

## FOOD SYSTEM

The bulk of VC's food will come from VC's own farms in the surrounding countryside just beyond the circular highway. Everyday fresh vegetables, fruit, dairy products, & meat will be picked, brought into VC and prepared, cooked, served & eaten all in the same day.

From a nutritional standpoint this will bolster the health and stamina of all VC individuals and perhaps contribute to a more favorable course for the future evolution of man.

From an economical standpoint, great savings will be made by the elimination of all types of food stores, the supermarket grocery chain stores, the supporting wholesale warehouses, the fleet of trucks to move all the food back and forth, the food processors, packagers, canneries, bakeries, meat packing plants, etc. The cost of canning, freezing or dehydrating food is gone. Fresh food is better tasting and better nutritionally anyway.

There will be no need for preservatives, artificial flavors, artificial coloring, monosodium glutamate, excessive spices, corn starch, pectin, cellulose, bleached degerminated white flour, salt, sugar, water, and numerous additives and chemicals. Most of this junk will be eliminated.

We are what we eat.

## ANNEX GREENHOUSE

There will be a greenhouse covering most of the Annex roof in order to grow additional vegetables & fruits and extend their season. If there is sufficient room we could also grow flowers. Freight elevators will take the greenhouse produce down to the kitchen area as soon as it is picked.

## TEENAGE STUDENTS TO WORK FARMS

To qualify for their free high school & college education all teenagers will be required to work on the farms & in the greenhouse. For additional incentive it will probably be necessary to pay them according to the quantity & quality of their work. The outdoor work will be healthy for them & will provide new knowledge, variety of experience, & a broader view of life.

## INEXPENSIVE JOB TRANSFERS

As progress in our civilization excellerates, many changes in industry are taking place. There are changes in product and changes in plant size and plant location, and accompanying changes in jobs. This means learning new skills and transferring from one location to another in order that there may be progress. Job transfers apply to the laborer and the executive, and are on the increase, and the rate of increase is increasing. Everyone is subject to a job transfer from one city to another or to another state or foreign country. The transfer may be within the same company or to another, and over a period of time there may be several transfers for one individual.
