

Before entering any V.C. a person must show his bankbook to a guard (V.C. private police) who will compare the photo on the book with the person presenting it to ascertain that they correspond. These check points at all entrances will be monitored on TV closed circuit in police headquarters.

In case of emergency the members of the fire department will back up the police as their second line of defence, and the police will be the second line of defence to back up the firemen. Each will have some training in the other's duties for this purpose.

It must be understood that Victory City will be a private city and that all the land owned by it will be private property. Any unauthorized person upon it will be trespassing. The exception to this will be the highway system which by necessity must tie into and become a part of the public highway system. Included in the exception would be the public parking area and filling stations, auto repair garage, new and used car dealers.

Eventually in the distant future, perhaps a 100-150 million years from now when 90% of the people in the U.S. are living in V.C.'s, then the major portion of all crimes committed will be concentrated amongst the remaining 10% of the people still living in the old obsolete cities. This will enable the entire might of the nation, all its financial resources, local police forces, state troopers, national guard, F.B.I., and all the federal military forces can concentrate on the 10% instead of being spread thin amongst 100% of the people.

FIRE DEPT. & FIRE PREVENTION

There would be fire hoses, fire extinguishers, and whatever other equipment that is necessary throughout the building. Also sprinkler systems and fire alarm systems should be considered for all sections. The entire building including all apartments will be inspected routinely and frequently for fire or explosion hazards.

There will not be one stick of wood used in the construction of V.C. or in any of the furniture, furnishings or equipment in V.C. Not only will this make the building much more fireproof, but it will also help preserve what is left of the forests of our land. The decline of trees on the landscape has contributed greatly to the increasingly bad floods in the U.S.

The building will be of reinforced poured concrete construction with a metal curtain wall on the outside. The interior walls will be mostly concrete but some will be removable metal partitions which will have a non-inflamable plastic foam in the center, sandwiched between two sheets of metal, probably aluminum with a baked enamel in various decorator colors. The furniture will all be metal, similar to office furniture and will be specially designed for V.C. so that not an inch of space would be wasted, and each individual item of furniture would be designated for a particular position in an apartment.
