Dear Bruce:

The work, I envision for you and your students to do for Victory City (VC), could fall into two major categories:

1. Help me complete the plans on VC and work out the technical details.
2. Disengage your students' inhibitions, and let their imagination run wild to see what kind of new city plan or plans they might create.

Select either or both categories. I am interested in plans that would accomplish the following:

Save land, money, energy, time, the ecology, all natural resources and man made wealth.

Promote clean air, land & water; health; safety; education; opportunity; prosperity.

Improve our standard of living, using less resources to do it.

If category No. 1 is chosen, plans for the following are still needed:

industry building
freight elevator building
monorail station
transportation building
tunnel system with pedestrian & freight transportation systems.

utilities:

heating & air conditioning system for entire city
electric generating plant
telephone system
water works
sewage disposal system
trash & garbage disposal & recycling systems

food production:

slaughter house & meat processing plant
dairy farm
chicken farm factory
fish farm
vegetable & fruit greenhouse
farms & farmland
