answered	URL
12852	LOCUS-17	I would think we want a "latest best" URL too, which would initially point to 1.0.0, then later 1.0.1, etc. Convention dictates that everything under /updates/ is then qualified by a TYPE or release: http://download.jboss.org/jbosstools/updates/stable/ http://download.jboss.org/jbosstools/updates/development/ http://download.jboss.org/jbosstools/updates/integration/ http://download.jboss.org/jbosstools/updates/nightly/ And, to avoid having lots of locus-* folders in the root of /updates/, I'd prefer to see locus/<version>/ than locus-<version>/. Thus, I would suggest this: http://download.jboss.org/jbosstools/updates/stable/locus/ --> points to latest stable release -> http://download.jboss.org/jbosstools/updates/stable/kepler/core/locus/ This pattern is the same for JBoss Tools: http://download.jboss.org/jbosstools/updates/stable/ --> points to latest stable release -> http://download.jboss.org/jbosstools/updates/stable/juno/ (currently 4.0.1) In fact, we already (sort of) have this, but only for /integration/ since we haven't had a /development/ or /stable/ release yet: http://download.jboss.org/jbosstools/updates/integration/locus/ (manually updated to point at latest release) -> http://download.jboss.org/jbosstools/updates/integration/kepler/core/locus/ I think we need to decide, like with Orbit (and its R-build releases which are not always backward compatible w/ previous releases), if 1.0.0 is a "Juno+" release, or since it's used for projects which are based on Kepler, whether it should be considered a "Kepler+" release. And then going forward, if we decide a baseline eclipse target based on the stuff that uses it, or what's in Locus & its TP. Personally, I think it makes sense for Locus 1.0.0 to be under /stable/kepler/core/locus/1.0.0.Final/, because: * it's stable * it's used by Kepler-based projects * core is there because it lets me use my existing promote.sh script w/o having to change it (#laziness #reuse) * it's locus (/locus/ is a composite of all the contained releases therein) Then, if we do a Locus release that depends on Luna, it would be /stable/luna/core/locus/1.1.0.Final/, but all subsequent releases depending on Kepler would be 1.0.x. Make sense?	1	1	https://issues.jboss.org/browse/LOCUS-17
12853	LOCUS-15	what does orbit do?	0	0	https://issues.jboss.org/browse/LOCUS-15
12854	LOCUS-13	QE has consistently said they LIKE having BUILD_NUMBER used in qualifiers. Why would we remove them? (qualifier is always changing because of timestamp too)	1	1	https://issues.jboss.org/browse/LOCUS-13
12855	LOCUS-13	Would QE be happy enough with Git commit id? [~ldimaggio] [~mmalina] any opinion on that?	1	1	https://issues.jboss.org/browse/LOCUS-13
12856	LOCUS-13	Yeah, I'm with Nick on this one. I think we're quite happy with the build number - it gives us a distinct ID that we can rely on. I get the point that you cannot reproduce a qualifier twice, but as Nick says, you couldn't have the date either. Having the corresponding git hash somewhere (is there a place for it? manifest? I don't know) wouldn't be bad, but I don't think build qualifier (=part of filename) is the right place. My $0.02 ;)	0	0	https://issues.jboss.org/browse/LOCUS-13
12857	LOCUS-13	I did not see this jira - we discussed early on for Locus that since this site will be used across multiple versions of Eclipse and from different installations it would be important we did not unnecessarily bump the version of the libraries. That said, is this the actual issue [~pleacu] bumped into ?	1	1	https://issues.jboss.org/browse/LOCUS-13
12858	LOCUS-13	I'm not sure how to interpret your answer. Is it ok to remove the SNAPSHOT/Final distinction in build?	0	0	https://issues.jboss.org/browse/LOCUS-13
12859	LOCUS-13	Removing BUILD_ALIAS won't remove the B## suffix. It will only remove the .Final part. Do you ALSO want to remove the BUILD_NUMBER? {quote}The action here would be simply be to configure tycho-packaging-plugin to remove reference to BUILD_NUMBER.{quote} Oh, I see you do. Or did. But don't now? Plugins in http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-locus.site_master/latest/all/repo/plugins/ show names like org.jboss.tools.locus.dmr_1.3.0.Final-v20150430-1349-B77.jar But when we rebuild, even if we remove the .Final bit, we'll get org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B78.jar And then each build after that, assuming no code change to the plugin (so no timestamp change)... org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B79.jar org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B80.jar ...	1	1	https://issues.jboss.org/browse/LOCUS-13
12860	JBTM-2905	This class was added to demonstrate how to support new log record types in the tooling. The bug is that it was included in the default list of types. What is your plan to fix this, are you going to remove it from the default list?	1	1	https://issues.jboss.org/browse/JBTM-2905
12861	JBTM-2905	[~mmusgrov] ok, that could be my wrong in understanding the issue here. Without the header reader I got troubles to get working ExpiredAssumedCompleteScanner. But I could take it from a wrong end. In that case, this change would be superfluous and the fix should go in opposite way - removing from the default list and leaving header reader in the test package. Can you please elaborate a bit on what is the correct way of fixing it? Thanks in advance!	1	1	https://issues.jboss.org/browse/JBTM-2905
12862	JBTM-2835	What does the error look like with your patch? What is the effect of the NPE?	1	0	https://issues.jboss.org/browse/JBTM-2835
12863	JBTM-2822	Hi [~tomjenkinson], during the check ups JBEAP issues I got to this issue and when applying the same test as I have for JBTM-2636 I found out that there is a branch in code where deffered exception is not added - that's when heuristic happens. Is it intentional? This kind of update fixes the issue that I refer to: https://github.com/ochaloup/narayana/commit/cb2ab4252a6c2e1106751d28103daefea42e86f6	1	1	https://issues.jboss.org/browse/JBTM-2822
12864	JBTM-2822	Sorry Ondra - I don't quite follow. Which branch does not have this commit in?	1	1	https://issues.jboss.org/browse/JBTM-2822
12865	JBTM-2733	Hi [~tomjenkinson], I was wondering on your comment https://issues.jboss.org/browse/JBTM-2733?focusedCommentId=13284121#comment-13284121 and now I found some time to go through the XA spec for it. I wasn't able to find reason behind why the recover sequence should be {{xa_recover(START), xa_commit/rb, xa_recover(END)}} and can't be e.g. like {{xa_recover(START|END), xa_commit/rb}}. Would you be so kind and elaborate a bit on this? Or can you point me to spec/article where I got information how this is expected to be used? It's quite possible that I just haven't read/searched properly. I'm just curious. Thanks in advance.	1	1	https://issues.jboss.org/browse/JBTM-2733
12866	JBTM-2686	Where is the link to the PR?	0	0	https://issues.jboss.org/browse/JBTM-2686
12867	JBTM-2660	It looks like the jca spec 1.5 dependency JTA 1.1 {code} +- org.jboss:jboss-transaction-spi:jar:7.3.0.Final:provided [INFO] | \- org.jboss.spec.javax.resource:jboss-connector-api_1.5_spec:jar:1.0.0.Final:provided [INFO] | \- org.jboss.spec.javax.transaction:jboss-transaction-api_1.1_spec:jar:1.0.0.Final:provided {code}	1	1	https://issues.jboss.org/browse/JBTM-2660
12868	JBTM-2634	Can you ask for feedback on the forum now it seems complete.	0	0	https://issues.jboss.org/browse/JBTM-2634
12869	JBTM-2634	It looks like it is in the spring-boot-1.4.0-M2 release now.	0	0	https://issues.jboss.org/browse/JBTM-2634
12870	JBTM-2606	Can we get a link to your branch here please?	1	1	https://issues.jboss.org/browse/JBTM-2606
12871	JBTM-2605	Is this done?	1	1	https://issues.jboss.org/browse/JBTM-2605

#	Requirement	Questions	Answered	Successfully Answered	URL
12872	JBTM-2599	[~lbarreiro] - understood. Will do the release as the PR passed. It will be tomorrow AM (UK) though. I don't think characterising this as a bug (in Narayana) is correct so changing the issue type. Also, please can you add a description? Probably just replicate your comment https://issues.jboss.org/browse/JBTM-2599?focusedCommentId=13145088&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13145088	1	1	https://issues.jboss.org/browse/JBTM-2599
12873	JBTM-2591	Yes, using 5.2.9.Final produces an example that works ... 15:43:35,988 INFO [org.jboss.weld.deployer] (MSC service thread 1-1) WFLYWELD0006: Starting Services for CDI deployment: ROOT.war 15:43:36,055 INFO [org.jboss.weld.Version] (MSC service thread 1-1) WELD-000900: 2.2.16 (SP1) 15:43:36,303 INFO [org.jboss.weld.deployer] (MSC service thread 1-3) WFLYWELD0009: Starting weld service for deployment ROOT.war 15:43:38,196 INFO [stdout] (ServerService Thread Pool -- 58) StartupBean call 15:43:38,217 INFO [stdout] (ServerService Thread Pool -- 58) MyEJB call 15:43:38,217 WARN [com.arjuna.ats.arjuna] (ServerService Thread Pool -- 58) ARJUNA012094: Commit of action id 0:ffffc0a80121:-26a9308d:567c12a6:b invoked while multiple threads active within it. 15:43:38,218 WARN [com.arjuna.ats.arjuna] (ServerService Thread Pool -- 58) ARJUNA012107: CheckedAction::check - atomic action 0:ffffc0a80121:-26a9308d:567c12a6:b commiting with 1 threads active! 15:43:38,602 INFO [javax.enterprise.resource.webcontainer.jsf.config] (ServerService Thread Pool -- 58) Initializing Mojarra 2.2.12-jbossorg-2 20150729-1131 for context '' 15:43:40,112 INFO [org.wildfly.extension.undertow] (ServerService Thread Pool -- 58) WFLYUT0021: Registered web context: / 15:43:40,151 INFO [org.jboss.as.server] (ServerService Thread Pool -- 34) WFLYSRV0010: Deployed "ROOT.war" (runtime-name : "ROOT.war") 15:43:40,264 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0060: Http management interface listening on http://127.0.0.1:9990/management 15:43:40,266 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0051: Admin console listening on http://127.0.0.1:9990 15:43:40,266 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0025: WildFly Full 9.0.2.Final (WildFly Core 1.0.2.Final) started in 14595ms - Started 330 of 510 services (221 services are lazy, passive or on-demand) I won't raise a pull request because maybe there's a reason it shouldn't be 5.2.9.Final. Whoever takes this issue should provide the right fix, i.e., don't wait for me :)	0	0	https://issues.jboss.org/browse/JBTM-2591
12874	JBTM-2564	Because if so we need to do it in a profile at a guess. Unless those arguments work on an IPv6 box. Do we know which quickstarts need those? [~hhovsepy] - can you raise a PR if you have the fix on your box so we can check it works on our CI cluster too please?	1	1	https://issues.jboss.org/browse/JBTM-2564
12875	JBTM-2564	Hi [~hhovsepy] - I thought Mike said you had tested a fix locally? If so, please can you commit it and PR it and I can amend it as necessary? Alternatively just paste in the surefire config you tested as a comment and I will try it here.	1	1	https://issues.jboss.org/browse/JBTM-2564
12876	JBTM-2564	Did you need any fixes to Narayana to make it work on IPv6 because I think [~hhovsepy] is reporting they don't work for him? I think the reason they would work on IPv6+IPv4 is arq will be fine to run with its IPv4 args. I therefore don't think we can mark it as resolved because the QS are running on IPv6 with IPv4 too so that is difference to the summary+description of this issue.	1	1	https://issues.jboss.org/browse/JBTM-2564
12877	JBTM-2564	As I understood, this task was created to add new maven profile into several quickstarts to pass IPv6 parameters (mentioned in earlier comments), right? Is it already done?	1	1	https://issues.jboss.org/browse/JBTM-2564
12878	JBTM-2553	I did some debug with the CrashRecovery2 Run with the following command {code} ./build.sh -f ArjunaJTA/jta/pom.xml clean test -Dtest=CrashRecovery2 -Dorg.jboss.byteman.debug -Dorg.jboss.byteman.verbose -PcodeCoverage {code} check the output of the test and it looks like the rule does not be triggered as it can not find the local binding var "$this" The fail2pc rule is {code} RULE Fail 2PC CLASS com.arjuna.ats.arjuna.coordinator.BasicAction METHOD phase2Commit AT ENTRY BIND NOTHING IF readCounter("phase2commit") == 0 DO debug("Called"), incrementCounter("phase2commit"); com.arjuna.ats.arjuna.coordinator.ActionManager.manager().remove($this.get_uid()); RETURN ENDRULE {code} The failure is {code} start:4 triggerPos:0 end:535 (I add this debug message in agent/src/main/java/org/jboss/byteman/agent/adapter/RuleCheckMethodAdapter.java) RuleCheckMethodAdapter.checkBindings : invalid local variable binding $this checking method phase2Commit(Z)V {code} if we run without the jacoco, the start and end is {code} start:0 triggerPos:0 end:327 {code} [~adinn] how do you think about this ?	1	1	https://issues.jboss.org/browse/JBTM-2553
12879	JBTM-2553	Hi Amos, thanks for reporting this. I don't know why you are seeing that error. It's very odd because $this is the only local variable reference that we can identify when there is no local variable table. Could you try changing the rule to use $0 instead of $this and see if that makes it work.	1	1	https://issues.jboss.org/browse/JBTM-2553
12880	JBTM-2553	Doh! I see Amos is way ahead of me here (nice work, Amos :-) The trace statement Amos inserted shows that the local variable checking code has found an entry in the local var table for $this but one that starts at bytecode offset 4 and ends at offset 535. The injection code is trying to inject the rule at offset 0 i.e. at entry to the code. This is after transformation by Jacoco. With no transformation the local var this is found starting at offset 0. I have not yet looked at the Jacoco code but it seems pretty obvious what is happening. When Jacoco inserts profiling instructions into the method it updates the start and end offsets for entries in the local variable table to take account of the new code. One of those profiling instruction sequences will be injected at the start of the method and Jacoco appears to be shifting the local var start offset for this so that it comes into scope after the profiling code rather than at bytecode 0. No doubt it is also shifting the start position for method parameter entries. This is at best unhelpful; actually, I think it is an error because this and the parameters are /always/ in scope from the start of the method even if code is inserted before the start. I thought that ASM fixed this as a special case. Which version of Jacoco is being used here? The latest Jacoco version uses ASM 5 which shoudl deal with this problem. Have you tried updating to a later Jacoco? If that doesn't work I'll take this up with the Jacoco developers.	1	1	https://issues.jboss.org/browse/JBTM-2553
12881	JBTM-2553	Thanks for the detailed explanation Andrew - it certainly sounds a complex issue. Do you know of any other coverage frameworks that Byteman might interoperate with today? If not we can just disable the byteman tests under coverage testing. If you do get a Jacoco issue reference please can you let us know so we can reference it here? Thanks again!	1	0	https://issues.jboss.org/browse/JBTM-2553
12882	JBTM-2532	Did you put back a commit for the unit tests for now?	1	1	https://issues.jboss.org/browse/JBTM-2532
12883	JBTM-2522	I meant https://github.com/jbosstm/performance/tree/master/comparison, but I'm not sure it's going to work. Is it possible to use JMH to test Arquillian tests? Or applications in WildFly deployed manually?	0	0	https://issues.jboss.org/browse/JBTM-2522

12891	JBTM-2458	Is this done?	1	1	https://issues.jboss.org/browse/JBTM-2458
12892	JBTM-2458	What was the resolution?	1	0	https://issues.jboss.org/browse/JBTM-2458
12893	JBTM-2440	Do you know why these only seemed to start failing when we upgraded to JDK8?	1	1	https://issues.jboss.org/browse/JBTM-2440
12894	JBTM-2440	Hi Mike, Am I right in thinking that this should be fixed, but we still have JBTM-2454? If so it is worth closing this one. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2440
12895	JBTM-2440	I asked [~adinn] to provide an opinion about whether it could be the annotation rather than the agent loading functionality that is the root cause of the problem and he suspects that it is most likely a bug in the dynamic agent loading behaviour in the J9 compiler. He also gave a good analysis of the issue which I am including here: {quote} I downloaded IBM's Java 7 SDK and tried to use it to build Byteman. That's enough to thoroughly test the use of the agent. The tests on the Byteman agent maven module are configured to install the agent from the command line using the -javaagent option (I do that rather than use the BMUnitRunner to auto-load because I don't want failures in BMUnit to stop the agent jar being built). These tests all worked ok. So, the IBM JDK does support all the functionality of the Byteman agent when you load it from the command line. The maven tests in the BMUnit maven module rely the BMUnitRunner annotation to auto-install the agent into an already running test JVM and this is what failed. The error output is attached. As you can see from the first exception trace the IBM JVM does implement dynamic loading -- the Attach operation is fielded and J9 tries to install the agent by executing com.ibm.tools.attach.javaSE.Attachment.loadAgentLibrary If you look at the cause of the exception you can see that this eventually calls into org.jboss.byteman.agent.Main.premain which is the Byteman entry point. This tries to register its ClassFileTransformer (InstrumentationImpl.addTransformer) and at this point J9 blows up. It is objecting to the agent's request for the ClassFileTransformer to be installed as a 'retransformable' transformer. That means it wants to be able to handle retransformations of existing classes as well as being given a chance to modify newly loaded classes. This seems a tad odd because when the Byteman agent is loaded on the command line it also asks its ClassFileTransformer to be installed as a retransformable transformer. So, the refusal by J9 must be some sort of policy decision on its part. I suspect that this may be a performance hack -- J9 may be willing to not perform certain optimizations in order to allow for retransformers if you install them from the get go but otherwise may decide to switch on optimizations that mean subsequent use of retransformers won't work. Whatever the reason IBM have done this you are snookered until you can get them to remove this restriction. n.b. it is a legitimate (i.e. JVMTI agent spec-compliant) behaviour but it's not exactly very useful. I will make eqnuiries to see if I can talk to someone in IBM and get this removed or, at least, find a way to relax it but I am not sure I will have any traction. I think there is only one workaround which will fix this if you want to use BMUnit on both OpenJDK/Oracle and IBM. You will need to switch to loading the agent from the command line (whatever JVM you are using). To do this you need to: i) install the agent on the command line of the test JVM by configuring java command line argument -javaagent:/path/to/byteman.jar=listener:true ii) stop BMUnit from loading the agent by adding adding the property setting -Dorg.jboss.byteman.contrib.bmunit.agent.inhibit n.b. you will need to build the path to the byteman jar by referencing the relevant dependency in your maven repo dir. you should be able to do that using by substituting maven property values (repo dir + byteman dependency version) into the path n.b. if you don't do the load yourself then you may want to set some other -javaagent options and/or Byteman system properties. The auto load will do the equivalent of adding boot:/path/to/byteman.jar to the -javaagent line and adding -Dorg.jboss.byteman.allow.config.update as a system property setting. The former allows you to inject into JDK runtime classes. The latter allows BMUnit to pay heed to your any options specified using a BMUnitConfig annotation on your test class. regards, Andrew Dinn {quote}	0	0	https://issues.jboss.org/browse/JBTM-2440
12896	JBTM-2432	Is there anything in Narayana that requires Java8 though? If not then why not still allow that at build time?	0	0	https://issues.jboss.org/browse/JBTM-2432
12897	JBTM-2432	That's WildFly and I do understand why they're moving to 8. However, if someone wants to build a component project using 7 then why wouldn't we allow that within that project until/unless we add features only available in 8?	0	0	https://issues.jboss.org/browse/JBTM-2432
12898	JBTM-2412	Thanks Tom, Which component would that be. Tom	1	0	https://issues.jboss.org/browse/JBTM-2412
12899	JBTM-2398	After the code review I have moved the implementation of the new methods into VolatileStore and TwoPhaseVolatileStore and added a new property to the store configuration bean to control the behaviour. As expected the change has no effect on the benchmarks for the new stores: -i 1 -wi 10 -f 1 -t 10 -r 100 # 10 warm up iterations and then a single iteration lasting 100 seconds using 1 thread c.a.a.j.x.p.VolatileStoreBenchmark.testVolatileStore thrpt 1 637563.988 NaN ops/s c.a.a.j.x.p.TypedVolatileStoreBenchmark.testVolatileStore thrpt 1 185962.192 NaN ops/s c.a.a.j.x.p.TwoPhaseVolatileStoreBenchmark.testVolatileStore thrpt 1 144480.394 NaN ops/s c.a.a.j.x.p.TypedTwoPhaseVolatileStoreBenchmark.testVolatileStore thrpt 1 107737.372 NaN ops/s	0	0	https://issues.jboss.org/browse/JBTM-2398
12900	JBTM-2392	Looks like a duplicate of JBTM-2216 to me. https://github.com/jbosstm/narayana/blame/master/ArjunaJTA/jta/classes/com/arjuna/ats/internal/jta/recovery/arjunacore/XARecoveryModule.java Its fixed in WFLY master version (was fixed in Narayana 5.0.4 which should be in WFLY since 9.Beta1).	0	0	https://issues.jboss.org/browse/JBTM-2392

#	Requirement	Questions	Answered	Successfully Answered	URL
12901	JBTM-2390	I am surprised you think its an anomaly. As an example, when you turn volatile store on our performance is something much more than a 15 fold improvement iirc? Some suggestions: 1. Are you using HQ store (can you use it in this config)? 2. Have you tried enabling the volatile store? In terms of notx vs emptytx I expect that is all down to the creation of the TX endpoints. You could profile the server to get more details there. I imagine your participants are no-ops so in the no tx case you have 2 no-op calls vs the empty tx case where you have 3 no-ops (I will class commit() here as a no-op as I assume it really is very little) and 1 op (the creation of the tx endpoints). Seems reasonable to me. In the emptytx case, can you drop the commit calls (without it falling over) to see the cost of the commit vs the create?	1	1	https://issues.jboss.org/browse/JBTM-2390
12902	JBTM-2379	Is it OK to raise this one now that 2377 is merged thanks?	1	1	https://issues.jboss.org/browse/JBTM-2379
12903	JBTM-2379	Great, please can you let me know when the PR is merged so I can start the 5.1.1 release?	0	0	https://issues.jboss.org/browse/JBTM-2379
12904	JBTM-2366	EDIT: The first link will need to be viewed using: https://drive.draw.io/?#G0B9c6Ahw-picmQklPZXp5M19nalk as the text does not seem to be visible on the Google Docs preview ---------- Gytis has a draft, I have shared it publicly but its still very much in development: https://drive.google.com/file/d/0B9c6Ahw-picmQklPZXp5M19nalk/view?usp=sharing For comparison, this is the existing version: http://narayana.io/images/narayana-architecture-diagram.jpg I think we need to align the cosmetics with other JBoss.org projects. Are isometric boxes still the most graphically clear?	1	1	https://issues.jboss.org/browse/JBTM-2366
12905	JBTM-2358	We should try to get the best JDBC results we can so should try to use a database that is either on the same machine ideally. Does haverstraw host a postgres?	1	1	https://issues.jboss.org/browse/JBTM-2358
12906	JBTM-2345	Would we need a variant of WFLY-1119 (Assign an unique NodeID automatically) to avoid conflicts (ie would different images share the same JDBC store). Also it is possible to point the tooling (ObjStoreBrowser) at a filesystem to manage the logs although it is unsupported (normally it is done via a JMX browser connected to the TM process). Do we need similar functionality for accessing the JDBC store directly?	0	0	https://issues.jboss.org/browse/JBTM-2345
12907	JBTM-2344	Happy to go with either, I wonder if Container could be confused with JEE container though. Maybe Cloud? I had a quick look at other projects and Forge has Docker and LiveOak seemed to use Cloud. I am happy with Docker though even with the potential overloading.	1	1	https://issues.jboss.org/browse/JBTM-2344
12908	JBTM-2343	How is this different to the current class that allows thread-to-transaction association and disassociation?	0	0	https://issues.jboss.org/browse/JBTM-2343
12909	JBTM-2334	Does that address the same use case though? If not then we should re-examine what we're doing.	1	1	https://issues.jboss.org/browse/JBTM-2334
12910	JBTM-2318	Agreed. Maybe create a separate JIRA for the tooling?	0	0	https://issues.jboss.org/browse/JBTM-2318
12911	JBTM-2318	Yeah, I haven't upgraded the logging for the component. The only thing I can think is that maybe the default used to be WARN or something? From looking at the log statements there looks to be three statements, its the way the log messages are formatted that is causing each of the statements to bridge two lines. The logging format looks to be the format generated by JDK logging rather than log4j so I guess this is in an IDE? {code} 2014-12-18 16:30:49,755 [main] INFO (ats.arjuna :88) - ARJUNA012163: Starting service com.arjuna.ats.arjuna.recovery.ActionStatusService on port 51214 2014-12-18 16:30:49,765 [main] INFO (ats.arjuna :327) - ARJUNA012337: TransactionStatusManagerItem host: 127.0.0.1 port: 51214 2014-12-18 16:30:49,765 [main] INFO (ats.arjuna :138) - ARJUNA012170: TransactionStatusManager started on port 51214 and host 127.0.0.1 with service com.arjuna.ats.arjuna.recovery.ActionStatusService {code} I am happy for those statements to move down to debug but the reason they are info is the default option seems to be to choose a random port so it might be the case then that people would all enable debug just to get at that. I can see why with multiple processes on the same machine why electing a port dynamically has some advantages but I know that WFLY at least configure a default of 4713. (4712 for recovery port). Why don't we use those defaults and only then log the statement at INFO if the user changes the port to 0?	0	0	https://issues.jboss.org/browse/JBTM-2318
12912	JBTM-2299	It looks like we don't need it as we has removed the TAO dependency in JBTM-1665 and used the http rest methods to access the TM [~tomjenkinson], Does it make sense ?	1	1	https://issues.jboss.org/browse/JBTM-2299
12913	JBTM-2296	[~tomjenkinson], you had a go with it some time ago. Do you think it's usable enough to be merged into our dockerfiles repo?	1	1	https://issues.jboss.org/browse/JBTM-2296
12914	JBTM-2286	Hi Mark, I clarified the description a bit. Its an addition, not a replacement of the existing standalone set. Its for ease of publishing on the site. Hope you agree it would be beneficial for that. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2286
12915	JBTM-2279	Wouldn't it have been easier/better/less invasive to have hidden this within a call to something like getCheckedActionFactory()? _checkedAction = _checkedActionFactory.getCheckedAction(get_uid(), type()); + _checkedAction = allowCheckedActionFactoryToBeOverriden ? arjPropertyManager + .getCoordinatorEnvironmentBean().getCheckedActionFactory() + .getCheckedAction(get_uid(), type()) + : defaultCheckedActionFactory.getCheckedAction(get_uid(), + type());	1	1	https://issues.jboss.org/browse/JBTM-2279
12916	JBTM-2270	JTS participant records are not in-lined with the transaction log so they appear in a separate part of the log store. The tooling only shows participants for JTA records which do have their participants inlined. Ondrej, is the Fix version field (6.0.0) ok? I just noticed that Gytis is down as the assignee so I will let him update that field.	0	0	https://issues.jboss.org/browse/JBTM-2270

#	Requirement	Questions	Answered	Successfully Answered	URL
12917	JBTM-2264	Hi Evgeniy, I have raised a pull request for this in our transactional driver code. I have also deployed a snapshot version of Narayana with the change already in there for you to have a go with. I have tested it locally (extensively) and it works for me. I can see the SNAPSHOT over here: https://repository.jboss.org/nexus/content/groups/public/org/jboss/narayana/jta/narayana-jta/5.0.4.Final-SNAPSHOT/. All you should need to do is change your pom to this version. Now for some background. BTM and Atomikos are not strictly spec compliant in my mind as their core transaction processing engine performs simple pointer comparison to determine if two XAResources are equivalent rather than the spec defined approach of using isSameRM. You can see the pointer comparison for yourself over here: https://github.com/bitronix/btm/blob/master/btm/src/main/java/bitronix/tm/internal/XAResourceManager.java#L194 You can see where the spec has pseudo code that demonstrates how the transaction manager is intended to use isSameRM in section "3.4.9 Identifying Resource Manager Instance" over here: https://jcp.org/en/jsr/detail?id=907 If two XAR are not equivalent you are meant to generate a new Xid for the branch and call start with TMNOFLAGS (as BTM/Atomikos will in this case, even though its technically the same RM) and if they are equivalent you use the same Xid and call start with TMJOIN (as we do). It turns out that there are a number of resource managers that return true to isSameRM but cannot handle the TMJOIN flag. It also turns out that this is a known issue with some of the drivers and Ironjacamar (Red Hats JCA implementation in Wildfly) already works around that for a number of drivers by wrapping their XAResources with an is-same-rm-override flag that returns false. The impact of this is that although your test would work in WildFly, there is a slight performance impact as the RM has two branches, plus should you touch the same tables you may be able to deadlock. Anyway, as you were using transactional driver rather than ironjacamar you have hit this issue. I have effectively backported that IJ workaround for a number of drivers which are also not compliant to our transactional driver code. The reason we haven't gone to pointer comparison is: 1. Spec compliance - we don't break that 2. There is an issue with overriding isSameRM which affects app servers performing a process known as transaction inflow. Due to limitations with the transaction inflow API (discussed at length elsewhere, for example https://issues.jboss.org/browse/JBTM-622) a transaction manager is not permitted to generate different Xids for resources. As such if we override the same rm report from the RM, RMs which correctly implement isSameRM and accept TMJOIN would be unfairly penalised as they would get: {code} xaResource1.start(xid1, TMNOFLAGS) xaResource2.start(xid1, TMNOFLAGS) {code} Which is a protocol error. Hope it helps, Tom	1	1	https://issues.jboss.org/browse/JBTM-2264
12918	JBTM-2262	BTW what did these scripts do in the old days? Did they add the jacorb jar explicitly?	1	1	https://issues.jboss.org/browse/JBTM-2262
12919	JBTM-2259	One of the reasons we haven't done this to date is that it's not standards compliant. Why isn't the ordering that JTA allowed in the interposed option sufficient?	0	0	https://issues.jboss.org/browse/JBTM-2259
12920	JBTM-2259	OK, but this is not compliant with the standards and therefore if some other transaction engine is used it will break. The reason ordering of resources and synchronisations isn't supported in the standards is because it becomes very hard to manage global ordering in a heterogenous environment. Are we really happy to add something which basically ties IronJacamar and Narayana together? I'm no so sure. While it's nice to add something like resource ordering, as we do with AbstractRecords, it should be done cautiously, in situations where no other option is possible, or as an optimisation, i.e., so without it the system still works, but may be slower, less efficient etc.	1	0	https://issues.jboss.org/browse/JBTM-2259
12921	JBTM-2245	Hi Tom, Mike, What is the planned fixed version of this task? Is there already a support of shutdown(timeout) in Narayana? I am asking as we have RFE https://issues.jboss.org/browse/EAP7-86 resolved and ready for QA. Thanks, Hayk.	1	0	https://issues.jboss.org/browse/JBTM-2245
12922	JBTM-2231	Hi Jesper, Please can you give me some ideas of what this for? Is it the IJ tracer? I have no problem with adding it, please just provide some context as there could be more I can give you. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2231
12923	JBTM-2231	Hi Jesper, Is the attached PR what you were thinking? Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2231
12924	JBTM-2230	As mentioned on the call, we need to be mindful of when we introduce this new interface method as it will require implementations to add the new method when they wish to upgrade. We could add it to a new interface. As there are various options here Mike we should create a design discussion and mention it to various teams. Can you create the discussion and flag it to Jesper (and Andy) to make sure known XARW impls are aware of the requirements (Andy obviously knows but he might want to contribute if Jesper has any observations.	1	0	https://issues.jboss.org/browse/JBTM-2230
12925	JBTM-2224	Can you point me at the forum posting where this was discussed? Then I can take my comments there rather than in JIRA.	1	1	https://issues.jboss.org/browse/JBTM-2224
12926	JBTM-2210	Granted I haven't updated my local copy for a few weeks, but these warnings seemed to come all of a sudden and a lot of them to boot. Was this expected?	0	0	https://issues.jboss.org/browse/JBTM-2210
12927	JBTM-2210	So all of these warnings have been there for 7 months?!	0	0	https://issues.jboss.org/browse/JBTM-2210
12928	JBTM-2210	No, failing on warn is probably not a good idea. I'm surprised that I didn't see it earlier, since I built the source quite a bit only a few weeks ago. I'm also surprised no one else caught it if it's been around that long. Do we regularly check the build logs? Even building in the cloud or an IDE should generate the same warnings (e.g., in Eclipse).	1	1	https://issues.jboss.org/browse/JBTM-2210
12929	JBTM-2209	Hi Jesper, Please can you add a few more details to the Jira on the reasons for the change? Tom	1	1	https://issues.jboss.org/browse/JBTM-2209
12930	JBTM-2209	Thanks, but that's about as much use to me as a chocolate fireguard! ;) Or giving me a scalar number when I need a vector. What was the test used? How many iterations? We could do this ourselves of course, but it'd be so much simpler if you've already done that work :-) And yes, I see the test code you added, but I was looking for some test that worked in situ with the Stack usage within Narayana.	1	1	https://issues.jboss.org/browse/JBTM-2209
12931	JBTM-2209	Great work on the fix and the benchmark, I agree it looks like it is worth merging. Mike, may I ask you to do the honours please as it is your PR now?	0	0	https://issues.jboss.org/browse/JBTM-2209
12932	JBTM-2206	I don't think we should change ArjunaCore/arjuna/classes/com/arjuna/ats/arjuna/coordinator/CheckedAction.java as it is in the public API so unless it has considerable performance win the cost of update apps to use the new API is probably not justified. As to the rest of the changes, can you give us a brief indication of the performance benefit of this particular change?	1	1	https://issues.jboss.org/browse/JBTM-2206
12933	JBTM-2206	Can you include a link to the forum posting here for future reference?	0	0	https://issues.jboss.org/browse/JBTM-2206
12934	JBTM-2203	Hi Jesper, Thanks for creating the separate issues! Can you now share the relative performance benefit of the enhancement please, same for JBTM-2209, JBTM-2207, JBTM-2208 and JBTM-2206? Thanks! Tom	1	1	https://issues.jboss.org/browse/JBTM-2203
12935	JBTM-2203	I don't think we can remove the *Mutex() methods from StateManager as these are part of the public API so people that inherit from that class would no longer have access to them (as you saw in the tests you had to modify). Please can you provide a few more details on what the performance win was with removing the Reentrant lock to help evaluate the benefit vs the drawback of the API change?	1	1	https://issues.jboss.org/browse/JBTM-2203

#	Requirement	Questions	Answered	Successfully Answered	URL
12936	JBTM-2203	Hold on ... doesn't this changed the public API of StateManager and LockManager? Whilst the latter is a superset of the previous API, the former isn't and potentially breaks other classes from users that may inherit from StateManager. Did we deprecate as discussed last July? Did we determine what the cost/benefit is of doing this?	1	0	https://issues.jboss.org/browse/JBTM-2203
12937	JBTM-2202	What does this have to do with REST transactions? If it's local-only, then distribution over REST is not an option.	0	0	https://issues.jboss.org/browse/JBTM-2202
12938	JBTM-2189	For clarity in future if others come to this issue, can you please describe what problem you've seen and hence why you've submitted a patch. "fails to bootstrap properly" isn't sufficient. Thanks.	0	0	https://issues.jboss.org/browse/JBTM-2189
12939	JBTM-2189	After applying the change proposed to ConfigurationInfo, the following exception (which is addressed by the proposed change in AbstractPropertiesFactory) occurs: java.io.FileNotFoundException: \naintegration-1.0-SNAPSHOT.one-jar.jar (The system cannot find the file specified) at java.util.zip.ZipFile.open(Native Method) at java.util.zip.ZipFile.<init>(Unknown Source) at java.util.zip.ZipFile.<init>(Unknown Source) at java.util.jar.JarFile.<init>(Unknown Source) at java.util.jar.JarFile.<init>(Unknown Source) at sun.net.www.protocol.jar.URLJarFile.<init>(Unknown Source) at sun.net.www.protocol.jar.URLJarFile.getJarFile(Unknown Source) at sun.net.www.protocol.jar.JarFileFactory.get(Unknown Source) at sun.net.www.protocol.jar.JarURLConnection.connect(Unknown Source) at sun.net.www.protocol.jar.JarURLConnection.getInputStream(Unknown Sour ce) at java.net.URL.openStream(Unknown Source) at com.arjuna.common.util.propertyservice.AbstractPropertiesFactory.load FromFile(AbstractPropertiesFactory.java:142) at com.arjuna.common.util.propertyservice.AbstractPropertiesFactory.getP ropertiesFromFile(AbstractPropertiesFactory.java:100) ... 33 more	1	1	https://issues.jboss.org/browse/JBTM-2189
12940	JBTM-2189	Hi Chris, Many thanks for your interest in Narayana. Normally for something like this it is best to start with a discussion on our forums over here: https://community.jboss.org/en/jbosstm. That said, please can you add a little more detail into the description as to the nature of the bug. We do already function in Java SE and also complex classloader hierarchies so this may be a corner case which we would be happy to work with you to address. I am not familiar with OneJar, is it a maven plugin that will put all the dependency jar classes into the same Jar as the application jar? The main problem with your report as it stands is that we don't have a well defined reason for _why_ the change needs to be made, if you can express the motivation for the change in more general terms then we can get it merged. As you say, the fix looks like it should work in our currently supported options so it shouldn't be a problem to get it merged once we have more context to backup the need to merge it. Once we understand the problem better, and we proceed with your approach, please can you: 1. Sign the CLA over here: https://cla.jboss.org/ (project is JBoss Transactions) 2. Fork: https://github.com/jbosstm/narayana 3. Raise a pull request on the main repo with your fix in. It should be easier to review inline, plus it will get CI run on it. Many thanks for the contribution! Tom	1	1	https://issues.jboss.org/browse/JBTM-2189
12941	JBTM-2184	What's the procedure for ensuring our artifacts make it into maven central? How are you determining our missing dependencies?	0	0	https://issues.jboss.org/browse/JBTM-2184
12942	JBTM-2184	So my guess is that we need to add the dependency to ArjunaJTA/narayana-jta/pom.xml - what is the easiest way to test that? I ran tattletale over narayana-jta and it reports transitive dependencies on other stuff as well (org.hornetq.core and org.jfree). Does that imply we need to add explicit dependencies on those too?	1	0	https://issues.jboss.org/browse/JBTM-2184
12943	JBTM-2184	Just trying to work out, what were you doing to cause the issue? For example the ArjunaJTA/maven qs doesn't exhibit this behaviour after I fixed it to have the correct runtime dependencies. Some of the quickstarts do import the SPI correctly as they must need to use this behaviour: [tom@dhcppc1 quickstart](JBTM-2182) (15:40:29) $ grepinpom transaction-spi ./jca-and-tomcat/pom.xml ./jta-and-hibernate/pom.xml ./jca-and-hibernate/pom.xml It looks like "provided" scope dependencies of constituent modules have not been included in shaded poms. Some of this goes away if we start to recommend users to use the raw modules rather than the uber jars created by the shade plugin as then the poms are self documenting (like in WildFly). At the moment it is effectively assumed that you would know which jars to include if you use the uber jars as the Jars do not document the requirement. The disadvantage of the none-uber jar is only for JTS as you would be required to provide a configuration file to enable JTS, at the moment it is selected by the jar. Unfortunately I can't get a shaded pom to include provided scope at all, I could make it runtime but then it would still be dependent on the Jars being available which for some situations shouldn't be required. Will have a think...	1	1	https://issues.jboss.org/browse/JBTM-2184
12944	JBTM-2183	Have we seen this behaviour elsewhere in the past? I don't recall it. A change in Oracle? Or just lucky for us so far not to have seen it? As to changing the default, we can't do that until the EAP 7 timeframe even if we wanted to. Plus, we'd better be able to show that this has no impact on performance, reliability etc. in environments where the RM doesn't exhibit this behaviour. Otherwise may be best to err on the side of caution and perhaps catch the error in recovery and swap in the alternate behaviour for the next sweep.	0	0	https://issues.jboss.org/browse/JBTM-2183
12945	JBTM-2180	As a start on this task I have enabled the Oracle® JRockit Flight Recorder for a subset of the performance tests in the perf CI job (http://172.17.131.2/job/narayana-performance/). Flight data is stored in the maven build directory (target/test-classes/*.jfr) and can be read using the jmc tool available in the standard JDK (edition 7u40 and above). What is the best way to evaluate other options given that there are many alternatives (and trying out each one involves engineering work): * JDK Collections (much of our code hasn't been updated to take advantage of newer releases (Jesper has been looking into this); * Goldman Sachs Collections; * Google Collections (Guava); * javolution; * Highly Scalable Java; * ... Tests with flight data currently include: Core: com.hp.mwtests.ts.arjuna.performance.Performance1 com.hp.mwtests.ts.arjuna.performance.Performance2 com.hp.mwtests.ts.arjuna.performance.Performance3 com.hp.mwtests.ts.arjuna.performance.Performance4 JTA: com.arjuna.ats.jta.xa.performance.OnePhase2PCPerformanceDefaultUnitTest com.arjuna.ats.jta.xa.performance.OnePhase2PCPerformanceVolatileUnitTest com.arjuna.ats.jta.xa.performance.OnePhasePerformanceDefaultUnitTest com.arjuna.ats.jta.xa.performance.OnePhasePerformanceVolatileUnitTest JTS com.hp.mwtests.ts.jts.local.synchronizations.Performance com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1 com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2 com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance3	1	1	https://issues.jboss.org/browse/JBTM-2180
12946	JBTM-2163	Hi [~zhfeng], Does your current pull request enable the recovery manager? If not we should make sure you have done that as a top priority before closing this issue. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2163
12947	JBTM-2159	Huh? Assume I can't view the Bugzilla, which may go part way to explaining my confusion ;-) Is this a race condition between recovery and application? If so it should be taken care of already within the transaction code.	1	1	https://issues.jboss.org/browse/JBTM-2159

#	Requirement	Questions	Answered	Successfully Answered	URL
12948	JBTM-2151	Should I remove the fix version number as I don't believe this is work that is currently scheduled?	0	0	https://issues.jboss.org/browse/JBTM-2151
12949	JBTM-2122	[~tomjenkinson] Not fully sure if our discussion at https://issues.jboss.org/browse/JBEAP-610?focusedCommentId=13147405#comment-13147405 is directly connected to this issue but you previous comments seem to me so. What I remember by [~hhovsepy]'s investigation it seemed that JTS works with 2pc for propagated transactions at any time (meaning even with one resource enlisted). Later on that was found that we have (?) some trouble in test and 1pc is used. Your reference of https://c.na7.visual.force.com/apex/Case_View?sbstr=01560781 seems to me not related as it's rather caused by the fact discussing at https://issues.jboss.org/browse/JBEAP-225 and https://issues.jboss.org/browse/WFLY-4608 which is based on issue in container. _plus as action item from f2f I would say that what you mentions in your first comment is not so. if we are not wrong in our settings then jts and jboss remoting run 1pc_	1	0	https://issues.jboss.org/browse/JBTM-2122
12950	JBTM-2119	Hi Lami, Would you be interested in contributing a pull request for this enhancement? If so, please can you sign the CLA over here: https://cla.jboss.org/index.seam (the project is JBoss Transactions) The raise a pull request against either 4.17 or master over here: https://github.com/jbosstm/narayana/pulls Many thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-2119
12951	JBTM-2116	Is this something that needs to be meaningful in a distributed environment? What about a heterogeneous environment?	0	0	https://issues.jboss.org/browse/JBTM-2116
12952	JBTM-2116	I added a forum reference for this which I found. I am extrapolating a little, but is the issue related to calling hashCode in JTS afterCompletion in a subordinate node and are there other scenarios you have found it to be volatile?	0	0	https://issues.jboss.org/browse/JBTM-2116
12953	JBTM-2081	I think that if we are allowing defaults for all values (good idea) then it should be possible for someone to deploy a transactional application without a property file. Maybe give a warning or output in Info?	1	1	https://issues.jboss.org/browse/JBTM-2081
12954	JBTM-2081	Hi Mark, The issue is that jts is not a strict superset of jta. To be able to provide a single binary containing both JTS and JTA, you therefore need a properties file. Otherwise you have to decide the java hardcoded defaults at compile time, which means using code templates in the jta module compile. We could look at only requiring the properties file once you get to JTA or greater level of the framework? What do you think? Tom	1	1	https://issues.jboss.org/browse/JBTM-2081
12955	JBTM-2081	Would the intention also be to no longer ship a default jbossts-properties.xml file in the jars, and to no longer be able to change the default name of the config file in the manifest.mf?	1	1	https://issues.jboss.org/browse/JBTM-2081
12956	JBTM-2081	What values are in the default properties file these days?	1	1	https://issues.jboss.org/browse/JBTM-2081
12957	JBTM-2081	The original Android code should still be in my Android branch on svn. The vert.x code is https://github.com/nmcl/mod-stm Try removing the property file? Note, this is 5.0.0.Final of TS.	1	1	https://issues.jboss.org/browse/JBTM-2081
12958	JBTM-1972	JIRA is not the appropriate place to ask this question. Please can you raise it via the forums at http://www.jboss.org/ejb3	0	0	https://issues.jboss.org/browse/JBTM-1972
12959	JBTM-1955	We should make sure we are using the PRODUCT variable throughout. We should also add variables for the target app server (IMO). This will allow us to use Narayana and WildFly for the community docs and JBossTS and JBoss AS in the product docs. Does this last point make sense?	1	0	https://issues.jboss.org/browse/JBTM-1955
12960	JBTM-1955	I've read through the XTS docs. I've applied the minor changes (mostly typos) here: https://github.com/jbosstm/documentation/commit/238a06aa9e50ff03144c7f542c08f1b36a9e6b93. Gytis, Can you apply this to the 4.17 branch please? I also have some ideas about how to layout the docs for the new feature-work done in Narayana 5. I will discuss this with Gytis when we meet to discuss the XTS docs.	1	0	https://issues.jboss.org/browse/JBTM-1955
12961	JBTM-1943	Ondrej Chaloupka <ochaloup@redhat.com> made a comment on [bug 1009981|https://bugzilla.redhat.com/show_bug.cgi?id=1009981] Hi Tom, I help to Mirek with verification of this issue. The correct name of attribute that is needed to be set is com.arjuna.ats.jta.orphanSafetyInterval (default is 10000) Mirek ran his test with several values of the attribute. When we set the attribute to be 20s (20000) we still get the XAExceptions time to time. When we redefine the time being 40s (40000) the exception disappeared from the log. I think that I can verify this issue just don't you think that it would be better to set the default interval time a bit bigger? For not to get the error as default behavior. But I'm not sure how would it influence the whole recovery process. It's true that the problem occurs on faster machines under the load of receiving a bigger amount of messages. Ondra	0	0	https://issues.jboss.org/browse/JBTM-1943
12962	JBTM-1943	Ondrej Chaloupka <ochaloup@redhat.com> made a comment on [bug 1009981|https://bugzilla.redhat.com/show_bug.cgi?id=1009981] Hi Tom, a one more request. I've added a doc text to this bug but I don't think that my text is well written. Could you please check it and polish it? Thank you Ondra	0	0	https://issues.jboss.org/browse/JBTM-1943
12963	JBTM-1942	Is this issues resolved now? /cc [~paul.robinson]	1	1	https://issues.jboss.org/browse/JBTM-1942
12964	JBTM-1930	The definitive documentation for CLI subsystems are in the XSDs (docs/schema/jboss-as-txn_<version>.xsd). Rather than duplicate this documentation and risk it diverging my preference is to simply point the community docs at this file. Does anyone have any objections with this approach?	1	1	https://issues.jboss.org/browse/JBTM-1930
12965	JBTM-1925	Gytis, I've had a look at this issue and updated the description with what should now work. Tom and I have tried it out. It's going to be quite time-consuming, and I still have a few M5 issues left to do. Can you take a look at this please. Re-assign it back if you don't think you will have time to do it.	0	0	https://issues.jboss.org/browse/JBTM-1925
12966	JBTM-1915	Is this still likely for tomorrow?	1	1	https://issues.jboss.org/browse/JBTM-1915
12967	JBTM-1909	Seems like a few things broke or changed behaviour due to 1875. Can we have a better vetting process in future to either prevent these things creeping in or at least document them such that they don't come as a surprise?	1	0	https://issues.jboss.org/browse/JBTM-1909
12968	JBTM-1908	I notice qa and rts have printSummary set to true. Maybe do that for everything anyway? Whatever we do, we should be consistent though.	1	1	https://issues.jboss.org/browse/JBTM-1908
12969	JBTM-1908	Did we upgrade the surefire version recently?	1	1	https://issues.jboss.org/browse/JBTM-1908
12970	JBTM-1855	[~gytis], [~zhfeng] mentioned that he had asked you to review: https://github.com/zhfeng/narayana/commit/b51faee71db0977898f471e806b5e88162100945 Have you had chance to do this yet?	1	1	https://issues.jboss.org/browse/JBTM-1855
12971	JBTM-1852	I see. Now I understand the issue but not the context nor the solution, thanks. How does the participant recover and who rolls back the participant if there is no transaction.	1	1	https://issues.jboss.org/browse/JBTM-1852
12972	JBTM-1838	Done in 4.17 using EAP: https://github.com/jbosstm/quickstart/commit/5d7a4ea39bea48c90b63de783381ced493ba343e Gytis: can you apply to master using WildFly. I think the commands are the same, but you will need to test them. Also, you will need to rename the occurrences of JBoss EAP 6.1 with WildFly. I think it should be less specific about the actual version downloaded. Just tell the user to go get WildFly from the download page and then unzip it. This will stop it going out of date every time a new version is released.	0	0	https://issues.jboss.org/browse/JBTM-1838

#	Requirement	Questions	Answered	Successfully Answered	URL
12973	JBTM-1821	Conversation with Gytis on a potential solution: pfrobinson: whilst you are at it, can you have a quick check to see if you can add modules to the classloader in that phase too? [12:06pm] gytist: you mean dependencies like org.jboss.xts? [12:10pm] pfrobinson: yeah [12:10pm] pfrobinson: I want to scan for the use of @Transactional and then add the org.jboss.jts depenedency to the deployment [12:10pm] gytist: I think it is, some of the subsystems automatically add dependencies [12:11pm] pfrobinson: yeah, that was my thoughts too [12:11pm] pfrobinson: for example, if persistence.xml is present, you add the jpa deps [12:11pm] gytist: I saw it when I was researching my issue on Monday [12:11pm] gytist: need to find it again [12:12pm] gytist: grep for this class WSDependenciesProcessor [12:12pm] gytist: that's what you need [12:12pm] pfrobinson: great, thanks	0	0	https://issues.jboss.org/browse/JBTM-1821

12975	JBTM-1816	How are you running the test. The following syntax used to work but not anymore: {code} ./build.sh -f ArjunaJTS/pom.xml test -Dtest=com.hp.mwtests.ts.jts.orbspecific.recovery.JavaIdlRecoveryUnitTest -Didlj-enabled {code}	0	0	https://issues.jboss.org/browse/JBTM-1816
12976	JBTM-1816	The reason in the difference in the tests is because if JacORB runs first it has put its RC entry in the object store. You can replicate the issue by using the ObjectStore in the attached jacorb-rc-in-object-store.tgz. If you put it as ArjunaJTS/jts/target/test-classes/ObjectStore then even "./build.sh -f ArjunaJTS/jts/pom.xml test -Dtest=JavaIdlRecoveryUnitTest -Didlj-enabled" would fail. iirc the RC manager uses a known UID hence why running JacORB then JDKORB in the same ObjectStore will be a problem. If you notice, the specific test that fails isn't actually the one that is generated in the log you pasted, so success or fail you get those log messages. i.e. those log messages come from tests where failure is expected. That being said, I don't know if there are any tests where success is expected - we should make sure we have some of those as that log message implies that the JDK orb hasn't been configured correctly. i.e. do we have a test that correctly initializes a JDK ORB RC manager? The only tests I see in JavaIdlRecoveryUnitTest are testing failure scenarios.	0	0	https://issues.jboss.org/browse/JBTM-1816
12977	JBTM-1809	Did this get resolved? I saw some commits on the 4.17 branch	1	1	https://issues.jboss.org/browse/JBTM-1809
12978	JBTM-1808	Tom, I was thinking that this would be good for Amos to investigate. Can you add any ideas you may have to the above text and then assign accordingly?	1	1	https://issues.jboss.org/browse/JBTM-1808
12979	JBTM-1808	Maybe this isn't worth the bother? How about we split the job up into 5 1hr pieces and defer this task until we are in a position where we are using too much CI time?	1	1	https://issues.jboss.org/browse/JBTM-1808
12980	JBTM-1789	Hi Paul, Can you list the files that are in the uber jars but not in the individual jars? The AS currently just consumes the uber jars so I want to make sure when we move to using the individual jars in the AS we can anticipate any further modifications required. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-1789
12981	JBTM-1788	Hi Tom, [tom@dhcppc1 quickstart](4.17.4.Final)) $ git name-rev HEAD HEAD tags/4.17.4.Final [tom@dhcppc1 quickstart](4.17.4.Final)) $ find . -name \pom.xml -exec grep -l 4.17.5 {} \; [tom@dhcppc1 quickstart](4.17.4.Final)) $ I can't find any reference to 4.17.5 on that tag (SNAPSHOT or otherwise). Can you try to find which file has that reference in? Maybe somehow your repo is corrupted? Tom	1	0	https://issues.jboss.org/browse/JBTM-1788
12982	JBTM-1772	Is this not something that the build can automate?	1	0	https://issues.jboss.org/browse/JBTM-1772
12983	JBTM-1770	Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom	1	0	https://issues.jboss.org/browse/JBTM-1770
12984	JBTM-1754	Hi Paul, The dir name and artifact id are effectively fixed at the moment. However, as you say we have more flexibility on the "project name" field. Can you update your table with an example of your preferred project name for those modules you have referenced originally, please? Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-1754
12985	JBTM-1754	Hi Paul, is the "Narayana: " prefix implied and therefore a little redundant (I realise I added the redundancy myself with JBossJTS, so just trying to get your opinion here)? if not the table looks good to me - thanks!	1	1	https://issues.jboss.org/browse/JBTM-1754

#	Requirement	Questions	Answered	Successfully Answered	URL
12986	JBTM-1742	In what way did it break the build? I thought I had built everything when I changed this yesterday.	1	1	https://issues.jboss.org/browse/JBTM-1742
12987	JBTM-1721	Is there a pull request for this on WildFly or does it require M5?	1	1	https://issues.jboss.org/browse/JBTM-1721
12988	JBTM-1707	Hi, Could you please confirm, can we use JBossTS 4.3.GA release for above mentioned problem. Thanks, Sube	1	0	https://issues.jboss.org/browse/JBTM-1707
12989	JBTM-1699	Should we link this to JBTM-1970 as well?	0	0	https://issues.jboss.org/browse/JBTM-1699
12990	JBTM-1695	Hi Weinan, We left as much of the old builds directory structure in place as maven could cope with. Please can you clarify if there is an EAP issue with the code in these folders as we have previously decided not to make cosmetic changes to the structure? Tom	1	1	https://issues.jboss.org/browse/JBTM-1695
12991	JBTM-1694	{quote} we are using a custom fork but only for community testing {quote} That's what our thirdparty-releases repository [1] is for, so ideally we should upload the patched release there. Were the patches also submitted to upstream emma so they can get into a future release? Moving the emma tests to a profile would be good. [1]https://community.jboss.org/wiki/MavenDeployingaThirdpartyRelease	0	0	https://issues.jboss.org/browse/JBTM-1694
12992	JBTM-1689	Which profiles do your team regularly use? I guess we should keep just the most commonly used ones?	0	0	https://issues.jboss.org/browse/JBTM-1689
12993	JBTM-1689	I would be happy to remove: all, core, jta, jts, jts-idlj and stm from /pom.xml [~marklittle] does use "mvn install -Pstm", but perhaps he will be happy to use: "mvn install -pl STM -am" instead? Leave it with me and I will raise the pull request if Mark is happy to stop using the profile. For completeness, this is what would be replaced: all (as used in EAP builds) = mvn install core = mvn install -am -pl ArjunaCore/arjunacore jta = mvn install -am -pl ArjunaJTA/narayana-jta jts = mvn install -am -pl ArjunaJTS/narayana-jts-jacorb jts-idlj = mvn install -am -pl ArjunaJTS/narayana-jts-idlj -Didlj-enabled=true stm = mvn install -am -pl stm	1	1	https://issues.jboss.org/browse/JBTM-1689
12994	JBTM-1680	Please can you add an estimate for this?	1	0	https://issues.jboss.org/browse/JBTM-1680
12995	JBTM-1679	[~tomjenkinson], maybe this would be worth pushing to 5.next?	1	1	https://issues.jboss.org/browse/JBTM-1679
12996	JBTM-1679	How is this different to JBTM-1107? Should we close this as a duplicate?	1	0	https://issues.jboss.org/browse/JBTM-1679
12997	JBTM-1679	I think we should just close it and add it into the details for JBTM-1107 as it seems somewhat intrinsic to the behaviour. If you agree, please can you make the change?	0	0	https://issues.jboss.org/browse/JBTM-1679
12998	JBTM-1672	Please can you clarify the reason to disable the maven-surefire-plugin? If it is still needed, please can you raise a separate Jira for this one?	0	0	https://issues.jboss.org/browse/JBTM-1672
12999	JBTM-1658	Assign this to me, as I think I know what the problem is?	0	0	https://issues.jboss.org/browse/JBTM-1658
13000	JBTM-1645	How about we do this: Split the PR job into a multi config with the same split as Narayana: MAIN XTS QA_JTA QA_JTS_JACORB QA_JTS_JDKORB These will all be scheduled in a random order, which is annoying if you are willing to merge based on a sub-set of tests. It wastes resources, and causes you to wait longer as the tests you are uninterested in may be scheduled first. The solution is to specify in the description which of the above groups you wish to skip. This is similar to what you mention above, but a bit more course-grained and fits in more neatly with the hudson multi-config approach. You can get the PR description with the following command. There's probably a better approach, but this works: curl -s https://api.github.com/repos/jbosstm/narayana/pulls/279 | grep \"body\": I don't think it makes sense to allow MAIN to be skipped, and if you want to skip one lot of QA tests, you probably want to skip them all? So how about we just have these two options: skipXTS skipQA We could add more fine-grained options if it proves useful. I don't see the point in specifying who can do this. If a contributor skips some tests that need to pass, we simply tell them to update the description and re-test.	0	0	https://issues.jboss.org/browse/JBTM-1645
13001	JBTM-1645	How about if the pull just changes a JacORB qa test? Or just an XTS test, that would be rationale to skip MAIN wouldn't it? Agreed on the white listing, we just need to be vigilant :)	0	0	https://issues.jboss.org/browse/JBTM-1645
13002	JBTM-1643	Why focus solely on JTS? Why not support something like this for each component?	1	0	https://issues.jboss.org/browse/JBTM-1643
13003	JBTM-1641	I was unable to duplicate the problem on jboss-as-8.0.0.Alpha1-SNAPSHOT. I was able to duplicate it on EAP. I agree that printing the stacktrace in this instance is excessively verbose. We are in the process of reworking the transactions SPI and as part of that work I will rationalise the debug logging, however we may not make the changes in time for wildfly 8 release. I have added a link from JBTM-1699 (Changes to the transaction SPI) to make sure we don't loose sight of this JIRA. Would you object to me closing this issue "as will not fix".	0	0	https://issues.jboss.org/browse/JBTM-1641
13004	JBTM-1635	Hi Jesper, Do you want me to pretty-print the flag or is the int enough? I don't think you can OR the flags on delist so the int should be enough? Tom	1	1	https://issues.jboss.org/browse/JBTM-1635
13005	JBTM-1602	I just noticed this change in the code and tracked it back to github (no JIRA associated with it, so I couldn't see what the issue was): try { Object syncObject = ((BasicAction.Current() == null) ? getMutex() : BasicAction.Current()); synchronized (this) { synchronized (getMutex()) { synchronized (syncObject) { I'm not sure why this change is in here, but need to check because it doesn't look right. Ignoring the fact that we now have 3 locks being acquired before the actual locksHeld lock, we're also potentially acquiring the same lock twice (syncObject could be getMutex())!	1	1	https://issues.jboss.org/browse/JBTM-1602
13006	JBTM-1598	Hi Weinan, I can do this, but is it not ok for these all to be in the root pom in a dependency management section? I thought that was the preferred route for jboss projects? e.g. grep https://github.com/jbosstm/narayana/blob/master/pom.xml for "common<" Tom	1	1	https://issues.jboss.org/browse/JBTM-1598
13007	JBTM-1584	Should this be done as part of the BLACKTIE-381 / BLACKTIE-202 package?	1	1	https://issues.jboss.org/browse/JBTM-1584
13008	JBTM-1583	How about using rest rather than SOAP?	0	0	https://issues.jboss.org/browse/JBTM-1583
13009	JBTM-1576	So is this replacing sockets with JNI calls - I would have expected sockets (domain sockets on unix) to be faster than JNI. Have you considered java NIO memory mapped files which will be faster than both JNI and sockets.	0	0	https://issues.jboss.org/browse/JBTM-1576
13010	JBTM-1576	Hi Mike, There are two considerations in this: 1. Performance - Amos, please review Mikes comment "Have you considered java NIO memory mapped files which will be faster than both JNI and sockets." 2. Administration - deploying into the AS container for admin seems like it would be easier than managing standalone C processes and an AS? In terms of performance, I am considering the (unlikely, but ramp it down a bit and it might be more likely) case of someone trying to send a 4GB .iso to a service. Would a socket be quicker than JNI call (or your NIO mapped files - out of interest, can these be accessed from C?)? I talked to Andrew Dinn and he thought (maybe my question wasn't phrased well enough to him) that JNI would be faster than socket (we didn't consider NIO). Tom	1	0	https://issues.jboss.org/browse/JBTM-1576
13011	JBTM-1576	Please can you add an estimate for this issue?	1	0	https://issues.jboss.org/browse/JBTM-1576
13012	JBTM-1573	In HybridSessionImpl::send we call apr_socket_timeout_set(stompConnection->socket, 1); and abandon the send if we don't get the message receipt in time. Where in the code are we doing a blocking wait when the transaction timeout is set?	1	1	https://issues.jboss.org/browse/JBTM-1573
13013	JBTM-1568	Please can you add an estimate for this issue?	1	1	https://issues.jboss.org/browse/JBTM-1568

#	Requirement	Questions	Answered	Successfully Answered	URL
13014	JBTM-1568	do you know the jbossas jira for this way to deploy a war as module ? does it need more configuration ? just for merge stempconnect and blacktie-admin-servers ear the estimate is 4h	1	1	https://issues.jboss.org/browse/JBTM-1568
13015	JBTM-1568	I can not access ncl openvpn as my crt has been expired. can you mail me these txt ?	1	1	https://issues.jboss.org/browse/JBTM-1568
13016	JBTM-1568	Would it be possible for you to push the fix directly without the need for a PR (since it currently breaks all of our builds). Also why aren't we using the wildfly version that is built during the main narayana build.	1	1	https://issues.jboss.org/browse/JBTM-1568
13017	JBTM-1565	Hi Crispin, Please can you: 1. Sign our CLA: https://cla.jboss.org/index.seam (choose JBoss Transactions rather than BlackTie) 2. Raise a pull request for your change? This will then run CI over the proposed enhancement and double check it for us I will then merge the PR after it passes :) Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-1565
13018	JBTM-1558	Can you provide more detail to this task, since I thought we already had an SPI?	1	0	https://issues.jboss.org/browse/JBTM-1558
13019	JBTM-1558	There are a few SPI related issues at the moment. Maybe cross-link them?	0	0	https://issues.jboss.org/browse/JBTM-1558
13020	JBTM-1556	What do you mean by a remote thread? We should be using interposition in all distributed cases, which means the Synchronisation will be registered with a subordinate coordinator.	0	0	https://issues.jboss.org/browse/JBTM-1556
13021	JBTM-1556	Regarding the question about what I meant by the "remote thread" case: {quote} <tomjenkinson> smarlow: AS1:EJB1 enlists JPA(XAR1) then calls AS2:EJB2 over JTS <tomjenkinson> smarlow: AS2:EJB2 enlists JPA(XAR2) this is done by a jacorb request processor thread at random <tomjenkinson> smarlow: AS1:EJB1 calls commit on the transaction, JPA(XAR1) afterCompletion is handled in the same thread as before - this is fine - but then the call to AS2 to commit the transaction goes over a different jacorb request processor, now afterCompletion in AS2 is done by a different thread {quote} The above doesn't raise any concurrency concerns since there is no (active) application thread on AS2 at the time that AS2 invokes the Synchronization.afterCompletion. Another case, would be similar to the above but with one difference. AS1:EJB1 enlists JPA(XAR1) then loops on calling AS2:EJB2 over JTS AS2:EJB2 enlists JPA(XAR2) and does processing and returns Looping continues until the transaction times out while current application execution is in AS2:EJB2 or just in AS1:EJB1. I don't think that only checking the reaper thread name covers when the transaction times out when the application thread of execution, is in AS2:EJB2. Question 1: Does the root coordinator (AS1) reaper always handle transaction timeout or can the subordinate coordinator (AS2) reaper also handle transaction timeout? I'm not sure how the subordinate coordinator would handle timeout (maybe by sending an out of band message to its parent coordinator that propagates up to the root coordinator?) Even so, it would be chaotic to have multiple coordinators cancelling the transaction at the same time. Regarding the idea of having globally searchable "being cancelled" (I assume you mean by the reaper) list, sounds better than my current "reaper thread" name check. The globally searchable list would also cover the second (above) case when the application execution is in AS2:EJB2 while (concurrently) an AS2 background orb thread sees the cancel message from the root coordinator.	1	1	https://issues.jboss.org/browse/JBTM-1556
13022	JBTM-1556	When each coordinator handles the timeout, does it also cancel its subordinates (as if the subordinate is one of the resources)? Or is it more like the coordinator times out the subordinate (as a resource) which means blocking until the subordinate has completed the subordinate level (reaper) timing out of its (subordinate) resources? In other words, could the subordinate coordinator Synchronization.afterCompletion() be called from a transport thread ever or only from a reaper thread?	0	0	https://issues.jboss.org/browse/JBTM-1556
13023	JBTM-1526	Please can you itemize the dependencies that you are worried about - thanks	1	1	https://issues.jboss.org/browse/JBTM-1526
13024	JBTM-1526	Hi Weinan, Please can you provide an update on which dependencies you are worried about? We might be cutting a 4.17.4 soon and would like to hear from you, thanks! Tom	1	1	https://issues.jboss.org/browse/JBTM-1526
13025	JBTM-1526	Hi Weinan, Please can you raise a Jira for the second issue (orb.idl) as we don't see that on our machines, it might be environmental so let us know the OS etc and assign it [~mmusgrov] Please can you raise a pull request for the first one? Thanks! Tom	1	1	https://issues.jboss.org/browse/JBTM-1526
13026	JBTM-1503	Just wondered what had necessitated this? Not that it is a problem but we should record in the Jira why this decision was made.	1	1	https://issues.jboss.org/browse/JBTM-1503
13027	JBTM-1485	Does this change represent a possible backward incompatibility?	1	0	https://issues.jboss.org/browse/JBTM-1485

#	Requirement	Questions	Answered	Successfully Answered	URL
13032	JBTM-1479	I think that might be enough information to log a bug report against IronJacamar? Can you link this bug as dependent on the one you raise? Also can you provide the link to the stackoverflow article just in case. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-1479
13033	JBTM-1469	I think we should just take one of the existing quickstarts from the Narayana quickstart repo (multi-hop or multi-service) and simplify it for the following scenario: 1. Client begins TX 2. Client updates a DB 3. Client invokes service 4. Service updates another DB 5. Client commits TX Where client and Service are both EJBs.	1	0	https://issues.jboss.org/browse/JBTM-1469
13034	JBTM-1463	you are right in your concern and that is what I am trying to address but ineloquently I was thinking more about changes to narayana that need a change to jbosstm somehow being able to test both pulls at once. Maybe we could somehow put convention when you raise a pull request for jbosstm that you can put a comment to say something like: "requires: https://github.com/jbosstm/jboss-as/pull/217" We can then somehow use that info in the narayana.sh to pull in that branch rather than 5_BRANCH, what do you think? I know you did some work with using rest to talk to git hub to comment on pulls, could it possibly download the comment for the pull in order to grep it for that info?	1	1	https://issues.jboss.org/browse/JBTM-1463
13035	JBTM-1463	Please can you add an estimate for this?	0	0	https://issues.jboss.org/browse/JBTM-1463
13036	JBTM-1454	Why? Also, will you be testing HTTP versus IIOP initially to get a base?	1	0	https://issues.jboss.org/browse/JBTM-1454
13037	JBTM-1424	Please can you add a component for this?	1	1	https://issues.jboss.org/browse/JBTM-1424
13038	JBTM-1424	Shouldn't this also be fixed for 4.17?	0	0	https://issues.jboss.org/browse/JBTM-1424
13039	JBTM-1423	Please can you add a component for this?	0	0	https://issues.jboss.org/browse/JBTM-1423
13040	JBTM-1412	I think the test didn't have long enough to crash and be detected, it was set for 5 seconds but the fact your build of JTA takes an hour tells me that node is sloooow ;) I have given it a minute now (5 seconds x 20 attempts), hopefully that will be enough. The other failures are cascading off that one but I fixed that now too (was using @AfterClass rather than @After - d'oh) If you want to test this, the following will get you to my code and run the integration unit tests: git remote add tomjenkinson git://github.com/tomjenkinson/jbosstm.git git fetch tomjenkinson git checkout -b JBTM-1412 tomjenkinson/JBTM-1412 ./build.sh -f ArjunaJTS/integration/pom.xml (Assuming you are relatively current with master, if you are quite out of date it will be worth a full build)	1	1	https://issues.jboss.org/browse/JBTM-1412
13041	JBTM-1407	It should be trivial to do that *today* for JDK orb with profiles as you can activate a profile by the presence of a file, e.g. JAVA_HOME/lib/orb.idl. However, JacORB would be in the classpath unless you specifically disabled it with a different profile so its presence would be guaranteed. Now, in the future when AS7-5582 is implemented, the "JDK" orb will be a maven dependency (same as JacORB), i.e. it will be available by default in the classpath. Lets say we made the change today as a convenience until AS7-5582 is available, the question is do we really want to have unpredictable results in the build. Lets say the user attempts this new default, detection based build but does still expect both a JDK orb and JacORB version but we as can't locate orb.idl (say they are on pi) and just build the JacORB version - what would you expect then, log a warning?	1	1	https://issues.jboss.org/browse/JBTM-1407
13042	JBTM-1407	Since I'm still receiving the following using the latest JDK 7 build for OSX ... [ERROR] Failed to execute goal org.apache.maven.plugins:maven-surefire-plugin:2.9:test (surefire-idlj) on project jts: Execution surefire-idlj of goal org.apache.maven.plugins:maven-surefire-plugin:2.9:test failed: java.lang.reflect.InvocationTargetException; nested exception is java.lang.reflect.InvocationTargetException: null: com/arjuna/ArjunaOTS/OTSAbstractRecordPOA: com.arjuna.ArjunaOTS.OTSAbstractRecordPOA -> [Help 1] I'm assuming we haven't made the automatic build the default? Building for both ORBs is something that has only just happened. So users currently really don't expect an IDLJ build. However, as a developer what I'd prefer is for the build system to not cr*p out ;-) if it can only find one ORB. If it can't find both and I asked it to build JTS then that's definitely an error. But if I just specify JTS on the build line I think I'm either meaning "Build JTS with JacORB" (given the last 7 years of history) or "Build JTS and I really don't care which ORB you use". Therefore, I suggest changing the build so that it only fails if it can't find either ORB. If it can't find both ORBs then at the end it should print out a message saying which one failed to build. Plus add a jacorb option to the build to correspond to the idlj option, so someone can specify "build jacorb only". This would mean the following: ./build.sh -P jts --> build with any ORB, I really don't care which ./build.sh -P jts idlj --> build with only the IDLJ ORB ./build.sh -P jts jacorb --> build with only JacORB	0	0	https://issues.jboss.org/browse/JBTM-1407
13043	JBTM-1398	Should org.jboss.as.weld.deployment.WeldAttachments be lifted into its own subsystem that doesn't depend on EJB3?	1	1	https://issues.jboss.org/browse/JBTM-1398
13044	JBTM-1398	I think this is resolved for now. Do you agree Tom?	0	0	https://issues.jboss.org/browse/JBTM-1398
13045	JBTM-1382	Hi Mike, THANKS for raising this, I keep forgetting! Can we put the output in testoutput/ that way we can have a git ignore on just testoutput rather than testoutput TEST*.txt. Tom	1	1	https://issues.jboss.org/browse/JBTM-1382
13046	JBTM-1382	The JIRA asks for output to be sent to qa/testoutput (not qa). For a qa run against both orbs if you look in the testoutput directory you will find two zips (testoutput-jacorb.zip and testoutput-idlj.zip) which contain the testoutput directory and the TEST*txt files corresponding to each run. To see it working look at the latest narayana-dualstack job (I did notice that btny-pulls-narayana CI job does not archive testoutput so I have updated that job config). I think I may have misunderstood your requirement. Did you mean move all the TEST*txt files into testoutput but leave the zip files in the qa directory.	1	1	https://issues.jboss.org/browse/JBTM-1382
13047	JBTM-1369	Can we have an update on this?	1	1	https://issues.jboss.org/browse/JBTM-1369

#	Requirement	Questions	Answered	Successfully Answered	URL
13048	JBTM-1369	We have four JTS performance unit tests - they all run 1000 empty transactions with each test using a different method to begin the txn. I got the following figures from our CI cluster but if you want to try them on your own machine do the following: Build narayana with JDK orb support enabled: {code}./build.sh -Didlj-enabled=true clean install -DskipTests{code} To run just a specific test, such as Performance2 for example: {code}./build.sh -f ArjunaJTS/jts/pom.xml -Didlj-enabled=true -Dtest=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2{code} View the results in the surefire report directories: {code}JacORB: ArjunaJTS/jts/target/surefire-reports/com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1-output.txt JDK ORB: ArjunaJTS/jts/target/idlj-surefire-reports/com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1-output.txt{code} The results generally show jacorb performance as being significantly better on our CI cluster but, interestingly, on my laptop JDK orb seemed to do better: {code:title=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1} 1000 txns (OTSImpleManager.current), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 1.284000039100647 Transactions per second = 778.8161756602676 jacorb Average time for empty transaction = 1.3229999542236328 Transactions per second = 755.8579248680498 {code} {code:title=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2} 1000 txns (TSImpleManager.factory().create()), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 3.48799991607666 Transactions per second = 286.6972546045273 jacorb Average time for empty transaction = 2.115999937057495 Transactions per second = 472.5898061181409 {code} {code:title=Test: com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance3} 1000 txns (ArjunaTransactionImple), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 0.05400000140070915 Transactions per second = 18518.5180381656 jacorb Average time for empty transaction = 0.052000001072883606 Transactions per second = 19230.76883399276 {code} {code:title=Test: com.hp.mwtests.ts.jts.local.synchronizations.Performance} 1000 txns (org.omg.CosTransactions.Current) each registering a single synchronization idlj TPS: 191.20458891013382 jacorb TPS: 309.2145949288807 {code}	1	1	https://issues.jboss.org/browse/JBTM-1369
13049	JBTM-1369	Can you paste in the commands you used to get those numbers, please?	1	1	https://issues.jboss.org/browse/JBTM-1369
13050	JBTM-1369	What version of JacORB was used please?	1	1	https://issues.jboss.org/browse/JBTM-1369
13051	JBTM-1369	What hardware architecture is your CI cluster?	1	1	https://issues.jboss.org/browse/JBTM-1369
13052	JBTM-1359	Why has this been linked to the JDBC object store work? I'd like to understand the relative priority of this to other tasks.	1	0	https://issues.jboss.org/browse/JBTM-1359
13053	JBTM-1359	Thanks, but it still doesn't seem that there is clarity on what exactly is required. What is the problem that we're trying to fix? Is it only for JTA? Until we have answers to these and other questions there's no point in implementing anything.	0	0	https://issues.jboss.org/browse/JBTM-1359
13054	JBTM-1357	It's worth pointing out that the script is inherited from AS7's build.sh, do you think you could try to raise this "upstream" so to speak?	1	0	https://issues.jboss.org/browse/JBTM-1357
13055	JBTM-1357	I've been using it for a wile on my machine and I think it's currently too colourful to be adopted across the board. I think we just want to colour: 1. Test failures red 2. overall build success as green 3. overall build failure as red 4. ERROR as red 5. WARN as orange The output should then be mostly default colour with the important stuff highlighted.	0	0	https://issues.jboss.org/browse/JBTM-1357
13056	JBTM-1340	Hi Mark, Please can you upload the test you were using and the name of the tool that outputted the profiling information? We can look at tuning TxStats, I am thinking a listener pattern might help? Before that though, the test and profiler settings would be useful. Thanks, Tom	1	1	https://issues.jboss.org/browse/JBTM-1340
13057	JBTM-1339	When the linked JIRA is ready make sure JTS functions with the JDK orb	1	1	https://issues.jboss.org/browse/JBTM-1339
13058	JBTM-1339	Isn't this out of date now?	0	0	https://issues.jboss.org/browse/JBTM-1339
13059	JBTM-1339	OK, thanks. Does the title of the issue need changing now though? I'm assuming we're not back porting this to AS7 and only focussing on WildFly.	0	0	https://issues.jboss.org/browse/JBTM-1339
13060	JBTM-1338	How do I get access to BaseTransaction in AS7? As JNDI lookup (java:jboss/UserTransaction) returns ServerVMClientUserTransaction.	1	1	https://issues.jboss.org/browse/JBTM-1338
13061	JBTM-1328	Was this a one-off?	1	1	https://issues.jboss.org/browse/JBTM-1328
13062	JBTM-1328	Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom	1	0	https://issues.jboss.org/browse/JBTM-1328
13063	JBTM-1310	Does this affect all versions or 4.17.1+ in particular?	1	0	https://issues.jboss.org/browse/JBTM-1310
13064	JBTM-1254	Mike, Does that mean that you agree with me that we should resolve this as "won't fix"?	1	0	https://issues.jboss.org/browse/JBTM-1254
13065	JBTM-1251	You don't need to branch the quickstart, narayana, or docs branches to create these jobs. Currently 5.x and 4.17 share a common branch (master) so both sets of jobs build against master. The place in which they differ is that 4.17 builds against 4_BRANCH of our jboss-as fork and 5.x against 5_BRANCH. They also differ in what is tested as TXF is only tested in 5.x. I would suggest we create the jobs now, but the problem is that we are going to double the load on Hudson as any change is going to trigger both the EAP61 and the narayana-500 version of the job. The reason why I'm keen to get some narayana 5.x CI is that TXF is currently not getting any CI. Maybe I could just create some TXF jobs in the mean time until this is resolved?	1	1	https://issues.jboss.org/browse/JBTM-1251
13066	JBTM-1247	What is the use case for this?	0	0	https://issues.jboss.org/browse/JBTM-1247
13067	JBTM-1227	Did this make it into PropertiesFactory?	1	1	https://issues.jboss.org/browse/JBTM-1227
13068	JBTM-1217	Seems to be related to REM3-158. Ivo, I'm on PTO until August 28th. Can you try rebuilding AS7 with XNIO 3.0.6 and then re-testing on the IPv6 node?	1	1	https://issues.jboss.org/browse/JBTM-1217
13069	JBTM-1212	Amos, Has this been done for the docs yet?	0	0	https://issues.jboss.org/browse/JBTM-1212
13070	JBTM-1212	Can we mark this as resolved now?	0	0	https://issues.jboss.org/browse/JBTM-1212

#	Requirement	Questions	Answered	Successfully Answered	URL
13071	JBTM-1199	The only way I have found to check an old version of the AS (but still having our commits from 5_BRANCH) is as follows: 0. cd jboss-as 1. git checkout 5_BRANCH (assumes you haven't checked this out yet, if you already have this such as by having ran scripts/hudson/narayana.sh git checkout master git branch -D 5-BRANCH git checkout 5_BRANCH) 2. git pull --rebase --ff-only upstream master (to get up to date) 3. Go to: https://github.com/jbossas/jboss-as/commits/master and find a commit you want to check against, e.g one from July 3rd when build was still working: https://github.com/jbossas/jboss-as/commit/55fca1401f399591d009c211205f2e6ef94f876b 4. Use this in a git rebase: git rebase -i 55fca1401f399591d009c211205f2e6ef94f876b^ (you need the ^ to include that commit in the rebase) 5. delete all the commits after that commit (dd in vi) but leave our commits in at the bottom of the rebase 6. You will get a rebase issue on the first one, simply open pom.xml and remove the jbossjts part of pom.xml which came from HEAD -- grep in pom.xml for an "=" sign), then: git add pom.xml git rebase --continue 7. You should now be able to build the AS as per that commit but with our commits on top MAVEN_OPTS=-XX:MaxPermSize=256m ./build.sh "$@" clean install -DskipTests 8. cd ../ 9. export JBOSS_HOME=${WORKSPACE}/jboss-as/build/target/`ls -1 ${WORKSPACE}/jboss-as/build/target \| grep jboss-as` 10. ./build.sh -f XTS/localjunit/pom.xml --projects xtstest,crash-recovery-tests -Parq "$@" clean install -Dtest=TestATCrashDuringCommit#MultiParticipantPrepareAndCommitTest After you have verified that that version works, try a later revision of AS, however you will need to delete your local branch first! This will be tedious, so to reduce the number of checks, the first thing to do is identify the day where a commit was added that broke our build, then use a binary tree search style to cut down the options on that day. Suggested commits to try: https://github.com/jbossas/jboss-as/commit/2e2f1a7dfcebebb282987d2d8e2df4407de036ac https://github.com/jbossas/jboss-as/commit/f2d65c311d67c61d953bd17c079f4169c3dbf8aa Tom	1	1	https://issues.jboss.org/browse/JBTM-1199
13072	JBTM-1199	I can confirm that the the build started to break was between the following two jboss-as commits. I know this because: FAILED = https://github.com/jbossas/jboss-as/commit/f2d65c311d67c61d953bd17c079f4169c3dbf8aa PASSED = https://github.com/jbossas/jboss-as/commit/55fca1401f399591d009c211205f2e6ef94f876b Please can you start checking the commits inbetween to see which specific commit broke the build?	1	1	https://issues.jboss.org/browse/JBTM-1199
13073	JBTM-1199	Amos, please can you investigate why https://github.com/jbossas/jboss-as/commit/435c862b9514bfcf0a036bb2b916ac3dc63b4f4a would stop the XTS crash recovery tests from working? I noticed somethings to do with "Reload" perhaps AS7 has some behaviour that reloads the server automatically now?	1	1	https://issues.jboss.org/browse/JBTM-1199
13074	JBTM-1199	I added a comment onto that commit, please enable notifications for updates to that commit, my comment is https://github.com/jbossas/jboss-as/commit/435c862b9514bfcf0a036bb2b916ac3dc63b4f4a#commitcomment-1579773, you can enable updates by going to the bottom of the page and searching for: "Email notifications for these commit notes"	1	1	https://issues.jboss.org/browse/JBTM-1199
13075	JBTM-1192	Can resolve when this: http://172.17.131.2/job/btny-pulls-quickstarts/31/ is seen testing TXF.	0	0	https://issues.jboss.org/browse/JBTM-1192
13076	JBTM-1188	Where did the requirement for a per-tx override come from? Is the existing global config option not sufficient?	1	0	https://issues.jboss.org/browse/JBTM-1188
13077	JBTM-1187	Amos, What made you think "the client handler chain can be added by txframework automatically"? This is a feature we have planned but we don't have it yet. Did you read it in some docs somewhere?	1	1	https://issues.jboss.org/browse/JBTM-1187
13078	JBTM-1182	With recent changes to transactional fileio repo, is this still relevant? Also what about the AS7 RPMs that have already been produced for Fedora: don't they duplicate this?	1	0	https://issues.jboss.org/browse/JBTM-1182
13079	JBTM-1173	How to run the tests: # ipv4: {noformat} mvn clean test {noformat} # ipv6: {noformat} mvn clean test -Dipv6 -Parq-jbossas-managed-7 {noformat} Note that for IPv6 the XTS demo app needs to be compiled with HOSTNAME set to [::1] in jboss.properties file.	1	1	https://issues.jboss.org/browse/JBTM-1173
13080	JBTM-1173	I won't be able to test this before Weds. If it's urgent, could someone else test the pull? It sounds like we have many other IPv6 (JBTM-1156) issues that will be pushed to 5.final, so we could push this too and I'll look at it and JBTM-1156 on Weds when I hope to be back to work.	1	1	https://issues.jboss.org/browse/JBTM-1173
13081	JBTM-1166	Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom	1	0	https://issues.jboss.org/browse/JBTM-1166
13082	JBTM-1156	Great, are you working with Paul on resolving the XTS issues? +1 on the JDBC tests	1	1	https://issues.jboss.org/browse/JBTM-1156
13083	JBTM-1147	Please can you add an estimate for this issue?	0	0	https://issues.jboss.org/browse/JBTM-1147
13084	JBTM-1116	Good points, lets rework this Jira as an opportunity to simply: 1. Ensure the Javadocs in isolation are still correct, fully explained 2. Ensure the documentation explains the architecture of our configuration mechanism 3. Ensure the documentation builds on point 2 to reference the relevant beans when configuring common deployment scenarios, e.g. which properties do you need to enable hornetq/JDBC object store	1	1	https://issues.jboss.org/browse/JBTM-1116
13085	JBTM-1082	As workaround is possible to define java opt argument -XX:-UseSplitVerifier Put it to file sharedbuild.xml to the tag <junit> like: <jvmarg value="-XX:-UseSplitVerifier" /> I suppose that this problem is caused by the fact that the emma library was compiled with older version of compiler that we are trying to use for compiling TS sources. Some links e.g. here http://stackoverflow.com/questions/7970622/java-7-jvm-verifyerror-in-eclipse Do you think that the workaround is enough for solving this jira or should be tried to recompile emma or dive to some other investigation?	1	1	https://issues.jboss.org/browse/JBTM-1082
13086	JBTM-1073	Worth a link to where this was done?	1	0	https://issues.jboss.org/browse/JBTM-1073
13087	JBTM-1072	I commented on the pull re the password in narayana.sh, not ideal, can it be externalized into the job config? Also, I commented to say what happens if you are running this locally on a checked out pull, can we make the default that the commenting is disabled and job config enables it?	1	1	https://issues.jboss.org/browse/JBTM-1072
13088	JBTM-1072	Tom, btny-pulls-blacktie and btny-pulls-quickstarts are tied to Windows2008. btny-pulls-documentation will run on any machine (including windows). It's not going to be trivial to get this working on windows: {code} function comment_on_pull { if ["$COMMENT_ON_PULL" = ""]; then return; fi PULL_NUMBER=$(echo $GIT_BRANCH | awk -F 'pull' '{ print $2 }' | awk -F '/' '{ print $2 }') if ["$PULL_NUMBER" != ""] then JSON="{ \"body\": \"$1\" }" curl -d "$JSON" -ujbosstm-bot:$BOT_PASSWORD https://api.github.com/repos/$GIT_ACCOUNT/$GIT_REPO/issues/$PULL_NUMBER/comments else echo "Not a pull request, so not commenting" fi } {code} I guess the only way to do this is by having the job run cygwin with a bash script that does the above. I don't fancy finding Windows commands for all of the above! WDYT?	1	1	https://issues.jboss.org/browse/JBTM-1072
13089	JBTM-1063	Hi Amos, Please can you backport this to the branch? Thanks! Tom	1	1	https://issues.jboss.org/browse/JBTM-1063

#	Requirement	Questions	Answered	Successfully Answered	URL
13091	JBTM-1063	Hi, I have updated the config on the jobs to use this new script thanks Amos! Paul, please can you give Amos a pointer on the xts commands? Tom	1	1	https://issues.jboss.org/browse/JBTM-1063
13092	JBTM-1063	Paul, I checkout 5_BRANCH on jboss-as and build fail with following: [ERROR] Failed to execute goal on project jboss-as-transactions: Could not resolve dependencies for project org.jboss.as:jboss-as-transactions:jar:7.1.1.Final: The following artifacts could not be resolved: org.jboss.jbossts:jbossjts:jar:5.0.0.M2-SNAPSHOT, org.jboss.jbossts:jbossjts-integration:jar:5.0.0.M2-SNAPSHOT: Failure to find org.jboss.jbossts:jbossjts:jar:5.0.0.M2-SNAPSHOT in http://repository.jboss.org/nexus/content/groups/public/ was cached in the local repository, resolution will not be reattempted until the update interval of jboss-public-repository-group has elapsed or updates are forced It looks like we should change groupId from "org.jboss.jbossts" to "org.jboss.narayana" can you confirm this change? Amos	1	1	https://issues.jboss.org/browse/JBTM-1063
13093	JBTM-1063	Amos, Can you give us an update on when this will be ported to the 4.16 branch?	1	1	https://issues.jboss.org/browse/JBTM-1063
13094	JBTM-1063	Paul, I ran these test commands on my machine and it failed with <testcase classname="com.arjuna.qa.junit.LocalJUnitRunner" name="testCallServlet" time="0.01"> <error message="org/apache/commons/logging/LogFactory" type="java.lang.NoClassDefFoundError">java.lang.NoClassDefFoundError: org/apache/commons/logging/LogFactory at org.apache.commons.httpclient.HttpClient.<clinit>(Unknown Source) at com.arjuna.qa.junit.HttpUtils.accessURL(HttpUtils.java:97) at com.arjuna.qa.junit.LocalJUnitRunner.testCallServlet(LocalJUnitRunner.java:40) Caused by: java.lang.ClassNotFoundException: org.apache.commons.logging.LogFactory at java.net.URLClassLoader$1.run(URLClassLoader.java:202) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:247) </error> </testcase> did I miss some jars ?	0	0	https://issues.jboss.org/browse/JBTM-1063
13095	JBTM-1063	I think that was fixed by https://issues.jboss.org/browse/JBTM-1086 Have you done an 'svn up' on the 4.16 branch?	1	1	https://issues.jboss.org/browse/JBTM-1063
13096	JBTM-1063	how about commands on the txbridge tests?	0	0	https://issues.jboss.org/browse/JBTM-1063
13097	JBTM-1061	I just put this on HORNETQ-274: Hi I just trawled the the Jira and forum postings I ls'd my .m2/repository/org/hornetq find . -name \pom.xml in the AS7 version of hornetq but can't find the dependency to import for this. Do you know that this work was done? If so, do you happen to know what I should replace: <dependency> <groupId>org.hornetq</groupId> <artifactId>hornetq-core</artifactId> </dependency> with? I also can't find it by grepping the internet, e.g. http://mvnrepository.com/artifact/org.hornetq	1	1	https://issues.jboss.org/browse/JBTM-1061
13098	JBTM-1052	Is this still required? We could do with a better description to explain the actual motivation or leave this closed as "incomplete description".	0	0	https://issues.jboss.org/browse/JBTM-1052
13099	JBTM-1051	A better solution would be to have this problem detected in the AS7 testsuite. This would prevent the error from even being accepted into the AS7 codebase. Ivo, can this type of check be made in the allTests junit suite?	1	1	https://issues.jboss.org/browse/JBTM-1051
13100	JBTM-1051	I would add that I believe this issue can be (not formally, but effectively) resolved through education. Who ever makes a change to src/main/resources/standalone/configuration/*xml should be made aware that they should also update src/main/resources/docs/examples/config/*xml This issue should affect: ./messaging/src/test/resources/standalone-with-messaging.xml ./modcluster/src/test/resources/standalonemodcluster.xml ./build/src/main/resources/docs/examples/configs/standalone-hornetq-colocated.xml ./build/src/main/resources/docs/examples/configs/standalone-xts.xml ./build/src/main/resources/docs/examples/configs/standalone-minimalistic.xml ./build/src/main/resources/docs/examples/configs/standalone-jts.xml ./build/src/main/resources/docs/examples/configs/standalone-osgi-only.xml So I see it as broader than XTS. That said, +1 on checking whether the testsuite can detect it, but I don't know if the other configs are tested during testsuite.	0	0	https://issues.jboss.org/browse/JBTM-1051
13101	JBTM-1051	PS, shouldn't this issue be moved to an AS7 Jira?	0	0	https://issues.jboss.org/browse/JBTM-1051
13102	JBTM-1051	I don't even know where standalone-jts.xml is referenced from :) In my quickstarts I show people how to change the config manually. I wonder who added the jts one? Maybe that is an option for XTS? Explain the manual configuration?	0	0	https://issues.jboss.org/browse/JBTM-1051
13103	JBTM-1051	Ivo, Of course, I forgot these tests would do this also. Do your tests fail if the server boots with errors, even though XTS is still functioning correctly? We still have the problem where a minor change is forgotten; one which doesn't break XTS and doesn't fail the server boot. However, these are relatively minor and could probably be checked manually every now and then.	1	1	https://issues.jboss.org/browse/JBTM-1051
13104	JBTM-1051	Can this be moved to an AS7 Jira?	1	1	https://issues.jboss.org/browse/JBTM-1051
13105	JBTM-1031	I've just added 4.17.4 to the fix version. Can you cherry-pick your commit from master and raise a pull request on 4.17?	0	0	https://issues.jboss.org/browse/JBTM-1031
13106	JBTM-1016	I suggest we add a dependency on BYTEMAN-190 for this task. Amos, if you agree, can you add the dependency please? More Actions -> Link -> Depends on	1	1	https://issues.jboss.org/browse/JBTM-1016
13107	JBTM-1016	Please can you add an estimate for this issue?	1	1	https://issues.jboss.org/browse/JBTM-1016
13108	JBTM-1016	Paul, can I delete XTS/localjunit/crash-recovery-tests/check.sh as now we can use maven plugin to check rule ?	1	1	https://issues.jboss.org/browse/JBTM-1016

#	Requirement	Questions	Answered	Successfully Answered	URL
13109	JBTM-999	In case the fpaste expires: {code} package org.jboss.wsf.stack.cxf.interceptor; import javax.management.ObjectName; import javax.xml.ws.WebServiceContext; import javax.xml.ws.handler.MessageContext; import org.apache.cxf.jaxws.context.WrappedMessageContext; import org.jboss.wsf.spi.SPIProviderResolver; import org.jboss.wsf.spi.classloading.ClassLoaderProvider; import org.jboss.wsf.spi.deployment.Endpoint; import org.jboss.wsf.spi.deployment.Reference; import org.jboss.wsf.spi.invocation.EndpointAssociation; import org.jboss.wsf.spi.management.EndpointRegistry; import org.jboss.wsf.spi.management.EndpointRegistryFactory; public class XTSHandler { //.... public Object getEndpointInstance() { Endpoint endpoint = EndpointAssociation.getEndpoint(); Reference ref = endpoint.getInstanceProvider().getInstance(endpoint.getTargetBeanName()); return ref.getValue(); } public Object getEndpointInstanceCXF(MessageContext ctx) { Endpoint endpoint = ((WrappedMessageContext)ctx).getWrappedMessage().getExchange().get(Endpoint.class); Reference ref = endpoint.getInstanceProvider().getInstance(endpoint.getTargetBeanName()); return ref.getValue(); } public Object getEndpointInstanceCXF(WebServiceContext ctx) { return getEndpointInstanceCXF(ctx.getMessageContext()); } public Object getEndpointInstanceUsingRegistry() { ClassLoader cl = ClassLoaderProvider.getDefaultProvider().getServerIntegrationClassLoader(); EndpointRegistryFactory eprFac = SPIProviderResolver.getInstance(cl).getProvider().getSPI(EndpointRegistryFactory.class, cl); EndpointRegistry registry = eprFac.getEndpointRegistry(); Endpoint endpoint = null; for (ObjectName on : registry.getEndpoints()) { Endpoint ep = registry.getEndpoint(on); //somehow identify your endpoint... name? address? if (ep.getAddress().equals("....")) { endpoint = ep; } //... } Reference ref = endpoint.getInstanceProvider().getInstance(endpoint.getTargetBeanName()); return ref.getValue(); } } {code}	0	0	https://issues.jboss.org/browse/JBTM-999
13110	JBTM-968	Quick notes after Andrew explained the XTS structure to me: {quote} XTS project layout WS-AS, Activity service (needed? - yes but need to know why) WS-CF (general purpose context management), useful WS-C Client and coordinator side impl of the oasis standard (current) Activation and registration service WS-T oasis TX protocol specific services for client, coord, ws negotiation (WS-AT and WS-BA) WS-TX JBoss specific APIs which drive WS-C and WS-T services {quote}	1	1	https://issues.jboss.org/browse/JBTM-968
13111	JBTM-956	Hi Amos, is this closed?	0	0	https://issues.jboss.org/browse/JBTM-956
13112	JBTM-948	Ah, ok. So what you are saying is that this will work on Hudson as you have fixed this problem before for other jobs?	1	1	https://issues.jboss.org/browse/JBTM-948
13113	JBTM-948	Paul, what CI environment did you mean in your comment [1]? Yes, I was talking about Hudson as it is the primary environment for QE testing. If I run the tests locally on my laptop I usually don't need headless mode as I want to see how the test is going and thus see its actions performed in Firefox in front of my eyes. This is the reason why the tests look so at the moment. But I can change them to better fit to your requirements. On Hudson if you want to run a selenium test you need to enable 'Run Xvnc during build' and select some of selenium slaves at 'Label Expression'. Then the selenium test should work. [1] https://issues.jboss.org/browse/JBTM-948?focusedCommentId=12661667&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12661667	1	1	https://issues.jboss.org/browse/JBTM-948
13114	JBTM-934	Do we need pseudo support for idlj? 13115	JBTM-934	When creating the jobs, you can probably copy: http://172.17.131.2/view/Narayana+BlackTie/job/narayana-java6/ and http://172.17.131.2/view/Narayana+BlackTie/job/narayana-java7/ Maybe rename the old jobs narayana-jacorb-java6 and the new job narayana-idlj-java6 and so on	1	1	https://issues.jboss.org/browse/JBTM-934
13116	JBTM-934	Will it work on OpenJDK?	1	1	https://issues.jboss.org/browse/JBTM-934
13117	JBTM-928	[~tomjenkinson], these test still don't work. Shall I investigate further or keep them ignored?	1	0	https://issues.jboss.org/browse/JBTM-928
13118	JBTM-883	Does this work? Are you ready to create a pull request?	1	0	https://issues.jboss.org/browse/JBTM-883
13119	JBTM-870	Steps: * Agree on suitable set. * Ensure they are testable and tested via Hudson. * Non-standalone ones need a way of grabbing the AS deps * Must follow the AS7 quickstart rules	0	0	https://issues.jboss.org/browse/JBTM-870
13120	JBTM-852	Firstly some background. It is possible to configure different stores for different purposes. Each store is a singleton so each store type is shared. We currently use at least four stores (XTS uses some others): - an action store for transaction and participant logs; - a recovery store (which defaults to the action store); - a state store for use with TxOj and is not used with JTA (or JTS); - a communications store for storing connectivity information such as ORB endpoints or transaction manager status items. Calling arjPropertyManager.getObjectStoreEnvironmentBean() looks up the default store and is equivalent to: BeanPopulator.getNamedInstance(ObjectStoreEnvironmentBean.class, "default") and is used to configure the action store. The other stores can be configured by looking up a specific named ObjectStoreEnvironmentBean. Use "default" or "stateStore" to configure the action and state stores respectively. Use "communicationStore" to configure the communications store. So the actual bug/feature is that looking up the default store environment bean via the properties manager (arjPropertyManager.getObjectStoreEnvironmentBean()) should return a bean that will configure all stores. Howeve this could be risky (for example it could interfere with XTS behaviour) so my preference would be to force the user to be specific about which stores he wants an environment bean for by making the getObjectStoreEnvironmentBean call take the store name as a parameter. But that leaves the difficult issue of how to specify which store to use in the properties file <entry key="ObjectStoreEnvironmentBean.objectStoreType">XYZStore</entry> since this entry is only applied to the default store. We could simply document the behaviour in jbossts-properties.xml and tell users to explicitly set the communications store programatically if required. So the communications store type would have to be set as follows: BeanPopulator.getNamedInstance(ObjectStoreEnvironmentBean.class, "communicationStore").setObjectStoreType(com.arjuna.ats.internal.arjuna.objectstore.VolatileStore.class.getName()); Is this latter approach acceptable to all concerned?	0	0	https://issues.jboss.org/browse/JBTM-852

#	Requirement	Questions	Answered	Successfully Answered	URL
13121	JBTM-846	Further to previous comment ... for instance what do we (or customers) expect from the statistics gathering routines in this new environment? Should it be measuring all transactions created and terminated in the JVM, or on a per transaction manager basis?	0	0	https://issues.jboss.org/browse/JBTM-846
13122	JBTM-846	To address Davids requirement we need to support 1xArjunaCore (for the MSC) and 1xArjunaJTA||ArjunaJTS (for the EJB container). The problem is the recovery manager, are we expecting to launch two of those in the same VM? I presume we have to in order to cleanly separate the MSC from the EJB container (e.g. different object stores)	0	0	https://issues.jboss.org/browse/JBTM-846
13123	JBTM-846	Why would we need to recovery managers? As long as the transactions are unique and things like the nodename are shared by recovery, it should be possible to have one instance.	0	0	https://issues.jboss.org/browse/JBTM-846
13124	JBTM-846	Allowing multiple TMs in the same JVM is a generic statement and although WF needs this, there may be other users who want it for different reasons. I think we should either define this as a generic problem which we can try to solve for other use cases (do we know them all?) or we should refocus this solely on the WF use case and then come back to a more general requirement if/when it comes back up.	0	0	https://issues.jboss.org/browse/JBTM-846
13125	JBTM-845	Isn't this duplicated by JBTM-1451?	1	0	https://issues.jboss.org/browse/JBTM-845
13126	JBTM-829	Hi, Please can you confirm that I am right in thinking you mean that we should remove the version numbers from the remaining dependencies in maven/pom-template.xml where they have a corresponding version number in the AS7 pom tree? Ta	1	1	https://issues.jboss.org/browse/JBTM-829
13127	JBTM-817	I'm in the process of validating the trace output from these tests and I think doing this automatically is not going to be a trivial process. I have some ideas around how the byteman scripts can be re-factored to simplify the validation process and to also improve scalability so that we can introduce more complex, multi-party tests. Therefore I am removing the requirement to validate the trace output from this issue. Validation will come in a later release. Hopefully this will turn this issue into a much more straight forward task. So to confirm, the requirements for this issue are to: # Run the tests as part of the AS7 testsuite (as per Ivo's pattern: https://github.com/istudens/jboss-as/compare/xts_tests#diff-0) # Automate the running of each crash recovery test without any Byteman rules. This provides some test coverage and ensures we have a valid system before the Byteman rules are applied. # Automate each valid combination of Byteman script to TestCase. The Byteman scripts specify which tests are available. # Gather the output from all test runs in separate files for "eyeball validation". Until this validation is automated, I (with the help of Andrew initially) will do this validation. The output files should be named "<bytman script name>:<test class name>". For example: "ATCrashDuringCommit.MultiParticipantPrepareAndCommitTest". Amos: does this make sense? Is this in line with how you are currently implementing the feature?	1	1	https://issues.jboss.org/browse/JBTM-817
13128	JBTM-817	Also, I don't think we need Arquillian to crash the app server as Byteman is doing that for us. This is good as Arquillian is unlikely to have this feature as part of a JBoss AS release soon enough. Amos: Does this make sense, or am I missing something?	1	1	https://issues.jboss.org/browse/JBTM-817
13129	JBTM-813	Email from Jonathan re ArjunaJTS: JTS install guide is same as core except name and: - add first and last bullet point paras for 'preparing your system' section - add 'specifying the ORB to use' and 'the interface repository' sections' - the 'loading the distribution' section is obsolete, just junk it. - add 'installing into non-default location' section - operating system services needs additional note on PUT_JACORB_HOME_HERE - additional 'web services component' section. JTS admin guide is same as core except name and: - intro paragraph adds mention of web services - add 'OTS/J2EE transaction service management' (except it's now 'Java EE' not 'J2EE') - add 'web service transaction management' section - in periodic recovery section, RecoveryEnvironmentBean.recoveryExtensions module list is wrong for JTS - it should be per the xml in ArjunaJTS/jbossts-properties-arjunajts.xml - add 'orb specific configurations' section - add 'initialising JBossTS applications' section side note: the docs dialect is actually 'en_GB' not 'en_US', hence 'initialising' not 'initializing' and such. What is the company policy on this - do we need to standardise it? The docbook layout seems to assume the canonical version is en_US. Likewise A4 vs. US letter for pdf page size. Jonathan.	0	0	https://issues.jboss.org/browse/JBTM-813
13130	JBTM-810	The controlling property is com.arjuna.ats.arjuna.recovery.recoveryListener (in bean RecoveryEnvironmentBean). With a socket based recovery manager the TM/RM can easily detect whether another RM is managing an object store. Changing the default puts the onus on the user to make sure that only one RM is managing it. So my question is: is it the intention to make the user responsible for getting it right?	1	1	https://issues.jboss.org/browse/JBTM-810
13131	JBTM-810	Would the same problem exist if you opened up two RMs on different ports but against the same ObjectStore? If so, +1 on the user getting it right.	1	1	https://issues.jboss.org/browse/JBTM-810
13132	JBTM-809	Is there any documentation that explains what is going on here? Will JBossTS be still usable for JDBC connections? In what would consist the migration? We're using JBossTS in a JTA infrastructure where database queries are done through JDBC. The client code just uses JDBC connections (obtained through the transactional driver), while the global JTA transaction is controlled using Spring JTA transaction manager. The JBossTS backend, through the transactional driver and some of our glue code, is obtaining JTA connections through XA data sources created using the DynamicClass mechanism. We're working outside JEE, just plain Tomcat + JBossTS + Spring. How will the scenario change with JCA?	1	1	https://issues.jboss.org/browse/JBTM-809
13133	JBTM-785	Hi Paul, Is there any update on this one? Is it covered by any QS? Tom	1	0	https://issues.jboss.org/browse/JBTM-785
13134	JBTM-785	Hi [~paul.robinson], Is there any update on this? We can't understand what is needed here. What is a standalone client in this context? Tom	1	0	https://issues.jboss.org/browse/JBTM-785
13135	JBTM-747	I have implemented draft 4 of the specification that resides at http://www.jboss.org/reststar/specifications/transactions.html with some amendments (documented in the docs directory). What's left: - hook it into the build releases target of JBossTS; - port the "Night out" demo from the previous REST-tx prototype; - track updates to the specification	0	0	https://issues.jboss.org/browse/JBTM-747
13136	JBTM-741	[~tomjenkinson], what would you think about postponing this issue until JBTM-2571 is resolved? I think it'd be too dangerous to remove public classes or methods without having code coverage from all available tests. What do you think?	1	0	https://issues.jboss.org/browse/JBTM-741
13137	JBTM-728	Are you sure the remote tests are actually running? Looks to me like they are turned off, hence no coverage. <target name="run.tests"> ... <exclude name="**/remote/**"/> ... </target>	1	1	https://issues.jboss.org/browse/JBTM-728
13138	JBTM-713	Marks description from the duplicate issue: {quote} We're working on WS-BA based compensation annotations. That's great, but can we refactor so that we can support compensations outside of WS-BA? ArjunaCore can support compensations without Web Services. Maybe the WS-BA annotations vanish entirely, or collapse down to a subset of what currently exists to support what is truly unique about WS-BA? {quote}	0	0	https://issues.jboss.org/browse/JBTM-713

#	Requirement	Questions	Answered	Successfully Answered	URL
13139	JBTM-700	I looked at this from the perspective of EAP, i.e., what docs are needed there versus only needed in the community. TS docs outline for EAP distribution: In: 0..1 InstallGuide 1..1 ReleaseNodes (JIRA generated) FailureRecovery Guide Administration Guide (ArjunaCore as basis, with diffs from JTA and JTS) Programmers Guide (ArjunaCore with all TXOJ aspects removed; start with JTA) Separate Programmers guide for JTS and XTS (maybe separate Admin guides then?) Separate all JTS and XTS information into separate documents? JTS Quickstart Guide (should be expanded to cover JTA) Configuration guide (Administration Guide update) Out: Debugging documentation All TXOJ aspects from documentation Maybe: None. Duplicated: Tooling discussions Debugging discussions ObjectStore setup Errors	0	0	https://issues.jboss.org/browse/JBTM-700
13140	JBTM-659	Hi Mike, Trying to work out whether this is something we want to support on 4.16.x branch right now. Do you know if it is fixed in 4.16.x yet? e.g. hoping to put 4.16.1 out on Friday and hopefully that would be the last version for EAP6. Tom	1	1	https://issues.jboss.org/browse/JBTM-659
13141	JBTM-659	When I come to release 4.16.1 it is going to ask me what to do with this bug, is it in a state that it can be closed or does it need to move to 4.16.2 (or ideally 5.0.0.M2)?	0	0	https://issues.jboss.org/browse/JBTM-659
13142	JBTM-659	Is this bug resolved in 4.6.1.CP13?	0	0	https://issues.jboss.org/browse/JBTM-659
13143	JBTM-659	I fixed it in a private branch of JBOSSTS_4_6_1_GA_CP12. I am not aware of any CP13 branch. The details are in https://issues.jboss.org/browse/JBTM-522 including a link to the hudson job that tests the functionality. Has there been a decision on whether the backport will go into a 4.6.1 release? When/if it does then we should ask QA to include it in there test plan.	0	0	https://issues.jboss.org/browse/JBTM-659
13144	JBTM-659	Can we mark this as complete?	1	1	https://issues.jboss.org/browse/JBTM-659
13145	JBTM-608	huh? we already do - the syncs records are ordered and you can register one even during beforeCompletion as long as the new one has a order later in the sequence that the current one.	1	1	https://issues.jboss.org/browse/JBTM-608
13146	JBTM-596	Introduced a set of *EnvironmentBean classes and updated code to use them instead of accessing the property manager directly. The beans have hardcoded defaults that are overridden with values from the property manager (i.e. properties file / system properties) when the bean is instantiated. Thereafter the bean is independent of the property manager. A handful of property manager usage remains, esp. in the orb portability layer which uses dynamically named properties that are difficult to map to fixed beans. Needs some further thought. Some more thought also needed to: capturing running config, since it's not necessarily the same as what's in the properties file. Some sort of bean state dumper, similar to what the module Info classes do? even stronger type safety - e.g. some beans have hostnames vs. InetAddresses, lists of classnames vs lists of classes - consider impact on injection systems and JMX API. dynamic reconfig mechanism - should updating bean properties automatically restart relevant parts of the system e.g. rebind listeners to new port without requiring full restart? but that's all for the next cycle. For now the type safety improvements are enough progress.	0	0	https://issues.jboss.org/browse/JBTM-596
13147	JBTM-595	LogFactoryInterface yields a AbstractLogInterface - how does one get from Logl18n to AbstractLogInterface? I confess this logging infrastructure is pretty baffling to me	1	1	https://issues.jboss.org/browse/JBTM-595
13148	JBTM-595	I stuck with Logl18n initially because it was unclear how LogFactory can receive resource bundle information. I guess the key to solving resource bundles will indeed be some kind of nifty subclassing as we are limited to a single resource bundle instance per category. Would you consider simply moving to java.util.logging wholesale, and removing all the facade stuff completely? And by "you" I guess I mean "me", since it's my dumb idea. The only practical difficulty I see would be that I'd have to add a Level class so that you have DEBUG/TRACE instead of JUL's FINE/FINER/FINEST, but that's not too big a deal. The upside would be removing the dep on commons-logging and deleting a bunch of classes. At first glance I think the resource generation stuff would work OK with JUL.	1	1	https://issues.jboss.org/browse/JBTM-595
13149	JBTM-581	For example ... <!-- Periodic recovery settings. Time values in this section are in seconds. --> <!-- Interval in seconds between initiating the periodic recovery modules. Default is 120 seconds. --> <property name="com.arjuna.ats.arjuna.recovery.periodicRecoveryPeriod" value="120"/> <!-- Interval in seconds between first and second pass of periodic recovery. Default is 10 seconds. --> <property name="com.arjuna.ats.arjuna.recovery.recoveryBackoffPeriod" value="10"/>	1	1	https://issues.jboss.org/browse/JBTM-581
13150	JBTM-575	Hi Richard This does not make much sense to me. JBAS-4238 and JBTM-66 are similar but not equivalent. The JBAS issue is addressed in both releases, but JBossAS 4.2.3 uses TS 4.2.3.SP7, which does not have the JBTM-66 changes. JBossTS AS 5.1.0.GA uses TS 4.6.1.GA , which does. So, you seem to be having problems due to a behaviour change that you requested in the first place?! Ah well, maybe I misunderstood what you wanted. Do you have any preference between the implementation alternatives I outline in http://community.jboss.org/message/515473 assuming either will address your needs?	1	1	https://issues.jboss.org/browse/JBTM-575

#	Requirement	Questions	Answered	Successfully Answered	URL
13151	JBTM-575	though I understand JIRA seems to indicate it does. The fact remains that I (and others, by the look of it) are seeing transaction RollbackExceptions *that do not include their root cause* when using JBoss 5.1.0.GA. For example, I see: --- 08:48:35,468 http-127.0.0.1-8080-6 DEBUG [SQL] delete from Resource where id=? and version=? 08:48:35,484 http-127.0.0.1-8080-6 WARN [JDBCExceptionReporter] SQL Error: 1451, SQLState: 23000 08:48:35,484 http-127.0.0.1-8080-6 ERROR [JDBCExceptionReporter] Cannot delete or update a parent row: a foreign key constraint fails (`avant-ss-production/bug`, CONSTRAINT `FK106546DD208B6` FOREIGN KEY (`assignedTo_id`) REFERENCES `resource` (`id`)) 08:48:35,484 http-127.0.0.1-8080-6 ERROR [AbstractFlushingEventListener] Could not synchronize database state with session org.hibernate.exception.ConstraintViolationException: could not delete: [com.avant.ss.ejb.entity.Staff#402881812627347901 2627c550d60004] at org.hibernate.exception.SQLStateConverter.convert(SQLStateConverter.java:94) at org.hibernate.exception.JDBCExceptionHelper.convert(JDBCExceptionHelper.java:66) at org.hibernate.persister.entity.AbstractEntityPersister.delete(AbstractEntityPersister.java:2569) at org.hibernate.persister.entity.AbstractEntityPersister.delete(AbstractEntityPersister.java:2725) at org.hibernate.action.EntityDeleteAction.execute(EntityDeleteAction.java:97) at org.hibernate.engine.ActionQueue.execute(ActionQueue.java:279) at org.hibernate.engine.ActionQueue.executeActions(ActionQueue.java:263) at org.hibernate.engine.ActionQueue.executeActions(ActionQueue.java:172) at org.hibernate.event.def.AbstractFlushingEventListener.performExecutions(AbstractFlushingEventListener.java:321) at org.hibernate.event.def.DefaultFlushEventListener.onFlush(DefaultFlushEventListener.java:50) at org.hibernate.impl.SessionImpl.flush(SessionImpl.java:1027) at org.hibernate.impl.SessionImpl.managedFlush(SessionImpl.java:365) at org.hibernate.ejb.AbstractEntityManagerImpl$1.beforeCompletion(AbstractEntityManagerImpl.java:504) at com.arjuna.ats.internal.jta.resources.arjunacore.SynchronizationImple.beforeCompletion(SynchronizationImple.java:101) at com.arjuna.ats.arjuna.coordinator.TwoPhaseCoordinator.beforeCompletion(TwoPhaseCoordinator.java:269) at com.arjuna.ats.arjuna.coordinator.TwoPhaseCoordinator.end(TwoPhaseCoordinator.java:89) at com.arjuna.ats.arjuna.AtomicAction.commit(AtomicAction.java:177) at com.arjuna.ats.internal.jta.transaction.arjunacore.TransactionImple.commitAndDisassociate(TransactionImple.java:1423) at com.arjuna.ats.internal.jta.transaction.arjunacore.BaseTransaction.commit(BaseTransaction.java:137) at com.arjuna.ats.jbossatx.BaseTransactionManagerDelegate.commit(BaseTransactionManagerDelegate.java:75) at org.jboss.aspects.tx.TxPolicy.endTransaction(TxPolicy.java:170) at org.jboss.aspects.tx.TxPolicy.invokeInOurTx(TxPolicy.java:87) at org.jboss.aspects.tx.TxInterceptor$Required.invoke(TxInterceptor.java:190) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at org.jboss.aspects.tx.TxPropagationInterceptor.invoke(TxPropagationInterceptor.java:76) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at org.jboss.ejb3.security.RunAsSecurityInterceptorv2.invoke(RunAsSecurityInterceptorv2.java:94) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at	1	1	https://issues.jboss.org/browse/JBTM-575
13152	JBTM-575	at com.arjuna.ats.jbossatx.BaseTransactionManagerDelegate.setRollbackOnly(BaseTransactionManagerDelegate.java:123) at org.hibernate.ejb.AbstractEntityManagerImpl.markAsRollback(AbstractEntityManagerImpl.java:421) at org.hibernate.ejb.AbstractEntityManagerImpl.throwPersistenceException(AbstractEntityManagerImpl.java:576) at org.hibernate.ejb.AbstractEntityManagerImpl.throwPersistenceException(AbstractEntityManagerImpl.java:614) at org.hibernate.ejb.AbstractEntityManagerImpl$1.beforeCompletion(AbstractEntityManagerImpl.java:513) What's key here is that, from the transaction manager's perspective, the setRollbackOnly call precedes the exception - hibernate sets the tx to rollback before throwing the exception. So, the setRollbackOnly call IS the root cause of the transaction rolling back. JBTM-66 is not only present but functioning exactly as designed. As mentioned in the forum thread, this is arguably misuse of the api by hibernate. Of the alternatives proposed in the forum thread, chaining the deferredThrowable to the rollbackOnly trace won't work, as there is no deferredThrowable at the point in time that the setRollbackOnly call is made. So the only viable alternative seems to be using the deferredThrowable as the initCause of the rollback in preference to the rollbackOnlyCallerStackTrace in cases where both are available. Will that meet your needs?	1	1	https://issues.jboss.org/browse/JBTM-575
13153	JBTM-575	Johathan, can I ask you another question on a related topic(one that does not involve the client at all). If a business method in EJB session bean throws a RuntimeException in the JBoss log I see only this line: 11:32:12,550 ERROR [TxPolicy] javax.ejb.EJBTransactionRolledbackException No cause, no message, no nothing - the RuntimeException is however successfully relayed to the client, but I remember that in older JBoss version I used to get I full stack trace with the javax.ejb.EJBTransactionRolledbackException. What might be causing this problem?	0	0	https://issues.jboss.org/browse/JBTM-575
13154	JBTM-575	Jonathan, As you asked, I asked someone from the Hibernate team (Steve Ebersole) about casuality. Steve has since responded, as have a couple other people. What is our next step to getting this resolved? Regards, Richard.	1	1	https://issues.jboss.org/browse/JBTM-575
13155	JBTM-575	Was this fixed or not? I can't tell from the JIRA or the forum post. Assuming that it was, I will write this release note: Cause: In ArjunaCore which was included in JBoss Application Server 4.2 and previous, when a transaction rolled back, the <systemitem>RollbackException</systemitem> included the root cause of the exception. In JBoss Application Server 5.1, the exception no longer included this information, even though the information could still be found in a different area of the log file. Consequence: Developers who relied on the information included in the <systemitem>RollbackException</systemitem> in the older versions of JBoss Application Server found that their applications no longer worked as expected. Fix: The debugging information has been put back into the exception, so that it works as it did previously. Result: Developers can once again write code to take advantage of the debugging information found in the <systemitem>RollbackException</systemitem>.	0	0	https://issues.jboss.org/browse/JBTM-575
13156	JBTM-573	This says "Done" but there is no information. Is it done or WONTFIX? If it is done, what is the command-line tool and what is the syntax for using it?	1	1	https://issues.jboss.org/browse/JBTM-573

#	Requirement	Questions	Answered	Successfully Answered	URL
13157	JBTM-555	Maybe running the test with the gc.log and analysing it afterwards would also be a sounded approach ? Basically what is to know of the test is : "Is there memory consumption below a certain threshold ?", this could be answer by a gc.log file... (However, this is rather tied to the Sun JVM implementation). Moreover, analysing the GC log also allow to see how the memory consumtion progress, maybe spotting a memory consumption rising (even if it's stay beneath the appropriate threshold during the test) that wasn't rising in the previous version. That gain this sort of knowledge would requires you to either run test on previous tag release or keep previous GC.log on file, however doing the first one with Git is not really that complicated (in fact, it will be similar to using the 'bissect' command). On other "trick" that I know of is the Ant's for-each statement in the ant-contrib.jar, which will allow to do something like this: <for-each ..> <junit .... > <!-- run one particular test or test group --> <!-- Load memory configuration for an appropriate test from a properties file --> <property name="${testId}-config.."/> <jvmarg value="-Xms${memory.start}"/> <jvmarg value="-Xmx${memory.max}"/> <!-- ... Hope that's help.	1	1	https://issues.jboss.org/browse/JBTM-555
13158	JBTM-535	Another thought about the Listener.finalize() method: it is useless also because if the Listener is running, it can't be finalized, so finalize() will never be called. Viceversa, if finalize() is called it means that the listener has already been stopped, so its finalize() implementation is useless... am I wrong?	1	1	https://issues.jboss.org/browse/JBTM-535
13159	JBTM-535	Could this be targetted for 4.7.0? Resolution should be quite straightforward... Thanks in advance.	1	1	https://issues.jboss.org/browse/JBTM-535
13160	JBTM-522	new Uid ("invalidString", true); should return cleanly with a Uid such that x.valid()== false. Instead it throws NPE. The exception handling probably needs a catch for that in addition to the existing exceptions it knows about.	0	0	https://issues.jboss.org/browse/JBTM-522
13161	JBTM-503	Hi Andrew, any news on this? Could it be considered for 4.7.0?	1	1	https://issues.jboss.org/browse/JBTM-503
13162	JBTM-465	I'm here again regarding this issue. As I wrote in the referenced forum topic, what I'm doing right now is to collect all the created connections (by my JDBCAccess implementation) and shut down them on webapp restart. However, there's a little issue when embedding JBossTS in a stand-alone application. In our case, this is happening when unit-testing our application code. I'm going to explain it better. In out unit testing framework, we do the following: --- for every test case: --- 1. in the setup phase, initialize JBossTS 2. in the test phase, run the tested code, which uses JBossTS 3. in the tear down phase, shutdown JBossTS Step 1. and 3. are almost the same that happen in our web application start and stop phases. In step 3. all the connections returned by our implementation of JDBCAccess are closed. Now, when more than one test case is executed (so, points 1. to 3. are reiterated), during the second, third, etc. iterations unfortunately in step 1. JBossTS does not re-create the Object Store, so at the first attemp to connect to it, connections in com.arjuna.ats.internal.arjuna.objectstore.JDBCImple._theConnection array are all closed (by step 3. of the previous iterations), so any attempt to setup and execute a prepared statement (for instance in com.arjuna.ats.internal.arjuna.objectstore.JDBCImple.write_state(Uid, String, OutputObjectState, int, String)) fails. This is not a big problem, because com.arjuna.ats.internal.arjuna.objectstore.JDBCImple.reconnect(int) is invoked to create a new connection, however if you consider for instance com.arjuna.ats.internal.arjuna.objectstore.jdbc.h2_driver.write_state(Uid, String, OutputObjectState, int, String), because the internal state of the class is not handled in a stack-way (to handle the recursive call in the catch clause), when the outer write_state calls terminates and calls com.arjuna.ats.internal.arjuna.objectstore.JDBCImple.freePool(int), a warning is logged (identified by "com.arjuna.ats.internal.arjuna.objectstore.JDBCImple_18") because the connection has been already freed by the inner call to write_state. As I said, this is not a real issue, but it is annoying in our use case. Anyway, all of this could be avoided if either JDBCImple or the Object Store correctly implemented a shutdown method. In fact, from one iteration to another the Object Store is recycled and not recreated because even if I correctly disable the TxControl in step 3., in step 1. of the following iteration the TxControl is re-enabled, the TransactionStatusManager is correctly recreated and it creates a new ActionStatusService. However, the latter keeps on using its static field com.arjuna.ats.arjuna.recovery.ActionStatusService._objectStore, which is initialized once (at step 1. of the first iteration) and never disposed. Saying it in a simple way: it would be useful to implement a correct lifecycle for the Object Store (and for its connections, of course), bound to the TxControl one.	1	1	https://issues.jboss.org/browse/JBTM-465
13163	JBTM-465	Please can you review this in context of JBTM-1230, I think the changes we made there might have addressed your requirements	1	1	https://issues.jboss.org/browse/JBTM-465
13164	JBTM-465	Hi Tom, please let me understand something. From JBTM-1230 I understand that JDBC connections for the Object Store are now retrieved using JNDI, is this correct? If so, as I already stated already in other circumstances, this is a problem for us, since we're using JBoss TS embedded in an application which is meant to work outside a JEE environment. We would need to setup a fake JNDI repository with Spring to let the object store find JDBC connections. Do you confirm this? Or is there an alternative way to still provide connections without JNDI? If not, I personally consider this, together with the push towards the mandatory use of a JCA connector (in place of the plain JDBC implementation) in JBoss TS 5.x, a step backward. Please note that I've not followed this evolution so tightly, but this is what I understood based on the feedback I received on the bugs I opened myself (and for some of which I also contributed with patches that were never integrated). Thanks in advance.	1	1	https://issues.jboss.org/browse/JBTM-465
13165	JBTM-437	Jonathan, can you take this?	0	0	https://issues.jboss.org/browse/JBTM-437
13166	JBTM-409	This is now working for the 1.1 WS-AT implementation. Need to add supporrt for WS-AT 1.0 next. There is now a new API class UserSubTransaction which subclasses the remote UserTransaction class. It can be used to create an AT UserTransaction when already inside an AT transaction by calling getTransaction. This can be suspended and resumed via the TransactionManager class like any other UserTransaction. Any participants enlisted in the subtransaction will be coordinated using the coordinator of the local host rather than the coordinator of the original TX. See the WSTX tests for details.	0	0	https://issues.jboss.org/browse/JBTM-409
13167	JBTM-400	Done: JBTM-1472. Can you add some more detail to the description? As it stands, my understanding of this issue is that it's a duplicate of JBTM-1472.	1	1	https://issues.jboss.org/browse/JBTM-400
13168	JBTM-394	Added getters and setter for addresses / ports to the jta and jts service mbean interfaces and implementations. Revised assorted jta/jts/core internals to remove knowledge of AS from things that don't need it - the TransactionManagerService puts the values from ServiceBindingManager (or SERVER_BIND_ADDRESS as a fallback) in to the arjuna config objects, so app server integration is transparent to the rest of the JBossTS codebase. Revised XTS AS integration to read same service bindings the AS webserver uses, making it more POJO and less JMX style integration. Whilst checking port bindings, discoved and fixed inconsistencies in various places where 4711 was stated as recovery manager port, rather than the correct 4712. Used 4713 for transaction status manager and 4714 for socketProcessId in the app server. Note that when running standalone these still use random ports - do we want to hardcode these defaults in the standalone version also?	0	0	https://issues.jboss.org/browse/JBTM-394

#	Requirement	Questions	Answered	Successfully Answered	URL
13169	JBTM-390	Most JTS test now run locally. Some issues still exist: no JTA test coverage, no JDBC test coverage, excessive memory usage by ant/junit, excessive buffering of output (may be related to memory usage), occasional unexplained hanging of tests on husdon only (ORB shutdown blocking?). These are relatively low priority. Pushing to next release.	0	0	https://issues.jboss.org/browse/JBTM-390
13170	JBTM-389	Which svn tag are your src changes based on?	1	1	https://issues.jboss.org/browse/JBTM-389
13171	JBTM-387	A prototype package has been added to the TS repository in workspace/adinn/orchestration which supports orchestration of different activities in multi-threaded test cases.The prototype works by injecting triggers for Event Condition Action (ECA) rules at arbitrary points in the code under test. The ECA rules include primitives which enable sequencing, synchronization, delay and abort of the threads executing the trigger class.. The prototype has been used to automate one of the test scenarios for XTS recovery and will be developed to cover other cases. However, the tool is independent of the TS code base and development and use of the tool for recovery testing will continue beyond the 4.4.0 GA release. So this JIRA is being rescheduled for completion after that date .	1	1	https://issues.jboss.org/browse/JBTM-387
13172	JBTM-369	Can you give a use case for this? I'm not seeing any real advantage over just doing e.g. -Dcom.arjuna.ats.arjuna.xa.nodeIdentifier=foo ?	1	1	https://issues.jboss.org/browse/JBTM-369
13173	JBTM-369	Jonathan, How to end-up with a "smooth" integration within the AS? I understand that the TM has its own configuration file when working inside some other runtime, but when runing inside the AS, can't he use the JBoss config files (like jboss-services.xml file) or similar? If not, can we at least implement the same feature set as JBoss AS has, including the property replacer that Roland was suggesting to add? Thanks for your feedback. Cheers, sacha	1	1	https://issues.jboss.org/browse/JBTM-369
13174	JBTM-369	Hi Sacha Please clearly define what you are trying to achieve. So far nobody has given me a convincing, specific real world use case for this feature. As far as I can tell the existing ability to override values from the config file by specifying system properties is equivalent to value substitution, except for cases where you may want to use the same value for multiple parameters. The only such case I can think of is the IP address, for which we have a separate solution anyhow. With the exceptions of the port bindings (which will be done via SBM), recovery (which will be done via the new tx integration API) and multiple 1PC (which is an horrifically bad idea anyhow), users should not need to change values in the tx properties file. I believe this feature will benefit only a small proportion of users. I agree it's better to have consistent behaviour for the properties files, it makes for a better user experience. But that's secondary to having a product that works. Because of these factors, I consider this issue a low priority. It will get done as and when we have time, but not until e.g. crash recovery and JTS integration are finished. That's why it's still not scheduled against any particular release. Perhaps I'm missing something though. If you feel it's worth taking time out from managing the division to comment on the issue, you must feel it's important. Can you say why?	1	1	https://issues.jboss.org/browse/JBTM-369
13175	JBTM-360	When resolved the server manager jar should be included in the JBossTM build (and the server wrapper removed)	0	0	https://issues.jboss.org/browse/JBTM-360
13176	JBTM-355	Can you please explain why the value of this timeout needs to be configured with a larger value and how this value relates to your transaction's 'size'? Also, by 'size' are you referring to the number of participants or the amount of work done by each participant? The transport timeout is only ever employed when dispatch of a WS-C/T protocol message must wait on receipt of a corresponding protocol message. For example, the WS-AT Coordinator engine responds to a prepare request by sending a PREPARE message to the participant and then waiting for a PREPARING message to be returned in response. Processing of the incoming message and dispatching the corresponding response will normally happen very quickly as it only involves a small amount of work on the part of the transaction system. The other variables in the equation are the communication transport delays and, in some cases, a certain amount of processing time added by the participant implementations (in the example above the participant's prepare method will be invoked). The participant may conceivably be delaying the response for more than 30 seconds. If so then this is likely to be due to an error in the participant.	1	1	https://issues.jboss.org/browse/JBTM-355
13177	JBTM-355	I'm still not convinced that configuring this timeout is the correct thing to do. Can you explain i) which database you are using and ii) what your code is doing in the prepare call? I am assuming that this problem arises because entities created in your subordinate TX only get flushed at prepare time due to the delegation involved in bridging. The persistence manager install a Syncrhonization to flush cached SQL updates to the database. This normally runs before the 2PC is entered but with bridging the flush cannot be performed (i.e. the Synchronization cannot be executed) until the delegated prepare arrives which stalls the parent TX. One possibility might be for you to manually flush changes inside your EJB code as you make them. This should leave little or no work to do at prepare time because the DB updates will already be out on disk. Can you try this? Another option might be to do break the create operations into lots of little transactions. Do you have to do this update all in one go? Anyway leaving these questions aside for the moment, if you want to reset the timeout you can easily do so by invoking TransportTimer.setTransportTimeout(long) from your application code.	1	1	https://issues.jboss.org/browse/JBTM-355
13178	JBTM-345	What happens if a module goes away between first and second passes, or during a recovery pass? Do we need blocking unregister calls for modules so that does not happen?	1	1	https://issues.jboss.org/browse/JBTM-345
13179	JBTM-334	Just a clarification: this is not about deprecating what NORMAL does, just changing the name from NORMAL to PERIODIC. Correct?	0	0	https://issues.jboss.org/browse/JBTM-334
13180	JBTM-331	See http://jira.jboss.com/jira/browse/JBTM-20?page=all for the backstory on this. We already downgrade this stuff from INFO to DEBUG when running integrated with the AS. The arjuna level won't be changed, so the options are to change the global rewriting of arjuna messages in AS from INFO->DEBUG to INFO->TRACE which will impact other messages too, or install a filter in log4j. Why is AS even logging at DEBUG by default? It should be INFO, at least for production releases.	1	1	https://issues.jboss.org/browse/JBTM-331
13181	JBTM-319	Yes, we definitely don't want to duplicate code from elsewhere. How about getting the ManagedConnectionFactory instance from JNDI, since that's what creates the WrapperDataSource in the first place?	0	0	https://issues.jboss.org/browse/JBTM-319
13182	JBTM-319	Can you take any queries and discussion to the forums, where it's easier to track? Thanks.	0	0	https://issues.jboss.org/browse/JBTM-319
13183	JBTM-312	Would this work as a general design pattern if you wanted to implement a HA recovery coordinator? 1. Use the JDBC object store. 2. Configure a recovery coordinaor (RC) on each node to recover all (*) nodes. You can only *start* one of these RC at any one time 3. Develop some "watchdog" process runs on every node and monitors the current RC process and if it fails, uses a group protocol to elects one of the other RC's to start 4. Rather than starting the RC on one of the nodes, start the watchdog processes and allow them to enable one of the RC's Would this work for JTS?	1	0	https://issues.jboss.org/browse/JBTM-312

#	Requirement	Questions	Answered	Successfully Answered	URL
13184	JBTM-300	Thank you for backporting. I put 4.2.3.SP5_CP07-brew jars into EAP 4.3.0 CP06 (SOA-P 4.3.0 CP02) and tested AtomicActionExpiryScanner. Then I found that expired tx-logs were copied to "Expired" directory but the original files were not removed. > find data/tx-object-store ... data/tx-object-store/HashedActionStore/defaultStore/StateManager/BasicAction/TwoPhaseCoordinator/AtomicAction/#197#/7f000001_9020_4b025a1e_2f9 data/tx-object-store/HashedActionStore/defaultStore/StateManager/BasicAction/TwoPhaseCoordinator/AtomicAction/Expired/#197#/7f000001_9020_4b025a1e_2f9 ... It's hitting JBTM-418. Could you take care of JBTM-418 for 4.2.3 branches too?	0	0	https://issues.jboss.org/browse/JBTM-300
13185	JBTM-280	Do you mean simply saving them as .odt files? I tried to check one in but got the following error : svn: CHECKOUT of '/!svn/ver/15549/labs/jbosstm/trunk/ArjunaCore/docs/install_guide': 403 Forbidden (https://svn.labs.jboss.com) Am I using the wrong path or don't I have the correct permissions to commit perhaps. Thanks, Daniel	1	1	https://issues.jboss.org/browse/JBTM-280
13186	JBTM-265	Ok, I have managed to modify XTS to run over JBossWS/CXF 3.1.0 but a few caveats apply I had to patch two bugs in CXF so we cannot go ahead with moving to CXF untiil JBossWS assimilates fixes for CXF-2161 and CXF-2167. I had to break XTS working on JBossWS/Native because of several incompatibilities. The most notable difference is that the AddressingProperties class and related classes reside in different packages but there are a couple of others: i) the RelatesTo field in CXF has only one entry whereas in JBoss it is an array of entries ii) when a JaxWS port is created from a W3CEndpoint JBossWS configures its request messaqe properties with a MAP containing any WSA header values derived from the endpoint. this requires the XTS code to merge any extra headers into the existing MAP. CXF stashes the endpoint WSA header values in the port and so XTS has to create a MAP containing the extra headers and hang this off the request message properties. iii) CXF does not support JAX-RPC so the JaxRPC client handlers could not be compiled (the requisite headers are missing from the CXF libraries). This means the old version of the demo has to be dropped on CXF. Ignoring the JAX-RPC issue, it ought to be possible to hide these differences behind a wrapper class which managed the underlying MAP types and handled the task of configuring a JaxWS port. However, this would mean that the build process would have to be modified to build either a JBossWS/Native compatible version or a JBoss/CXF compatible version i.e. the XTS code would for all intents and purposes become dual binary (this is why we really need a fix in JBossWS).	0	0	https://issues.jboss.org/browse/JBTM-265
13187	JBTM-264	Is this resolved as part of the CLI work possibly? e.g. can the AS7 CLI be deployed externally?	1	1	https://issues.jboss.org/browse/JBTM-264
13188	JBTM-264	Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom	1	0	https://issues.jboss.org/browse/JBTM-264
13189	JBTM-252	Daniel, would you please clarify the scope of the quanitfiers 'some' and 'all' in your issue description? i.e. in which documents have you noticed the format problem? which other documents do you suspect are affected?	1	1	https://issues.jboss.org/browse/JBTM-252
13190	JBTM-144	Mark The DTF QA tests have their own (JBoss internal) repo, due to different licencing for the DTF. Can we close this one?	1	1	https://issues.jboss.org/browse/JBTM-144
13191	JBTM-116	Which lower level? JBossTS understands -1. It means "transactions never time out".	1	1	https://issues.jboss.org/browse/JBTM-116
13192	JBTM-103	Mark I'm not clear on this one. The effective default timeout appears to be 0 regardless of which TransactionManagerImple is used. Am I missing something?	1	1	https://issues.jboss.org/browse/JBTM-103
13193	JBTM-103	In ArjunaJTA BaseTransaction.begin: Integer value = (Integer) _timeouts.get(ThreadUtil.getThreadId()); int v = 0; // if not set then assume 0. What else can we do? if (value != null) { v = value.intValue(); } // TODO set default timeout which doesn't exist in the JTAX BaseTransaction, because that relies on the JTS Current object to manage timeouts, which pulls the default from the JTS property and not the ArjunaCore property (check relevant Environment.java classes to see what I mean). The JTA and JTS implementations should both use the Core definition of default transaction timeout. At the moment, if someone wants to set a default timeout for JTA transactions, that should be used if no explicit timeout is defined, they can only do so via the JTS implementation. Plus, they'd need to make sure the JTS value is the same as the Core value if they want to mix and match transaction implementations (not likely in reality). We should have only a single place to set the default transaction timeout, and this value should be used when no timeout is explicitly defined. A value of 0 or -1 should be taken as "no timeout", i.e., infinite. JTS TransactionFactory does this already: int theTimeout = time_out; if (theTimeout == 0) theTimeout = TransactionFactoryImple._defaultTimeout; and _defaultTimeout could be 0.	0	0	https://issues.jboss.org/browse/JBTM-103
13194	JBTM-98	what is the setup of your test? If I have a single JBoss server talking to oracle then it works fine. When I try the following scenario is when I get the problem (both server 4.0.3 SP1 and JBossts 4.2): Server1 : starts the global distributed transaction, performs local oracle database operations and calls a server2Bean on server2 // this method has the tx "required" attribute in ejb-jar.xml performGlobalTx(){ doSomething(); // do oracle operations server2Bean.doSomething(); // call remote jboss Server2 } Server2: the bean on this server updates the same oracle database: doSomething(){ performDBOperations...; // here is where I get the exceptions reported in the forum <<<<----------here }	1	0	https://issues.jboss.org/browse/JBTM-98
13195	JBTM-95	We have such a thing in place now as far as I can see. Let's close this?	1	1	https://issues.jboss.org/browse/JBTM-95
13196	JBTM-86	Could you please increase the priority of this bug, or at least give it some sort of schedule? Defect analysis becomes a nightmare without any sort of exception chaining.	0	0	https://issues.jboss.org/browse/JBTM-86
13197	JBTM-86	Hi Andrew, hi Jonathan, what is the fix version that includes the whole fix? 4.14? Thanks in advance!	1	0	https://issues.jboss.org/browse/JBTM-86
13198	JBTM-49	Does this still make sense? We should probably ensure our tooling is consistent with AS7 as much as anything.	1	1	https://issues.jboss.org/browse/JBTM-49
13199	JBTM-49	Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom	1	0	https://issues.jboss.org/browse/JBTM-49
13200	JBTM-20	Can you add something to the documentation (the section around application server integration)? If you want, send me text and I'll put it in place.	1	1	https://issues.jboss.org/browse/JBTM-20
13201	JBTM-5	From Adrian Brock: "Adrian comment: "Will this also be integrated with the JBoss installer and the JBoss Network for "ease" of installation/choice? i.e. we include JBoss Transactions in the installer distrubtion and let them choose between the two implementations."	0	0	https://issues.jboss.org/browse/JBTM-5
13202	JBVFS-194	Aleš, would you mind fixing or removing these tests please? Thank you.	1	0	https://issues.jboss.org/browse/JBVFS-194

13204	JBVFS-12	Is this fixed or not in Beta9? (JBCTS-747) When commiting code in VFS, we need VFS jira tags, not JBCTS ones, otherwise, it's impossible to track. I want to mark Beta9 as released.	0	0	https://issues.jboss.org/browse/JBVFS-12
13205	JBVFS-8	Hi Scott, Can this one be closed?	1	1	https://issues.jboss.org/browse/JBVFS-8
13206	JBWEB-292	Thanks for the hint Remy, I can see it now in the docs on [cipher-suite|http://docs.jboss.org/jbossweb/7.0.x/config/ssl.html]. Does it mean that the configuration syntax changed between {{jbossweb-7.3.0.Final}} and {{jbossweb-7.4.0.Beta4}} or that it has been so all along and the colon-delimited cypher-suite was simply ignored in {{jbossweb-7.3.0.Final}}? Anyhow, I tried it with: {{cipher-suite="AES128-SHA,ALL,!ADH,!LOW,!MD5,!SSLV2,!NULL"}} and I must say that the error persists: {{JBWEB002081: No cipher match}}.	1	0	https://issues.jboss.org/browse/JBWEB-292
13207	JBWEB-292	Yes, JSSE names did it, this works: {code} <subsystem xmlns="urn:jboss:domain:web:1.5" native="false"> <connector name="https" protocol="HTTP/1.1" socket-binding="https" scheme="https" enabled="true" secure="true"> <ssl name="https" ca-certificate-file="/proper/ca-cert.jks" certificate-key-file="/proper/client-cert-key.jks" certificate-file="/proper/client-cert-key.jks" password="tomcat" verify-client="false" key-alias="javaclient" cipher-suite="TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384,TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384,TLS_ECDH_RSA_WITH_AES_256_GCM_SHA384,TLS_ECDH_ECDSA_WITH_AES_256_GCM_SHA384,!TLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256,!TLS_ECDHE_ECDSA_WITH_AES_128_GCM_SHA256,!TLS_ECDH_RSA_WITH_AES_128_GCM_SHA256,!TLS_ECDH_ECDSA_WITH_AES_128_GCM_SHA256,TLS_DHE_RSA_WITH_AES_256_GCM_SHA384,!TLS_DHE_RSA_WITH_AES_128_GCM_SHA256,TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384,TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA,TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA,TLS_ECDH_RSA_WITH_AES_256_CBC_SHA384,TLS_ECDH_ECDSA_WITH_AES_256_CBC_SHA384,TLS_ECDH_RSA_WITH_AES_256_CBC_SHA,TLS_ECDH_ECDSA_WITH_AES_256_CBC_SHA,TLS_DHE_RSA_WITH_AES_256_CBC_SHA256,TLS_DHE_RSA_WITH_AES_256_CBC_SHA,!TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA256,!TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,!TLS_ECDHE_RSA_WITH_AES_128_CBC_SHA,!TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA,!TLS_ECDH_RSA_WITH_AES_128_CBC_SHA256,!TLS_ECDH_ECDSA_WITH_AES_128_CBC_SHA256,!TLS_ECDH_RSA_WITH_AES_128_CBC_SHA,!TLS_ECDH_ECDSA_WITH_AES_128_CBC_SHA,!TLS_DHE_RSA_WITH_AES_128_CBC_SHA256,!TLS_DHE_RSA_WITH_AES_128_CBC_SHA,TLS_ECDHE_RSA_WITH_3DES_EDE_CBC_SHA,TLS_ECDHE_ECDSA_WITH_3DES_EDE_CBC_SHA,TLS_ECDH_RSA_WITH_3DES_EDE_CBC_SHA,TLS_ECDH_ECDSA_WITH_3DES_EDE_CBC_SHA,TLS_DHE_RSA_WITH_3DES_EDE_CBC_SHA,TLS_RSA_WITH_AES_256_GCM_SHA384,TLS_RSA_WITH_AES_256_CBC_SHA256,TLS_RSA_WITH_AES_256_CBC_SHA,!TLS_RSA_WITH_AES_128_GCM_SHA256,!TLS_RSA_WITH_AES_128_CBC_SHA256,!TLS_RSA_WITH_AES_128_CBC_SHA,TLS_RSA_WITH_3DES_EDE_CBC_SHA" protocol="TLS"/> </connector> <virtual-server name="default-host" enable-welcome-root="true"> <alias name="localhost"/> <alias name="example.com"/> </virtual-server> </subsystem> {code} So, is this just a documentation issue then?	1	0	https://issues.jboss.org/browse/JBWEB-292
13208	JBWEB-276	This is a potential patch which adds a new error message (is using one past the last number correct?) and uses it when a RejectedExceutionException is caught instead of the normal message. It alters the NIO, APR and JIO endpoints	1	1	https://issues.jboss.org/browse/JBWEB-276
13209	JBWEB-276	James Livingston <jlivings@redhat.com> made a comment on [bug 985191|https://bugzilla.redhat.com/show_bug.cgi?id=985191] For the default blocking thread pools, a RejectedExecutionException means a serious problem occurred, yes. If you switch the web container over to using a non-blocking thread pool however, so that it drops requests rather than blocking, it is expected that you would receive these. Currently if you want to make JBoss drop web requests when there are too many, it writes a large number of these errors out into the log, which would have performance implications reducing the usefulness of dropping request under excessive load. If you don't want to hide the message since it is serious for blocking thread pools, is there an alternative which would let people using non-blocking thread pools hide it? It would be possible to move it to a different logging category, which could be turned off, but adding a new logging category for one message seems excessive.	1	1	https://issues.jboss.org/browse/JBWEB-276
13210	JBWEB-276	Paul Gier <pgier@redhat.com> made a comment on [bug 985191|https://bugzilla.redhat.com/show_bug.cgi?id=985191] Can this issue be closed?	0	0	https://issues.jboss.org/browse/JBWEB-276
13211	JBWEB-248	where do you put the valve?	0	0	https://issues.jboss.org/browse/JBWEB-248

#	Requirement	Questions	Answered	Successfully Answered	URL
13215	JBWEB-228	OK. I think I see your point. To summarize: your proposal would be to implement a JBoss AS 7 extension (subsystem) for loading the authenticator valve and adding it to the valve chain. Right? I personally think this is much better than configuring it per app in the jboss-web.xml file (because it would not need an additional configuration on application developer/deployer side, besides application developer/deployers don't have to care where to get the classes from). IMO I still think this approach would have 2 drawbacks (when comparing it with the possibility of the registration of the Authenticator in the file Authenticator.properties file): * Developer/Deployer cannot configure the Authenticator by means of web.xml. It's even not possible to see by means of the web.xml file which Authenticator is really in use. As far as I know if a custom Authenticator is configured as a valve, JBoss will always take the valve configuration and will ignore the configuration in the web.xml file. This could be tricky (somehow magic) in terms of support and maintenance * The valve cannot be enabled/disabled by means of a deployment. It will be either always enabled or disabled (if we control this by means of a system property). For instance it is not possible to have 2 different War files deployed in one JBoss where one needs my custom Authenticator and the other one needs a Java EE Standard Authenticator. -> Using the jboss-web.xml approach per deployment this requirement can be solved (coming along with the drawback of a more tricky configuration (and class loading). I don't understand why JBoss cannot just provide the possibility to plugin custom authenticators and the required configuration for them (including the mapping to a auth-method usable in the web.xml file) in the standard subsystem web. From my point of view a custom Authenticator is different from a normal valve in terms of it should support and act the same way as the standard Java EE authenticators. And I don't see a way to achieve that when just treating it like a normal valve (neither when using jboss-web.xml file to configure it, nor using a JBoss Extension subsystem). To detail the requirement - The authenticator should be made available globally (just like the standard Java EE Authenticators are made available by the container) - The authenticator should be configurable / enabled per deployment (the same way like it is for a standard Java EE Authenticator) - And best would be that the configuration mechanism in use is the same than it would be for Java EE standard authenticators (using a custom auth-method in the web.xml file)	0	0	https://issues.jboss.org/browse/JBWEB-228
13216	JBWEB-178	@Remy Maucherat Thank you for your very interesting answer. Can you add in Jboss Web FAQ at http://www.jboss.org/jbossweb/faq.html that : "Jboss Web, the web container in JBoss is no longer compatible with Tomcat. All application vendor that sell web app certified for Tomcat would have to include specific JBoss AS versions in their certification process." It is very important for customers that want that their software editor add new support for Jboss Web. And can you add some words that explain why now Jboss Web, the web container (JSP/Servlet) in JBoss, is no longer compatible with Tomcat. What are the big problems or changes for this compatibility problem ? There is only few information about Comet Advanced IO, Tomcat Versions, NIO but is not very detailed for IT professionnals. Can you update Jboss Web FAQ at http://www.jboss.org/jbossweb/faq.html because then now this line is not truth: "...The latest version of JBoss Web corresponds to the latest version of Tomcat for the patches and security fixes." Thanks for your help.	1	0	https://issues.jboss.org/browse/JBWEB-178
13217	JBWEB-178	Can you add more information in the Jboss Web's FAQ. See https://jira.jboss.org/browse/JBWEB-178?focusedCommentId=12547642&page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#action_12547642 Thanks.	1	0	https://issues.jboss.org/browse/JBWEB-178
13218	JBWEB-164	Jean-Frederic, So you are saying that this functionality exists in JBossWeb trunk, is that right? Any idea when the trunk code will make it into a JBoss release?	0	0	https://issues.jboss.org/browse/JBWEB-164
13219	JBWEB-164	The link in the description is broken... My notes only tell about replaceProperties() in the TC7 repo. Could you please put the new link in a comment?	1	0	https://issues.jboss.org/browse/JBWEB-164
13220	JBWEB-142	Since Remy is on vacation, can you please apply this upstream?	1	1	https://issues.jboss.org/browse/JBWEB-142
13221	JBWEB-8	Can someone review the article that is at: http://www.apache.org/~mturk/docs/article/ftwai.html In the article I have focused on determining the best topology and determining the actual configuration to use. Would you like to see something else in the article? Thanks, Mladen	1	1	https://issues.jboss.org/browse/JBWEB-8
13222	JBWEB-8	Finished the article. What's left is publishing	0	0	https://issues.jboss.org/browse/JBWEB-8
13223	JBWEB-5	Released jk-1.2.7-beta-2. This is the last beta release I hope. The next one will be 1.2.8	0	0	https://issues.jboss.org/browse/JBWEB-5
13224	JWS-151	[~fgoldefu], is there any specific configuration is required for monitoring mod_cluster connections? I was under the impression that monitoring apache through mod_bmx would suffice (I could be totally wrong though).	1	1	https://issues.jboss.org/browse/JWS-151
13225	JBWS-4056	Sorry about that, I missed that usage since they are looked up by FQDN class name in String. Anyway I sent a proposal PR https://github.com/jbossws/jbossws-cxf/pull/23, could you have a look?	0	0	https://issues.jboss.org/browse/JBWS-4056
13226	JBWS-4000	[~david.boeren], is it possible to see (privately is fine too) the code for WebPaymentInternal?	0	0	https://issues.jboss.org/browse/JBWS-4000

13234	JBWS-3738	What type of documentation is being sought? Where is it desired to reside?	1	1	https://issues.jboss.org/browse/JBWS-3738
13235	JBWS-3724	The option you mention was discarded because in HTTP 1.0 new connections are open for each request/response pair. And after each response the connection would be closed. This lead to some big efficiency problems. I asked to several people and they do not recommend do this. I disabled Chunked encoding in client side, over HTTP 1.1 and i was hoping to do the same in server side, keeping HTTP 1.1 because it means that chunked transfer encoding is an option in HTTP 1.1	0	0	https://issues.jboss.org/browse/JBWS-3724
13236	JBWS-3648	Alessio, would you check this issues? https://community.jboss.org/thread/231657 Invoking @PolicySets-added Service Endpoint Interface is failed. I suggest to make another JIRA to solve this issues. I need your advice deperately	1	1	https://issues.jboss.org/browse/JBWS-3648

#	Requirement	Questions	Answered	Successfully Answered	URL
13237	JBWS-3628	Rebecca, sure, the client has power to change this specific value, as well as using a completely different wsdl contract. The JMS case here is probably also not a perfect fit for the new feature request, as for pure JMS endpoints the wsdl contract is actually not published at all (that's also why in the testcase you mentioned the client is retrieving the wsdl from as a resource in the client jar). This said, it could still be useful to support a server side property expansion mechanism; the user could deploy a contract first endpoint with something like @foo@ in its wsdl, then the jbossws deployer would expand that by reading the value of the "foo" system property when publishing the endpoint wsdl. Do you see what I mean?	1	1	https://issues.jboss.org/browse/JBWS-3628
13238	JBWS-3628	OK, I see. So we can't "fool" CXF into using a different location for the wsdl. Btw, I also remember that CXF has a wsdl cache mechanism that is based on the wsdl url, so playing with the wsdl location url might definitely be risky. The idea of running a filter at the time CXF parses the wsdl into the WSDL4J Definition model is interesting; something I've noticed in the patch is that is applies to the JMS wsdl extensibility element only. So we'd need to clarify in advance which elements actually support property expansion and which do not. Something I've been thinking about is why don't we run the filter directly at WSDL4J level? javax.wsdl.factory.WSDLFactory (which is used by CXF to parse the wsdl) lets us have a different implementation of WSDLFactory (see newInstance() and findFactoryImplName() methods). We could have a custom WSDLFactory impl that runs our filters and eventually delegates to the default WSDLFactory impl (or to what would have been resolved before, but that's an impl detail). The filtering could either be performed through pluggable filters as you did in your last patch for cxf, or (better, I think) be StAX / DOM based on the whole document (depends on which readWSDL method flavor is called). The advantage are no need to have changes in CXF and a solution that applies to any component relying on the WSDLReader.	1	1	https://issues.jboss.org/browse/JBWS-3628
13239	JBWS-3628	CXF would need only a minor modification in order for us to register an custom WSDLFactoryImpl through the bus for CXF's WSDLManager to reference. Our WSDLFactoryImpl class would override the newWSDLReader method and return a custom WSDLReaderImpl class. It would be most desirable to subclass com.ibm.wsdl.xml.WSDLReaderImpl and override select parsing methods, however is this not possible because the methods of interest are "protected". I see two solutions. One, copy the contents of com.ibm.wsdl.xml.WSDLReaderImpl into our WSDLReaderImpl class and make the desired modifications to the protected methods. Two, in our WSDLFactoryImpl override method newDefinition() and return a custom impl of DefinitionImpl and in DefinitionImpl override methods like createService() and return a custom ServiceImpl class (and the like) that does our bidding. This would allow com.ibm.wsdl.xml.WSDLReaderImpl to be used as is. Because of the nature of what we are currently customizing I am more in favor of option one. This provides us full access to the wsdl contents with the smallest number of classes that needs to be maintained. Option two seems like over kill and requires a larger number of custom classes to be maintained by us. What are your thoughts?	1	1	https://issues.jboss.org/browse/JBWS-3628
13240	JBWS-3573	I re-executed Coverity analysis, there are 2 new defects detected: - JBossWS SPI - TRANSIENT_FIELD_NOT_RESTORED: probably design decession - http://station5.brq.redhat.com:8080/sourcebrowser.htm?projectId=10001#mergedDefectId=10219&defectInstanceId=1283&fileInstanceId=2332 - JBossWS Native - DM_DEFAULT_ENCODING: shouldn't be UTF-8 enforced ? - http://station5.brq.redhat.com:8080/sourcebrowser.htm?projectId=10004#mergedDefectId=10220&defectInstanceId=1364&fileInstanceId=3078 JBossWS -- api and spi items updated based on Richard's comment - low priority items and tests marked as Intentional Overall Status: http://station5.brq.redhat.com:8080/projects/index.htm?tableKey=ProjectsTable Please could you check 2 new items? Are defects for JBossWS common and JBossWS CXF section intentional? I would like to add classification to this items to skip them in future reports.	0	0	https://issues.jboss.org/browse/JBWS-3573
13241	JBWS-3549	Michael, sorry I've spotted this just now. Can you please provide more info? It's not clear how to reproduce given what you wrote above. Thanks	0	0	https://issues.jboss.org/browse/JBWS-3549
13242	JBWS-3435	How appclient tests work? ---------- 1) We're providing appclient-ws.xml configuration to configure JBoss remoting to allow for remote access to appclient JNDI env. 2) Our JAX-RPC proxies are de/serializable to be accessible remotely. 3) Our tests are always calling appclient.sh(.bat) scripts internally via java.lang.Process and passing --appclient-config=appclient-ws.xml parameter to use our custom config 4) Every appclient archive must be nested in ear, so we're using foo-appclient.ear#foo-appclient.jar syntax in our JBossWS test helper to specify which ear contains what appclient jar. 5) We're registering AppclientKiller for every appclient.jar that contains no main-class MANIFEST.MF entry. The goal of this class is to detect shutdown mark files and call System.exit when mark file is found.	0	0	https://issues.jboss.org/browse/JBWS-3435
13243	JBWS-3409	Are you able to reproduce this problem against 7.1.0.CR1 ? http://www.jboss.org/jbossas/downloads	1	1	https://issues.jboss.org/browse/JBWS-3409
13244	JBWS-3259	Can you please provide the war that's being deployed when the exception is thrown?	0	0	https://issues.jboss.org/browse/JBWS-3259
13245	JBWS-3255	I experience same using JBossAS-5.1.0,GA and JBossWS-native 3.4.0. I simply drop the @EndpointConfig(configName = "Standard WSSecurity Endpoint") annotation into my Port Impl class and I get the same errors. If I understand Marcus Moyses's comment above correctly this means I need to create my own version of org.jboss.ws.extensions.security.jaxws.WSSecurityHandlerServer since the one provided is tied to a JNDI name that is no longer valid as of 5.1.0 if not earlier. Is that right? Or is another workaround available on 5.1.0?	1	0	https://issues.jboss.org/browse/JBWS-3255
13246	JBWS-3255	Thanks Alessio, but my point is that it DOESN'T work with Native 3.4,0 on top of AS 5.1.0 in spite of your assertions that it SHOULD. Have you actually tried it? For one thing, although the documentation included with the 3.4.0 Test Suite talks about a JBossWS-Security And Attachments Sample supposedly located in the org.jboss.test.ws.jaxws.samples.news package, this package does not in fact exist in the 3.4.0 Test Suite and there is no source code in the 3.4.0 Test Suite examples that contains the @EndpointConfig annotation, although you can find it in the included documentation, which, however, does not seem to pertain to 3.4.0. If 3.4.0 could do this, there should be a sample illustrating how. Maybe there needs to be a 3.4.0a? So I must ask: is it even possible to do WS Security with 3.4.0 over 5.1.0? And if so, how? And, as we know from http://community.jboss.org/wiki/JBossWS-SupportedTargetContainers, 3.4.1 is not compatible with 5.1.0.	1	0	https://issues.jboss.org/browse/JBWS-3255
13247	JBWS-3185	Jim, the CXF jiras mentioned above are fixed in the 2.3.4 version we're using, can you please verify this issue is fixed and mark it as resolved in that case? Thanks!	1	1	https://issues.jboss.org/browse/JBWS-3185

13248	JBWS-3115	This is my TODO list related to this issue: Our SPI have dependencies on jboss-logging, jbossxb and jboss-kernel, see: [/home/opalka][/home/opalka/svn/jbossws/spi/trunk]>grep -r "import org.jboss" * | grep -v "\.svn" | grep -v "jboss\.wsf" src/main/java/org/jboss/wsf/spi/deployment/DeploymentAspect.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/UnifiedServiceRefMetaData.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.xb.binding.ObjectModelFactory; src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.xb.binding.UnmarshallingContext; src/main/java/org/jboss/wsf/spi/metadata/webservices/PortComponentMetaData.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.ObjectModelFactory; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.Unmarshaller; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.UnmarshallerFactory; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.UnmarshallingContext; src/main/java/org/jboss/wsf/spi/metadata/webservices/WebserviceDescriptionMetaData.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/annotation/AuthMethod.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/management/recording/RecordGroupAssociation.java:import org.jboss.logging.Logger; src/main/java/org/jboss/wsf/spi/serviceref/ServiceRefHandler.java:import org.jboss.xb.binding.UnmarshallingContext; src/main/java/org/jboss/wsf/spi/util/KernelLocator.java:import org.jboss.kernel.Kernel; These dependencies must be removed! To help other J2EE servers developers implement our SPI. Kernel dependency have to be moved to AS IL. Remove dependency on logging + jbossxb = evaluate how! Refactor to AS IL? We should create logging SPI facade to delegate to concrete impl.	1	1	https://issues.jboss.org/browse/JBWS-3115
13249	JBWS-3084	Is it possible to use Dispatch<SOAPMessage> instead of SOAPConnection ? The analysis shows that due to a number of restrictions in SAAJ API (not possible to get an access to the connection headers used by default SOAPConnection instances, even by relying on the custom SOAPConnectionFactories, explicitly added Content-Length header to SOAPMessage.getMimeHeaders() is ignored on the client side), as well as the disconnect between bare SOAPConnections and stack-specific chains, using Dispatch<SOAPMessage> and setting a property on the SOAPMessage which will be recognized by stack-specific HTTP transport modules is probably the only realistic approach.	1	1	https://issues.jboss.org/browse/JBWS-3084
13250	JBWS-3084	Thanks Sergey; can you please comment here with the jira number of the required CXF changes? That might be of use when we will need to port this fix to EAP branches. Thanks.	1	1	https://issues.jboss.org/browse/JBWS-3084
13251	JBWS-3011	If a change is required that will affect all clients or all endpoint why not just edit the "Standard Client" or "Standard Endpoint" definitions directly? Why does a new configuration need to be added then a system property set to specify the new configuration is the new default leaving the existing defaults unused.	1	0	https://issues.jboss.org/browse/JBWS-3011

13253	JBWS-2818	Removing the declaration "<executable>${java.jdk15.home}/bin/javac</executable> " makes the problem go away. Where is the java.jdk15.home variable set?	1	1	https://issues.jboss.org/browse/JBWS-2818
13254	JBWS-2782	Maybe asking the helpdesk team would be enough to achieve that. Who other could handle this? I don't hink each team configures it on its own.	1	0	https://issues.jboss.org/browse/JBWS-2782

#	Requirement	Questions	Answered	Successfully Answered	URL
13255	JBWS-2752	Alessio, could you back port this issue fix to JBossWS EAP 5 branch, please? JBIDE-4257 depends on it and it's really critical for them to have it there (I discussed this issue with Denny via IRC)	1	0	https://issues.jboss.org/browse/JBWS-2752
13256	JBWS-2751	Hi Stefan, I've just committed changes taken from your sources. The project has already been "mavenized" by me in the mean time and you can find the artifacts on JBoss Maven repositories: http://repository.jboss.org/maven2/jboss/jaxbintros/ http://snapshots.jboss.org/maven2/jboss/jaxbintros/ This said, I'd really appreciate if you could give the latest snapshot (1.0.2-SNAPSHOT) a try, or better update sources and try if everything is working as expected. Btw, is there any other annotation missing that you want to add?	1	1	https://issues.jboss.org/browse/JBWS-2751
13257	JBWS-2741	What have been done: * jbossws-native-jaxws.jar became manifest only file * some useless classes from jbossws-native-jaxws-ext.jar have been removed. * there were added jaxws-api.jar and jsr181-api.jar files to our distributions (APIs)	1	1	https://issues.jboss.org/browse/JBWS-2741
13258	JBWS-2724	Thanks for the patch Hans. BTW, how is the interoperability testing going?	0	0	https://issues.jboss.org/browse/JBWS-2724
13259	JBWS-2723	Thanks for the patch Hans. BTW, how is the interoperability testing going?	1	1	https://issues.jboss.org/browse/JBWS-2723
13260	JBWS-2694	I've always seen that to disable chunking encoding is always related to client configuration. How can it be disabled from server side? What configuration file can be changed in JBoss or JBossWS to do that?	0	0	https://issues.jboss.org/browse/JBWS-2694
13261	JBWS-2685	I am able to run the tests and get the same results with both the Sun 1.6 JDK and OpenJDK: ========== Failed tests: test(org.jboss.test.ws.jaxws.samples.dar.JMSClientTestCase) Tests in error: org.jboss.test.ws.jaxws.samples.dar.ClientTestCase Tests run: 28, Failures: 1, Errors: 1, Skipped: 0 ========== This is after BUILDING with Sun and RUNNING with Sun and OpenJDK. Alessio - can you recheck this? Thx...	1	0	https://issues.jboss.org/browse/JBWS-2685
13262	JBWS-2680	Jim, your PR has been merged; is it possible to have the same fix applied to the 800 an 810 ASIL too?	0	0	https://issues.jboss.org/browse/JBWS-2680
13263	JBWS-2679	Is this issue meant to address compression at the transport level through "Content-Encoding: gzip"?	1	0	https://issues.jboss.org/browse/JBWS-2679
13264	JBWS-2647	Paul, what scripts do you actually refer to? Can you give further details? Currently the jboss-xml-binding.jar is referenced by the testsuite, the jbossws-client manifest and the ws tools scripts. This said, JBossWS Native uses the JBossXB jar provided by the AS. Currently that's jboss-xml-binding.jar. Are you saying there're plans for having jbossxb.jar in AS client dir instead of jboss-xml-binding.jar ?	1	1	https://issues.jboss.org/browse/JBWS-2647
13265	JBWS-2647	OK, just created JBAS-7441 for fixing the AS build first, then we'll fix the WS stuff accordingly. Fine with you?	1	1	https://issues.jboss.org/browse/JBWS-2647
13266	JBWS-2647	If I change the references in the AS build first, won't that break some tests? It seems like this issue should be resolved first, and then when AS updates to jbossws-native 3.3.2 the AS build scripts can be changed.	1	1	https://issues.jboss.org/browse/JBWS-2647
13267	JBWS-2554	Any news on this? Is Remoting 3 going to be included in AS 5.1.0.CR1? Which version should I start looking at exactly? And can I install that version to previous AS releases?	1	1	https://issues.jboss.org/browse/JBWS-2554
13268	JBWS-2554	The community time-line has been reduced quite a bit, so remoting 2 will definitely remain since jbm 1.4 depends on it. This should definitely be updated to another http client impl though, since you have WAY more flexibility (can support things like NTLM auth etc)	1	1	https://issues.jboss.org/browse/JBWS-2554
13269	JBWS-2554	Jason, should I read this as AS 5.1.0.GA will still have Remoting 2 ? Asking as this kind of change does not fit very well into a micro jbws release (3.1.1 we're working on) and we plan a 3.2.0 after that... Regarding feature and flexibility, I agree, perhaps we already have some of them with other stacks, but yes this is a chance for improvements.	1	1	https://issues.jboss.org/browse/JBWS-2554
13270	JBWS-2510	I wouldn't put any effort on this. AS doesn't care about it at all. Why have JBossWS internationalized and other AS parts not? Finally there should be i18n and l10n team inside RH that would take care of that IMHO.	1	0	https://issues.jboss.org/browse/JBWS-2510
13271	JBWS-2424	We're seeing some failures in jaxr TCK5 gui at the moment. There are listed jaxr tests that doesn't exist in commandline version. Note that commandline version of jaxr passes on 100%. I wrote to javaeetck@jboss.org mailing list and I'm waiting for response how is it possible nonexisting tests are displayed in TCK5 GUI version.	1	1	https://issues.jboss.org/browse/JBWS-2424
13272	JBWS-2397	The test have been removed: --- <ropalka> asoldano, regarding https://issues.jboss.org/browse/JBWS-2397 <ropalka> asoldano, this test was using the following native config <ropalka> --- <ropalka> <context-param> <ropalka> <param-name>jbossws-config-name</param-name> <ropalka> <param-value>.NET friendly Endpoint</param-value> <ropalka> </context-param> <ropalka> --- <ropalka> asoldano, and I oversaw that so I thought it can run against CXF too. <ropalka> asoldano, Native contained a lot of hacky fixes to make this .NET friendly endpoints work <ropalka> asoldano, this is not going to work on Apache CXF <ropalka> asoldano, I'm going to delete this test from shared-testsuite <ropalka> asoldano, any complains? Do you want to implement this feature at Apache CXF in near future? <asoldano> ropalka, fine with removing the test. We actually never run it with metro or cxf stack <asoldano> ropalka, the problem would really be another though <asoldano> ropalka, ie. verifying .net compatibility, but I assume that nowadays cxf is tested elsewhere wrt this topic	1	0	https://issues.jboss.org/browse/JBWS-2397
13273	JBWS-2337	Is there any specification mandating single or double quoted attributes for being used in these cases?	1	0	https://issues.jboss.org/browse/JBWS-2337
13274	JBWS-2324	Why postpone this issue constantly? It is a major performance problem?	0	0	https://issues.jboss.org/browse/JBWS-2324

13278	JBWS-2106	Hi Andrew, given the current jbossws-cxf leverages apache cxf 2.1.3, I've taken a look at its sources and think it has its own implementation of what you need. In particular I've successfully tried setting the FaultTo in an outgoing message with this: import static org.apache.cxf.ws.addressing.JAXWSAConstants.CLIENT_ADDRESSING_PROPERTIES; import org.apache.cxf.ws.addressing.AddressingProperties; import org.apache.cxf.ws.addressing.AddressingPropertiesImpl; import org.apache.cxf.wsdl.EndpointReferenceUtils; ... Service service = Service.create(wsdlURL, serviceName); proxy = (ServiceIface)service.getPort(ServiceIface.class); Map<String, Object> requestContext = ((BindingProvider)proxy).getRequestContext(); AddressingProperties maps = new AddressingPropertiesImpl(); maps.setFaultTo(EndpointReferenceUtils.getEndpointReference("http://localhost:9999/decoupled_endpoint")); requestContext.put(CLIENT_ADDRESSING_PROPERTIES, maps); proxy.sayHello(); Would this be fine for your usecase when using the cxf stack integration? Can you take a look? Thanks.	1	1	https://issues.jboss.org/browse/JBWS-2106
13279	JBWS-2106	Hi Alessio, Yes, cxf does implement the required AddressingProperties class but in a different package to the one used by Native, as are the other types provided by CXF. I probably could use their implementation to get my code to run on the CXF stack -- it looked to be pretty complete when I used it. The problem is how to use it compatibly with the Native JBossWS implementation. A lot of the methods in my current XTS build are currently parameterised with AddressingProperties instances or employ local values of this type. The same applies for the various dependent types employed in conjunction with AddressingProperties as AddressingBuilder, AttributedURI, Relationship, etc.. I need to be able to manipulate these types in order to construct faultto, replyto etc addresses. I don't really see how to generalize the code so that my code can operate over both stacks. Do you have any ideas how to resolve this?	1	1	https://issues.jboss.org/browse/JBWS-2106

#	Requirement	Questions	Answered	Successfully Answered	URL
13280	JBWS-2106	I have bypassed this problem by creating an abstraction layer in the XTS code which hides all uses of the AddressingProperties class and its close relatives. Alternative implementations for Native and CXF are included (it comprises only 5 classes in all). See: http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-cxf/org/jboss/jbossts/xts/wsaddr/map/ and http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-native/org/jboss/jbossts/xts/wsaddr/map/ A consequence of adopting this abstraction layer is that the XTS code is now dual source/binary. This complicates the build, deploy and test processes. It would be easier if this compatibility library was deployed by JBossWS. This would also provide a starting point for other JBossWS clients who wish to have a portable API for WSA. Perhaps you could look at the code and i) see if it could be extended with any missing capabilities or revised and cleaned up ii) advise on the feasibility of transferring it from TS to WS. I have not yet commented the API of MAP and its related classes so the way it works may not be entirely clear. Amongst the trickier details the following are especially noteworthy. I dealt with the RelatesTo problem by limiting the API to only allow one relationship to be managed. There is some trickery required when attempting to install the outbound AddressingProperties for a port derived from a W3CEndpointReference. In Native the AddressingProperties are pre-installed by the getPort call with To defined and with the ReferenceProperty elements stashed as a property of the AddressingContext. In CXF you get a port which has no AddressingProperties object on the request context. The To/ReferenceProperty values seem to have been stashed away somewhere else so they still get used. So, when you add other WSA properties the routine which fetches the outbound map creates an AddressingProperties object on the fly at first access.	1	1	https://issues.jboss.org/browse/JBWS-2106
13281	JBWS-2106	Hi Alessio, Thanks for this. It looks ok to me -- did you change any of my original API? (apart from adding getReferenceParameters, that is). I didn't spot any diffference.	1	1	https://issues.jboss.org/browse/JBWS-2106
13282	JBWS-2102	Well, that's maybe what the blog entry says but is it actually what the JaxWS committee have decided? Have you asked Thomas Diesler (since he is JBoss' representative) whether this is the official position of the committee? Personally, I think this decision makes provision of the WS Addressing capability in JaxWS utterly pointless. JaxWS might just as well not bother attaching WS Addressing headers to messages if there is no simple API for clients/SEIs to set/detect the header values. If they have to resort to installing SOAP handlers to do this then they might as well either i) implement WS Addressing themselves or ii) invent their own (simpler) custom header protocol. The latter is not an option for me as the WSTX specs I am working to require WS-Addressing headers with quite specific values. So, if this is a final decision then it means I will have to provide my own implementation of the JBossWS AddressingProperties class and associated handlers and ensure it runs on all 3 stacks -- a pointless fork of the code.	1	1	https://issues.jboss.org/browse/JBWS-2102
13283	JBWS-2090	Which mailing lists do you require? Usually for a project we have the following: <projectName>-announce <projectName>-commits <projectName>-dev <projectName>-issues <projectName>-users Mark	1	1	https://issues.jboss.org/browse/JBWS-2090
13284	JBWS-2090	Helpdesk ticket #665595 has been created with the following text: Please could the following mailing lists be created at http://lists.jboss.org metro-users cxf-users	1	1	https://issues.jboss.org/browse/JBWS-2090
13285	JBWS-2090	Mark, could you please make the forum messages go to the above mentioned mailing lists? IOW we need what we currently have with jbossws-users collecting messages coming from http://www.jboss.org/index.html?module=bb&op=viewforum&f=200 Thanks	1	1	https://issues.jboss.org/browse/JBWS-2090
13286	JBWS-2090	Mark, it's a long time we're waiting for this issue to be solved. Can you please give us any update on this or reassign in case you're not the one supposed to work on this? thank you	1	1	https://issues.jboss.org/browse/JBWS-2090
13287	JBWS-2031	I added a test for the addressing client. I am handing over to you because its currently failing. Could you please have a look? Similar tests should be added for the other clients.	1	1	https://issues.jboss.org/browse/JBWS-2031
13288	JBWS-2030	I added a test for the addressing client. I am handing over to you because its currently failing. Could you please have a look? Similar tests should be added for the other clients. tests-run-internal: [junit] Running org.jboss.test.ws.jaxws.samples.dar.AddressingClientTestCase [junit] Sent message ID: urn:uuid:4b9ffcb8-372-4e1e-a01e-8342ce858d55 [junit] Wed Mar 12 14:42:16 CET 2008 Sending request... 13289	JBWS-1994	There's the package: src/main/java/org/jboss/wsf/stack/sunri/* Should it be renamed to metro as well?	1	1	https://issues.jboss.org/browse/JBWS-1994
13290	JBWS-1994	"should go" means "should be removed"	0	0	https://issues.jboss.org/browse/JBWS-1994
13291	JBWS-1982	This need to be looked at again. * The knowledge of how to (un)deploy stack X should not leak into framework * If AS has stack X.0.0 deployed and you want to deploy stack Y.0.1, how can framework that comes with Y.0.1 know how to undeploy X.0.0? The changes need to be rolled back until we know how to do this properly.	1	1	https://issues.jboss.org/browse/JBWS-1982
13292	JBWS-1967	Richard, as this is marked as depending on JBAS-5257 which you closed, could you please see what still needs to be done here?	0	0	https://issues.jboss.org/browse/JBWS-1967
13293	JBWS-1928	Apart from * Integrate Metro (wsit+jaxws) into jbossws build * Provide a metro based community release is the required functional;ity all there? i.e. Is the exclude file clean? Are there no unwanted FIXMEs?	0	0	https://issues.jboss.org/browse/JBWS-1928
13294	JBWS-1869	The test is failing for AS50 http://jbws.dyndns.org:8180/hudson/view/Metro%20Tests/job/Metro-Core-AS-5.0.0/35/testReport/org.jboss.test.ws.jaxws.jbws1869/JBWS1869TestCase/testStreamBasedInvocation/ unit.framework.ComparisonFailure: expected:<..."1.0" ...> but was:<...'1.0' encoding='UTF-8'...> at org.jboss.test.ws.jaxws.jbws1869.JBWS1869TestCase.testStreamBasedInvocation(JBWS1869TestCase.java:98) Could you find out why the encoding is added in AS50 and not in AS42?	0	0	https://issues.jboss.org/browse/JBWS-1869

#	Requirement	Questions	Answered	Successfully Answered	URL
13295	JBWS-1842	What exactly needs to be done here? I can find the above mentioned class in https://svn.jboss.org/repos/jbossas/projects/metadata/trunk but it is not clear to me who the producer and consumer of instances for the metadata object is. Is it correct to assume that somehow an instance of ServiceReferenceMetaData will be available through the DeploymentUnit and that [code] public interface ServiceRefHandler { final String BEAN_NAME = "WSServiceRefHandler"; enum Type {JAXRPC, JAXWS}; ServiceRefMetaData newServiceRefMetaData(); Object newChild(ServiceRefElement ref, UnmarshallingContext navigator, String namespaceURI, String localName, Attributes attrs); void setValue(ServiceRefElement ref, UnmarshallingContext navigator, String namespaceURI, String localName, String value); void bindServiceRef(Context encCtx, String encName, UnifiedVirtualFile vfsRoot, ClassLoader loader, ServiceRefMetaData sref) throws NamingException; } [/code] needs to be extended to consume instances of ServiceReferenceMetaData?	1	1	https://issues.jboss.org/browse/JBWS-1842
13296	JBWS-1814	Hi Alessio, This still has a bug wherein sometimes it throws an error saying: Cannot get the certificate for message encryption! Verify the keystore contents, considering the certificate is obtained through the alias specified in the encrypt configuration element or (server side only) through a single key used to sign the incoming This error is generated randomly i.e. sometimes it works but sometime it doesn't. Any help with this would be highly appreciated! Thanks in advance! Regards, Pratik Pai	1	0	https://issues.jboss.org/browse/JBWS-1814
13297	JBWS-1814	Hi Alessio, This problem still persist wherein it throws an error saying: Cannot get the certificate for message encryption! Verify the keystore contents, considering the certificate is obtained through the alias specified in the encrypt configuration element or (server side only) through a single key used to sign the incoming This error is thrown randomly i.e. it goes through sometimes but sometimes it doesnt Any help with this would be highly appreciated! Thanks in advance! Regards, Pratik Pai	1	0	https://issues.jboss.org/browse/JBWS-1814
13298	JBWS-1777	Alessio, I remember you did some progress here. What's the state of this issue?	1	0	https://issues.jboss.org/browse/JBWS-1777
13299	JBWS-1707	Do you guys mind if I tweak the status of some of those resolved bugs, to see what's going on? I'll put everything back how I found it before I'm done.	1	1	https://issues.jboss.org/browse/JBWS-1707
13300	JBWS-1670	I've just done some tests, this could be easily fixed resurrecting the InvocationExceptionHandler stuff I committed last month (just need a little modification to well fit into the latest deployement architecture). However, I suspect there might be something wrong with the InvocationExceptionHandler idea, since it has been deleted... am I missing something? Would you like me to take care of this?	1	1	https://issues.jboss.org/browse/JBWS-1670
13301	JBWS-1655	Hi Thomas, could you please provide more details about this issue, how to reproduce etc, or is there any existing test case? Thanks.	0	0	https://issues.jboss.org/browse/JBWS-1655
13302	JBWS-1612	Tom Fennelly sais: I'm interested in it from a JBossESB perspective i.e. being able to expose JBossWS endpoints through the ESB => making the endpoints consumable over any channel supported by the ESB (HTTP, JMS, FTP etc). I had some success. However, it involved using some JBossWS classes that I'm not sure are part of its public API => meaning they could change in the future, breaking integration with the ESB. The ESB class of most interest is (specifically, the "process" and "getServiceEndpoint" methods): http://anonsvn.labs.jboss.com/labs/jbossesb/trunk/product/core/listeners/src/org/jboss/soa/esb/actions/soap/JBossWSAdapter.java Was just wondering if you could throw an eye over this and let us know what you think. Mark (Little) said that one of your customers has done something like this in the past and ran into issues with it re API changes. If so, what are the possibilities of making the relevant code part of a public API?	1	1	https://issues.jboss.org/browse/JBWS-1612
13303	JBWS-1552	OK, so "rpc/encoded is supported ... as is", but if you use it, it throws a WSException... I'm confused??? Can it be used or not? And if so, how can we use it without getting an exception thrown? Thanks.	0	0	https://issues.jboss.org/browse/JBWS-1552
13304	JBWS-1527	Thomas, Did you verify the ejb21 ws tests as part of your TCK testing?	0	0	https://issues.jboss.org/browse/JBWS-1527
13305	JBWS-1526	How come the interop tests pass with JDK6? All interop tests should run against the public endpoints. http://jbws.dyndns.org:8180/hudson/view/Native%20Tests/	0	0	https://issues.jboss.org/browse/JBWS-1526
13306	JBWS-1525	Jason, could you please have a look if this is critical for 1.2.0? If not please reschedule for 1.2.1	0	0	https://issues.jboss.org/browse/JBWS-1525
13307	JBWS-1525	I fixed JBWS-1529, however the test still fails because the service and client are referring to differing WSDL definitions. The service is using two namespaces, and the service name ends with "Service". The client is using one namespace without the "Service". What should the test be testing. Are you attempting to test the same WSDL that we published with the previous JSR-181 implementation?	0	0	https://issues.jboss.org/browse/JBWS-1525
13308	JBWS-1508	Could you you please incude those pictures that you generated from the schema? This issues is relevant for http://tddell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide as well	0	0	https://issues.jboss.org/browse/JBWS-1508
13309	JBWS-1506	Are you sure you want to maintain the BPEL docu in two locations? http://tddell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide#WS-BPEL http://tddell.dyndns.org/mediawiki/index.php/JAX-WS_User_Guide#WS-BPEL There should be no duplication of content between th JAX-RPC, JAX-WS user guide	0	0	https://issues.jboss.org/browse/JBWS-1506
13310	JBWS-1496	I ran the test three times in a row, restarted app server, then ran test three more times. I could not reproduce the test failure. prepare: [echo] ---------- [echo] jboss.home = C:/dev/jbossas/branches/Branch_4_2/build/output/jboss-4.2.0.CR1-ejb3 [echo] tomcat.home = ${tomcat.home} [echo] java.home = C:\dev\jdk1.5.0_10\jre [echo] endorsed = C:/dev/jbossas/branches/Branch_4_2/build/output/jboss-4.2.0.CR1-ejb3/lib/endorsed [echo] excludesfile = tests-jboss42-excludes.txt [echo] ---------- one-test: [junit] Running org.jboss.test.ws.jaxrpc.samples.wsbpel.hello.BpelHelloTestCase [junit] Tests run: 2, Failures: 0, Errors: 0, Time elapsed: 5.641 sec I do see the JobExecutorThread error. The problem is the thread starts before the data source inside jbpm-bpel.sar is deployed. Despite the stack trace, the error is harmless as the thread tries again later. This issue will be addressed as part of BPEL-229. What are the steps to reproduce the problem?	0	0	https://issues.jboss.org/browse/JBWS-1496
13311	JBWS-1474	AFAIC, 1.2.0 is production ready for all included pieces. Isn't it?	0	0	https://issues.jboss.org/browse/JBWS-1474
13312	JBWS-1469	Will JBossWS-1.2.0 be made available with JBossAS-4.0.5.SP1 or 4.0.6?	0	0	https://issues.jboss.org/browse/JBWS-1469
13313	JBWS-1449	This feature request is not clear to me. What does the user want? I can understand it two ways: * Either user wants WSDL to be generated in the form WSDL + external file schema imports (schema is not inlined in WSDL but imported instead) * Or user wants Java2Schema command line tool	1	0	https://issues.jboss.org/browse/JBWS-1449
13314	JBWS-1443	Carlo sais: I've made an implementation which passes the test: http://jira.jboss.com/jira/browse/EJBTHREE-757?page=com.cenqua.fisheye.jira:fisheye-tabpanel I turned the tables by pulling in the message context via MessageContextAssociation. Do you see any problems with this? The one thing I don't like is the circular dependencies between ejb3 and ws.	0	0	https://issues.jboss.org/browse/JBWS-1443

#	Requirement	Questions	Answered	Successfully Answered	URL
13315	JBWS-1443	This approach is probably not the right way to go. How about: WebServiceContextCallback callback = new WebServiceContextCallback() { public MessageContext getMessageContext() { ... } public WebServiceContext getWebServiceContext() { ... } }; sessionContext.registerWebServiceContextCallback(callback); The WebServiceContextCallback interface would live in the ejb3 code base. The dependency would be unidirectional, as it is now already.	0	0	https://issues.jboss.org/browse/JBWS-1443
13316	JBWS-1443	Ok, works on jboss50. Are you planning to backport this to jboss40, jboss42?	0	0	https://issues.jboss.org/browse/JBWS-1443
13317	JBWS-1443	what is your target platform? Have a look at http://jbws.dyndns.org:8180/hudson/ for tests that have passed QA	1	1	https://issues.jboss.org/browse/JBWS-1443
13318	JBWS-1442	trunk Branch_4_0 jdk1.4 cannot compile. Does java need additional libs from these required by 1.0 branch?	1	1	https://issues.jboss.org/browse/JBWS-1442
13319	JBWS-1442	Can you provide a summary of problem?	1	1	https://issues.jboss.org/browse/JBWS-1442
13320	JBWS-1442	I followed the instructions in the wiki. When I try compile the testsuite it fails just the same way as the cc build (see build artifacts for details ;) Prabhat, is testsuite compiling by you?	0	0	https://issues.jboss.org/browse/JBWS-1442
13321	JBWS-1442	Thanks for telling me about JBWS-1458 Do you see any problem with jdk15 builds? They seem to me fine.	0	0	https://issues.jboss.org/browse/JBWS-1442
13322	JBWS-1442	Should I remove cruisecontrol builds then? btw I don't see the hudson instance	0	0	https://issues.jboss.org/browse/JBWS-1442
13323	JBWS-1433	Darran, I believe you implemented this. Is this code in trunk?	1	0	https://issues.jboss.org/browse/JBWS-1433
13324	JBWS-1402	What is the relation of this bug to bug http://jira.jboss.org/jira/browse/JBWS-1911? Isn't it fixed already?	1	0	https://issues.jboss.org/browse/JBWS-1402
13325	JBWS-1397	Thomas, Does this affect all TestCases written for JBoss-5.0.x?	0	0	https://issues.jboss.org/browse/JBWS-1397
13326	JBWS-1381	Remy, could you please comment and reasssign?	0	0	https://issues.jboss.org/browse/JBWS-1381
13327	JBWS-1330	http://www.jboss.com/index.html?module=bb&op=viewtopic&p=4041299#4041299 My test clients have code like this Code: InitialContext iniCtx = getInitialContext(); OrganizationHome home = (OrganizationHome)iniCtx.lookup("ejb/RoleSecuredSLSB"); OrganizationRemote bean = null; try { bean = home.create(); fail("Security exception expected"); } catch (Exception e) { // all cool, now try again with valid credentials SecurityAssociation.setPrincipal(new SimplePrincipal(USERNAME)); SecurityAssociation.setCredential(PASSWORD); bean = home.create(); } This no longer works. How is the client now supposed to provide valid principal/credential	1	1	https://issues.jboss.org/browse/JBWS-1330
13328	JBWS-1309	There @WebContext annotation seems to not be fully-covered in the EJB3 deployment descriptor. Please see the discussion on [url=http://www.jboss.com/index.html?module=bb&op=viewtopic&t=140182]this thread[/url] of the JBossWS forum regarding the issue. Could you re-open this issue so that the security-overrides that are missing can be addressed? Evidently the stuff we require	0	0	https://issues.jboss.org/browse/JBWS-1309
13329	JBWS-1308	Can we access these slides externally? Thanks	1	0	https://issues.jboss.org/browse/JBWS-1308
13330	JBWS-1307	is there any way we can get access to this documentation? I can not seem to access jbws.dyndns.org. I can access all the documentation for other projects since they are hosted on labs.jboss or docs.jboss.. Thanks, Gary	1	0	https://issues.jboss.org/browse/JBWS-1307
13331	JBWS-1297	How to obtain the fault bean: 1.a If the exception class has a getFaultInfo method **and** WebFault annotation: (note: how to interpret the "and" above? an exception having a WebFault annotation but not a getFaultInfo method does not comply with the semantics of the annotation. should we bomb?) 1.a.1 invoke getFaultInfo on the exception object; the return instance goes to JAXB 2.b Otherwise 2.b.1 retrieve the bean class from the fault metadata 2.b.2 instantiate the bean class 2.c.2 copy the non-excluded properties from the exception instance to the bean instance	0	0	https://issues.jboss.org/browse/JBWS-1297
13332	JBWS-1297	Marshalling is done. The outgoing SOAP messages look good, altough the tests still fail because unmarshalling is not done yet. I modified JSR181MetaDataBuilder to populate the XML type for the fault bean. Currently, I copy the properties using low-level reflection. Can you point me to the accessor API you are referring to? I'll commit what I have and work on unmarshalling the rest of the evening.	0	0	https://issues.jboss.org/browse/JBWS-1297
13333	JBWS-1296	This thing seems to be really trivial to do. Also this is is apparently used frequently and quite critical as for full blown WS-Security stack. Please consider implementing it in 2.0.3 or something. All Metro, Axis2 and CXF does support this.	1	1	https://issues.jboss.org/browse/JBWS-1296
13334	JBWS-1194	This is the build.properties file I use to run the test script: jboss.jdk14.src.url=http://anonsvn.jboss.org/repos/jbossas/tags/JBoss_4_0_5_GA jdk14.distro.name=jboss-4.0.5.GA #only set this if you need to overwrite the one from jdk14.src.url #provide the absolute dir location #jboss.jdk14.home= jboss.jdk15.src.url=http://anonsvn.jboss.org/repos/jbossas/branches/Branch_4_2 jdk15.distro.name=jboss-4.2.0.CR1-ejb3 #only set this if you need to overwrite the one from jdk15.src.url #provide the absolute dir location #jboss.jdk15.home= tomcat.url=http://archive.apache.org/dist/tomcat/tomcat-5/v5.5.17/bin tomcat.zip.file=apache-tomcat-5.5.17.zip tomcat.home.name=apache-tomcat-5.5.17 #Tomcat home. This is required to run samples test eventhough target server is JBoss. #Will ask WS team to fix this. Only when needs to be overwritten with your tomcat #tomcat.home= #jboss webservices svn repository url jbossws.svn.url=https://svn.jboss.org/repos/jbossws/branches/jbossws-1.0/ #This is needed for logging purpose jbossws.version=1.0.4.GA #jboss-head location jboss-head= #JDK1.5 home java15=/opt/jdk1.5.0_05 #JDK 1.4. Home. This jdk should have BouncyCastle security provider jar. #See the WIKI http://wiki.jboss.org/wiki/Wiki.jsp?page=JBWSFAQBuildAndInstallJBoss40x java14=/home/pjha/j2sdk1.4.2_09 #Ant Home. WS needs some specific jars in Ant. The best way is to #point ant home to jboss-head/tools. You need to copy log4j.jar to #jboss-head/tools/lib though. No need to change this. ant-ws=./ws-tools jdk14.deploy=deploy-jbossws14 jdk15.deploy=deploy-jbossws	1	1	https://issues.jboss.org/browse/JBWS-1194
13335	JBWS-1178	Where did you find the source code for jbossws 1.0.3? It is not available at the download page (only binary, source for newer versions only) and I couldn't find it in SVN either. This is a break of JBoss own licence...	1	1	https://issues.jboss.org/browse/JBWS-1178
13336	JBWS-1172	I cannot find any test for the @SchemaValidation annotation on a webservice, is this already supported ?	1	0	https://issues.jboss.org/browse/JBWS-1172
13337	JBWS-1172	Also, when I add this to my webservice: @SchemaValidation(enabled=true, errorHandler=nl.kb.hrd.dd.karakterisering.impls.ValidationErrorHandler.class, schemaLocation="ergens") and send an invalid request, nothing happens. The request just gets passed, the handler is not called, and I see no errormessage about the invalid schemaLocation. A related question: in the jax-ws RI, it is not necessary to specify the schema location. Why is it needed here ?	1	0	https://issues.jboss.org/browse/JBWS-1172
13338	JBWS-1162	Can we concatenate their text summaries?	1	1	https://issues.jboss.org/browse/JBWS-1162
13339	JBWS-1162	The recent email conversations are an indication that this issue is not resolved properly. As I suggested before, we need a web application that any team member can access and initiate a testrun in a non-conflicting manner. Can this be done?	1	1	https://issues.jboss.org/browse/JBWS-1162
13340	JBWS-1158	Can we discuss this one as well? administrators: http://www.atlassian.com/software/jira	0	0	https://issues.jboss.org/browse/JBWS-1158

#	Requirement	Questions	Answered	Successfully Answered	URL
13341	JBWS-1136	Wil this JIRA allow POJO WAR JSEs to be both authenticated with the configured JBossSX login module and allow them to be authorized with the standard declarative WAR web.xml <security-constraint> tag structure? rjb	0	0	https://issues.jboss.org/browse/JBWS-1136
13342	JBWS-1136	Given I agree with you about what you say on POJO endpoints, we could nevertheless do what the issue title says i.e. allowing a username element in the require list of the wsse configuration the same way we have for the timestamp, for example. This way we could reject requests that do not have a Username Token. What do you think about?	0	0	https://issues.jboss.org/browse/JBWS-1136
13343	JBWS-1119	Hi Jason, was this actually merged to the trunk and eventually removed later? I'm asking this because I can't find this in the trunk and somebody is asking for this feature on the forum. I can work on this and port from tag 1.0.3 to the trunk of course, just want to know if it was not done or was reverted because of some problems discovered later and not mentioned here. Thank you.	0	0	https://issues.jboss.org/browse/JBWS-1119
13344	JBWS-1119	Will this issue be included in the JBoss.native-2.0.4 then? /Michael	1	1	https://issues.jboss.org/browse/JBWS-1119
13345	JBWS-1090	As of https://svn.jboss.org/repos/jbossws/trunk@938 this test is not yet available in trunk, or is it?	0	0	https://issues.jboss.org/browse/JBWS-1090
13346	JBWS-1086	Why should this being resolved "Out of Date"?	0	0	https://issues.jboss.org/browse/JBWS-1086
13347	JBWS-1077	Does this include updating the WS-Security documentation?	0	0	https://issues.jboss.org/browse/JBWS-1077
13348	JBWS-1065	Is there a way to let the build scripts check the Xerces version?	0	0	https://issues.jboss.org/browse/JBWS-1065
13349	JBWS-937	What is the purpose of supporting wscompile options? The old axis based stack jboss-ws4ee is deprecated and will no longer be worked on. All soapui integration efforts should focus on jbossws	1	0	https://issues.jboss.org/browse/JBWS-937
13350	JBWS-925	The referenced document (http://java.sun.com/developer/technicalArticles/xml/fastinfoset/) is over four years old. Since the time it was published several of your open source competitors have integrated Fast Infoset into their stacks. This includes Apache's Axis2 (http://wso2.org/library/2686) which is used by Geronimo (http://geronimo.apache.org/) and Jonas (http://jonas.objectweb.org/). It also includes Sun's reference implementation of JAX-WS (https://jax-ws.dev.java.net/) which is the basis of the Metro Web Service Stack (https://metro.dev.java.net/) used by Glassfish (https://glassfish.dev.java.net/). I don't know anything about commercial vendors, but I assume coverage is good there as well. The reason I bring this up is because I am endeavoring to write the highest performing web service possible with open source software. Right now, we have standardized on JBoss, but the benefits of Fast Infoset look large enough that they might justify changing application servers. Is there any possibility Fast Infoset could be integrated into the 2.0.x codebase rather than the 2.1.x codebase?	0	0	https://issues.jboss.org/browse/JBWS-925
13351	JBWS-925	I see that this ticket was changed to "Provide initial support for FastInfoset." What does "initial support" entail?	0	0	https://issues.jboss.org/browse/JBWS-925
13352	JBWS-922	is there a webservice to remotely list deployed webservices or should we start by parsing the html returned by /jbossws/services?	1	1	https://issues.jboss.org/browse/JBWS-922
13353	JBWS-914	> > How is the download count managed? This is probably not setup to work > with the jbossws download area. Yes, you need to enable counters for your project as defined in this wiki: http://labs.jboss.org/wiki/DownloadCounters	0	0	https://issues.jboss.org/browse/JBWS-914
13354	JBWS-871	According to the schema <complexType name='IntegerArray'> <sequence> <element name='value' nillable='true' maxOccurs='unbounded' minOccurs='0' type='int'/> </sequence> </complexType> A null array can only be expressed like this <Integer_1 xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'> <ns:value xmlns:ns='http://jbws871.ws.test.jboss.org/jaws' xsi:nil='1'/> </Integer_1> which is no different to an array with a sigle null value. Is it true that the endpoint must be able to deal with that ambiguity?	0	0	https://issues.jboss.org/browse/JBWS-871
13355	JBWS-871	"which is no different to an array with a sigle null value. Is it true that the endpoint must be able to deal with that ambiguity? " Yes, when an array is reprented as a single element definition, in other words no wrapping complex type, then a null value is semantically equivalent to inserting a single null value. Endpoints should use empty arrays instead of null to prevent the obvious problems that come from this. -Jason	1	1	https://issues.jboss.org/browse/JBWS-871
13356	JBWS-868	I got some questions: - where are the user guide docbook sources? - what do I have to do for the existing bpel tests to get packaged in the sample archive?	1	1	https://issues.jboss.org/browse/JBWS-868
13357	JBWS-868	Can you elaborate?	1	1	https://issues.jboss.org/browse/JBWS-868
13358	JBWS-868	BPEL does not explicitly depend on AS, but it requires JMS. Does Messaging run on plain Tomcat? The question is, where do I take bpel.sar from? Do I include it in the resources of the sample (1.4MB!) or get it from the repository? Is there a sample with similar requirements?	1	1	https://issues.jboss.org/browse/JBWS-868
13359	JBWS-868	The testduite still fails Cannot obtain URL for: jaxrpc-samples-wsbpel-hello.war java.lang.IllegalArgumentException: Cannot obtain URL for: jaxrpc-samples-wsbpel-hello.war at org.jboss.test.ws.JBossWSTestHelper.getArchiveURL(JBossWSTestHelper.java:123)	0	0	https://issues.jboss.org/browse/JBWS-868
13360	JBWS-868	Aren't samples intended to be run after (a) the sample suite is built and (b) the sample jars are packaged? It looks like you are trying to run them as a normal unit test. jbpm-bpel.sar is fetched from the remote repository as part of the samples build process. Once you build the samples, please change to the jaxrpc/wsbpel directory and execute the "tests" target there: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\jaxrpc\wsbpel>ant tests Buildfile: build.xml init: [echo] jboss.home = C:/dev/jboss/Branch_4_0/build/output/jboss-4.0.5.GA-ejb3 [echo] tomcat.home = ${tomcat.home} [echo] java.home = C:\dev\jdk1.5.0_07\jre [echo] node0 = AGUIZAR compile: [javac] Compiling 1 source file to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\classes copy-resources: zip-processes: check-jbpmbpel: install-jbpmbpel: [mkdir] Created dir: C:\dev\jboss\Branch_4_0\build\output\jboss-4.0.5.GA-ejb3\server\default\deploy\jbpm-bpel.sar [unjar] Expanding: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\lib\jbpm-bpel.sar into C:\dev\jboss\B ranch_4_0\build\output\jboss-4.0.5.GA-ejb3\server\default\deploy\jbpm-bpel.sar generate-sources: [move] Moving 2 files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\wstools\java compile-generated: [javac] Compiling 2 source files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\classes copy-generated: [copy] Copying 4 files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\resources jars: [war] Building war: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\libs\jaxrpc-samples-wsbpel- hello.war [jar] Building jar: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\libs\jaxrpc-samples-wsbpel- hello-client.jar store-processes: [storeprocess] target url: http://localhost:8080/jbpm-bpel/deploy?processfile=file%3A%2FC%3A%2Fdev%2Fjbossws%2Fjbossws-1 .0%2Foutput%2Fjbossws-samples-1.0.4.DEV%2Foutput%2Flibs%2Fjaxrpc-samples-wsbpel-hello-process.zip [storeprocess] got response code: 200 tests: init: [echo] jboss.home = C:/dev/jboss/Branch_4_0/build/output/jboss-4.0.5.GA-ejb3 [echo] tomcat.home = ${tomcat.home} [echo] java.home = C:\dev\jdk1.5.0_07\jre [echo] node0 = AGUIZAR test: [junit] Running org.jboss.test.ws.jaxrpc.samples.wsbpel.hello.BpelHelloTestCase [junit] Tests run: 2, Failures: 0, Errors: 0, Time elapsed: 5.015 sec	1	1	https://issues.jboss.org/browse/JBWS-868

13361	JBWS-865	Since this fix is slated for JBossWS 1.0.1, will there be a workaround that I can do for the JBoss AS 4.0.4 GA release to get around this issue until JBossWS 1.0.1 is released?	0	0	https://issues.jboss.org/browse/JBWS-865
13362	JBWS-839	Could you please write a wiki about the bouncy castle issue? Can we automate this for our testruns?	1	1	https://issues.jboss.org/browse/JBWS-839
13363	JBWS-803	JBossEntityResolver How to apply the patch (jboss-entity-resolver-V3-patch.zip): 1) Apply the patch-common.txt in your common project (HEAD). (If you are using Eclipse, you can apply the patch: right mouse click to the commons project> team > apply patch) 2) Apply the patch-server.txt in your server project (HEAD). The current implementation of the JBossEntityResolver distinguishes between an in-server mode and a client-mode. In-server-mode: When used inside the application server the jax-ws-catalog.xml is loaded form the ${jboss.server.conf.dir}. This catalog references entities located in ${jboss.server.conf.dir}/catalog/[dtd|schema]. In-client-mode: When used from a remote client, all catalog files located in [META-INF/jax-ws-catalog.xml]and [client-resources/jax-ws-catalog.xml] are considered (class path resources). The jboss-all-client.jar contains a folder (client-resources\[dtd| schema]) where client-side resources are located and referenced form the client-resources/jax-ws-catalog.xml (also included in this jar file) Potential discussion topics: I) Currently the schema/dtd files are located: a) In the server project for the in-server mode -> the build process copy this files to the ${jboss.server.conf.dir} b) In the common project for the client access -> this build process copy this files to the jboss-common.jar and later to the jboss-all-client.jar Someone who knows the build process better tan me should unify this. II) To distinguish between the in-server/ client mode the System.getProperty("jboss.home.dir") is used. If this property is not null, then the resolver is running in the in-server mode. Maybe there is a better way to find out if the JBossEntityResolver is used inside the application server or not.	0	0	https://issues.jboss.org/browse/JBWS-803

13368	JBWS-684	Could you pls check that these show up on cruisecontrol?	1	1	https://issues.jboss.org/browse/JBWS-684
13369	JBWS-678	How to apply the patch: The solution is mainly realized in the common project. A new global JBoss oasis catalog file (jax-ws-catalog.xml) is located in the server project. This file is copied during the installation to the conf directory. It contains the references to the entities (located in /docs/dtd, and /docs/schema/). Before, the references were hard coded in the JBossEntityResolver class. The new JUnit tests are located in the testsuite project. 1) Apply the patch-common.txt in your common project (HEAD). (If you are using Eclipse, you can apply the patch: right mouse click to the commons project? team ? apply patch) 2) Apply the patch-server.txt in your server project (HEAD). 3) Apply the patch-testsuite.txt in your testsuite project (HEAD).	1	1	https://issues.jboss.org/browse/JBWS-678
13370	JBWS-678	Reopen The JBossEntityResolver is not only used by server components, but also in remote clients. (i.e. many of the web service tests use application clients to connect to a remote server) From what I can see web service tests fail because entities cannot be loaded on the client side. How is this supposed to work? Also, I suggest that entities are configured on a per server basis and not loaded from a global location like /docs/[dtd|schema]	1	1	https://issues.jboss.org/browse/JBWS-678

13382	JBWS-374	How are we going to address org.jboss.xb.binding.JBossXBRuntimeException: Global type definition is not found: {http://org.jboss.ws/anonymous/types}>root My inital tought was, that the JBossXSModel should support these types of lookup and return the XSModel object that represents the anonymous type associated with the global element {http://org.jboss.ws/anonymous/types}root. If that is what we agree upon, JBWS-374 is not (yet) your issue. Anil, looking at the debug log, I see that the anonymous types are not serialized correctly (they are missing). If this is a serialization problem this issue is minor. If they are indeed missing from the model, it would be serious. Jason, if Alex delegates this back to us and demands JBossXSModel lookup for anonymous type names, could you take care of that? All cases defined by the JSR-109 spec should be supported. See org.jboss.test.ws.anonymous.AnonymousTypesTestCase	0	0	https://issues.jboss.org/browse/JBWS-374
13383	JBWS-374	Alexey, Since the jaxrpc-mapping data is passed to jbossxb (via jbossxb specific mappings), and the JBossXSModel is just a schema model, is it possible for you to add support for the annoymous type expressions that are defined in jsr109? Basically it amounts to using expression based qnames such as typeNS:>>root>inside to specify which anonymous type to map to which field. -Jason	1	1	https://issues.jboss.org/browse/JBWS-374
13384	JBWS-374	I have implemented this in JBossXSModel, and marshalling seems to work properly now. However, unmarshalling fails because JBossXB works off special object heirarchy that is copied from JBossXSModel. Since anonymous types are not true types, and thus not registered under their names the type binding skips them. We need the ability to add type defitions to an existing JBossXB schema binding, perhaps by modifying XsdBinder to expose some of its private methods. If there was a way to add XSTypeDefinitions and XSElementDeclarations, then I could modify JAXBUnmarshaller to scroll through the anonymous types and add them. Alexey, What are your thoughts on this? All anonymous types and elements can be retrieved from JBossXSModel as maps by calling getAnonymousElements() and getAnonymousTypes(). -Jason	1	1	https://issues.jboss.org/browse/JBWS-374
13385	JBWS-374	I've added a couple of methods to the XsdBinder. Is this enough? /** * @deprecated * * This method is added temporary to get anonymous type binding working in JBossWS. * It will be removed when anonymous type binding in JBossWS is implemented properly. * No one else should use this method. * * <p>This method binds a type definition and adds it as a global type to the passed in schema binding. * * @param schema schema binding the type should be added to * @param type type definition to be bound */ public static void bindType(SchemaBinding schema, XSTypeDefinition type) /** * @deprecated * * This method is added temporary to get anonymous type binding working in JBossWS. * It will be removed when anonymous type binding in JBossWS is implemented properly. * No one else should use this method. * * <p>This method binds an element declaration and adds it as a global element to the passed in schema binding. * * @param schema schema binding the type should be added to * @param element element declaration to be bound * @param minOccurs * @param maxOccurs * @param maxOccursUnbounded */ public static void bindElement(SchemaBinding schema, XSElementDeclaration element, int minOccurs, int maxOccurs, boolean maxOccursUnbounded)	0	0	https://issues.jboss.org/browse/JBWS-374
13386	JBWS-355	I'll ask this question again... Why are we writing to "private" Xerces API inside the webservices implementation? This needs to be abstracted away through JBossXB.	0	0	https://issues.jboss.org/browse/JBWS-355

#	Requirement	Questions	Answered	Successfully Answered	URL
13387	JBWS-355	Some of this could be abstracted and moved to JBossXB. I believe the reason for its current location is that currently schema generation is only needed by the webservice module. Since wsdl generation/processing is webservice specific, and since it is based heavily off of schema, the webserivce module needs to use a full schema api. There is no current standard API for this, but there is a W3C submission that xerces implements. http://www.w3.org/Submission/2004/SUBM-xmlschema-api-20040309/ This could be abstracted in JBossXB, but it would require moving schema generation into JBossXB since the schema api is a read-only API and webservices requires the ability to modify the schema (for example if someone manipulates a Call object). Migrating this codebase would be a fairly involved amount of work, and could affect the timelines of both the webservice and JBossXB projects. Alexey and Thomas may have additional reasons that I didn't think of, so I will defer to them. -Jason an the	1	0	https://issues.jboss.org/browse/JBWS-355
13388	JBWS-314	For the above solution, what happens when you have more than one mapping file needed (more than one service...)? Does the above account for that?	0	0	https://issues.jboss.org/browse/JBWS-314
13389	JBWS-299	I am looking at using this option now. We currently have JBoss.NET WS running in production (3.2.6), and some calls return arrays of 50K instances. Axis serialisation just dies for 10 - 15 seconds with these requests (the .NET client on a trader desktop is much faster parsing it). We are looking at migrating the app to JBoss 4 and J2EE 1.4 WS, and nodatabinding will allow us to cache the SOAP response (since the underlying data is static) which should make the call much faster. Are we saying this wscompile is not supported in JBoss 4?	1	0	https://issues.jboss.org/browse/JBWS-299
13390	JBWS-286	Jason says to my earlier comment: "it sort of is, ssl actualy does asym key exchange with negotiated sym keys for tansport" Right, because of the negotiated sym keys for transport, can a claim for non repudiation be made?	0	0	https://issues.jboss.org/browse/JBWS-286
13391	JBWS-271	Does that mean all methods in the SEI that have a void return will be one-way? JSR-181 handles this at the method level @WebService public class PingService { @WebMethod @Oneway public void ping() { } }; Resulting WSDL: <definitions> <message name="ping"/> <portType name="PingService"> <operation name="ping"> <input message="ping"/> </operation> </portType> </definitions>	0	0	https://issues.jboss.org/browse/JBWS-271
13392	JBWS-268	Thomas, this is just one of the vagaries of wscompile. Array handling by wscompile has infact given a lot of headache to the tools project. I have an issue for it at JBWS-227 and spent a lot of time in April trying to match wscompile array handling. This also is related to my comments (item b) on why we cannot make Xerces schema parser strict[JBWS-244]. Schema generated by wscompile is not liked by xerces sometimes. I have had a question on this for few days now, as to how wscompile equates the namespace defined by prefix "ns2" in the first namespace to the targetnamespace in the second. Internally, wscompile does use Xerces for schema parsing. Analyzing the schema generated by wscompile, this is valid schema, I think. In this case, it seems to be a bug with the Xerces schema implementation. Its just that the Xerces schema implementation requires schema elements to be in seperate files. Just as a test, can we try changing the order of the schema elements? In that case the type "HelloObj" will be read into the Xerces parser before it starts handling the second schema with the array type. If it fails, we should file a bug on the Xerces website.	1	1	https://issues.jboss.org/browse/JBWS-268
13393	JBWS-265	tdiesler@satellite /cygdrive/d/projects/jboss-head/testsuite $ ant -Dtest=org.jboss.test.webservice.samples.ServerSideJMSTestCase one-test one-test: [junit] Running org.jboss.test.webservice.samples.ServerSideJMSTestCase [junit] Tests run: 1, Failures: 0, Errors: 1, Time elapsed: 1.272 sec [junit] Test org.jboss.test.webservice.samples.ServerSideJMSTestCase FAILED 2006-02-20 23:53:20,911 WARN [org.jboss.ejb.plugins.jms.JMSContainerInvoker] JMS provider failure detected for OrganizationMDB org.jboss.deployment.DeploymentException: Could not find the queue destination-jndi-name=queue/MessageDrivenEndpointQueue; - nested throwable: (javax.naming.NameNotFoundException: MessageDrivenEndpointQueue not bound) at org.jboss.ejb.plugins.jms.JMSContainerInvoker.innerStartDelivery(JMSContainerInvoker.java:767) at org.jboss.ejb.plugins.jms.JMSContainerInvoker.startService(JMSContainerInvoker.java:839) The temporary queue is not created. 13394	JBWS-258	Verification of JBWS-707 needs to be done. Can we schedule it for the next CTS run, Thomas?	0	0	https://issues.jboss.org/browse/JBWS-258
13395	JBWS-219	Your last changes provide access to the EJB3 meta data after the deployment create step but not to the annotations that are present on the bean class. Would it be possible to load the bean class in the create step like this? public void start() throws Exception { initializeClassContainer(); for (int i = 0; i < constructors.length; i++) { if (constructors[i].getParameterTypes().length == 0) { defaultConstructorIndex = i; break; } } initializePool(); createCallbackHandler(); } public void create() throws Exception { clazz = classloader.loadClass(beanClassName); }	1	1	https://issues.jboss.org/browse/JBWS-219
13396	JBWS-219	The annotations that WS is interested in are JSR-181 annotations that will be given at the bean class. My point remains, would it be possible to have the bean class available in the create step?	1	1	https://issues.jboss.org/browse/JBWS-219
13397	JBWS-218	The new build will do it "automagically" and should be extensible to other IDEs? http://cvs.sourceforge.net/viewcvs.py/jboss/jbossbuild/src/main/org/jboss/ant/tasks/component/IDETask.java?rev=1.1.1.1&view=markup	0	0	https://issues.jboss.org/browse/JBWS-218
13398	JBWS-211	Does this list cover all we need in both WS testsuites? If not, what is missing?	0	0	https://issues.jboss.org/browse/JBWS-211
13399	JBWS-158	The parsing is part of the marshalling layer. Alex could you have a look at integrating StAX into JBossXB or comment appropriately?	0	0	https://issues.jboss.org/browse/JBWS-158
13400	JBWS-157	Can this perhaps be resolved by establishing a convention that <soap:address> entries that contain a valid URL with a valid protocol part will not be modified? An additional boolean switch in jboss-service.xml can help not break existing deployments. <attribute name="ModifySOAPAddress">true</attribute>	0	0	https://issues.jboss.org/browse/JBWS-157
13401	JBWS-157	This sounds good to me. Can you also add the <virtual-host></virtual-host> element to the jboss-web.xml element that gets created so that it can be synced to virtual hosts within Tomcat?	0	0	https://issues.jboss.org/browse/JBWS-157
13402	JBWS-154	Note from Thomas: if ("element".equals(localName)) { QName xmlName = navigator.resolveQName(attrs.getValue("name")); QName xmlType = navigator.resolveQName(attrs.getValue("type")); return wsdlTypes.addSchemaElement(xmlName, xmlType); } An element is never the child of WSDLTypes, it is the child of a schema element. How would this code cope with multiple schemas with different namespaces? I don't see a class that abstracts the schema element in WSDLTypes	0	0	https://issues.jboss.org/browse/JBWS-154

#	Requirement	Questions	Answered	Successfully Answered	URL
13403	JBWS-147	I reviewed the tests and seperated the XSDToJavaTestCase into * AnonymousTypesTestCase * ComplexTypesTestCase * NillableTypesTestCase * ReferencesTestCase * SimpleTypesTestCase A) There are a few more directories with xsd files in cvs that I assume to be input for more tests. These are * annotations * schemaimport * schemainclude Are they not covered by tests yet? If this is the case, please provide the tests and the associated test fixtures generated with wscompile. That these additional tests would fail is not a problem. Test failures can be assigned individual JIRA tasks. JBWS-147 is only about generating a comprehensive test suite and *not* about providing the implementation that make it work. B) The xsd2java implementation should be separated from WSDL concerns. The API that it used by the tests seems not logical SchemaBuilder builder = new SchemaBuilder(); XSDSchema schema = new XSDSchema(); schema = builder.parseSchema(xsdFile.toURL(), schema); WSDLToJava wsdl2java = new WSDLToJava(); wsdl2java.generateSEI(schema, dir, packagename, true); Can we clean this up and provide a simple xsd2java API that is well documented in javadoc? This becomes more important as we will potentially fork out some of this work to partners (e.g. Novell) C) The tests generate java code in cvs locations. This should be moved to the output directory. D) Some tests exist in two versions, one set uses an internal xsd object representation the other set uses the xerces xsd parser. What is the situation here? Have we decided to go with xerces for the reading and our own implementation that extends xerces for writing? Thanks for the effort	1	1	https://issues.jboss.org/browse/JBWS-147
13404	JBWS-137	I presume this issue also has dependency on JBWS-644. (http://jira.jboss.com/jira/browse/JBWS-644) Since the JAX-RPC 2.0 implementation is still not there should i work on this issue?	1	0	https://issues.jboss.org/browse/JBWS-137
13405	JBWS-136	i am writing test cases for this conformance. The jaxrpc api classes dont seem to be there for versio 2.0 For example i am not able to find javax.xml.jaxrpc.BindingProvider And javax.aml.jaxrpc.Call interface must extend javax.xml.jaxrpc.BindingProvider... Please let me know if i am missing out something. How do i add jaxrpc2.0 apis to check the conformance.	1	1	https://issues.jboss.org/browse/JBWS-136
13406	JBWS-116	Is this going to be fixed? Obviously the work around is a solution but surely it would be better if it was correctly generated.	1	0	https://issues.jboss.org/browse/JBWS-116
13407	JBWS-104	A month down the line, did you hava a chance to get any progress on this?	0	0	https://issues.jboss.org/browse/JBWS-104
13408	JBWS-75	Thanks for getting started on JBWS-75. The performance and benchmark tests should run in an automated fashion as part of an ant task. This is important because they will run as part of the jboss-labs performance regression tests. Unfortunately, we cannot have any dependencies on third party software that we cannot distribute. What I am initially looking for is a set of ws deployments that cover common ws processing use cases. What immediately jumps to mind are use cases like: 1) trivial soap messages 2) complex user types 3) array types I would assume that we are not the first who think about measuring ws performance. So ideally, there is a set of wsdl available somewhere that form the basis of good performance tests. If this fails, maybe there is a paper available that allows us to derive the needed set of wsdl files. From the wsdl files we derive the deployments and the test cases. Initially we would have a build for jbossws deployments. Later we would add corresponding deployments for JWSDP, Axis, etc to actually do a comparison.	1	1	https://issues.jboss.org/browse/JBWS-75
13409	JBWS-72	I reviewed the matrix version 1.0, here is some feedback. Chapter 4 Generally I don't like the disconnect of command line options and config file. For example this forces me to include the command line options that I use with a particular config.xml as an xml comment to be able to reproduce the same results. jbossws should opt for a configfile with as little command line options as necessary. options 2) why do we need -cp and -classpath 4) what does -define do 5) why are -f:features not supported 10) what is -gen:wsdl needed for 13) what does -import do features 3) donotoverride is useful 7) do we even generate stubs? otherwise what does nodatabinding do? 9) what is nomultirefs 11) is duplicated 16) what is serializeinterfaces 17) strict vs. lenient ? 19) how does useonewayoperations ---------- The matrix could be split up in server and client side. Server side takes SEI as input and generates wsdl, schema, jaxrpc-mapping. This is of higher importance than client side. Client side takes wsdl as input and generates SEI, SI, complex types, holders. One of my biggest questions is: Do we need generated stubs or can we get away with dynamic proxies. Could you please create fine grained jira tasks and associate them with the features you like to support. Java2Wsdl * primitive types, no schema * complex types + schema * rpc/literal * doc/literal * INOUT, OUT paramters * bound and unbound headers * bound and unbound attachments * one way operations * jaxrpc-mapping * what else? wsdl2Java * primitive types, no schema * complex types + schema * schema with anonymous types * service interface * rpc/literal * doc/literal * INOUT, OUT paramters * bound and unbound headers * bound and unbound attachments * one way operations * what else? cheers	1	1	https://issues.jboss.org/browse/JBWS-72
13410	JBWS-72	Thomas::Generally I don't like the disconnect of command line options and config file. For example this forces me to include the command line options that I use with a particular config.xml as an xml comment to be able to reproduce the same results. jbossws should opt for a configfile with as little command line options as necessary. Anil: JbossWSTools will use an xml config file just the way wscompile uses. Thomas: 2) why do we need -cp and -classpath 4) what does -define do 5) why are -f:features not supported 10) what is -gen:wsdl needed for 13) what does -import do Anil: -import reads the WSDL file, generates SEI and a template implementation of the SEI. -gen:wsdl is a jbosswstool option to generate wsdl (that is the only server side artifact that we can generate given a SEI) -define allows you to read a SEI and define a javax.xml.rpc.Service interface for the SEI. -cp and -classpath allow u to locate the SEI compiled classes. Thomas: 3) donotoverride is useful 7) do we even generate stubs? otherwise what does nodatabinding do? 9) what is nomultirefs 11) is duplicated 16) what is serializeinterfaces 17) strict vs. lenient ? 19) how does useonewayoperations Anil: First phase of tools, we will always regenerate the SEI.(Regarding donotoverride) Thomas: One of my biggest questions is: Do we need generated stubs or can we get away with dynamic proxies. Anil: I have been having the same question. Generated stubs are not portable(The easiest way for the users to use JBossWS, though.)	1	1	https://issues.jboss.org/browse/JBWS-72
13411	JBWS-72	Thomas, can you review the JBossWS Tools document to see if I need to add anything to the feature matrix.	1	1	https://issues.jboss.org/browse/JBWS-72

#	Requirement	Questions	Answered	Successfully Answered	URL
13412	JBWS-72	I reviewed the doc, here is some feedback: 1. This issue asks you to backup each feature by a corresponding JIRA task. This still needs to be done. The created tasks should be linked to this issue. 2. The document should reflect the intended usage of the jbossws tools for the first release, not the current state. Otherwise you will have a hard time to keep the documentation in sync. 3. Table 2.1 states command line options for jbossws. AFAIK, we agreed on removing the disconnect between the command line options and the config file. What is the minimal set of cmd line options we need? 4. Use multiple digit serial numbers, so we can refer to them uniquely accross the document 5. Table 2.3 sn-4: exlain the benefit and usage of 'define' (This is repeated feedback from 11/Feb) 6. Table 2.3 sn-8: exlain the benefit and usage of 'import' (This is repeated feedback from 11/Feb) 7. Table 2.4 sn-5: exlain the benefit and usage of 'explicitcontext' 8. Table 2.4 sn-6: exlain the benefit and usage of 'jaxbenumtype' 9. Table 2.4 sn-5: exlain the benefit and usage of 'nodatabinding' 10. Table 2.4 sn-10: exlain the benefit and usage of 'norpcstructures' 11. Table 2.4 sn-11: is duplicated, should this be another feature? 12. Table 2.4 sn-12: change to NOT SUPPORTED 13. Table 2.4 sn-13: exlain the benefit and usage of 'resolveidref' 14. Table 2.4 sn-16: exlain the benefit and usage of 'serializeinterfaces' 15. Table 2.4 sn-18: lets make wrapped the default 16. Table 2.4 sn-19: how do intend to support 'useonewayoperations'? 17. Generally, all supported features should be explained. the description collumn is often not meaningful enough 18. Replace the examples using wscompile with how one uses jbossws. Show the typical use cases. 19. Table 2.6 Do we support CustomType Inheritance, Enumerations 20. Configuring jbossws.sh: There should be a set of tool jars. Remove dependency on JBOSS_HOME 21. Running jbossws.sh: Replace by intended xml configutration 22. 4.1.2 Remove API documentation. This is covered by javadoc. Avoid duplicate/redudant documentation sets Please update the document version an have a date at the front page. I suggest you create JIRA tasks for features that you describe in the document, but are not implemented yet. Then you can reference them from the document, allowing us to continously have up to date information. The relevant comments from the JIRA tasks can then be incorporated in the document and references can be removed with the next revision.	1	1	https://issues.jboss.org/browse/JBWS-72
13413	JBWS-72	Anil wrote: Hi Thomas, here are the minutes of our meeting. Took me sometime to format it. Main goal: Previous exercise was to generate a feature matrix of jbossws against wscompile (JBWS-72). Now it is time to generate a document that just talks of jbossws features and how to use it. (JBWS-321) - Need to get a schema written for the tools configuration. - the attributes in the configuration file should be of mixed case (AND not all lower case). Section 2.1.1.2 jbossws configuration * interface is a bad name. * packagename should be removed. * wsdldest: bad attribute. Should be removed and all directory related attributes should be removed. - assume a sub directory called "jbossws" and generate the artifacts there. * includetypesinwsdl: should be renamed to includeSchemaInWSDL * wsxml element - remove the directory related attribute. - add an attribute for servletlink. Section 2.1.2 Question from Thomas: Is the Service Interface being generated? Answer from Anil: It is being generated but I forgot to mention it in the document. - remove packagename and seidir attribute. Section 2.1.3: WS-I Compliance Remove this section as jbossws will be ws-i compliant. Section 2.1.4: wscompile features section should be completely replaced with jbossws features. Notes on Document Style Web Services:- * jbossws should not doublewrap classes (wscompile does wrapping of wrapped classes). - there should be a option for user to tell jbossws that it is using wrapped classes. - jbossws should validate that the wrapped request structure is valid. * Document/Literal Wrapped is Microsoft technology which is deprecated and no support should be available. For WSDL-> Java * User should be allowed to inform jbossws whether to unwrap the document request/response structures or not. Unwrap should be the default. 2.1.4.10 nodatabinding feature is not required. Section 2.3 JSR-181 Annotations Support * Support should be for both interfaces and implementation classes. If the implementation class has the @interface annotation, then jbossws should read the interface for the methods to expose. * Oneway operations - JSR181 refers to oneway capabilities at the method level. - For unannotated interfaces, there should be a way to specify which methods are oneway. Section 2.3.,4 SoapBinding Annotation - Support custom jbossws annotations to take in the jboss.xml attributes like port-component-uri, context root etc. Section 4: Java To WSDL/XSD Focus on annotated types in the examples. - Remove all the API details. Section 5: Architecture should be removed. First Release should include the following: 1) Documented Schema. 2) User Guide. 3) Annotated endpoint support + oldstyle J2EE 1.4 artifacts.	1	0	https://issues.jboss.org/browse/JBWS-72
13414	JBWS-67	I will start contributing to the WSDL Validators project of Eclipse Web Tools. They are working on WSDL 2.0 validators (in cooperation with the W3C). Why reinvent the wheel?	1	1	https://issues.jboss.org/browse/JBWS-67
13415	JBWS-35	should we promote this issue to resolved status rather than a voting status? We need support for the following : a) Support for SAML Token Profile (Higher Priority). b) Support for Kerberos Token Profile (Low Low Priority). This is important in intranets that hosts windows-centric systems.	0	0	https://issues.jboss.org/browse/JBWS-35
13416	JBWS-31	I'll take this one, though I currently don't have permission to assign it to myself. Could someone give me JIRA rights? Thanks, Jason	1	1	https://issues.jboss.org/browse/JBWS-31
13417	JBWS-28	Is the generated schema going to be stored on disc somewhere? I would wait for the implementation of XSD generation (by Anil?) first.	1	1	https://issues.jboss.org/browse/JBWS-28
13418	JBWS-24	Alex says: As I understand, we are given *.wsdl, webservices.xml and jaxrpc-mapping.xml (optional?). What happens then? We generate marshaller/unmarshaller for jaxrpc parameters? Is there any other source of Java - XML binding info except for jaxrpc-mapping.xml?	0	0	https://issues.jboss.org/browse/JBWS-24
13419	JBWS-24	It seems logical to have the same tool generate Java classes and their mapping to XML elements. Is the mapping file going to be optional? If so, let's first try w/o it. So the client will use the same tool to generate Java classes, serializers/deserializers, mapping file as the one used on the server side? It seems to be a weakness to me, since how can you be sure the client has this same tool? Assuming there is no standard for these tools' output.	0	0	https://issues.jboss.org/browse/JBWS-24
13420	JBWS-24	Is Anil working on Java classes generation? If so I will focus on default Java to XML names mapping support.	0	0	https://issues.jboss.org/browse/JBWS-24
13421	JBWS-24	Ok, then I will work on that. What do we use right now for code generation? wscompile? Some Axis tool?	0	0	https://issues.jboss.org/browse/JBWS-24
13422	JBWS-24	So right now we some Axis tool for generation? In what case do we need to generate Java classes from XSD? When a client deploys a web-service into JBoss, we need to generate only serializers/deserializers, right?	0	0	https://issues.jboss.org/browse/JBWS-24
13423	JBWS-11	This task is completed. wsdl4j does not handle XML Schema ie. <types> in wsdl. A collaboration with JBossXB, which will deal with XSD Types to Java, will handle it.	0	0	https://issues.jboss.org/browse/JBWS-11
13424	JBWS-1	All the CTS tests in jaxrpc, saaj, webservices have one ore more SEI. Generating a valid wsdl comes in two parts: 1. generate wsdl definition 2. generate contained xsd types Checkout if XMLBeans can help with generating XMLSchema from java. Are there other tools? Xerces is suposed to have a schema parser. Julien sais: don't try to write your own xsd parser!	1	1	https://issues.jboss.org/browse/JBWS-1
13425	WFK2-755	one-off patch	1	1	https://issues.jboss.org/browse/WFK2-755
13426	WFK2-755	[~ivassile], according to workflow, this issue should be now in "QA in progress" state. Can you please update it?	1	1	https://issues.jboss.org/browse/WFK2-755

#	Requirement	Questions	Answered	Successfully Answered	URL
13427	WFK2-755	[~ppitonak]: Hold on the testing on this patch. I just received information from the customer, that they are using a patched version of RF 4.3.5 which includes issues RF-13719 and RF-13733. Both issues are not included in RF 4.3.7 and this patch will roll-back the changes. The client prefers a 4.3.5 (WFK 2.5) patch. I'm going to build cumulative patch based on [1]. [1] https://access.redhat.com/jbossnetwork/restricted/softwareDetail.html?softwareId=32893&product=web.framework.kit&version=2.5.0&downloadType=patches	1	1	https://issues.jboss.org/browse/WFK2-755
13428	WFK2-755	RF-13719 is an issue for RichFaces in portal environment. Can you confirm that the customer uses portal and therefore we need to test this patch in portal?	1	1	https://issues.jboss.org/browse/WFK2-755
13429	WFK2-755	Verified, both *RF-13640 : Autocomplete with custom layout: cant select item by mouse* and *RF-13733 : dataTable built-in sorting and filtering* work with this patch. No regressions have been found. Verified on IE 10, IE 11, Firefox 24, Firefox 31, latest Chrome, on EAP 6.2.4.GA. [~pmensik], please, could you check the Portal issue: RF-13719 : rich.fileUpload breaks form action in portal ?	1	0	https://issues.jboss.org/browse/WFK2-755
13430	WFK2-396	Added to WFKDOC-16 jira tracking update of supported configs page for WFK 2.5 by docs team.	0	0	https://issues.jboss.org/browse/WFK2-396
13431	WFK2-396	What is the purpose of this upgrade? an issue?	1	1	https://issues.jboss.org/browse/WFK2-396
13432	WFK2-396	[~manaRH] this update contains @InFrame related bugfixes and support for IE9 - more details here http://arquillian.org/blog/2014/01/31/arquillian-graphene-2-0-1-Final/ Why is JDF issues needed here?	1	0	https://issues.jboss.org/browse/WFK2-396
13433	WFK2-326	[~mmurray] not sure if this task is solved/reviewed. Could you please process it till the end - closing ;-). Thanks in advance!	1	0	https://issues.jboss.org/browse/WFK2-326
13434	WFK2-324	Is it ready to release? please provide staging repository for QE	0	0	https://issues.jboss.org/browse/WFK2-324
13435	WFK2-324	[~jowilson] Based on Pete's comments: https://issues.jboss.org/browse/WFK2-321?focusedCommentId=12925810&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12925810 Shouldn't we change to 1.0.3.GA instead ?	1	1	https://issues.jboss.org/browse/WFK2-324
13436	WFK2-323	Is it ready to release? please provide staging repository for QE	0	0	https://issues.jboss.org/browse/WFK2-323
13437	WFK2-321	Where these Archetypes should be released ? maven.repository.redhat.com or Maven Central ?	0	0	https://issues.jboss.org/browse/WFK2-321
13438	WFK2-321	The version used on HTML5 Archetypes is 2.4.0.Final. Should we change it to 2.4.0.GA or 2.4.0-redhat-x ? Will Spring and Richfaces Archetype also follow the WFK version ?	0	0	https://issues.jboss.org/browse/WFK2-321
13439	WFK2-168	[~burrsutter], I'd like one clarification - should this be considered complete only if TiMo uses a native API? i.e. should your second comment also be fulfilled? The first comment (import TiMo sources into JBDS 7.1) can be done, but with a minor concern - we'd have to load cordova.js without using Require.js. Currently in TiMo, a version and platform specific {{cordova.js}} file is loaded through require.js based on the runtime platform. We'll instead have to create a separate HTML page for cordova apps (like app.html instead of index.html) which * references cordova.js that is managed by the tooling, and * is referenced in the config.xml file as the initial page for the app. I don't see how we can 'fix' this in the tooling to support require.js alongside cordova.js.	1	1	https://issues.jboss.org/browse/WFK2-168
13440	WFK2-153	Hi Sanne, do you plan to finish this issue into wfk 2.5.0, or will it be postponed?	1	1	https://issues.jboss.org/browse/WFK2-153
13441	WFK2-152	Can we change the title of this jira to lose the word "integration"? It always throws me off - it is just Spring + Websockets, not "Spring Integration"	1	1	https://issues.jboss.org/browse/WFK2-152
13442	WFK2-152	[~emil.cervenan] awesome - can you publish an eample/quickstart formatted out to github some place so other parties could look at your setup?	1	1	https://issues.jboss.org/browse/WFK2-152
13443	WFK2-152	I tried your example on JBoss EAP 6.3.0.Alpha1 (AS 7.4.0.Final), but that one doesn't seem to support websockets yet: 16:26:24,654 ERROR [org.jboss.msc.service.fail] (MSC service thread 1-7) MSC000001: Failed to start service jboss.deployment.unit."spring-websockets.war".PARSE: org.jboss.msc.service.StartException in service jboss.deployment.unit."spring-websockets.war".PARSE: JBAS018733: Failed to process phase PARSE of deployment "spring-websockets.war" at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:166) [jboss-as-server-7.4.0.Final.jar:7.4.0.Final] at org.jboss.msc.service.ServiceControllerImpl$StartTask.startService(ServiceControllerImpl.java:1980) [jboss-msc-1.1.5.Final.jar:1.1.5.Final] at org.jboss.msc.service.ServiceControllerImpl$StartTask.run(ServiceControllerImpl.java:1913) [jboss-msc-1.1.5.Final.jar:1.1.5.Final] at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) [rt.jar:1.7.0_45] at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:615) [rt.jar:1.7.0_45] at java.lang.Thread.run(Thread.java:744) [rt.jar:1.7.0_45] Caused by: org.jboss.as.server.deployment.DeploymentUnitProcessingException: JBAS018014: Failed to parse XML descriptor "/C:/repos/3rdparty/jboss/jboss-wfk-quickstarts/spring-websockets/content/spring-websockets.war/WEB-INF/jboss-web.xml" at [20,3] at org.jboss.as.web.deployment.JBossWebParsingDeploymentProcessor.deploy(JBossWebParsingDeploymentProcessor.java:79) at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:159) [jboss-as-server-7.4.0.Final.jar:7.4.0.Final] ... 5 more Caused by: javax.xml.stream.XMLStreamException: ParseError at [row,col]:[20,3] Message: Unexpected element 'enable-websockets' encountered Where can I find EAP 6.3.0.ER3? Thanks in advance, Geert.	1	1	https://issues.jboss.org/browse/WFK2-152
13444	WFK2-152	[~manaRH], [~trepel]: currently the WFK Spring Guide states "Support for Spring 4 as a tested framework is limited to the features supported by Red Hat JBoss Enterprise Application Platform. Specifically, support is not provided for the new features in Spring 4 related to Java 8, Java EE 7, and WebSockets." Does this needs to be updated in light of this jira?	1	0	https://issues.jboss.org/browse/WFK2-152
13445	WFK2-152	[~trepel], [~manaRH] - I will fix the text in the Spring doc. To make it obvious to users, let include an RN text to state that WebSockets is supported. Can one of you complete the RN text please.	1	0	https://issues.jboss.org/browse/WFK2-152
13446	WFK2-138	How will we handle BOMs in product repository? I assume they still will be delivered in shipped WFK 2.7.0 product repository and not through jboss-developer ways or deployment process - so they will accessible on developer pages as today. Do I understand it correctly?	0	0	https://issues.jboss.org/browse/WFK2-138
13447	WFK2-138	As far as I know, all BOMS ship with their respective product maven repository .zip - they should also land at maven.repository.redhat.com. Is there anything special about the WFK BOMs that require Nexus (other than Staging) which is actually now being architected outside of the Nexus environment?	0	0	https://issues.jboss.org/browse/WFK2-138
13448	WFK2-123	Also, @burrsutter, we don't currently have Topcoat at any tier. Do you think we should add it to tier 4 because of this?	1	1	https://issues.jboss.org/browse/WFK2-123

#	Requirement	Questions	Answered	Successfully Answered	URL
13449	WFK2-121	Apparently I looked at the wrong Backbone-based Kitchensink. :-) What is the URL to the sources you are looking at? [~vineet.reynolds] Do you think there would be value in removing the responsive aspect so that it is mobile all the time? The reason I ask is...concern for learning curve as well as ease of support in the tooling.	1	0	https://issues.jboss.org/browse/WFK2-121
13450	WFK2-115	[~alrubinger]what is the approximate timeframe for this item? Mid-2014? or mid-2015?	1	0	https://issues.jboss.org/browse/WFK2-115
13451	WFK2-113	[~burrsutter], concerning your statement about no "responsive design", what specifically are you asking for here. Some of RWD covers "resizing" based on the viewing area so that it will fit on desktops to mobiles. Is this what you are referring to? Because RWD also refers to the use of JavaScript and JS libs. As you have already asked for jQuery Mobile, I am thinking that you are not talking about building a site without JS. So can you please clarify the 'no "responsive design"' request?	1	1	https://issues.jboss.org/browse/WFK2-113
13452	WFK2-113	[~pmuir] I have started working on this as a "contacts" app as [~burrsutter] requested. Should I continue under a different JIRA or stop work on this?	1	1	https://issues.jboss.org/browse/WFK2-113
13453	WFK2-113	It would be good to have a non-Angular and with-Angular option - so people can compare apples to apples. If we only have time for the with-Angular option that demonstrates create, read, update and delete operations, ideally with the additional fields/properties (e.g. birthdate) then that would work for now.	1	1	https://issues.jboss.org/browse/WFK2-113
13454	WFK2-113	The app I created was tasks based. So if we want to create a non-angular option, we could clone it's UI? To keep them v similar.	1	1	https://issues.jboss.org/browse/WFK2-113
13455	WFK2-113	[~pmuir] & [~burrsutter] do you want to keep this Jira focused on a "contacts" app? Or do you want a modified version of Pete's "task" app that doesn't have AngularJS? If the later, who will build it? I have the time now to do either.	1	1	https://issues.jboss.org/browse/WFK2-113
13456	WFK2-108	Do you know if there are any plans for that Pete?	1	1	https://issues.jboss.org/browse/WFK2-108
13457	WFK2-108	[~petemuir], there seems to be little progress on this jira and it's subtasks. Will it make it for 2.5? Also, how is 'online delivery of BOMs' related to the current tech preview online red hat/jboss maven repo?	1	1	https://issues.jboss.org/browse/WFK2-108
13458	WFK2-108	Hi [~petemuir], will the pages appear in the new design soon enough to make this feature work in WFK 2.6?	1	1	https://issues.jboss.org/browse/WFK2-108
13459	WFK2-108	There is already some WFK 2.5 content on the new Developer site, so it would make sense to update those to WFK 2.6 eventually. Can we update those after WFK 2.6 GA then?	1	1	https://issues.jboss.org/browse/WFK2-108
13460	WFK2-108	[~manaRH], can you clarify what this will look like for 2.7 please? * Quickstarts - from jboss-developer website, github and WFK quickstarts zip on customer portal * TiMo - from jboss-developer website (as for 2.6), github (as for 2.6) and WFK TiMo zip on customer portal * BOMs - from jboss-developer maven repo and WFK maven zip on customer portal Will the RF, HSearch, and Snowdrop demo.zip files continue to be distributed from the customer portal? will these also be available from jboss-developer in some way?	1	1	https://issues.jboss.org/browse/WFK2-108
13461	WFK2-72	[~maschmid] when do you need the release complete by in order for it to make WFK 2.4?	1	1	https://issues.jboss.org/browse/WFK2-72
13462	WFK2-48	Hey Andrew, do you know if that is something that is being/will be worked on?	0	0	https://issues.jboss.org/browse/WFK2-48
13463	WFK2-46	Yes, of course. Do we have due dates for the Use Case documents?	0	0	https://issues.jboss.org/browse/WFK2-46
13464	WFK2-46	Why the reassign, [~rruss]? You'd still like use-case docs from me for this, yes?	1	1	https://issues.jboss.org/browse/WFK2-46
13465	WFK2-45	Same comment as in WFK2-6: what is the work to be done to get this included?	1	1	https://issues.jboss.org/browse/WFK2-45
13466	WFK2-45	These are two separate tasks; for your tracking as well, [~pmuir], do you mind if I split this issue into one each for Persistence and Tx?	1	1	https://issues.jboss.org/browse/WFK2-45
13467	WFK2-45	[~maschmid] when do you need the release complete by in order for it to make WFK 2.4?	1	1	https://issues.jboss.org/browse/WFK2-45
13468	WFK2-25	[~alrubinger]What is the customer impact of this item? At this time, the wildfly/upstream adapter seems to work fine with EAP, at least in the quickstarts/archetypes that leverage Arquillian. Should we continue with reusing the same adapter or is now the time to fork?	1	0	https://issues.jboss.org/browse/WFK2-25
13469	WFK2-25	[~kpiwko]thank you [~alrubinger] what will it take to get this scheduled?	1	0	https://issues.jboss.org/browse/WFK2-25
13470	WFK2-25	Do we have a team in place for maintenance of this component? Also, shipment is via Maven Central or mave.repository.redhat.com? (it should not ship as part of the WFK distribution)	0	0	https://issues.jboss.org/browse/WFK2-25
13471	WFK2-16	I read the doc and wanted to know what you saw that needs to be changed. We are going to changed the directory structure to align with an add-on. And provide a version of the standalone.xml so that no one needs to modify it. What else?	0	0	https://issues.jboss.org/browse/WFK2-16
13472	WFK2-15	Should that certification include also Seam (Seam examples) ?	0	0	https://issues.jboss.org/browse/WFK2-15
13473	WFK2-15	Could Openshift access internal maven repository or extracted zipped maven repository? This probably needs a discussion with openshift team.	0	0	https://issues.jboss.org/browse/WFK2-15
13474	WFK2-15	Can we use OpenShift Enterprise for the testing? I don't see how you intend to get OpenShift online to access something behind the VPN, nor what the OpenShift team could do about this.	1	1	https://issues.jboss.org/browse/WFK2-15
13475	WFK2-15	[~burrsutter] WDYT? Can we claim that this is done if we are missing the necessary instructions in the readmes?	1	1	https://issues.jboss.org/browse/WFK2-15
13476	JBWIKI-106	Is there a reason for which the two packages that you mentioned are not in the repo?	0	0	https://issues.jboss.org/browse/JBWIKI-106
13477	JBWIKI-94	Do i have to add this also to binaries released before acquisition ?	0	0	https://issues.jboss.org/browse/JBWIKI-94
13478	JBWIKI-76	what is standard diff output ?	0	0	https://issues.jboss.org/browse/JBWIKI-76
13479	JBWIKI-17	Tomek, is this finished? I thought that roles aren't included until 1.0 Final. Am I wrong?	1	0	https://issues.jboss.org/browse/JBWIKI-17
13480	JBWIKI-2	What exactly do we need here ? (you wrote sth. about spliting this up)	1	1	https://issues.jboss.org/browse/JBWIKI-2
13481	JBWIKI-2	There should be a link... in every wikipage... (or above.. next to history).. that allows people to subscribe to all changes.. in a wikipage... which gives: 1. The new wikipage 2. The changes made via the 'diff' format. .... as a blog entry in rss/atom/rdf.	1	1	https://issues.jboss.org/browse/JBWIKI-2
13482	JBXB-246	Thanks for doing this. But, could you give an example of what the output should look like now, and which part is the fileName (is it "URI"?). I'm get the following message which I'm having a heck of time interpreting enough to diagnose: "Failed to resolve schema nsURI= location=web-fragment" What is "ns"? why no URI? If it had a URI, what would that be indicating (the filename?)? etc Thanks in advance for any more info that can be provided.	1	0	https://issues.jboss.org/browse/JBXB-246
13483	JBXB-246	In fact...the message I'm seeing is the same as the one noted in the referenced conversation that prompted this change. I'm running with the 6.0 M4 - why am I not getting the updated format? Should I be?	1	0	https://issues.jboss.org/browse/JBXB-246
13484	JBXB-244	Yes, that's exactly what David is asking for. Should we switch AllBinding implementation to UnorderedSequenceBinding?	0	0	https://issues.jboss.org/browse/JBXB-244
13485	JBXB-206	What I meant is that the issue is probably the resolver is not configured properly. It's not enough to just instantiate it. What namespace is resolved with XsdBinder?	0	0	https://issues.jboss.org/browse/JBXB-206

#	Requirement	Questions	Answered	Successfully Answered	URL
13486	JBXB-194	How would that be different from SchemaBinding.setNormalizeSpace() which is false by default and SchemaBinding.setIgnoreWhitespacesInMixedContent() which is true by default?	1	0	https://issues.jboss.org/browse/JBXB-194
13487	JBXB-100	AFAICS, just Source won't be more efficient. Since it gives access only to the systemId of the source. Or am I missing something?	1	0	https://issues.jboss.org/browse/JBXB-100
13488	JBXB-100	So what are you asking for? To add unmarshal(javax.xml.transform.Source)? Then its implementation will be unmarshal(Source s) { return unmarshal(s.getSystemId()); } Or unmarshal(DOMSource ds) and navigate through the Nodes producing SAX-like events?	1	0	https://issues.jboss.org/browse/JBXB-100
13489	JBXB-100	How about: unmarshal(Source source) { if (source instanceof DOMSource) { Node node = ((DOMSource)source).getNode(); ... // process node } else throw new UnsupportedOperationException(); } Or you prefer to use DOMSource class directly in your method signatures?	0	0	https://issues.jboss.org/browse/JBXB-100
13490	JBXB-87	Thanks, Alex. Right in time ;) Still I would need a quick explanation. Could we have a quick skype session this afternoon? /Heiko	1	0	https://issues.jboss.org/browse/JBXB-87
13491	JBXB-65	Sorry, I didn't mentioned it before ... There is called 'content.get(index)' also on other methods in this class. That's why I did't simple used Iterator in my test (I have used ArrayList). The other occurences are more complicated to rewrite to iterator. Are you sure, that it will not slowdown other processes?	1	1	https://issues.jboss.org/browse/JBXB-65
13492	JBXB-65	What's the reason to stick with the linked list? Compared to the ArrayList replacement, the Iterator approach doesn't really have an impact on performance: Without any changes: testCase resultValue dataFile 3 Items 2983.500 data/po.xml 20 Items 1013.800 data/po-20.xml 50 Items 454.800 data/po-50.xml 100 Items 219.200 data/po-100.xml With the Iterator change: testCase resultValue dataFile 3 Items 3410.600 data/po.xml 20 Items 1074.900 data/po-20.xml 50 Items 489.700 data/po-50.xml 100 Items 257.400 data/po-100.xml With the ArrayLIst change: testCase resultValue dataFile 3 Items 4250.000 data/po.xml 20 Items 1415.100 data/po-20.xml 50 Items 650.200 data/po-50.xml 100 Items 342.100 data/po-100.xml	1	1	https://issues.jboss.org/browse/JBXB-65
13493	JBXB-42	Thomas. Can you please discuss things on public mailing lists before scheduling work to others! Otherwise this is a feature request not a task! I'm going to add some of the related "productization" issues. There are others. Which probably makes this task redundant.	1	1	https://issues.jboss.org/browse/JBXB-42
13494	JBXB-40	Alex, Why is this closed without comment?	0	0	https://issues.jboss.org/browse/JBXB-40
13495	JBXB-33	You proposed to add SchemaBindingErrorHandler to not depend on Xerces API? I agree it's a good idea. But then I would also get rid of org.apache.xerces.xs.StringList. Is that ok for you? How do you create an instance of that? Anonymous class?	1	0	https://issues.jboss.org/browse/JBXB-33
13496	JBXB-33	Doesn't the Xerces parser need a StringList to parse a set of Schema files? If there is a way in which you will be ok with a List of schema locations (List<String> or List<URL>), I am fine. The parsing is all yours. All I care about is passing a SchemaBindingResolver and an ErrorHandler to the Util method. :-) We have a RW based Xerces model and I do have a way of constructing a StringList via JBossStringList class. But as you said, lets not tie the util method to StringList.	0	0	https://issues.jboss.org/browse/JBXB-33
13497	JBXB-33	Alexey, can you provide me a resolution for this feature request in the next few days? I will then be able to offload schema parsing from the ws tools layer to the binding layer.	0	0	https://issues.jboss.org/browse/JBXB-33
13498	JBXB-30	How can I do it?	1	0	https://issues.jboss.org/browse/JBXB-30
13499	JBXB-5	Adrian, could you please correct assertions in org.jboss.test.xml.PojoServerUnitTestCase when you have time? You can leave fixing the binding to me. Just let the tests fail. This is not a blocking issues for me right now. I started to work on XSD/runtime binding.	0	0	https://issues.jboss.org/browse/JBXB-5
13500	ORG-3634	[~velias] I understand Libor is sick. Can someone else make this change? It should be quick. [~adelaarreola] can help out and show you exactly what you need to add.	1	1	https://issues.jboss.org/browse/ORG-3634
13501	ORG-3608	I don't think 'mixed content' is the right term here. Essentially, we need to ensure that links to the developer blog use https. These links are coming from the sys_url in the DCP documents. How about you use the same protocol in the sys_url as is used in the feed URL used to configure the river? We then update the URLs for all the blogs that support https.	1	1	https://issues.jboss.org/browse/ORG-3608
13502	ORG-3580	hi Libor. I can't get to that link- it says temporarily unavailable. I see this jira as 'done' status. What's the next step to getting visibility into first response times?	1	0	https://issues.jboss.org/browse/ORG-3580
13503	ORG-3495	Could this be done this week (by August 24), since we are doing the marketing announcement for JDV 6.3 this week.	1	1	https://issues.jboss.org/browse/ORG-3495
13504	ORG-3476	Is there any update of this please? I would like to verify JBIDE-17615 and this blocks me. I tried it again now and the change password page still rejects my current password.	1	1	https://issues.jboss.org/browse/ORG-3476
13505	ORG-3441	Fixed Shall I apply to prod?	0	0	https://issues.jboss.org/browse/ORG-3441
13506	ORG-3314	* "Type" (atricle/solution) information is already available in the DCP, we have two separate types in DCP {{rht_knowledgebase_article}} and {{rht_knowledgebase_solution}} * Last update date is not available on the API we use to pull data into DCP. We have to work with CP team to get it there if possible Also we currently pull data for middleware (JBoss) products only. Should we change this to pull data for all products?	0	0	https://issues.jboss.org/browse/ORG-3314

According to [JBoss Enterprise BRMS Component Details](https://access.redhat.com/articles/119953), BRMS 5.3 is based on jBPM 5.2 so the TaskEventListener interface looks like below. Only four methods	0	0	https://issues.jboss.org/browse/ORG-3314
13508	ORG-3239	[~newtonm] [~hwindzio] [~burrsutter] Once we have the list, is there any reason why we couldn't go ahead and get these added this week? Is there a branding concern having RHEL, CDK, etc in the JBoss forums? Who has access to create new product forums?	1	1	https://issues.jboss.org/browse/ORG-3239
13509	ORG-3239	What's the strategy with the Customer Portal discussion forums? They have a developer category and various developer tags. It seems like they should be focused on production vs the developers.redhat.com focused on development discussions. Anyone speak with them yet? I don't know that's a blocker for adding additional products, but figured I'd ask as it may be confusing to developers (and we could also ask GSS to help out with the developers.redhat.com forums instead ;)) Also, are we adding *all* Red Hat products, or only those that are used within the context of development? I haven't seen the list.	1	1	https://issues.jboss.org/browse/ORG-3239
13510	ORG-3239	[~newtonm] [~hwindzio] I propose that we get rid of this space: https://developer.jboss.org/en/products/portal as it's not active and we don't even show that product on RHD. Any reason why we would not want to get rid of this? Is there another related product where we could move these threads?	1	1	https://issues.jboss.org/browse/ORG-3239
13511	ORG-3239	Something to discuss: How do we sunset a product space?	1	1	https://issues.jboss.org/browse/ORG-3239
13512	ORG-3187	[~lkrzyzanek] [~tnolan] - I'd suggest we keep it simple. http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_jive_main_r1v1.png 1) Change the background to #242424 2) Change the top padding to 5em 3) Add the RHD logo above the content 4) add a dotted pattern to the top right. Libor... is this workable in JIVE?	1	1	https://issues.jboss.org/browse/ORG-3187
13513	ORG-3182	[~lkrzyzanek] As part of this story, can we also add a message at the bottom of the email about the product forums being rebranded? Or would you like that work tracked in a different story?	1	1	https://issues.jboss.org/browse/ORG-3182
13514	ORG-3182	[~mikgue] [~lkrzyzanek] Here's a draft of the suggested changes. Mike - Can you take a look and let me know if you think it needs any other changes?	1	1	https://issues.jboss.org/browse/ORG-3182
13515	ORG-3182	What is "Them Test"? What is "Red Hat JBoss - RHD"? The dual branded forums? If so, will anyone know what RHD means as we use this mostly internally? Please change "Red Hat Developers" to "Red Hat Developer Program" Shouldn't "Following" instead be "Follow"?	1	1	https://issues.jboss.org/browse/ORG-3182
13516	ORG-2898	Review here: https://developer-dev.jboss.org/account/download-thank-you.jspa?filename=aaa.zip What reset password should be used ? The jboss.org one or RHD ?	1	1	https://issues.jboss.org/browse/ORG-2898
13517	ORG-2780	[~lvlcek] do you have a report from the Searchisko load testing you did a while ago? Are the tests reproducible?	1	0	https://issues.jboss.org/browse/ORG-2780
13518	ORG-2780	Yes, this is probably it. Do you have updated figures on what request load we are getting today on the DCP, and what multiplication factor you think we can achieve? Also, how easy is it to reproduce what you did? It would probably be wise to re-run as the data is 1.5yrs old. We've now got a new major version of the DCP and I believe new hardware.	0	0	https://issues.jboss.org/browse/ORG-2780

#	Requirement	Questions	Answered	Successfully Answered	URL
13519	ORG-2763	Hi, I analyzed content of weld webpages (http://weld.cdi-spec.org) and I see two main glitches there. *How to get page content* Weld website is missing some unique css class which allows us to get real content of the page, without common stuff as header, footer, main menu. We can take whole content but it will decrease search relevance for some words present in the common stuff. [~mkouba] should you look at https://github.com/weld/weld.github.io/issues/22 please? Attachment !weld-website-content-div.png|thumbnail! shows which {{div}} should be marked as it seems it is present on all pages of the website. *How to get page description* It is good to have some short description of the page stored in the search index. This description is typically shown on search result page. The description is typically taken from {{<meta name="description" content="short page description">}} tag stored in {{<head>}} section of the page, but it is missing on current weld website. I created https://github.com/weld/weld.github.io/issues/23 for this, [~mkouba] should you look at this please? If not added we should prepare short description as eg. first 150 characters of the page content, but we need glitch 1 to be resolved for this not to take common stuff into the description of each page ;-)	1	1	https://issues.jboss.org/browse/ORG-2763
13520	ORG-2679	[~lvlcek] is it you that's working on this? If so, can you assign it to yourself. Otherwise, if you know who's working on it, can you assign to them?	1	1	https://issues.jboss.org/browse/ORG-2679
13521	ORG-2679	[~unibrew] Who should review this? Can you chase them to get it done?	1	1	https://issues.jboss.org/browse/ORG-2679
13522	ORG-2644	[~newtonm] Can you set the release on this? Also, should this be a business requirement?	1	0	https://issues.jboss.org/browse/ORG-2644
13523	ORG-2644	[~unibrew] is it you that's working on this? If so, can you assign it to yourself. Otherwise, if you know who's working on it, can you assign to them?	0	0	https://issues.jboss.org/browse/ORG-2644
13524	ORG-2632	Burr, isn't https://repository.jboss.org/nexus/#nexus-search good enough for your use case?	1	0	https://issues.jboss.org/browse/ORG-2632
13525	ORG-2544	Hi, both accounts has been deleted. Should you use help@jboss.org to report this kind of problems next time please? We use this jira project for development related tasks, not common short term operational issues. Thanks.	1	1	https://issues.jboss.org/browse/ORG-2544
13526	ORG-2335	Can you explain what you mean by upgrading Zurp in Magnolia? I do not think it was ever used there. [~unibrew] might know more though.	1	1	https://issues.jboss.org/browse/ORG-2335
13527	ORG-2251	The approved product code is "unifiedpush" Can we go ahead and create the product forum? https://developer.jboss.org/<lang>/products/unifiedpush	1	1	https://issues.jboss.org/browse/ORG-2251
13528	ORG-2231	Please review: http://planet-jbossorgdev.rhcloud.com/ * Title link points to planet's blog post page * On compact view title link expands the content * When blog is already expanded then title link works as standard link * Next to Permanent Link is Original Blog link Let me know if it's OK. Thanks.	1	1	https://issues.jboss.org/browse/ORG-2231
13529	ORG-2216	[~pmuir] [~velias] based on analysis above it seems that it's possible to construct safely github and facebook links. Google and Linkedin is problematic. One option how to handle google and linkedin issue could be to pre-fill the field and let user to change it via jive UI if generated URL is wrong. Second option is to skip google and linkedin. WDYT?	1	1	https://issues.jboss.org/browse/ORG-2216
13530	ORG-2214	[~velias] can I also have the same job run against dcpbeta? Will those creds work?	1	1	https://issues.jboss.org/browse/ORG-2214
13531	ORG-2194	Note that you could reconfigure the headers for this rendering path to not need to check for a "modified since" operation, if those resource names increment monotonically at each change? What I mean is that assuming that when you update your avatar picture it changes from "23.png" to "24.png" you can set these to be cached for 10 years at client side. Worth checking how the avatar thing works, but I expect this to be the case as it's a common requirement nowadays to deliver speedy webpages ;-)	0	0	https://issues.jboss.org/browse/ORG-2194
13532	ORG-2180	Thanks for letting us now. Where could we expect that in production?	1	1	https://issues.jboss.org/browse/ORG-2180
13533	ORG-2173	For public social providers like twitter, linkedin, facebook and github it makes sense to set default privacy to everyone. However for google I would keep default value "yourself". WDYT?	1	1	https://issues.jboss.org/browse/ORG-2173
13534	ORG-2173	How is google plus different?	1	1	https://issues.jboss.org/browse/ORG-2173
13535	ORG-2161	Sensitive user data like emails and other ids (github id, jbossorg id, ...) are available at http://dcp.jboss.org/v1/rest/contributor/ but requires authorization (currently DCP admin only). May be we can expose this data to other authorized users once we implement more fine grained roles in Searchisko (cc: [~velias]). What is your specific use case? May be we can find a different solution and you do not have to wait for new version of DCP deployment.	1	0	https://issues.jboss.org/browse/ORG-2161
13536	ORG-2156	Implemented in sso plugin 3.1.3. See https://community-dev.jboss.org/edit-social-accounts!added.jspa [~james.cobb] [~cheyenneweaver] Could you please add Red Hat icon to the social accounts sprite https://static.jboss.org/images/jive/social-accounts-sprite.png ? and then update the https://static.jboss.org/css/jive/jbossdeveloper.css (class .social-account-logo-RedHatInternalProvider). You can force Jive to reload the css/img by increasing number in Jive's sytem property "jbossorg.themelocation" via https://community-dev.jboss.org/admin/system-properties.jsp . Thanks.	1	1	https://issues.jboss.org/browse/ORG-2156
13537	ORG-2156	[~lkrzyzanek] Where are we using this sprite? I'm seeing something different on the SSO page.	1	1	https://issues.jboss.org/browse/ORG-2156
13538	ORG-2141	Do I need access to dcpbeta-searchisko to update this? I know that it is being parse from a JSON, but I am not sure where to put in the information in order to have it added to the Buzz section.	0	0	https://issues.jboss.org/browse/ORG-2141
13539	ORG-2052	Hmm, maybe time to engage linkedin? I can start a thread with them.	1	1	https://issues.jboss.org/browse/ORG-2052
13540	ORG-2050	Hi, will you, please, let me know in what repository should the artifacts from Neo4j be accessible? I can create the proxy, but it would most likely not help you, because you would need to add the repository to your pom.xml.	1	1	https://issues.jboss.org/browse/ORG-2050
13541	ORG-2026	Hi [~gastaldi], it is not problem to add new provider into DCP. We have to clear out exactly data structure you plan to push into DCP to be able to configure provider appropriately. So few questions: * author name - which will be in this field? Full name of person (one or more)? Are you able to push email address, github username or jboss.org username there also, so DCP can correctly normalize against contributor profiles (as normalization based on full name is not so simple). * license - what is this? only textual info about license used? Do you want to be part of fulltext search data for addons or not? * repository url - what is this? Is it URL to some HTML page with addon description and download, or direct link to the some jar file or so? * description - is it plain text or contains some markdown or html formatting? I also expect you will write your own code to push data for addons into DCP. How do you plan to use these data? Some search on forge site?	1	1	https://issues.jboss.org/browse/ORG-2026
13542	ORG-2026	Vlastimil, About the author name, is there an existing model for us to reuse? Like, some sort of key that could be used in here that links to the github/jira/jboss.org username? Thanks	1	1	https://issues.jboss.org/browse/ORG-2026

#	Requirement	Questions	Answered	Successfully Answered	URL
13543	ORG-2026	Here are the attributes comments: Addon Info: - author name: I think we should store the github user name in here? Or perhaps a key? How would you suggest? - description: Markdown and/or HTML formatting should be available - license: Perhaps just the license acronym (EPL, ASL, LGPL, etc) would be interesting to have. Not sure if full text search would be interesting. - repository url: This is a Github URL Documentation Info: - documentation url: A URL pointing to an asciidoc document - content: Asciidoc content for indexing - title - tags	1	1	https://issues.jboss.org/browse/ORG-2026
13544	ORG-2026	I prepared initial configuration of DCP content provider. Expected input format for data is {code} { "sys_title" : "Addon title", "sys_url_view" : "http://github.com/addon/repository", "sys_description" : "Addon description in plain text (or markdown which is nearly plain text)", "sys_content" : "Addon documentation/long description text in Asciidoc format", "sys_license" : "ASL", "sys_url_doc" : "http://some.url/with/documentation", "tags" : ["tag1","tag2"], "author" : "velias", "sys_created" : "2011-04-14T11:32Z", "sys_activity_dates" : ["2011-04-14T11:32Z","2012-11-27T13:55Z","2012-11-27T14:20Z","2012-11-27T14:22Z"] } {code} Where fields contain: * sys_title - Addon name * sys_url_view - URL of Github addon repository * sys_description - Basic addon description in plain text (or markdown which is nearly plain text). We typically restrict this to 400 characters. * sys_content - Addon documentation/long description text in Asciidoc format * sys_license - license acronym (EPL, ASL, LGPL, etc) * sys_url_doc - an URL pointing to an asciidoc document * tags - an array of tags * author - github username of addon author * sys_created - optional - date of Addon creation in ISO format * sys_activity_dates - optional array of dates when some activity around Addon became (eg. created, updated, ...) in ISO format If you agree then I can install provider to DCP testing server and provide you other info about how to push data in and how to use them over search REST API	1	1	https://issues.jboss.org/browse/ORG-2026
13545	ORG-2022	What is the lower security for this ? why is it not the exact same as when I've used my username/password ? (I here assume that the remember me is shown where it will be noticed just as with username/password)	1	0	https://issues.jboss.org/browse/ORG-2022
13546	ORG-2022	Security will be lower if we automatically apply 'remember me' for social login without any explicit user control (without checkbox). On the other hand I never saw website which used Social login with explicit Remember Me control/checkbox by users. We can't use current "Remember me" checkbox as it is too far from social icons, so nobody will know to use it together. We should probably place something like new "Remember me after Social login" checkbox somewhere near/under Social login icons, but I'm really not sure users will understand what it is for as it is not commonly used on web today. [~james.cobb] what do you think about this solution? Or any other idea how to implement this feature?	0	0	https://issues.jboss.org/browse/ORG-2022
13547	ORG-1961	Could you please specify which pages should be modified? I cannot find anything at community.jboss.org. Thanks, Libor	1	1	https://issues.jboss.org/browse/ORG-1961
13548	ORG-1876	Andy, can you please provide more info about curated feeds requirements? Is there anything missing in existing FEED API? http://docs.jbossorg.apiary.io/#feedapi	0	0	https://issues.jboss.org/browse/ORG-1876
13549	ORG-1875	Andy, you mean you want to index iCal [1] file format content? Do you think you can provide a little bit more context about this? Does it mean you want to put an "event" info into DCP or do you want to use it for something else? [1] http://en.wikipedia.org/wiki/ICalendar	0	0	https://issues.jboss.org/browse/ORG-1875
13550	ORG-1818	Could you add me as an administrator?	0	0	https://issues.jboss.org/browse/ORG-1818
13551	ORG-1780	Is there a way I can create forums, or does the .org team need to do this?	1	1	https://issues.jboss.org/browse/ORG-1780
13552	ORG-1745	What would you suggest for expiry time of files stored in project directories? e.g. http://static.jboss.org/example/images/example-banner-1180px.png. For our static.jboss.org/theme/* content, we set 2 days expiry time. Does it seem reasonable for the whole domain ? Obviously the question is regards normal usage of URLs, the FFE is a separate story.	1	1	https://issues.jboss.org/browse/ORG-1745
13553	ORG-1742	I have updated my mirrors section to the following {code} <mirrors> <mirror> <id>jboss-public-repository-group</id> <mirrorOf>*,!jboss-deprecated,!jboss-maven2-brew,!jboss-eap-5</mirrorOf> <name>JBoss.org Public Repository Group</name> <url>https://repository.jboss.org/nexus/content/groups/public/</url> </mirror> </mirrors> {code} However, when I try a mvn clean install I end up with {code} $mvn clean install -pl testsuite/compat/ -DallTests [INFO] Scanning for projects... 13554	ORG-1719	Libor, can this be made visible to the user to whom the profile belongs *and* to admins?	1	1	https://issues.jboss.org/browse/ORG-1719
13555	ORG-1710	Ok, thanks for trying. I wish it would have been a trivial change... Did the issue you got show the same stacks as those ones: https://bugs.eclipse.org/bugs/show_bug.cgi?id=411239 ? Maybe you can add a quick note to this bug report to explain the use-case and symptoms you got so it would help plugins author to fix it.	0	0	https://issues.jboss.org/browse/ORG-1710
13556	ORG-1708	Is there an estimated date where this will be ready/live? Thanks, Catherine	1	1	https://issues.jboss.org/browse/ORG-1708
13557	ORG-1708	Hello, Is this FORUM LIVE & KICKING. Cause when the link https://community.jboss.org/en/soap was tried to access it gave a Page Not Found. Kindly do update us the FORUM link for Red Hat JBoss SOA-P Thanks, Star	1	1	https://issues.jboss.org/browse/ORG-1708
13558	ORG-1661	Hi, I agree with you, the user mechanism currently used on our Nexus is not good and I hope I will be able to fix it this year. Can you, please, explain what is Hibernate CI.	1	1	https://issues.jboss.org/browse/ORG-1661

#	Requirement	Questions	Answered	Successfully Answered	URL
13559	ORG-1661	So then is there a chance of this happening? Or are we just going to have to expose the current one used by all projects outside the firewall?	1	1	https://issues.jboss.org/browse/ORG-1661
13560	ORG-1661	Hi, I do not know, if there is a firewall issue with uploading the artifacts to Nexus. I suggest we try it and learn. Please, give me the list of user names and e-mails, that should be added as Nexus users. The names must differ from jboss.org accounts. I suggest we use some postfix, i.e. ebersole_hibernateCI, or something like that. I will create the accounts. What repository will be the target of your deploys? Then you should be able to test it and if there is a firewall issue, we ask Eng-ops to fix it. I do not have access to network configurations, but I will create the user(s) for you.	1	1	https://issues.jboss.org/browse/ORG-1661
13561	ORG-1591	Or maybe to render outgoing links as plain text for unauthenticated users, or for search bots only? This should be better if spam is added due SEO reasons only.	1	1	https://issues.jboss.org/browse/ORG-1591
13562	ORG-1554	I was able to reproduce the problem with the even-odd color problem, however I can not find any page with a problem with the sorting by date. When I click on the date column, it is ordered properly. Can you, please, point me to it?	1	1	https://issues.jboss.org/browse/ORG-1554
13563	ORG-1540	I noticed that we don't have nofollow's in our outgoing links. That's the main motivation for the spammers - they get higher pagerank. Can we please add rel="nofollow"? ===> ORG-1591	0	0	https://issues.jboss.org/browse/ORG-1540
13564	ORG-1466	How's this: https://www.jboss.org/author/confirmation.html?	1	1	https://issues.jboss.org/browse/ORG-1466
13565	ORG-1446	This feature will be present in DCP (Distributed contribution platform = a new content delivery system we develop. For those with access more information can be found here: https://docspace.corp.redhat.com/community/bu/middleware/jbossorg/dev/dcp). Points from discussion with lvlcek and velias: - DCP will return JSON object with the data - DCP will return either whole list of the projects or information about a specific project based on the query. - at this moment we expect project identifier will be the field you can narrow the list of returned projects. Is there any other field (or property) you would like to filter by? I.e. "active" / "archived" projects. - Magnolia will supply all the data to DCP using the logic, that feeds the project matrix paragraph - it may take a while until DCP is fully implemented. In the meantime it would make sense if I publish a Rest API, that will give you the whole list. This API should be considered a temporary solution.	1	1	https://issues.jboss.org/browse/ORG-1446
13566	ORG-1446	Hi David, could you please prepare the mock JSON of jboss.org/projects for us, till the the DCP is ready?	0	0	https://issues.jboss.org/browse/ORG-1446
13567	ORG-1446	The link you have posted isn't valid any more. Is [README.md|https://github.com/jbossorg/dcp-api/blob/master/documentation/rest-api/README.md] what you mean.	0	0	https://issues.jboss.org/browse/ORG-1446
13568	ORG-1411	Hi Darran, as I know content of JIRA "Summary" field is shown in hover popup when you stay with mouse pointer above issue key for a while. See attached screenshot. Isn't this enough?	1	1	https://issues.jboss.org/browse/ORG-1411
13569	ORG-1408	David, " I would go to Google " -- so why would we want the overview list at all then, when we say the user to go to Google anyway? The main issue is that with our project names asdfhasoid and sudzf98wzr and asn348t6e8rgh no user can guess what they try to do. So we need to help him. -> Short description, always visible. Directly below the project name is space. And then as you say, a longer description via hover.	1	1	https://issues.jboss.org/browse/ORG-1408
13570	ORG-1405	Are we allowed to get the mbox file data? Is there any link?	0	0	https://issues.jboss.org/browse/ORG-1405
13571	ORG-1404	Are we allowed to get the mbox file data? Is there any link?	0	0	https://issues.jboss.org/browse/ORG-1404
13572	ORG-1402	Is there any idea where those two mail lists should fall to in terms of project? Does it make sense to cover it under "JBoss AS7" or does it make sense to create a new project filter value for them (i.e. does it make sense to create a new visual project filter category for them in search.jboss.org)?	1	1	https://issues.jboss.org/browse/ORG-1402
13573	ORG-1402	With cdi-dev we have the same situation as with forge-dev. The mail list contains a lot of JIRA event emails (as of writing there are around 1300 of emails like that). I am suggesting not indexing them for now and ignoring all emails that have author like: _some_name_(JIRA) <jira-events@lists.jboss.org> For example: Pete Muir (JIRA) <jira-events@lists.jboss.org> or Dan Allen (JIRA) <jira-events@lists.jboss.org> Such data is now searchable directly in JIRA and it contains high volume of noise. It will be better integrated into search.jboss.org once we decide to include JIRA data. WDYT? Whatever your decision will be it would be better if it is consistent with https://issues.jboss.org/browse/ORG-1400 (as stated above we have the same problem there).	0	0	https://issues.jboss.org/browse/ORG-1402
13574	ORG-1400	Hi, as of writing the forge-dev list contains around 830 emails from <jira-events@lists.jboss.org>. Typically the mbox 'From:' header value is prefixed with the original (author_name+" "+(JIRA)) like: Jason Porter (JIRA) <jira-events@lists.jboss.org> or Lincoln Baxter III (JIRA) <jira-events@lists.jboss.org> I would suggest ignoring such emails for now. I.e. not indexing them. These seem to be result of some mirroring from JIRA events. This data is now searchable directly in JIRA and it contains high volume of noise. These will be better integrated into search.jboss.org once we decide to include JIRA data. WDYT?	1	1	https://issues.jboss.org/browse/ORG-1400
13575	ORG-1398	Where will this discussion happen?	0	0	https://issues.jboss.org/browse/ORG-1398
13576	ORG-1390	What do you mean by all JBoss Community contributors? Do you mean everyone or a subset?	1	1	https://issues.jboss.org/browse/ORG-1390
13577	ORG-1368	Git supports rsync: http://schacon.github.com/git/git-fetch.html http://schacon.github.com/git/git-push.html I'm also curious why ssh isn't an option. If sftp and scp are open, wouldn't that mean ssh is available?	1	0	https://issues.jboss.org/browse/ORG-1368
13578	ORG-1368	Sadly, the rsync implementation inside git seems to use ssh in background and since our chrooted environment on filemgmt.jboss.org is very limited and has ssh turned off completely, we cannot use it. So, after various tries with services we have and protocols available, we've decided to change strategy with this task. We are planning to set up a very simple service which would receive GitHub's webhook JSON messages from your repos - https://help.github.com/articles/post-receive-hooks/. On receive of such message it would simply update the local checkout on filemgmt.jboss.org and therefore update the site. You won't have to login to filemgmt.jboss.org any more, setting up the webhook is just few clicks and only a one time issue and also setting this configuration up should be doable in fairly short manner. Does this sound good to you?	0	0	https://issues.jboss.org/browse/ORG-1368
13579	ORG-1314	Hi David, did you add styles to the page through a paragraph or through the editor by any chance? Those styles are conflicting with the styles I added to the project stylesheet and need to be removed. If not, there are some mystery breadcrumb styles that I need to hunt down :-) Also, I styled the breadcrumb to have a span inside the div. Is it possible to add that back in? Thanks!!	1	1	https://issues.jboss.org/browse/ORG-1314
13580	ORG-1310	I still don't understand. The gunvor-dev mailing appears to be being used to ask questions about Drools Guvnor, not Guvnor Core. What do you currently use for Guvnor Core?	1	1	https://issues.jboss.org/browse/ORG-1310

#	Requirement	Questions	Answered	Successfully Answered	URL
13581	ORG-1310	Until now projects have used their <project>-dev mailing list for issues related to subprojects too. For example the hibernate-dev list contains emails about Hibernate Search in addition to Hibernate Core: http://lists.jboss.org/pipermail/hibernate-dev/2012-January/thread.html Given that there is no traffic on the guvnor-dev list anyway would it be possible to use this also for Guvnor SOA emails to keep things consistent? If you really want a separate list then we can do it but it makes sense to keep things consistent where possible and it also prevents a proliferation of mailing lists as more and more subprojects are created.	1	1	https://issues.jboss.org/browse/ORG-1310
13582	ORG-1302	Could you please make me an administrator of the group? username: dan.j.allen	1	1	https://issues.jboss.org/browse/ORG-1302
13583	ORG-1300	Could you please make me an administrator of the group? username: dan.j.allen	1	1	https://issues.jboss.org/browse/ORG-1300
13584	ORG-1258	Hi Linconl, please propose a blog and I'll approve it. I see in propositions only "OCPsoft" feed. Is it that feed which you mean? Probably you'd like to have separate group "Forg" right? Thanks, Libor	1	1	https://issues.jboss.org/browse/ORG-1258
13585	ORG-1165	Can you, please, specify what exactly do you want to be displayed on that page? I am not sure whether you want to be able to add a paragraph with the twitter accounts of a single project or the list of all the projects in SBS and their twitter user names. If it is the list, we will need to add some properties to SBS groups and users, because there are more groups than projects (they are used for other purposes) and we also might need to specify who is "core developer" and who is not (unless we consider all the developer from SBS to be core developers).	1	1	https://issues.jboss.org/browse/ORG-1165
13586	ORG-1165	OK, so I suggest following solution: I will modify the Project team paragraph. At this moment it is able to display just a photo of the developer, e-mail and it marks a leader of the project. I will add check boxes for other possible contact informations, (such as Twitter, Facebook....). I will also ask Libor to add G+ to SBS, so we can add it there too. That way each project could set what they want to display. Note: If the specific user sets its privacy settings not to display the specific field, it will not be displayed in the paragraph, but it will be displayed for other people from the team, that have the information available to the public. Is this solution suitable for you?	1	1	https://issues.jboss.org/browse/ORG-1165
13587	ORG-1165	And is there a way to aggregate all the twitter ids? Or will I need to search through each person's profile? I would like to follow all JBoss'ers :-)	1	0	https://issues.jboss.org/browse/ORG-1165
13588	ORG-1165	I might have not been entirely clean, so I am adding two screenshots. The first one has the latest project team paragraph (twice: once with the user icon displayed and the second also without it). The second screenshot shows the settings dialogue. What I suggest is to add check boxes for the contact types (such as G+, Twitter etc.). If the group is checked, in the paragraph the links for checked contacts will be displayed too. In case of the displayed user icon (I will refer it as user picture to avoid an ambiquity), I think the best solution will be the clickable icons of the services under the name. In case of the user picture, that is switched off, the best way would be the service icons on the same line as the name of the developer (after the project leader's star, if it is present). Burr, will you, please, confirm, this solution will help you to achieve what you wanted to?	0	0	https://issues.jboss.org/browse/ORG-1165
13589	ORG-1156	Hey David, I've added a silver star for admins and put the gold star on the lead Can we just add text inside the span that either says "lead" or "admin"? Lead Admin (I've attached a screenshot of what I mean) Thanks, cheyenne	1	1	https://issues.jboss.org/browse/ORG-1156
13590	ORG-1127	The decision to only include the latest version of docs in Confluence was because we wanted to focus people's attention on editing the latest version in the quickest possible way whilst providing a bridge to DocBook XML. i.e. it wasn't a requirement to allow easy editing of prior doc versions. There were also concerns about performance given the large number of projects we have. However since we have a clustered setup that works well and maintaining multiple doc versions in Confluence appears to be the de-facto standard it looks like a good solution. If we can resolve the copy space issue and give some better hierarchical structure to the spaces then I don't see why we shouldn't do this. We'd still of course improve the DocBook XML export process as much as possible for releases. Would projects still have a need to produce the HTML and single-HTML formats of docs if we went ahead with this (given that Confluence is already viewed in a web browser), or only the PDF format?	1	1	https://issues.jboss.org/browse/ORG-1127
13591	ORG-1121	Are you interested in having same content in a couple of places or just a paragraph of same type to edit afterwards?	0	0	https://issues.jboss.org/browse/ORG-1121
13592	ORG-1097	One workaround for this issue is to use WebDAV to mount confluence data as files on your computer, and then use standard local tools to find and replace some texts in these files. Related documentation is here: http://confluence.atlassian.com/display/DOC/Configuring+a+WebDAV+client+for+Confluence#ConfiguringaWebDAVclientforConfluence-UsingaWebDAVClienttoWorkwithPages Root URL of Confluence WebDAV access is here: https://docs.jboss.org/author/plugins/servlet/confluence/default/Global/	0	0	https://issues.jboss.org/browse/ORG-1097
13593	ORG-1096	Hmm, that is a very unintuitive place to put it. Is it possible to have it where docbook puts it (foot of content area)?	0	0	https://issues.jboss.org/browse/ORG-1096
13594	ORG-1096	Would it be possible for you to share the code of the macro? This would be really great!	0	0	https://issues.jboss.org/browse/ORG-1096
13595	ORG-1085	Do you possibly have a list of whose blogs should we include in this syndicated filtered copy? I thought that as a source we could simply use a filtered main JBoss Community feed (http://planet.jboss.org/view/feed.seam?name=all&from=0). Basically, everyone should be aggregated in this feed anyway already.	1	1	https://issues.jboss.org/browse/ORG-1085
13596	ORG-1082	Is there already a URL to programmatically download the transformed DocBook XML from Confluence? If so, I could very easily write a simple script to use that until this Maven plugin was available.	1	1	https://issues.jboss.org/browse/ORG-1082
13597	ORG-1075	We need to talk about how you propose to integrate with SBS, i.e. what purpose does the integration serve. Given our recent emails it appears you want to implement a different way to create project pages which isn't a valid idea. All projects should be using Magnolia.	0	0	https://issues.jboss.org/browse/ORG-1075
13598	ORG-1075	Can we please enable the REST API for SBS? There are tons of use cases where we could use this data to help streamline processes in our projects. One idea is to get builds to generate blog entries. Another use case is to be able to get lists of JBoss user profiles to link them to identities in other places. The thing about a REST API is that you just never know what great mashups can occur, both inside the project teams and outside, that lead to innovation and great participation.	0	0	https://issues.jboss.org/browse/ORG-1075
13599	ORG-1071	How to add button to site (not only on search result): http://www.google.com/webmasters/+1/button/index.html#utm_source=webmastercentral&utm_medium=blog&utm_campaign=announcement	0	0	https://issues.jboss.org/browse/ORG-1071

#	Requirement	Questions	Answered	Successfully Answered	URL
13600	ORG-1060	Some questions: # Do I always have to approve content that I wrote? # Is there any way to only display the latest approved content for a given site? (Except for the author of the unapproved content who should probably see their content with the "unapproved" header) Just noting it as "unapproved" doesn't really prevent misinformation from being added. # If we put this in, can we automatically approve everything that was previously written so we don't have to click a zillion approve links?	1	1	https://issues.jboss.org/browse/ORG-1060
13601	ORG-1060	I installed new version to the staging server with some improvements. ad 1 - it's not necessary to approve content written by user with approve permissions ad 3 - I added "Approve all" link to the screen showing all unapproved pages for space ad 2 - what is shown is selected by Confluence internals and I have no chance to change it. I highlighted "unapproved" warning message more. I think this message warns readers that content is not approved so may contain misinformations, and they can to show latest approved content. It's probably best what we can do. We can change wording of "unapproved" warning in some way if you think.	1	1	https://issues.jboss.org/browse/ORG-1060
13602	ORG-1060	Okay, well that's better than nothing. Can we get a special notification for unapproved changes? Or do I just have to watch the space manually?	1	1	https://issues.jboss.org/browse/ORG-1060
13603	ORG-1052	The purpose of the documentation is to describe the final releases so why would you need to include mockups? If you're trying to describe a screen layout then a screenshot would be better. By standardising on using the Gliffy Diagram plugin consistently across the docs it makes it much easier to gain economies of scale and present consistent, high-quality docs to users.	1	1	https://issues.jboss.org/browse/ORG-1052
13604	ORG-1038	Should we be able to embed a metadata reference in a link? When I use a wiki text such as {noformat} [foo {space-metadata-from:bar}|http://...]{noformat} the next time I edit the page the link will be turned into plain text - e.g. {noformat}\[foo {space-metadata-from:bar}|http://...\]{noformat}	0	0	https://issues.jboss.org/browse/ORG-1038
13605	ORG-1005	Hi Laura, should you look this please because related to Authoring Guide? But we are constrained by Confluence and Scroll export plugin features here.	0	0	https://issues.jboss.org/browse/ORG-1005
13606	ORG-1005	I'm not sure we want to add this functionality. I'd say rather than relying on formatting for this, the better way is to make sure the element that you're referring to is clearly distinguished by your language. Would a decent compromise be to add line numbers to the 'code' blocks, or request that the ability to call out specific lines be added to a) Confluence and b) the Scroll plugin? We can use callouts in <programlisting> to identify particular code blocks (shown in the Seam Reference Guide, off the top of my head) but I don't believe Confluence or Scroll can cope with this.	0	0	https://issues.jboss.org/browse/ORG-1005
13607	ORG-980	I expect that we want to have option to add new sponsor to the default list as well, right? Should the user be able to edit each description of sponsor, even those which are available by default ? I guess, they will often prefer just to have logo without the text.	0	0	https://issues.jboss.org/browse/ORG-980
13608	ORG-980	ok, so, what are the defaults? Could some native English person fill them in on http://10.16.93.207:8080/author/rysieksParagraphsTestPage.html ?	0	0	https://issues.jboss.org/browse/ORG-980
13609	ORG-980	Yeah, I was thinking all the text descriptions would be editable. In fact, I just made a lot of the text up and your right that some people will want a logo-only option, so we might want to leave the text off by default(?) So perhaps we could add an option to the dialog that asks if you want to add text, and the class could change depending on whether they do or not: class="sponsors" for no-text class="sponsors-text" for logos+text Does that make sense? Thanks!	1	1	https://issues.jboss.org/browse/ORG-980
13610	ORG-980	Or we could add default text... perhaps we could just paraphrase Drools, Portal, and Microcontainer: JProfiler - EJ-Technologies has provided the ___ project JProfiler licenses for free. NexB - nexB is the preferred Eclipse development partner of the ___ project. IntelliJ - JetBrains has donated an IntelliJ license for use on the open source ___ project. Structure101 - Structure 101 is a valued sponsor of the ___ project. MagicDraw - A Special thanks to Magicdraw for supporting ___ project. (could we auto-fill the name of the project in the blank, or should I try and write it w/o mentioning the project?)	1	1	https://issues.jboss.org/browse/ORG-980
13611	ORG-980	I finished coding, quite a bit of work. Anyway, it's available here http://10.16.93.207:8080/author/sponsorsTest.html for testing. Please check if everything works as you expected. Also for default banners I used links to main pages of the sponsors, that's ok? Or should I use links to the product itself?	0	0	https://issues.jboss.org/browse/ORG-980
13612	ORG-978	If it should always appear on the project page template then, I'll just add it as a part of the template not as a paragraph. The question is: where should it appear?	1	1	https://issues.jboss.org/browse/ORG-978
13613	ORG-965	is the import/parse code possible to run outside of Confluence some how to test the import? I'm getting the not so useful error: Error during DocBook file import: Error attempting to parse XML file (href='extension_reference.xml').	1	1	https://issues.jboss.org/browse/ORG-965
13614	ORG-920	Does this GPL have a version number appended as well, like ASL v2 or LGPL v2.1 ?	1	1	https://issues.jboss.org/browse/ORG-920
13615	ORG-920	Okay, I've created the badge for GPL which is now in staging: http://10.16.93.207:8080/author/cookbook/demo.html? (also see screenshot) Rysiek, we'll need to add it to the paragraph dialog with the option for adding the version number in text like the jsr's. <li class="license-gpl">General Public License version 2.0 (GPL v2.0)2.0 If we're adding the option to change the version number, what should we link to? http://www.gnu.org/licenses/old-licenses/gpl-2.0.html ? Thanks! ~c	1	1	https://issues.jboss.org/browse/ORG-920
13616	ORG-920	Do you think other projects might need a different version number in the near future? Cheers, Cheyenne	1	1	https://issues.jboss.org/browse/ORG-920
13617	ORG-869	The reason AFAIK is because of using P tag for each single line and not using BR tag for break line. More info: http://wiki.moxiecode.com/index.php/TinyMCE:FAQ#TinyMCE_produce_P_elements_on_enter.2Freturn_instead_of_BR_elements.3F	1	1	https://issues.jboss.org/browse/ORG-869
13618	ORG-869	It sounds good to me. I've modified the css in staging. Libor, can we strip the p tags?	0	0	https://issues.jboss.org/browse/ORG-869
13619	ORG-869	I've tweaked the CSS in staging. Shall we strip the p tags?	0	0	https://issues.jboss.org/browse/ORG-869
13620	ORG-869	I have few concerns: 1. RTE editor still display paragraph with 0 margins - it means that it's not WYSIWYG because then paragraphs are rendered with margin and can be confusing for users. 2. Existing documents usually have empty line between paragraphs. Now margin is bigger and rendered document looks differently. For example compare: http://goomba.qa.atl2.redhat.com/wiki/RiftSawInstructionsforUploadingtodocsjbossorganddownloadsjbossorg and http://community.jboss.org/wiki/RiftSawInstructionsforUploadingtodocsjbossorganddownloadsjbossorg 3. Don't know why but doesn't work in Chrome. Firefox is OK	1	1	https://issues.jboss.org/browse/ORG-869

#	Requirement	Questions	Answered	Successfully Answered	URL
13621	ORG-846	We currently have these styles used by various projects: https://www.jboss.org/netty/testimonials Is this something needed for Magnolia or SBS?	0	0	https://issues.jboss.org/browse/ORG-846
13622	ORG-846	How's that formatting supposed to work? The PDF would have to be rewritten on our side with your template? Because I don't think we could require users to use it while writing the success story? It's additional work for them.	1	1	https://issues.jboss.org/browse/ORG-846
13623	ORG-834	From an email thread on the core. I had said: "I actually used WordPress, not Movable Type. So I have both Blogspot and WordPress formatted dumps, but neither can be imported into SBS. As for Movable Type, do you know of any freely available, hosted MT service I could use? The last thing I'm going to do is download and install Movable Type (inc a RDBMS, etc) just to convert a blog. :-)"	1	0	https://issues.jboss.org/browse/ORG-834
13624	ORG-834	If I send you the dump that I have generated, could you try with this?	1	0	https://issues.jboss.org/browse/ORG-834
13625	ORG-830	who should i ask if i want hibernate repo be in the fisheye?	1	1	https://issues.jboss.org/browse/ORG-830
13626	ORG-811	Mark, Is there somewhere I can drill down into downloads.jboss.org to style an example? Not Found for me here: http://downloads.jboss.org/docbook/ Thanks!	1	1	https://issues.jboss.org/browse/ORG-811
13627	ORG-811	Thanks Mark. So assuming that the styles suffice, who would I ping to get this implemented?	0	0	https://issues.jboss.org/browse/ORG-811
13628	ORG-811	Here's a taste of what we do for JBoss Tools: Unstyled Apache default (dir browsing enabled): http://download.jboss.org/jbosstools/builds/staging/ http://download.jboss.org/jbosstools/updates/nightly/ Custom-assembled HTML pages (to help users know what's what): http://download.jboss.org/jbosstools/updates/ http://download.jboss.org/jbosstools/builds/ http://download.jboss.org/jbosstools/updates/helios/ I'm good with the Apache default changing to something prettier, but I'd still like the ability to override (or supplement?) that with our own custom content to explain what is in a directory, and where people should be clicking to find content. Is that possible? Eg., if I drop a README.txt in a folder, you could pick that up and embed it into your templated HTML? Or if there's an index.html it would replace your generated stuff?	1	1	https://issues.jboss.org/browse/ORG-811
13629	ORG-769	I see SteamCannon in the Projects menu on jboss.org but I don't see it in the projects menu on planet.jboss.org. Is that a separate system, and do I need to open a separate issue to get it to show up there?	1	1	https://issues.jboss.org/browse/ORG-769
13630	ORG-745	Added to the css which can be found here: http://10.16.93.207:8080/exampleproj-rightcol.html Rysiek can we add this to the paragraph? Thanks!	1	1	https://issues.jboss.org/browse/ORG-745
13631	ORG-704	Where are we with these? Do have some place we can dump logs inside the Red Hat Infrastructure? 3) If we have it hosted within JBoss / Red Hat, we should be able to pull this all in and search it easily (I would think). There's still value in being able to go back and read logs IMO, if there wasn't a meeting, but some good discussion happened, it's nice to see what actually happened. 4) May be nice, but wouldn't the freenode web interface work for this?	0	0	https://issues.jboss.org/browse/ORG-704
13632	ORG-692	Hi Mark Yep, I can confirm PressGang is sitting on the projects matrix page. Thanks for that. I think when we were first discussing PressGang I seem to remember we also talked about making a Documentation Support category (or something similar) to lump things like PressGang, jbossorg-jdocbook-style, maven-jdocbook-plugin, and the other related items. Just to get them out of the "Other" category. Would that be possible? For Point 2 in this ticket Description, I can't see a listing in the https://svn.jboss.org/repos/ listing for PressGang. I also note it is really out of alphabetical order (as an aside).	0	0	https://issues.jboss.org/browse/ORG-692
13633	ORG-669	Can not someone quickly add the anchor?	1	1	https://issues.jboss.org/browse/ORG-669
13634	ORG-639	Hi Marek, I think it will be better to just move BoxGrinder node from stormgrind/projects/boxgrinder to the root. It should save you some time in moving the content but still some links or header image etc. might break and may need correction. Do you agree? or you prefer a clean project site? Cheers	1	1	https://issues.jboss.org/browse/ORG-639
13635	ORG-639	Is there a chance to copy that instead of move? I would prefer to polish (sic!) the new project before release and then remove unnecessary files from StormGrind. But yah, it'll save a lot of time!	1	1	https://issues.jboss.org/browse/ORG-639
13636	ORG-639	In case of SBS, I think we should do the same to have a clear mapping between Magnolia and SBS. I'd like to block the idea of (creating|renaming StormGrind to) Cloud for now. Btw. what's the point of moving BoxGrinder out of StormGrind if still you find it appropriate to place it inside same subspace if it's named Cloud ?	1	1	https://issues.jboss.org/browse/ORG-639
13637	ORG-620	Can we see what it's going to look like? Can we participate by giving feedback on the design and layout?	1	1	https://issues.jboss.org/browse/ORG-620
13638	ORG-620	First, thank you for sharing the screenshot and answering my questions. I have some feedback regarding the screenshot. * [statement] I agree that the blog posts now appear on the left side when visiting the root URL of planet. We want to present users with the news first, then a list of sources as a second click. This design accomplishes that goal. * [feature request] The posts appear to be truncated to only a short summary. All other planet feeds I know of show the whole post. Can we show the whole post? If we are concerned it's too much scrolling, could we use an expandable block using jQuery as an alternative approach? That should expand w/o reloading the page...it just reveals the hidden content. * [request for clarification] The posts are still missing avatars (profile pictures) for each author. Do you plan on hooking those up with the identities on jboss.org so that the picture is shown? I understand if that doesn't show up in staging, but I would like to know ahead of time if pictures need to be fixed for the most regular authors before we go live. * [feature request] Formatting code has been a problem in the past. Code is a very central part of many of the posts that we write. How will code be handled? Will it show up abnormally, or is there some way we can get a consistent rendering?	1	1	https://issues.jboss.org/browse/ORG-620
13639	ORG-613	I sent a communication to the team, that created the tool. There are two important questions: is it legal, to replicate their functionality? And second question is how to generate the parameters, so we can use it some clever way.	0	0	https://issues.jboss.org/browse/ORG-613
13640	ORG-606	is this applied to the JBoss Website running currently ?	1	1	https://issues.jboss.org/browse/ORG-606
13641	ORG-601	Okay, I added and to projectContent.jsp but migration.jboss.org isn't showing the update. Can you push this change so I can check to see it's working before we schedule a merge? Also, is there another template I need to add these to for the full-width and right column layouts, or will this template take care of all 4 layouts? Thanks, C	0	0	https://issues.jboss.org/browse/ORG-601
13642	ORG-584	I think it is better, if it is not extra paragraph, because it applies to all pages without modifications. However I might following: - hide it on all home pages, so it is not necessary to do this by CSS - add a checkbox into property settings of our community page templates. They would be on by default and if unchecked, the breadcrumb would disappear. What do you think?	1	1	https://issues.jboss.org/browse/ORG-584

#	Requirement	Questions	Answered	Successfully Answered	URL
13643	ORG-577	Regarding to point 2. When you receive another type of feed (e.g. ATOM) then you receive also missing details. Just add "?feedType=ATOM" at the end of URL. Example: http://community.jboss.org/blogs/feeds/posts?feedType=ATOM	0	0	https://issues.jboss.org/browse/ORG-577
13644	ORG-575	So this would cover all SBS pages, not just blogs? cool. How can I have access to this? My google ID is manik.surtani@gmail.com	1	1	https://issues.jboss.org/browse/ORG-575
13645	ORG-575	Sounds perfect. So how do I do this? :)	1	1	https://issues.jboss.org/browse/ORG-575
13646	ORG-575	How would a project such as Infinispan configure the ${gacode} tracker ID variable? Via some admin interface on SBS?	1	1	https://issues.jboss.org/browse/ORG-575
13647	ORG-574	I checked feedburner features and I didn't find any big advantage against Google Analytics (since we have separated stats for each project). Manik, Is there something special that we could use?	0	0	https://issues.jboss.org/browse/ORG-574
13648	ORG-573	Can this not be extended to handle any Google Gadget? See the Google Gadget API: http://code.google.com/apis/gadgets/ so that this will cover not just the re-tweeting gadget but anything else written for Blogger/iGoogle/etc.	1	1	https://issues.jboss.org/browse/ORG-573
13649	ORG-562	Hey David, so what I did was to switch the position of the default tile to be at the very top of the sprite, so that whenever the class that calls a specific project that doesn't have an icon yet (because the project has not been branded yet), it will always default to this very top tile of the sprite which will show the default bullet. This way you don't have to mess with trying to find out if the class already exists or not. We don't have to add or change any html either. You can see a test I set up to show this working here: http://10.16.93.207:8080/author/projects1/matrix.html? I added a class in the css to correctly call the Application Server 7 icon for the corresponding node; .jbossas_icon_16x I also added a version of a hypothetical new project at the bottom there called "SomeNewProject" where you can see the default bullet showing up despite not being called by the class .blank_icon_16x Look good? Cheers, cheyenne	1	1	https://issues.jboss.org/browse/ORG-562
13650	ORG-537	The permanent link to your article (http://community.jboss.org/docs/DOC-15107) gets replaced in the address bar with the Human Friendly URL: http://community.jboss.org/wiki/HowIsArquillianPronounced This capitalizes the first letters of all words which you say is much more readable and fits in the spirit of wiki links. So what exactly is the issue?	0	0	https://issues.jboss.org/browse/ORG-537
13651	ORG-537	Please can you start again and explain what it is you want, I'm very confused :)	0	0	https://issues.jboss.org/browse/ORG-537
13652	ORG-537	Sure thing. I believe that users expect words in a friendly URL to be capitalized. This makes it easier on the eyes to read. If I create a document with the name "A test document", the resulting URL should be: https://community.jboss.org/wiki/ATestDocument This is consistent with how seamframework.org (and many other sites) create friendly URLs. Examples of what looks normal: http://seamframework.org/Community/15GotchasInSeam http://seamframework.org/Community/PostingAboutSeam3 The URL should be the same regardless of what capitalization I use in the document title. For instance, if I create a document with the name "a Test document", the resulting URL should still be: https://community.jboss.org/wiki/ATestDocument This works by capitalizing all words, removing non-alphanum characters (spaces, etc), then appending it to https://community.jboss.org/wiki/ Make sense?	0	0	https://issues.jboss.org/browse/ORG-537
13653	ORG-524	>> Manik, if you seriously haven't been 'able' to use the dropdown then I think we have bigger problems ;) Well, lets put it this way: with 50 or so *unsorted* entries, locating the one I need would require reading through almost each of them till I find the one I want (Infinispan ends up somewhere in the last 2/3rds of the list). It's quicker to search on *all spaces* and then look through the unnecessarily excessive search results for the one I want. Hence I never use the drop down. :) >> I know little issues like this can be frustrating but please try to report them accurately as it'll help us to prioritise things accordingly. In this case the dropdown is usable but not optimized for rapid searching. If you remember the location of your project in the list then you can find it in a few seconds. What's inaccurate about the report? I detail how I get to the menu in question, I explain which drop down in which screen is an issue, and I explain that the issue is that this list is not sorted. And I include a screen shot. Do you want a patch as well? ;) >> As Libor says I do think we can order this alphabetically though so we can improve it. This is *precisely* what I have asked for (see title of this JIRA).	1	1	https://issues.jboss.org/browse/ORG-524
13654	ORG-524	The fact that you say the dropdown is unusable is inaccurate as you can use it. It's just not as easy to use as it could be. You're using the word 'unusable' in a subjective way rather than an objective way which is why we're having this conversation. For example there is no way to differentiate this issue from one where the dropdown 'actually' became unusable because it didn't render. In its current state locating the entry you want simply means remembering where it's ordered in the list of projects. Once you've done this once then it takes about 3 seconds to locate again every time. Can you visually filter the search results to exclude the non-Infinispan related items in less than 3 seconds?	0	0	https://issues.jboss.org/browse/ORG-524
13655	ORG-524	You've woken up the pedant in me. :) >> The fact that you say the dropdown is unusable is inaccurate as you can use it. It's just not as easy to use as it could be. From http://en.wikipedia.org/wiki/Usability : "... usability is the study of the ease with which people can employ a particular tool or other human-made object in order to achieve a particular goal ..." >> In its current state locating the entry you want simply means remembering where it's ordered in the list of projects. Once you've done this once then it takes about 3 seconds to locate again every time. Can you visually filter the search results to exclude the non-Infinispan related items in less than 3 seconds? No. On my browser the viewport only displays a fraction of the complete list. And again my browser doesn't render scrollbars to indicate how much further there is to go to the end of the list (see screenshot), so I end up having to scroll one entry at a time. And keyboard shortcuts (pressing "I") does not scroll to the project in question (for whatever reason), and not even anywhere close. Maybe this is an OS/Browser combination thing (see the "Environment" field that I have filled out).	1	1	https://issues.jboss.org/browse/ORG-524
13656	ORG-524	Hi Manik, in Firefox it works perfectly. See the screenshot. Combobox is visible with scroolbar. Also typing letters works as expected. I tried type "inf" and it jumped to Infinispan. I also tried that behavior on final version of Google Chrome on Fedora12 and it works also perfectly - same like in Firefox. What version of Chrome do you use? Thanks.	1	1	https://issues.jboss.org/browse/ORG-524
13657	ORG-524	Have they been sorted alphabetically? It still seems the same (just checked)...	1	1	https://issues.jboss.org/browse/ORG-524
13658	ORG-517	Hi Libor, http://goomba.qa.atl2.redhat.com/en/hibernate I've updated the css to pull the search bar up into the proj_nav and swap out the search button. I've placed the dogear in jive-userbar, but it's not tall enough to show the entire dogear, so I'm going to need to add two nested divs inside jive-userbar to allow it to sit above the content, like so: (see screenshot also) Is this possible?	1	1	https://issues.jboss.org/browse/ORG-517
13659	ORG-494	It might work without too much complexity if you can just redirect from one page to another. So you would change the title of the page, but create a new page with the old title which redirects to the new title. The problem with the current system is that people using external systems are linking to the URL of the page title because this is the URL displayed. This URL breaks every time the title of the page changes. The unique DOC-XXXX links only work within SBS, but links coming in from external systems are easily broken.	1	1	https://issues.jboss.org/browse/ORG-494

#	Requirement	Questions	Answered	Successfully Answered	URL
13660	ORG-493	Could you share the numbers or show me where I can find them? (I believe you, just curious.) Also, I still believe a fluid layout would be an appropriate solution. It would allow users at any resolution to view the documentation at their preferred scale. A third option, which I did not present in the initial issue, would be to enable a user-setting to choose resolution. But, in reality, a fluid layout solves most of the issues.	1	1	https://issues.jboss.org/browse/ORG-493
13661	ORG-493	Is there a way to drill down and see what those 11.48% of users who's resolution is 1024x768 are doing on the site? I'd be surprised if they are active members of the community.	1	1	https://issues.jboss.org/browse/ORG-493
13662	ORG-485	Can we make the dialog change depending on the permissions of the user? Editable by the sysadmin, uneditable for the users.	1	1	https://issues.jboss.org/browse/ORG-485
13663	ORG-485	Mark: Sure thing, I'll hold off. Who's making the final approval?	1	1	https://issues.jboss.org/browse/ORG-485
13664	ORG-485	Following my call with the TDMs we agree that it doesn't make sense to place this widget on all project pages. Given the wide range of opinions people have on this matter I think we would be better off by leaving the title look&feel as it is so that we can place it anywhere on the page. Is it possible to modify the CSS for the dogear graphic so that it literally' overhangs over any other image placed there, or would that look weird?	1	1	https://issues.jboss.org/browse/ORG-485
13665	ORG-485	Rysiek, what I've done is add the html into a text and image paragraph at the top of the right column. Can we hard code that into the template? http://10.16.93.207:8080/supportedin-test.html?	0	0	https://issues.jboss.org/browse/ORG-485
13666	ORG-469	[~lkrzyzanek] is there any documentation anywhere describing how to enable and/or make use of this feature? Does the solution implemented involve mailman as has been suggested in this comment thread?	1	1	https://issues.jboss.org/browse/ORG-469
13667	ORG-421	Looks like the modifications didn't take. We need to re-position custom.css to overwrite org_common.css Libor, can we make this change in staging? Thanks! -cheyenne	1	1	https://issues.jboss.org/browse/ORG-421
13668	ORG-421	Hi David, I've fixed how CS is handling the sizes and spacing of each h tag which will be visible in our next release (until then see the screenshot I included). If this fix does not end up able to satisfy your needs, would you please move the request for a bulleting system, or FAQ template into another jira? Thanks! -cheyenne	1	1	https://issues.jboss.org/browse/ORG-421
13669	ORG-407	Can we assign this issue to some new release? It was reopened so it was not handled within the 4.1.0 release and probably will be in some future one. I just don't think we should have unresolved tasks in Changelog.	0	0	https://issues.jboss.org/browse/ORG-407
13670	ORG-400	Similar issue from Vicky Kak: I have started getting notifications from various sub groups with subject line starting with [DataSource*, [Installation*, [Security*, [Embedded JBoss Development], [Beginner's Corner], [Performance Tuning] etc.. I never used to get mail notification from these forums before, is there a way to disable email notification from these forums ? With older nukes forums I was subscribed to AS,JCA,TX,JMX,AOP sub groups and things were working fine.	0	0	https://issues.jboss.org/browse/ORG-400
13671	ORG-320	The main issue here is this. What the heck is that symbol all about? It's so cryptic. If it gave any indication of what happens when you click it, then this wouldn't be such an issue. Something like curly brackets: {...}	0	0	https://issues.jboss.org/browse/ORG-320
13672	ORG-297	Take your meds if "JBoss Users" and "JBoss Portal Users" share two first words ;-) Anyway, I know what you mean so I guess we will think about this longer. Still, what other condition can you do in GMail, there are very few options? What could we add to improve this?	0	0	https://issues.jboss.org/browse/ORG-297
13673	ORG-297	ok ok... I was about to write something else. But with this naming schemes it is not so unlikely for the whole prefix be a first part of other one ;) You made me experiment a bit with filters once again. So it looks like emails from lists.jboss.org are now recognized properly to have mailing list id in header and it is easy create proper filter with one click. I'm pretty sure gmail only worked in this way with google groups so I don't know if this is an improvement on gmail or on lists.jboss.org side. So it is nice for things like commit/jira notifications that go thru lists.jboss.org atm. Anyway... I looked a bit into email headers and the magic seems to be: List-Id: JBoss JIRA notifications <jboss-jira.lists.jboss.org> and then "Has the words" filter like "list: "<jboss-jira.lists.jboss.org>"" works perfectly... On the other possibilities - maybe encode more info into sender field? like "John Kowalski <xxx-yyy@communities.jboss.org>"? Other workaround is to setup mailing list channel for each forum :)	0	0	https://issues.jboss.org/browse/ORG-297
13674	ORG-297	Can't a header be added like for example what we have from the mailing lists? e.g. List-Id: Developer Forums discussion archive <jboss-dev-forums.lists.jboss.org>	0	0	https://issues.jboss.org/browse/ORG-297
13675	ORG-297	Sorry if I'm trying to be to smart as my SBS knowledge is minimal... but could this be helpful?: https://community.jivesoftware.com/message/263499#263499	1	1	https://issues.jboss.org/browse/ORG-297
13676	ORG-284	What's our current view on the ohloh link in project nav?	1	1	https://issues.jboss.org/browse/ORG-284
13677	ORG-260	Libor, we also have a parser (based on an antlr grammar) which you could take a look at in Seam - http://anonsvn.jboss.org/repos/seam/branches/community/Seam_2_2/seam-text.g. It will convert from a wiki-esque syntax to html. We also have a reasonable validator for it which is able to identify which character caused the error. Might be useful?	0	0	https://issues.jboss.org/browse/ORG-260
13678	ORG-260	Hi Ondrej, could you please provide more details? Which page did you edit? Did you try Undo button in your browser (Main menu -> Edit -> Undo) ? Thanks.	0	0	https://issues.jboss.org/browse/ORG-260
13679	ORG-247	How about an optional IRC nickname field as well?	1	1	https://issues.jboss.org/browse/ORG-247
13680	ORG-234	Since we have our own plugin for SBS&JIRA integration feel free to create new Enhancement ticket and describe what kind of functionality would you like to have. Thank you. Closing this ticket.	0	0	https://issues.jboss.org/browse/ORG-234
13681	ORG-227	Perfect (almost)! I have enabled this on one of my FAQ pages: http://www.jboss.org/community/wiki/InfinispanTechnicalFAQs But I don't want my Q's to be H1 (too big), so I use H5. But this means the questions are heavily indented in the TOC. Is there any way to tweak this to remove the indenting? Perhaps what we'd need is a separate style for TOC? Also, How can I have the TOC displayed as a numbered list rather than a bulleted one? Thanks Manik	1	1	https://issues.jboss.org/browse/ORG-227

#	Requirement	Questions	Answered	Successfully Answered	URL
13682	ORG-208	After some considerations, there are three possible solutions coming out: 1. One central repository In this case, admin will set the URL of the downloads repository centrally in the module configuration. Common users will use a control with behavior like current "Internal link", i.e. after clicking the button a new window with the repository tree will appear, where user will select the file to download. PROS: easier to develop, centralized = easier to maintain and manage possible problems CONS: only one repository for all projects 2. Separate repository for each paragraph instance There will be two tabs in the paragraph's dialog, in the first tab user will define the URL of the repository, in second tab will add items. The "Add item" control will work the same way as in #1, only the repository tree will be from the repository defined by user. PROS: more flexible (for "independent" projects like Hibernate) CONS: much more complicated development, possible production problems with user-defined repositories 3. Mix of #1 and #2 In the first tab of the paragraph's dialog, user will chose whether to use the repository predefined by admin in module's config, or to use different repository (in which case user has to define its URL). Second tab works the same way as in #2. PROS: flexible enough for "independent" projects, but offers "default" for standard projects CONS: development even more complicated than in #2 (but only a bit), possible production problems with user-defined repositories Mark (& Rysiek?), could you help me to choose the right option? Whether to invest more energy to get flexible solution, or we can last with one central repository? Eventually, we can start with #1 but have #3 as the final goal...? What's the priority & time frame?	1	1	https://issues.jboss.org/browse/ORG-208
13683	ORG-208	Please can we go for the simplest solution for now, i.e. defining the repository's URL in the module configuration. I don't want us to attempt a risky solution given the workload we're currently under.	1	1	https://issues.jboss.org/browse/ORG-208
13684	ORG-204	Putting the date in front of the month is very European. With the month first, you see a natural grouping of when the posts were created. May 05 2009 May 14 2009 Jun 08 2009 Jun 21 2009 I looked at many of the feed sources for our blogs and all of them that I saw had the day (Monday, Tuesday, etc.) One question we should ask, is the time important? Is it that critical that the user knows that a post went out in the morning or afternoon? I could see if we want to prove that we've posted something prior to a competitor to stay in front of say... system outages (zing!). What about this format "Tue May 05 2009 07:21 EDT by Pete Muir" or this one... "Tue May 05 2009 by Pete Muir"	0	0	https://issues.jboss.org/browse/ORG-204
13685	ORG-203	I think this feature request is handled already, or should we change anything still in this subject?	1	1	https://issues.jboss.org/browse/ORG-203
13686	ORG-118	Please can we rename the paragraph type and the 'Project Navigation' and 'Useful Links' styles to: Paragraph Type: General Link List Style 1: Lines Style 2: Block Conceptually the vertical navigation paragraph type you've created is a 'General Link List' with different styles: Lines - the list items are separated by lines Block - the list items are contained within a block We've got to be careful that we don't confuse people with terminology. Project Navigation is achieved using the horizontal bar at the top of a project page. When you add a new page to Magnolia using AdminCentral then we automatically add this to the Overview dropdown menu. This allows users to navigate around the project pages. This behaviour is the same for all projects using the default JBoss.org template so users only have to learn this once. If the project teams want to put other links on the page to other websites or maybe a couple of additional links to their project pages then they can use this 'General Link List'. It's not intended to replace the links automatically generated in the 'Overview' dropdown menu however. thanks, Mark	1	1	https://issues.jboss.org/browse/ORG-118
13687	ORG-59	Blocks and Issues not yet resolved: -figure out why "Tasks" is not allowed by admin -'new discussion' dropdown should be hidden? -make sure 'customize' links are positioned correctly -why are announcements coming back like zombies the next morning after "expire"? -change meta title "Jboss.org community: Home" -reload favicon with transparent background -re-org. template.ftl to move footer below wrapper and give it a z-index of 2 to solve the follover issues -make search bar text disappear on click	0	0	https://issues.jboss.org/browse/ORG-59
13688	ORG-59	x-unhide tooltip issue -reset your password page has a weird issue at the top, then the following dialogue as well -re-skin PRINT preview! THIRD RE-SKIN AFTER MIGRATION: x-add header name x-add favicon x-add "Search wiki..." x-add space under table header -Avatars are getting hidden in table structure for liquid layout in MULTIPLE places. So add css for max-width and overflow: hidden -Test announcements issue coming back like a zombie (still happening) -Move "personalize" and "customize" back and wrap a tab around it (because when you close the dialogue abt how to personalize- it stays closed) -"Guest" seems to be author of everything - is this a migrating issue? x-re-organize main page from admin- rename "spaces" "projects" and move widgets around x-what happend to avatars? x-in "projects" (jboss wiki) there's an empty tab bos showing - hide this. -Should I also hide the "Overview" tab here (as it's the only tab) or will there be other tabs once people comment on it, etc? x-fix missing underline in tables styles -make different table styles for the project pages, and people search pages??? -add specific poles for POC ease of use -"Recent History" and "Projects" headers have too much room below them because of tabs turned off - lessen this. -"Create Task" email still doesn't log you in and sends more than one reminder email x-Hide the overflow on the history dropdown x-move jboss hr right a few pixels x-redirect "show recent history" link in history dropdown to documents page not discussions x-hide all tabs in history x-un-hide all dropdowns and remove from templates x-make sure all "discussions" and "blogs" links are gone from right column navigation too (Your Stuff) x-take out whole "Your Blogs" box -maybe also take out "Recent Activity" box on the homepage -"recent content" box on personalize your homepage has overflow issues - hiding the authors and avatars again! -TURN OFF of both "projects" and "tasks" - widgets, links, right-col boxes -add more room between border-left and people icon? -table in "People search" is cutting off at the right AND is generally fucked up -wrap a tab around "personalize" and it should say "Your view" next to it -Authors on the main page "Recent Content" say "Guest" but should have the name of the real authors!!!!! x-Green favicon comes back on "Spaces" pages x-jboss.org logo is gone on a few pages	0	0	https://issues.jboss.org/browse/ORG-59
13689	JBPM-6137	[~cristiano.nicolai], It occurred to me the other day that Process Definitions perspective won't have new search mechanism at it's disposal. If we remove the old search there, what alternative will users have to do any kind of filtering of the process definitions list?	1	0	https://issues.jboss.org/browse/JBPM-6137
13690	JBPM-6137	[~bsremac] sure, we should add the quick search UI also to the process definition list. [~swiderski.maciej], for the sake of UI component consistency, where all of the runtime views are based on the dataset API but the definition list, would be possible that we use a data set query instead of the service call to retrieve the list of process definitions? Do you see any issues with that?	1	1	https://issues.jboss.org/browse/JBPM-6137
13691	JBPM-6006	[~roger600] Hi Roger, maybe couple thing to think of: -a sequence flow can have an expression condition property set which the user might not want to lose (as they can sometimes be very long and would have to retype). When removing node if incoming/outgoing connections have expression set maybe a confirmation that they are ok with losing this is ok before removing would be good? - in case of when the incoming connection is the "default" (also property on sequence flow) sequence flow coming out of a gateway, if removing it maybe we can remind user to set a different sequence flow as the new default? - a node can also have undirected associations (for example to text annotation) so when deleting the node those should probably also be deleted. - case where the removed node is the only node inside a container (lane, ad-hoc subprocess etc). In this case does it make sense to delete the container as well?	1	1	https://issues.jboss.org/browse/JBPM-6006

#	Requirement	Questions	Answered	Successfully Answered	URL
13692	JBPM-6006	Hey [~tsurdilovic], Thanks for the feedback! Lemme share my comments: * Good point about default connection - but where is this attribute located in the SequenceFlow bean? Is it the ConditionExpression (when empty String)? * Yeah good point too, associations are not supported and will require a different Edge Content type, so we can address this once this type is present, thanks! * Well not sure, I had been looking at some process modelers and no one does this... so for now I would let this feature for the future, if customers requires so, but you have more background than me, so will let you Tiho and [~KrisVerlaenen] decide, np for me! :) Thanks!	1	1	https://issues.jboss.org/browse/JBPM-6006
13693	JBPM-6005	[~uxdlc] Hi Liz, could you please provide some designs how the type selection could look like?	1	0	https://issues.jboss.org/browse/JBPM-6005
13694	JBPM-5967	Hi [~roger600], thank you for update! As I can see this PR have some issues and didn't merge yet. Can you check are reported issues are also reproducible in Stunner?	1	1	https://issues.jboss.org/browse/JBPM-5967
13695	JBPM-5925	[~pere.fernandez] ok sure i will make pr. do you know if opening empty form now is ok ?	1	1	https://issues.jboss.org/browse/JBPM-5925
13696	JBPM-5925	[~jsoltes] Could you provide a screenshot or better video of what you are experiencing because I cannot reproduce. You say the Start form is not generated (do you mean the process form?) and then that it is generated (correctly/incorrectly?) but not visible in what library?	1	1	https://issues.jboss.org/browse/JBPM-5925
13697	JBPM-5903	hey [~srambach], [~uxdlc]!! Can you please take a look at the latest comments [on this PR|https://github.com/kiegroup/kie-wb-common/pull/843]? So we did the palette is floating on top of canvas, in the top left position, but we realize that trying to open some existing processes (from other editors too), we cannot guarantee that some of the shapes could be hidden by the palette.... (see screenshot on the PR - the green start event cannot be selected for example....). Any ideas how to fix this? Adding some paddings, margins? Thanks in advance!!! CC [~federico.locci]	1	1	https://issues.jboss.org/browse/JBPM-5903
13698	JBPM-5902	Great, thanks for the feedback [~tsurdilovic]! One question anyway, right now Stunner does not need to go to server to perform validations, validations are done on the client while modelling... so probably this validations you mention, that are server side, could be only applied once clicking on save or validate button? This way there will be some structural validations that are applied while modelling , an other more complex structure and data model validations that apply once saving/validating (server side). WDYT?	0	0	https://issues.jboss.org/browse/JBPM-5902
13699	JBPM-5898	I believe the point of this query is to not ignore variable details but actually to include them in the response. so it seems there is no way to actually provide such support, is that valid conclusion?	1	0	https://issues.jboss.org/browse/JBPM-5898
13700	JBPM-5886	Are we sure we don't have this anywhere else in the codebase? The PR does not seem to touch the platform BOM, so other projects can still be using this.	1	1	https://issues.jboss.org/browse/JBPM-5886
13701	JBPM-5881	and where is the stack trace of the failure of console?	1	1	https://issues.jboss.org/browse/JBPM-5881
13702	JBPM-5880	Hi [~swiderski.maciej], can you set AsyncMode in an XML directly? Seems like Business Central won't let you do that. How do I add the AsuncMode property [here|http://pastebin.test.redhat.com/502878]? (Otherwise the default configuration)	1	1	https://issues.jboss.org/browse/JBPM-5880
13703	JBPM-5808	Hey [~cchianel] [~kgaevski] Thanks for your feedback guys! Well had been looking again and each modeller does different.. looking at genmymodel, it places the shape based on the top-left corner of the mouse location, but looking at the existing jbpm designer it does place it in the center. In fact no matter for me which one to use, so just double checking with UX guys about this, let's them point the right solution, is it good for you? Please [~mstevens1], [~uxdlc], what do you think about this? Once dragging an element from the palette, where it should be placed - the top-left of the created shape at the drag location, or the center of the shape at the drag location? Thanks in advance!!	1	0	https://issues.jboss.org/browse/JBPM-5808
13704	JBPM-5808	Hello [~kgaevski] [~cchianel] [~roger600] [~uxdlc] I agree with both of the key points above. I think the shape should be placed top left. But I also agree that, because the cursor is centered on the "shadow" object, that the user might think it will be placed in the center. Is it possible to move the cursor to be positioned top left, _off_ the shadow object? You might also consider changing the cursor to a pointer arrow instead of the four sided arrows. The latter makes it feel like you are pinpointing a specific (center) position. And finally, it looks like lane is the only object that doesn't have an icon / shadow object. But I assume that will change. Thank you, Matthew	1	0	https://issues.jboss.org/browse/JBPM-5808
13705	JBPM-5808	Hey [~kgaevski] [~cchianel] [~mstevens1] I'm agree with [~mstevens1], I think actually it's better using top-left corner. Mostly because the current approach is to show the icon, while dragging from the palette, rather than the shape, so the user, while not "dropping", doesn't know about the resulting size for the shape. So using the center approach, all cardinal directions as from the drop's target location, can be potentially used by the new shape, meanwhile using top-left approach, at least the resulting shape will require only space in the E/SE/S directions. I attached a video for the center approach, using the lane, where this happens, and IMO is not expected. Good point too [~mstevens1] about the cursor! Please [~cchianel] can you try to change the icon too, sounds easy? BTW [~mstevens1] about the lane icon, yeah that video is a bit old, actually it's using the lane icon you provided guys. Attached a palette screenshot where you can see it - while dragging from the palette, same icon appears over the canvas. Thanks for the feedback and good work guys!!	1	0	https://issues.jboss.org/browse/JBPM-5808
13706	JBPM-5808	Great [~cchianel], Please let's try to fix this "ficker" that appears on the mouse pointer yeah! AFAIK neither the workbench editors neither lienzo would be changing the cursor here, so probably it's stunner who, while dragging the icon from the palette, tries to change the icon at same time as you... Forgot to say this, please look for usages for [this|https://github.com/kiegroup/kie-wb-common/blob/master/kie-wb-common-stunner/kie-wb-common-stunner-core/kie-wb-common-stunner-commons/kie-wb-common-stunner-client-common/src/main/java/org/kie/workbench/common/stunner/core/client/canvas/AbstractCanvas.java#L96], and well you can probably use this too for changing the cursor while dragging, not sure tbh, anyway this can be the conflicting point, is Stunner calling it as while you drag too?	0	0	https://issues.jboss.org/browse/JBPM-5808
13707	JBPM-5671	Ah, I see. Thanks for the explanation [~swiderski.maciej]. Couple follow up comments / questions: * How does this partitioning functionality relate to permissions (e.g., I'm in Finance and can't see or create HR processes). If we are using permissions to restrict who can start / see the process definitions in different departments, wouldn't the other departments just be invisible to those without access * Who do we see as the current target user of this page? Ops or End Users? ** From what I understand, ops users would primarily be interested in deploying and managing servers and instances. If we have an Ops / Admin user can see across multiple departments, it makes their job harder to have to keep going to that dropdown to browse all definitions. If an Ops user can't see across to another department for security reasons, then access could simply be restricted to them. ** Similarly, if I'm an end user who wants to start a process, wouldn't I just want to see all the process definitions I personally can start?	1	1	https://issues.jboss.org/browse/JBPM-5671

13708	JBPM-5671	{quote}How does this partitioning functionality relate to permissions (e.g., I'm in Finance and can't see or create HR processes). If we are using permissions to restrict who can start / see the process definitions in different departments, wouldn't the other departments just be invisible to those without access{quote} this is handled by the kie server itself so if you have access to certain deployments then you will see them otherwise they are hidden. But that is quite limited and it's based on required roles in deployment descriptor of the project {quote}Who do we see as the current target user of this page? Ops or End Users?{quote} in my opinion business central UI for processes and tasks is certainly Ops/Admin focus as it's very generic so real users will be lost as it lacks the domain context. {quote}From what I understand, ops users would primarily be interested in deploying and managing servers and instances. If we have an Ops / Admin user can see across multiple departments, it makes their job harder to have to keep going to that dropdown to browse all definitions. If an Ops user can't see across to another department for security reasons, then access could simply be restricted to them.{quote} how I see it, less is better. If I have to go over 5 pages to find the definition I am looking for but I know it's in Finance department then it's way easier to look at only finance processes rather than all. Remember that they are still run on different servers so showing all of them at once hides the potential issues as it might give you a false impression that everything is fine because those that do have issues won't be in the initial list and trying to find them there manually will be time consuming. {quote}Similarly, if I'm an end user who wants to start a process, wouldn't I just want to see all the process definitions I personally can start?{quote} do you see end users (business users) to not be focused on their work area? If I need to start new payment process I know what I'd like to start so there is no need to show all process definitions as that just makes it fuzzy by forcing user to look over multiple pages to find what they need to do. Or sort by some stuff or filter etc. Anyway, that UI is not really for end users (business users) as it has no business context in my opinion. So overall, I see server template selection as a way for initial filtering/scoping to what you really want to work with. Some time ago we talked about having this as part of preferences so user directly can be brought to what they need.	1	0	https://issues.jboss.org/browse/JBPM-5671
13709	JBPM-5624	could you elaborate a bit on what do you expect? here you can find example of using jBPM with spring boot: https://github.com/mswiderski/jbpm-examples/tree/master/spring-boot-jbpm	1	0	https://issues.jboss.org/browse/JBPM-5624
13710	JBPM-5624	Many BPM engines have ready maven dependencies. For example Activiti and Camunda BPM have: <dependency> <groupId>org.activiti</groupId> <artifactId>spring-boot-starter-basic</artifactId> <version>${activiti.version}</version> </dependency> In my opinion such features increase developer efficiency, reduce boiler code and make work much simpler. You provided a good example in github. Could you please add maven-dependency so that people could just include it in pom.xml file and work with jbpm. So my point is, less code and less configuration far better.	0	0	https://issues.jboss.org/browse/JBPM-5624
13711	JBPM-5623	[~bsremac] this has been changed now, using the quick search we return all process instances related to that definition in the search tab. Are you ok for this issue to be closed?	1	0	https://issues.jboss.org/browse/JBPM-5623
13712	JBPM-5623	[~cristiano.nicolai] Yes, this is now history taking quick search feature into account. Closing it....	0	0	https://issues.jboss.org/browse/JBPM-5623
13713	JBPM-5607	hasNextFireTime method on the following line: long now = kruntime.getSessionClock().getCurrentTime(); Full Method: public Date hasNextFireTime() { Date date = orig.hasNextFireTime(); if (date == null) { return null; } long then = date.getTime(); long now = kruntime.getSessionClock().getCurrentTime(); // overdue timer if (then < now) { return new Date((now + OVERDUE_DELAY)); } else { return orig.hasNextFireTime(); } } 09:00:37,454 INFO [org.kie.server.services.impl.KieServerImpl] (EJB default - 1) Container 1 (for release id com.rhc.jbpm:com.rhc.jbpm.timer.demo:1.0.1) successfully started 09:09:45,342 INFO [stdout] (EJB default - 7) Timer is working triggered from host docker 09:09:45,345 WARN [org.drools.core.time.impl.DefaultTimerJobInstance] (EJB default - 7) Unable to execute timer job!: java.lang.NullPointerException at org.jbpm.process.instance.timer.TimerManager$OverdueTrigger.hasNextFireTime(TimerManager.java:465) at org.drools.core.time.impl.DefaultTimerJobInstance.call(DefaultTimerJobInstance.java:75) at org.drools.persistence.jpa.JpaTimerJobInstance.internalCall(JpaTimerJobInstance.java:59) at org.drools.persistence.jpa.JDKCallableJobCommand.execute(JDKCallableJobCommand.java:35) at org.drools.persistence.jpa.JDKCallableJobCommand.execute(JDKCallableJobCommand.java:21) at org.drools.core.command.impl.DefaultCommandService.execute(DefaultCommandService.java:36) at org.drools.core.command.impl.AbstractInterceptor.executeNext(AbstractInterceptor.java:41) at org.drools.persistence.SingleSessionCommandService$TransactionInterceptor.execute(SingleSessionCommandService.java:604) at org.drools.core.command.impl.AbstractInterceptor.executeNext(AbstractInterceptor.java:41) at org.drools.persistence.jpa.OptimisticLockRetryInterceptor.execute(OptimisticLockRetryInterceptor.java:82) at org.drools.core.command.impl.AbstractInterceptor.executeNext(AbstractInterceptor.java:41) at org.drools.persistence.jta.TransactionLockInterceptor.execute(TransactionLockInterceptor.java:73) at org.drools.persistence.SingleSessionCommandService.execute(SingleSessionCommandService.java:397) at org.jbpm.process.core.timer.impl.GlobalTimerService$DisposableCommandService.execute(GlobalTimerService.java:306) at org.jbpm.persistence.timer.GlobalJpaTimerJobInstance.call(GlobalJpaTimerJobInstance.java:77) at org.jbpm.persistence.timer.GlobalJpaTimerJobInstance.call(GlobalJpaTimerJobInstance.java:47) at org.jbpm.services.ejb.timer.EJBTimerScheduler.executeTimerJob(EJBTimerScheduler.java:78) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:498) at org.jboss.as.ee.component.ManagedReferenceMethodInterceptor.processInvocation(ManagedReferenceMethodInterceptor.java:52) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:340) at	1	1	https://issues.jboss.org/browse/JBPM-5607

13714	JBPM-5607	Maciej pointed out I had run some tests with the wrong datasource configuration, so I think my previous results should be disregarded as invalid. My testing now validates failover is working and no duplication is occurring; however, I do see the following error on one node each time the timer fires: 11:53:39,006 ERROR [org.jboss.as.ejb3] (EJB default - 1) WFLYEJB0164: Exception running timer task for timer [id=c766bba7-005b-42eb-9cda-cb5cf3069568 timedObjectId=kie-server-redhat.kie-server-redhat.EJBTimerScheduler auto-timer?:false persistent?:true timerService=org.jboss.as.ejb3.timerservice.TimerServiceImpl@459df624 initialExpiration=2017-01-26 11:53:39.0 intervalDuration(in milli sec)=0 nextExpiration=2017-01-26 11:53:39.0 timerState=ACTIVE info=EjbTimerJob [timerJobInstance=GlobalJpaTimerJobInstance [timerServiceId=1-timerServiceId, getJobHandle()=EjbGlobalJobHandle [uuid=1-1-1]]]] on EJB kie-server-redhat.kie-server-redhat.EJBTimerScheduler: java.lang.RuntimeException: org.postgresql.util.PSQLException: ERROR: could not serialize access due to concurrent update at org.jboss.as.ejb3.timerservice.persistence.database.DatabaseTimerPersistence.shouldRun(DatabaseTimerPersistence.java:421) at org.jboss.as.ejb3.timerservice.TimerServiceImpl.shouldRun(TimerServiceImpl.java:1110) at org.jboss.as.ejb3.timerservice.TimerTask.run(TimerTask.java:124) at org.jboss.as.ejb3.timerservice.TimerServiceImpl$Task$1.run(TimerServiceImpl.java:1214) at org.wildfly.extension.requestcontroller.RequestController$QueuedTask$1.run(RequestController.java:497) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) at org.jboss.threads.JBossThread.run(JBossThread.java:320) Caused by: org.postgresql.util.PSQLException: ERROR: could not serialize access due to concurrent update at org.postgresql.core.v3.QueryExecutorImpl.receiveErrorResponse(QueryExecutorImpl.java:2455) at org.postgresql.core.v3.QueryExecutorImpl.processResults(QueryExecutorImpl.java:2155) at org.postgresql.core.v3.QueryExecutorImpl.execute(QueryExecutorImpl.java:288) at org.postgresql.jdbc.PgStatement.executeInternal(PgStatement.java:430) at org.postgresql.jdbc.PgStatement.execute(PgStatement.java:356) at org.postgresql.jdbc.PgPreparedStatement.executeWithFlags(PgPreparedStatement.java:168) at org.postgresql.jdbc.PgPreparedStatement.executeUpdate(PgPreparedStatement.java:135) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:498) at org.postgresql.ds.PGPooledConnection$StatementHandler.invoke(PGPooledConnection.java:423) at com.sun.proxy.$Proxy10.executeUpdate(Unknown Source) at org.jboss.jca.adapters.jdbc.WrappedPreparedStatement.executeUpdate(WrappedPreparedStatement.java:537) at org.jboss.as.ejb3.timerservice.persistence.database.DatabaseTimerPersistence.shouldRun(DatabaseTimerPersistence.java:410) ... 8 more	1	1	https://issues.jboss.org/browse/JBPM-5607
13715	JBPM-5601	[~cristiano.nicolai] [~swiderski.maciej] the kie-server role was introduced to secure access to the kie-server remote REST api (as this is in general more powerful than the UI so we want to have more restricted access that just existing roles user, developer, etc.). With the separation of kie-server it seems all users now require this role, which will break this more strict enforcement. Assuming we can't secure kie-server remote api anymore separately (there's no way to distinguish a jbpm-console request from a remote one), I think just removing the kie-server role and giving users with roles like admin,analyst,etc. access to kie-server would be required. Wdyt?	1	1	https://issues.jboss.org/browse/JBPM-5601
13716	JBPM-5597	just one comment, why does it have to have "blank" in the name? isn't that enough to have kjar-archetype as I'd say you'll anyway assume to be empty... and then when we have kjars with some content maybe they should have additional part in the name.	1	0	https://issues.jboss.org/browse/JBPM-5597
13717	JBPM-5572	Added comments from [~KrisVerlaenen]: Connections - can't seem to select a connection - selecting an endpoint for reconnection seems difficult often (delay, need hold) - no bendpoints Toolbar - if nothing is selected and you click delete it first asks for confirmation and then shows an error, shouldn't action be disabled if no selection?	0	0	https://issues.jboss.org/browse/JBPM-5572
13718	JBPM-5546	Hey [~cchianel] [~kgaevski] Thanks for looking into this. Lemme share my comments: * I'm agree on just selecting the shape on right click on it, and avoid starting a drag operation too, it results an unexpected behavior * This means that in Stunner we need to accept the right button as well on the SelectionControl. This way the shape will be selected on right click. * But on the other hand, trying to avoid starting a drag operation once right clicking on the canvas, this happens as well on pure lienzo applications. Try it for example [here|https://www.lienzo-core.com/lienzo-ks/#WIRES_DOCKING]. In fact there already exist a bug for Lienzo about this, [the issue 145|https://github.com/ahome-it/lienzo-core/issues/145]. IMO this is a bug on lienzo side, as I think nobody expects starting a drag with the right button, in fact I tested other different editors and right button never starts a drag. So in order to address this bug, the [issue on lienzo|https://github.com/ahome-it/lienzo-core/issues/145] must be analyzed and addressed first, once this part is clear, we can decide the actions to take in Stunner. WDYT guys? Thanks!	1	1	https://issues.jboss.org/browse/JBPM-5546
13719	JBPM-5467	[~jsniezek], I have two questions: Should the main palette have some tooltip or text? What is the expected behaviour when the user presses the "more" link?	1	1	https://issues.jboss.org/browse/JBPM-5467
13720	JBPM-5467	Hi [~pere.fernandez], sure we can help! Not sure exactly what the need is though. Could you explain?	1	1	https://issues.jboss.org/browse/JBPM-5467
13721	JBPM-5467	Hey [~jsniezek]!! Sorry for bothering again with the palette, but as from [~mark.proctor]'s feedback, there are some customers that have some "complains"/suggestions about the palette design. Probably we should talk all together about ti on next Monday's meeting, but I think the main reason is about "it uses too much white-spaces and icons seem too big". Re-opening the ticket for keeping track of it. Thanks Joe! CC [~pere.fernandez]	1	1	https://issues.jboss.org/browse/JBPM-5467
13722	JBPM-5250	Can you add [~hkonsek] to this issue?	1	1	https://issues.jboss.org/browse/JBPM-5250
13723	JBPM-5250	This has been fixed on 6.5.x branch and will be available in the next release. [~jreimann-1] do you need this backported also into older branches? Also, would you be able to test with the latest 6.5.0-SNAPSHOTs to verify your use case if working?	1	1	https://issues.jboss.org/browse/JBPM-5250
13724	JBPM-5239	not sure I understand this request - org.kie.api.executor.Command is purely dedicated to the jbpm executor that executes these commands as background tasks and thus the method is expected to return results from the execute method as it will be invoked by background thread anyway. So what would be the benefit to spin another thread for running the method execute which was invoked by already separate thread? This command (org.kie.api.executor.Command) is not meant tbe be used directly by application code - like calling its execute without jbpm executor.	1	1	https://issues.jboss.org/browse/JBPM-5239

#	Requirement	Questions	Answered	Successfully Answered	URL
13725	JBPM-5223	first of all [~jludvice] there is no need to apologize quite the opposite, thanks for the time you put into describing and filing the jira! now let's go over the design of work items and work item handlers - the most important concept here is that work item is design time component, so this is the activity in the process that should happen. It defines inputs (what needs to be given so it can perform operation) and expected output (what shall be returned). On the other hand, work item handler is a runtime component that is responsible for handling the action defined by work item. So it's a matter of separation of concerns. If we would merge these two we loose a huge advantage that is - possibility to change handlers without changing the process. So the master component here is work item and not the handler. With that said, - we cannot build work items (and their parameters) based on discovered handler on the time when the process is created (authored) as it is quite possible that on runtime environment that handler will not exists - so it's a false assurance that it will work - especially going towards v7 where workbench won't include runtime at all - idea to improve the handler with annotation to produce valid and readable documentation- +1 to that it's really great to make it self-explanatory to promote reuse of handlers - improve work item definition to allow to specify required and optional parameters, validation schema so we can check if given value is valid or not does this make sense to you guys?	0	0	https://issues.jboss.org/browse/JBPM-5223
13726	JBPM-5220	I believe we should add one more endpoint (or enhance existing one) which would accept the ReleaseId and would return only the containers with such kjar deployed. Deciding if an kjar is deployed can be simply done on the client -- client would request the containers for specified ReleaseId and in case the returned list is empty it means the kjar is not deployed (this needs to somehow take into account the container state as well). I currently see the following options: 1) New endpoing with ReleaseId as part of the URL Example: {{.../containers/releaseId/org.example:artifact:1.0.0.Final}} - easy to use - consistent with the current API (e.g. using URI parts) 2) ReleaseId as URL parameter for existing endpoint Example: {{.../containers?releaseId=org.example:artifact:1.0.0.Final}} - easy to use - not really consistent with current API as URL parameters are not being used 3) ReleaseId encoded in the HTTP body; using the existing endpoint Example: {{.../containers}}, with body {code} <requested-release-id> <groupId>org.example</groupId> <artifactId>artifact</artifactId> <version>1.0.0.Final</version> </requested-release-id> {code} - harder to use (one needs to mess with the HTTP request, instead of just using the URL) - not really obvious (it least that's how it looks to me) [~swiderski.maciej], [~ksuta] WDYT? Which option would you prefer? Or do you perhaps see some better option?	1	1	https://issues.jboss.org/browse/JBPM-5220
13727	JBPM-5220	I have a question. Can I use for filtering only part of the name (like: org.ex*) or I must know whole name (org.example)?	1	1	https://issues.jboss.org/browse/JBPM-5220
13728	JBPM-5189	very good feature request! would you mind extending that and submitting PR?	1	1	https://issues.jboss.org/browse/JBPM-5189
13729	JBPM-5173	I think the easiest and least intrusive solution is the third one. We just need to remove unused *activate* parameter from constructors and add *Vetoed* annotation on those classes. [~swiderski.maciej], what do you think? If you agree, I can make those changes.	1	0	https://issues.jboss.org/browse/JBPM-5173
13730	JBPM-5163	Hi [~davidredhat], tried to reach you on freenode but I think we missed each other. Is the documentation subjira planned to be resolved soon, or is it put on the backburner for now?	0	0	https://issues.jboss.org/browse/JBPM-5163
13731	JBPM-5107	Hello [~abhisheksit2004] Can you explain better what do you want to achieve? Maybe if I understand it we can find a workaround. Cheers!	1	1	https://issues.jboss.org/browse/JBPM-5107
13732	JBPM-5071	Will the impacts of this particular feature be documented anywhere, [~swiderski.maciej]? I'm specifically concerned about the asset management, which the users will sure be looking for and we should make the switch as easy for them as possible.	1	1	https://issues.jboss.org/browse/JBPM-5071
13733	JBPM-5068	Hi there, will it be a complete REST API in API in 7.0.0 Final?	0	0	https://issues.jboss.org/browse/JBPM-5068
13734	JBPM-5036	[~selrahal] see this issue was approved only for 7.0 - the request to backport it to 6.4.x was rejected. See RHBPMS-4778 Is this ok ?	0	0	https://issues.jboss.org/browse/JBPM-5036
13735	JBPM-4899	that usually means it was not discovered. Could you please describe the steps you have taken and maybe upload the jar that contains the implementation of the listener so we could examine it? Would be actually good to move this discussion to user forum instead of jira: http://jbpm.org/community/forum.html	1	0	https://issues.jboss.org/browse/JBPM-4899
13736	JBPM-4881	[~davidredhat], is there any support from dashbuilder to parse query strings like the one mentioned in here? I'm guessing something that would read the string and build a DataSetFilter/ColumnFilter(s).	1	0	https://issues.jboss.org/browse/JBPM-4881
13737	JBPM-4857	[~psiroky], how is the PR coming along?	1	0	https://issues.jboss.org/browse/JBPM-4857
13738	JBPM-4851	Hi [~davidredhat], I saw the PR and it looks like this jira can be closed. Are there any other change which will be implemented? If not, could you please close it? It is part of BPMSPL-257 and I would like to know if I can check it off in my list. Thanks.	0	0	https://issues.jboss.org/browse/JBPM-4851
13739	JBPM-4849	Just double-checking, should they be excluded from current and any new filter in the process definition list correct?	1	1	https://issues.jboss.org/browse/JBPM-4849
13740	JBPM-4847	[~jsniezek], as discussed, can you please amend the details (screenshot) which I can't access.	1	1	https://issues.jboss.org/browse/JBPM-4847
13741	JBPM-4847	Agreed, I'd say that storing XML files is a bit of an extreme use of process variables, and I'm not sure how common something like this is. As for solutions, I like the idea of a popover, but I think there's more design risk with that option (how will it look at different content sizes, in practice?). The edit popup with the text-area would be most effective for this case, particularly for large amounts of content. And perhaps we could _also_ do a tooltip (with a character limit, so it doesn't take up the whole screen), for the "normal" usage of process variables, where process variables are too long for the table column, but are not entire files. What do you think [~cristiano.nicolai]? Joe	1	1	https://issues.jboss.org/browse/JBPM-4847
13742	JBPM-4847	Great, looks good. So, there will be both the "edit" button to bring up the text box (Selection_038.png), and clicking on the row will bring up the pop-over(Tooltip_036-7). Correct?	0	0	https://issues.jboss.org/browse/JBPM-4847
13743	JBPM-4847	[~cristiano.nicolai]: Hello Cristiano, if I mouse over and click on a process variable value, I cannot see the tooltip. Tested on 6.4.0-SNAPSHOT. Can you see the tooltip?	1	1	https://issues.jboss.org/browse/JBPM-4847
13744	JBPM-4838	I'm trying to reproduce it. No success though. There is no limit in the number of columns that can be created in a tabular report. Can you please add further details about how to reproduce it please? As a mention, notice that tables don't allow to modify their columns once the "Group by" setting is on. In order to configure a table, the group by setting must be disabled. Once the configuration of the table heading is done, the group by setting can be enabled.	1	0	https://issues.jboss.org/browse/JBPM-4838
13745	JBPM-4832	Maciej, I think we should aim to support the 3 marshalling formats without exceptions to avoid surprises. What is the problem of supporting XStream if we support JAXB as well?	0	0	https://issues.jboss.org/browse/JBPM-4832
13746	JBPM-4832	after reviewing pull requests I think that building this as new KIE Server extension can bring more value where some of them are: * users can enable or disable extension if not needed * encapsulate UI (or sort of UI) facing capabilities * users can provide new provider types that will be discovered on startup * we can then add more features to this kind of UI extension like return process diagram (png) with active and completed nodes what do you think?	1	1	https://issues.jboss.org/browse/JBPM-4832

#	Requirement	Questions	Answered	Successfully Answered	URL
13747	JBPM-4812	Hey Maciej, Sorry for slow response here - been travelling. I don't see anything on the REST API here. Do you want that addition in this issue or a new one created?	1	1	https://issues.jboss.org/browse/JBPM-4812
13748	JBPM-4812	Just read through the PRs and I think I've got my head wrapped around the impl. Overall looks good, but I have two concerns: # Current API as described in [droolsjbpm-integration/pull/216|https://github.com/droolsjbpm/droolsjbpm-integration/pull/216] does not appear to support multiple task variables in the query. This seems to be an API limitation, not a limitation of the indexing mechanism and supporting JPA data structure but I could be wrong. # Current API returns a [TaskSummary|https://github.com/droolsjbpm/droolsjbpm-integration/blob/master/kie-server-parent/kie-server-api/src/main/java/org/kie/server/api/model/instance/TaskSummary.java] which does not have a data structure to return task variables. [~swiderski.maciej] Can you confirm that these are correct of the current impl and are they correct for the impl we are targeting for jbpm 6.4/bpms 6.3? If so, we probably need to work together see what can be done to enhance the feature in our timetable. Customers will need to be able to query with multiple variables. And the result will need to be able to display some subset of task variables in the resultsSet. We may need to explore a variable expansion approach to limit the data exchange.	1	1	https://issues.jboss.org/browse/JBPM-4812
13749	JBPM-4812	Maciej, All reasonable points. The problem is that this implementation falls short of the use case that our key customers want to solve, which is the ability to create a custom task dashboard that displays a small number of task variables along with each individual task. They then want to filter down the list displayed in this dashboard by using searching on one or more of the task variables. So while it may be possible to write a customer indexer to support multi-variable queries, I still have no way to display these variables in the dashboard. Is there a way to explore a variable expansion to the API which returns the indexed string if a certain param is passed to the API?	1	0	https://issues.jboss.org/browse/JBPM-4812
13750	JBPM-4779	pull request created to allow override default KieStoreServices class and further define command service class. Would that work for you?	1	1	https://issues.jboss.org/browse/JBPM-4779
13751	JBPM-4723	Marco, do we want the WADL to be published on an URL of the REST API as WSDL is? For example, Jersey generates and publishes WADL by default https://jersey.java.net/documentation/latest/wadl.html. But of course, we have to support more implementations than just Jersey.	1	1	https://issues.jboss.org/browse/JBPM-4723
13752	JBPM-4723	[~rsynek] I'd rather not publish the WADL: it doesn't accurately reflect the operations that we provide and may be confusing to users. For example, in the documentation, I list several task operation REST URL's: {noformat} [POST] /task/{taskId}/activate [POST] /task/{taskId}/claim {noformat} et cetera.. (see the [REST Task documentation|http://docs.jboss.org/jbpm/v6.2/userguide/jBPMRemoteAPI.html#d0e15775]). But in the WADL, the URL's will show up differently, since in the code, I don't have 10+ different methods for each task operation, but [one method that accepts a couple different possibilities|https://github.com/droolsjbpm/droolsjbpm-integration/blob/master/kie-remote/kie-remote-services/src/main/java/org/kie/remote/services/rest/TaskResourceImpl.java#L125-L177]. Does that make sense?	1	0	https://issues.jboss.org/browse/JBPM-4723
13753	JBPM-4723	[~rsynek] Huh, I think we've lost sight of what we're talking about now. Or otherwise, I was mistaken about the discussion in the first place! Are we talking about how to check the backwards compatibility of the REST API or are we talking about whether or not to publish the WADL of the REST service as part of kie-wb or BPMS? Please let me know! If it's in regards to publishing the WADL, then we should at least move that to another Jira. When you say "publish", I assume you mean that it should be made publically available via http, as opposed to simply being stored as part of the {{kie-remote-services}} jar. Regardless of whether or not the WADL is _published_, we can always still use it for testing backwards compatibility. From what I understand from Ivo Bek (see the mojo document I referenced), the WADL can *not* fully accurately describe our REST API. However, again: Are we discussing generating the WADL for backwards compatibility tests *OR* are we discussing publishing the WADL? If we are discussing publishing the WADL, then that discussion is orthogonal to generating the WADL for backwards compatibility tests?	1	0	https://issues.jboss.org/browse/JBPM-4723
13754	JBPM-4705	Thanks Is it possible to use LATEST? eg. org.jbpm.test:single-project:LATEST "When using process that signals with external scope (process id: external-project.throw-external-signal) it will start a process (process id: single-project.start-with-signal) as it has signal start event and will trigger process that waits in intermediate catch event (regardless of what strategy is used) assuming the SignalDeploymentId was set to org.jbpm.test:single-project:1.0.0-SNAPSHOT on start of the process"	1	1	https://issues.jboss.org/browse/JBPM-4705
13755	JBPM-4672	Should this be closed?	0	0	https://issues.jboss.org/browse/JBPM-4672
13756	JBPM-4663	We came across the need to use these concepts. Beneficiary - is the entity the case is raised for. Can be a person, a team, a department, an organization. Usually the beneficiary is the party who benefits from the work done on the case and pays for it. Beneficiary can be internal or external to organization. Owner - is the entity responsible to deliver the work done by the case. Owner is the main contact for the case. Participants - are the entities working together on the case to achieve the desired outcome Contacts - when a message is sent between pools there is a need to specify contact information. One entity can have several contacts; for example a person can be contacted to several email addresses or an organization can have multiple representatives related to a case. Also contacts can have attributes such as main contact or delivery contact. At the moment the jBPM implementation for messages is just technical and not usable in practical terms. A message requires the sender to know the target process ID; this is an impossible requirement for an external participant (other pool) as that participant does not have visibility to technical details. External participants can send and receive messages based on contact information only and not on some internal technical detail such as process id.	0	0	https://issues.jboss.org/browse/JBPM-4663
13757	JBPM-4661	Is there any validation to be done on this new field? Does it need to be serialized as CDATA or just xml attribute value?	1	1	https://issues.jboss.org/browse/JBPM-4661
13758	JBPM-4648	This is a very important feature. What happens if a process is not perfect? After the process is started user realizes that additional tasks need to be performed. Adding ad-hoc tasks to a running process solves the problem. Processes can be reviewed and improved based on the history of ad-hoc tasks that were started for that type of process. Also ad-hoc tasks could be added against the case itself. For example we do not have a hire process but we have a "hire" type case. The user can start using the case based on ad-hoc tasks only. After a while an analyst can look to past "hire" cases and find out what kind of tasks were required. Then the analyst can investigate the sequence of steps and convert the case to a BPMN model. The key is that cases should have types: sales, warranty, diagnostics, ... ; some of these cases could be turned into processes if they are stable and repeatable.	1	0	https://issues.jboss.org/browse/JBPM-4648
13759	JBPM-4648	Hi Mauricio I can bring on board the business person who drove our requirements. We have a system in production and are very happy with it. I can talk to him tomorrow morning. Our system is simple but handles all flexibility issues we need. Also there are other concepts that are very useful for us such as "can start date/time" and "must start before date/time".	1	0	https://issues.jboss.org/browse/JBPM-4648
13760	JBPM-4648	What is your timezone? We are in GMT +10. Regards	1	0	https://issues.jboss.org/browse/JBPM-4648

#	Requirement	Questions	Answered	Successfully Answered	URL
13761	JBPM-4648	Ready for Google Hangouts in 10 minutes? My email address is dan.cimpoesu [at] clearbridge.com.au and alex.cimpoesu [at] clearbridge.com.au If you want us to invite you what email address should we use?	1	0	https://issues.jboss.org/browse/JBPM-4648
13762	JBPM-4629	what would be the way to do this using the deployment Service? I tried: @ApplicationScoped @MyKjar public class MyDeploymentServiceCDIImpl extends DeploymentServiceCDIImpl { protected RuntimeEnvironmentBuilder boostrapRuntimeEnvironmentBuilder(KModuleDeploymentUnit deploymentUnit, DeployedUnit deployedUnit, KieContainer kieContainer, MergeMode mode) { DeploymentDescriptor descriptor = deploymentUnit.getDeploymentDescriptor(); if(descriptor == null){ descriptor = new DeploymentDescriptorImpl(); deploymentUnit.setDeploymentDescriptor(descriptor); } descriptor.getConfiguration().add(new NamedObjectModel("drools.processInstanceManagerFactory", MyJPAProcessInstanceManagerFactory.class.getName())); deploymentUnit.setDeploymentDescriptor(descriptor); return super.boostrapRuntimeEnvironmentBuilder(deploymentUnit, deployedUnit, kieContainer, mode); } } But this can't work because the configuration cannot be changed this way.	1	1	https://issues.jboss.org/browse/JBPM-4629
13763	JBPM-4609	could you provide reproducer for this? what surprises me is that you say it uses CMT but then code fails with No transaction exceptions which indicates there is no transaction - meaning CMT somehow did not work for that case? btw, I see you run it with CR4 have you tried with 6.2.0.Final?	0	0	https://issues.jboss.org/browse/JBPM-4609
13764	JBPM-4553	Where can I find the Jbpm7.0.0.Final ? source code any idea I don't see it in the git hub any branch yet. I am not sure that this is right way to ask this question sorry about that if that so .	1	0	https://issues.jboss.org/browse/JBPM-4553
13765	JBPM-4501	not sure I got the point behind this request... could you please elaborate or provide an example of what you try to achieve?What sort of an ID are you after? Note that there is already a process id that is an ID of given process definition. Placing any ID in the bpmn2 itself will make it shared across all process instances created out of that definition.	1	1	https://issues.jboss.org/browse/JBPM-4501
13766	JBPM-4501	Andrea, you should be able to achieve that with relying on UniqueId taken from meta data as long as the process definition is not updated. So when running it by the engine the UniqueId should remain unchanged regardless of how many process instances have been started and if the server was restarted or not. What do you mean by change it - do you change the model with process designer or?	1	1	https://issues.jboss.org/browse/JBPM-4501
13767	JBPM-4496	provided possibility to re-queue failed jobs via UI as currently executor itself do not expose REST api. Changing job data most likely will be addressed post 6.2 community. Duncan, do you mind dropping another jira for it?	0	0	https://issues.jboss.org/browse/JBPM-4496
13768	JBPM-4484	So, I started to attempt an implementation and it didn't take too long to run into a problem. UserGroupCallback defines a method "getGroupsForUser" but does not have a "getUsersForGroup" method. Would this be something that could be added? Is there a reason it wasn't there in the first place? It seems like a natural compliment to getGroupsForUser	1	1	https://issues.jboss.org/browse/JBPM-4484
13769	JBPM-4484	Ahhh...that's why I asked if there was a reason. Would an optional new interface that could be provided work? I realize this is getting messier. As a potential workaround, I was able to add a listener, and afterTaskAdded do the check on my own, and do a claim if there is only one. Right now I'm calling back into the taskService, which causes another event to be fired. I suppose I could just set the actuallyOwner the way the AddTaskCommand is doing and be done with it.	1	1	https://issues.jboss.org/browse/JBPM-4484
13770	JBPM-4482	[~swiderski.maciej] You're the jbpm-audit lead :) so I've left it assigned to you because I'd like your feedback on it. Of course, I *love* working with reflection (have you seen any of my tests? ;D), so this looks like an interesting feature to me. On the other hand, because of the possible performance costs (reflection..) and other pitfalls (it's a feature that deserves careful consideration because it may contain bugs that will be very hard to support), I want to make sure to get your and [~KrisVerlaenen]'s feedback about this.	1	1	https://issues.jboss.org/browse/JBPM-4482
13771	JBPM-4482	I would say that for this purpose it would be better to use variable persistence strategies (unless we see any drawbacks of using that) instead of extending variable instance log capabilities. With persistence strategies we can easily persist variables into an external storage where the easiest will be to use data base as backend but persist the variables as JPA entities. In fact we already have out of the box support for it. Some details how variable persistence strategies can be used are described here: http://mswiderski.blogspot.com/2014/02/jbpm-6-store-your-process-variables.html Marco, what do you think? Would that be sufficient or you see it will lack some of the requested features? Access to it will be directly via process instance variables, and not via history. History will still have string representation of the variable.	1	0	https://issues.jboss.org/browse/JBPM-4482
13772	JBPM-4482	[~swiderski.maciej] I agree that variable persistence strategies cover a lot of what users already need, but I don't think it's very user friendly. - currently, variable persistence does not work out-of-the-box and it's not simple for beginner developers to set it up. - It can't be used automatically with BPMS/kie-wb/console: there's no way for users to easily set it up with these deployables Does that make sense? One of the main reasons for this jira is part of the query work I've done recently. This jira is also actually for a better internal framework with regards to process instance variables. For example, at the moment, it's possible to retrieve process instance variable information in 3 different ways: 1. query the user-defined process instance variable strategy tables, if they are in use 2. query the (jbpm-audit) variable instance logs. 3. make sure to hold a reference to the process instance itself, and retrieve the variables from that instance. There's no interface that allows us (internal developers) or users to generically query variable information regardless of whether configuration/strategy 1, 2 or 3 is being used. Querying 3 is in some cases impossible. What I'd like to acheive, at the very least, is a step in that direction: adding optional (internal) persistence for process instance variables is a good first step, I think. What do you think?	1	1	https://issues.jboss.org/browse/JBPM-4482

#	Requirement	Questions	Answered	Successfully Answered	URL
13773	JBPM-4482	{quote} currently, variable persistence does not work out-of-the-box and it's not simple for beginner developers to set it up. {quote} could you explain what does not work out of the box? {quote} It can't be used automatically with BPMS/kie-wb/console: there's no way for users to easily set it up with these deployables {quote} you can do it very easy with deployment descriptors, see here:https://github.com/droolsjbpm/jbpm-playground/blob/master/translations/src/main/resources/META-INF/kie-deployment-descriptor.xml#L11 {quote} What I'd like to acheive, at the very least, is a step in that direction: adding optional (internal) persistence for process instance variables is a good first step, I think. {quote} I see persistence variable strategies to be actually that, a way to have optional and flexible persistence options for process variables. Although I agree that this in general lacks of searching capabilities. And by that I believe VariableInstanceLog is the simplest way (yet quite powerful) to get some degree of search ability by process variables. At some point we where thinking to include indexing engine like lucene to help with searching options but lack of time stops us a bit ;) I might not know all the details you already thought about so maybe I don't see the right things here so would be great to get more details on what you planned to have here. So either drop some notes here or we can talk about it too. anyway, effective searching through process variables is more then needed question is how to approach it. From my point of view we have two options: - as you mentioned to implement another way to persist variables - implement additional layer dedicated for searching I am in favor of the second one mainly because it is designed for given purpose. As generic persistence option is more complex and might overlap persistence strategies. P.S. nice to have this design discussion back in place :) thanks!!!	1	0	https://issues.jboss.org/browse/JBPM-4482
13774	JBPM-4478	Maciej, First, thank you for implementing this feature request. I hope it is of benefit to not only me but many other users of the application. Could you just clarify how to use the jar with 6.2 if we don't want to use auto-discovery? By patch do you mean personally modifying the source and recompiling jbpm-runtime-manager? Or is there a way to programatically do it within the current APIs. Thanks Again,	1	0	https://issues.jboss.org/browse/JBPM-4478
13775	JBPM-4478	I'm not too clear what the release schedule is (is it published somewhere?), but is there any chance this could be squeezed into 6.2? It sounds like it wouldn't impact a lot of the other code. Thought I would ask.	1	0	https://issues.jboss.org/browse/JBPM-4478
13776	JBPM-4477	[~gangli], we currently support the ability to activate/deactivate a process deployment. I believe that matches the requirements you mentioned in here. Once a process deployment is deactivate, you can't create new instances. Would you mind verifying and let us know if we could close this issue, thanks.	0	0	https://issues.jboss.org/browse/JBPM-4477
13777	JBPM-4456	Can you please specify the use case that you are trying to create when you get this exception? Im quite sure that there are alternative methods that are working. If a method is not currently supported it is probably due the fact that we provided a better alternative for it.	0	0	https://issues.jboss.org/browse/JBPM-4456
13778	JBPM-4443	Toshiya, there are already bunch of tests for timers including Quartz based: https://github.com/droolsjbpm/jbpm/tree/master/jbpm-test/src/test/java/org/jbpm/test/timer Is there anything in particular that you would like to have included?	1	1	https://issues.jboss.org/browse/JBPM-4443
13779	JBPM-4443	Thanks Maciej, With the master, I still see NullPointerException with PerRequestRuntimeManager/PerProcessInstanceRuntimeManager during the test. Increasing "org.jbpm.timer.delay" and Thread.sleep() in getManager() doesn't help. Don't you see the Exception? {noformat} java.lang.NullPointerException at org.jbpm.persistence.timer.GlobalJpaTimerJobInstance.call(GlobalJpaTimerJobInstance.java:67) at org.jbpm.persistence.timer.GlobalJpaTimerJobInstance.call(GlobalJpaTimerJobInstance.java:46) at org.jbpm.process.core.timer.impl.QuartzSchedulerService$QuartzJob.execute(QuartzSchedulerService.java:281) at org.quartz.core.JobRunShell.run(JobRunShell.java:216) at org.quartz.simpl.SimpleThreadPool$WorkerThread.run(SimpleThreadPool.java:549) {noformat}	1	1	https://issues.jboss.org/browse/JBPM-4443
13780	JBPM-4443	Toshiya, I cannot see any NPE while running the test cases for any of the runtime managers - trying the test case delivered by you GlobalQuartzDBTimerServiceTest.testContinueTimer can you check if you have that commit included? https://github.com/droolsjbpm/jbpm/commit/d03c4330a230871c8b223398f67d85069ee0956f	1	1	https://issues.jboss.org/browse/JBPM-4443
13781	JBPM-4443	Hi Maciej, Yes, I confirmed that the commit is included. On my end, it's constantly reproducible when I leave this line. {code:java} public class GlobalQuartzDBTimerServiceTest extends GlobalTimerServiceBaseTest { ... public static Collection<Object[]> persistence() { Object[][] data = new Object[][] { { 1 }, { 2 }, { 3 } }; {code} In other words, if I test only 3 (=PerProcessInstanceRuntimeManager), it's not reproducible. I comment out other tests in GlobalQuartzDBTimerServiceTest/GlobalTimerServiceBaseTest for convenience but it doesn't seem to affect. With some debugging, I noticed that the NullPointerException occurs when Timer is triggered after manager.close(). It means that the scheduler doesn't correctly shutdown on manager.close(). I found that setUp()/tearDown() makes QuartzSchedulerService.timerServiceCounter confused. When I comment-out the following lines, the issue has gone. {code:java} @Before public void setUp() { cleanupSingletonSessionId(); System.setProperty("org.quartz.properties", "quartz-db.properties"); testCreateQuartzSchema(); // globalScheduler = new QuartzSchedulerService(); // ((QuartzSchedulerService)globalScheduler).forceShutdown(); } @After public void tearDown() { try { // globalScheduler.shutdown(); } catch (Exception e) { } System.clearProperty("org.quartz.properties"); } {code} Hmm, should we move testContinueTimer() (= intends to test the default RuntimeManager behaviour) to a different test class?	1	1	https://issues.jboss.org/browse/JBPM-4443
13782	JBPM-4392	Marco, could you please elaborate little bit about this? What we want to achieve with it (I like the idea just need more info to confirm I know what to do)	1	1	https://issues.jboss.org/browse/JBPM-4392
13783	JBPM-4380	Hi Kris, We're investing on this commit and see what we can do based on this commit. After a quick view, we guess that this is the back-end api support in jbpm core of the description for process instance, right? So we can add front-end display function based on it, is it?	1	1	https://issues.jboss.org/browse/JBPM-4380
13784	JBPM-4379	Seems that we did not see this "Administrator" property for human task now in BPMS 6.0.1, so which version does it support? BTW does this variable support a group? You know that sometime the admin should be a group which is supplied from usergroupcallback.	1	1	https://issues.jboss.org/browse/JBPM-4379
13785	JBPM-4379	HI, Kris, I've tried the BusinessAdministratorId property in Human Task node, and found that the user id of this property will be persisted in PeopleAssignments_BAs, does this means the user has been set to Business Administrator of this task? BTW, even if this is what has been done in core engine, actually these is no support in front-end for this feature yet because i did not find any changes for task operations for this task BA. So i think this is what we can do next step. But before that, i still have confusions in several task operations in the user guide and i did not find where to do these operations in UI now: fail, forward, nominate, remove, skip, stop, suspend, resume. Especially for remove, i can not understand if a task has been removed by a admin, what's the status of the process instance which this task belongs to?	0	0	https://issues.jboss.org/browse/JBPM-4379

#	Requirement	Questions	Answered	Successfully Answered	URL
13786	JBPM-4379	Hi,Kris I have same issue like Marcell. this code (((org.jbpm.process.instance.impl.ProcessInstanceImpl) kcontext.getProcessInstance()).getMetaData().get("OwnerId"))) dose not work. I debugging this function, i found this reason is the CDI runtime(DeploymentServiceCDIImpl) is not aware of that listener(IdentityProviderAwareProcessListener), If you want to get more details , you can read email (Re: next step for UI works on JBPM-4379 RegisterableItemsFactory getRegisterableItemsFactory). So i want to modify it. But i found InjectableRegisterableItemsFactory (in DeploymentServiceCDIImpl) very differnet to KModuleRegisterableItemsFactory (in KModuleDeploymentService). Can u give some suggests about it?	1	1	https://issues.jboss.org/browse/JBPM-4379
13787	JBPM-4343	This error is thrown because the service task should reference an interface (that will be called), but the process parser cannot find any interfaces defined. Could you attach the process XML you created? It might be that the order of the elements is not as expected, are there any interface elements in the XML, and is it located before the process tag?	0	0	https://issues.jboss.org/browse/JBPM-4343
13788	JBPM-4341	Thx Maciej. I have discovered something new "SHARED_EM" ;-) Is this property "STANDALONE_LOCAL_SPRING_SHARED_EM" like the other strategies documented somewhere ? KIE_SESSION, STANDALONE_JTA, STANDALONE_JTA_SPRING_SHARED_EM, STANDALONE_LOCAL_SPRING_SHARED_EM, STANDALONE_LOCAL; The official doc is very poor concerning JPA & Tr (http://docs.jboss.org/jbpm/v6.0.1/userguide/jBPMPersistence.html#d0e4914).	0	0	https://issues.jboss.org/browse/JBPM-4341
13789	JBPM-4337	Hi, that's already happening inside the human task service, do you mean to add that feature in the User Interface? Can you please elaborate more?	1	1	https://issues.jboss.org/browse/JBPM-4337
13790	JBPM-4337	Hi, I mean I can see that there is a global administrator role ("admin" or "administrators"? What are the differences between these two?): - When I'm connected to the Business Central GUI as an admin (a user that I created with the "admin" role with the add-user script) or an admininistrator (during jbpm6.0.1+EAP6.1.1 installation, I had to create an admin which has all the jBPM roles (admin,analyst,...) in the User Interface), I'm not allowed to do "revoke" or "complete" on tasks that a simple user has claimed and started. Indeed via the User Interface I necessarily need to be the owner of the task to do these operations - when you say "that's already happening inside the human task service", do you mean that even if the User Interface doesn't show me the possibility to do "revoke" on tasks, I should be able to use the API "revoke" in a webapp? I would like to create a local administrator (supervisor of several users): - I can see that there is a task.setBusinessAdministrator API (human tasks have PeopleAssignments with PotentielOwners, BusinessAdministrators and ActualOwners), but I cannot find the notion of Business Administrator in the User Interface (neither in the process designer nor in menus/buttons/task displays). - What roles/rights do businessAdministrator(s) have on human tasks? I would like to know if I can "revoke" tasks that potential owners have claimed even if I'm not a PotentialOwner of the task, but only a BusinessAdministrator of the task. Thank you	1	0	https://issues.jboss.org/browse/JBPM-4337
13791	JBPM-4337	Thank you. Actually my request is not only about the UI. I've noticed that the feature is not in the UI, but I'm interested in using this feature by calling the APIs (revoke, complete,...) in a webapp. I can see that the notion of BusinessAdministrator exists; OK so it's not usable via the UI yet, but my hope Is that the APIs are operational however? Is the parameter BusinessAdministrator implemented in the human task (as are PotentialOwner and ActualOwner)? Can I set a BusinessAdministrator on a task by calling the API task.setBusinessAdministrator and then call getTaskAssignedAsBusinessAdministrator to get the task ids list? What are the possible actions/rights on these tasks as a BusinessAdministrator (only viewing? I hope he can act on it)? You say "We have this feature in our plans which is to build a task list for administrators that can see all the tasks not only the ones that they own", will the administrator only be able to "see" the tasks list? I would also be very grateful if you could answer my first question about the different notions of admin; it could help me to understand how to do what I need. Thank you! Regards	0	0	https://issues.jboss.org/browse/JBPM-4337
13792	JBPM-4320	Hi I tried to use metadata with workbench following the example provided on github. When I import the .bpmn2 file in workbench the metadata section is stripped out. Is this a bug in workbench or there is a way to save metadata in .bpmn2 file?	0	0	https://issues.jboss.org/browse/JBPM-4320
13793	JBPM-4316	It looks like perhaps a custom implementation of IdentityProvider along with ServicesAwardAuditEventBuilder might work. Is that correct? It's hard to see from the barely documented classes.	1	1	https://issues.jboss.org/browse/JBPM-4316
13794	JBPM-4307	Yes. You are right. I have just downloaded the current master branch (6.1.0-betaX) and the business task is working properly. Thanks for your help.	0	0	https://issues.jboss.org/browse/JBPM-4307
13795	JBPM-4249	I believe that documenting that is better choice as not always CMT is used and by that it should not introduce any additional overhead. So I would still opt to have it disabled by default but well documented. wdyt?	0	0	https://issues.jboss.org/browse/JBPM-4249
13796	JBPM-4233	Is this also available in the Java REST client?	1	0	https://issues.jboss.org/browse/JBPM-4233
13797	JBPM-4217	Shouldn't the implementation classes have the @Alternative annotation?	0	0	https://issues.jboss.org/browse/JBPM-4217
13798	JBPM-4178	[~cdsosi] Could you explain the use case a little bit? Why would you need a method that returns all available process definitions? The reason I ask is that this is obviously contrary to the whole philosophy of limiting process definitions (and ksessions and runtimes, etc.) to deployments.	1	1	https://issues.jboss.org/browse/JBPM-4178
13799	JBPM-4178	Of course I can explain. To my mind the philosophy is to make jBPM6 much more simple to use and to avoid complexity in handling sessions and so on. I think we agree on that point ;) I want to make a generic tooling so that I can retrieve process definitions first and then possibly interact with some process instances especially as far as human task are concerned. I may be wrong but I do not want if possible to know in advance what is available or not in a repository and that's not the case with proposed REST API because you always need to know at least a valid deployment id to use Remote REST AP. Moreover the AuditLog service retrieve all kind of information even if a specific deployment id is specified (that's what 6.0.0.Final user documentation tells) so I think that this parameter (deploymentId) appears to be a little useless to my opinion of course. Querying database through AuditLog service should be more generic, don't you think so? You can also refer to a post on forum where I had some exchange with Maciej about that, this may give you further information => https://community.jboss.org/thread/234895 HTH	1	1	https://issues.jboss.org/browse/JBPM-4178
13800	JBPM-4178	[~cdsosi], thanks, this helps a little bit. I agree with your point about querying the database through the AuditLogService -- that that should be more generic. Unfortunately, the <deploymentId> parameter is still needed becuase of.. how the AuditLogService is set up. Once 6.0 is done, I'll work on making the <deploymentId> parameter not needed.. All right, I'm starting to understand why you would want this, but there's one more challenge I want to bring up: you can have 3 deployments, "A", "B" and "C", and all 3 deployments contain the exact same process definition. Hmm.. it's now obvious to me why this operation would be helpful. I won't be able to deliver it with 6.0.0.Final, but I'll make sure it get's in the next release.	1	1	https://issues.jboss.org/browse/JBPM-4178

#	Requirement	Questions	Answered	Successfully Answered	URL
13801	JBPM-4178	Thanks Marco for your comment / explanations. Just some other questions to clarify : Now with jBPM 6.0.0 is it possible to have 3 differents business processes with same id but in different depoyment unit? Does the deployment unit represent a kind of namespace? >>there's one more challenge I want to bring up: you can have 3 deployments, "A", "B" and "C", and all 3 deployments contain the exact same process definition Exact same process definition means ? 1. Same process id only (with different content) 2. Same process id and actually same bpmn2 xml file Franck	1	1	https://issues.jboss.org/browse/JBPM-4178
13802	JBPM-4178	Hi Marco, That will be great. We are also looking for this feature to be available. Since we had this feature available in 5.4 it is very necessary feature to have the backward compatility. Do you have any estimate timeframe for 6.1.x release?	1	1	https://issues.jboss.org/browse/JBPM-4178
13803	JBPM-4178	Marco, just to add to the conversation as it might be quite useful - what would you say to expose same sort of information we have in UI, mainly following: - process definition id - process name - process version - deployment id - list of variables defined for given process definition including their types - optionally user and group involved in the process all these information we already have for UI in jbpm-kie-services so remote API might be simply taking that data, wdyt?	1	1	https://issues.jboss.org/browse/JBPM-4178
13804	JBPM-4178	Hi Marco, Has this feature been resolved? Can you please tell what is the rest API? Thanks.	1	1	https://issues.jboss.org/browse/JBPM-4178
13805	JBPM-4178	Hi Marco, There must be some confusion - the URL you specified provides the details of a specific process definition from a specific deployment (you have to know the deployment id and process definition id in order to construct the URL). My understanding is that this enhancement should instead provide all process definitions regardless of the deployment id - so I would expect the REST URL not to depend on a <deploymentId> or a <process-def-id>. In this way for example, if I want to start a process instance using REST API from my web app I can display for the user a list of process definitions to select from (just like in the jBPM console), instead of expecting him to manually enter some id's - the end user shouldn't care about those. Can you please clarify this? Thank you.	1	1	https://issues.jboss.org/browse/JBPM-4178
13806	JBPM-4178	Hi guys, Thanks for the questions! Seriously, critical attentiont to features always makes them better. The other new operation that I didn't mention is: {{http://<host>:<port>/<instance>/rest/runtime/<deploymentId>/process/}} (also {{GET}}, of course) If you want to retrieve every single process definition, then you can do the following: 1. call {{.../rest/runtime/<deploymentId>/process}} for the list of process def ids 2. for each process def id, retrieve the process def (see operation above). I had assumed this would be enough. Some users will have 100's of process definitions per deployment, so that retrieving a total list (wihout paging) is not a feature that's practical to implement. However, I can definitely add a feature that retrieves a *paged* list of the process definitions (default page size of 10 or so). It seems like both of you would want that: is that correct?	1	1	https://issues.jboss.org/browse/JBPM-4178
13807	JBPM-4178	[~kgeis], If I understand correctly, you're deploying the process from a different component than your front end. So this is what's happening: 1. Component A deploys process to new deployment id. 2. BPMS/Console deploys process, etc.. 3. Component B needs to find new process definition, but doesn't have info from component A Is this correct?	1	1	https://issues.jboss.org/browse/JBPM-4178
13808	JBPM-4178	[~kgeis], So: 1. You (person) author and deploy process in the console 2. BPMS/Console deploys process.. 3. Front-end doesn't have the deployment id (which only you know), so can't find process Is that correct? (If not: I guess what I'm trying to establish is why one part of your application doesn't know what the deployment id is. Sorry that I'm not understanding this.. :/ Could you explain which parts of your application there are and why the deployment id information isn't available to certain parts of your application?) Thanks!	1	1	https://issues.jboss.org/browse/JBPM-4178
13809	JBPM-4178	[~dragos.snk], Could you attach the stack trace (NPE) to this jira? That is, save the stack trace to a file (text) and then attach the file to this jira? That would be very helpful! Thanks.	1	1	https://issues.jboss.org/browse/JBPM-4178
13810	JBPM-4166	Duncan, could you take a look at the prototype that I believe should cover your case with bpmn2 standard way - transformations. Here you can find pull requests for it: https://github.com/droolsjbpm/droolsjbpm-knowledge/pull/55 https://github.com/droolsjbpm/jbpm/pull/184 kie-api where single DataTransformer interface is defined so it can be referenced in jbpm and if needed used to provide custom implementation of transformers. jbpm where we have default implementation of transformers and registry where such transformers are placed so runtime engine can take advantage of them. Currently implementation covers task nodes (work item based) so whenever transformation is used the variable will be transformed on the fly without actually changing process variable value that is its source. Out of the box, we provide two (at the moment) implementations of DataTransformer: - MVEL based - Java Script based - this is implementation that uses javax.script support from Java SE 6 which is JSR 223. this gives us extremely useful option to add more languages based on users request by simply dropping given scripting engine on class path and it will be automatically found and registered. By default Java 6 and above provides JavaScript engine based on Rhino impl. There are quite few engines already supporting JSR 223 like groovy, freemarker, etc (more here https://java.net/projects/scripting/sources/svn/show/trunk/engines) with that users can take advantage of the preferred scripting language as part of the bpmn2 transformation. Moreover new/custom ones can be provided by anyone, like the one you created based on JAXB, then registered in the engine and off you go... What do you think?	1	1	https://issues.jboss.org/browse/JBPM-4166
13811	JBPM-4164	When you say dumper for process instances, I assume you're referring to dumping an instance of the (RuleFlow)Process class as BPMN2 XML? I do believe that is valid use case however (and it's for example used like this for dynamic process instances). What's the reason for believing this might not be a good idea? Similarly, what would be the reasons for forcing to hide this? What is the risk of this being (ab)used? Note that it's currently only part of the internal implementation classes. That means that people can use it at their own risk, but there's no guarantee we won't change the API etc. It is however used internally to turn a Process object into an BPMN2 XML representation (to be able to restore it later). If people want to use it for similar use cases, I don't see a problem with that. Note however that it doesn't address other features like for example preserving the XML structure (like comments etc.) or simulation data etc.	0	0	https://issues.jboss.org/browse/JBPM-4164
13812	JBPM-4144	Is there a plan to work on this? If so, in which release can we expect this?	1	0	https://issues.jboss.org/browse/JBPM-4144
13813	JBPM-4135	How do I add process model view in my project? I want same debug option in my project so can you guide me?	0	0	https://issues.jboss.org/browse/JBPM-4135
13814	JBPM-4125	Would it be possible to get a small test component that illustrates exact usage of jbpm with spring in your case? Just to avoid any misunderstanding especially with resource local configuration.	1	1	https://issues.jboss.org/browse/JBPM-4125
13815	JBPM-4110	How to reproduce this behaviour: 1. Add the kie-wb-6.0.0.CR2-tomcat-7.war to a Tomcat 7 installation 2. Read the README.txt file and do some configurations 3. Start the application and look if it starts clearly (it should) 4. Build the https://gist.github.com/mbiarnes/6379664 branch and fetch the droolsjbpm/jbpm-dashboard/jbpm-dashboard-distributions/target/jbpm-dashbuilder-tomcat-7.war 5. Deploy it to tomcat/webapp 6. Start the server Now you should see in the logs this error.	1	1	https://issues.jboss.org/browse/JBPM-4110

#	Requirement	Questions	Answered	Successfully Answered	URL
13816	JBPM-4071	Hi Thomas, This sounds as a good community contribution, but I have doubts about storing things in the database. Can the Projection/Prediction be calculated on the fly? This kind of feature can be really interesting if you pick up the simulation data, that can give you business estimates about how much time in average a user needs to wait for the prediction to happen. You also need to take into account the fact that assignments can be done with variable data, which means that sometimes you don't know who the potential owner is.	1	0	https://issues.jboss.org/browse/JBPM-4071
13817	JBPM-4071	Hi Mauricio, Yes actually in my current implementation I also try to resolve the variables that are assigned to Human Task by looking at the Process Variable Map. About resolving things on the fly, it surely can be done but the problem is the user UI is a grid that list all the process instances which he/she may be involved in the future. So if I resolve things on the fly I thought it will take so long considering there should be a lot of active process instances. What do you think? I can share the model code if needed.	1	0	https://issues.jboss.org/browse/JBPM-4071
13818	JBPM-4071	Can you share a couple of screenshots of the UIs that will be affected? I though that the user will be able to see the Future tasks in their task list. I didn't understood that the process instance list will be affected by this feature. I guess that you have both. By the way are you working with the jbpm console ng? and jBPM 6? If you have a fork of the jbpm repository with the changes I can take a look. Cheers	0	0	https://issues.jboss.org/browse/JBPM-4071
13819	JBPM-4046	Marco, I am not quite sure the incoming and outgoing are optional. According to xsd they are marked with minOccurs = 0 but that does not have to mean it's optional. As there might be activities that do not have either incoming or outgoing sequence flow at all, for example start and end events respectively. In my opinion, for custom parsers it is even better to have these elements there as it makes the parsing easier from structure point of view. In most of the cases bpmn2 xml is built like this: - item definitions - properties - activities (nodes) - sequence flows - BPMN DI - relationship (out simulation) so when parsing nodes (assuming stream/event based approach is used) it is quite difficult to refer to sequence flows at that time as sequence flows were not yet parsed thus having its incoming and outgoing node directly makes it much easier. What is the issue with having them in bpmn2 xml? Sorry if I did not get it directly.	0	0	https://issues.jboss.org/browse/JBPM-4046
13820	JBPM-4029	Could you upload the bpmn2? Or even better if you could provide test case. In general nested OR gateway should work fine We cannot rely on outgoing sequence flows on diverging gateway because there can be another split in between or timer that will generate more instances. I reopen this issue again and try the example attached	1	1	https://issues.jboss.org/browse/JBPM-4029
13821	JBPM-4029	indeed the fix added for loops caused the nested gateways to be wrongly evaluated. Have done bit of changes to be able to keep track over looks (node executions) and now both scenarios are handled properly, at least based on the test I added. Marcos, could you please give it a try and let me know how does it look like from your point of view? Once comment about the loop example you have uploaded to the linked jira - it will not be properly handled as there is a mix between XOR and AND gateways - in other words it might be considered as invalid processing as the AND gateway will not wait for loop iterations as it's not aware of it because XOR gateway in front of it. To make it proper switch places of XOR and AND gateways to be more like this -see attached diagram. Will keep this jira open until you comment on it. Thanks	1	1	https://issues.jboss.org/browse/JBPM-4029
13822	JBPM-4029	Marcos, could you give a try once again? Just pushed some clean ups and improvements for the mechanism that decides when the OR converging gateway should be triggered. Added the loop inside OR gateway example to test cases.	1	1	https://issues.jboss.org/browse/JBPM-4029
13823	JBPM-4029	What you mean by this case? Could you upload zip/tar files instead of rar. If you could upload process image too so I know what case you have in mind.	1	1	https://issues.jboss.org/browse/JBPM-4029
13824	JBPM-4008	we should probably group "Front, Back, Forward, Backward | Alignment, Sizing" into a single dropdown menu rather than having them all next to each other (sample image attached). wdyt?	1	1	https://issues.jboss.org/browse/JBPM-4008
13825	JBPM-3989	I assume you created your ruleflow using the Drools&jBPM Eclipse plugin, version 5.5.0.Final? Would it be possible to attach the full XML file for reference?	0	0	https://issues.jboss.org/browse/JBPM-3989
13826	JBPM-3989	this xml seems to be valid, I was able to import it into jbpm web designer without any issue. Though it might have been fixed in version 6. Do you mind checking and confirming (or not) if this is still the case?	0	0	https://issues.jboss.org/browse/JBPM-3989
13827	JBPM-3987	jbpm aligns common libraries with versions used by Jboss Application Server to ensures the best compatibility. Current version we use is 1.4.5 which in general comes out of the box. Although there is nothing against to upgrade that version when embedding jbpm in the system. Have you tried with 1.4.5? Maybe if you could provide more details about the issue we could look into it as if that is actually an issue when using gmail that would be rather serious. Personally have tried several times with gmail account and never ran into any problems.	1	1	https://issues.jboss.org/browse/JBPM-3987

#	Requirement	Questions	Answered	Successfully Answered	URL
13828	JBPM-3979	room. (Ping timeout: 245 seconds) [07:48am] maciejs: salaboy: what you mean suspend? process instances or... [07:48am] salaboy: maciejs: yes a process instance to the state SUSPENDED [07:49am] salaboy: maciejs: we did a review session yesterday and most of the guys were freaking about aborting a process instance.. they prefer to suspend it instead [07:49am] salaboy: maciejs: I remember to see in the Enum the SUSPENDED state [07:49am] maciejs: salaboy: to be honest I don't think we have that supported (or at least I am not aware of it) [07:50am] salaboy: maciejs: cool.. I'm just checking because it ring some bells here.. but I don't remember where that code is.. so I will look at it.. don't worry [07:50am] salaboy: maciejs: public static final int STATE_SUSPENDED = 4; [07:50am] salaboy: maciejs: I'm not than crazy yet hehe [07:50am] maciejs: salaboy: yes, I know about the state, but don't recall anything that sets it [07:51am] salaboy: maciejs: I'm going back to work now.. i need to meet prakash in 1h [07:51am] maciejs: salaboy: have fun [07:51am] salaboy: maciejs: ttyl.. enjoy the rest of the day [07:51am] maciejs: salaboy: same to you [07:53am] mriet: salaboy, re suspended state: isn't that what happens when the process hits a human task or similar? [07:53am] mriet: salaboy, I don't think you can "set" that state via the api. [07:53am] salaboy: mriet: I'm checking that [07:54am] mriet: salaboy, I don't think it's a state for "external use", so to speak.. maybe krisv knows? [07:54am] salaboy: mriet: I remember setting that state in Drools Flow.. in the early days [07:54am] mriet: salaboy, [07:54am] salaboy: mriet: yeah.. the code will tell us the truth [07:56am] salaboy: mriet: doing a grep to all the jbpm code it seems that the SUSPENDED state is not even used in the jbpm code [07:59am] chm007 left the chat room. (Quit: Computer has gone to sleep.) [08:01am] omolinab is now known as omolinab|trn. [08:01am] salaboy: mriet: maciejs looking at the abortProcess method it looks like are just missing the method for suspending a process which just set the ABORTED state.. in the ProcessRuntimeImpl [08:01am] salaboy: mriet: maciejs i will write a mail to krisv to see what his opinion on the matter [08:03am] mriet: salaboy, don't forget persistence complications.. (suspended <=> process instance cache?) [08:03am] jrenaat left the chat room. (Ping timeout: 252 seconds) [08:03am] salaboy: mriet: it should be the same as abort.. is there something special happening when we abort a persistent process? [08:04am] salaboy: mriet: a cache? why is htat? [08:04am] salaboy: mriet: it's too early here for me to think about that kind of stuff hehe [08:04am] mriet: salaboy, JPAProcessInstanceManager [08:04am] salaboy: mriet: let me check that [08:05am] maciejs: mriet: salaboy suspend should be to sort of temporarily exclude process instance from execution [08:05am] maciejs: mriet: salaboy meaning when you call like a signal so it should not be triggered [08:05am] mriet: salaboy, sorry.. time for a coffree break? [08:06am] salaboy: mriet: hmm it's just a filter IMO.. but I will check it [08:06am] salaboy: mriet: enjoy your coffee [08:06am] maciejs: mriet: salaboy but I see potential issues with human tasks - complete human task when process instance is suspended we could end up with inconsistent state [08:07am] salaboy: mriet: maciejs yeah.. I was thinking about that.. it shoudn;t be so hard.. I mean.. you can just suspend all the tasks .. we should have the same policies with aborted processes [08:07am] salaboy: maciejs: mriet I can imagine the same kind of problems with suspend and abort [08:08am] • mriet is going to grab some coffee.. brb. [08:08am] maciejs: salaboy: yeah, but that would mean to extend workitemhandler with suspend and resume capabilities [08:08am] salaboy: maciejs: so I guess that we should use our process event listener to abort all the tasks from an aborted process [08:09am] maciejs: salaboy: for abort it's not an issue we already have a way to abort work item via handler [08:09am] salaboy: maciejs: not really.. I mean if you suspend a process all the tasks are suspended.. if you bring it back to life you will just change the state of the task not of the work item handler.. [08:09am] maciejs: salaboy: and how are you going to communicate between process instance and tasks? [08:10am] salaboy: maciejs: i see your point.. but I also see the business side of it.. [08:10am] maciejs: salaboy: I completely agree with the need for suspend and resume	0	0	https://issues.jboss.org/browse/JBPM-3979
13829	JBPM-3968	Cristiano, I'm not sure how moving the examples module to it's own (maven?) profile would help. Could you explain the proposed solution a little bit more?	1	1	https://issues.jboss.org/browse/JBPM-3968
13830	JBPM-3947	Will this be implemented? According to a related jira this is not an issue but I disagree and think it's a fundamental problem with sessions being disposed and persistent timers	1	1	https://issues.jboss.org/browse/JBPM-3947
13831	JBPM-3946	does this issue refer to providing a custom editor on the Properties tab when selecting a custom WorkItemHandler? If so I could really use something like this to massively improve the tooling experience in the "Continuous Deployment" solution for OpenShfit / Fabric8 using jBPM. Basically we have a BuildTrigger custom WorkItemHandler which has 2 input strings; when a user clicks on the BuildTrigger node in the designer we really want to show our own simple web form by default which shows those 2 strings (along with our own smart defaulting / auto-completing widgets if possible). Right now the Properties view shows mostly stuff thats not relevant to the user (see screen shot https://issues.jboss.org/secure/attachment/12388661/buildtrigger-page1.png); then if the user spots the very first line called "Assignments" then clicks the Down icon a popup appears that lets them edit the values (with no validation/custom widgets) - see screenshot 2 https://issues.jboss.org/secure/attachment/12388662/buildtrigger-page2.png. While this works; its not totally awesome or massively intuitive ;). Any improvements in this area would be awesome.	1	1	https://issues.jboss.org/browse/JBPM-3946
13832	JBPM-3946	I have added a change in master that does the following: * If in your WID you define a workitem for example (note the customEditor property set !) ["name" : "MyTest", "parameters" : ["FirstName" : new StringDataType(), "LastName" : new StringDataType(), "Address" : new StringDataType(), "Country" : new StringDataType()], "customEditor" : "something", "displayName" : "MyTest", "icon" : "defaultemailicon.gif"] Designer will treat each parameter as an individual property entry. The Assignments and Data Input / Data Output properties will be hidden. In addition these properties will be displayed in the "Assignments" section of the property panel (new section that is created just for these) Here you can see what that looks like: http://i.imgur.com/ykAenUh.png So all you have to do to get this is set the customEditor property to anything really (except a blank string)..any value will do. The underlying BPMN2 generated remains the same with the proper ioSpecification section created with correct data inputs / outputs and assignments. Currently its an all/nothing deal (you cannot pick/choose which parameters in the wid you want to externalize into their own properties..they are all done) just to get you moving forward. In the future we will update this so users can pick /choose as well as we will look at the parameter type and associate it with the correct individual properties editors (like boolean, enumeration, script, etc etc). Please give this a try and let me know if it works for you.	1	1	https://issues.jboss.org/browse/JBPM-3946
13833	JBPM-3905	Would it be possible to test this on a more recent version? Spring support was only added after the 5.2.0.Final release, so it is possible that the issue is already addressed in a future release. Would it be possible to for example try with the 5.2.5.Final or the 5.4.0.Final release?	1	0	https://issues.jboss.org/browse/JBPM-3905

#	Requirement	Questions	Answered	Successfully Answered	URL
13834	JBPM-3905	Thanks Kris, We tried to test the same with a latest version: 5.4.0.Final release, we were not able to get the same error anymore. However, when the app server is started it throws below error log: Hibernate: select task0_.id as col_0_0_, deadline1_.id as col_1_0_, deadline1_.deadline_date as col_2_0_ from Task task0_, Deadline deadline1_ where (task0_.archived=0)and((deadline1_.id in(select startdeadl2_.id from Deadline startdeadl2_ where task0_.id=startdeadl2_.Deadlines_StartDeadLine_Id))or(deadline1_.id in(select enddeadlin3_.id from Deadline enddeadlin3_ where task0_.id=enddeadlin3_.Deadlines_EndDeadLine_Id)))and(deadline1_.escalated=0) order by deadline1_.deadline_date Hibernate: select SESSIONINFO_ID_SEQ.nextval from dual Hibernate: insert into SessionInfo (lastModificationDate, rulesByteArray, startDate, OPTLOCK, id) values (?, ?, ?, ?, ?, ?) 83388 23/01 11:10:33,112[pool-2-thread-1] ERROR transaction.support.TransactionSynchronizationUtils.invokeAfterCompletion - TransactionSynchronization.afterCompletion threw exception java.lang.AbstractMethodError: org.drools.container.spring.beans.persistence.DroolsSpringJpaManager.clearPersistenceContext()V at org.drools.persistence.SingleSessionCommandService$SynchronizationImpl.afterCompletion(SingleSessionCommandService.java:448) Even after getting the above error, Everything works fine and we are able to complete and end process for jbpm human task. But, After manually executing delete script for jbpm workflow tables, when we start process and than tries to complete human task, we get below error: Exception: Row was updated or deleted by another transaction ... If I restart my app. server and start process and than tries to complete human task, it works fine. Could you please provide us with any hint to avoid restarting the app server, everytime we delete or update jbpm tables.	1	0	https://issues.jboss.org/browse/JBPM-3905
13835	JBPM-3905	Noor, did you already get rid of this exception? (java.lang.AbstractMethodError: org.drools.container.spring.beans.persistence.DroolsSpringJpaManager.clearPersistenceContext()V) If yes, how?	0	0	https://issues.jboss.org/browse/JBPM-3905
13836	JBPM-3902	Is there a patch to backport this fix to 5.4.0 Community?	1	0	https://issues.jboss.org/browse/JBPM-3902
13837	JBPM-3889	Attached an example, which demonstrates that commit per node transition with BRMS 5.3.0. The customer doesn't feel nice with it because it requires development on their side and more development if they consider recovery which is described in (b). FYI : "jBPM5 Developer Guide" Chapter 11 suggests persisting BusinessEntity object to hold ksessionId/processInstanceId/workItemId relation in WorkItemHandler for async WorkItem but it has the same concern... Isn't it too much effort on application side? Can jBPM provide some help out-of-box?	1	0	https://issues.jboss.org/browse/JBPM-3889
13838	JBPM-3889	Toshiya Kobayashi <tkobayas@redhat.com> made a comment on [bug 958386|https://bugzilla.redhat.com/show_bug.cgi?id=958386] +++ This bug was initially created as a clone of Bug #889091 +++ Description of problem: a) Being able to commit a transaction per node transition regardless of synchronous or asynchronous. Hopefully by configuration basis (not additional development effort by users) b) Recovery support (continuing process instance execution) after JVM reboot (including JVM crash case). The key point is less development effort by users --- Additional comment from JBoss JIRA Server on 2013-01-06 21:48:37 EST --- Toshiya Kobayashi <tkobayas@redhat.com> made a comment on jira JBPM-3889 Attached an example, which demonstrates that commit per node transition with BRMS 5.3.0. The customer doesn't feel nice with it because it requires development on their side and more development if they consider recovery which is described in (b). FYI : "jBPM5 Developer Guide" Chapter 11 suggests persisting BusinessEntity object to hold ksessionId/processInstanceId/workItemId relation in WorkItemHandler for async WorkItem but it has the same concern... Isn't it too much effort on application side? Can jBPM provide some help out-of-box?	1	1	https://issues.jboss.org/browse/JBPM-3889
13839	JBPM-3869	Marco Rietveld <mrietvel@redhat.com> made a comment on [bug 880874|https://bugzilla.redhat.com/show_bug.cgi?id=880874] Hisao, it doesn't look like we'll be adding this functionality to BRMS 5.x, but it will be present in BPMS 6.0+. This issue applies to BRMS. What would you like to do with this issue? I'd like to set it to CLOSED / NEXTRELEASE.	1	1	https://issues.jboss.org/browse/JBPM-3869
13840	JBPM-3869	Hi, Marco. Thank you for your work. I'm fine with that this functionality will be present in BPMS 6.0+. Could you set to CLOSED/NEXTRELEASE please? Thx	1	0	https://issues.jboss.org/browse/JBPM-3869
13841	JBPM-3820	QQ, it seems like there might be a mistake in your configuration -- did you forget to add a " at the end of the <beans element? Also, could you attach your file to the issue?	1	1	https://issues.jboss.org/browse/JBPM-3820

#	Requirement	Questions	Answered	Successfully Answered	URL
13842	JBPM-3814	obvious to you, but I want to document this for others as well, which is why I'm adding more documentation than necessary) To start with, the problem can only happen if the user takes control of the transaction before a the synchronized SSCS.execute() method is called. If no one else takes control of the transaction, then we don't have a problem, as far as I know. Multiple processes started on the same ksession won't cause this, I think: when a process is started (or otherwise run), it's run from inside the synchronized execute() method. Any subsequent process starts must go through the wait and go through the same synchronized method. So unless the ksession is not the owner of the transaction, running multiple processes on the same ksession can never cause a problem. And this is where you're right: running a ksession in an environment where the ksession _is *not* the transaction owner_ will cause problems. In fact, the race condition that you describe will then be present! So, what we can do is use a reentrant lock to fix this problem -- like you suggested. This, like any code that tries to solve a race condition, makes the code complexer. Does it introduce any _new_ race conditions that weren't previously present? Let's take the simplest situation: the transaction owner is _not_ the ksession but something else, and a ksession method is called that, for example, starts a process and thus goes through the SSCS.execute() method. What happens? Well, the the lock is gotten, the process is started, and since the SSCS is _not_ the owner of the transaction, the transaction is not committed. Then the SSCS.execute() method is completed, and the ksession.startProcess() method (or whichever method) returns control to the user code. If we call another ksession operation in the same thread, then the reentrant lock will allow us to lock again (it's reentrant ;)) and we're fine. Eventually, the transaction will commit, the lock will be released, and everything is good! Okay, let's make the situation a little more complex: two threads, and the transaction owner is again *not* the ksession but something else. When the first thread calls, it's the same as the first situation: everything's good! Then the second thread calls ksession method that involves the SSCS.execute block. At this point, # the transaction has not yet been committed and # the first thread owns the lock. When the second thread (and any thread after that) call an operation, then it will block until the transaction is committed. Unfortunately, having the ksession behave this way will break existing implementations for users who expect the following: # I can share the same ksession object with multiple threads # I can take control of the transaction. Users who do this will see their performance decrease drastically, I think. And they will also be working with code that might break on them because of the race condition that you've described. The heart of the problem is the following: - the code assumes that the ksession has control of the transaction So when the code (SSCS) does _not_ have contol of the transaction, then weird and bad things happen. If we try to fix the code, we will be ["going against the grain"|http://dictionary.reference.com/browse/go+against+the+grain] and, as I describe above, possibly introduce other problems. I like your solution -- it's a nice piece of code -- but one of the responsibilities we have is to protect the API. To some degree, the code is like a fortress: users are crazy and there will always be users who are trying to climb in through the chimney instead of using the front door, "because the architecture is based around chimneys". We then have a choice: we can change things around so that the fire isn't burning in the fireplace, or say "NO, you may not enter through the chimney". What we then have to decide is: is it more important the the house stays warm, or was the chimney always actually more of an upstairs door? In this case, I really think that the house has to stay warm. There's no other way to keep it warm in the winter, as far as I know. I'm getting a little carried away with this metaphor.. ;) In other words, I think we have to make clear that having other components take control of the transaction is not something that we support and that if you *do* allow something else to take control of the transaction, then you're on your own. (At this point, we get into a discussion about the architecture of the human-task component, but that's another discussion -- one	1	1	https://issues.jboss.org/browse/JBPM-3814
13843	JBPM-3814	Hi Kris, can you give me some some sample code on how I can get a handle on the underlying command service and how to configure the lock? Thanks.	0	0	https://issues.jboss.org/browse/JBPM-3814
13844	JBPM-3814	Marco, what do you think about keep this configurable for 6.0 release? I mean, using reentrant locks could be configured by jBPM API in some way even affecting the performance at least for this 6.0 release. This is very important because many developers use Spring or EJBS with a couple of methods implicitly using transaction around, which calls ksession/jBPM API in some moment - so keeping it thread safety for these scenarios even with performance implication is better than let the whole context in in a non reliable state. Making this decision configurable, it will not impact in designs where the user transaction is not shared with the jBPM/session API, letting the session creating and managing the transaction/entity manager, without unnecessary locks.	1	0	https://issues.jboss.org/browse/JBPM-3814
13845	JBPM-3803	Does jBPM work with OpenJPA?	0	0	https://issues.jboss.org/browse/JBPM-3803
13846	JBPM-3799	What was in a *whole* lot of tests was the following code: {code:java} protected void tearDown() throws Exception { super.tearDown(); client.disconnect(); server.stop(); } {code} The problem is that super.tearDown() refers to BaseTest.tearDown(), which closes the entityManager and entityManagerFactory instances. Except that TaskServerHandler.messageReceived() calls taskSession.dispose() -- which closes these instances as well. This situation would not really be a problem in a production environment (it's internal code, after all), but it can mean that errors involving persistence and tx's can be thrown during tests (especially with hibernate 4). And those errors can be either alarming or confusing, when working on a complicated bug. Therefore, this bug, and the changes to reorder the above method so that it ends up being this: {code:java} protected void tearDown() throws Exception { client.disconnect(); server.stop(); super.tearDown(); } {code} Fortunately, there was a lot of duplicate code I could refactor into inherited methods that did this.	0	0	https://issues.jboss.org/browse/JBPM-3799
13847	JBPM-3774	It would be really useful to extend this to a) add other Out of box service implementations (e.g. Email? b) make this extensible so user could plug in their own implementations and reference them in the various design tools with a text value, e.g., Implementation = "foo" where foo is their custom workitem handler. This later capability would be instead of creating custom tasks with custom workitem handlers. This would allow for somewhat more portable BPMN2 models.	0	0	https://issues.jboss.org/browse/JBPM-3774

#	Requirement	Questions	Answered	Successfully Answered	URL
13848	JBPM-3769	hardcoded urls (admittedly this is not as bad as some of the other components): > grep -r localhost . ./org.drools.guvnor.Guvnor/hosted.html:var $hosted = "localhost:9997"; ./WEB-INF/classes/preferences.properties:designer.url=http://localhost:8080 ./WEB-INF/classes/preferences.properties:guvnor.url=http://localhost:8080/jboss-brms Is it unrealistic to centralise these for the configuration of BRMS / jBPM as a whole instead of diverse locations I have to modify to get it all working? I have sent a separate list of the same for the designer.war to Tiho with these: > grep -r localhost . ./defaults/customeditors.json: "Actors" : "http://localhost:8080/designer/customeditors/sampleactorseditor.html" ./defaults/formwidgets/backboneformsinclude.fw:<script src="http://localhost:8080/designer/lib/backbone-forms-min.js" charset="utf-8"></script> ./defaults/formwidgets/backboneformsinclude.fw:<script src="http://localhost:8080/designer/lib/backbone-forms-list-min.js" charset="utf-8"></script> ./defaults/formwidgets/backboneformsinclude.fw:<link href="http://localhost:8080/designer/lib/backbone-forms-default.css" rel="stylesheet" /> ./js/Core/main.js: * url:"http://localhost:8080/oryx/stencilsets/bpmn1.1/bpmn1.1.json" ./js/Plugins/bpel2bpmn.js: eRDF = '<?xml version="1.0" encoding="utf-8"?><html xmlns="http://www.w3.org/1999/xhtml" xmlns:b3mn="http://b3mn.org/2007/b3mn" xmlns:ext="http://b3mn.org/2007/ext" xmlns:rdf="http://www.w3.org/1999/02/22-rdf-syntax-ns#" xmlns:atom="http://b3mn.org/2007/atom+xhtml"><head profile="http://purl.org/NET/erdf/profile"><link rel="schema.dc" href="http://purl.org/dc/elements/1.1/" /><link rel="schema.dcTerms" href="http://purl.org/dc/terms/ " /><link rel="schema.b3mn" href="http://b3mn.org" /><link rel="schema.oryx" href="http://oryx-editor.org/" /><link rel="schema.raziel" href="http://raziel.org/" /><base href="http://localhost:8080/backend/poem/new" /></head><body>' }); }indow.show();ndowue,Bpmn2Bpel.ApacheOdeUrlInputTitle,w').close();el_window').close();sport.responseText);Failed); ./js/Plugins/bpmn2pn.js: * getRdfUrl("http://localhost:8080/backend/poem/model/7/self") ./js/Plugins/bpmn2pn.js: * => "http://localhost:8080/backend/poem/model/7/rdf" ./js/Plugins/bpmn2pn.js: * getRdfUrl("http://localhost:8080/backend/poem/model/7/rdf" => "http://localhost:8080/backend/poem/model/7/rdf") ./xslt/BPMN2XForms.xslt: <xsl:variable name="test1" select="'http://localhost:8180/backend/poem/model/237/self#oryx_606560F1-BE0B-4130-81CC-F77202E2F27A'"/> ./xslt/BPMN2XForms.xslt: <xsl:variable name="test2" select="'http://localhost:8180/backend/poem/model/237/self#oryx_E6E357E0-6407-4221-9C4F-E4CE9F5FE42F'"/> ./xslt/BPMN2XForms.xslt: <xsl:variable name="test3" select="'http://localhost:8180/backend/poem/model/237/self#oryx_1A426703-F199-4123-BE6B-452A2900ADDF'"/> ./xslt/BPMN2XForms.xslt: <xsl:variable name="test4" select="'http://localhost:8180/backend/poem/model/237/self#oryx_249FD0F7-EEFF-4A08-ACB5-D3F23F1E0A42'"/> ./xslt/BPMN2XForms.xslt: <xsl:variable name="test5" select="'http://localhost:8180/backend/poem/model/237/self#oryx_24055331-44F5-483D-A612-6ABB2E609096'"/> ./xslt/BPMN2XHTML-extended.xslt:<!-- http://localhost:8180/backend/poem/model/205/self#oryx_F15AEAF4-3AB2-4107-91A9-CDB909AE175C --> ./xslt/BPMN2XHTML-extended.xslt:<g id="node1" class="node"><title>http://localhost:8180/backend/poem/model/205/self#oryx_F15AEAF4-3AB2-4107-91A9-CDB909AE175C</title> ./xslt/BPMN2XHTML-extended.xslt:<!-- http://localhost:8180/backend/poem/model/205/self#oryx_C6DF5A68-6719-47E5-BD8D-FA2DBD0C229F --> ./xslt/BPMN2XHTML-extended.xslt:<g id="node2"	1	0	https://issues.jboss.org/browse/JBPM-3769
13849	JBPM-3769	Thanks Eric, from your list there should be some Designer Jiras that come from it: 1) Remove unneeded and unused xslt files from Designer (that clears most of your list there) 2) Add ability to look up the actual host name in form widgets instead of using localhost by default 3) Add ability to use the actual host name in custom editors configuration rather than defaulting to localhost As far as this Jira goes (initial request): a) Designer does not require a login, so not sure where single signon would fit in? b) Add Jira asking for a common system variable to be used..I think that would be the easiest to do at this point. wdyt? Thanks.	0	0	https://issues.jboss.org/browse/JBPM-3769
13850	JBPM-3764	Hmm, 'difficult' you say? I'd say impossible. How should I to identify from a message like {code} Errors occured loading flows: [7,10]: [ERR 102] Line 7:10 mismatched input 'data' in rule "RuleFlow-Split-info.magnolia.workflow.SimpleWorkflow-10-9-DROOLS_DEFAULT" [0,0]: Parser returned a null Package ProcessLoadError: unable to parse xml : Exception class org.drools.RuntimeDroolsException : invalid package name ProcessLoadError: unable to parse xml : Exception class org.drools.RuntimeDroolsException : invalid package name 2013-04-11 16:23:35,237 ERROR org.drools.builder.impl.KnowledgeBuilderImpl : [7,10]: [ERR 102] Line 7:10 mismatched input 'data' in rule "RuleFlow-Split-info.magnolia.workflow.SimpleWorkflow-10-9-DROOLS_DEFAULT" 2013-04-11 16:23:35,237 ERROR org.drools.builder.impl.KnowledgeBuilderImpl : [0,0]: Parser returned a null Package 2013-04-11 16:23:35,237 ERROR org.drools.builder.impl.KnowledgeBuilderImpl : ProcessLoadError: unable to parse xml : Exception class org.drools.RuntimeDroolsException : invalid package name 2013-04-11 16:23:35,237 ERROR org.drools.builder.impl.KnowledgeBuilderImpl : ProcessLoadError: unable to parse xml : Exception class org.drools.RuntimeDroolsException : invalid package name {code} that I've forgot to switch one condition from "rule / mvel" to "code / java"?	0	0	https://issues.jboss.org/browse/JBPM-3764
13851	JBPM-3763	Jiri Svitak <jsvitak@redhat.com> made a comment on [bug 852044|https://bugzilla.redhat.com/show_bug.cgi?id=852044] Cannot view human task list on EAP 6.0 with JPA 2.0 and PostgreSQL due to: org.postgresql.util.PSQLException: Large Objects may not be used in auto-commit mode. How to reproduce: 1. Set up your environment using the steps in this document: https://docspace.corp.redhat.com/docs/DOC-111367 Ignore the parts about setting up Hibernate 3, instead of that use attached persistence.xml files with JPA 2.0. 2. Run the attached test case. It starts a process instance and connects to the human task server and creates a task there. 3. Open http://localhost:8080/business-central and view your tasks (click on refresh button) of your user (in my case it's jsvitak, but you can easily reconfigure it to krisv for example; in these files: testproc.bpmn2 file, brms-users.properties, brms-roles.properties and DefaultUsers.mvel). 4. You can see an exception in your server, see attached server.log for details. Business central shows no human tasks, but the task from the testproc should be there. With configured Hibernate 3 you can see the test task and complete it too. My environment: EAP 6.0 (with default Hibernate 4) BRMS 5.3.0 GA patch01 (reconfigure to JPA 2.0 jbpm-human-task.war and business-central-server.war) PostgreSQL 9 Added also relevant JIRA issue based on this discussion: https://community.jboss.org/thread/203384	0	0	https://issues.jboss.org/browse/JBPM-3763
13852	JBPM-3758	Kris, not sure how console could help with this, especially with creating new version of a process based on an existing one?? One thing that could be useful is to change the parsing mechanism for process - as soon as there is a version attribute specified then make a sort of composite id of the process automatically: process.id-version so it will be by default possible to host different versions of the process in same knowledge base. For starting such processes a new command could be implemented... Wdyt? Or I completely misunderstood this issue?	0	0	https://issues.jboss.org/browse/JBPM-3758
13853	JBPM-3758	Guys, this is a really important feature that must be supported on the knowledge base primarily. The great problem is that every object in the engine that wants to refer a process definition uses only its id (a String). What happens if I have multiple instances of a process with different versions? They point to the same processId but this is wrong.	1	1	https://issues.jboss.org/browse/JBPM-3758

#	Requirement	Questions	Answered	Successfully Answered	URL
13854	JBPM-3758	Kanchan Desai <kadesai@redhat.com> made a comment on [bug 917949|https://bugzilla.redhat.com/show_bug.cgi?id=917949] Hi Marek, Doc Text has been added. Can you please review the CCFR.	0	0	https://issues.jboss.org/browse/JBPM-3758
13855	JBPM-3741	Implementation for this is in Designer master now. Can you please test it and let me know if there is anything else that need to be done? Thanks.	1	1	https://issues.jboss.org/browse/JBPM-3741
13856	JBPM-3724	This is very nice +100. One thing that is often requested by community is to be able to execute commands against the session via the console REST api - would this also be a feature worth considering here as well?	0	0	https://issues.jboss.org/browse/JBPM-3724
13857	JBPM-3724	One thing that can be sort of reused is to add factories (I think we already have an jira issue for that) for it as it relies on different components (no session and no knowledge base there). And the "template" is web.xml in that case. Is that what you meant Marco? If not could you please elaborate bit more?	1	1	https://issues.jboss.org/browse/JBPM-3724
13858	JBPM-3724	short update on JNDI binding - it can be done in generic way by using JEE components to initialize it: - servlet - servlet context listener as AS 7.1.x will consider this as part of the deployment process of an application and will do all required preparations so there is no need for any JBoss AS specific code at all. Important to note here is that works for AS 7.1.x and does not work for AS 7.0.2 which we use by default. So here it is what we could do: 1. implement servlet context listener that will boostrap console (knowledge base and session based on given configuration) - console code 2. since boostrap is done in JEE managed object it will allow to bind session into JNDI - console code 3. move to JBoss AS 7.1.1 as default server to be able to utilize this feature - installer This mechanism is generic and supported by all app servers and servlet containers and provides us with additional advantage - any errors in console will be visible during server startup and not after first logon attempt. Wdyt?	1	1	https://issues.jboss.org/browse/JBPM-3724
13859	JBPM-3724	Maciej, yes that's what I meant. You wrote: "One thing that can be sort of reused is to add factories (I think we already have an jira issue for that) for it as it relies on different components (no session and no knowledge base there). And the "template" is web.xml in that case. Is that what you meant Marco? If not could you please elaborate bit more?" Good point in that not a lot of what will be used for console can be reused, because HT does different things -- but being able to reuse the general framework (and also have "A Way to Configure Components") is good. Thanks!	1	1	https://issues.jboss.org/browse/JBPM-3724
13860	JBPM-3723	Is there any progress on this issue ?	0	0	https://issues.jboss.org/browse/JBPM-3723
13861	JBPM-3723	Hello. I am still encountering this problem in jBPM 5.4.0 when persistence is enabled. Does your comment from 10/02/12 indicate otherwise? I see that the jira is still open so I wasn't sure... If I add a DefaultProcessEventListener to the ksession, override the afterProcessCompleted() method, and call kession.dispose() inside of that method using jBPM 5.4.0, I still receive: ERROR [org.drools.persistence.SingleSessionCommandService] (Thread-95) Could not commit session: org.jbpm.workflow.instance.WorkflowRuntimeException: ... Caused by: java.lang.IllegalStateException: Illegal method call. Thanks	0	0	https://issues.jboss.org/browse/JBPM-3723
13862	JBPM-3707	Kristofer, Yes, it is true that jBPM doesn't support the full BPMN2 specification yet. I don't think any (open-source) vendor does at this point (as the specification defines a huge amount of constructs, where not all of them are as important or commonly used probably, see http://www.bpminstitute.org/resources/articles/bpms-watch-how-much-bpmn-do-you-need). The scope of the BPMN2 specification is also much broader than just executable business processes. So instead of trying to reach 100% conformance to the BPMN2 specification, we have selected (what we believe is) the most important subset and are constantly trying to extend our support for other constructs. Note that the BPMN2 specification has been defined by a lot of large players in the market, many of the participants can be considered BPM gurus. JBoss / Red Hat participated but can hardly be "blamed" for the fact that the BPMN2 specification did not try to implement each and every possible workflow pattern. As workflow patterns are probably similar to BPMN2 constructs when it comes to this: not all of them are as important or commonly used. And for some of the patterns, the BPMN2 specification might offer a suitable alternative. Could you explain why you believe it should be one of our important goals to implement all of these patterns? Regarding support from jBPM, note that the latest version of jBPM that was evaluated was jBPM 3.1.4 (Jan 2007!). So all the improvements we did over the last 6 years probably haven't been incorporated in that evaluation yet. Note that there have been tons of initiatives related to workflow languages in the past 10 years (WfMC, XPDL, WF patterns, BPEL, etc.), we simply can't support everything out there (but feel free to help out if you believe something is missing). Also note that we currently do support the local task data in jBPM5, as every task has a so-called workItem associated with it, which has parameters that are specific to that instance of the task. Kris	1	0	https://issues.jboss.org/browse/JBPM-3707

#	Requirement	Questions	Answered	Successfully Answered	URL
13863	JBPM-3707	Kristofer, Yes, I am aware of this is a possibility. Unfortunately, we haven't had the time to do something like this ourselves. We welcome anyone in the community who might be willing to help out here. Would you mind if I ask why you need this information? While the workflow patterns were a common approach to evaluate / compare the expressiveness of different workflow engine a while ago, I believe the breakthrough of the BPMN 2.0 specification has significantly changed this: most people now seem more interested in using a standard for describing their process definitions and therefore would like to see information about which BPMN 2.0 constructs are supported rather than which workflow patterns could be expressed using these constructs. Kris	1	0	https://issues.jboss.org/browse/JBPM-3707
13864	JBPM-3703	I will take a look on this issue.. it shouldn't be so hard to configure. As a user, do you want to know about the I18N feature always?	0	0	https://issues.jboss.org/browse/JBPM-3703
13865	JBPM-3700	eagerly anticipate this example. Can you send me a draft version for testing. many thanks.	0	0	https://issues.jboss.org/browse/JBPM-3700
13866	JBPM-3698	Who had try to use jBPM 5.3, JBoss7.0.2 on this issue?	0	0	https://issues.jboss.org/browse/JBPM-3698
13867	JBPM-3698	Tried with both 5.3.Final and master and both work fine. The report template file is located inside jbpm-gwt-console-server.war/WEB-INF/reports. Could you please check if you have that file there?	1	1	https://issues.jboss.org/browse/JBPM-3698
13868	JBPM-3698	kind of weird that it did not help. could you provide bit more information about your environment and how do you install jbpm and then upgrade this report core library to be able to try to reproduce the issue.	0	0	https://issues.jboss.org/browse/JBPM-3698
13869	JBPM-3698	just to double check, did you remove the previous version of report code from jbpm-gwt-console-server.war/WEB-INF/lib? since attached one has different version could be that you have both on classpath...	0	0	https://issues.jboss.org/browse/JBPM-3698
13870	JBPM-3678	Julian, which SessionFactory class do you mean? Could you perhaps provide the fully qualified name (package name + class name) of the class you're referring to? Thanks!	1	1	https://issues.jboss.org/browse/JBPM-3678
13871	JBPM-3671	My bad with previous misinformation about this case, in fact you can do this with installer environment, here is an example of how to get hold of actual owner of a task in a freemarker template: <#if task.taskData??> Actual owner is: ${task.taskData.actualOwner.id} </#if> So, I think most of the cases can be already supported as this provides access to both task and taskData information. With that, I leave that to you to decide if the issue should be in any way enhanced or can be closed.	1	0	https://issues.jboss.org/browse/JBPM-3671
13872	JBPM-3652	See https://bugzilla.redhat.com/show_bug.cgi?id=818936 Things to think about: - What should happen with the task? Should it be stored in the db, but without a user? Should the task be rejected? - Should an exception be thrown, and if so, where in the human-task logic? Is this a persistence problem or a human-task logic problem (with regards to where things are checked)?	1	1	https://issues.jboss.org/browse/JBPM-3652
13873	JBPM-3635	You should file this issue under Guvnor and not jBPM. Designer uses the Guvnor REST api for retrieving/storing process assets and currently this REST API is not capable of retrieving alternative representations of an asset - it only returns a single one which in case of business processes is the bpmn2. What would solve this issue is Guvnor REST api allowing for example: /rest/packages/defaultPackage/assets/myProcessAssetName/source?type=svg /rest/packages/defaultPackage/assets/myProcessAssetName/binary?type=png /rest/packages/defaultPackage/assets/myProcessAssetName/source?type=bpmn2 ... We can currently store the png of the process on the on-save operation, but what good does that do unless you can actually retrieve it? Thanks.	1	1	https://issues.jboss.org/browse/JBPM-3635
13874	JBPM-3635	You don't deploy a business process into Guvnor. Designer is a BPMN2 asset editor OF Guvnor. Guvnor initiates the saving of the process, not Designer. But either way this is kind of irrelevant because the requirement is the same - when storing the business process, the associated process image should be stored as well. The question is - should it stop there? Should we also re-generate all the process forms on on-save operation? Should we also generate the proces PDF, and store the SVG, and the process JSON? If you look at the big picture, what I described in the previous post is the solution (multiple representations of 1 asset in Guvnor) and not a partial solution that you are requesting.	1	1	https://issues.jboss.org/browse/JBPM-3635
13875	JBPM-3635	I'm still open to suggestions. Don't take my previous post as the conversation being "done" by any means :) Regenration of process image is high priority as it is used in monitoring. We can implement a solution for this independently of Guvnor now if that is requested here. WDYT?	1	1	https://issues.jboss.org/browse/JBPM-3635
13876	JBPM-3635	Tihomir, from your POV, seen in the Guvnor scenario this is completely true. From what I see, there are still a lot of people that, like me, are migrating from JBPM 3.x and prefer to use the old process design & deployment flow, with a standalone designer (not Guvnor dependent): 1) Model process in the designer (allowing also load/save from external files) 2) Deploy the definition (process + image) directly in the application, using a servlet or whatever. However it seems that JBoss abandoned this approach. What do you think?	1	1	https://issues.jboss.org/browse/JBPM-3635
13877	JBPM-3635	Do you have some advices/examples to integrate easily Guvnor (and designer) in my app (JSF based)?	1	1	https://issues.jboss.org/browse/JBPM-3635
13878	JBPM-3635	The version number in the bpmn2 definition (version attribute in the process properties) is not updated when you save the process and is not the same as the version number of the process asset in the Guvnor JCR repository (which does get incremented every time you save). Users who are modeling their processes might save many times but do not want their version in the process definition updated (should stay the same). Is this what we are talking about?	1	1	https://issues.jboss.org/browse/JBPM-3635
13879	JBPM-3635	What you say is correct Tihomir. I mean the image asset version number. It remains always 1, even if I update the process (e.g. version 2 of the BPMN). Should the image follow the same process versioning?	1	0	https://issues.jboss.org/browse/JBPM-3635
13880	JBPM-3635	It seems that SVG file is saved after the refresh of the designer and for this reason the bounding box it is not the minimum bounding box. So the SVG file contains big empty space. Is it possible to save an SVG with the minimum bounding box?	1	0	https://issues.jboss.org/browse/JBPM-3635
13881	JBPM-3635	As far I see there no 2.4.1 version to include this feature. Is the latest designer version compatible with Guvnor 5.5.0 Final? Is there a compatibility matrix between Drools and the designer?	0	0	https://issues.jboss.org/browse/JBPM-3635
13882	JBPM-3629	There's also the question of backwards compatibility for Oracle users: - If a Oracle user is already using jBPM 5. - and starts using a version in which the annotations have been updated to specify sequences (but with hbm2ddl=validate). Does the code/database continue to use HIBERNATE_SEQUENCE when updating entries? This needs to be confirmed or denied.	0	0	https://issues.jboss.org/browse/JBPM-3629
13883	JBPM-3606	As discussed briefly on IRC, maybe we could think about a single way of configuring Human Task server/service? In addition to persistence/transaction handling there are few more: 1. UserGroupCallback 2. UserInfo (for escalation and notification) 3. Escalation handler 4. loading users and groups 5. defining transport and its attributes For human task server deployed as web app we do that via init parameters on web.xml but it could be refactored to make use of the single mechanism for configuration. Wdyt?	1	1	https://issues.jboss.org/browse/JBPM-3606

13884	JBPM-3600	jbpm4.4 seems can not set business.day.expressed.in.hours, and jbpm3 can set day.expressed.in.hours to any hour in jbpm.business.calendar.properties as below: business.day.expressed.in.hours= 8 business.week.expressed.in.hours= 40 business.month.expressed.in.business.days= 21 business.year.expressed.in.business.days= 220 can you make jbpm 5.x can set that as jbpm 3?	0	0	https://issues.jboss.org/browse/JBPM-3600
13885	JBPM-3600	how to delete this empty comments?	0	0	https://issues.jboss.org/browse/JBPM-3600
13886	JBPM-3600	Maciej, can you explain better this step? "It is configurable by putting BusinessCalandar implementation into environment under jbpm.business.calendar key." Thank you!	0	0	https://issues.jboss.org/browse/JBPM-3600
13887	JBPM-3600	Hi Maciej, How can i specify time interval for work day ? e.g.: http://docs.jboss.com/jbpm/v3/userguide/businesscalendar.html weekday.monday= 9:00-12:00 & 12:30-17:00 ... This is an example of my businesscalendar properties file: business.hours.per.week = 6 business.hours.per.day = 36 business.start.hour = 8 business.end.hour = 15 business.weekend.days = 7 business.holiday.date.format = yyyy-DD-mm business.holidays = 2013-01-01,2013-05-01,2013-06-02,2013-06-13:2013-06-16,2013-08-15,2013-12-25 Could we have an example of a new "jbpm.business.calendar.properties" file Thanks a lot	1	0	https://issues.jboss.org/browse/JBPM-3600
13888	JBPM-3575	Tihomir Surdilovic <tsurdilo@redhat.com> made a comment on [bug 806428|https://bugzilla.redhat.com/show_bug.cgi?id=806428] Reading this thread I don't see prior discussions of this particular issue so not sure what the repeated "as i said" really mean or try to accomplish? Can you please link me the URL where I can download the ER build so can test locally and fix? Thanks.	0	0	https://issues.jboss.org/browse/JBPM-3575
13889	JBPM-3575	Tihomir Surdilovic <tsurdilo@redhat.com> made a comment on [bug 806428|https://bugzilla.redhat.com/show_bug.cgi?id=806428] Could I please get a response on the last comment? Thanks.	0	0	https://issues.jboss.org/browse/JBPM-3575
13890	JBPM-3575	Jiri Svitak <jsvitak@redhat.com> made a comment on [bug 806428|https://bugzilla.redhat.com/show_bug.cgi?id=806428] I have cleared my browser cache, but it did not help. Even if I forget on the attached business process and use another new process the problem persists. I cannot add any notification to human task node notifications. I have noticed that there are small red triangles for columns: Expires At, From, To Users, To Groups, Reply To, Subject What these small red triangles mean? Also I was not able to add body to notification in the bigger editor for message body. Returning back to the attached business process created by Maciej. Have you asked Maciej about the commas in the "Expires At" column? I can confirm that changing the existing two notifications is possible. Cannot add third notification there though. So it's not possible to add new notifications in new processes. Existing saved notifications seems to be possible to edit.	0	0	https://issues.jboss.org/browse/JBPM-3575
13891	JBPM-3575	Tihomir Surdilovic <tsurdilo@redhat.com> made a comment on [bug 806428|https://bugzilla.redhat.com/show_bug.cgi?id=806428] The red triangle means that that column cannot be blank or that the value has changed. Can you please give me steps to reproduce this issue? Neither Maciej nor I are able to reproduce on ER4. Currently you cannot leave to users , to groups, subject and body as blank. if you do designer will ignore your entry (we should probably show an alert message here for users rather than just ignore - please open a BZ for that).	0	0	https://issues.jboss.org/browse/JBPM-3575
13892	JBPM-3575	Jiri Svitak <jsvitak@redhat.com> made a comment on [bug 806428|https://bugzilla.redhat.com/show_bug.cgi?id=806428] Hello, I will write again the steps to reproduce the problem: 1.) Download brms-p-5.3.1.ER4-deployable-ee6.zip from http://jawa05.englab.brq.redhat.com/candidate/BRMS-5.3.1-ER4/. MD5 hash and name of the file: 225bf1b40a1190acfa3267f4c7c2c10b brms-p-5.3.1.ER4-deployable-ee6.zip 2.) Download EAP 6 from here: http://download.eng.brq.redhat.com/released/JBEAP-6/6.0.0/zip/ 3.) I have deployed the brms 5.3.1 ER4 ee6 into EAP6, you can use this guide for that (default human task users and groups, default console users and groups, persistence using MySQL 5.5): https://docspace.corp.redhat.com/docs/DOC-111367 4.) Start the server in standalone mode: jboss-eap-6.0/bin/standalone.sh 5.) Create .dodeploy files for all jBPM .war directories in jboss-eap-6.0/standalone/deployments. 6.) Open Firefox 12.0, click on Tools->Clear Recent History, check Cache to be deletede, time range Everything. 7.) Open new tab and type the address: http://localhost:8080/jboss-brms/ 8.) Log in as user krisv, password krisv. 9.) Click on Knowledge Bases on the left panel. 10.) Click on Create New->New Package. 11.) Fill in the name of the package com.sample and click Create package. 12.) Click on Create New->New BPMN2 Process. 13.) Fill in the name HumanTask and Create in Package com.sample. 14.) HumanTask process is opened in Designer. Click on the left panel and place on the canvas ordinary StartEvent. Add a human task. Add an end event. 15.) Click on the human task. Fill in Name: Human Task, TaskType: User, Actors: krisv, Task Name: HumanTask. 16.) Click on PNG on the bottom panel to generate process image. Generate task forms for human tasks. Click on Validate button, all should validate without problems. 17.) Click on File->Save changes->Check in. 18.) Click again on HumanTask, open right panel and click on Notifications. 19.) Fill in type: Not Started, Expises At: 10s, From: krisv, To Users: mary, To Groups: PM, Subject: subject. 20.) Try to fill Body, the editor is opened. Fill in "body" and click on OK. String "body" is not saved. 21.) Try to save the rest of the notification with filled fields Type, From, To Users, To Groups, Subject. 22.) The notification did not save. NEW FINDINGS: However later I have noticed another editor for the Body. I think that this is the core problem. Two editors for body of the notification have been opened. After I closed the second body editor, which was hidden behind other dialogs, I was able to add a notification on second attempt without problems. Why there are two Body editors opened? It prevents from saving the body of the notification and then it prevents from saving the notification itself. After the first unsuccessful attempt I was able to add new notifications without problems. I see two following problem now: user friendliness - user doesn't know which fields are mandatory, no warnings or validations are available - two editors for Body notification can be opened and user can easily miss this fact and thinks that it's impossible to add a notification POSSIBLE SOLUTION: I think we can agree that there is no time for implementing the validation or program help for the mandatory parameters of notifications. Regarding the second problem - if you have two editors for "Body" opened, please try to fix it - that only one correct editor is opened, which is able to save the body of the notification. If you cannot see this problem, then don't fix it and we'll leave this bug.	0	0	https://issues.jboss.org/browse/JBPM-3575
13893	JBPM-3575	jgargula@redhat.com made a comment on [bug 867819|https://bugzilla.redhat.com/show_bug.cgi?id=867819] After another playing with notifications I've found that there is a problematic field "Reply To" on Notifications tab. I'm not sure how it exactly works but this field lost its value after closing the dialog by pressing OK. How to reproduce: 1. Fill all fields and click "Add" 2. Check filled values by clicking on just saved notification (everything seems to be all right) 3. Click OK and dialog disappears. 4. Double click on the user task and show notifications tab again. 5. After clicking on the previously saved notification there is missing value of "Reply To" field. I noticed that if you include @ sign in Reply To then the situation is different and it influences several fields in this form. They lost theirs values but these values can be seen in some other field.	0	0	https://issues.jboss.org/browse/JBPM-3575

13894	JBPM-3543	Rajesh Rajasekaran <rrajasek@redhat.com> made a comment on [bug 870424|https://bugzilla.redhat.com/show_bug.cgi?id=870424] This issue was agreed as a blocker, and has pm_ack. If we can commit to fixing this in the product branch, I will set the release flag for 5.3.1. Kris, can you comment?	1	1	https://issues.jboss.org/browse/JBPM-3543
13895	JBPM-3528	This is odd... The domain of values for MultiInstanceLoopCharacteristics.inputDataItem is constructed from the list of ioSpecification.dataInputs but as far as I can tell, neither the SubProcess nor Process have an ioSpecification. Where should these values come from?	1	1	https://issues.jboss.org/browse/JBPM-3528
13896	JBPM-3512	Meciej, I see you are the new owner of this issue. Is there an ETA for getting this issue resolved? Thanks! :)	1	1	https://issues.jboss.org/browse/JBPM-3512
13897	JBPM-3481	Not sure what you mean, these methods are available in the TaskClient class and are implemented. While a UI might decide to only offer a subset of the available methods, removing these methods from the implementation while they could be used, for example programmatically or by using another task UI that does support these operations. Could you elaborate on what you would like to see removed where and why?	1	1	https://issues.jboss.org/browse/JBPM-3481
13898	JBPM-3481	These methods should be fully implemented, and there should be junit test for most of these as well. What part of the code makes you think those operations are not supported?	1	1	https://issues.jboss.org/browse/JBPM-3481
13899	JBPM-3481	You mean the response handlers in TaskClientHandler? That is because there is one generic response handler for all task life cycle methods like claim, assign, etc.: TaskOperationResponseHandler. Or are you referring to something else?	1	1	https://issues.jboss.org/browse/JBPM-3481
13900	JBPM-3481	I see that, but also only see code in code in TaskServiceSession, for example, to handle Claim, Complete, Fail, Skip, Remove and Register. What am I missing here?	1	1	https://issues.jboss.org/browse/JBPM-3481
13901	JBPM-3445	Looked first at how drools-persistence-jpa handles a DB2 (97) database. The error that's thrown in about half of those tests is "SQL Error: -302, SQLState: 22001". On the following forum post, it's explained that this is because a value that's larger than the field in the db is being persisted: - http://www.dbforums.com/db2/1652962-getting-error-db2-sql-error-sqlcode-302-sqlstate-22001-sqlerrmc-null.html#post6445333 In this case, it's the lob in SessionInfo: the value being saved is larger than the (TINYBLOB) field. {noformat} WARN hibernate.util.JDBCExceptionReporter.logExceptions - SQL Error: -302, SQLState: 22001 ERROR hibernate.util.JDBCExceptionReporter.logExceptions - DB2 SQL Error: SQLCODE=-302, SQLSTATE=22001, SQLERRMC=null, DRIVER=3.61.75 ERROR event.def.AbstractFlushingEventListener.performExecutions - Could not synchronize database state with session org.hibernate.exception.DataException: could not update: [org.drools.persistence.info.SessionInfo#201] at org.hibernate.exception.SQLStateConverter.convert(SQLStateConverter.java:100) at org.hibernate.exception.JDBCExceptionHelper.convert(JDBCExceptionHelper.java:66) at org.hibernate.persister.entity.AbstractEntityPersister.update(AbstractEntityPersister.java:2443) ... at org.hibernate.ejb.AbstractEntityManagerImpl$1.beforeCompletion(AbstractEntityManagerImpl.java:504) at bitronix.tm.BitronixTransaction.fireBeforeCompletionEvent(BitronixTransaction.java:397) at bitronix.tm.BitronixTransaction.commit(BitronixTransaction.java:147) at bitronix.tm.BitronixTransactionManager.commit(BitronixTransactionManager.java:95) at org.drools.persistence.session.JpaPersistentStatefulSessionTest.testUserTransactions(JpaPersistentStatefulSessionTest.java:213) ... Caused by: com.ibm.db2.jcc.am.SqlDataException: DB2 SQL Error: SQLCODE=-302, SQLSTATE=22001, SQLERRMC=null, DRIVER=3.61.75 at com.ibm.db2.jcc.am.ed.a(ed.java:668) ... at org.hibernate.persister.entity.AbstractEntityPersister.update(AbstractEntityPersister.java:2425) ... {noformat}	0	0	https://issues.jboss.org/browse/JBPM-3445
13902	JBPM-3445	We can override the JPA anno setup by having an XML mapping file that overrides the appropriate fields (and adds a @Column(length=...)). There are 2 things to do then: # making sure this happens for testing? # saving the mapping file and documenting it that users know where it is and how to use it {noformat} <mriet> The problem is that, if you just have a @Lob anno on the field of an entity (and no other anno's), it looks like DB2 then automatically translates that to a "TINYBLOB" field in the DB. <mriet> A TINYBLOB field is only 255 long though (bytes?) <mriet> so, when we have a serialized session, or workItem info or proc info, etc. that's longer, BOOM: SQL -302/22201. <mriet> One way of fixing this is adding @Column(length=<long enough>) to the same @Lob field. <mriet> but what's long enough? <mriet> max (64k/65k depending on def of k)? But are we then wasting space? <mriet> and how do other db's relate to this? <krisv> mriet, if it works for other databases as well, that's fine, if not, can you override the annotations for example in an xml config file for db2? <mriet> oh yeah -- mapping-file overrides in the xml for DB2. {noformat}	0	0	https://issues.jboss.org/browse/JBPM-3445
13903	JBPM-3443	Has this been resolved? It seems like it..	0	0	https://issues.jboss.org/browse/JBPM-3443
13904	JBPM-3428	Thanks Kris for the suggestion. It works as long as I keep the action node as an script task. When I switched back to use to the Action interface approach, I got the following exception, We would like to use the Action interface approach so that developer can debug into the action node in the flow. Otherwise, he/she has to rely on println, which is not ideal. So, is it possible for us to using the XOR splitnode + Action node interface + internal API to register the flow (aka without xml tranformation)? Exception in thread "main" java.lang.ClassCastException: org.jbpm.workflow.core.DroolsAction cannot be cast to org.jbpm.workflow.core.impl.DroolsConsequenceAction at org.jbpm.process.builder.ActionNodeBuilder.build(ActionNodeBuilder.java:21) at org.jbpm.compiler.ProcessBuilderImpl.processNodes(ProcessBuilderImpl.java:215) at org.jbpm.compiler.ProcessBuilderImpl.buildNodes(ProcessBuilderImpl.java:201) at org.jbpm.compiler.ProcessBuilderImpl.buildProcess(ProcessBuilderImpl.java:165) at com.sample.SplitnodeTest.registerProcess(SplitnodeTest.java:34) at com.sample.SplitnodeTest.main(SplitnodeTest.java:147)	1	0	https://issues.jboss.org/browse/JBPM-3428

13906	JBPM-3378	Marco, could you comment on what the current issues are if you try to compile with JDK5? Are they code issues, build issues, or something else?	1	0	https://issues.jboss.org/browse/JBPM-3378
13907	JBPM-3366	example mriet: do you have a jira? {noformat}{noformat} tsurdilo: sorry i was wrong - https://issues.jboss.org/browse/JBPM-3366 tsurdilo: there is also ability to execute a process from designer tsurdilo: thats a bigger change tsurdilo: idk how to do that yet..but woudl be cool :) {noformat}{noformat} tsurdilo: well, it would be great to be able test stuff tsurdilo: and just wanted to provide some means for the user to test their proces they are creating mriet: makes sense! tsurdilo: so..either we go with creating a java junit test (cut/paste into eclipse and it runs) tsurdilo: or..we go the big route and integrate with jbpm-console from designer (via rest api) to actually run the process tsurdilo: ... or have both :) tsurdilo: ..or something completely different that's better {noformat}{noformat} tsurdilo: about https://issues.jboss.org/browse/JBPM-3366 tsurdilo: one thing i was thinking is that tsurdilo: i would create a maven project for the user tsurdilo: that they can just run mvn test and thats it tsurdilo: because if it's just a .java file source for a junit test tsurdilo: user would have to set up eclipse, jbpm plugin, etc tsurdilo: i want to be able to execute the test outside of eclipse cause eclipse is a competitor to designer :) :) mriet: right -- why not skip all that maven/etc. stuff and just have the user execute the test _from within designer_? tsurdilo: even better ! tsurdilo: designer already has depends on jbpm and drools jars tsurdilo: not all drools jars tho tsurdilo: so maybe we need more ? mriet: maybe, first we have to figure out exactly how we want to do that: tsurdilo: yap ill leave that up to you :) mriet: sure -- but you're welcome to "think with me", as we say in dutch. tsurdilo: nice will do tsurdilo: idk how to do assertions tsurdilo: like what's expected and what's not mriet: in any case, I'll post my thoughts to the jira the coming days -- feel free to reply or whatever. {noformat}{noformat} mriet: bpm test framework! tsurdilo: its ok to start really small and then expand if it gets any tracktion tsurdilo: you have access to the entire bpmn2 of the process at any time mriet: hehe.. Lol. yeah -- iterative development is definitely easier than big bang. ;D tsurdilo: so you can inspect the process, find out what process vars are defined, user task inputs/outputs etc mriet: right, so thinking out loud, we can divide this into the following parts: mriet: 1. running the process from the designer mriet: 2. testing the process mriet: and 1. is then. mriet: exporting the process (jar? fork a thread? who knows?) mriet: a. ^^ mriet: b. starting the process mriet: c. integration with designer so that the process can be "seen" by user? mriet: d. returning end state of proces (same as c?) mriet: does that make sense? tsurdilo: yap, from what you said i really like the "all-in-designer" testing process tsurdilo: it would not be that hard to create a .java file and execute it in designer tsurdilo: the problem is with workitems and human tasks ..how to do those {noformat}{noformat} mriet: re workItems and human tasks, there are 3 options: mriet: 1. write the java code in designer... :(mriet: 2. have an environment or jars that can be imported mriet: 3. mocking -- in conjunction with the "bpmn test framework"" tsurdilo: ok. maybe just even so simple that we just tell users "paste the expected output (if any) of workitem" mriet: Exactly!!! mriet: the simpler for the users, the better.. tsurdilo: for human task the same really tsurdilo: timers are another thing.. tsurdilo: so its not simple thing tsurdilo: so how to take something not simple and make it simple ? :) mriet: those are the really hard problems. :) tsurdilo: another thing we could do tsurdilo: is instead of trying to run inside designer tsurdilo: have the designer interact via the console rest api mriet: re timers: I think it's probably best to get to that once we get 1. running the process and 2. testing the process done.. 3. will be timers and that kind of stuff. tsurdilo: and just run the process test in console? tsurdilo: idk what would be best :) mriet: yeah, that makes sense. tsurdilo: but that introduces also issues like how do you do junit asserts ? {noformat}{noformat} mriet: when I say "inside" the designer, the only thing I mean (at this point) is simply being able to run the process from the designer -- from the users point of view. tsurdilo: yap that would be already a big thing mriet: so, the whole junit framework is reflection based (btw me == big	1	0	https://issues.jboss.org/browse/JBPM-3366

#	Requirement	Questions	Answered	Successfully Answered	URL
13908	JBPM-3366	+JUnit tests+: Indeed, this is _not_ about JUnit tests or (as far as I'm concerned) any sort of result that only a developer would use. +jBPM console+: integrating with the console is definitely a good idea. But because this has to do being able to test processes as you design them (and you can't design processes in the console), part of this has to happen in the designer, I think. +Simulation/replay+: perfect! Where is this being done? This almost 50% of the work for this idea. I would very much like to start looking at how to integrate what's being done. A lot of this idea has to do more with being able to create a process and then _immediately_ run it, simulate running it, and/or test it against some sort of system of constraints. This Jira is primarily for being able to start/simulate the process out of the designer -- and maybe that starts up a console within the designer, who knows? Lastly, depending on how the simulation/replay stuff works, it would be interesting to be able to write "tests" for a bpmn process. For example, the user can fill in an "assert" to check if the process does this, or that, when a or b happen.	1	0	https://issues.jboss.org/browse/JBPM-3366
13909	JBPM-3340	Thanks ur reply. This is my task "web-based designer based on Oryx that can export jPDL". Thanks great. So, as per you said jBPM 4.x releases is possible. Can you tell me where can get the source code(Oryx repository detail). Also how to download jBPM 4.x	0	0	https://issues.jboss.org/browse/JBPM-3340
13910	JBPM-3308	The build (mssql2008R2) is broken. - It also kind of looks like the MSSQL 2008 R2 database is missing functionality: {code} javax.transaction.xa.XAException: com.microsoft.sqlserver.jdbc.SQLServerException: Failed to create the XA control connection. Error: "Could not find stored procedure 'master..xp_sqljdbc_xa_init_ex'." {code} This is due to the MSSQL database does not have XA transaction functionality installed. Working on this..	0	0	https://issues.jboss.org/browse/JBPM-3308
13911	JBPM-3308	There seem to be some minor problems with creating tables in MS SQL: {noformat} 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Unsuccessful: create table Notification_email_header (Notification_id numeric(19,0) not null, emailHeaders_id numeric(19,0) not null, mapkey varchar(255) null, primary key (Notification_id, mapkey), unique (emailHeaders_id)) 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Cannot define PRIMARY KEY constraint on nullable column in table 'Notification_email_header'. 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Unsuccessful: alter table Notification_email_header add constraint FKF30FE3441F7B912A foreign key (emailHeaders_id) references email_header 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Cannot find the object "Notification_email_header" because it does not exist or you do not have permissions. 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Unsuccessful: alter table Notification_email_header add constraint FKF30FE34430BE501C foreign key (Notification_id) references Notification 17/02 11:33:53,296[main] ERROR tool.hbm2ddl.SchemaUpdate.execute - Cannot find the object "Notification_email_header" because it does not exist or you do not have permissions. {noformat}	0	0	https://issues.jboss.org/browse/JBPM-3308
13912	JBPM-3249	Ok... So I'm looking at this in two phases... The Service Task object in the BPMN2 spec really doesn't have much to it, but the jbpm5 version does, so this will definitely have to be split out into the jbpm5 runtime area: <itemDefinition id="_2_InMessageType" structureRef="java.lang.String" /> <message id="_2_InMessage" itemRef="_2_InMessageType" /> <interface id="_2_ServiceInterface" name="org.jbpm.examples.junit.HelloService"> <operation id="_2_ServiceOperation" name="hello"> <inMessageRef>_2_InMessage</inMessageRef> </operation> </interface> <process processType="Private" isExecutable="true" id="ServiceProcess" name="Service Process" > <property id="s" itemSubjectRef="_sItem"/> <serviceTask id="_2" name="Hello" operationRef="_2_ServiceOperation" implementation="Other" > <ioSpecification> <dataInput id="_2_param" name="Parameter" /> <dataOutput id="_2_result" name="Result" /> <inputSet> <dataInputRefs>_2_param</dataInputRefs> </inputSet> <outputSet> <dataOutputRefs>_2_result</dataOutputRefs> </outputSet> </ioSpecification> <dataInputAssociation> <sourceRef>s</sourceRef> <targetRef>_2_param</targetRef> </dataInputAssociation> <dataOutputAssociation> <sourceRef>_2_result</sourceRef> <targetRef>s</targetRef> </dataOutputAssociation> </serviceTask> ... </process> So we need the ability to: 1) Define a property (is it something that should be defined in the Palette? Or something simply maintained in the context of the bpmn file?) 2) Define an item definition, message, interface, and operation so it can be referenced by the custom service task. These seem to be outside the process element in the file, so would need to be added somehow... 3) Figure out why the implementation of the inputs & outputs is so convoluted... a) You define an individual parameter (incoming) and an individual result (outgoing) b) Then you define the set of input parameters (the inputSet) and a set of output parameters (the outputSet) c) Then you associate the property "s" with the inputs and again with the outputs. Is there a reason it's not handled in a single pair of elements instead of in three separate chunks? And this is just from one example (BPMN2 - ServiceProcess.bpmn2 from the jbpm5 examples). What other options/values are available here or is it just a Java service interface that's available at the moment?	1	1	https://issues.jboss.org/browse/JBPM-3249
13913	JBPM-3248	Do we have any idea what properties need to be made available to the user for this one? An example? A spec?	1	1	https://issues.jboss.org/browse/JBPM-3248
13914	JBPM-3248	So this screen shot is of the Constraint editor dialog for a diverging gateway in the Drools-BPMN editor (BPMN2 Process Editor vs. the new BPMN2 Visual Editor). This entire dialog is Drools runtime specific. So here lies another place where we need the ability to hook in runtime-specific components via some sort of extension mechanism to allow for other runtimes to do the same thing. Can we assume that all BPMN2 runtimes will be able to specify constraints on a gateway? The sequenceFlow/conditionExpression seems to map to a connection/expression or connection/formal expression in the BPMN2 Model Editor... I'm guessing that's what we need to maintain.	1	1	https://issues.jboss.org/browse/JBPM-3248
13915	JBPM-3223	Thank you, Tihomir, for doing this! Are you also doing this for tests? A general log policy with regards to tests would be nice. Something like: - info for important info - debug for more detailed - trace for exact system output The output from the BPMN tests starts to drive me nuts if I end up running mvn clean install too many times.. argh.	0	0	https://issues.jboss.org/browse/JBPM-3223
13916	JBPM-3199	Can you copy paste the query or source code line ? I got some JPA-QL experience and might be able to whip up fast JPA-QL instead.	0	0	https://issues.jboss.org/browse/JBPM-3199
13917	JBPM-3181	What do I need to to do pass this patch into the service repo?	0	0	https://issues.jboss.org/browse/JBPM-3181
13918	JBPM-3172	Hey Gary - as a BPMN2 n00b, can you put together a sample or more concrete reproductive steps so I can better understand this one?	1	1	https://issues.jboss.org/browse/JBPM-3172
13919	JBPM-3172	I believe this has been resolved. Gary, can you verify? If this needs more work, please comment in bugzilla. Thanks!	1	1	https://issues.jboss.org/browse/JBPM-3172
13920	JBPM-3170	Is the solution to this problem available to look at? We have a use case which requires this feature and I'm reluctant to build something custom if there is something that has already been implemented.	1	0	https://issues.jboss.org/browse/JBPM-3170
13921	JBPM-3170	Esteban, When a timer, fires, it sends a signal that is then picked up by the process instance that is waiting for that timer. This signal is sent through the command service, which synchronizes and makes sure multiple threads are not executing simultaneously. Do you have a test case that shows this issue? If so, could you open a new JIRA for this and attach the issue?	1	0	https://issues.jboss.org/browse/JBPM-3170

#	Requirement	Questions	Answered	Successfully Answered	URL
13922	JBPM-3170	In our case the session is disposed. We have up coming use cases where we need to utilise timers. "In more complex set-ups, where multiple sessions are used and sessions could be disposed in between, a centralised session could be used to manage the timers when the other sessions are disposed." --> Is there a timeframe for when this might be available? or is there any early access to the code? We need to implement timers and I'd rather look a consistent solution so when this becomes available we can remove our copy.	1	0	https://issues.jboss.org/browse/JBPM-3170
13923	JBPM-3170	JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 786402|https://bugzilla.redhat.com/show_bug.cgi?id=786402] Kris Verlaenen <kris.verlaenen@gmail.com> made a comment on jira JBPM-3170 Esteban, When a timer, fires, it sends a signal that is then picked up by the process instance that is waiting for that timer. 13925	JBPM-3170	Kris Verlaenen <kverlaen@redhat.com> made a comment on [bug 786402|https://bugzilla.redhat.com/show_bug.cgi?id=786402] Lukas, can I change the status of this issue to CLOSED - NOT_A_BUG?	0	0	https://issues.jboss.org/browse/JBPM-3170
13926	JBPM-3170	Lukáš Petrovický <lpetrovi@redhat.com> made a comment on [bug 786402|https://bugzilla.redhat.com/show_bug.cgi?id=786402] (In reply to comment #10) > Lukas, can I change the status of this issue to CLOSED - NOT_A_BUG? Sure. Even better, I'll do it for you. (By the way - I think that this used to be an issue in the early days of the release. It must have been fixed somewhere along the road.)	0	0	https://issues.jboss.org/browse/JBPM-3170
13927	JBPM-3138	It should be possible to define simple expressions like that inside #{}. For example, the following test uses #{Person.name} where Person is a process variable. https://github.com/krisv/jbpm/blob/master/jbpm-flow-builder/src/test/java/org/jbpm/integrationtests/ProcessWorkItemTest.java Did you define myData as a variable and is the method param defined? what type is myData in this case? Your expression should follow MVEL syntax.	1	0	https://issues.jboss.org/browse/JBPM-3138
13928	JBPM-3093	I think this is fixed. Gary, can you verify & close?	1	1	https://issues.jboss.org/browse/JBPM-3093
13929	JBPM-3064	I've tried to apply the patch but I end up with several compile time errors after doing so. It is possible that more recent changes have made this patch invalid. Would it be possible to update from git again and regenerate the patch?	0	0	https://issues.jboss.org/browse/JBPM-3064
13930	JBPM-3064	never mind found it. I can see that it's been a while since last comment here but I think it was not applied. Can I find mentioned pull request somewhere?	0	0	https://issues.jboss.org/browse/JBPM-3064
13931	JBPM-3063	Could you clarify how you are editing the action script? Because the eclipse editor should support autocompletion for actions.	0	0	https://issues.jboss.org/browse/JBPM-3063
13932	JBPM-3055	Jiangsiyu, Which database are you using? (Oracle? Sybase? DB2?) Please also upgrade to the latest version of jbpm (see the jboss nexus/repository). Thanks, Marco	1	0	https://issues.jboss.org/browse/JBPM-3055
13933	JBPM-3048	So, what's been done is the following: - ProcessInstanceInfo no longer contains _any_ Hibernate *or* JPA annotations. - When using jBPM with Hibernate 3.x, we make sure to add a line that imports a hibernate mapping file in the persistence.xml. This takes care of correctly mapping the ProcessInstanceInfo to a database entity. - There is now a "META-INF/JBPMorm-JPA2.xml" file available with the jbpm-persistence-jpa.jar. This file is of course an entity-mapping file for use with JPA2 and includes a JPA2 mapping for the ProcessInstanceInfo class. - You can add the following line to your persistence.xml: <mapping-file>META-INF/JBPMorm-JPA2.xml</mapping-file> The reason we don't include JPA 2 annotations in the ProcessInstanceInfo.java file/class is that jBPM is still obligated to be JPA _*1*_ compliant. The element-collection mapping is only available in JPA2..	0	0	https://issues.jboss.org/browse/JBPM-3048
13934	JBPM-3044	@Kris, should I close this? I'm not responsible for the designer itself. I think that the engine it's fine for escalations.	0	0	https://issues.jboss.org/browse/JBPM-3044
13935	JBPM-3044	What editor is this pertaining to? The Eclipse BPMN2 Editor or the BPMN2 Web Designer?	0	0	https://issues.jboss.org/browse/JBPM-3044
13936	JBPM-2971	Actually I had to modify the JbpmSchema tool to deal with Sybase. I have ASE 15.0.3 installed in my workstation. When given a script without any "go" command batch terminator, the Sybase isql tool parses the statements but never actually executes them. See http://www.sybase.com/detail?id=938&contentOnly=true#batch I figure that script execution via JDBC interprets statements differently. What method invocation produces the exception you posted?	1	1	https://issues.jboss.org/browse/JBPM-2971
13937	JBPM-2920	Have you tried to use condition tag for transitions? <transition name="transition" to="next step"> <condition expr="#{1==1}"/> </transition>	1	1	https://issues.jboss.org/browse/JBPM-2920
13938	JBPM-2920	Just consider about this. Should we let joinActivity auto-detect when process instance should continue. Just like InclusiveGatewayActivity in BPMN2. Now, JoinActivity used incoming transitions number to decide when process instance should continue. if the actual number of children executions is not equals as incoming transitions, we should set the multiplicity attribute to let JoinActiivty know when should continue. But if we want to support N of M paths in forkActivity, should we ask people to set multiplicity for each time?	1	1	https://issues.jboss.org/browse/JBPM-2920
13939	JBPM-2904	In general it looks good to me. However I have few comments: - please remove system.out.println statements from method - why you use equals method to compare booleans?! isn't it enough to just use them in if statement? - perhaps it is worth mentioning it in docs as well BTW, nice to see that you found a way to set this within configuration file	1	1	https://issues.jboss.org/browse/JBPM-2904
13940	JBPM-2896	Hi, Just one question, the activity name is available in HistoryTaskInstanceImpl so is it possible to just add it in the HistoryTask interface ? That is all my need ! Today I have done a derivative HistoryTask and it directly use HistoryTaskInstanceImpl to populate activity name and it works without problem... Is there something wrong or a negative impact in that approach ? Regards	0	0	https://issues.jboss.org/browse/JBPM-2896
13941	JBPM-2893	Do we have any new date for this release?	0	0	https://issues.jboss.org/browse/JBPM-2893
13942	JBPM-2873	complete implementation of the query operand functionality. supports following query operands on most of the parameters for all query types: - Equals - Like - In - Not in Do you think it is good enough to be incorporated with trunk?	1	1	https://issues.jboss.org/browse/JBPM-2873

#	Requirement	Questions	Answered	Successfully Answered	URL
13943	JBPM-2855	User id needs to be provided prior to adding comment: processEngine.setAuthenticatedUserId("johndoe"); taskService.addTaskComment(taskId, "hi, how are you guys?") processEngine.setAuthenticatedUserId("joesmoe"); taskService.addReplyComment(helloCommentId, "i'm doing fine, thanks"); So I think this issue can be closed.	1	0	https://issues.jboss.org/browse/JBPM-2855
13944	JBPM-2845	jBPM 4.4 and I want to try if jBPM 4.5 solves my problem. org.jbpm.api.JbpmException: couldn't acquire block of ids at org.jbpm.pvm.internal.id.DatabaseDbidGenerator.getNextId(DatabaseDbidGenerator.java:65) at org.jbpm.pvm.internal.lob.Lob.<init>(Lob.java:81) at org.jbpm.pvm.internal.type.variable.BlobVariable.setObject(BlobVariable.java:54) at org.jbpm.pvm.internal.type.Variable.setValue(Variable.java:95) at org.jbpm.pvm.internal.type.variable.BlobVariable.setValue(BlobVariable.java:66) at org.jbpm.pvm.internal.tx.DeserializedObject.flush(DeserializedObject.java:63) at org.jbpm.pvm.internal.tx.AbstractTransaction.flushDeserializedObjects(AbstractTransaction.java:54) at org.jbpm.pvm.internal.tx.SpringCommandCallback.doInTransaction(SpringCommandCallback.java:47) at org.springframework.transaction.support.TransactionTemplate.execute(TransactionTemplate.java:130) at org.jbpm.pvm.internal.tx.SpringTransactionInterceptor.execute(SpringTransactionInterceptor.java:49) at org.jbpm.pvm.internal.svc.EnvironmentInterceptor.executeInExistingEnvironment(EnvironmentInterceptor.java:47) at org.jbpm.pvm.internal.svc.EnvironmentInterceptor.execute(EnvironmentInterceptor.java:42) at org.jbpm.pvm.internal.svc.RetryInterceptor.execute(RetryInterceptor.java:56) at org.jbpm.pvm.internal.svc.ExecutionServiceImpl.getVariables(ExecutionServiceImpl.java:140) at com.agbar.aquacisxf.component.workflow.helpers.ProcessHelper$18.execute(ProcessHelper.java:609) at com.agbar.aquacisxf.component.workflow.helpers.ProcessHelper$18.execute(ProcessHelper.java:605) at org.jbpm.pvm.internal.svc.DefaultCommandService.execute(DefaultCommandService.java:42) at org.jbpm.pvm.internal.tx.SpringCommandCallback.doInTransaction(SpringCommandCallback.java:45) at org.springframework.transaction.support.TransactionTemplate.execute(TransactionTemplate.java:130) at org.jbpm.pvm.internal.tx.SpringTransactionInterceptor.execute(SpringTransactionInterceptor.java:49) at org.jbpm.pvm.internal.svc.EnvironmentInterceptor.executeInNewEnvironment(EnvironmentInterceptor.java:53) at org.jbpm.pvm.internal.svc.EnvironmentInterceptor.execute(EnvironmentInterceptor.java:40) at org.jbpm.pvm.internal.svc.RetryInterceptor.execute(RetryInterceptor.java:56) at org.jbpm.pvm.internal.processengine.ProcessEngineImpl.execute(ProcessEngineImpl.java:300) at com.agbar.aquacisxf.component.workflow.helpers.ProcessHelper.getVariables(ProcessHelper.java:605) at com.agbar.aquacisxf.component.workflow.helpers.ProcessHelper.getVariables(ProcessHelper.java:591) at com.agbar.aquacisxf.component.workflow.impl.WorkflowComponentImpl.getVariables(WorkflowComponentImpl.java:392) at com.agbar.ovs.business.core.impl.WorkflowBCImpl.getVariables(WorkflowBCImpl.java:272) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at	0	0	https://issues.jboss.org/browse/JBPM-2845
13945	JBPM-2830	Sebastian, Is this a 'regression' compared other jBPM 4 releases? Meaning another field was used before? The name should *not* be used for a descrition. That is where the description element is for	0	0	https://issues.jboss.org/browse/JBPM-2830
13946	JBPM-2830	Now, in jBPM-4.4, BPMN use id for the name of process definition. If there is no id, it will throw a deployment exception. And it use name for the key of process definition. Shall we use name for the description of process definition? and just let the key of process definition always empty?	0	0	https://issues.jboss.org/browse/JBPM-2830
13947	JBPM-2830	Oh, now BPMN used the document element of process as the description of process definition. So shall we revert the behaviour to jBPM-4.3?	0	0	https://issues.jboss.org/browse/JBPM-2830
13948	JBPM-2809	Sounds like a good idea, not sure how though what the best way is to get a transaction into the MailActivity... Could it be simply injected?	0	0	https://issues.jboss.org/browse/JBPM-2809
13949	JBPM-2776	Looks great to me. Can you commit please?	1	1	https://issues.jboss.org/browse/JBPM-2776
13950	JBPM-2771	Reading through the section async executions in the documentation I was just wondering how to start a process without blocking the client. It came to my mind that this should be possible via the API without the need to specifiy this in the process defnition explicitly. So additional to fixing this does it make sense to provide a startProcessInstance() -method enabling users to start process definitions in a non-blocking way (= not in the client thread)?	1	1	https://issues.jboss.org/browse/JBPM-2771
13951	JBPM-2764	You could findActivity() by activityName from ProcessDefinition, then you could get the activityName, activityType, activityDescription. Is it enough?	0	0	https://issues.jboss.org/browse/JBPM-2764
13952	JBPM-2759	Attaching a patch to support business time subtractions. Ronald, could you please double-check this? Thanks.	1	1	https://issues.jboss.org/browse/JBPM-2759
13953	JBPM-2759	I will, but why did you change 12 februari to 19? 12 is my birthday ;-)	0	0	https://issues.jboss.org/browse/JBPM-2759
13954	JBPM-2759	Thanks for giving it a try and creating further tests. I ran out of time to create those, but might be able to take a look at this again in the next days. Could you send them to me, please?	0	0	https://issues.jboss.org/browse/JBPM-2759
13955	JBPM-2741	What's mean of this issue? How could we handle this?	0	0	https://issues.jboss.org/browse/JBPM-2741
13956	JBPM-2661	there seems to be a bug with the behaviour in 4.3 When I put three outcomes, two with a expression and one without a expression whereby one expression can be evaluated to true, the engine will fork the evaluated and the empty expression transition. Can somebody please test that?	1	0	https://issues.jboss.org/browse/JBPM-2661
13957	JBPM-2661	Can you point to the location in the spec on which base it being a bug.. afaik, being able to take more than one transition is valid BPMN2 behaviour... All transitions that evaluate to true (including ones without a 'guard') should be taken. This differs from jPDL!!!	0	0	https://issues.jboss.org/browse/JBPM-2661
13958	JBPM-2648	I understand there are many priorities in the draft, but could someone tell me if that's at least a possible Bug I'm not asking for an urgent solution, but at least answer simply because it seems quite serious.	0	0	https://issues.jboss.org/browse/JBPM-2648
13959	JBPM-2648	Thank you for your work, Maceij. And could you marked this issue as resovled?	0	0	https://issues.jboss.org/browse/JBPM-2648
13960	JBPM-2644	To put it another way, not being able query information about a task when it starts is a major drawback. Are we missing something here? I think this issue should have been considered in the wider context of how jBPM is likely to be used before being rejected.	1	0	https://issues.jboss.org/browse/JBPM-2644
13961	JBPM-2644	Hi Huisheng, Thanks for your reply. Having a TASK_STARTED event which fires once the task is available would solve a lot of our issues I'm fairly sure that if this was done, you could then remove the START event entirely since I can't think of a scenario where you would need to distinguish between START and STARTED. Would it be possible to re-open this Jira?	1	0	https://issues.jboss.org/browse/JBPM-2644

#	Requirement	Questions	Answered	Successfully Answered	URL
13962	JBPM-2633	This is marked as "Out of Date", but has anything been done on this? I have the same problem: upgrading jBPM 3.2.x from one version to another is a pain. This is because it implies: # changing the JARs (easy) # seek for information about the need to update the DB schema # seek for information about changed APIs (either model APIs or infrastructure APIs, since we're embedding jBPM in a non-JEE application) # adapt our extension of JobExecutor and related classes (since its design is not extension-friendly) # adapt our own patches for unsolved bugs (well, at least this is unavoidable) So, is there some source of information (apart from JIRA) I can look at to make this process easier?	0	0	https://issues.jboss.org/browse/JBPM-2633
13963	JBPM-2576	Is the HistorySessionChainBinding part of some configuration file parsing?	1	1	https://issues.jboss.org/browse/JBPM-2576
13964	JBPM-2570	Sebastian, Do you have a real full unittest for this? I 'fixed' something in https://jira.jboss.org/jira/browse/JBPM-2749 which might be related.	0	0	https://issues.jboss.org/browse/JBPM-2570
13965	JBPM-2533	I have started a discussion about similar issue in the forum: http://community.jboss.org/message/528104#528104 I posted as well some information about what was implemented by me to be able to satisfy business requests. Are we talking about the same things? If so, are there any plans for implementation of this, especially if it could be part of upcoming release 4.4.	0	0	https://issues.jboss.org/browse/JBPM-2533
13966	JBPM-2524	Joram, are you sure this is a priority for 4.2 ? Can you explain the use case. Bear in mind that the install scripts should produce the configuration that you want. So can you elaborate with the use case when you need this ? In order to see if it is a developer feature or a userguide feature.	1	1	https://issues.jboss.org/browse/JBPM-2524
13967	JBPM-2509	Since the upgrade scripts will be checked into version control, I do not see why a separate DbUpgrade tool is required, separate from the standard Ant SQL task [1]. Is it just to leverage the known locations of the upgrade scripts in the distribution? If so, could DbUpgrade be simply a macro, or extended from SQLTask? Otherwise, is the intention to enable programmatic invocation as well? [1] http://ant.apache.org/manual/CoreTasks/sql.html	1	1	https://issues.jboss.org/browse/JBPM-2509
13968	JBPM-2508	I'm using jbpm 4.2 with tomcat 6.0.20 and hsqldb(standalone) mode. When I launch jbpm console using http://localhost/:8080/jbpm-console after entering userid/password peter/password , it shows creating workspace and then breifly shows Tasks, etc and then crashes IE. What is the alternative to this? How can I view/manage the process definitions created etc.... This is a high priority issue. The workaround of logout then login does NOT work.	0	0	https://issues.jboss.org/browse/JBPM-2508
13969	JBPM-2508	Would it work on Jboss 5.0.0 ?	0	0	https://issues.jboss.org/browse/JBPM-2508
13970	JBPM-2508	This crashing business doesn't seem to be a problem for Firefox. It crashes IE for me also, though I have not checked out Safari. Does this problem have anything to do with the timeout issues associated with remoting callbacks? There was a similar issue in SEAM a while back that apparently got resolved... https://jira.jboss.org/jira/browse/JBSEAM-3459	0	0	https://issues.jboss.org/browse/JBPM-2508
13971	JBPM-2506	When declaring variables already in the process definition it is possible to specify whether or not they should be taken into account for the history. So the same configuration should be possible via the API for variables which are created during run-time. btw: Why is the history disabled by default? What are the reasons against enabled by default?	0	0	https://issues.jboss.org/browse/JBPM-2506
13972	JBPM-2506	Hi Maciej, Glad to see that you are working on this issue. Do you have any plan for this? Do we need create a new post in the forum and talk about it?	0	0	https://issues.jboss.org/browse/JBPM-2506
13973	JBPM-2506	you can leave JBPM-2840, I have already solved that. But thanks for pointing me to that issue so I will mark it as well when I am done. I am considering custom type variables as well, as a matter of fact I will make some tests today to see how difficult will it be.	0	0	https://issues.jboss.org/browse/JBPM-2506
13974	JBPM-2506	Part of the work is done now: - declare variable in jpdl - mark declared variable as history enabled - create variable via API that is history enabled - retrieve variables from history via API - support for both simple text and EL on declared variables in jpdl If it comes to non string variables that is bit more complex. Mainly due to the structure of the data base where value column is only of type string (varchar). I did some tests with JavaBeans as variable and simple solution that I implemented is that such variables will be still persisted as string based on implementation of toString() method. In my opinion that is quite good solution at the moment that enables us to simply query for history process instances based on variable's values. Of course this is not a final solution but at least something to let users hove some added value from variable history. Difficult to say what was initial idea for history of variables ... any news are more than welcome. In addition, such approuch could be used as well to allow queries based on variables for execution variables as well. I mean that if some once would be interested to query based on variable value (s)he could implement toString with information that should be searchable. Soon will upload a first version of a patch for review. What do you think based on the description so far?	0	0	https://issues.jboss.org/browse/JBPM-2506
13975	JBPM-2505	We are currently evaluating open source BPMS. The search capability is really crucial for us. We have a single workflow that gets startet hundred times a day. So we have thousands of instances. How should a supervisor find critical processes? I really love jBPM so far, but this could be a show stopper :-/	0	0	https://issues.jboss.org/browse/JBPM-2505
13976	JBPM-2505	Do you have any updates on this issue? We are deploying v4.3 and at this point will probably have to create our own tables to enable searches. We like JBPM a lot and are going forward either way, but his feature would be incredibly valuable to us.	0	0	https://issues.jboss.org/browse/JBPM-2505
13977	JBPM-2477	It might be related to the fact that a newer driver is used here compared to the one jBPM is tested with. Can someone check? In the meantime I'll ask somebody to take a look at the 'patch'	0	0	https://issues.jboss.org/browse/JBPM-2477
13978	JBPM-2465	can you add a code snippet of how you like to use this or another description of what you exactly mean ? and why activity.getDefaultOutgoingTransition is not convenient/clean enough.	0	0	https://issues.jboss.org/browse/JBPM-2465
13979	JBPM-2432	the description is insufficient. can you please elaborate?	1	1	https://issues.jboss.org/browse/JBPM-2432
13980	JBPM-2426	I think this should only be tackled if we can build all the features to execute following demo scenario: - process variable is a open office (or word) document - review task - notification that includes a process variable as attachment - assignee can then make updates to document and reply - a simple mail listener will capture the replied document, update the process variable and complete the task. i think the attachment feature will only be valuable if we also build the reply functionality. reply functionality should be done by an email-deamon that is configured very much like the job-executor. it would have 1 thread that periodically scans the jbpm inbox using JavaMail only. what do you think? would you consider this feasible in this release? another extension idea is the introduction of a VersionedFile object that can be stored and retrieved as a process variable.	1	1	https://issues.jboss.org/browse/JBPM-2426
13981	JBPM-2417	What is 'specifiying authentication' in this regard? I have no clue For me it is like 'basic authentication', 'certificate authentication' or something like that.	1	0	https://issues.jboss.org/browse/JBPM-2417
13982	JBPM-2416	How is this issue related to JBPM-2417? I don't see the connection. Could anyone clarify? Thanks.	1	1	https://issues.jboss.org/browse/JBPM-2416

#	Requirement	Questions	Answered	Successfully Answered	URL
13983	JBPM-2415	I am not sure if I understand the description correctly? Does this mean there is already an implementation to declare process variables but it needs to be extended so that you can declare within a group activity definition? Thanks for any explainations.	1	0	https://issues.jboss.org/browse/JBPM-2415
13984	JBPM-2414	what kind of for-each did you have in mind? There are differences in creating 10 tasks for the same user with different variables like task: learn to play instrument 10 times, each with e.g. another instrument or 10 identical tasks for different users or 10 different subprocesses, which ones based on e.g. a processvariable etc... So a little more specific would be nice. The most requested ones are the last two. But often in combination with an n-out-of-m join and cancelling the remaining tasks.	1	1	https://issues.jboss.org/browse/JBPM-2414
13985	JBPM-2414	What I have implemented for now: <for-each name="fork" vars="#{myCollection}" var="item"> <transition to="myTask" name="to_task"/> </for-each> <task name="myTask"> <transition to="join" name="to_join"/> </task> <join name="join"> <transition to="myTask" name="to_end"/> </join> What this does is create new executions for each element in a collection (set, list, collection, array) and put a variable with the name 'item' that in a local scope for the execution. In e.g. the task you can do whatever you want with that variable.... Assignments, do things in event-listeners whatever.... Limitations: - it can only have one outgoing transition - A corresponding join with one incomming transition is needed - Complex nesting things between this for-each and join can and most likely will result in strange behaviour (although I think this is very acceptable) Additions: - The join now accept an EL for multiplicity. A Long/Integer, String (that will be parsed runtime) and a collection (size will be determined runtime). Things like 70% of the created executions has to be passed before it will continue can work now... cool isn't it? One thing I maybe like to change is not call it 'foreach/for-each' but put it in the fork... This makes it visible in the designer, *now*. Comments? After that, I will add the patches here.	1	1	https://issues.jboss.org/browse/JBPM-2414
13986	JBPM-2414	Is this already in the repository? Are there any disadvantages when using <fork foreach> instead of <foreach>?	1	1	https://issues.jboss.org/browse/JBPM-2414
13987	JBPM-2414	No it is not in repo yet. I'll attach the 'patches´ tonight. Why it is not in repo is because I did not (well, not quite at least) receive feedback from the core devs. Why can be read on the post by Alejandro Guizar http://www.jboss.org/feeds/view/jbossjbpm. The disadvantage of using either that is it is not easy to model it in the BPMN way (with a || sign on e.g.a repeating task) using the 'group' thing would make this easier. Otherwise there is no real disadvantage afaics	1	1	https://issues.jboss.org/browse/JBPM-2414
13988	JBPM-2414	Is there any chance to get hold of Ronald's work? That would be very helpful with moving forward with this issue. Anyone is capable to contact Ronald? Thanks Maciej	1	1	https://issues.jboss.org/browse/JBPM-2414
13989	JBPM-2414	While waiting for Ronald's work I tried to implement it based on the discussion given here and some other ideas. In general, it is pretty much how Ronald described this, with one difference, it can have more than one transition in fork node. In such case all transitions will be multiplied by number of items in for-each collection. Please have a look at the patch that includes both code changes and few test cases to illustrate (and of course verify) working fork - for each. Let me know what do you think about it. P.S. If you need more details about how does it work, just let me know and I will try to describe it.	1	1	https://issues.jboss.org/browse/JBPM-2414
13990	JBPM-2414	This is a great feature! Could I suggest a completion expression is also added to the join? This would allow more control when releasing the join, similar to the dynamic partial join pattern, by default the multiplicity behaviour would apply. Tim	1	1	https://issues.jboss.org/browse/JBPM-2414
13991	JBPM-2414	Tim, if I understood your comment correctly that should already be included. multiplicity attribute of join indicates when execution should move on (number of incoming transitions) and it accepts expression. Is that what you ment?	1	1	https://issues.jboss.org/browse/JBPM-2414
13992	JBPM-2414	While waiting for this change to be officially released, what is the preferred way to implement Wfp16MiWithoutAPrioriRuntimeKnowledge in jbpm 4.2/4.3? All references I can find point to createTaskInstance() which exists in v3, but is no longer available in v4. Thanks!	0	0	https://issues.jboss.org/browse/JBPM-2414
13993	JBPM-2413	After reading the group activity description in the developer documentation I do not see the connection either. http://docs.jboss.com/jbpm/v4/devguide/html_single/#groupconcurrency A group activity is a kind of sub process for me which has a static definition just like a normal process. Of course there can be concurrent executions within a group activity if the group activity is modelled like this. So you have 2, 3 or more concurrent executions but just as many as you modelled during design time. In contrast the foreach activity could have several concurrent executions. How many exactly would be decided kind of dynamically - maybe even at runtime, right? Or you could define and set a property for the group activity at design time telling the number of concurrent executions which should be created. is the later one in the manner you think of, Tom?	0	0	https://issues.jboss.org/browse/JBPM-2413
13994	JBPM-2412	I would to, but what about ditching the target-ejb-home and method thing completely and using just one <java action="#{myEjbBean.myMethod} .... The target-expr is only usefull if you want to specify what bean to call in a processvariable. Does that happen often? I've never come across it. My example with <java action="..." could also be used to calls webbeans/seam pojo's/spring beans etc... Wouldn't that be much nicer?	1	1	https://issues.jboss.org/browse/JBPM-2412
13995	JBPM-2404	was this wiki page ever created ? I am finding tons of posts related to deploying jbpm-console to WLS 10.3 but none of them are really conclusive whether this is possible or not. Is WLS 10.3 a supported platform for jbpm 4.x at all ?	0	0	https://issues.jboss.org/browse/JBPM-2404
13996	JBPM-2403	Mark, Do you have an example process in which the fork activity fails? The fork tests in our test suite aren't failing.	0	0	https://issues.jboss.org/browse/JBPM-2403
13997	JBPM-2399	This issue related to the readContext and writeContext. How could we handle it? If there is no plan for read/write context, should we just marked it as Out of Date?	0	0	https://issues.jboss.org/browse/JBPM-2399
13998	JBPM-2398	work started on the test. test needs further elaboration. also test the task comment replies. how should users display the full comment discussion?	0	0	https://issues.jboss.org/browse/JBPM-2398
13999	JBPM-2398	patch that introduces some enhancements in history handling: - super process instance relationship - process initiator - task name and due date available on history task - query for tasks by process instance id - query for process instance by super process instance id (to find all subprocesses) - query by initiator of process instance history details are added for following operations: - change assignee of a task (previous and current assignee are stored) - change priority of a task (previous and current values are stored) - change due date of a task (previous and current values are stored) - change of variable values that has history enabled (previous and current values are stored) To make it doable following entities/tables were extended: Execution: - ExecutionImpl/JBPM4_EXECUTION new column added initiator/INITIATOR_ History: - HistoryProcessInstanceImpl/JBPM4_HIST_PROCINST new columns added superProcessInstanceId/SUPERPROCID_ and initiator/INITIATOR_ - HistoryTaskImpl/JBPM4_HIST_TASK new columns added name/NAME_ and duedate/DUEDATE_ Comments? Do you think it is good enough to be committed?	1	1	https://issues.jboss.org/browse/JBPM-2398

#	Requirement	Questions	Answered	Successfully Answered	URL
14000	JBPM-2378	Koen, are there fixes that we can still apply in the next 2 days ? For which you think it is pretty clear ? The rest, we need to address in 4.1. Can you make a separate jira issue for XSD related matters in 4.1 and add good descriptions of each item that you consider not logical ?	1	1	https://issues.jboss.org/browse/JBPM-2378
14001	JBPM-2368	[14:23] <kconner> tomb: If this is behaving the same way as previously then it would suggest that the thread is still running after being undeployed but then the question would be... is this problem only appearring when jboss shuts down ? or when the jbpm service is shut down. in that case we should synchronize on ending of the job executor. and in that case the issue would not be a blocker, i think.	1	1	https://issues.jboss.org/browse/JBPM-2368
14002	JBPM-2359	heiko, i have an oracle installation locally. is there some way i could help you with this issue by trying something out ?	1	1	https://issues.jboss.org/browse/JBPM-2359
14003	JBPM-2359	is there something i can do to help? can i just try to update the queries in the report directly? could it be just a semicolon at the end ?	1	1	https://issues.jboss.org/browse/JBPM-2359
14004	JBPM-2354	Heiko, I've moved the SQLStmtTest to a normal package name: org.jbpm.test.reporting And I added it to the exclude list. Could you have a look at this ?	0	0	https://issues.jboss.org/browse/JBPM-2354
14005	JBPM-2341	Is this really a change that people need? The implementations I have done all had requirements that the assigned user for swimlanes stayed the same during the process. So if this is implemented I'd make the default *remember* instead of not remember.	1	1	https://issues.jboss.org/browse/JBPM-2341
14006	JBPM-2339	heiko, can you check if my latest commit fixed the problem ?	1	1	https://issues.jboss.org/browse/JBPM-2339
14007	JBPM-2329	What is actually the reason for the schema change and why is this postponed again? Grateful for any light shed on this.	0	0	https://issues.jboss.org/browse/JBPM-2329
14008	JBPM-2320	can you explain your use case a bit better ? first explain what you want to do and next, which features and methods you need for it. thanks	1	1	https://issues.jboss.org/browse/JBPM-2320
14009	JBPM-2293	the sources are attached in the distro profile. this way we avoid the creation of all these jars during normal development. reopen if you don't think this is a good solution, reopen and discuss why	1	1	https://issues.jboss.org/browse/JBPM-2293
14010	JBPM-2291	Which is the actual fix version? 3.3.2? 3.2.9? 3.2.6.SP1 is affected by this problem.	0	0	https://issues.jboss.org/browse/JBPM-2291
14011	JBPM-2281	tried, but wasn't able to reproduce. my environment: OS: windows XP C:\Software\jbpm-4.0-SNAPSHOT\jboss>java -version java version "1.5.0_11" Java(TM) 2 Runtime Environment, Standard Edition (build 1.5.0_11-b03) Java HotSpot(TM) Client VM (build 1.5.0_11-b03, mixed mode, sharing) C:\Software\jbpm-4.0-SNAPSHOT\jboss>ant -version Apache Ant version 1.7.0 compiled on December 13 2006 Maybe it's the ant version. Can you verify that, Burr ?	1	1	https://issues.jboss.org/browse/JBPM-2281
14012	JBPM-2251	The mail session configuration is in jbpm-pvm/src/main/resources/jbpm.default.cfg.xml. It was placed there because all other sessions are (pvm-db-session, message-session, timer-session, etc.). What we could do to avoid having explicit properties there is externalize to a properties file, as in the hibernate configuration case. <mail-session> <mail-server> <session-properties resource="jbpm.mail.properties" /> </mail-server> </mail-session> The mail template is in jbpm-examples/src/test/resources/jbpm.cfg.xml. If needed we can also take this one out through the import mechanism. <import resource="jbpm.mail.templates" /> What are your thoughts? When you reply, please assign this issue to me. JIRA will send me a notification.	1	1	https://issues.jboss.org/browse/JBPM-2251
14013	JBPM-2250	Heiko, could you rename those tabs in the console as well to Personal Task List and Group Task List ?	0	0	https://issues.jboss.org/browse/JBPM-2250
14014	JBPM-2242	To implement suspend and resume on deployments and cascade it to executions, jobs and tasks, I started with synchronizing following properties: * Deployment.state * Execution.state * Job.state * Task.state (some of those had an isSuspended boolean) So i switched to all state (String) properties. Two operations are added to the repository service: suspendDeployment and resumeDeployment. This cascades to all the related executions, jobs and tasks.	0	0	https://issues.jboss.org/browse/JBPM-2242
14015	JBPM-2214	koen, see the user guide for the actual schema and meaning on sub-process parameter-in and parameter-out can you resolve this issue when the necessary designer updates have been done ?	0	0	https://issues.jboss.org/browse/JBPM-2214
14016	JBPM-2203	> Yes. Are you using Unified EL now? Or another EL flavour... i've plugged in jsr 223 with scripting.dev.java.net. in the configuration, you can configure a named list of expression languages and also indicate which is the default expression language. in the jpdl language, for each expr attribute, there is an optional lang attribute. > Possibly - I'm on PTO quite a lot in May, but I think we can sort > something out. How about 18th onwards? ok. my expectation is that you drive the seam integration. i'll be ready to supply any jbpm update that you'll need and re-upload a snapshot. does that work for you ? regards, tom. Pete Muir wrote: > > On 14 Apr 2009, at 14:50, Tom Baeyens wrote: > >> the initial work needs to be done by us, i think. >> >> implementation wise there are a couple of directions, but there is still a bit of thinking involved. >> >> mostly, the current integration is based on integrating the naming resolutions while resolving UEL expressions. apart from that there is only the special SEAM annotations, which will boil down to jbpm service invocations. >> >> * setup of the seam contexts. find the proper places where we need to intercept to set up the seam contexts. this could potentially be very easy. we have a set of services now (==session facades). we also have a mechanism to add interceptors to those. a seam interceptor could ensure that seam is properly initialized around jBPM operations. > > Great, sounds easy enough :-) > >> * expanding the jbpm variable resolver so that it also delegates to the seam contexts. > > Yes. Are you using Unified EL now? Or another EL flavour... > >> * tx around the jbpm timers and messages. we should be able to leverage our container integration. since we'll be deployable as a service, we'll build our own tx interceptor for managing the JTA tx. this is leveraged when using seam. > > Kev has been doing some work on this - but I agree, we should just use JTA here - Seam will join or start a TX as required. > >> >> >> * pageflow. build the page activity. create a pageflow parser. >> >> this is all not cristal clear though. requires getting our hands dirty to see if this plans are complete. i think we should plan a week where we together set out the initial structure. then we can involve productization people to finish the integration. > > Ok. > > ... >> >> regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-2203
14017	JBPM-2203	Is it possible to make the extensability of the variable resolver configurable like it was in jbpm 3? We need this for a project where data is stored in our own datastore and not as variables in the tasks. (see also http://www.jboss.org/index.html?module=bb&op=viewtopic&t=160042) Wkr, Sofie	1	0	https://issues.jboss.org/browse/JBPM-2203
14018	JBPM-2200	Classloading was fixed on 4.2 trunk. @Tom: can you update the doc (chapter 4)	0	0	https://issues.jboss.org/browse/JBPM-2200
14019	JBPM-2193	For the images, how will they get in the console ? through a servlet ? is there a servlet that will process a request in the line of http://localhost/gwt-console/processimage?procdef=InsuranceClaim-8374 then that servlet will go to the repository service. currently there is a resource method to look up a resource by deploymentDbid InputStream getResourceAsStream(long deploymentDbid, String resourceName); but that would not be sufficient. we probably need a method like InputStream getResourceAsStream(String processDefinitionId, String resourceName); Is that also how you see it ? A servlet that depends on a new -to-be-created method getResourceAsStream(String processDefinitionId, String resourceName) ?	0	0	https://issues.jboss.org/browse/JBPM-2193

#	Requirement	Questions	Answered	Successfully Answered	URL
14020	JBPM-2193	Heiko, One more question: is a relative link good between the process definition file and the image file ? Given the processDefinitionId, I can look up the resource name of the process file. Then I can replace .jpdl.xml with .png for instance to get the image file. I think having the link between process file and image file based on the same file name, but with different extensions is good. It's also easy for the designer. Alternatively, we would have to maintain a reference from the process definition to its image file... Doesn't seem like a good idea to me. WDYT ?	0	0	https://issues.jboss.org/browse/JBPM-2193
14021	JBPM-2172	first thing we need to do is establish the concrete first goal. i think this should be the following: * create a jboss installation where - jboss idm is deployed as a service archive and identity session factory is published in jndi - jbpm is deployed as a service archive and is configured so that it uses the jboss idm to get the jbpm installation, start by installing jbpm into the as using the installer (build it with mvn -Pdistro clean install from source) then run through the installer. then update the jbpm configuration files to use the jboss idm component does that make sense ?	1	1	https://issues.jboss.org/browse/JBPM-2172
14022	JBPM-2172	later this week, i'll think about how we can create a profile in our build so that the test suites use jboss idm instead of our build-in identity component. in order to do that, i'll need to integrate idm schema creation into our build. how will that work ?	1	1	https://issues.jboss.org/browse/JBPM-2172
14023	JBPM-2172	Right now, it creates the idm schema and populate it in the runtime. I've already built the schema in the build time, I need to use the jboss mechanism to populate the schema into database in the following days. how did jbpm handle this?? Thanks Jeff	1	1	https://issues.jboss.org/browse/JBPM-2172
14024	JBPM-2172	btw, what property do we have to set in which build script of jbpm ? i think it should be adding -Didentity.component=jboss.idm to line ant -f qa/build.xml $ANT_PROPERTIES integration.testrun.setup in file qa/hudson-jbpm4-jboss.sh can you verify that that script works when specifying that property?	1	1	https://issues.jboss.org/browse/JBPM-2172
14025	JBPM-2172	[15:27] <tomb> jeffyu: you around ? [15:27] <jeffyu> tomb, Hi tom, Yes. [15:27] <tomb> jeffyu: hi [15:28] <jeffyu> tomb, was still looking into the Transaction issue... [15:28] <jeffyu> tomb, I find an minor issue that is in the JTATransaction [15:28] <tomb> jeffyu: in the jbpm trunk, i see that the jboss idm version still points to org.jboss.identity.idm:idm-api:jar:1.0.0-SNAPSHOT [15:28] <tomb> jeffyu: is that intentional ? [15:29] <jeffyu> tomb, yes.. because there were two test cases failed, I didn't make an alpha release for the update. [15:29] <jeffyu> was thinking relied on the new published SNAPSHOT. [15:29] <tomb> jeffyu: you mean you couldn't make an idm alpha release ? [15:29] <jeffyu> after resolved those two test case, I will make another alpha release for the jBPM usage. [15:30] <jeffyu> tomb, I can, but I was thinking I might do some little update due to those two failed test case. related to the Transaction. [15:30] <jeffyu> tomb, you want me to do another alpha release now? [15:30] <jeffyu> I saw you want to make the CR release, right? [15:31] <jeffyu> tomb, if you want to, I think we can do another idm release now. [15:31] <bdawidow> jeffyu: Anil will need one anyway for assembly module fix [15:31] <bdawidow> jeffyu: just give me a moment to fix [15:31] <tomb> jeffyu: my cr release is already underway [15:32] <tomb> jeffyu: so you don't have to do it for that release [15:32] <jeffyu> tomb, ok, yes, the SANPSHOT is intentional.:) [15:32] <jeffyu> tomb, ok. [15:32] <tomb> jeffyu: but it's always good to have it on a specific release [15:32] <tomb> jeffyu: i mean it is always better to ... [15:33] <tomb> jeffyu: when do you think you could do that on trunk ? [15:33] <jeffyu> tomb, agreed... was thinking the Transaction issue might be easier to fix... and didn't realized the CR release is going to happen in these days... sorry. [15:33] <tomb> jeffyu: no prob. if it mattered, then i would have brought it up [15:33] <jeffyu> tomb, you mean make another idm release on idm trunk. [15:34] <tomb> jeffyu: instead of using idm snapshot in jbpm trunk, i would like to switch to using idm releases asap [15:34] <jeffyu> bdawidow, ok, may I know whats the problem for current assembly module?:) [15:34] <tomb> jeffyu: if you're about to do a release then we can wait for that, but i want to plan that [15:34] <bdawidow> jeffyu: looking at it now. Anil says it doesn't contain all stuff atm [15:35] <jeffyu> tomb, I can do another release tomorrow. (after the bdawidow committed the fix) [15:35] <jeffyu> tomb, and then I will update the idm version on the jbpm trunk if you don't mind. [15:35] <tomb> jeffyu: that would be great [15:37] <jeffyu> tomb, ok, will give you an update tomorrow.. btw, JTATransaction.class uses the 'java:comp/UserTransaction' as JNDI name, I thought it should be 'UserTransaction' in the JBoss.	1	1	https://issues.jboss.org/browse/JBPM-2172
14026	JBPM-2170	Does it deploy to the db directly or via the console (http upload)?	1	1	https://issues.jboss.org/browse/JBPM-2170
14027	JBPM-2166	can anyone with schema knowledge paste the right piece of schema to be added to all jpdl elements so that the language becomes extensible ? i'm looking for the proper usage of the any and anyAttributes. the goal is that elements and attributes can be added in any namespace (also the jpdl namespace)	1	1	https://issues.jboss.org/browse/JBPM-2166
14028	JBPM-2166	Are you already working on this? If I got it right, the schema should be extended in that way, that you can add additional elements like for example customized task-elements and additional attributes to existing elements while validation through the schema still works? Might be helpful: http://www.w3schools.com/schema/schema_complex_anyattribute.asp	0	0	https://issues.jboss.org/browse/JBPM-2166
14029	JBPM-2166	What if there were a different approach? I feel like the available node set is adequate, with the existing custom node. The "killer" feature that's missing is the ability to enhance or replace the existing node behavior. So, what do you think about optionally allowing an activity behavior chain? Any activity could specify a list of ActivityBehavior implementations that would be executed on activity start. Additionally, we could specify 2 additional flags: include-default-behavior and default-behavior-location. The attribute include-default-behavior would specify to include the default (a boolean attribute), pre-implemented behavior in the node execution and would default to true if not specified. The attribute default-behavior-location is a enumerated attribute of "first" or "last" and would specify where in the chain the default behavior would be executed. It would be defaulted to "first" if not specified. ActcivityBehavior would be enhanced to return a boolean from the execute(ActivityExecution) method and would indicate if processing in the chain should continue. All of the default implementations would return "true", indicating the execution chain should continue. A return value of "false" would indicate that no further processing should continue. This would allow custom behavior to do things like conditionally create tasks in the task node, or notify task candidates after the task has been created. It could open up a bunch of possibilities... I'll upload an example xml file of what I've described.	1	1	https://issues.jboss.org/browse/JBPM-2166
14030	JBPM-2154	is this a big impact ?	0	0	https://issues.jboss.org/browse/JBPM-2154

14039	JBPM-2042	Unschedule from 3.2.6. When done, please set the fix version appropriately	0	0	https://issues.jboss.org/browse/JBPM-2042
14040	JBPM-2038	Tom, what do you mean by "this should be a developer feature"? Please also see my post in the forum: https://community.jboss.org/thread/150549?tstart=0 The "Configuration.setHibernateSessionFactory(SessionFactory)" doesn't seem to work... What's the best way to deal with externaly managed transactions and hibernate session factories?	0	0	https://issues.jboss.org/browse/JBPM-2038
14041	JBPM-2006	I think this is really a cool feature going to boost jBPM. Is there support from the Drools guys?	1	1	https://issues.jboss.org/browse/JBPM-2006
14042	JBPM-2006	I have a question regarding the integration approach. I don't have much experience in relation to rule engines but there is JSR 94: Java Rule Engine API. AFAIK as of version 2.0 Drools is a fully JSR94-compliant rule engine. Maybe we should take this as an integration approach and thus not aime for Drools integration or support but for support for JSR94-compliant java rule engines? What do you think about this?	1	1	https://issues.jboss.org/browse/JBPM-2006
14043	JBPM-2006	Which approach did Jeff Delong follow in jBPM 3.? Did he use serialized rules or a repository?	0	0	https://issues.jboss.org/browse/JBPM-2006
14044	JBPM-1996	Heiko, is it ok for you if I take this issue ?	0	0	https://issues.jboss.org/browse/JBPM-1996
14045	JBPM-1995	I added this section in the userguide: <section id="databasemigration"> <title>Database migration</title> <para>TODO: document the instructions how users should apply the automatic migration</para> </section> Alejandro, can you complete that docs as part of this jira issue ?	1	1	https://issues.jboss.org/browse/JBPM-1995
14046	JBPM-1995	Does this really belong in the user guide? I don't think we want to support upgrading between arbitrary versions. Furthermore, because it requires checking out the source code and working with Maven, it is hardly an end-user feature. I'll write the instructions in the user guide for the time being, but I think it really belongs to the dev guide.	0	0	https://issues.jboss.org/browse/JBPM-1995
14047	JBPM-1974	"this way an activity will refer to the model element, as well as to the combination of the model element and the behaviour." Do you really think that an overlay in concepts on a specific term makes things easier to understand? It's actually the other way around. Furthermore Activity is a BPMN term. If we use a mixed approach in jpdl4 then we need to avoid overlap in terms between BPMN and jbpm.	1	1	https://issues.jboss.org/browse/JBPM-1974
14048	JBPM-1927	do i get this correctly that you're planning to bind the file upload deployment in the console to the jboss deployer ? if yes, then i don't think this is a good idea. programmatic deployment is also part of the api. and that will work in any container. also tomcat.	1	1	https://issues.jboss.org/browse/JBPM-1927

#	Requirement	Questions	Answered	Successfully Answered	URL
14049	JBPM-1924	Thomas, The participant production-ready forms can be created with JBoss tools.... they have a palet for many components, jBPM should not provide that themselves. The basic form, generated by jBPM can be adapted. I've done it. The 'visual task form designer'? What is that? I have no clue... jBPM does not provide anything visual for this at all... so to say it is relatively weak is to much credit ;-). All changes can be deployed in the par file... so.... The JSF console had indeed the problem that it showed all tasks. I fixed that once, but maybe something got lost in the process. I'll have a look again. The JBoss logo is customizable... it's an image... replace background.gif in the images directory in the webapp... We can also change it that it is customizable via css or whatever... Or do I miss something here? And critical??? hmmmm... strange report	1	1	https://issues.jboss.org/browse/JBPM-1924
14050	JBPM-1924	Hello Ronald, There is a "visual form designer" in JBoss Tools that almost works well with jBPM's generated task forms, ideally the generation logic for task forms would be much more clever, using specialized form input types (e.g. drop-down list box for an enumeration), it shouldn't have to be "adapted" for simple applications. Concerning the logo - I think it is bundled into the .WAR file and I (the business analyst) can't easily crack open, fix and repackage a .war file. I have found that the current JSF-based console has been the single most complained about item in jBPM. Many folks who approach a BPM problem and are looking for a solution (e.g. jBPM) are not too interested in expending lots of hours of highly talented (and costly) Java programming time to get a prototype created, tested, re-worked (rinse, wash, repeat) and then finally to production. This means the tooling has to improve so that it makes better decisions about its code generation, allow for more selections in the property sheets, better usability overall. Currently the JBoss Tools task form generation and visual designer do not work in concert, nor is the Admin console ready to be put in front of an end-user so he/she can work on his/her tasks (e.g. review & approve expense reports). Another way to say all of this is...focus more on the business analyst, give him/her better tools so they can do more for themselves and bypass the Java propeller heads.	1	1	https://issues.jboss.org/browse/JBPM-1924
14051	JBPM-1922	When does this 'BusinessExceptionFlow' have to start? I mean, what is the definition of the 'error' that can occur? And don't come up with 'everythingh' because I'll answer 42 then ;-) And what is 'without' java programming? Meaning that there may not be any actionhandler written (once!!) in java and configured (once!!) in each process? These are the most important parts to know. The rest is 'trivial' I think.... You can start any process from an actionhandler. Provide the full path to the node to it and a reference to the process id for the 'callback' or to retrieve additional data from it. First thing this businessExceptionFlow shoud do is to suspend the calling process. Then it can do anything it wants. At the end of this process you can end the calling process or resume it in the node it was or go to another node if that was passed in or whatever... So if you give an answer to the first two questions, I'll provide the rest and not bill them (or should I). Personally I think this is a great question for the userforum or JBoss consultancy and does not belong in the issues list (besides for keeping track of the customers question).	0	0	https://issues.jboss.org/browse/JBPM-1922
14052	JBPM-1919	I think everything should be fixed here. Can you please verify and close the Bug Thomas?	1	1	https://issues.jboss.org/browse/JBPM-1919
14053	JBPM-1919	Can you please point me to the exact incompatibility in the BatchSignalCommand? I don't find it at the moment...	1	1	https://issues.jboss.org/browse/JBPM-1919
14054	JBPM-1919	Hi Thomas, I double checked the BatchSignalCommand, I don't find any incompatibilities. Or does it make a difference if the method has moved up to the superclass? If that matters what would help is to introduce a method in the BatchSignalCommand which just delegates to super? This would be easy by using Eclipse but quite verbose in the code :-/ Every line marked with a "#" I found in the new class as well... 3.3.0 public class org.jbpm.command.BatchSignalCommand extends java.lang.Object implements org.jbpm.command.Command{ # public org.jbpm.command.BatchSignalCommand(); # public java.lang.Object execute(org.jbpm.JbpmContext) throws java.lang.Exception; # public java.lang.String getProcessName(); # public void setProcessName(java.lang.String); # public long getProcessVersion(); # public void setProcessVersion(long); # public java.lang.String getStateName(); # public void setStateName(java.lang.String); # public long[] getTokenIds(); # public void setTokenIds(long[]); # public java.lang.String getTransitionName(); # public void setTransitionName(java.lang.String); # public java.util.Date getInStateAtLeastSince(); # public void setInStateAtLeastSince(java.util.Date); } 3.3.1 public class org.jbpm.command.BatchSignalCommand extends org.jbpm.command.AbstractTokenBaseCommand{ public org.jbpm.command.BatchSignalCommand(); public java.lang.Object execute(org.jbpm.graph.exe.Token); public java.lang.String getTransitionName(); public void setTransitionName(java.lang.String); public java.util.Date getInStateAtLeastSince(); public void setInStateAtLeastSince(java.util.Date); public java.lang.String getAdditionalToStringInformation(); public org.jbpm.command.BatchSignalCommand transitionName(java.lang.String); public org.jbpm.command.BatchSignalCommand inStateAtLeastSince(java.util.Date); from AbstractTokenBaseCommand protected org.jbpm.JbpmContext getJbpmContext(); public java.lang.Object execute(org.jbpm.JbpmContext) throws java.lang.Exception; public abstract java.lang.Object execute(org.jbpm.graph.exe.Token); public void setTokenIds(long[]); public void setTokenId(long); public java.lang.String getAdditionalToStringInformation(); public java.lang.String getProcessName(); public void setProcessName(java.lang.String); public int getProcessVersion(); public void setProcessVersion(int); public java.lang.String getStateName(); public void setStateName(java.lang.String); public long[] getTokenIds(); public long getTokenId(); public java.lang.String toString(); public org.jbpm.command.AbstractTokenBaseCommand tokenIds(long[]); public org.jbpm.command.AbstractTokenBaseCommand tokenId(long); public org.jbpm.command.AbstractTokenBaseCommand processName(java.lang.String); public org.jbpm.command.AbstractTokenBaseCommand processVersion(int); public org.jbpm.command.AbstractTokenBaseCommand stateName(java.lang.String); }	1	1	https://issues.jboss.org/browse/JBPM-1919
14055	JBPM-1909	I committed the change to add the setActor to the AuthenticationService and added the factory. So it is at least consistent now, but I think is still room for improvement, but maybe this isn't done in jbpm 3 any more? Shall we close this issue?	1	1	https://issues.jboss.org/browse/JBPM-1909
14056	JBPM-1905	Some methods were named "setProcessId" or the like. Since this in ambiguous (is it ProcessDefinitionId or ProcessInstanceId) I set these methods to deprecated and created new ones with the right names.	1	1	https://issues.jboss.org/browse/JBPM-1905

#	Requirement	Questions	Answered	Successfully Answered	URL
14057	JBPM-1887	Okay, I could reproduce the behavior. If the ExceptionHandler itself throws an exception it can catch, it will hang in an infinitive loop. In my eyes this is a bug and I would resolve it for next jbpm version (even if I think it doesn't affect a lot of people). Unfortunately the CVS-history wasn't important in the new SVN and my "old" CVS access doesn't work any more (don't know why), so I cannot easily check what has changed and why it was not there in jbpm 3.2.GA. Anyway, I would say, an exception caused by an action executed by exception handler should NOT be handled by the jbpm exception handler. This could be implemented by checking if the exception is set on the ExecutionContext already: GraphElement 280: // If an exception is already set we are in an action of an exception handler // in this case don't give the exception to the handlers but throw it to the client if (executionContext.getException()==null) { // if an exception handler is available raiseException(exception, executionContext); } else { // if there is no parent we need to throw an action exception to the client if (exception instanceof JbpmException) { throw (JbpmException) exception; } else { throw new DelegationException(exception, executionContext); } } What do you guys think? Worked for my local test case. I could add the test case and commit this change if it doesn't break anything of the test suite... Thoughts?	1	1	https://issues.jboss.org/browse/JBPM-1887
14058	JBPM-1883	Comments made earlier today suggest that a deployer was never implemented, is this true? If this task did not cover the deployer then what did it cover?	0	0	https://issues.jboss.org/browse/JBPM-1883
14059	JBPM-1835	why is this closed? the fact that embedding the jsf forms does not work is just one option. I think it should be left open, the description a little changed and something new maybe develloped (embedded xforms?)	0	0	https://issues.jboss.org/browse/JBPM-1835
14060	JBPM-1822	thomas, can you have a look at this ? i can help you find the old release notes if that turns out a problem.	1	1	https://issues.jboss.org/browse/JBPM-1822
14061	JBPM-1821	Thomas, could you update the installer so that it also produces a db directory in the installation, containing the schema creation DDL scripts ?	0	0	https://issues.jboss.org/browse/JBPM-1821
14062	JBPM-1782	could this be due to the examples not having a retry on an optimistic locking exception ?	1	1	https://issues.jboss.org/browse/JBPM-1782
14063	JBPM-1767	Tom, could you please take care of this docs issue?	1	0	https://issues.jboss.org/browse/JBPM-1767
14064	JBPM-1764	Heiko, could you please work with Alejandro to resolve this?	0	0	https://issues.jboss.org/browse/JBPM-1764
14065	JBPM-1761	Can you elaborate on this? I don't understand what you mean.	0	0	https://issues.jboss.org/browse/JBPM-1761
14066	JBPM-1752	Tom Baeyens: > Let's fix this in jPDL 4.0 Thomas Diesler: > A deferred issue cannot have a fix version Then why not leave it just open and put a fix version of 4.0 on it? That way it does not get lost. Isn't that what versions are for? Now this issue is not visible anywhere anymore	1	0	https://issues.jboss.org/browse/JBPM-1752
14067	JBPM-1740	work going on here? Otherwise I take it....	0	0	https://issues.jboss.org/browse/JBPM-1740
14068	JBPM-1735	I couldn't reproduce it in eclipse, but only with maven. That is weird. That seems to indicate that some parts of the environment are not the same. Have you got an idea how that could have happened ? Maybe explaining the maven profiles and how we use it to test it on different DB's is a good topic for the team meeting...	0	0	https://issues.jboss.org/browse/JBPM-1735
14069	JBPM-1728	Thomas, Do you have specific examples of what you mean by stale content? Just 2.0 stuff or also the 3.1 stuff? Now jboss.org has a new wiki, is it still the intention to move to a dyndns.org wiki? Personally I'd think not, but you guys might think otherwise	0	0	https://issues.jboss.org/browse/JBPM-1728
14070	JBPM-1724	What will we do with SEAM support in general ? It's going to be hard to avoid. If we do support SEAM, how will the test suite look like. Should the jPDL/pageflow tests be in jBPM or should they be in SEAM ? Thinking of it, probably pageflow should move to seam as that is hard for us to test cause it (the page node) has a direct dependency on SEAM iirc. Apart from that there is the timer transaction problem: JBPM-1166	1	1	https://issues.jboss.org/browse/JBPM-1724
14071	JBPM-1724	Alejandro, you can re-introduce the seam pageflow test, but then you have to make sure that it succeeds. I believe that a full pageflow test should be in SEAM, not in jBPM. If we can test the specific aspect that caused JBPM-1707, then we could consider writing a test for only that specific aspect. If that aspect is only reproducable in SEAM, then the test should be in the SEAM codebase, not ours. WDYT?	1	1	https://issues.jboss.org/browse/JBPM-1724
14072	JBPM-1720	Thomas, can you have a look at this ? I have fixed the configuration problem. Now the underlying issue pops up. java.lang.NoSuchFieldError: name at org.slf4j.impl.Log4jLoggerAdapter.<init>(Log4jLoggerAdapter.java:75) at org.slf4j.impl.Log4jLoggerFactory.getLogger(Log4jLoggerFactory.java:75) at org.slf4j.LoggerFactory.getLogger(LoggerFactory.java:92) at org.apache.jackrabbit.core.config.RepositoryConfig.<clinit>(RepositoryConfig.java:64) at org.jbpm.jcr.jackrabbit.JackrabbitJcrServiceFactory.getRepository(JackrabbitJcrServiceFactory.java:48) at org.jbpm.jcr.impl.AbstractJcrServiceFactory.openService(AbstractJcrServiceFactory.java:46) at org.jbpm.svc.Services.getService(Services.java:156) Which seems to be an slf4j classloading problem according to http://www.velocityreviews.com/forums/t635509-hibernate-tutorial-problem.html	0	0	https://issues.jboss.org/browse/JBPM-1720
14073	JBPM-1710	Can you elaborate on your externalization proposal? You mean, set the pageflow schema resource in jbpm.cfg.xml or something similar?	0	0	https://issues.jboss.org/browse/JBPM-1710
14074	JBPM-1471	Same here. I have running subprocess, and when the parent process is ended (using end-complete-process="true"), subprocess is ended, token returns to parent process, and jbpm tries to execute it normally (causes usually unexpected behavior, e.g. something wrong with hibernate proxies). Don't see it being any special case or anything, just subprocess in a wait state, and in meantime parent process is ended. Is there any reason to execute token, if it has ended (end not null)? cvl	1	1	https://issues.jboss.org/browse/JBPM-1471
14075	JBPM-1471	not sure, how throwing an exception would help here. In my view, the process _usually_ ends, when the subprocesses are _not_ ended yet. Would it be possible for token to simply _not_ follow the execution, if it has ended? At least when it is signaled at returning from subprocess. I see throwing an exception would be valid, if token is explicitly signaled (e.g. through external trigger), but what about simply ending process, and having not ended subprocesses? Regards.	0	0	https://issues.jboss.org/browse/JBPM-1471
14076	JBPM-1460	[12:01] <tomb> porcherg: thanks. what do you think about this: https://jira.jboss.org/jira/browse/JBPM-1460 [12:01] <tomb> ? [12:01] <tomb> can i remove class ObjectReference and use Descriptors instead ? [12:02] <tomb> os do you see a downside of that [12:02] <tomb> or do you see a downside of that [12:04] <porcherg> tomb: i think it can be removed [12:04] <tomb> ok [12:04] <porcherg> maybe there will be a db performance impact [12:04] <tomb> i'll do it in the next couple of days [12:04] <tomb> should be minimal [12:04] <tomb> or even for the better [12:05] <porcherg> because the descriptor table will have a lot of entries [12:05] <tomb> with an index on a long column that is not a problem [12:05] <tomb> index is only maintained during deployment [12:05] <porcherg> but this will but easier to understand [12:05] <tomb> don't think so [12:06] <tomb> as most ObjectReferences will have a descriptor memberfield anyway [12:06] <porcherg> but this will be easier to understand [12:06] <tomb> so it removes an extra indirection [12:06] <porcherg> i think having only one Descriptor is easier [12:06] <tomb> ok	1	1	https://issues.jboss.org/browse/JBPM-1460
14077	JBPM-1451	Hi Trevor, what are the Tier-1 DBs?	0	0	https://issues.jboss.org/browse/JBPM-1451
14078	JBPM-1451	Hi Len, could you please resolve the dependent issue	1	1	https://issues.jboss.org/browse/JBPM-1451

#	Requirement	Questions	Answered	Successfully Answered	URL
14079	JBPM-1450	Thomas, Resolving this issue simply requires a change in the jBPM configuration. I understand SOA-P uses its own jBPM and Hibernate configuration files. We should change those files directly. Julian, can you confirm whether SOA-P uses a separate jBPM configuration Thomas, Resolving this issue simply requires a change in the jBPM configuration. I understand SOA-P uses its own jBPM and Hibernate configuration files. We should change those files directly. Julian, can you confirm whether SOA-P uses a separate jBPM configuration file? If so, please let me know how can I change it. Alternatively I can post the required changes in a comment to the Jira issue. -Alejandro El lun, 24-11-2008 a las 09:08 +0100, Thomas Diesler escribió: > > Hi Alejandro, > > > > this issue https://jira.jboss.org/jira/browse/JBPM-1450 is still open, > > but CP03 has been tagged already. 14080	JBPM-1446	How can you get a TimeZone from a Locale? The country alone is not enough to determine the exact time zone, as some countries span multiple time zones. I was thinking of parsing the Date HTTP header. I reviewed the Seam source code and did not (yet) find anything besides TimeZone.getDefault(). Any suggestions welcome...	1	1	https://issues.jboss.org/browse/JBPM-1446
14081	JBPM-1423	standard java ========== 1) environment block controls the jdbc transaction through hibernate. hibernate being one resource in the standard transaction. 2) user controls the jdbc transaction with hibernate and environment block has got to participate in that same tx. Here, the tx will have a bigger scope then the environment block. So special care should be taken to verify all usages of transaction-end-listeners (like synchronisations) 3) user controls the transaction with spring and environment block has got to participate in that same tx. Same comment: tx scope is bigger then environment block scope. can we find a way so that the API tests are all executed in each of these 3 deployment configurations ? enterprise java ========== In enterprise Java, we can always assume that the transaction is controlled by JTA and that the transaction has a bigger scope then the environment block. The most common case will be CMT controls the transaction and pvm is addressed through the ExecutionService local SLSB osgi ==== testing only one of the tx configurations in osgi will be sufficient. To create a bundle out of PVM, the	1	1	https://issues.jboss.org/browse/JBPM-1423
14082	JBPM-1395	Tom, could you please reassign appropriately.	1	0	https://issues.jboss.org/browse/JBPM-1395
14083	JBPM-1375	But will jBPM suffer of the same problem? Mauro.	1	0	https://issues.jboss.org/browse/JBPM-1375
14084	JBPM-1375	Sorry, I meant: will jBPM4 suffer of this problem regarding the determination of the node type? Mauro.	1	0	https://issues.jboss.org/browse/JBPM-1375
14085	JBPM-1373	i don't think a special instance needs to be set up. JBPM.3 and JBPM.3_pgsql82 are already available. isn't this just a matter of enabling the publication checkbox in the configuration page of the hudson jobs ?	0	0	https://issues.jboss.org/browse/JBPM-1373
14086	JBPM-1372	what is the purpose of the installer ? i see 3 potential targets: 1) deploy a jbpm installation into a version of jboss. what are all the things that the installer should do? * add a jBPM queue to the JMS message service ? * add a jPDL DB * populate jPDL DB with example processes * add identity DB * populate identity DB with example users * configure a security domain * put the deployment artifact (the war?) in the deploy folder this is what we now have in an ant target somewhere. given that this is part of the simply unzippable suite distribution, i don't really see the urgent need for this. 2) install the jpdl-suite in a file system, which includes the jpdl lib, sources, docs, a preconfigured jbpm server and the eclipse plugin currently this is just unzipping the distribution. so i don't see the need for an installer here 3) installing the gpd into an existing eclipse installation. i think the eclipse update mechanism would be better for that. currently we have a feature distribution package that can just be unzipped in an eclipse. Koen is now working together with Kris on a joint new designer. That seems to be working great. In the meantime, the problem with the milestone versions of the designer dependencies has disappeared. So in this new designer, the standard eclipse versioning mechanism can and will be used.	0	0	https://issues.jboss.org/browse/JBPM-1372
14087	JBPM-1355	jBPM does not install duplicate jars {code} [tdiesler@tdvaio jboss-4.2.2.GA]$ find server/default/deploy/jbpm/ -name "*.jar" server/default/deploy/jbpm/jbpm-enterprise.jar server/default/deploy/jbpm/jbpm-service.sar/jboss-bpm-api.jar server/default/deploy/jbpm/jbpm-service.sar/jbpm-jpdl-core.jar server/default/deploy/jbpm/jbpm-service.sar/jbpm-jpdl-identity.jar server/default/deploy/jbpm/jbpm-service.sar/jbpm-jpdl-integration.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/jsf-facelets-1.1.14.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/commons-io-1.4.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/jbpm-jbpm4jsf-3.3.0-SNAPSHOT.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/gravel-1.0.0.GA.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/commons-fileupload-1.2.1.jar server/default/deploy/jbpm/jbpm-console.war/WEB-INF/lib/jsf-facelets-1.1.11.jar {code} The jar ordering in jboss is defined, so a potential duplicate would be hidden anyway. In case we have duplicates and have an incompatibility reported we deal with it on a case by case basis. Automating a scan as part of the Hudson QA is also possible but a superfluous effort at the moment ls -1 lib lib/endorsed server/default/lib | grep jar | sort	1	1	https://issues.jboss.org/browse/JBPM-1355
14088	JBPM-1352	> Yes. Are you using Unified EL now? Or another EL flavour... i've plugged in jsr 223 with scripting.dev.java.net. in the configuration, you can configure a named list of expression languages and also indicate which is the default expression language. in the jpdl language, for each expr attribute, there is an optional lang attribute. > Possibly - I'm on PTO quite a lot in May, but I think we can sort > something out. How about 18th onwards? ok. my expectation is that you drive the seam integration. i'll be ready to supply any jbpm update that you'll need and re-upload a snapshot. does that work for you ? regards, tom. Pete Muir wrote: > > On 14 Apr 2009, at 14:50, Tom Baeyens wrote: > >> the initial work needs to be done by us, i think. >> >> implementation wise there are a couple of directions, but there is still a bit of thinking involved. >> >> mostly, the current integration is based on integrating the naming resolutions while resolving UEL expressions. apart from that there is only the special SEAM annotations, which will boil down to jbpm service invocations. >> >> * setup of the seam contexts. find the proper places where we need to intercept to set up the seam contexts. this could potentially be very easy. we have a set of services now (==session facades). we also have a mechanism to add interceptors to those. a seam interceptor could ensure that seam is properly initialized around jBPM operations. > > Great, sounds easy enough :-) > >> * expanding the jbpm variable resolver so that it also delegates to the seam contexts. > > Yes. Are you using Unified EL now? Or another EL flavour... > >> * tx around the jbpm timers and messages. we should be able to leverage our container integration. since we'll be deployable as a service, we'll build our own tx interceptor for managing the JTA tx. this is leveraged when using seam. > > Kev has been doing some work on this - but I agree, we should just use JTA here - Seam will join or start a TX as required. > >> >> * pageflow. build the page activity. create a pageflow parser. >> >> this is all not cristal clear though. requires getting our hands dirty to see if this plans are complete. i think we should plan a week where we together set out the initial structure. then we can involve productization people to finish the integration. > > Ok. > >> ... >> >> regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-1352

14089	JBPM-1319	* Downloads * Documentation * Jira * Forums * jBPM Users * jBPM Developers * see if the other forums can be deleted or deprecated * would be great if we add usage instructions like: when should people use forums vs mailing lists. * Mailing list * jbpm-dev (is that one public or internal only) * dev-jbpm * cvs-commits (sf.net) * other sf.net mailing lists * Sources * jbpm3 : jpdl3 & identity * jbpm4 : pvm, jpdl, task, identity * Wiki's	0	0	https://issues.jboss.org/browse/JBPM-1319
14090	JBPM-1319	what is the difference between jbpm-dev and dev-jbpm (I cannot seem to find the latter) Would be nice though if a small text was added where the forums are for: jBPM developers is for people developing jBPM itself, not developing their own apps WITH jBPM.	1	1	https://issues.jboss.org/browse/JBPM-1319
14091	JBPM-1301	Koen, can you take this one ? A patch file should be extracted with eclipse that shows contains the diffs between jbpm-3.2.3 and the current head. That patch file should be assigned to this jira issue. That shouldn't be much. But it might be convenient for Alejandro to apply his fixes again. Then all the files need to be deleted. Then a readme needs to be added to the root jbpm.3.	1	1	https://issues.jboss.org/browse/JBPM-1301
14092	JBPM-1299	what is meant with this ?	1	1	https://issues.jboss.org/browse/JBPM-1299
14093	JBPM-1296	this is a component used in the console. so same comment as the console. only in this case, testing it in isolation will even be harder as JSF components are even harder to test then web pages. and no one knows what those JSF components are supposed to do.	0	0	https://issues.jboss.org/browse/JBPM-1296
14094	JBPM-1292	Hey Thomas. I am a bit confused by now. Where is the current code base hosted? Not in CVS any more, right? Can you give me the right direction, then I try to have a look into it...	1	1	https://issues.jboss.org/browse/JBPM-1292
14095	JBPM-1291	it is a community extension to our core jBPM product. we should define a way how we deal with such extensions. something like incubation maybe ?	0	0	https://issues.jboss.org/browse/JBPM-1291
14096	JBPM-1285	Guillaume, can you describe the proposal you have to fix it ?	1	1	https://issues.jboss.org/browse/JBPM-1285
14097	JBPM-1280	an important part of this task is the systematic approach. meaning that i don't want tests to be created ad hoc cause then we'll never know what we test and what not. that doesn't mean that all possible combinations have to be tested. but i want that we at least thought about which combinations we want to see tested. by having an overview that has a systematic approach, we can get a good appreciation of the coverage of the test suite for the job executor	1	1	https://issues.jboss.org/browse/JBPM-1280
14098	JBPM-1271	Are we sure we want to keep using jbpm4jsf as it is? Big dependency on Gravel, which is not the easiest to learn. The jBPM 4 console will be seam based, maybe with some custom JSF components. If jBPM 3.2.4 should be mavenised, than this should as well, but It will be only short lived I think (hope)	0	0	https://issues.jboss.org/browse/JBPM-1271
14099	JBPM-1269	Could you please help me to resolve this?	0	0	https://issues.jboss.org/browse/JBPM-1269
14100	JBPM-1227	Guillaume, there are still some tests commented in the HibernateJobDbSessionTest. Can you evaluate if those are still relevant or if they should be removed ? Just execute as you think it should be done. Once that is done, this issue can be reloved. All methods are now tested except for the base DbSession methods void flush(); void forceVersionUpdate(Object entity); void lockPessimistically(Object entity); I created JBPM-1684 for that.	1	1	https://issues.jboss.org/browse/JBPM-1227
14101	JBPM-1223	This proposal was already taken in PVM. Not sure it is worth backporting, tough. There aren't many votes for it, though the community may not be aware of it. Which brings another question: how can we communicate with the community about issues for which we would like input/votes?	0	0	https://issues.jboss.org/browse/JBPM-1223
14102	JBPM-1212	is this something more than variable declaration?!	1	1	https://issues.jboss.org/browse/JBPM-1212
14103	JBPM-1212	I think the static process variables is something like processDefinition id, key, name or version. And everything could be shared between all of process instances. E.g, we could declare partnerLinks in processDefinition on BPEL environment, then all of process instances could refer them. Furthermore I think the differences between static process varaible and normal process variable is the static process variable is readonly. Any ideas?	1	1	https://issues.jboss.org/browse/JBPM-1212
14104	JBPM-1210	Hi Tom, this weekend we were working trying to solve Jira#PVM-44 (spring configuration support). At the moment we are trying to learn wich part of your configuration framework has to be done with Spring. We first did an SpringEnvironmentFactory extending EnvironmentFactory. About this we have this first impressions: * There is some coupling with all the parser lifecycle, meaning that in Spring there is no such concept (at the high level, of course). As we understood the intention is that we must make our own Parser that receives the config file location, parse it until we get the SpringEnvironmentFactory. This is not posible without going to deep into the spring architecture. In spring you just create an XmlApplicationContext instance from the file and you ask it for defined beans. The solution was to make an static method SpringEnvironmentFactory#parse(InputStream) -just to follow your conventions, but using this concept in spring is not really usual- that accomplish this task but ignoring all the other way. * We defined a Context in the Environment containing a hibernate session. At first time we tried to make a SimpleContext just implementing the Context interface and keeping it as pojo as possible, to be able to fill it with Spring. We made it and succesfully register the HibernateSession on it. But the problem began when we tried to get it by class (type). The hibernate session get registered as SessionFactoryImpl and in the code it is invoked as get(SessionFactory.Class). Digging into the code we realize that all this registrations had to be done by a layer of Descriptors through the WireContext. Now the problem is that all this layer is not really so much pojo-oriented in the sense that there are no getters and setters for every property. * Maybe the whole package org.jbpm.pvm.internal.wire.* should be avoided in the Spring configuration. But when we try to get this we realize that there are some coupling between the usage of services and the way that they get 'injected' and even this approach will translate in a lot of duplications in the code. Have you any suggestion about this topics? Beside how we resolve this, is necesary to add in your ivy repository the Spring dependencies. At the moment we have <dependency org="springframework" name="spring-context" rev="2.5.4" conf="compile->default" /> <dependency org="springframework" name="spring-core" rev="2.5.4" conf="compile->default" /> <dependency org="springframework" name="spring-beans" rev="2.5.4" conf="compile->default" /> <dependency org="springframework" name="spring-orm" rev="2.5.4" conf="compile->default" /> <dependency org="springframework" name="spring-jdbc" rev="2.5.4" conf="compile->default" /> <dependency org="springframework" name="spring-tx" rev="2.5.4" conf="compile->default" /> Thanks. Mauricio Salatino - Diego López León	1	1	https://issues.jboss.org/browse/JBPM-1210

#	Requirement	Questions	Answered	Successfully Answered	URL
14105	JBPM-1209	TODO: creating tests that use an expression for each situation where it is possible. E.g. * an expression that refers to a method that implements behaviour of a node * an event listener expression. on every possible event. * transition conditions. create an activity that takes the first transition for which the condition evaluates to true * setting timers dynamically based on processvariables * choosing a specific subprocess runtime instead of designtime * maybe event listeners should get a condition as well ? separately, the name resolution should be checked in all of these situations: * can the expression 'see' process variables * can the expression see the process definition properties * can the expression see the named environment and environment-factory objects * can the expression easily navigate a process domain object (stored as process variable) other ideas ?	1	1	https://issues.jboss.org/browse/JBPM-1209
14106	JBPM-1205	I would prefer if they could be renamed to XxxTestArchived. That way, mvn will not pick them up and I will still have them available for archive purposes when looking for "how did i do that before. I know i have done that in the past somewhere..."	0	0	https://issues.jboss.org/browse/JBPM-1205
14107	JBPM-1194	First I think the subject is incorrect. EL expressionevaluation *is* in mail templates, just not in the attributes of the variable value element. Correct? Besides that, if you want *specific* subjects, you can set those in the template and override the default one. The fact that the default currently only is static is not a big deal imo. The advantage only comes in when using complex EL in many places. Thirdly, I'd make a totally different patch and change the mailvariableresolver to parse the value of the value attribute as an EL and not do it in the getters as you do now	1	0	https://issues.jboss.org/browse/JBPM-1194
14108	JBPM-1179	Did you commit only to HEAD ? Or also to the SOA branch ? Who's going to do the test on WebLogic ? Who are we waiting for ?	1	1	https://issues.jboss.org/browse/JBPM-1179
14109	JBPM-1179	Only to head. Should all work on the enterprise module (including this issue) also be ported to the soa branch? Martin is testing on WebLogic.	0	0	https://issues.jboss.org/browse/JBPM-1179
14110	JBPM-1172	hmm... I see that the template is only resolved run-time (not deploy time), so it is not possible to detect a non existent template and to a fall back. Would it be better to change this to do a deploy time check? I personally think so.	1	1	https://issues.jboss.org/browse/JBPM-1172
14111	JBPM-1171	Hi, I just switched to 4.4 recently and found out that the patch is not there and in the trunk either. What happened?	0	0	https://issues.jboss.org/browse/JBPM-1171
14112	JBPM-1148	Hi. What is the current status on this? Anybody did some work here already? Maybe I could have a look at it but want to avoid duplicate work. And Fix Version 3.3 is too late I think, so target release should be 3.3.1? The proposed solutions is a good direction but still has some flaws (see forum entry), but a working solutions in terms of classloading is vital, especially if you think about jBPM ESB integration, scoping of deployments and so on...	1	1	https://issues.jboss.org/browse/JBPM-1148
14113	JBPM-1148	The problem with the proposed fix was that it leads to an endless loop, since the classloader is already needed to load the jbpm.cfg.xml in the JbpmConfiguration (InputStream jbpmCfgXmlStream = ClassLoaderUtil.getStream(resource);), but this wants to read which classloader to use. Exception StackTrace: at org.jbpm.util.ClassLoaderUtil.getClassLoader(ClassLoaderUtil.java:50) at org.jbpm.util.ClassLoaderUtil.getStream(ClassLoaderUtil.java:83) at org.jbpm.JbpmConfiguration.getInstance(JbpmConfiguration.java:279) at org.jbpm.JbpmConfiguration.getInstance(JbpmConfiguration.java:257) at org.jbpm.JbpmConfiguration$Configs.getObjectFactory(JbpmConfiguration.java:418) at org.jbpm.JbpmConfiguration$Configs.hasObject(JbpmConfiguration.java:426) at org.jbpm.util.ClassLoaderUtil.getClassLoader(ClassLoaderUtil.java:50) So my solution is to introduce a special method "getJbpmConfigurationStream" which is responsible especially for loading the jbpm.cfg.xml. It looks first in the ClassLoaderUtil.class.getClassLoader (because this is the "old behavior") and if there is nothing found in the Thread.currentThread().getContextClassLoader(). This method is used by the JbpmConfiguration and the XmlUtil to load jbpm.cfg.xml. And in the ObjectFactoryImpl I changed to lazy load the classloader, otherwise it is queried too early (before the jbpm.cfg.xml is processed)... Additionally the described patch is applied, but currently I am not sure if we still need the customClassLoader configuration? Shouldn't all use cases be already solved by using the context class loader and overwrite the ProcessClassLoader? Third thing I did was to introduce a ProcessClassLoaderFactory which can be configured via the jbpm.cfg.xml. So you can easily exchange the ProcessClassLoader to whatever you need in your project. The three new configuration parameters are: <jbpm-configuration> ... <string name="jbpm.classLoader" value="jbpm" /> <string name="jbpm.customClassLoader.className" value="com...MyClassLoaderUtil" /> <bean name="jbpm.processClassLoader" class="org.jbpm.instantiation.DefaultProcessClassLoaderFactory" singelton="true" /> /> All these values have defaults (which doesn't change the current behavior), so they are not required. All tests are still running, I added a short new test, which also works... I will commit it, so everybody interested can review it... The whole conifguration / load during startup / Config part is a bit tricky, didn't understand each and everything there, would be nice if you, Tom, can have a look at it? If it keeps like that I can also make a short note in the documentation about these classloading configuration possibilities...	1	1	https://issues.jboss.org/browse/JBPM-1148
14114	JBPM-1148	Bernd, what is the status of this?	1	1	https://issues.jboss.org/browse/JBPM-1148
14115	JBPM-1144	Here is the description of the duedate-timer attribute: "the duration (optionally expressed in business hours) that specifies the time period between the creation of the timer and the execution of the timer. See Section 15.1, "Duration" for the syntax." So I thought in the workflowdefinition I'm only able to input a constant value for the duedate. (e.g. "7 days"). But suppose, I want to send a report on the first day of the next month. How can I formulate this in the workflow? I found no solution. So I customized the Class "CreateTimerAction". And with the code above, I'm able to set the timer to the first day of the next month. Thanks in advance, Thorsten	1	1	https://issues.jboss.org/browse/JBPM-1144
14116	JBPM-1137	Alejandro Just wanted to confirm a few things. Running test.jpdl runs these 905 tests. Is that all? [junit] Running org.jbpm.AllTests [junit] Tests run: 905, Failures: 0, Errors: 0, Time elapsed: 88.214 sec Also we test patches by building from the release branch and then replace with the attached patch jar, we do not use the patch branch (jpdl_3_2_2_JBPM-1137) directly. The test target kept rebuilding the jpdl jar replacing the patched one that i copied, hence i had to disable the build part in the build files. For patch testing, we do not cover multiple databases (this is covered as part of SOA platform testing), unless the patch directly affects database. Can you tell me if there is any way or testcase to test this leap year date calculations?	0	0	https://issues.jboss.org/browse/JBPM-1137
14117	JBPM-1127	" Are you saying that the tests will provide us with zero additional (DB-specific) test coverage? " exactly	0	0	https://issues.jboss.org/browse/JBPM-1127

#	Requirement	Questions	Answered	Successfully Answered	URL
14118	JBPM-1117	This is what I get from this discussion: * You can use the ant deploy target, providing it with a configuration file that points to a jBPM DB. * The jBPM Console also contains a config file pointing to the jBPM DB. * So if you update one of those configuration files without the other then the deployed process is not seen in the console. Would the following be a solution ? * Make sure that a jBPM installation always has a deployment servlet * That way, the ant task and the designer can both deploy to a URL * So there is only 1 configuration of the database. And the ant task and the designer only need to be configured with a URL We'll take this into account in building jPDL 4. I don't think we can still prioritize this for jBPM 3.	1	0	https://issues.jboss.org/browse/JBPM-1117
14119	JBPM-1116	do you have a unittest (or a patch for an existing unittest) that demonstrates the problem?	1	0	https://issues.jboss.org/browse/JBPM-1116
14120	JBPM-1089	Is this issue resolved?	1	1	https://issues.jboss.org/browse/JBPM-1089
14121	JBPM-1089	I've the test suite running on hudson. So many thanks for fixing enterprise module! There are some jpdl failures because of wrong version included into SOA-P RC1 so please ignore them. But there are some enterprise module failures as well. Could you look at http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-JBPM.3-testsuite/59/testReport/ where the two org.jbpm.msg test failures can be seen. For the related server logs, please look under "Build Artifacts" on http://hudson.qa.jboss.com/hudson/job/jboss-soa-platform-JBPM.3-testsuite/59/ Let me know if you need any additional information.	0	0	https://issues.jboss.org/browse/JBPM-1089
14122	JBPM-1079	why is this major?	1	1	https://issues.jboss.org/browse/JBPM-1079
14123	JBPM-1066	Hi. Does this mean this issue has been fixed and the requested functionality exists ? Or that the issue will not be resolved ? Thanks, Ross	1	0	https://issues.jboss.org/browse/JBPM-1066
14124	JBPM-1060	afaik, I already added this feature reqeust in CVS, can you verify?	0	0	https://issues.jboss.org/browse/JBPM-1060
14125	JBPM-1040	like the colspan and rowspan in html tables?	0	0	https://issues.jboss.org/browse/JBPM-1040
14126	JBPM-1016	Is there a new issue made than to track this? Just closing and mentioning it will be in 4.0 is plain wrong.	0	0	https://issues.jboss.org/browse/JBPM-1016
14127	JBPM-998	simplifying, updating and improving the main jbpm.org website is on its way; it's one of my highest priorities atm. apart from that, i just double checked and there is little i can do to remove the SF CVS repo. i disabled cvs and forums. Hopefully that already helps.	1	1	https://issues.jboss.org/browse/JBPM-998
14128	JBPM-993	great... could you also make a small unit test for this? and maybe one with a CustomExpressionAssignmentHandler? Then I'm prepared to check this in.	0	0	https://issues.jboss.org/browse/JBPM-993
14129	JBPM-993	Actually according to http://jira.jboss.com/jira/browse/JBPM-429 this issue has been already fixed in 3.2.2. But I don't see any changes neither in 3.2.2 nor in FishEye. It would be nice to rely on jira status and jBPM documentation. Please write me what kind of unit test are you expecting?	0	0	https://issues.jboss.org/browse/JBPM-993
14130	JBPM-986	Can you comment on this. I looked at the schema and cannot see what you mean	1	0	https://issues.jboss.org/browse/JBPM-986
14131	JBPM-977	How about making the EL pluggable, so that you can retain back compatibility, but Seam 1.3 can use jboss-el?	1	1	https://issues.jboss.org/browse/JBPM-977
14132	JBPM-977	Thanks Tom! Can I get a new build?	0	0	https://issues.jboss.org/browse/JBPM-977
14133	JBPM-955	so the same way as you can map variables to sub processes, you want to map swimlanes to sub processes. would that cover your feature request ?	1	1	https://issues.jboss.org/browse/JBPM-955
14134	JBPM-955	> so the same way as you can map variables to sub processes, you want to > map swimlanes to sub processes. would that cover your feature request ? I guess you're referring to for example: <process-state name="initial interview"> <sub-process name="interview" /> <variable name="a" access="read,write" mapped-name="aa" /> ... </process-state> ...which could then be enhanced to allow for <process-state name="initial interview"> <sub-process name="interview" /> ... <swimlane name="candidate" /> ... </process-state> Is that what you propose? If so: - maybe some others would like to set an explicit actor, not the swimlane (so that would need an <assignment> mapping as well) - if a sub-process is invoked from within another sub-process then one may not know the hardcoded swimlane name ("candidate" in the example above, or "client" and "employer" in my first post) So I guess it would cover my current needs, but I'm not sure if the above would yield the most flexible solution. And it can probably just as easy be implemented using some custom component: <task name="survey"> <assignment actor-id="#{myCustomTaskAssignerComponent.surveyActor.id}"/> </task> Maybe it would be more flexible to either have jBPM search for an assignment (swimlane or actor, whichever is found first) anywhere up in the calling tree, or to make the current swimlane somehow available in expressions. As for the latter, one could then simply use: <task swimlane='#{jbpmSwimlane}' /> If this is doable, then I guess others might like the current actor to be available in expressions as well. Does this answer your question? Thanks, Arjan.	1	0	https://issues.jboss.org/browse/JBPM-955
14135	JBPM-955	" <process-state name="initial interview"> <sub-process name="interview" /> ... <swimlane name="candidate" /> ... </process-state> Is that what you propose? " yes. but also with a mapped-name that allows for translation of the swimlane instance to be stored under a different name in the sub process instance. i still don't get quite what you propose. with looking upward. in general, i'm very sceptical about references maintained between process instances. we'll probably end up in more problems then we actually solve. the proposal that i sketched makes sure that information is copied in from and potentially extracted from the sub process. so the two process instances are independent.	1	1	https://issues.jboss.org/browse/JBPM-955

#	Requirement	Questions	Answered	Successfully Answered	URL
14136	JBPM-955	> also with a mapped-name that allows for translation of the swimlane > instance to be stored under a different name in the sub process instance. A mapping is indeed good to have, as a sub-process might of course define multiple tasks, each of which could have its own swimlane (or assignment) as well. Sorry for not getting it after your first comment, and excuse me for giving yet another example just to be sure. So, I assume you're proposing: <process-definition name="hire"> <swimlane name="candidate" /> <swimlane name="colleague" /> <swimlane name="manager" /> ... <process-state name="initial interview"> <sub-process name="interview" /> <!-- First interview: assessment by future colleague --> <swimlane name="colleague" mapped-name="interviewer" /> <swimlane name="candidate" mapped-name="interviewee" /> ... </process-state> ... <process-state name="second interview"> <sub-process name="interview" /> <!-- Second interview: assessment by future manager --> <swimlane name="manager" mapped-name="interviewer" /> <swimlane name="candidate" mapped-name="interviewee" /> ... </process-state> ... <process-definition> ...using <process-definition name="interview"> <!-- NOTE: no need for expression here, such as "#{interviewer}" -- right? --> <swimlane name="interviewer" /> <swimlane name="interviewee" /> ... <task swimlane="interviewer"> ... </task> <task swimlane="interviewee"> ... </task> ... </process-definition> Right? That looks good! It would also allow for sub-processes within sub-processes. Maybe a future GPD could even ensure the swimlanes are set by the calling process-state. The above would surely cover my needs and is much better than my proposal, which I couldn't even make clear so you should forget about ;-) If you're indeed proposing the above for <swimlane>, then what about doing the same for <assignment> -- would that make sense at all, and would it be doable? I guess this would only make (some) sense for pooled-actors, but would look much better using swimlanes: <process-state name="initial interview"> <sub-process name="interview-using-actor" /> <assignment pooled-actors="colleagues-pool" mapped-name="interviewer-pool" /> <assignment actor-id="candidate-actor" mapped-name="interviewee-actor" /> <assignment expression="previous --> group(hierarchy) --> member(boss)" mapped-name="supervisor" /> ... </process-state> ...and <process-definition name="interview-using-actor"> ... <task> <!-- NOTE: unlike the swimlane, using "#{..}" here --> <assignment pooled-actors="#{interviewer-pool}" /> ... </task> <task> <!-- NOTE: unlike the swimlane, using "#{..}" here --> <assignment actor-id="#{interviewee-actor}" /> ... </task> ... </process-definition> There might be better ways to do this (such as some custom Java classes to set the variable value), and probably most is covered using swimlanes like you propose? Thanks for reading this ;-) Arjan.	1	0	https://issues.jboss.org/browse/JBPM-955
14137	JBPM-952	currently, we don't plan to have configurable out of the box support for authorization. i wan't to provide a more generic solution to this. you could build it yourself by making use of the identity component, though. but then you need to tweak the web console. you could define an authroization-group for each process. all members of that group can then start the process. you might create a link between the authorization group and the process by a name convention on the group. e.g. the group has groupType process-authorization and the group is called [process-name]-authorization-group or something like that. in one of the later versions we might work out some thing similar out of the box, but i want to take the time to analyse this carefully	0	0	https://issues.jboss.org/browse/JBPM-952
14138	JBPM-891	david, i remember that you worked on this. can you give an update and a pointer to the solution if there is one already. i think i forgot to mention that this should go somewhere into the jpdl/dist/src/main/resources/runtime/release.notes.html	1	1	https://issues.jboss.org/browse/JBPM-891
14139	JBPM-890	ronald, could you please have the patience to wait until AFTER my afternoon nap before you close this task ? otherwise i might loose track and do a nap twice, which would be a waste of that effort.	0	0	https://issues.jboss.org/browse/JBPM-890
14140	JBPM-889	who the hell starts using our jira for typing lessons ?!? :-)	0	0	https://issues.jboss.org/browse/JBPM-889
14141	JBPM-850	this seems already committed to cvs. Why is it still open? Does it need a test?	1	1	https://issues.jboss.org/browse/JBPM-850
14142	JBPM-848	Fady, i don't get your remark. As far as I remember, it should be possible for people to specify the property jbpm.mail.from.address in their jbpm.cfg.xml file. Can you try to reproduce and compare the problem report of Sebastian with the docs and the code ? In case our code is the problem, how do you think we should fix it ?	0	0	https://issues.jboss.org/browse/JBPM-848
14143	JBPM-845	subContextInstance.setTransientVariables(superContextInstance.getTransientVariables()); That line is in the process state since 3.1.2. Does that resolve your requirements as well ? In your proposed solution, there is a lot of overhead in the DB schema and the XML schema. So i prefer the approach that is currently taken: Just transfer *all* the transient variables *allways*. What do you think ?	1	1	https://issues.jboss.org/browse/JBPM-845
14144	JBPM-845	Have a look at my first and 4th comment: there I am pointing out, that this solution is too simple. I'll try to explain it by example: Given: A process, that creates a "Contact" in the database (A), taking a transient variable called "contact". A process, that creates a "Domain" in the database (B), taking a transient variable called "domain" and 4 transient variables called "contactAdminc", "contactTechC", "contactZoneC","contactHolderC". Now, every Domain needs to create the contacts. Simple approach: process B uses 4 times process A in a processState to create Contacts (like a function call). The problem: With the actual implementation this is not possible, since a transient variable must have the same name in super- and subprocesses, there is no variable scoping! Do you see the limits of the actual implementation? For us this is a no-go limit... Regarding the overhead: sure ... it uses the same datastructures like persistent variables and that's a lot. But is this really a problem? Concerning to the necessary changes in the DB schema and the XML schema: new Feature --> new XML stuff, new DB stuff - that's the way it goes :-) I think, the only real problem is that there is no backward compatibility. May only help writing good release notes... a making this an optional feature (how?)	1	0	https://issues.jboss.org/browse/JBPM-845
14145	JBPM-838	you mention a number of good improvements. but please consider the following for each of the individual points you make: * Currently it's a feature of jBPM to be runnable on a 1.4.2 JVM. will this still be the case after your proposed change ? * How will the library dependencies of jBPM be impacted ? There are many different deployment environments: from embedded into a user application to standalone on an app server. * What is the actual benefit for the jBPM users ? please, for any of the points that you think must still be addressed in jBPM 3.x, create a new, separate issue and explain previously mentioned aspects of the issue. thanks.	1	1	https://issues.jboss.org/browse/JBPM-838
14146	JBPM-835	Jeff, there are 2 issues about library dependencies for examples. As the number of examples will grow, so will the libraries needed for the examples. If we include them all in the plain download, the size will become bigger, only for the examples. The advantage of course is that it can run out of the box. What about consistently fetching the libs for an example into the lib directory in the build script of the example itself ?	1	0	https://issues.jboss.org/browse/JBPM-835
14147	JBPM-820	I thought, along with this feature, you 'fixed' passing a variablemap when starting a process as well? Correct? Then http://jira.jboss.com/jira/browse/JBPM-412 can be closed as well.	0	0	https://issues.jboss.org/browse/JBPM-820

#	Requirement	Questions	Answered	Successfully Answered	URL
14148	JBPM-810	isn't this a very clumsy way of starting to build a scripting language in jbpm ? maybe we should revert to a real scripting language then ?	1	0	https://issues.jboss.org/browse/JBPM-810
14149	JBPM-808	hmmm... someone care to explain this? Why not use a decision node for this and not go into the tasknode at all...? Now the designer has to be extended to show this condition as well.... I'm not saying that I'm against this, but do not see the advantage immediately, unless it is for ad-hoc tasks that are not part of a process.	1	0	https://issues.jboss.org/browse/JBPM-808
14150	JBPM-807	Tom, do you consider this proposal as setting variables *inside* the expression? To me, it looks simpler: evaluate the expression and set the result as the value of the named variable.	0	0	https://issues.jboss.org/browse/JBPM-807
14151	JBPM-807	pete, can you elaborate on this feature request a bit ? does it mean that variables should be settable through a value binding expression ? or does this just translate to a setVariable on the business process context ?	0	0	https://issues.jboss.org/browse/JBPM-807
14152	JBPM-799	Cool that lots of the webconsole issues have been done, compliments. Wouldn't it be better to assign a 'fix version/s' to these so they will show up on the releasenotes?	0	0	https://issues.jboss.org/browse/JBPM-799
14153	JBPM-770	Ok, I forgot to update the Hibernate mapping for processstate, I've done so as such: <property name="signalProcess" column="SIGNALPROCESS_" /> I think it's working now - is there anything else I need to do?	1	1	https://issues.jboss.org/browse/JBPM-770
14154	JBPM-760	Jeff i didn't find this issue when resolving the problem yesterday. I just did a good effort of trying to add many indexes on each many-to-one where i thought it was possibly being used in a query. I think i have many more indexes defined then you have specified. If you have a chance, could you have a look and see in the scripts if the once i created make sense ?	0	0	https://issues.jboss.org/browse/JBPM-760
14155	JBPM-743	I do not agree, what is the use of swimlanes then at all? Same thing can be achieved with direct assignments, making swimlanes an unneeded special feature.	1	1	https://issues.jboss.org/browse/JBPM-743
14156	JBPM-743	I do not agree either, and agree with Ronald's assertion that in that case swimlanes themselves are a special feature that isn't required. To my mind if a swimlane represents an actor/role in a process, there's a good set of use cases for that actor's physical human changing during the running of a long running process. In that case isn't it still the same swimlane being used? As I read a process (or for that matter generate a nice html picture/report) from a given process isn't a swimlane actually a far more accurate representation of what I'm attempting to accomplish? Furthermore there's no need to force a jPDL author to include an extra attribute in their jPDL - evaluate="always" would cause the behavior I'm seeking, and if the attribute didn't exist the current behavior would be used. Existing processes still parse and work as before, but a valueable feature is added, the lack of which makes for a messier and potential less accurate representation of a process.	0	0	https://issues.jboss.org/browse/JBPM-743
14157	JBPM-721	Can i contribute with this? i want to test and create new webservices functionallity.. could you recommend me something that is missing right now?	0	0	https://issues.jboss.org/browse/JBPM-721
14158	JBPM-720	Hi..Diego Leon and I wanna contribute with this (because we have the time).. I was testing jbpm in 3.2 in JBoss 4.2.2.GA and it works fine.. I was thinking to implement this WS Interfaces as a separate War Maven project using JBoss WS 2.0, with this we are able to use JAX-WS and make compatibility with Metro and CXF.. In the main branch of the repository (jbpm.3) we only find a few classes about this under jpdl/ws.. this is all about this? Ronald can you contact me in private? or we discuss this here? Just in case my mail is salaboy at gmail dot com Thanks	1	0	https://issues.jboss.org/browse/JBPM-720
14159	JBPM-718	This issue still active? Can i help you with something.. I am very interested in this.. but i do not know the state of this issue..	0	0	https://issues.jboss.org/browse/JBPM-718
14160	JBPM-713	Ryan, can you elaborate on this? You mean scheduling them and having them fired all at once? That would mean the scheduler has to be multi threaded... Maybe a good moment to try to switch to quartz for the scheduling	1	1	https://issues.jboss.org/browse/JBPM-713
14161	JBPM-708	can you expand on "Each time the server is restarted, a new version is deployed." ? it's the user's code that should call the, jbpmContext.deployProcessDefinition(). so you should look for the fix where this is called when the server is restarted. does that help you further ?	0	0	https://issues.jboss.org/browse/JBPM-708
14162	JBPM-705	Ryan, Can you comment on what functionality you expect in this area? In the webapp there is not a lot of functionality at the moment, so only duplicating that (without the visible display of the processdiagram) gives you little info. IMO we should expose a JMX interface for some things, but the webapp itself should be the only display functionality we provide. OTOH, there is something like http://www.camunda.com/toolkit_for_jbpm/toolkit_for_jbpm.html which looks nice	1	1	https://issues.jboss.org/browse/JBPM-705
14163	JBPM-705	Triage:::: Tom, can this be closed? Or should the subject change to: " expose management info via jmx"	0	0	https://issues.jboss.org/browse/JBPM-705
14164	JBPM-704	is there anything missing in these docs ? http://docs.jboss.org/jbpm/v3/userguide/deployment.html#thirdpartylibraries	1	0	https://issues.jboss.org/browse/JBPM-704
14165	JBPM-699	Prabhat, I thought I had similar issues, but atm I do not seem to have them using cvs-head. Can you point out what version of jbpm you are trying to use.	0	0	https://issues.jboss.org/browse/JBPM-699
14166	JBPM-699	jbpm 3.1 branch?	0	0	https://issues.jboss.org/browse/JBPM-699
14167	JBPM-675	In TaskInstance.java, i replaced the resume() method with: public void resume() { if(end == null) { // Only re-open the task if the task was not previously completed isOpen = true; } isSuspended = false; } The isSuspended=false; could be moved up inside the if..block, but since the suspend() method is still marking ended tasks as suspended, I figured might as well unsuspend them. Question goes back to this original bug. Do we want to error on suspending a closed taskinstance? Or just send a warning to the log and do nothing when a closed task is suspended?	0	0	https://issues.jboss.org/browse/JBPM-675
14168	JBPM-675	works on 3.2, should this still be fixed in 3.1? I assign it to 3.1.5, and see what happens	1	0	https://issues.jboss.org/browse/JBPM-675
14169	JBPM-672	What is an action controller? Did I mis something?	1	1	https://issues.jboss.org/browse/JBPM-672
14170	JBPM-672	Do I need repost? -- ---------- RODRIGO CARVALHO REZENDE ----------	1	0	https://issues.jboss.org/browse/JBPM-672
14171	JBPM-661	The solution for this issue was developed, but it was never merged into the jbpm.3 codebase due to its dependency on jdk 1.5. How to deal with that?	1	0	https://issues.jboss.org/browse/JBPM-661
14172	JBPM-653	Would this mean that if the jBPM engine is called from a servlet (either jsf or webservice) the web context classloader would be used? That would be great, then versioned classes in the process can have access to files in a war file... nice..	0	0	https://issues.jboss.org/browse/JBPM-653
14173	JBPM-633	on what is this statement based: "tokens are locked in memory; not at a database level" ? afaik, we always use (optimistic) db locking. we plan to switch to quartz in the future for execution of asynchronous stuff. but no timing has been worked out yet. also we don't plan to overcome the limitations that come with maximum 1 command-executor-thread. JMS implementations can be used in case you want to remove those limitations.	1	1	https://issues.jboss.org/browse/JBPM-633

#	Requirement	Questions	Answered	Successfully Answered	URL
14174	JBPM-633	Would it be possible to attach a process definition example and action handler java file that demonstrates this behavior? That would really complement the nice description above.	0	0	https://issues.jboss.org/browse/JBPM-633
14175	JBPM-633	Sorry I've taken a while to get back to you. The statement about tokens being locked in memory refers to the call to token.lock() within the executeAction method of org.jbpm.graph.def.GraphElement. JBPM Javadoc states that token.lock(): "locks a process instance for further execution. A locked token cannot continue execution. This is a non-persistent operation. This is used to prevent tokens being propagated during the execution of actions." However my ActionHandler's execute method starts a new thread on which to perform some long-running process without holding up the single CommandExecutorThread. This new thread also needs to propogate the token and so opens a new JbpmContext and hence a new hibernate session from which to get the token and propogate it; the token will never appear to be locked to this new session (as it is a non-persistent operation). There is however a chance that my new thread will try to do exactly what the token.lock() call is trying to prevent; i.e. the token being propogated during the execution of an action. It's a race condition; it depends on whether the execute method of the action completes before my new thread creates a new JbpmContext and propogates the token. There is also the chance that my new thread gets a copy of the token from a new session before the action's execute method has completed and saved its copy, making the token in the new thread out of date. I don't have a problem with there being a single CommandExecutorThread; what I do need to do is to be able to perform long-running actions that propogate the token without holding up the single CommandExecutorThread from executing other actions. This is achievable by starting a new thread from within the execute method of the ActionHandler and creating a new JbpmContext on the new thread and progresssing the token from within the new context. The problem is that this will sometimes lead to the optimistic locking issues referred to where one thread is left holding an out-of-date copy of the token; hence the solutions that I have suggested. Is there another way of achieving this behaviour where the CommandExecutorThread can execute long-running actions asynchronously so that it can immediately start to process the action specified in next message? I can attach a process definition and action handler that show this behaviour but the behaviour is, as you say, to be expected due to optimistic locking - what I am suggesting is a feature that allows me to wriyte asynchronous actions handlers without needing to worry about optimistic locking - I would have expected this to be a common requirement given the single CommandExecutorThread. I'm afraid that we haven't currently implemented the work-arounds that I suggested as we have leaned towards using our own bespoke command executor thread and message implementation with a view to maybe replacing these with a jBPM solution once this becomes available. [I noticed futher optimistic locking issues of the same nature between the SchedulerThread and the CommandExecutorThread and, more importantly, between the CommandExecutorThread and the client thread - I have reported these in JIRA issue JBPM-626. I think that these latter two issues can be catagorized as defects rather than feature requests.] Thanks for your help so far - I hope that this response has clarified my previous explanation. Mark Shotton	1	0	https://issues.jboss.org/browse/JBPM-633
14176	JBPM-633	I have created a process flow application which can be used by multiple users concurrently. As these users may decide to save the work in various states and it may take a long time like a week to reach the end point - I am trying to use asynchronous continuations. As there is only a single CommandExecutorThread on which all async ActionHandler execute methods are called for different processes what should we do to ensure all the threads are safe? Also, will this be an issue to have so many threads in wait state for so long? I appreciate any feedback Thanks Prasad	1	0	https://issues.jboss.org/browse/JBPM-633
14177	JBPM-617	should the processdefinition.xml by default be in the DB? and should the above config filter it out if needed? Looking at the implementation of FileArchiveParser and FileFilter, this is not implemented yet. Reopening....	1	1	https://issues.jboss.org/browse/JBPM-617
14178	JBPM-616	I don't get this issue, can anybody elaborate?	1	1	https://issues.jboss.org/browse/JBPM-616
14179	JBPM-615	What is the status for this issue? I use already my port of JBPM-libs as Maven2-driven modules. Just the problem is to synchronize it with generic JBPM-updates. I found already in the latest update (3.1.4) some POMs... ...but it is only basic build without tests, reports, e.t.c... ...The first reason to port it to maven - my server platform. I use Geronimo. Currently my "JBPM-Brach" is compatible with geronimo-1.1. Most actual Geronimo utilize fully Maven infrastructure. It will be nice to get more deep integration of JBPM on Geronimo. What are the plans to solve this issue? It is really not a big step to get "MAVEN_INSIDE" :) Current structure of projects alredy good designed. Its needs just minor "refactoring"... So, I will appreciate any Reply.	0	0	https://issues.jboss.org/browse/JBPM-615
14180	JBPM-605	Behaviour? Should selecting a task automagically assign it to 'me' or not. Does there need to be an additional 'assign to me' element in the list? If so what is the behaviour of the ui? go to act upon the task then? or refresh and see the personal tasklist where the just assigned task can be on a completely different page (in case of paging). What does the behaviour of 'cancel' mean in a task that is acted upon from the group task list? Does it go to his/her personal tasklist? or does there need to be an additional button besides save and cancel that says assign to me? and what about the save button? automagically to personal tasklist? with maybe a 'reminder' of this? or back to the group tasklist? Please comment.....	1	0	https://issues.jboss.org/browse/JBPM-605
14181	JBPM-599	only with input from the process archive? What do you want to put in there then? there are things like: - dates only in the past, in the future, more than 18 years ago, between ? - regular epressions? How far do you want to go? And if you do. why not put a variable type in there to. Would make a great enhancement in the automagically generated forms.	0	0	https://issues.jboss.org/browse/JBPM-599
14182	JBPM-599	ok, but I suspect you want to configure this in the processdefinition and in that case not each time a processvariable is used in a task. So you are probably thinking of introducing something like there was in 2.0 (or was it 1.0) to have a global definition of variables and a reference to them from the individual tasks? Or do you just want to do it in the forms and not in the PD at all? OR a kind of a roadmap to first do it in the forms and later in the pd?	1	1	https://issues.jboss.org/browse/JBPM-599
14183	JBPM-583	promoted to highest feature request priority. it will be delivered on the 3.2, but also on the 3.1 branch. the actual versions of delivery are indicative.	0	0	https://issues.jboss.org/browse/JBPM-583
14184	JBPM-582	Quote from Gavin: "So, we need to make pageflow composition work. As I understand it, you are resolving composed process definitions on the database. I have all process definitions in a Map. Can you make it possible for me to plug in a ProcessDefinitionResolver somewhere?"	1	1	https://issues.jboss.org/browse/JBPM-582

#	Requirement	Questions	Answered	Successfully Answered	URL
14185	JBPM-582	Yes, you're right. What about public interface SubProcessResolver { ProcessDefinition findSubProcess(org.dom4j.Element subProcessElement, ProcessDefinition superProcessDefinition); } That way, the plugged in implementations could also take the content of the sub-process element into acount. During implementations, mind self referencing sub processes. In case of the SEAM pageflow, the subprocesses have to be deployed before superprocesses. This implies that bidirectional references are impossible. In the case of jPDL, we plan to support this by means of offering binding capabilities in the jBPM webapp admin console. regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-582
14186	JBPM-581	Is there any way you might be able to suggest an alternative if this isn't something that can be done? I am trying to create a presentation layer for JBPM (where transitions are represented by buttons and states are represented by different screens). Obviously this is for task notes. Do you have any suggestion as to how I could record data that is meaningless to the workflow definition but meaningful to an engine presenting the workflow? Any help would be greatly appreciated. Thanks. Joe	1	0	https://issues.jboss.org/browse/JBPM-581
14187	JBPM-580	Is this implemented in the process designer? If not, when will it be?	0	0	https://issues.jboss.org/browse/JBPM-580
14188	JBPM-578	leave them in, but keep them deprecated? or 'undeprecate' them? Or remove them in 3.3 or 4.0? Still, shouldn't we remove the usage of these in jbpm itself...	1	1	https://issues.jboss.org/browse/JBPM-578
14189	JBPM-578	deprecating them means to express the intend to remove them in the not so distant future. I would therefore not 'won't fix' them, but reopen the issue and do a 'fix version of 3.3 or 4)	0	0	https://issues.jboss.org/browse/JBPM-578
14190	JBPM-569	koen, could you have a look at this ?	1	0	https://issues.jboss.org/browse/JBPM-569
14191	JBPM-569	Could this be the problem of the trailing blanks?	0	0	https://issues.jboss.org/browse/JBPM-569
14192	JBPM-541	Tom, can you go ahead and upload the jar which you wish to work with into the repository? I've made the necessary changes locally, but would like to go ahead include and your jar before into the build script before i commit the changes.	1	1	https://issues.jboss.org/browse/JBPM-541
14193	JBPM-541	Also, don't check out the entire repository. It's huge. Just check out a single folder (e.g. jbossws) which you can use as a template.	1	1	https://issues.jboss.org/browse/JBPM-541
14194	JBPM-541	alex, what do you need from the jboss jbpm integration ? afaik, the BPEL extension does not use the jbpm service archive, right ? what integration between jbpm and jboss must work in order for you to get started with the bpel-jboss integration ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-541
14195	JBPM-541	The BPEL extension does not use the jBPM service archive directly; instead, it reuses the MBean with a different service name, has different service mappings and some other libraries specific to the BPEL extension. Regarding the integration, all I need is to agree with you on where to place the libraries, dependencies and configuration files for jBPM and BPEL without creating conflicts. Before, we were planning to add two service archives to the "all" configuration of the appserver. Now we can either share a single server configuration and deal with the conflicts, or simply have two separate custom server configurations. The latter option seems easier to me. What do you guys think?	0	0	https://issues.jboss.org/browse/JBPM-541
14196	JBPM-541	Ruel, can you give us a pointer to an example of a script that builds a server configuration in the jboss test environment ? We have such a script, but don't know how this should be integrated into the jboss test stuff. Alex, i think that we should create 1 jbpm server configuration, which is based on the all configuration + jBPM jPDL + jBPM BPEL. then we should be able to run the whole jboss test suite to make sure that our jbpm deployments don't break anything. then we should start building our own test suite. regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-541
14197	JBPM-537	can you provide a test case that shows the problem ? preferrably with the process definition inside of the test case. regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-537
14198	JBPM-509	Koen, can i assign this task to you ? can you take the lead in this ? regards, tom.	1	0	https://issues.jboss.org/browse/JBPM-509
14199	JBPM-492	Oops, wrong comment. Issues related, since paging becomes more difficult if sorting other than the primary key (if it is ordered at all) comes into play. I personally have no idea how to solve this. - by querying the database and have it sort the result set - keeping the list in memory and have custom sorters while keeping the result set limited to e.g. 100 entries - what about if the user wants to sort on a different column? Re-query the db? I think so - .... If anyone has any experience with this, please let us know.	1	1	https://issues.jboss.org/browse/JBPM-492
14200	JBPM-490	The BPEL extension doesn't conform to the LGPL terms. Should I add the headers anyway?	1	1	https://issues.jboss.org/browse/JBPM-490
14201	JBPM-479	is this still an issue in 3.2?	1	1	https://issues.jboss.org/browse/JBPM-479
14202	JBPM-459	A solution for this would be to use the key <taskname:transitionname> in the formfile and use it the same as with presenting the form for the task itself. Shall I look into this?	1	1	https://issues.jboss.org/browse/JBPM-459
14203	JBPM-459	not sure if we are talking about the same thing here. i meant that after a task is completed, the process moves to the next state. the feedback i'm talking about is new assignments of tasks, new wait states and process completion. i don't see yet how a taskname:transitionname would help. could you elaborate ?	1	1	https://issues.jboss.org/browse/JBPM-459
14204	JBPM-454	Is this likely to be added as a feature in the near future? Cheers. Adrian	1	1	https://issues.jboss.org/browse/JBPM-454
14205	JBPM-454	Is there any documentation for this feature? Is it supported in the jPDL designer for Eclipse? Thanks.	1	0	https://issues.jboss.org/browse/JBPM-454
14206	JBPM-448	Hi, Just checking to see if there is anything I can do to help you certifiy your project information pages on Labs. Is there something that I can help you with or something that needs more explaining or instructions? Let me know. Cheers, Damon	1	0	https://issues.jboss.org/browse/JBPM-448
14207	JBPM-441	the namespace has been set to urn:jbpm.org:jpdl-3.1 so you can use the following ways to refer to the jpdl schema: <process-definition xmlns="urn:jbpm.org:jpdl-3.1" name='...' > in case you have you map the urn:jbpm.org:jpdl-3.1 namespace to the http://jbpm.org/jpdl-3.1.xsd URL in your local catalog or <process-definition xmlns="urn:jbpm.org:jpdl-3.1" xmlns:xsi ="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="urn:jbpm.org:jpdl-3.1 http://jbpm.org/jpdl-3.1.xsd" name='...' > in case you want to include the reference to the actual URL that matches the namespace. regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-441
14208	JBPM-436	Oops, wrong comment. Issues related, since paging becomes more difficult if sorting other than the primary key (if it is ordered at all) comes into play. I personally have no idea how to solve this. - by querying the database and have it sort the result set - keeping the list in memory and have custom sorters while keeping the result set limited to e.g. 100 entries - what about if the user wants to sort on a different column? Re-query the db? I think so - .... If anyone has any experience with this, please let us know.	1	0	https://issues.jboss.org/browse/JBPM-436
14209	JBPM-426	Would be great to have this for 3.3. Can anyone estimate the amount of work?	1	1	https://issues.jboss.org/browse/JBPM-426
14210	JBPM-423	Tiles I agree. (not completely but enough), but is this dependend on Tomahawk? Aren't those nice to have jsf components? date entry etc... Assign this one to me. I can remove it in a lost minutes.	1	1	https://issues.jboss.org/browse/JBPM-423
14211	JBPM-412	It is in the ProcessInstance class, but should this be added to JbpmContext as well?	1	0	https://issues.jboss.org/browse/JBPM-412

#	Requirement	Questions	Answered	Successfully Answered	URL
14212	JBPM-403	gavin, you mentioned that you could provide me the code for the following 3 functions: 1) determine wether an object is an ejb3 entity or not. 2) extract the id and the classname from an ejb3 entity 3) obtain an ejb3 entity from the classname and the id for this issue, i am waiting on this input. what library dependencies does the provided code have ? regards, tom.	1	0	https://issues.jboss.org/browse/JBPM-403
14213	JBPM-403	Tom, do you need any further help on this one?	0	0	https://issues.jboss.org/browse/JBPM-403
14214	JBPM-403	what are the library and JDK version dependencies ? i don't know yet what the impact will be on the current jbpm project structure (which needs to be revised, btw) i didn''t have time now. 3.1 release is really under pressure. it can be scheduled for one of the next releases. how soon it can be done depends on how easy it is to set up tests in the current jbpm project structure. if, in the mean time you want to add this to the seam code base, i can help you with customizing the configuration. regards, tom.	1	0	https://issues.jboss.org/browse/JBPM-403
14215	JBPM-399	i added the last line to org.jbpm.graph.node.ProcessState: [code] // feed the readable variableInstances if ((variableAccesses != null) && (!variableAccesses.isEmpty())) { ContextInstance superContextInstance = executionContext.getContextInstance(); ContextInstance subContextInstance = subProcessInstance.getContextInstance(); subContextInstance.setTransientVariables(superContextInstance.getTransientVariables());[/code] can you make the same update to the beta3 sources and check if it works. if you could write a simple test case that i could add to our test suite, that would be great. regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-399
14216	JBPM-297	How can I get this to work? I have a similar issue with 3.1.1. I notice that SessionFactory.openSession is called without regards to any 'current' session. Hibernate3 provides a standard method on SessionFactory, getCurrentSession(), which can work in a variety of ways: - transaction-aware with Spring (by LocalSessionFactoryBean) - open session in view filter with Spring - CurrentSessionContext (custom plug-in if you are managing thread-local session yourself) It seems like it should be pretty simple for jBPM to take advantage of this.	0	0	https://issues.jboss.org/browse/JBPM-297
14217	JBPM-275	Can't the taskcontroller be configured to accept all kinds of configuration? Including variablenames etc... The thing you have to do is implement processing of variables yourself, but that is why it is a custom taskcontroller. Ronald	1	0	https://issues.jboss.org/browse/JBPM-275
14218	JBPM-258	hmm... isn't that like reinventing the wheel? the portal has something like that. Can't we reuse that in one way or another for real crud? For a simple version use a user.xml, group.xml or whatever file to configure it.	1	1	https://issues.jboss.org/browse/JBPM-258
14219	JBPM-255	Was not assigned to the webapp, but to nothing. This is i18n, internationalization, just translating text, labels etc for webapp specific issues. The ability to define e.g. multiple labels for a variable in the processdefinition is not solved by this. That should be another issue. l10n (localization) is not taken care of, but I think we should. e.g. dates should be presented in the way they are in that specifica region/language. Who defines the priority for this? I put it on major since we should take it into account from the beginning.	0	0	https://issues.jboss.org/browse/JBPM-255
14220	JBPM-255	i'm happy to see that the current i18n is based on plain JSF without any dependencies on struts or any other technology, right ? but i would like to know the target we want to achieve with i18n. as you mention, we don't have support for dates or enumerated types translations. my concern is that making all this translatable will make the webapp over complex. And the question i have is : is it worth to introduce a bit of complexity for the plain translation as we currently have, knowing that we won't be able to support full translation of all items... i'm in doubt here. regards, tom.	1	0	https://issues.jboss.org/browse/JBPM-255
14221	JBPM-255	Why don't we create samples of internationalization, let's say adding french and some eastern language? An earlier issue tackled the handling of eastern encoding, we might combine the two issues together and get it sorted out	1	0	https://issues.jboss.org/browse/JBPM-255
14222	JBPM-228	Is this still open for discussion? Would make a nice addition.... the Java type should imo be a 'render-hint' and not a real type. The real type can be gotten from the instance of the variable.	1	1	https://issues.jboss.org/browse/JBPM-228
14223	JBPM-228	2 minor issues with the proposed proposal :) 1) it is one specific gray value on the scale between black and white. let me try to explain. there's guis that do a lot of generation of the form, based on a few input parameters. that is typically not so flexible. on the other hand, there's jsp's: a lot of information to be specified but more flexible for form layout and parameter types. the proposed solution is one specific version somewhere in the middle. 2) dependency on tomahawk. i intend to remove it (see other jira issue for reasons. search for tiles & tomahawk) let me propose a counterproposal: we could give each task a form element. the content of the form element is free text or elements (as with the any stuff). then in the runtime environment, a form renderer can be specified. a form renderer takes the task's form element and the task instance as input. then it has to render the task form. maybe the task renderer could be a servlet or something like that... your proposal could then be one implementation of such a task form renderer. what do you think. ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-228
14224	JBPM-228	lets start simple and not configure it anywhere but let it depend on the type in the DB. If someone wants a specific variable to have a certain type, set it in the process-start event? btw, how can I access this 'any' type? is it stored somewhere?	1	1	https://issues.jboss.org/browse/JBPM-228
14225	JBPM-228	Is this feature supported in 3.2.2? If yes, where could I find docs about it? Thank you.	1	0	https://issues.jboss.org/browse/JBPM-228
14226	JBPM-228	what feature? The any content? The issues is closed, so yes	0	0	https://issues.jboss.org/browse/JBPM-228
14227	JBPM-220	Do you realy want this? I do, but I can imagine that others will not be so happy since it leads to exclusion of jbpm running on a plain old servlet engine or the abilty to use it standalone. People should get a warning when a process using async is used from a system that does not support jms.	0	0	https://issues.jboss.org/browse/JBPM-220
14228	JBPM-185	Is this separate xml file a new one or can we reuse forms.xml? I think the config files should not get to fragmented	1	1	https://issues.jboss.org/browse/JBPM-185
14229	JBPM-185	can you explain how you want to implement this ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-185
14230	JBPM-183	can you update the schema ?	1	1	https://issues.jboss.org/browse/JBPM-183
14231	JBPM-165	slipping this to 3.3? Or will it realy still go into 3.2? I would let it slip...	0	0	https://issues.jboss.org/browse/JBPM-165
14232	JBPM-165	Bernd, could you commit that ? I want to have a look and see if we can base an experimental implementation on that.	1	1	https://issues.jboss.org/browse/JBPM-165
14233	JBPM-165	how do you handle the bidirectional reference between the old and the new process instance version ?	1	1	https://issues.jboss.org/browse/JBPM-165
14234	JBPM-165	Regarding the current version of ChangeProcessInstanceVersionCommand Does it make sense to use newDef.getTaskMgmtDefinition().getTask(oldTask.getName()); instead of // find new task Query q = jbpmContext.getSession().getNamedQuery("TaskMgmtSession.findTaskForNode"); q.setString("taskName", oldTask.getName()); q.setLong("taskNodeId", newNode.getId()); This will fix a problem when tasks are defined in the process level instead of a task node level. In addition, does it make sense to set the task management definition in the migrated process to the new definition? Similar to the below: pi.getTaskMgmtInstance().setTaskMgmtDefinition(newDef.getTaskMgmtDefinition());	0	0	https://issues.jboss.org/browse/JBPM-165
14235	JBPM-158	Partly solved by JBPM-816.... The top level of this issue is core, one subtask is core and one subtask is GPD... How do we resolve THIS issue?	1	1	https://issues.jboss.org/browse/JBPM-158

#	Requirement	Questions	Answered	Successfully Answered	URL
14236	JBPM-130	can you check again. or submit the body of a test case that shows the problem ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-130
14237	JBPM-125	What should be the approach for multiple tasks for different users? Should they all operate on the same variables? Should they get their own local ones? Should we detect if they post and someone else allready has? We should think about these issues a little and at least describe the behaviour.	0	0	https://issues.jboss.org/browse/JBPM-125
14238	JBPM-113	Magnolia seems to be using jsr170 to, and are going to include a workflow engine in the next release. I think it is openwfe (wrong choice ;-)) JSR-170 should (imo) be used in the CMS of the portal as well. I already made a note for that in the portal forum. Couldn't we make it a joint effort with the portal guys? Security has to be solved in an integrated way. The CMS editor of Magnolia is great btw... I've suggested it to my employer early this year as a valid replacement of something called smartsite. Unfortunately they (management) seem to be moving in the M$ direction. :-(Ronald	1	1	https://issues.jboss.org/browse/JBPM-113
14239	JBPM-108	email support replaced a generic notification framework. future versions of the identity component (merged by that time with portal's identity component?) could store notification type preferences. depending on that, we could send out notifications over IM, email, SMS, ...	0	0	https://issues.jboss.org/browse/JBPM-108
14240	JBPM-71	realy? can't we make it more explicit? use an attribute on the variable. This is old fashioned imo	1	0	https://issues.jboss.org/browse/JBPM-71
14241	JBPM-46	If the license permits it, I think we should look at Quartz again. It has clustering features. With a few classes that should be doable. How far is jbpm 3 on that part. Is the basic scheduler node there and only the backend not implemented?	1	1	https://issues.jboss.org/browse/JBPM-46
14242	JBPM-46	the fact that it supports clustering doesn't bring us new features, i think. we only use one transactional resource (jdbc connection) so that is easy clusterable. but we should make sure that every job is only executed once. i was thinking of using the jboss singleton for that. i think the main beef of quartz is the fact that you can express complicated functions of time a la cron (only time). this is something we don't need because our jobs are always related to process events rather then time. another aspect is that we must be able to control the classloader because the classes that are scheduled could be versioned. although this was one of the reasons why i thought quartz would be a problem, now i think this would be easy solvable. how much KB (MB?) does it require in required runtime jars ? but i'm always open for this discussion. we should not be doing what already has been done. why do you think we should use quartz ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-46
14243	JBPM-46	I notice this one is marked Done but there are no Subversion commits logged. Could you point me at what has been done here as I'm just about to attempt a Quartz implementation.	1	0	https://issues.jboss.org/browse/JBPM-46
14244	JBPM-46	The SchedulerServlet was available in 3.1.4 but no longer seems to be in 3.2.GA, am I missing something? The basis for my Quartz implementation will be to create an implementation of SchedulerService and SchedulerServiceFactory, can you confirm that is a sensible approach? Thanks, Matt.	1	0	https://issues.jboss.org/browse/JBPM-46
14245	JBPM-30	Did all work except for the ANT tasks.	0	0	https://issues.jboss.org/browse/JBPM-30
14246	JBPM-9	I guess this means that all workflow patterns (www.workflowpatterns.com) will be implemented? When I looked at the source I saw already some constructs (milestone, interleaveStart). Are these towards the workflowpatterns? Maybe, when all is done, a report could be created showing how each pattern is implemented in jBpm. I'm happy to assist in this :-)	0	0	https://issues.jboss.org/browse/JBPM-9
14247	JBPM-9	I am trying to find out information about workflow patterns supported by jBPM but i cant get success. Can u please give me the answers of following questions. 1. Is jBPM supports all the workflow patterns (www.workflowpatterns.com) ? 2. if no then which are patterns not supported by jBPM. -- Vijay	1	0	https://issues.jboss.org/browse/JBPM-9
14248	JBPM-2	Is this still a BLOCKING issue? If not, could it please be marked Closed? Those red issues really scary admins trying to use jBPM in production.	0	0	https://issues.jboss.org/browse/JBPM-2
14249	JBPM-2	for jBPM 3 this means that it is only possible to have an extra page of graphics inside the current console, directly based on the logs. is the current plan any different from that approach ?	0	0	https://issues.jboss.org/browse/JBPM-2
14250	JBPM-1	can you explain what you mean with adding components ? what are components and where do i find them ? regards, tom.	1	1	https://issues.jboss.org/browse/JBPM-1
14251	BPEL-313	Aleksander, the jBPM code has been migrated to Subversion, including the BPEL runtime. jBPM BPEL 1.1.1 was released from SVN. Would you rather incorporate your work into our SVN repo if you had write access to it?	1	1	https://issues.jboss.org/browse/BPEL-313
14252	BPEL-311	A proof of concept patch. This patch enables caching of VariableDefinitions. It has cut a single process execution's JVM time by 20% for us, as indicated by JProfiler. Note that I've used a ConcurrentHashMap, which requires Java 1.5. This is because I'm not certain whether findVariable can be called concurrently on the same CompositeActivity. Feel free to change it to ordinary HashMap if that won't cause problems. However, the patch needs verifying for correctness. Is it OK to cache VariableDefinitions, or can they get stale over time? What will happen on hot redeployment of BPEL process definition? Will CompositeActivity instances be dropped together with their VariableDefinition caches?	0	0	https://issues.jboss.org/browse/BPEL-311
14253	BPEL-305	Looks like Charles Charles Souillard from Bull S.A.S. has already implemented this for jBPM-BPEL 2: http://fisheye.jboss.org/browse/JBPM/lightning/bpel2/org/jbpm/bpel/xml/query/xpath/jaxen/DOMDoXslTransformFunction.java?r=1.1 Which unfortunately has never been released. Can this be easily imported to jBPM-BPEL 1 branch?	0	0	https://issues.jboss.org/browse/BPEL-305
14254	BPEL-268	Hi, wondering on that status of this. Evaluating jBoss jBPM and (ofcourse) human tasks came up in the discussion. Where can I find this example? Thanks!	1	0	https://issues.jboss.org/browse/BPEL-268
14255	BPEL-244	Has there been any progress on this during last 2.5 years?	0	0	https://issues.jboss.org/browse/BPEL-244
14256	BPEL-193	Burr Sutter wrote: "Would you mind adding an "all" task that runs all the steps necessary for Hello World to build, gen, pack, deploy, etc? It is easier to demo where I change the .bpel file and simply run "All" to go through the whole process."	0	0	https://issues.jboss.org/browse/BPEL-193
14257	BPEL-84	Ok, how can I run these tests?	1	1	https://issues.jboss.org/browse/BPEL-84
14258	BPEL-84	The procedure you describe is not relevant to this issue, it uses the axis based implementation in jboss-4.0.x What I am asking for is: [quote] Please provide initial integration tests at jboss-head/webservice/test/java/org/jboss/test/ws/integration/bpel There should be an test-bpel ant target that runs as part of the tests target. [/quote]	1	1	https://issues.jboss.org/browse/BPEL-84
14259	BPEL-59	Hi, i'd like to make some editions to this request. in order to monitor the process flow i need some how to identify entities inside BPEL xml file and that identifier might be entity's name. but inside BPEL names are not unique. each of the JBPM events come per node definition ID. Is it possible to return BPEL xml file with little addition like real system id of the entity inside JBPM. it would be very helpful, because this way i can know exactly which entities have been already executed.	1	1	https://issues.jboss.org/browse/BPEL-59
14260	GPD-395	weird, I just did clean build and then apply this patch and it works as expected. I run it on MacOSX could this be the issue?	0	0	https://issues.jboss.org/browse/GPD-395
14261	GPD-306	how are users suppose to do this now ? can that serve as a workaround ?	1	0	https://issues.jboss.org/browse/GPD-306

#	Requirement	Questions	Answered	Successfully Answered	URL
14262	GPD-299	Jiri, is there still stuff to do for this?	0	0	https://issues.jboss.org/browse/GPD-299
14263	GPD-293	indeed post ga is better. i leave this issue in 4.0.x, but i think that if you address some of these that you should create individual issues for them	0	0	https://issues.jboss.org/browse/GPD-293
14264	GPD-282	My current ideas are to have four tabs in the tabbed properties view: - General: to contain name (and later description attributes) - Details: to contain all relevant details (e.g. expression for an exclusive gateway); ideally this should be based on metadata. - Graphics: the graphical attributes if any - Advanced: the tabular properties view for all properties not supported by the above tabs Problems to solve: - How to deal with collections of config data? - How do the metadata look to compose the Details tab?	0	0	https://issues.jboss.org/browse/GPD-282
14265	GPD-239	Please tell us a little more about this release * where are the binaries? * where is the GPD site hosted? * etc...	1	1	https://issues.jboss.org/browse/GPD-239
14266	GPD-226	what exactly does this mean ? you already have a build, right ?	0	0	https://issues.jboss.org/browse/GPD-226
14267	GPD-206	Yep, showing in between « » would be great. Would asking for color coded swimlanes be asking too much? :-)	0	0	https://issues.jboss.org/browse/GPD-206
14268	GPD-203	The patch is applied on both HEAD as 3.1.x. Thanks for the contribution Bernd-Christoph. Can anyone from the ESB guys verify that it works as expected. I will attach a build of the plugin here but I'll first have a look at GPD-202 and GPD-204	0	0	https://issues.jboss.org/browse/GPD-203
14269	GPD-165	hmmm I was sure I also added a comment... here we go - old version of GPD, very old version - GPD has it's own project in jira, called GPD: http://jira.jboss.com/jira/browse/GPD - very little info - different requests in one issue Now more constructive answers 1: totally up to you. use the console, create/use ant tasks, create you own app... pick one...if you want different deployment methods between test and production, then do so.. if not, keep them the same. 2: Runtime at the 'process' level? e.g. when a certain task is encountered? then file a jira issue for the GPD. This is *not* just a documentation issue but a very complex thing to build. You can do this in unit tests very easily btw...	0	0	https://issues.jboss.org/browse/GPD-165
14270	GPD-111	Matthew, Did you sign the contributor's agreement? It would be better to do this to avoid later trouble. Also, i can leave your name as the author of the contributed classes then ;-) Cheers, Koen	1	1	https://issues.jboss.org/browse/GPD-111
14271	GPD-111	Hi Matthew, I have worked on this today and I think the feature should be working now. I took the liberty of changing your approach somewhat. - I sticked to the changes in your extension point definition - I changed the interface name to XmlElementMapper, this interface only has the accept(Node) method - The registry will register all the possible configuration elements for an xml element in a set directly sorted according to the specified priority - The xml adapter factory will iterate through the sorted set and once it finds a mapper that accepts the dom node create the adapter found in the configuration element With this approach, I was able to simplify the api (the interface has only one method), to simplify and optimize the implementation of the adapter creation (sorting does only happen once) and to get rid of the default implementation of the mapper. The only thing I do not know is if this approach works for you, so could you please test it for me? The changes are committed to HEAD Regards, Koen	1	1	https://issues.jboss.org/browse/GPD-111
14272	GPD-111	I don't understand. What are the exact issues you have? Why do you have to give different priorities to the nodes?	1	1	https://issues.jboss.org/browse/GPD-111
14273	GPD-111	I made a mistake implementing the priority comparator. I think it should work now, can you verify?	1	1	https://issues.jboss.org/browse/GPD-111
14274	GPD-111	Is it by intention, that the default priority is MAXINT, if you do not set a value for "mapperClassPriority"? Because of that, it is not possible to activate a mapping on an existing xml types, since the existing semantic element is always first in the SortedSet. So I have to set mapperClassPriority for this existing xml mapping. Or am I missing something?	1	1	https://issues.jboss.org/browse/GPD-111
14275	GPD-111	The value MAX_VALUE was originally chosen because this would be the lowest priority (huh?). The (second) mistake was that I assumed wrongly the wrong order within the sorted set. I think it would indeed be best to do as you suggest and assume MIN_VALUE for the default priority and let contributors specify higher priorities if they want their mapper to take over. If I am not mistaken, the ordering should be from high to low now with the latest commit. Can anyone verify?	1	1	https://issues.jboss.org/browse/GPD-111
14276	GPD-111	Matthew, can you have a check if this works for you and close the issue if it does?	1	1	https://issues.jboss.org/browse/GPD-111
14277	GPD-111	ok this appears to be working now - heres a patch from eclipse from the eclipse "Create Patch" - is that the best way to provide these? if not i can attach the entire file... ### Eclipse Workspace Patch 1.0 #P org.jbpm.gd.jpdl Index: src/org/jbpm/gd/common/xml/XmlAdapterFactory.java === RCS file: /cvsroot/jbpm/jbpm.3/designer/jpdl/org.jbpm.gd.jpdl/src/org/jbpm/gd/common/xml/XmlAdapterFactory.java,v retrieving revision 1.8 diff -u -r1.8 XmlAdapterFactory.java --- src/org/jbpm/gd/common/xml/XmlAdapterFactory.java 7 Aug 2007 13:02:45 -0000 1.8 +++ src/org/jbpm/gd/common/xml/XmlAdapterFactory.java 8 Aug 2007 20:16:40 -0000 @@ -99,6 +99,17 @@ Logger.logError("Neither xmlElement nor nameProvider are present on mapping configuration element for " + jpdlElement.getElementId(), e); } } + } else { + try { + XmlAdapter adapter = (XmlAdapter) configurationElement.createExecutableExtension("adapterClass"); + INodeNotifier element = (INodeNotifier)document.createElement(elementName); + element.addAdapter(adapter); + adapter.setNode((Node)element); + adapter.setFactory(this); + return adapter; + } catch (CoreException e) { + Logger.logError("Unable to create XML Adapter for " + jpdlElement.getElementId(), e); + } } return elementName == null ? null : createAdapterFromElementName(elementName); }	1	1	https://issues.jboss.org/browse/GPD-111
14278	GPD-111	Matthias, I have simply *moved* the setFactory() before adapt(). Does that work as well?	1	1	https://issues.jboss.org/browse/GPD-111
14279	GPD-77	It may work in this way, but it doesn't feel right as it blurs the lifecycle of the semantic element. Let me think about this and try to come up with a working solution. Btw. I infer from your previous comment that you guys are doing xpdl on top of jbpm? Can you elaborate on this? Are you planning to contribute something?	1	1	https://issues.jboss.org/browse/GPD-77
14280	GPD-77	I've been experimenting with (on and off) adding GD support for "xpdl", which would become a domain specific "extension" of jpdl. Because of its proprietary nature it wouldn't be very useful to the general public. I plan to keep contributing patches and post feature requests that would make it possible/easier to use GD for editing "xpdl", and this would hopfully also make it easier for other developers to add support for their own dsls. Does this sound like a good approach? Thanks, John	1	1	https://issues.jboss.org/browse/GPD-77
14281	GPD-77	xpdl is a public standard so it is definitely not proprietary. xpdl support is on the roadmap of our new pvm approach. we are collaborating with the guys from the bonita engine and with the eclipse jwt project to get this going. or is this a name clash?	1	1	https://issues.jboss.org/browse/GPD-77
14282	GPD-77	ROTFL Maybe you need to go into the 7-character acromym space to still find something useful in the workflow/BPM space ;-) As for the problem at hand. Isn't it possible to do use the XmlAdapter.initialze(SemanticElement) method to override the (default) values that were set in the SemanticElement.initialize() method by the values that are specified in the xml? This method was created for this purpose in any case.	1	1	https://issues.jboss.org/browse/GPD-77
14283	GPD-77	John, What is wrong with doing this in the constructor of the SemanticElement? Regards, Koen	1	1	https://issues.jboss.org/browse/GPD-77
14284	GPD-65	This issue has been here for almost 2 years now, is it ever going to be resolved?	1	1	https://issues.jboss.org/browse/GPD-65

#	Requirement	Questions	Answered	Successfully Answered	URL
14285	GPD-54	I am not clear about what is really needed here. Is it some kind of an annotation or text box that appears as a descriptive element on the graphical canvas?	1	1	https://issues.jboss.org/browse/GPD-54
14286	GPD-33	Koen, I tried to generate a form for a task with a few variables mapped in the task controller. In the description, you say "we currently start from the data entered in the task controller". Is that behavior available in 3.1.3, in the works, or planned for the future?	1	0	https://issues.jboss.org/browse/GPD-33
14287	GPD-33	Was there a problem with this task form generation? It should normally work fine...	0	0	https://issues.jboss.org/browse/GPD-33
14288	GPD-14	I'm looking at creating an implementation of this feature that pulls the graph structure into another package that does layouts and then generating move commands. Is that a viable approach or is there a specific set of algorithms you'd need to use? I would then simply include a button or menu item to apply the layout(s). I may have some time over the next month or so to put it together.	0	0	https://issues.jboss.org/browse/GPD-14
14289	GPD-3	The most important thing is to decide if we want to have - specific rendering per type (date, string, (longer) text, collections (dropdown, list, radio)) (for each of these there is a jsf component) - the type specifiied in the processdefinition.xml or in the gpd.xml (the processdefinition.xml has my preference since read/write/required is also there) - we want to specify other limitations (regexp on input etc...) for me, specifying this per variable in the pd in a way like xforms uses is nice. xforms has the following attributes: required This property, when set to true() or 1, signals that the attached instance data must not be blank, and will prevent submission until that condition is met. relevant This property controls whether the attached instance data is relevant or not. Non-relevant items are usually not rendered (although this can be fine-tuned with stylesheets) and even not submitted. readonly This property controls whether the attached instance data is read-only, in which case it can't be user-modified. calculate This property bears a full XPath expression, which can include mathematical operators and function calls, which is used to automatically provide a value to the attached instance data nodes. Multiple calculations can interact, and like a spreadsheet, they will recalculate in the proper order for dependencies to work out. constraint This property bears a full XPath expression which must evaluate to true() in order for the attached instance data to be considered valid. Therefore, all constraints must be met before submission can succeed. type This property associates a datatype (taken from XML Schema) with the attached instance data nodes. Datatypes can be useful in refining the view into data, for example using a calendar control to enter a date. p3ptype This property associates a datatype (taken from P3P) with the attached instance data nodes. P3P datatypes are useful for privacy monitoring, namely smart user agents that keep track of what information they give out. It can also serve as a flag for the client to pre-fill certain allowed kinds of information. Which is imo all we need. In xpath these can all take an xpath to another item (e.g. this input is required if another input has a certain value), In jBPM we could use EL for this instead of xpath since we do not have a complex document structure but an 'array' of variables. This way it is even possible to do things like 'required if user is in role' Xforms besides that has some predefined controls: input Entry of free-form value edit box, voice prompt textarea Entry of large amounts of free-form text email body, weblog entry secret Entry of sensitive information password prompt select1 Choice of one-and-only-one item from a list radio buttons, drop-list select Choice of one or more items from a list checkbox group, listbox range Selecting a value from a range slider, volume control upload Selecting a data source file picker, digital camera interface trigger Activating a defined process button, hyperlink submit Activating submission of the form submit button output Display-only of form data inline text I'm not saying we should do it identically to xforms but at least look at what they did and why (I myself would e.g. not have a string based 'read, write, required' but have separate attributes (read="true" write="false" required="${var1 >10}) e.g... would be much nicer. Building a freemarker template what gets this feeded per task and generates .xhtml files with jsf controls in it would not be to difficult for people who want to have it customized. Generating a .xhtml form runtime (jbpm supports this indirectly) based on such a template for having automagically generated forms would be possible then as well. Most work will go into the GPD for having the ui for filling all the attributes described above... Shoot, this has become such a long post that I think we should put it in a wiki page as a design document. What do you think?	1	1	https://issues.jboss.org/browse/GPD-3
14290	GPD-3	Most important imo is to still have the automagically generated pages in 3.2 with the addition of automagically correct input elements. So deciding to store the type somewhere is imo the most important thing the gpd should add. The way forms can be custom build by the user (something different than customizing generated forms) can be described in a 'how do I design custom pages'	1	1	https://issues.jboss.org/browse/GPD-3
14291	GPD-1	Translated palette entries. Not much left to finish it. Feel free to add your own localization, simply find all the files messages.properties and copy them with a new name messages_??.properties, where ?? is two letter signature of your language. All the strings values should be in UTF-8 encoding, for example russian word "???" will look like: "\u0412\u0438\u0434". If you need a utility to do such a translation tell me about it and I'll post it here.	0	0	https://issues.jboss.org/browse/GPD-1
14292	JBRULES-3714	Toshiya Kobayashi <tkobayas@redhat.com> made a comment on [bug 894222|https://bugzilla.redhat.com/show_bug.cgi?id=894222] Hi, This BZ has been approved for the next roll up patch for BRMS 5.3.1 (BZ873846). Could you cherry-pick the commit https://github.com/droolsjbpm/drools/commit/a9a93876f2ead9468fd50eba715083c9a7e8a52a to 5.3.x branch? Thanks! Toshiya	0	0	https://issues.jboss.org/browse/JBRULES-3714
14293	JBRULES-3699	Edson Tirelli <etirelli@redhat.com> made a comment on [bug 958387|https://bugzilla.redhat.com/show_bug.cgi?id=958387] Mario, can you please take a look at this one? Is this still happening in 6?	0	0	https://issues.jboss.org/browse/JBRULES-3699
14294	JBRULES-3693	Hi guys, Although I think this has been resolved, can you please verify and close the ticket if it is resolved. Thanks George.	1	0	https://issues.jboss.org/browse/JBRULES-3693
14295	JBRULES-3679	What are the ramifications on Guvnor (that's a WAR) that will need to build KProject's?	1	1	https://issues.jboss.org/browse/JBRULES-3679
14296	JBRULES-3635	This question is important for us, can be processed as quickly as possible?	0	0	https://issues.jboss.org/browse/JBRULES-3635
14297	JBRULES-3619	This can be done quite cleanly as an integration exercise via a memory file system and a custom classloader. For this reason I have closed the pull request, and have not merged it. I've pasted the comments I left in the pull request below: --- not sure I like this, it seems very kludgy. The knowledge agent is for monitoring external resources, but this is applying them. It's possible to make a MemoryFileSystem and actually use that, without changing KnowledgeBuilder at all. I recently wrote a MemoryFileSystem here: https://github.com/droolsjbpm/drools/tree/master/drools-compiler/src/test/java/org/drools/kproject/memory And here you can see the vfs in action, programmatically, to allow me to build resources in memory without touching disk. See testCompileAndCDI, where I build up the contents of the MemoryFileSystem. https://github.com/droolsjbpm/drools/blob/master/drools-compiler/src/test/java/org/drools/kproject/KProjectTest.java What makes it work is the classloader, scroll down to line 455: MemoryFileSystemClassLoader As you can see the builder factory is using just standard knowledge builder public apis, but they are actually being resolved from in memory. https://github.com/droolsjbpm/drools/blob/master/drools-compiler/src/main/java/org/drools/kproject/KBaseBuilder.java You can actually mix both in memory and disk based file systems, using the in memory to "overlay" the disk.	0	0	https://issues.jboss.org/browse/JBRULES-3619

14301	JBRULES-3470	Done, thanks for reporting. http://www.jboss.org/drools/downloads Below is the text, can you verify that the text is accurate (especially the part about JBoss Tools)? Eclipse update site Click here to go to the Drools and jBPM update site 5.4.0.Final. The Drools plugin for Eclipse is also part of JBoss Tools. Click here to go to the JBoss Tools Eclipse update site. Alternatively, you can download the Drools and jBPM tools zip, unzip it and use the directory there as a local updatesite.	1	1	https://issues.jboss.org/browse/JBRULES-3470
14302	JBRULES-3470	Drools 5 and jBPM 5 (as well as jBPM 3) are not strictly part of JBoss Tools anymore, so there's little point linking to http://www.jboss.org/tools/download.html. Once the SOA Tools ship as part of the 3.3.0.Final release, they will provide a link to themselves from within JBoss Central (that is, if you've installed JBoss Tools you'll be able to discover Drools/jBPM3/jBPM5 right in Eclipse). As to the "you can download the Drools and jBPM tools zip", it's not clear which zip you mean. Perhaps place a link in the text to the zip you mean, or reference it using the *exact same text* as in the table above?	1	1	https://issues.jboss.org/browse/JBRULES-3470
14303	JBRULES-3470	Would it be possible to symlink your content in http://download.jboss.org/drools/release/5.4.0.Final/org.drools.updatesite/ from http://download.jboss.org/jbosstools/updates/stable/indigo/soa-tooling/droolsjbpm/5.4.0.Final/ ? You can achieve this with some shell script at the end of your publishing job in Jenkins: {code} ECLIPSERELEASE=indigo PROJECTNAME=droolsjbpm SOURCESERVER=tools@filemgmt.jboss.org:/downloads_htdocs SOURCEPATH=/drools/release DESTINATION=tools@filemgmt.jboss.org:/downloads_htdocs/tools/updates/stable/${ECLIPSERELEASE}/soa-tooling PROJECTVERSION=$(echo "ls *.Final" | sftp ${SOURCESERVER}${SOURCEPATH} 2>&1 | grep "\.\+Final" | grep -v sftp | sort | tail -1); PROJECTVERSION=${PROJECTVERSION%%/*}; echo ${PROJECTVERSION} # if folder already exists, sftp will throw an error but should still be able to proceed echo "mkdir ${PROJECTNAME}" | sftp ${DESTINATION} # symlinking appears to only works with relative paths echo "ln ../../../../../..${SOURCEPATH}/${PROJECTVERSION}/org.drools.updatesite ${PROJECTVERSION}" | sftp ${DESTINATION}/${PROJECTNAME}/ echo "Click here: http://download.jboss.org/jbosstools/updates/stable/${ECLIPSERELEASE}/soa-tooling/${PROJECTNAME}/${PROJECTVERSION}" {code} Alternatively, instead of symlink, could also fetch from one site & post to the other (uses twice as much disk space, however) {code} rsync -aPz --rsh=ssh --protocol=28 ${SOURCESERVER}${SOURCEPATH}/${PROJECTVERSION}/org.drools.updatesite/* /tmp/org.drools.updatesite-${PROJECTVERSION} rsync -aPz --rsh=ssh --protocol=28 --delete /tmp/org.drools.updatesite-${PROJECTVERSION}/* ${DESTINATION}/${PROJECTNAME}/${PROJECTVERSION}/ # cleanup rm -fr /tmp/org.drools.updatesite-${PROJECTVERSION} echo "Click here: http://download.jboss.org/jbosstools/updates/stable/${ECLIPSERELEASE}/soa-tooling/${PROJECTNAME}/${PROJECTVERSION}" {code}	1	1	https://issues.jboss.org/browse/JBRULES-3470
14304	JBRULES-3470	Caching problems? Can you link to a servicedesk ticket w/ details?	1	1	https://issues.jboss.org/browse/JBRULES-3470
14305	JBRULES-3465	Hi, Can i please have an update on whether username or password is supported at all in KnowledgeAgentConfiguration? In my project it is discouraged to check-in any username or password on subversion, so we are passing it from the command line. Thing is, I am getting HTTP 401 when I move out the code to set username/password from change-set.xml onto the KnowledgeAgentConfiguration this way: KnowledgeAgentConfiguration conf = KnowledgeAgentFactory.newKnowledgeAgentConfiguration(); conf.setProperty ("enableBasicAuthentication", "true"); conf.setProperty ("username", username); conf.setProperty ("password", password); KnowledgeAgent kagent = KnowledgeAgentFactory.newKnowledgeAgent("kagent", conf); kagent.applyChangeSet(ResourceFactory.newClassPathResource("rules/change-set.xml")); StatelessKnowledgeSession ksession = kagent.newStatelessKnowledgeSession(); Please advise how I can set the username/password to connect to Guvnor programmatically. Thank you.	0	0	https://issues.jboss.org/browse/JBRULES-3465
14306	JBRULES-3402	Davide, does your fix also cover the use-case in https://issues.jboss.org/browse/GUVNOR-1980 whereby expressions can be used in CEP operators?	0	0	https://issues.jboss.org/browse/JBRULES-3402
14307	JBRULES-3389	Mark, Which kind of unit do you want ? To test OSGI bundles, we should deploy it in an OSGI runtime. Until now, to make tests like that we are using for Apache Karaf, Camel, ... projects Pax-Exam (http://team.ops4j.org/wiki/display/paxexam/Pax+Exam). What do you think ? Regards, Charles	1	0	https://issues.jboss.org/browse/JBRULES-3389
14308	JBRULES-3318	@Jim Do you mean Guvnor data or drools-persistence-jpa data? Could you give an example of such a table name, so we can verify to witch part you're talking about. Guvnor doesn't use any table names directly, because it uses JCR. If you use the default JackRabbit implementation, it writes to the file system, not a database. If you reconfigure that or use Modeshape instead of JackRabbit, you can write to a database (or even infinispan). Modeshape uses hibernate-jpa, so it might support changing the table names. If it's about drools-persistence-jpa, we have to move this to JBRULES. Since that module uses JPA, in theory you can change the table name structure by creating and editing META-INF/orm.xml in that drools-persistence-jp jar (not tested yet). If there is anything that breaks that (for example native SQL queries which aren't there as far as I know), please create an issue in JBRULES. @Rikkola probably all tables, like they can in JPA by configuring an orm.xml in it.	1	1	https://issues.jboss.org/browse/JBRULES-3318
14309	JBRULES-3318	From JBRULES-3305 it's clear that they mean drools-persistence-jpa, so I 've moved this issue to JBRULES. @Jim can you verify if the META-INF/orm.xml way is viable or not?	1	1	https://issues.jboss.org/browse/JBRULES-3318

#	Requirement	Questions	Answered	Successfully Answered	URL
14310	JBRULES-3305	Moved from Guvnor's jira: Guvnor itself doesn't have any hibernate specific annotations. It does depend on hibernate-validator (but that's unrelated to hibernate persistence and/or JPA) and even then it only uses the bean validation JSR annotations. Drools does depend on hibernate-core, annotations and entitymanager, but it doesn't use any hibernate specific annotations. JBPM does use hibernate specific annotations: {code} Targets String 'import org.hibernate' Found usages (5 usages) Production (5 usages) jbpm-bam (4 usages) org.jbpm.process.audit (4 usages) HibernateUtil.java (2 usages) (19: 1) import org.hibernate.SessionFactory; (20: 1) import org.hibernate.cfg.Configuration; ProcessInstanceDbLog.java (1 usage) (21: 1) import org.hibernate.Session; WorkingMemoryDbLogger.java (1 usage) (28: 1) import org.hibernate.Session; jbpm-persistence-jpa (1 usage) org.jbpm.persistence.processinstance (1 usage) ProcessInstanceInfo.java (1 usage) (35: 1) import org.hibernate.annotations.CollectionOfElements; {code} What does the customer want? - Is removing that one @CollectionOfElements in jBPM enough? - Or do all the org.hibernate imports in jBPM have to be removed? - Or do all the hibernate-* dependencies be set to scope runtime (which might not be feasible)?	1	1	https://issues.jboss.org/browse/JBRULES-3305
14311	JBRULES-3282	Geoffrey De Smet <gdesmet@redhat.com> made a comment on [bug 732085|https://bugzilla.redhat.com/show_bug.cgi?id=732085] Is this is a duplicate of these? https://bugzilla.redhat.com/show_bug.cgi?id=741219 https://bugzilla.redhat.com/show_bug.cgi?id=741287 https://bugzilla.redhat.com/show_bug.cgi?id=751319 https://bugzilla.redhat.com/show_bug.cgi?id=751326	0	0	https://issues.jboss.org/browse/JBRULES-3282
14312	JBRULES-3238	Oct 06 12:37:55 <mriet> ge0ffrey, which repo is droolsjbpm-introduction-docs in? Oct 06 12:38:10 <ge0ffrey> mriet: droolsjbpm-knowledge	0	0	https://issues.jboss.org/browse/JBRULES-3238
14313	JBRULES-3192	I am attempting to run Drools and Camel in Karaf (all using the Fuse X.02-20 release). There is an incompatibility from JAXB because Drools OSGi declares dependency on com.sun.tools.xjc. Is this dependency really necessary? Can it be removed? I found a comment related to it in JBRULES-2351.	0	0	https://issues.jboss.org/browse/JBRULES-3192
14314	JBRULES-3157	After some tests it seems to work well and integrated into 5.4.0.Final version. Do you want that I modify the state of this ticket? Jérémie.	1	1	https://issues.jboss.org/browse/JBRULES-3157
14315	JBRULES-3154	Comment from OP (Vincent Legendre): Should add a warning in the doc then. May be that the fix is shorter to do... The Date problem is common with XLS (POI has exactly the same problem), but there, the displayed value is not the one rendered in the DRL, which is a problem (in my opinion).	0	0	https://issues.jboss.org/browse/JBRULES-3154
14316	JBRULES-3152	How do you manage the KA lifecycle? The user is expected to control the monitoring threads: ResourceFactory.getResourceChangeNotifierService().start()/stop(); ResourceFactory.getResourceChangeScannerService().start()/stop(); and to dispose the KA when no longer needed: kAgent.dispose(); ---------- At the moment, the KA name is not unique and they are not tracked. Could you provide a few more details on your use case so I can see if it is necessary/reasonable to implement an agent registry?	1	0	https://issues.jboss.org/browse/JBRULES-3152
14317	JBRULES-3063	kylin <ksoong@redhat.com> made a comment on [bug 724753|https://bugzilla.redhat.com/show_bug.cgi?id=724753] As [1] hints the issue is fixed in drools 5.3.0.Final, but I test via BRMS 5.3.0 the issue still existed [1] https://issues.jboss.org/browse/JBRULES-3063	0	0	https://issues.jboss.org/browse/JBRULES-3063
14318	JBRULES-3063	Edson Tirelli <etirelli@redhat.com> made a comment on [bug 724753|https://bugzilla.redhat.com/show_bug.cgi?id=724753] Can you please clarify how you tested? By default, BRMS does allow rule replacement... it will only raise errors when the engine is configured to raise errors for rule duplication.	0	0	https://issues.jboss.org/browse/JBRULES-3063
14319	JBRULES-3056	Sure, attach a patch or submit a pull request and we'll add it. Can this be done without any additional dependency jars?	0	0	https://issues.jboss.org/browse/JBRULES-3056
14320	JBRULES-2884	We need more info. Is this in the build, in eclipse, in the API? Can you show some code how AS, WS and ESB do this? Note that for the build, we build and deploy the source jars (which includes javadocs) to the public jboss repository.	1	0	https://issues.jboss.org/browse/JBRULES-2884
14321	JBRULES-2833	This issue is not resolved. 1. The file pattern to include/exclude .package files is incorrect: should be "*.package" instead of {code}"***..package"{code} 2. DirectoryScanner.scan() is not called after the includes/excludes are overridden. 3. Most importantly: Overriding the includes which are already defined in the ant task seems like bad design. Seems more logical to me to add a Comparator on the file list which prioritises files with extension .package 4. unittest? ;-)	1	0	https://issues.jboss.org/browse/JBRULES-2833
14322	JBRULES-2829	Why do you call the solution a hack? the parser generated code is huge now as it includes basically the full java grammar in there + all the DRL constructions. The DFAs are pretty big as well. The only way to deal with that that I found so far is increasing the stack size...	0	0	https://issues.jboss.org/browse/JBRULES-2829
14323	JBRULES-2816	Do we want to include all optional jars? Hmm maybe not the felix stuff etc if that is optional? Do we want to mix them in the release zip with non-optional jars? Yea, doesn't matter since the module classpaths are mixed anyway so it's a mess anyway (=> it's not decent dep management) The README.txt and README_dependencies.txt file are out of date.	0	0	https://issues.jboss.org/browse/JBRULES-2816
14324	JBRULES-2792	Wolfgang, I have added some metadata accessors recently, could you please check if the current APIs are sufficient or something is still missing? Thanks	0	0	https://issues.jboss.org/browse/JBRULES-2792
14325	JBRULES-2759	Could you create a junit test for this problem?	1	0	https://issues.jboss.org/browse/JBRULES-2759
14326	JBRULES-2759	Yes, I see, that this test is ok, but if I start process from remote application on gwt-console-server, I get always -1 value in processInstanceId field of Task table. I've posted Task.patch, there isn't in latest snapshot and I think so, but my solution works fine with remote application and I've created every patches, which needed. Have you got any idea about this problem and solution?	0	0	https://issues.jboss.org/browse/JBRULES-2759
14327	JBRULES-2694	would you keep the entire SQL and plain java comparison in it? need to take a closer look... probably only for presentation... not sure it is worth maintaining the code for it ge0ffrey: I am in favor of keeping it, but not necessary for every rule	1	1	https://issues.jboss.org/browse/JBRULES-2694
14328	JBRULES-2685	Geofrey: Can you check if this perf regression has been fixed.	1	1	https://issues.jboss.org/browse/JBRULES-2685

#	Requirement	Questions	Answered	Successfully Answered	URL
14329	JBRULES-2640	Is this a {{group-by}} intended to be in conjunction with {{accumulate}} ? IFF so, normally I try to normalize it as per the below example; possibly doesn't cover all possible use-cases, but I thought maybe could be helpful in the time being. {code} declare GroupByString groupId : String groups : String[] end rule "init Metro hash of my interest" no-loop when then GroupByString grp = new GroupByString(); grp.setGroupId("metroHash"); grp.setGroups(new String[]{"#M1", "#M2"}); insert(grp); end rule "Multiple tweets about a metro line hash" no-loop when $group : GroupByString(groupId == "metroHash") $metroHash : String() from $group.groups accumulate ($tweet : Status(text contains $metroHash, inReplyToUserId == -1) over window:time(5m) ; $list : collectList($tweet), $count : count($tweet); $count >= 2) not Alert(condition == "Multiple tweets about a metro line hash "+$metroHash) over window:time(5m) then Status[] theTweets = new Status[$list.size()]; $list.toArray(theTweets); // TODO check: I've tried more concise one-liner syntax but fail KB compilation. Alert<Status[]> alert = new Alert<Status[]>(sessionCurrentTime(kcontext), "Multiple tweets about a metro line hash "+$metroHash, AlertType.INFO, theTweets); insert(alert); LOG.info("Multiple tweets for " + $metroHash + " count " + $count + " list: " + $list); end {code} taken from here https://github.com/tarilabs/reex2014-rules/blob/master/src/main/resources/tweet.drl	0	0	https://issues.jboss.org/browse/JBRULES-2640
14330	JBRULES-2604	Can you check against our most recent spring stuff, do we have something that does this for you now? If so please close this jira, or come back with additional requests against what we have now.	0	0	https://issues.jboss.org/browse/JBRULES-2604
14331	JBRULES-2471	Was this left out intentionally when first programmed and was expected to work as is or was this a bug that was found out later? Does this seem like a lot of work to persist the event listeners? Is it reasonable to expect this feature in the 5.1 release?	1	1	https://issues.jboss.org/browse/JBRULES-2471
14332	JBRULES-2459	The WS-HT spec doesn't really define reassign, so I think this also should be called delegation (just different behavior depending on the state of the task you are trying to delegate). Could you elaborate why you think delegation is not working (as there are some junit tests showing that it should be)? Could you give an example of your starting task you are trying to delegate (what state is it in, what are the potential owners or assignee etc.), how you delegate and what you would expect as the result (but apparently not getting)?	0	0	https://issues.jboss.org/browse/JBRULES-2459
14333	JBRULES-2455	Given a decision table column: VALUE1, VALUE2, VALUE3 VALUE4, VALUE5 Currently, only a token index specific tag is available, giving snippet: property == "$1" && property == "$2" && property == "$3" which results in the following post compilation DRL: property == "VALUE1" && property == "VALUE2" && property == "VALUE3" property == "VALUE4" && property == "VALUE5"&& property == "" This gives unintended results of matching an empty string and puts an upper bound on the number of tokens.	1	1	https://issues.jboss.org/browse/JBRULES-2455
14334	JBRULES-2448	The fix is an improvement, but wouldn't it be better to avoid the hibernate-specific @CollectionOfElements annotation? Also the way things are I don't think I can override the table name 'EventTypes' because it is assumed here, in this fix.	0	0	https://issues.jboss.org/browse/JBRULES-2448
14335	JBRULES-2409	I like the second idea where you expect the developer to deliberately escape the quotes in the cells. Although I think it would be more natural for a developer to write: $myObject.setField("A 12\" rule") in a cell. A business user will never write this, he will write 'A 12" rule'. Ideally, the escaping "rule" should be intelligent enough to see the cell contains actual code, so no escaping is necessary (since the cell is written and maintained by a developer). But I guess there will always be scenarios slipping through the holes of the safety net. Could we provide some kind of indication in a cell (or column) to tell Drools the cell contains actual code, so its safe to expect the developer properly escaped everything?	1	1	https://issues.jboss.org/browse/JBRULES-2409
14336	JBRULES-2409	I really like the parser to be intelligent. But I agree that it is very hard (much work) to make it work properly. Even in case of Michael's idea what should we do in the rare case a business user writes \"? He would then get " in the drl without expecting it. I know chances are small but still. As ar as I'm aware there is curently no mechanism in the decision table to add meta data to a specific cell (Or is there?). The way I see it is that in most cases you want to enable/disable quote escaping per sheet. Developers and business users typically do not edit the same rule sheet. The busines user should not be bothered with stuff that he does not understand or may not edit. Given that the sequential parameter is also a sheet based parameter, I therefor think it is best to use that mechanism. Kenneth would you be happy with a global (e.g. sheet) parameter?	1	1	https://issues.jboss.org/browse/JBRULES-2409
14337	JBRULES-2409	Here is the pull request: https://github.com/Jospfh/drools/pull/1 Do I need to do anything else?	1	1	https://issues.jboss.org/browse/JBRULES-2409
14338	JBRULES-2409	Hi Jos, thanks for the fix :) We are however having problems merging your pull request into droolsjbpm :(The pull request is not appearing in droolsjbpm. Can you please re-try making the pull request ensuring you have droolsjbpm\drools@master as the target repo?	0	0	https://issues.jboss.org/browse/JBRULES-2409
14339	JBRULES-2351	The mylin Manifest you provide has no exports, is that correct?	0	0	https://issues.jboss.org/browse/JBRULES-2351
14340	JBRULES-2342	Do we need to close this one for 5.1?	0	0	https://issues.jboss.org/browse/JBRULES-2342
14341	JBRULES-2301	Any news on this? Should the sysouts be removed alltogether as was done for jbpm?	0	0	https://issues.jboss.org/browse/JBRULES-2301
14342	JBRULES-2300	Would it be possible to test this with the latest snapshot release? Or could you find a way to reproduce this issue somehow so we can take a look what's going on at runtime?	0	0	https://issues.jboss.org/browse/JBRULES-2300
14343	JBRULES-2264	It's confusing: what is the current official update site? I know of these ways: - 1) According to http://www.jboss.org/drools/downloads the update site is http://downloads.jboss.com/drools/updatesite3.5/ (note that none of the milestones have been uploaded there) (note that its not split up per ganymede, galileo, helios like JBoss Tools) - 2) But also on http://www.jboss.org/drools/downloads you can download the eclipse zip to have a local update site directory (which is available for the milestones too) - 3) JBoss tools includes drools, so there are a couple of update site on http://www.jboss.org/tools/download/ such as http://download.jboss.org/jbosstools/updates/stable/ganymede/ - 4) In development, to build from source, it's a matter of following https://github.com/droolsjbpm/droolsjbpm-tools/blob/master/drools-eclipse/org.drools.updatesite/pom.xml#L17 Do we want to keep and maintain 1)? If so, updating it should be part of the release checklist. If not (which I am in favor of), we just link the download page to JBoss Tools download page. Either way, we should keep 2) (but clearly explain the difference).	1	0	https://issues.jboss.org/browse/JBRULES-2264
14344	JBRULES-2264	We're no longer maintaining our own update site. You can either use - (2) to download the eclipse zip and use it as the local update site - (3) to download the latest version of the Drools plugin from the JBossTools update site I tested http://download.jboss.org/jbosstools/updates/stable/ on my Helios installation and it seems to work fine. Is it a requirement to use Ganymede (as this is already quite old)? Could you upgrade to a more recent version? I haven't tested on Ganymede.	0	0	https://issues.jboss.org/browse/JBRULES-2264
14345	JBRULES-2243	Hello, I can see this issue was moved from milestone 1 to milestone 2. Do you think you will work on it for milestone 2 ? Do you have a planned release date for milestone 2 ? Thanks Benoit	1	1	https://issues.jboss.org/browse/JBRULES-2243
14346	JBRULES-2147	Is this still bad in 5.2?	0	0	https://issues.jboss.org/browse/JBRULES-2147

#	Requirement	Questions	Answered	Successfully Answered	URL
14347	JBRULES-2124	Jurgen, this feature is available since December 6 2008, so I think it is already present in 5.0.1.FINAL. What you have to do is: kagent.applyChangeSet(ResourceFactory.newUrlResource(yourUrl);	0	0	https://issues.jboss.org/browse/JBRULES-2124
14348	JBRULES-2040	Is this still a problem in Drools 5.2, can you re-test?	0	0	https://issues.jboss.org/browse/JBRULES-2040
14349	JBRULES-2020	The screenshot looks good? What's the problem? I am working on the styles and about to release them. Either we fix it now or much later :)	0	0	https://issues.jboss.org/browse/JBRULES-2020
14350	JBRULES-1908	Hi Darrin, These changes are very welcome, but because that file has been changed 11 times since than and the Insertion content is changed on about every line: https://github.com/droolsjbpm/drools/tree/master/drools-docs/drools-expert-docs/src/main/docbook/en-US/Obsolete-Chapter-Rule_Engine/Section-The_Drools_Rule_Engine.xml So these changes are stale :(Would it be possible to create a pull request with the not-stale changes (or even apply them directly as you're the documentation lead)? Poke me if you decide the pull request way: we don't want this to go stale again.	1	1	https://issues.jboss.org/browse/JBRULES-1908
14351	JBRULES-1900	Hi Mauricio, I find what you posted really useful for what i am doing at the moment, but i am trying to get the files you uploaded and keeps saying they dont exist anymore, could you please upload them again so i can have a look at them please? Thanks Chrissie	1	1	https://issues.jboss.org/browse/JBRULES-1900
14352	JBRULES-1826	Did you tried to escape the {}? The new DSL parser is much more robust and strict. It interprets anything inside non escaped {} as a variable name. Try the following: [consequence][]log an error "{errorCode}"= String[] errorMessage = \{$name\}; errorlist.add(new UWError("{errorCode}",$driverKey, errorMessage)); []s Edson	1	1	https://issues.jboss.org/browse/JBRULES-1826
14353	JBRULES-1721	Any chance to make the latest 5.0.0.SNAPSHOT build, with the patch applied, available through the jboss snapshots maven2 repository? Should i create a new issue for this?	1	1	https://issues.jboss.org/browse/JBRULES-1721
14354	JBRULES-1701	I'm not too keen on increasing the parser/build complexity for what is sugar. eval(unique(A, B,C, D)) that seems adequatate to me instead of : unique(A, B,C, D) Which we would expand to: eval(unique(A, B,C, D)) Btw you know there is the remove identity equals option that will disallow any match where a fact is matched more than once? See RuleBaseConfiguration Mark	1	0	https://issues.jboss.org/browse/JBRULES-1701
14355	JBRULES-1615	I see in the documentation for 5.1 the expander keyword is still being used. What does the expander keyword deprecation mean? I would also like to be able to break up my DSL into multiple files but because of this editor limitation I am unable to. I'm using version 5.0.1.FINAL.	0	0	https://issues.jboss.org/browse/JBRULES-1615
14356	JBRULES-1590	is the only difference that the first catch sets the clone object to null again? Don't think I can see any other differences?	0	0	https://issues.jboss.org/browse/JBRULES-1590
14357	JBRULES-1504	This would be a nice one to do (would make support a lot easier !).	0	0	https://issues.jboss.org/browse/JBRULES-1504
14358	JBRULES-1471	Currently: - accumulate - getResults - accumulate - getResults - other restrictions Mark thinks about putting the result from a from node on the agenda, instead of processing it directly. That might result in worse performance, for those that use an accumulate as an early restriction of which the other restrictions are expensive to evaluate: - accumulate -> schedule getResults - accumulate -> schedule getResults - other restrictions - getResults I've been wondering if it's possible to do a best of both worlds? Schedule it on the agenda, but before the other restrictions are evaluated: - accumulate -> schedule getResults - accumulate -> schedule getResults - getResults - other restrictions Does that look possible to implement?	0	0	https://issues.jboss.org/browse/JBRULES-1471
14359	JBRULES-1431	you can add packages and add/remove rules and packages already in Drools. What is it that we are missing?	0	0	https://issues.jboss.org/browse/JBRULES-1431
14360	JBRULES-1431	What is missing is doing it from a rule, as in a Meta rule. How can a rule add and remove rules? currently there is no key word or built in function that a meta rule could use to create rule. The best way to see how that is done is to try it in CLIPS and JESS.	1	0	https://issues.jboss.org/browse/JBRULES-1431
14361	JBRULES-1431	You can use the MVEL dialect to avoid class generation. I'm not sure what your problem is with dynamic rules. It's possible in drools to do something like this. What more do you require? function void addRule(String pkgName, String rule, RuleBase ruleBase) { PackageBuilder builder = new PackageBuilder(); builder.addPackgeFromDrl(new StringReader(rule)); ruleBase.addPackage (builder.addPackage()); } rule X when then String rule = "package org.drools.test\n global java.util.List list\n rule xxx\n when\n i:Integer()\nthen\n list.add(i);\nend"; addRule("org.domain", rule, drools.getWorkingMemory().getRuleBase()); end	1	1	https://issues.jboss.org/browse/JBRULES-1431
14362	JBRULES-1430	How would one do that from a rule, if "workingmemory" is not a reserved word in DRL language? http://downloads.jboss.com/drools/docs/4.0.4.17825.GA/html_single/index.html#d0e2641 Would it be better for the engine to automatically pass that and have it part of the Function interface, so that "workingmemory" doesn't have to be a reserved word and change the parser? It's common in machine learning applications to have a Meta rule that creates new rules. To do this in clips and JESS is trivial. I suppose one could statically pass the workingmemory object to the functions, but that feels a bit hack-ish.	1	1	https://issues.jboss.org/browse/JBRULES-1430
14363	JBRULES-1430	If you can provide a patch we'll consider it. However this requires text mangling, which is hard to do and as users can just pass the workingmemory themselves it's low on our priority. By this I mean in the consequence how do you detect a function call and how do you mangle the text to insert the workingmemory parameter at the end. This isn't something that can be done simply with some regular expression.	0	0	https://issues.jboss.org/browse/JBRULES-1430
14364	JBRULES-1307	Isaac. Could you please improve the DT documentation just a little for 4.0.x and trunk.	1	1	https://issues.jboss.org/browse/JBRULES-1307
14365	JBRULES-1273	can you attach it to our JIRA for us to look at?	1	0	https://issues.jboss.org/browse/JBRULES-1273
14366	JBRULES-1273	Rainer, Fernando has moved on from JBoss, so not sure what the status of his code review us. Will you be able to get this finished for Drools 5.0, meaning in the next 2 weeks? With unit tests and documentation?	0	0	https://issues.jboss.org/browse/JBRULES-1273

#	Requirement	Questions	Answered	Successfully Answered	URL
14367	JBRULES-1273	Hi Geoffrey, where does this requirement for incremental build support originate from? - is it a requirement for all Maven 3 plugins? or - is it a requirement for inclusion of the plugin into the Drools mainline? If it is a requirement to be accepted for mainline inclusion: does the drools compiler API support incremental compilation? Can you point me to the relevant interfaces and/or methods? As far as I know, the KnowledgeBuilder interface only has add() methods to add resources and does not support removal of packages or other artifacts from the knowledge base which originally were inserted as result of compilation of a given resource file. I'm not sure about current features of the knowledge agent, but last time I looked, the agent was also only capable of *adding* new files to a knowledge base. In case of rule refactoring (e. g. moving rule R from package A to package B, and an existing compiled knowledge base where rule R is already compiled into package A), how can the compiler act sensibly during "incremental compilation"? As we cannot tell from which file the rule R in package A originated, and there is no methot to remove this from the knowledge base either, I see no use of *adding* another rule R to package B (as the build would be totally inconsistent with what is stored in the files on disk. This is different to java compilation, where each java file is compiled into a number of classes in a reproducible manner. Given a modified java file, one can tell exactly which classes have to be overwritten. Maybe this is just my personal taste, but since incremental compilation introduces a lot of chances for inconsistencies, I'd suggest this can be postponed to a later version of a compiler plugin, in favour of bringing value to potential users earlier with a basic feature set. What do you mean by "drl compiler plugin MUST support incremental builds"?	1	0	https://issues.jboss.org/browse/JBRULES-1273
14368	JBRULES-1273	We can comprise to leave that "increment build" requirement out of the first version but with the info in the URL's it should be doable. Any non-beta version of a compiling plugin such as this one, should support - incremental builds - bulk compilation (do not compile 1 file at a time): so it can scale to 100's of DRL files (and more). Of course, both might need changes in the drools-api (haven't checked yet).	0	0	https://issues.jboss.org/browse/JBRULES-1273
14369	JBRULES-1260	Can we please re-test this again as another user has confirmed that this also happens to him.	0	0	https://issues.jboss.org/browse/JBRULES-1260
14370	JBRULES-1260	Are you using Eclipse3.2?	1	1	https://issues.jboss.org/browse/JBRULES-1260
14371	JBRULES-1260	Jesse: Would you please share your solution (if you remember).	0	0	https://issues.jboss.org/browse/JBRULES-1260
14372	JBRULES-1260	I don't think this is fixed. You still have to add that library-dependency yourself for a drools project (at least for me, fresh Eclipse 3.5 with JBoss Tools), which is a bit tricky, at least for newbies. Isn't there any easier way available?	0	0	https://issues.jboss.org/browse/JBRULES-1260
14373	JBRULES-1195	Could you attach a zip of your stuff.	1	1	https://issues.jboss.org/browse/JBRULES-1195
14374	JBRULES-1195	haven't had a chance to look into it - but will. How is this different from current DT support? Configurable CH is a good idea - although the GWT is hard coded as reflection/lazy loading is now allowed (but there is probably a way around it by loading the config on the server and squirting it to the client to cache as a map).	0	0	https://issues.jboss.org/browse/JBRULES-1195
14375	JBRULES-1185	Kris, can you please take a look and fix the Audit View for the new events?	1	1	https://issues.jboss.org/browse/JBRULES-1185
14376	JBRULES-1176	Got this idea from bug reporting: Should be able to see "my rules" - rules that you are the creator of, or perhaps recently contributed to. Also (permission willing) be able to specify other user names, and be able to do the same with them.	0	0	https://issues.jboss.org/browse/JBRULES-1176
14377	JBRULES-1155	forget decision tables for the moment and show me how this would be done in standard DRL. How can the consequence bind to some data matched on the LHS? how does it know which pattern or which field?	0	0	https://issues.jboss.org/browse/JBRULES-1155
14378	JBRULES-1155	So say you have a "variable" which is really a service, you could pass in "answerService". Then in the actions of the rules, you can do: answerService.setAnswer(true); etc... [Show »] Michael Neale [15/Sep/07 01:09 AM] If you use Variables - you can set a type and a name, and then pass this into the working memory (stateful session) - the variables is then accessible on the RHS of a rule. So say you have a "variable" which is really a service, you could pass in "answerService". Then in the actions of the rules, you can do: answerService.setAnswer(true); etc... Have you tested this? B/c this is how I got started down this road in the first place. I tried to do what you're suggesting and it didn't work unless the variable was defined on the LHS.	0	0	https://issues.jboss.org/browse/JBRULES-1155
14379	JBRULES-1119	Is the ant task for this something you have written? as the DSL file can be read in from anywhere (just not sure what can be done to do this - if you are loading rules from the API you can store things however you want). Or is this the drools-ant module?	0	0	https://issues.jboss.org/browse/JBRULES-1119
14380	JBRULES-1040	As far as I can tell, it's not working: rule "constraintsBroken" when $multipleQueensHorizontal : Long() from accumulate($q1 : Queen($id : id, $y : y); Queen(id > $id, y == $y); , count($q1)); $multipleQueensAscendingDiagonal : Long() from accumulate($q2 : Queen($id : id, $ascendingD : ascendingD); Queen(id > $id, ascendingD == $ascendingD); , count($q2)); $multipleQueensDescendingDiagonal : Long() from accumulate($q3 : Queen($id : id, $descendingD : descendingD); Queen(id > $id, descendingD == $descendingD); , count($q3)); then scoreCalculator.setScore(- $multipleQueensHorizontal - $multipleQueensAscendingDiagonal - $multipleQueensDescendingDiagonal)); end this gives problems on the ";" at each end. so I tried this: rule "constraintsBroken" when $multipleQueensHorizontal : Long() from accumulate($q1 : Queen($id : id, $y : y) Queen(id > $id, y == $y) , count($q1)); $multipleQueensAscendingDiagonal : Long() from accumulate($q2 : Queen($id : id, $ascendingD : ascendingD) Queen(id > $id, ascendingD == $ascendingD) , count($q2)); $multipleQueensDescendingDiagonal : Long() from accumulate($q3 : Queen($id : id, $descendingD : descendingD) Queen(id > $id, descendingD == $descendingD) , count($q3)); then scoreCalculator.setScore(- $multipleQueensHorizontal - $multipleQueensAscendingDiagonal - $multipleQueensDescendingDiagonal)); end which yields: aused by: org.drools.rule.InvalidRulePackage: [69,6]: unknown:69:6 mismatched token: [@178,2093:2093=',',<11>,69:6]; expecting type RIGHT_PAREN[69,14]: unknown:69:14 Unexpected token '$q1' at org.drools.rule.Package.checkValidity(Package.java:412)	1	1	https://issues.jboss.org/browse/JBRULES-1040
14381	JBRULES-1023	This is a nice to have, but for 4.2 at the earliest.	1	1	https://issues.jboss.org/browse/JBRULES-1023
14382	JBRULES-959	// Method used to generate a single random fact: private BOBOMessage getRandomMessage() { Random generator = new Random(); BOBOMessage msg = new BOBOMessage(); String randomMsg = (generator.nextBoolean()?"BOBO ":" ") + (generator.nextBoolean()?"BIBI ":" ") + (generator.nextBoolean()?"BABA ":" ") + (generator.nextBoolean()?"CACA ":" ") + (generator.nextBoolean()?"POOP ":" ") + (generator.nextBoolean()?"SUPER ":" ") + " this is some text to make the message longer, don't you like it?"; msg.setMessage(randomMsg); logger.debug("Random message generated: " + randomMsg); return msg; }	1	1	https://issues.jboss.org/browse/JBRULES-959

14384	JBRULES-894	is this finished?	0	0	https://issues.jboss.org/browse/JBRULES-894
14385	JBRULES-851	I'm sure I'm not the first to think of this, but just to throw it out there: Would it be possible to contain this functionality within an Applet, and communicate the data to/from javascript using exposed methods on the applet? I promise my suggesting use of an Applet isn't an April Fool's joke :)	1	0	https://issues.jboss.org/browse/JBRULES-851
14386	JBRULES-834	how do we specify svn ignore files?	1	1	https://issues.jboss.org/browse/JBRULES-834
14387	JBRULES-834	ok i'm adding stuff now. We tend to want .project, .setting and .classpath commited. what is local?	1	1	https://issues.jboss.org/browse/JBRULES-834
14388	JBRULES-833	hmmm, I just remembered. if the .project and .classpath files are committed, why are they in svn:ignore in drools-core? It's a trick issupose?	1	1	https://issues.jboss.org/browse/JBRULES-833
14389	JBRULES-833	Do we use maven's Tycho to build the drools eclipse plugin? If not, we probably should: http://www.sonatype.com/people/2008/11/building-eclipse-plugins-with-maven-tycho/ (there might be a more up to date page then that somewhere). from that page: "Can we build eclipse plugins with maven? yes we can!"	0	0	https://issues.jboss.org/browse/JBRULES-833
14390	JBRULES-791	Is there any update on this issue?	1	0	https://issues.jboss.org/browse/JBRULES-791
14391	JBRULES-706	Fer - how is this one going? this is pretty critical for CR release, otherwise we will really annoy people.	0	0	https://issues.jboss.org/browse/JBRULES-706
14392	JBRULES-693	when a rule is in a package, we can validate it in the repo. This can happen on save or checkin. The question - shoudl this happen on save - if so, how should the feedback of errors be provided? should it be form the rule view, or the package view, should one rule at a time be compiled - or a package as a whole?	1	1	https://issues.jboss.org/browse/JBRULES-693
14393	JBRULES-693	Michael, I'm not sure about the meaning of "saving" a rule vs "checking in" a rule, so I will give my opinion using different words... :) My understanding is that a user must be allowed to do draft versions of their rules and only when he tries to promote them is that the validation should be enforced. So, from tooling perspective, I think validation may occur automatically (like when saving a rule in eclipse) or there may be a button that triggers it (like in antlrworks), but that validation should not block any action. When the user tries to promote a rule, then the validation should be enforced and in case problems are found, the rule is not promoted. Is that in line with what you are thinking?	1	0	https://issues.jboss.org/browse/JBRULES-693
14394	JBRULES-671	(Comments from Burr Sutter, some may no longer be relevant as this was from an old mockup). 1) My Fact list could get really long therefore the drop-down list to choose a fact in the add condition pop-up dialog might be cumbersome. 2) It is not clear how I add facts to the overall system. Facts might also have security aspects as well. 3) I'm not sure if "package" makes sense to an average end-user. I would have thought the screen above was under "rules". 4) I'm not sure how to save my edits 5) It would be nice to see the generated .drl and have free-form editing. While I realize this is an end-user tool it seems to me that the person wielding this tool will still need to be very rules savvy to deal with "facts", "constraints", "condition type", "condition templates", etc. There is a lot of jargon being used here, some of which I don't know. Like what is a template condition/action? 6) In the pop-up dialogs (from the green plus sign), the close button should be more clearly labeled and the red X should be in the top right corner. I would offer the user both ways to escape the modal dialog box. 7) It is unclear to me how you pull a series of If-Then "packages" into a single .drl for deployment. 8) Will there be a screen that shows me the "version" associated with a deployed/deployable unit? 9) How do I know which version is deployed into production? 10) If you click around the menu too many times it stops working altogether (in FireFox 1.0.7 on Windows). The work around is to restart Firefox. 11) What will the security model be like? Rule reviewers, rule editors, rule packagers (the deployable unit), rule publishers (pushing the unit to production)? 12) Will we have the concept of development, qa, staging and then production to allow for testing? There really needs to be a solution to basic rule editing and running basic tests. Perhaps have some test facts loaded into the repository. 13) If testing is allowed how does someone run the automated tests?	0	0	https://issues.jboss.org/browse/JBRULES-671
14395	JBRULES-664	Has this been checked in yet? I didn't see any changes some in from SVN	0	0	https://issues.jboss.org/browse/JBRULES-664
14396	JBRULES-626	Fer - do you think you will have time for this in the next week or 2? if not, we can punt this to 4.1 to make way for more critical issues (ie we can live without it, but the tables we have are very ordinary, visually and otherwise, so we will need to revisit them).	1	1	https://issues.jboss.org/browse/JBRULES-626
14397	JBRULES-576	can we have individual pom.xml's? having some trouble applying the patch file.	0	0	https://issues.jboss.org/browse/JBRULES-576

14404	JBRULES-363	Have you made sure that the build system still works for JDK1.4 build systems? As we build the relese distribution on JDR1.4	1	1	https://issues.jboss.org/browse/JBRULES-363
14405	JBRULES-360	Is this a huge project? Does anyone else care about this? Are there any major pitfalls or concerns that would make this more difficult than it seems?	0	0	https://issues.jboss.org/browse/JBRULES-360
14406	JBRULES-296	just built the new plugin, content assist is starting to get really good. Would it be possibly to make sure only valid operators and values are suggested, for the current location? So it should only list valid variables for comparators, which includes valid types and also it must be defined before the current location.	1	1	https://issues.jboss.org/browse/JBRULES-296
14407	JBRULES-266	If assertion behaviour is WM_BEHAVIOR_EQUALS (either for normal or logically asserted facts) there are potential problems in the case that a modify of a fact happens, that makes it equal to some other fact. Do they "merge" into one fact or continue to exists equal but separate? Currently I believe they continue to exist as equals, but that yields problems, as some checks I assume can't distinguish between the two facts or they appear as one. Testcase test_ModifyToEquality.drl attached. I had to modify org.drools.Cheese to CheeseEqual and implement hashCode() and equals(). Classfile can be found at: http://jira.jboss.com/jira/browse/JBRULES-233 This is in general an interesting problem and more a matter of definition of behaviour of modify I guess. If modify is interpreted as rectract+assert then the facts should be merged. But that would yield problems as e.g. the 2 fact-handles pointing to 2 separate objects would then either point to the same or one fact-handle would become invalid. In case of merging and logically assertion: Justifications would have to be updated, for the 2 merging objects + objects logically depending on these two. JESS 7.0b7 does also have problems with that. Attached modifyToEquality.clp, yields errors for cases described.	1	1	https://issues.jboss.org/browse/JBRULES-266
14408	JBRULES-266	logical assertions are always equality based. Stated facts can now use identity and equality - using your configuration settings. I have added another configuration setting to dictate how logical over-ride works. Does it discard the original fact, or turn it into two stated fact handles.	0	0	https://issues.jboss.org/browse/JBRULES-266
14409	JBRULES-240	are there any unit tests to go with these?	1	1	https://issues.jboss.org/browse/JBRULES-240
14410	JBRULES-240	ok I've added the two classes. I've made them impl an interface and changed the method to use them. However we still really need unit tests for these. Can you clean up what you have and improve it, so its suitable?	0	0	https://issues.jboss.org/browse/JBRULES-240

#	Requirement	Questions	Answered	Successfully Answered	URL
14411	JBRULES-233	I assume a logically asserted object should also be retracted (or a justification removed), if the rule that caused the assertion is removed (so A => B means that B is not only justified by A, but by the existence of rule A => B). Logically asserted objects are not retracted if a rule is removed. There seems to be some ClassCastException in the combination of modify object + logically assertion + remove rule. Comment out the currently failing assertions in the supplied testcase: ------- // list = workingMemory.getObjects(c1.getType().getClass()); // assertEquals("remove of rule should retract objects logically asserted based on the rule", 2, list.size()); // assertTrue("remove of rule should retract objects logically asserted based on the rule", list.contains(c1.getType())); // assertTrue("remove of rule should retract objects logically asserted based on the rule", list.contains(c2.getType())); // assertFalse("remove of rule should retract objects logically asserted based on the rule", list.contains(c3.getType())); ----- This will yield for "workingMemory.modifyObject(h, c2);" in the Testcase: java.lang.NoClassDefFoundError: org/drools/test/Rule_rule1_0 at org.drools.test.Rule_rule1_0PredicateOInvoker.evaluate(Rule_rule1_0PredicateOInvoker.java:13) at org.drools.rule.PredicateConstraint.isAllowed(PredicateConstraint.java:84) at org.drools.common.BetaNodeBinder.isAllowed(BetaNodeBinder.java:57) at org.drools.reteoo.LeftInputAdapterNode.modifyObject(LeftInputAdapterNode.java:205) at org.drools.reteoo.ObjectSource.propagateModifyObject(ObjectSource.java:138) at org.drools.reteoo.ObjectTypeNode.modifyObject(ObjectTypeNode.java:162) at org.drools.reteoo.Rete.modifyObject(Rete.java:164) at org.drools.reteoo.RuleBaseImpl.modifyObject(RuleBaseImpl.java:265) at org.drools.reteoo.WorkingMemoryImpl.modifyObject(WorkingMemoryImpl.java:725) at org.drools.reteoo.WorkingMemoryImpl.modifyObject(WorkingMemoryImpl.java:685) at org.drools.integrationtests.IntegrationCases.testLogicalAssertionsDynamicRule(IntegrationCases.java:1966) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:324) at junit.framework.TestCase.runTest(TestCase.java:154) at junit.framework.TestCase.runBare(TestCase.java:127) at junit.framework.TestResult$1.protect(TestResult.java:106) at junit.framework.TestResult.runProtected(TestResult.java:124) at junit.framework.TestResult.run(TestResult.java:109) at junit.framework.TestCase.run(TestCase.java:118) at junit.framework.TestSuite.runTest(TestSuite.java:208) at junit.framework.TestSuite.run(TestSuite.java:203) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.runTests(RemoteTestRunner.java:436) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.run(RemoteTestRunner.java:311) at org.eclipse.jdt.internal.junit.runner.RemoteTestRunner.main(RemoteTestRunner.java:192)	1	1	https://issues.jboss.org/browse/JBRULES-233
14412	JBRULES-231	"not contains" was not implemented, since we have "excludes". Do you want me to add "not contains" as a synonym for "excludes"?	0	0	https://issues.jboss.org/browse/JBRULES-231
14413	JBRULES-210	Unless we create our own editor, I think we'll have to put the drl files in a directory structure that represents the drl's package. Should this be validated (error if rule file is not in correct directory)? Should check whether this has any impact on rule loading (specifying the drl should also contain the directory of course). Create Rule wizard should be altered to create folders representing package too (if necessary). Example project should be changed to that drl files are in correct package.	0	0	https://issues.jboss.org/browse/JBRULES-210
14414	JBRULES-210	ideally this should have been done before RC :(Can we do it quickly?	0	0	https://issues.jboss.org/browse/JBRULES-210
14415	JBRULES-149	another error in 2.1 its Production Memory, as its asserted did you mean it's rather than its? its Production Memory, as it's asserted	0	0	https://issues.jboss.org/browse/JBRULES-149
14416	JBRULES-144	I'm going to use concurrency classes from Dawid Kurzyniec's java 1.4 backport of Doug Lea's java.util.concurrent. http://dcl.mathcs.emory.edu/util/backport-util-concurrent/ Are there other aspects we want to make asynchronous? I'm thinking of making a ConcurrentWorkingMemory that's just a proxy for another WorkingMemory implementation. (And will itself implement WorkingMemory) To start with only the assert() methods would be made asynchronous. Everything else would be a synchronous passthrough call. Sound good?	0	0	https://issues.jboss.org/browse/JBRULES-144
14417	JBRULES-144	I've attached an example of how I think the asynch assert should be implemented. It's an asychronous wrapper of any WorkingMemory that guarantees the lifecycle methods will be executed in a seperate thread, in the order they were invoked. I used the backported concurrency classes to do this: http://dcl.mathcs.emory.edu/util/backport-util-concurrent Is this a worthy approach? Method return values and exception handling are facilitated by the Future returned by each method. If a FutureTask throws an exception while executing, it will result in an ExecutionException being thrown when you call get() to retrieve the result. Methods that normally return void now return null from get().	0	0	https://issues.jboss.org/browse/JBRULES-144
14418	JBRULES-144	I don't have a problem with "breaking" the working memory interface in the case of concurrent. but I don't want the original one to change. The working memory interface implies semantics that are synchronous. I don't think that it is a concern that you can't just "swap" out and "plug in" the async version: moving to an async model is not trivial for a user. So any interface should make it obvious how to use the concurrent features. Looks good to me though ! what sort of environments will this be used in? As on the server, we are little limited as to what we can do with threads. But JMS is far to heavy to be useful for queuing asserts.	0	0	https://issues.jboss.org/browse/JBRULES-144
14419	JBRULES-144	Some general thoughts on this. From past experience with running rule engines in reactive mode for real-time OMS. It isn't necessary to return null in fireAllRules. Take for example JESS, fire() in JESS just returns an int count of the rules fired. When JESS runs in reactive mode, there's no gaurantee an assert will result in rule activation. Therefore running in async mode, the rule engine should provide a way to return results. In my slot-based rule engine, I was considering 3 potential techniques. 1. use listeners to pass rule fire events. the specific technique I was thinking of is to use the asserted object as the source for the event. Each thread using the shared engine then filters the events to see which ones were caused by facts they asserted. 2. provide a generic getRulesFired() method that returns a List. this approach is very simple, but not pratical for a couple of reasons. I. with many threads it quickly blows chunks because each threads has to keep inspecting the list II. how does an application know when to look for results? III. the list could get huge very quickly. especially for pre-trade compliance 3. use a messaging system like JMS to handle inbound objects In a typical event driven system, the data is sent using JMS and the response is published to all recipients. In fact I wrote a JMS client for JESS to do exactly that. Back to the point I was going to make. There are several ways to get the concurrent stuff to fit within the existing WorkingMemory interface. One way to do that is to actually start an instance of the engine in a thread, then the wrapper can simply call asserts using executor. hope that provides some food for thought. peter	1	1	https://issues.jboss.org/browse/JBRULES-144
14420	JBRULES-135	Are these shoots as you wish ?	1	1	https://issues.jboss.org/browse/JBRULES-135

#	Requirement	Questions	Answered	Successfully Answered	URL
14421	JBRULES-118	Is there another way? this is really not nice. What would be nice woudl be if the parser could punt to the semantic compiler in place... just an idea.... but I guess that is against the whole AST idea.	1	1	https://issues.jboss.org/browse/JBRULES-118
14422	JBRULES-71	Is there any way to specify "not matches"? There's no (?x)-style switch you can put inside the java regex. I need something like rule when Email(from matches "me@.*", to !matches "you@.*") then doSomething(); end I can imagine some ways to do what I need with activation groups, and it's easy with an eval, but I don't see a good way to do what I have above.	1	1	https://issues.jboss.org/browse/JBRULES-71
14423	JBRULES-61	yeah the reading part is the harder (and more important) one for now. Once that is reliable, and with a solid XML schema, exporting should be quite easy. It only a rare case that people will actually export, but its a nice item to have, as it means less apparent "lock on" to the DRL (at least according to PHBs). Why are we designing for PHBs? ;)	1	1	https://issues.jboss.org/browse/JBRULES-61
14424	JBRULES-48	whats the status on this, can we close?	1	1	https://issues.jboss.org/browse/JBRULES-48
14425	JBRULES-46	Will this feature be available in 5.0? Thanks.	1	1	https://issues.jboss.org/browse/JBRULES-46
14426	JBRULES-46	Is there any update on backward chaining support in Drools?	0	0	https://issues.jboss.org/browse/JBRULES-46
14427	JBRULES-46	So, I take it these updates mean that backward chaining is being/has been developed? I would love to know more if there was some documentation somewhere. Is backward chaining semi-usable in trunk?	0	0	https://issues.jboss.org/browse/JBRULES-46
14428	JBRULES-39	Yes have something basic working with 2.x. The question is: should it generate a static main example rulebase invoker, or a TestCase? Further to this, for this to properly work, it will need to have a drools "project" concept where a new project is created with the classpath deps already setup (otherwise the example will not compile). It may also be possible to modify the projects classpath to include appropriate deps, like when you chose to create a new JUnit testcase in eclipse.	0	0	https://issues.jboss.org/browse/JBRULES-39
14429	JBRULES-11	has this been done, can we close it off?	0	0	https://issues.jboss.org/browse/JBRULES-11
14430	JBRULES-5	Do we need to set something up? Why not just use the codehaus one and point a domain there? I'm sure bob will set you up with admin priveliges etc. My reasoning for this is there are already quite a few people on irc.codehaus.org so it will make it easy for these people to "pop in" and see other channels. Or the alternative is to request bob to allow irc.codehaus.org to live at jboss, which I think he would also be happy with. Just trying to think of a way to leverage communities.	1	1	https://issues.jboss.org/browse/JBRULES-5
14431	JBRULES-5	Shall I mark this as a won't fix? Even the idea of pointing irc.jboss.org at codehaus?	1	1	https://issues.jboss.org/browse/JBRULES-5
14432	JBRULES-3	Mark, How is this going? Anything I can do to help? I'd like to get this task completely resolved and JBoss Rules turned on in Labs. Cheers, Damon	1	1	https://issues.jboss.org/browse/JBRULES-3
14433	JBRULES-2	Will we continue to use gmane as our main archive site? Or do you plan to host the gmane software internally. Also speak to Bob about mailing lists as I believe he said he has some good configurations/advice or something along those lines :)	0	0	https://issues.jboss.org/browse/JBRULES-2
14434	JBINSTALL-346	PATCH NAME: JBINSTALL-346 PRODUCT NAME: JEMS Installer VERSION: 1.2.0.GA SHORT DESCRIPTION: Fix for Automated installer, generates appropriate InstallConfigRecord.xml LONG DESCRIPTION: The problem before this fix was the InstallConfigRecord.xml generated by Installer (after user completes the GUI Installation) wasn't correct and hence Unattended mode was failing MANUAL INSTALL INSTRUCTIONS: NA COMPATIBILITY: NA DEPENDENCIES: NA SUPERSEDES: NA SUPERSEDED BY: NA CREATOR: amit bhayani DATE: 22 Aug 2007	1	1	https://issues.jboss.org/browse/JBINSTALL-346
14435	JBINSTALL-319	Below said is how I will design the Tree Application Server |_ everything that it has currently |_ jmx-core |_ docs |_ client |_ RMI |_ JCA |_ JTA |_ JMX |_ Clustering |_ minimal EJB EJB3 JMS Portal (In case of Portal profile selected) The idea is that once user selects top level node everything should work out of the box. For example in current scenario Application Server and JCA are peers but one cannot work without other being selected. Let us keep it very simple. Also I see that once I de-select top level node and select it back doesn't cause all the child nodes to be selected automatically. Isn't it suppose to behave like that? The child nodes becomes disabled and I cannot select them anymore.	1	1	https://issues.jboss.org/browse/JBINSTALL-319
14436	JBINSTALL-319	"Also I see that once I de-select top level node and select it back doesn't cause all the child nodes to be selected automatically. Isn't it suppose to behave like that? The child nodes becomes disabled and I cannot select them anymore. " Yes, it behaves like that because it uses the PacksModel behaviour (the same a in PacksPanel). But i agree that selecting a root node should select all child nodes with all their dependencies would be the best behaviour, i was already experimenting on that (there are some corner cases like excludeGroups and preselected="no" items)	0	0	https://issues.jboss.org/browse/JBINSTALL-319
14437	JBINSTALL-297	Just committed the latest http://repository.jboss.com/jems-installer-web-repository/test-7-6-2007/jems-web-installer-1.2.1.RC2.jar Is this really supposed to go in 1.2.1 GA?	0	0	https://issues.jboss.org/browse/JBINSTALL-297
14438	JBINSTALL-296	Should we give an option to user if he/she wants .zip of installed components? May be in same screen as that of User Short Cut Screen or we do it by default anyway? Giving an option will require to modify the Short Panel.	1	1	https://issues.jboss.org/browse/JBINSTALL-296
14439	JBINSTALL-212	The script should picked up the above 3 strings if the ID mapping works properly, then PO files should include such strings. Could you please kindly confirm if eng.xml got that strings within?	1	1	https://issues.jboss.org/browse/JBINSTALL-212
14440	JBINSTALL-207	great! do you always create desktop shortcuts or only when user wants to?	0	0	https://issues.jboss.org/browse/JBINSTALL-207
14441	JBINSTALL-150	Won't fix because it's it sync with the ejb3 server coming from the 4.0.5.GA build.	0	0	https://issues.jboss.org/browse/JBINSTALL-150
14442	JBINSTALL-148	Is the fix for JBAS-3839 already in JBoss_4_0_5_GA_EJBTHREE-798 branch?	1	1	https://issues.jboss.org/browse/JBINSTALL-148
14443	JBINSTALL-140	Alex, there are about 10 other languages enabled for selection in the JEMS installer and we are not planning to translate into these languages soon. Should I disable them for now? (note that the izpack team has done some translation for the basic interface in these langs, but nothing jboss-specific)	1	1	https://issues.jboss.org/browse/JBINSTALL-140
14444	JBINSTALL-134	what is the scope of this task? InstallationGroupPanel? UserInoutPanel's?	1	1	https://issues.jboss.org/browse/JBINSTALL-134
14445	JBINSTALL-133	1. In InstallGroupPanel - the column names are not localizable and are stuck in english. 2. In the same panel - the installation group names are not localizable. 3. In the packs selection panel the "Requires:" and "Excludes" words are stuck in english, but this will be fixed in the next patch of izpack.jboss. 4. There are localized strings from the original izpack translations that can't be externally modified (*but they are already translated*). Do we care about these? 5. The localized installer has different dimensions when a non-english langpack is selected (possibly to fit the new strings?) 6. the "Created with Izpack - http://www.izforge.com" string appears in the non-english version (translated in each of the languages - it's built-in, but externally modifiable). 7. Command line localization is not supported at all by izpack. Do we need it?	1	1	https://issues.jboss.org/browse/JBINSTALL-133

#	Requirement	Questions	Answered	Successfully Answered	URL
14446	JBINSTALL-133	on the first 7 issues you found: 1. InstallGroupPanel - separate issue, fix and sync up with izpack 2. Same as 1 3. Consider branching izpack and doing all I18N fixes in the branch 4. We should not need to care about this for now. I18N team will be testing these translations (provided to izpack by native speakers supposedly), and if they are not happy, we will just have to accept their translations and build a custom I18N version of the izpack. 5. Do you mean that window size is different from what's defined in install.xml? 6. How can you modify it? 7. Already commented on this - submit a feature request JIRA. EULA and Image localization: looks like this is supported by izpack. Documentation mentions that it's possible to have a separate resource for each localization suffixed with language code.	1	1	https://issues.jboss.org/browse/JBINSTALL-133
14447	JBINSTALL-131	Hello, That was a very good analysis and you have identified an issue that will happen down the track. I would like to add a couple of points with regards to RHEL5. [snip] I tried the fallback folder solution on Fedora 6 with JVM 1.5 and 1.4. In order the japanese text to render correctly the following lines have to be executed: # cd /usr/java/jre1.5/lib/fonts # mkdir fallback # cd fallback # ln -s /usr/share/fonts/japanese/TrueType/sazanami-gothic.ttf # ln -s /usr/share/fonts/japanese/TrueType/sazanami-mincho.ttf [snip] The above issue has been fixed in the fonts-japanese package with the symlink work around, not in the fallback dir though as RHEL5 dont have jre installed as default. An ideal solution should probably be something more dynamic like getting the font info using fc-match (fontconfig). Bug 217821: Cannot use japanese fonts on Java application with JRE <http://bugzilla.redhat.com/bugzilla/show_bug.cgi?id=217821> [snip] for chinese: # cd /usr/java/jre1.5/lib/fonts # mkdir fallback # cd fallback # ln -s /usr/share/fonts/japanese/TrueType/ukai.ttf # ln -s /usr/share/fonts/japanese/TrueType/uming.ttf [snip] The situation is a bit different in RHEL5 because we are using ZYSong (commercial font) since previous version of RHEL. Hence, workaround is not required as JAVA 5 still reference to RHEL4 font configuration. [snip] Each java UI component has it's own pre-defined default font - it is one of the logical fonts and which one exactly depends on the GUI manager in Java (this is why in linux you can see some of the GUI componentes rendering correctly east-asian characters and other do not). [snip] This is going to be an issue later when we extend the localisation effort to include South Asia (indic locales) as in RHEL4, there are only 5 supported indic locale. In RHEL5, there are 12 supported indic locale. We can discuss on this in detail later.	0	0	https://issues.jboss.org/browse/JBINSTALL-131
14448	JBINSTALL-114	Resolved this. Please test taking source code from trunk jems-installer If you select Standard, Security will not be implemented. Standard is equivalent to .zip distro. Is this ok or by default we want to implement security?	1	1	https://issues.jboss.org/browse/JBINSTALL-114
14449	JBINSTALL-93	Amit, I have already done it. Should I commit it to the repo to check it? (xmlresolver is not included)	1	1	https://issues.jboss.org/browse/JBINSTALL-93
14450	JBINSTALL-72	I've updated the ejb3 profile to fix a couple missing jars and verified that the seam demos (namely the booking app and the dvd store) run against it. The non-seam dvdstore also runs fine. I'm still forced to use -Djava.net.preferIPv4Stack=true to run the jboss instance, though. Would it make sense to make this a default?	1	1	https://issues.jboss.org/browse/JBINSTALL-72
14451	JBINSTALL-46	I will make the Installer to put install-config.xml in the $INSTALL_PATH folder (the destination folder where the AS is being installed). The users can be simply instructed to send this file back. Is this ok?	1	1	https://issues.jboss.org/browse/JBINSTALL-46
14452	JBINSTALL-46	we need to make sure that it's going to be easy to fully reproduce customer's install by using install-config.xml. Inlcuding pack selections and all user input. Is this going to be possible to run installer and pass a reference to install-config.xml?	1	1	https://issues.jboss.org/browse/JBINSTALL-46
14453	JBINSTALL-46	Alex, when I generate the auto script using the FinnishPanel and when I run the install with this script everything seems to work fine. Do you remember what exactly is broken? And could you clarify what you mean by "silently uses it", I am not sure I undetstand?	1	1	https://issues.jboss.org/browse/JBINSTALL-46
14454	JBINSTALL-44	Should we include all default profile packs into ejb3/ejb3-clustered profiles?	1	1	https://issues.jboss.org/browse/JBINSTALL-44
14455	JBINSTALL-39	can we implement our own version of HelloPanel (hopefully by inheriting from it) in order to avoid having to modify izpack?	1	1	https://issues.jboss.org/browse/JBINSTALL-39
14456	JBINSTALL-39	We can do it. I think its good idea to not touch izpack so that we can upgrade to latest version without many modicfications. However I see that there are already many custom changes in our local izpack-installer. For example HelloPanel and FinishPanel is already modified to make use of GridBagLayout which is not there in actuall izpack project. The concern is do we implement all the changes in our own jboss specific classes and keep it external to izpack? I really like this idea as I dont want to change the original code.	0	0	https://issues.jboss.org/browse/JBINSTALL-39
14457	JGRP-2172	[~rvansa] If you look at my previous comment, are you suggesting the behavior I described is *not* suitable? IMO it is; the causality between P1 and P2 is only given if P1 is blocking and P2 is only sent once P1 returns. In this case, we'll never deliver P2 before P1. Otherwise, there is no causality and then it doesn't matter in which order P1 and P2 are delivered. Do you have an example which shows unwanted behavior?	1	1	https://issues.jboss.org/browse/JGRP-2172
14458	JGRP-2155	Hi Yves, the JGroups JAR is 2MB in size, which isn't really big. On top of that people can remove classes they don't need from the JAR. What's the goal of stripping down the JAR file size even further? Will JGroups run faster as a result? If you've conducted any tests that show a speedup, I'm willing to take a look. Otherwise, since there's quite some work involved (not sure I like the annotations based approach), I'm not inclined to do this.	1	1	https://issues.jboss.org/browse/JGRP-2155
14459	JGRP-2155	Hi, even if it is 2.5mb, i face the problem because Android limits the APK size. Removing class if not so easy. It is a try & fail tedious process because of the two main configuration files, the class instantiation by reflexion and all the dependencies. It is not at all a performance concern as i beleave that this point is governed by the protocol exchange. Another point is related to the security: I have not look this point deep, but i realized that knowing the connect name is enought to communicate with a JGroups instance. As all protocols are present, it may be easy for anyone to send commands. So i think it is important to limits the class to the minimum needed by the project configuration. As you still widely use the Annotations i think this may be the easiest way but you can do it as you will. Anyway, i think that you should move the demo and test packages to comply with maven recommendations. While i am here, can i ask you to use the sl4j framework and leave the logging choice to the user? This will also save the logging package. Thanks a lot for your work. It saved me a lot of sweat. Yves	1	0	https://issues.jboss.org/browse/JGRP-2155
14460	JGRP-2129	What did you do to reproduce this?	1	1	https://issues.jboss.org/browse/JGRP-2129
14461	JGRP-2109	I'm not an expert on S3, although I wrote the original S3_PING (copying code from the Amazon example). I know there are other S3 discovery implementations (you listed Zalando's impl). Have you asked them if they were planning on adding support for this?	1	1	https://issues.jboss.org/browse/JGRP-2109
14462	JGRP-2109	I recently rewrote nativ-s3-ping [1], can you take a look? I'd like to deprecate S3_PING as it started as a copy of AWS sample code, and doesn't use the official SDK. I suggest use AWS_PING or NATVE_S3_PING as replacement. [1] https://github.com/jgroups-extras/native-s3-ping	1	1	https://issues.jboss.org/browse/JGRP-2109
14463	JGRP-2109	Yes: https://issues.jboss.org/browse/JGRP-2170. Are you interested? :-)	0	0	https://issues.jboss.org/browse/JGRP-2109

#	Requirement	Questions	Answered	Successfully Answered	URL
14464	JGRP-2099	If you want to use a single thread pool, I recommend looking into {{ForkJoinPool}} - that's the one I'm thinking of switching Infinispan to. One of the things I like about FJP is that when you have to block, you can use {{ManagedBlocker}} to tell the pool it should allocate a new thread. FJP is also much better than using a classical {{ThreadPoolExecutor}} with a {{SynchronousQueue}} when it comes to context switches: {{SQ.add()}} has to block until a worker thread is free, so for each task either the submitter wakes up a worker, or the submitter parks, then a worker finishes a task and wakes up the submitter. When you use a FJP pool, and the submitter thread is from the same FJP, it will just add the task to its own queue, and the task may be processed without involving any other threads. I've read a long time ago about about an extreme version of this, a variation of {{WithinThreadExecutor}} that queues the task in a thread-local and always runs the tasks on the same thread. (Well, if you run on your own {{Thread}} subclass, you don't technically need a thread-local.) Sounds very interesting, but I think the FJP approach is more practical :)	1	1	https://issues.jboss.org/browse/JGRP-2099
14465	JGRP-2097	Just out of curiosity, when do you plan to remove the Channel class altogether, e.g. 4.1, 4.2, 5.0?	1	0	https://issues.jboss.org/browse/JGRP-2097
14466	JGRP-2063	[~rhusar] I want to release 3.6.10 today, is this a quick change?	1	1	https://issues.jboss.org/browse/JGRP-2063
14467	JGRP-2063	When will this get more thought? :-) I'm pushing it into 4.1, so we have more time.	0	0	https://issues.jboss.org/browse/JGRP-2063
14468	JGRP-2044	How do you see boxing/unboxing in JFR? And what was the percentage you were seeing? I've looked into this before in JGRP-1982 and decided against it. I've changed this in my private branch to use Trove's {{TLongObjectHashMap}}, but this * introduces a dependency which I don't want and * {{TLongObjectHashMap}} is not concurrent (as {{ConcurrentHashMap}}, and therefore every access needs to be synchronized, slowing things down	0	0	https://issues.jboss.org/browse/JGRP-2044
14469	JGRP-2021	Is the fix for this going to be included in EAP 7?	1	1	https://issues.jboss.org/browse/JGRP-2021
14470	JGRP-2021	OK, I'm done with the backport to the 3.6 branch. What are the next steps? For a review of the code on 3.6, use branch [1]. The document to start with is ./doc/design/MaliciousAttacks.txt. The 2 unit tests are {{SYM_ENCRYPT_Test}} and {{ASYM_ENCRYPT_Test}}. The 2 sample configs are sym-encrypt.xml and asym-encrypt.xml (in ./conf). [1] https://github.com/infinispan/private-jgroups/tree/JGRP-2055	1	0	https://issues.jboss.org/browse/JGRP-2021
14471	JGRP-2010	When sending a message with an AnycastAddress, no copy is needed, either	0	0	https://issues.jboss.org/browse/JGRP-2010
14472	JGRP-1989	TCPConnection.send() only makes a copy if you pass a direct ByteBuffer to it, otherwise it doesn't. Are you referring to code further up the stack?	1	1	https://issues.jboss.org/browse/JGRP-1989
14473	JGRP-1989	Actually, buffer pools can be used more widely: * Sending of message batches and single messages ** Also for {{TCP_NIO2}} once JGRP-1991 is in place * Reception of message batches ** The message batches are de-serialized from the buffer, so the buffer can be reused immediately after deserialization (in {{TP.handleMessageBatch}}) * Reception of single messages ** Can we assume that - after the {{receive()}} callback returned - we can reuse the buffer? ** Asynchronous Invocation API? ** User cannot store the buffer somewhere, but needs to copy if it wants to hang on to the buffer ** Possibly make this configurable	1	1	https://issues.jboss.org/browse/JGRP-1989
14474	JGRP-1985	Hmm, by default we have the following headers * Transport: {{UDP}}, {{TCP}} or {{TCP_NIO2}} * Reliable retransmission and ordering protocol: either {{NAKACK2}} or {{UNICAST3}} * RequestCorrelator for RPCs That's 3 headers most of the time. Which other headers did you see? {{FRAG2}}, {{FORK}}? Just out of curiosity, I'll change the default to 4 anyway.	1	1	https://issues.jboss.org/browse/JGRP-1985
14475	JGRP-1980	[~sannegrinovero] This is interesting: {{decrementIfEnoughCredits()}} is called when *sending* a message, and it is executed on a {{Credit}} object in the {{sent}} table. Method {{decrementAndGet()}} is called when a message is *received* on is executed on a {{Credit}} object in the {{received}} table, so the 2 {{Credit}} objects should be different, thus no contention! Which test did you run to come up with this? I'd like to reproduce this...	1	1	https://issues.jboss.org/browse/JGRP-1980
14476	JGRP-1976	I didn't want to make this the default because the current default tries to keep the existing coordinator, wheres the 'winning' policy just picks the first largest subview. What's wrong with setting {{GMS.membership_change_policy}} in your config ?	1	1	https://issues.jboss.org/browse/JGRP-1976
14477	JGRP-1966	Not sure I understand what the issue is. Also, I've never used either JDK logging or sl4j. Can you submit a pull request to fix what you perceive to be the issue? Meanwhile, I'm closing this one, feel free to reopen once you have a PR.	0	0	https://issues.jboss.org/browse/JGRP-1966
14478	JGRP-1962	Actually, I need this file to run my unit tests. Why can't you simply use {{-Dlog4j.configuration=/your/home/log4j2.xml}} ?	0	0	https://issues.jboss.org/browse/JGRP-1962
14479	JGRP-1945	Which version are you referring to ? JGroups switched from LGPL to ASL a few years ago...	1	1	https://issues.jboss.org/browse/JGRP-1945
14480	JGRP-1933	Can you submit a PR to fix this ? Yes, a patch is possible, too. I assume this would be a change in pom.xml ? I'm not too familiar with OSGi.	1	1	https://issues.jboss.org/browse/JGRP-1933
14481	JGRP-1933	Thank you, what's a PR? Also, yes, it is just in the pom file, i.e: {code} <plugin> <groupId>org.apache.felix</groupId> ... <configuration> <instructions> <Bundle-SymbolicName>camel-blueprint</Bundle-SymbolicName> <Import-Package>*</Import-Package> <DynamicImport-Package>*</DynamicImport-Package> </instructions> </configuration> ... </plugin> {code} Also, customer originally downloaded the jar from: http://mvnrepository.com/artifact/org.jgroups/jgroups/3.5.1.Final so it is a community version as opposed to an RH distribution	1	1	https://issues.jboss.org/browse/JGRP-1933
14482	JGRP-1927	Let's say A leaves the relay cluster first, then B tries to send a message {{m}} to the backup site, and then A leaves the local cluster. When B then becomes coordinator of the local cluster and site master, will RELAY2 on B pick up {{m}} and send it to the backup site? If B resends {{m}}, everything should be fine. But if B doesn't resend {{m}}, we'll eventually get a {{TimeoutException}} in Infinispan and we won't retry, so that wouldn't work for us.	1	1	https://issues.jboss.org/browse/JGRP-1927
14483	JGRP-1927	Do I still need to look into this, or can this issue be closed ?	1	1	https://issues.jboss.org/browse/JGRP-1927
14484	JGRP-1909	Do we have an Azure account that we can use to test a new discovery protocol ?	1	1	https://issues.jboss.org/browse/JGRP-1909
14485	JGRP-1901	Do you plan to ack the PREPARE_VIEW without leaving the old view?	1	1	https://issues.jboss.org/browse/JGRP-1901
14486	JGRP-1898	Good. Do you want me to release a version (which one, 3.4.7?), or is a tag good enough ? If you're consuming a Brew-created JAR, then a tag should do the job.	1	1	https://issues.jboss.org/browse/JGRP-1898
14487	JGRP-1898	Sorry for the incorrect backports (fixed now) ! So I'll release 3.4.7. For 3.6.1 I wanted to wait a bit... do you really need it, or is a tag good enough ?	1	1	https://issues.jboss.org/browse/JGRP-1898

#	Requirement	Questions	Answered	Successfully Answered	URL
14488	JGRP-1883	OK, now I understand. But what's the point of selling SASL for authentication and encryption while in fact the latter isn't even done via SASL mechanisms, but by ENCRYPT code facaded by the SASL protocol ? Why can't we say that SASL (the JGroups protocol) only supports authentication as SASL (the mechanism) isn't good enough to provide encryption ? I don't see anything wrong in saying "JGroups supports SASL authentication". The above sounds like a marketing rather than technical argument to me... *If* we decide to go ahead and do this, then we'd have to refactor the components that ENCRYPT is made of for them to be reused in SASL. Let's avoid copy&paste here. Tristan [~NadirX] ?	1	0	https://issues.jboss.org/browse/JGRP-1883
14489	JGRP-1883	No, don't close it yet ! I was just assessing your argument and if marketing/prod mgmt thinks that we need to support SASL all the way, then fine. Is this the case ? It's just that I wouldn't be able to do this, so if you or Tristan have time, no problem... Your argument that the SASL tools get enhanced outside of JGroups and then we benefit from that work by upgrading the SASL lib is certainly valid. I think you and Tristan need to discuss this (and perhaps Divya)...	1	0	https://issues.jboss.org/browse/JGRP-1883
14490	JGRP-1875	Hmm, there's a problem when a new connection is established: * A (conn-id=1) sends A1(first)-A10 to B * B receives A:3 first. Since this isn't tagged as {{first}}, B sends a SYNC to A * A hasn't seen that SYNC yet, so it changes its {{conn-id}} to 3 * B now receives A:1(first) and creates the connection with {{conn-id}} == 2 * B also receives the other messages and adds them to the connections recv-window * Now B receives the {{SYNC-OK}} message with {{conn-id}} == 3 ** B now removes the recv-window for A and creates a new one with {{conn-id}} == 3 This race between the first message and SYNC happens because we cannot guarantee that the first message from A is always received _first_ by B. I'm starting to dislike this whole SYNC business: we're fixing an edge case that happens 0.001% of the time, but introduce a complexity that's not warranted ! So what are the alternatives ? h5. Do nothing (status quo) / first message creates the recv-window * With {{conn-close-timeout}} set to a reasonably large value, JGRP-1873 can almost never happen * The first message creates the recv-window ** If we get some messages before the first, they're dropped on the ground, but as soon as the first message is received (or retransmitted), the recv-window is created. Not too bad, as the first message is usually a JOIN or JOIN-RSP, and only then does message traffic start h5. Use SYNC altogether (replace first message above) * This means that the first N messages would always get dropped until a SYNC and subsequent SYNC-OK have been received ** This would be completely new logic, replacing a proven algorithm h5. Provide connection establishment a la TCP (SYN / SYN-ACK - ACK) * Complex state model (including timeouts and dreaded states such as TIME-WAIT) * Redundant if run over TCP as transport * Blocking semantics: threads need to block until connection has been established	1	1	https://issues.jboss.org/browse/JGRP-1875
14491	JGRP-1875	Or should we make {{conn-id}} a long and use {{nanoTime()}} to set it ? This would guarantee that conn-ids can compare conn-ids and discard messages sent with previous conn-ids. Also, we wouldn't have to add another long, but turn the short conn-id into a long...	1	1	https://issues.jboss.org/browse/JGRP-1875
14492	JGRP-1860	I don't understand why a custom Marshaller impl for handling requests and responses wouldn't fix this. Can you elaborate ? BTW: there is no {{objectFromByteBuffer()}} method in 3.2.13, only {{objectToBuffer()}}. Are we looking at different versions (I'm looking at tag JGroups-3.2.13.Final) ?	1	1	https://issues.jboss.org/browse/JGRP-1860
14493	JGRP-1860	So you want an implementer of a custom marshaller to be able to (re)use the {{Util.objectToFromBuffer()}} methods, but still be able to pass in a class loader ? This in order to prevent having to implement something equivalent themselves ? Makes sense, can you confirm this ?	1	1	https://issues.jboss.org/browse/JGRP-1860
14494	JGRP-1860	> BTW: there is no objectFromByteBuffer() method in 3.2.13, only objectToBuffer(). Are we looking at different versions > (I'm looking at tag JGroups-3.2.13.Final) ? Sorry about that, I've been looking at it in different versions. The method was objectFromByteBuffer in earlier versions, but was renamed to objectFromBuffer. (and the same for objectTo*Buffer). > So you want an implementer of a custom marshaller to be able to (re)use the {{Util.objectToFromBuffer()}} methods, but still be > able to pass in a class loader ? This in order to prevent having to implement something equivalent themselves ? That's correct. Since the classloader is currently hard-coded, the entire marshalling code has to be reproduced in a custom marshaller. With an additional request to be able to set a ClassLoader on RpcDispatcher and have it just handle it, to also skip the step of creating a custom marshaller. (In a non-flat classloader environment, setting the classloader would be a common need for users of RpcDispatcher, so it should be as simple as possible).	1	1	https://issues.jboss.org/browse/JGRP-1860
14495	JGRP-1860	Are you sure that setting a classloader in RpcDispatcher to be used to deserialize requests is a good idea ? AFAICS, ObjectInputStream.resolveClass(), when passed in a classloader, does not attempt to walk a CL chain when a user-defined class is not found. So I'm not sure that setting a single classloader to be used for all requests in {{RpcDispatcher.handle()}} is a good idea... I think adding the classloader ar parameter to the objectFromXXX() methods is good enough. BTW: setting a classloader in RpcDispatcher would also require setting one in RequestCorrelator, too... Thoughts ?	0	0	https://issues.jboss.org/browse/JGRP-1860
14496	JGRP-1856	A,B,C,D are all added to {{suspected_mbrs}} and the coordinator will remove them regardless of their timestamps. So I'm not sure I understand what you mean. Can you decribe this in more detail ?	1	1	https://issues.jboss.org/browse/JGRP-1856
14497	JGRP-1856	For example, we have 6 members A, B, C, D, E and F. The FD_ALL is configured with interval=20 and timeout=60. A, B, C, D are dead at same time. On the FD_ALL timeout scan, the time from since last heartbeat looks like: A (61), B (59), C (56), D(45), E(12), F(15). A is timed out, we suspect it and view change. During view change, the FD_ALL initializes timeout on remaining nodes: B (0), C (0), D(0), E(0), F(0). B, C and D are live another 60 sec. Does it make sense?	1	1	https://issues.jboss.org/browse/JGRP-1856
14498	JGRP-1851	The 'block' option may need to be defined per call, so perhaps a {{NON_BLOCKING_RSVP}} flag needs to be added ? But then we may also want to define timeout, resend interval etc, which leads to a permutation of flags... Should a header be (ab)used to define 'options' to an RSVP call ? Hmm, not nice...	0	0	https://issues.jboss.org/browse/JGRP-1851
14499	JGRP-1844	Why can't you create multiple fork channels ? Each fork channel is independent from the others, while they have the same view and address. The reason for sharing the views is that I made a big mistake a couple of years ago by introducing "service views" which complicated things and were never quite correct compared to JGroups views (google for jgroups "service view"). Can you clarify your use case above with an example ? I'm pretty dead set on removing the shared transport, unless there's a convincing use case / requirement against it...	1	1	https://issues.jboss.org/browse/JGRP-1844

#	Requirement	Questions	Answered	Successfully Answered	URL
14500	JGRP-1844	The situation I am in is that two applications share some Infinispan caches, but also have some of their own independent caches. The short explanation is that I have to create three separate cache managers (one shared, one for each application), each of which requires its own JGroups channel. Infinispan assumes that every node in the view is participating in the cache manager, which isn't true for the app-specific cache managers when using a fork channel. That is arguably more of an Infinispan problem, and I'm going to file some issues in the Infinispan JIRA for those, but I don't know if or when those issues will ever be resolved. Shared transport is a useful workaround in the meantime. I also have my own fork channel that is used by only one of the two applications, and I need to be able to determine a coordinator within that subset of members. JGroups currently doesn't do anything to help with that, so instead of forking the channel that is shared by both applications, I'm forking the app-specific channel. It would be nice if JGroups did something for applications using fork channels, so the application can easily determine which cluster members are participating in the fork. Alternatively, is it possible to put the FORK protocol lower in the stack, below the GMS protocol? Then forks would have their own separate views. I haven't tried that but I doubt it would work based on what I've read.	1	1	https://issues.jboss.org/browse/JGRP-1844
14501	JGRP-1832	The current test focuses mainly on identifying mcast issues which is a great diagnostics start , and we use the largestate test to identify issues such as dropped packets etc.. But the largestate test uses a much bigger stack, is more complex to configure and run, and it uses unicast. 1) It would be great if the mcast sender had a feature , that will fire a stream of sequentially numbered datagrams(for example 1,2,3,...100) to the mcast address , and the receiver will identify and log any gaps in sequence. This will also allow us to run multiple receivers, one on each node, with one sender and complete testing of multiple nodes in one shot , rather then running the test multiple times on "node couples" 2) Can the test detect inefficient mtu fragmentation and defragmantation along a route? 3) In order to track packet loss issues , we sometimes use jgroups at debug or trace log level. But, enabling jgroups debug/trace logging in a production environment , is tricky and can slow down the server, especially if debug level is enabled on multiple servers. It would be great if we can run a receiver instance(lets call it listener) that will listen to the mcast cluster traffic and log relevant data(but obviously will not interfere) This allows us to trace mcast in a separate process or even a different machine without any impact to the prod server. The important aspect here is the ability to correlate the receiver log lines to the log lines on servers for which we did enable jgroups debug. 4) The information that the listener is recording could be further improved , and provide great help , I have quiet a few suggestions on that front but i don't want to make this comment too long one example would be that the listener log can be further precessed by an analysis tool to detect split-brain , or cluster collisions. let me know what you think? more suggestions to come ;)	1	1	https://issues.jboss.org/browse/JGRP-1832
14502	JGRP-1830	Also handle the case where a crash leads to a gap, e.g. A gets 3, B gets 4 and C gets 5, but B crashes before sending message #4. Everyone receives 3(2) -> 5(4), but 4 is missing. SOLUTION: * The coord needs to keep track of seqnos dished out to members (e.g. 4 to B) and send a message to skip the missing ones on a crash of B. * This state needs to be kept until everyone has received B#4. How do we know that? * What happens with this state when the coord itself crashes? ** The reconciliation phase described above needs to be able to reconstruct this state	0	0	https://issues.jboss.org/browse/JGRP-1830
14503	JGRP-1830	Another aspect: uniform delivery, e.g. * C sends m5 (global seqno=5) * A and B receive and deliver m5 * C crashes * D and E haven't received m5 (e.g. because the packet was dropped by the network) Is there a way to provide _uniformity_ for m5?	0	0	https://issues.jboss.org/browse/JGRP-1830
14504	JGRP-1830	What's the initial seqno to be delivered when a new member starts up? The highest seqno currently in use needs to be somehow transferred to a new member... Note that {{SEQUENCER2}} is broken exactly because of this.	0	0	https://issues.jboss.org/browse/JGRP-1830
14505	JGRP-1828	Hmm, how do we do the actual parsing ? XMLConfigurator does the parsing *for the entire XML config*, currently. We'd have to provide hooks for a protocol do do part of this parsing on its own. E.g. after all attributes of a given protocol have been parsed, we look for children nodes. If there are any, we delegate parsing of this subtree to the protocol. The FORK protocol already parses from an input stream, and we could simply add a second parse() method which accepts the DOM subtree (node). The default {{Protocol.parse(Element)}} method would be a no-op.	0	0	https://issues.jboss.org/browse/JGRP-1828
14506	JGRP-1825	What exactly do you want to achieve? Can't you implement the locking/isolation semantics with cache-local locks and using JGroups only as message transport? I'm not entirely happy with the current {{LockService}}, as it doesn't handle partitions well. The {{j.u.c.l.Lock}} interface isn't amenable to takeing locks away from members, so I'm thinking about designing a new partitionable lock service. Not at the top of my todo list though... Since I'm not happy with the current lock impl, I don't want to add something atm.	1	0	https://issues.jboss.org/browse/JGRP-1825
14507	JGRP-1825	Do you have any details on the design ? How and what for you'd use r/w locks ?	1	0	https://issues.jboss.org/browse/JGRP-1825
14508	JGRP-1790	On 02/04/2014 10:50 AM, Bela Ban wrote: > Hi Richard, > > On 04/02/14 15:23, Richard Achmatowicz wrote: >> Hi Bela >> >> I have been thinking about how we might exclude those tests which are not relevant to EAP testing from the JGroups testsuite. >> >> The testsuite has a lot of structure which is not easily customised: >> - runtest gets passed a lot of parameters which determines the suites to run and the runtime parameters to use >> - the report processing depends on runtest output being in a certain format and in certain directories >> - not easy to add in lists of new tests which should be excluded for each runtest target >> >> Because you don't want to add in EAP-related stuff into the JGroups community release, the only clean approach I can see is to do this in the Jenkins job which runs the testsuite: >> - checkout and run the entire JGroups 3.2.13 testsuite >> - after the testsuite has completed and before the reports are generated, delete all test report directories relating to non-EAP tests >> - generate the EAP-only reports and let Jenkins display them > > > An alternative (#1) could be to compile everything, but before running the individual tests (functional, udp, tcp etc), a task would remove all files matching files on the exclusion list from the ./classes directory. > > The advantage over removing xml files is that we don't need to run all of the tests. > >> The "delete non-EAP test results" step can be packaged up as an ant file which deletes the specified directories and can be used on all hosts which run the job. >> >> WDYT? Otherwise, we are going to have to customise the JGroups testsuite in some way, after the branch is checked out and before it is executed. > > > Hmm, not really nice. Also, I don't really like my alternative #1. Perhaps adding an "unsupported" element into the groups annotation attr is not so bad after all, e.g. > > @Test(groups={Global.FUNCTIONAL,Global.UNSUPPORTED}) public void testFoo() {} > > I'm thinking we could create an eap-build.xml which uses <import> to import the regular build.xml and overrides the test targets. Or perhaps this could be done inside of the existing build.xml, in a more elegant way. > > OK, while writing this email, I realized that adding an "unsupported" element to the groups tag is not so bad, so - unless you object - this is the way we're going to do this. > > Do we agree on "unsupported", or would you like it to be named differently ? >	1	1	https://issues.jboss.org/browse/JGRP-1790

#	Requirement	Questions	Answered	Successfully Answered	URL
14509	JGRP-1790	For this to work: - you'll need to add the group "unsupported" to an excludeGroups parameter on every instance of runtest (or add it in by default to the macro), so that each instance of runtest excludes tests marked as unsupported - i'll need to go in an edit every test case file to be excluded to add the "unsupported" annotation parameter. Is that the way you envison things working? It seems fine conceptually, but in practical terms, having to go in an edit a test case to exclude it seems a bit much. It would have been nicer to be able to just specify a list of test case names to be excluded using a system property, somehow ...But testNG doesn't really make life easy. If you would like to proceed that way, i'm fine with it. I'll just have to modify my test report modifying script to modify test cases instead.	1	1	https://issues.jboss.org/browse/JGRP-1790
14510	JGRP-1790	Thanks, Bela. I had written an ant task to update the test cases with the new group, but this is better! I think we also need to mark these tests as eap-excluded: /junit-functional/org/jgroups/tests/FCTest /junit/org/jgroups/tests/LargeStateTransferTest /junit/org/jgroups/tests/StateTransferTest /junit/org/jgroups/tests/StateTransferTest2 /byteman/org/jgroups/byteman/ForwardToCoordFailoverTest Are you going to push these changes to Branch_JGroups_3_2 as well?	1	1	https://issues.jboss.org/browse/JGRP-1790
14511	JGRP-1781	For now, I'll write the length field even for single messages, to have the same code for parsing of single messages and message batches. With NIO.2 in 4.0, this will change anyway	0	0	https://issues.jboss.org/browse/JGRP-1781
14512	JGRP-1773	[~pruivo] was also interested in this, and asked why we can't be clever in UDP's org.jgroups.protocols.UDP.PacketReceiver.run() Wouldn't it be nice to allocate only the receive buffer size of the minimal size possible? I'd say it should not use a size larger than the IPv4/6 required size at least, but maybe we can even look into the header to understand how long the buffer for the copy needs to be?	1	1	https://issues.jboss.org/browse/JGRP-1773
14513	JGRP-1773	hmmm... I don't know why but when I saw the code last week, it looked like this array (https://github.com/belaban/JGroups/blob/master/src/org/jgroups/protocols/UDP.java#L673) was created every time you read a datagram packet. I was wrong :)	0	0	https://issues.jboss.org/browse/JGRP-1773
14514	JGRP-1765	Hi Bela, Could you apply the enhancement without deprecating and ignoring this prop ? TP.looback=false in our configuration.	1	1	https://issues.jboss.org/browse/JGRP-1765
14515	JGRP-1765	And why would that be a problem ?	1	1	https://issues.jboss.org/browse/JGRP-1765
14516	JGRP-1762	Comments: Andre Dietlisheim: {quote} From what I have in mind when packaging libraries to bundles (long time ago, sorry) 1.) will cause havoc to most classpath partitioning frameworks (osgi, jboss modules etc). The code snippet in JGRP-1762 is very likely to fail if bundled. The current thread, your util class and the class you're trying to load may reside in different modules/bundles and visibility rules apply. It is thus is very likely that current thread classloader wont be able to load your class. You should start with 2), the classloader that is accessible via the class you try to load (clazz.getClassLoader() in your snippet). There are most likely further hints that I have forgotten from those times that others here may come up. Jason Green wrote a nice blog that is describing best practices for module-aware classloading: https://community.jboss.org/wiki/ModuleCompatibleClassloadingGuide {quote} Jason Greene: {quote} What I can say is the TCCL lookups only make sense if A) you have a separate API module that discovers a pluggable implementation that the user provides and is discovered lazily during a call from the user's application (e.g. JAXP DOM and STAX) And B) You have a reliable convention that says the TCCL will point to something reliable (like a Java EE container which sets it to the deployment) {quote} James Livingston: {quote} The correct answer is usually "it depends on what is loading the class and why". Is it some shared framework code (JGroups here) which is loading an EE application class passed to it by name? Is it loading a class from a name passed over the network to deserialise an object that's about to follow? Something else? The problem with things like your Util.loadClass() is that you don't know how it's being used so anything you do will be wrong in some situations. Often the best thing to do is to have the API take the classloader to use as a parameter, and push the decision upwards to the caller who either knows the search order or can push the decision upwards to their caller. {quote}	0	0	https://issues.jboss.org/browse/JGRP-1762
14517	JGRP-1750	Would you want to set an {{AddressGenerator}} both for (1) nodes in the local cluster and the bridge cluster, or (2) only for nodes of the bridge cluster ? The latter case is simple: we could allow to set an {{AddressGenerator}} in Relayer, and use it to generate an address which would then we wrapped with a SiteUUID. The former case is more generic: in essence, this would allow for multiple {{AddressGenerator}}s to build an address. So is your use case (1) or (2) ?	0	0	https://issues.jboss.org/browse/JGRP-1750
14518	JGRP-1750	[~ammous] Not sure I understand the need for an AddressGenerator to be set in a bridge. Meanwhile, I created an {{ExtendedAddress}} and {{SiteUUID}} and {{SiteMaster}} are both subclasses of it, so you can add any data to them. I modified UnicastTestRpc slightly and used a config containing RELAY2, and data added to a SiteUUID is actually seen at the receiving end in a different site. Do you have a small test case that shows your problem ? (This is on branch JGRP-1750)	0	0	https://issues.jboss.org/browse/JGRP-1750
14519	JGRP-1743	This is problematic: what is huge and when should this check be done? * Is it the number of messages in the NAKACK table ? * Is it the entire size occupied by the NAKACK table ? In the latter case, I'd have to iterate through all messages and get their length. This is already provided via {{NAKACK2.getSizeOfAllMessages()}}. * When should this be done ? Periodically ? Note that the above method is exposed as a JMX operation, so it could be queried from a script, e.g. {{probe.sh op=NAKACK2.getSizeOfAllMessages}}	1	1	https://issues.jboss.org/browse/JGRP-1743

#	Requirement	Questions	Answered	Successfully Answered	URL
14520	JGRP-1742	h5. Update h6. Serialization of state requests * State transfer requests should be handled *sequentially* at the state provider ** This ensures that a BARRIER that is closed by a new state transfer is not accidentally openend by a completed state transfer h6. State provider * Close BARRIER (see below) only for fetching of digest * When blocked, punch a whole (PUNCH_HOLE) for *unicasts from the state requester* and pass messages tagged with INTERNAL | OOB ** PUNCH_HOLE is needed e.g. for UNICAST3 ACKs or retransmissions * When digest has been fetched, open BARRIER again ** (Leave hole for state requester open, as a different state request might block BARRIER again, before state request has completed) * When state transfer to the state requester has completed, remove hole for state requester (CLOSE_HOLE) h6. State requester * Close BARRIER to set digest *and apply state* * Punch hole for *state provider* ** This is not critical as the state requester can block for some time, before becoming operational ({{JChannel.connect()}} returns) * When the state transfer has completed, remove the hole for the state provider again and open BARRIER h6. Closing of BARRIER / flushing of pending requests * CLOSE_BARRIER can return a boolean (or throw an exception?) if it wasn't able to flush all pending threads ** If false, the state transfer fails and an exception is sent to the state requester * Flushing of requests might fail: ** Requests might be executed as newly spawned threads. This means we'll return immediately, but we're not guaranteed that the state has been modified *** Possible solution: use {{Receiver.block()/unblock()}}: when a {{block()}} is received, the application has to make sure that all pending requests that modify application state have completed h6. Misc * Should we discard traffic when blocked or queue it ? ** Discarding means we'll retransmit, but we might have to kick off a stability round to handle the last-message-lost problem ** Queueing requires keeping track of how many bytes have been added to the queue and ensuring the boundedness of it. We might also overwhelm the thread pools by passing a lot of messages and message batches to them on opening BARRIER	0	0	https://issues.jboss.org/browse/JGRP-1742
14521	JGRP-1742	There are all sorts of problems when a BARRIER is closed and discards messages: * JGRP-1751: a view received during state transfer is not installed * The coordinator doesn't deliver its own view if BARRIER is closed. Only when stability kicks in, will the coord receive its view. This is bad as new views won't get created correctly * When the BARRIER is closed, flushing of pending threads might take a long time So let's think about what the purpose of BARRIER is: # Provide a digest which corresponds to messages *applied to the state* # It doesn *not* need to be active during state transfer (BARRIER can be opened after the digest has been fetched) Re 1: if a message P:25 was added to the digest, but not yet applied to the application, it should be excluded from the digest so we can retransmit it and apply it to the state later. So perhaps a better idea is to *remove BARRIER altogether* and instead use an _application digest_. This would be the digest of the highest message seqnos *applied* to the state. There would be an aditional GET_APP_DIGEST event (implemented by NAKACK and NAKACK2) which returns a digest of seqnos applied to the state. Contrary to the normal digest, this digest is updated when a message has been *delivered* to the application ({{up(Event)}} or {{up(MessageBatch)}} returned) rather than when the message is *received*. Example: * We have digest {{A:10,B:2,C:16}} * Now a message batch {{B:3-10}} is received and a single message {{C:17}} is also received * The normal digest in NAKACK(2) is now {{A:10,B:10,C:17}} * However, the delivery of the message batch hasn't completed yet. The {{up(message)}} method for {{C:17}} has completed though * The _application digest_ returned to the state requester is now {{A:10,B2,C:17}}: ** B's highest seqno is 2 because the message batch {{B:3-10}} hasn't returned yet, so we don't know which messages in it have been delivered to the application (and potentially caused state changes). ** {{C:17}} is part of the application digest as we know that it returned and therefore any potential state change was performed h5. Observations * It is not important to know whether a message really changed the state or not. However, it is important to know whether the message was delivered to the application or not. If not sure (e.g. messages {{B3-7}} of the above message batch might have gotten delivered to the application, but not messages {{B8-10}}), we return the highest seqno that we know was delivered to the application. In the above case, messages {{B:3-10}} would get retransmitted and applied to the state (even if 3-7 were already applied) * As a consequence of the above, *messages need to be idempotent*, or else the state would not be correct. In other words, the state should not be different regardless of whether messages {{B:3-7}} get delivered once or multiple times. * If the above is not possible, then {{FLUSH}} should be used to prevent any sending during a state transfer	0	0	https://issues.jboss.org/browse/JGRP-1742
14522	JGRP-1742	OK, so the following things might solve this puzzle: h5. Coordinator blocked during fetching of digest * Since BARRIER is closed during a state transfer, the coordinator will not only drop messages from other members (except from members for which holes were punched into BARRIER), but also *from itself* * Currently, the only message that causes problems when dropped is a VIEW change multicast * SOLUTION: when multicasting a view V, *have the coord install V locally before multicasting it*. When receiving V, it will get dropped as it is already installed h5. BARRIER skips threads in BLOCKED or WAITING state * Don't skip these, as a blocked thread might simply block on a lock, before changing state (e.g. Infinispan) * If message P:10 was blocked, and we skipped it when fetching the digest, we'd include P:10 in the digest, but not in the state. This would mean that the state requester will never get P:10, neither as part of the state, nor as a retransmission from P h5. Flushing of threads in BARRIER should time out * We cannot wait forever for the threads to time out * The timeout passed to {{getState(timeout)}} should be used to bound the max duration for flushing the threads. If we run into a timeout, either at the state requester or the provider, state transfer (the {{getState()}}) call will fail * A timeout of 0 means wait forever * Closing the channel should terminate the flush h5. Things not tackled * While flushing of threads might succeed in BARRIER, if the application has its own thread pool (e.g. using the _Asynchronous Invocation API_) to handle requests, then flushing will return quickly * However, this is not a guarantee that all incoming threads have completed their changes to the application state * A possible solution might be to call the {{block()}} and {{unblock()}} callbacks in the application. The former would have to wait until all current threads are done modifying the application state. The latter would be called when the digest has been fetched and the application pool can continue making modifications. ** Not very nice, but state transfer should not be used for very large states (taking a long time) anyway ** This will not be addressed by this JIRA. Perhaps it will be tackled in a later release.	0	0	https://issues.jboss.org/browse/JGRP-1742
14523	JGRP-1711	As the implementation of incoming messages delay would be more complicated, I think that implementing outcoming delay could be sufficient. Anyway, I can't distinguish where the message got delayed on network. What was the reason to provide both delays in DELAY?	1	1	https://issues.jboss.org/browse/JGRP-1711
14524	JGRP-1706	Perhaps publish to jcenter rather than nexus? http://ant.apache.org/ivy/history/trunk/resolver/bintray.html	0	0	https://issues.jboss.org/browse/JGRP-1706
14525	JGRP-1672	Hi Bela, couple of comments: 1. Very exciting that you are doing this! 2. The knowledge of 'affinity' in address will be very important to us, we consider the current ISPN 5.x KeyAffinityService API slightly delinquent in this regard (see https://issues.jboss.org/browse/ISPN-3112) 3. By using Java memory mapped files to Linux kernel /dev/shm data do you think you might be able to realize a (C++ like) "call by reference" capability from the Java view? In other words, will you be able to do this in a way that no /dev/shm data ever needs to be copied from the kernel address space into the Java VM's user address space? Thx, Ben	1	0	https://issues.jboss.org/browse/JGRP-1672

#	Requirement	Questions	Answered	Successfully Answered	URL
14526	JGRP-1669	Is it possible to make the similar fix in 2.x release (e.g. make a 2.12.3 with that fix)?	1	0	https://issues.jboss.org/browse/JGRP-1669
14527	JGRP-1669	Hi Aleksandr, sorry, but 2.12.x is not officially maintained anymore. Can't you make that change in your own private repo and build a 2.12.x release yourself ?	0	0	https://issues.jboss.org/browse/JGRP-1669
14528	JGRP-1649	Added max_site_masters (default=1). If > 1, the first N members become site masters. When routing to a remote site, a random member with rank 1..N is picked.	0	0	https://issues.jboss.org/browse/JGRP-1649
14529	JGRP-1625	Thanks for creating this test. The rational for the test is to be able to spot regressions in RPC performance between JGroups release versions. Significant changes to protocol layers can be identified by changed protocol names (MERGE -> MERGE2, for example), so in trying to isolate the effect of changes to JGroups, we can revert back to the original protocol stack layers. But not so for changes to RPC components. Given the dependence of the AS clustering code on SYNC and ASYNC RPCs, comparative tests on the RPC level will increase confidence in version changes.	0	0	https://issues.jboss.org/browse/JGRP-1625
14530	JGRP-1622	Manik mentioned there was a command line tool but it's no longer in the distro... Can it be added back?	1	1	https://issues.jboss.org/browse/JGRP-1622
14531	JGRP-1622	It already exists: Chat. Can you resolve this JIRA ?	1	0	https://issues.jboss.org/browse/JGRP-1622
14532	JGRP-1614	Which protocol ? NAKACK, NAKACK2, UNICAST, UNICAST2, UNICAST3 ? A message needs to be buffered by the sender until it has been received by the peer (unicast) or by all cluster nodes (multicast). You should discuss this on the mailing list before creating a JIRA. Also provide more information if you create a JIRA.	0	0	https://issues.jboss.org/browse/JGRP-1614
14533	JGRP-1613	OK, based on a conversation with Sanne at Red Hat Summit, we decided to narrow the scope. One of the main reasons not to implement a cactus stack like architecture like in the picture above was that - as grafts could be dynamically created (as a matter of fact, Sanne would need a graft to be created *per deployed application*) and deleted - not all nodes would have all grafts. This means that GMS would have to maintain something like the dreaded service views (google for Multiplexer service views, e.g. [1]). This means that if we have view \{A,B,C,D\}, but only nodes B and C have a certain graft created, then the *service view* for that graft would be \{B,C\}. Another reason was that a number of protocols (discovery, failure detection, merge) would have to be rewritten to become singletons. It turned out that it's unlikely this could be genericized, e.g. FD_ALL maintains mappings between logical addresses (which are per channel) and physical addresses. It is therefore tied to a channel and would have to be rewritten to only deal with physical addresses. I'll keep this task for a later day... So the new, limited, functionality should be: * FORK can only be the top protocol in a stack (or towards the top of the stack) * An app gets a call createChannel() which takes a string that has to be unique. We create a fork-channel, which is a subclass of JChannel and has a ref to the main channel * The createChannel() method initially carries a list of instantiated protocols. Later we might also accept XML snippets * The close() or disconnect() method on the fork-channel does *not* close or disconnect the main channel, only the fork-channel * In other words, a fork-channel is a very light weight channel, and we might create hundreds of them without a big penalty * That string is used to mux/demux messages to the app * A header is added to each message including that max-id so we know how to mux/demux * There is a *main channel* and the dynamically created channels refer to it, e.g. their lifetime is less than or equal to the main channel * When the main channel is closed, sending of messages on the fork-channel throws an exception * The view and address of the fork-channels is the same as that of the main channel [1] https://community.jboss.org/wiki/MigrationFromMultiplexerToSharedTransport	1	1	https://issues.jboss.org/browse/JGRP-1613
14534	JGRP-1613	Hmm... Are your components going to be created on *all* cluster nodes ? COUNTER and CENTRAL_LOCK require a coordinator to maintain cluster wide unique counters / locks. However, if we have view \{A,B,C,D\} where A's the coordinator, but the components is only created on B and D, then COUNTER / CENTRAL_LOCK won't work as they send their requests to A, which is the same as to /dev/null as the component isn't running on A...	1	1	https://issues.jboss.org/browse/JGRP-1613
14535	JGRP-1596	Can you elaborate ? The properties map contains property names and associated values ? It would be best to show an example of how such a constructor would be used.	1	1	https://issues.jboss.org/browse/JGRP-1596
14536	JGRP-1585	Hi David, here are my requirements: # Add vararg log methods to Log [1], e.g. trace(String format, Object... params); # Replace log4j, possible candidates so far: ## log4j2 ## jboss-logging # I currently support JUL and log4j as backends, and these need to be supported. If more backends can be supported, even better # Minimize the number of JARs to be used # No pre-processing phase (mvn or ant) # Ability to change the log level at runtime. This is an issue for me with log4j2, which doesn't support this anymore. It's not enough to be able to periodically reparse the config file, as I want to do this across a cluster, via probe.sh op=UDP.setLevel["trace"] ## Derived from above: extensibility. I might want to extend a logging impl to provide this feature. Or users might ant to provide their own logging frameworks. If you tell me that I need only 1 JAR (plus the backend, but that's up to the deployer), than that sounds appealing. I looked at jboss-logging on GitHub, but am unsure which project I should use there. Do you have documentation on jboss-logging ? I googled, but I think I hit old documentation... [1] https://github.com/belaban/JGroups/tree/master/src/org/jgroups/logging [2] https://github.com/jboss-logging	1	1	https://issues.jboss.org/browse/JGRP-1585
14537	JGRP-1585	jboss-logging: * meta-logging framework, does the same as what JGroups org.jgroups.logging already does * Easy to use * Provides logging adapters for JBoss, log4j, JUL and slf4j * Does *not* provide adapter for log4j2 or logback I think I'm going to go with log4j2 for now, with the following changes: * Hack support for setting the level at runtime * Use only the CORE JAR and copy the relevant part of the API JAR (creation of loggers) into JGroups's Log4j2LogImpl	0	0	https://issues.jboss.org/browse/JGRP-1585
14538	JGRP-1576	Hi Mattias. Do you perhaps have a test case that reproduces this problem?	0	0	https://issues.jboss.org/browse/JGRP-1576
14539	JGRP-1576	Any progress on this ? I could simply do what I did in master, namely remove all ThreadGroups (not recommended anyway). WDYT ?	1	1	https://issues.jboss.org/browse/JGRP-1576
14540	JGRP-1564	When sending messages batches, the transport header (TpHeader) is now removed and the cluster name is instead sent as part of the message batch header. This greatly reduces the size of the marshalled message batch ! So if we have a batch of 60 messages and they are sent in a cluster called "my-cluster", then we *add* the length of the cluster name (+12) to a batch, but remove every TpHeader from all 60 messages, that's a saving of (2+2+12) * 60 = 840 -12 = 828 bytes for the message batch ! This effectively fixes https://issues.jboss.org/browse/JGRP-872 !	0	0	https://issues.jboss.org/browse/JGRP-1564
14541	JGRP-1540	This could enable us to use message bundling for *all* messsages, even those tagged with OOB and possibly even DONT_BUNDLE msgs. Since a message marked as DONT_BUNDLE never has to wait for the max bundling timeout to kick in, but instead only for a batch to fill up (should be quick unless the batch size is big !) or no messages remaining in the queue, even sync RPCs might be fast. Need to bench this... e.g. how quickly do 60K fill up when a batch of 1K messages is sent (a few microsecs?)	0	0	https://issues.jboss.org/browse/JGRP-1540

#	Requirement	Questions	Answered	Successfully Answered	URL
14542	JGRP-1539	Sometimes, out-of-order messages are caused by OOB messages: as OOBs are not bundled, a message 20 might be sent as OOB while the bundler has messages 10-19, which will be sent up to bundler_delay ms later. Perhaps look into treating gaps created by OOB message reception differently ? We do know whether a message is OOB or not.	0	0	https://issues.jboss.org/browse/JGRP-1539
14543	JGRP-1535	How do you reproduce this ? In 3.3 (master), I check if a NIC is UP and has one or more addresses associated. How did you create a NIC that doesn't have an adress associated ?	1	1	https://issues.jboss.org/browse/JGRP-1535
14544	JGRP-1535	OK, has this been resolved (config error) ? If not: - Can you show me how to reproduce this on Linux ? - Or can you provide me with a VMWare image that I could download to try this out ? I don't have access to Windows.	1	1	https://issues.jboss.org/browse/JGRP-1535
14545	JGRP-1533	Hi Bela Ban, can you show you email to me? or gtalk? * What's the actual problem Two JGoup Server can't communicate each other when I use UDP mcast_addr=239.190.1.1;mcast_port=32986 * Stack trace how to get the Stack trace? * Logs where the log loaction * How to reproduce etc Server run many days, we found it can't communicate each other	0	0	https://issues.jboss.org/browse/JGRP-1533
14546	JGRP-1528	How would this fit with sync replication calls? I guess they might still block for the batching duration, which I I guess would be much smaller than (max_forward_attempts * forward_sleep milliseconds), i.e. would be in x * 100-millisecond timeout. Also API wise, do you plan to return a future or ISPN-2423 is still relevant even when this will be in place?	1	1	https://issues.jboss.org/browse/JGRP-1528
14547	JGRP-1523	Can you elaborate a bit more ? The suspected_mbrs field is updated also when there is a view change, as all non-members are removed. Other members need to keep suspected members in their suspected_mbrs list, as they may become coordinator themselves. The 'wasteful' doesn't really bother me, as there won't be many suspected members in a list at any given time, and they're cleared after the new view excluding them is installed. I do care about the 'wrong' part of your statement. Can you elaborate ?	1	1	https://issues.jboss.org/browse/JGRP-1523
14548	JGRP-1523	I still don't understand. What do you mean by [old_suspect, new_suspect, me, ...] ? Can you write down a step-by-step description of the scenario that leads to the incorrect state ? You can also ping me on IRC (#jgroups @ irc.freenode.net) if you want to discuss this interactively, or we can have a phone call. (I do speak German if that's of any help) I'd like to release JGroups 3.2.0.Final by the end of October (actually: 1 week before the end of Oct), so if you want this to be fixed and included, as need to act asap. Cheers,	1	1	https://issues.jboss.org/browse/JGRP-1523
14549	JGRP-1523	[1:26pm] bela: ok, simple solution: [1:26pm] bela: if msg_counts_as_heartbeat is true and we do receive a message (or a heartbeat) from a member in suspected_mbrs, we remove it from suspected_mbrs [1:28pm] jboehm: why not recheck the timestamps in suspect()? [1:28pm] jboehm: should be faster [1:29pm] jboehm: suspect is only called if a new member is suspected, not every message, like update() in this case [1:30pm] bela: So how would you remove A from suspected_mbrs then ? [1:32pm] jboehm: in FD_ALL.suspect() instead of eligible_mbrs.removeAll(suspected_mbrs); iterate over suspected_mebrs, get the time stamp, check if it is OK and remove only if not [1:33pm] jboehm: or something like that [1:34pm] bela: aha. And remove members from suspected_mbrs whose timestamps are below the timeout. Hmm, would work I guess	1	1	https://issues.jboss.org/browse/JGRP-1523
14550	JGRP-1495	That further thinking convinced me that the _real_ question is: why is C broadcasting a message, when it knows perfectly well that it is not coordinator? It should have forwarded to B (who is coordinator). The answer to that is that the variable 'flushing' may not be set soon enough. I've updated my pull request to fix that instead.	0	0	https://issues.jboss.org/browse/JGRP-1495
14551	JGRP-1493	Shouldn't this situation correct itself, when D drops the dead members in its view after some time ? At least, if you use FD_ALL, D will exclude B' and C' after some time, and become coordinator of {D,A}, and then the merge should succeed. Re pull request #59: I don't like the solution of spawning a separate thread to send the merge request. I'd rather add a new message flag to bypass fetching the physical address, or make the timeout configurable...	1	1	https://issues.jboss.org/browse/JGRP-1493
14552	JGRP-1493	I have FD and FD_SOCK, but not FD_ALL. D doesn't exclude B' and C', and the situation does not resolve itself. I don't think that physical_addr_max_fetch_attempts is sufficient here: - I agree that this limits the time it takes to look up one member - But there may be more than one dead member. So you might repeatedly fail to find physical addresses when sending MERGE_REQs, so that you still almost surely hit the merge killer. Perhaps the simplest answer would be to use FD_ALL. Is there any reason I wouldn't want to include that in my stack (either in addition to or in place of the other FD protocols)?	1	0	https://issues.jboss.org/browse/JGRP-1493
14553	JGRP-1493	First off, I think D should form a cluster of D and A even with FD (it will be faster with FD_ALL): - We have {B', D, A, C'} - With FD, D pings A and A pings C' - After not receiving acks from C' for a number of times, A excludes C' from its ping set and starts sending out SUSPECT(C') messages - A now starts pinging B' - After some time, A excludes B' from its ping set and starts pinging D. It now starts sending SUSPECT(C', B') messages - D gets the SUSPECT(B') message, takes over as coordinator, creates view {D,A} and installs it So it'll take approximately 2 times (timeout * max_tries) milliseconds to establish the new view. With FD_ALL, this is faster: after timeout (+ (possibly) timeout_check_interval), B' and C' will get excluded. So using FD_ALL instead of FD should only be faster, but both protocols should end up with view {D,A}. Once this happens, a merge should succeed. If the view is not established, I'd rather investigate why this is the case, and not work around this ! WDYT ? I'll see if I can come up with a unit test for the root cause...	1	1	https://issues.jboss.org/browse/JGRP-1493
14554	JGRP-1493	Per my last-but-one - will FD_ALL always help?	0	0	https://issues.jboss.org/browse/JGRP-1493
14555	JGRP-1475	I don't understand what you mean, Jason: I do have unique IDs for logs messages, see [1]. Did you intend to say that I have to have IDs from the ID pool of [2] ? If that's the issue, no problem, I can easily change that. [1] https://github.com/belaban/JGroups/blob/master/conf/jg-messages.properties [2] https://community.jboss.org/wiki/LoggingIds	1	0	https://issues.jboss.org/browse/JGRP-1475
14556	JGRP-1448	I see that the fix version is set to v3.x, should I interpret that as there will not be a 2.12.4?	1	1	https://issues.jboss.org/browse/JGRP-1448
14557	JGRP-1448	Sure I can do that but I was a bit unsure how to go about the correct way. I got the code from a Git repo but the SCM tag in the pom file points to a CVS so was not sure how to create the patch in the "correct" way. Is there any documentation that specifies how JGroups want's the patch file to be created? Sorry for using the comment field for this discussion, didn't know how else to respond.	1	1	https://issues.jboss.org/browse/JGRP-1448
14558	JGRP-1405	Misc comments: - Should we serialize individual messages as they're being added to the bundler ? So serialization would be done on the sending thread, not by the message bundler - Should the message bundler bundle only *multicast* (and not unicast) messages ? This way, we could use a queue instead of a hashmap, as there is only 1 destination (null = send to all). We could then also optimize various headers away, e.g. TpHeader needs to be present only once ! As a matter of fact, we could bundle only the payloads (byte buffers) and send them in one big message with only *one set of headers* !	0	0	https://issues.jboss.org/browse/JGRP-1405

#	Requirement	Questions	Answered	Successfully Answered	URL
14559	JGRP-1396	What was done is the following: - Created Table as a copy of RetransmitTable, but with a lock, and LOW, HD and HR - In NAKACK2: replaced NakreceiverWindow with Table<Message> - In NAKACK2: created only 1 retransmitter task, which periodically scans all tables and triggers retransmission	0	0	https://issues.jboss.org/browse/JGRP-1396
14560	JGRP-1389	Yes, we'll use a separate protocol (RSVP): this *is* separate functionality, not directly tied to NAKACK or UNICAST2. This way, we can use it over UNICAST or even a stack without NAKACK or UNICAST2 ! Design: - RSVP checks if the RSVP flag is set in a message - If so, it creates a unique number (possibly a UUID), and adds it plus all recipients to a hashmap (maybe via AckCollector ?) - Then it adds a header with the UUID and pass the message down - A timer task is then started which periodically sends a LAST_SEQNO event down, telling the NAKACK or UNICAST2 protocols to send their highest seqno (sent or received) to a specific recipient (unicast) or all recipients. - The recipient(s) check the seqno sent by P against their own entry for P and ask P for retransmission if it's missing - Then it blocks on AckCollector until a timeout occurs or all ack have been received - When a timeout occurs, we can throw an exception or simply return (configurable) - When RSVP receives a message with flag=RSVP, it sends an ack back to the sender. This means, we'll only ack messages that have been *delivered*, not when they're *received* - We could first pass the message up, and *then* ack it, or ack it and then send the message. This should be configurable	0	0	https://issues.jboss.org/browse/JGRP-1389
14561	JGRP-1379	We can reduce the number of merge responses using the algorithm below. On a merge request from P: #1 If we're the coordinator --> send a response OR #2 If P is the coordinator of our sub-cluster --> send a response Else suppress the response E.g. if we have sub-clusters {A,B,C,D} and {D,E,F,G}: - A multicasts a discovery request - B, C, and D see that the request's sender is A (the coord), so they reply - D replies, too, because it is the coord of its own subcluster - However, E, F and G don't reply as A is neither their coord, nor are they coords ! This is important if we have large clusters and many subclusters	0	0	https://issues.jboss.org/browse/JGRP-1379
14562	JGRP-1360	Is TP.getBindAddress() and TP.setBindAddress() the only occurrence ? Ichecked other protocols, but didn't find this inconsistency. Fixed.	1	1	https://issues.jboss.org/browse/JGRP-1360
14563	JGRP-1355	Hi William, are you going to be able to resolve this issue in 3.1 (say by Feb 2012) ? If not, I'll push it into 3.2... Cheers,	0	0	https://issues.jboss.org/browse/JGRP-1355
14564	JGRP-1343	We are also using the JBoss Cache 2.1.0 with which the compatible versions of JGroups is 2.6.2. Could you suggest anything else that we could try?	1	1	https://issues.jboss.org/browse/JGRP-1343
14565	JGRP-1317	Sending the digest and associating it (at the receiving end) with a view proved to be problematic in some cases: * If we sent a digest with view-id V1, but the sender already installed V2, the digest would not be associated with a view * In some cases, a view was meaningless, e.g. ** On a merge, each subgroup coordinator (e.g. X in \{X,Y,Z\}) needs to get the digest from all of its subgroup members ** Each member returns its own digest, so Y returns Y=[50:51]. However, Y's view would be \{X,Y,Z\}, so this doesn't work, as Y would return a digest whose seqnos for X and Z would be 0. * On a state transfer, if the membership is \{A,B,C\}, we'd return the state and digest \{A,B,C\}. However, ** If D joined meanwhile, the receiver would have a different view-id and would not be able to associate the received digest with a view. ** Even if the receiver was able to get the view, if B left, the digest for \{A,B,C\} would be associated with view \{A,C\}, which would lead to incorrect seqnos Therefore, digest needs to be changed to include either a view (*reference digest*) or a membership list (*full digest*). The full digest is a bit bigger in memory and when marshalled over the wire, but most digests are unmarshalled, and then some entries in an xmit-table are added/changed or removed, and then the digest is discarded, so this shouldn't be an issue. The only place where we keep a digest around is in the coordinator in STABLE. This shouldn't increase memory consumption. So when would we use full digests and when ref digests ? # JOIN: the existing members would not receive any digest with the new view. The joiner would receive the new view and the *full digest*. # STABLE: members send the *ref digest*; as it is associated with a view-id, the coordinator discards STABLE messages which have a different view-id. # STATE transfer: a state provider always returns the state and the *full digest* # MERGE: the digests for the subgroup are always returned as a *full digest* (as discussed above). However, this only includes *1 member* anyway, so no harm done. The MERGE-REQs always return the *full digests* as well. However, the merge view installation includes the *ref digest* only, as the MergeView and the ref digest are shipped together, and the latter can have a reference to the former. So if we assume that STABLE messages are the most frequent (ref digest), followed by view installation to existing members (ref digest), followed by JOINs (full digest), followed by STATE transfer (full digest) and merge (full and ref digest), then we can see that the cost incurred is not so bad.	0	0	https://issues.jboss.org/browse/JGRP-1317
14566	JGRP-1302	ISPN-658 was pushed into a later release (and may get dropped altogether), so we're pushing this issue into 3.0 as well. If ISPN-658 becomes moot, this issue will be moot, too.	0	0	https://issues.jboss.org/browse/JGRP-1302
14567	JGRP-1290	Hmm, I don't have access to Window 7... does this apply only to Windows 7, or to Windows (XP, 2008) in general ?	1	1	https://issues.jboss.org/browse/JGRP-1290
14568	JGRP-1268	[comment by Jayesh Seshadri] What would be the address visible to other entities (i.e. where would they send their packets to)? Note that currently if you use the external address 'override' for that, jgroups resolves the external_addr property using InetAddress.getByName on the node that the external_addr was assigned to, prior to advertising that address to the peers. A simple fix would be to skip that resolution on the node that the external_addr is assigned and simply advertise the supplied external_addr string as-is to the other nodes, requiring that to be resolvable from the other nodes. So if I set external_addr = 'foobar.corp.com', peers would get the peer address as "foobar.corp.com", and attempt to send packets to "foobar.corp.com", instead of the single IP returned by InetAddress.getByName().	0	0	https://issues.jboss.org/browse/JGRP-1268
14569	JGRP-1268	Hmm, not so sure this makes sense... Even if a user can set the bind address to be 0.0.0.0, at the end of the day they still have to pick an address (e.g. external_addr) that's going to be advertized as the node's address. So we're just pushing the issue of picking an address from bind_addr to external_addr. If we have to pick an address, might as well pick it for bind_addr (as is currently the case). Comments ?	0	0	https://issues.jboss.org/browse/JGRP-1268
14570	JGRP-1262	How about a bind port ? Would you want to pick the bind address only, or also a bind port ?	0	0	https://issues.jboss.org/browse/JGRP-1262
14571	JGRP-1231	I'm not sure what a "SPOF" is. Something like what Mircea made for the JDBC stores in Infinispan would be great: it auto-creates the tables and provides configuration options to define the SQL types. Actually, wouldn't it be great if people could plugin their own implementation in SPI style? So additional dependencies wouldn't be an issue, and people might easily add any exotic alternative strategy.	1	1	https://issues.jboss.org/browse/JGRP-1231
14572	JGRP-1231	to create a complete test I might need to add some dependencies (for testing only), like an in-memory database as H2 or HSQLDB. Would you be ok with that, or would you prefer me to skip merging this kind of tests.	1	1	https://issues.jboss.org/browse/JGRP-1231
14573	JGRP-1231	I will definitely do the testing via Infinispan to "feel" a real scenario, but wouldn't you want an automated test to prevent future regressions? This would be a testing-only dependency, but I'll do as you wish.	0	0	https://issues.jboss.org/browse/JGRP-1231
14574	JGRP-1219	Sounds good, two comments: - Is there a chance that in one cluster we'll have different JBoss versions? Upgrade? If yes, we need to specify always our own prefix. - Maybe prefix with "cluster" at the beginning: "cluster-jboss-6-m4", "cluster-jboss-7-ga" would be nicer :)	1	0	https://issues.jboss.org/browse/JGRP-1219

#	Requirement	Questions	Answered	Successfully Answered	URL
14575	JGRP-1207	{Email Dennis] The fix that works for this customer is bind()'ing the multicast socket on creation to the correct IP, instead of relying on setInterface. Do you think that will cause issues on any other OS's? That's easy enough on 2.4.x. But on 2.6.x and above, I think the separate send/receive sockets would need to be restored, so receive can bind to the multicast IP and send can bind to the bind_addr. Do you agree?	1	0	https://issues.jboss.org/browse/JGRP-1207
14576	JGRP-1207	IMO, IPv6 should use the IP address passed to it in MulticastSocket.setInterface() as *source* address. If it doesn't do that, then I suggest we talk to our IP gurus to see why not ! MulticastSocket.setInterface() sets the interface, but as I understand it, the kernel can pick any address on that interface. I cannot use the MulticastSocket() constructor taking a SocketAddress and pass in the bind address, as we pass in the multicast address to prevent promiscuous traffic ! e.g. new MulticastSocket(new InetSocketAddress("224.5.6.7", 7500)); Check Util.createMulticastSocket() for details. BTW: there's a bunch of JIRAs on this. I suggest you write a simple program which creates a MulticastSocket as described above, and calls setInterface() with an IPv6 address. Then we create a couple of aliases on the same interface as the IP address and observe that the src address is different every time. Someone from Red Hat (preferably Neil Horman) should take a look...	1	0	https://issues.jboss.org/browse/JGRP-1207
14577	JGRP-1207	what do you want me to do then ?	1	0	https://issues.jboss.org/browse/JGRP-1207
14578	JGRP-1202	I guess injecting a SocketFactory instance into a stack is the way to go. However, we have to think about the following case. Say we have a shared transport ("udp") that's used by standard-session-cache and sfsb-cache. All sockets created in sfsb-cache would be created by a SocketFactory instantiated with the name "sfsb-cache". All sockets created in standard-session-cache would be created by a SocketFactory instantiated with the name "standard-session-cache". So, for example, we could have the following config: standard-session-cache: FD_SOCK.bind_port: 7300 sfsb-cache: FD_SOCK.bind_port: 7400 However, since we have a shared transport, what would the naming scheme be for it ? It's used by both standard-session-cache and sfsb-cache, so we cannot give it the name of either one, or should we ? Or should we just call it "udp" ? One solution would be give the SocketFactory in a shared transport the name of its singleton_name attr, e.g. in the above example "udp". When setting the SocketFactory, e.g. in JChannel.setSocketFactory(), we'd create an event SET_SOCKET_FACTORY (with an instance of a SocketFactory) and send it down the stack. When we have a singleton (shared) transport, the TP$ProtocolAdapter would catch the event and install the socket factory, then discard the event (not send it down to the transport). The transport's SocketFactory would have to be set separately. When there's no singleton transport, the SET_SOCKET_FACTORY event would be caught by the transport (TP) and the factory would be installed. A getSocketFactory() method (inherited from Protocol) would return the socket factory of TP$ProtocolAdapter if a singleton transport is used and the call originated from above TP, or the one from TP if the call originated in TP. If no singleton transport is used, the socket factory of TP would always be returned.	0	0	https://issues.jboss.org/browse/JGRP-1202
14579	JGRP-1189	Question is should we hard-code the prefix (e.g. FF0e::) or make it configurable	0	0	https://issues.jboss.org/browse/JGRP-1189
14580	JGRP-1156	I cannot reproduce this, can the customer reproduce this ? I tried bringing the interface down (ifconfig eth1 down), stopping the networok (service network stop), to no avail...	0	0	https://issues.jboss.org/browse/JGRP-1156
14581	JGRP-1154	[Email dated Sept 10 2010 to jg-dev] FYI, I've added 2 new flow control protocols: MFC (Multicast Flow Control) and UFC (Unicast Flow Control). They're an implementation of [1], which is about splitting the FC functionality into 2 separate protocols. The advantages are that this simplifies the code, the code becomes more maintainable, that we can enable unicast or multicast flow control individually, that I could remove some coarse grained locking, and that I created helper classes, e.g. to manage sender or receiver credits, which can be unit tested individually, apart from the use in the protocol. The downside is that we now have MFC and UFC instead of just FC. My goal for performance was that MFC and UFC should be about the same as FC, but not slower. This morning, I ran a quick perf test [2] on a 4 node cluster, with 4 nodes (all senders) sending 1 million messages (of varying size) each. The numbers are MiBs/sec/node. The numbers for 4 nodes are: Size FC MFC/UFC 1K 135 135 2K 145 145 4K 145 145 8K 130 131 The numbers for 8 nodes are (2 processes per physical box): Size FC MFC/UFC 1K 72 73 2K 83 85 4K 87 93 8K 107 113 As can be seen, performance is about the same, or even slightly better with MFC/UFC when running 2 perf JVMs / physical box. However, the second test on 8 nodes is to be taken with a grain of salt, as the 2 JBMs/box are competing for CPU and the network, and therefore we don't saturate the network (bandwidth)... To use the new folw control protocols, replace <FC max_credits="2M" min_threshold="0.6" /> with <UFC max_credits="2M" min_threshold="0.6" /> <MFC max_credits="2M" min_threshold="0.6" /> I will change the configs shipped with JGroups after some more testing and updating the documentation. [1] https://jira.jboss.org/browse/JGRP-1154 [2] http://community.jboss.org/docs/DOC-11594 -- Bela Ban Lead JGroups / Clustering Team JBoss	1	0	https://issues.jboss.org/browse/JGRP-1154
14582	JGRP-1150	We also don't need to marshal 'range' when the request type is MSG ! (Only for XMIT_RSP and XMIT_REQ)	0	0	https://issues.jboss.org/browse/JGRP-1150
14583	JGRP-1121	What's the benefit over the existing solution here ?	1	1	https://issues.jboss.org/browse/JGRP-1121
14584	JGRP-1108	What's the status of this, Brian ? Is it still relevant ? If not, could we remove ChannelFactory from JGroups ?	1	1	https://issues.jboss.org/browse/JGRP-1108
14585	JGRP-1106	Just out of curiosity, why would this be a jgroups change? The last thing we need is for every project to have a complicated logging framework of its own.	0	0	https://issues.jboss.org/browse/JGRP-1106
14586	JGRP-1106	Yes, this makes sense, thx for the contribution Shay ! I applied this change, but changed the system prop to jgroups.logging.log_factory_class. Also, I'm not too sure about whether Class.forName() is good. We usually use Util.loadClass() to make sure to pick the right classloader. This is in CVS, can you take a look ? I'll close this issue, feel free to re-open if you run into an issue.	0	0	https://issues.jboss.org/browse/JGRP-1106
14587	JGRP-1105	OK, here's what we can do: We create new SeqnoRanges every N milliseconds, e.g. all seqnos added in T=0-30ms go into range 1, 31-60ms go into range 2 and so on. When a seqno is received and the current time - last_time is > MAX_TIME, we create a new range and add the seqno to the range. Ditto when the current range's size is exceeded. Algorithm: add(seqno): - if current range has all received and size not exceeded: - add to current range (reuse that range) - start the retransmission task (with a new TIMEOUTS copy) else if not all received and time - last_time > MAX_TIME or size exceeded: - create new SeqnoRange (current range) - set last_time = time - If retransmission task is not running: start retransmission task - add seqno to current range Task run: - retransmit all missing messages - If all received: cancel the task TODO: - when do we remove a range and retransmission task ?	0	0	https://issues.jboss.org/browse/JGRP-1105
14588	JGRP-1104	Vladimir: If oob message is added to NRW it is immediately delivered by its own oob thread propelling that message up, right? So, what is the scenario when #1 occurs ? Bela: I forgot, but this *can* occur. That's why I wrote that code. I think the use case was the OOB message was dropped and then retransmitted (as reg message).	1	1	https://issues.jboss.org/browse/JGRP-1104

#	Requirement	Questions	Answered	Successfully Answered	URL
14589	JGRP-1095	The issue is that MPING wants to send a request back to the requester via the transport (TCP), but a socket to a lonk local address with a scope-id fails. Without the scope-id, it works. TODO: remove the scope-id when creating a socket. Dito for TUNNEL, TCPGOSSIP	0	0	https://issues.jboss.org/browse/JGRP-1095
14590	JGRP-1090	Analyze which protocols above NAKACK send multicast OOB messages (STABLE for sure, maybe others ?)	0	0	https://issues.jboss.org/browse/JGRP-1090
14591	JGRP-1090	For now, the bundlers were changed to store messages per *cluster and destination address*, e.g. messages with dest=null for "cluster1" are stored separately from messages to "cluster2". This way, messages sent on a shared transport to different clusters won't get handled by the same thread at the receiver(s). Also, multicast messages won't interfere with unicast messages. The old solution stored messages under only the destination as key, and didn't take the cluster name into account. So the only messages that will be delivered by the same thread are messages from the same sender to the same destination and cluster. To be investigated: should we neverthless bundle OOB messages as well ? This would entail having a separate hashmap in the bundlers, and handle every OOB message of a message bundle with a separate thread at the receiver(s).	0	0	https://issues.jboss.org/browse/JGRP-1090
14592	JGRP-1084	Is this really needed ? IIRC, Infinispan's CommandAwareDispatcher passes a list of target addresses, but removes the local address before that...	1	1	https://issues.jboss.org/browse/JGRP-1084
14593	JGRP-1078	Bela, I tried this locally and the element in question is present and I don't get -Djgroups.xml.validate=true that you refer to. Using JDK6 on Snow Leopard. What JDK are you using?	1	1	https://issues.jboss.org/browse/JGRP-1078
14594	JGRP-1078	Interesting, my local schema is valid too! What JDK/OS are you using Sei?	0	0	https://issues.jboss.org/browse/JGRP-1078
14595	JGRP-1078	I don't use maven, I use ./build.sh create-schema, which command do you use ?	0	0	https://issues.jboss.org/browse/JGRP-1078
14596	JGRP-1068	treated during @Property processing. I found this example in MPING: public void init() throws Exception { super.init(); String str=Util.getProperty(new String[]{Global.MPING_MCAST_ADDR}, null, "mcast_addr", false, null); if(str != null) mcast_addr=InetAddress.getByName(str); str=Util.getProperty(new String[]{Global.MPING_MCAST_PORT}, null, "mcast_port", false, null); if(str != null) mcast_port=Integer.parseInt(str); str=Util.getProperty(new String[]{Global.MPING_IP_TTL}, null, "ip_ttl", false, null); if(str != null) ip_ttl=Integer.parseInt(str); if(mcast_addr == null) { mcast_addr=InetAddress.getByName("230.5.6.7"); } } This started me thinking about how we process properties in JGroups, especially now with @Property. Does the following concur with your understanding of how properties should be processed? 1. Usera can specify defaults for properties in one of two ways. The usual way is to provide a default for the value in a stack configuration file. Over and above that, they may provide a default on the command line using a named system property. The system property should override the default in the stack configuration file through system property substitution within the stack config file. (NOTE: we could also systematically check system properties during property conversion, with no need to use variable substitution in config files - but forget about this when reading point 2.) 2. Once the stack config file has been processed, each @Property in a protocol gets a value assigned through PropertyConverter processing. At this stage, the users intentions for the variable should have been determined. No further system variable substitution for @Property values should be required. 3. After property processing, @Property variables may have valid values(e.g. user assigned), invalid values(e.g. user assigned IPv6 address, but no scope) or no value (null). We don't really have any systematic way of checking for the case of no (default) value at present. One way to do this is via sanity checks, after property processing and before init() is called on each protocol. This is the intention for the InetAddress related stuff - to call inetAddressSanityCheck() to assign a consistent IP version and check IPv6 scopes before init() starts. The good thing about this is that we have access to all @Property values in the stack and can assign defaults accordingly. This is needed for determining the correct IP version to use. On the other hand, there are a lot of variables in a lot of protocols which may require programmer assigned defaults, and assigning them in this centralized location through table lookup doesn't scale well. It would be more convenient to assign a programmer assigned default value through the @Property mechanism itself. But because @Proeprty processing uses converters to assign values to variables, the assignment of programmer assigned default values would need to be incorporated into the ProeprtyConverter mechanism. For example, in the case of jgroups.udp.mcast_addr, we used to specify a default string value "224.x.y.z" which would get converted in init() to an InetAddress if mcast_addr == null, just like in the code above. But now this happens too late. Is it worth adding an attribute to @Property to specify a programmer supplied default value for the property which would be passed through the converter if no user specified value was present? At the moment, during property processing, we check if a user assigned value is present: if yes, we call the converter; if no, we don't call the converter. This means that some fields, which take complex data structures which need special conversion from strings, like initial_hosts, have null for a default and have to be picked up after property processing has completed. We could incorporate programmer assigned defaults as follows: (i) introduce a new field in @Property called default (ii) during property processing, we check if a user assigned value is present: if yes, we call the converter; if no, we call the converter using the default value, if there is one; if there is no default value, we do nothing. In this way, all properties have either a user assigned or programmer assigned default value. The default values are referenced by Global.jgroups.protocol.variable name which picks up the default from a table during processing. With this in place, we eliminate checking for default values in the sanify	0	0	https://issues.jboss.org/browse/JGRP-1068
14597	JGRP-1050	So what about OSGI support in jgroups? I"m seeing in the binaries jgroups 2.8 and morover and there are not bundle informations inside the MANIFEST.MF file. Testing the sources (2.12.0.Alpha1) I see a maven-bundle-plugin but it is disabled because it need the row <packaging>bundle</packaging> in the pom.xml and actually it is configured as jar.	0	0	https://issues.jboss.org/browse/JGRP-1050

#	Requirement	Questions	Answered	Successfully Answered	URL
14598	JGRP-1043	Another related contention point I see when profiling is for AckReceiverWindow.msgs. Calls the lead to acquiring that lock come from UNICAST.handleDataReceived(). Looking at that I see a couple possible improvements: 1) if(win.smallerThanNextToRemove(seqno)) sendAck(msg.getSrc(), seqno); The win.smallerThanNextToRemove(seqno) call has to acquire the AckReceiverWindow.msgs lock. My interpretation of this is that it's purpose is to send an ack to a message retransmission, where the original message has already been received. Why would this be necessary? A) ACK of original message didn't arrive in time to cancel retranmission B) ACK of original message got lost. If B) occurred, the retransmission will go on forever, so to prevent that we have this code to ack the retransmission. Now, why would win.smallerThanNextToRemove(seqno) return true? a) It's a retransmission, i.e. the case described above. In that case "added" from the earlier "boolean added=win.add(seqno, msg);" will be false. So, checking for !added would handle this. b) Another thread is removing messages from the window and between when the thread adding the message called win.add(seqno, msg) and later called if(win.smallerThanNextToRemove(seqno)), the "removing thread" already removed it. In that case the "removing thread" will ack the message and the adding thread also acking it is redundant. Bottom line, I think the above can be changed to the following, eliminating contention on AckReceiverWindow.msgs: if(!added) { // Must be a retransmission of a msg we already acked. Ack it to ensure retransmission task // is cancelled, in case our ack of original message got dropped sendAck(msg.getSrc(), seqno); } 2) if(!added && !win.hasMessagesToRemove()) { // no ack if we didn't add the msg (e.g. duplicate) return; } I get the feeling this code is leftover cruft, as the "// no ack if we didn't add the msg (e.g. duplicate)" comment doesn't fit the surrounding logic that determines whether there's an ack. The effect of this block is just to cause the thread to return and not drop into the section where it checks if it should become the thread that removes messages. That check is now quite cheap, so why not just remove this? This one is no big deal in the normal case, since added will usually be true so the win.hasMessagesToRemove() call won't be made. But in the overload case where there are starting to be a lot of retransmissions, the win.hasMessagesToRemove() call will start being made, adding to the contention on the lock.	1	1	https://issues.jboss.org/browse/JGRP-1043
14599	JGRP-1043	Further to the issue of contention for AckReceiverWindow.msgs. For acking OOB messages, the relevant logic in handleDataReceived is: if(msg.isFlagSet(Message.OOB)) { if(added) up_prot.up(new Event(Event.MSG, msg)); Message oob_msg=win.removeOOBMessage(); if(oob_msg != null) sendAckForMessage(oob_msg); if(!(win.hasMessagesToRemove() && undelivered_msgs.get() > 0)) return; } ..... logic to possibly become thread that passes messages up, if yes, then... while(true) { Message m=win.remove(processing); if(m == null) { released_processing=true; return; } // discard OOB msg as it has already been delivered (http://jira.jboss.com/jira/browse/JGRP-377) if(m.isFlagSet(Message.OOB)) { continue; } num_regular_msgs_removed++; sendAckForMessage(m); up_prot.up(new Event(Event.MSG, m)); } As we discussed, I believe there is a race where win.removeOOBMessage() can return null, resulting in the OOB message not getting acked, since the logic in the later while loop won't ack an OOB. Wait! Just realized it's not just the race we discussed, where OOB msg 1 gets added and then another thread adds msg 2 and removes 1 before the first thread calls win.removeOOBMessage(). This can happen in the simple case where AckReceiverWindow.next_to_remove is only up to say seqno 5 and an OOB msg 10 comes in. In that case win.removeOOBMessage() will return null and the msg will not get ACKed. (As we discussed, AckSenderWindow.ack() will help clean up after this, by cleaning 10 once it gets an ack for 11). Anyway, back to my original point. :) The win.removeOOBMessage() call is adding contention on AckReceiverWindow.msgs. Just acking OOB messages in the while loop seems cleaner. Is the goal of the win.removeOOBMessage() and if(!(win.hasMessagesToRemove() && undelivered_msgs.get() > 0)) return; to try and provide an escape route for OOB threads so they don't become the thread responsible for passing message up? OK, later comments about JGRP-781 indicate that's the case. In any case the test can be if(!(undelivered_msgs.get() > 0 && win.hasMessagesToRemove())) Do the cheap test before the expensive one. Perhaps the whole thing becomes: final AtomicBoolean processing=win.getProcessing(); if(msg.isFlagSet(Message.OOB)) { if(added) up_prot.up(new Event(Event.MSG, msg)); // JGRP-781. If no thread is processing the window and passing // messages up, we may need to take on that duty even // though we are an OOB thread if (!processing.get()) { // First try and clear our own message from the window Message oob_msg=win.removeOOBMessage(); if(oob_msg != null) sendAckForMessage(oob_msg); // Check and see if there is processing work to do; if not // return and let whatever thread adds work become the // processing thread if(!(undelivered_msgs.get() > 0 && win.hasMessagesToRemove())) return; } else { return; } } I think the undelivered_msgs tracking would be better placed inside AckReceiverWindow. Right now the win.add() and undelivered_msgs.incrementAndGet() calls are not atomic, nor are the remove() and decrement calls. So you can get races plus it makes handleDataReceived more complicated.	1	1	https://issues.jboss.org/browse/JGRP-1043
14600	JGRP-1043	Re: !added: DOH! Good example of why I post comments rather than change code! is this useful? if(!added && win.smallerThanNextToRemove(seqno)) We limit the win.smallerThanNextToRemove to cases where the message isn't the next_to_remove. Hmm, probably not a huge benefit, unless even w/ thread pools in TP it's still the norm that messages get added to the window in seqno order.	1	1	https://issues.jboss.org/browse/JGRP-1043
14601	JGRP-1043	The DelayQueue (based on PriorityQueue) used by ScheduledThreadPoolExecutor seems to be inefficient regarding adding and removing elements. These methods apparently need rebalancing of the tree. ConcurrentSkipListSet promises log(n) cost for add() and remove(), maybe we should take a look at replacing ScheduledThreadPoolExecutor in TimeScheduler with this ! Disadvantage: ConcurrentSkipListSet requires JDK 6 as base line...	0	0	https://issues.jboss.org/browse/JGRP-1043
14602	JGRP-1040	How do you separate tests when they're not sequential ? @Test(sequential=false) ?	1	0	https://issues.jboss.org/browse/JGRP-1040
14603	JGRP-1040	Good question... Doesn't your test listener which collects output from each test handle that? I seem to remember that you dealt with that issue using local thread storage. If not, i'll have to go back and check.	0	0	https://issues.jboss.org/browse/JGRP-1040

#	Requirement	Questions	Answered	Successfully Answered	URL
14604	JGRP-1038	to everybody else took 16 seconds (see below) ! Did you have members send unicasts from everyone to everyone else on purpose, or should those messages have been multicast ? Also, your stack is non-standard: * You don't set multicast and unicast receiver buffer sizes in UDP, this makes a big diff when receiving large messages (as we have to do fewer retransmissions due to dropped messages) * For UDP, you may also want to configure thread pools * Your FC2 is in the wrong place (for FC2_STACK): it is just above NAKACK, but below UNICAST so your unicasts are not flow controlled at all !!! * STABLE should have max_bytes, a gossip time of 5000 is too long for sending a lot of messages * I tested this on 2.8, which version did you use ? I created a JIRA for FC2 to take a look at in 2.9, but unless performance of the existing FC is really bad, I don't think FC2 is necessary. ---------- GMS: address=linux-39675, cluster=x, physical address=192.168.1.5:33472 ---------- . ---------- GMS: address=linux-12313, cluster=x, physical address=192.168.1.5:34644 ---------- . ---------- GMS: address=linux-56774, cluster=x, physical address=192.168.1.5:55607 ---------- . ---------- GMS: address=linux-15964, cluster=x, physical address=192.168.1.5:38462 ---------- . ---------- GMS: address=linux-49489, cluster=x, physical address=192.168.1.5:56906 ---------- . ---------- GMS: address=linux-43361, cluster=x, physical address=192.168.1.5:52679 ---------- . ---------- GMS: address=linux-55342, cluster=x, physical address=192.168.1.5:53446 ---------- . ---------- GMS: address=linux-16696, cluster=x, physical address=192.168.1.5:43925 ---------- . ---------- GMS: address=linux-31728, cluster=x, physical address=192.168.1.5:38416 ---------- . ---------- GMS: address=linux-19539, cluster=x, physical address=192.168.1.5:53866 ---------- . -- sending message #0 of 5242880 bytes to linux-39675 -- received message of 5242880 bytes on linux-39675 Received 1 messages, sent 149 messages and 0 retransmits, Received 375 packets, sent 366 -- sending message #0 of 5242880 bytes to linux-12313 -- received message of 5242880 bytes on linux-12313 Received 2 messages, sent 237 messages and 0 retransmits, Received 506 packets, sent 496 -- sending message #0 of 5242880 bytes to linux-56774 -- received message of 5242880 bytes on linux-56774 Received 3 messages, sent 325 messages and 0 retransmits, Received 633 packets, sent 624 -- sending message #0 of 5242880 bytes to linux-15964 -- received message of 5242880 bytes on linux-15964 Received 4 messages, sent 413 messages and 0 retransmits, Received 765 packets, sent 754 -- sending message #0 of 5242880 bytes to linux-49489 -- sending message #0 of 5242880 bytes to linux-43361 -- received message of 5242880 bytes on linux-49489 Received 5 messages, sent 503 messages and 0 retransmits, Received 899 packets, sent 887 -- received message of 5242880 bytes on linux-43361 Received 6 messages, sent 589 messages and 0 retransmits, Received 1028 packets, sent 1015 -- sending message #0 of 5242880 bytes to linux-55342 -- sending message #0 of 5242880 bytes to linux-16696 -- received message of 5242880 bytes on linux-55342 Received 7 messages, sent 680 messages and 0 retransmits, Received 1165 packets, sent 1151 -- received message of 5242880 bytes on linux-16696 Received 8 messages, sent 765 messages and 0 retransmits, Received 1293 packets, sent 1278 -- sending message #0 of 5242880 bytes to linux-31728 -- received message of 5242880 bytes on linux-31728 Received 9 messages, sent 853 messages and 0 retransmits, Received 1424 packets, sent 1408 -- sending message #0 of 5242880 bytes	1	1	https://issues.jboss.org/browse/JGRP-1038
14605	JGRP-1038	Looks like FC2 handles only *unicasts*, not multicasts. Is this what FC2's supposed to do ? If so, it could be an alternative to UFC... A good perf test would be UnicastTestRpcDist.	0	0	https://issues.jboss.org/browse/JGRP-1038
14606	JGRP-1030	Vladimir, can you look into this ? thx !	1	1	https://issues.jboss.org/browse/JGRP-1030
14607	JGRP-1025	[~belaban] Can we close this one? See given long enough timeline all bugs go away? :-)	1	0	https://issues.jboss.org/browse/JGRP-1025
14608	JGRP-1011	Test results: I list the test which failed repeatedly, followed by the tests which failed, but passed on retry, organized by IP version. ipv4: repeatable failure: * CloseTest(tcp).testMultipleConnectsAndDisconnects (also fails on 2.6.10.GA - no regression) * FlushCloseOpenTest(tcp).testAndLoop (also fails on 2.6.10.GA - no regression) passed on retry: * none ipv4.local: repeatable failure: * CloseTest(tcp).testMultipleConnectsAndDisconnects (also fails on 2.6.10.GA - no regression) * FlushCloseOpenTest(tcp).testAndLoop (also fails on 2.6.10.GA - no regression) passed on retry: * SharedTransportTest(udp).testSendingOfMessageAfterChannelClose * ConnectStressTest (timeout) ipv6: repeatable failure: * CloseTest(tcp).testMultipleConnectsAndDisconnects (not testsed on 2.6.10.GA) * FlushCloseOpenTest(tcp).testAndLoop (not tested on 2.6.10.GA) passed on retry: * MergeTest(udp).testMerging4Members ipv6.local: repeatable failure: * CloseTest(tcp).testMultipleConnectsAndDisconnects (not testsed on 2.6.10.GA) * FlushCloseOpenTest(tcp).testAndLoop (not tested on 2.6.10.GA) * MergeTest(udp).testMerging4Members/testMerge4Members (this test is really broken for IPv6 as it uses IPv4 default mcast addresses and needs to be recrafted) passed on retry: * ConnectStressTest (timeout)	0	0	https://issues.jboss.org/browse/JGRP-1011
14609	JGRP-1009	Merging and join/leaves should be separate and can never overlap. When a merge is in progress: - Join and leave requests should get discarded (or queued ?) When a join or leave is processed: - MERGE events should be discarded - MERGE-REQ requests received from other partitions should be *rejected*	0	0	https://issues.jboss.org/browse/JGRP-1009
14610	JGRP-1007	Is the issue anyway related to JBAS-6807 at https://jira.jboss.org/browse/JBAS-6807. Could this JIRA task provide some inputs?	1	1	https://issues.jboss.org/browse/JGRP-1007
14611	JGRP-988	I have no objection, but I'm questioning in general whether we should trash JChannelFactory. It is IMO pretty useless, new apps inject channels anyway, and that mechanism is external. Can't we move this entire class into JBoss AS ? I'll definitely trash it in 3.0...	1	0	https://issues.jboss.org/browse/JGRP-988
14612	JGRP-983	Hi Galder, a couple of questions: - is there the usual 3-4 day deadline on QAing this? I'm ugly busy at the moment. - is there a test case in here to check for crosstalk? Don't seem to remember if there is one i n the testsuite. If not, do you have a description of a manual procedure for verifying that cross talk does not occur?	0	0	https://issues.jboss.org/browse/JGRP-983
14613	JGRP-983	Re: - is there the usual 3-4 day deadline on QAing this? I'm ugly busy at the moment. Indeed, it's 5 business days AFAIK Re: - is there a test case in here to check for crosstalk? Don't seem to remember if there is one i n the testsuite. If not, do you have a description of a manual procedure for verifying that cross talk does not occur? I don't have a test case as such but the following could be tested on a HP-UX machine (customer did this): - Start two EAP 4.3.0.GA_CP04 server instances passing a different -g and -u to each and see if the clusters start up independently. If there's cross talk, they'd see each others messages.	0	0	https://issues.jboss.org/browse/JGRP-983
14614	JGRP-982	Fixed in 2.4.x, 2.6.x, 2.7.x and trunk. Bela, what are the fix versions for 2.6.x, 2.7.x and trunk?	1	1	https://issues.jboss.org/browse/JGRP-982
14615	JGRP-974	Can you post the link to the fix from Brian? Thanks.	1	0	https://issues.jboss.org/browse/JGRP-974
14616	JGRP-960	Comment from Bob: Is there any race conditions we need to look out for when working with S3? Or do you need to write S3-based lock-manager? With XA and a pony? :) Or a separate thought, treat S3 more directory-like, and instead of updating a file, each node puts (and removes, optionally) its own file within the dir? s3://path/to/my/cluster/node1.conf s3://path/to/my/cluster/node2.conf s3://path/to/my/cluster/node3.conf s3://path/to/my/cluster/node4.conf s3://path/to/my/cluster/node5.conf Just thinking if 100 nodes are booting up at the same time, each trying to write to a shared cluster.conf without trampling each other?	0	0	https://issues.jboss.org/browse/JGRP-960

#	Requirement	Questions	Answered	Successfully Answered	URL
14617	JGRP-951	Bela, One question. The updates I made to allow the 2.8 testsuite to use IPv6 addressses didn't address one issue in build.xml. You call runtest as follows, for udp.xml: <runtest testname.ext="udp" threadcount="10" parallel="tests" initial.mcast.addr="235.10.10.10" initial.mcast.port="25100" initial.tcp.port="25100" testng.xmlfile="testng-udp.xml" /> That is, you are hardcoding IPv4 values for initial.mcast.addr, and you are using different address ranges across the different targets (udp, tcp, udp-flush, ...)for some reason. This makes switching the testsuite from IPv4 to IPv6 rather difficult. I would like to replace these hardcoded values by the system property ${jgroups.udp.mcast_addr} so that the value gets picked up from build.properties. Same for the mcast_port. Is this OK? There shouldn't be any need to use different ranges of mcast addresses when calling runtest as these are run in sequence anyway.	0	0	https://issues.jboss.org/browse/JGRP-951
14618	JGRP-908	What's the diff to SMACK ? No acks ?	1	1	https://issues.jboss.org/browse/JGRP-908
14619	JGRP-908	I don't see why you use seqnos: the code doesn't use them ! Every message contains a seqno, but the receivers don't order them, nor do they prevent duplicate seqnos...	1	1	https://issues.jboss.org/browse/JGRP-908
14620	JGRP-892	Dennis, do you have a pull request ?	0	0	https://issues.jboss.org/browse/JGRP-892
14621	JGRP-886	Bela, as I know NIO2 is already available in JDK 7 builds for several months (or years?). Oracle delayed the release of JDK 7 due to some internal reasons, but it seems to be good enough, I tried it with our production system for several days. Are you going to hard-code NIO2 usage inside JGroups or add some abstraction layer (aka TransportProvider abstraction) so we could use such network frameworks as mina, netty, etc (what if something goes wrong with the new NIO2)?	1	1	https://issues.jboss.org/browse/JGRP-886
14622	JGRP-856	Hi, I'll be happy to make our 64bit machine available for any kind of testing thats deemed appropriate here. Would it help, for example, to just run one or more of the unit tests between it and another box?	1	1	https://issues.jboss.org/browse/JGRP-856
14623	JGRP-856	Excuse my ignorance, but what's a 64 bit Windows OS ? XP, Vista ? Which one do you use ? I don't know how I could test this, unless I purchased a license or used a VMWare image...	1	1	https://issues.jboss.org/browse/JGRP-856
14624	JGRP-856	I assume this image requires a user id and password, can you send them to me via email (bela at jboss dot org) ? Possibly also the admin user, so I can create new users and/or change the pwd myself. Happy Holidays to you too !	1	1	https://issues.jboss.org/browse/JGRP-856
14625	JGRP-822	How do we remove scopes ? If we have web sessions as scope, for example, we'll keep creating new sessions, therefore scopes in SCOPE. How do we purge them, e.g. when a session expires ? We should definitely associate scopes with the member with which they were created. When a member P leaves the cluster, all scopes associated with P should be removed in SCOPE. However, that doesn't solve the issue of creating and expiring sessions (= scopes) within P, when P doesn't leave... Maybe there should be a expire(Scope... scopes) method in SCOPE. This triggers a multicast to all SCOPE instances, and causes purging. The API to use this could be in Message, e.g. removeScope(Scope id), although this feel not right. Maybe a utility method in Util, which - given a channel - grabs the SCOPE protocol and calls expire() method ?	0	0	https://issues.jboss.org/browse/JGRP-822
14626	JGRP-813	Set disable_canolicalization to true by default: remove canonicalization ! This uses a hashmap lookup every time an IpAddress is created, inefficient ! We will canonicalize IpAddresses with LogicalAddresses to a much more efficient format (shorts) later anyway...	0	0	https://issues.jboss.org/browse/JGRP-813
14627	JGRP-806	The current Message (1.84) is not using the ConcurrentHashMap for the headers anymore. The CCHM is used for the canonical adrresses which is a class static instance. The message headers are currently handled using the default java HashMap class. It might be a good solution if there are many headers attached to a common message object. As far as I could see (debug) from our first test application there was just one header attached to messages recevied from the defalt channel (multicast-localhost). How many headers are added by the protocol stacks to sent/received messages? The header name/value pair could be just simply stored in an Object array and iterated for every header put and every header get call. The array would be extended when there are more headers than preallocated size (parameter) required. The second issue is with the synchronization object currently used for the headers access. The ReentrantReadWriteLock is pretty expensive class to be created for every message sent or received by the protocol stacks. Is there really a situation that the same message object is modified (putHeader) and processed (getHeader) from multiple threads? The message is either sent (down the stack) or received (up the stack) by a single thread execution. I think that an object monitor should be considered for the headers synchronization . # # EXAMPLE # private final Object headersMonitor = new Object(); private Object[] headers = new Object [DEF_HEADERS << 1]; ... public Header getHeader(String key) { synchronized(this.headersMonitor) { for(int i = 0; i < header.length; i+=2) { if(this.headers[i] == null) { return null; } else if(this.headers[i].equals(key)) { return (Header) this.header[i + 1]; } } } return null; } ...	1	1	https://issues.jboss.org/browse/JGRP-806
14628	JGRP-806	I don't think this would be very fast, especially as you need to iterate over the array to find the right header. The putHeader() method would also have to see whether a key of the same name already exists, and also iterate to do that. Do you have any measurements which show the opposite ?	1	1	https://issues.jboss.org/browse/JGRP-806
14629	JGRP-806	Ok, I've added MessageStressTest to JGroups. It measures the time to create messages, add and get headers. I implemented your suggested changes and saw a marginal improvement from 605'000 msgs/sec to 620'000 msgs/sec. While this is not really great, it is actually EXCELLENT because I'll create much less garbage. The only thing is that for putHeader(), I need to iterate through the array to see whether the key is already present, and not just find the first free space. Can you attach your impl to this case, so I can compare mine to yours ? I haven't checked in my impl yet...	1	1	https://issues.jboss.org/browse/JGRP-806
14630	JGRP-806	Excellent ! I changed the code locally today (no commits): #1 Use of IDs (ints) rather than strings as keys: performance was about the same, but space overhead was bigger #2 Use of intern() with all keys. Performance dropped to 50% ! So it seems that the Headers class is quite efficient ! Would you be able to contribute your changes to MessageStressTest to JGroups ?	1	0	https://issues.jboss.org/browse/JGRP-806
14631	JGRP-777	This works on Linux, but does NOT work on MacOS. I'll see whether I can add a flag checking for the presence of MacOSx. Or, probably better: I check for the presence of Linux and use the MulticastSocket() constrcutor which takes a SocketAddress, and port otherwise. Cross talking does not happen on Windows and MacOSX	1	1	https://issues.jboss.org/browse/JGRP-777
14632	JGRP-757	Seems that removing Event.INFO is easier path. Do we want to remove set/getInfo API from the JChannel and along with it info map that belongs to a JChannel? Should we store previous INFO values into additional data?	0	0	https://issues.jboss.org/browse/JGRP-757

#	Requirement	Questions	Answered	Successfully Answered	URL
14633	JGRP-755	Thinking a bit more about this, I realized that a stopping channel removes all of its submitted tasks from the timer, so if we have 3 channels which hold refs to a singleton timer, and they are closed, the timer has no references to any threads anymore, so it should get GC'ed. Oh, shit, not true: the TimeScheduler is a subclass of ScheduledThreadPoolExecutor, which maintains a pool of threads. Unless they are daemon threads, this will prevent the timer from being GC'ed. Do you agree on this ? I can make the timer's threads daemon threads, which would allow timer to be GC'ed.	0	0	https://issues.jboss.org/browse/JGRP-755
14634	JGRP-739	re-opened to apply patch. Vladimir, can you look into this ?	1	1	https://issues.jboss.org/browse/JGRP-739
14635	JGRP-735	[Michael Newcomb] Upon further thinking on this issue, it seems that when discovering existing 'members', PingRsp objects that come back with PingRsp.is_server == true need to be treated differently than those PingRsp objects with PingRsp.is_server == false... Right now, they are treated the same and *both* count towards num_initial_members which can cause problems in concurrent startup situation because the concurrently starting members might receive PingRsp objects from other concurrently starting members (PingRsp.is_server == false), hit the num_initial_members threshold, and trigger formation of a new group. So, I think there needs to be a shortcut in Discovery.Responses when a PingRsp is added, it should be checked to see if it is a real member (PingRsp.is_server == true). If it is it could signal the awaiting promise? This would effectively eliminate all wait times associated with joining an existing group because as soon as you receive a response from a real member, you would join his coordinator. I think you should join the first coordinator you see, because it is the most likely case and if you have more than one coordinator, a merge is most likely in place and even with the voting process, there is no guarantee that you selected the winning coordinator anyway (may have missed the 'lowest addresses' coordinator or missed a PingRsp that would have made one coordinator have more votes than another, etc...). If you are not a coord (PingRsp.isCoord() == false), you should behave as normal and just count towards the 'num_initial_members' threshold or the full timeout as normal.	1	1	https://issues.jboss.org/browse/JGRP-735
14636	JGRP-734	With the changes, ENCRYPT14KeyStoreTest fails with 2 errors, this wasn't the case with the old BouncyCastle JAR. Can you consult with the Red Hat expert to see what's going on ?	1	1	https://issues.jboss.org/browse/JGRP-734
14637	JGRP-733	I agree with Vladimir. The question is how do we expose individual channels (and their stacks) in AS 5? I think you already do this as part of the startup of an MBean don't you Brian ? I'm closing this issue	1	0	https://issues.jboss.org/browse/JGRP-733
14638	JGRP-726	Are we postponing this one until JDK 7 and internal GR overhaul that we talked about?	1	1	https://issues.jboss.org/browse/JGRP-726
14639	JGRP-719	Vladimir, can you do this ?	0	0	https://issues.jboss.org/browse/JGRP-719
14640	JGRP-719	Can you upload patches separately? I cannot apply this patch locally! I am using Eclipse as well.	1	1	https://issues.jboss.org/browse/JGRP-719
14641	JGRP-718	Message is read from stream passed to a Message object. I assume discard_messages_larger_than flag is a property of TP? How can we use discard_messages_larger_than flag from within a Message object? Maybe we can make this flag a JVM property?	1	0	https://issues.jboss.org/browse/JGRP-718
14642	JGRP-718	Or we can make a discard_messages_larger_than a static field of TP. Automatic assignment of discard_messages_larger_than will work using @Property mechanism. Are you ok with this kludge?	1	0	https://issues.jboss.org/browse/JGRP-718
14643	JGRP-705	Possibly provide implementations (subclasses) of java.net.Socket and ServerSocket ? This would allow existing code to run unchanged, but provide the flexibility of JGroups, e.g. add a compression protocol.	0	0	https://issues.jboss.org/browse/JGRP-705
14644	JGRP-705	Issue: what do we do with connections to non-existing members ? Failure detection doesn't run because it only starts running if we have 2 or more members, and since we don't have views for unicast channels, we will never start the failure detector ! We might have to modify FD slightly (or write a new unicast failure detector, FD and FD_SOCK), which emits a notification if one of the destinations ceases to respond to heartbeats. When this is the case, we need to remove the sender window for that destination, e.g. in UNICAST, or else we will retransmit messages to the non existing destination forever !	0	0	https://issues.jboss.org/browse/JGRP-705
14645	JGRP-701	The only downside is scalability. How is FD_ALL going to scale to very large clusters?	1	1	https://issues.jboss.org/browse/JGRP-701
14646	JGRP-663	Multiplexer does not treat OOB message between MuxChannels in any special way. It is added to fifo queue just as any other message for a certain MuxChannel. Should we bypass the fifo queue and deliver OOB directly to MuxChannel?	0	0	https://issues.jboss.org/browse/JGRP-663
14647	JGRP-653	- Receiver gets an abstraction in the form of an NIO selectable channel. Handback object needs to contain sender's and receiver's address. We don't need headers, as the app can write/read additional data directly to the channel - On the sender side, we have 1 output stream for the multicast address, and N for the unicast destinations. There's an abstraction (StreamableJChannel ?) which allows us to fetch the right output stream based on the destination - Provide an implementation of blocking method calls based on StreamingJChannel - Provide a new impl of RpcDispatcher/MessageDispatcher, based on an input and output stream - How do we send OOB messages (flags in general) ?	1	1	https://issues.jboss.org/browse/JGRP-653
14648	JGRP-653	Too many open questions, e.g. - this solves an edge case in JBossCache, so the priority is not high - Do we need changes in RpcDispatcher as well ?	0	0	https://issues.jboss.org/browse/JGRP-653
14649	JGRP-644	Are you referring to renaming of a thread that pushes message up the stack on a particular shared transport? For example, if a thread pushes message up the stack on a singleton "udp" then "udp" should be appended to a thread name?	0	0	https://issues.jboss.org/browse/JGRP-644
14650	JGRP-640	Question is do we support 'cactus stacks' ? How do we ensure that e.g. a a SUSPECT event is not demultiplexed to the same protocol N times (where N == number of multiplexed protocols) ?	0	0	https://issues.jboss.org/browse/JGRP-640
14651	JGRP-637	fixed in CVS head and the 2.6 branch (2.6.1)	0	0	https://issues.jboss.org/browse/JGRP-637
14652	JGRP-608	Michael, I was aware of the these problems but as we were in the process of simplifying flush (JGRP-598) I never got around to verify how concurrent flush works with a revised FLUSH version. Would you please verify FLUSH.java version 1.75 that I checked in this morning and see if you still experience these problems. Vladimir	1	1	https://issues.jboss.org/browse/JGRP-608
14653	JGRP-608	Ok. Lets reproduce it if possible.I'll abstract a unit test that attempts to recreate this scenario. Look at FlushTest that we have in a testsuite. It checks for event sequence. What we need is a version of ConcurrentStartupTest and ConcurrentStateTransferTest that checks for event sequence. I'll see to add it today. Have you had a look at the code changes?	1	1	https://issues.jboss.org/browse/JGRP-608

#	Requirement	Questions	Answered	Successfully Answered	URL
14654	JGRP-608	197 private boolean startFlush(Event evt, int numberOfAttempts, boolean isRetry) { 198 boolean successfulFlush = false; 199 if(!flushInProgress.get() || isRetry){ 200 flush_promise.reset(); While reviewing the new code, I came across the above in FLUSH.java. Does isRetry really outweigh the fact that a flush is in progress? If a flush is in progress, is there a need to retry starting a flush? Also, further down, it is possible for a flush to complete sometime after the initial timeout waiting for the flush to complete and the time the flush is attempted again. In fact, a flush attempt that timed out, could even complete a flush has just been reset (line 200). I think that flush messages need to be tracked by member/viewid/flush# or something. So, each flush message can be checked against a flush 'id'. Also, I think that having a flush 'object' tracking all the participants, acknowledged members, and even the rejected members would also aid in the debugging process. Anyway, I'm taking the latest code into our lab and will report back soon.	1	1	https://issues.jboss.org/browse/JGRP-608
14655	JGRP-608	JGRP-618 seems to have resolved this. Well, I no longer see consecutive 'unblock' calls with 5 simultaneous joining/state-requesting group members. As a side note, do you have an estimate of when connect-with-state-transfer will be done? I could really use it for my application. Thanks again, Michael	1	1	https://issues.jboss.org/browse/JGRP-608
14656	JGRP-570	Bela, what do you think? It would be very nice to have ThreadFactory and create threads from factory. Did you talk about exposing this API so users can hook their own factory? Maybe 2.6 afterall?	0	0	https://issues.jboss.org/browse/JGRP-570
14657	JGRP-567	I don't think we need this; substates are rarely used anyway... can we close this issue ?	1	0	https://issues.jboss.org/browse/JGRP-567
14658	JGRP-528	Just a couple of questions on this issue, and hope someone could advice. (I'm sorry, if this is not the correct place to ask questions - I'm new to using this website account) Basically my software is currently using version 2.4.1 SP1. 1) Using version 2.4.1 SP1, I've encountered this issue (spurious retransmission requests) as well. Is this normal? 2) When this issue happened, the CPU shoot up to 100%. Will this issue (spurious retransmission requests) caused CPU to shoot up to 100% ? 3) Is this issue solved in version 2.6.0? 4) If I upgrade to 2.4.1 SP4, will this issue happen, and caused CPU to shoot up to 100% as well? Thanks in advance.	1	0	https://issues.jboss.org/browse/JGRP-528
14659	JGRP-518	#1 What do you want to do if none of the responses are acceptable ? Timeout ? #2 How should 'discarded' (not accepted) responses look like in the RspList ? As not-received ? I would probably have to create a new mode GET_WITH_FILTER, which requires a valid filter. Hmm, I could also *not* do this and leave it up to the user to make sure that the filter always returns: for example, if you have mode GET_ALL, and discard only 1 valid response, and don't have a timeot, you'd block forever. Idea: if I marked every response I received which PASSED the filter as RECEIVED and every response which FAILED the filter as RECEIVED_NOT_ACCEPTED, then we'd know exactly which responses passed and which ones failed. Hmm, not good either: GET_FIRST would return as soon as 1 passed or failed response is received; it it is failed then we'd return with a response which didn't pass the filter. Okay, so the simple solution is then to just drop all responses which don't pass the filter, and it is the programmer's responsibility to make sure the call doesn't hang forever ! Example: - We expect responses from A,B,C - Mode is GET_ALL and timeout is 0 (wait forever) - Get get a response from A, discard it - Get responses from B and C ==> We hang forever	1	1	https://issues.jboss.org/browse/JGRP-518
14660	JGRP-518	Timeouts are ugly. I prefer letting the filter contain logic around returning. So how about if the filter looks like: public interface ResponseFilter { boolean isAcceptable(Object response); boolean needMoreResponses(); } Does that work for you? So every time a response comes in and you use the filter to test whether the response is acceptable, you also test whether you need to wait for more responses or you can just break and return the responses received so far.	1	1	https://issues.jboss.org/browse/JGRP-518
14661	JGRP-515	I've also seen this issue on Redhat Enterprise Linux 4 (not just Fedora). I don't think specifying the class D address you want to listen to in the MulticastSocket constructor would pick the wrong NIC though I haven't tested this because I've only run this on a single homed machine. What about another option in the UDP protocol stack to specify this?	1	1	https://issues.jboss.org/browse/JGRP-515
14662	JGRP-515	Forwarding to Bela for his comment as what Neil Horman said _may_ relate to a discussion he's been having with a user on the JGroups list. Unless Bela comes back and says Neil's comment has changed his opinion on how this stuff should work, I think we should pursue the issue. Ryan Campbell wrote: > Brian, We opened this issue in the RHEL Bugzilla: > > http://wiki.jboss.org/wiki/Wiki.jsp?page=PromiscuousTraffic <http://wiki.jboss.org/wiki/Wiki.jsp?page=PromiscuousTraffic>https://bugzilla.redhat.com/bugzilla/show_bug.cgi?id=231899 > > As you can see, we even attached a program to reproduce the issue. They have closed the issue as NOTABUG. > > Aleksandar suggested that we write the program as the suggested and perhaps reopen the bug: The only thing left to check is if binding to the proper socket will result in the desired behavior. I mean 2 processes can bind to the same address(group)/port as well not receive mcast messages to other groups. > > Should we pursue the issue? I think we have a fair chance of getting it fixed if we can demonstrate that they violate the RFC. > > Thanks, > Ryan > > > ---------- > > Subject: > [Fwd: [Bug 231899] multicast incorrect handling] > From: > Aleksandar Kostadinov > Date: > Tue, 22 May 2007 16:25:13 +0300 > To: > Ryan Campbell > > To: > Ryan Campbell > > > seems reasonable... > http://tldp.org/HOWTO/Multicast-HOWTO-2.html#ss2.4 > > The only thing left to check is if binding to the proper socket will > result in the desired behavior. That means the socket in each mcreceive > process should receive all multicast traffic from all groups that any process is > added to, which is exactly what you are seeing. If you want only the first > process to receive multicast frames, then you should write a separate program to > run in step 2 that binds to 225.12.12.14:1444, rather than INADDR_ANY. > > the Jboss kbase entry should be fixed to reflect that. > -- Brian Stansberry Lead, AS Clustering JBoss, a division of Red Hat	1	1	https://issues.jboss.org/browse/JGRP-515
14663	JGRP-512	What do you mean by this Brian ? I don't think JGroups uses the 'jboss' name space anyway.	1	1	https://issues.jboss.org/browse/JGRP-512
14664	JGRP-489	Vladimir, can you take a look ?	1	1	https://issues.jboss.org/browse/JGRP-489
14665	JGRP-489	Resolved. I was able to reproduce this issue frequently while working on http://jira.jboss.com/jira/browse/JGRP-158. The core of the problem was that SocketThread at GossipRouter assigned to handled input stream from each RouterStub (client) would read incorrect values from stream. One of the values was byte array size that needs to be allocated to deserialize message from RouterStub. If the value of the size was enormous such a byte array could not be allocated resulting in OOME. So how did this happen to begin with? I noticed that RouterStub allowed multiple thread to enter block of code that was writing a messsage to GossipRouter. When I refactored this block of code to be atomic I have never encountered manifestation this problem again.	0	0	https://issues.jboss.org/browse/JGRP-489

14666	JGRP-474	Done. When running both 2.4.1 SP2 and 5.0 beta-2, we see On 2.4: [WARN] [IncomingPacketHandler (channel=DrawGroupDemo)] TP.handleIncomingPacket(): packet from 192.168.5.2:4993 has different version (4416) from ours (2.4.1). Packet is discarded On 2.5: [WARN] [Incoming Thread,DrawGroupDemo,192.168.5.2:4992] TP$IncomingPacket.run(): packet from 192.168.5.2:4989 has different version (2.4.1) from ours (2.5.0). Packet is discarded	0	0	https://issues.jboss.org/browse/JGRP-474
14667	JGRP-430	Is GR list at RouterStub static or dynamic? Do we update the list with push or pull?	1	1	https://issues.jboss.org/browse/JGRP-430
14668	JGRP-375	Can we put this one in 2.6.2 as well? It is a very simple feature to implement. Instead of sending one GET_MBRS_REQ at a time we submit each in a separate thread to the thread pool. public void sendGetMembersRequest(String cluster_name) { for(Iterator<Address> it = initial_hosts.iterator();it.hasNext();){ final Address addr = it.next(); final Message msg = new Message(addr, null, null); msg.setFlag(Message.OOB); msg.putHeader(name, new PingHeader(PingHeader.GET_MBRS_REQ, cluster_name)); if(log.isTraceEnabled()) log.trace("[FIND_INITIAL_MBRS] sending PING request to " + msg.getDest()); timer.submit(new Runnable() { public void run() { try{ down_prot.down(new Event(Event.MSG, msg)); }catch(Exception ex){ if(log.isErrorEnabled()) log.error("failed sending discovery request to " + addr, ex); } } }); } }	0	0	https://issues.jboss.org/browse/JGRP-375
14669	JGRP-340	[email by ayyagarikiran at gmail.com] I have added BasicConnectionTable for routing. I have some doubts in that regard (please suggest me after reading this at your convenient time, will continue my dbugging till then) 1. I think the AddressEntry class is no longer needed due to the use of BasicConnectionTable 2. The Gossip requests CONNECT and DISCONNECT are also not needed 3. For every incoming request the BasicConnectionTable's readPeerAddress() method is getting called and is expecting a cookie and the address information so I am able to send requests only after writing that information from the GossipClient.(please see the writeGossipData() method in the attached GossipClient file) Is this way of writing cookie and Address info is correct (Connection.sendLocalAddress() didn't help as it is called only as part of getting a connection) 4. am able to send and register (after following the 3rd step) the GossipRouter.REGISTER request only if I add a check the network bytes available condition in BasicConnectionTable at line no. 588 if(in.available() > 0) { // read int Is this change acceptable? Not having that check is resulting in the below exception 10626 [TRACE] GossipRouter$SocketThread.receive(): - REGISTER(mygroup, 127.0.0.1:7000) 10626 [TRACE] BasicConnectionTable$Connection.run(): - exception is java.io.EOFException 10626 [TRACE] BasicConnectionTable$Connection.run(): - ConnectionTable.Connection.Receiver terminated 5. The ConnectionTable is expecting a non null address for every incoming request which may not be possible with the Gossip GET request.	0	0	https://issues.jboss.org/browse/JGRP-340
14670	JGRP-324	unicast address or a multicast address. Both types of packets have the same payload format (i.e. when we strip off the UDP header, we are left with a payload with the same format). It is this payload which Wireshark will have to dissect. JGroups uses message bundling to put several Messages into one UDP packet. Bundling can either be turned on or turned off, so we have to be able to handle both formats. UDP payload (non-bundled) ---------- version (2 bytes) flags (1 byte) Message (variable length) UDP payload (bundled) ---------- version (2 bytes) flags (1 byte) length (4 bytes) Address (variable length) Message (first bundled message - variable length) Message (second bundled message variable length) ... Message ('length' bundled message- variable length) NOTES: 1. In order to dissect these packets, we need to be able to dissect Address and Message. Address is read using Util.readAddress(). Message is read using Message.readFrom() 2. version format: e.g. JGroups 2.6.2 * X = 0-31 for major versions * Y = 0-31 for minor versions * Z = 0-63 for micro versions See the org.jgroups.Version class for algorithm on how to decode the version. 3. flags format: LIST (0x1) MULITCAST (0x10) OOB (0x100) 4. We can tell whether bundling is turned on by the value the expression (flags & LIST): * if (flags & LIST == false), then after reading version and flags, we expect only one message in the packet * if (flags & LIST == true), then after reading version and flags, we read length and expect 'length' messages in the packet In order to dissect the UDP payload, we need to be able to dissect serialized Address and Message objects. ---------- --- Address wireformat ---------- Address is a JGroups class which represents an 'address'. Depending on the transport we are using, this could be an <IP address, port> combination, or a JMS topic. The in-memory value of an Address is written/serialized using Util.writeAddress(). The wireformat is: isnull (variable length) isIpAddress (variable length) contents (variable length) The values isnull ("is the address equal to null?") and isIpAddress("is the address an IpAddress instance") are encoded Boolean values. Contents is variable and involves shipping classes across the wire. See the method org.jgroups.util.Util.writeAddress() for the specifc details. ---------- Message wireformat ---------- Message is a JGroups class and represents data shipped around the system. Messages contain the following data elements: dest_addr - destination address of the Message src_addr - source address of the Message flags - flags data - payload of the message list of headers - headers which Protocols use to store information Messages are written to the wire using the method org.jgroups.Message.writeTo(). The wireformat is: leading (1 byte) flags (1 byte) dest_addr (variable length) src_addr (variable length) buflen (4 bytes) buf ('buflen' bytes) numhdrs (2 bytes) (Key, Header) (first Header - variable length) (Key, Header) (second Header -variable length) ... (Key, Header) ('numhdrs' Header - variable length) NOTES: 1. leading is a set of flags indicating which elements have been written to the wireformat and which have not. DEST_SET (0x0000001) SRC_SET (0x0000010) BUF_SET (0x0000100) IPADDR_DEST (0x0010000) IPADDR_SRC (0x0100000) SRC_HOST_NULL (0x1000000) 2. flags indicate properties of the Message, whether it is out of bound, etc. OOB (0x001) LOW_PRIO (0x010) HIGH_PRIO (0x100) 3. dest_addr and src_addr are written using either IpAddress.writeTo() or Util.writeAddress(), depending on whether the Address is an IpAddress instance or not. I suspect that almost all will be IpAddress instances. See the method org.jgroups.Message.writeTo() for the specifc details on how Message is serialized. ---------- (Key, Header) wireformat ---------- Header is a JGroups class, and each protocol will have its own versions (e.g. TPHeader, FRAGHeader, etc.) which are subclasses of Header. Each Message has zero or more Headers associated with it. Each Header entry consists of a key and a value (e.g. ("UDP", TPHeader), ("FRAG", FRAGHeader), etc.) The wireformat is: key (variable length) magic (2 bytes) class (variable length, only if magic == -1) size (2 bytes) contents (variable length) NOTES: 1. key is the UTF8 encoding of the key String (e.g. "FRAG") 2. magic is the magic number	1	1	https://issues.jboss.org/browse/JGRP-324

#	Requirement	Questions	Answered	Successfully Answered	URL
14671	JGRP-324	Hello Yamato-san I spent a little more time looking at JGroups wireformats. I sent you earlier the wireformat for JGroups messages as sent by UDP/TCP. I wanted to add to that a concrete protocol as well, and I have done so for the lowest level protocol sitting on top of UDP/TCP - the PING protocol. I have included the wireformat for that message at the end of this email. Just as a reminder, we have the following structure for things sent across the wire in JGroups (up to and including PING): * Ethernet frame ** UDP/TCP packet *** JGroups TP packet, containing a header and one or more bundled Messages **** Message containing a PING header 1. I believe we now have enough information to start putting together a dissector which will handle completely PING messages. A PING message is going to be Message structure which contains a single PING header. We should make it our aim to get this working as a next step. The key problems I see in getting this working are: (i) dealing with bundled messages - Messages can contain one or more bundled Messages and as a first step in receiving a TP packet, need to be able to unbundle it if necessary. (ii) writing small C routines to dissect Address instances - Address instances are embedded both in TP packets, serialized Messages, as well as serialized PingHeaders. Solving (i) will involve reading up on how Wireshark handles bundled messages and getting some basic framework working to display the individual packets within a bundle in some reasonable way on the Wireshark GUI. Solving (ii) will simply be a matter of writing a Wireshark routine for displaying an arbitrary JGroups Address - mimicking the code in Util.readAddress(). Shouldn't be too difficult. 2. If you need a svn repository to store your Wireshark code, I can set up a repo for you on our internal QA repository. What do you think about 1 & 2? Richard PING wire format (PingHeader) ========== byte type: (1=PingHeader.GET_MBRS_REQ, 2=PingHeader.GET_MBRS_RSP) PingRsp response: can take value null, or a PingRsp instance PingRsp class ========== Address local ; Address coord ; boolean is_server ; These elements are serialised using PingRsp.writeTo() and PingRsp.readFrom() methods, which use DataStream methods to write bthe small pieces which make up the serialzed form. For example, Addresses are written using a combination of Util.writeStreamable() and Address.writeTo().	1	1	https://issues.jboss.org/browse/JGRP-324
14672	JGRP-324	I've created a new CVS project for the JGroups Wireshark plugin on SF under the name wireshark-plugin and uploaded a *draft* version of the plugin to SF. You can visit the project at http://javagroups.cvs.sourceforge.net/javagroups/wireshark-plugin. The project contains the sources for the plugin, some sample Wireshark capture files created using the JGroups Draw application, and instructions on how to get the plugin working with Wireshark. This plugin has been only minimally tested over UDP, and will be subject to continued development over the next couple of months. Up until the time we feel it is stable and release a "version", please keep in mind it is in a state of development and use is "as is". A few points: 1. The plugin should be able to display complete JGroups bundles (i.e. the TP header, all Messages in a bundle, as well as all Headers within a Message. At present, only TP and PING headers are fully processed; for the others, we just display the header key (e.g. STABLE) and the header size. 2. There is a user preferences section available from Edit->Preferences->Protocols->JGroups. The main options here you will need are: (i) telling Wireshark which port to associate with JGroups messages (ii) turning on debugging fields - which show pretty much all fields in the JGroups Message, as opposed to those which users would really be interested in. The next immediate development steps will be trying to get the UI presentation right and then testing over more JGroups configurations. Later development will deal with handling Wireshark conversations.	1	1	https://issues.jboss.org/browse/JGRP-324
14673	JGRP-324	Richard, it would be good if we can tie the type of dissector to the version of JGroups. This should be simple IMO, as the version ID (the short) is the first thing a JGroups message contains. I have a feeling the wire format's going to change once more in 2.8, with logical addresses, so it would be good if we can already now tie the dissector to the version, so when/if the wire format changes, we can still parse messages from previous versions. Do you think this is doable ?	1	0	https://issues.jboss.org/browse/JGRP-324
14674	JGRP-324	One comment, one question: 1. Comment: At present, the JGroups wireshark dissector (and every other dissector i've looked at) is written in this way: while (still more data in buffer) { - read some expected data item from the payload buffer and deserialize if necessary (using knowledge of the format of the data) - display the data on the user interface - advance the offset into the buffer by the length of the data read } I structured the code for the above loop into a set of functions, so it really looks like this: while(still more data in buffer) { - read and display TP header - get number of messages in bundle - for each (message in bundle) { - read and display message header - read and display message payload - get number of headers attached to message for each (header in message) { - read and display header } } } So, I have a lot of functions to carry out this work (2500 lines of C), from reading Digests and ViewIDs to deserializing class info based on magic numbers. And each function which involves reading from the payload buffer includes assumptions about the format of the payload buffer and its contents. So, knowledge of the wireformat is at present buried and scattered all over the code. One approach to handle different versions would be to scatter version checks throughout the single copy of the dissector (as in the old C code which runs on different platforms). Another approach would be to have a dissector for each version, but there is so much common code.....and every time we added a new chunk of code to the dissector, we would have to add it for each version. So, its unclear to me how to proceed with handling different versions at present. Another thought is to have wireformat specifications for each version, specifying the order in which data appears, the type, the display names, and so on, and base the dissector to work off that wireformat. But i'm not sure if that would be any better than including version information within the dissector itself (as in the old C style approach). 2. Question How many times has the wireformat changed, for which versions, and for which reasons? (i.e. what part of the format has changed)? Maybe if we look at the changes that have taken place (and might take place), a solution will present itself?	0	0	https://issues.jboss.org/browse/JGRP-324
14675	JGRP-278	Should the SocketFactory SPI be a singleton ? If yes, what are the implications regarding classloading ? We don't want to create 1 factory per classloader !	0	0	https://issues.jboss.org/browse/JGRP-278
14676	JGRP-236	How are we going to handle multiple concurrent joins(view bundling) where some joining members require transfer and others not?	0	0	https://issues.jboss.org/browse/JGRP-236

#	Requirement	Questions	Answered	Successfully Answered	URL
14677	JGRP-196	Email to Scott: Definitions: * Major: 1, minor: 1.1, micro: 1.1.1 * API compatibility: breaking is allowed between major versions * Binary compatibility: breaking is allowed between minor versions * Configuration compatibility: breaking is allowed between minor versions * Changes between micro versions: only implementation changes So, while incompatible API changes are not allowed between minor releases, there are allowed between major releases. That's why we have queued API changes to JBossCache and make them only in release 2.0. However, adding to an API, which doesn't break code using the API, is okay. We discussed design of a framework which allows for pluggable marshallers. Each message (or state transfer in JBossCache) is preceeded by a version number (a short in JGroups). That version number is key into a hashmap, whose values are marshallers. A marshaller knows how to unmarshall a message with a given version number to the one used by the current node. So, by convention, it is always the receiver, never the sender who has to be able to unmarshall messages with a version number different from its own. The marshalling tables are populated ar startup time, based on a directory (or shipped within the JAR and defined in META-INF, TBD). Each JAR has one or multiple marshallers and contains information in the META-INF about the version numbers they handle. This has not been thought through 100%, but I think it will work, and provide both backward and forward binary compatibility. Forward compatibility is an interesting one, as we could simply make new JARs available when new binary-incompatible versions are released, which can be downloaded (e.g. via JBoss Network), and simply be placed into the plugin directory. So, to upgrade a cluster to a new version, you'd copy the new JAR into the plugin dir, and restart the cluster in a staggered fashion. Once this is done, we'd simply restart each node in turn, with the new version. NOW, this is quite some work... I know, some folks are anal about binary compatibility around here, but IMO we're spending 90% of the time solving the 1% problem. For example, when customers switch from JDK 1.4.2 to 5, or from 5 to 6, both cases result in binary incompatibility, which our mechanism won't fix. So, customers will have to restart their clusters altogether. The other thing is that, even assuming the JDK migration is compatible, the JDKs themselves have changed serialVersionUIDs over and over between minor releases, so this won't help either. I intend to tackle this issue in JGroups 2.4: JGroups: http://jira.jboss.com/jira/browse/JGRP-196. Manik has a similar JIRA task, and we'll try to come up with a common solution. Thoughts ?	0	0	https://issues.jboss.org/browse/JGRP-196
14678	JGRP-188	which system properties can you not read from an applet ?	1	1	https://issues.jboss.org/browse/JGRP-188
14679	JGRP-188	Julien, what do you suggest we change ?	1	0	https://issues.jboss.org/browse/JGRP-188
14680	JGRP-181	Question is should we remove queues altogether ? That would mean we have only 1 set of semantics, but we'd have to go through each protocol to see whether it is reentrant	0	0	https://issues.jboss.org/browse/JGRP-181
14681	JGRP-181	- Remove up and down queues - The Channel.send() method runs on the caller's thread - Messages/events have (1) a reliability flag (http://jira.jboss.com/jira/browse/JGRP-180) and (2) a FIFO flag - When the reliability is set, when passing an event up/down, and an exception occurs, we retry (after N ms pause) to deliver the event, until no exception is encountered (this prevents intra-stack loss) - We have a thread pool at the transport level - The receiver thread passes the message to the threadpool if the FIFO flag is *not* set. This means the message can essentially be treated as an out-of-band message, and it can be passed up the stack on its own thread from the thread pool, asynchronous to other messages. When the FIFO flag is set, we pass the message up in the right order viz other messages, this can be done by enqueueing it and having a single thread handle the queue, or by using the receiver's thread (the one that called DatagramSocket.receive()). - The thread pool would be util.concurrent's Executor, and is externalized (with a default), so devs can plug in their own thread pool impl	0	0	https://issues.jboss.org/browse/JGRP-181
14682	JGRP-178	Hi Takayoshi, so you are saying that you did see the NAKACK problem with 2.2.9/2.2.9.1 but *not* with 2.3 beta ? Was that NAKACK problem reproducible ? Cheers,	0	0	https://issues.jboss.org/browse/JGRP-178
14683	JGRP-178	Looks like the jgroups NAKACK error has been fixed in 2.3beta. But we are still seeing the runPrepare phase failed during load from JBossCache that leads to timeout exception. So can it be that JGroups ate the TImeoutEception previously that leads to this error?	0	0	https://issues.jboss.org/browse/JGRP-178
14684	JGRP-178	Is this issue still present or can I close this case ?	1	1	https://issues.jboss.org/browse/JGRP-178
14685	JGRP-130	Is there an ETA on this functionality/2.6?	0	0	https://issues.jboss.org/browse/JGRP-130
14686	JGRP-130	Implementing GMS.reject_join_from_existing_member pretty much fixed this issue. I don't see the need for logical addresses any more. I added a comment to http://jira.jboss.com/jira/browse/JGRP-129. What do people think, is there still a compelling reason we need logical addresses ?	1	1	https://issues.jboss.org/browse/JGRP-130
14687	JGRP-130	This is resolved...is there a release with the new code in it? Do I need to compile from svn?	0	0	https://issues.jboss.org/browse/JGRP-130
14688	JGRP-130	Bela, seems the problem can be resolved without logic addresses, I looked into detailed logs and can see that almost everything works perfectly: the member who sent JOIN_REQ receives JOIN_RESP but ignores it, I do not know why. Maybe my tcp configuration is incorrect or I missed something?	1	1	https://issues.jboss.org/browse/JGRP-130
14689	JGRP-129	Has this code changed since JGroups 2.2.8? We have recently upgraded from JGroups 2.2.8 to 2.2.9.1 and we have a member in a cluster which utilizes a Virtual IP. With JGroups 2.2.8, the member with the virtual IP had no problems joining the group, however after we upgraded to 2.2.9.1, we noticed that that particular server was sending join requests to the coordinator, the coordinator received the requests, sent the join response to the virtual IP, but the participant never received the join response. As a result, the participant continues to send join requests and is never able to join the group. After removing the virtual IP, the node was able to connect to the group successfully. We would like to use the virtual IP for our system for failover, where a passive server can claim the same IP if the primary server goes down for some reason. Is there a hot-fix or workaround that we can use in our system to allow our configuration to work? Thanks. This is the config that we are using: <config> <UDP loopback="false" mcast_recv_buf_size="16384" mcast_send_buf_size="8192" mcast_addr="228.1.2.3" mcast_port="45566" ip_ttl="32" /> <PING down_thread="false" up_thread="false" timeout="5000" num_initial_members="2" /> <FD down_thread="false" up_thread="false" timeout="5000" max_tries="3" shun="true" /> <VERIFY_SUSPECT down_thread="false" up_thread="false" timeout="5000" num_msgs="5" /> <pbcast.NAKACK down_thread="false" up_thread="false" gc_lag="20" retransmit_timeout="300,600,1200,2400,4800,7000,9000" max_xmit_size="4096" discard_delivered_msgs="true" /> <UNICAST down_thread="false" up_thread="false" /> <pbcast.STABLE down_thread="false" up_thread="false" /> <pbcast.GMS down_thread="false" up_thread="false" join_timeout="5000" join_retry_timeout="2000" shun="true" print_local_addr="true" /> <FLOW_CONTROL down_thread="false" up_thread="false" /> <FRAG down_thread="false" up_thread="false" frag_size="4096" /> <COMPRESS down_thread="false" up_thread="false" min_size="50000" /> <VIEW_ENFORCER down_thread="false" up_thread="false" /> </config>	1	1	https://issues.jboss.org/browse/JGRP-129

14690	JGRP-129	I'm not sure I want to introduce logical addresses. This is regarding JGRP-129 (logical addresses) and JGRP-130 (problems with reincarnation). JGRP-130 is about a member that leaves and rejoins *under the same IP address and port (using bind/start_port)* before failure detection kicks it out. I implemented a fix for this, which won't allow a member into the group that's already in the group. In the above case, with A and B, B would have to wait until the cluster is {A} before it can rejoin. JGRP-129 is about providing a logical address (possibly host + system time in ms (plus 1 for same system times) for a member, which can be mapped to a physical host/port combo. It would add 4 bytes/address, and I don't see the benefits of this. The original motivation was that when a member gets shunned, it rejoins under a new identity. Sacha didn't like this and therefore added 'logical addresses' in JBoss, which creates a logical address for a member. So when that member is shunned and rejoins under a *new* JGroups address, it would still keep the *old* JBoss logical address. I tend to leave it this way, as I don't want to add something which - adds clutter (Host:26634425614 looks less readable than Host:4536) - adds 4 bytes / IpAddress - has some additional lookup in the transport to find the real physical address to which the logical address maps - needs some ARP-like traffic for establishing local tables which map logical to physical addresses What do people think ?	0	0	https://issues.jboss.org/browse/JGRP-129
14691	JGRP-118	Can the state_id be a byte[]? This would allow the app to use any type of object, for instance a serialized Fqn (which cannot always be accurately represented as a string).	1	1	https://issues.jboss.org/browse/JGRP-118
14692	JGRP-118	Can't you use a string rep of the Fqn ? I'll think about it...	0	0	https://issues.jboss.org/browse/JGRP-118
14693	JGRP-111	- RpcDispatcherSpeedTest -mode method now runs 230 methods/sec (was: 122/sec) - Added MessageDispatcherSpeedTest, SynchronousMessageSpeedTest - RequestCorrelator.Header now supports Streamable - GroupRequest: changed synchronization and streamlined code - GroupRequest: added mode "id" - Added GroupRequestTest unit test	0	0	https://issues.jboss.org/browse/JGRP-111
14694	JGRP-104	Okay, I'm adding this to JGroups, so that if jboss.partition.udpGroup is set, it will override the property mcast_addr in the XML file. While at it, would you want to override the mcast_port as well (jboss.partition.udpPort) ? This will be in JGroups 2.2.9	1	1	https://issues.jboss.org/browse/JGRP-104
14695	JGRP-104	"Okay, I'm adding this to JGroups, so that if jboss.partition.udpGroup is set, it will override the property mcast_addr in the XML file. While at it, would you want to override the mcast_port as well (jboss.partition.udpPort) ? " Does this still allow somebody to explicitly set the mcast_addr? e.g. somebody might want all the channels on one jboss.partition.udpGroup except one which is part of a greater federated cluster. I was thinking that the system property could be used to allow users to not specify the value instead using the value specified at JVM boot time through the system property. It would also be good (but probably requires a separate feature request) to use something like a gossip server to automatically lease unique udp addresses like a DHCP server does for ip addresses, such that developers on a network can isolate themselves during testing.	0	0	https://issues.jboss.org/browse/JGRP-104
14696	JGRP-100	Further points to look at: GMS: - Is the single coordinator a bottle neck ? When a coord hangs, it won't be able to admit new nodes into the cluster, until it is suspected and excluded - Use view_bundling Failure detection: - Replace FD with FD_ALL TP, timers: - Increase thread pools NAKACK: - Set use_mcast_xmit="true" if UDP is used. UDP is recommended anyway for large clusters - Use stats for xmit_timeouts ? PBCAST: - Revisit ? SMACK: - Use instead of NAKACK ? Doesn't require GMS - Improve: don't ack every single message ! FC: - Increase max_credits FRAG2: - Use instead of FRAG - Get latest version (fix for https://jira.jboss.org/jira/browse/JGRP-800) Streaming API (?): - For large values ? Discovery: - Use only servers, not clients (https://jira.jboss.org/jira/browse/JGRP-735) - Workaround: set num_responses to a large value, so we do get some server responses	0	0	https://issues.jboss.org/browse/JGRP-100
14697	JGRP-84	// Author: Bela Ban // $Id: JmxSupport.txt,v 1.2 2005/06/14 14:00:59 belaban Exp $ JMX support for JGroups ========== In 2.2.9, JMX support was added to JGroups. There were several design goals: - No dependencies on JMX if JMX support is not required. It should be possible to ship a JGroups version without any JMX support, and without jmxri.jar (for JDK 1.4.x). Therefore channels and protocols are not turned into MBeans, e.g. FD doesn't implement FDMBean. Instead, a parallel MBean and MBeanImpl hierarchy was created, where the MBeanImpl delegates to the real protocol. This hierarchy is located in package org.jgroups.jmx. For a protocol org.jgroups.protocols.P, there is a corresponding org.jgroups.jmx.protocols.PMBean MBean and an implementation org.jgroups.jmx.protocols.P - No negative effect on performance, minimal effect on memory. JMX support can be disabled in the channel, and all protocols (stats="false") - Support for running in a pre-JMX JDK (1.4, for example), e.g. under JBoss. There is a jgroups-service target in the ANT build which generates a jgroups-service.sar that can be deployed into JBoss. The channel defines in the META-INF/jboss-service.xml file of the SAR defines a JGroups channel MBean, which will automatically create MBeans for all protocols and register them with the MBeanServer - Support for running in JDK 5 standalone. JDK 5 has JMX support built in. The jconsole tool can be used to inspect the MBean hierarchy. To programmatically create MBean support for JDK 5, the following code can be used: JChannel channel; channel.connect(groupname); ArrayList servers=MBeanServerFactory.findMBeanServer(null); if(servers == null || servers.size() == 0) { throw new Exception("No MBeanServers found;" + "\nJmxTest needs to be run with an MBeanServer present, or inside JDK 5"); } MBeanServer server=(MBeanServer)servers.get(0); JmxConfigurator.registerChannel(channel, server, "JGroups:channel=" + channel.getChannelName() , true); JmxConfigurator has a number of helper methods which register and de-register the channel and/or te protocols attached to a given channel. Provided information ---------- Some information provided includes (all info can be reset), besides configuration: - UDP: messages sent/received, bytes sent/received (per member) - Discovery: manual triggering of discovery - NAKACK: retransmissions per member, last N retransmitted messages, lowest and highest sequence numbers per member - GMS: membership, history of views - FD/FD_SOCK: last N suspected members - STATE_TRANSFER: number of state requests, total bytes transferred - STABLE: manual triggering of STABLE protocol Example ------- The Draw program was modified to support JMX. The following steps describe how to configure and run a JDK 5 VM and look at the resulting Draw application via jconsole. - Run the Draw program (the JDK needs to be 5 !): java -Dcom.sun.management.jmxremote org.jgroups.demos.Draw -props c:\fc-fast.xml -jmx (the -jmx flag enables registering the Channel and protocols with the MBeanServer) - Start jconsole and connect to the local Draw process - Under 'MBeans', choose the JGroups channel and browse the channel and the protocols - [optional] Add the STATS protocol to the top of the stack; it display information about messages sent and received	1	1	https://issues.jboss.org/browse/JGRP-84

14698	JGRP-82	Here's a copy of FLUSH.txt FLUSH protocol for default stack ================================ Author: Bela Ban Version: $Id: FLUSH.txt,v 1.2 2006/01/27 13:00:00 belaban Exp $ Overview -------- Flushing means that all members of a group flush their pending messages. The process of flushing acquiesces the cluster so that state transfer or a join can be done. It is also called the stop-the-world model as nobody will be able to send messages while a flush is in process. When is it needed ? ---------- (1) On state transfer. When a member requests state transfer, the coordinator tells everyone to stop sending messages and waits for everyone's ack. Then it asks the application for its state and ships it back to the requester. After the requester has received and set the state successfully, the coordinator tells everyone to resume sending messages. (2) On view changes (e.g.a join). Before installing a new view V2, flushing would ensure that all messages *sent* in the current view V1 are indeed *delivered* in V1, rather than in V2 (in all non-faulty members). This is essentially Virtual Synchrony. Design ------ As another protocol FLUSH which handles a FLUSH event. FLUSH sits just below the channel, e.g. above STATE_TRANSFER and FC. STATE_TRANSFER and GMS can be configured with a boolean use_flush attribute which determines whether flushing is used on state transfer and/or view changes. If so, the protocol just sends a SUSPEND event up the stack, where it is handled by the FLUSH protcol. The SUSPEND_OK ack sent back by the FLUSH protocol let's the caller know that the flush has completed. When done (e.g. view was installed or state transferred), the protocol sends up a RESUME event, which will allow everyone in the cluster to resume sending. FLUSH protocol: - On SUSPEND event: multicast START_FLUSH to everyone (including self) - On reception of START_FLUSH: - set suspended flag to true, all subsequent down() methods will block on mutex - *multicast* a FLUSH_OK message - On reception of FLUSH_OK at non-coordinator: discard - On reception of FLUSH_OK at coordinator: - Record FLUSH_OK in vector (1 per member) - Once FLUSH_OK messages have been received from all members --> send down SUSPEND_OK event (in case of crash notification: mark that member's entry as received, so we don't hang forever) - On RESUME event: multicast STOP_FLUSH message - On reception of STOP_FLUSH message: unblock down() - On view change: - Mark crashed member as 'received' (see above) - On suspect(P) - If P is the coordinator and we're next in line - Run the FLUSH protocol from scratch Notes ---- *Multicasting* (as compared to unicasting) the FLUSH_OK message is required so we can be sure that the FLUSH_OK message sent by P is the last message received from P before P stopped sending messages. Since we're waiting on everyone's FLUSH_OK, we can be assured that everyone's previous messages were received (thanks to reliable mcast).	1	1	https://issues.jboss.org/browse/JGRP-82
14699	JGRP-74	Test is StateTransferTest	0	0	https://issues.jboss.org/browse/JGRP-74
14700	JGRP-65	From Eric: For the transmit queue: $ /sbin/ifconfig [eth0|eth1] The txqueue size is currently 1000. To get the kernel queue size for incoming packets: $ sysctl -a | grep net.core.netdev_max_backlog For socket buffer info: $ sysctl -a | grep net.core net.core.divert_version = 0.46 net.core.hot_list_length = 128 net.core.optmem_max = 10240 net.core.message_burst = 50 net.core.message_cost = 5 net.core.mod_cong = 290 net.core.lo_cong = 100 net.core.no_cong = 20 net.core.no_cong_thresh = 20 net.core.netdev_max_backlog = 300 net.core.dev_weight = 64 ** these are the default and max sizes for socket buffer memory net.core.rmem_default = 65535 net.core.wmem_default = 65535 net.core.rmem_max = 131071 net.core.wmem_max = 131071 Here are some other links: Squeeze Your Gigabit NIC for Top Performance http://www.enterpriseitplanet.com/networking/features/article.php/3497796 How to achieve Gigabit speeds with Linux http://datatag.web.cern.ch/datatag/howto/tcp.html Enabling High Performance Data Transfers http://www.psc.edu/networking/projects/tcptune/ >> #2 What's the MTU (do you use jumbo frames, or the regular 1500b) ? In general, we have not tuned this environment. This needs to be addressed as part of the QA Lab upgrades we're targeting for next month. I'll be creating some Jira tasks and working with Ryan's team on this, so we should discuss the network needs along with other system relates topics (oracle tuning, etc.). Regular 1500 for now. We need to revisit this for some upcoming QA lab updates were doing. If we need a dedicated GIGE switch for testing, we need to get this in the budget (I think it's worth the 1.5k myself). If we can't get a dedicated switch, we'll see if we can enable the jumbo frames on the private side subnet (but this requires ALL connected machines be gige w/ jumbo frame support - not an issue w/ the current hw, but something to think about).	1	1	https://issues.jboss.org/browse/JGRP-65
14701	JGRP-28	[Lez Haslewoord] We don't want to use the bind.address property, as it sets that value for the entire VM and all components that reference it (i.e. clustering for DefaultPartition, Tomcat-Cluster, etc). The client requirement is to run JBoss in clustering mode at all times, but only have a node join the group when desired. When testing, the developers just want to bind to the localhost to ensure the mcast packets aren't sent to other members on the network, thereby preventing an undesireable group membership. The only change needed to go to production would be to change the bind address to the default (eth0) ip/interface. Given the following UDP stack config on 2 separate machines (or 2 jboss instances on the same machine): <UDP mcast_addr="228.1.2.3" mcast_port="45566" bind_addr="127.0.0.1" ip_ttl="32" ip_mcast="true" mcast_send_buf_size="800000" mcast_recv_buf_size="150000" ucast_send_buf_size="800000" ucast_recv_buf_size="150000" loopback="true"/> we verified the following w/ ethereal on a 3rd machine in the same network (this machine isn't running JBoss - we're just using it as a network sniffer): 1. During startup of node 1 and node 2, no JGroups UDP packets originating from either host are being sent on the network. (so far, so good) 2. Long after both nodes have started up, no JGroups UDP packets originating from either host are being sent on the network. (still good) 3. If either node shuts down their JBoss instance, 1 and only 1 JGroups UDP packet originating from that node is being sent to the network during shutdown. (not so good). This means that packet was not swallowed by the loopback interface, and intead it was sent via the default interface (eth0), even though we've explicitly configured the UDP stack to _not_ do that. I'm not sure why that 1 packet would be sent (maybe its related to broadcasting a member leave event?). The concern in this case is that we don't want other machines on the network to receive that packet, implying that other nodes do exist. If it _is_ a leave event, the other members would probably ignore it since the node that sent it was never part of their group to begin with. That may be the case, but it would be nice to know why this packet ever goes to the network on the default interface, instead of being swallowed by the loopback interface as it should have been.	0	0	https://issues.jboss.org/browse/JGRP-28

14702	JOPR-320	(8:49:29 AM) ccrouch: i'm not sure these new names are going to be any clearer to a basic user (8:49:34 AM) ccrouch: what do you think? (8:51:12 AM) ccrouch: are the following better?: (8:51:12 AM) ccrouch: Enterprise Apps (8:51:12 AM) ccrouch: EJB2 Apps (8:51:12 AM) ccrouch: EJB3 Apps (8:51:12 AM) ccrouch: Embedded Web Apps (8:51:12 AM) ccrouch: Resource Archives (8:51:12 AM) ccrouch: Standalone Web Apps (8:51:21 AM) ccrouch: ozizka: comments? (8:56:00 AM) ozizka: ccrouch: Hi, I don't know how native english speakers call those app types, (8:56:27 AM) ozizka: but afaik, everyone I know just uses the abbrevs. (8:57:13 AM) ozizka: If it were up to me, I would use something like EAR (Enterprise Archive) and similar (8:58:06 AM) ccrouch: ozizka: yeah i think we need something more than three letter acronyms here (8:59:21 AM) ips: ccrouch - there's also the res description which contains a more verbose version (8:59:42 AM) ips: i like keeping the res type names concise for the sake of the leftnav (9:00:04 AM) ccrouch: but aren't we just working around the real problem (9:00:13 AM) ccrouch: that you cant drag the left nav to make it wider? (9:00:17 AM) ips: don't you think any jboss admin/oper will know what war, ear means? (9:01:24 AM) ips: yes and no, even once we support that, it's nice to not have to make the leftnav overly wide, since it steals real estate from the content (9:05:58 AM) ccrouch: try, but i think we can do better than what we have now, maybe smaller font or something along the hybrid approach ozizka mentioned (9:05:58 AM) ccrouch: anyways i'm reopening and moving to 1.3 so we can think about it some more	1	1	https://issues.jboss.org/browse/JOPR-320
14703	JOPR-320	(9:06:48 AM) ips: ccrouch - ok. of course, we need to finalize the names before jon 2.3, since the names are also the keys for restypes (9:07:15 AM) ccrouch: yep (9:07:31 AM) ccrouch: but don't we have a displayname and a real name? (9:07:33 AM) ips: (why did we do that? we should have both name and displayName like we have for every other metadata entity) (9:07:42 AM) ccrouch: ha (9:07:43 AM) ips: :) (9:08:31 AM) ccrouch: +1, thats bad. We should see about adding a displayName, which if not present just defaults to the real name (9:09:03 AM) ccrouch: one other thing (9:09:03 AM) ccrouch: EJB2 is not strictly accurate since EJB1.x beans would go in there too? (9:10:30 AM) ccrouch: also for consistency we should think about embedded ejb jars i guess, or are they included already	1	1	https://issues.jboss.org/browse/JOPR-320
14704	JOPR-296	<ips> jweiss - the reason it was closed is bc if we don't fix it for 2.3, we probably won't ever fix it <jweiss> ips: you mean you *can't* fix it which should have upped the urgency to fix it now <ips> bc it would require changing resource types, which we don't even support ie - once we get the as5 plugin out in the wild, we wouldn't be able to cleanly upgrade users' existing DS and CF resources <jweiss> ips: i hear you. i think that's a great reason to fix it now <ips> so if you really feel strongly about it, i'd try to convince greg or charles to fix it for 2.3 <jweiss> ips: ok. ccrouch ^ let me know what you think <ips> i personally am in favor of keeping it as is, bc i think 3 restypes for the different types of DS's makes more sense since they have disparate properties <jweiss> ips: so you think the as4 way was wrong and it's too late to change that one <joseph> ips, jweiss: using the enhancements to the resourceType/plugin drop-down, can you filter it such that you can see all datasources on a page? <ips> yeah, too late to change the as4 one because we don't support renaming or merging/splitting restypes joseph: the AS5 plugin has a Datasources subcat so you can see all datasources using the leftnav <joseph> i mean from res browser <ips> we could potentially incorporate subcat headings into other pulldown menus, but i think right now they're only used by the leftnav <jweiss> hm. ok ips you convinced me. since the ideal fix is not possible, and making it consistent would be the "wrong" fix, i guess there's no other option but to leave it as is	0	0	https://issues.jboss.org/browse/JOPR-296
14705	JOPR-262	Is this in Jopr 2.3.1? Rhq-agent is not able to detect my JBoss 5 instance with a secured JMX console. Do I have to give rhq-agent the JBoss path or specify some other configuration?	0	0	https://issues.jboss.org/browse/JOPR-262
14706	JOPR-258	Do we have a JON logo to replace them with or should there just not be any logo?	1	1	https://issues.jboss.org/browse/JOPR-258
14707	JOPR-258	> Charles Crouch: From greg: Still need to replace the web icon I assume you mean the favicon. What do we want to use - the new JBoss logo?	1	1	https://issues.jboss.org/browse/JOPR-258
14708	JOPR-230	Lukas, does the SBM actually expose a property which gives us the list of available binding sets? If it does, we could present that as a readonly list to the user, so they could choose the correct one	1	1	https://issues.jboss.org/browse/JOPR-230
14709	JOPR-230	The users can see the list of the defined binding sets as children of the Service Binding Manager in the resource tree. I originally planned for exactly this feature (i.e. the selection being a combobox) but, for the reasons Charles mentioned, I failed at it. We could certainly expose the readonly list directly on the edit page but I didn't do that because I found it a bit confusing. Additionally, as I mentioned above, the user is able to get at the list by expanding the Service Binding Manager resource in the nav tree. I agree with Ondrej that this isn't the most bulletproof approach but at least there is a check present that will prevent the user from entering a non-existant binding set name. I.e. an attempt to save the configuration with an invalid binding set name will result in an exception. An attempt to delete a binding set that is currently active throws an exception as well. For now, I will add a note in the property description describing the dangers and effects of changing the active binding set name. What other options do we have to make this more intuitive and foolproof?	0	0	https://issues.jboss.org/browse/JOPR-230
14710	JOPR-210	rev751 only added support for 2 metrics, create and remove counts, and an operation fro retrieving method invocation statistics for session beans. We need to make sure we implement as much of the metrics mentioned in JBAS-6625 as possible. This is a table of what was requested and what Profile Service offers: SLSB Create Calls = CreateCount Remove Calls = RemoveCount Method-Ready Beans = ? Pool Size = ? Max Pool Size = ? SFSB Create Calls = CreateCount Remove Calls = RemoveCount Method-Ready Beans = ? Passive Beans = ? Entity Beans Create Calls = CreateCount Remove Calls = RemoveCount Method-Ready Beans = ? Pooled Beans = CacheSize? Cache Size = CacheSize? Passivated Count = ? Current Size = ? Max Size = ? MDB Create Calls = CreateCount Remove Calls = RemoveCount Method-Ready Beans = ? ? = MessageCount The DetypedInvocationStatistics managed component provided by Profile Service offers these properties: - concurrentCalls - maxConcurrentCalls But what do they mean exactly?	1	1	https://issues.jboss.org/browse/JOPR-210
14711	JOPR-178	Where would I find these call-time metrics? I have deployed a sample EJB3 jar but I see nothing that indicated what, if any, call-time metrics exist or should exist.	0	0	https://issues.jboss.org/browse/JOPR-178

#	Requirement	Questions	Answered	Successfully Answered	URL
14712	JOPR-177	Okay, I've seen that JON 2.2 already contains a feature like this (Type = DiskSource). Unfortunately, I am not able to fill it with EARs or WARs. What I did: 1. Create new Content Source 2. Root Directory = [somewhere on my local disk] 3. Filename Filter: .*\.ear 4. Package Type Name: ear 5. Architecture: noarch 6. Resource Type Name: JBossAS Server 7. Resource Type Plugin Name: JBossAS I put a file called TestSeam-1.0.0.ear on the path specified by [2]. After pressing on Synchronize, I get the following log: 2009-05-06 01:05:42,146 INFO [org.rhq.enterprise.server.plugin.content.ContentSourcePluginContainer] Scheduled content source sync job [b99c6466--dead438--121130681fc:syncContentSource] to fire now at [Wed May 06 01:05:42 CEST 2009] for [ContentSource: id=[500050], name=[My Apps]] 2009-05-06 01:05:42,193 INFO [org.rhq.enterprise.server.plugin.content.ContentSourceAdapterManager] synchronizeContentSource: [My Apps]: loaded existing list of size=[0] (6)ms 2009-05-06 01:05:42,282 INFO [org.rhq.enterprise.server.plugin.content.ContentSourceAdapterManager] synchronizeContentSource: [My Apps]: got sync report from adapter=[PackageSyncReport: new=[1], updated=[0], deleted=[0]] (85)ms 2009-05-06 01:05:42,300 WARN [org.rhq.enterprise.server.content.ContentSourceManagerBean] Content source adapter found a package of an unknown package type [ear|ResourceType[id=500568, category=Server, name=JBossAS Server, plugin=JBossAS]] Skipping it. 2009-05-06 01:05:42,314 INFO [org.rhq.enterprise.server.plugin.content.ContentSourceAdapterManager] synchronizeContentSource: [My Apps]: report has been merged (28)ms 2009-05-06 01:05:42,324 INFO [org.rhq.enterprise.server.scheduler.jobs.ContentSourceSyncJob] Content source [My Apps] is fully synchronized now. 14713	JOPR-171	I built and deployed the app attached to this jira, and can view the xml feed, but I cannot download "patches/jboss-5.0.0.GA_CP01.zip", it tells me it's not found if I try to manually download it -- that is, despite the fact that it's quite evidently there on the filesystem. Is there something that needs to be configured on my end to make this test app work? Update: I hacked up the XML to host the patch on a different server. This appears to get me past the issue above. However, attempting to deploy to any EAP5 server returns a Failure with an NPE that reads akin to: java.lang.NullPointerException at org.rhq.plugins.jbossas5.ApplicationServerContentFacetDelegate.deployPackages(ApplicationServerContentFacetDelegate.java:112) at org.rhq.plugins.jbossas5.ApplicationServerComponent.deployPackages(ApplicationServerComponent.java:279) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:616) at org.rhq.core.pc.inventory.ResourceContainer$ComponentInvocationThread.call(ResourceContainer.java:525) at java.util.concurrent.FutureTask$Sync.innerRun(FutureTask.java:334) at java.util.concurrent.FutureTask.run(FutureTask.java:166) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:636)	1	1	https://issues.jboss.org/browse/JOPR-171
14714	JOPR-169	Asaf, please look into whether we can do restart/stop via the Profile Service, or whether we will have to use JMX. Also, please describe your impl plan - do you plan on providing the option to use either a script or a JMX (or PS) operation for restart and stop, as we have in the as4 plugin? Start will, of course, have to be done via script :)	0	0	https://issues.jboss.org/browse/JOPR-169
14715	JOPR-166	What exactly do you have in mind? Just the plain JDBC check if the JDBC-url + credentials are valid?	1	0	https://issues.jboss.org/browse/JOPR-166
14716	JOPR-162	Shelly can you attach the .rar you are using for this test	0	0	https://issues.jboss.org/browse/JOPR-162
14717	JOPR-159	The amount of flexibility in the ServiceBindingManager is precisely what makes managing this stuff difficult. You can use the service or not and you can use it different ways. In the end it can be difficult for Jopr to figure out where the data came from. Was it xslt'd? etc. To be honest, it's probably easier for us to go around to each different service file and gather up the ports and display it on one page then to work backwards through these bindings. Or do you think with AS5 we have to just assume their using the new default setup of the SBM?	0	0	https://issues.jboss.org/browse/JOPR-159
14718	JOPR-137	Farah, Do you want to try tackling this one? It should consist of just adding an additional resource-config property to the as5-plugin's descriptor.	1	1	https://issues.jboss.org/browse/JOPR-137
14719	JOPR-137	Ian, I tried adding the following resource-config property locally to the as5-plugin's descriptor: <resource-configuration> <c:simple-property name="partitionName" displayName="Partition Name" description="The name of the cluster partition this app server instance belongs to" type="string"/> </resource-configuration> However, when I deployed the console and tried to click on the "Configuration" tab for "JBoss AS 5 (default)", the following error occurred: 14:49:56,910 ERROR [PluginContainerResourceManager] Error retrieving configuration for resource: Resource[id=-3, type=JBossAS Server, key=/home/fjuma/jbossas5/jbpapp_5_0/JBPAPP_5_0/build/output/jboss-5.0.0.Beta/server/default, name=JBoss AS 5 (default), parent=tool.yyz.redhat.com, version=5.0.0.Beta] org.rhq.core.clientapi.agent.PluginContainerException: Cannot load Resource configuration for [-3] at org.rhq.core.pc.configuration.ConfigurationManager.loadResourceConfiguration(ConfigurationManager.java:174) at org.jboss.on.embedded.manager.pc.PluginContainerResourceManager.getResourceConfiguration(PluginContainerResourceManager.java:235) at org.jboss.on.embedded.ui.configuration.resource.ResourceConfigurationUIBean.resourceConfiguration(ResourceConfigurationUIBean.java:144) I took a look at BaseServerConfig.java (https://svn.jboss.org/repos/jbossas/projects/bootstrap/tags/jboss-bootstrap-1.0.1/src/main/java/org/jboss/bootstrap/BaseServerConfig.java) and it looks like the "partitionName" property is not marked as ViewUse.CONFIGURATION. Could this be causing the error I'm seeing? (I deployed the console to the EAP branch.)	1	1	https://issues.jboss.org/browse/JOPR-137
14720	JOPR-137	Farah, In my comment I said the partition name should be a resource config prop, but it should actually be a trait. I'm sorry about that! As for the exception you're seeing, is there more to the stack trace? It seems like the root cause is missing.	1	1	https://issues.jboss.org/browse/JOPR-137
14721	JOPR-137	Has all AS4 traits plus "Server home dir", "Server Name". rev880	0	0	https://issues.jboss.org/browse/JOPR-137
14722	JOPR-134	Jopr currently doesn't support raw config editing, which is what it would take to allow editing of run.bat/run.sh. However, we could fairly easily add Configuration support for adding/updating/deleting environment variables from run.conf/run.conf.bat. I think 95% of what people would update in the start scripts is env variables (e.g. JAVA_OPTS) anyway. Would you find that useful?	1	0	https://issues.jboss.org/browse/JOPR-134

#	Requirement	Questions	Answered	Successfully Answered	URL
14723	JOPR-108	It looks like there may be more of an issue here than just a missing type in the enum. In the JBAS 5.x source, I see: https://anonsvn.jboss.org/repos/jbossas/branches/Branch_5_x/connector/src/main/org/jboss/resource/metadata/mcf/TxConnectionFactoryDeploymentMetaData.java which defines the @ManagementComponent(type="ConnectionFactory",subtype="XA") componentType. and: https://anonsvn.jboss.org/repos/jbossas/branches/Branch_5_x/connector/src/main/org/jboss/resource/metadata/mcf/NoTxConnectionFactoryDeploymentMetaData.java which defines the @ManagementComponent(type="ConnectionFactory",subtype="NoTx") componentType. But I do -not- see anything which defines the @ManagementComponent(type="ConnectionFactory",subtype="LocalTx") componentType. I see: https://anonsvn.jboss.org/repos/jbossas/branches/Branch_5_x/connector/src/main/org/jboss/resource/metadata/mcf/ManagedConnectionFactoryDeploymentMetaData.java but that appears to just be a base class for the specific CF types. Scott, can you comment?	1	1	https://issues.jboss.org/browse/JOPR-108
14724	JOPR-78	The new RTfilter does its best to determine the contextRoot - get it from the container if servlet spec 2.5 else get it from jboss-web.xml if present else (still to be implemented) get it from application.xml else fall back to parts of the webapp name (which will change if the user calles the app foo-1.war, foo-2.war etc).	0	0	https://issues.jboss.org/browse/JOPR-78
14725	JOPR-78	I'm not sure its the responsibility of the RTFilter to be doing this. Shouldnt this be done as part of the webapp discovery?	0	0	https://issues.jboss.org/browse/JOPR-78
14726	JOPR-73	So how did this get implemented?	1	0	https://issues.jboss.org/browse/JOPR-73
14727	JOPR-73	(5:12:12 AM) fdrabek: about JOPR-73 Add support for changing arguments passed to start/stop operations I thought that it is allready possible to change the arguments in scripts (5:13:00 AM) fdrabek: Was that request about it or did you mean something else? (5:18:52 AM) ccrouch: ok let me describe what i was thinking about when i raised this (5:21:43 AM) ccrouch: <but first off I should say this is probably a lower priority fix that we shouldnt be looking at right now :-)> (5:22:47 AM) fdrabek: oki. I will contact you when I will finish the rest of my tasks .... (5:23:47 AM) ccrouch: so if the issue with the start and stop operations is that they are a different sort of script based operation compared to the operations on a JBAS Script resource type (5:24:42 AM) ccrouch: for start and stop all you can do is to change in the config properties for the JBAS instance where the scripts reside, i.e. their path (5:25:00 AM) ccrouch: you can't change the arguments that we actually pass to those scripts (5:28:04 AM) fdrabek: you can change the Command Line Arguments and enviroment variable ... (5:30:44 AM) ccrouch: where? (5:37:09 AM) ccrouch: i can see that you alter the arguments to a regular script, but thats not how the stop/start JBoss ops work (5:48:40 AM) ccrouch: for instance the command line arguments passed to the start script are hardcoded inside of JBossASServerOperationsDelegate.start() (5:53:17 AM) fdrabek: <operation name="execute" displayName="Execute Script" (5:53:17 AM) fdrabek: description="execute the script; NOTE: environment variables to be (5:53:17 AM) fdrabek: passed to the script can be configured via this Script (5:53:17 AM) fdrabek: service's connection properties (under its Inventory tab)"> (5:53:17 AM) fdrabek: <parameters> (5:53:18 AM) fdrabek: <c:simple-property name="commandLineArguments" type="longString" required="false" (5:53:18 AM) fdrabek: description="the command-line arguments (if any) to pass to the script; each (5:53:19 AM) fdrabek: command-line argument must be on a new line; (5:53:19 AM) fdrabek: the arguments can contain properties (5:53:20 AM) fdrabek: with the syntax %propertyName%; the script plugin will interpolate these with (5:53:20 AM) fdrabek: the current values of the corresponding properties from the (5:53:21 AM) fdrabek: script's parent JBossAS server's connection properties"/> (5:53:21 AM) fdrabek: </parameters> (5:53:22 AM) fdrabek: <results> (5:53:22 AM) fdrabek: <c:simple-property name="exitCode" type="integer" description="the script's exit code (0 indicates success, any other value indicates failure)"/> (5:53:22 AM) fdrabek: <c:simple-property name="output" type="longString" description="the script's output (stdout and stderr interleaved)"/> (5:53:23 AM) fdrabek: </results> (5:53:24 AM) fdrabek: </operation> (5:53:38 AM) fdrabek: the parameters is taken from c:simple-property name="commandLineArguments" (5:54:12 AM) ccrouch: right, and all of that is completed ignored for the start/stop operations :-) (5:54:18 AM) ccrouch: completely (5:54:26 AM) ccrouch: (5:48:40 AM) ccrouch: for instance the command line arguments passed to the start script are hardcoded inside of JBossASServerOperationsDelegate.start() (5:58:00 AM) fdrabek: bingo (5:58:29 AM) fdrabek: thanks for your time charles :) (5:59:21 AM) ccrouch: so what JOPR-73 was about was externalising those start/stop parameters so that they could be changed based on the scripts being called, e.g. some scripts may want to use something other than -c or -b to pass in the config and bind address params	1	0	https://issues.jboss.org/browse/JOPR-73
14728	JOPR-39	Are you really sure you are testing with the latest version of the JBAS plugin? after rev 384 ?	1	1	https://issues.jboss.org/browse/JOPR-39
14729	JSFUNIT-296	This issue ties into the ideas expressed here, ARQ-578. Basically moving JSFUnit 'out' of the container, and instead have 'assertion' objects piggy back on 'any' http request that get executed incontainer on e.g. AfterRender	1	0	https://issues.jboss.org/browse/JSFUNIT-296
14730	JSFUNIT-273	Looks nice. Will non-CDI deployments be able to use method injection for JSFSession, JSFClientSession, and JSFServerSession? public class MyTest { // no instance vars @Test @InitialPage("/index.faces") public myTest(JSFSession jsfSession, JSFClientSession client, JSFServerSession server) {} }	1	1	https://issues.jboss.org/browse/JSFUNIT-273
14731	JSFUNIT-244	I'm updating the fix version for this one to 1.4.0.Final. It's probably doable. Is it something you still need? Would you like to contribute a patch to RichFacesClient?	0	0	https://issues.jboss.org/browse/JSFUNIT-244
14732	JSFUNIT-225	Hi Sanket, JSFUnit/HtmlUnit should behave the same way as a browser. So if your application redirects, then JSFUnit/HtmlUnit should do the same. Exactly how is the redirect initiated? Do you have an example where this is not working? Stan	1	1	https://issues.jboss.org/browse/JSFUNIT-225
14733	JSFUNIT-203	I done some profiling of my own this week. It looks like request/response handling is not the bottleneck at all. It always comes down to HtmlUnit and Rhino. I profiled a non-AJAX application. In that case, the bottleneck is in scanning the HTML page. So the problem is in DOM processing. A secondary bottleneck is (surprisingly), initializing the javascript engine. If you aren't using javascript then telling HtmlUnit that you aren't using javascript should speed things up. But how realistic is that? Even one of the standard JSF components, <h:commandLink>, uses javascript. When I profiled an AJAX application, I found that javascript processing was the bottleneck. This means that to speed things up, you have to speed up Rhino, which HtmlUnit is using for javascript processing. So it looks to me like anything we do to speed up JSFUnit will involve helping the HtmlUnit team to come up with optimizations of their code. I've attached my JProfiler snapshot files.	1	1	https://issues.jboss.org/browse/JSFUNIT-203
14734	JSFUNIT-194	Fixed. The latest snapshot of Mojarra 2.0 has an error page that is almost exactly like the Facelets page. So I can easily check for either error page.	0	0	https://issues.jboss.org/browse/JSFUNIT-194
14735	JSFUNIT-140	Hi Maly, Would you be willing to help out with this and other static analysis issues?	0	0	https://issues.jboss.org/browse/JSFUNIT-140

#	Requirement	Questions	Answered	Successfully Answered	URL
14736	JSFUNIT-96	Thanks Brian! Normally, I try to collect the whole component tree so that JSFUnit tests can assert server-side state on unrendered components. But as you discovered, that's rather impractical with a large UIData. I just committed a fix that does this: int rowsToDisplay = component.getRows(); if (rowsToDisplay == 0) rowsToDisplay = component.getRowCount(); for (int i=0; i < rowsToDisplay; i++) if setRows() was never called on the component the getRows() will return zero, which means "display everything". So I have to use both methods. Can you give that a try and let me know if it solves your problem?	1	1	https://issues.jboss.org/browse/JSFUNIT-96
14737	JSFUNIT-47	Have you tried the third option? That one may work. Please let me know if it does. I suspect that we have the same issue as with Seam conversation scope. In Seam, since the scope instance is referenced with a ThreadLocal, we need to move that reference to the test thread at the end of the HTTP request. We do this currently with FacesContext so that FacesContext.getCurrentInstance() will work. We will look into this for both Seam and Trinidad for Beta 2.	1	1	https://issues.jboss.org/browse/JSFUNIT-47
14738	JSFUNIT-25	Shouldn't this issue be moved to StaticAnalysis?	0	0	https://issues.jboss.org/browse/JSFUNIT-25
14739	JSFUNIT-2	Is there any plans to continue looking into this effort? or are the current ant tasks sufficient? Also, what is the current status with renaming it to "jsfunity"	1	0	https://issues.jboss.org/browse/JSFUNIT-2
14740	KEYCLOAK-5069	Shouldn't we also add test for this? [~sebastienblanc] What do you think?	1	1	https://issues.jboss.org/browse/KEYCLOAK-5069
14741	KEYCLOAK-5018	KeycloakConfigResolver let's you do whatever you want. keycloak.json already supports sys props and env variables. So what's the problem?	0	0	https://issues.jboss.org/browse/KEYCLOAK-5018
14742	KEYCLOAK-5004	This is not a bug, nor is it security sensitive.	0	0	https://issues.jboss.org/browse/KEYCLOAK-5004
14743	KEYCLOAK-4989	I'm assuming this is when passwords are updated through Keycloak. Is it not the responsibility of the LDAP server to hash the passwords when the password is being updated?	1	0	https://issues.jboss.org/browse/KEYCLOAK-4989
14744	KEYCLOAK-4989	Can we change this to a feature request and update the summary to be more specific? I don't think it needs to be security sensitive either.	1	0	https://issues.jboss.org/browse/KEYCLOAK-4989
14745	KEYCLOAK-4986	[~vmuzikar] I don't think this is a bug right? Is this by any change breaking something? Unless this is blocking the community version for some reason, I don't see the point of having two versions of package.json	1	1	https://issues.jboss.org/browse/KEYCLOAK-4986
14746	KEYCLOAK-4982	[~stianst] I suddenly understood why you need all the modules, it's for your set-version.sh script, correct ? So what about creating a profile `bump-version` that contains all the modules and that you activate when you run the set-version script ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4982
14747	KEYCLOAK-4971	Hey [~stianst], I've played a bit with export/import of client and I've found out I'm not quite sure about some stuff. When I export a client, lets say account to account.json. Then remove account client from list of clients. Now account management is not available, http://localhost:8080/auth/realms/master/account shows empty page and 'Admin' -> 'Manage account' navigation returns me back to admin console. And then I create a new client using import from the file. But now http://localhost:8080/auth/realms/master/account shows "We're sorry ... No access" and in log there is {noformat} WARN [org.jboss.resteasy.resteasy_jaxrs.i18n] (default task-80) RESTEASY002142: Multiple resource methods match request "GET /realms/master/account". Selecting one. Matching methods: [public javax.ws.rs.core.Response org.keycloak.services.resources.AccountService.accountPageJson(), public javax.ws.rs.core.Response org.keycloak.services.resources.AccountService.accountPage()] {noformat} Q1: Should be really possible to delete 'account' client and also 'security-admin-console'? (when you delete security-admin-console admin console shows just Not found) Q2: In case it should be possible to delete 'account' . Shouldn't account management work when you re-create account client from the file? Q3: In account.json there are also IDs. like "id": "ddb3b034-0fff-4ac5-9aee-0cc445ef5949" and I've tried following scenario: 1. export account to account.json 2. create new client using import from account.json -> error message "Client account already exists" -> OK 3. change the name of the client in input field clientId to account1 -> "Client account1 already exists" -> not OK, client account1 doesn't exists, the problem is that protocolMapper of the client already exists. So change the message? Can you please look at it? Thanks	1	1	https://issues.jboss.org/browse/KEYCLOAK-4971
14748	KEYCLOAK-4946	Would it make sense to do something similar also for auth-utils?	1	0	https://issues.jboss.org/browse/KEYCLOAK-4946
14749	KEYCLOAK-4915	[~stianst] [~pcraveiro] At what point does the UI review need to be done? Do I need to review what is in 7.1 or should I wait until the 7.2 feature is completed?	1	0	https://issues.jboss.org/browse/KEYCLOAK-4915
14750	KEYCLOAK-4914	[~bill.burke] Can you close this issue once you've reviewed all authorization services APIs and are happy with them?	0	0	https://issues.jboss.org/browse/KEYCLOAK-4914
14751	KEYCLOAK-4895	I've got one question though. [~ssilvert], in the PR you are mentioning that you'll discuss the possibilities of downloading the JS dependencies using Maven and not Node.js which then creates the non-relevant node_modules dir structure etc. In the end, are there any plans for this? Or at least to get rid of the node_modules folder? Do we really need to use Node.js (on top of Maven) for it?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4895
14752	KEYCLOAK-4881	Out of curiosity what's the use-case for this?	0	0	https://issues.jboss.org/browse/KEYCLOAK-4881
14753	KEYCLOAK-4874	The fix should be included in 3.1.0.Final. [~bettina_h], are you using this version ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4874
14754	KEYCLOAK-4827	Hey [~stianst] I've tried to create such a test [1] what you suggested. But I cannot reproduce the issue the the test what I wrote. Can you take a look? Maybe I am missing something. I'm testing it on 2.5.5.Final. The test adds several clients, all of them have the same redirect uri pointing to the existing app. Then it performs login request and then accesses different clients in multiple threads and checks if the user is logged in. Thank you. [1] https://github.com/vramik/keycloak/commit/d1bb1e65312e4a09748083880207f739a5fc9f50	1	1	https://issues.jboss.org/browse/KEYCLOAK-4827
14755	KEYCLOAK-4727	Hey [~bill.burke], what do you plan to do with https://github.com/keycloak/keycloak/blob/master/testsuite/integration-arquillian/tests/base/src/test/java/org/keycloak/testsuite/admin/FineGrainAdminLocalTest.java#L58?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4727
14756	KEYCLOAK-4727	[~vramik] What do you mean? These tests are for some new features that I'm working on.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4727
14757	KEYCLOAK-4666	Shouldn't only the social provider that was used to authenticate be logged-out?	0	0	https://issues.jboss.org/browse/KEYCLOAK-4666
14758	KEYCLOAK-4644	Wouldn't this be covered by KEYCLOAK-4184? Basically a user profile should only be updated through identity broker if: * The user was initially created as login from that specific provider * The user has not been updated through the account management console or admin console	1	1	https://issues.jboss.org/browse/KEYCLOAK-4644
14759	KEYCLOAK-4627	Hi [~hmlnarik]. This sounds really good. One question though: apart from being able to configure these new action tokens separately what we are also looking for is a way to persist them. In our flow these tokens will be very long lived (as in weeks) and we want very much for them to survive Keycloak restarts/redeploys because we do those quite often (because we have integrated the build of Keycloak in our automated delivery pipeline). Are these tokens persisted in the Keycloak database or if not can this be done (by us) without too much effort?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4627

#	Requirement	Questions	Answered	Successfully Answered	URL
14760	KEYCLOAK-4627	Hi [~hmlnarik], if they survive Keycloak restart, that is good enough for us. :-) Just for my understanding: how can they survive restarts if they are not persisted? This seems to indicate that they are not very unique and not very secure then? I would expect that in order to create (and validate) them you use something (pseudo)random and something with the timestamp?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4627
14761	KEYCLOAK-4626	Can we have the same ID for authentication session and user session. There should only ever be one authentication session per user session. For example if user logs in to app1, but abonds the login on the OTP page, then tries to login to app2 later the user should be prompted with the first step in the authentication flow and eventually be logged-in to app2.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4626
14762	KEYCLOAK-4580	I guess we have a use case which fits this feature request, but I'm not sure. Our scenario is: We have a central OIDC Provider (not Keycloak-based) which creates access and identity tokens. We want to use the identity token with the [JWT Bearer Flow|http://example.com] to retrieve Keycloak tokens from Keycloak. The Keycloak tokens are than used to access Keycloak secured services. There is also a [Token Exchange Spec |https://tools.ietf.org/html/draft-ietf-oauth-token-exchange-08] (currently draft), which in my opinion offers much more possibilities and should also be able to satisfy the above use case. This feature request seems to be more tailored for the Token Exchange Spec. Am I right with my assumptions? P.S. I guess this feature request would also be the correct way to implement this issue https://issues.jboss.org/browse/KEYCLOAK-910.	0	0	https://issues.jboss.org/browse/KEYCLOAK-4580
14763	KEYCLOAK-4560	Is there an official workaround? Deployments with downtime are essentially a deal breaker when using KC for end user authentication and you have thousands of active users 24/7... :(	0	0	https://issues.jboss.org/browse/KEYCLOAK-4560
14764	KEYCLOAK-4517	I'm currently working on this issue. Unfortunately I'm randomly getting this error for some tests: {code:java} com.gargoylesoftware.htmlunit.FailingHttpStatusCodeException: Too much redirect for http://localhost:8180/offline-client {code} Do you have any idea how to solve this? WIP can be found here: https://github.com/daklassen/keycloak/commit/18814b13fc1237703045cddd954dccf2cf7800d1	1	0	https://issues.jboss.org/browse/KEYCLOAK-4517
14765	KEYCLOAK-4517	In those cases, I usually tries to simulate issue manually and debug the cause. What is helpful is, that I temporarily add this snippet in the beginning of test method: {code} @Test public void yourTest() { Thread.sleep(1000000000); // Here is rest of the test, which you can simulate manually through your browser } {code} and manually simulate the actions done in test. Another suggestion might be to try run the test with different browser to isolate if it's htmlUnit specific issue. For example you can run test with this property: {code} -Dbrowser=phantomjs {code} and test will use PhantomJSDriver instead of default htmlUnit.	0	0	https://issues.jboss.org/browse/KEYCLOAK-4517
14766	KEYCLOAK-4512	Is something like this (http://lists.jboss.org/pipermail/keycloak-dev/2017-February/008891.html) meant here? I made a custom authenticator which does the following: Users are logging in via SAML IdP initiated SSO request, and if their realm has configured other IdPs, we are showing a page where they can log in to the other IdPs so in the end the Keycloak account is linked to the two external IdPs. We've managed to do this with custom first/post broker login authentication flows, with a custom authenticator which shows a .ftl with the buttons you would normally see on the login screen if you have external IdPs configured. Basicly the authenticator does this; {code} public void authenticate(final AuthenticationFlowContext context) { final List<IdentityProviderModel> unlinkedIdps = getUnlinkedIdps(context); if (!unlinkedIdps.isEmpty()) { LOG.debug("unlinkedIdps not empty, show IDP links page"); final LoginFormsProvider loginFormsProvider = context.form(); loginFormsProvider.setAttribute("unlinkedIdps", unlinkedIdps); loginFormsProvider.setInfo("unlinkedIdpsMessage", getLinkedIdpsAsString(context)); context.challenge(loginFormsProvider.createForm("show-idp-links.ftl")); } else { LOG.debug("unlinkedIdps empty, no need to show IDP links page"); context.success(); } } ... // logic for determining unlinkedIdps {code} the ftl: {code} ... <#list social.providers as p> <#list unlinkedIdps as unlinkedIdp> <#if unlinkedIdp.alias == p.alias> <span class="text">${p.displayName} </#list> ... {code}	0	0	https://issues.jboss.org/browse/KEYCLOAK-4512
14767	KEYCLOAK-4501	edit: I've found https://github.com/keycloak/keycloak/commit/b4f625e1ce572bb18cefb7535b8b26d99b7caaeb so it seems the tests are there. What remains is to solve KEYCLOAK-4534	0	0	https://issues.jboss.org/browse/KEYCLOAK-4501
14768	KEYCLOAK-4444	[~vmuzikar] looks like this feature request is a duplicate with https://issues.jboss.org/browse/KEYCLOAK-4445. Could you please take at the PR attached (https://github.com/keycloak/keycloak/pull/4017) and see if that's enough for you?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4444
14769	KEYCLOAK-4437	There's a fairly good chance KEYCLOAK-4338 has fixed this issue. Do you know how to reproduce this issue?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4437
14770	KEYCLOAK-4437	Is there any updates of this issue? I had the same problem here. So, I'd like to know if this issue still occurs in the newer version of keycloak.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4437
14771	KEYCLOAK-4437	[~stianst], thanks for reply! Sure! I tested in 3.0.0 version, so I'll update my app. Thanks a lot!	1	1	https://issues.jboss.org/browse/KEYCLOAK-4437
14772	KEYCLOAK-4435	We actually do have tests in Node.js https://github.com/keycloak/keycloak-nodejs-connect/tree/master/test. But I'm 110% sure that they must be improved, maybe we can get what you have here https://github.com/keycloak/keycloak/tree/master/testsuite/integration-arquillian/tests/other/nodejs_adapter and migrate to Node.js? Also the usage of Node.js will be pretty much as a backend. I'm not against Webdriver, but do you see a scenario where it should be used?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4435
14773	KEYCLOAK-4429	I don't disagree that often it's useful to have the account created locally. There are sceario's though where you want to rely solely on the information from an external IdP. Our use case is we have users (e.g. userA) who want to access our system using an external IdP. They login using the external IdP and are created an account in our keycloak db. Our keycloak relam also has a read-only federation with LDAP for our corporate users. At some point later on, userA is provisioned an account in our LDAP (corpA). Now they have two accounts in our keycloak realm. Ideally, userA was never created and instead they can now easily link corpA with their external IdP login.	1	0	https://issues.jboss.org/browse/KEYCLOAK-4429
14774	KEYCLOAK-4429	[~stianst] Yes. Linking the two accounts, internal and ldap federated, would probably work. How would / could this be done? My initial feeling is that linking the two might actually complicate the situation rather than making it simpler.	0	0	https://issues.jboss.org/browse/KEYCLOAK-4429
14775	KEYCLOAK-4412	By the way why would you need multiple directories even with full server? Just point it to "themes/src/main/resources/theme" all the sources are there.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4412
14776	KEYCLOAK-4412	Actually, let's take a step back. Is what you're trying to do is to run the console tests with quick changes to the themes? Or are you trying to start a full server and allow quickly changing the themes?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4412
14777	KEYCLOAK-4412	First, I haven't been able to get these tests running with Undertow. Any tips? There is no documentation for the console tests. But I thought we were trying to get away from using Undertow anyway? Second, how would I deal with tests that use custom themes? This requires the ability to change themes in two directories without rebuilding everything.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4412

#	Requirement	Questions	Answered	Successfully Answered	URL
14778	KEYCLOAK-4412	We are getting away from the old testsuite, but the new testsuite supports different containers (embedded Undertow, full server dist and server overlay on wf/eap). Undertow is the default container so just running the console tests from the IDE should do the trick. If that doesn't work there's a bug in there. Not sure about the custom themes. That's a very specific set of tests though, so is that really a big deal? In either case that should be sorted out in embedded server as that's what should be used for quick testing during development. It should be done specifically for the embedded KeycloakServer, not by adding a undocumented/untested feature in the server dist. Could be done with a custom theme loader or something like that.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4412
14779	KEYCLOAK-4379	I think this is an interesting topic. When will this be available or at least if we get time frame would be nice.	1	0	https://issues.jboss.org/browse/KEYCLOAK-4379
14780	KEYCLOAK-4376	I wasn't sure if I should open an issue or just leave a comment here since this seems very related. We recently have run into this issue with building a custom account theme and using multi-valued attributes. Since the AccountBean only returns the first element in the multi valued array its is impossible to display these in the template: [AccountBean.java|https://github.com/keycloak/keycloak/blob/2.5.1.Final/services/src/main/java/org/keycloak/forms/account/freemarker/model/AccountBean.java#L49] We have figured out how to post these multi values attributes through the form but cannot display them to the user after they leave the page and return. I see a TODO in the code but as a short term work around could the AccountBean expose these properties through a delimited string {code}attribute1=aaaa##bbbb##cccc{code} similiar to the admin interface? Or do you have a better idea, maybe the solution to this issue will fix the problem. Can the attributes that get injected into freemarker template just be an array?	1	0	https://issues.jboss.org/browse/KEYCLOAK-4376
14781	KEYCLOAK-4365	Are you using OpenAM SP (client libraries) with Keycloak as the IdP? If so can OpenAM SP be configured to either not use PasswordProtectedTransport or to accept unspecified? It will help us decide on priorities for this issue.	1	0	https://issues.jboss.org/browse/KEYCLOAK-4365
14782	KEYCLOAK-4333	Can you explain why it's a problem to change the password through LDAP when Kerberos is used?	0	0	https://issues.jboss.org/browse/KEYCLOAK-4333
14783	KEYCLOAK-4333	Hello, In my case, what I want to do is just to allow to change a principal Kerberos password through KeyCloak. This means that the user is taken from the LDAP but the authentication is done by Kerberos. So the LDAP is only used to verify that the principal exists. Keycloak would have a open feature to verify if a principal exists and change the principal kerberos password. I would not mind to start to work on it on my free time, but I never add an add-on nor know how to add a new feature in Keycloak. Could you send me some info privately about that? Cheers	0	0	https://issues.jboss.org/browse/KEYCLOAK-4333
14784	KEYCLOAK-4333	[~mposolda] can you comment on this issue please? Perhaps give some hints on how it could be implemented if it makes sense to add?	1	0	https://issues.jboss.org/browse/KEYCLOAK-4333
14785	KEYCLOAK-4271	[~mposolda] can you pls review Migration test for offline tokens for manual migration via applying sql script? There is link to log where you can see test results (for db2 in this case): https://keycloak-jenkins.rhev-ci-vms.eng.rdu2.redhat.com/view/vramik/job/keycloak-jpa-migration-manual/DB=db2-105,jdk=mw_oraclejdk8,label_exp=rhel,migrated_version=test-70-migration/123/testReport/ Auto migration works fine.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4271
14786	KEYCLOAK-4246	I do not want to rewrite/refactor the LDAP provider, nor do I ever want to take on this task. :) We only refactor things if we want to expose the LDAPMapperProvider as an SPI, IMO.	1	0	https://issues.jboss.org/browse/KEYCLOAK-4246
14787	KEYCLOAK-4204	I have only added messages for English for the GUI, where can I get help to get this translated?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4204
14788	KEYCLOAK-4204	We don't maintain the non-English translations and expect someone from the community to translate it at some point. It'll fallback to English in either case.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4204
14789	KEYCLOAK-4204	[~stianst], I don't want to be a bother but is there a possibility someone can take a new look at the PR I made three months ago? I have fixed a few merge conflicts but the PR haven't been merged still - is there a reason why you guys haven't merged it? It would be nice if someone could shed some light on this so that we are not waiting in vain, because this is really a critical feature for our use case. :)	1	1	https://issues.jboss.org/browse/KEYCLOAK-4204
14790	KEYCLOAK-4136	Based on the existing code in the ProtectedResource i'm currently using this code to call the update endpoint: {code:java} try { String token = this.authzClient.obtainAccessToken().getToken(); URI uri = new URI("http://127.0.0.1:8080/auth/realms/photoz/authz/protection/resource_set/" + resource.getId()); final RequestBuilder requestBuilder = RequestBuilder.put(uri); final HttpMethod httpMethod = new HttpMethod(this.configuration, requestBuilder); Object response = httpMethod .authorizationBearer(token) .json(JsonSerialization.writeValueAsBytes(resource)) .response().json(Object.class).execute(); LOG.info("Update Resource Response of object {}", response); } catch (IOException | URISyntaxException e) { throw new RuntimeException("Could not update the given resource", e); } {code} The request contains the content-type: application/json as you stated. But still no succes. As requested I checked the PUT request in the admin console, but the requests differ: Admin console: {code} http://127.0.0.1:8080/auth/admin/realms/photoz/clients/afdefd3f-d121-425a-80a6-77267a75d72b/authz/resource-server/resource/7fa1bf65-8f41-414d-9194-2a7313b954ed {code} AuthzClient: {code} http://127.0.0.1:8080/auth/realms/photoz/authz/protection/resource_set/7fa1bf65-8f41-414d-9194-2a7313b954ed {code} Are they using the same endpoint underwater? I attempted to alter my URI to the one used in the admin console, but that results in a Forbidden result. So that did not do the trick..	1	1	https://issues.jboss.org/browse/KEYCLOAK-4136
14791	KEYCLOAK-4109	Sounds great, is there a list of all feature names somewhere? Currently one needs to look at the source: https://github.com/keycloak/keycloak/pull/3676/files#diff-a8e35fe551f4631ce385ec4a00a14d6aR38	1	0	https://issues.jboss.org/browse/KEYCLOAK-4109
14792	KEYCLOAK-4098	The tests for protocol mappers for 2.3.0 looks fine. I think that for 2.5.0 we can maybe have a test for https://github.com/keycloak/keycloak/pull/3630 (Support for duplicate emails). Assuming we will merge this PR. After migration from the 2.4.0, the switch "loginWithEmailAllowed" should be enabled and "duplicateEmailsAllowed" should be disabled.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4098
14793	KEYCLOAK-4098	@Vlastislav Ramik everything should be added now. Can you double check and close once you're happy?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4098
14794	KEYCLOAK-4098	Are offline tokens not exported as part of the export?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4098
14795	KEYCLOAK-4098	[~mposolda] Currently it is not possible to "Login and request offline token" when 1.9.8 starts (before stop the 1.9.8). Start 1.9.8, stop 1.9.8 and migration is done before the tests are run.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4098
14796	KEYCLOAK-4087	Yeah, ok. So just to clarify, you have something like: uid: john uidname: john uidnumber: 123 And on group you have: memberUID: 123 Is it correct? If yes, I will likely go with what you propose (Have both attributes configurable somehow). Fact is, that we can't just change it like in your PR as for example in the case of some other deployments, I am aware, there is something like: user uid: john entryUUID: 123456 group memberUID: john	1	1	https://issues.jboss.org/browse/KEYCLOAK-4087

#	Requirement	Questions	Answered	Successfully Answered	URL
14797	KEYCLOAK-4052	IMO this is not something specific to LDAP. Instead of having flag on LDAP storage provider, shouldn't we rather enforce Keycloak password policies BEFORE the UserStorage is invoked? The call to UserStorage.updatePassword will happen just if keycloak policies matches?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4052
14798	KEYCLOAK-4052	+1 Seems like this would be best handled outside each individual provider. Q should it be optional?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4052
14799	KEYCLOAK-4018	[~jlpettersson], can you provide some tests for this new policy ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4018
14800	KEYCLOAK-4018	[~jlpettersson], I think I found an issue. The attribute "kc.client.id" maps to the azp (issueFor in AccessToken) and Keycloak puts there the client_id (e.g.: my-client) and not the client identifier. We need to change the {{ClientPolicyProvider}} to obtain a client based on its client_id and then do the check. Do you want me to change that or do you want to change by your self ? Thanks.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4018
14801	KEYCLOAK-4018	I am not sure, what from {{Evaluation evaluation}} I should use for lookup. My previous code worked with {{evaluation.getContext().getIdentity().getId()}}. But how am I sure that the token is from keycloak (aud). Do you think that I should use *azp* anyway, and lookup that client in some way? I am not sure what or how I should lookup here now :) :(	1	1	https://issues.jboss.org/browse/KEYCLOAK-4018
14802	KEYCLOAK-4018	Right. So we are sure that {{kc.client.id}} / azp is unique? Or can anyone create a client with the same name? And we are sure that the accessToken is from keycloak, or can it be from any other ID-server, just with the same azp-name (that is mapped to kc.client.id? If so, it looks good now.	1	1	https://issues.jboss.org/browse/KEYCLOAK-4018
14803	KEYCLOAK-4009	I'm not sure we want to support AD LDS. [~mposolda] what do you think about this PR?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4009
14804	KEYCLOAK-4009	[~stianst] I propose to merge the simplified version of this PR, which will include just the mapper. [~sldab] I propose that in your PR you include just the code of your new MSADLDSUserAccountControlStorageMapper, but NOT any other changes. Especially NOT include: - adding new vendor to the list of supported vendors - adding new LDAPConfig.isActiveDirectoryLds() method (and all related changes) If we include just the new mapper, then people, who want MSAD LDS will just: - Select the existing vendor "Active Directory" and save their federation provider - Then they will need to go to "Mappers" tab and manually remove the existing "MSAD mapper" and instead add your "MSAD LDS Mapper" . This should work fine if I understand correctly, right? The reason is, that we rather prefer smaller list of OOTB supported vendors, but the flexibility to re-configure things manually if people want to use their preferred vendor. WDYT?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4009
14805	KEYCLOAK-4009	Hi [~mposolda], I see your point in reducing vendor-specific logic and I am fine with your proposal. There's just one thing to consider: If we only include the mapper and one would select "Active Directory" as the vendor, the password update would brake. It would try to modify the {{unicodePwd}} attribute instead of {{userPassword}}. If one would select "Other" as vendor, then UUID handling would brake or one would need to resign from having an UUID. Would it be OK for you if we assume, that the {{objectGUID}} attribute is MS-specific and replace the {{isActiveDirectory()}} check with {{"objectGUID".equalsIgnoreCase(config.getUuidLDAPAttributeName())}} in {{LDAPOperationsManager.decodeEntryUUID(..)}} and {{LDAPOperationsManager.getFilterById}}?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4009
14806	KEYCLOAK-4009	Updated PR. Added {{isObjectGUID()}} method to {{LDAPConfig}}. I noticed that the {{processFailedPasswordUpdateException(..)}} method in the existing {{MSADUserAccountControlStorageMapper}} isn't used anywhere. Ist this still work in progress?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4009
14807	KEYCLOAK-4009	I've merged your PR. Thanks. Could you please summary here what are needed steps in configuration to have Keycloak working with MS LDS?	1	1	https://issues.jboss.org/browse/KEYCLOAK-4009
14808	KEYCLOAK-3965	[~bill.burke] is this something which I could help? If yes, could you please elaborate more about "no-import"?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3965
14809	KEYCLOAK-3877	You've lost me.. WF/EAP console is served on management port (9990) right? So I'd expect dynamic keycloak.json to be served there as well (http://localhost:9990/console/keycloak.json). Then the JS in WF/EAP console configures Keycloak JS with this link to make it use the correct auth-server-url, realm and client-id. Correct? I can't see any of that being the responsibility of our subsystem. Then there's a separate issue of making config available for WARs that are secured with a secure-deployment so that they can configure Keycloak JS in a similar way. That's a completely separate issue IMO and the two are not linked at all.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3877
14810	KEYCLOAK-3747	[~zschwarz] the PR is clearly only about the testsuite, so why did you remove the component I added?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3747
14811	KEYCLOAK-3731	Asked about this one via mailing list as well, but [~chris.brandhorst] pointed me in the right direction here. We have a significant need for this one. Is it currently being worked on? If not, I might pick it up as we have a pressing need for it.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3731
14812	KEYCLOAK-3731	Thanks for the work! We retried the configuration with two 2.5.0-Final instances, but sadly we get the same result (StaleCodeMessage from instance 'B'). From the PR it seems that the endpoint I mentioned should still be used, is this correct? Thanks for any pointers.	0	0	https://issues.jboss.org/browse/KEYCLOAK-3731
14813	KEYCLOAK-3712	I just hit this limitation. My plan was to dynamically register a client and its resources. But I dont see any way to register resources without first manually enabling "Authorization" in the admin ui. Is there a workaround? Are there any plans to fix these limitations in the near future?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3712
14814	KEYCLOAK-3678	[~sonicaaaa] I've merged your PR. Thanks. Would you have a chance to update also our documentation for fuse adapter? It's here https://github.com/keycloak/securing_apps_guide	1	1	https://issues.jboss.org/browse/KEYCLOAK-3678
14815	KEYCLOAK-3672	Do you know if this is still an issue with 3.x?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3672
14816	KEYCLOAK-3661	[~praseodym] If you specify "Search scope" as "subtree" in the configuration of LDAP federation provider, it should find also groups under sub-OU . For example if you configure Group LDAP mapper with the "LDAP Groups DN" like "ou=groups,dc=example,dc=com", it will find also group like "cn=group1,ou=subou,ou=groups,dc=example,dc=com" . Is it working for you?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3661
14817	KEYCLOAK-3643	[~sonicaaaa]] I've added another commit with the bit updated README for hawtio https://github.com/keycloak/keycloak/pull/3284 . Especially it's now pointing that Hawtio integration will be available from Fuse 6.3.1 but not with older fuse versions (unless people uninstall the provided hawtio and replace it with newer community version). Is it correct? Can we resolve this JIRA if you are ok with my change in the README?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3643
14818	KEYCLOAK-3631	Hi [~stianst], in the meantime, could you think of any workaround for the issue we are having? I guess we can increase the Session SSO timeout to a couple of days. From a security and performance point of view of course not ideal but we could probably live with it for a little while. That still leaves the issue that if Keycloak is restarted for whatever reason we lose all the client sessions and hence the 'user action tokens' making them invalid. Ideally these tokens would be stored in the Keycloak database so that they survive a restart.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3631
14819	KEYCLOAK-3631	Hi [~hmlnarik]. This sounds really good. One question though: apart from being able to configure these new action tokens separately what we are also looking for is a way to persist them. In our flow these tokens will be very long lived (as in weeks) and we want very much for them to survive Keycloak restarts/redeploys because we do those quite often (because we have integrated the build of Keycloak in our automated delivery pipeline). Are these tokens persisted in the Keycloak database or if not can this be done (by us) without too much effort?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3631
14820	KEYCLOAK-3613	Do we want to move this to 3.x? This isn't just an SPI issue and requires changes to LDAP, SSSD, admin console and account service.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3613

#	Requirement	Questions	Answered	Successfully Answered	URL
14821	KEYCLOAK-3605	Do you have an example for such a custom header? I'm currently working on KEYCLOAK-4163	0	0	https://issues.jboss.org/browse/KEYCLOAK-3605
14822	KEYCLOAK-3592	[~jcain] I'll find someone that can review this, but a few things from my point of view (I've not had a chance to look at it detail though): * Can you squash to a single commit? * Can you use the new profile mechanism (https://keycloak.gitbooks.io/documentation/content/server_installation/topics/profiles.html). By default it should be default, but then enabled through the profile options. * Can you send docs updates to https://github.com/keycloak/keycloak-documentation (we've merged all doc repositories into one) * We need to somehow test this. Ideally automated testing with Docker. Not sure how we'd do that. Also, it seems kinda stupid that Docker won't just allow OpenID Connect providers. Seems like a feature they will eventually have to add. Did you check if there is any progress on that?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14823	KEYCLOAK-3592	We'll need functional tests rather than unit tests for this one. Can we configure the local Docker and just invoke that from a test? If setup needs to be done prior to running the test that's fine as long as it's covered in HOW-TO-RUN.md in the testsuite and also possible to automate in Jenkins.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14824	KEYCLOAK-3592	The problem I've run into isn't invoking a `docker login` from the client - Docker actually has a functional Java adapter for that. The problem is interacting with a docker registry. I don't know of a way to wire that up in a test harness without introducing dependencies on some binaries on the host machine. How much leeway does your current Jenkins/Travis instance give you for system configuration?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14825	KEYCLOAK-3592	[~jcain] Travis wouldn't run this as we're already overloading what we can do there. It would rather have to be part of separate CI that runs everything. I believe we can setup what's needed. Can you explain what that would actually be, then I can ask our QE guys if it's doable?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14826	KEYCLOAK-3592	[~stianst] sure! So the big showstopper for putting this on any kind of CI environment for me has been the requirement for a docker registry to test against. Per above ^ I've tried to make some quickstarts pretty simple out of the box (although I've clearly failed to make them as portable as they should be), but there's likely going to need to be at least some docker binaries/tools on the testing box. Past that, everything is pretty straightforward. Docker's Java client works well for automated testing, and y'all have a really solid setup for spinning up Keycloak instances and realm config. So just some docker + tools (compose perhaps) binaries. What do you have in mind? How would I go about providing you the tests you need in such a scenario?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14827	KEYCLOAK-3592	How do we start the server with the correct profile to be able to select the docker protocol ? bin/standalone.sh|bat -Dkeycloak.profile.feature.<feature name>=disabled	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14828	KEYCLOAK-3592	I can't get it to work... The docker cli is making the request right : {quote}GET /auth/realms/docker/protocol/docker-v2/auth?account=###&client_id=docker&offline_token=true&service=docker-registry HTTP/1.1 User-Agent: docker/17.03.1-ce go/go1.7.5 git-commit/c6d412e kernel/4.4.0-71-generic os/linux arch/amd64 UpstreamClient(Docker-Client/17.03.1-ce \(linux\)) Authorization: Basic ############### Accept-Encoding: gzip Connection: close{quote} but Keycloak answer with the HTML login page... which lead to "Error response from daemon: Get http://registry/v2/: unable to decode token response: invalid character '<' looking for beginning of value" I performed the following actions : * add "docker" realm * add "docker-registry" client * save (after setting * as valid redirect url) I noticed that "BASIC authentication is configured for you realm. Since docker auth requires HTTP Basic auth, this should be the only authenticator configured for the realm hosting the docker registry client." but didn't get it. Can u help so it work with manual setup on clean realm ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14829	KEYCLOAK-3592	Just one question regarding the profile. So, if I understand it correctly, the default settings is keycloak.profile.feature.docker=disabled. So every time you want to use the docker features you need to explicitly enable it. At least, currently it seems to work like that for me. Shouldn't it be enabled by default?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14830	KEYCLOAK-3592	Also, I've found some issues I'd like to discuss. * When creating a new Client, docker-v2 is the default Client Protocol. I believe the default should remain openid-connect as it is obviously much more used. * All built-in Clients in a Realm (account, admin-cli, broker, ...) look like docker-v2 clients in the Admin Console. But of course they are openid-connect. This doesn't concern additionally created Clients. * A subject to discussion: I don't like the idea to have to break the browser flow just to make docker work. I can imagine the scenario when users are stored in Keycloak (directly, without using User Federation) and they'd need to be able to use Keycloak both for docker authentication and a web service authentication at the same time. Additionally, it's a bit complicated to set up docker in Keycloak with all the flows juggling. Would it be a problem to categorize the docker flow as an extra flow, not as browser flow, so it wouldn't be necessary to manipulate with flows at all (docker flow would work out of the box)? EDIT: One more insignificant detail. Is there any specific reason for README.md (which is included in the downloaded YAML ZIP from Keycloak) to have content like {{java.util.zip.ZipFile$ZipFileInflaterInputStream@770c8fa0}}. Shouldn't it be instead a human readable markdown, some instructions?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14831	KEYCLOAK-3592	{quote}* When creating a new Client, docker-v2 is the default Client Protocol. I believe the default should remain openid-connect as it is obviously much more used.{quote} See discussion [here|https://github.com/keycloak/keycloak/pull/3565#discussion_r107416768] {quote}* All built-in Clients in a Realm (account, admin-cli, broker, ...) look like docker-v2 clients in the Admin Console. But of course they are openid-connect. This doesn't concern additionally created Clients.{quote} See discussion [here|https://github.com/keycloak/keycloak/pull/3565#issuecomment-290832697] {quote}A subject to discussion: I don't like the idea to have to break the browser flow just to make docker work ...{quote} That's a really good point. Ideally enabling the docker feature would provide an already configured new flow called docker, so no additional configuration would be required. But then - how does the server know when a specific type of auth flow should kick in (is it browser flow or is it docker flow?). Currently a set of available flow types is hardcoded in realm model so there's no SPI to extend. If 'docker' flow type is added then an if-then should probably be added to wherever the decision logic that triggers browser flow is implemented. And whether to activate 'docker' flow would have to be guided by something present in the request (target uri probably?).	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14832	KEYCLOAK-3592	[~jcain] I see your point. What I meant was really just the thing that after setting up the flows for docker you cannot use the same realm anymore to standard browser authentication as before, e.g. to authenticate the user via browser to access other non-docker resources. Or am I mistaken? Perhaps I'm missing something. Anyway, if you think that this scenario is not really relevant, let's proceed with the tests. Just two more previous questions we haven't discussed yet: * Shouldn't be the docker profile enabled by default? * Content of README.md included in the YAML ZIP	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592

#	Requirement	Questions	Answered	Successfully Answered	URL
14833	KEYCLOAK-3592	As I'm thinking about it, I still feel we need to clear up one thing. If I understand it correctly, to use docker with a realm we need to completely replace the browser flow in such realm. Am I correct? There is no other way of using docker with a realm? So, this leads to breaking up the standard browser login flow, user's can't login to this realm using browser anymore, so that this realm can't be used for much other things than docker only. Do we really want this - the need of separate realm just to use docker? I believe it makes a perfect sense to use one realm for docker and e.g. some other web service. But if we replace the browser flow, we can't use the realm for login using browser. Perhaps, I'm missing something. [~stianst] What do you think? One more thing. We should also mention in the docs that the docker profile is disabled by default in Keycloak (unlike the other profiles).	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14834	KEYCLOAK-3592	[~vmuzikar] I still don't see a problem with this, as the docker client will never use any other flow. There will be a functional separation between what Docker uses and what standard web browsers use within a ream that could be argued as being better expressed in terms of different realms. With that said, I'm up for whatever finally gets this PR accepted. [~stianst] -Docker requires HTTP Basic auth - iirc we're not going to be able to use something like an ootb direct grant flow.- * See comment on PR, I think you're right in that direct grant flow is a better fit here. Would switching to that flow be sufficient?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14835	KEYCLOAK-3592	[~jcain] With the current approach (replacing the browser flow), are users able to login to the same realm using browser login (when authenticating to some other web resource) and docker at the same? Or is it like that after setting up the realm for docker, users won't be able to login using browser? From the docs PR: bq. it is recommended that you configure the docker registry client in a realm other than 'master', since the HTTP Basic auth flow will not present forms. I've done some testing and after replacing the browser flow for Docker Authenticator I can't access following URL {{localhost:8080/auth/realms/{docker-realm}/account}}. I'm getting an error: "Unexpected error when handling authentication request to identity provider."	1	1	https://issues.jboss.org/browse/KEYCLOAK-3592
14836	KEYCLOAK-3592	instructions (removing the docker binary and installing docker-ce again) didn't do anything. Even installed a fresh Fedora 25 virtual machine and installed fresh docker-ce - still the same results, same exception "Retry limit reached while trying to pull image" Only thing that works for this exception is Red Had docker binary. However, I'm getting another exception using this binary: Failed to get D-Bus connection. {code} 11:45:13,232 INFO [TestEventsLogger] [DockerClientTest] shouldPerformDockerAuthAgainstRegistry() STARTED 11:45:14,661 INFO [KeycloakDronePostSetup] Configuring driver settings. implicitWait=750, pageLoadTimeout=10000 11:45:15,759 DEBUG [AbstractKeycloakTest] updating admin password 11:45:15,760 INFO [URLUtils] starting navigation 11:45:15,763 DEBUG [KeycloakDronePostSetup$HtmlUnitInterceptor] Ignored JS as we are on about:blank page now 11:45:15,764 INFO [URLUtils] current URL: about:blank 11:45:15,764 INFO [URLUtils] navigating to http://localhost:8180/auth 11:45:16,226 INFO [URLUtils] new current URL: http://localhost:8180/auth/ 11:45:16,226 INFO [URLUtils] navigation complete 11:45:16,228 DEBUG [AbstractKeycloakTest] loading test realms 11:45:16,611 INFO [AbstractKeycloakTest] importing test realms 11:45:16,611 DEBUG [AbstractKeycloakTest] importing realm: docker-test-realm 11:45:19,529 INFO [org.testcontainers.dockerclient.DockerClientProviderStrategy] Found docker client settings from environment 11:45:19,565 INFO [org.testcontainers.dockerclient.DockerClientProviderStrategy] Looking for Docker environment. 14840	KEYCLOAK-3576	Is the conclusion now to introduce a new role {{manage-user-federation}} and let the administrators configure it as they like?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3576
14841	KEYCLOAK-3573	Hi [~stianst] and [~dlofthouse], Sent the PR with Elytron SAML and OIDC Adapters. We are using the latest release version of Elytron and related dependencies. The new adapter can be tested by passing a {{elytron.wildfly-version}} system property when running tests using {{app-server-wildfly}}. Something like: {code} mvn clean install -Pauth-server-wildfly -Papp-server-wildfly-elytron -Delytron.wildfly.version=11.0.0.Alpha1-SNAPSHOT -Papp-server-wildfly -Dtest=org.keycloak.testsuite.adapter.WildflyOIDCAdapterTest {code} [~stianst], would like your feedback about distribution of these adapters. My PR also changes adapter disttribution package to include these adapters. Is that OK ? Thanks.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3573
14842	KEYCLOAK-3573	Why is the Elytron adapter being added to the WildFly adapter? See here: https://github.com/keycloak/keycloak/pull/3978/files#diff-c461e2913d8fc274023f25ede83bfdbaR38 That makes no sense to me. Shouldn't this adapter be distributed as a separate WildFly 11 adapter than be co-located with the WildFly 10 / EAP 7.0 adapters? Seems like it could cause issues having both the old Undertow and the new Elytron adapter in the same distribution. Why is there a folder called "elytron" in the root of Keycloak? That makes no sense. With regards to testing we need to test with the latest builds of WF11 and EAP 7.1, not with Elytron installed to older WF versions. The latter is not a scenario we should document or support IMO. Also, did you add any updates to documentation around this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3573
14843	KEYCLOAK-3573	[~stianst], can you please review changes to documentation ? Are you OK with them ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3573
14844	KEYCLOAK-3519	[~puntogil] thanks, out of curiosity why did you care enough to send this PR? ;)	1	1	https://issues.jboss.org/browse/KEYCLOAK-3519
14845	KEYCLOAK-3505	Yes, the UserAttributeMapper has subclass AbstractClaimMapper, which uses just AccessToken and IDToken. I would go for the approach1 and rather add the missing functionality to AbstractClaimMapper.getClaimValue , so it's able to read stuff from accessToken, idToken or userInfo. Would you mind working on it and send PR? I hope you will be able to reuse some code from AbstractJsonUserAttributeMapper as it has some static helper methods to retrieve the value of claim from JsonNode.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3505
14846	KEYCLOAK-3498	Can you elaborate on why it doesn't work for you?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3498
14847	KEYCLOAK-3498	We're a payments processing company providing internet acquiring services for our clients. Our clients are merchants, owners of internet shops. They integrate our products in their internet shops in order to accept credit card payments online. We're providing powerful capabilities of payment form customization. Our merchants implement html code of credit card payment forms and just include our JS library. This JS lib a "Tokenizer" grabs credit card data from the html document, sends it to our API endpoint, and receive a credit card token. This token afterwards is being sent to merchant's backend which contacts our backend and performs actual credit card charge. In such a way we have two common service types using Keycloak. The first one is usual JS web-application "Merchant Personal office" which uses Keycloak infrastructure for authorisation and authentication/SSO using JWTs. This app uses wide range of scopes described in JWT for accessing different application elements. This app uses our API backend with obtained JWT and renders a view. The second one is that JS credit card data Tokenizer. It also uses our API backend but with very limited scope, actually only one API endpoint: "tokenize this credit card data". So our clients, Merchants, have to be able to obtain Keycloak JWTs in order to have access to their Personal office web-app and in the same time to obtain another JWT from this web-app which they will use for authorization of JS tokenizer. We think that such a functionality is very similar of Github's Personal access tokens (https://github.com/settings/tokens). Could you please clarify whether such business logic could be implemented by existing Keycloak functionality and if not would you accept our pull request implementing it? Thanks!	1	1	https://issues.jboss.org/browse/KEYCLOAK-3498
14848	KEYCLOAK-3485	Great. Love the responsiveness :) When is the next release planned for?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3485
14849	KEYCLOAK-3468	Just out of curiosity, why is it very important to you?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3468

#	Requirement	Questions	Answered	Successfully Answered	URL
14850	KEYCLOAK-3468	A few things that needs to be considered when upgrading: * Test HTTP/2 support * Test and document automatic generation of self-signed certs. This involves documenting steps for clients as well. * Test clustering as Infinispan is upgraded * Review load-balancing profile. Do we drop ours and use the load-balancing profile provided by WF instead?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3468
14851	KEYCLOAK-3468	Even though the core KC server isn't being upgraded to WF 10.1 soon, can I still add the KC OpenID WF adapter to a WF 10.1 install? There is a bug fix I need for my app that is in WF 10.1 so I need to upgrade our app server.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3468
14852	KEYCLOAK-3416	Is this not optional?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3416
14853	KEYCLOAK-3407	What version of JBoss are you actually talking about? We support EAP 6, JBoss AS 7 and WildFly, that's it.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3407
14854	KEYCLOAK-3370	[~stianst] One example of this is the stylistic differences between something like [access.redhat.com|https://access.redhat.com] and the [Openshift Console|https://api.preview.openshift.com/]. Openshift has explicitly asked for the ability to display an Openshift-branded login/registration page to users. A single theme doesn't really seem to suite both of those applications simultaneously. We would certainly include some SSO-specific elements (banner, title text, etc.) to preserve coherence across application boundaries. However, for this particular use case, OpenShift users are more commonly going to interact with a single application than with multiple apps under the SSO umbrella. In light of the usage patterns, does it not make sense to have the option to provide a more consistent experience for those users? And those two are a relatively close example. When you start comparing them with something like [http://www.jboss.org/], it's easy to see why users might want some sort of context on the page that denotes an understanding of what app they're coming from.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3370
14855	KEYCLOAK-3370	+1 This is very important for OpenShift Online's usage. Is there any idea when this could be completed and we could adopt?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3370
14856	KEYCLOAK-3370	Do you actually have that requirement? Just curious ;)	1	1	https://issues.jboss.org/browse/KEYCLOAK-3370
14857	KEYCLOAK-3359	Can you not just change the email after the service account is enabled?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3359
14858	KEYCLOAK-3359	I'm not quite following what you want. Are you simply wanting to have an email attribute somewhere on the client/service account directly? Or do you want to set it at a realm level or something?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3359
14859	KEYCLOAK-3353	I don't think a separate issue was opened to solve this problem. Please correct me if I'm wrong. Shall I just open an issue with "Support for session iframe for confidential clients" as a subject and copy the description or reference this issue? Thanks.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3353
14860	KEYCLOAK-3337	Could you provide an example, please ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3337
14861	KEYCLOAK-3317	Has any progress been made on this subject? We use XACML policies for authorizations in our webapps and webservices. It would be great if we could integrate similar policies in Keycloak.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3317
14862	KEYCLOAK-3316	Hi, About the Implicit Flow : if 'scope=openid' is missing the request is pure OAuth2 so the 'nonce' parameter should not be 'Required' anymore since it does not exist in the OAuth2 specs. The same for 'redirect_uri' which is not mandatory in OAuth2 if already registered at client registration step. What do you think ? -Nicolas	1	1	https://issues.jboss.org/browse/KEYCLOAK-3316
14863	KEYCLOAK-3310	I'm honestly not following what you are asking for here. Are you talking about adding custom attributes to the user? If so that's already supported through mappers both for identity brokering and user federation.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3310
14864	KEYCLOAK-3310	To my understanding the mapping features are applicable under the precondition that a social media link is still established for a user. My request refers to the intention to become able to create this link to an identity provider as part of the process when a user is created in Keycloak by user federation mechnism. Perhaps it is a more reasonable way to override the isValid-method by adding an admin-REST-call to establish this link instead of extending/refactoring the user federation provider SPI for that purpose?...	1	1	https://issues.jboss.org/browse/KEYCLOAK-3310
14865	KEYCLOAK-3310	Oki, I finally get what you want. How about using a required action for it? You can have a default custom required action that retrieves the social media link and associates it with the user on the first login?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3310
14866	KEYCLOAK-3309	What container is this actually referring to? Our Keycloak images are here https://github.com/jboss-dockerfiles/keycloak, but there are no Keycloak+FreeIPA images	1	0	https://issues.jboss.org/browse/KEYCLOAK-3309
14867	KEYCLOAK-3309	[~mposolda] what's the purpose of the keycloak-freeipa-docker image? Is it just something you've used to help test FreeIPA?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3309
14868	KEYCLOAK-3309	What's the reasoning behind requiring people to build it from source themselves?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3309
14869	KEYCLOAK-3279	[~charlee_ch], do you have anything else to add to this issue ? May I assume that you get it working ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3279
14870	KEYCLOAK-3279	Thanks ! Can we close this issue ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3279
14871	KEYCLOAK-3237	Re-opening this as scope=openid has not been added to the JavaScript adapter. Did you add it to all the other adapters?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3237
14872	KEYCLOAK-3209	It could be optional with a warning telling that there will be javascript injected. The http header content-security-policy should also automatically reflect that so that there will still be no inline javascript. You say you are reluctant to add javascript, is that a platform feature or a personal trophée (not trying to be offensive)? For the security part, couldn't there be throttling ? When an user fails registration because an username or an email it means he has to retype 3 field : username/email, password, and confpassword. What if the realm has a lot of user, and the new user tries 7 times ? My guess is that most of them are gonna leave before even attaining this number. That's what I meant by extremely bad, which might be an overstatement. What's more important to a webmaster : having no javascript on its register page or not losing potential subscribers ? Most of the popular website have this feature, so there should be a secure way of doing it.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3209
14873	KEYCLOAK-3209	Hello, I'm just checking by to see if you changed your mind about this. In other words, may I expect this feature in the future ?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3209
14874	KEYCLOAK-3182	The blog post for the 2.3.0.CR1 release (http://blog.keycloak.org/2016/10/keycloak-230cr1-released.html) mentioned that Keycloak now passes the OpenID Connect certification tests. Would it be possible to attach the certification results to this issue? :).	1	1	https://issues.jboss.org/browse/KEYCLOAK-3182

#	Requirement	Questions	Answered	Successfully Answered	URL
14875	KEYCLOAK-3175	I've run the OIDC conformance test as per instructions on http://openid.net/certification/testing/ . What I did was: - Setup of openshift instance with Keycloak 2.0.0.CR1 on https://keycloak-mposolda.rhcloud.com/auth . Created confidential client "openidd" with redirect_uri https://op.certification.openid.net:60720/authz_cb . This points to the testing client deployed by OIDC conformance testsuite. Used user "admin" with some claims filled (email, first name, last name) and realm "master" - Then configured the testing instance like this (second line are my answers): Does the OP have a .well-known/openid-configuration endpoint? Yes Do the provider support dynamic client registration? No (just for easier start) redirect_uris: https://op.certification.openid.net:60720/authz_cb client_id: openidd client_secret: 98d90dd1-9d2e-43ad-a46b-1daeec3f5133 Which subject type do you want to use by default? Public Which response type should be used by default? Code Select supported features: JWT signed with algorithm other than "none" Test specific request parameters: nothing filled So basically I've tested "Basic" profile for startup. The results from testing application: 24 PASSED tests 2 UNKNOWN test results (both defacto passed, but it may be some manual actions involved) 5 FAILED tests 9 WARNING tests (but 5 of them are related to scope parameter, so have the same cause) I will add details to the JIRA for basic profile certification. But in shortcut: - It's easy to setup and run testing application and run/rerun conformance tests anytime we want - Test works in a way that you need to manually click and run individual tests. Some tests require some manual actions (eg. delete cookies) - The keycloak must be available online, hence openshift was the easiest possibility for me to run this though. It allows to restart the server and eventually upload files (jars) through SSH. So we can easily upload snapshot with JAR to openshift and restart the instance when we have some fix. Then we can rerun particular test scenario. - It doesn't seem to be easy (or even possible) to run automated test against the conformance application inside our testsuite. However what we can easily do is "copy" test scenarios into our testsuite. IMO we should have automated tests for all the scenarios required by conformance testsuite (even for those, which we already pass).	1	1	https://issues.jboss.org/browse/KEYCLOAK-3175
14876	KEYCLOAK-3175	Can you document somewhere how to run the conformance testing? Adding it to here https://github.com/keycloak/keycloak/tree/master/misc maybe?	1	0	https://issues.jboss.org/browse/KEYCLOAK-3175
14877	KEYCLOAK-3135	*1) Usecase* Wonder about support classic social use-cases : - I want to share my photoalbum with user X . - I want to share my photoalbum with group of users Y (Google+ circles) . Note that group Y is not "global" group, but is "scoped" to user, who is owner of the group and has permission to add/remove other member to this group as he want . In other words, it's like Google+ circle where I can add/remove any users to some of my circles. Ideally I want to manage authz directly from my application (Click on "Share photoalbum" from inside the photoalbum application). *2) How to implement. ACL?* For supporting this, it might be needed to have some support for ACL policy. The ACL table may look like this: Resource_id | scope (or list of scopes) | user_id (or circle_id) - The ACL records must be possible to manage remotely - It might be special "scopes" for sharing. For example i click "Share the photoalbum with user X" . Then user X has possibility to view the photoalbum, but he has also possibility to share it with other different users, who can share it again etc. - User must be able to add other users to his circles. This should be again possible to do remotely It seems this is quite complex and will likely require much more though to be supported properly. *3) Support OOTB?* Not sure if this use-case is something to support OOTB or is rather something "advanced", which people need to implement by themselves if they want it? Maybe we should wait for feedback from community if this is common usecase, which people want?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3135
14878	KEYCLOAK-3135	I am also interested in an API for Policy Management. Mostly for User-Based Policy and a new Client-Based Policy, to be used for UMA. A UMA Resource need a Permission as in the Admin GUI today, but it would be good to be able to add Policies directly for the resource? Or should all policies be added via a Permission? As in the Resource Registration RFC https://docs.kantarainitiative.org/uma/rec-oauth-resource-reg-v1_0_1.html#rfc.section.2.2.1 A "user_access_policy_uri" field with the URL for policy management should be returned in the response when registering a resource.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3135
14879	KEYCLOAK-3135	[~jlpettersson], I think we can support Client-based policies OOTB. Are you interested in contributing ? Regarding the Policy API, today you can CRUD policies and permissions using Keycloak Java Administration Client. All endpoints used by the administration console are exposed and accessible from this client. Indeed we are using this endpoints in a few tests we run for authorization services. However, we have a lot of improvements to do in this area in order to provide a more clean and simple API for remote policy management.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3135
14880	KEYCLOAK-3135	We have changed the AuthZ REST APIs in order to provide a better usability when managing policies remotely. For now, policy management can be performed via Keycloak Java Admin Client. Can we close this issue ?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3135
14881	KEYCLOAK-3124	You're right about the first point. Not sure about the second point. Couldn't we just as well add adapter tests with WildFly to the default build as a Undertow adapter test.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3124
14882	KEYCLOAK-3103	What about logs ? Could you provide some ? It would also help if you attach the encrypted response, so I can look its structure.	1	0	https://issues.jboss.org/browse/KEYCLOAK-3103
14883	KEYCLOAK-3090	Are you sure? Quick look at the code suggests user should be available. It's not used in the default template, but should be available. For example ${user.username} should work in that template.	1	1	https://issues.jboss.org/browse/KEYCLOAK-3090
14884	KEYCLOAK-3065	This doc is no longer updated, can you check new Gitbook version?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3065
14885	KEYCLOAK-3065	[~stianst]My bad, I am seeing it works when you have the format like in your second format. Sorry for false alarm.	0	0	https://issues.jboss.org/browse/KEYCLOAK-3065
14886	KEYCLOAK-3065	Sent PRs to keycloak master and 1.9.x to remove provider from keycloak-server.json: https://github.com/keycloak/keycloak/pull/2901 https://github.com/keycloak/keycloak/pull/2902 [~stianst] I am thinking about add the note to gitbook too to emphasize that people need to remove "provider" to have enabled switch working. As I suppose that in keycloak-server.json for product, the line with provider will be there as we don't have more builds, so just switch to "enabled": false won't work. WDYT?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3065
14887	KEYCLOAK-3060	Do we want to move this to 3.x? This isn't just an SPI issue and requires changes to LDAP, SSSD, admin console and account service.	0	0	https://issues.jboss.org/browse/KEYCLOAK-3060
14888	KEYCLOAK-3056	Would it be possible with some new configuration options, to verify signature against a configured certificate (or the one bundled in the assertion, if there is an option to verify the common name). I have to analyze this some more, but without this, how can people trust the assertion? IP-filtering on the saml broker endpoint?	1	1	https://issues.jboss.org/browse/KEYCLOAK-3056
14889	KEYCLOAK-3056	[~stianst]: Has there been any work on this? As there is already signature verification on the response, I might attempt a pull request for the same in the assertion...	1	1	https://issues.jboss.org/browse/KEYCLOAK-3056
14890	KEYCLOAK-3048	Isn't SNI supposed to just work with newer Java and HttpClient library?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3048

#	Requirement	Questions	Answered	Successfully Answered	URL
14891	KEYCLOAK-3012	What about adding two buttons to the password policy page "Require all users to update password" and "Require users with insufficient passwords to update password", then also add a new conditional update password policy required action?	0	0	https://issues.jboss.org/browse/KEYCLOAK-3012
14892	KEYCLOAK-2994	Just did a fresh PR concerning this issue. Found quite a lot of typos in the german translation.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2994
14893	KEYCLOAK-2984	But if you had local users and later added an LDAP directory as an option, you *could* have duplicates. How are those handled? Wouldn't that be the same means of resolution? I can see the concern about duplicates, but seems like there should be some way to handle it. AFAIK, no other IDM tool would treat what could even be a transient connection error to one source as a Fatal error blocking management of *all other sources* of user identities. That creates tons of operational issues and makes the entire system only as robust as the least reliable user store.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2984
14894	KEYCLOAK-2984	It's been a while since I played in the Keycloak UI, but my setup was using the Keycloak DB for one set of users and LDAP in read-only mode for another. Since repositories like LDAP can be read-only, there already needs to be a consideration in Keycloak that transient errors in LDAP should *not* block adding local users when in read-only mode for sure. As far as I can recall, you are aware of where you are creating users, are you not? i.e. if you are intending to create local users in the Keycloak DB, you could do that. It wouldn't just arbitrarily decide where to create them, right? If that's the case, maybe that's the root of the problem. My specific case is *not* about fallback. It's about maintaining maximum availability of features in the face of one provider not being reachable. i.e. creating local users explicitly not in LDAP.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2984
14895	KEYCLOAK-2984	I second that if users are supposed to be created locally then failure of a user storage provider should not prevent creation of users. If users are going to be created in a user storage provider that is not working that obviously user creation should fail. [~mposolda] how do we actually deal with where the user is created?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2984
14896	KEYCLOAK-2984	[~bill.burke] Yes, we can do the callback like this. However this issue is not about failed "addUser", but failed user lookup before the addUser is called. In UsersResource.createUser we have this: {code} if (session.users().getUserByUsername(rep.getUsername(), realm) != null) { return ErrorResponse.exists("User exists with same username"); } {code} Assume the LDAP is down. What happens is: - Admin wants to create new user "john" - session.users().getUserByUsername is called. User "john" doesn't exists in local Keycloak DB - So UserStorage is queried for "getUserByUsername" . Since LDAP is unavailable, this will throw an exception. Hence new user won't be created because LDAP is down and the lookup of user throwed the exception. Note that this issue will happen even if LDAP doesn't have registration enabled. As the issue is in userLookup, not in the user creation itself.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2984
14897	KEYCLOAK-2979	please help us what is the Please use user mailing list for support?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2979
14898	KEYCLOAK-2966	Comments from Marek: {quote} Few things: - It will be good to have some OOTB support for multivalued attributes. You will be able to define if attribute is multivalued and then in registration/account pages, users will see something like we have in admin console for "redirect uris" or "web origins" in client detail page. - Besides validation, it may be useful to add some "actions" when attribute is changed? For example if user changes email, there will be the optional action, which will switch "emailVerified" to false and put the "VerifyEmail" required action on him. When he changes mobile number, it will send him SMS and he will need to confirm it somehow (perhaps again through required action), etc. - It will be probably useful to allow admin to skip validation (and actions) for certain attributes. Maybe validators could have an option like "Skip admin" or something like that? Or should we always skip the validations for admin? {quote}	0	0	https://issues.jboss.org/browse/KEYCLOAK-2966
14899	KEYCLOAK-2966	Is there a way to help advance this feature request? Some work in progress somewhere? I did not see anything on the mailing lists, but I may have searched badly.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2966
14900	KEYCLOAK-2966	I haven't had time to get very far with this so I don't have much to share other than a few things I've shared on the mailing list the last few months. You should be able to find it using the search on our website. You could start describing what you need and why you're interested. Also, how much are you willing to get involved?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2966
14901	KEYCLOAK-2962	I'm not sure how so, can you explain it? Ajax requests are sent to the very same URL as normal GET and POST requests. This can't be influenced, this is how the JSF framework works. We are not talking about custom REST services (just to make that clear). So I can't make up how to apply the multi-tenancy example to this problem because they need different paths as far as I understand the multi-tenancy solution.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2962

14903	KEYCLOAK-2950	[~mposolda] for [KEYCLOAK-3829|https://issues.jboss.org/browse/KEYCLOAK-3829] I was considering something like: {code:java} public class BrokeredIdentityContext { @Override public boolean equals(Object o) { if (o == null) return false; UserModel userModel = (UserModel) o; if (id != null ? !id.equals(userModel.getId()) : userModel.getId() != null) return false; if (username != null ? !username.equals(userModel.getUsername()) : userModel.getUsername() != null) return false; if (email != null ? !email.equals(userModel.getEmail()) : userModel.getEmail() != null) return false; if (firstName != null ? !firstName.equals(userModel.getFirstName()) : userModel.getFirstName() != null) return false; return lastName != null ? !lastName.equals(userModel.getLastName()) : userModel.getLastName() != null; } } {code} Or if we think override equals is a terrible idea, I just add an utility method. I think this can solve the problem here, too. Don't you think? For example on IdentityBrokerService or IdentityProviderMapper we call: {code:java} if !(brokeredIdentityContext.equals(federatedUser)) { //update } {code} Does it make sense?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2950
14904	KEYCLOAK-2950	[~stianst] Few points: 1) The built-in mappers still doesn't handle this 100% correctly and they write to the keycloak DB even if the value is the same. So pointless cache invalidations are still there. For example looking at org.keycloak.broker.oidc.mappers.UserAttributeMapper#updateBrokeredUser I can still see (and just tested) that for example: -- Mapper for basic attributes (firstName, lastName, email) always update the user account and invalidate the user from the cache even if the old value is same https://github.com/keycloak/keycloak/blob/2.5.0.Final/services/src/main/java/org/keycloak/broker/oidc/mappers/UserAttributeMapper.java#L149 -- For non-basic attributes, there is check for CollectionUtil.collectionEquals, which is good. However in case that attribute is empty, there is always call to "user.removeAttribute" and pointless cache invalidation. We probably have similar stuff in other mapper impls too. 2) In last comments https://issues.jboss.org/browse/KEYCLOAK-2943 we discussed the possibility, that broker login will update user account just in case that particular broker is "owner" of the Keycloak user account. Which means that Keycloak account was registered through login of this broker. So in case that existing Keycloak account was linked to the broker "xy", the additional login of this user through broker "xy" won't update the account and won't call the "IdentityProviderMapper.updateBrokeredUser" . This will also fix the KEYCLOAK-2943 . WDYT? Anyway, this stuff should be re-visited IMO as we still have a space to improve here.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2950
14905	KEYCLOAK-2950	I've reopened KEYCLOAK-3829 which should cover not updating the user unless some values have indeed changed. Also added a separate issue KEYCLOAK-4184 to cover not updating the profile unless it's the IdP that created the account. Does that cover it and we can close this issue?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2950
14906	KEYCLOAK-2939	Will this feature mean that it will be possible to call the following from a browser? {code} POST /auth/realms/<realm>/protocol/openid-connect/logout ContentType: x-www-form-urlencoded Data: - client_id : <client> - refresh_token : <refresh-token-from-login-token> Headers: - Authorization Bearer <IdToken> {code} Currently it fail because the OPTIONS request does not contain the CORS-Headers which were set in the keycloak-configuration.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2939
14907	KEYCLOAK-2939	For browser based logout you should redirect to logout endpoint, this will redirect back to your application afterwards. Otherwise cookies on the Keycloak side are not invalidated. Are you using keycloak.js? There's a logout function there that does the job for you.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2939
14908	KEYCLOAK-2939	I know that there is the possibility with a redirect, but I wanted to do it without the redirect and opening another window. But if you say that there is no other option because of the cookie invalidation in keycloak itself, I will have to think about something else. What is the difference to the POST-Request the keycloak-spring-security-adapter does?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2939

#	Requirement	Questions	Answered	Successfully Answered	URL
14909	KEYCLOAK-2939	Why would you open login in another window? It redirects back to the application afterwards.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2939
14910	KEYCLOAK-2939	Well, I'm asking why don't you want a redirect? That's the only way to do a proper logout and properly invalidate all cookies on the Keycloak side.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2939
14911	KEYCLOAK-2939	Okay, I thought it would be easier with angular 2. But if you recommend that I will do it that way :) But back to my question, will it be possible after this ticket is fixed, or do I get the OpenID specification wrong?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2939
14912	KEYCLOAK-2926	What do you mean about unused required action?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2926
14913	KEYCLOAK-2909	Should I also remove tests under account.custom package?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2909
14914	KEYCLOAK-2858	I'm talking about this: username = *UNICODECHARNOCRLF Which of course does not imply case sensitivity is a must, only the charset, but they also write: "Unless otherwise noted, all the protocol parameter names and values are case sensitive." What do you think?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2858
14915	KEYCLOAK-2858	All usernames in Keycloak are lowercased when saved in the db. Same goes for username in tokens. We're not going to change this as it would break backwards compatiblity. There are also good reasons why we're doing it like this. For example to prevent a situation where you have "userA" and "usera" in the system which refer to different users. Do you actually have a real problem with this or is it just because?!	1	1	https://issues.jboss.org/browse/KEYCLOAK-2858
14916	KEYCLOAK-2857	Isn't there a password configuration type that you can use? There's one for authenticators	0	0	https://issues.jboss.org/browse/KEYCLOAK-2857
14917	KEYCLOAK-2830	Well, they are automatically added by the keycloak wildfly adapter in our configuration. And they are also added in the verify step. In class RedirectUtils line 126, the baseUri.getPort() gives 443 in our configuration, which matches the URI we get from the wildfly adapter, but doesn't match the one from the javascript adapter. We are using an apache HTTPS reverse proxy in front of keycloak, maybe that is the reason. The ProxyPeerAddressHandler from wildfly always sets the specific port, that was send as X_FORWARDED_PORT. I assume if the wildfly does the SSL termination itself and runs on port 443, it will just leave the port empty and then everything works. Would it be ok, if the RedirectUtils would allow both URIs with and without ports for well known port numbers? So when the scheme is HTTP and the baseUri.getPort() is 80, I would allow the URIs http://example.com/ and http://example.com:80/ and for HTTPS and baseUri.getPort() 443 allow https://example.com/ and https://example.com:443/? This should handle both cases. Any ideas?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2830
14918	KEYCLOAK-2808	ok, how can we make SSO possible between different applications of whose not all can "speak" openid-connect? We´ve tried many many ways and relying on the Identity Token seems to be the easiest way.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2808
14919	KEYCLOAK-2797	I gave this a try but the problem is that the counter based OTP works different than the timer based approach and since I need to support "old hardware OTP generators" I need to use the timer based OTP auth ... but as said need to ensure that the token can only be used once. How about adding an option like "allow token reuse: true/false" with default "true" to the "Time Based" OTP type in the OTP Policy page? Then the server needs to store the most recent successfully accepted token together with the servertime on the credentials record. With this information a token that was already used can be rejected.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2797
14920	KEYCLOAK-2784	Can you please confirm if this is still an issue with 1.9.2?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2784
14921	KEYCLOAK-2784	Stian, Is it possible to add this fix to version 2.0.0.CR1? This problem is stopping us from going to production with many of our products.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2784
14922	KEYCLOAK-2777	I'm not following, can you elaborate?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2777
14923	KEYCLOAK-2751	Which REST API is this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2751
14924	KEYCLOAK-2750	I appreciate that it's far from ideal behavior. There are quite a few "usability" issues with the rest endpoints and we're discussing whether we're going to try to resolve them in the current API, or introduce a new v2 of the API. This work will not be done until 2.x though.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2750
14925	KEYCLOAK-2749	This is going to have to wait for 2.x. Is that ok?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2749
14926	KEYCLOAK-2749	+ 1.9.2 is pretty much done and I don't want more changes in it, except bug fixes, we're past feature freeze and I'm certainly not going to accept features/enhancements for 1.9.3. Is there a way you can work around this? For example to use the redirect uri in your authenticator instead?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2749
14927	KEYCLOAK-2736	??A user can import a JSON realm by mistake via Manage/Import since that's the only visual thing you see when you enter the management console. When you do that, the real is not added properly.?? I've got no idea what you are saying here ??To add a realm, you have in fact to click on "Master" on top left and then click on "Add Realm" and then you can import a JSON file.?? Do you have a better suggestion? It seems pretty clear to me	0	0	https://issues.jboss.org/browse/KEYCLOAK-2736
14928	KEYCLOAK-2721	Hello. I know this issue is marked as closed, however I still get the same error with version 2.5.1 (both keycloak client and core). In my configuration, the client is instantiated in a ejb.jar while I access it from a .war file (all in an .ear deployment). Is there anything I can do, or do I have to wait of a future release? Thank you in advance.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2721
14929	KEYCLOAK-2709	[~stianst] [~bill.burke] Can I provide PR for this? This is really UX fail, try to login Red Hat Customer Portal where you are looking few seconds to the the blank page. I looked into code and it is probably not so easy to use realm Login theme there, so my proposal is: # Change page {{<title>}} to "Authentication redirect" # Add visible paragraph into body with text "We are redirecting you due to authentication, wait a moment please." Should be shown above {{<noscript>}} section. This is really small change in {{org.keycloak.saml.BaseSAML2BindingBuilder.buildHtml(String, String, boolean)}} but I believe it is a big improvement for end users.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2709
14930	KEYCLOAK-2709	If there's anything beyond a blank page it shouldn't be hardcoded. When it's used by identity brokering it should be fine to use login theme for that, but are these not also used on the adapter side?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2709
14931	KEYCLOAK-2684	Did you try the Jetty 9.2 adapter?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2684
14932	KEYCLOAK-2684	Hi guys, can you please also check if this adapter works with jetty running stateless (NO_SESSIONS) and keycloak adapter running the TokenStore with cookie ? This has been an issue with the adapted for 9.2.x already.. See: https://issues.jboss.org/browse/KEYCLOAK-2514 Thanks Gregor	1	0	https://issues.jboss.org/browse/KEYCLOAK-2684
14933	KEYCLOAK-2677	This should be high priority and something we should work on. I'll try as much as possible to make sure this happens soon, but it's going to be 3.x at the earliest. Due to a lot of other things happening at the moment I can't make any promises though. Can you elaborate on progressive user profiling? I'm not sure I fully understand what you are after.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2677
14934	KEYCLOAK-2677	[~velias] I get what you're after now and will make sure once we do user profile SPI it will cover (or allow customizing) to support what you are after. One last question do you have an idea on how you'd specific when the additional fields would be required? Could perhaps be done with scopes? Could have user attributes that are always required, required if client asks for a specific scope or optional. Whenever a client tries to authenticate and requests a scope where the user hasn't provided the required attributes a user profile form would pop up.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2677

14937	KEYCLOAK-2603	I am seeing on my MySQL that all mentioned indexes are already available. Indeed we have foreign key for USER_ID column in both USER_ROLE_MAPPING and CREDENTIAL table. Similarly we have unique constraint for USERNAME in USER_ENTITY. So MySQL is adding BTREE indexes by default for those cases. Is it any more info, which I am missing why those 3 indexes are necessary? Especially: - What RDBMS was used for performance test? - What is the tested scenario? This is what I am seeing on my MySQL: {code} mysql> show indexes in USER_ROLE_MAPPING; +----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	Table	Non_unique	Key_name	Seq_in_index	Column_name	Collation	Cardinality	Sub_part	Packed	Null	Index_type	Comment	Index_comment	+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	USER_ROLE_MAPPING	0	PRIMARY	1	ROLE_ID	A	8174	NULL	NULL		BTREE				USER_ROLE_MAPPING	0	PRIMARY	2	USER_ID	A	8174	NULL	NULL		BTREE				USER_ROLE_MAPPING	1	FK_C4FQV34P1MBYLLOXANG7B1Q3L	1	USER_ID	A	8174	NULL	NULL		BTREE			+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+ 3 rows in set (0.00 sec) mysql> show indexes in CREDENTIAL; +----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	Table	Non_unique	Key_name	Seq_in_index	Column_name	Collation	Cardinality	Sub_part	Packed	Null	Index_type	Comment	Index_comment	+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	CREDENTIAL	0	PRIMARY	1	ID	A	1887	NULL	NULL		BTREE				CREDENTIAL	1	FK_PFYR0GLASQYL0DEI3KL69R6V0	1	USER_ID	A	1887	NULL	NULL	YES	BTREE			+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+ 2 rows in set (0.00 sec) mysql> show indexes in USER_ENTITY; +----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	Table	Non_unique	Key_name	Seq_in_index	Column_name	Collation	Cardinality	Sub_part	Packed	Null	Index_type	Comment	Index_comment	+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+	USER_ENTITY	0	PRIMARY	1	ID	A	1937	NULL	NULL		BTREE				USER_ENTITY	0	UK_DYKN684SL8UP1CRFEI6ECKHD7	1	REALM_ID	A	1937	NULL	NULL	YES	BTREE				USER_ENTITY	0	UK_DYKN684SL8UP1CRFEI6ECKHD7	2	EMAIL_CONSTRAINT	A	1937	NULL	NULL	YES	BTREE				USER_ENTITY	0	UK_RU8TT6T700S9V50BU18WS5HA6	1	REALM_ID	A	1937	NULL	NULL	YES	BTREE				USER_ENTITY	0	UK_RU8TT6T700S9V50BU18WS5HA6	2	USERNAME	A	1937	NULL	NULL	YES	BTREE			+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+----------+ 5 rows in set (0.00 sec) {code}	1	1	https://issues.jboss.org/browse/KEYCLOAK-2603
14938	KEYCLOAK-2590	Do I understand this correctly, when running a test we want to be able to set Time.offset, and so we need a new REST endpoint to allow this, or maybe one exists already, and just has to be exposed through admin-client because it's missing, but I suppose not since you say to make sure that manage realm permission is checked? And for checking you mean to add at the beginning of the method the following line - and that permission is not current realm specific but cuts across all realms - Time.offset is static field: {code} auth.requireManage(); {code}	1	1	https://issues.jboss.org/browse/KEYCLOAK-2590
14939	KEYCLOAK-2537	Any progress? Roadmap?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2537

#	Requirement	Questions	Answered	Successfully Answered	URL
14940	KEYCLOAK-2489	Yes I can give it a spin. Where should the scripting infrastructure tests be placed? in keycloak-services? I guess the tests for the ScriptBasedAuthenticator should be implemented in the keycloak-integration test project? Given the new documentation infrastructure where should I put the docs for this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2489
14941	KEYCLOAK-2480	Not quite sure what you are requesting here. The default setting will remain whatever WildFly provides as they have more experience with setting this up then we do. Further it's possible to configure it as you want. So what are you actually requesting?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2480
14942	KEYCLOAK-2480	The default settings (standalone-ha.xml) needs modifying for production in any case. You need to add a proper database, configure SSL, etc.. So doesn't really make that much difference that you need to apply different config for JGroups. What we could do is provide examples/documentation on how to setup JGroups for different environments (Docker, OpenShift, Amazon, etc..). We could maybe talk to WildFly guys to document that so we can reference it in our documentation. With regards to applying the config to a new version, have you had a look at jboss-cli? It's a great way to apply changes to standalone-ha.xml and can be executed offline. For example take a look at our JBoss CLI script[1] that can be used to install Keycloak onto an existing WildFly installation. It can be executed with: {code} bin/jboss-cli.sh --file=bin/keycloak-install-ha.cli {code} [1] https://github.com/keycloak/keycloak/blob/master/distribution/server-overlay/cli/keycloak-install-ha.cli	1	0	https://issues.jboss.org/browse/KEYCLOAK-2480
14943	KEYCLOAK-2474	Ok, great! Argh, I made my changes on the 1.8 version and the whole Keycloak project structure changed between 1.8 and 1.9! :-s Plus every file now includes a licence header, so the git patch is also useless. I guess I'll have to re-apply all changes manually ... oh well, keeps you busy :-) Is the current project structure and file contents stable now after those 'big impact' changes? Otherwise I'll wait a little more.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2474
14944	KEYCLOAK-2474	Sorry about that. We had to do it at some point. Doesn't git rebase work? It should figure out files have moved and show you diffs.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2474
14945	KEYCLOAK-2453	[~stianst] what exactly do you mean? Just document how to enable it?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2453
14946	KEYCLOAK-2438	[~stianst] correct me if I'm wrong, but don't you think that adding display name would be an overlap with "name" from [IdentityProviderFactory|https://github.com/keycloak/keycloak/blob/c7a8742a368bd8d76301145b08bb1e4af1b010e9/services/src/main/java/org/keycloak/social/facebook/FacebookIdentityProviderFactory.java#L31-L34] ? I was wondering if we could reuse the "name" attribute.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2438
14947	KEYCLOAK-2438	[~stianst] fair enough. Does it make sense to you? https://github.com/abstractj/keycloak/commit/5ac2c7bd7a24f1db9d44b0e289cc48091c25cac9 If you are ok with this change (just a raw idea), I will move forward on this.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2438
14948	KEYCLOAK-2422	Stian - this is a critical piece before you can make KC a product as all the Organizations typically use commercial certificates. KC generated certificates/keys will not be acceptable. Can you address this ASAP? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-2422
14949	KEYCLOAK-2406	[~stianst] [~dadirkes] I'm new to keycloak but very much interested in using this project. is there a way to plug the persistence framework in Keycloak? I don't want to bother the awesome developers of this project with my own agenda, Red hat has its own. Although I'm more experienced using Cassandra, I'm just trying to learn Mongo for the sake of using keycloak with a nosql persistence framework. After reading about mongo replica sets and configuration and sharding servers, it just feels to me that keycloak would be so much more powerful if used in conjunction with Cassandra	1	0	https://issues.jboss.org/browse/KEYCLOAK-2406
14950	KEYCLOAK-2406	Hi Stian, Has a Jira case number been defined for the changes to UserProvider/UserFederationProvider you mentioned, so that we can know when that has been completed ? If not yet defined, would you be able to add a comment here when one has been defined ? Thanks	1	1	https://issues.jboss.org/browse/KEYCLOAK-2406
14951	KEYCLOAK-2392	would it be possible to log both username and and UUI together?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2392
14952	KEYCLOAK-2382	Given that many people have requested this enhancement, would it make sense to increase the size by 2 or 3 as a starting point to accommodate some of the use cases? This likely has negligible impact on performance, but will accommodate many more customers.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2382
14953	KEYCLOAK-2378	+1 The current version of the npm repo is 2.0.0. Please update it to the latest one - 2.1.0 final. Also, why do you call it a bower project and feature a bower installation on the npm page? I find it misleading.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2378
14954	KEYCLOAK-2359	Does this make sense for all emails or do you have some dedicated ones in mind?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2359
14955	KEYCLOAK-2359	Hi [~tdarimont] I don't have one at hand that works but I would suspect it would be something like this (for example in the error.ftl I would add the following) {code:java} <#if client?? && client.baseUrl?has_content> ${msg("backToApplication")} <#elseif (request.getParameter("client_id")?has_content> <#assign clientBaseUrl = ${msg("clientBaseUrl_"+request.getParameter("client_id"))}> <p>${msg("backToApplication")} </#if> //Then in my messages.properties file, I will have a key like this clientBaseUrl_DummyClientID=redirect url //*** NOTE the above is not tested.*** {code} But as you can see, this is not good and elegant. So was wondering if its better to send the client base url as well in the parameter list so we can then redirect it to that url without much fuss. I think we still need the client ID as well as we can then accordingly use it to load different style sheets that will style the messages as per the client style sheet. But if we can get the base url as well, I think that would be great	0	0	https://issues.jboss.org/browse/KEYCLOAK-2359
14956	KEYCLOAK-2351	OAuth2 allows that [1] but OpenID Connect doesn't for implicit nor hybrid flow to use response_type=token alone without "id_token" or "code" [2] [3] . So we're not going to support that as we want to be OpenID Connect compliant. Isn't it possible to configure swagger UI to use "response_type=id_token token" ? [1] https://tools.ietf.org/html/rfc6749#section-4.2.1 [2] http://openid.net/specs/openid-connect-core-1_0.html#ImplicitAuthRequest [3] http://openid.net/specs/openid-connect-core-1_0.html#HybridAuthRequest	1	1	https://issues.jboss.org/browse/KEYCLOAK-2351
14957	KEYCLOAK-2343	We currently need that functionality - is this currently in progress or may I submit a PR for this? Cheers, Thomas	1	0	https://issues.jboss.org/browse/KEYCLOAK-2343
14958	KEYCLOAK-2343	Can we just have an additional boolean param on searchForUser() on whether to make query exact or not? Same with a new @QueryParam("exact")?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2343
14959	KEYCLOAK-2343	Hi, I gave this a quick spin and sent a PR with a PoC implementation for (JPA, MongoDB, and some of the other providers) according to the suggested change. At the moment I'm using an ugly checkbox next to the user-search field to mark the search as exact (when checked) and unexact (when not checked, default). Would this be suitable (after some UI polishing and some additional tests?). Cheers, Thomas	1	0	https://issues.jboss.org/browse/KEYCLOAK-2343
14960	KEYCLOAK-2343	How about performing an exact search when the search term is wrapped in single / double quotes?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2343
14961	KEYCLOAK-2339	Shouldn't simply putting the impersonation info in the impersonated {{UserSessionModel}} be enough? Then mappers can be used to expose this information as claims if desired.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2339
14962	KEYCLOAK-2337	Did you completely remove the Keycloak theme? You need to leave keycloak/common as that contains resources used by the base theme as well (Angular for example).	1	1	https://issues.jboss.org/browse/KEYCLOAK-2337

#	Requirement	Questions	Answered	Successfully Answered	URL
14963	KEYCLOAK-2337	Did you update keycloak-themes.json? For keycloak it should only include common	1	1	https://issues.jboss.org/browse/KEYCLOAK-2337
14964	KEYCLOAK-2302	Would it be ok to include the subsystem by default if this PR is merged? I'd like it to be as simple for the administrators to enable this functionality as possible. I'll probably need some help at least on reviewing the Wildfly configuration as it's not our standard operating environment.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2302
14965	KEYCLOAK-2271	[~mposolda] how critical is this and how much effort would it be?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2271
14966	KEYCLOAK-2266	Is there a documentation which requests are valid for the keylcoak token introspection endpoint? With RFC7662 there are several possibilities to introspect a token.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2266
14967	KEYCLOAK-2210	[~stianst] do you think it would be possible to push it to 1.8.CR2 release? Is it big change? It would be great to have it there because it's very misleading from UX perspective.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2210
14968	KEYCLOAK-2210	[~lkrzyzanek] we don't have time to do more features and improvements in 1.8.x now. If there are things that you must have let us know and we can see if we can make an exception. It has to be must haves rather than nice to haves at this point though.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2210
14969	KEYCLOAK-2210	What about: The link you clicked is not valid. I'm trying to change the impression from "hey your server has some trouble" to "OK it's my fault." There is no need to put much details what happened. Just have something else than "general error message".	1	1	https://issues.jboss.org/browse/KEYCLOAK-2210
14970	KEYCLOAK-2210	What is wrong with this message? "The link you clicked is a old stale link and is no longer valid. Maybe you have already verified your email?"	1	1	https://issues.jboss.org/browse/KEYCLOAK-2210
14971	KEYCLOAK-2170	What we have now is: - Tests for various response_types in package "org.keycloak.testsuite.oidc.flows" . This was added when working on OIDC conformance testsuite, which is passing now with implicit flow - Adapter tests done by QA team - AbstractJSConsoleExampleAdapterTest and it's subclasses	0	0	https://issues.jboss.org/browse/KEYCLOAK-2170
14972	KEYCLOAK-2141	Does the openid connect spec actually state it's recommended to not make email unique? Or does it just say it can change over time.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2141
14973	KEYCLOAK-2108	Could you send a mail about this to keycloak-dev please?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2108
14974	KEYCLOAK-2108	Sure. I registered to the dev-mailing list this morning and try to work my way trough the threads ... is there also a google searchable group for this? (I'm currently using this "hack": http://johnpoelstra.com/importing-mailing-list-archives-to-thunderbird/ to read the list via thunderbird - but there must be a better way to do this...) I'll post the question there... Btw. was the keycloak issue board witht the 3 lanes deleted? It is really hard to keep track of what happens now... When I try to access the board: https://issues.jboss.org/secure/RapidBoard.jspa?rapidView=1202 I see the message: "The requested board cannot be viewed because it either does not exist or you do not have permission to view it." Would be great of this would be opened / recreated again.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2108
14975	KEYCLOAK-2089	Is this related to the case where a <secure-deployment> without "secret" would imply that the KC adapter subsystem would try to auto-register the deployment with the server?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2089
14976	KEYCLOAK-2089	I tried to find which issue would be related to the case I mentioned, but I wasn't able to locate it. Is there already a JIRA for that?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2089
14977	KEYCLOAK-2084	[~stianst] for the 3 scenarios you described. Is this what you expect? 1. Admin username/password {code:bash} ./client-registration.sh -u john #Prompt for the password Password: ****** {code} 2. Service Account client id+secret, or JWK keys {code:bash} ./client-registration.sh --client-id 42424242 #Prompt for the secret Secret: ****** #JWK keys ./client-registration.sh --key client.jks {code} 3. Initial access token and registration access token {code:bash} ./client-registration.sh --initial-access-token #Prompt Token: ./client-registration.sh --registration-access-token #Prompt Token: #JWK keys ./client-registration.sh --key client.jks {code} Does it make some sense?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2084
14978	KEYCLOAK-2076	Few thoughts from me around reauthentication support on Keycloak server: h4. Authentication flow for Reauthentication Common Keycloak authentication is performed in "Browser" flow. Question is if we should upgrade this fow to support reauthentication, or define new one. The flows will be typically very similar, providing same authentication options, but also differing in behaviour: h5. Cookie * must be performed as first step. If user is not authenticated from cookie then authentication flow must be performed in next steps, else we can perform steps in Reauthentication mode. h5. Kerberos * new kerberos handshake should be performed to reauthenticate user. What to do if user differs from the original one we are reauthenticating, show error or continue in the process with new user? h5. Forms * we need new form template(s) different from one used during user login - another title - no username field, maybe username shown as readonly? - password field - in case of OTP enabled for current user we should also have field for one time password right on the form. But I'm not sure if current authentication flow mechanism allows to have same form for two underlying authenticators. h5. Rest of flow * Should we perform "Required actions" defined for given user after successful reauthentication? I think yes as it is the only point where we can force them during long lived user session. * After reauthentication flow is finished then authentication timestamp must be stored in user session, and then control returned back to SSO/client protocol to return user info back to client app. h4. Should we allow reauthentication over Identity providers? * I think yes, as user should originally authenticate over some of it. Probably not to automatically forward to the original identity broker, but show list of identity broker buttons on "Reauthenticate" form to allow user use them. * We should maybe allow realm scoped configuration of which identity broker may be used for reathentication and which not. * We also have to decide what to do if user returned from identity provider differs from the original one we are reauthenticating. Show error message or continue in login process with new user? * If identiy provider protocol supports reauthentication, should we use it (so force reauthentication in the provider also)? * how to handle "Authenticate by Default" marked identity providers in case of reauthentication? Should we care of them?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2076
14979	KEYCLOAK-2070	This is a *very* important feature for our project. Is there a workaround that we could implement waiting this feature to be available ? We are using OpenID connect with the javascript adapter.	0	0	https://issues.jboss.org/browse/KEYCLOAK-2070
14980	KEYCLOAK-2070	Is this a duplicate of KEYCLOAK-2775?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2070
14981	KEYCLOAK-2067	Is it always the case that people can sort this at DNS level? Don't some organizations work in a way that admin responsible for Keycloak is not responsible (and doesn't have access) to manage DNS server and viceversa? People can sort this at DNS level already, but "auth-server-url-for-backend-requests" might be an alternative for those where DNS is not an easy option.	1	0	https://issues.jboss.org/browse/KEYCLOAK-2067

#	Requirement	Questions	Answered	Successfully Answered	URL
14982	KEYCLOAK-2054	Upvote from me, I recently ran into the same problem where a HTTP proxy is between the keycloak server and the Java backend that uses keycloak client to authenticate a web user. The proxy configuration needs to be set on the {{org.apache.http.client.HttpClient}} which is build by the {{org.keycloak.adapters.HttpClientBuilder}}. An example configuration can be found on the [HTTPClient website|https://hc.apache.org/httpcomponents-client-ga/httpclient/examples/org/apache/http/examples/client/ClientProxyAuthentication.java]. Looking at the source code it looks like we could add an additional configuration section to the {{org.keycloak.representations.adapters.config.AdapterConfig}} process this config in {{org.keycloak.adapters.KeycloakDeploymentBuilder}} and add the proxy configuration to the HTTPClient in {{org.keycloak.adapters.HttpClientBuilder.build()}}. Does that sound like the way to do this? Looking at {{org.keycloak.adapters.HttpClientBuilder}} it appears it could do with some work as it uses Apache HTTP Client deprecated APIs.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2054
14983	KEYCLOAK-2054	[~nbertram] that sounds about right. Do you fancy sending a PR for this? We don't have any resources to work on it ourselves atm.	1	1	https://issues.jboss.org/browse/KEYCLOAK-2054
14984	KEYCLOAK-2054	I gave this a spin, would you mind having a look? https://github.com/keycloak/keycloak/pull/2381 Could someone add this as a github PR to this issue? It seems that I'm not allowed to do this...	0	0	https://issues.jboss.org/browse/KEYCLOAK-2054
14985	KEYCLOAK-2040	[~tdarimont] looks very interesting. Can you send a mail about it to keycloak-dev mailing list?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2040
14986	KEYCLOAK-2035	Hello [~stianst], Is the support on the UI totally necessary for it to be accepted?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2035
14987	KEYCLOAK-2019	This is what I am looking for as well. Can someone help us with some tips on how to do this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-2019
14988	KEYCLOAK-2019	I honestly don't understand what this is about. Can you please give an example when you would propagate an error message from the underlying user federation provider directly to the users?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2019
14989	KEYCLOAK-2008	Can you please add some more details to this issue? How did you configure it, what was the error, what is the app backend, etc..	1	0	https://issues.jboss.org/browse/KEYCLOAK-2008
14990	KEYCLOAK-2008	On investigating, Found out that the Username of the external user is stored by his email address in Keycloak-"Users" while the username is configured as "LDAP entry dn" for internal users in keycloak. The authentication fails even after passing the DN of the user in the assertion claim. I wish to get the DN of this external user in the username field of Users. Do we need to configure a mapper for the same?	0	0	https://issues.jboss.org/browse/KEYCLOAK-2008
14991	KEYCLOAK-2003	[~mposolda] could you please elaborate more about what you have in mind? Would you like to prevent an attacker from attempting to brute force the client secret against KC?	1	0	https://issues.jboss.org/browse/KEYCLOAK-2003
14992	KEYCLOAK-1998	[~stianst] seems like this workflow is already working today. What I tested: 1. Deployed the latest version of KC 2. Went to my realm configuration, enabled "User Registration", included "totp" as required credential. 3. Tried to register a new user After the registration screen, the OTP is mandatory. Let me know if I'm misundestanding what you want.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1998
14993	KEYCLOAK-1974	[~stianst] ok, can you then set some fix version to not forgot on this, please?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1974
14994	KEYCLOAK-1949	I've got an implementation proposal: https://github.com/gerbermichi/keycloak/commit/0ef36f0ac446fcf70272f2aed05320c3a5083635 I would like to discuss some points of it: - What do you think of the "create-new-session" option? - What do you think of the execution order? - Where is the right place for the tests?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1949
14995	KEYCLOAK-1925	Can you specify more precisely what this task entails? Including what work is done, and what is still to be done here ...	0	0	https://issues.jboss.org/browse/KEYCLOAK-1925
14996	KEYCLOAK-1922	Hi Stian, you are right. These links are orginally used by the admin console and no client is available. But in the rest api doc (http://www.keycloak.org/docs/rest-api/index.html#_send_a_update_account_email_to_the_user) you can set a client id. If you do so, the client is available in the template, but <# skipLink??> evaluates to false. I use this call to trigger a set initial password action, after the user is created by a 3rd party application. In this case I want the user after setting his initial password, to be able to click on a back to to application link. Here is my workaound: {code} ${message.summary} <#if client??> <#if client.baseUrl??> ${msg("backToApplication")} </#if> </#if> {code} I am using Keycloak 1.9.2.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1922
14997	KEYCLOAK-1912	Stian - I am presuming that you are referring to dynamic registration. Is that correct? If not, can you look into the below spec? https://openid.net/specs/openid-connect-registration-1_0.html Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-1912
14998	KEYCLOAK-1905	It would be better if it wasn't an admin endpoint, but instead something that was associated with users themselves and such protected by the user token, not an "admins" token. However, not sure this is a generic enough feature for us to add it. We are planning to add pluggable REST APIs though, so you could add it on yourself. Would that be an ok approach?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1905
14999	KEYCLOAK-1905	Right, a user based endpoint, as you described, would be more suitable - I just took the admin URI pattern as an example from the REST API doc :) In my point of view, it is a very generic feature - one could also think about requiring the user to enter a TOTP token again when he wants to change some import profile / account information (billing, bank account etc.) or after a longer time of inactivity. Could you give me some pointers where / how such a user based REST endpoint could be added? Having said that - if the feature doesn't make it in the product - pluggable rest apis could be one way to workaround that - do you have the JIRA issue for that at hand?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1905
15000	KEYCLOAK-1904	Can you create a bug for that issue?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1904
15001	KEYCLOAK-1903	hi, I already translate all messages I have to correct some sentences and create a PR what do you think about it ? best regards,	1	1	https://issues.jboss.org/browse/KEYCLOAK-1903
15002	KEYCLOAK-1903	Great, would you also be willing to maintain the translation in the future? If we don't have someone that can maintain it it'll quickly become outdated	0	0	https://issues.jboss.org/browse/KEYCLOAK-1903
15003	KEYCLOAK-1902	Could this be included in 2.0.0.Final?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1902
15004	KEYCLOAK-1902	I would very appreciate to see this feature as soon as possible. We have actually this requirement and would have to implement a custom deployment on Keycloak server in order to be able to search the users by custom attributes and roles. Is there a plan, when this feature will be supported natively?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1902
15005	KEYCLOAK-1901	Not sure about this one. I'm not to convinced about us using RestEasy client in the first place and I don't want to expose it. Can we do it by passing in the HttpClient instead?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1901
15006	KEYCLOAK-1893	For a hardware token how would you configure the device in Keycloak? I assume the totp secret is hard coded in the device itself and would have to be copied to Keycloak?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1893

#	Requirement	Questions	Answered	Successfully Answered	URL
15007	KEYCLOAK-1893	For hardware tokens I assume only an admin should be able to register the token with the user as the user themselves wouldn't have the knowledge to configure the token seed? With regards to 4, are we not spec compliant already? We have https://tools.ietf.org/html/rfc4226 and https://tools.ietf.org/html/rfc6238 already AFAIK.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1893
15008	KEYCLOAK-1893	It seems like you're willing to contribute what's required to get hardware tokens working properly in Keycloak? If so we should discuss the best approach through the mailing list. I think we have two options, either introduce a new OTP authenticator or make the existing authenticator configurable through the admin console. Can you start a general thread on the Keycloak dev mailing list with what you're trying to achieve and how? Also, include that you are willing to contribute it ;)	1	1	https://issues.jboss.org/browse/KEYCLOAK-1893
15009	KEYCLOAK-1885	Do you want to just add those that you need?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1885
15010	KEYCLOAK-1872	Will this feature be added in the near future? -- Thanks, Suresh	1	0	https://issues.jboss.org/browse/KEYCLOAK-1872
15011	KEYCLOAK-1851	Should this be rejected? The Realm settings forces verify email for all users. Required Actions is just for one user.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1851
15012	KEYCLOAK-1784	What do you think about configuring the Tomcat Valve in the global context.xml and then having conf/keycloak.xml instead of having to include both in the war? keycloak.xml would have to have secure-deployment elements like standalone.xml does	1	1	https://issues.jboss.org/browse/KEYCLOAK-1784
15013	KEYCLOAK-1744	How could Keycloak know if the password is expired when it is controlled by LDAP?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1744
15014	KEYCLOAK-1737	What custom events are you talking about? Your application shouldn't use Keycloak as an event store. Instead you should have a separate event store and make Keycloak and your application use that.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1737
15015	KEYCLOAK-1735	I'm not following, what has to be re-developed?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1735
15016	KEYCLOAK-1735	I can't see the issue KEYCLOAK-528 in Jira(the duplicate). Can we see it? Thanks, Lucian	1	0	https://issues.jboss.org/browse/KEYCLOAK-1735
15017	KEYCLOAK-1733	Hi, this would be useful for us in scenarios where we can not modify the headers. For example downloads or file uploads. We have most of our app now working using keycloak (using javascript-client and wildfly backend) but its these edge-cases that prevent us from full usage right now.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1733
15018	KEYCLOAK-1724	Does it work when auth-method is set to KEYCLOAK? If so we need to update instructions on http://keycloak.github.io/docs/userguide/html/ch08.html#tomcat-adapter, feel free to create a PR for that.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1724
15019	KEYCLOAK-1720	Excuse me for questioning this, since I am probably missing some bits and pieces of the big picture. Why merging roles is not an option, if a user sets its app to behave like that? In case of role collision, the role would be in that list in any case, what's the issue with that? What I can't really understand is why at least that option can't be controlled by the developer so we can customize keycloack to every possible scenario.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1720
15020	KEYCLOAK-1720	We can probably improve on what we have. I'm not sure what you are proposing is correct though, because there's no way for the client in that case to distinguish if a role is associated with a client or a realm. Can you send a mail about this to the mailing list so we can get input from others as well?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1720
15021	KEYCLOAK-1720	I understand where you are going now. That makes sense to me. Knowing where those roles come from sounds like a must to have. So perhaps simply merging is not a good solution. The thing is, not having some roles at all is also an issue as far as I understand. If my client is in a realm. Both have roles and I need them both in my app, What am I supposed to do? We could also workaround the issue by making realm roles composite, and including some substitutive client-level role. But that approach shows itself unmanageable as more and more clients are added. Where could I find the mailing list? Is there any convention / protocol to share this discussion, or should I just send a regular mail with the information of this ticket.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1720
15022	KEYCLOAK-1719	I assume you're talking about the ability to pass a token by reference so it can be passed around without exposing the details of the token itself? In that case I assume only certain clients should be permitted to invoke the validation api to retrieve the actual jwt? Is there a spec for this or does the commercial vendors provide their own proprietary mechanisms?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1719
15023	KEYCLOAK-1719	If any client can invoke the validation api it seems to negate the whole point of pass by reference. In that case anyone can just invoke the validation api to obtain the details from the jwt. I don't quite follow your example on how it should work. Are you simply saying that the client that invokes the verification api needs to have the scope to obtain all details in the token? So if the token contains a few realm roles, a few client roles and the users profile the client needs to have the corresponding scope configured in the KC admin console? Further only confidential clients should be permitted to invoke this endpoints, but I don't think that's a problem as the public client type is for client-side applications, not services. This would probably require some token cache built in to the adapter otherwise this could end up with generating a lot of traffic to the Keycloak server.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1719
15024	KEYCLOAK-1718	Can you elaborate a bit on your use case? Do you have an Spring MVC based REST backend and a JS frontend that uses said backend and you want to transparently authenticate via Keycloak? Did you see the spring security XML configuration example under: http://keycloak.github.io/docs/userguide/html/ch08.html#d4e1223 ?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1718
15025	KEYCLOAK-1691	note, you guys *do* ship a -server-feature-pack.zip, which is cool, but lacks some modules like keycloak-undertow-adapter, etc.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1691
15026	KEYCLOAK-1690	Can you elaborate on what you need? We support authenticating users with Kerberos through SPNEGO/GSSAPI. This is used as a bridge between web SSO and desktop SSO. We don't support applications authenticating with Keycloak using Kerberos though.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1690
15027	KEYCLOAK-1596	If you've been using Keycloak's adapter with Cordova or AeoroGear, we'd welcome help. My thinking was that we'd add a mobile section to the documentation covering Cordova, briefly covering AeroGear and links to AeroGear's oauth libraries. Not sure what you mean about general information, can you elaborate?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1596
15028	KEYCLOAK-1578	Any news on this topic ? Would you welcome a pull request ?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1578
15029	KEYCLOAK-1542	Would this not just re-implement what's already available in the WF/EAP console?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1542
15030	KEYCLOAK-1542	There are plans to allow login to WF/EAP console with KC. When that's available in WF we can configure it like that OOTB in KC. You'd still need URL though and it's on a separate port as well. TBH I'm a bit undecided on this one. On one side it would be nice to have everything available from one console, but on the other side duplicating functionality isn't ideal either. Let's bring this one to keycloak-dev and see what others think. Do you want to send a mail about it?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1542

#	Requirement	Questions	Answered	Successfully Answered	URL
15031	KEYCLOAK-1530	(see exception below). Not sure if the wrong schema is used (like public - but as far as I can see the code is ok) or if it's a quoting problem (realm vs "realm" - as described here: http://stackoverflow.com/questions/25692362/liquibase-with-posgresql-relation-issue). I would also like to suggest to rename the property "defaultSchema" (which is mapped to hbm2ddl.auto) to "schemaMode" or "schemaDDLMode" (or whatever reflects best what is done here) and the property "schema" to "defaultSchema" or "dbSchemaName". I just think using the name "defaultSchema" for the hbm2ddl.auto property is confusing. 13:34:46,077 ERROR org.keycloak.connections.jpa.updater.liquibase.LiquibaseJpaUpdaterProvider Change Set META-INF/jpa-changelog-1.1.0.Beta1.xml::1.1.0.Beta1::sthorger@redhat.com failed. 15032	KEYCLOAK-1515	Just to clarify: would this feature enable a user that was federated via Activate Directory / LDAP to automatically log-in via their AD credentials? To me it sounds like it, since the user@corp email that came with the federated user attributes would implicitly imply to use of the configured AD identity provider (for @corp), or is there some additonal mapping for federation provider -> identity provider needed?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1515
15033	KEYCLOAK-1455	Do we not eventually need to get rid of it? Or rename it to isSecondFactorAuthEnabled?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1455
15034	KEYCLOAK-1445	it seems that there is an implementation for that in the keycloak github repository already. Unfortunatly one has to build it manually since it isn't yet consumable from maven central, I added a link to the implementation. What's the status of this? Is this tentative or already useable?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1445
15035	KEYCLOAK-1445	[~tdarimont] If it works fine we can include it in 1.7. I don't know the status of it though. Did you get a chance to try it out?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1445
15036	KEYCLOAK-1434	A few open questions here: * Should it be an icon, a label or both * Does [Edit] make sense? It's also to view.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1434
15037	KEYCLOAK-1432	The blank-slate link is broken - did you mean: empty-state https://www.patternfly.org/patterns/empty-state/ ?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1432
15038	KEYCLOAK-1430	Is this issue meant exclusively only for form buttons and that too for the form header buttons ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1430
15039	KEYCLOAK-1427	[~agalante] Can you please just add a delete glyph icon and a vertical separator in realm selector menu as shown in screenshot 'keycloak-delete-client.png'. I can deal with the latter part of adding a github like modal to confirm deletion of realm. I tried adding delete glyph icon with the separator using custom css and raw values. But, IMHO, using raw values might be a poor practice. Moreover, that separator is a little pain to deal with. The best I could reach upto using raw and custom css is in screenshot 'realm_selector_menu.png'	0	0	https://issues.jboss.org/browse/KEYCLOAK-1427
15040	KEYCLOAK-1423	Query param can be modified by user so can be used as hint only. What about configuration option for Keycloak "Client"?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1423
15041	KEYCLOAK-1423	Why would it be a problem that query param can be modified by user? Configuration option for Client would probably be good as well (or as only option).	1	1	https://issues.jboss.org/browse/KEYCLOAK-1423
15042	KEYCLOAK-1402	Is this still a problem? We're just evaluating Keycloak 1.4.0.Release with Postgresql 9.4 and haven't seen any issues so far - thought we haven't done any migrations yet.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1402
15043	KEYCLOAK-1384	Do we support federated logout for SP's using SAML libraries other than Keycloak ?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1384
15044	KEYCLOAK-1383	Currently our largest deployment (*.redhat.com) uses a separate application for user registration. We have added hooks into our PicketLink deployment to allow for apps like this to programtically authenticate a user after registration. Will KC support scenarios where the user registration can occur outside of KC itself?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1383
15045	KEYCLOAK-1383	should I create a new "feature request" or we can open this one ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1383
15046	KEYCLOAK-1382	Are there any plans to support delgating authn to the container (similiar to JBoss/Picketlink)? For example, we are using org.jboss.security.auth.spi.LdapExtLoginModule for our internal IdP deployment - this module lets us use a PAM passthrough to our OTP server for the majority of users, and at the same time define accounts with static passwords in LDAP for certain services, etc. Being able to use our existing jboss login-modules would make migrating from PL to KC easier for our external IdP as well.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1382
15047	KEYCLOAK-1377	Is there also the ability to do back-end lookups (based on authenticated identity), from LDAP or database for example?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1377
15048	KEYCLOAK-1376	Implemented this, but I'm not sure what you mean by "Ability to pass RelayState as additional parameter". Is this a configurable option? Or do you want to be able to pass it as a URL Query parameter? Or both?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1376
15049	KEYCLOAK-1326	Does this require firing/logging an event including the number of counts in case a user authenticates via google authenticator or FreeOTP ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1326
15050	KEYCLOAK-1267	[~stianst] I see this has been removed from 1.3.0 Beta. Does that it means that its not scheduled for any release coming soon? Do you guys have any plans of a way to approach this solution? If so I would like to provide help fixing this if u can give me some guidelines.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1267

#	Requirement	Questions	Answered	Successfully Answered	URL
15051	KEYCLOAK-1267	That would be really useful! As I see it one would need to do the following things: * Introduce new two new persistent properties to {{RealmModel}} ** rememberMeSsoSessionMaxLifespan ** rememberMeSsoSessionIdleTimeout (those need to be propagated to the Jpa, Infinispan, MongoDB model) ** RealmAdapters have to be adjusted ** when creating a realm initialize the rememberMeSso settings from the corresponding SsoSessionXXX settings. ** Add the two new columns to the liquibase jpa-changelog-2.2.x as a new changeset * use the new rememberMeSso timeouts in case of the clientSession has the rememberMe note set ** As far as I see it this would be in {{org.keycloak.services.managers.AuthenticationManager}}: *** {{AuthenticationManager#createIdentityToken}} *** {{AuthenticationManager#createLoginCookie}} *** {{AuthenticationManager#isSessionValid}} * expose the new rememberMeSsoSession settings in the admin-console ** see {{theme/base/admin/resources/partials/realm-tokens.html}} ** add labels, descriptions to the admin resource bundle {{theme/base/admin/messages/admin-messages_en.properties}} * Testing ** Verify that everything still works ** Add acceptance test(s) for user logins with remember me set... and check whether the correct cookies are generated Did I miss something?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1267
15052	KEYCLOAK-1250	for a sidebar which supports expand-on-hover (when slimmed), would it also be sensible to give it some transparency? Something like: !http://i.imgur.com/pX4QtxS.gif!	1	0	https://issues.jboss.org/browse/KEYCLOAK-1250
15053	KEYCLOAK-1204	[~prabhalar] This issue is rather vague. Is this required for identity brokering when external OpenID Connect IdPs are signing tokens with ECDSA? For HMAC I'm not sure how that would work as that would require having a shared secret between Keycloak and the external IdP.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1204
15054	KEYCLOAK-1201	Hi [~lohithac] I am also struggling with this issue where the "aud" claim is the name of the keycloak client and not an array of accessible resources. The workaround with the custom protocol mapper would be awesome, but I can't seem to configure it. Inside my realm I go to "clients > client > Mappers" and then click on "Create". As Mapper type I select "Hardcoded claim" but then I don't have the option to choose "Multivalued" or to choose an array as my Claim JSON type Can you give me some insight on how to proceed from this point?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1201
15055	KEYCLOAK-1195	Do you guys want to do a PR for this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1195
15056	KEYCLOAK-1167	I'm looking for that right now - are the relevant openid connect urls listed here: https://github.com/keycloak/keycloak/blob/1c38bb7158fdeb9c2a094dcf8dfd15c3f41aa7f3/core/src/main/java/org/keycloak/constants/ServiceUrlConstants.java#L9 ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1167
15057	KEYCLOAK-1155	Can Kerberos support also be added to the authentication of DB Connections?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1155
15058	KEYCLOAK-1129	Stian - Can this also be implemented in 1.4 version along with Client Credentials grant? If not, I will be happy to get Client Credentials Grant first. Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-1129
15059	KEYCLOAK-1129	Stian - I agree with your explanation about the basic vs implicit flow but we will not be able to consider Keycloak for our enterprise needs unless support is provided for implicit flow. So can you make sure that this feature is implemented in 1.5 version without fail? Thanks once again, Raghu.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1129
15060	KEYCLOAK-1129	Hi Stian - Can we get this feature in 1.6, if not 1.5 ? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-1129
15061	KEYCLOAK-1129	Hi Marek - While you are at this basic flow, I believe, with a little deviation even the Hybrid flow can be addressed which will make this a more complete implementation of OIDC. What do you think? I will be happy to create a JIRA for hybrid flow. Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-1129
15062	KEYCLOAK-1118	Doesn't make sense. Couldn't you create your own theme to implement that functionality?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1118
15063	KEYCLOAK-1109	Could you please let me know when I could expect having this in master? I'm asking because of implementing KEYCLOAK-1042. Thanks.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1109
15064	KEYCLOAK-1075	What we're currently doing for LDAP is update backend always when any setter is called. See WritableLDAPUserModelDelegate . It's not very great to call backend per each setter call and I have JIRA to address this for LDAP - KEYCLOAK-601 . The improvements to this could be creating custom type of KeycloakTransaction and then call something like: {code} keycloakSession.getTransaction().enlistAfterCompletion(new MyCustomTransaction()); {code} when MyCustomTransaction.commit method will invoke your REST backend. Once you enlist transaction by the call above, the commit callback will be called by Keycloak at the end of HTTP request, so update of REST backend is postponed and called just once per request. We are already using very similar approach for mongo or infinispan models. I will try to take a look if it's possible to use more "generic" task/transaction approach so that federation providers don't need to deal with writing similar code again. Until it's available, you can either call backend per each setter or write custom transaction by yourself. Does it work?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1075
15065	KEYCLOAK-1075	Can I expect this to be added anytime soon? I'm facing the same issue here, having a backend service which has several required fields and not being able to register users using the addUser method on UserFederationManager class. is there any other workaround apart from the transaction one? thanks	0	0	https://issues.jboss.org/browse/KEYCLOAK-1075
15066	KEYCLOAK-1074	We thought about javascript hack also, but it is not reliable, and mainly it doesn't work for Social registrations (eg Google, GitHub etc). I think realm option should be best solution as it can affect both frontend (hide username field from registration form) and backend (validations on register form submit, and mainly value passed to the "registerUser" method for both normal and social registrations). I think this feature is generic enough (brings simplified user registrations without additional username) to be added. As it looks not too complicated I should try to code it myself and contribute back. WDYT?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1074
15067	KEYCLOAK-1074	[~stianst] This doesn't really fit into custom claim work. I'm focused on mapping user data into token claims. This is a bit different as you want one input item to populate two user attributes. Would we really need to have something that maps registration form data into UserModel attributes anyways? I need to be in registration code anyways for custom attributes. I can do this work if you want...BUT....if you are itching to contribute, it is always nice getting somebody new as a contributor. I've scheduled this to be fixed for 1.2.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1074
15068	KEYCLOAK-1073	Input validation is critical, especially for a security application. Can you add some more explanation of how this is okay to be closed out? There is no explanation and the other item was closed as a duplicate. Is there comprehensive input validation now? Is it customizable?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1073
15069	KEYCLOAK-1069	Are you suggesting to use refresh tokens with a lifespan of 180 days (or so) to get a remember-me functionality? Until now I thought about refresh token usage like a session not like a remember-me cookie. The refresh token uses the session idle timeout, not the preferred session max lifespan (see KEYCLOAK-1068 for details). The remember-me cookie of the login page uses the session max lifespan as well.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1069
15070	KEYCLOAK-1069	Could this be clarified a bit? We are also looking into this option. What are the implications of increasing the refresh token expiration times to a few months? If that's okay then it's an easy solution. If not, there should be a way to achieve "remember me"-like functionality with direct grant.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1069
15071	KEYCLOAK-1065	Hi Marek - Can you make it multiple OUs instead of just two (We have users in multiple OUs)? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-1065

#	Requirement	Questions	Answered	Successfully Answered	URL
15072	KEYCLOAK-1064	Actually your NPE happens on this line: https://github.com/picketlink/picketlink/blob/v2.7.0.CR3/modules/idm/impl/src/main/java/org/picketlink/idm/ldap/internal/LDAPIdentityStore.java#l753 . Wonder if it could be just case-sensitivity issue like "createTimestamp" vs "createTimeStamp" ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1064
15073	KEYCLOAK-1047	Are these apps not adding support for OpenID Connect and SAML?	1	1	https://issues.jboss.org/browse/KEYCLOAK-1047
15074	KEYCLOAK-1045	[~bill.burke] look at the http://www.jboss.org/ - right side of header part contains link to login/register, if you are logged in then it is changed to user avatar image with link to user profile (by javascript which performs AJAX REST call to SSO server to get info about current user and change header is user is logged in). Now imagine that we use Keycloak for the SSO of this site, how can we implement this? Note that the site is static HTML server by plain Apache web server, no any dynamic server side is available.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1045
15075	KEYCLOAK-1045	We don't support doing this in an iframe as it opens for exploits (clickjacking, csrf). Why can't you redirect main browser, you could even do it before displaying anything and the user wouldn't really know (other than longer request time on first request)? I would assume on jboss.org you could have long-lived user sessions, which means it'd only redirect once every 30 days or something for a user, and only if they are already logged-in. There's only the one redirect, which if you store the refresh token in local storage would only be for the first request. You need to swap code for token, but that's a async request (which looks like that's how it's working atm). User profile is included in the token, so you don't need to do a separate request for that.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1045
15076	KEYCLOAK-1045	Are you interested in session management at all for anything hosted at jboss.org? i.e. Single logout, tracked app visits in a sign-on-session, admin initiated logouts, etc. Do you just use CAS to populate some cookie that you extract data from every request?	1	0	https://issues.jboss.org/browse/KEYCLOAK-1045
15077	KEYCLOAK-1045	I guess what I'm asking, do you need *any* of our token architecture? Maybe you are just interested in 1) Is the user logged in. and 2) who the user is.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1045
15078	KEYCLOAK-1045	The OIDC iframe currently passes realm-name and userid. Is that enough information Vlastimil? Maybe we need to expand what information the iframe has and can transmit (like we do any application). @Stian, I guess for performance reasons we need to support implicit flow.	1	0	https://issues.jboss.org/browse/KEYCLOAK-1045
15079	KEYCLOAK-1045	Added a POC to http://stianst.github.io/jbossorg/ backed by Keycloak on OpenShift. How it works: User not-logged in to Keycloak: # Load session iframe from Keycloak - this is a static resource and is cached in the browser (default max-age is 2592000, but is configurable) # As there's is no session cookie no more requests are made User logged-in to Keycloak, but not to static web pages: # Load session iframe from Keycloak (from browser cache) # As there is a session cookie the browser is redirected to Keycloak login pages to obtain code # Ajax request to Keycloak is used to exchange code for token - we can probably add support for the implicit flow to prevent this # Refresh token and access token is stored in sessionStorage if available or cookie if not - this makes it important to give reduced scope and claims to the application in the Keycloak admin console as storing refresh token in cookie/sessionStorage may be a small vulnerability User logged-in to static web pages: # Refresh token and access token is loaded from sessionStorage/cookie and keycloak.js is initialized with it # Load session iframe from Keycloak (from browser cache) # If session is valid (session cookie exists and id is same as in refresh token) the user profile is loaded from the access token. If the access token is expired the refresh token is used to retrieve a new access token from Keycloak, which returns updated user profile # If session is not valid, the flows from above are used Have a look at it and let me know if it fits your needs. I had to do some minor fixes to keycloak.js to support this, which is not in master yet, but added directly to keycloak.js on http://stianst.github.io/jbossorg/	1	1	https://issues.jboss.org/browse/KEYCLOAK-1045
15080	KEYCLOAK-1045	Hi [~stianst], I had no chance to look it yet as I have had a bit more important work on our UserFederationProvider implementation. Hope I'll be able to look it tomorrow. One question around "User logged-in to Keycloak, but not to static web pages:" case. Is user profile obtained as part of ajax request done in step 3? Or is another ajax request necessary to get user profile info? If only one request is used there then it will be probably OK, at least for first release. We will see what Pete Muir and his website guys will say to this solution ;-) Adding "implicit flow" which will prevent step 3 completely should be good still as it improves response times for users. Thanks	1	1	https://issues.jboss.org/browse/KEYCLOAK-1045
15081	KEYCLOAK-1044	Nice. BTW we should think about how often this SPI will be called, who and how can cache UserInfo. Point is that some informations in backend system can be updated often and we need this information to be immediately propagated to the clients. Which leads me to solution when Keycloak shouldn't cache data provided from this SPI at all (so SPI implementation will be responsible for caching), or it should be configurable how long Keycloak can cache data obtained from this endpoint (and maybe provide some REST endpoint where backend system can invalidate this cache for user?).	1	1	https://issues.jboss.org/browse/KEYCLOAK-1044
15082	KEYCLOAK-1044	Is that change still valid? I noticed that _UserDetailProvider_ is missing from master.	0	0	https://issues.jboss.org/browse/KEYCLOAK-1044
15083	KEYCLOAK-1042	I don't like changing details to <String, Object> it's intentionally strings to make it simpler to deal with. We shouldn't expose servlet or jax-rs classes. Further, we also need to make sure an event listener isn't able to change the request. How about adding "HttpRequest Event.getRequest" where HttpRequest has: * String getHeader * Map<String, String> getHeaders * String getQueryParam * Map<String, String> getQueryParameters * Cookie getCookie * Map<String, Cookie> getCookies We'd also create our own Cookie representation	0	0	https://issues.jboss.org/browse/KEYCLOAK-1042
15084	KEYCLOAK-1042	Trying to understand what you want here. What exactly are you going to do in the EventListener? Are you going to plug in your own and do something special? Or are you just going to parse this cookie information from a log file?	0	0	https://issues.jboss.org/browse/KEYCLOAK-1042
15085	KEYCLOAK-1024	Can you make that configurable? Let users of Keycloak choose it based on the risk level	0	0	https://issues.jboss.org/browse/KEYCLOAK-1024
15086	KEYCLOAK-1015	I propose the following solution: * Add 'accessCodeLifespanLogin' to Realm with default 300 seconds * Add 'Back to application' link on error page if application has baseUrl set ** Admin console can't set baseUrl atm, but we'll add that Would that fix your problems? [~gerbermichi] I'm moving this to 1.2.0.Beta1, it'll be released in a week or two and we don't have plans to do a 1.1.1.Final release.	1	1	https://issues.jboss.org/browse/KEYCLOAK-1015
15087	KEYCLOAK-996	Like this feature. Out of curiosity, can't we have the application choose the identity provider while registering with Keycloak?	1	0	https://issues.jboss.org/browse/KEYCLOAK-996
15088	KEYCLOAK-996	You mean, specify a default identity provider for an application ? So when an user tries to access this app he is automatically redirected to the default identity provider ?	0	0	https://issues.jboss.org/browse/KEYCLOAK-996
15089	KEYCLOAK-977	tested on EAP 6.3, 6.4-alpha and also WF 8.2: works fine	0	0	https://issues.jboss.org/browse/KEYCLOAK-977
15090	KEYCLOAK-971	Is there a good reason for this to be included in 1.9.3? We need to prioritize testing in 1.9.3 so this should be postponed to 2.x unless absolutely necessary in 1.9.	1	1	https://issues.jboss.org/browse/KEYCLOAK-971
15091	KEYCLOAK-953	What is the reason for the "Won't Fix"	0	0	https://issues.jboss.org/browse/KEYCLOAK-953
15092	KEYCLOAK-953	It was closed due to lack of demand and the initial use-case from the reporter has been resolved in another way. Is this a feature that you want?	0	0	https://issues.jboss.org/browse/KEYCLOAK-953

#	Requirement	Questions	Answered	Successfully Answered	URL
15093	KEYCLOAK-953	This feature would be very nice. Is someone already working on it?	0	0	https://issues.jboss.org/browse/KEYCLOAK-953
15094	KEYCLOAK-943	Has this been merged in yet?	1	1	https://issues.jboss.org/browse/KEYCLOAK-943
15095	KEYCLOAK-943	[~mtrue] No. It's still a work in progress. You can see what I have now at https://github.com/stianst/keycloak/tree/ACCOUNT-REST. I've got tests for the user profile and session endpoints. Also, CORS tests. I still need to add more (log, password update, etc.) and also add permissions tests.	1	1	https://issues.jboss.org/browse/KEYCLOAK-943
15096	KEYCLOAK-943	How can I get REST API for all operations available in the account management console. This includes view/update profile, reset password, view/update social links	0	0	https://issues.jboss.org/browse/KEYCLOAK-943
15097	KEYCLOAK-941	Bill/Stian - Can you please bump up the prioritization of this Jira and get it addressed in 1.3 Beta? This is turning out to be a major use case for a number of our clients and we require this functionality ASAP. If not, can you give me some pointers on how this can be implemented? I will give it a try once I find some time. Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-941
15098	KEYCLOAK-941	OK. Thanks Stian. In that case, along with certificates, can you also support Kerberos Keytabs? We create Kerberos System accounts for client applications to interact with each other - typically a Client application uses its Kerberos account and Keytab to authenticate against MIT Kerberos and obtains a service ticket applicable for the downstream application and presents it to it as a way of authenticating. Instead of service ticket, it can obtain an access token that can be used.	1	1	https://issues.jboss.org/browse/KEYCLOAK-941
15099	KEYCLOAK-941	Thank for taking this up in the 1.4 version. We also have a requirement of exchanging access tokens for a different scope of equal or lesser value. Our use case is as below: We have a portal like app that hosts links to a number of other service applications (service A, service B etc). This portal app has a number of components (web server, app server 1, app server 2) that reside on different hosts separated by firewalls. When a user requests content, the first component of the portal app gets an access token for a global scope (Service A, Service B Service C) which is then passed on to the other components (app server 1, app server 2). There will be validation of the token at each point and finally app server 2 (this is a sort of policy/authorization engine) will decide where to route the user request and then it will exchange the access token (scope : Service A Service B Service C) with the Authentication server (keycloak) for another access token with the scope downgraded to either "Service A" or "Service B" from "Service A Service B Service C" Can this also be included? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-941
15100	KEYCLOAK-932	Has there been any talk of reconsidering this decision? LGPL dependencies (brought in by WildFly) are a real problem for us.	1	0	https://issues.jboss.org/browse/KEYCLOAK-932
15101	KEYCLOAK-912	Where should code for this be placed? https://github.com/keycloak/keycloak/tree/master/wildfly might be suitable. Any plans for hwo the widlfly CLI extension should look (which commands, which parameters)? Should the CLI interact with the keycloak-server subsystem directly or just use the REST endpoints via admin-client?	1	1	https://issues.jboss.org/browse/KEYCLOAK-912
15102	KEYCLOAK-904	Can this be prioritized? This would be useful for my application.	0	0	https://issues.jboss.org/browse/KEYCLOAK-904
15103	KEYCLOAK-904	Would it be possible to use offline tokens in deep links for example in emails? I mean the following use case: client application sends a notification email to user; user clicks a deep link with an "offline" token and is automatically authenticated and authorized with a reduced set of roles	1	1	https://issues.jboss.org/browse/KEYCLOAK-904
15104	KEYCLOAK-883	Hi Pedro - I was just trying out the Identity brokering using KC as SAML service provider against ADFS (using latest source code as of now) . Tried to upload the ADFS's metadata and it failed with the error message "File cannot be uploaded. Please verify the file". That metadata file is being used by multiple clients. Tried even other meta data files including KC as well (another instance that was setup as IDP). Even that failed. Can you please look into it and fix the issue? Logs 22:09:11,652 ERROR [io.undertow.request] (default task-15) UT005023: Exception handling request to /auth/admin/realms/SP/identity-provider/: java.lang.RuntimeException: request path: /auth/admin/realms/SP/identity-provider/ at org.keycloak.services.filters.KeycloakSessionServletFilter.doFilter(KeycloakSessionServletFilter.java:54) [keycloak-services-1.2.0.Beta1-SNAPSHOT.jar:1.2.0.Beta1-SNAPSHOT] at io.undertow.servlet.core.ManagedFilter.doFilter(ManagedFilter.java:60) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.FilterHandler$FilterChainImpl.doFilter(FilterHandler.java:132) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.FilterHandler.handleRequest(FilterHandler.java:85) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.security.ServletSecurityRoleHandler.handleRequest(ServletSecurityRoleHandler.java:61) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.ServletDispatchingHandler.handleRequest(ServletDispatchingHandler.java:36) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at org.wildfly.extension.undertow.security.SecurityContextAssociationHandler.handleRequest(SecurityContextAssociationHandler.java:78) at io.undertow.server.handlers.PredicateHandler.handleRequest(PredicateHandler.java:43) [undertow-core-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.security.SSLInformationAssociationHandler.handleRequest(SSLInformationAssociationHandler.java:131) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final] at io.undertow.servlet.handlers.security.ServletAuthenticationCallHandler.handleRequest(ServletAuthenticationCallHandler.java:56) [undertow-servlet-1.1.0.Final.jar:1.1.0.Final]	1	1	https://issues.jboss.org/browse/KEYCLOAK-883
15105	KEYCLOAK-883	One question - How do I get the metadata for the KC SAML service provider? Our IDP (ADFS) requires either a URL or metadata that should be uploaded. If there is no URL, is there any easy way of generating it? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-883
15106	KEYCLOAK-883	Can you try from latest upstream ? Just pushed some changes.	1	1	https://issues.jboss.org/browse/KEYCLOAK-883
15107	KEYCLOAK-883	Thanks Pedro. Now I am able to upload the IDP meta data and create a provider. But when I click the link of IDP provider data to view the uploaded configuration, I get an error "Page Not Found". Can you fix that as well? BTW I can't do any more testing unless I know how to get the KC SAML metadata. Any pointers?	1	1	https://issues.jboss.org/browse/KEYCLOAK-883
15108	KEYCLOAK-883	Can you attach the metadata you are using ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-883
15109	KEYCLOAK-883	That is a big use case for us. Can I put in an enhancement request to process the Roles and populate that data using the new functionality that Bill is putting together under Custom profiles? If not, can you point me to some direction on how I can process the Roles? If needed, I will write my own processor and I should be able to plug it in? Regarding metadata, an end point will be very useful as there should be some interfaces through which the external systems can interact with KC in its capacity as Identity Broker. Generating one should be simple enough, as long as we know a few attributes like assertion consumer URL, Issuer name etc	1	1	https://issues.jboss.org/browse/KEYCLOAK-883

#	Requirement	Questions	Answered	Successfully Answered	URL
15110	KEYCLOAK-832	Was thinking of just generating a UUID and storing it as a user attribute of {clientId}.saml.persistent.name.id. Then we just re-use it if it has already been generated. Another question for you is, should Keycloak enforce a certain policy per client? Like for google client only allow transient, but for an internal enterprise app support others?	1	1	https://issues.jboss.org/browse/KEYCLOAK-832
15111	KEYCLOAK-828	Hi Raghu, Thanks for the feedback! I believe you can try it out if you build latest master and then clear browser cache. Clearing cache should hopefully fix "Error, Not Found" . Regarding (1), I don't know what exactly can be done for this? Just expect that token sent in "Authorization: Negotiate <token>" is not SPNEGO token but Kerberos token? I believe that can be done easily by using Oid of Kerberos mechanism instead of Spnego mechanism. I can add configuration option for allowing use different mechanism. Will it suits your needs? Regarding (2), what exactly is the usecase? Currently I have delegated credential from SPNEGO Authentication, which can then be theoretically used for further calls. See https://github.com/keycloak/keycloak/blob/master/broker/kerberos/src/main/java/org/keycloak/broker/kerberos/impl/SPNEGOAuthenticator.java#L87 . But if you have some use-case what exactly you want to support, it would help. Thanks! Marek	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15112	KEYCLOAK-828	Thanks Marek. That's similar to what I do at home to build and it works. My issue is that not all the libraries are downloadable at my Org. I managed to build the jar files (keycloak*.jar) and I also have the latest auth-server.war. Is there any way I can overlay all the keycloak*.jar and auth-server.war on the top of the existing 1.1 Final and would that work with some changes in the settings? If so, what are the steps?	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15113	KEYCLOAK-828	OK. finally got the latest code (as of now) working in my organization. Tried out the Kerberos functionality. Saw a login page that has a button for Kerberos. For SPNEGO, I didn't expect to see any login page as KC should do the negotiation and once it finds the proper SPNEGO token, it should allow the user to get in. But on clicking the button on the login page, got the below error: "Registration of new users is not allowed. Please ask admin to register you and login to account management to link the account" The logs just show the below. I think KC authenticated me as I got an error message earlier when I used the wrong principal. 22:30:49,162 INFO [stdout] (default task-3) Debug is true storeKey true useTicketCache false useKeyTab true doNotPrompt true ticketCache is null isInitiator false KeyTab is xxxxxxxx refreshKrb5Config is false principal is xxxxxxxxxxxx tryFirstPass is false useFirstPass is false storePass is false clearPass is false 22:30:49,167 INFO [stdout] (default task-3) principal is xxxxxxxxxxx 22:30:49,167 INFO [stdout] (default task-3) Will use keytab 22:30:49,175 INFO [stdout] (default task-3) Commit Succeeded 22:30:49,175 INFO [stdout] (default task-3) 22:30:49,203 INFO [stdout] (default task-3) [Krb5LoginModule]: Entering logout 22:30:49,204 INFO [stdout] (default task-3) [Krb5LoginModule]: logged out Subject Registration of new users is not allowed. Please ask admin to register you and login to account management to link the account. Tried setting up my user info in the realm but even that didn't help. How should I proceed? Any pointers? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15114	KEYCLOAK-828	The support for SPNEGO with MS IE "Integrated Windows Authentication" is going to be great. Looking forward to trying this off master as soon as it's ready. Does this support for Kerberos mean that one could integrate with a MS Active Directory LDAP server now without the user syncing to local Keycloak store? I like the current the LDAP sync support as Federation option, but could see certain enterprise users insisting on a check against the MS AD server on every authentication by Keycloak. Perhaps I misunderstand the sync however.	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15115	KEYCLOAK-828	[~prabhalar] I will try to test with MIT Kerberos today or tomorrow. From what I googled, the "Defective token detected" may be caused if you have some DNS issue. Maybe it will help to use virtual host like "www.myhost.org" (you can manually add it to /etc/hosts) and kerberos domain MYHOST.ORG. But I am just guessing.... Will have more info for you once I try it on MIT Kerberos [~guydavis] I am going to work on linking Kerberos with LDAP authenticated user. The users from MSAD domain will be able to login either via desktop (Kerberos ticket) or Keycloak login screen. In both cases it will be same user. For login via Keycloak login screen, it will use the credentials from MSAD server	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15116	KEYCLOAK-828	We do have createTimestamp attribute in our standard LDAP and probably some other attribute (can you let me know what attributes you are using for a search?) caused that issue. Thanks for suggestion on the temporary alternative. I think that should be doable, now that I have your implementation of LDAP+Kerberos as reference. I agree that perhaps you have to refactor the SPI into Federation (user info) and authentication (Kerberos, SecureID and others). That would be more intuitive.	1	1	https://issues.jboss.org/browse/KEYCLOAK-828
15117	KEYCLOAK-815	Is this a problem for the adapters in general or just admin-client?	1	1	https://issues.jboss.org/browse/KEYCLOAK-815
15118	KEYCLOAK-815	Hi, What are the results of the discussion on the mailling list? What is the suggested alternative to using the admin API? Accessing the admin API by REST calls?	1	1	https://issues.jboss.org/browse/KEYCLOAK-815
15119	KEYCLOAK-785	Is this implemented? It seems it is not possible to select a different key for signing JWT, than to encrypt the SAML authentication request. Both chooses the key with highest priority in the realm.	0	0	https://issues.jboss.org/browse/KEYCLOAK-785
15120	KEYCLOAK-782	I am interested in fixing this bug. I am a candidate for a GSOC stipendist potentially working on Certificate Management project. Could you assign this issue to me?	1	1	https://issues.jboss.org/browse/KEYCLOAK-782
15121	KEYCLOAK-725	In the example you have added yesterday you are using RealmResource update method ! RealmRepresentation rep = realm.toRepresentation(); rep.setSsoSessionIdleTimeout(123); rep.setSsoSessionMaxLifespan(12); realm.update(rep); Does this exist in 1.0.1.Final ? If not where can i get a nightly build. Again thanks for ur help.	1	1	https://issues.jboss.org/browse/KEYCLOAK-725
15122	KEYCLOAK-725	Good ! What will be the next release data if i may ask ?	1	1	https://issues.jboss.org/browse/KEYCLOAK-725
15123	KEYCLOAK-692	hmm... can't it be cache issue? For me it works as expected - ie when on http://localhost:8081/auth/admin/master/console/#/realms/master/applications/master-realm I am not seeing "Scope" or "Claims" tabs. Similarly when I switch application type to "Bearer-only" the tabs are hidden immediatelly as expected. But btv. found another minor issue with oauth clients during testing https://issues.jboss.org/browse/KEYCLOAK-693	0	0	https://issues.jboss.org/browse/KEYCLOAK-692
15124	KEYCLOAK-684	Hi Stian - Can you please comment on the timelines for this functionality? Thanks, Raghu	1	0	https://issues.jboss.org/browse/KEYCLOAK-684
15125	KEYCLOAK-654	Would it be enough to have a add additional credential form in the credentials tab of a user? This would allow admins to register a HW token secrets.	1	0	https://issues.jboss.org/browse/KEYCLOAK-654
15126	KEYCLOAK-599	Can you make a GUI available to choose different attributes for different client applications? This will allow us to choose all the attributes from LDAP and customize them based on client needs.	1	1	https://issues.jboss.org/browse/KEYCLOAK-599
15127	KEYCLOAK-598	Where should the user profile image be stored and are there limits on image dimensions / filesize / type? Instead of storing images, one could provide a configurable / dynamically parameterizable profile image url that could be referenced / resolved in the profile page (with appropriate origin / content checks of course).	0	0	https://issues.jboss.org/browse/KEYCLOAK-598

#	Requirement	Questions	Answered	Successfully Answered	URL
15128	KEYCLOAK-598	For that would you even need support in Keycloak? For example if app knows profile image is available at: http://mycdn/profiles/{user id} Why add anything?	1	1	https://issues.jboss.org/browse/KEYCLOAK-598
15129	KEYCLOAK-587	Rename admin console from Audit to event?	0	0	https://issues.jboss.org/browse/KEYCLOAK-587
15130	KEYCLOAK-586	Rename everything to event from audit? Admin console, etc.?	0	0	https://issues.jboss.org/browse/KEYCLOAK-586
15131	KEYCLOAK-565	Stian - I am presuming that the user can use the otp code from any of the devices and Keycloak would loop through all the registered devices and validate the code. Is that correct? Thanks, Raghu	1	0	https://issues.jboss.org/browse/KEYCLOAK-565
15132	KEYCLOAK-531	This would help the users of the UnifiedPush Server as well. Would it be possible to be done for the RC-1 ?	0	0	https://issues.jboss.org/browse/KEYCLOAK-531
15133	KEYCLOAK-522	stan is this done? Do I need to schedule this?	1	1	https://issues.jboss.org/browse/KEYCLOAK-522
15134	KEYCLOAK-450	Is there something in OpenID Connect for this? Or should be add something Keycloak specific?	0	0	https://issues.jboss.org/browse/KEYCLOAK-450
15135	KEYCLOAK-401	Can you add even Kerberos Keytab as a form of validating Service accounts? Using the keytab, the client would get a Kerberos token directly from the KDC and send in the authorization header which can be validated by the keycloak server to issue access/refresh tokens. Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-401
15136	KEYCLOAK-392	* Do you need Child type/ID, client ID, and User ID? Wouldn't all of those be covered by the Resource Type/ID? * Operation should really be Operation Type and be a static enum (READ, WRITE, UPDATE, DELETE). * Operation should be able to map to things like "CHANGED PASSWORD", "RESET PASSWORD", "LOGGED OUT ALL", "PUSHED NOT BEFORE", "INVALIDATED SESSION"	0	0	https://issues.jboss.org/browse/KEYCLOAK-392
15137	KEYCLOAK-392	I am not sure about tracking just single container and child. IMO it could be better to log the info about all the "parents" under the path to the actual resource (basically all the path variables). For example if someone invokes the endpoint for update protocol mapper (http://docs.jboss.org/keycloak/docs/1.2.0.Beta1/rest-api/admin/realms/%7Brealm%7D/applications-by-id/%7Bapp-name%7D/protocol-mappers/models/%7Bid%7D/index.html#PUT). I would log all of the: - realm - client - protocol mapper Also instead of having 3 things (Realm ID, Client ID, User ID), we can instead have single "auth" object, which will encapsulate all the info about authenticated user. In addition it could also encapsulate accessToken (or at least available roles of realmAdminApp). Basically it can wrap all the info like current AdminAuth object wrapps. This could be useful if people have issues with authorization, they can just send the log with their event to keycloak-user list and we can easily track which role (or scope) is missing. Another thing, do we really need OperationType? Isn't it sufficient (and less confusing) to just log the HTTP method of the request (GET, POST, PUT, DELETE)?	0	0	https://issues.jboss.org/browse/KEYCLOAK-392
15138	KEYCLOAK-349	Should we also include roles in token as scope rather than roles?	1	1	https://issues.jboss.org/browse/KEYCLOAK-349
15139	KEYCLOAK-349	I amazed that this isn't required for certification, given that currently Keycloak leaks personal information without permission (i.e. email address shouldn't be given out without the appropriate scope being authorized by the user). Is the fix for this going to be in the guts of Keycloak or is it something that could be implemented via a plugin? Is there anything I can do to help? Thanks.	1	1	https://issues.jboss.org/browse/KEYCLOAK-349
15140	KEYCLOAK-349	[~yaytay] If you switch "consent required" for your client and also for your "email" protocolMapper within this client, the consent screen will be shown to the user. Will it address your usecase?	1	1	https://issues.jboss.org/browse/KEYCLOAK-349
15141	KEYCLOAK-349	Hi, I am newby at keycloak, but I want to use the scope as above, can I do that using the admin GUI to set the mapper? I cannot get it to work can you help what to enter to get the SCOPE_PARAM thanks	0	0	https://issues.jboss.org/browse/KEYCLOAK-349
15142	KEYCLOAK-311	Bill/Stian - Regarding the population of custom attributes into a profile, can you make one of the Providers as the source of those attributes? Just to give you an idea of what we do (hopefully this is what even you are planning to do), we authenticate users against multiple stores like Kerberos, SecureID etc and use the subject (or principal) to retrieve all the attributes from other repositories like LDAP and DB which are then made available to our clients in the form of SAML or id_token attributes. The client has the capability to choose the available attributes and change the names to fit their needs during registration. Is that something that you can make available as a part of Keycloak. If not, can you provide some hooks to achieve that functionality? Thanks, Raghu	1	1	https://issues.jboss.org/browse/KEYCLOAK-311
15143	KEYCLOAK-301	I have analyzed this a bit, and ui_locales is part of OpenID Connect 1.0 specification. If we wanted to pass this flag to KeyCloak login page, we would need to adopt keycloak.js and other adapters. While it seems to be pretty easy to adopt keycloak.js to pass a new parameter (ui_locales) and put this to: OAuth2Constants, for me the main hurdle is how to do this with jetty and tomcat adapters. In those cases situation is much harder and I can only think of reading accept-language header flag as I don't know how to pass ui_locale query parameters. Is there any plan to implement a generic servlet based filter (adapter) for example that would work on slightly higher level than Tomcat's valves and give more control to developers what values they should pass, etc?	1	1	https://issues.jboss.org/browse/KEYCLOAK-301
15144	KEYCLOAK-301	[~matiwinnetou] Sorry, I haven't seen that you want to do that task. I've already started with the Realm config. Have a look at my code: [https://github.com/gerbermichi/keycloak/tree/i18n] Do you want to finish that task alone or together?	1	1	https://issues.jboss.org/browse/KEYCLOAK-301
15145	KEYCLOAK-301	[~gerbermichi] it's awesome that you've started working on this! Can you send an email to keycloak-dev on what you're doing, including some details, so we can make sure it aligns with what we need? Also, do you have an idea roughly how long it'll take you? I'm also hanging out on #keycloak on FreeNode if you fancy a chat.	1	1	https://issues.jboss.org/browse/KEYCLOAK-301
15146	KEYCLOAK-301	We don't want to require JS for these screens so the language selector needs to be converted to a css drop-down menu with links instead of a select * Is there somewhere such a css drop-down? Or should I create one? The 'ui_locale' should be 'ui_locales' and should support a list where we should iterate through the list until we find one that is available (see http://openid.net/specs/openid-connect-core-1_0.html#rfc.section.3.1.2) * OK sorry Found a few places where you do replace("'","'") why is this? * I use the MessageFormat to format the messages: {noformat} Within a String, a pair of single quotes can be used to quote any arbitrary characters except single quotes. For example, pattern string "'{0}'" represents string "{0}", not a FormatElement. A single quote itself must be represented by doubled single quotes '' throughout a String. For example, pattern string "'{''}'" is interpreted as a sequence of '{ (start of quoting and a left curly brace), '' (a single quote), and }' (a right curly brace and end of quoting), not '{' and '}' (quoted left and right curly braces): representing string "{'}", not "{}". {noformat} So, I introduced this workaround. Otherwise don't would be displayed like dont. But, I think I should remove this workaround and document that a single quote in the message.properties needs to be two single quotes. What do you think?	1	1	https://issues.jboss.org/browse/KEYCLOAK-301
15147	KEYCLOAK-301	[~stianst] I think I'm finished with this task. Do you have any open issues?	1	1	https://issues.jboss.org/browse/KEYCLOAK-301
15148	KEYCLOAK-292	can this be closed?	1	1	https://issues.jboss.org/browse/KEYCLOAK-292

#	Requirement	Questions	Answered	Successfully Answered	URL
15149	KEYCLOAK-228	Can this be configurable as well. I am thinking when we use KC in non saas environments, we might want to change it without having to wait and upgrade to the newer KC version.	1	1	https://issues.jboss.org/browse/KEYCLOAK-228
15150	KEYCLOAK-228	Currently the instructions for configuring a social provider is "hard-wired" into the admin console. In the future this should come from the JAR that implements the provider, so you could update the instructions by updating the single jar for the provider. Would that work, or do you have something else in mind?	0	0	https://issues.jboss.org/browse/KEYCLOAK-228
15151	KEYCLOAK-142	Why are the jpa entities using Strings for ids?!?! I am not able to deploy to any real database either. What is the intended database? I have tried MS SQL and POSTGRL. Both complain about string ids and deployment fails. This is a serious issue and the developers don't seem to be taking it seriously. They refuse to even reply to questions. Has there been some internal meeting where it was decided to treat their community with disdain? I work for a large government organization where I am trying to do a proof of concept and convince the powers that be to use JBOSS software. I am realizing it may not be such a good choice.	1	0	https://issues.jboss.org/browse/KEYCLOAK-142
15152	KEYCLOAK-117	What are the restrictions here? * implementation language * testing environment (AS7/EAP/WF) * test location * how stable is the ui itself? I could write some Arquillian + Graphene2 based tests (Graphene is Selenium on steroids), however that would be Java based tests. PhantomJS is support out of the box. I've noticed there are already Java based tests in testsuite. Arquillian also have support for QUnit, if that helps. Let me know if you'd be interested in such tests. If you want to have javascript based implementation for test to keep them next to admin-ui, npm + grunt + mocha + webdriver could be the combination you're looking for.	1	0	https://issues.jboss.org/browse/KEYCLOAK-117
15153	KEYCLOAK-108	This message could have the same style of the one in the Google Authenticator Setup page: http://ejsclient-cardosogabriel.rhcloud.com/saas-totp-setup.html . Agree?	1	1	https://issues.jboss.org/browse/KEYCLOAK-108
15154	KEYCLOAK-68	problem is in Keycloak or PicketLink. Basically it's caused by ApplicationEntity. When trying to load an ApplicationEntity from PicketLink, PicketLink tries to assign a Realm to ApplicationEntity.resourceUser. Full stack trace is: {code} org.picketlink.idm.IdentityManagementException: PLIDM000405: Could not load partition for type [class org.keycloak.models.picketlink.mappings.ApplicationData] and identifier [2-1383073500442]. at org.picketlink.idm.internal.DefaultPartitionManager.getPartition(DefaultPartitionManager.java:369) at org.picketlink.idm.internal.DefaultPartitionManager.createIdentityManager(DefaultPartitionManager.java:291) at org.keycloak.models.picketlink.ApplicationAdapter.getIdm(ApplicationAdapter.java:41) at org.keycloak.models.picketlink.ApplicationAdapter.addRole(ApplicationAdapter.java:156) at org.keycloak.models.picketlink.ApplicationAdapter.addRole(ApplicationAdapter.java:27) at org.keycloak.models.picketlink.RealmAdapter.addApplication(RealmAdapter.java:611) at org.keycloak.test.ApplicationModelTest.before(ApplicationModelTest.java:39) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.junit.runners.model.FrameworkMethod$1.runReflectiveCall(FrameworkMethod.java:47) at org.junit.internal.runners.model.ReflectiveCallable.run(ReflectiveCallable.java:12) at org.junit.runners.model.FrameworkMethod.invokeExplosively(FrameworkMethod.java:44) at org.junit.internal.runners.statements.RunBefores.evaluate(RunBefores.java:24) at org.junit.internal.runners.statements.RunAfters.evaluate(RunAfters.java:27) at org.junit.runners.ParentRunner.runLeaf(ParentRunner.java:271) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:70) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:50) at org.junit.runners.ParentRunner$3.run(ParentRunner.java:238) at org.junit.runners.ParentRunner$1.schedule(ParentRunner.java:63) at org.junit.runners.ParentRunner.runChildren(ParentRunner.java:236) at org.junit.runners.ParentRunner.access$000(ParentRunner.java:53) at org.junit.runners.ParentRunner$2.evaluate(ParentRunner.java:229) at org.junit.internal.runners.statements.RunBefores.evaluate(RunBefores.java:26) at org.junit.internal.runners.statements.RunAfters.evaluate(RunAfters.java:27) at org.junit.runners.ParentRunner.run(ParentRunner.java:309) at org.junit.runner.JUnitCore.run(JUnitCore.java:160) at com.intellij.junit4.JUnit4IdeaTestRunner.startRunnerWithArgs(JUnit4IdeaTestRunner.java:77) at com.intellij.rt.execution.junit.JUnitStarter.prepareStreamsAndStart(JUnitStarter.java:195) at com.intellij.rt.execution.junit.JUnitStarter.main(JUnitStarter.java:63) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at com.intellij.rt.execution.application.AppMain.main(AppMain.java:120) Caused by: org.picketlink.idm.IdentityManagementException: Could not create [6da6e9bb-6f33-470e-aed0-38a1cd315802 from entity [org.picketlink.idm.jpa.model.sample.simple.PartitionTypeEntity@7abdb100]. at org.picketlink.idm.jpa.internal.mappers.EntityMapper.createType(EntityMapper.java:202) at	1	0	https://issues.jboss.org/browse/KEYCLOAK-68
15155	KEYCLOAK-66	Can we close this Marek?	1	1	https://issues.jboss.org/browse/KEYCLOAK-66
15156	KEYCLOAK-65	When creating a new user through admin-console, if I add a user with same email as an existing user, the UI error message is "Error! An unexpected server error has occurred.". There's nothing in the UI to hint the user it's related to the duplicate email address. 14:06:04,588 ERROR [org.hibernate.engine.jdbc.spi.SqlExceptionHelper] (default task-12) Unique index or primary key violation: "UK_QYR7VP9OE4MRWM2JFMT5C5K7Q_INDEX_9 ON PUBLIC.USERENTITY(REALM, EMAIL) VALUES (/* key:3 */ null, 'dm@metcalf.net', null, null, null, null, null, null, null, null, 'keycloak-admin')"; SQL statement: update UserEntity set authenticationLink_id=?, email=?, emailVerified=?, enabled=?, firstName=?, lastName=?, loginName=?, notBefore=?, realm=?, totp=? where id=? [23505-173] [...]	0	0	https://issues.jboss.org/browse/KEYCLOAK-65
15157	KEYCLOAK-59	Is this issue solved? Where is the corresponding duplicate issue?	1	0	https://issues.jboss.org/browse/KEYCLOAK-59
15158	KEYCLOAK-24	I assume that this "logged in user" is your persona Linda, is that correct? Please let's refer to our users using their names, this is one of the uses of the personas. https://docs.google.com/document/d/1VHcllu37pCoiWiypzVkIMtq5pQloTX-3UB2ONyA_ZLM/edit	0	0	https://issues.jboss.org/browse/KEYCLOAK-24
15159	KEYCLOAK-17	Isn't this ticket related to the https://issues.jboss.org/browse/KEYCLOAK-24? Another doubt: Instead of giving access to "Google Account", we are giving access to "Keycloak". Is that correct? So basically create a similar page just changing the names? I guess I need to understand better how it works...	0	0	https://issues.jboss.org/browse/KEYCLOAK-17
15160	KEYCLOAK-16	Do we need to design a page for this? Aren't not those modal boxes provided by the services (aka Facebook, Google)? Attached is a screen asking for Facebook permissions. I was redirected for the facebook page (in background) in this case...	1	1	https://issues.jboss.org/browse/KEYCLOAK-16
15161	KOSMOS-25	If i wanted it slow, when could it be available you think :) ? Cheers, Tomek	1	0	https://issues.jboss.org/browse/KOSMOS-25

#	Requirement	Questions	Answered	Successfully Answered	URL
15162	KOSMOS-1	> Could you create a fisheye portlet which shows the latest changelog for a given CVS directory? Using page-scraping technique, it'd be very easy. I'm not exactly sure how would it play together with a CVS monitoring portlet? Are they replacement of each other? (Not really...) > Another possibility is to create a portlet which displays an arbitrary Fisheye QL query. A quick look at Fisheye API (http://fisheye.cenqua.com/api/) suggests that it's possible with their current API. I like this idea better, because it's a kinda generalization of the previous one, but seems a bit dangerous as the API is not solified yet.	0	0	https://issues.jboss.org/browse/KOSMOS-1
15163	LIVEOAK-745	Can you please followup on this.	1	0	https://issues.jboss.org/browse/LIVEOAK-745
15164	LIVEOAK-732	[~mwringe], here is a proposal for the Android chat. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-732
15165	LIVEOAK-732	awesome, its looking much better than before :) I was thinking of using the same application to support both authenticated and non-authenticated chats. Essentially instead of seeing the 'enter username' you would be directed to a separate login page (most likely a webview so there is nothing you would need to design for that). If we do want to support both authenticated (with separate login screen) and unauthenticated chats, would it make sense to have the enter username on a separate screen instead of as a dialog (http://developer.android.com/design/building-blocks/dialogs.html)? Trying to think about the consistency between the two apps. For the third screen screen, is there any way to determine what the users current username is? Also, if you don't want the 'send' button we can make it more like the web based one and send the message when the user clicks on the 'enter' key (or add a 'send' key) in the on screen keyboard. I have no idea which one has better UX on a touch screen and it doesn't really matter to me either way. Just letting you know that is a possibility. We could also use some app launcher icons, and icons to use for the notifications. There is some cool stuff regarding android notifications available at http://developer.android.com/design/patterns/notifications.html but we probably just need a few simple icons for it.	1	1	https://issues.jboss.org/browse/LIVEOAK-732
15166	LIVEOAK-732	[~mwringe], can you send me the specs for the icon image so I can generate the proper sizes? Also, for the notification, I believe we can use the same logo, but maybe without the shadows, right? Do you know the sizes for that too? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-732
15167	LIVEOAK-732	I generated the 5 sizes for each icon, so you have the launcher, notification and small notification icon. You can get the files on: https://www.dropbox.com/sh/pxi0mcav3z79b4v/AACRatouaFLBTryy18XtSUMSa?dl=0 I believe the logo will look too small for the small notification icon. Can you send me a screenshot when you have it implemented? Thanks!	1	1	https://issues.jboss.org/browse/LIVEOAK-732
15168	LIVEOAK-732	That's great [~mwringe]. Can you send me some screenshots so I can take a look at the result? Thanks!	0	0	https://issues.jboss.org/browse/LIVEOAK-732
15169	LIVEOAK-723	[~kenfinni], I tried to run it but got authentication errors. How should I proceed to have it running?	1	1	https://issues.jboss.org/browse/LIVEOAK-723
15170	LIVEOAK-723	[~kenfinni], I updated the css to fix the "logout" link issue. I also updated the chat.js to include a "delete" class for the button, which I had forgotten. Can you check if that works now? https://github.com/liveoak-io/liveoak-example-chat-html-secured/pull/3 Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-723
15171	LIVEOAK-705	[~mwringe], can you point me the pages where this is happening? In the meanwhile, should the user be able to do other actions in the console or should we block the screen while the call finishes?	1	1	https://issues.jboss.org/browse/LIVEOAK-705
15172	LIVEOAK-705	I went to the storage configuration page and changed the Datastore from Default to Custom, changing the host and port to 1. I got the feedback that it was successfully saved instantly, but there was a sign on the list item indicating "Unable to reach storage server. Please check the configuration". So I believe I couldn't replicate your scenario. Or was it fixed to save instantly and inform the user that the config is wrong? Considering this to be an issue to different pages, should we display a loading feedback while liveoak is connecting to the database sever? Should this loading prevent the user to click anywhere else on the console, or is this a process that runs in background, so we just need a feedback that stays on the screen but allows the user to keep navigating?	1	1	https://issues.jboss.org/browse/LIVEOAK-705
15173	LIVEOAK-705	If you went to the configuration page and it allowed you to save without waiting for the server to respond back, then that is a bug :/ {quote} Considering this to be an issue to different pages, should we display a loading feedback while liveoak is connecting to the database sever? {quote} The console does not connect to the database server directly, it connects to LiveOak (which then connects to the database server). So it needs to wait for LiveOak to respond back, and since the console connects to LiveOak on pretty much every change, its not restricted to the storage page. {quote} Should this loading prevent the user to click anywhere else on the console, or is this a process that runs in background, so we just need a feedback that stays on the screen but allows the user to keep navigating? {quote} My initial opinion on this is that it should probably stop the user from clicking anything in the console. But maybe it might be appropriate to have some tasks run in the background.	1	1	https://issues.jboss.org/browse/LIVEOAK-705
15174	LIVEOAK-705	Adding [~alexandrem], who is also taking care of the UI. What are you thoughts about how we should care of the feedback for rest calls?	1	1	https://issues.jboss.org/browse/LIVEOAK-705
15175	LIVEOAK-693	Would this be related to LIVEOAK-406 at all?	1	1	https://issues.jboss.org/browse/LIVEOAK-693
15176	LIVEOAK-693	As the generator works, is this done?	1	1	https://issues.jboss.org/browse/LIVEOAK-693
15177	LIVEOAK-674	Right now, example applications have the "example":true field, so we can use that to determine if the example app was installed (the name is the same + example === true). but what to do once we know it? you can't install the example app, because the app with same name already exists. Is there a way for me to install this example app with some custom name?	1	1	https://issues.jboss.org/browse/LIVEOAK-674
15178	LIVEOAK-674	Agree. Can you ping me once the changes on the server side were done? Or just point me, what to fix there. I will then quickly fix the console part. Edit: I see now, that I have to edit the example field in application.json file per each example git.	0	0	https://issues.jboss.org/browse/LIVEOAK-674
15179	LIVEOAK-667	Several questions. # Why have a distinction between "Reports" and "Graphs"? Instead, couldn't the console present graphs and, if a report is valuable, simply offer a link to view a report of the same information? Immediately displaying the graphs gives one less step the user has to do before viewing useful information. # Can the time period be chosen by the user? If so, does the user select a date range, or do they select the window (e.g., last minute, last hour, last day, last week, last year)? # I think overlaying all information on a single graph is best, especially if the user can use a filter to specify which info they want to see. This also would reduce the steps required before actually seeing useful information. It's possible to present multiple graphs for different windows (e.g., stats for each of the last 60 minutes, or stats for each of the last 24 hours, etc.) but again all filtering would apply to all graphs. As a side note, how are all of these data going to be collected, and how are the stats (for the various time windows) going to be calculated and rolled up?	0	0	https://issues.jboss.org/browse/LIVEOAK-667
15180	LIVEOAK-667	Are we renaming "Dashboard" to be "Analytics", or is that just for the prototype?	1	1	https://issues.jboss.org/browse/LIVEOAK-667
15181	LIVEOAK-667	The scenario described a session called "Analytics". In my understanding we wouldn't have the dashboard anymore. Would we?	1	1	https://issues.jboss.org/browse/LIVEOAK-667
15182	LIVEOAK-666	Yes, I was thinking about giving the user the README.md file to be downloaded, just that. I didn't think about a viewer, do you think we need to care about this?	1	1	https://issues.jboss.org/browse/LIVEOAK-666
15183	LIVEOAK-654	[~mwringe], is this issue to support creating a storage resource by selecting a shared datasource instead of entering information directly?	1	1	https://issues.jboss.org/browse/LIVEOAK-654

#	Requirement	Questions	Answered	Successfully Answered	URL
15184	LIVEOAK-654	Can you take a look at how we could modify the "Storage" page, for new and edit, so that we can support the current state of capturing "host", "port" and "db" while offering the chance to select a "datastore" that defines the "host" and "port". Essentially it's a choice of specifying "host"/"port" or "datastore", where "datastore" is one of possibly many that can be selected. Not sure whether "datastore", "datasource", or an entirely different name is best to represent what is being captured.	0	0	https://issues.jboss.org/browse/LIVEOAK-654
15185	LIVEOAK-637	This is definitely fixed for a row, but the issue appears to be related to a column. [~gcardoso], was the issue meant to refer to row or you did mean column?	1	1	https://issues.jboss.org/browse/LIVEOAK-637
15186	LIVEOAK-599	We already have a generic registry for Resources implementation. https://github.com/liveoak-io/liveoak/blob/master/modules/common/src/main/java/io/liveoak/common/DefaultMountPointResource.java allows you to define a Resource that holds a map of resources that can be registered and unregistered from the resource. Do we need something beyond that?	1	1	https://issues.jboss.org/browse/LIVEOAK-599
15187	LIVEOAK-588	[~gcardoso], can you come up with a UX design for the best place(s) to link to Keycloak and Aerogear UPS admin consoles? Thanks Ken	1	1	https://issues.jboss.org/browse/LIVEOAK-588
15188	LIVEOAK-588	[~farrukhny], are you wanting the entirety of the other consoles to be "embedded" within the LiveOak console under those buttons, or simply opening them in another tab?	1	1	https://issues.jboss.org/browse/LIVEOAK-588
15189	LIVEOAK-588	Before jumping straight to a solution, I'd like to understand the requirement better. Does the user can currently access LiveOak / Keycloak / UPS with the same login? Is there a need to browse between the three applications? What would the user do in these three applications? [~mcarrano] was also concerned about the experience of changing between consoles, so I'm adding him to the thread.	0	0	https://issues.jboss.org/browse/LIVEOAK-588
15190	LIVEOAK-588	It doesn't seem that there is a strong need for such links. How about implementing them when there is a strong need for such flow?	0	0	https://issues.jboss.org/browse/LIVEOAK-588
15191	LIVEOAK-587	Your jira covers quite a few different areas, so I'll try and cover each of them. There are not any current plans to include all functionality of the Keycloak and Aerogear Unified Push Server consoles into LiveOak's console. There would simply be too much content for that to be seamless and workable. What we may do is provide links out to the other consoles to perform any management that isn't offered within LiveOak. Could you create a separate JIRA for each item you've mentioned (we already have one for Analytics), as that will make it much easier for us to separate whatever features you would like to see added? Thanks Ken	1	1	https://issues.jboss.org/browse/LIVEOAK-587
15192	LIVEOAK-584	Do you mean getting all the subscriptions that a Stomp Client has subscribed to?	0	0	https://issues.jboss.org/browse/LIVEOAK-584
15193	LIVEOAK-583	What can be done is: - Creating new UserProfile object which will have methods like getFirstName, getLastName, getEmail etc - New method 'getUserProfile' can be added to SecurityContext - Actually securityProfile is filled from calling keycloak endpoint and it's done here: https://github.com/liveoak-io/liveoak/blob/master/modules/keycloak/src/main/java/io/liveoak/keycloak/TokenResource.java#L51 . This is the place where userProfile info can be added as well from the keycloak accessToken. - This TokenResource is called from AuthInterceptor with local client call here - https://github.com/liveoak-io/liveoak/blob/master/modules/keycloak/src/main/java/io/liveoak/keycloak/interceptor/AuthInterceptor.java#L64 . So this is the place where retrieved profile data from ResourceState can be added to SecurityContext	1	1	https://issues.jboss.org/browse/LIVEOAK-583
15194	LIVEOAK-573	Is the proposal then to have ResourceSink not implement AutoCloseable?	1	1	https://issues.jboss.org/browse/LIVEOAK-573
15195	LIVEOAK-573	Why would it be the sole responsibility of the container to know when ResourceSink.close() can be appropriately called? Surely inside Resource.readMembers() a Resource would know when it's completed the work on the sink and can close it? Unless the Resource is swallowing exceptions, they would be thrown out before a ResourceSink.close() call anyway. I agree that removing AutoCloseable makes sense, but why the close() method too? How do we close a ResourceSink without it?	1	1	https://issues.jboss.org/browse/LIVEOAK-573
15196	LIVEOAK-534	Here's a scenario for being able to create/edit scripts. Could you check with [~mwringe] that I didn't mess up what should be entered for some of the values? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-534
15197	LIVEOAK-534	Hi, I've created some mockups for the new script scenario. Questions: - If the name is optional, does the system attribute an automatic name in case of not specified? - A dropdown from 0 - 10 should be fine, I believe. Or do we expect to have more than 10 scripts? - Does the user need some guidance to fill in the resource path? - Is the script required? - Is it possible to import a file (script) or only write a script? - How is this Web IDE to write/edit the script? Is there a plugin for that?	0	0	https://issues.jboss.org/browse/LIVEOAK-534
15198	LIVEOAK-534	Another thing that I noticed is that it's not possible to specify the triggers in the new/edit script page. Is that correct [~mwringe] Also, should the user delete a script?	1	1	https://issues.jboss.org/browse/LIVEOAK-534
15199	LIVEOAK-528	Are you referring to the icon in the list of example applications, or having an icon in the application list?	1	1	https://issues.jboss.org/browse/LIVEOAK-528
15200	LIVEOAK-512	Ken, [~alexandrem], what do you think about this proposal? https://github.com/vrockai/liveoak/commit/a72d31ecf39d742d82363cdc283aa4ebe220a769 The code is commented so it's easier to get how it works. If you want to try it, build this branch, create first application and then check the Rest 1 and Rest 2 pages (available from the left menu). If you open another browser window and create new apps in there, everything should be propagated to the first window on Rest pages + in the application list in the left menu.	1	1	https://issues.jboss.org/browse/LIVEOAK-512
15201	LIVEOAK-512	I've tried to come up with better solution. I've just commited it to my LIVE branch. How it works? It stores the loaded data in a "cache" (which is actually a field in the $resource get method, you're trying to call). Once you use the LiveLoader it loads the data and registers the callback functions. After loading data it will create the "live" object inside, so you can reference to actual live data handled by callbacks. What this version does is actually "getting better use of subs", because if no sub event was fired, then we can assume that data haven't changed, so we will just return lastly loaded data. This version again has two pages Rest 1 and Rest 2 accessible from the left menu, but it presents both features: "cache" and "live data". If you create new application in another browser, the data in the "application list" in left menu are automatically updated. If you click between the Rest 1 and Rest 2 pages, no new requests to the server are fired (unless some sub event was fired in the meantime).	1	1	https://issues.jboss.org/browse/LIVEOAK-512
15202	LIVEOAK-512	Tried out your latest branch. I was expecting the application list in Rest 1 and Rest 2 to automatically update with new applications when they're created in another browser. Is that not setup to listen for subscriptions right now? Switching between the Rest screens I saw a network call to /admin/applications, is that to be expected?	1	1	https://issues.jboss.org/browse/LIVEOAK-512
15203	LIVEOAK-508	Maybe we could increase the services page with the languages supported / integrated solutions? Does that make sense? If we decide to have three boxes as secondary message, what could we emphasize, besides services? I'll check with Alex about the features list. Thanks!	1	1	https://issues.jboss.org/browse/LIVEOAK-508

#	Requirement	Questions	Answered	Successfully Answered	URL
15204	LIVEOAK-508	Attached a visual design proposal for the Homepage. Please download the file and open it in a browser to have an idea of how it would look like. [~alexandrem] is helping me with the Features session, selecting the items and working on the texts. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-508
15205	LIVEOAK-508	I like this a lot, looks really good. One thought I had was around making the logo more prominent. I'm not sure if it's possible, or easy, but maybe the large green area can be changed to be a "slice" through an enlarged version of the logo, so that it shows the trunk and/or branches super large. Does that make sense?	1	1	https://issues.jboss.org/browse/LIVEOAK-508
15206	LIVEOAK-508	Maybe use a "Fork Me" angled link near the top of the page?	1	1	https://issues.jboss.org/browse/LIVEOAK-508
15207	LIVEOAK-508	[~kenfinni], regarding the homepage, I tried to integrate the logo in the banner, but I couldn't find a good solution for this. [~vrockai], I included the "View on GitHub" button. For the release notes, we could make the text below the buttons as a link to it, and also have a link for it in the downloads page. Regarding the videos, It would be nice if we have frequent updates. Is that the case?	1	1	https://issues.jboss.org/browse/LIVEOAK-508
15208	LIVEOAK-508	[~gcardoso], would it be possible to incorporate something from http://design.jboss.org/liveoak/, such as the project banner, or a slice of the desktop wallpaper, or the Twitter or Google backgrounds? Might be possible to use the many overlaid logos from one of these instead of the green banner? We have reasonably frequent video updates, but in time it should become more frequent	0	0	https://issues.jboss.org/browse/LIVEOAK-508
15209	LIVEOAK-506	[~kenfinni], I added the link to open the application in both pages. Also, I updated the application details to cover also clients and logic, which where missing. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-506
15210	LIVEOAK-484	[~mstruk], did you implement this for Alpha02?	1	1	https://issues.jboss.org/browse/LIVEOAK-484
15211	LIVEOAK-480	I am proposing to use the same box style that we have for lists, like applications list, storage list. The difference here would be the "Show script", which expands the box. What do you think?	0	0	https://issues.jboss.org/browse/LIVEOAK-480
15212	LIVEOAK-480	Looks good! Does the description of the script disappear, or move somewhere, when the scripts is shown? Might be worth keeping the description above the script if its shown	0	0	https://issues.jboss.org/browse/LIVEOAK-480
15213	LIVEOAK-480	Looking good. Is 'FirstScript' and 'AnotherScript' the names of the IDs of the script? We should probably have both (since multiple scripts could potentially have the same name and description). I also don't see the priority or triggers/provides content. For this version, is everything just read only or editable? For a more complex version later on, we should see if we can get a nice javascript editor to use for the scripting part instead of just having it read only.	0	0	https://issues.jboss.org/browse/LIVEOAK-480
15214	LIVEOAK-480	Yes, those are the names. I can put the IDs too. How would an ID look like? How can I represent the priority? What do you mean by 'priority: integer specifying the priority'? I'll include something like Triggers: preupdate Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-480
15215	LIVEOAK-480	You mean, a dropdown to change priority? Or is it still read-only?	1	1	https://issues.jboss.org/browse/LIVEOAK-480
15216	LIVEOAK-477	What's your idea of the actual use-case? If we just add the arrows to the current solution, we will loose expected functionality (left/right to move cursor within the cell we are editing). So I assume the best way would be to do the same thing as in i.e. google spreadsheets. 1st click will just select the input and we would need another click (or start typing) to actually edit it. After 1st click, you would be able to use arrows to navigate, but after second click (= going to edit mode), you'll have the same functionality as now. If this is required we won't be able to quickly copy-paste values from table, since it would require 2 clicks for each cell. [~gcardoso], wdyt about this? Mimicking the google spreadsheet functionality would be a complex task to do, so we need to have clear requirements before the work starts.	1	0	https://issues.jboss.org/browse/LIVEOAK-477
15217	LIVEOAK-477	[~vrockai], I agree with what you said, I just didn't understand why "we won't be able to quickly copy-paste values from table, since it would require 2 clicks for each cell". It's not possible to paste a content when you have the cell selected (one click)? Having a solution like google spreadsheets would be great, but I think it is more a matter of priorities and cost/benefit here. Does the effort worth the benefit in the context that we are now? I'd let this to [~kenfinni]	1	0	https://issues.jboss.org/browse/LIVEOAK-477
15218	LIVEOAK-470	I'm not sure what you're suggesting here, can you explain? if you access /admin then the console is loaded.	1	1	https://issues.jboss.org/browse/LIVEOAK-470
15219	LIVEOAK-454	Do the examples that use push need to be updated in any way with the latest AeroGear UPS? Does http://liveoak.io/docs/install/ups/ need to be updated?	1	1	https://issues.jboss.org/browse/LIVEOAK-454
15220	LIVEOAK-454	I don't think we need to worry about the co-location scenario, as it would likely only be used in a local dev situation and not production. As long as we document that it's not possible to run UPS on the same WildFly instance as LiveOak, that should be fine. Will you be updating the instructions based on how you got it working?	1	1	https://issues.jboss.org/browse/LIVEOAK-454
15221	LIVEOAK-449	Since we are providing the possibility of creating a collection when there are no collections created, it seems to make sense to provide this same functionality when all the collections has been secured. So in that case, if the user clicks on Secure a collection (screen 04), we present the same modal. What do you think [~alexandrem]?	1	1	https://issues.jboss.org/browse/LIVEOAK-449
15222	LIVEOAK-449	This improves the overall user experience a lot, thanks! I have a few questions: * What happens if the application has more than one storage resource ? It should show a dropdown for picking the storage resource where the collection is to be created. * What happens if the application has no storage resources ? Should we allow to create one ? starts to be more complex.. * I think the ability to create a collection can be always present. It probably confuses the user that sometimes a functionality is available (when there are no collections or when all collections are secured) other times it's not (when only some collections are secured) , wdyt ? Plus, it's not likely that the user will only come to this page to secure a collection for the first time, so having all collections secured won't necessarily mean he'll want to create a new one to secure when he visits it.	1	1	https://issues.jboss.org/browse/LIVEOAK-449
15223	LIVEOAK-449	- Good point. In case of having more than one storage resource, he should choose into which storage he wants to create the collection. A dropdown works. - I believe to not have any storage resources is an edge case. I don't think we should invest in such complex logic for an edge case. For this case, we could proceed as we do today, tell them to create a storage resource first. WDYT? - I agree with your third point, but this will probably add some step in the flow when the user chooses to secure a collection (he will need to specify if he wants to secure an existing collection or create a new one). But I believe it won't hurt much :)	0	0	https://issues.jboss.org/browse/LIVEOAK-449
15224	LIVEOAK-444	[~mwringe], as we can specify security for a mongo database, does that cover this use case?	1	1	https://issues.jboss.org/browse/LIVEOAK-444
15225	LIVEOAK-414	What do you think [~kenfinni] and [~alexandrem]?	1	1	https://issues.jboss.org/browse/LIVEOAK-414
15226	LIVEOAK-414	[~gcardoso], looks really good. One thing I'm not sure on is "Type of source". Would "Import method" with "Local file system" and "Git" work? With respect to the message about an invalid application folder when importing from file system, do you expect the UI to transfer to the importing screen and then jump back to the previous screen when it fails for that reason? If so, that's fine, just wanted to clarify.	1	1	https://issues.jboss.org/browse/LIVEOAK-414

#	Requirement	Questions	Answered	Successfully Answered	URL
15227	LIVEOAK-414	Thanks Alex! Ok, let's keep them together. How about the badge? Will we allow application update or not? Sorry, I didn't follow you Ken.	0	0	https://issues.jboss.org/browse/LIVEOAK-414
15228	LIVEOAK-414	Makes sense. It would be a free input text field, right ? Or should we think about fetching branches from the repo and show in dropdown ?	1	1	https://issues.jboss.org/browse/LIVEOAK-414
15229	LIVEOAK-414	What's the POST look like? I hadn't seen an error like that in my testing	1	1	https://issues.jboss.org/browse/LIVEOAK-414
15230	LIVEOAK-409	I recall you mentioning that this might have already been done, is that correct?	0	0	https://issues.jboss.org/browse/LIVEOAK-409
15231	LIVEOAK-408	[~mstruk], what kind of configuration is possible for GridFS? Should the user expect objects within the "drive" to be visible in a collection of GridFS storage?	1	1	https://issues.jboss.org/browse/LIVEOAK-408
15232	LIVEOAK-408	Just had a quick look at the config JSON returned from gridfs vs mongo, and they seem to be identical. Where would a per user quota for gridfs be set? Is there a config value that can be used, which currently doesn't appear when retrieving the config because there is no value?	1	1	https://issues.jboss.org/browse/LIVEOAK-408
15233	LIVEOAK-406	Is something you wanted to put off until after your PTO?	0	0	https://issues.jboss.org/browse/LIVEOAK-406
15234	LIVEOAK-406	The example is here: https://github.com/vrockai/liveoak-example-ionic Would be nice if someone tested it before it's put into official example space. [~alexandrem], could you please spend some time on this? Big thanks!	1	1	https://issues.jboss.org/browse/LIVEOAK-406
15235	LIVEOAK-396	[~mstruk], thanks for looking into this, and providing a detailed analysis of the outcome. Is this even worth leaving as an open JIRA, or should we just close it as won't fix?	1	1	https://issues.jboss.org/browse/LIVEOAK-396
15236	LIVEOAK-389	[~mwringe], I think this JIRA came out of the F2F. Is there anything in particular needs to be done with the Mongo resource? Or is it more a case of just fixing things that might crop up?	1	0	https://issues.jboss.org/browse/LIVEOAK-389
15237	LIVEOAK-389	[~mwringe], is there anything required for this?	1	0	https://issues.jboss.org/browse/LIVEOAK-389
15238	LIVEOAK-388	Do we still want the examples to be deployable as separate cartridges? Or just as part of the main LiveOak one?	1	1	https://issues.jboss.org/browse/LIVEOAK-388
15239	LIVEOAK-388	Is there a benefit/advantage to having them separate? If there isn't a significant one, or several, then I'm ok with them just installing into the main cartridge.	1	1	https://issues.jboss.org/browse/LIVEOAK-388
15240	LIVEOAK-386	Ken, can you list all the resources you want to be secured?	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15241	LIVEOAK-386	Would them be Storage, Push and Clients? Do the same options make sense to these other resources? We currently have: - Can access the collection (role) - Can create an entry (role) - Entry creator can (R,U,D) - Can read all entries (role) - Can update all entries (role) - Can delete all entries (role)	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15242	LIVEOAK-386	In terms of design, we just need to update some labels and feedback message then. Will Alex or Villiam work on that to make it work? If it is only a screen change, I can do the changes myself. Otherwise, they can change them easily.	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15243	LIVEOAK-386	This page calls for some questions. Right now it's only possible to secure a collection. When no collection is available, we're redirected to "Create new collection" page. When we add Push and Clients to the security list, what should be the default page? "Nothing to secure" or redirecting somewhere? Right now, in the dropdown with collection list we got an option "Create new collection...". I guess this will go away once we extend the page for Push and Clients. WDYT [~alexandrem]?	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15244	LIVEOAK-386	I'm thinking that it might be confusing to mix up all things in the same UI. Thus, a decision step could be interesting. Something like: What would you like to secure? And give the options: Collections or Push or Clients. I can work on a prototype for that. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15245	LIVEOAK-386	[~alexandrem], I worked on a prototype to include the new security resources. Since we have tabs, we can adjust the labels according to the resource. Ex.: - Storage - Can access the storage The interaction would be the same as we have now when the user is inside a tab, so he can still select the kind of resource he is in. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15246	LIVEOAK-386	[~kenfinni] can you please validate these are the right rules to work with: {panel:title=Storage (root)} {noformat} { uriPattern: "/[app-name]/storage", requestTypes: ["CREATE", "READ", "UPDATE", "DELETE"], allowedRoles: [...] } {noformat} * Can access the storage (role) * Can create a storage (role) * Storage creator can (R,U,D) * Can read all storages (role) * Can update all storages (role) * Can delete all storages (role) {panel} ---- {panel:title=Storage (Collections)} {noformat} { uriPattern: "/[app-name]/storage/[col-name]", requestTypes: ["CREATE", "READ", "UPDATE", "DELETE"], allowedRoles: [...] } {noformat} * Can access the collection (role) * Can create an entry (role) * Entry creator can (R,U,D) * Can read all entries (role) * Can update all entries (role) * Can delete all entries (role) {panel} ---- {panel:title=Push} {noformat} { uriPattern: "/[app-name]/push", requestTypes: ["CREATE", "READ", "UPDATE", "DELETE"], allowedRoles: [...] } {noformat} * Can access push configuration (role) * Can create push configuration (role) * Push configuration creator can (R,U,D) {panel} ---- {panel:title=Clients} {noformat} { uriPattern: "/[app-name]/clients/", requestTypes: ["CREATE", "READ", "UPDATE", "DELETE"], allowedRoles: [...] } {noformat} * Can access the clients (role) * Can create a client (role) * Client creator can (R,U,D) * Can read all clients (role) * Can update all clients (role) * Can delete all clients (role) {panel} ---- {panel:title=Business Logic} {noformat} { uriPattern: "/[app-name]/logic/", requestTypes: ["CREATE", "READ", "UPDATE", "DELETE"], allowedRoles: [...] } {noformat} * Can access the scripts (role) * Can create a script (role) * Script creator can (R,U,D) * Can read all scripts (role) * Can update all scripts (role) * Can delete all scripts (role) {panel}	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15247	LIVEOAK-386	With Storage (root), should most of the bullet points be about create/edit/read/delete a collection and not a storage? Do we need a way to define security at the App level? Just a thought I had. [~mwringe], can you take a look at the storage and logic access rules to see if they make sense?	1	1	https://issues.jboss.org/browse/LIVEOAK-386
15248	LIVEOAK-377	What exactly is this issue about? It seems like an overly generic issue, maybe we should close it and haven people open individual issues if a PUT operation is not working as expected?	1	0	https://issues.jboss.org/browse/LIVEOAK-377
15249	LIVEOAK-365	So, is the idea here to be able to define application.json templates on the server, so what when you create an application through the endpoint you can select which template you want to use? And also, alternatively be able to fully specify the application.json if you need to customize things. I guess kindof like how you can specify a full mongo server configuration for you application, or just select a system created datastore.	1	1	https://issues.jboss.org/browse/LIVEOAK-365
15250	LIVEOAK-361	[~gcardoso], could you provide some design guidance for [~vrockai] about how this should look? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-361
15251	LIVEOAK-361	Is that because it's a lot of work and there are still lots of console issues?	1	1	https://issues.jboss.org/browse/LIVEOAK-361
15252	LIVEOAK-361	Now that I see a comparison, I think the sketch Alex did more accurately reflects what I've typically seen in UIs. It also got me thinking that for multiple columns, we need some way to specify AND/OR, so that we know whether all the columns are being AND'd or OR'd together. Right now I don't think we need to get complex by supporting both in a single search. [~gcardoso], was your design based on something that PatternFly has been working on, or just your ideas?	1	1	https://issues.jboss.org/browse/LIVEOAK-361

#	Requirement	Questions	Answered	Successfully Answered	URL
15253	LIVEOAK-350	What do you consider the advantages to be, as opposed to using awestruct as now?	1	1	https://issues.jboss.org/browse/LIVEOAK-350
15254	LIVEOAK-350	Can you elaborate on how LiveOak hosting a static content site would showcase it? I'm not following where you view the benefits to this approach.	1	1	https://issues.jboss.org/browse/LIVEOAK-350
15255	LIVEOAK-345	Are you suggesting that the console is deployed to myliveoak.com and not deployed at myliveoak.com/admin, or simply that we perform a redirect to the console when the root is accessed?	1	1	https://issues.jboss.org/browse/LIVEOAK-345
15256	LIVEOAK-340	Could you look at a good place in the Admin Console to provide a download of LiveOak's client.js file? Possibly from the dashboard somewhere?	1	1	https://issues.jboss.org/browse/LIVEOAK-340
15257	LIVEOAK-340	Is this liveoak.js client file related to all applications running on LiveOak or is this related to a specific app? What is exactly a client file? Do we need to say something (short text) or only presenting a button/link would be enough?	0	0	https://issues.jboss.org/browse/LIVEOAK-340
15258	LIVEOAK-284	Matt, I think this is resolved, can you confirm?	0	0	https://issues.jboss.org/browse/LIVEOAK-284
15259	LIVEOAK-278	[~gcardoso], am I correct in thinking that wireframe 03 and 04 are no longer required as we don't have the settings page any longer? Also, would it be beneficial to provide the ability to upload, etc from the dashboard, maybe in the right hand pane?	1	1	https://issues.jboss.org/browse/LIVEOAK-278
15260	LIVEOAK-278	It doesn't make sense anymore. How important is this functionality? I'm asking that to understand if only a link in the applications list is enough. We could have it in the dashboard too.	1	1	https://issues.jboss.org/browse/LIVEOAK-278
15261	LIVEOAK-278	Do you want me to update this prototype according com the new navigation, [~kenfinni]?	1	1	https://issues.jboss.org/browse/LIVEOAK-278
15262	LIVEOAK-277	Ken, before I propose wireframes for this, I'd like to have a better understanding of it. What exactly is a Single Page App? Is it something that will appear in the console or in the application for the final users? Also, do you think the dashboard is a good place to the upload button? Does Josh need to have an overview of the Single Page Apps that he has uploaded?	1	1	https://issues.jboss.org/browse/LIVEOAK-277
15263	LIVEOAK-277	Yes, Alex helped me on that :) What do you think about the wireframes?	0	0	https://issues.jboss.org/browse/LIVEOAK-277
15264	LIVEOAK-271	Was this done, or does it shift to Alpha2?	0	0	https://issues.jboss.org/browse/LIVEOAK-271
15265	LIVEOAK-266	I don't see this with the current code. Can you update to the latest and try again?	1	1	https://issues.jboss.org/browse/LIVEOAK-266
15266	LIVEOAK-262	Interesting. How would you see a new application being created? Currently there's a button for it on the application list page, but if we were to not have such a page then we'd need another way to create an application.	1	1	https://issues.jboss.org/browse/LIVEOAK-262
15267	LIVEOAK-262	Thanks for the feeback Marko. I agree, logging in at the first time and seeing a dashboard is not the experience I want for the console. I already had discussions with Ken about that, we need a special flow for the first time user, informing that one default app has been created, what he can do and so on, instead of throwing him in a dashboard screen. There is a Jira for that. Are you saying that when there is no applications, you see the page “applications list” empty? If so, that should not happen, since one application is created by default in the first login, isn’t it? What do you mean by available apps are not listed anywhere and available at a glance? The user is redirected to the apps list when there is more than an app right after logging in, and he can change application in the dropdown if he is inside one application. I would like to check if more people have problems to recognize the application link and the dropdown. I can try to make the application link more like a link instead of a label. Same thing with the dropdown button. One thing we must consider is that once the user recognises the application link as a link and the dropdown as a way to switch between applications, he won’t have more problems. That said, we should optimize the UI for future usages. Of course, it is desirable that the user understands the link and dropdown at first, but not that bad if he explores the UI a bit to get the picture, after all, this is something new to him. The problem I see if your proposal is that it brings more pollution to the design trying to optimize something that will be quickly understood (the dropdown interaction). Also, the accordion solution works better when there is different content to show below each option, I don't think it is a good pattern for this navigation. That said, I would stick with the current design. One good strategy is to apply a short survey with Alpha one users to get their insights. The more feedback, the better. Finally, regarding the Add Application button, that was discussed with some people from Patternfly, and we agreed that, since "create a new application" is not an action the user will do all the time, it is better to have it inside applications. This follows the concept of Progressive Disclosure.	0	0	https://issues.jboss.org/browse/LIVEOAK-262
15268	LIVEOAK-259	Oops, this is for the console, not for the resource implementation. Sorry, re-opening.	0	0	https://issues.jboss.org/browse/LIVEOAK-259
15269	LIVEOAK-243	This is a proposal with a visual language that best matches the console. I didn't have many elements to play with, so hopefully we can go with this for now. As I said, after we have a logo I can revisit it. What do you think [~stianst]?	1	1	https://issues.jboss.org/browse/LIVEOAK-243
15270	LIVEOAK-232	I know for url path of creating a storage, it was discussed on the mailing list (http://mail-archive.liveoak.io/New-Storage-screen-design-td724.html) that we'd add an info icon with a hint for that field. Created LIVEOAK-233 to cover this particular usage. [~gcardoso], what are your thoughts on adding hints to all input fields in the console?	1	1	https://issues.jboss.org/browse/LIVEOAK-232
15271	LIVEOAK-232	Ken, don't you think that hints would be good for the UPS config?	1	0	https://issues.jboss.org/browse/LIVEOAK-232
15272	LIVEOAK-214	[~gcardoso], is this complete, or are you still tweaking the HTML for it?	0	0	https://issues.jboss.org/browse/LIVEOAK-214
15273	LIVEOAK-207	Instead of having the users as a tab in security, we could provide access to them with a link "Users" in the left sidebar. What do you think [~stianst]? Also, it is quite confusing that editing the user inside an application affects other applications. Shouldn't we let the admin make only the changes related to that application in this page, and take him to a different place to edit the fields related to all applications? Do we plan on supporting more than a realm for liveoak soon?	1	1	https://issues.jboss.org/browse/LIVEOAK-207
15274	LIVEOAK-206	Ken, the idea is to display a link to security directly from the list of applications, so Josh can go directly to security, push or storage if he wants to. What would a "security policy" be? By "a more details configuration", which fields are you referring to? When Josh chooses "ACL", was he presented to a dropdown with some security options? In the "ACL" configuration, are all fields input text?	1	1	https://issues.jboss.org/browse/LIVEOAK-206
15275	LIVEOAK-206	I had a hangout to Marko and some interesting questions arrived regarding the terminology: - What constitutes a security policy? Is it what you call "ACL policies for resources" plus some "ACL entries for the application", or each "ACL policies for resources" / "ACL entries for the application" is a "security policy" which Josh sees in the "Policies" view? - I also didn't understand very well where the creation of "ACL policies for resources" and "ACL entries for the application" fit the flow to "add a new security policy". Are them add later or part of this creation flow? It is probably a good idea to have a hangout with [~stianst] tomorrow, since he wrote this specification. Thanks	0	0	https://issues.jboss.org/browse/LIVEOAK-206
15276	LIVEOAK-199	Looks good, and I like the idea of identifying which is an example app. Should it be a label to identify it, or have a separate (maybe collapsible) section for example applications deployed to LiveOak?	1	1	https://issues.jboss.org/browse/LIVEOAK-199

#	Requirement	Questions	Answered	Successfully Answered	URL
15277	LIVEOAK-199	Ok. So can I jump to the implementation of these screens? Ken, I'd need the list of example applications that we have, screenshots and some text about them. Can you help me with that?	0	0	https://issues.jboss.org/browse/LIVEOAK-199
15278	LIVEOAK-193	Are you thinking of storing whatever UPS configuration an application might need in liveoak only, or a copy of what UPS holds?	1	0	https://issues.jboss.org/browse/LIVEOAK-193
15279	LIVEOAK-193	My concern with this approach is that we're duplicating data between two systems. Is there a way for LiveOak to be notified of changes to the UPS configuration that occur directly in UPS? Granted we're talking about a short term solution here, but want to make sure that this doesn't become more short term than intended.	1	0	https://issues.jboss.org/browse/LIVEOAK-193
15280	LIVEOAK-186	Gabriel, I'd forgotten about keycloak realms as part of the new application process, which I added to the scenario this afternoon. Could you update the wireframe(s) to account for that change? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-186
15281	LIVEOAK-186	Hi Ken. I finished the wireframes for both scenarios: new blank and basic app. Could you take a look at them?	1	1	https://issues.jboss.org/browse/LIVEOAK-186
15282	LIVEOAK-186	What do you mean by additional info?	1	1	https://issues.jboss.org/browse/LIVEOAK-186
15283	LIVEOAK-186	ah ok, do we need that for the wireframes or just the html impl?	1	1	https://issues.jboss.org/browse/LIVEOAK-186
15284	LIVEOAK-186	Gabriel, can we change "Blank" to "Do-It-Yourself"? Thomas suggested it and I think it makes it clearer the difference with "Basic"	1	1	https://issues.jboss.org/browse/LIVEOAK-186
15285	LIVEOAK-185	[~kenfinni]I like the blank option also. I guess the "devil is in the details" here, if the downstream tasks of configuring users, data, push, 3rd party services, etc are relatively easy, then I can see how blank would be preferable, even to the newbie. For me, the bottom line is - how easy is either path? basic vs blank - it could be that the end-user experience is nearly the same number of clicks, requiring approximately the same level of mental dexterity.	1	1	https://issues.jboss.org/browse/LIVEOAK-185
15286	LIVEOAK-185	Guys, do you think that presenting the dashboard after the creation of a blank application provides a good user experience? What will this user see if nothing is configured and no data will be displayed? Perhaps it would be more useful to tell him what he could do next. Same thing for the basic application. Won't the dashboard be filled only with zeros in the stats area? It would be better to tell him what to set up next.	1	1	https://issues.jboss.org/browse/LIVEOAK-185
15287	LIVEOAK-185	So my question would be, what do they need after creating these two kinds of applications? We could have links to what they need to do in this "what to do next..." page. Still better than a dashboard with zeros, and we wouldn't be putting additional roadblocks in their way.	1	1	https://issues.jboss.org/browse/LIVEOAK-185
15288	LIVEOAK-185	In the Basic App scenario, do you think Josh could not have all that info (Path, URL, ID, Secret) in the moment of the creation of a new app? Will we make all these fields required or can he move on without filling in some of them? Another question, after creating a basic app, how would the process of connecting an app be?	1	1	https://issues.jboss.org/browse/LIVEOAK-185
15289	LIVEOAK-185	Ken, for the KeyCloak realm field, is it a select box with some realms available to be selected (and application as default) plus the possibility to create a realm? Also, in the blank scenario, when you say that "the application is added to the default 'application' realm of KeyCloak", should we inform that to the user somehow?	1	1	https://issues.jboss.org/browse/LIVEOAK-185
15290	LIVEOAK-152	[~mwringe], is this covered by the system instances?	1	1	https://issues.jboss.org/browse/LIVEOAK-152
15291	LIVEOAK-148	How about this screen for the initial set up?	1	1	https://issues.jboss.org/browse/LIVEOAK-148
15292	LIVEOAK-147	Ken, if I understood correctly, to set up push notifications Josh should have already configured an application in Aerogear, is that correct? Are you predicting a scenario where Josh still hasn't configured an app in Aerogear? What are the "configuration" options shown upon saving the first piece of information?	1	1	https://issues.jboss.org/browse/LIVEOAK-147
15293	LIVEOAK-147	Do you think we need to go to read only after saving it? Isn't there a scenario where Josh needs to update this info, or maybe he just want to test with a different Aerogear config before putting the final config in the form? I'm asking that because we usually don't change to read only in Keycloak and in the Storage config. page...	1	1	https://issues.jboss.org/browse/LIVEOAK-147
15294	LIVEOAK-141	What's the flow for that? Click on the "Export Collection Data" button and present the OS dialog for the user to choose where to save the file?	1	1	https://issues.jboss.org/browse/LIVEOAK-141
15295	LIVEOAK-141	How about the option "Export data to JSON" above "Delete All Data", in the table dropdown?	1	1	https://issues.jboss.org/browse/LIVEOAK-141
15296	LIVEOAK-141	I think that works. Do you think we should provide the option to specify a filename to be exported to, or just export as "{collection name}-export.json" and let them rename it locally as they see fit?	1	1	https://issues.jboss.org/browse/LIVEOAK-141
15297	LIVEOAK-139	Is this an action related to a specific collection or import data creates a new collection?	1	1	https://issues.jboss.org/browse/LIVEOAK-139
15298	LIVEOAK-139	If Josh chooses to import it to the current collection, what would happen if the current data, if existing? It would be overwritten or would we add new lines in the end of the table?	1	1	https://issues.jboss.org/browse/LIVEOAK-139
15299	LIVEOAK-125	Will users use this same theme as the 'default' for login to their apps?	0	0	https://issues.jboss.org/browse/LIVEOAK-125
15300	LIVEOAK-125	Couldn't have formulated that any worse.. Let's try again: Are we creating one LiveOak theme for both the console, and also to be the default theme used by applications?	0	0	https://issues.jboss.org/browse/LIVEOAK-125
15301	LIVEOAK-125	Would it not make sense to just use the same theme for apps as well by default? That's how KC works, we use the same theme for admin console as well as the default for all realms. MADs should obviously be able to create their own, but we need some default theme available	0	0	https://issues.jboss.org/browse/LIVEOAK-125
15302	LIVEOAK-122	[~kenfinni] and [~mstruk], this is a very simple draft for the API Viewer. What do you think about a hangout to discuss the wireframes? I have some doubts and I'm sure you'll have lots of suggestions too.	1	0	https://issues.jboss.org/browse/LIVEOAK-122
15303	LIVEOAK-122	Do we have plans to work on this feature, [~kenfinni]?	1	0	https://issues.jboss.org/browse/LIVEOAK-122
15304	LIVEOAK-118	Marek, is this still an issue?	1	0	https://issues.jboss.org/browse/LIVEOAK-118
15305	LIVEOAK-112	Matt, I think this is actually done, can you confirm?	1	1	https://issues.jboss.org/browse/LIVEOAK-112
15306	LIVEOAK-104	Ken, how about this page? I included the "Edit Table" button, so the data would come as view-only initially. Is that the common use case, or should we display the table with editable fields right away?	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15307	LIVEOAK-104	Regarding your comments: - Ok, I removed the ordering functionality - It is a better practice to reinforce the collection where the user is with a title above the table rather than showing only the link in an active state. This leaves the context clearer for the user, and it won't take much vertical space. - I've updated the search to a filter. What do you think? - I've added the editing options. Some questions: - Is it a use case to remove a row? I've added this button - Whenever Josh needs to edit the table, will he make lots of changes or mostly edit a few strings? This proposal works better for the case of not having many strings to edit. I decided to present the items as view only initially because it is easier to read the data as text than in a bunch of inputs. Wait for the feedback. Gabriel	1	1	https://issues.jboss.org/browse/LIVEOAK-104

#	Requirement	Questions	Answered	Successfully Answered	URL
15308	LIVEOAK-104	How would the filtering look if multiple conditions were added? Does the header area grow in height to account for the larger space needed, or does something else happen? Yes, we definitely need the ability to remove a row. For adding a row, we don't need the concept of adding above or below a current row, we just add it to the end. So I think adding a row would work better as a button in header, as opposed to row selection. Most of the time I would not expect a large amount of data to be edited at one time. To make a field editable, do we need the click if saying you want to edit it, can we just have it that when Josh clicks in the field it becomes editable? What do you see the "Columns" drop down having values of other than "All"? It would certainly be nice to offer ability to show/hide columns, but don't know best way to portray that. We also need to be able to add/remove an entire column from the collection, and thus remove any data in that column for each row.	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15309	LIVEOAK-104	Yes, the header area grows to accommodate more conditions. I've put the actions "Add Row" and "Add Column" at the header. They are complementary. I updated the way to edit a field. When the mouse is over it, a background color appears and the cursor changes to the "editing text" cursor. This should be enough and less annoying than the tooltip. Regarding the "Columns" drop down, I thought on providing all the columns names multiple selection items, so Josh can search in one or more specific columns. I had understood that you asked me for this, but we can remove it if not necessary. To show / hide columns, we could display a dropdown icon when the mouse is over the column. By clicking on it, we could display options, like "hide column", "delete column" and "clear column", which you've just asked for. Will we allow sorting by column (A - Z and Z - A)? What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15310	LIVEOAK-104	This is looking good. Regarding "Columns", that sounds fine. I guess I hadn't thought of it that way, so threw me in the wireframe as to what the options would be, but a multi select list seems reasonable. Would hiding a column then adjust the "Columns" multi select to be all columns, except the one that was just hidden? And therefore showing a column again means selecting it in "Columns"? What would "clear column" do? Remove the data from every row in that column? Makes sense to provide sorting A-Z and Z-A on a column. But I think it needs to be single sort only, and ordering a separate column resets everything and just orders that column. Couple of other things I've thought of. We probably need to provide the ability to delete the Collection from the resource and also to delete all data within the collection (while retaining the column structure). Do we need to provide a way to delete multiple rows? Or is it sufficient to be able to delete a single row or all rows?	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15311	LIVEOAK-104	As we're intending to display data as JSON, can we change all the plain text to be surrounded with double quotes? So 1 becomes "1", John becomes "John", etc. Also, I think we need to further show how JSON objects are handled. To that end, can we change email address to be "Address", and we just have one entry for someone that is something like: { "line1" : "54 My Street", "city" : "MyCity", "zip" : "34567", "country" : "USA" } This can be compressed to remove new lines and spaces, I just wanted to expand it here so you could easily see what it was. Not sure if this is possible to show on a wireframe, but we need the ability to shrink and expand the width of columns, and when editing a large JSON object, like the address, if it all isn't visually displayed when read-only we need to expand the column to see it all for editing.	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15312	LIVEOAK-104	I've updated the wireframe with the Columns dropdown. I believe the filtering should happen in all columns, not only the visible ones. Not searching the hiding columns might cause error, cause the user have forgotten that some columns are hidden. For the best UX, we should inform that some results belongs on a hiding column, and ask him if he wants to make those columns visible. But if this is too complex, we can make it simpler, like you proposed. Yes, "clear column" removes the data from every row in that column. Would you like to propose a better label? What do you mean by "single sort only" and that this action "resets everything"? On top of deleting a collection, shouldn't we provide an option to add a new collection? When the user deletes all data inside the collection, should we remove all rows? Probably leave only one row, without data and clear would be good, no? Regarding deleting rows, we need to consider how often the user will need to delete a column. If it is a frequent action and he needs to delete lots of rows at a time, a multiple selection would be better. However, consistency wise, it is better to keep the inline delete, since it is only possible to delete a single row at a time as well. I've updated the data to JSON. To shrink and expand the with of columns, we need to display a different cursor when the mouse is over the edges of the columns. In case of editing a cell with too much information, we could open the input or text area in a bigger box floating above the content.	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15313	LIVEOAK-104	"clear column" - my thought was whether its a common use case or not. What I meant by "single sort only" is that you can only sort on a single column at a time, as opposed to multiple sorts, ie. sort by ColA, then ColB, etc. So a result of that means selecting a different column to sort "resets everything" that was done to sort before. Yes, I'd forgotten about add collection, we definitely need that. Delete collection should probably remove all rows and not leave a blank one, as that may cause confusion that a row still exists with blank values (which is valid with JSON). For when the delete collection icon is visible, what do you consider to be part of the "area of the collection"? Just want to make sure its visible more than it isn't to make it clear how to delete the whole thing. I'm not entirely sure whether the more common use case is deleting multiple rows or a single one. We can leave it as is for now and see if we get it raised as an issue to address. I like the idea of a larger floating box for editing large amounts of JSON data. What do you mean by 'add new column / row comes with inputs'?	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15314	LIVEOAK-104	Some other services uses "Clear column" to refer to the action of deleting data from every row in that column. Ok, now I understand what you mean by "single sort only". That's the way I was thinking it would work. I've updated the wireframe with the "Add Collection" button. What happen after clicking on it? What's the difference between "Delete collection" and "Delete all data from the collection"? Do we need both features? I consider the "area of the collection" a imaginary rectangle around the title of the collection + table. By "add new column comes with inputs", I meant that after clicking on this button, a new column will be created and all rows will come with an input, ready to be filled in.	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15315	LIVEOAK-104	For the Add Collection flow, on top of the name, the user needs to specify the number of columns (and rows) at a certain time. For a best interaction, we could provide a "sample table" with 3 columns and 3 rows, for example (or another number that you find better). This is less annoying than having to go through another step that asks the numbers of rows and columns. About the "Delete all data from collection" button, I suppose that this is an unusual action, is it? If so, we should keep it more hidden than "Add row" and "Add column". I was thinking about the search/filter. We are providing many UI elements for this action in the beginning. I believe we could offer a simple search box that searches the string in all columns, and provide a link "advanced filter" that opens a box with the columns selector, conditions, possibility to add conditions etc. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-104
15316	LIVEOAK-103	Hi Ken. I believe this scenario was partially covered by the "Add new data storage scenario", wasn't it? https://issues.jboss.org/browse/LIVEOAK-85 Could you talk more about this concept of "collections" that are new to me? What is a collection? How many collections will be available per storage? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-103

#	Requirement	Questions	Answered	Successfully Answered	URL
15317	LIVEOAK-103	Some questions: When you talk about "selecting the storage", you mean that Josh could have many storage resources inside the app and HAS TO select only one from the list of storage? My design only provides the list without the possibility of choosing one... From the "Storage List", it seems possible to access the "Collections" page and also the "Edit Storage" page. Which page will be accessed more often? We need to define better how to redirect him to these pages from the Storage list. In the collections page, if Josh needs to select a collection, we probably should display the collections initially collapsed, since they can be long, right? In case of a collection have too many rows, will we provide continuous scroll or pagination? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-103
15318	LIVEOAK-103	Yes, viewing data within a storage resource requires choosing one from possibly many. I would expect the ability to view the data within the collections of a storage resource will be used much more frequently than viewing/editing the configuration of a storage resource. Not sure the best way to represent it, but my thoughts were that we'd have a sidebar section, or the like, where the list of collections is present. Then selecting one of those then displays the data grid for that collection to the right of the collection list. I probably didn't make that super clear in the scenario, sorry. The idea is to be able switch which collection you're looking at easily, without trying to see all the data for all collections at once. I might lean towards continuous scroll, but am not stuck on either. Would depend on how we show options to remove rows/columns, add rows/columns, etc. Does that clear it up? Also, I've just realized I probably didn't make it clear that I think View and Edit Data are essentially the same page, just different purpose.	0	0	https://issues.jboss.org/browse/LIVEOAK-103
15319	LIVEOAK-102	Is this still needed? Or is the fact we provide a lot of the functionality across various examples ok?	1	0	https://issues.jboss.org/browse/LIVEOAK-102
15320	LIVEOAK-92	Ok, I won't put the progress bars in the boxes on my visual design proposal. Regarding the main box, I didn't want to have four equal boxes just because something asymmetrical is more interesting. 5 boxes would work fine as well, with the two that you mentioned at the top and three below. Do you think we have info for a 5th box? I haven't thought about the detailed screen for each box. This can be done in the future, we can stick only with the dashboard for now. I am not sure if I understood how the sidebar would be with many resources. Could you play a bit with Balsamic to illustrate this case? This will make easier for me to decide on how to handle this case. Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-92
15321	LIVEOAK-92	Should we use the term "View all Storage"? I think we agreed that Storage sounded better than Data Resource on another screen. Do you mean that we'd only show the 3 last used storage resources under the Storage section, or something else?	1	1	https://issues.jboss.org/browse/LIVEOAK-92
15322	LIVEOAK-86	Gabriel, Here's some more feedback on the data screens: - For the right hand section of the new storage page, I don't think a list of apps using a given resource is relevant anymore, as a single resource will only ever be used by a single application. What might be useful is to have the database name that has been configured for use with that storage resource. - Not sure that "Data Resource" is an appropriate name for the collapsible section where mongo, etc is selected. Maybe "Storage Provider"? - "Doesn't have it installed?" should probably be "Don't have it installed?" - Within the "Settings" collapsible section, I'm wondering if "URL Path" should come before "Database Name", as then all the configuration that specifies a particular database (name, host, port) is together as its all related to what Mongo database you want to use, whereas "URL Path" is how you want it exposed in LiveOak.	0	0	https://issues.jboss.org/browse/LIVEOAK-86
15323	LIVEOAK-86	If we just replace the "Apps using it" section with "DB Name". So the MyFirstStorage resource is connected to MongoDB with DB Name "MyDB". As we have a resource which connects to a particular Mongo instance and database, but each resource that connects to Mongo could be connecting to different databases within the same instance (host/port). Does that make sense? My only uncertainty is whether showing DB Name here would be too much information. Thoughts [~bdaw]?	1	1	https://issues.jboss.org/browse/LIVEOAK-86
15324	LIVEOAK-86	I'm not getting it, I probably need to understand better the relation between a storage resource, the storage provider and the database name. So one app can have multiple storage resources. But isn't true that one storage resource is only associated to one storage provider and on database name? If so, what exactly do you want to show in the sidebar?	0	0	https://issues.jboss.org/browse/LIVEOAK-86
15325	LIVEOAK-86	If we put this information in the sidebar, aren't we replicating the information presented in the storage list page (previous page)? Let's take a step back and try to think about the usage scenario. When Josh is creating or editing a new resource, how important is to see if there are other storage resources and detailed information about them, considering he already came from a previous screen containing this data (storage list page)? Is that really helpful to him? If not, what would be more helpful?	1	1	https://issues.jboss.org/browse/LIVEOAK-86
15326	LIVEOAK-85	I illustrated the case when he has only one application and is redirected to the application Dashboard directly. Once in the dashboard, he clicks on "Data Settings" (right sidebar) and is lead to a list of the data resources from that application. This page also provides a lateral navigation for the other areas related to that application. By clicking on "Add Resource", Josh accesses a new page to add a new resource. A frequente discussion on Interaction Design lists is whether we should redirect the user to the (resources) list after saving or the keep him on the resource page. If we take him to the resources list, it would be good to highlight the modified resource from the list for a few seconds, on top of the success feedback, so the user knows where the item is on the list. This might be more complicated in case of many resources or pagination. How many resources do you think an user will have on average?	1	1	https://issues.jboss.org/browse/LIVEOAK-85
15327	LIVEOAK-85	The list of data resources and creating a new data resource look good. My only thought, or concern, is that on the data resource list and add pages the breadcrumb for "Applications -> MyFirstApp -> Data" is nearer the center of the page. On the dashboard it's on the very left. Wondering if that will be confusing to change where the breadcrumb lives? Should the breadcrumb on list and add pages be below the divider under the app selection dropdown, as it is on the dashboard?	1	1	https://issues.jboss.org/browse/LIVEOAK-85
15328	LIVEOAK-84	Perhaps the possibility of adding a new source on the dashboard is too specific. I was thinking about providing a link like "Data Settings", and then he can do that in the data settings page. What do you think?	1	1	https://issues.jboss.org/browse/LIVEOAK-84
15329	LIVEOAK-81	Gabriel, Could you actually add the balsamiq mockup to the jira, not just a png image? That way any updates can be handled in the jira too. Thanks Ken	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15330	LIVEOAK-81	I've updated the files. Is that correct now? Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15331	LIVEOAK-81	Gabriel, these look good. Couple of questions: - For screen 2, would you see the items listed under the app, such as "Mongo DB" and "Secured", being links to the details for that particular item? Kind of a shortcut to bypass app dashboard? - For both means of editing the application name, would it be better to do away with the idea of a popup and simply have the cursor change to a text cursor when hovering over the name, and clicking converts it from a read only field to an editable one? With the enter key capturing the change?	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15332	LIVEOAK-81	Ken, I created a new wireframe, "6 - Application Settings". What do you think about it?	1	1	https://issues.jboss.org/browse/LIVEOAK-81

#	Requirement	Questions	Answered	Successfully Answered	URL
15333	LIVEOAK-81	Just had another look at Keycloak admin and think I understand better now. So the application role list is just a pure list of current roles for the application, with ability to add/remove as needed. Default roles is then as the wireframe, where the left hand of available roles is based on the application role list, and you select which roles are the default. Client scope left hand of available roles is also based on the application role list? Did I get that right [~stianst]?	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15334	LIVEOAK-81	[~stianst], when you say that "application roles is a list of roles where you can add/remove roles to it" you are talking about that table in Keycloak that leads to another page to create a role, is it? Considering that Josh can add multiple clients, it wouldn't be a bad idea to split this page in two: General Settings and Clients. What do you think Ken?	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15335	LIVEOAK-81	Do you mean making the configuration page, into multiple pages? Not sure how that would look, so maybe put together a quick wireframe to show it?	1	1	https://issues.jboss.org/browse/LIVEOAK-81
15336	LIVEOAK-80	Any idea how are we going to name the app by default? NewApp, NewApp1, NewApp2? MyApp? NameMe? :)	0	0	https://issues.jboss.org/browse/LIVEOAK-80
15337	LIVEOAK-77	Where is the scenario description?	1	1	https://issues.jboss.org/browse/LIVEOAK-77
15338	LIVEOAK-77	Gabriel, could you attach the balsamiq mockups instead? Should be able to export the XML from where you created them and then import them into the balsamiq extension for jira.	1	1	https://issues.jboss.org/browse/LIVEOAK-77
15339	LIVEOAK-77	Few commens. What I like: - All needed info there. Stats, app keys, app status, and links to data and security config. What may be missing - Link or banner of some tutorial. Could be placed around the stats. Like "How to start building your app". This could take to a separate section or modal listing tutorials with different topics On the first sight there is a bit of a lot of info... especially with those 2 additional popups. Just an impression. Still I like the fact that app keys and status of base services is exposed right away and doesn't require looking around.	0	0	https://issues.jboss.org/browse/LIVEOAK-77
15340	LIVEOAK-77	I added the link for the tutorials. How important is to inform the user that "we have created an app for him"? I guess this is part of your "magic" and we should reinforce it. To minimize the informational load, I propose hide the content below a dark background and only display the initial information (2 First Application Dashboard - Welcome). After clicking on "OK", the tooltips are hidden and the user goes to the page (last image). What do you guys think?	1	1	https://issues.jboss.org/browse/LIVEOAK-77
15341	LIVEOAK-76	I liked the way you wrote the scenario (concise, straight to the point) and the topics at the bottom. Some comments: We had discussed the idea of NOT need to log in as admin to be asked to change the password right after. Did that change or it was just a mistake in the scenario description? (https://gatein.mybalsamiq.com/projects/liveoak/First%20login) Does Josh have to change the application name at some time after this "default" app has been created? If so, I believe that a initial screen welcoming him and asking him to name and create an application is more intuitive because he knows that he is creating an app and expects to see some feedback and information about the app right after. In the scenario you described, it is unexpected and maybe confusing (what is this? I just logged in, I already have an application?) (https://gatein.mybalsamiq.com/projects/liveoak/Create%20first%20application) Do you have a clear vision of what pieces of information goes inside the application dashboard after the app is created? I would need to have a list of data and functional elements to be able to prototype it. Thanks	1	1	https://issues.jboss.org/browse/LIVEOAK-76
15342	LIVEOAK-76	Hi Ken, Today I presented the dashboard for this scenario to other JBoss scenario and we realised that maybe this approach is not the best one for someone who just starting on LiveOak. Right after logging in, to present statistics with big numbers showing a zero has no value for the user. For this scenario, instead of showing numbers, we probably should guide the user, telling him what he can or has to do. In this sense, I believe the previous initial screen that I prototyped work better: https://gatein.mybalsamiq.com/projects/liveoak/Initial%20overview In my understanding, after logging in at first, the user should be informed that an application with data, security and push has been created and see what to do next. That's the part we are missing. I believe application details are important too, but you can confirm. What are your thoughts? Gabriel	1	1	https://issues.jboss.org/browse/LIVEOAK-76
15343	LIVEOAK-76	It would be magic if we auto create everything you mentioned. Won't Josh really need to set up anything at all? The best thing to do is tell him what he has to do next, so if he has to connect his mobile app to LiveOak, I agree that the tutorial would be our best option.	1	1	https://issues.jboss.org/browse/LIVEOAK-76
15344	LIVEOAK-76	Ok! And do you guys know who will write this "how to connect your mobile app to LiveOak" tutorial? Do you think we should update the wireframe with some sample text or wait for the real content to do the design?	1	1	https://issues.jboss.org/browse/LIVEOAK-76
15345	LIVEOAK-56	[~mposolda] is this still required? Or is this not needed because its covered by a rewrite of uri policies?	1	0	https://issues.jboss.org/browse/LIVEOAK-56
15346	LIVEOAK-51	I believe that after merging this PR https://github.com/liveoak-io/liveoak/pull/67 the issue can be resolved. What's the PR merging policy? should be merge our own PRs?	1	1	https://issues.jboss.org/browse/LIVEOAK-51
15347	LIVEOAK-22	Shouldn't this wait until we have LIVEOAK-31 in place?	0	0	https://issues.jboss.org/browse/LIVEOAK-22
15348	LIVEOAK-17	What exactly are you trying to do as part of this issue?	0	0	https://issues.jboss.org/browse/LIVEOAK-17
15349	LIVEOAK-10	Is this done per the change from [~bob.mcwhirter] that changed DirectConnector?	0	0	https://issues.jboss.org/browse/LIVEOAK-10
15350	LIVEOAK-1	Currently we place somewhat fast-and-loose with updating resources. The current update(state) method on current Resource implementations is ostensibly a partial-update-allowed sorta implementation. Should we tighten up that contract/docs to indicate that update(state) is a full-replacement call? And then provide for an update(diff) method that allows partial updates? I don't think simply applying the rule of "update the fields mentioned in the provided state" is sufficient for PATCH, since ultimately, you then don't have a way to unset things, but only change their value to other non-null values. ie, if a resource is ostensibly: {code}{ name: 'bob', favorite-food: 'tacos' }{code} And we call the current update() method like: {code}update({ name: 'bob' }){code} it would basically be a no-op if we allow just partial state objects. It'd set my name to 'bob' (as it was to start) and would ignore the un-mentioned favorite-food. If I want to remove any favorite-food, I'd need to do a full update and exclude it from the inbound state. If we had {code}update({ remove: [favorite-food] }){code} as a diff-centric update, then we could remove it without altering saved state beyond the removal of the property. To make life easier for people, we could also provide a default implementation for a diff-centric update, in psuedo-code {code}default void update(ResourceDiff diff) { ResourceState before = doMagicToObtainTheBeforeDiffState(); ResourceState after = applyDiff(before, diff); update(after); }{code} This would allow simple Resources to only care about update(ResourceState state) and assume it's always a full update, while the container would still provide the ability to apply diffs from outside. A smarter or more optimized Resource could implement their own update(ResourceDiff diff) to operate more efficiently than a fetch/apply/update the default implementation.	1	0	https://issues.jboss.org/browse/LIVEOAK-1
15351	LOGTOOL-124	Do we want to use a {{@Producer}} annotation or just make assumptions if the parameter is a {{java.util.function.Function}}?	1	1	https://issues.jboss.org/browse/LOGTOOL-124

#	Requirement	Questions	Answered	Successfully Answered	URL
15352	LOGTOOL-124	Just to confirm. For a {{Function}} the signature must resolve to {{java.util.function.Function<String, Throwable>}} where {{String}} is the message. For a {{BiFunction}} the signature must resolve to {{java.util.function.BiFunction<String, Throwable, Throwable}} where the {{String}} is the message and the first {{Throwable}} is the cause. Does that sound correct? Example of the current output for a function: {code:java|title=Interface} @Message("The operation failed due to %s") <T extends Throwable> T operationFailed(@Producer Function<String, T> function, String op); {code} {code:java|title=Generated} private static final String operationFailed = "The operation failed due to %s"; protected String operationFailed$str() { return operationFailed; } @Override public final <T extends Throwable> T operationFailed(final java.util.function.Function<String, T> function, final String op) { final T result = function.apply(String.format(getLoggingLocale(), operationFailed$str(), op)); final StackTraceElement[] st = result.getStackTrace(); result.setStackTrace(Arrays.copyOfRange(st, 1, st.length)); return result; } {code}	1	1	https://issues.jboss.org/browse/LOGTOOL-124
15353	LOGTOOL-101	Failing that (cloning), an alternative is to allow overloading: {code} @Message(id = 1234, "Binding to %s failed: %s") IOException bindFailed(SocketAddress bindAddress, @CopyStackFrom @Pos(2) IOException cause) BindException bindFailed(SocketAddress bindAddress, @CopyStackFrom @Pos(2) BindException cause) {code} Which I think is allowed today (right?).	1	1	https://issues.jboss.org/browse/LOGTOOL-101
15354	LOGTOOL-101	Do you want the stack trace just appended to the created exceptions stack trace? So something like: {code:java} final StackTraceElement[] resultStackTrace = result.getStackTrace(); final StackTraceElement[] causeStackTrace = cause.getStackTrace(); final int newLen = resultStackTrace.length + causeStackTrace.length; final StackTraceElement[] newStackTrace = Arrays.copyOf(resultStackTrace, newLen); System.arraycopy(causeStackTrace, 0, newStackTrace, resultStackTrace.length, causeStackTrace.length); result.setStackTrace(newStackTrace); {code} WRT cloning I'm not sure I get what you mean. Note I'll also fix the {{@Pos}} documentation as it's rather poor :)	1	0	https://issues.jboss.org/browse/LOGTOOL-101
15355	LOGTOOL-101	If we add a parameter to the {{@Producer}} this might not be needed. Maybe something like {{@Producer(copyStackTrace=false}}, then the {{Function}} could just attempt to clone the exception. {code:java} @Message("Binding to %s failed") <T extends IOException> T bindFailed(@Producer(copyStackTrace=false BiFunction<String, IOException, T> function, @Cause IOException cause, SocketAddress address); throw ValidMessages.MESSAGES.bindFailed((msg, cause) -> { final IOException copy; if (cause instanceof BindException) { copy = new BindException(msg + ": " + cause.getMessage()); } else { copy = new IOException(msg + ": " + cause.getMessage()); } copy.setStackTrace(cause.getStackTrace()); return copy; }, new IOException("Failed IO exception"), address); {code} Note the {{copyStackTrace}} here refers to the reset of the stack trace removing the interface entry from the stack trace. A better name may be needed. E.g the default implementation looks something like: {code:java} @Override public final <T extends IOException> T bindFailed(final java.util.function.BiFunction<String, IOException, T> function, final IOException cause, final SocketAddress address) { final T result = function.apply(String.format(getLoggingLocale(), bindFailed$str(), address), cause); final StackTraceElement[] st = result.getStackTrace(); result.setStackTrace(Arrays.copyOfRange(st, 1, st.length)); return result; } {code} So we'd just need property to indicate the resulting stack trace should not be set. Maybe {{setStackTrace=false}}?	0	0	https://issues.jboss.org/browse/LOGTOOL-101
15356	LOGTOOL-84	Yes, it seems related. In fact, {{@FormatWith}} appears to be what I'm after, just learned about it. I'll give that a try. Though what I had in mind here would go a bit farther, as it basically would specify default {{@FormatWith}} 's based on the parameter type, without the need to specify the formatter type for each single parameter. Btw. the pull request for LOGTOOL-55 is merged, still the issue itself is open. Shouldn't it be marked as resolved?	1	0	https://issues.jboss.org/browse/LOGTOOL-84
15357	LOGTOOL-79	What about just a {{@Signature}} with a {{causeIndex}} and {{messsageIndex}} attribute?	1	1	https://issues.jboss.org/browse/LOGTOOL-79
15358	LOGTOOL-44	Since the JBoss Logging library is compiled to Java 6 I'm not sure this would work anyway. Can you give me the version of JBoss Logging you're using?	0	0	https://issues.jboss.org/browse/LOGTOOL-44
15359	LOGTOOL-44	> Since the JBoss Logging library is compiled to Java 6 Are you using any Java 6 specific features. Sure Java 5 is out of date, but if any framework should be conservative regarding JVM versions it should be logging.	0	0	https://issues.jboss.org/browse/LOGTOOL-44
15360	LOGTOOL-44	> Since the JBoss Logging library is compiled to Java 6 I'm not sure this would work anyway. Right, there is a problem. See https://hibernate.onjira.com/browse/HV-569 So even though Hibernate Validator itself would still run in a Java 5 environment, by switching to JBoss logging we basically force users to use Java 6. Couldn't you just compile JBoss Logging with target 1.5?	0	0	https://issues.jboss.org/browse/LOGTOOL-44
15361	LOGTOOL-44	{quote} Let me make it perfectly clear that 1.5 compatibility is a non-requirement at the moment. {quote} If you are not using any Java 6 specific features it is just a question of adding 'target = 1.5' to your compiler flags. If it is just about _Arrays#copyOfRange_, just add method to the code base. I think the advantage is outweighing the fact that you have "duplicated" code. Even though Java 5 is out of date, I think there are still a lot of deployments out there which run on this JVM. I just see it as an advantage if they have the chance to upgrade parts of their system (as they could w/ Validator if not for the logging framework) {quote} If you want jboss-logging to actually execute on 1.5, you're going to have to use a retroweaver of some sort to do it. {quote} How would that look like? I am not sure this is possible.	0	0	https://issues.jboss.org/browse/LOGTOOL-44
15362	LOGTOOL-20	FYI, this is the output with my patch: those are clearly invalid messages from Infinispan, not in your validation. Or feel free to use them as tests. {quote}[INFO] --- maven-compiler-plugin:2.3.1:compile (default-compile) @ infinispan-core --- [INFO] Compiling 613 source files to /home/sanne/workspaces/infinispan/infinispan/core/target/classes Format specifier 's' Parameter count does not match for format 'Could not register object with name: %s (%s)'. Required: 2 Provided: 1 Format specifier 's' Parameter count does not match for format 'Found WebSphere TransactionManager factory class [%s], but couldn't invoke its static 'getTransactionManager' method'. Required: 1 Provided: 0 [INFO] ---------- [INFO] BUILD SUCCESS {quote}	1	0	https://issues.jboss.org/browse/LOGTOOL-20
15363	MPJDOCBOOK-86	Yes, the whole renaming process won't be easy. Do you think we should go for it anyway? I mean I reported the error as maven was complaining about it, but I don't know if it is worth the trouble.	1	0	https://issues.jboss.org/browse/MPJDOCBOOK-86
15364	MPJDOCBOOK-32	thanks. the website is back online. could you update the mailing list pages or is there a forum available?	0	0	https://issues.jboss.org/browse/MPJDOCBOOK-32
15365	MPJDOCBOOK-19	I was actually not sure how to accomplish this. Do you have any ideas?	1	1	https://issues.jboss.org/browse/MPJDOCBOOK-19
15366	MPJDOCBOOK-6	hmmm sounds interesting. can't wait to see how it comes along for you ;) I'd prefer to not do this as a report plugin as I actually already tried that route. But the site/report stuff is perhaps the worst documented of al the badly documented parts of maven. What did you have in mind when you say "or maybe perhaps just include the raw artifacts in the site"?	1	0	https://issues.jboss.org/browse/MPJDOCBOOK-6
15367	MIGR-235	@pmuir what's the plan for this missing content?	1	1	https://issues.jboss.org/browse/MIGR-235
15368	MIGR-235	Do we have anywhere the previous content backed up in git or not?	1	1	https://issues.jboss.org/browse/MIGR-235

#	Requirement	Questions	Answered	Successfully Answered	URL
15369	MIGR-235	[~paul.robinson] and [~manaRH]: Has this been JIRA been resolved?	1	0	https://issues.jboss.org/browse/MIGR-235
15370	MIGR-233	Why is this here? Are you using MIGR as a personal JIRA list?	1	0	https://issues.jboss.org/browse/MIGR-233
15371	MIGR-233	Marc: >> Maybe we will need a parameter to say if we need the EAP 6 or EAP 7 BOM. (I do not think that there will be any other BOM) I have created the indexer, and I can make it create several different Lucene indexes. So that the user would have to choose which one to use, or Windup would have to query each one. What we can do: a) Have one combined index with the information in which BOM the APIs are available. b) Pick the right index based on the target platform. On the other hand, I don't want to make it too complicated - the feature is basically still "what artifact contains this package"; the BOM is currently only used when creating the index. >> For the war/ear/jar structure, it is also fully sufficient in a first step just to list the analyzed top-level applications. I mean that creating maven project for embedded-self-written (or shared) libraries is not necessary. >> It is perfectly fine to release it without all exhausite provided dependencies. I would recommend to combine it with the implementation of the technological-overview report. For both you will need the same information. >> Adding an option/parameter for the company pom-GAV is fully sufficient. There is no need for detecting it automatically I think. If no parameter has been set, something like "com.mycompany.mavenized:jee-example-app-parent:1.0-SNAPSHOT" is fully sufficient.	0	0	https://issues.jboss.org/browse/MIGR-233
15372	MIGR-233	What do do with cases like these? wimssecurity-client.jar Name: com.mformation.* (from MANIFEST)	0	0	https://issues.jboss.org/browse/MIGR-233
15373	MIGR-214	{code} .addRule() .when(XmlFile.matchesXpath("persistence[not(@version)]")) .perform(Classification .as("JPA Configuration") .withEffort(0) .and(XSLTTransformation.using("transformations/xslt/jboss4-persistence-to-jboss5.xsl") .withDescription("JPA Descriptor - JBoss 5 (Windup-Generated)") .withExtension("-jboss5.xml"))) {code}	0	0	https://issues.jboss.org/browse/MIGR-214
15374	MIGR-211	Actually, if you could clarify what the actual use case is, that might help. What does the user want? Do they want generation of data-sources? Do they like a file backup? (Which is weird since we wouldn't modify files?)	0	0	https://issues.jboss.org/browse/MIGR-211
15375	MIGR-198	Lincoln: "Need to check these two things: Is there newer addon version online? Is it compatible?" https://github.com/forge/furnace#usage	1	1	https://issues.jboss.org/browse/MIGR-198
15376	MIGR-195	Is this covered by Forge?	1	1	https://issues.jboss.org/browse/MIGR-195

15378	MIGR-177	Is there anything else we want to do here or is this issue resolved?	1	1	https://issues.jboss.org/browse/MIGR-177
15379	MIGR-177	I have only one question on this. We suggest folks go to the migration guide in the customer portal. What if they aren't customers - which is a strong possibility? The other doc links are to sites anyone can get to? Can we provide a link that is not on the Customer Portal?	0	0	https://issues.jboss.org/browse/MIGR-177
15380	MIGR-175	The IBM link noted above is obsolete, however, a search turned up this page: http://www-01.ibm.com/support/docview.wss?uid=swg24034637 [~rsearls]: Does that look right?	1	1	https://issues.jboss.org/browse/MIGR-175
15381	MIGR-175	[~clichybi]: This link in your document gives an error: http://www-01.ibm.com/support/docview.wss?uid=swg24019368 Should it be replaced with this link? http://www-01.ibm.com/support/docview.wss?uid=swg24034637	1	1	https://issues.jboss.org/browse/MIGR-175
15382	MIGR-175	[~clichybi] In your document, you say to "download jboss-as-tomcat-6.0.0.Final.jar from JBoss AS6". I used the following steps but I must be looking in the wrong release: 1. Browse to http://www.jboss.org/jbossas/downloads 2. Find JBoss AS 6.0.0.Final in the list and click Download. You see the message: Community projects represent the latest development releases and are not supported. Click 'Continue Download' 3. Find jboss-as-distribution-6.0.0.Final.zip in the list and click on it. It downloads the follwoing file: http://sourceforge.net/projects/jboss/files/JBoss/JBoss-6.0.0.Final/jboss-as-distribution-6.0.0.Final.zip/download I don't see jboss-as-tomcat-6.0.0.Final.jar in that distribution. Can you tell me where a customer needs to go to get that file?	1	1	https://issues.jboss.org/browse/MIGR-175
15383	MIGR-174	How to connect to JBoss EAP 6 using JConsole: Standalone server: https://access.redhat.com/site/solutions/149973 Managed domain: https://access.redhat.com/site/solutions/443033 I'm not clear why you need to set the JAVA_HOME within the shell script and configuration files though as we don't do that with the helloworld-mbean quickstart. I need to investigate	0	0	https://issues.jboss.org/browse/MIGR-174
15384	MIGR-166	Would you proivde a link to the Eclipse Plugin archive URL so I can proivded it on the web site? I also need a link to the video for this. If you have specific text you want for this new feature please provide it here and I will use it.	1	0	https://issues.jboss.org/browse/MIGR-166
15385	MODCLUSTER-528	The conclusion doesn't make any sense to me - which systems? Which tomcats? Why would we bring Tomcat 7 dependencies to Tomcat 8 game? When I compile with Tomcat 7 profile, I should need Tomcat 7 dependencies, when I compile with Tomcat 8 profile, I should need only Tomcat 8 dependencies without patching *.java files and without patching pom files. The aforementioned is not possible due to a bug in the Java source code and pom structure. According to the pom, it looks like we offer Tomcat 7 and Tomcat 8 profiles, while in fact we don't (Tomcat 8 profile still depends on Tomcat 7 libs). h3. Suggestion * drop Tomcat 6 from 1.3.x branch and from master, it is not needed there * drop JBossWeb/AS7 from 1.3.x branch and from master, it is not needed there * move Catalina stuff around so as *-PTC7* needs Tomcat 7 dependencies, *-PTC8* needs Tomcat 8 dependencies, *-PTC85* needs Tomcat 8.5 dependencies etc.	0	0	https://issues.jboss.org/browse/MODCLUSTER-528
15386	MODCLUSTER-528	> The conclusion doesn't make any sense to me - which systems? Which tomcats? For instance Fedora 24 build system (i.e. ecosystem). > Why would we bring Tomcat 7 dependencies to Tomcat 8 game? See below. > I should need only Tomcat 8 dependencies without patching *.java files That's a terrible approach. Building for RPM or whatever other system needs to follow what maven is doing -- that's the build that is used and tested. introducing new code in e.g. RPM building is a quiality risk. > drop Tomcat 6 from 1.3.x branch and from master, it is not needed there > drop JBossWeb/AS7 from 1.3.x branch and from master, it is not needed there Long time dropped from master. > move Catalina stuff around so as -PTC7 needs Tomcat 7 dependencies, -PTC8 needs Tomcat 8 dependencies, -PTC85 needs Tomcat 8.5 dependencies etc. This is setup in pre-master, never used and never worked. This is dropped in master (commented out). Doing this means unnecessary code duplication. The base module could then only contain code that can be compiled with *every* Tomcat version we support. The approach that we have been shipping for years is to compile base against single version and override code that needs to be changed for newer tomcat version.	0	0	https://issues.jboss.org/browse/MODCLUSTER-528

15388	MODCLUSTER-499	Where can the tarballs be downloaded from? If its from an official apache hosting, that sounds best to me atm.	1	0	https://issues.jboss.org/browse/MODCLUSTER-499
15389	MODCLUSTER-492	What exactly is here to do? * {{maxAttempts}} defaults to 1, so the native balancer *will* try another worker * {{stickySession*}} attributes are configurable on worker side...	1	0	https://issues.jboss.org/browse/MODCLUSTER-492
15390	MODCLUSTER-449	Wouldn't it be better addressed in the native part? The problem is not the load number itself, it's the {{elected}} counter. I suggest treating "newcomers" gently in {{internal_find_best_byrequests}}. IMHO one could guess that info from a large discrepancy between the elected counters of other nodes and this new one. I'm gonna try to verify I'm not just being full of ideas...	0	0	https://issues.jboss.org/browse/MODCLUSTER-449
15391	MODCLUSTER-449	I've developed a new load metric that has a "warm up" period where the capacity starts at 0 and then grows linearly to the true capacity over a configurable number of seconds (default 120). Would this be something you'd be interested in me submitted a pull request for?	1	0	https://issues.jboss.org/browse/MODCLUSTER-449
15392	MODCLUSTER-448	At least on the Apache mod_cluster side, could we have it refuse to register 0.0.0.0 and dump out a warning/error?	0	0	https://issues.jboss.org/browse/MODCLUSTER-448
15393	MODCLUSTER-438	can I use both ajp and WebSocket on one apache for loadbalance? e.g. when use http client access to apache,it will redirect to a http webserver. when use WebSocket client access to the same apache,it will redirect to a websocket webserver.	1	0	https://issues.jboss.org/browse/MODCLUSTER-438
15394	MODCLUSTER-438	[~mbabacek] What's the status of the ws tunnel integration? Do we know, is this supported in Undertow-based implementation?	1	0	https://issues.jboss.org/browse/MODCLUSTER-438
15395	MODCLUSTER-438	[#Jean-Frederic Clere] I am troubling about how to support http and websockt at the same time rather than how to support websocket. To support WebSocket for mod_cluster, i have to set option "EnableWsTunnel" in configuration of apache, and use http instead of ajp. However, it makes all the http to ws. The result is websockt supported but http not. Is there any way to for apache to support the two protocol ,http and ws, at the same time?	0	0	https://issues.jboss.org/browse/MODCLUSTER-438
15396	MODCLUSTER-438	[~gfleury] Thank you. The current version of httpd/mod_cluster supports websockets via proxy_wstunnel. Does nginx/mod_cluster anything differently? e.g. what happens when worker dies? Does the balancer try to re-negotiate handshake with a different worker or it's up to the client to do so? We arrived at the conclusion that there is no meaning in having websocket "ha", so when worker dies, the communication is broken and client has to initiate it again - balancer would give the client another, healthily worker then.	1	0	https://issues.jboss.org/browse/MODCLUSTER-438
15397	MODCLUSTER-438	Is this issue able to include the feature for the configuration Undertow as a Load Balancer Using mod_cluster [1] ? Then the changes will be in mod_cluster, not native. Or is it should be created as a separate issue ? [1] https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.0/html/configuration_guide/configuring_high_availability#configure_undertow_load_balancer_mod_cluster	1	0	https://issues.jboss.org/browse/MODCLUSTER-438
15398	MODCLUSTER-434	Our need is that, in a sticky-session context, when server load exceeds some specified threshold, no more requests are sent to this server until server load drops below another threshold. So that sessions will be moved to other servers as new requests from this sessions arrive. It is not necessary to move all sessions instantly, they could be moved gradually as requests arrive, until server is ready for new requests. The former threshold (upperThreshold) must be grater than the latter (lowerThreshold) so that the server is not taken out and in so frequent. I add an alternative: 4. Add this two thresholds attributes to a new AbstractLoadMetric subclass. In DynamicLoadBalanceFactorProvider.getLoadBalanceFactor(): {code} ... if (previousLoadValueOfThisMetric > 0) { if (currentLoadValue <= metric.getUpperThreshold()) { //do actual stuff with currentLoadValue; } else { // stop evaluating metrics and return -1 return -1; } } else { if (currentLoadValue <= metric.getLowerThreshold()) { //do actual stuff with currentLoadValue; } else { // stop evaluating metrics and return -1 return -1; } } ... {code} I don´t know which are the "consequences" of returning -1 (ERROR STATE) to the balancer. Perhaps we could create a new -3 OVERLOADED STATE. WDYT? If you want, we (with [~godiedelrio]) could try to develop a proposal and upload it for evaluation. Thanks	0	0	https://issues.jboss.org/browse/MODCLUSTER-434

15402	MODCLUSTER-390	Hmm, apart from the message, could you comment on my question: {quote} @[~jfclere] Hmm, the forced failover doesn't happen at once, it takes several requests...is that the correct behaviour? {quote} I understand that the _forcerecovery_ ain't supported, but there should be an immediate failover if the listed status is hit, IMHO.	1	1	https://issues.jboss.org/browse/MODCLUSTER-390
15403	MODCLUSTER-390	Very well, I've written an automated test that reflects the _comment #4_ and it works: h3. mod_cluster before the feature was implemented Some initial requests, HTTP 200... {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.2 Session ID: 4VKyGpxfi2MvHCOKC4A-l-5i.jboss-eap-6.2 Session isNew: false Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.2 Session ID: 4VKyGpxfi2MvHCOKC4A-l-5i.jboss-eap-6.2 Session isNew: false {code} Now, let's use HTTP 201, the *failonstatus=201* setting... {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=201, response code = 201 HTTP Code was: 201 JVM route: jboss-eap-6.2 Session ID: 4VKyGpxfi2MvHCOKC4A-l-5i.jboss-eap-6.2 Session isNew: false {code} The response comes from the same node, that's fine, but the subsequent requests come from that node as well, i.e. the feature is not implemented: {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.2 Session ID: 4VKyGpxfi2MvHCOKC4A-l-5i.jboss-eap-6.2 Session isNew: false Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.2 Session ID: 4VKyGpxfi2MvHCOKC4A-l-5i.jboss-eap-6.2 Session isNew: false {code} h3. current mod_cluster 1.2.9, feature implemented Some initial requests, HTTP 200... {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.3 Session ID: cETRQkQtnJk9R0I4eaGaoril.jboss-eap-6.3 Session isNew: false Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.3 Session ID: cETRQkQtnJk9R0I4eaGaoril.jboss-eap-6.3 Session isNew: false {code} Now, let's use HTTP 201, the *failonstatus=201* setting... {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=201, response code = 201 HTTP Code was: 201 JVM route: jboss-eap-6.3 Session ID: cETRQkQtnJk9R0I4eaGaoril.jboss-eap-6.3 Session isNew: false {code} The response comes from the same node, that's fine, but the subsequent requests come from a different node, i.e. the feature is implemented: {code} Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.3-2 Session ID: cETRQkQtnJk9R0I4eaGaoril.jboss-eap-6.3-2 Session isNew: false Trying to retrieve content from http://192.168.122.204:2181/clusterbench/httpcode/?http_code=200, response code = 200 HTTP Code was: 200 JVM route: jboss-eap-6.3-2 Session ID: cETRQkQtnJk9R0I4eaGaoril.jboss-eap-6.3-2 Session isNew: false {code} h3. Regarding Status As to your other question, the *jboss-eap-6.3* worker was in *NOTOK* for a period of time just until the next *STATUS* message was received. After that, both *jboss-eap-6.3* and *jboss-eap-6.3-2* have been in *OK* status. So, what shall we do about it? I think it's probably all right. 1. I have a certain set of HTTP codes that I want to trigger a failover 2. it works, failover occurs (on the *second* request) 3. the worker is put back in business, because there is no reason to believe it's broken, i.e. the fact that a web app returned a specific code does not suggest that the whole box should be kept in *NOTOK*... WDYT?	1	1	https://issues.jboss.org/browse/MODCLUSTER-390
15404	MODCLUSTER-343	Doesn't it because of MODCLUSTER-430?	0	0	https://issues.jboss.org/browse/MODCLUSTER-343

#	Requirement	Questions	Answered	Successfully Answered	URL
15405	MODCLUSTER-342	MemManagerFile /var/cache/httpd does it exist? Is it writable by the httpd user? Any SELinux/or UAC security like on the box?	1	1	https://issues.jboss.org/browse/MODCLUSTER-342
15406	MODCLUSTER-342	MemManagerFile /var/cache/httpd does it exist? Yes. it is. Is it writable by the httpd user? Yes, the user is root. Any SELinux/or UAC security like on the box? I don't know, but I think that anything.	1	1	https://issues.jboss.org/browse/MODCLUSTER-342
15407	MODCLUSTER-342	not yet we do have a box to investigate the problem. Could you use strace (or something similar) to track the system call that have failed? Additionally the output of ipcs (or something similar) could help.	1	1	https://issues.jboss.org/browse/MODCLUSTER-342
15408	MODCLUSTER-341	Weird the hosts are removed in: https://github.com/modcluster/mod_cluster/blob/master/native/mod_manager/mod_manager.c#L1440 how do you find that they aren't removed?	1	1	https://issues.jboss.org/browse/MODCLUSTER-341
15409	MODCLUSTER-334	smumford@redhat.com made a comment on [bug 958991|https://bugzilla.redhat.com/show_bug.cgi?id=958991] The JIRA suggests this is fixed, is that the case? And for release notes, does the user have to add that code? And if so, where does it go?	1	1	https://issues.jboss.org/browse/MODCLUSTER-334
15410	MODCLUSTER-329	Is there anything new on this feature?	1	0	https://issues.jboss.org/browse/MODCLUSTER-329
15411	MODCLUSTER-315	So is this essentially resolved? Which AS/EAP version is included?	0	0	https://issues.jboss.org/browse/MODCLUSTER-315
15412	MODCLUSTER-315	Okay, now I am confused. Is this in EAP 6.1 and upstream in AS8?	0	0	https://issues.jboss.org/browse/MODCLUSTER-315
15413	MODCLUSTER-306	I had a customer using this backported fix through the JBPAPP-9571 patch. They use this along with Siteminder and see STATUS MCMP requests were randomly failing/500ing without any real reason. Come to find out that any failed STATUS is missing the Host header and so siteminder fails it: {noformat} 10.170.104.52 - - [06/Mar/2013:12:44:52 -0800] "STATUS / HTTP/1.1" 500 535 "-" "ClusterListener/1.0" 0 375 10.170.104.52 - - [06/Mar/2013:12:44:52 -0800] "STATUS / HTTP/1.1" 500 535 "-" "ClusterListener/1.0" 0 343 10.170.104.52 - - [06/Mar/2013:12:44:56 -0800] "STATUS / HTTP/1.1" 500 535 "-" "ClusterListener/1.0" 0 468 10.170.104.51 - - [06/Mar/2013:12:45:01 -0800] "INFO / HTTP/1.1" 200 5088 "-" "ClusterListener/1.0" 0 848 ina-internal-ch-prd-web1.uboc.com:8466 10.170.104.51 - - [06/Mar/2013:12:45:01 -0800] "INFO / HTTP/1.1" 200 5088 "-" "ClusterListener/1.0" 0 757 ina-internal-ch-prd-web1.uboc.com:8466 10.170.104.51 - - [06/Mar/2013:12:45:01 -0800] "CONFIG / HTTP/1.1" 200 - "-" "ClusterListener/1.0" 0 574 ina-internal-ch-prd-web1.uboc.com:8466 [CSmHttpPlugin.cpp:278][ERROR] Unable to resolve server host name. Exiting with HTTP 500 server error '10-0004'. {noformat} Here's DefaultMCMPHandler.sendRequest from the 1.0.10.GA_CP branch currently: {code:title=DefaultMCMPHandler.java|borderStyle=solid} String head = builder.toString(); int length = encoder.getLength(); char[] body = encoder.getBuffer(); // Require exclusive access to proxy socket synchronized (proxy) { try { String line = null; StringBuilder proxyheadBuilder = new StringBuilder(head); proxyheadBuilder.append(proxy.getAddress().getHostName() + ":" + proxy.getPort()); String proxyhead = proxyheadBuilder.toString(); try { line = sendRequest(proxy, proxyhead, body, length); } catch (IOException e) { // Ignore first write failure } if (line == null) { // Retry failed read/write with fresh connection proxy.closeConnection(); line = sendRequest(proxy, head, body, length); } {code} So it looks like they occasionally use that second sendRequest, which wasn't updated to use the proxyHead string that was built with the info for the Host header. I can see we have it proper in master and 1.2 branches though: {code:title=DefaultMCMPHandler.java|borderStyle=solid} try { line = sendRequest(proxy, proxyhead, body); } catch (IOException e) { // Ignore first write failure } if (line == null) { // Retry failed read/write with fresh connection proxy.closeConnection(); line = sendRequest(proxy, proxyhead, body); } {code} Can we correct this in the 1_0_10_GA_CP branch?	1	1	https://issues.jboss.org/browse/MODCLUSTER-306
15414	MODCLUSTER-303	Hi Vladimir, do we have any documentation how to set this up ?	0	0	https://issues.jboss.org/browse/MODCLUSTER-303
15415	MODCLUSTER-303	I am going to try to target this for WildFly 8. Hm, but seems like there is an issue in the native part - MODCLUSTER-282 ?	0	0	https://issues.jboss.org/browse/MODCLUSTER-303
15416	MODCLUSTER-296	what back-end are you using?	1	0	https://issues.jboss.org/browse/MODCLUSTER-296
15417	MODCLUSTER-282	I would like to eventually finish implementing this (i.e. keep this) but we haven't reached consensus on the topic yet.	0	0	https://issues.jboss.org/browse/MODCLUSTER-282
15418	MODCLUSTER-235	What is this issue duplicated by?	0	0	https://issues.jboss.org/browse/MODCLUSTER-235
15419	MODCLUSTER-211	i remember you had the problem while we were preparing the docs in Neuchatel. Do you remember the solution?	1	1	https://issues.jboss.org/browse/MODCLUSTER-211
15420	MODCLUSTER-211	Some engineering work is required per the note above, who is the core/main engineer on this project?	1	1	https://issues.jboss.org/browse/MODCLUSTER-211
15421	MODCLUSTER-211	Where does that parameter get put?	1	1	https://issues.jboss.org/browse/MODCLUSTER-211
15422	MODCLUSTER-211	Why does the port need to be changed?	0	0	https://issues.jboss.org/browse/MODCLUSTER-211
15423	MODCLUSTER-211	When SE Linux is enabled it gets in the way of random ports getting opened by application, and will block that access it SE Linux is turned on. By default several ports are "open" and port 10001 is one of those ports. Let me know if you have other questions?	0	0	https://issues.jboss.org/browse/MODCLUSTER-211
15424	MODCLUSTER-211	Hi guys, can someone explain this to me in simple terms for the release notes, please? Thanks.	0	0	https://issues.jboss.org/browse/MODCLUSTER-211
15425	MODCLUSTER-211	I was just a reporter of this issue, I would think a test case in a test plan would need to be created to verify this is either corrected or not. Do you agree?	0	0	https://issues.jboss.org/browse/MODCLUSTER-211
15426	MODCLUSTER-211	Thanks, that's what I was looking for. Can you also confirm that this is also not a problem for mod_cluster master (or 1.3.0.Final) on httpd 2.4 on Fedora 20/RHEL7?	0	0	https://issues.jboss.org/browse/MODCLUSTER-211
15427	MODCLUSTER-210	I have added the pdf to links in web site, is that was to you wanted?	0	0	https://issues.jboss.org/browse/MODCLUSTER-210
15428	MODCLUSTER-178	this ticket could be simple, however can become tricky if we want to expand this functionality. use case one is where we stick to a node (which is supported as we already know) second use case stick to a domain (which is what this ticket describes) third use case (which would be tricky i think) is to support combination of both !cluster-small.png! first we stick to a node, then in case of a failure of that node we failover to another node within same domain, and only in case of a second node failure, we will send request to Domain2. do you think we would ever want to implement third use case? i was looking into implementing this one.	1	1	https://issues.jboss.org/browse/MODCLUSTER-178
15429	MODCLUSTER-178	Rado, is there a special configuration that i should do to achieve case 3? i've tested it with sticky session true and force to false, and i am getting 503 if node goes down, here is my info: balancer: [1] Name: mycluster Sticky: 1 [JSESSIONID]/[jsessionid] remove: 0 force: 1 Timeout: 0 maxAttempts: 1 node: [2:2],Balancer: mycluster,JVMRoute: MyClusterE1,LBGroup: [MyDomain2],Host: 127.0.0.1,Port: 4453,Type: http,flushpackets: 0,flushwait: 1,ping: 10,smax: 0,ttl: 60,timeout: 0 host: 1 [myClusterAlias2] vhost: 1 node: 2 host: 2 [mycluterAlias1] vhost: 1 node: 2 context: 1 [/cluster] vhost: 1 node: 2 status: 1 my session cookie: id: 6a1f20eda1ec119e7fa168f766f2309bb5f42692.MyClusterD route: MyClusterD as you see node is MyClusterD and route is MyClusterD which died, however there is MyClusterE that serves /cluster context, however mod_cluster doesn't elect that node	1	1	https://issues.jboss.org/browse/MODCLUSTER-178

#	Requirement	Questions	Answered	Successfully Answered	URL
15430	MODCLUSTER-168	Thank you, Jean, do you know which release versions this switch will be available in? I mean 1.1.?	0	0	https://issues.jboss.org/browse/MODCLUSTER-168
15431	MODCLUSTER-165	It might, and this is the use case. I have setup httpd, I think I am good, but for whatever reason I never see my JBoss instances show up in the mod_cluster-manager. Wouldn't it be nice from the JBoss machine see if I can get across the network to that port. I am always amazed at the security lock downs that are at customer sites, and the headaches our massive use of ports creates for us in these environments.	0	0	https://issues.jboss.org/browse/MODCLUSTER-165
15432	MODCLUSTER-165	That is different then I was thinking, as I always have a browser or telnet available to test out #.#.#.#:6666 from my remote systems. What does this latch on to, and how does it work?	0	0	https://issues.jboss.org/browse/MODCLUSTER-165
15433	MODCLUSTER-160	@[~rhusar] It has been quite some time... Did you like the result configs? It seems to be largely outdated at the moment though.	1	0	https://issues.jboss.org/browse/MODCLUSTER-160
15434	MODCLUSTER-144	Isn't domain what you are looking for?	1	1	https://issues.jboss.org/browse/MODCLUSTER-144
15435	MODCLUSTER-125	So the process to permanently remove the node would be: 1) to set "auto-enable contexts" to false in mod-cluster-jboss-beans.xml 2) invoke the MBean to disable the node in the http proxy. 3) restart the node do your validation 4) set "auto-enable contexts" to true in mod-cluster-jboss-beans.xml 5) invoke the mbean to enable the node in the http proxy. Is that how you see things playing out? Any concern with triggering a deploy of mod-cluster by modifying the config on the file system? Of course "auto-enable contexts" could always be false if that is the desired behavior. However this is only the desired behavior when something has gone wrong so I wouldn't anticipate many folks setting "auto-enable contexts" to false as the default.	1	1	https://issues.jboss.org/browse/MODCLUSTER-125
15436	MODCLUSTER-90	Can you add the version to the /mod_cluster_manager handler as well ?	0	0	https://issues.jboss.org/browse/MODCLUSTER-90
15437	MODCLUSTER-84	Do you want to have MCMP commands corresponding to that? So that the httpd part of mod_cluster supports for a new set of ENABLE-DOM, DISABLE-DOM and STOP-DOM?	0	0	https://issues.jboss.org/browse/MODCLUSTER-84
15438	MODCLUSTER-75	In fact the balancers and the workers are not created correctly in mod_cluster. 1 - watchdog in server_rec principal 2 - via STATUS through isup in the VirtualHost that receives STATUS (6666 in the example). 3 - during the request in proxy_cluster_trans() in the VirtualHost that creates the request. What should we support: - create the balancers (and workers) in all VirtualHosts. - don't create the balancers, create the workers of the balancers defined by a ProxyPass and co, like: ProxyPass ... balancer://mycluster1	1	1	https://issues.jboss.org/browse/MODCLUSTER-75
15439	MODCLUSTER-54	We could maybe open this issue to community contributors? Since in 2.4 it is shipped by default IIUC. Do we know what are the main differences or is that a whole lot different API?	0	0	https://issues.jboss.org/browse/MODCLUSTER-54
15440	MODCLUSTER-25	I have added in buildbin.mod_cluster.sh: mvn -P dist package and copied the produced tar file in the output directory so that it get publish. Is that enough?	1	1	https://issues.jboss.org/browse/MODCLUSTER-25
15441	MODCLUSTER-1	It has been some time guys. What shall we do about this one?	0	0	https://issues.jboss.org/browse/MODCLUSTER-1
15442	MODE-2701	Same as for MODE-2698, [~open4storage], given that you wrote the initial implementation of the S3 backend, what do you think of this proposal?	0	0	https://issues.jboss.org/browse/MODE-2701
15443	MODE-2700	[~dalbani]: index providers don't have the ability to retrieve the stored text information really. Rather, they only store reverse indexes from the analyzed content of a text property towards the existing nodes which have that property. In other words, the entire architecture of indexes is based on being able to retrieve {{NodeKeys}} based on certain criteria. If you wanted to implemented this feature like it is in JR, you'd have to at least: * enhance the JCR-SQL2 supported grammar with an additional selector [see (this package|https://github.com/ModeShape/modeshape/tree/master/modeshape-jcr/src/main/java/org/modeshape/jcr/query/model)] and [parser support|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/query/parse/JcrSql2QueryParser.java]) * add an additional custom column for each result set (see https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/query/JcrSqlQueryResult.java) * add the ability to extract the excerpt (most likely somewhere in the ScanningQueryEngine) I would recommend first debugging a JCR-SQL2 test case from https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/test/java/org/modeshape/jcr/JcrQueryManagerTest.java until you understand how the query parsing, optimization etc work and after that try to implement this feature.	0	0	https://issues.jboss.org/browse/MODE-2700
15444	MODE-2699	[~hchiorean] I've hacked a (very) dirty workaround in {{ScanningQueryEngine.java}}: {noformat} protected RowFilter createRowFilter(final Constraint constraint, final QueryContext context, Columns columns, QuerySources sources) { ... if (constraint instanceof FullTextSearch) { ... IndexDefinition ftsIndexDefinition = context.getIndexDefinitions().getIndexDefinitions().values().stream().filter(indexDefinition -> indexDefinition.appliesToProperty(propertyName)).findFirst().orElse(null); if (ftsIndexDefinition != null) { IndexProvider indexProvider = indexManager.getProvider(ftsIndexDefinition.getProviderName()); // if (indexProvider.supportsFullTextSearch()) ... return null; } ... {noformat} But given that you qualified the enhancement as "complex", I suppose that I completely missing the point, right? By the way, how come a FTS-based query get handled in {{ScanningQueryEngine.java}} (thus with _scanning_) — when does {{IndexQueryEngine}} comes into action then?	1	0	https://issues.jboss.org/browse/MODE-2699
15445	MODE-2698	Hey [~open4storage], given that you wrote the initial implementation of the S3 backend, what do you think of this proposal?	1	0	https://issues.jboss.org/browse/MODE-2698
15446	MODE-2698	[~dalbani] I actually didn't write the initial implementation. Just updated what was there to included username/passwords for 3rd party S3 compatible storage. That said. The lifecycle IMO is a good choice, it needs a way to manage expiration changes/updates to objects. Users will also need to be aware that a later restore won't bring back objects that expired (if these aren't backed up in some other way) in the event of a restore.	0	0	https://issues.jboss.org/browse/MODE-2698
15447	MODE-2696	How to test: 1/ Launch modeshape with *modeshape-cmis.war* 2/ Connect to a cmis client (like *CMIS workbench*) with the url *http://localhost:8080/modeshape-cmis/services11/cmis?wsdl* 3/ Go to *Types* next *Create type* next *Load type definition from xml* 4/ Select the *my-document.xml* file present on this Jira. => The exception is thrown *org.apache.chemistry.opencmis.commons.impl.jaxb.CmisException: Not supported!* I have test *my-document.xml* file with *OpenCMIS InMemory Repository*, the file is valid	1	0	https://issues.jboss.org/browse/MODE-2696
15448	MODE-2674	I have set {{DEFAULT_MIN_IDLE_POOL_SIZE = 5}}. Would 0 be a better default value for this configuration? See: https://github.com/ModeShape/modeshape/pull/1638/files#diff-7a0174f60ddf8693be6c0df41c7e249bR54	1	1	https://issues.jboss.org/browse/MODE-2674

#	Requirement	Questions	Answered	Successfully Answered	URL
15449	MODE-2634	Thanks for trying. There is nothing that would make the cache internally deadlock except for recursive computations, which is disallowed by ConcurrentHashMap's JavaDoc. Since only get and put style operations are used, I think the issue is a broken test assumption. Can you please try using Caffeine.executor(Runnable::run)? In CLHM the eviction and maintenance work is amortized on calling threads. In JDK8 we have ForkJoinPool.commonPool() that we can delegate to by default, rather than using calling threads or requiring our own. This means the eviction is asynchronous, so a race condition in the test is a likely culprit. The blocking on LazyCachedNode and racy inspection of the cache (e.g. count) might result in a flawed wait condition. By setting the executor the test code is simpler and might help identify the problem. The other possibility is that the test is relying on LRU behavior, whereas Caffeine takes into account frequency. This seems less likely, but is a significant difference.	1	1	https://issues.jboss.org/browse/MODE-2634
15450	MODE-2630	{quote} First, this is not a feature request. Second, in this particular form this looks like a question, not a JIRA issue. {quote} Fair point. I initially wanted to mark this as a bug, but since I do not know the expected behavior, I ended up classifying this as a feature request. {quote} Since there is no "default" number of DB calls involved when creating a node, everything is *highly context dependent*. {quote} I did not ask for the default number of DB calls and I hope I did not imply that anywhere, since I understand that such a metric varies based on the number of nodes. I only pointed to a pattern that I observed, where performance of the library degrades drastically as the number of existing nodes increases. In terms of being dependent on the context, I provided you with the context I have, i.e. a sample application that is linked in the description of this JIRA. That application has a trivial use case, which is based purely on ModeShape JCR implementation, without any additional context. {quote} if you suspect any incorrect behavior, you should profile and investigate your local application {quote} Using a profiler, I observed a pattern that stood out to me and I brought it up here. I do not know if it is correct or not, this is why I wanted to know your thoughts. {quote} ModeShape has been designed to efficiently handle a single node having a large number (100K-200k) of child nodes out-of-the-box. However, if an application stores a lot more nodes than that under a single parent, performance in terms of latency and memory consumption starts to decrease proportionally to the number of stored children. {quote} The quote above is taken from [here|https://docs.jboss.org/author/display/MODE50/Large+numbers+of+child+nodes]. Could you please explain what is meant by efficiency in handling a large number of nodes, preferably, by providing some numbers or pointing to the documentation that outlines the results of the abilities testing, which I assume was performed to come up with those conclusions? Note, that this question was also brought up in [here|https://issues.jboss.org/browse/MODE-2629?focusedCommentId=13293888&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13293888]. [~hchiorean], any help is greatly appreciated. My apologies if I misunderstood any of your points. By the way, thanks a lot for fast and helpful responses in here and on the forum.	1	1	https://issues.jboss.org/browse/MODE-2630
15451	MODE-2630	{quote} I only pointed to a pattern that I observed, where performance of the library degrades drastically as the number of existing nodes increases. In terms of being dependent on the context, I provided you with the context I have, i.e. a sample application that is linked in the description of this JIRA. That application has a trivial use case, which is based purely on ModeShape JCR implementation, without any additional context. {quote} the issue here is that you're describing a low level DB query (based on the internal ModeShape implementation) without mentioning anything about how you're using the JCR API - which is the only client interaction point. You mention you're adding versionable nodes, but without an exact code sample this is extremely vague considering that: * your nodes are versionable - are you using any versioning operations in between ? (if yes, then this is hugely expensive performance wise since every checkin/checkout creates a number of nodes under {{jcr:system}} in additional to the regular nodes) * are you using SNS or not - this can have a significant performance impact because not using SNS means additional reads and validations are required whenever a new node is added to a parent * are you using a short-lived or long lived sessions for each of the persist operations * the issue description keeps mentioning the word "query" - does that mean you're using JCR-SQL2 queries ? If yes, what are they ? ...etc I hope this explains better why without a running example/test case this type of issue is impossible to handle and is extremely vague. {quote} Using a profiler, I observed a pattern that stood out to me and I brought it up here. I do not know if it is correct or not, this is why I wanted to know your thoughts. {quote} hopefully I explained above why without something that is simple enough for me to run and look at locally it's impossible to say if this represents a problem or not. There are simply too many variables. {quote} The quote above is taken from here. Could you please explain what is meant by efficiency in handling a large number of nodes, preferably, by providing some numbers or pointing to the documentation that outlines the results of the abilities testing, which I assume was performed to come up with those conclusions? Note, that this question was also brought up in here. {quote} that statement refers to fact that we've tried to implement the node structure's internal representation so that it works (in a reasonable amount of time) in that particular case. However, if you look at that documentation page, the first thing is a large (hopefully) warning which explains why you should not use deep hierarchies. Being an API, you can use JCR essentially in an infinite number of ways (not to mention that you can also define your node hierarchy in an infinite number of ways with respects to the structure and datatypes). So there are no published numbers since there are an infinite number of uses cases really. What we did profile and test locally was done using the test cases from [this test suite and the JDBC subclass|https://github.com/ModeShape/modeshape/blob/master/modeshape-performance-tests/src/test/java/org/modeshape/test/performance/InMemoryPerformanceTest.java], which only tests reading/writing with or without SNS nodes based on {{nt:unstructured}}. The database that we did run these under were H2, MySql and Postgres primarily.	1	1	https://issues.jboss.org/browse/MODE-2630
15452	MODE-2613	[~oleg.kulikov]: can you please take a look at this ? When working on this, you can create several PRs especially if you have any questions or there are issues around the build. For example we can integrate first just the Maven module (without any tests) but with everything (i.e. Docker) configured and running and then integrate the tests.	1	1	https://issues.jboss.org/browse/MODE-2613

#	Requirement	Questions	Answered	Successfully Answered	URL
15453	MODE-2581	I'll try to express more precisely what I mean. 1. When I need indexing I add the following lines into WildFly config file: {noformat} <!-- Index provider --> <index-providers> <index-provider name="lucene" classname="lucene" module="org.modeshape.index-provider.lucene" lockFactoryClass="org.apache.lucene.store.NoLockFactory" directoryClass="org.apache.lucene.store.RAMDirectory" codec="Lucene53"/> </index-providers> <!-- A pair of indexes --> <indexes> <index name="ns:foo" provider-name="lucene" kind="text" synchronous="true" node-type="nt:base" columns="ns:foo(STRING)"/> <index name="ns:bar" provider-name="lucene" kind="text" synchronous="true" node-type="nt:base" columns="ns:bar(STRING)"/> </indexes> {noformat} Then Wildfly is started and I see: {noformat} 21:43:26,278 DEBUG [org.modeshape.jcr.RepositoryQueryManager] (modeshape-reindexing-7-thread-1) Performing full reindexing for repository 'test' and workspace 'default' ... 21:43:26,689 DEBUG [org.modeshape.jcr.index.lucene.LuceneIndexProvider] (modeshape-reindexing-7-thread-1) Enabled index 'ns:foo' from provider 'lucene' in workspace 'default' after reindexing has completed 21:43:26,690 DEBUG [org.modeshape.jcr.index.lucene.LuceneIndexProvider] (modeshape-reindexing-7-thread-1) Enabled index 'ns:bar' from provider 'lucene' in workspace 'default' after reindexing has completed {noformat} This is what I expected and queries produces expected results. It's fine - indexes were created and activated via configuration file. 2. Now I do not need indexing, so remove indexes section from configuration file.Only index-providers remains: {noformat} <index-providers> <index-provider name="lucene" classname="lucene" module="org.modeshape.index-provider.lucene" lockFactoryClass="org.apache.lucene.store.NoLockFactory" directoryClass="org.apache.lucene.store.RAMDirectory" codec="Lucene53"/> </index-providers> {noformat} Restarting WildFly gives me the following output: {noformat} 22:08:17,706 DEBUG [org.modeshape.jcr.RepositoryQueryManager] (modeshape-reindexing-6-thread-1) Performing full reindexing for repository 'test' and workspace 'default' ... 22:08:18,720 DEBUG [org.modeshape.jcr.index.lucene.LuceneIndexProvider] (modeshape-reindexing-6-thread-1) Enabled index 'ns:foo' from provider 'lucene' in workspace 'default' after reindexing has completed 22:08:18,720 DEBUG [org.modeshape.jcr.index.lucene.LuceneIndexProvider] (modeshape-reindexing-6-thread-1) Enabled index 'ns:bar' from provider 'lucene' in workspace 'default' after reindexing has completed {noformat} This is not what I expected and queries produces the same results as when indexes were defined in configuration file. So it doesn't matter whether indexes defined in configuration file or not - they are enabled till I remove index-providers at all. Is it a bug?	1	1	https://issues.jboss.org/browse/MODE-2581
15454	MODE-2568	[~rhauch]: I'm aware of the latest developments, my original plan was to try this using the latest/final 1.x (I think that's 1.0.9). As far as being faster than H2, IMO any "direct-disk" (i.e. non-JDBC) based storage _should_ be faster than going through JDBC. If you think {{MapDB}} is not worth pursuing (3.x does not have a final release yet, plus being a major rewrite does not give me the confidence of using it right of the bat) I can take a look at LevelDB and see if the batch writing mechanism actually works (if it does, we could use Level since no writes will overlap on a particular key) wdyt ?	0	0	https://issues.jboss.org/browse/MODE-2568
15455	MODE-2546	I agree that option 2 seems far more flexible, despite it being more complicated. My fear with #1 is that some databases might not really support `SELECT FOR UPDATE`, in which case to get ModeShape to work properly we might need to use an explicit locking column/table. I'd hate to have to do that, but option 2 gives us that flexibility. Can option 2 be implemented by relying upon the underlying database (e.g., `SELECT FOR UPDATE` within the transaction)? If so, option 2 gives us the best of both worlds.	1	1	https://issues.jboss.org/browse/MODE-2546
15456	MODE-2532	[~jkraushaar]: are you referring here to the ability of adding "transient sequencers" ? i.e. a sequencer that is only active for the lifetime of the VM but which is lost after a restart ? If yes, then we can consider this enhancement. If not, then the only way to add a persistent "dynamic" sequencer is via the configuration because it has to survive restarts.	1	0	https://issues.jboss.org/browse/MODE-2532
15457	MODE-2532	Would that really make sense though? IMO not really, since once you add a sequencer you'd want that to be present from there onwards, not only for the lifetime of that JVM. The current {{RepositoryConfiguration}} approach does allow "in-place updating" of the configuration of a running repository via [an update method|https://github.com/ModeShape/modeshape/blob/modeshape-4.4.0.Final/modeshape-jcr/src/main/java/org/modeshape/jcr/ModeShapeEngine.java#L561]. This is the same approach we're using from our AS kit. I understand the appeal of using annotations or a more OO based approach for configuration, but that would mean adding this support at a general repository level really, not just for sequencers. It does make sense, but it's a quite complicated and requires significant changes. If you or anyone else in the community wants to help and contribute, we're more than happy to review and integrate any submissions.	1	0	https://issues.jboss.org/browse/MODE-2532
15458	MODE-2518	This has already been discussed here: https://developer.jboss.org/message/943886 [~oleg.kulikov]: can you please take a look ? tx	1	1	https://issues.jboss.org/browse/MODE-2518
15459	MODE-2488	It seems that the Wildfly 9 Maven artifacts *are built using JDK 8*. This means that ModeShape's Wildfly subsystem cannot be updated to use Wildfly 9 *until ModeShape moves to Java 8*. Until that happens, the only thing that we can do is to try and check (and change if possible) if the Wildfly 8 subsystem is _binary compatible_ (i.e. will run) on Wildfly 9. [~rhauch] thoughts ?	1	1	https://issues.jboss.org/browse/MODE-2488
15460	MODE-2488	What Wildfly requires is unclear. [This page|https://docs.jboss.org/author/display/WFLY9/Getting+Started+Guide] suggests that Wildfly 9 only requires Java 7 to run, though it's not terribly clear since that page is in the Wildfly 9 documentation but the text on the page still refers to Wildfly 8. The [source code|https://github.com/wildfly/wildfly/tree/9.x] appears to require JDK 7 (and I can't find it in the top-level POM). We need to find out for sure. But, if Wildfly 9 does require Java 8 (source and target level), then we need to have a separate conversation about when ModeShape will require a minimum of Java 8 for **running**. Either way, we should be able to start requiring JDK 8 for building, even if we stick to source-level of 7 and target 7 for runtime. Have you tried this?	1	1	https://issues.jboss.org/browse/MODE-2488
15461	MODE-2482	Do we have test cases that verify this?	0	0	https://issues.jboss.org/browse/MODE-2482
15462	MODE-2458	Did you investigate the option of using/creating your own [Authentication/Authorization providers|https://docs.jboss.org/author/display/MODE/Custom+authentication+providers] ? That would be the preferred way to map your AD roles to one of the 4 roles required by the repository. These 4 roles are repository internal-roles which were not designed with the purpose of being configurable. Instead, we have the previously mentioned interfaces allowing you to plug in your custom security provider and tailor the permission checking in whichever way your application requires.	1	0	https://issues.jboss.org/browse/MODE-2458

#	Requirement	Questions	Answered	Successfully Answered	URL
15463	MODE-2452	{quote} What if the backup operation wrote to the data directory (perhaps a specific location that incorporated the timestamp that the backup was started) {quote} Since the REST service can be running in "any environment" (not just a container) maybe we should also support passing an optional {{location}} parameter which can be resolved as a system property - e.g. {{/backup?location=jboss.server.data.dir}}. If no such location is given as a parameter, we can simply use a "writable" default like {{java.io.tmpdir}}. The backup request can then return if successful something like {code:json} "location": "file:///<some_path>/<repository_name>_backup_timestamp" {code} The restore operation would then require this {{location}} parameter and read it when performing the restore. If not provided by the user, the restore request would fail with a {{400}}. wdyt ?	1	1	https://issues.jboss.org/browse/MODE-2452
15464	MODE-2452	Passing parameters in certainly makes things generic, but IMO that does not make them as useful or easy to use. I'm not convinced that it's worth exposing the option of writing a backup somewhere else: it complicates the behavior, and it may cause problems or performance issues if people specify locations like NFS directories. For the EAP/Wildfly subsystem, it would be better if the backup were smarter and simply did the right thing -- which IMO is writing out to the a directory within the data directory. And restore should then require the name of the backup, which can be used to determine the directory (within the data directory) where the backup exists. Can this relative location be set within the service's {{web.xml}} file? If not set, then perhaps backup is disabled (that's a decent option, IMO). The subsystem-based service would refer to the server's data directory? (IIRC, you can refer to system variables like {{jboss.server.data.dir}} within the {{web.xml}}; if not, then that might be an issue.) By putting the relative location within the {{web.xml}} file also allows other non-EAP/Wildflly installations to control where backups are written/read. Just my opinion.	0	0	https://issues.jboss.org/browse/MODE-2452
15465	MODE-2452	{quote} For the EAP/Wildfly subsystem, it would be better if the backup were smarter and simply did the right thing – which IMO is writing out to the a directory within the data directory. And restore should then require the name of the backup, which can be used to determine the directory (within the data directory) where the backup exists. {quote} How would this account for the difference between domain mode ({{jboss.domain.data.dir}}) and standalone mode ({{jboss.server.data.dir}}) ? In other words, there is no "unifying" data directory for both standalone and domain mode. {quote} Can this relative location be set within the service's web.xml file? If not set, then perhaps backup is disabled (that's a decent option, IMO). The subsystem-based service would refer to the server's data directory? (IIRC, you can refer to system variables like jboss.server.data.dir within the web.xml; if not, then that might be an issue.) {quote} AFAIK system property substitution in {{web.xml}} is not part of the EE spec, and [this issue|https://issues.jboss.org/browse/AS7-2931] seems to confirm that. So we can't really use it. Therefore I'm not sure I see how configuring the location in the {{web.xml}} file would solve this problem, particularly for JBoss AS. Of course, we can always go the easy route and use convention, meaning that the code can "hardcodedly" look in order at one of the following locations: {{jboss.domain.data.dir}}, {{jboss.server.data.dir}} and fallback perhaps to {{user.home}}, taking the first accessible one and using it as the root folder for backup/restore.	1	1	https://issues.jboss.org/browse/MODE-2452
15466	MODE-2452	{quote} Of course, we can always go the easy route and use convention, meaning that the code can "hardcodedly" look in order at one of the following locations: jboss.domain.data.dir, jboss.server.data.dir and fallback perhaps to user.home, taking the first accessible one and using it as the root folder for backup/restore. {quote} How about use the value in the {{web.xml}} if there (which is useful for non-EAP/Wildfly deployments), and otherwise try to resolve the well-known variables as you suggested?	0	0	https://issues.jboss.org/browse/MODE-2452
15467	MODE-2443	Let's try to clarify a bit the meaning of file-chooser capabilities. Here are possible options: - point to path on local file system; - point to path on server's file system; - any valid URI. These options allow us either backup/restore on the server side, backup/restore and download/upload to the local filsystem or even specify other remote storage. What do you think?	1	1	https://issues.jboss.org/browse/MODE-2443
15468	MODE-2422	You could reverse the subsqueries, but then makes it difficult to return {{artifact1}} properties in the select. I'm not even sure what the {{'element'}} represents -- is that a literal? Can you describe the node structure you're trying to query? (Perhaps that's better done on the forums.) This is very unlikely to be implemented, since it would require significant changes to the query engine. Non-correllated subqueries (what we have now) are very easily implemented compared to correlated subqueries.	1	1	https://issues.jboss.org/browse/MODE-2422
15469	MODE-2411	[~wesssel]: can you please be more clear what the issue is ? ModeShape does not use login modules, but rather security domains defined as {{security-domain}} elements in the EAP configuration. Whatever such a security domain contains, is out of the scope of ModeShape.	1	1	https://issues.jboss.org/browse/MODE-2411
15470	MODE-2411	[~wesssel], we are definitely not "bypassing" the security cache. We're literally using the JAAS API, as seen [here|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/security/JaasProvider.java#L84]. Have you tried using the [JaasCredentials|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr-api/src/main/java/org/modeshape/jcr/api/JaasCredentials.java] rather than a password? With this approach, you create the LoginContext and pass that in every time. This might give you the kind of control you need to make more use of the cache (if that's even possible).	1	1	https://issues.jboss.org/browse/MODE-2411
15471	MODE-2411	[~wesssel], sure your own LDAP login module would work and would be quick for you. But we'd love to have something similar so that our OOTB JAAS integration supports caching (if it is available on the classpath). Did support say how you're supposed to get a hold of the CacheableManager instance?	1	1	https://issues.jboss.org/browse/MODE-2411
15472	MODE-2410	[~rhauch]: this method was added as part of https://issues.jboss.org/browse/MODE-1286, but it is unused atm. and I don't understand its purpose. Does it make sense to keep it ?	1	1	https://issues.jboss.org/browse/MODE-2410
15473	MODE-2407	Yes, not looking below a given path would mean that fewer nodes are iterated. This would however place the "burden" on the client of making sure that nodes are stored in the correct places. Since this is a performance issue, have you looked at (profiled) where the time is actually spent ? (MapDB is the only index provider we have atm and we are aware of this performance issue: https://issues.jboss.org/browse/MODE-2387) The current indexing mechanism already allows index definitions to apply only to certain workspaces (by name only), meaning nodes not belonging to those workspaces will not be looked at: {code:javascript} "indexes" : { "index" : { "kind" : "value", "provider" : "invalid-provider", "nodeType" : "mix:title", "workspaces" : "<regex>" "columns" : "jcr:title(STRING)" } } {code} So one option would be to extend/implement this feature under the {{workspaces}} attribute and extend the semantic from a workspace name regex to a full-blown workspace path.	1	1	https://issues.jboss.org/browse/MODE-2407

#	Requirement	Questions	Answered	Successfully Answered	URL
15474	MODE-2407	{quote} (or even adding a new optional paths attribute if needed, if that makes the implementation easier) {quote} Yes, that's exactly what I had in mind. {quote} But I also agree with Horia Chiorean that profiling is the only way to fully understand where the time is spent. If the vast majority of the time is spent in MapDB, then when MODE-2387 is addressed will this still be a problem? {quote} OK, I'll try if playing with MapDB settings makes any (large) difference for me. By the way, would you have some ModeShape-specific tips on how to profile it easily? Still, imagine the case with millions of nodes in a repository and that I want to only index a few dozen nodes -- always sitting at the top of the tree by definition. Well, that's more or less my use case. Even if MapDB was über-fast, I think it would be a waste of CPU cycles to iterate over those millions of node... only to actually index a couple dozens of them.	1	1	https://issues.jboss.org/browse/MODE-2407
15475	MODE-2406	[~dalbani]: shouldn't 8.2 be compatible with 8.1 ? Have you tried deploying the 8.1 kit on 8.2 ?	1	1	https://issues.jboss.org/browse/MODE-2406
15476	MODE-2398	[~blafond], [~van.halbert], Would you care to comment on the priority of this, for both Modeshape and future support in Designer/Komodo?	1	0	https://issues.jboss.org/browse/MODE-2398
15477	MODE-2394	Is this a change that needs to be back ported to 3.8.x?	1	1	https://issues.jboss.org/browse/MODE-2394
15478	MODE-2394	Paul, In fixing the VDB sequencer, did u by chance fix the parsing to load the relational_schema (model) and relational_catalog (vdb) tables accordingly? I see vdb_model and vdb_virtualDatabase get updated, but I would have also thought the relational tables would have also.	1	1	https://issues.jboss.org/browse/MODE-2394
15479	MODE-2394	Hey [~van.halbert], I have created another PR which actually modifies the VdbSequencer and its accompanying classes to handle the changes to the Vdb schema that have already gone into the vdb.cnd. Is this what you are referring to or if not can you clarify please?	1	1	https://issues.jboss.org/browse/MODE-2394
15480	MODE-2387	In responce to the PR discussion on github, I guess this belongs here rather than there. It is not (a bit) slower, it's (in my case) nearly unusable. Infinispan is fast if configured correctly, but the MapDB backed Index is very slow because of file sync and it gets even worse with multiple threads running. So currently I only have one option: Patching Modeshape. A configuration setting that doesn't hurt anyone if it is disabled by default would help me not to patch. If you could tell which class boots up the index provider I could try to implement that myself so no work would have to be done on your side and we end up with a "hidden" conf setting that I may use as long as no other index provider is in place. Or maybe better, I could just create a fork of the LocalIndexprovider and use that? Maybe easier for now. Would that work, jsut clone the whole provider, put it in a differnt package and use that clone from the config?	1	1	https://issues.jboss.org/browse/MODE-2387
15481	MODE-2363	[~bes82]: what's the feature that's being requested here ? Shouldn't this be a question rather either on the ModeShape on ISPN forums around case-sensitive/insensitive storage in the Infinispan StringBasedJDBCStore ?	1	1	https://issues.jboss.org/browse/MODE-2363
15482	MODE-2363	But you are right, it's because of MySQL. But still I don't understand: hasNodeType(typeName) asks for a key that can't be found. But then when registerNodeType(type, true) tries to create the same key it suddenly can find the other key and complains. Shouldn't the behaviour be consistent throughout this two methods? It would also be nice if something about the case-sensitivity could be mentioned here: modeshape-examples/modeshape-jdbc-store-example/src/main/resources/infinispan-configuration.xml	1	1	https://issues.jboss.org/browse/MODE-2363
15483	MODE-2363	Could you please add this as xml comment to modeshape-examples/modeshape-jdbc-store-example/src/main/resources/infinispan-configuration.xml. {code} <!-- When using MySsql it's important to use a cs collation for the idColumn. Otherwise you might run into issues when defining case sensitive nodeTypes <stringKeyedTable prefix="ISPN_STRING_TABLE" createOnStart="true" dropOnExit="false"> <idColumn name="ID_COLUMN" type="VARCHAR(255) CHARACTER SET latin1 COLLATE latin1_general_cs"/> <dataColumn name="DATA_COLUMN" type="LONGBLOB"/> <timestampColumn name="TIMESTAMP_COLUMN" type="BIGINT"/> </stringKeyedTable> --> {code}	1	1	https://issues.jboss.org/browse/MODE-2363
15484	MODE-2363	That sounds like a great idea. [~bes82], would you mind opening a pull-request against https://github.com/modeshape/modeshape-examples? It can simply add an `infinispan-mysql.xml` file to the module that uses JDBC (e.g., it [this directory|https://github.com/ModeShape/modeshape-examples/tree/master/modeshape-jdbc-store-example/src/main/resources]).	1	1	https://issues.jboss.org/browse/MODE-2363
15485	MODE-2363	[~bes82], you're right about "{{_ci}}". Other resources on the web suggest using {{COLLATE=utf8_bin}} for collation in place of the default. WDYT?	1	1	https://issues.jboss.org/browse/MODE-2363
15486	MODE-2349	[~dalbani]: are you referring to the Wildfly (XML) configuration or the JSON configuration ? The JSON configuration is documented here: https://docs.jboss.org/author/display/MODE40/Query+and+search#Queryandsearch-Usingindexes. If you're referring to the Wildfly configuration, did you look at the {{modeshape.xsd}} that's installed with the WF kit ? That will always explain the significance of each attribute.	1	1	https://issues.jboss.org/browse/MODE-2349
15487	MODE-2349	Indeed, it *is* documented -- I'm sorry, how could I miss that page!? To answer to second question, yes, I was looking for documentation for an XML-based configuration in WildFly. But it seems that using the documentation for the JSON environment is just fine. However, I've had a brief look at it and there's some configuration attributes that are not mentioned in the XSD shipped with WildFly. Namely {{workspaces}} and {{synchronous}}. Should it be added the the XML schema definition?	1	1	https://issues.jboss.org/browse/MODE-2349
15488	MODE-2334	[~rstachowiak], ModeShape should not be using the TCCL, but instead when ModeShape needs to find arbitrary classes (e.g., sequencers, connectors, text extractors, index providers, etc.) it should be possible to specify the "classloader" in the configuration. ModeShape then delegates all classloading to the {{Environment}} instance that the {{RepositoryConfiguration}} instance optionally references. We may want to implement a new {{Environment}} class (perhaps subclassing {{LocalEnvironment}}) that is OSGi-specific and that maps "classloader" names to OSGi bundles. But, yes, using a named classloader in the config should be the preferred approach for finding security providers. Have you found others components loaded without using a named classloader?	1	1	https://issues.jboss.org/browse/MODE-2334
15489	MODE-2334	The Environment abstraction is actually the only place where we should be changing/using different class-loaders because when running in EAP/WF we have a special implementation that works in that case. So in the case of {{LocalEnviroment}}, ATM when we instantiate external components (like security providers) we use as a fallback loader {{getClass().getClassLoader()}} optionally passing in a list of Strings representing URI(s) coming from the {{classpath}} configuration attribute. These URIs (if present) will be passed into another URL-based CL: https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/LocalEnvironment.java#L132 So we could change this to use as the fallback loader the TCCL, but the question is why won't the classpath approach work in an OSGI enviroment ? Something like: {code} "security" : { "providers" : [{ "classname" : "servlet" "classpath": "my.jar" }] {code} where _my.jar_ can be any valid {{URI}} that is accessible at runtime by a {{URLClassLoader}}.	1	1	https://issues.jboss.org/browse/MODE-2334
15490	MODE-2334	[~rhauch]: how would we actually use this 3rd implementation ? The logic of {{Environment}} embedding is something that's done when creating a {{RepositoryConfiguration}}.	1	1	https://issues.jboss.org/browse/MODE-2334

#	Requirement	Questions	Answered	Successfully Answered	URL
15491	MODE-2334	[~hchiorean], that sounds great. I've already +1 the PR. But doesn't the {{JcrRepository}} class still need to be changed to use {{Environment}} for the security providers? If so, then that should be fixed as part of this issue. [~rstachowiak], if you think an OSGi-specific {{Environment}} class is beneficial and are willing to help us out with it, please log a new issue as a feature request.	1	1	https://issues.jboss.org/browse/MODE-2334
15492	MODE-2333	OK, I'll follow the steps you described then -- I'm still learning about the versioning thing, and I thought that checked-in nodes were set as read-only for good. Taken as a whole, coming from the traditional SQL world, I'm kind of surprised of the current behavior. Changing an SQL schema and its constraints is an all-or-nothing action. Either the database fully accepts the change or it doesn't if there's a mismatch with the actual data. But I can't think of a situation where the database wouldn't let me *read* some data because I have changed the schema inadvertently, say, a few weeks ago. -I see constraint definitions as requirements for what I *put* in the repository, not what I *read* from it.- In practice, how do I validate a modification of constraints? Do I have to make a offline copy of the repository, change the CND and then try to read all the properties of all the nodes, to be really sure that ModeShape won't throw an error out of the blue??	1	0	https://issues.jboss.org/browse/MODE-2333
15493	MODE-2332	After working with these changes in my app, I'm wondering if it would be cleaner to actually break JdbcMetadataConnector into two different classes: 1) JdbcConnector, extends ReadOnlyConnector - defines connectivity properties like dataSourceJndiName, username, password, connection pool settings, etc. 2) JdbcMetadataConnector, extends JdbcConnector - defines metadata-specific retrieval methods and properties like metadataCollector, metadataRetrievers, some of the init methods, etc. My extension is to retrieve data from a database and present it as nodes. It seems that extending the JdbcMetadataConnector would imply that my functionality is working the the DB metadata itself, which it's not. Though I wouldn't want to duplicate the DB connectivity structure that's currently in place. Separating these two aspects of the class would make for a cleaner extension for me. Would this separation make sense in other cases as well? Thanks! nikhil	1	1	https://issues.jboss.org/browse/MODE-2332
15494	MODE-2327	We have trimmed names ever since the project's inception, so changing that behavior might be a problem. Can you use the trimmed name but store the _actual file name_ in a separate property on those nodes that really need it?	0	0	https://issues.jboss.org/browse/MODE-2327
15495	MODE-2327	{quote} We have trimmed names ever since the project's inception, so changing that behavior might be a problem. {quote} I agree that changing the default behavior could have (unforeseen) consequences. It could be implemented as a new option then, to avoid risking problems with existing installations. {quote} Can you use the trimmed name but store the actual file name in a separate property on those nodes that really need it? {quote} Some uses case don't lend themselves easily to such workarounds: e.g. the WebDAV example I mentioned before. Plus storing the "original" name is a dedicated property introduces some (unwanted) complexity.	0	0	https://issues.jboss.org/browse/MODE-2327
15496	MODE-2327	By the way, I've noticed than {{String.trim()}} removes all leading / trailing characters with a code <= 0x20. So that's more than only the "space" characters that I was talking about. I know these are control characters, so somewhat rare, but they are not specifically mentioned in the JCR spec either. To sum things up, I maintain my point of view : the current implementation in ModeShape arbitrarily forbids a set of leading / trailing characters, for no good reason in my opinion. I just can't see why [0x00 - 0x20] characters are treated in a way different that all the other Unicode space characters for instance (e.g. NBSP). Apart from characters used in the JCR node name representation and syntax, *all* characters should be treated equally -- up to the user to prune any characters that he doesn't see fit. Using ModeShape as a file repository, this limitation on node names is precisely what introduces a "significant degree of complexity": why should I handle some filenames differently than others?? Compared to a conventional filesystem, have we ever seen one which forbids leading / trailing spaces?? The workarounds I've been presented with are error-prone and make me deviate from the standard implementation (e.g. via a specific name encoder). Plus, as I've mentioned before, accessing a repository through WebDAV (i.e. my use case for file synchronization) don't let me use this trick. Having said that, I leave the decision to your appreciation.	1	0	https://issues.jboss.org/browse/MODE-2327
15497	MODE-2323	Merged the PR into the {{master}} branch. This does not appear to fix the MODE-2280 issue, so do we want to backport this to the {{3.x}} (and {{3.8.x-prod-ip6.1}} branch? I'm not convinced that's necessary or even a good idea. [~hchiorean], thoughts?	1	1	https://issues.jboss.org/browse/MODE-2323
15498	MODE-2323	Not sure actually. Maybe port it ? I like very much the fact that we've simplified this logic a great deal.	1	1	https://issues.jboss.org/browse/MODE-2323
15499	MODE-2321	Reopening, because the change is incomplete: ModeShape also defines an explicit version of Apache POI, which is required by Tika. This change updated the Tika versions but didn't update the POI versions which means that now Tika (depending on the artifacts it's processing) can crash with: {code} 11:01:56,087 ERROR [org.modeshape.extractor.tika.TikaTextExtractor] (modeshape-text-extractor-32-thread-1) Error while extracting text : org.apache.poi.xssf.eventusermodel.XSSFSheetXMLHandler.<init>(Lorg/apache/poi/xssf/model/StylesTable;Lorg/apache/poi/xssf/model/CommentsTable;Lorg/apache/poi/xssf/eventusermodel/ReadOnlySharedStringsTable;Lorg/apache/poi/xssf/eventusermodel/XSSFSheetXMLHandler$SheetContentsHandler;Lorg/apache/poi/ss/usermodel/DataFormatter;Z)V: java.lang.NoSuchMethodError: org.apache.poi.xssf.eventusermodel.XSSFSheetXMLHandler.<init>(Lorg/apache/poi/xssf/model/StylesTable;Lorg/apache/poi/xssf/model/CommentsTable;Lorg/apache/poi/xssf/eventusermodel/ReadOnlySharedStringsTable;Lorg/apache/poi/xssf/eventusermodel/XSSFSheetXMLHandler$SheetContentsHandler;Lorg/apache/poi/ss/usermodel/DataFormatter;Z)V at org.apache.tika.parser.microsoft.ooxml.XSSFExcelExtractorDecorator.processSheet(XSSFExcelExtractorDecorator.java:190) at org.apache.tika.parser.microsoft.ooxml.XSSFExcelExtractorDecorator.buildXHTML(XSSFExcelExtractorDecorator.java:135) at org.apache.tika.parser.microsoft.ooxml.AbstractOOXMLExtractor.getXHTML(AbstractOOXMLExtractor.java:112) at org.apache.tika.parser.microsoft.ooxml.XSSFExcelExtractorDecorator.getXHTML(XSSFExcelExtractorDecorator.java:94) at org.apache.tika.parser.microsoft.ooxml.OOXMLExtractorFactory.parse(OOXMLExtractorFactory.java:112) at org.apache.tika.parser.microsoft.ooxml.OOXMLParser.parse(OOXMLParser.java:82) at org.apache.tika.parser.CompositeParser.parse(CompositeParser.java:244) at org.modeshape.extractor.tika.TikaTextExtractor$1.execute(TikaTextExtractor.java:143) at org.modeshape.jcr.api.text.TextExtractor.processStream(TextExtractor.java:89) [modeshape-jcr-api-4.1-SNAPSHOT.jar:4.1-SNAPSHOT] at org.modeshape.extractor.tika.TikaTextExtractor.extractFrom(TikaTextExtractor.java:133) at org.modeshape.jcr.TextExtractors$Worker.run(TextExtractors.java:171) [modeshape-jcr-4.1-SNAPSHOT.jar:4.1-SNAPSHOT] at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) [rt.jar:1.7.0_40] at java.util.concurrent.ThreadPoolExecutor$Worker.run(ThreadPoolExecutor.java:615) [rt.jar:1.7.0_40] at java.lang.Thread.run(Thread.java:724) [rt.jar:1.7.0_40] {code}	0	0	https://issues.jboss.org/browse/MODE-2321

#	Requirement	Questions	Answered	Successfully Answered	URL
15500	MODE-2316	[~bes82]: should this be an issue in JIRA or a topic in the [community|https://developer.jboss.org/en/modeshape] ?	1	1	https://issues.jboss.org/browse/MODE-2316
15501	MODE-2316	One more thing I didn't understand: After registering a new index the reindex thread logs that it is reindexing every node. During this time "something" constantly accesses / writes to the index directory/files. I don't know too much about the internals, but is this file access really needed? If I define an index on a nodetype that has no nodes yet, then every node has to be considered, I understand. But as soon as the node has been loaded and its nodeType is known to not match, couldn't there be an early return? If this is already the case than please excuse this comment, as said: I don't know that much about the internals, just looking at the file access and logs.	0	0	https://issues.jboss.org/browse/MODE-2316
15502	MODE-2311	The query plan structure changes frequently and is likely to continue to do so while the indexing system matures over the next few releases. Exposing in a public API the existing internal object structure is not an option. Creating a public structure explicitly for this is also far more trouble than its worth. Besides, most DBMSes expose the query plan in tabular form (again, which would require a lot of work). On the other hand, the amount of work necessary to create a simple, custom analyzer is quite low. Every line in the query plan is separate operation, and the indentation level describes the structure (if that's even necessary). Have a look at [this test code|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/test/java/org/modeshape/jcr/ValidateQuery.java#L349] that analyzes the query plan using simple regular expressions. The index validation logic does not currently handle queries with joins, but that could easily be done with custom code (or with a pull-request).	0	0	https://issues.jboss.org/browse/MODE-2311
15503	MODE-2305	It seems {{3.10.1}} contains a valid fix, so this will be the version that will be brought in via the BOM in both {{3.x}} branches.	1	1	https://issues.jboss.org/browse/MODE-2305
15504	MODE-2304	What do you mean by: {quote} modified the configuration and then used a maven uberwar to bundle that and my own application war {quote} The explorer should be a generic webapp, in that it works with any ModeShape repository. What parts of it do you need to modify and why ?	1	1	https://issues.jboss.org/browse/MODE-2304
15505	MODE-2304	[~oleg.kulikov], you seemed to allude to a potential problem: is it possible to create a single JAR that embeds all of the resources (not just class files) for the repository explorer, so that when it is assembled into the WAR file all the GWT and non-GWT resources can be found correctly? I suspect this will be the most challenging part.	1	1	https://issues.jboss.org/browse/MODE-2304
15506	MODE-2304	If this is not technically possible (for GWT reasons) then IMO we have only 1 option and that is to only distribute the full WAR file. This means that we can/should get rid of the {{modeshape-web-explorer-war}} module since its content is identical to {{modeshape-web-explorer}}. The reason is that without a lightweight JAR, there is no "Bare WAR" concept that would work and/or be useful IMO. EDIT: actually, isn't there a way we could leverage JCA and still have the "Bare WAR" approach ? Have the webapp connect to another ModeShape repository via JCA ?	1	1	https://issues.jboss.org/browse/MODE-2304
15507	MODE-2304	{quote} Horia Chiorean, I agree with you regarding modeshape-web-explorer-war. JCA doesn't seem like a solution. As maximum we can expose JCR api but we need quite more (backup/restore, stats, etc) {quote} Doesn't the explorer use only the JCR API and ModeShape's public API? If so, a lightweight WAR should still be an option, since those API JARs should be publicly available via the JCA deployment.	1	1	https://issues.jboss.org/browse/MODE-2304
15508	MODE-2304	Here's what I see as three possible ways for users/developers to get the explorer app: # *Heavyweight WAR* - The purpose is to be a standalone WAR file that is easy to deploy and use, because it runs out of the box. It has everything and is completely self-contained: it has the explorer classes, all GWT-related artifacts, repository connector definition, ModeShape connector implementation, *and* all of the JCR API and ModeShape-specific JARs with a repository configuration file. # *Lightweight WAR* - The purpose is to be a WAR file that must be deployed on a container where ModeShape is running elsewhere in the container. This is similar to the WAR file for the JBoss environment, but in this case there's nothing specific about JBoss. It includes only the explorer-specific code: the explorer classes, all GWT-related artifacts, repository connector definition, and ModeShape connector implementation (which IIUC only uses the JCR API and ModeShape public API; if not, it should). It does *not* contain the JCR API or ModeShape-specific JARs (since these should be found elsewhere on the classpath), and since the WAR is not starting or running its own repository, it has no repository configuration file(s). # *Custom WAR* - This is custom built by our users, and it's a simple WAR application that (let's say) is Maven based. They have their custom code, but they also want the explorer functionality and/or the REST service and/or the WebDAV service and/or the CMIS web service. To get this all into their own custom app, they need to add Maven dependencies on the explorer, REST service, and WebDAV artifacts, which of course have dependencies on other libraries. Because they're assembling multiple end points, they have to build a custom {{web.xml}} that includes snippets for the explorer, REST service, WebDAV service, and/or CMIS service. It probably also has a dependency on ModeShape (public APIs and impls), provides one or more repository configurations, and manages the ModeShape engine; if not, then it's looking up the repository from JNDI and has access to the JCR API and ModeShape API. When their application is built, everything gets assembled into a single, runnable WAR file that is easily deployed. We currently build something akin to (1), but twice ({{web/modeshape-web-explorer}} and {{web/modeshape-web-explorer-war}}) and these are nearly identical. (I'm not sure what the difference is, actually. But they're both very large and include everything under the sun.) Option (2) is very similar to what {{deploy/jbossas/modeshape-jbossas-web-explorer-war}} is, though it's customized for the JBoss container. I'm not sure whether it's feasible to have this for other containers, since sharing classpath resources is really challenging. (For example, it used to be possible to do this with old Tomcat only by putting shared classpath resources on the global classpath. This is really a hack, and many admins won't want to do it. But for those that do, this might be the best way.) I'm not convinced we need this for non-JBoss containers. Option (3) lets somebody easy build their own WAR that uses an arbitrary combination of our web-based functionality. Yes, they have to manage their {{web.xml}} and it has to be correct, but theoretically this should be easy by simply depending upon multiple ModeShape artifacts. Presumably these are all JARs, and would be except for the explorer functionality. If we don't want to do (2) and want to do (1) and (3), then for (3) we want to provide an artifact to make it easy to reuse the explorer functionality. All of our other services are just JARs, and this works really well and is very conventional. But GWT throws a wrench into the gears and makes it challenging. My question is: how can we package the explorer into one or more artifacts so that we can achieve option (3) above? Can we do a JAR file and put everything in it? Should it be a JAR for our classes (including generated classes) but then with the GWT resources put into a ZIP file that has to be exploded into the custom web app codebase? What other options are there?	1	1	https://issues.jboss.org/browse/MODE-2304

#	Requirement	Questions	Answered	Successfully Answered	URL
15509	MODE-2304	{{http://localhost:8090/modeshape-explorer}} results in: {code} Caused by: java.lang.ClassNotFoundException: org.modeshape.common.logging.Logger at java.net.URLClassLoader$1.run(URLClassLoader.java:366) at java.net.URLClassLoader$1.run(URLClassLoader.java:355) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:354) at java.lang.ClassLoader.loadClass(ClassLoader.java:424) at java.lang.ClassLoader.loadClass(ClassLoader.java:357) at org.eclipse.jetty.webapp.WebAppClassLoader.loadClass(WebAppClassLoader.java:436) at org.eclipse.jetty.webapp.WebAppClassLoader.loadClass(WebAppClassLoader.java:389) at org.modeshape.web.server.JcrServiceImpl.<clinit>(JcrServiceImpl.java:76) at sun.reflect.NativeConstructorAccessorImpl.newInstance0(Native Method) at sun.reflect.NativeConstructorAccessorImpl.newInstance(NativeConstructorAccessorImpl.java:57) at sun.reflect.DelegatingConstructorAccessorImpl.newInstance(DelegatingConstructorAccessorImpl.java:45) at java.lang.reflect.Constructor.newInstance(Constructor.java:526) at java.lang.Class.newInstance(Class.java:374) at org.eclipse.jetty.server.handler.ContextHandler$Context.createInstance(ContextHandler.java:2307) at org.eclipse.jetty.servlet.ServletContextHandler$Context.createInstance(ServletContextHandler.java:1164) at org.eclipse.jetty.servlet.ServletContextHandler$Context.createServlet(ServletContextHandler.java:1151) at org.eclipse.jetty.servlet.ServletHolder.newInstance(ServletHolder.java:976) at org.eclipse.jetty.servlet.ServletHolder.initServlet(ServletHolder.java:521) at org.eclipse.jetty.servlet.ServletHolder.getServlet(ServletHolder.java:422) at org.eclipse.jetty.servlet.ServletHolder.handle(ServletHolder.java:669) at org.eclipse.jetty.servlet.ServletHandler$CachedChain.doFilter(ServletHandler.java:1568) at org.modeshape.web.AuthFilter.doFilter(AuthFilter.java:61) at org.eclipse.jetty.servlet.ServletHandler$CachedChain.doFilter(ServletHandler.java:1548) at org.eclipse.jetty.servlet.ServletHandler.doHandle(ServletHandler.java:524) at org.eclipse.jetty.server.handler.ScopedHandler.handle(ScopedHandler.java:143) at org.eclipse.jetty.security.SecurityHandler.handle(SecurityHandler.java:544) at org.eclipse.jetty.server.session.SessionHandler.doHandle(SessionHandler.java:221) at org.eclipse.jetty.server.handler.ContextHandler.doHandle(ContextHandler.java:1110) at org.eclipse.jetty.servlet.ServletHandler.doScope(ServletHandler.java:453) at org.eclipse.jetty.server.session.SessionHandler.doScope(SessionHandler.java:183) at org.eclipse.jetty.server.handler.ContextHandler.doScope(ContextHandler.java:1044) at org.eclipse.jetty.server.handler.ScopedHandler.handle(ScopedHandler.java:141) at org.eclipse.jetty.server.handler.ContextHandlerCollection.handle(ContextHandlerCollection.java:199) at org.eclipse.jetty.server.handler.HandlerCollection.handle(HandlerCollection.java:109) at org.eclipse.jetty.server.handler.HandlerWrapper.handle(HandlerWrapper.java:97) at org.eclipse.jetty.server.Server.handle(Server.java:459) at org.eclipse.jetty.server.HttpChannel.handle(HttpChannel.java:280) at org.eclipse.jetty.server.HttpConnection.onFillable(HttpConnection.java:229) at	1	1	https://issues.jboss.org/browse/MODE-2304
15510	MODE-2304	[~hchiorean], I'm building now. Should I resolve this issue after merging?	1	1	https://issues.jboss.org/browse/MODE-2304
15511	MODE-2304	Could you please check this: I created a war file with an empty web.xml just as in your example and included the modeshape-web-explorer.jar As soon as I access Console.html I get a GWT popup containing this error: org.jboss.as.naming.NamingContext cannot be cast to org.modeshape.jcr.ModeShapeEngine Nothing in the server.log There is nothing else in the war file. Server is Wildfly 8	1	1	https://issues.jboss.org/browse/MODE-2304
15512	MODE-2304	I don't understand, why you write it will never work. It worked before, when I bundled the old 3.6 GWT app into the war. Without changing anything to the JCR access layer used in there. I looked at the mentioned war and that contains nothing special besides some security settings that I currently don't need and that should have nothing to do with the JCR layer. And it contains the jboss-deployment-structure.xml. I think this war is only suitable in the context of the whole kit. What I need it the https://github.com/ModeShape/modeshape/blob/master/web/modeshape-web-explorer-war that should work out of the box, correct? Thats the whole purpose of this war: ModeShape repository explorer that embeds ModeShape and can be deployed standalone And it does indeed start and the {code}shouldAccessInitialPage{code} test succeeds as well, but that test only tests if the app was deployed. After that the GWT app just presents a notice box which seems to be triggered by this server response: //EX[2,1,["org.modeshape.web.client.RemoteException/3886951464","jcr -- service jboss.naming.context.java.jcr"],0,7] I can't see anything being logged from the GWT app besides {code}Requested URI /modeshape-web-explorer/console/jcr{code}, so I have no idea why this Exception is triggered. Thats the main problem, nothing is beeing logged. In the old Version 3.6 I used there wasn't even an access to a repository until you provided JNDI name and workspace at the front page. That front page seems to be gone now and instead the error above is triggered.	1	1	https://issues.jboss.org/browse/MODE-2304
15513	MODE-2304	{quote} What I need it the https://github.com/ModeShape/modeshape/blob/master/web/modeshape-web-explorer-war that should work out of the box, correct? {quote} it will only work out-of-the-box if the container you're deploying into has something bound by default in JNDI under the {{jcr}} name. In other words: {code} InitialContext ic = new InitialContext(); engine = (ModeShapeEngine) ic.lookup("jcr"); {code} This works fine by default *only if you use the ModeShape Wildfly/EAP kit* which does the above binding behind the scenes when you startup the subsystem. EDIT: If you don't use the above (which IIUC is your case), then you need to make the above binding yourself (in your application). I agree that this is quite limiting ATM, so I'll open an issue to improve this for {{4.1}}.	1	1	https://issues.jboss.org/browse/MODE-2304
15514	MODE-2299	[~rhauch]: since we do have a {{2.8.1.GA}} version can you please create a {{2.8.2.GA}} version as well in JIRA ?	1	1	https://issues.jboss.org/browse/MODE-2299
15515	MODE-2277	When a node is checked out, all nodes below it are affected. Unfortunately, that means to determine if a node is checked out we have to walk all the way up the ancestors to the root to verify that none of them is checked out. IIRC, the logic starts with the node in question and walks up to the root, though it does stop when it finds a node that is checked out. I'm not really sure how we might mitigate this. Even if we had a cache of the node keys of the nodes that are currently checked out, we'd still have to walk up the ancestors to find the node keys of the ancestors. If that cache of checked out nodes contained the node keys and the paths (and we could maintain this in a cluster), then we'd have to know the path of the node. Again, that requires walking up the ancestors. -Perhaps one thing we could do is maintain state that records the number of checked out nodes. I would guess that for most repositories, locking is not used and the state would be 0. This would be super fast for a lot of cases (maybe even the majority), but as soon as you used locking it would be the same performance as what we have now.- Thoughts? Can you think of any alternatives?	1	1	https://issues.jboss.org/browse/MODE-2277
15516	MODE-2277	[~hchiorean], I merged the PR into the {{master}} branch, but it doesn't merge cleanly into {{3.x}}. Can you please create a new PR?	1	1	https://issues.jboss.org/browse/MODE-2277

#	Requirement	Questions	Answered	Successfully Answered	URL
15517	MODE-2265	Having investigate this a bit more, IMO there are only 3 viable options: 1) keep as is (nothing changes) 2) use MapDB and an on-heap structure. Even though off-heap may sound attractive, the reality IMO is that off-heap is very much dependent on the OS/JVM combination and this is still a bit of a "grey" area. Since the WS cache is a structure that's being used intensively, we can't really risk memory/Direct Buffer mishaps. Also, the WS cache should be "relatively" small & constant in size, since most performance tuning should come out of the main ISPN cache. 3) "reinvent the wheel" and come up with a LRU {{ConcurrentMap}} implementation. I don't think we should spend the effort of doing this since there are other libraries out there which already have this implementation (like google collections) but since we're already using {{MapDB}} IMO we should avoid bringing in yet another dependency. For example just the {{-collections}} part of Guava is 500k in size... So IMO it really comes down between (1) and (2). The question then is how do we compare the two ? One thing we can try is just looking at performance (i.e. how much time does it take in a given scenario to read/write entries into the cache). However I'm not really sure how relevant this is given that the churn is likely to very high and there are a lot of get/put operations that happen very atomically - for each node. Thoughts ?	1	1	https://issues.jboss.org/browse/MODE-2265
15518	MODE-2242	[~rhauch]: I understand changing this for {{master}} and {{3.8.x-prod}} but for {{3.x}} this is a completely non-backwards compatible change. Given that the {{anonymous-roles}} defaults change was not ported to {{3.x}}, do we really want this in {{3.x}} ? Regarding the webapps: if we're supposed to use the {{ApplicationRealm}} (which from what I understand is being used via the {{other}} security domain), I see no advantage in defining/changing a {{modeshape-security}} domain. The mechanism via which users will be able to register & map roles will still be the same. So IMO we should change the webapps security and map them to {{other}}. This change (overall) will impact *all* of our integration tests, since I'm not aware of any way of doing the "add-user" call from tests. Is there any easy way for us to adapt the tests & use (add) the Application Realm ? We shouldn't loose our ability to run the container-based tests IMO (there's always the possibility of overwriting the security domain, but ideally we should keep the config as close to the real one as possible)	1	1	https://issues.jboss.org/browse/MODE-2242
15519	MODE-2242	> Randall Hauch: I'm curious, what are the arguments for having a separate security domain that behaves like {{other}} ? This way, all ModeShape repositories and web applications use a ModeShape-specific security domain out-of-the-box. And out-of-the-box the users for ModeShape are managed with the {{add-user.sh}} script (and the "{{ApplicationRealm}}") just like user accounts for EAP. To change how everything is authenticated, simply change the "{{modeshape-security}}" security domain, and anything that uses the "{{other}}" default security domain, like other web apps, are unaffected. IOW, in this approach, you simply have to modify the existing domain. With the other approach, ModeShape repositories and web applications *and* other web applications use the built-in security domain "{{other}}", and to change ModeShape requires defining a new security domain, change each repository configuration (not a big deal) *and* alter the ModeShape web applications to use the new security domain (not straightforward). This is potentially a lot more work and more error prone.	1	0	https://issues.jboss.org/browse/MODE-2242
15520	MODE-2234	[~oleg.kulikov], what's the status on this?	1	1	https://issues.jboss.org/browse/MODE-2234
15521	MODE-2234	[~oleg.kulikov], MODE-2231 is scheduled for 4.1, whereas the others are scheduled for 4.0 and 3.x.	0	0	https://issues.jboss.org/browse/MODE-2234
15522	MODE-2233	[~oleg.kulikov], what's the status on this?	1	1	https://issues.jboss.org/browse/MODE-2233
15523	MODE-2233	[~oleg.kulikov], MODE-2231 is scheduled for 4.1, whereas the others are scheduled for 4.0 and 3.x.	0	0	https://issues.jboss.org/browse/MODE-2233
15524	MODE-2225	I'm looking at adding a test case for this issue. Is the preferred approach to add a test to the existing ModeShape test suit and issue a pull-request or to provide a standalone project that can be used to demonstrate the issue?	1	1	https://issues.jboss.org/browse/MODE-2225
15525	MODE-2225	I think I have found the issue. If you look at the AbstractNode.ChildNodeResolver constructor (line 3559) it sets the this.checkPermission flag to true only if checkPermission=true and AccessControl is enabled (see code below) {noformat} public ChildNodeResolver(JcrSession session, NodeKey parentKey, boolean checkPermission) { this.session = session; this.parentKey = parentKey; // we only need to check permissions if ACLs are enabled this.checkPermission = checkPermission && session.repository().repositoryCache().isAccessControlEnabled(); } {noformat} From what I can tell isAccessControlEnabled is only true if using ACLS. I did do a previous test with ACLS and child nodes where filtered correctly based on the configured ACLS. Would a appropriate fix be to also check permissions if the SecurityContext is an instance of AuthorizationProvider or AdvancedAuthorizationProvider?	1	1	https://issues.jboss.org/browse/MODE-2225
15526	MODE-2225	That change (see [here|https://github.com/ModeShape/modeshape/commit/22abf4509553a393b6eb046f4bcf397557f369b0#diff-76d801bf27b2288229aa7e262e2ddb6cR3562]) was made as part of MODE-2186. We do need to check the permissions (when called by a client), but I'm not sure why we decided to do this only when ACLs are enabled and not all of the time. So my suggestion would be to do this: {code} public ChildNodeResolver(JcrSession session, NodeKey parentKey, boolean checkPermission) { this.session = session; this.parentKey = parentKey; this.checkPermission = checkPermission; } {code} The session will actually perform the check using the appropriate AuthorizationProvider, AdvancedAuthorizationProvider, and ACL mechanism that are configured. Want to try this and run a {{mvn clean install -Pintegration}} to check for regressions? However, perhaps [~hchiorean] can respond with any context that he remembers. (MODE-2186 was about iteration not checking ACLs, so since permissions were not being checked maybe he wanted to add the check only when ACLs are used.)	1	1	https://issues.jboss.org/browse/MODE-2225
15527	MODE-2225	Those are all clustering related, and it's usually a symptom of the network configuration of the tests not matching your platform. For example, does your machine only use IPv6 or IPv4? If so, you might want to try one of these commands to see if they help: {code} mvn clean install -Pintegration -DpreferIpv4 {code} if your machine is configured to use (or only use) IPv4, or {code} mvn clean install -Pintegration -DpreferIpv6 {code} if your machine is configured to use (or only use) IPv6. The latter should be the default, since our build [prefers IPv6|https://github.com/ModeShape/modeshape/blob/master/modeshape-parent/pom.xml#L218], except when running the two integration module tests against Wildfly/EAP since Arquillian seems to prefer IPv4.	1	1	https://issues.jboss.org/browse/MODE-2225
15528	MODE-2225	[~ma6rl], you logged this against 4.0.0.Alpha3. Are you okay with us *not* backporting this to 3.x?	1	1	https://issues.jboss.org/browse/MODE-2225
15529	MODE-2215	[~rhauch]: why would we want to build our subsystem against Beta level API (EAP 6.3) ? I don't see any good reason to as long as the EAP 6.2.1.GA API is binary compatible with EAP 6.3.Beta. IMO we should only move to EAP 6.3 *when GA is available* - meaning Maven artifacts published in the techpreview repository.	1	1	https://issues.jboss.org/browse/MODE-2215

#	Requirement	Questions	Answered	Successfully Answered	URL
15530	MODE-2215	I thought the whole point of releasing the Beta was using the same components versions as EAP 6.3. Please note there are 2 different classes of components: 1) non EAP API related: Infinispan, JGroups, RestEASY etc. These are the ones which should be frozen by now in EAP 6.3 and they should have the same versions in the BOM. Updating to CR9 should align these versions for us. All of these components *must be available in a public Maven repo (via JBoss Nexus)*. 2) EAP API: components like {{jboss-as-controller}}, {{jboss-as-naming}} etc which our subsystem needs to integrate with. The versions of these is directly related to the EAP version & state. These are the ones I'm referring to as "beta-level" API. They are only available in "obscure" (and sometimes not public) Maven repositories which need to be tracked down. So if we were to change our subsytem API to depend on EAP 6.3.Beta API: a) we need to add this additional Maven repo to our settings (we just got rid of this custom Maven repo when we updated to EAP 6.2.1GA). If this is not a public repo, it means only people with VPN access can build the community version. b) we would *tie our 3.8.Final* community release with the EAP 6.3.GA release (afaik July is the best-case scenario): I doubt you'd want to release any earlier than EAP 6.3.GA because that means releasing a "beta-subsystem" Anybody integrating against ModeShape in EAP, *should not care what EAP API was used to build the subsystem*, as long as the subsystem works.	1	1	https://issues.jboss.org/browse/MODE-2215
15531	MODE-2215	I do agree that we need everything (including any EAP APIs) to be in a public repository, and this issue is predicated on that being possible. That's always an underlying assumption: all released community bits must depend on publicly-available bits. So if the APIs for EAP 6.3 Beta are not yet available in a public repo, then I agree that ModeShape 3.8.0.Beta1 be released to use EAP 6.2.1.GA. I also concur that if we upgrade to EAP 6.3 Beta for ModeShape 3.8.0.Beta1, then we are hitching ModeShape 3.8.0.Final to be based upon EAP 6.3 GA. IIRC, that was always the plan. But I'm open to release 3.8.0.Beta1 against EAP 6.2.1.GA (what we currently depend upon), if we're very confident that the resulting subsystem can be installed into both EAP 6.2.1.GA and EAP 6.3.Beta. The benefit is that this gives our community users a choice of which EAP version they want to use, while not limiting ourselves. Of course, there's another option here: make our next 3.8 release a FINAL rather than a BETA. The only reason I was suggesting a BETA was because I presumed we'd build against the EAP 6.3 Beta. If that's no longer true, is there really any point to calling this next release a BETA?	1	1	https://issues.jboss.org/browse/MODE-2215
15532	MODE-2215	{quote} Of course, there's another option here: make our next 3.8 release a FINAL rather than a BETA. The only reason I was suggesting a BETA was because I presumed we'd build against the EAP 6.3 Beta. If that's no longer true, is there really any point to calling this next release a BETA? {quote} I was under the impression that we would call it a Beta so that a) there is a release published in Nexus (we don't do snapshots) which can be used by other projects and b) it would give us a flexible window (time-wise) to get in more features & bug fixes until we release Final independent of EAP (e.g. MODE-2174) I was never under the impression that we're aligning our {{3.x}} with EAP 6.3. That being said, if ^^ is untrue, and we plan on making this alignment, then releasing Beta against EAP 6.3.Beta and the Final against EAP 6.3.GA sounds reasonable. In that case we should have another JIRA like you suggested above. So this is something you need to decide, I guess. From a compatibility perspective, I've deployed a subsystem built with EAP 6.2.1 on EAP 6.3.Alpha and EAP 6.3.Beta and it worked fine (meaning navigating repositories and nodes via the various webapps). This leads me to think that from an EAP API perspective, we are compatible (if we weren't, the repositories wouldn't start really).	1	1	https://issues.jboss.org/browse/MODE-2215
15533	MODE-2215	I originally _did_ anticipate that the 3.8 effort (e.g., the {{3.x}} branch) would be aligned with EAP 6.3, since that was primarily the codebase that will go into the JBoss Data Virtualization 6.1 product. This is why I tended to favor releasing 3.7.3.Final and 3.7.4.Final, rather than releasing an earlier version of 3.8. But now I see the advantage of releasing the 3.8.0.Final this week: it includes slight patch-level upgrades for Infinispan and JGroups useful to all users, and the EAP subsystem could be installed into EAP 6.2.x GA and 6.3 Beta (and we think GA). There's no reason to call this a "beta" release, since there really are just a handful of very small, low-impact, low-risk features and quite a few bug fixes. In fact, it's nearly the same and just as stable as 3.7.4.Final. We can then continue fixing critical issues on the {{3.x}} branch and cutting patch-level releases (e.g., "3.8.x.Final") as needed. We also will not issue any more 3.7.x patch releases. I'll update the issue to no longer upgrade EAP to 6.3 Beta, but to instead just upgrade the IP BOM. If that's the case, what is involved in that other than just changing the IP BOM version in our parent POM?	1	1	https://issues.jboss.org/browse/MODE-2215
15534	MODE-2215	@rhauch: why would this issue have the Fix Version {{4.0.0.Alpha4}} ?	1	1	https://issues.jboss.org/browse/MODE-2215

#	Requirement	Questions	Answered	Successfully Answered	URL
15535	MODE-2211	[~hchiorean], I should have been more clear about what would be cached in the {{CachedNode}}: only whether *that node* has an ACL child. It does *not* reflect anything about what those ACLs represent nor whether its descendants have any ACLs. So, when you said: {quote} ... regarding caching, consider the following scenario: there are 2 nodes A with its parent B. Node A does not have any ACLs while node B does. Initially, everyone has READ permissions for node B. Now, if there are 2 sessions: session 1 loads only Node A and keeps it for a while {quote} Okay, at this point the {{WorkspaceCache}} contains a {{LazyCachedNode}} for Node A, and when ACLs are checked this cached node might cache the fact that *it* does not have ACLs. That simply means that when session 2 attempts to read Node B and determine if it can from the ACLs, the session would: # load the {{LazyCachedNode}} for Node B into the {{WorkspaceCache}} # the {{AccessControlManagerImpl}} logic would attempt to determine if session 1 can read/write Node B: ## it looks at the {{SessionNode}} and then the {{LazyCachedNode}} for Node B to see if it has ACLs, and the {{LazyCachedNode}} would not already have the boolean flag and would then look for the ACL child. It would find it, so it would return "true" signifying that it does have ACLs. The {{AccessControlManagerImpl}} would then ask the {{CachedNode}} for the ACL child and would discover the permissions. ## Even if ACL was not on Node B, the {{AccessControlManagerImpl}} would walk up the tree and find the {{CachedNode}} for Node A, and the {{CachedNode}} would already have cached that it does not have ACLs. Thus the {{AccessControlManagerImpl}} logic would not have to try to read the (nonexistent) ACL child, and could simply walk up to the next parent and continue. {quote} while session 2 loads only Node B and at some point (while session 1 is active) removes all the permissions from B and saves. {quote} As soon as session 2 (which removed the permissions from Node B) is saved, the {{LazyCachedNode}} for node B in the {{WorkspaceCache}} will be purged via changes. So the second kind of caching (whether or not a {{CachedNode}} has ACLs) would always be in-sync with the persisted state. This still seems to work. {quote} If session 1 would've cached the fact that node A & node B are readable it wouldn't see the ACL changes made by B, making this a security hole IMO. The reason why this is important is that all the security checks are performed "up-top", in the JCR layers, not in the caching layer during {{WritableSessionCache#persistChanges}}. {quote} As I mention above, the second kind of caching would be fine, as it simply saves a little bit of time when trying to determine ACL privileges by caching which nodes do *not* have an ACL. As for the third improvement and keeping information in the session, I do agree we have to be careful here. For example, we might be able to at least know if a node is writable because it is found in the {{SessionCache}}. Yes, this conclusion might not be valid in some cases: this session modifies a node for which it does have privilege, another session modifies the ACLs and persists them so that this session no longer has permission, and this session tries to make more changes. However, as it stands now the first session would still be allowed to persist at least those changes it made before the other session changed the ACLs -- is that valid? Is it any worse to allow a session to modify any node any time *after* it has determined ACLs allow it to do so, even if those ACLs are changed at some later point but before the session saves its changes?	0	0	https://issues.jboss.org/browse/MODE-2211
15536	MODE-2208	[~rhauch]: after reading https://issues.jboss.org/browse/TEIID-2948, it appears the RBAC feature is around securing the EAP subsystem extension elements (resources/attributes). Since the ModeShape EAP subsystem is big (in terms of configuration options), what are the exact requirements around the various elements ? Also, I'm not entirely convinced this makes sense: the core ModeShape subsystem requires a properly configured Infinispan (and in some cases JGroups) subsystem. However, we have no control over the RBACC compliance of these 2 subsystems. Therefore, what's the purpose of securing a {{repository}} for example, when we have no control of the security of its cache ?	1	1	https://issues.jboss.org/browse/MODE-2208
15537	MODE-2168	Are there any changes in ModeShape that are required in order to support EAP 6.3 RBAC features? If not, I would suggest reading TEIID-2948 and the discussion that Ramesh had with Brian Stansbury.	1	1	https://issues.jboss.org/browse/MODE-2168
15538	MODE-2168	Probably, but that'd be better handled as a separate issue. [~vhalbert], do you want to log an issue for us?	0	0	https://issues.jboss.org/browse/MODE-2168
15539	MODE-2168	With MODE-2208 completed, can this JIRA be considered completed?	1	1	https://issues.jboss.org/browse/MODE-2168
15540	MODE-2162	[~hchiorean] Can you please guide me a bit how we can isolate Lucene classes with separated modules? Just hit into the problem with versions. The issues is that Elasticsearch uses older versions. The most fresh is 5.2.1	1	1	https://issues.jboss.org/browse/MODE-2162
15541	MODE-2162	[~oleg.kulikov]: I'm curious though, is this a runtime-thing only ? i.e. isn't ElasticSearch supposed to have its own API so that you don't interact directly with the Lucene API ? More precisely, shouldn't there be just a REST over HTTP API ? The other thing is I always thought Elasticsearch is really a service/remote server only. So there should be any Lucene up-front interaction required.	1	1	https://issues.jboss.org/browse/MODE-2162
15542	MODE-2162	[~hchiorean], [~rhauch], just hit to the potential dangerous place https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/query/engine/process/RestartableSequence.java#L187 In case of inaccurate {{ResultSearch}} implementation loop might be infinite. Would it be useful to limit it to some {{MAX}} value?	1	1	https://issues.jboss.org/browse/MODE-2162
15543	MODE-2159	[~hchiorean]I am still a bit confused with multiple column indexes. {{ProvidedIndex}} interface offers methods like {{add(NodeKey, Object)}} which are, in my opinion, still oriented for single column index. Would it be better to use map between string column name and value(s) as parameter? Like this {{void add(Map<String, Object> doc)}}	1	1	https://issues.jboss.org/browse/MODE-2159
15544	MODE-2159	[~hchiorean], additional parameter {{propertyName}} will be good me for as well. Should I wait for commit of your changes or just add same thing locally and later merge?	1	1	https://issues.jboss.org/browse/MODE-2159
15545	MODE-2135	The maintainer of MapDB is moving towards 2.0, so it's not clear when append-only support will be added -- unless it already has been in 1.0.6. [~hchiorean], can you check? If it's not there, we may want to either push this into a future release (e.g., 4.1) or mark it as WONTFIX. Thoughts?	1	0	https://issues.jboss.org/browse/MODE-2135

#	Requirement	Questions	Answered	Successfully Answered	URL
15546	MODE-2111	See also IRC transcript below from 5 December 2013: {quote} *barmintor*: rhauch: is it reasonable to write that ticket such that event filtering criteria are ordered in increasing cost (eventType, session locality, parent uuid or location, access privilege, nodeType as I understand it) *barmintor*: it's a shifting cost: If there *are* nodeType filters among others, then that is faster; if not, it might incur other costs *rhauch*: barmintor: thinking *barmintor*: rhauch++ *rhauch*: barmintor: I still think that all of the other filters operate against the Event without needing to load the node, so I think the node type filters should always be at the end since they are most expensive. *barmintor*: rhauch: I'm inclined to agree *barmintor*: but wanted someone else to think about it, too *rhauch*: barmintor: so the change would be to the order of the calls within this method: https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/JcrObservationManager.java#L991 Do you agree? *barmintor*: rhauch: the order there, but checking eventType first in https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/JcrObservationManager.java#L838 *barmintor*: since eventType checking is a bitwise op on a value in the event already *rhauch*: barmintor: so should the acceptBasedOnNodeTypeName(...) call just be moved out of https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/JcrObservationManager.java#L991 and into the appropriate event type(s)? *rhauch*: barmintor: actually, I'm not sure I understand why that filter is a function of the event type *barmintor*: rhauch: I meant that eventListenedFor is the cheapest filter, and it's called after all of the other filters *rhauch*: barmintor: ah, so that just moves to the front and the acceptBasedOnNodeTypeName(...) moves to the end? *barmintor*: rhauch: that's what I was thinking, yeah *rhauch*: barmintor: the acceptBasedOnUuid(...) probably would be pretty fast if we converted the String[] to a Set<String> in the constructor. Might be faster than the path-based one. {quote}	1	1	https://issues.jboss.org/browse/MODE-2111
15547	MODE-2111	[~barmintor], has there been any progress on a pull-request with the fix? Note that we want to release 3.7 early next week, so we'd like to get this addressed.	1	1	https://issues.jboss.org/browse/MODE-2111
15548	MODE-2111	branch in the msoffice-sequencer tests. I develop on a Mac, so... that's suspicious. See below: Tests run: 4, Failures: 1, Errors: 0, Skipped: 0, Time elapsed: 20.974 sec <<< FAILURE! shouldSequencePowerpointFiles(org.modeshape.sequencer.msoffice.MSOfficeMetadataSequencerTest) Time elapsed: 17.467 sec <<< FAILURE! java.lang.AssertionError at org.junit.Assert.fail(Assert.java:92) at org.junit.Assert.assertTrue(Assert.java:43) at org.junit.Assert.assertNotNull(Assert.java:526) at org.junit.Assert.assertNotNull(Assert.java:537) at org.modeshape.sequencer.msoffice.MSOfficeMetadataSequencerTest.shouldSequencePowerpointFiles(MSOfficeMetadataSequencerTest.java:167) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.junit.runners.model.FrameworkMethod$1.runReflectiveCall(FrameworkMethod.java:45) at org.junit.internal.runners.model.ReflectiveCallable.run(ReflectiveCallable.java:15) at org.junit.runners.model.FrameworkMethod.invokeExplosively(FrameworkMethod.java:42) at org.junit.internal.runners.statements.InvokeMethod.evaluate(InvokeMethod.java:20) at org.junit.internal.runners.statements.RunBefores.evaluate(RunBefores.java:28) at org.junit.internal.runners.statements.RunAfters.evaluate(RunAfters.java:30) at org.junit.rules.RunRules.evaluate(RunRules.java:18) at org.junit.runners.ParentRunner.runLeaf(ParentRunner.java:263) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:68) at org.junit.runners.BlockJUnit4ClassRunner.runChild(BlockJUnit4ClassRunner.java:47) at org.junit.runners.ParentRunner$3.run(ParentRunner.java:231) at org.junit.runners.ParentRunner$1.schedule(ParentRunner.java:60) at org.junit.runners.ParentRunner.runChildren(ParentRunner.java:229) at org.junit.runners.ParentRunner.access$000(ParentRunner.java:50) at org.junit.runners.ParentRunner$2.evaluate(ParentRunner.java:222) at org.junit.internal.runners.statements.RunBefores.evaluate(RunBefores.java:28) at org.junit.internal.runners.statements.RunAfters.evaluate(RunAfters.java:30) at org.junit.runners.ParentRunner.run(ParentRunner.java:300) at org.apache.maven.surefire.junit4.JUnit4Provider.execute(JUnit4Provider.java:234) at org.apache.maven.surefire.junit4.JUnit4Provider.executeTestSet(JUnit4Provider.java:133) at org.apache.maven.surefire.junit4.JUnit4Provider.invoke(JUnit4Provider.java:114) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:606) at org.apache.maven.surefire.util.ReflectionUtils.invokeMethodWithArray(ReflectionUtils.java:188) at org.apache.maven.surefire.booter.ProviderFactory$ProviderProxy.invoke(ProviderFactory.java:166) at org.apache.maven.surefire.booter.ProviderFactory.invokeProvider(ProviderFactory.java:86) at org.apache.maven.surefire.booter.ForkedBooter.runSuitesInProcess(ForkedBooter.java:101) at org.apache.maven.surefire.booter.ForkedBooter.main(ForkedBooter.java:74)	1	1	https://issues.jboss.org/browse/MODE-2111
15549	MODE-2109	A couple of questions: 1) why shouldn't there be any properties on the node types ? IMO something like the {{nt:unstructured}} node definition would also work. 2) {quote} Note that when using large collections, a repository's eviction policy should be sized larger than the total number of range buckets, Nrb, for all collections to be accessed quickly and efficiently. {quote} While this statement is correct, IMO it's largely academic: there will be a lot of other stuff in the cache, so the eviction policy size may not have any direct influence on the range buckets. From the cache's perspective, the range buckets are nothing more than regular entries. In other words, even with a larger eviction policy, all the buckets may be evicted if not used often compared to other nodes. 3) Adding & Removing a child should also mention that explicit locking needs to happen on the bucket, once it has been located. 4) Federation: {{mode:unorderedCollection}} *should not* be allowed to contain external children. This would create a "deadly mix" between segments and range buckets. 5) Removing the parent node: according to the JCR spec, when removing a node all its children should be removed as well. In this case, with millions of nodes, this is likely to take forever, considering that we need to load each child node and mark it as REMOVED for the {{WritableSessionCache}}. Actually, loading all those into memory might also produce OOM exceptions, so not sure what to do here. 6) In the previous case, locking should also be discussed: consider 2 concurrent sessions, one which removes the parent and one which adds a child. Without any kind of synchronization between the sessions (via cache locking) how can we guarantee a consistent result ?	1	1	https://issues.jboss.org/browse/MODE-2109

#	Requirement	Questions	Answered	Successfully Answered	URL
15550	MODE-2109	add residual property definitions, but that would force all nodes that use it to allow any properties. Someone couldn't extend {{mode:unorderedLargeCollection}}, for example, and limit the properties to some set they define; instead, there would always be the residual that would allow any property to be set on the node. By leaving off all property definitions and basically requiring someone to create a subtype with the kinds of properties they wanted, the developer is in full control of the properties. I'm not convinced the current approach is better. Yes, it gives more control to a repository designer, but it isn't terribly useful without creating a subtype. {quote} 2) "Note that when using large collections, a repository's eviction policy should be sized larger than the total number of range buckets, Nrb, for all collections to be accessed quickly and efficiently." While this statement is correct, IMO it's largely academic: there will be a lot of other stuff in the cache, so the eviction policy size may not have any direct influence on the range buckets. From the cache's perspective, the range buckets are nothing more than regular entries. In other words, even with a larger eviction policy, all the buckets may be evicted if not used often compared to other nodes. {quote} Yeah, my statement was pretty squishy. I was simply trying to make the point that the range buckets are accessed pretty randomly whenever children are accessed, and that for ideal child-access performance you probably want all of the range buckets to stay in the workspace cache (while leaving room for all the other nodes). Whether that can even be achieved is pretty iffy. It's also highly dependent upon how the clients access/read the children: fairly randomly vs frequently re-reads of the same recently-read children. On one hand, you want each range bucket to be small enough so that loading it from the cache store is faster. On the other, the larger they are, they larger percentage of the collection each range bucket owns and thus the more likely a given bucket will already be in the cache (under heavy read load). I think picking the number of buckets is going to be tricky. It would be nice if it were adaptable, but that would add a lot of complexity. {quote} 3) Adding & Removing a child should also mention that explicit locking needs to happen on the bucket, once it has been located. {quote} Agreed. {quote} 4) Federation: mode:unorderedCollection should not be allowed to contain external children. This would create a "deadly mix" between segments and range buckets. {quote} Hmm... I guess your right. I do think that it's perfectly acceptable ... a collection should be stored completely _within_ the repository. Besides, if in the future it is deemed absolutely critical, then we could consider removing this restriction. {quote} 5) Removing the parent node: according to the JCR spec, when removing a node all its children should be removed as well. In this case, with millions of nodes, this is likely to take forever, considering that we need to load each child node and mark it as REMOVED for the WritableSessionCache. Actually, loading all those into memory might also produce OOM exceptions, so not sure what to do here. {quote} Good catch. But perhaps it is no different than removing a large tree in one fell swoop - that, too, would probably fail with an OOM. So is that a more general problem we should consider? And if so do we need a separate JIRA? Do all the nodes need to be removed within the one transaction? For example, is it sufficient that the node being removed is removed in the transaction, and once that has completed then all descendants are _eventually_ (perhaps asynchronously) removed? We can't suspend the actual transaction, as then we'd have no way to roll back any internal transaction(s) should the outer one be rolled back. A general workaround is to just explicitly delete smaller portions of the subtree or collection, and then repeat this as many times as needed to delete the remaining portions. Yes, it would take forever, but it would work. {quote} 6) In the previous case, locking should also be discussed: consider 2 concurrent sessions, one which removes the parent and one which adds a child. Without any kind of synchronization between the sessions (via cache locking) how can we guarantee a consistent result ? {quote} I suspect you're referring to ISPN locking and not JCR locking. What if the code removing the parent collection attempts to lock all (actual and potential) range bucket entries in	1	1	https://issues.jboss.org/browse/MODE-2109
15551	MODE-2109	I see this ticket has been pushed further out into the future (to 4.3). Is that due to the complexity of the solution? the ModeShape priority roadmap? or lack of community interest? This performance issue is a significant pain-point for the [Fedora Repository|https://wiki.duraspace.org/display/FF/Fedora+Repository+Home] application.	0	0	https://issues.jboss.org/browse/MODE-2109
15552	MODE-2109	When searching through the "open" tickets in the ModeShape JIRA - Query: project = "MODE" AND status = Open ORDER BY votes DESC I see that this ticket is the most wanted feature from the community. If there is a consultant company (RedHat has been unresponsive) that you have worked with before, we would be interested in funding the implementation of this ticket.	0	0	https://issues.jboss.org/browse/MODE-2109
15553	MODE-2109	I have tested it with CMIS connector. I couldn't create document in folder(mode:unorderedSmallCollection). Does this feature supported for external connectors?	1	0	https://issues.jboss.org/browse/MODE-2109
15554	MODE-2093	[~oleg.kulikov], those screenshots look fantastic! Is there a way of supporting multiple repositories and their workspaces, perhaps somewhat akin to how GitHub shows a user/organization with multiple Git repositories?	1	1	https://issues.jboss.org/browse/MODE-2093
15555	MODE-2093	[~oleg.kulikov], what is the status of this?	1	1	https://issues.jboss.org/browse/MODE-2093

#	Requirement	Questions	Answered	Successfully Answered	URL
15556	MODE-2093	8.0.0.Final/standalone/configuration/standalone-modeshape.xml}}" to add the following line to the ModeShape subsystem configuration: {code} <webapp name="modeshape-explorer.war"/> {code} and then running with {{bin/standalone.sh -c standalone-modeshape.xml}}. 15557	MODE-2093	It does work well, and I really like the new design. Very nice work, [~oleg.kulikov]. I do have a few comments, and I'd be interested in honest feedback from [~oleg.kulikov] on them: # The "path" link that shows the breadcrumb location of what is currently being deployed is a single link to the current view. That's great, but do you think it would make sense to break this path into separate links for each segment? So for "/jcr:system/mode:namespaces/nt", the "jcr:system" segment would link to "/jcr:system", the "mode:namespaces" segment would link to "/jcr:system/mode:namespaces", and "nt" would link to "/jcr:system/mode:namespaces/nt". This would make it much easier to jump up to an ancestor, yet there still is a link to the current page. # What would you think about moving the properties table below the child table? I'm not sure if that'd be better or worse, but it might save a few clicks. # How is a binary property shown? Can you link to see or download the content? How it's displayed might depend on the MIME type - some MIME types might be just displayed (maybe even with line numbers! :-D) # Can the links be displayed as standard blue (when not clicked, but if darker blue if previously-clicked) but without underline? They're still visible, but IMO the underling is pretty distracting nowadays. # Make the "Backup", "Restore", and "Download" more subtle, or even move to a page for administration. Also, can these be displayed only if user has admin role? Perhaps it'd be a bit easier to move to a separate page for administration, where we could also provide a bit more functionality in the future (like showing some metrics, etc.). Fixing to allow only administrators to see/use these buttons seems pretty important. # "Save" button should maybe move closer to where the content and edit buttons are. Not exactly sure when. It'd be fantastic if it enabled only when there's something to save. # Click on "Node types" and get a popup with "Note: 123" and occasionally get a "Note: 300". Otherwise seems to work. # Query language should default to "JCR-SQL2" # Query results show only one line for me, though I can scroll up and down via those buttons on the list. Not sure if we should handle these as part of this issue, or whether we should have separate issues for some/all of these. I could go either way.	1	1	https://issues.jboss.org/browse/MODE-2093
15558	MODE-2091	[~oleg.kulikov], have you made any progress on this? I'm not convinced this is an easy fix, but great if you can get some easy improvements by Monday Dec 16, 2013. (If not, please re-target to 4.0.)	1	1	https://issues.jboss.org/browse/MODE-2091
15559	MODE-2088	[~hchiorean], do you want to try to start this? The index system might very well benefit from this. As it currently stands, the global index writer for the repository would like process each of the incoming ChangeSet objects, and serially delegate to each of the index providers, each of which would serially delete to each of its indexes. I'm in the process of changing the IndexWriter interface to extend ChangeSetListener, so the bulk of all index updates happen by processing events. The exception is reindexing, which does not rely upon events whatsoever. We certainly could change the design so that each index provider, or rather each index, might register its own ChangeSetListener with the bus. That would mean that even in the short term the indexing system is relatively simple and (potentially) decoupled. With the current bus, each index would indeed be independent and decoupled (we use a separate worker thread for each listener). But each ChangeSetDispatcher (which the thread runs) still has a blocking queue. At the moment I'm worried about adding lots more listeners. (I think we'll be fine for a dozen or so indexes, but I suspect we'd have trouble with more than that. And if we decide to give each index in each workspace its own listener, then we have a permutation problem.) If we think it's worth it, then I'll start moving the index system over to using separate listeners for each index (and perhaps each index/workspace combination). Then if we implement a ring buffer, the index system shouldn't need to be changed.	1	1	https://issues.jboss.org/browse/MODE-2088
15560	MODE-2088	[~rhauch]: perhaps, but I'm not yet entirely sure how this would work/look like. I did look at the [disruptor|https://github.com/LMAX-Exchange/disruptor], but IMO it's not something that we can use as-is, so we'd have to implement something from scratch. At least a couple of issues the implementation would have to take into account: * support 1 writer/multiple readers from different threads * should there be a max size to the buffer ? If yes, what happens when events are received by the bus and exceed the current {{max}} ? If no, what's the difference between the ring buffer and an unbounded queue from which each listener takes (but doesn't remove) items ?	1	1	https://issues.jboss.org/browse/MODE-2088

#	Requirement	Questions	Answered	Successfully Answered	URL
15561	MODE-2088	Can you share the code for your favorite implementation? I'm curious to see how you're doing it. {quote} * preventing the main buffer from being overrun - whenever a new ChangeSet comes through and should be added to the buffer, it cannot be added until "there is a spot for it", meaning that there should be a gap of at least 1 between the current head of the buffer and the slowest reader. This means that the buffer has to always be on the lookout for the slowest reader and keep waiting (or sleep & retry) until a slot opens up. The slowest reader in my prototypes is determined by the global "min cursor" value, but that obviously sucks when there are lots of listeners. Sleep and retry is even worse for throughput. {quote} There should always be room for the buffer to add something, or else the ring buffer is not sized nearly large enough. For example, an {{Object[1000]}} is only 4K of memory, so it's probably worth it to have a sufficiently large buffer. Let's see how the first ChangeSet is added, which we'll assume is added at index 0. Until it is added, the listener threads do nothing (yes, we have to address that), but as soon as it's added the threads all process it as quickly as they can. When another is added, they all process it as quickly as they can. This continues, so after having added 100 ChangeSet, the majority of the listeners will already have processed nearly all of them (e.g., 998 of them), and a few might be a little slower at the moment (e.g., 96), though it's likely they may catch up. (Consider that 96 might have been a big ChangeSet, whereas 97-98 were both relatively small.) When a new listener is added, it has no need to process any of the previously-added ChangeSets, so in our example it would be ready to process the one at index 100, since 0-99 were all fired before the listener was added. {quote} * each reader thread has to "do something" if there is no new data in the buffer. This means that it can either keep checking its own cursor against the head of the buffer in a while loop (which effectively kills the CPU) or employ some sort of suspend/resume mechanism, via which the buffer tells it that there is "new data". This suspend/resume mechanism is already part of the JDK built-in queues and mimicking it with low level code seems to always perform worse. Overall, I'm inclined to say that a polling approach - the reader threads constantly polling the buffer waiting for data - offers the worst performance. Therefore, the other approach is to be able to notify the reader threads in some way but even so, the performance degradation is significant (even for a simple test of 1000 events and 10 listeners) compared to the current queued approach. {quote} I agree that this is perhaps the most challenging. There are multiple ways to do this (even with suspending the thread via wait), but we'd have to do a bit of research to figure out the fastest and most efficient way to do it. {quote} * removing consumed items from the buffer - the way I understand it, the buffer has to constantly look at the "free gap" between its latest head and the "slowest reader" (its cursor) and remove (or in my implementation nullify) all the elements in this gap. {quote} Sure, but isn't this "mind the gap" problem just comparing indexes? In theory this should never happen because nearly all listeners should be pretty close to the front of the ring buffer, not near the end. As I said above, if they're near the end, they are slowing down relative to the incoming ChangeSets and will (perhaps soon) be at the very end and will indeed block additions (assuming a fixed-size ring buffer). Something like this is a problem with this approach or with our current approach (in which case the listener's blocked queue fills up and ChangeSets are dropped. IMO, this condition means that either the ring buffer is too small (not leaving enough room for natural variation in the processing time of the ChangeSets) or the listener implementation is too slow (in which case it needs to be changed).	1	1	https://issues.jboss.org/browse/MODE-2088
15562	MODE-2088	Have you seen https://github.com/LMAX-Exchange/disruptor/wiki/Introduction ? Maybe it might be worth prototyping with the Disruptor to see what happens with their advanced implementation. If that doesn't even perform, then we can drop the whole thing immediately.	1	1	https://issues.jboss.org/browse/MODE-2088
15563	MODE-2086	with information/data already stored in the cache. The reason is that since https://issues.jboss.org/browse/MODE-1524, the "main" {{SchematicExternalizer}} extends {{org.infinispan.commons.marshall.Externalizer}} *and not* {{AdvancedExternalizer}}. This, in turn, means that any externalizer IDs are ignored completely by Infinispan. Instead, when serializing objects in the cache, Infinispan via JBoss Marshalling will write out *the fully qualified name (string)* of the externalizer class and will attempt to instantiate & use that upon deserialization. See https://github.com/jboss-remoting/jboss-marshalling/blob/master/river/src/main/java/org/jboss/marshalling/river/RiverMarshaller.java#L1415 and https://github.com/jboss-remoting/jboss-marshalling/blob/master/river/src/main/java/org/jboss/marshalling/river/RiverUnmarshaller.java#L1072 for the implementation details behind marshalling & unmarshalling. When attempting to change the package names, the binary incompatibility manifests itself with exceptions like: {code} org.infinispan.persistence.spi.PersistenceException: java.lang.ClassNotFoundException: org.infinispan.schematic.internal.SchematicEntryLiteral at org.infinispan.marshall.core.MarshalledEntryImpl.unmarshall(MarshalledEntryImpl.java:116) at org.infinispan.marshall.core.MarshalledEntryImpl.getValue(MarshalledEntryImpl.java:61) at org.infinispan.interceptors.CacheLoaderInterceptor.loadIfNeeded(CacheLoaderInterceptor.java:270) at org.infinispan.interceptors.CacheLoaderInterceptor.loadIfNeededAndUpdateStats(CacheLoaderInterceptor.java:335) at org.infinispan.interceptors.CacheLoaderInterceptor.visitGetKeyValueCommand(CacheLoaderInterceptor.java:105) at org.infinispan.commands.read.GetKeyValueCommand.acceptVisitor(GetKeyValueCommand.java:40) at org.infinispan.interceptors.base.CommandInterceptor.invokeNextInterceptor(CommandInterceptor.java:98) at org.infinispan.interceptors.EntryWrappingInterceptor.visitGetKeyValueCommand(EntryWrappingInterceptor.java:116) at org.infinispan.commands.read.GetKeyValueCommand.acceptVisitor(GetKeyValueCommand.java:40) at org.infinispan.interceptors.base.CommandInterceptor.invokeNextInterceptor(CommandInterceptor.java:98) at org.infinispan.interceptors.base.CommandInterceptor.handleDefault(CommandInterceptor.java:112) at org.infinispan.commands.AbstractVisitor.visitGetKeyValueCommand(AbstractVisitor.java:74) at org.infinispan.interceptors.locking.AbstractTxLockingInterceptor.visitGetKeyValueCommand(AbstractTxLockingInterceptor.java:60) at org.infinispan.interceptors.locking.OptimisticLockingInterceptor.visitGetKeyValueCommand(OptimisticLockingInterceptor.java:108) at org.infinispan.commands.read.GetKeyValueCommand.acceptVisitor(GetKeyValueCommand.java:40) at org.infinispan.interceptors.base.CommandInterceptor.invokeNextInterceptor(CommandInterceptor.java:98) at org.infinispan.interceptors.base.CommandInterceptor.handleDefault(CommandInterceptor.java:112) at org.infinispan.commands.AbstractVisitor.visitGetKeyValueCommand(AbstractVisitor.java:74) at org.infinispan.commands.read.GetKeyValueCommand.acceptVisitor(GetKeyValueCommand.java:40) at	0	0	https://issues.jboss.org/browse/MODE-2086
15564	MODE-2083	What do you consider a small cluster and a large cluster?	1	1	https://issues.jboss.org/browse/MODE-2083
15565	MODE-2077	Let's see what impact (1) has on the performance and go from there. If possible, can we do this while keeping (at least temporarily) the option of using the current JGroups-based lock implementation? This will make it easier to compare behaviors.	1	1	https://issues.jboss.org/browse/MODE-2077
15566	MODE-2066	Did you fork the https://github.com/ModeShape/modeshape repository? If you did, you can push your topic branch up there (don't make changes on master). See [these instructions|https://community.jboss.org/wiki/ModeShapeDevelopmentWorkflow].	0	0	https://issues.jboss.org/browse/MODE-2066

#	Requirement	Questions	Answered	Successfully Answered	URL
15567	MODE-2065	Should we support *any* version of Wildfly or is there a particular version we're targeting ? (i.e. I remember significant differences between AS 7.1 and AS 7.2).	1	1	https://issues.jboss.org/browse/MODE-2065
15568	MODE-2065	WildFly 8.0.0.CR1 was released Dec 21 and uses Infinispan 6.0.1.Final: http://wildfly.org/news/2013/12/21/WildFly8-CR1-Released/ https://community.jboss.org/thread/233347 stack trace showing such early interference with the WildFly boot suggests that the existing EAP6.x kit really isn't going to help those of us who want WildFly+ModeShape. WildFly is passing EE7 TCK 100%, so the next few weeks would the optimal window to test it with an early cut of a ModeShape4 with upgraded Infinispan, and get feedback to them before they go final. What do you think?	1	1	https://issues.jboss.org/browse/MODE-2065
15569	MODE-2065	@rhauch as mentioned in my previous comment, I still need to update the quickstarts. I was thinking we can use this issue & attach a 2nd PR. WDYT ?	1	1	https://issues.jboss.org/browse/MODE-2065
15570	MODE-2065	When playing around with clustering in ModeShape 4.0, we get the error mentioned in MODE-2188 when shutting down Wildfly (8.0.0.Final) {noformat} 17:04:05,973 ERROR [org.jgroups.jmx.JmxConfigurator] (ServerService Thread Pool -- 28) unregister MBean failed jgroups:type=protocol,cluster="modeshape-repository-clustered",protocol=FORK {noformat} NOTICE THE "protocol=FORK" message, which makes us think it's related to our programmatic creation of the JGroups FORK. Once this error occurs we are no longer able to get all of the Wildfly instances in my cluster to reconnect. The first instance connects but the second instance gets stuck attempting to register an MBean and remains that way until it times out. The full details of this issue are discussed on the ModeShape forum https://community.jboss.org/message/871880#871880	0	0	https://issues.jboss.org/browse/MODE-2065
15571	MODE-2061	In the testing I did it was actually the smaller files that showed increased performance using openssl not the larger. For the 64GB size file streaming vs openssl were basically the same. Did you find differently? My findings: stats for retrieving jcr:content node of 1.3GB and 64GB file: default modeshape secureHash - 12 sec/16.6 minutes cached openssl - 3.5 sec/8.1 minutes cached modeshape secureHash - 6.2 sec/8.1 minutes mocked - .002 sec But even with the openssl alternative, whether faster or slower, this issue - that touching jcr:content nodes recalculates the hash every time (that takes on the order of minutes to an hour for large file) still remains. Ideally, being naive to modeshape, it seems hashes of a full file should NOT be the BinaryKey identifier but I don't know the fallout of changing this. In the Fedora Commons Akubra module for example https://wiki.duraspace.org/display/FEDORA34/Configuring+Low+Level+Storage, the key is an MD5 of an ID rather than the full file, an approach I was trying to implement similarly with the "mocked" implementation of creating the SHA-1 hash from the file path rather than full file, but Randall expressed reservations about the fallout from this when files move around. One idea I just realized is perhaps for large files (above a threshold) to allow the option of a "disinterested hash", which rather than a full file hash (which takes to long), or a path hash (that may change), to calculate the hash on the first arbitrary KBs of a file, or the first and last KBs of a file (is that possible?) with the assumption that the probability of this being the same in more than one file is little to none. I'd be interested in your opinion about this approach.	1	1	https://issues.jboss.org/browse/MODE-2061
15572	MODE-2061	{quote} In the testing I did it was actually the smaller files that showed increased performance using openssl not the larger. For the 64GB size file streaming vs openssl were basically the same. Did you find differently? {quote} I didn't do a lot of in-depth testing, but I noticed during some of our unit tests that computed the SHA-1 for lots of very small to small files (e.g., mostly .class files in the '{{target}}' directory) that the results were noticeably slower when we always used {{openssl}}. For a few larger files, {{openssl}} was actually faster. So the results are more inline with my expectation that streaming small files and computing the SHA-1 in our code is actually faster that forking off a separate process, whereas streaming (very) large files in Java should be more expensive than a native {{openssl}}, which has access to more operating system optimizations. (That doesn't mean that {{openssl}} _uses_ all the available optimizations on all platforms.) You'll notice that my solution was to always use {{openssl}} (if available) for all files larger than {{n}}, where {{n}} defaults to 50kB but is entirely configurable. This approach kept the configuration as simple as possible while still allowing someone control over {{n}}, including setting {{n}} to a very large value if {{openssl}} is never to be used or a very small value if {{openssl}} should always be used. *Can you test the code in 'master' in similar ways to what you did before, and see if this change fixes your problem? If you can do this and let us know ASAP, because we plan to release 3.6 in the middle of next week (roughly October 16). Currently, there is nothing holding up the release.* {quote} Ideally, being naive to modeshape, it seems hashes of a full file should NOT be the BinaryKey identifier but I don't know the fallout of changing this. {quote} The whole point of the binary key is to have a unique identifier that is representative of the content but independent of location (and thus moves). Note that most of the requirements come from how ModeShape manages/stores binary values in its binary store, where a content-based key allows us to store only one copy of any given binary value. Now, the FileSystemConnector (or rather a subclass of it) may actually be able to use a different binary key, since the connector actually [stores the URI of the file inside the BinaryValue|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/connector/filesystem/FileSystemConnector.java#L385]. We've not really investigated that, though it could very well be that this causes problems when copying or moving external content into internal content. Feel free to subclass the connector and try different options. Subclassing would also be a way to provide caching of binary keys. IMO, caching is not worth the complexity, especially when we can't use an _unbounded_ cache.	1	1	https://issues.jboss.org/browse/MODE-2061
15573	MODE-2061	{quote} This breaks the functionality of the getHash() and getHexHash() methods which are now returning this URI {quote} What exactly does "break" mean here ? In the case of {{UrlBinaryValue}} it may be true that "a true SHA1" isn't returned, but from looking at the code the main purpose of the {{getHash}} methods is to aid in binary values comparison (i.e. value1.equals(value2)). This should still hold when the string version of the URL is used. Yes, the Javadocs for the above methods aren't really correct in this case, but I'm not sure I see the functional problem.	1	1	https://issues.jboss.org/browse/MODE-2061
15574	MODE-2061	Thanks for the update Eric. How is the SHA1 used by the fixity service ? Is it used to make assumptions about the content (bytes) of the file itself ?	1	1	https://issues.jboss.org/browse/MODE-2061
15575	MODE-2048	Can we just add this as additional function for rest api of items instead of creating new handler? We just replace target url from "../items/<node_path>" to "../items/move".	1	1	https://issues.jboss.org/browse/MODE-2048

#	Requirement	Questions	Answered	Successfully Answered	URL
15576	MODE-2048	[~aangeles], unfortunately the "{{.../items/move}}" resource URI is does not follow the RESTful style because it puts the verb into the resource URI and because the same URI would apply to multiple resources. A RESTful approach would instead keep the URI referencing the resource (the node) that is being moved and uses the POST or PUT operation. The question is then what the body of the request looks like. My current thought is that this can be handled by our current API as follows. The client would do the following steps: # GET the source node (the node to be moved/shared), and specifically its identifier # GET the new parent node's representation # Add an entry for the source node in the correct location in the "children" nested document, keeping the same identifier that the node has in its original location. # PUT the updated representation of the new parent ModeShape (specifically the [ItemHandler.updateNode(...)|https://github.com/ModeShape/modeshape/blob/master/web/modeshape-web-jcr-rest/src/main/java/org/modeshape/web/jcr/rest/handler/ItemHandler.java#L613] method) would then behave as follows: # Make sure that the children in the representation match the children in the current node. Any nodes that don't exist need to be created, and any nodes that exist elsewhere (by ID) need to be either moved (if not shareable) or cloned (if shareable). WDYT? Thoughts, [~hchiorean]?	1	1	https://issues.jboss.org/browse/MODE-2048
15577	MODE-2046	After thinking about this today, I'm not convinced that this is that useful. For the most part, it is really not much code to create a session and ensure it is logged out in a finally block. So it really isn't saving much code. However, it does increase the complexity a fair amount. Should the function or the framework perform the save? What happens if there is an exception during the same; the transient state in the session is still there, and can be accessed to either discover or fix what was wrong. It's also more constraining to force the application code into this pattern, especially when the pattern requires jumping through to different methods. I'll leave this open for a little while in case people want to discuss and advocate for this. Otherwise, we'll close it with a REJECTED.	0	0	https://issues.jboss.org/browse/MODE-2046
15578	MODE-2040	Which version of JDK is this in ?	0	0	https://issues.jboss.org/browse/MODE-2040
15579	MODE-2040	Sounds good, I noticed there isn't a 4 branch? Is this something in the works or is it a bit further off? Perhaps there is somewhere where I could read about it?	0	0	https://issues.jboss.org/browse/MODE-2040
15580	MODE-2033	I agree that {{RepositoryConfiguration.validate()}} is probably not appropriate for the reasons you mention. I think the problem is that the code that calls {{ModeShapeEngine.deploy(RepositoryConfiguration)}} doesn't get any feedback of any problems encountered during deployment. Sure, the problems (really, warnings) are logged, but that doesn't really help the calling code. Obviously any _errors_ will prevent the repository from being deployed at all. But _warnings_ are just logged; is there a way of recording the deployment warnings/problems in the {{JcrRepository}} instance and making them available after the repository is deployed?	1	1	https://issues.jboss.org/browse/MODE-2033

#	Requirement	Questions	Answered	Successfully Answered	URL
15582	MODE-2018	administrator-defined indexes. When no such indexes are defined, the query engine is able to still answer the queries by "scanning" all nodes in the repository. This is like a regular relational database: all query functionality works (albeith slowly) even when no indexes are defined, though to improve performance simply define an appropriate index based upon the query or queries that are being used. All of ModeShape's query parsing, planning, and optimization steps are basically unchanged from the previous query system. There is one addition to the rule-based optimizer: a new rule looks at query plans and adds the potential indexes that might be of use in each access query portion of a query plan. Then, the query execution process (see below) chooses one of the identified indexes based upon the selectivity and cardinality. If no index is available for that portion of the query plan, then the query engine simply iterates over all queryable nodes in the repository. A new kind of component, called a "query index provider", allows the query engine to delegate various responsibilities around indexes to these providers. For example, a provider must provide an index planner that can examine the constraints that apply to an access query and determine if any of the provider's indexes can be used. When they are, ModeShape adds those indexes to the query plan. If the query engine uses one of those indexes, then provider must be able to return all of those nodes that satisfy the criteria as described earlier by its index planner. Finally, as ModeShape content changes, ModeShape will notify the index providers' of the changes so that they can ensure their indexes are kept up-to-date with the content. This means that a provider can implement the functionality using any kind of technology, and consequently, that ModeShape can begin to leverage multiple kinds of search and index technology within its query system. The ModeShape community anticipates having providers that use Lucene, Solr, and ElasticSearch. ModeShape will also likely come with a provider that maintains file-system based indexes. Additionally, providers can optionally support indexes on one or more properties. Thus, it will be possible to mix and match these providers, selecting the best technology for the specific kind of index. The new query engine does the execution in a very different way than the previous engine, which used Lucene to determine the tuples (that is, the values in each row) for each access query and that were then further processed and combined to form the tuples that were returned in the result set. The new engine instead uses a new concept of a "stream of node keys" for each access query: what actually implements that stream depends on many factors. A node sequence is an abstraction of a stream of "rows" containing one or more node keys. The interfaces are designed to make it possibly to lazily implement a stream in a very efficient manner. Specifically, a node stream is actually comprised of multiple "batches" of rows, and batches can be of any size. Consider when the engine findes no indexes are available for a certain access query. The engine simply uses a "node sequence" (or {{NodeSequence}}) implementation that returns in batches a row for each node in the repository. But if an access query involves a criteria on the path of a node, such as "{{... WHERE ISSAMENODE('/foo/bar') ...}}", then ModeShape knows that this query (or portion of a query) will have only one result, namely the node at "{{/foo/bar}}". ModeShape doesn't need an index to quickly find this node; it merely has to navigate to that path to find the one node that satisfies this query. ModeShape has several other optimizations, too: it knows when a query involves all children or descendants of a node at a given path, and can take this into account when optimizing and executing the query. All of these are handled with special {{NodeSequence}} implementations optimized for each case. For many access queries (i.e., part of a larger query), the engine will use one of the indexes identified by one of the providers. When this happens, ModeShape uses other {{NodeSequence}} implementations that utilize the underlying indexes to find the nodes that satisfy some of the criteria. The above describes how the engine uses a single {{NodeSequence}} instance for each each access query in a larger query. But how does the engine combine these to determine the ultimate query results? Basically, the	0	0	https://issues.jboss.org/browse/MODE-2018
15583	MODE-1986	What's the required timeframe for this?	1	1	https://issues.jboss.org/browse/MODE-1986
15584	MODE-1986	It seems to me that if a user (or Designer) knows the parser they want to use, they should be able to designate that parser and use the "parseUsing" method. On the other hand, if the user (or Designer) does not know what parser to use, it seems they would want the parsing framework to pick the best one. This is how the framework's "parse" method is intended to work. It sounds like there is a problem in the framework, or maybe in an individual parser, when the first parser fails, the subsequent parser is completing successfully when it shouldn't be (i.e., returning an incomplete, problem-filled, or incorrect node graph). In the case above, I assume you didn't know which parser you wanted to use so you used the generic "parse" method. If you would've received a fully parsed node graph (without knowing what parser was used), or received a chain of parser exceptions signifying no parser could handle the DDL, would you still have had an issue? Or maybe you just want the user to be able to pick the parser after the scoring since they may have a bit more knowledge about the DDL than the framework does. And sometimes there are ties in the scoring and I'm not sure how the framework works in that case. Regardless of all of that, it seems there is a problem, rightfully so, with the fact you received an AstNode with just UnknownStatement child nodes. The Teiid parser was written to throw an exception if the DDL does not parse. One or more of the other parsers apparently completely parse (no exceptions) even if they don't recognize the DDL.	1	1	https://issues.jboss.org/browse/MODE-1986
15585	MODE-1979	[~blafond], can you create a pull-request with the changes? (Get the latest from 'master', create a topic branch, commit your changes, push to your fork, then create a pull-request.) Also, do you have a test case? It'd be a big help, and we can merge the fix onto our '3.3.x' branch.	1	1	https://issues.jboss.org/browse/MODE-1979
15586	MODE-1960	So how can the memory-usage-might-go-crazy issue be tackled? How can I make sure that my _critical_ JCR server doesn't stall due to some weird, random MS Office file?	0	0	https://issues.jboss.org/browse/MODE-1960
15587	MODE-1955	So this JCR feature has always been very nebulous to me. Can you give some scenarios where/how this would be used?	1	1	https://issues.jboss.org/browse/MODE-1955

#	Requirement	Questions	Answered	Successfully Answered	URL
15588	MODE-1955	Your last idea about the connector exposing an area of "unfiled" content seems like the best approach. (Besides, using a central "{{/jcr:system/jcr:unfiled}}" and having content from multiple connectors there would be challenging.) Have you looked at how the Git connector works? Strictly speaking, Git's history really isn't hierarchical in any way (the log for a single branch can be very, very long), but it creates an artificial hierarchy for the different branches and tags, as well as a place to find all of the commits (with tree view of the file structure under each commit). We also designed the connector SPI to work fairly well with very large numbers of children by working with pages. For example, you don't want a node representing the "master" branch to contain a child node for every commit in that branch - doing so would make it extremely expensive to create the document for the "master" branch node. So, instead, the GitConnector looks up a small number of recent commits and adds them as the first page of children under a branch node. As the client navigates/iterates over the children, ModeShape will transparently fetch additional pages as necessary. We've created a specific {{[Pageable|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/federation/spi/Pageable.java]}} interface that your {{Connector}} (or {{ReadOnlyConnector}} or {{WritableConnector}}) subclass and implement. If you do, then ModeShape can take advantage of this capability. Where paging tends to breaks down, however, is when the client "knows" (from a variety of ways) a particular commit ID and then asks for that commit under a particular branch. In this case, ModeShape knows that it needs to get a specific child of the parent, and rather than relying upon the is being (e.g., a child of the branch where the child key is known), what ModeShape actually does is translate that into a call to the "{{getChildNode(parentKey,childKey)}}" method of the connector. I think the Pageable facet of the Connector SPI will let you implement a connector that does have a separate "unfiled" area that is effectively a huge list, and will allow client applications to get a particular node in that "unfiled" area when they know which node they want (usually by getting a reference or identifier from some other content).	1	1	https://issues.jboss.org/browse/MODE-1955
15589	MODE-1955	Trying to add unfiled support Creating versionable nodes under /jcr:system/jcr:unfiled (as it is told in specification). "jcr:unfiled" added as nt:folder (regular node - not system) which lets us to manage it's children. When create regular (eg nt:file) nodes it works but for versionalbe ones we get duplicate key error. This session tried to create node '/jcr:system/jcr:unfiled/sjesjsj' (with key '589e942317f1e737769d21-5a53-4c6b-9dbd-458eaf4e3e96'), but a node with that key already exists. {code} javax.jcr.InvalidItemStateException: This session tried to create node '/jcr:system/jcr:unfiled/sjesjsj' (with key '589e942317f1e737769d21-5a53-4c6b-9dbd-458eaf4e3e96'), but a node with that key already exists. Caused by: org.modeshape.jcr.cache.DocumentAlreadyExistsException: 589e942317f1e737769d21-5a53-4c6b-9dbd-458eaf4e3e96 at org.modeshape.jcr.cache.document.WritableSessionCache.persistChanges(WritableSessionCache.java:1077) at org.modeshape.jcr.cache.document.WritableSessionCache.save(WritableSessionCache.java:543) at org.modeshape.jcr.JcrSession.save(JcrSession.java:1004) ... 45 more {code} As not versionable nodes works OK I assume error is caused by the fact that versionable node has corresponding VersionHistory having the same key in the same system workspace. Does it make sense to you? And how difficult it would be to make VersionHistory to have different id and being correctly linked to a node ?	0	0	https://issues.jboss.org/browse/MODE-1955
15590	MODE-1955	Yes, I think your analysis is correct. All of the '/jcr:system' branch is actually placed within a hidden 'system' workspace and then shared to each of the real workspaces. The version storage exists under '/jcr:system', and there will be a version history for a given node that has the same key as the versionable node (that exists in a separate workspace). By also putting the unfiled content here, then any unfiled nodes that are also 'mix:versionable' will result in ModeShape attempting to also create a tree with the same identifier under version storage in the same hidden workspace. I'm not sure that we can really change how version history is stored - there are existing repositories whose content would have to be migrated, and that's very undesirable. Instead, I think we have to find a way for the unfiled nodes to work without changing how the existing content is done. One option is to use a different workspace in the key, though that might mean we actually need to create a second hidden workspace for everything else related to NodeKeys to work properly. Can anyone else think of a different approach?	1	1	https://issues.jboss.org/browse/MODE-1955
15591	MODE-1955	I'm not 100% clear what the purpose of the {{jcr:unfiled}} area is, but should it be trying to store nodes with the same identifier (the id part of the key) as standard (in session created) JCR nodes ? In other words, if node A is a versionable node created in a JCR session, why is this node's identifier being duplicated in {{jcr:system/jcr:unfiled}} ? IMO we shouldn't start using a second hidden workspace, as that would only complicate things a great deal. As an alternative, can't a separate source key be used and an approach similar to the {{FederatedDocumentStore}} ?	1	1	https://issues.jboss.org/browse/MODE-1955
15592	MODE-1955	>I'm not sure that we can really change how version history is stored - there are existing repositories whose content would have to be migrated, and that's very undesirable Well, can this be configurable or something? Like add some switch and based on it enable unfiled + changed versionHistory storage. The "existing" production data issue should not be blocker for improvements I guess.	1	1	https://issues.jboss.org/browse/MODE-1955
15593	MODE-1955	{quote} > I'm not sure that we can really change how version history is stored - there are existing > repositories whose content would have to be migrated, and that's very undesirable Well, can this be configurable or something? Like add some switch and based on it enable unfiled + changed versionHistory storage. The "existing" production data issue should not be blocker for improvements I guess. {quote} We obviously have to be cognizant of maintaining backward compatibility. Generally speaking, we should avoid changing how data is persisted, unless there is a *really* good reason to do so. Besides, we've already described two possible approaches that should mitigate the duplicate IDs without affecting any existing data. So as long as at least one of those works, then there's no reason to (arbitrarily) change how the existing version histories are stored. Finally, it took a lot of time and effort to get the versioning functionality working, and I'm not enthused about changing some of the fundamental mechanisms, especially if doing so will break existing repositories.	1	1	https://issues.jboss.org/browse/MODE-1955

#	Requirement	Questions	Answered	Successfully Answered	URL
15594	MODE-1955	[~hchiorean] and I had a chat today, and we have some questions about this feature. Here is _everything_ that the JSR-283 specification has to say about unfiled content: {quote} 3.12 Unfiled Content Implementers that build a JCR repository on top of an existing repository that supports content objects which exist outside of a hierarchical structure may expose these objects as nodes below {{/jcr:system/jcr:unfiled}} (see §3.11 System Node). The hierarchical structure below {{/jcr:system/jcr:unfiled}} is implementation-dependent. JCR implementers may disallow discovery (listing) of the nodes beneath this folder. In such a case a call to {{Node.getNodes()}} on the {{jcr:unfiled}} node would throw a RepositoryException. JCR implementers may expose the nodes below {{jcr:unfiled}} to search through the query mechanism (see §6 Query).{quote} (The only other place unfiled content is mentioned is the associated Repository descriptor in Section 24.2.2.) It concerns me that in order to get this to work efficiently, we'd have to add a significant amount of code to actually disable the discovery (listing) of nodes under "{{/jcr:system/jcr:unfiled}}". Thus, ModeShape would likely treat the unfiled area as just regular content. Yes, it happens to be in the system area, but that actually makes it worse and harder to deal with. In other words, ModeShape would not treat unfiled content any differently than regular workspace nodes, and that this unfiled area would not really perform or scale any better than placing a bunch of nodes under a single "nt:unstructured" parent (or any other acceptable node type). So given this, why do we want to add this feature? What benefit does it offer beyond the existing capability to place lots of nodes under a single, regular parent node in a workspace?	1	1	https://issues.jboss.org/browse/MODE-1955
15595	MODE-1955	{quote} can you please explain why "/jcr:system/jcr:unfiled" is useful to a client beyond just putting nodes under a single normal parent? {quote} Consistency? Do not need hierarchy - go unfiled and get your parent node as null, need hierarchy - here is your root node? Sorry, maybe I'm misunderstanding the complexity of this change in modeshape, so for me either way is an equal effort :)	1	1	https://issues.jboss.org/browse/MODE-1955
15596	MODE-1918	Hi Oleg, do means this way? {code:xml} <ironjacamar> <connection-definitions> <connection-definition class-name="org.modeshape.jca.JcrManagedConnectionFactory" jndi-name="jcrJCA" enabled="true" use-java-context="true" pool-name="modeshape-Pool" use-ccm="true"> </connection-definition> </connection-definitions> <config-property name="repositoryURL"> file:/${jboss.server.data.dir}/ms-repo </config-property> </ironjacamar> {code}	1	0	https://issues.jboss.org/browse/MODE-1918
15597	MODE-1918	Dmitri, yes. You can find sample configuration by this link https://github.com/ModeShape/modeshape/blob/master/modeshape-jca/src/main/resources/META-INF/ironjacamar.xml Now you have some kind of problem with repository configuration (resource adapter was started and failed on repository start up) which is specified by URL. Can you please show your configuration file? Another reason might be a variable in the url, RA does not resolve properties so I am not sure about what is the actual path. Please try also to specify an absolute path to configuration just for check	1	1	https://issues.jboss.org/browse/MODE-1918
15598	MODE-1918	[~dimonv], the JSON configuration file you posted above is invalid: there is an extra closing brace before the "workspaces" field. {code:javascript} { "name" : "CIM", "storage" : { "transactionManagerLookup" : "org.infinispan.transaction.lookup.DummyTransactionManagerLookup" }, "security" : { "jaas" : { "policyName" : "modeshape-jcr" }, "anonymous" : { "username" : "<anonymous>", "roles" : ["readonly","readwrite","admin"], "useOnFailedLogin" : true } }, <---------- THIS LINE SHOULD NOT BE HERE ---------- "workspaces" : { "predefined" : ["ws1", "ws2"], "default" : "default", "allowCreation" : true }, "node-types" : ["nodetypes.cnd"] } {code} Such an error in the configuration file will prevent the repository from starting, which means that nothing will get bound in JNDI to "{{java:jcr/local/CIM}}" and the {{NameNotFoundException}} is logical. Please correct the JSON configuration file and try again, continuing to look at the log for any errors or problems. ModeShape should be outputting any such repository startup errors via ERROR log messages.	1	1	https://issues.jboss.org/browse/MODE-1918
15599	MODE-1918	[~dimonv], can you please give an update? May I ask why you're deploying ModeShape via the JCA Adapter approach when we have a special kit for AS7/EAP? The problem with _not_ using our special kit is that ModeShape requires a specific version of Infinispan, and using the kit is really the best way to make sure that the versions match. The other benefit of using the ModeShape kit for AS7/EAP (which simply unzips on top of AS7/EAP) is that you don't have to (and really should not) use the JCA adapter at all. That's because our kit installs a ModeShape-specific subsystem into the application server, and this subsystem is controlled by the normal AS7/EAP configuration mechanism. See our documentation on the [kit for AS7/EAP|https://docs.jboss.org/author/display/MODE/ModeShape+and+JBoss+AS7], including how to [configure the subsystem|https://docs.jboss.org/author/display/MODE/Configuring+ModeShape+in+AS7]. I'm considering marking this as either CANNOT REPRODUCE (if the aforementioned correction to the custom JSON configuration file works) or WONTFIX (since we have a special kit for AS7/EAP).	1	1	https://issues.jboss.org/browse/MODE-1918
15600	MODE-1918	Hello Randall, sorry for not commenting so long. Why am I deploying Modeshape as a JCA adapter? Because: - it is easier to deploy without changing application server - it is a proper JEE way to include a RAR file to EAR and deploy it - its easier to acquire JCR session over JNDI and connection factory - it is not necessary to change application server - every deployed application can use a different version of JCR implementation Regards, Dmitri	1	0	https://issues.jboss.org/browse/MODE-1918
15601	MODE-1901	I assume that you mean to include something like a [mode:plan] property in the response? Would this mean that you have to actually execute the query to get the plan back? That isn't always a great thing to do if the query you are trying to get an explanation of is causing problems by taking an hour to run. Have I misunderstanding this? The usual behaviour of EXPLAIN is to return a rowset containing the query plan so for example if I run the following explain then I get back two rows with little execution time. Since the result is in the same form as the result of any other query, the usual tools (via JDBC) work quite well with this. {code} mysql> explain select * from (select date,time,abs(id) as id from txn order by date desc) x order by time,abs(id); +----+-------------+-----------+------+---------------+------+---------+------+------+----------------+ | id | select_type | table | type | possible_keys | key | key_len | ref | rows | Extra | +----+-------------+-----------+------+---------------+------+---------+------+------+----------------+ | 1 | PRIMARY | <derived2> | ALL | NULL | NULL | NULL | NULL | 333 | Using filesort | | 2 | DERIVED | txn | ALL | NULL | NULL | NULL | NULL | 333 | Using filesort | +----+-------------+-----------+------+---------------+------+---------+------+------+----------------+ 2 rows in set (0.00 sec) {code} but if I run the actual query I get back 100s or 1000s of rows and it takes a lot of time to execute.	0	0	https://issues.jboss.org/browse/MODE-1901
15602	MODE-1868	That seems very reasonable. If it were possible to do this in a way that was reusable (for other connectors) of course we would choose that. But if it's not going to be part of the general contract for connectors, then it makes a lot of sense to do it as part of a specific implementation. If I understand the design arightly, we should be able to subclass JsonSidecarExtraPropertyStore and mix in node types in the *properties() methods. But JsonSidecarExtraPropertyStore is default visible. Would it be possible to make this a public class, or to insert an abstract class that it extends and which implements ExtraPropertiesStore? Then we could subclass it (or the abstract class) and add only a minimum of new logic.	1	1	https://issues.jboss.org/browse/MODE-1868

#	Requirement	Questions	Answered	Successfully Answered	URL
15603	MODE-1864	Had a more in-depth look at implementing this and before detailing some of the problems, the following need to be taken into account with regards to the current versioning implementation: 1. everything version related is stored in a predefined structure in the {{jcr:system}} workspace, which is "outside" the scope of any current client session. 2. the structure, node names & ids of the version history (for any given version node) are based on the SHA-1 of the node's {{NodeKey}}. 3. there was no way (until the API extension in {{4.0.0.Alpha1}}) to remove the version history of a node, even if that node was removed. Considering this, at least the following aspects/scenarios are impossible/way too complex to handle: * importing an XML via a session (not a workspace): according to the JCR spec it's possible to transiently import nodes into a session which will only be persisted on {{save}}. However, if a client were to call {{refresh}} those would have to be discarded. Because of 1. from above, it would impossible in this case to "transiently alter the system area". Therefore, any such feature would only realistically be possible for the "workspace-write" import operations, which isn't ok IMO. * importing an XML containing versions into a repository for a given node which already contained that node & versions: when importing nodes, if either the {{ImportUUIDBehavior.IMPORT_UUID_CREATE_NEW}} or {{ImportUUIDBehavior.IMPORT_UUID_COLLISION_REPLACE_EXISTING}} options are used, the key of the existing node or the key of the new node would effectively change. This means the hierarchy of the existing/incoming version history nodes would need to be changed to reflect this (see 2. from above). There is no straightforward way to accommodate this, because the process of initializing a version history is extremely complex. * importing an XML containing versions into a repository which doesn't contain the versionable node anymore, but still has its entire version history (see 3. from above). Since it's possible to restore(revive) a removed node from an existing version, how would the import behave in this case ? These are just a few aspects, but I'm sure a lot more would come up. Therefore, I think this feature is *not* realistically possible or *worth the effort*. As an alternative, the backup/restore process would restore the entire {{jcr:system}} area, including any versioning information. [~rhauch]: thoughts ?	1	0	https://issues.jboss.org/browse/MODE-1864
15604	MODE-1860	Do you think it's possible to change the location to use a Maven property?	1	1	https://issues.jboss.org/browse/MODE-1860
15605	MODE-1849	What about the dist zip we use for testing ?	1	1	https://issues.jboss.org/browse/MODE-1849
15606	MODE-1849	BTW, I noticed that we are putting our modules under "{{modules/system/layers/base}}". Should we be putting our modules in some location other than "{{base}}"? AS7-6344 seems to cover the changeover to this structure, and it references https://community.jboss.org/docs/DOC-47927 (which describes the basic concepts and responsibilities) and https://community.jboss.org/docs/DOC-48264 (more of an internal AS7 documentation about how to implement these layers).	1	1	https://issues.jboss.org/browse/MODE-1849
15607	MODE-1839	The JCR API doesn't provide a way of doing this. Calling "{{Version.remove()}}" or "{{VersionHistory.remove()}}" (which is the same {{remove()}} inherited from {{Item}}) is expressly forbidden and tested by the TCK. It is possible to remove all of the versions from the history using "{{VersionHistory.removeVersion(String versionName)}}", but it is not possible to remove the root version and the {{VersionHistory}} node. There are a couple of challenges to this. One, it's not really possible through the JCR API to find the version history for a versionable node that has already been deleted. That's because the only way to find the version history is through the "{{VersionManager.getVersionHistory(String path)}}", where "{{path}}" is the path of the versionable node. _*UPDATE:* I think it should be possible to pass an identifier path (e.g., a node's identifier surrounded with square brackets) to the {{VersionManager.getVersionHistory(String path}} method. If this doesn't work now, we should fix it._ Now, ModeShape implements this by looking up the versionable node by the path, obtaining the node key, and then finding the VersionHistory node given the history's key (which can be derived from the node key). So it would be possible to expose a ModeShape-specific API to obtain the history given a node identifier. Secondly, when a versionable node is removed, it can (theoretically) be restored using the {{VersionHistory}} node. Of course, getting the {{VersionHistory}} node without an existing versionable node is a challenge, as previously mentioned. Thirdly, there may be some regulatory reasons why the version history should not be removed. OTOH, there actually may be some regulatory or policy requirements for being able to remove all of the data associated with some node. But either way, no single policy for removing or keeping the history can be stipulated by ModeShape; instead, we can provide the tools and functionality so that the application can implement the desired behavior. Finally, there are several considerations to removing version history: # The version history for a node should be removed when the node is removed. This might be exposed with a ModeShape-specific public API to include version histories for all versionable nodes below some node being removed. For example, {{org.modeshape.jcr.api.Node.remove(boolean includeVersionHistories)}}. This is essentially a more thorough form of the standard {{Node.remove()}} that would work on subtrees as well. # Provide a ModeShape-specific API to obtain the version history for a (potentially-non-existant) versionable node given the versionable node's identifier, and to provide a way of destroying the entire version history via a ModeShape-specific API. I'm not sure how practical this is given that the caller must somehow know the identifier of the versionable node. Could this be called when the versionable node still exists (see next item)? _*UPDATE:* I think it should be possible to pass an identifier path (e.g., a node's identifier surrounded with square brackets) to the {{VersionManager.getVersionHistory(String path)}} method. If this doesn't work now, we should fix it._ # What happens when a versionable node is simply changed to no longer be versionable, but it is not removed. Essentially, the node would need to have "{{mix:versionable}}" explicitly in the list of mixins and not have it in any of the other node types. In this case, does JCR stipulate what happens to the version history when a versionable node is changed to no longer be versionable. If the version history is to be removed, then perhaps this is a good approach for removing the version history of a single node without requiring a non-standard public API. # Provide a ModeShape-specific API to reclaim/remove all version histories for versionable nodes that no longer exist. This could be done with a batch process, but does the caller need any feedback? We need to decide which of these (or other) aspects we want to deal with. We at least need to figure out what the specification and/or TCK tests expect for #3.	1	1	https://issues.jboss.org/browse/MODE-1839
15608	MODE-1839	Hello, I've found another behaviour that can be related to this jira. I'm trying to find a workaround to remove history in the way to remove the mixin mix:versionable. But I can't once that you use a versionable node I have an exception like this: {code} javax.jcr.nodetype.ConstraintViolationException: Cannot find a definition for the property named 'jcr:versionHistory' on the node at '/test1' with primary type 'nt:file' and mixin types: [mix:mimeType,mix:lastModified,mix:title] at org.modeshape.jcr.AbstractJcrNode.removeMixin(AbstractJcrNode.java:2534) at org.modeshape.VersioningAPITest.createVersioningNodesAndRemovingVersioningDelete(VersioningAPITest.java:209) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) {code}	0	0	https://issues.jboss.org/browse/MODE-1839
15609	MODE-1820	Are you forking/reusing another existing web app (like JCR Explorer)?	1	1	https://issues.jboss.org/browse/MODE-1820

#	Requirement	Questions	Answered	Successfully Answered	URL
15610	MODE-1820	[~oleg.kulikov], can you be a bit more specific by providing a URL? There are several projects ambiguously referred to as "JCR Explorer", including: * http://code.google.com/p/jackrabbitexplorer/ (and https://github.com/lucasponce/modeshape-tools) * http://www.jcr-explorer.org/screenshots.html We need to keep the original license information, and we need to verify that the licenses are all okay for us to use.	1	1	https://issues.jboss.org/browse/MODE-1820
15611	MODE-1820	@okulikov , you mentioned that you were going to rework this. Do you have an updated PR or status?	0	0	https://issues.jboss.org/browse/MODE-1820
15612	MODE-1820	Rebased and merged the [first pull-request|https://github.com/ModeShape/modeshape/pull/965] into the 'master' branch. Work still left to be done: # Add the webapp to the EAP kit (as discussed on IRC, and similarly to the other web apps) # Consider renaming the module to not use "`console`". We hope to have integration with the EAP/Wildfly console, whereas this application is more of a repository explorer. What about "`modeshape-explorer`"?	1	1	https://issues.jboss.org/browse/MODE-1820
15613	MODE-1820	+1 for explorer, but are we limiting this for use only with ModeShape as opposed to any JCR-compliant implementation ?	1	1	https://issues.jboss.org/browse/MODE-1820
15614	MODE-1818	IMO this should be part of 3.2, as it's an enhancement request. For 3.1.x it should suffice to bump up the default, hardcoded value.	1	1	https://issues.jboss.org/browse/MODE-1818
15615	MODE-1815	[~psiroky-redhat.com], what is the status of this effort? Are you waiting for anything in particular from us?	1	1	https://issues.jboss.org/browse/MODE-1815
15616	MODE-1815	[~rhauch]: the fix version is still 3.6, shouldn't it be 4.0 ?	0	0	https://issues.jboss.org/browse/MODE-1815
15617	MODE-1803	It is not straightforward to get the Session for which the connector method are being called, so using a ThreadLocal may be the best approach. Just remember that when the connector is called, the session will already be within the scope of a call to the Session, so watch out for any concurrency problems. Do you have to pass in the same session (because you need the transient state), or can it be any session?	1	0	https://issues.jboss.org/browse/MODE-1803
15618	MODE-1803	>Do you have to pass in the same session (because you need the transient state), or can it be any session? I guess the same session/transaction and yes the new ID may not be visible outside of it. It makes no sense to keep cross-reference record if there was a fail.	0	0	https://issues.jboss.org/browse/MODE-1803
15619	MODE-1801	Is this still necessary since we've introduced in 3.4.0.Final support for JCR ACLs? If not, then I'd like to close this.	1	1	https://issues.jboss.org/browse/MODE-1801
15620	MODE-1784	Changed the way ModeShape web apps are deployed via the AS7 kit: Instead of statically packaging web applications into the kit and copying them over in the AS7 deployments folder, the following changes were made: * the web applications were moved into a _deployments_ folder under the _org.modeshape_ AS7 module * the AS7 subsystem was extended, with {code}<webapp name="" exploded="" auto-deploy=""/> {code} directly under the _<subsystem>_ element ** _name_ represents the name of the folder or file inside the deployments folder ** _exploded_ (default true) indicates if the packaged web app is exploded or not ** _auto-deploy_ (default true) indicates if the web application should be deployed automatically, when the subsystem starts * based on the above, web applications from the deployments directory are deployed at runtime, when the subsystem starts	1	1	https://issues.jboss.org/browse/MODE-1784
15621	MODE-1777	Perhaps I'm doing it wrong, but I don't see a difference in which tests are run by command-line Maven for "{{@Test}}" methods with and without the "{{@SkipLongRunning}}" annotation. Should this be reopened?	1	1	https://issues.jboss.org/browse/MODE-1777
15622	MODE-1764	Or AS7 subsystem relies on the AS7 core (in this case the clustering subsystem) to inject a {{CacheContainer}} into our {{RepositoryService}}, which will then be retrieved by our environment. How can we change this to obtain an ISPN cache configured in AS7 using the 5.2 slot ?	1	1	https://issues.jboss.org/browse/MODE-1764
15623	MODE-1764	Do we still need to keep this open ? (the attached PR has been merged and we have separate issues for the remaining open problems)	1	1	https://issues.jboss.org/browse/MODE-1764
15624	MODE-1723	Just a status update ... Finished coding the composite binary store. Now all the repository content (children and properties) are visible in the RHQ component tree under the EAP node. Also added "Web Applications" content as a sibling to "Repositories." The only information is the name of the web app and if the content has been exploded. Is this something of value? Added a new repository properties grouping for the 5 document optimization properties. I've titled this grouping "Content Optimization." Is that a good title? Currently working on reading and writing the metrics window(s) data from/to the plugin data directory and then updating the RHQ metrics report when requested.	0	0	https://issues.jboss.org/browse/MODE-1723
15625	MODE-1713	The more I think about it, the more I agree that the document-level (i.e., low-level) changes would be much more difficult for a connector implementation to work with. As for the Semantic Changes, I agree that {{SessionNode}} should not directly implement the same SPI interface that connectors use. And that would mean essentially "copying" the changes in the {{SessionNode}} into the changes object, which would be safer all the way around (guarantees no leakage in either direction) {quote} One potential challenge I see here, is that modified values coming from the SessionNode (e.g. property values) may have a different interpretation on the "document layer", because on documents, values are transformed via the DocumentTranslator#valueToDocument call. This might be a more generic problem that's already present, but which we haven't encountered yet in tests. {quote} That's true, but if they use the {{DocumentReader}} and access the {{Property}} representation, those values auto-convert to the desired types. This does expose that (so far internal) API to the connector, but I think the "{{value}}" API is extremely useful in this regard, especially for the more arcane types like DATE. One issue I do expect to have, however, is that the changes can contain {{NodeKey}} values that may need to be reduced to {{String}}s, though we probably need to do this for only the matching source rather than do it blindly for all {{NodeKey}}s (as some {{NodeKey}} values might refer to content not included in the connector's content. Is that something we can/want to prevent?	1	1	https://issues.jboss.org/browse/MODE-1713
15626	MODE-1713	What about NodeKeys that refer to nodes outside of the connector's content? For example, in REFERENCE or WEAKREFERENCE properties. (I think it should be up to a connector to prevent this, unless we make a global decision that no connectors can ever have references to content outside of the source.)	1	1	https://issues.jboss.org/browse/MODE-1713
15627	MODE-1712	[~rhauch]: this seems to me as something quite complicated to implement and honestly I wouldn't know where to start. Also, the concept of "navigation" is a bit vague IMO. What's the driving factor/use case behind this requirement and why would we want this in 3.6 ?	1	1	https://issues.jboss.org/browse/MODE-1712
15628	MODE-1712	[~oleg.kulikov], what's the status on this? See the discussion on the [PR|https://github.com/ModeShape/modeshape/pull/992] for the latest.	1	1	https://issues.jboss.org/browse/MODE-1712

#	Requirement	Questions	Answered	Successfully Answered	URL
15629	MODE-1711	I see at least 2 different options here: 1) Define the projections as part of the repository JSON config file, within each source: {code} "externalSources" : { "readonly-files" : { "classname" : "org.modeshape.connector.filesystem.FileSystemConnector", "directoryPath" : "target/federation/files-read", "readonly" : true, "projections" : ["ws1:/node1/node2/root => /", "ws2:/node1/node2/file1 => /file1"] } } {code} Where the {{projections}} element represents an array of strings, where each string has the format {{workspaceName}} *:* {{repositoryPath}} *=>* {{externalPath}}. This format poses the following questions: * what if parts of the projection path do not exist, do we create those nodes ? If yes, what typing information do we use ? * what if parts of the projection path already exist, do we ignore the projection or just create the nodes for the missing segments ? * do we process the projections each time a repository starts ? 2) Define the projections as part of the initial content: {code} <?xml version="1.0" encoding="UTF-8"?> <jcr:root xmlns:jcr="http://www.jcp.org/jcr/1.0"> <node1/> <!-- Creates a projection node2/testFile -> / --> <node2> <testFile source-id="files-store" path="/"> <!--Any content would be ignored--> </testFile> </node2> </jcr:root> {code} Here an XML element with the {{source-id}} and {{path}} elements is treated as a projection which has the name/alias that of the XML element. For this to work, IMO we need some conventions in place: * both {{source-id}} and {{path}} are required for an element to be considered a projection. If either are missing, the node is discarded * any content (children) within a projection node is ignored Using initial content however, would mean projections are created only once, when initial import takes place on a "fresh" repository. Thoughts ?	0	0	https://issues.jboss.org/browse/MODE-1711
15630	MODE-1710	I'm trying to write unit tests for this new code, but having trouble finding a model. I can't seem to find any tests for the federation code in modeshape-jar/src/test/java. Is there somewhere else I should be looking?	1	1	https://issues.jboss.org/browse/MODE-1710
15631	MODE-1708	I think there are several ways we can specify how nodes should be excluded from the indexes (and thus not queryable): # Use a mechanism that uses node type information to determine which nodes are indexable. There is already something for full-text queries, but such a property would be ModeShape-specific. # Use a mechanism that encodes information within the document, but outside the normal JCR properties area. Connectors could automatically set this information. This would be similar to the {{cacheTTL}} mechanism currently used by the connectors to specify how long the node representations should be cached in a workspace. # Use a ModeShape-specific mixin to determine if a node should not be indexed. The advantages are that JCR clients can see this, that it can be defined in initial content, and it can easily be defined as part of node types (ensuring all nodes of that type are never indexed). But exposing to clients is also perhaps a disadvantage. # Use the "childrenInfo/count" value to determine if a node's children should not be indexed. For example, if the count is -1, then the children would never be index. Should we pick just one, or are there benefits to having multiple approaches? Note that {{RepositoryQueryManager}} already has [logic|https://github.com/ModeShape/modeshape/blob/master/modeshape-jcr/src/main/java/org/modeshape/jcr/RepositoryQueryManager.java#L343] to exclude the locks and version storage area from the indexes. Ideally we could eliminate that custom logic and use one of the mechanisms above.	1	1	https://issues.jboss.org/browse/MODE-1708
15632	MODE-1708	Yes, it would be very difficult to use option 2 in areas (e.g., system area, and by clients) that aren't normally using the Document representation directly. I think my preference is for option 3, simply because it's easily used everywhere by anyone. Plus, a node type definition can use the mixin as a supertype, which means JCR clients couldn't change the behavior of nodes of that type. Is it sufficient to have a single mixin that would signal that the node should not be indexed? Or do we need a second one that says "do not index my children"? IMO, the first would be sufficient for now, and if there's a need later we can always do it. We can even define the "do not index my children" as a supertype of "do not index me".	1	1	https://issues.jboss.org/browse/MODE-1708
15633	MODE-1708	I agree that for the time being, one mixin should be enough. How do you want to call it ? (e.g. mode:queryable)	1	1	https://issues.jboss.org/browse/MODE-1708
15634	MODE-1703	[~jpalka], can you please review the pull-request and (if possible) build ModeShape 3.0.1-SNAPSHOT and run your application with it?	1	1	https://issues.jboss.org/browse/MODE-1703
15635	MODE-1703	Jaroslaw, any more detail on the problems your having? Does this fix the issue (as I suspect it should)? I'm marking this as resolved, but can reopen if there still are issues.	1	1	https://issues.jboss.org/browse/MODE-1703
15636	MODE-1698	Based on the current description, this issue does not make sense to me: ModeShape 3.x and 4.x is/will be fully JCR (and TCK) compliant, meaning it will not alter any parts of the implemented JCR spec. Everything else is provided as an extension to the spec, meaning clients can always opt to *not use the extension*. Is there any good example how a {{strict}} mode would be beneficial ?	1	1	https://issues.jboss.org/browse/MODE-1698
15637	MODE-1695	The EJB related examples from the EAP quickstarts, make use of "dummy" web apps which basically contain JSF controllers and some front ends so that the user can "click trigger" the example. Do we really want this for our examples as well or is it enough to use "arquillian-driven" examples ? (the EAP quickstarts contain some of those as well)	1	1	https://issues.jboss.org/browse/MODE-1695
15638	MODE-1695	Added 4 different quickstarts, together with a distribution module: * _modeshape-servlet_ - is the porting of the modeshape-web-example module from the examples repository * _modeshape-ejb_ - is a quickstart that shows how to use ModeShape from 3 different types of EJBs: Stateful Singleton, Stateless CMT and Stateless BMT. * _modeshape-cdi_ is a quickstart that show how to use CDI together with _@Producer_ and _@Consumer_ methods to inject a ModeShape session * _modeshape-cli_ is a quickstart which contains a couple of CLI scripts that are used to setup/clear the repository. All quickstarts contain remote Arquillian based unit tests.	1	1	https://issues.jboss.org/browse/MODE-1695
15639	MODE-1688	If this is an issue specific only to the CMIS connector, IMO we should change the description of this issue. Also, looking the {{CmisConnector}} code, there isn't a configuration option which stores neither username nor password. From what I can tell, only SOAP service endpoints are configured. So how does password encryption apply - i.e. if there is a SOAP authorization endpoint, *it* should be responsible for handling encrypted passwords, not ModeShape.	1	0	https://issues.jboss.org/browse/MODE-1688
15640	MODE-1688	[~vasilievip]: are you referring to ongoing (not committed) work for the CMIS connector ? Based on https://github.com/ModeShape/modeshape/blob/master/connectors/modeshape-connector-cmis/src/main/java/org/modeshape/connector/cmis/CmisConnector.java I'm not sure I understand how you can set a username/password from the JSON configuration file. The other existing connectors: FS, DBMetadata and Git all function without configuring a user password.	1	0	https://issues.jboss.org/browse/MODE-1688
15641	MODE-1680	Ivan, what is rate of passed tests when you are running TCK?	1	1	https://issues.jboss.org/browse/MODE-1680
15642	MODE-1680	Can you give us any information about which tests caused which results? And can you give us a URL to the test source?	1	1	https://issues.jboss.org/browse/MODE-1680

#	Requirement	Questions	Answered	Successfully Answered	URL
15643	MODE-1680	Jackrabbit does support child axes in order by clauses, but it is non-standard. See [https://issues.apache.org/jira/browse/JCR-800]. [~oleg.kulikov], can you look into how much effort it would take to support it? We can then evaluate whether it's worth the effort. [~vasilievip], do you know why the CMIS<->JCR bridge implementation uses XPath and not the more powerful JCR-SQL2? Is there a way for the bridge to be enhanced?	1	1	https://issues.jboss.org/browse/MODE-1680
15644	MODE-1680	So, are you saying that there is an issue with apache chemistry? Here is the [apache cmis code which seems wrong|https://github.com/apache/chemistry-opencmis/blob/trunk/chemistry-opencmis-server/chemistry-opencmis-server-jcr/src/main/java/org/apache/chemistry/opencmis/jcr/impl/DefaultDocumentIdentifierMap.java#L33]	1	1	https://issues.jboss.org/browse/MODE-1680
15645	MODE-1598	Brian, thanks for the feedback. I agree that a command line tool would be valuable. Do you want to log an enhancement request? Scripting would be important, but can you state any specific JCR-related scenarios or capabilities or ideas you'd like to see in the tool? (I have several ideas, but I'd rather hear users' expectations and ideas first.)	0	0	https://issues.jboss.org/browse/MODE-1598
15646	MODE-1587	[~hchiorean], is the precondition for our AS7.2 is to have that version of AS7 _installed_ locally or to _build_ that version locally? If the latter, then the integration test's POM can still install the AS7.2 kit in the {{target}} directory.	1	1	https://issues.jboss.org/browse/MODE-1587
15647	MODE-1583	Node type functionality, at a minimum the ability to upload a CND file. And/or a JSON interface to create, update, retrieve node types?	0	0	https://issues.jboss.org/browse/MODE-1583
15648	MODE-1576	Changing the resolution to 'Cannot Reproduce Bug', since it has been shown to work.	0	0	https://issues.jboss.org/browse/MODE-1576
15649	MODE-1561	Is it possible to have the same mimetype configuration for the text extractor (included, excluded) in ModeShape3 (and json) as it is in ModeShape2 (and xml)?	0	0	https://issues.jboss.org/browse/MODE-1561
15650	MODE-1561	Implemented the writeLimit functionality for 3.x as well. However, our current version of Tika (1.2) has this issue: https://issues.apache.org/jira/browse/TIKA-1069 for which I've added a workaround.	1	1	https://issues.jboss.org/browse/MODE-1561
15651	MODE-1535	[~rhauch]: since we're moving away from HSearch, shouldn't this be closed ?	1	0	https://issues.jboss.org/browse/MODE-1535
15652	MODE-1516	One interesting thing regarding the sequencing configuration in AS7, is that the "classname" attribute from the AS7 configuration xml, gets translated to the "type" field from our sequencer configuration (org.modeshape.jboss.subsystem.AddSequencer#92) These would seem to indicate that the "classname" attribute from our JSON schema configuration cannot be set atm from an AS7 configuration file, meaning that no custom sequencers could be defined inside AS7. Wouldn't it be better to keep the same attribute names both in the AS7 config and our schema ? (e.g. type - type, classname - classname etc)	1	1	https://issues.jboss.org/browse/MODE-1516
15653	MODE-1516	Ok. Wouldn't it be better to name the AS7 xml attribute "type" for the sequencer so there's a 1-1 mapping ?	1	1	https://issues.jboss.org/browse/MODE-1516
15654	MODE-1516	org.modeshape.jcr.JcrRepository.login(JcrRepository.java:578) at org.modeshape.jcr.JcrRepository.login(JcrRepository.java:535) at org.modeshape.jcr.JcrRepository.login(JcrRepository.java:146) at org.modeshape.test.integration.RepositoryProvider.loginAndLogout(RepositoryProvider.java:86) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.jboss.as.ee.component.ManagedReferenceMethodInterceptorFactory$ManagedReferenceMethodInterceptor.processInvocation(ManagedReferenceMethodInterceptorFactory.java:72) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.invocation.InterceptorContext$Invocation.proceed(InterceptorContext.java:374) at org.jboss.as.weld.ejb.Jsr299BindingsInterceptor.doMethodInterception(Jsr299BindingsInterceptor.java:127) at org.jboss.as.weld.ejb.Jsr299BindingsInterceptor.processInvocation(Jsr299BindingsInterceptor.java:135) at org.jboss.as.ee.component.interceptors.UserInterceptorFactory$1.processInvocation(UserInterceptorFactory.java:36) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.invocation.WeavedInterceptor.processInvocation(WeavedInterceptor.java:53) at org.jboss.as.ee.component.interceptors.UserInterceptorFactory$1.processInvocation(UserInterceptorFactory.java:36) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.invocation.InterceptorContext$Invocation.proceed(InterceptorContext.java:374) at org.jboss.as.ejb3.concurrency.ContainerManagedConcurrencyInterceptor.processInvocation(ContainerManagedConcurrencyInterceptor.java:104) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.as.weld.ejb.EjbRequestScopeActivationInterceptor.processInvocation(EjbRequestScopeActivationInterceptor.java:82) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.invocation.InitialInterceptor.processInvocation(InitialInterceptor.java:21) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.invocation.ChainedInterceptor.processInvocation(ChainedInterceptor.java:61) at org.jboss.as.ee.component.interceptors.ComponentDispatcherInterceptor.processInvocation(ComponentDispatcherInterceptor.java:53) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.as.ejb3.component.singleton.SingletonComponentInstanceAssociationInterceptor.processInvocation(SingletonComponentInstanceAssociationInterceptor.java:53) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.as.ejb3.tx.CMTTxInterceptor.invokeInOurTx(CMTTxInterceptor.java:228) at org.jboss.as.ejb3.tx.CMTTxInterceptor.required(CMTTxInterceptor.java:304) at org.jboss.as.ejb3.tx.CMTTxInterceptor.processInvocation(CMTTxInterceptor.java:190) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288)	1	1	https://issues.jboss.org/browse/MODE-1516
15655	MODE-1493	Should this be changed in 3.0.x also?	0	0	https://issues.jboss.org/browse/MODE-1493
15656	MODE-1493	Assuming we'd be able to integrate the BOM, we'd probably do that only in 3.1 (master) so I don't think we need to worry about 3.0.x. However, the question is: do we still want 2.3.4 or 2.3.3 ?	0	0	https://issues.jboss.org/browse/MODE-1493

#	Requirement	Questions	Answered	Successfully Answered	URL
15657	MODE-1487	In addition to the VDB dependencies feature, the new VDB manifest (vdb.xml) includes another new feature. The VDB manifest now allows adding models to the VDB declaratively. In other words, for these models there will *not* be an "xmi" file in the VDB archive. These models are completely defined within the vdb.xml file by either (1) using DDL (for virtual models); or (2) using the "source" element to identify the connector (for source models). Since these declarative models do not have a resource associated with them, they will not be sequenced by the current model sequencer implementation. So any associated output nodes would have to be created by the VDB manifest sequencer. These declarative models will not have an "xmi:uuid" property. One solution would be to add a node type definition to the vdb.cnd that might look like this: // model name is the node name [vdb:declarativeModel] > mix:referenceable - mmcore:modelType (string) = 'PHYSICAL' autocreated < 'PHYSICAL','VIRTUAL' - vdb:visible (boolean) = 'true' autocreated - vdb:sourceTranslator (string) // only for PHYSICAL - vdb:sourceJndiName (string) // only for PHYSICAL - vdb:sourceName (string) // only for PHYSICAL - vdb:metadataType (string) = 'DDL' autocreated // only for VIRTUAL - vdb:modelDefinition (string) // only VIRTUAL All the above properties, except "vdb:metadataType" and "vdb:modelDefinition," are properties found in the existing "vdb:model" node type definition. However, since these declarative models will not have an "xmi:uuid" they cannot extend "vdb:model" since that definition requires the "xmi:uuid" property. Another solution might be to keep the common properties of declarative and XMI models in the "vdb:model" definition and create two separate definitions for declarative and XMI models. The VDB manifest's declarative models support Teiid's dynamic VDB feature but are not yet supported by Teiid Designer. Randall, should this issue address these declarative models? If so, would creating a node type definition like above be a good solution?	1	1	https://issues.jboss.org/browse/MODE-1487
15658	MODE-1487	{quote} Another solution might be to keep the common properties of declarative and XMI models in the "vdb:model" definition and create two separate definitions for declarative and XMI models. {quote} While I would prefer changing "{{vdb:model}}" to be a supertype for "{{vdb:declarativeModel}}" and "{{vdb:xmiModel}}", it does create a backward compatibility problem for anyone with a 2.x or 3.0 installation configured with a VDB sequencer. (The likelihood of 3.0 with a VDB sequencer is small, but a 2.x installation is more likely.) So perhaps we should move the common property definitions from the existing "{{vdb:model}}" to a new "{{vdb:abstractModel}}" that is referenceable, and to then make it the supertype of the existing "{{vdb:model}}" and a new "{{vdb:declarativeModel}}" node types. This isn't ideal, but it will give us backward compatibility. {quote} Randall, should this issue address these declarative models? If so, would creating a node type definition like above be a good solution? {quote} We can use this issue to track the support for declarative models, but we should probably rename the issue to describe that we're adding support for newer Teiid and Teiid Designer features (and enumerate them in the description). I don't see much point in artificially separating the work into separate issues -- using separate commits for logically-separate changes would still be useful, though. WDYT?	1	1	https://issues.jboss.org/browse/MODE-1487
15659	MODE-1487	The common VDB model properties can be moved into "vdb:abstractModel." I think making "vdb:abstracModel" a mixin not a node type definition would work. How does this look: [vdb:abstractModel] mixin - vdb:description (string) - vdb:visible (boolean) = 'true' autocreated - vdb:pathInVdb (string) - vdb:sourceTranslator (string) - vdb:sourceJndiName (string) - vdb:sourceName (string) // name is the node name (xmi models) [vdb:model] > vdb:abstractModel, mmcore:model - vdb:checksum (long) - vdb:builtIn (boolean) = 'false' autocreated + vdb:markers (vdb:markers) = vdb:markers copy // model name is the node name [vdb:declarativeModel] > nt:unstructured, mix:referenceable - mmcore:modelType (string) = 'PHYSICAL' autocreated < 'PHYSICAL','VIRTUAL' - vdb:metadataType (string) = 'DDL' autocreated - vdb:modelDefinition (string) As stated before, the declarative model cannot inherit from "mmcore:model" as it requires an "xmi:uuid." So the declarative model node type must also declare "mmcore:modelType" and "mix:referenceable."	1	1	https://issues.jboss.org/browse/MODE-1487
15660	MODE-1476	Are we renaming the repository as well ?	1	1	https://issues.jboss.org/browse/MODE-1476
15661	MODE-1472	Horia Chiorean <hchiorea@redhat.com> made a comment on [bug 814675|https://bugzilla.redhat.com/show_bug.cgi?id=814675] Where is the MissingMethodException generated from ? (this is not a java.lang exception and moreover, SLF4J 1.6.1 has the same API as 1.5.8 - used in SOA)	1	1	https://issues.jboss.org/browse/MODE-1472
15662	MODE-1472	Martin Vecera <mvecera@redhat.com> made a comment on [bug 814675|https://bugzilla.redhat.com/show_bug.cgi?id=814675] There are still other non-necessary dependencies in the library. What is preventing us from following the jbossall-client.jar approach? This is in its MANIFEST.MF: Class-Path: commons-logging.jar concurrent.jar ejb3-persistence.jar hi bernate-annotations.jar hibernate-commons-annotations.jar hibernate-c ore.jar hibernate-validator.jar hornetq-core-client.jar hornetq-jms-c lient.jar jboss-aop-client.jar jboss-appclient.jar jboss-aspect-jdk50 -client.jar jboss-client.jar jboss-common-core.jar jboss-deployers-cl ient-spi.jar jboss-deployers-client.jar jboss-deployers-core-spi.jar jboss-deployers-core.jar jboss-deployment.jar jboss-ejb3-common-clien t.jar jboss-ejb3-core-client.jar jboss-ejb3-ext-api.jar jboss-ejb3-pr oxy-clustered-client.jar jboss-ejb3-proxy-impl-client.jar jboss-ejb3- proxy-spi-client.jar jboss-ejb3-security-client.jar jboss-ejb3-vfs-sp i.jar jboss-ha-client.jar jboss-ha-legacy-client.jar jboss-iiop-clien t.jar jboss-integration.jar jboss-j2se.jar jboss-javaee.jar jboss-jsr 77-client.jar jboss-logging-jdk.jar jboss-logging-log4j.jar jboss-log ging-spi.jar jboss-mdr.jar jboss-messaging-client.jar jboss-profilese rvice-client.jar jboss-remoting.jar jboss-security-spi.jar jboss-seri alization.jar jboss-srp-client.jar jboss-system-client.jar jboss-syst em-jmx-client.jar jbosscx-client.jar jbossjts-integration.jar jbossjt s.jar jbosssx-as-client.jar jbosssx-client.jar jmx-client.jar jmx-inv oker-adaptor-client.jar jnp-client.jar netty.jar slf4j-api.jar slf4j- jboss-logging.jar xmlsec.jar	1	1	https://issues.jboss.org/browse/MODE-1472
15663	MODE-1472	Horia Chiorean <hchiorea@redhat.com> made a comment on [bug 814675|https://bugzilla.redhat.com/show_bug.cgi?id=814675] modeshape-client.jar should be used as a standalone client jar, not only inside AS but also outside (as a JDBC driver for example). Therefore, just adding the dependencies inside of MANIFEST.MF is not really an option. The logging dependency was optional, since logging works with just JUL logging. However, all the other packaged dependencies are needed to maintain the standalone functionality. What are the other dependencies which are conflicting atm (if you have stacktraces please post them as well). Thanks.	1	1	https://issues.jboss.org/browse/MODE-1472
15664	MODE-1462	Regarding the AS 7 subsystem: the code seems to be using MS logging & JBoss logging, but the pom.xml defines also dependencies to: log4j and commons-logging. Why are those dependencies needed ?	1	1	https://issues.jboss.org/browse/MODE-1462
15665	MODE-1461	Randall Hauch <rhauch@redhat.com> made a comment on [bug 813837|https://bugzilla.redhat.com/show_bug.cgi?id=813837] The last automated comment reflects that MODE-1461 now only deals with ModeShape 3.0 (e.g., 'master' branch), and not longer affects 2.x. Since there's no work to be done for 2.x, can we resolve this issue?	1	0	https://issues.jboss.org/browse/MODE-1461
15666	MODE-1459	It looks like this has been repeatedly de-prioritized. Do you know whether this will be actually worked on for 4.1?	1	0	https://issues.jboss.org/browse/MODE-1459

15668	MODE-1444	Does Cassandra have support for variables inside their YAML file? If so, you could have one configuration file and use code to determine the variables. Might be easier; might not.	0	0	https://issues.jboss.org/browse/MODE-1444
15669	MODE-1440	Looks much better Randall... and all elements with defaults (as indicated in the schema) are not required. Correct?	1	1	https://issues.jboss.org/browse/MODE-1440
15670	MODE-1388	Targeting to 4.0. I'd really like to understand more than just the one use case. How is it useful to have some nodes disappear automatically after a period of time? If we have no new information, we'll probably close this as WONTFIX or REJECTED.	0	0	https://issues.jboss.org/browse/MODE-1388
15671	MODE-1365	Note that lots of {code} WARN HSEARCH000050: It appears changes are being pushed to the index out of a transaction. Register the IndexWorkFlushEventListener listener on flush to correctly manage Collections! {code} messages are being logged by Hibernate Search when we index nodes. See ISPN-1218 (which is marked as WONTFIX), but I think we need to address this.	0	0	https://issues.jboss.org/browse/MODE-1365
15672	MODE-1352	Isn't this a duplicate of MODE-1988 ?	1	0	https://issues.jboss.org/browse/MODE-1352
15673	MODE-1344	Can this be targeted to 3.1 (~Feb 2012), or does it need to be done by 3.0?	1	1	https://issues.jboss.org/browse/MODE-1344
15674	MODE-1344	That's going to be difficult to do and will involve some bigger enhancements to the sequencing framework in 2.7, since the 2.7 sequencing framework doesn't allow sequencers to create new node types. After all, the graph layer knows nothing about node types. It is possible, but just quite a bit of work (about 2-3 weeks total, compared with roughly 2-3 days in 3.0). An interim step might be to just be sure to read the extended properties and add them to the derived output, but not to create new node types. This means that the extended properties would appear in results (if included in the SELECT clause) but would not appear in the JDBC schema. Also, importing the models would not create the corresponding columns, but they could be modeled manually. Obviously this is less than ideal.	1	1	https://issues.jboss.org/browse/MODE-1344
