A TEXT-BOOK ON RHETORIC,

SUPPLEMENTING THE

DEVELOPMENT OF THE SCIENCE WITH EXHAUSTIVE
PRACTICE IN COMPOSITION.

A COURSE OF PRACTICAL LESSONS ADAPTED FOR
USE IN HIGH SCHOOLS AND ACADEMIES AND
IN THE LOWER CLASSES OF COLLEGES.

BY

BRAINERD KELLOGG, LL.D.,

Professor of the English Language and Literature in the Brooklyn Polytechnic
Institute. Author of a Text-book on English Literature, and one
of the Authors of Reed & Kellogg's "Graded Lessons in
English" and "Higher Lessons in English,
Etc., Etc.

New and Improved Edition.

L. N. THURBER, PRINTER.

NEW YORK:
MAYNARD, MERRILL & CO.,
43, 45 AND 47 EAST TENTH STREET.
1894.
A COMPLETE COURSE IN ENGLISH.

BY

ALONZO REED, A.M., AND BRAINERD KELLOGG, L.L.D.

REED'S WORD LESSONS, A COMPLETE SPELLER. Designed to teach the correct spelling, pronunciation, and use of each word only as that most common in current literature, and as are most likely to be misspelled, mispronounced, or misused, and to awaken new interest in the study of synonyms and of word-analysis. 286 pages, $2.00.

REED'S INTRODUCTORY LANGUAGE WORK. A simple, varied, and pleasing, but methodical series of exercises in English to precede the study of technical grammar. 250 pages, 16mo, $1.50.

REED & KELLOGG'S GRADED LESSONS IN ENGLISH. An elementary English grammar, consisting of one hundred practical lessons, carefully graded and adapted to the class-room. 300 pages, 16mo, linen.

REED & KELLOGG'S HIGHER LESSONS IN ENGLISH. A work on English grammar and composition, in which the science of the language is made tributary to the art of expression. A course of practical lessons carefully graded, and adapted to every-day use in the school-room. 310 pages, 16mo, cloth.

REED & KELLOGG'S ONE-BOOK COURSE IN ENGLISH. A carefully graded and complete series of lessons in English grammar and composition based on the natural development of the science. For schools that have not time to complete more than one book on grammar. 228 pages, 16mo, cloth.

KELLOGG & REED'S WORD-BUILDING. Fifty lessons, combining Latin, Greek, and Anglo-Saxon roots, prefixes, and suffixes, into about fifty-five hundred common derivative words in English; with a brief history of the English language. 127 pages, 16mo, cloth.

KELLOGG & REED'S THE ENGLISH LANGUAGE. A brief history of the grammatical changes of the language and its vocabulary, with exercises on synonyms, prefixes, suffixes, word-analysis, and word-building. A text-book for high schools and colleges. 212 pages, 16mo, cloth.

KELLOGG'S TEXT-BOOK ON RHETORIC. Revised and enlarged edition. Supplementing the development of the science with exhaustive practice in composition. A course of practical lessons adapted for use in high schools, academies, and lower classes of colleges. 345 pages, 16mo, cloth.

KELLOGG'S TEXT-BOOK ON ENGLISH LITERATURE, with copious extracts from the leading authors, English and American, and full instructions as to the method in which these are to be studied. 387 pages, 12mo, cloth.

Copyright, 1890, 1891, 1892, by Brainard Kellogg.

PREFACE.

Rhetoric, an Art. Learning what to do and how to do it and retailing the acquired knowledge in recitations and in oral or written examinations are things easy of accomplishment; doing what one has learned how to do, and doing this habitually, are not. What teacher of rhetoric has not sympathized with the delightful Portia, in the "Merchant of Venice," when she says, with a sigh, "If to do were as easy as to know what were good to do, chapels had been churches, and poor men's cottages princes' palaces"?

Because of this difficulty of doing and our neglect of it, how much of our instruction fails of that for which it is chiefly intended!

No professor of music—text-book as well as instructor—sits down with his scholar, expounds the principles on which the art of music rests, explains how this, that, and the other piece should be rendered, instances model performers, warns the pupil against the errors into which he is liable to fall, and then goes away imagining that under such training the youth is likely to become a musician. But in teaching the art of arts, the art of thinking and expressing thought, are we not prone to stop short with the presentation of the principles of the science; or add, it may be, for correction, some passages violating these principles, or in-
Rhetoric, the Art of Expression. Under qualities of style, the pupil is made familiar with perspicuity, imagery, energy, wit, pathos, and elegance, learns in detail what he must do to secure these qualities, and has placed before him pages of extracts from the best writers for the critical study of style.

Under productions, all discourse is divided into oral and written, and written into prose and poetry. These are subdivided, and the requisites and functions of the grand divisions and of their subdivisions are explained. Special attention is given to those productions exacted of the pupil—debates, orations, letters, essays. The rhythm and the meter of poetry and the substitution of feet are made level to the pupil's comprehension, and extracts are given for the critical study of poetry.
The Doing, the Essential Thing. But whether, under the head of *invention*, the author is conducting the pupil up through the construction of sentences and paragraphs, and through the analysis of subjects and the preparation of frameworks, to the finding of thought for his theme; or, under the head of *style*, he is acquainting the pupil with its cardinal qualities; or, under the head of *productions*, he is dividing and subdividing discourse, noting the nature and offices of each division; — everywhere he is keeping in sight the fact that the pupil is to acquire an art, and that to attain this he must constantly do what he has learned, from the study of the theory and the study of authors, that it is "good to do."

Rhetoric, a Preparation for Literature. But the ability to do is not everything. The capacity to appreciate what others have done is something. This book is a way of approach to literature, a preparation for it, and it is meant to be more. In the work required by the directions and in the study of the extracts from prose and poetry, the pupil has to make frequent and prolonged incursions into the field of literature itself. What he is to look for and look at there, what value he is to attach to his findings, and what enjoyment he may derive from them, he is taught.

The Revision. The first edition of this work the author has used for twelve years in the classroom. This book is a revision of that. While some things in the original work have been dropped from this, and many things, not in the original, may be found in this, the lesson numbers are not changed — the new edition can be used without confusion.
TABLE OF CONTENTS.

RHETORIC.

I. Construction of Simple and Compound Sentences, and of Complex Sentences with Adjective, Adverb, or Noun Clauses, and with Causal Complex or Compound.

II. Formation of Paragraphs.

III. Analysis of subjects.

IV. Preparation of Frameworks.

1. Matter of the Subject:

2. Use of Words:
   a. Moderate Number, b. Sufficient Number.

3. Arrangement of Words, Phrases, and Clauses.
   a. Unity of the Sentence.

II. Imagery .

III. Energy (acquired by):

IV. Wit.

V. Pathos.

VI. Elegance.

RHETORIC.

1. Oral......
   e. Lectures and Addresses.
   f. Arguments, g. Sermons.

2. Written......
   e. Biographies, f. Essays, g. Fiction.

III. Poetry......

1. Mission.

2. Style.
   a. Rhythm.
   b. Meter.
   c. Rhyme.

3. Form......
   a. Didactic.
   b. Satirical.
   c. Lyric.

IV. Kind of...

1. Imitation.

2. Pastoral.

3. Epic.

4. Dramatic Comedy.

5. Tragedy.
TO THE TEACHER.

Twelve years' use of the previous edition of this text-book in the classroom warrants us, perhaps, in making a suggestion or two.

1. If your pupils have been thoroughly exercised in the analysis and the construction of sentences, as taught in Reed & Kellogg's "Graded Lessons in English," "Higher Lessons," and "One Book Course," or have done equivalent work in other grammars, Lessons 3-20 of this book may be hurried over. But if your pupils have not fairly mastered the English sentence, we counsel holding them steadfastly to these Lessons.

2. The thorough understanding of the paragraph, the ability to form good, logical frameworks, and the habit of making these frameworks before the labor of writing is begun seem to us invaluable. The work in Lessons 21-30, then, should not be slighted. The work formerly exacted in Lessons 25 and 26 has been omitted.

3. See to it, also, that in the department called Qualities of Style, your pupils (1) understand the reason, or philosophy, of things, given in the long primer type; that (2) they recite the definitions exactly as laid down in the text or that they invent and give better ones; that (3) they learn the Roman and the Arabic notation under which what is said is arranged; and that (4) they perform a large fraction, if not all, of the work enjoined in the Directions. The importance of the pupils' doing what they have learned it is good to do and have learned how to do cannot be over-estimated. Pass by these pairs of synonyms in Lessons 33-36, between the words of which sufficiently broad distinctions have not yet obtained if in your judgment any such are there. Make much, and in the way pointed out, of the extracts in Lessons 74 and 75. Such work will open the eyes of the pupils to the merits of different authors.

4. Ground your pupils thoroughly in rhythm, in the substitution of poetic feet, and in scansion, as taught in Lessons 79 and 80.

R. K.

RHETORIC.

LESSON 1.

INTRODUCTORY.

What Rhetoric is.—We talk and we write to make known our thoughts, and we do it in sentences, the sentence being the universal and necessary form of oral and of written communication. In every sentence there are the words arranged in a certain order and addressed to the ear or to the eye; and there is that which these words express and impart, itself unheard and unseen, but reaching the mind of the hearer or reader through the words which he hears or sees. That which these words express we call a thought; hence

A sentence is a group of words expressing a thought.

Rhetoric deals with the thought of the sentence and with the words which express it, and so its function is twofold. It teaches us how to find the thought, and how best to express it in words. In this, its twofold function, rhetoric works near neighbor to grammar and to logic. Grammar, as well as rhetoric, deals with the words of a sentence; and logic, as well as rhetoric, deals with thought; but the fields of the three, though lying side by side, are distinct.

The better to see the field which rhetoric tills, it is useful, without attempting complete definitions, to say that
grammar teaches us the offices of single words in the sentence, and of those groups of words called phrases and clauses, and shows us what forms the inflected words must have in their various relations. It teaches, also, how to construct correct sentences containing the parts of speech in their several relations. Syntactical correctness is its chief aim. Logic deals with thought, but not with the thought in single and detached sentences. It does not decide whether this thought and that thought are true, but what conclusion follows from them if we assume them to be true. Without pointing out its full function, we may say that logic teaches us to reason correctly, to make right inferences, to draw just conclusions.

In what rhetoric has to do with words, it begins its work where that of grammar ends. It teaches us how in the choice and arrangement of words to express the thought clearly or forcibly or gracefully — in a word, how to express it most happily for the special purpose in hand. And helping us to find the thought with which we reason, its work with the thought ends where that of logic begins. Rhetoric, then, lies in between grammar and logic. The word side of its field touches the field of grammar, the thought side of it touches the field of logic; hence

Rhetoric is the study that teaches us how to invent thought, and how to express it most appropriately in words.

What the Word Rhetoric means. — You have seen what the thing is; look now at its name. The word rhetoric comes originally from a Greek verb which means to flow or to speak. Were we to name the study now, it is possible that we should take some word which means to write. But rhetoric was studied before writing became general, and

ages and ages before printing was invented. Men spoke long before they wrote, because speaking was easy. The air, the lungs, and the organs of the throat and mouth were ready and waiting to be used.

Writing was at first impossible, and for a long while difficult after it became possible. There were needed (1) an alphabet, and (2) something upon which to write. Letters, characters which would represent to the eye the sounds which the voice addressed to the ear, had to be invented. And that was not at all a task is shown by the fact that even today we have not in English a perfect alphabet; some of the twenty-six letters standing each for many sounds, some having no sounds belonging exclusively to them, and some combinations of letters being used to represent single sounds. That it was hard to find a suitable substance on which to write, a few words attest. From parchment we learn that the cleaned and dried skins of sheep, hares, goats, and calves were used, and from papyrus, that removing the writing so that the skin could be used again became a business; from paper, that the thin, cohesive layers of the stem of the papyrus, an Egyptian plant, served as a material; from ostracism and pelidium, that in voting at Athens to banish a citizen, a clay tile or a shell was used, and at Syracuse an olive-leaf; from style, that surfaces smeared with wax were prepared; from liber and librari, that the bark of trees, and from book, that beechen tablets, were resorted to.

Publication, then, among the Greeks and Romans was by the voice — Dr. Quiney says the voice of the actor, and that of the speaker on the bema, or platform. This must largely have determined (1) what kind of literature they have not be cultivated, and (2) the style in which this should be composed. In the main that was written which could be recited or spoken, and it was written so that it could
be appreciated by the listener. To this noteworthy fact modern literature is signally indebted. Its lawmakers in Europe and America have been those whose style was purified and perfected by the study of the great models which Athens and Rome furnished, or by the study of writers familiar with these models. It is much for us that these models were themselves shaped by the necessities of oral communication. They were to be addressed to the ear and not to the eye; their meaning and merit caught by the hearer as the speaker hurried on from sentence to sentence. Such discourse must have had, and did have, the great and essential qualities of style,—simplicity, clearness, directness, vigor. The writer who is accustomed to speaking, and who brings his sentences to this test, is the one likely to learn the secret of expression, the art of "putting things." And this leads us to speak of

Usage as Authority in Rhetoric.—There is no reason, in the nature of things, why an English noun in the nominative plural should always have its verb in the plural—the Greek noun in the nominative plural did not; or why English words should be spelled and accentuated as they now are—they have not always been. The reason why these things are as they are is, that the people who use the language have agreed that they should be so and not otherwise. The grammar and the dictionary of today are full of truths which have not always been truths, and will not always be; in other words, their truths are not, like those of mathematics, unchangeable. They are conventional, depend upon consent; are true as long as that consent is given; cease to be true when that consent is withdrawn.

So in rhetoric. While rhetoric is based upon principles as changeless as the mind which thinks and imparts thought, in that department of its work which is concerned with expression it has only usage as authority for what it teaches—the usage of the best writers and speakers. And this is variable, changing from generation to generation. While, for example, it must always be true that a thought should be expressed clearly, it is not true that an expression of it, clear to one generation, will necessarily be clear to the next.

Many words narrow in meaning, many widen, others completely change, and some words drop out of the vocabulary. Then, too, an arrangement of words customary at one time is not at another. A use of imagery suited to the taste of one age surfeits the next; indeed, what was imagery once is accounted plain language now. Concretes and turns of expression current in Sidney's day grate harshly upon our ears; and who would not, in the matter of style, appeal from Shakespeare in "Love's Labor Lost" to Shakespeare in "As You Like It?"

Style, then, is fluid and shifting. Its highest standard in any era is the prevailing usage of that era. What this usage is cannot always be easily determined, but, as soon as it is ascertained for our period, we must bow to it as the supreme authority.

Value of Rhetoric.—1. Dealing with invention, the finding of the thought, or subject-matter, rhetoric compels us to think; and thinking is the highest act of which the intellect is capable.

2. Dealing with expression, about which, as we have seen, there may be question, and large freedom of choice, rhetoric stimulates inquiry, provokes the student to study and to open disputation, compels to a balancing of views, and develops an independent judgment. This discipline is eminently wholesome, and prepares one for the all of life.

3. Rhetoric gives a command of the vocabulary. Next to having something to say is the ability to impart it in
apt words fitly arranged in the sentence, in sentences happily marshalled in the paragraph, in paragraphs standing to each other in their natural order.

4. Rhetoric lays literature under tribute. Based as rhetoric is, upon the writings of the great, living and dead, it opens our eyes to see, and educates our taste to enjoy, the treasures of thought and the graces of style lavished upon them. Of all the arts none outranks literature. Rhetoric opens this to our possession and enjoyment, and aims to make us proficient in it.

No valid objection lies against the study of rhetoric. It allows us all the freedom great writers and speakers have used, acquaints us with that which makes their productions classic, and bars our straying away into paths they have shunned,—paths that lead to harm. It checks license but not liberty. Only a false rhetoric, narrowing good usage by forbidding what this allows; that enforces a bookish diction, puts under ban the idioms of conversation, insists upon an arrangement, stiff and unnatural, and gives such emphasis to manner as to withdraw proper attention from the matter,—only such a rhetoric could be hurtful.

Let us add that, were rhetoric to end with teaching the pupil how things should be done, its study would not be fruitless. Rhetoric bears its full fruit, however, only when, in addition to this, it leads the pupil to do them as they should be done. Not rhetoric in the memory alone, enabling one to criticize, but rhetoric that has worked its way down into the tongue and into the fingers, enabling one to speak well and write well, is what the pupil needs.

To the Teacher.—See to it, before you proceed, that the pupils understand what rhetoric is, and how it is related to kindred studies, and yet differs from them.

Allow us here, on the very threshold of the study, to say that a large part of the pupil’s work in the preparation of his lessons will be composition. This is that to which everything else required will be made subordinate. Whatever, then, is shunned, do not allow this to be.

INVENTION.

LESSON 2.

SIMPLE SENTENCES.

What Invention is.—Thought is communicated by means of words. They are its instrument, its servant. The thought determines the expression—the worthy thought prompting to a worthy expression, the worthless thought allowing a poor expression. Both in time and in importance, then, the thought stands first, and deserves the special attention of the pupil.

Invention is that department of rhetoric which treats of the finding of thought for single sentences and for continued discourse.

What it is to Think, and what a Thought is.—By means of our bodily senses the mind comes face to face with the things of the outer world. Through the senses the mind sees, hears, feels, tastes, and smells—in short, perceives. Through the senses it receives and brings into itself and stores away in the memory impressions, images, or pictures of the things perceived. It gets these pictures, too, by reading and hearing people speak,—the written or the oral.
Invention.

word calling up these pictures to the mind. These impressions, or images, or pictures, of things we call ideas.

That the mind does receive and store away these ideas is proved by the fact that we can bring them up out of the memory, look at them with what we may call the "mind's eye," and through them perceive again, as it were, the things long ago seen, heard, felt, tasted, or smelt. This bringing up the ideas and through them knowing the things again is remembering, recollecting.

And without the bodily senses the mind can perceive—it can perceive its own acts, facts, feelings. These are already in the mind, and so need no bodily sense to bring them into it.

The things perceived stand in some relation to each other; the ideas we get of them through our senses may be made to represent them in this relation.

To think is (1) to detect this relation, one of agreement or of disagreement in some form, between things, between our mental pictures, or ideas, of things, and (2) so to unite these ideas as in our minds and to ourselves to affirm this relation. The result of these two acts of detecting and uniting is a thought. The writer or speaker detects this relation, affirms it to himself, and then expresses it in words. In reading him or listening to him we receive these ideas in the form of thought. By our own observation we get ideas, single and detached. We can ourselves convert them into thought immediately, or can lay them away in memory, recall them at any time afterward, and fuse them into thought. Uncombined, they are the raw material out of which thoughts are to be manufactured.

If these ideas are so united as exactly to mirror the relation which the things they picture actually hold to each other, the thought is true; if to assert or represent some other relation, the thought is untrue or false. He who first
detects the relation subsisting between certain things, and unites his ideas of them so as to represent them in this relation, creates an absolutely original thought; if he is ignorant that another has done it before him, the thought is only original with himself.

A thought is produced by the fusion of at least two ideas. Birds fly = Birds are flying. Here the idea denoted by birds and that denoted by flying are brought together, and in the sentence are coupled by the copula are, and thus one is affirmed of the other. Birds, naming the things and our idea of the things of which something is to be affirmed, is the subject of the sentence; and are flying, denoting what is affirmed and affirming it, is the predicate.

A simple sentence is one that contains but one subject and one predicate, either or both of which may be compounded.

Other words may be brought into the sentence and grouped about the subject and the predicate. The words so used are (1) adjectives expressing ideas (a) assumed; as, Industrious people can be found; and (b) asserted; as, The Chinese are industrious; are (2) adverbs; as, The Gulf Stream flows rapidly; are (3) nouns used as complements; as, Can I become an orator? Practice makes an orator.

What orators practice has made some men? are (4) nouns used as adjective modifiers. (a) possessive; as, Last came Joy's ecstatic trial; (b) explanatory; as, Edw. VI., Tudor, preceded Mary; are (5) words used independently; as, O sir, help me.

Directions. — (1) Justify the punctuation and the capitalization in the illustrations above. (2) Write sentences illustrating all the points made above, but use no words in relations other than those explained in writing these sentences; observe and illustrate the following rules, for capital letters and for punctuation.
Invention.

Capital Letters. - Begin with a capital letter (1) the first word of a sentence, and (2) of a line of poetry; (3) proper names (including all names of the Deity) and words derived from them, (4) names of things vividly personified, and (5) most abbreviations; and write in capital letters (6) the words I and O, and (7) numbers in the Roman notation.

Period. - Place a period after (1) a declarative or an imperative sentence, (2) an abbreviation, and (3) a number written in the Roman notation.

Comma. - Set off by the comma (1) an explanatory modifier which does not restrict the modified term or combine closely with it; (2) a word or phrase independent or nearly so.

Apostrophe. - Use the apostrophe (1) to distinguish the possessive from other cases.

Interrogation Point. - A direct interrogative sentence or clause should be followed by an interrogation point.

Exclamation Point. - An exclamatory expression should be followed by an exclamation point.

Simple Sentences.

LESSON 3.

simple sentences.

A noun or pronoun with its preposition, forming a prepositional phrase, may be brought into the sentence and perform the office of (1) an adjective modifier; as, Vibrations of other cause light; or (2) an adverb modifier; as, For this, time is required. Without its preposition the noun may be used adverbially and become (1) a so-called dative object; as, Hall refused Charles I. admittance; and (2) a noun of measure or direction; as, He returned home.

An infinitive phrase, to with its verb, may be brought into the sentence, and become (1) a subject; as, To err is human; (2) a complement; as, The command is to forgive. The Bible teaches us to forgive. The teacher made the pupil (to) forgive; (3) an adjective modifier; as, The way to be forgiven is revealed; (4) an explanatory modifier; as, This duty, to obey, is recognized; (5) an adverb modifier; as, Strive to do your duty; (6) the principal term of another phrase; as, He was about to speak; and (7) it may be independent; as, To tell the truth, he haunted counting-rooms.

A participle may be brought into the sentence, and become (1) an adjective modifier; as, An expanding, rising; (2) a complement; as, The gladiator lay bleeding, Mirea saw people crossing the bridge; (3) the principal word of a prepositional phrase; as, By losing its privacy, benevolence loses its charm; (4) the principal word in a phrase used as subject; as, Casting out the 9's will prove the operation; (5) the principal word in a phrase used as complement; as, Pardon my forgetting your request; and (6) it may be independent; as, Speaking plainly, Hamlet wasn't mad.
Invention.

Directions. — (1) Justify the punctuation in the illustrations above. (2) Write sentences illustrating all the points made above, but use no words in other relations than those explained in this and in the preceding Lesson. Let no word have more than a single modifier, and, if possible, let no modifier be modified. In writing observe these rules also: —

Comma. — Set off by the comma (1) a phrase that is placed out of its natural order and made emphatic, or that is loosely connected with the rest of the sentence; and (4) a participle used as an adjective modifier, with the words belonging to it, unless restrictive. Use the comma (5) whenever it will prevent ambiguity or make the meaning clearer.

Apostrophe. — Use the apostrophe (2) to mark the omission of letters, and (3) in the pluralizing of letters, figures, and characters.

Hyphen. — Use the hyphen (1) to join the parts of compound words, and (2) between the syllables when a word is divided.

LESSON 4.

Simple Sentences. — Compound Subject and Predicate, and Compound and Complex Modifiers.

Compound Modifiers. — Two or more nouns, each modified by one or more adjectives, may be used in a sentence, in the several offices indicated in 2; and any verb or adjective in the sentence may be modified by more than one adverb.

Simple Sentences. — Point out the offices of the parts of speech in the sentences below, and justify the punctuation: —

1. The greedy grubs and insects devour tender potato-vines, beans, beets, corn, and other plants.
2. The Roman amusements were the stage, the circus, and the arena.
3. Despair not, soldier, statesman, citizen.
4. Macaulay, essayist, historian, and statesman, died in 1859.
5. Shakespeare's and everybody's ideal, Portia, was amiable and noble, and loved her husband truly and passionately.
6. The times made Brutus an assassin and a traitor.

Several nouns with their prepositions, forming phrases, may be used as adjective modifiers of the same word, and, with or without their prepositions, as adverb modifiers.

Direction. — Describe the phrase modifiers in the sentences below, tell what they modify, and justify the punctuation:

1. The tersest simplicity and the profound brevity of question and of reply were characteristics of the Spartans.
2. From every bush, from every fence, from cannon and muskets, a pitiless storm poured upon the retreating British.
3. At Cape May, the coast bears away nine feet a year.

Direction. — Write simple sentences illustrating the points just made.

Several infinitive phrases or participles may be used in the various offices indicated in Lesson 3.

Direction. — Point out the infinitive phrases and participles in the sentences below, tell their functions, and justify the punctuation:

1. To spare the submissive and to war down the proud was to recognize and obey the tenets of Rome.
2. After his acquittal, Warren Hastings amused himself with embellishing his grounds, riding fine Arab horses, and trying to rear Indian animals and vegetables in England.
Invention.

3. A longing to dictate, to intermeddle, and to make others feel his power made Frederic the Great unwilling to ask counsel, to confide important secrets, or to delegate ample powers.

4. The world saw Marie Antoinette decorating and cheering her elevated sphere.

5. The queen’s horses, saddled and bridled, and about to start and follow the chase, stood pawing the earth and champing their bits.

6. Obeying the precept, to watch and to pray, and overlooking our neighbors’ speaking ill of us and doing us wrong constitute the severest test of Christian virtue.

7. To tell the truth and not to exaggerate, speaking honestly and not dissembling, no man has ever stood this test perfectly.

8. The highest proof of virtue is to possess boundless power without abusing it.

Direction. — Write simple sentences illustrating all these points. Keep the sentences, if possible, perfectly clear of complex modifiers.

Complex Modifiers. — The nouns and verbs of phrase modifiers and all other modifiers may themselves be modified.

Direction. — Point out and describe the modifiers in the sentences below, particularly all those which modify other modifiers or parts of them, and justify the punctuation:

1. Cromwell was bitterly opposed to all jurisdiction in matters of religion.

2. According to Marsh, the irregularity of the spelling in early English is very frequently chargeable almost wholly to the thoughtless printer’s desire to fill out the line.

3. Could is said by Earle to have acquired its t by associating with those little words, or auxiliaries, would and should.

4. The Saxon words in English are short, in great part monosyllabic, and full of consonants.

5. Yeast is added to dough merely to convert, or, putting it in other words, to change, by chemical action, some of the starch into sugar, and to raise and lighten the loaf by thus dispersing the liberated carbonic acid gas equally throughout the mass.

6. A well constituted tribunal, sitting regularly six days in the week and nine hours a day, would have brought Hastings’ trial, lasting eight years, to a close in three months.

7. Addison’s friends stood greatly amazed to see young Alexander Pope persistently maligning their chief, and yet giving himself out as a candidate for Addison’s favor.

Direction. — In these sentences you see that nouns as subjects, as complements, as possessive and explanatory modifiers, and nouns in adjective or adverb modifiers; that adjectives denoting qualities assumed or asserted; that adverbs; that verbs as prenouns and verbs in infinitive phrases used independently or as adjective, explanatory, or adverb modifiers; and that participles used independently or as adjective modifiers, as complements, and as principal words in prepositional phrases — that these are all modified. You see also by what they are modified. Write simple sentences illustrating all these points. In writing observe these rules also:

Comma. — Separate by the comma (6) connected words and phrases, unless all the conjunctions are expressed; and (7) connected predicates and other phrases, when long and differently modified, though no conjunction is omitted. Set off by the comma (8) a term connected to another by or and having the same meaning.

Period. — Place the period (4) after Arabic figures used to enumerate.

**Lesson 5.**

**Complex Sentences with Adjective Clauses.**

You have seen that even simple sentences may be long and difficult, and may express much. But the simple sentence is not the only sentence in constant use. We may put two or more simple sentences together, each with all its essential parts accompanied by their modifiers, and form what we call a complex or a compound sentence. These parts of complex and of compound sentences, containing each, of course, a subject and a predicate, we call clauses. Some of these clauses may perform merely the functions of adjectives, of adverbs, or of nouns. These we call dependent clauses. Those not so degraded in office we call independent clauses. Hence

*A clause is a part of a sentence (complex or compound) containing a subject and its predicate.*

*A dependent clause is one used as an adjective, an adverb, or a noun.*

*An independent clause is one not dependent on another clause.*

*A complex sentence is one composed of an independent clause and one or more dependent clauses.*

*A compound sentence is one composed of two or more independent clauses.*

We begin with that species of the complex sentence which contains a dependent clause used as an adjective, that is, an adjective clause. The adjective clause may modify any noun in the leading clause; and the connecting word in the adjective clause need not necessarily be the subject.

**Complex Sentences.**

Adjective clauses may be classified as restrictive and unrestrictive. **Restrictive clauses** limit the scope, or application, of the words they modify; as, *Water that is stagnant* is unhealthful. **Unrestrictive clauses** do not so limit, or restrict, the application of the words they modify; as, *Water, which is oxygen and hydrogen united,* is essential to life.

**Direction.**—Point out and classify the adjective clauses in the sentences below, tell what they modify, name the additional office, if any, that each connective performs, and justify the punctuation:

1. Those who drink beer think beer.
2. Rome was great only in what we call physical strength.
3. Marlborough, who died 17—, is perhaps the only instance of a man of real greatness who loved money for money's sake.
4. The one great corruption to which all religion is exposed is its separation from morality.
5. The bran of wheat, which is the covering of the kernel, is made up of several layers, and is broken into scales in grinding.
6. The mightiest master of words the world ever knew was the great Athenian, D—th—

Often the connecting word is omitted, and so, sometimes, is the antecedent. *When and where* equalling *in which; why, equaling for which;* and *whence, equaling by which,* may introduce adjective clauses. *It and there* are often used idiomatically to throw the real subject after the verb.

7. There are times when every active mind feels itself above any and all human books.
8. It is faith in something and enthusiasm for something that make life worth looking at.
9. A verb is a word whereby the chief action of the mind is expressed.
10. The valley of Chamouni is a place where the traveller has to linger for days and even for weeks.
11. Even P — r H x y would be troubled to give the reason why mosquitoes and midges exist.
LESSON 6.

COMPLEX SENTENCES WITH ADVERB CLAUSES.

Dependent clauses may discharge the office of adverbs. Such clauses, called adverb clauses, may express (1) the time, (2) the place, (3) the degree, (4) the manner, and (5) the real cause of the action or being denoted by verbs, or they may modify adjectives or adverbs.

Direction. — Classify the adverb clauses in the sentences below, tell what they modify, give the connectives with their full functions, and justify the punctuation:

1. The colorless substance known in ancient times as bird-lime is the gluten remaining after the starch in flour has been washed away.

2. The convalescent changes sides oftener than a politician.

3. The waves of sound do not move so rapidly as the waves of light.

4. The ancient Roman went to bed early, simply because his worthy mother Earth could not afford him candles.

5. Listed in numbers, for the numbers came.

6. Where there is a well-ballasted paragraph, solid in matter and earnest in manner, the adverbs may be crowded with glad effect.

7. As the twig is bent, the tree is inclined.

8. While Raleigh was launching paper navies, Shakespeare was stretching his baby hands for the moon.

9. Milk is one of the most important foods, since it contains all the elements of nutrition in the most digestible form.

10. The more we know of ancient literature, the more we are struck with its modernness.

11. Milton almost requires a service to be played before you enter upon him.

12. As we grow older, we think more and more of old persons and of old places and things.

13. Sometimes there is cinder in the iron, because there is cinder in the hay.

14. Since we declared our independence in 17—, how this country has developed!

15. As the juices of meat, determining its flavor, are not the same throughout an animal, all parts of the flesh do not taste alike.

16. As one tree keeps down another in the forest, so one speculator antagonizes other speculators.

17. When love begins to sicken and decay, it useth an enforced economy.

18. The ether in space is so thin that some scientists doubt its having any resisting power.

19. In Goethe’s character of poet, he set as little store by useless learning as Shakespeare did.

20. Carbonic acid gas sinks to the bottom of caves and abandoned wells, as it is heavier than air.

21. Whenever the subjected nation even approximates to an
equality in material or mental force, the native dialect is adopted by the conqueror.

22. Tea increases the waste in the body, since it promotes the transformation of food without supplying nutriment, and increases the loss of heat without supplying fuel.

23. Knowledge and timber should not be much used till they are seasoned.

Direction. — Write complex sentences containing adverb clauses of time, place, degree, manner, and real cause, introduced by the several connectives used above. In writing observe this rule also: —

Comma. Set off by the comma (10) the adverb clause, unless it closely follows and restricts the word it modifies.

LESSON 7.

COMPLEX SENTENCES WITH ADVERB CLAUSES.

Adverb clauses may express (6) reason, the cause of our knowing and asserting something to be, (7) condition, (8) purpose, and (9) concession, that in spite of which something exists.

Direction. — Classify the adverb clauses in these sentences, tell what they modify, note the connectives which introduce the clauses different in kind, and justify the punctuation:

1. Foul deeds will rise, though all the earth overwhelm them, to men's eyes.

2. We have had a long and severe drought, for the streams are low.

3. Coffee, roasted, is ground so that the aromatic volatile oil in it may be developed.

4. If bad men combine, the good must associate.

5. Moralists should cultivate in men the proper love of wealth and of power, lest civilization should be undone.

6. Were one to open his ear and his purse to all the schemes proposed to him, he would soon find himself in the poor-house.

7. If is sometimes omitted.

8. Cheese, although it is itself difficult of digestion, promotes the digestion of other foods.

9. Since there are fossils in the rocks ante-dating man, the first of terrestrial animals in dignity could not have been the first in time.

10. Charles II. cringed to Louis XIV. that he, the English king, might trample on his own people.

11. However imperfect the jury-system may be, we cannot afford to abandon it.

12. Richelieu died in the natural course of nature, notwithstanding he was all his life long beset by assassins.

13. Except your younger brother come down with you, ye shall see my face no more.

14. Unless the young of the oyster perished by the million, the shallow seas would swarm with these melodists.

15. Love not sleep, lest thou come to poverty.

16. Provided a boy has an eye for every side and angle of contingency, he may succeed in law.

17. Shun debt in order that you may never be the slave of creditors.

18. On condition that twelve citizens of Calais would give themselves into his hands, Edward III. promised to show mercy to the town.

19. The season must have been a rainy one, because vegetation is rank.

20. O thou invisible spirit of wine, if thou hast no name to be known by, let us call thee devil.

Direction. Write complex sentences containing adverb clauses of reason, condition, purpose, and concession, introduced by the several connectives used above.
It is worth noting that of the nine classes of adverb clauses, explained and illustrated, the last five really come under the head of cause, although only the first of them assigns the cause proper. The reason clause assigns the cause of our knowing and asserting something to be, though not the cause which makes it to be; the condition clause assigns what, if it occurs, will be the cause of something; the purpose clause assigns the motive which is working in some mind, or might work in some mind, to cause something; and the concession clause assigns a cause for something else than that expressed in the leading proposition—a cause in spite of which what is said in the leading proposition takes place.

LESSON 8.

COMPLEX SENTENCES WITH NOUN CLAUSES.

Dependent clauses may perform the office of nouns. Such clauses, called noun clauses, may be used (1) as subjects of verbs, (2) as object complements,—objects of verbs, (3) as attribute complements,—predicate clauses, (4) as explanatory modifiers—in apposition, (5) with or without the preposition expressed, as principal terms of prepositional phrases, and (6) as principal terms of absolute phrases.

These clauses may be questions, direct or indirect; and they may be quoted directly or indirectly.

A direct question introduced into a sentence is one in which the exact words and their order in an interrogative sentence are preserved, and which is followed by an interrogation point; and an indirect question is one referred to as a question, but not asked or quoted as such, and is not followed by an interrogation point.

A direct quotation is one whose exact words as well as thought are copied, and an indirect quotation is one whose thought is copied, but whose exact words are not.

Direction.—Classify the noun clauses in these sentences, point out the direct and the indirect questions and quotations, change the direct questions and quotations to indirect and the indirect to direct, and justify the punctuation and the capitalization:

1. Much turns upon when and where you read a book.
2. Lowell has long been certain that the great voice of American writing and speaking is a studied want of simplicity.
3. Nathan Hale's only regret was, that he had but one life to give to his country.
4. Logicians say that the operations of the intellect are three; namely, 1. Simple apprehension; 2. Judgment; 3. Discourse, or reasoning.
5. Byron, seeing Moore eating an underdone beast's heart, asked if he were not afraid of committing murder after such a meal.
6. That Mary Queen of Scots, hardly inferior to Elizabeth in intellectual power, stood high above her in fire and grace and brilliancy of temper, admits of no doubt.
7. Charles Lamb, reading the epitaphs in the churchyard, inquired, "Where be all the bad people buried?"
8. "I would surrender all my genius and learning in exchange for beauty" is a remark credited to Madame de Stael.
9. In studying grammar through the English language, we must purge our minds of the wooden notion that it is an inherent quality of a word to be this or that part of speech.
10. That Cromwell was a great general being admitted, we will turn to his statesmanship.
11. The whole force of conversation depends on how much you can take for granted.
12. Your ancestors' having done nothing is not considered proof that you can do anything.

Direction.—Write complex sentences containing noun clauses of all kinds, and illustrate all the points made above. In writing observe these rules also:
Invention.

Comma.—Set off by the comma (11) a noun clause used as an attribute complement; and (12) a direct quotation making complete sense and introduced into a sentence, unless it is formally introduced or is a noun clause used as subject; and use the comma (13) after as, viz., to wit, namely, and that is, when they introduce examples or illustrations.

Capital Letters.—Begin with a capital letter (8) the first word of a direct quotation making complete sense and of a direct question introduced into a sentence, and (9) phrases or clauses separately numbered or paragraphed.

Quotation Marks.—Quotation marks enclose a copied word or passage. If the quotation contains a quotation, this is enclosed within single marks.

Semicolon.—Use the semicolon (7) before as, viz., to wit, namely, and that is, when they introduce examples or illustrations.

LESSON 9.

COMPLEX SENTENCES WITH ALL KINDS OF DEPENDENT CLAUSES.

Direction.—Point out and classify the adjective, the adverb, and the noun clauses in the sentences below, and justify the punctuation:

1. If we track Queen Elizabeth through her tortuous mazes of lying and intrigue, the sense of her greatness is almost lost in a sense of contempt.

2. William, Earl of Nassau, won a subject from Spain whenever he put on his hat.

3. The nearer you come into relation with a person, the more necessary do tact and courtesy become.

4. The natural tendency to run adjectives together in triads is an instinctive effort of the mind to present a thought with the three dimensions that belong to every solid.

5. “Truth gets well if [if = even if = though] she is run over by a locomotive.”

6. “Thanatopsis” first appeared in print in the North American Review, which for so many years was our leading quarterly.

7. How often would I have gathered thy children together, as a hen doth gather her brood under her wings!

8. Yet I am strong and lusty, for in my youth I never did apply hot and rebellious liquors in my blood.

9. Know ye not that a little leaven leaveth the whole lump?

10. The unpoetical side of Protestantism is, that it has no women to be worshipped.

11. Where there is no tabi-bearer, the strife ceaseth.

12. We disbelieve that we may the better believe and believe the better.

13. “God gave two-thirds of all the beauty to Eve” is a saying of the Mohammedans.

14. It will be fair to-day, for last evening’s red sky is followed by this morning’s gray.

15. Daily do we verify this saying: “Man’s extremity is God’s opportunity.”

16. The principle involved in, “Resistance to tyrants is obedience to God,” was the seminal principle of the American Revolution.

17. That Washington was the man to lead the American army being the belief of the Continental Congress, he was nominated for that post by John Adams.

18. Astronomers are certain that the planet Jupiter is not inhabited by creatures like ourselves.

Direction. Write complex sentences illustrating the several uses of dependent clauses. In writing observe these rules also:

Colon.—Use the colon (1) before a quotation or an
Invention.

enumeration of particulars when formally introduced.

Brackets. — Use brackets to enclose what, in quoting another's words, you insert by way of explanation or correction.

LESSON 10.

COMPOUND SENTENCES.

The independent clauses joined to form compound sentences may be (1) in the same line of thought, the second adding to the first, the third adding to the first and second, and so on; they may be (2) adversative to each other, presenting thoughts in contrast or in alternation; or they may express thoughts one of which shall be (3) a consequence of the other, or (4) an inference from it. The clauses are usually connected by conjunctions, but they may stand joined by their very position in the sentence — connected without any conjunction expressed.

Direction. — Classify the sentences below according to the relations of their clauses to each other, note the conjunctions, when used, which unite the clauses in these relations, and justify the punctuation:

1. All the arrangements of our telescopes and microscopes are anticipated in the eye, and our best musical instruments are surpass’d by the larynx.
2. Charms strike the sight, but merit wins the soul.
3. The consonant R was once a picture of a house, and D is an old picture of a door.
4. The one prudence of life is concentration; the one evil is dissipation.

Compound Sentences.

5. Nitro-glycerine has great rending power, but it has no value whatever as a projectile.
6. Fat is heat-generating alone, whilst flesh is both flesh-forming and heat-generating.
7. Spring is a fickle mistress, Summer is more staid, Autumn is the poet of the family, but Winter is a thoroughly honest fellow with no nonsense in him.
8. In the wilds of Maine the aboriginal trees have never been dispossessed, nor has nature been disordered.
9. Oh! come ye in peace here, or come ye in war?
10. Wisdom is the principal thing, therefore get wisdom.
11. The camel has been termed the ship of the desert, the caravan may be termed its fleet.
12. Tie-tie-tie-tie! go the wheels of thought; our will cannot stop them; they cannot stop themselves; sleep cannot still them; madness only makes them go faster; death alone can break into the case, and silence at last the clicking of the terrible escapement carried so long beneath our wrinkled foreheads.
13. Young trees must be planted in our older states, or the water in many of our streams will fail.
14. Water expands in freezing; often in the winter season pitchers filled with it burst.
15. Our memories are most retentive in youth, consequently geography, history, and the modern languages should be studied then.
16. These Moors are changeable in their wills — put money in thy purse.
17. Histories make men wise; poets, witty; the mathematicians, subtle; natural philosophy, deep; moral, grave.

Direction. — Write compound sentences whose clauses shall stand in the relations explained above, and shall illustrate the points there made. In writing observe these rules also —

Comma. — (15) Co-ordinate clauses, independent or dependent, when short and closely connected, should be separated by the comma. Use the comma (15) to denote an omission of words.
**Invention.**

**Semicolon.**—Co-ordinate clauses, independent or dependent, (2) when slightly connected, or (3) when themselves divided by the comma, should be separated by the semicolon.

**Dash.**—Use the dash (3) where the sentence breaks off abruptly, and the same thought is resumed after a slight suspension, or another takes its place.

---

**LESSON 11.**

**SIMPLE, COMPLEX, AND COMPOUND SENTENCES.**

**Direction.**—Classify these sentences, name the independent and the dependent clauses, give the function and relation of each, and justify the punctuation throughout:

1. A great deal which in colder regions is ascribed to mean dispositions belongs to mean temperature.
2. Caesar thought Cassius dangerous to the state, because he had a lean and hungry look, and was without taste for music.
3. Most people in this country must work with head or hands, or they must starve.
4. And wretches hang that jurymen may dine.
5. The mountains in Brazil are too high to scale, the rivers are too wide to bridge.
6. The starting eyeball and the open mouth tell more terror than the most abject words.
7. Nature is in earnest when she makes a woman.
8. New rice must be inferior to old, inasmuch as it is less digestible.
9. It is remarkable that scarcely a house built before 1800 has any special means for ventilation.
10. By a usage, which was peculiar to England, each subtenant in addition to his oath of fealty to his lord swore fealty directly to the crown.

**Simple, Complex, and Compound Sentences.**

11. To be bold against an enemy is common to the brutes, but the prerogative of a man is to be bold against himself.
12. Very few people now urge that it is unjust to tax one for the education of other people's children.
13. Controversy equalizes fools and wise men, and the fools know it.
14. As the door turneth upon his hinges, so doth the slothful upon his bed.
15. Horse-racing is not a republican institution; horse-trotting is.
16. Where there is no vision, the people perish.
17. The internal secretions are diminished by the use of alcoholic drinks; hence the larynx, mouth, and throat become dry, the tendency to congestion of the circulation-centers also increasing.
18. Though Milton defended the execution of Charles I, yet he died an ordinary death.
19. That force is indestructible and eternal was first recognized in India.
20. The belief of some is, that hospitality is largely a matter of latitude.
21. Wallace's discovery of the military value of the stout peasant footman gave a death blow to the system of feudalism, and changed in the end the face of Europe.
22. That the Bunker Hill Monument sways with the wind being a fact, astronomical observatories must at times be unserviceable.
23. Many people are still confident that the national history and the national language are studied only in their decay.
24. With us law is nothing, unless close behind it stands a warm, living, public opinion.

**Direction.**—Write simple, complex, and compound sentences. Illustrate all kinds of dependent clauses in your complex sentences, and all kinds of independent clauses in your compound sentences. Let some of your compound sentences be without connectives. Attend carefully to the punctuation, and illustrate the use of all the marks.
LESSON 12.

SENTENCES WITH COMPLEX AND COMPOUND CLAUSES.

You have seen that single words may be united to form, for example, a compound subject or a compound complement; and that the same word may have many modifiers forming what, taken as a whole, we have called a compound modifier.

You have seen, too, that one modifier may be modified by another, the whole forming a complex word or phrase modifier.

You are now to see that sentences may contain clauses which are themselves compound or complex. In such we reach the highest stage of intricacy of which the sentence is susceptible.

**Direction.**—Point out the independent and the dependent clauses in these sentences, tell what clauses are coordinate and what ones modify clauses which are themselves dependent, give the function of each clause, and justify the punctuation throughout:

1. When I said I would die a bachelor, I did not think I should live till I were married.

2. As long as the Lord can tolerate me, I think I can stand my fellow-creatures.

3. The honorable member may perhaps find that, in that contest, there will be blows to take as well as blows to give; that others can state comparisons as significant, at least, as his own; and that his impudence may possibly demand of him whatever powers of taunt and sarcasm he may possess.

4. We pick the sun's rays to pieces, as [we would pick them] if they were so many skeins of colored yarn.

5. Train up a child in the way he should go, and, when he is old, he will not depart from it.

6. Only remember this: that, if a barrel of potatoes is shaken in a market cart without springs to it, the small ones always get to the bottom.

7. When one has had all his conceit taken out of him, his feathers will soon swaik through, and he will fly no more.

8. If man could have invented language, we may safely conclude that he did invent it; for God does nothing for us which we can do ourselves.

9. Marshal Lannes once said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid."

10. The view of Longinus, one of the ablest critics of antiquity, was the right one, that, if the Iliad was the work of Homer's fiery youth and early manhood, the Odyssey belongs to his senescent age—that, if the one is the glory of the mid-day, the other is the glory of the setting sun.

11. The ordinary talk of unlettered men among us is fuller of metaphor, and of phrases that suggest lively images, than that of any other people I have seen.

12. As we perceive the shadow to have moved along the dial, but did not see it moving; and as it appears that the grass has grown, though nobody ever saw it grow: so the advances we make in knowledge, as they consist of such minute steps, are perceptible only by the distance.

**Complex and Compound Clauses.**

6. Only remember this: that, if a barrel of potatoes is shaken in a market cart without springs to it, the small ones always get to the bottom.

7. When one has had all his conceit taken out of him, his feathers will soon swaik through, and he will fly no more.

8. If man could have invented language, we may safely conclude that he did invent it; for God does nothing for us which we can do ourselves.

9. Marshal Lannes once said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid."

10. The view of Longinus, one of the ablest critics of antiquity, was the right one, that, if the Iliad was the work of Homer's fiery youth and early manhood, the Odyssey belongs to his senescent age—that, if the one is the glory of the mid-day, the other is the glory of the setting sun.

11. The ordinary talk of unlettered men among us is fuller of metaphor, and of phrases that suggest lively images, than that of any other people I have seen.

12. As we perceive the shadow to have moved along the dial, but did not see it moving; and as it appears that the grass has grown, though nobody ever saw it grow: so the advances we make in knowledge, as they consist of such minute steps, are perceptible only by the distance.

**Direction.**—Write sentences containing compound and complex clauses and illustrating the points exhibited above. In writing observe these rules also:

**Dash.**—Use the dash (—) before a word or phrase repeated at intervals for emphasis.

**Colon.**—Use the colon (:) between the great parts of a sentence when these parts are themselves divided by the semicolon.
LESSON 13.

SENTENCES WITH COMPLEX AND COMPOUND CLAUSES.

Direction.—Treat the sentences in this Lesson as you treated those in Lesson 12:—

1. "If I were rich, I think I would have my garden covered with an awning, so that it would be comfortable to work in," says Warner, the humorist.

2. Speak the speech, I pray you, as I pronounced it to you, trippingly on the tongue; but, if you mouth it, as many of your players do, I had as lief the town-crier spoke my lines.

3. There is no elasticity in a mathematical fact; everything must go to pieces that comes into collision with it.

4. Emerson tells us, "I knew a wise woman who said to her friends, 'When I am old, rule me.'"

5. "I am never beaten until I know that I am beaten" was a remark of Benedict's.

6. Strangely, in that distant century, where the general history is but outline, and the great men and women who figured on the world’s stage are, for the most part, only names, the story of Becket, in the last days of it especially, stands out as in some indelible photograph, every minutest feature of it as distinct as if it were present to our eyes.

7. The point of honor which requires a man to be afraid of seeming to be afraid of what he is afraid of, forms no part of the Homeric idea of heroism.

8. Sheridan, when he concluded his great speech in the impeachment of Hastings, contended, with a knowledge of stage effect which his father might have envied, to sink back, as if exhausted, into the arms of Burke, who hugged him with the energy of generous enthusiasm.

9. But we cannot have everything, as the man said when he was down with the small-pox and the cholera, and the yellow-fever came into the neighborhood.

10. They sent Tallien to seek out a boy lieutenant, Napoleon Bonaparte, the shadow of an officer, so thin and pallid that, when he was placed on the stand before them, the President of the Assembly, fearful, if the fate of France rested on the shrivelled form, the ashy cheek before him, that all hope was gone, asked, "Young man, can you protect the Assembly?"

11. The dogma is borrowed from a character in a play which is, I dare say, as great a favorite with my learned friend as it is with me,—I mean the comedy of "The Rivals"—in which Mrs. Malaprop, giving a lecture on the subject of marriage to her niece, (who is unreasonable enough to talk of liking, as a necessary preliminary to such a union,) says, "What have you to do with your likings and your preferences, child?"

Direction.—Write as directed in the preceding Lesson. In writing observe these rules also:—

Marks of Parenthesis.—Marks of parenthesis may be used to enclose what has no essential connection with the rest of the sentence.

Dash.—The dash may be used (5) instead of marks of parenthesis, and (6) may follow other marks, adding to their force.

LESSON 14.

SUBSTITUTION AND CONTRACTION.

One part of speech or modifier may be exchanged for another, and by omission and contraction we may abridge and even get rid of clauses, dependent or independent. We shall make use of these facts when we come to speak of certain qualities of style, but for obvious reasons we shall take up the matter here.
**Invention.**

**Direction.** — Where you can, change the prepositional phrases in these sentences to adjectives, or to nouns in the possessive case:

1. A thing of beauty is a joy forever.
2. German is homogeneous to a remarkable degree.
3. At Nasby the rout of the forces of the King was complete.
4. From the time of Edward the First to that of Cromwell, no Jew touched the soil of England.
5. The dungeon was, in its origin, the principal tower in the castle of the lord.
6. The best features of the translation of King James, in 1611, are derived from the version of Tyndale.
7. Vulgarisms are, in many cases, only poetry in the egg.

**Direction.** — Where you can, change these adjectives, adverbs, and nouns in the possessive case to prepositional phrases:

1. Charles the Second’s last act was to seek formal admission into the Roman Catholic Church.
2. The interjection may be said to be passion’s mother-tongue.
3. The conclusions of science are seldom more than highly probable.
4. The study of the Greek and Latin languages might advantageously be partly replaced by the study of Anglo-Saxon.
5. The serpent’s trail is over; than all.
6. There were 700,000 vols. in the two Alexandrian libraries.
7. British and American commerce has scattered the productions of Anglo-Saxon genius over the habitable globe.
8. In Elizabeth’s reign, domestic architecture was in its infancy.
9. The water-lily is the type of the poet’s soul.
10. This strange word, demijohn, has sadly puzzled etymologists.

**Direction.** — Write sentences illustrating fully both these series of changes.

Participles may be substituted for infinitive phrases, and infinitive phrases for participles.

**Substitution and Contraction.**

**Direction.** — Where you can, change the participles in these sentences to infinitive phrases, and the infinitive phrases to participles:

1. To speak properly, vulgarity is in the thought and not in the word.
2. One of the great needs of language is the purging of its prurient and pretentious metaphors.
3. The best way of arriving at a theory of disease is by beginning with the theory of health.
4. To reduce a language to writing is to put a stop to the formation of inflections.
5. Having something to say and saying just that and no other is after all the secret of the art of writing.
6. To have a specific style and always to use it is to be poor in speech.

**Direction.** — Write sentences illustrating these substitutions.

Adjective, adverb, and independent clauses may be contracted by omitting pronouns and verbs or the verbs alone.

**Direction.** — Contract these adjective and adverb clauses and some of the independent clauses:

1. Our place is to be true to the best that we know.
2. All attainable health is a duty; all avoidable sickness is a sin.
3. You are always sure to detect a sham in the things which most affect.
4. When you are an anvil, hold you still; when you are a hammer, strike your fill.
5. No poetry was ever more human than Chaucer’s.
6. The oak does not grow so fast as the pine grows.
7. Truth gets well if she is run over by a locomotive.
8. The most satisfactory impressions of places which we have never seen are derived from poetry.
9. Lawyers are the cleverest men; ministers are the most learned, and doctors are the most sensible.
10. The Yankee says that, if it were possible, he would have no outside rows in his cornfield.

**Direction.** — Write sentences illustrating these contractions.
SUBSTITUTION AND CONTRACTION.

We may rid the sentence of adjective clauses by dropping the subject and the verb; of adverb clauses by dropping the subject, the verb, and the connective; and of independent clauses by dropping the subject, the verb, and the repeated words.

Direction.—Get rid of as many of these adjective, adverb, and independent clauses as you can;—

1. A shrug of the shoulders would lose much if it were translated into words.
2. Men, like peaches and pears, grow sweet a little while before they are ready to fall.
3. A sharp criticism which has a drop of witty venom in it stings a young author almost to death.
4. Many people fail, because they neglect their business.
5. Trains should be run that travellers may be accommodated.
6. If we keep to the golden mean in everything, we shall at least avoid danger.
7. Queen Mary was hopeful that she should be liberated by France or Spain, the enemies of Elizabeth.
8. The true Christian lives as the New Testament directs.
9. Shakespeare died where he was born.
10. Milton was eight years old when Shakespeare died.
11. Some minute animals feed, though they have no mouths or stomachs.
12. Though we care for our bodies, we cannot always keep them in health and vigor.
13. The thought that the fixed stars are billions of miles away is appalling.

Direction.—Write sentences containing adverb and noun clauses, and illustrate the changes there shown.
LESSON 16.

SUBSTITUTION AND CONTRACTION.

Adjective, adverb, noun, and independent clauses may be contracted to participles, or to phrases containing participles.

**Direction.**—Change each dependent clause in these sentences, and an independent clause in the compound sentence, to a participle or to a phrase containing a participle:

1. Men who have not handled books from infancy are afraid of them.
2. Glaciers, which flow down mountain gorges, obey the law of rivers.
3. Good Americans, when they die, go to Paris.
4. Error dies of lockjaw if she scratches her finger.
5. That a maple tree has sex seems a little strange.
6. When Johnson wrote for publication, he did his sentences out of English into Johnsonese.
7. Death, though it delays its visit long, will certainly knock at every door.
8. Dark clothes are warm in summer, because they absorb the rays of the sun.
9. The only criticism made upon Washington is, that he was not intellectually eminent.
10. Franklin must have been a wise philosopher, since he is quoted by everybody.
11. What boy does not lament that he never heard Daniel Webster speak?
12. The Mosque of Omar occupies the site of Solomon’s Temple, and it is the most graceful building in the East.

**Direction.**—Write sentences containing (1) restrictive and (2) unrestrictive adjective clauses, (3) the kinds of adverb clauses, and (4) of noun clauses, used above, and (5) independent clauses, and illustrate the changes made above.

**Substitution and Contraction.**

Adverb and independent clauses may be contracted to absolute phrases.

**Direction.**—Change one independent clause in each compound sentence below to an absolute phrase, and every adverb clause in the complex sentences to an absolute phrase:

1. When the cat’s away, the mice will play.
2. The letter A was once a picture, a bull’s head was represented by it.
3. The tides rise higher than usual at new moon, since the sun and moon then act in conjunction.
4. Though the age of reading and of thinking men has come, the age of bullets is not over.
5. If the boy sows the seeds of moral or physical ill-health, the man will reap the bitter harvest.
6. We have passed the 21st of September, as the sun sets now before six.
7. Every inordinate cup is unblessed, and the ingredient is a devil.

**Direction.**—Write (1) sentences containing the kinds of adverb clauses used above, and (2) compound sentences, and illustrate the changes there shown.

LESSON 17.

SUBSTITUTION AND CONTRACTION.

Adjective, adverb, and noun clauses may be contracted to infinitive phrases.

**Direction.**—Contract the dependent clauses in these sentences to phrases containing infinitives:

1. A general often leaves his camp-fires burning that they may conceal his retreat.
Invention.

2. Modern failures are of such magnitude that they appall the imagination.
3. Some students are foolish, because they study so late at night.
4. We should rejoice when we hear of the prosperity of others.
5. It is of the very nature of an interjection that it eludes the meshes of a definition.
6. Every Bostonian thinks that the State House is the hub of the solar system.
7. The Son of Man had no place where he might lay his head.
8. That we make the most of golden opportunities is a privilege as well as a duty.
9. The influence of school prizes is, that they lead pupils to study for the sake of them.
10. Everybody is quite sure that he shall make a mint of money in his speculation.
11. His friends did not know how or where they should look for the body of A. T. Stewart.
12. People in this country are seldom without the means by which they can procure food.
13. How delightful it would be if we could throw away our locks, and turn our jails and prisons into hospitals!
14. There is a time when one may dance.

Direction. — Write sentences containing the kinds of adjective, adverb, and noun clauses used above, and illustrate the changes there made.

Direct questions or quotations may be changed to indirect, and indirect to direct.

Direction. — Change the direct questions and quotations below and in Lesson 12 to indirect, and the indirect to direct: —

1. An Athenian, sent to Sparta on public business, reported, on returning to his native city, that he understood why the Spartans were so ready to remain on the battlefield, as a Spartan death was less formidable than a Spartan dinner.

Expansion and Substitution.

2. Agesilaus the Great, hearing one praise an orator who had the power of magnifying little things, said, “I do not like a shoemaker who puts large shoes on a small foot.”

3. Had a Spartan been asked, “What is the chief end of man?” he would have answered by inquiring if it was not to live as uncomfortably as possible, and to die fighting, spitted by a hostile spear.

Direction. — Write sentences illustrating these changes.

Adverb clauses may be changed to adjective clauses, and one of the independent clauses in a compound sentence to an adjective or an adverb clause.

Direction. — Change the adverb clause below to an adjective clause, and one clause of each compound sentence to a dependent clause, adjective or adverb: —

1. Give us the luxuries of life, and we will dispense with its necessaries.
2. There is surely an eclipse, it is growing dark at midnight.
3. The engines are returning, the fire is put out.
4. When a miser has lost his hoard, he has nothing left to comfort him.
5. The prodigal son had the best of reasons for staying at home, yet he wandered away from it.
6. Pearls are worn by queens, and yet these jewels are formed inside of oyster shells.

Direction. — Write sentences illustrating these changes.

LESSON 13.

EXPANSION AND SUBSTITUTION.

Direction. — By expansion and substitution illustrate, with the sentences in this and in the following Lesson, the teaching of the last four Lessons, and give an account of your work: —
1. Everybody has something to teach us.

2. Almost extinguished among the Jews, sacrifice is still a part of the worship of the Bedouin Arab.

3. Adam Smith's "Wealth of Nations" is one of the most important books men have written.

4. The wonderful having become common, we are likely to overlook it.

5. George the Third's reign was the golden age of mediocrity.

6. Milton was not only the highest but the completest type of Puritanism.

7. The setting sun, mantling with the bloom of roses, the Alpine snows, had to our eyes a value beyond its optical one.

8. A race shortening its weapons lengthens its boundaries.

9. We are all tattooed in our cradles with the national beliefs and prejudices.

10. The story of Cromwell's being prevented by a royal embargo from crossing the sea to America is probably unfounded.

11. No poet of the first class has ever left a school behind him, his imagination being incomunicable.

12. A petition from the officers of Parliament demanded the withdrawal of the proposal to restore the monarchy.

13. After eating honey, one thinks his tea to be without sugar.

14. The fire is out, for the engines are returning.

15. Had you asked Dr. Johnson what his opinion of a sick man was, he would have replied, "Every man is a rascal as soon as he is sick."

16. To defend ourselves and our own is an imperative duty.

17. The Nibelungen Lied, the great epic of Germany, dates, in all probability, back to 1200.

18. The best of perfumes is just fresh air with no mixture of anything in it.

19. Shakespeare was forty-four years old at Milton's birth.

20. Mohammedans promise to live up to the teachings of the Koran.

21. Wishing to enjoy the Adirondacks, you must carry mountains in your brain.

22. Read by so many, the words of the English Bible do not become obsolete.

---

**Expansion and Substitution.**

23. The effect of friction is to heat the substances rubbed.

24. We are certain in the end to overcome evil with good.

25. The weeds in our gardens and in our minds are likely to grow so fast as to choke the plants.

26. Staying at home, one may visit Italy and the tropics.

27. Trifles light as air are, to the jealous, confirmations strong as proofs from holy writ.

**Direction.** — Write sentences and expand them to illustrate the points made above. When you can, illustrate, as above, more than one point in a sentence.

---

**LESSON 19.**

**Expansion and Substitution.**

1. The lampreys fastens upon a person or a fish to suck out the blood.

2. We are always glad to harness a force of nature to our work.

3. Drive a strange ox into a pasture, and there will always be a trial of strength between him and the leader of the herd.

4. The dough not being well kneaded, the bread is too porous.

5. Dry flour having been added to the dough, the loaf will be hard and close.

6. Sir Walter Scott was unjust to himself to write, after his great failure, almost without cessation.

7. We are sorry to see the days growing shorter and the nights longer.

8. It is a good sign, when writing, to have your feet grow cold.

9. The frost having appeared, the yellow fever is still hot to leave.

10. Liberty's knowing nothing but victory has almost become an adage.

11. Everybody concedes Washington's having been a purer patriot than Napoleon.
12. God made the country, and man, the town.
13. To earn is to have.
14. Being delightful is being classic.
15. Capt. Ends built jetties at the mouth of the Mississippi for the improvement of the channel.
16. With good health and cheerful spirits, one can accomplish much.
17. By keeping the fields free from weeds, one will not necessarily reap a bountiful harvest.
18. By allowing the weeds to grow unchecked, the farmer will reap nothing at all.
19. Rain, falling, rises from the lakes and seas as vapor.
20. Night came on, closing the petals of the flowers.
21. A strong argument against the jury-system is the court's excluding intelligent men from the jury-box.
22. Arnold was fearful of being detected in his treason.
23. Each rogue, repenting, melts his stern papa.
24. Cairo is situated at the junction of the Ohio with the Mississippi.
25. The Nile, rising to a certain height, makes Egypt fruitful.
26. By no enactment of Maine Laws will legislatures utterly destroy intemperance.
27. The grass is covered with dew this morning, because the night was clear and cool.
28. By the concealment of his crime, the murderer escaped detection.
29. A scholar who has lost his money is not a bankrupt.
30. Though we live in time and space, yet we can understand neither.
31. Water, one of whose elements is inflammable and the other supports combustion, is itself hostile to fire.
32. The ice, having contracted and left great cracks, must have been subjected to very low temperature.
33. Hamlet’s mother asking him, “What have I done that thou darst wag thy tongue in noise so rude against me?” he replied that it was an act which blurred the grace and blush of modesty.
34. Roads are repaired for the accommodation of travellers.
35. The true patriot does not act from selfishness.

Composition of Sentences.

Direction.—Be careful so to expand and change the sentences in Lessons 18 and 19 that every point in the four preceding Lessons shall be illustrated. Give the reason for every mark of punctuation used in your work.

LESSON 20.

COMPOSITION OF SENTENCES.

Direction.—Notice how, by reducing some of these simple sentences to adjective clauses and afterwards to participial and prepositional phrases, this series of sentences is converted into one sentence:

I greatly admire the Alps. I see them distinctly from the windows of my “Castles in Spain.” I delight in the taste of the southern fruit. This fruit ripens upon my terraces. I enjoy the pensive shade of the Italian ruins. These ruins are in my gardens. I like to shoot crocodiles. I like to talk with the Sphinx. The Sphinx stands upon the shores of the Nile. The Nile flows through my domain.

I greatly admire the Alps, which I see distinctly from the windows of my “Castles in Spain.” I delight in the taste of the southern fruit which ripens upon my terraces. I enjoy the pensive shade of the Italian ruins which are in my gardens. I like to shoot crocodiles, and talk with the Sphinx standing upon the shores of the Nile which flows through my domain.

I greatly admire the Alps, seen distinctly from the windows of my “Castles in Spain.” I delight in the taste of the southern fruit ripening upon my terraces. I enjoy the pensive shade of the Italian ruins in my gardens. I like to shoot crocodiles, and talk with the Sphinx upon the shores of the Nile flowing through my domain.

Direction.—Notice how, by the use of adjective and adverbial clauses and prepositional phrases, these sentences reduce to a single beautiful sentence:
The confusion of unloading was long over. The ship lay at the
wharf. All her voyages seemed to be ended. Then I dared to
creep timorously along the edge of the dock. The water of its
huge shadow was black. The risk of falling into it was great. I
placed my hand upon the hot hulk. I thus established a mystic
and exquisite connection with Pacific islands, with palm groves,
and with passionate beauties. These beauties the palm groves
embower. I established a mystic and exquisite connection with
jungles, Bengal tigers, pepper, and the crushed feet of Chinese
fairies =

Long after the confusion of unloading was over, and the ship
lay at the wharf, as if all voyages were ended, I dared to creep
timorously along the edge of the dock, and, at great risk of falling
into the black water of its huge shadow, placed my hand upon
the hot hulk, and so established a mystic and exquisite connection with
Pacific islands, with palm groves, and all the passionate beauties
they embower, with jungles, Bengal tigers, pepper, and the crushed
feet of Chinese fairies.

**Direction.** — Contract each of these groups of sentences to a single
sentence: —

The sails hung ready. The ship lay in the stream. Busy little
boats darted about her. Puffing little steamers darted about her.
They clung to her sides. They paddled away from her. They led
the way to the sea. In this manner minnows might pile a whale.

Balthazar Gérard was the murderer of Prince William of
Orange. William was surnamed William the Silent. Gérard had
dropped his pistols. He dropped them on the spot. The spot was
where he had committed the crime. Upon his person were found
two bladders. These bladders were provided with a piece of pipe.
With these bladders he had intended to assist himself across the
moat. Beyond this moat a horse was waiting for him.

My grandfather Titilottom called me into his presence. I was
a mere child. He said he should soon be gone. He wanted to
leave with me some mementos of his love. These spectacles are
valuable. He knew of nothing more valuable. Your grandmother
brought them from her native island. She arrived here one sum-
mer morning, long ago.

**Composition of Sentences.**

Those days are long past now. But still I walk upon the
Battery. I look towards the Narrows. Beyond them there are
many friends. I know this. They are separated from me by the
sea. Of these I would so gladly know. Of these I so rarely hear.

**Direction.** — Expand the two absolute phrases, the two phrases
beginning with participles, and the explanatory phrase below into
clauses, contract the adjective clause, and rewrite the sentence: —

And then — Homer's frenzy of youthful adventure once appeared,
his knowledge embracing everything that was known in his age—the
image of the beautiful Ionia once more arose to his vision, and
a home-longing, like that of Odysseus, sitting on the rocky shore
of Calypso's isle, yearning for Ithaca, the dwelling of his wife and
son, compelled him to return.

**Direction.** — Change a noun clause in the sentence below to an
infinite phrase and a prepositional phrase to an adverb, get rid of
the adjective clause, and convert the whole into two sentences: —

Twice referring to the witticism of Cato, who declared that he
did not see how the soothsayers could avoid laughing each other
in the face, Cicero exhibits the disbelief which prevailed, at his time,
respecting the heathen gods.

**Direction.** — Change the proper connectives and form two com-
pound sentences out of the first group of sentences below, and three
out of the second group: —

Charles II. bestowed much. He never gave spontaneously. He
neither enjoyed the pleasure nor acquired the fame of beneficence.
It was painful to him to refuse.

The poet uses words. We observe certain phenomena. We
cannot explain them into material causes. Logicians may reason
about abstractions. We therefore infer something not material.
The great mass of men must have images. They are merely the
instruments of his art, not its objects. We can define it only by
negatives. Of this something we have no idea. The tendency of
the multitude in all ages to idolatry can be explained on no other
principle. We can reason about it only by symbols.
Invention.

**Direction.** — Group the sentences below into four, some complex and some compound, one or two with complex clauses:

Mr. Ruskin says that Shakespeare has no heroes. He says that Shakespeare never casts around human nature a really heroic lustre except in the persons of women — Cordelia, Desdemona, Hermione, Imogen. It is indisputable that Shakespeare assigns to his good women a spiritual purity and elevation. This he attributes to none of his men, or to Brutus only. But the character in his dramas which lends is in the vast majority of instances a man. The part played by women is more self-sacriﬁcing than that played by man. It is the world of man, however, that the action of the play chiefly illustrates. In Shakespeare’s dramas the women throw light upon the men. In George Eliot’s novels the men throw light upon the women.

---

**LESSON 21.**

SYNTHESIS OF SENTENCES INTO PARAGRAPHS.

You are now acquainted with all the parts of speech, and have used them in their various ofﬁces and relations in the sentence. You have familiarised yourselves with word, phrase, and clause modiﬁers, simple, compound, and complex, and have constructed sentences of all kinds, simple, complex, and compound. You have learned the ways of contracting complex and compound sentences to simple, of expanding simple sentences to complex and compound, and of substituting one word, phrase, or clause for another — in ﬁne, you have been brought face to face with the sentence, and have learned to construct it in all its varieties.

The Paragraph. — Having put words, phrases, and clauses together to form sentences, we must learn to join sentences together to form paragraphs. We say join sentences together; for, just as words, phrases, and clauses are more or less closely united in the sentence in meaning and in position, excluding from, or admitting, between them a comma, a dash, a semicolon, or a colon, so sentences separated by a period or other terminal mark may be connected — the bond that unites them being their common relation to the thought, or point, which jointly they develop and express. Sentences thus related and grouped together form what we call a paragraph. Sometimes a single sentence, sufﬁciently developing the point, forms a paragraph. The paragraph is exceedingly useful, if not absolutely necessary, in announcing to the reader where the development of a point begins and ends. The paragraph is indicated to the eye by beginning a little to the right of the marginal line of the page.

James II. at the moment of his accession was in doubt whether the kingdom would peaceably submit to his authority. The Exclusionists, lately so powerful, might rise in arms against him. He might be in great need, as was his brother, of French money and French troops. He was, therefore, during some days, content to be a sycophant and a mendicant. He humbly apologized to Louis XIV. for daring to call Parliament together without the consent of the French government. He begged hard for a French subsidy. He wept with joy over the French bills of exchange. He sent to Versailles a special embassy charged with assurances of his gratitude, attachment, and submission.

**Direction.** — Note the facts which the paragraph above contains, and how they are expressed:

1. James the Second’s doubt. 2. The possible rising of the Exclusionists. 3. The King’s possible need. 4. What he was content to be. 5. His apology — to whom and for what. 6. His petition. 7. His joy. 8. His embassy — whither and for what sent.
Direction. — State and number the facts in these paragraphs, and then, without reference to the text, develop these facts into paragraphs of your own:

For many years after the Restoration, the Puritans were the theme of unmeasured invective and derision. They were exposed to the utmost licentiousness of the press and of the stage, at the time when the press and the stage were most licentious. They were not men of letters; they were, as a body, unpopular; they could not defend themselves; and the public would not take them under its protection. They were, therefore, abandoned, without reserve, to the tender mercies of the satirists and dramatists. The ostentatious simplicity of their dress, their sour aspect, their nasal twang, their stiff posture, their long graces, their Hebrew names, their contempt of human learning, and their detestation of polite amusements were, indeed, fair game for the laughers.

The Puritans recognized no title to superiority but the favor of God; and, confident of that favor, they despised all the accomplishments and all the dignities of the world. If they were unacquainted with the works of philosophers and poets, they were deeply read in the oracles of God. If their names were not found in the registers of heralds, they were recorded in the Book of Life. If their steps were not accompanied by a splendid train of menials, legions of ministering angels had charge over them. Their palaces were not made with hands; their diadems, crowns of glory which should never fade away. On the rich and the eloquent, on nobles and priests they looked down with contempt; for they esteemed themselves rich in a more precious treasure and eloquent in a more sublime language, nobles by the right of an earlier creation, and priests by the imposition of a mightier hand.

When More heard the voice of one who was known to have boggled at the oath a little while before, calling loudly and ostentatiously for drink, he only noted him with his peculiar humor, “He drank,” More supposed, “either from dryness or from gladness” or “quod ite notas erat Pontifici.” More was called in again at last, but only repeated his refusal. It was in vain that Cranmer pled him with distinctions which perplexed even the subtle wit of the ex-chancellor; he remained unshaken and passed to the Tower.

Synthesis of Sentences into Paragraphs.

For the moment, even Cromwell shrank from his blood. More remained a prisoner, while new victims were chosen to overawe the silent but widely spread opposition to the bill of Supremacy. A mock trial was hardly necessary for the condemnation of More or for that of Fisher, the most learned among the prelates who had favored the New Learning, and who had been imprisoned, on the same charge, in the Tower. The old bishop approached the block with a book of the New Testament in his hand. He opened it, at a venture, ere he knelt, and read, “This is life eternal to know Thee, the only true God.” His death was soon followed by that of More. On the eve of the fatal blow, he moved his head carefully from the block. “Pity that should be cut,” he was heard to mutter with a touch of the old, sad irony, “that has never committed treason.”

LESSON 22.
SYNTHESIS OF SENTENCES INTO PARAGRAPHS.

Direction. — Construct out of each group of these bold facts a paragraph of three sentences, placing the facts in their proper relation and supplying what is needed, and write on the first line of each paragraph the topic it develops:

The same elements in flesh as in flour. In animals as in plants. The vegetable draws water and minerals from the soil. Absorbs and incorporates the air. Eaten, it sustains the life of animals. Hence animals gain the substances the vegetable first acquired. The vegetable receives from the animal the air thrown out in respiration. Lives and grows upon it. The animal itself becomes its food. The very bones made to increase the growth of vegetables. These eaten by the animal, the animal eats its own bones and lives on its own flesh.

Organs and tissues of the body continually changing. Atoms present one hour gone the next. When gone, the body wasted. Unless renewal attends the process. Renewing substance must be
of the same nature as the wasted. Bone renewed by bone. Flesh by flesh. Body always changing, yet the same. This duty assigned to food. Supplies to each part the kind of material lost.

The amount of vital action shown by respiration and pulsation. At night, low and tolerably uniform. High and varying during the day. Large increase after a meal. Decrease, before the next meal. Increase followed by decrease, due to food, proves its influence temporary. After a sufficient interval, another supply of food necessary. But the body not a passive agent. Not entirely subject to the action of food. No supply could prevent decrease of vital action at night. Nor make them equal night and day.

Direction. — Construct out of this group of bold facts two paragraphs, supplying what is needed to make the narrative smooth and flowing, and write on the first line of each paragraph the topic developed:

LESSON 23.
SYNTHESIS OF SENTENCES INTO PARAGRAPHS.

Direction. — Construct out of this group of facts three paragraphs, keeping up the direct discourse as far as possible, and write, as directed above, the topics developed:

A pious Brahmin made a vow. Would sacrifice a sheep. Went forth to buy one. In his neighborhood, three rogues. Knew his vow. Laid a scheme. The first met him, and asked if he would buy a sheep. Had one fit for sacrifice. For that very purpose he came forth this day. The rogue opened a box. Brought out an unclean beast. An ugly dog. Wretched, called thou that cur a sheep? Truly, a sheep of the finest fleece and of the sweetest flesh. An offering acceptable to the gods. Friend, thou or I must be blind. The second confederate came up. Praised be the gods. Am saved the trouble of going to market for a sheep. What I wanted. For what wilt thou sell it? The Brahmin heard it. Mind wavered. Take heed what thou dost. No sheep. An unclean cur. Said the new comer. Art drunk or mad. A third confederate came near. Ask this man what the creature is. Will stand by what he says. Agreed. He called out, Stranger, what dost thou call this beast? Surely a fine sheep. Surely the gods have taken away my senses. Asked pardon of the owner. Bought it for a measure of rice and a pot of ghee. Offered it to the gods. Wroth at the unclean sacrifice. Smote him with a sore disease in all his joints.

Direction. — Study this group of facts carefully, see what ones are related in meaning and can be united, form as many paragraphs as you think there should be, and write the topics as directed above:

A person is suddenly thrust into a strange position. Finds the place to fit him. Has committed a crime, perhaps. Sent to the State Prison. All the sharp conditions of the new life stamp themselves on his consciousness. Like a signet upon wax. Illustrated by an image. Did you ever see the soft-spoken, velvet-handed steam-engine? At the mint. Piston slides backward and forward. Lady slips her finger into and out of a ring. Lays one of its fingers on a bit of metal. A coin now. Will remember the touch. Tell a new race about it. Twenty centuries hence. So a great silent-moving misery puts a new stamp on us. In an hour. A moment. Impression sharp. Seems as if it had taken a lifetime to engrave it. Been down to the island. Deer-shooting. Island where? No matter. Splendid domain. Blue sea around it. Runs
Invention.

LESSON 24.

SYNTHESIS OF SENTENCES INTO PARAGRAPHS.

Direction.—Out of this group of facts construct as many paragraphs as you think there should be.

You will notice that the paragraphs are themselves related, because the topics which they develop are. When your work is done, write over them the general subject, or topic, treated, and the topic of each paragraph, as directed above:—

Human life not held sacred among the Romans of the first and second centuries. Seen in the cruelties of their warfare. Lives of the conquered in battle forfeit to the conqueror. The surrender of a town a signal for indiscriminate massacre. Little heed paid to the distinction between combatants and the peaceful inhabitants for whom they fought. Right of parents to destroy offspring not thought desirable to bring up recognized in law and practice. There was a law, originally, forbidding the destruction of infants. The law became practically obsolete. The Romans followed the teachings and the practice of the Greeks in this respect. Romans had a coarse appetite for food. Gluttony. Modern society affords no parallel. Two hundred and fifty dollars for a single fish. The mullet. Suppers extended far into the night. Guests inhaled with wine. Coarse revelry. No uncommon thing for a Roman gentleman to take an emetic. So might indulge his appetite again. Prolong the pleasures of the table. Roman law gave also-

late power to slaveholder. Could beat, maim, kill his slave. Slave could own no property. Contract no marriage. When allowed to give testimony, examined under torture. Master murdered by a slave, all the slaves of his household crucified without mercy. Slaves brought from all directions. Largest numbers from Asia. Every Roman felt a pride in owning at least a few. Some, from ten to twenty thousand. A freedman. Had lost many slaves. But able at his death to leave 4116. Among slaves were sometimes carpenters, secretaries, physicians, and architects. Nothing to prevent a drunken master from wreaking vengeance on his slave. Except pecuniary loss. Old slaves who could no longer work sold for what they would fetch. The Circus in Julius Caesar's time had seats for 150,000 men. Titus added seats for 100,000 more. Later, were seats for 350,000. Foot-races. Feats upon horse-back. Chief thing the chariot race. Several combatants put in. Chariots and horses owned by companies. Keenest excitement. Nobles, emperors, even women entered into the contests. Prostration of Roman dignity and virtue seemed complete.

LESSON 25.

SYNTHESIS OF SENTENCES INTO PARAGRAPHS AND OF PARAGRAPHS INTO A THEME.

The Theme.—You have seen that just as words, phrases, and clauses may be joined in sentences, and sentences, jointly developing a point, or thought, may be united into a paragraph, so paragraphs may be connected, standing one after another on the page, because they are related — the points, or thoughts, which they develop, being divisions of the one general subject, or topic. That which these paragraphs, so related and so placed, form, is a composition, or theme.
Direction. — Study carefully these facts, group them into two great paragraphs whose topics, written as before, shall be marked with Roman I and II; under these make as many sub-paragraphs as you think there should be, with their sub-topics marked with Arabic figures, and write the subject of the theme at the top:—

The tea-plant cultivated in China. Through about eleven degrees of latitude. On hillsides. At an elevation extending to 4000 feet. Soil rich and deep. Drainage good. Sunlight abundant. Will grow in almost any temperate climate. Hence farther north or south of the belt between 24° and 35°. Ground requires good cultivation. The old leaves becoming hard and tough, the old wood must be cut out, and new shoots produced. The tree remains useful a generation. The plants, standing five feet apart, grow thirty or forty feet high. Stem a foot through. By pruning, kept down to a height of from three to five feet. Leaves not gathered till the third year. Number of pickings, four. Wet season, five. Interval from four to six weeks. Process, simple.

Work done by women and children. Oil and fibrous leaves left on the trees. Young leaves stripped by the hand. An inch or two of the soft and succulent stalk taken with them. A woman will gather from 16 to 20 lbs. of raw leaves in a day. Each plant will yield in the third season half a pound of raw leaves. Two years after, the yield vastly increased. Full grown leaves 5 to 6 inches long. Average yield about 320 lbs. of dried tea per acre. Four lbs. of green leaves make one of dried. Qualities of tea vary with time of picking. Next step that of drying and preserving the leaves. Dried in pans. Pans heated with straw or charcoal. No smoke. Heat equally applied. Leaves moved by the hand. Vessel shaken. Rapid drying keeps the green color. Longer and slower drying and exposure to the air, fermentation setting in, produce black tea. The leaf is made supple for rolling, by the heat. The flavoring of tea is a well-known process. Carried on with the middle and inferior qualities. Effected by placing the tea leaves, while in the process of manufacture, in contact with the aromatic flowers of plants. Odors evanescent. Delicate and agreeable. Do not add to the chemical or dietetic value of the tea.

SYNTHESIS OF SENTENCES INTO PARAGRAPHS AND OF PARAGRAPHS INTO A THEME.

Direction. — Study carefully these facts, thrown together promiscuously, sort and arrange them in six paragraphs, in their proper order, and write the general topic and the topic of each paragraph, as before:

Each kind of meat its own flavor. Tastes of different persons may be gratified by selection of different meats. Each animal is also cut up into joints. Different joints, or parts, of same animal have different flavors. Of the same person at different times also. Not only of such parts as are distinct in function, as the liver and the tongue. Flesh of all animals divided into two principal parts — fat and lean, in their separate state. There is also fatty matter mixed with the juices and tissues, not evident to the eye. Also of those parts whose functions are identical. Flavor of all meats depends upon juices in the fibers. On minute quantities of flavoring matter in the fat. The flavor of a leg of mutton differs from that of the shoulder. The proportions of fat and lean vary with the animal. Also with its condition when killed. On the oily and fatty matters in the juices in the meat. But both joints are composed of flesh, or muscle. Both have the same duty to perform. Fine quality of meat has abundant and full-flavored juices. Has also a considerable proportion of fatty matter. Hence the agreeableness of a variety of joints. Fat of an ox may be doubled by feeding. Ready for market, the fat of the ox is one-third the whole weight. Hence the preference of one joint over another. Is red and pulpy. Inferior meat is paler. The proportion of fat to lean much greater in the sheep and pig than in the ox. Least in calves. More fibrous. With but little proper flavor. Nutritive value of fat or lean much the same in all animals used as food. Fat consists of three elements in this proportion. Lean flesh deprived of fat consists of four elements.
Invention.

77 parts in 100, of carbon. 11 of oxygen, 12 of hydrogen. A weight of lean meat from one animal should nourish the body as much as the same weight from another. But appetite plays an important part in nutrition. Nitrogen, carbon, oxygen, and hydrogen. Fat decomposing, carbon takes part of oxygen. Less relish of food followed by less digestion. Less digestion by less assimilation. Forms carbonic acid. Hydrogen takes another part. Forms water. The absence of nitrogen in fat. Its presence in lean. This, by less nutrition. Fat generates heat. Both fat and lean generate heat in the system. Deficiency of oxygen supplied by the inspired air. Heat is generated by every chemical combination. Nitrogen enters into the composition of lean. Lean and not fat contains nitrogen. Lean and not fat forms muscle.

LESSON 27.

THE PREPARATION OF A FRAMEWORK.

In the preparation of a theme, you have seen that several things must be done. A subject must be chosen. Facts forming the subject-matter of the theme must be found. They must be grouped. They must be grouped under the sub-topics into which the general topic, or subject of the theme, is resolved. They must then be wrought into thoughts, these thoughts must be expressed in sentences, these sentences framed into paragraphs, and these paragraphs arranged upon the page.

In every step of this work, rhetoric can aid the pupil, but it can only aid. It can direct the pupil to the choice of a subject and place him in the happiest relation with it; and can lead him on in such wise that he will find the most and the best matter in it, will think, and express his thought in the most effective form. In this sense, and this

only, can rhetoric teach one invention, or thinking, and the expression of thought.

A Framework. — In preparing a framework there are several steps to be taken. We note these in their order.

I. Selection of a Subject.—The first step is, of course, the selection of a subject. If the choice is left to you, find one which you can handle, one that is attractive to you and will start you off on many lines of thought. A general subject, like War or Tea, will be less suggestive than some branch or phase of it, as, for example, The Weapons used in War, or The Preparation of Tea for Market.

II. Accumulation of Material. — The next step is the accumulation of material. For this, a blank book, in which to note whatever facts or thoughts occur to you after the choice of a subject and before you begin to write, will be found useful if not indispensable. If the subject is one upon which you must read or converse, do so; but use what the reading or the conversation suggests rather than what you have read or heard. Think, think, and always put the thought into your own language. Remember that the more completely the composition is yours, in thought and in word, the greater is the good its construction does you and the higher the value you yourself place upon the production.

III. Construction. — The third step is the construction, out of your material, of the framework, or skeleton, of your theme. By this we mean the finding and arranging of the leading thoughts, or points, or heads, which, in the preceding Lessons, you have been writing as the special topics of the paragraphs. Upon no part of your work more than upon this will the merit of your composition or its lack of merit depend. Take time, and take thought for it.

1. Search your material for the leading thoughts, or
points. — If nothing noted down seems to you, as it stands, sufficiently inclusive, study to see what these or those jottings point to as broad enough to bracket them. Be certain, before you cease this work, that you have found all the general thoughts into which, as it seems to you, the subject should be resolved.

2. Study these points with care.— Let no point disguised in different words appear twice, let no two points cover the same ground even in part. Raise nothing to the rank of a topic which may properly stand under one already found. Cast out any point that on further thought seems irrelevant. Avoid a tedious multiplication of points. Study to see what ones may be spared with good effect. This matter of co-ordination and subordination requires the nicest discrimination. It is the point in which essays, sermons, speeches—the efforts of adults—are open to criticism.

3. Concentrate attention upon the arrangement of these points. — There are many illogical orders in which the points might be arranged, there is always at least one proper order in which they should stand. Find it. It would be illogical not to begin a theme upon a battle, as that of Ixion, for instance, with an account of the forces engaged and their disposition with respect to each other. Nor could you properly delay till after the battle what took place before it. If the fight began on the left, that must be spoken of before you describe the struggle in the center or that on the right. The losses on either side follow the battle, and the effect of the battle upon the question at issue follows the account of the losses. Perhaps no one of these points need be exhausted in a single paragraph, but the order in which they should be taken up is fixed.

In every kind of discourse, the question of order is vital. No point to the clear understanding of which, to feeling the full force of which, a knowledge of some other point would have to be presumed should precede that other. And this simple rule one must regard whether as a pupil he is writing a composition, as a lawyer he is making out a brief, as a preacher he is planning a sermon, or as a statesman he is preparing a speech.

So necessary is a fitting framework for the structure of a theme—a skeleton sustaining and giving shape to the body—that we shall require further work upon it here.

Direction. — Prepare, according to this model, but without slavish imitation of it, the framework of a theme upon each of these subjects. Mark the leading co-ordinate points with Roman characters, co-ordinate subdivisions of these with Arabic, and subdivisions of these with small letters:

Model.—The Good a Debating Society does its Members.

I. The good it does them in preparing for the debate.
   \[ \begin{align*}
   \text{a. In analyzing the subject.} \\
   \text{b. In selecting the strongest points.} \\
   \text{c. In coining thoughts to establish these points.}
   \end{align*} \]

2. It adds to their knowledge by the wide reading it compels.

3. It teaches them to defend the truth they have espoused.

4. It teaches toleration by showing them that there are unanswered arguments on each side.

II. The good it does them during the progress of the debate.
   \[ \begin{align*}
   \text{a. In that it furnishes opposition.} \\
   \text{b. In exciting hope of victory.} \\
   \text{c. In sharpening wits to detect error.} \\
   \text{d. In compelling a vigorous defense.}
   \end{align*} \]

2. It gives them self-command while under fire.

3. It teaches them a modest estimate of their abilities.
Invention.

4. It teaches them courtesy to opponents.
5. It corrects their opinions, and widens their view.
6. It gives them command of their vocabulary.
7. It is a rhetorical and a logical exercise in composition.
8. It teaches them something of Parliamentary practice.

I. What the Winds do. 2. October Woods.

The teacher should exact the most careful attention of his pupils to the co-ordination and the subordination of points, requiring them to use the Roman, the Arabic, and the literal notations, as above. Their whole work should be criticised rigidly by the teaching of this Lesson. The teacher should allow for individuality; should not insist that his pupils' analyses must conform exactly to the others and all to his. Out of all the points presented let him prepare one framework each day that shall be as nearly exhaustive and perfect as possible. Let him talk with his pupils, asking and giving reasons for every step. Let him insist that they shall carry this kind of work over into the preparation of ordinary compositions, or themes.

If the pupils need more drill than these Lessons furnish, the teacher can easily supply subjects and continue the exercise. A single subject may be sufficient for a lesson.

LESSON 23.

ANALYSIS OF SUBJECTS.

The wisdom of treading the steps taken in leading up to the analysis of subjects and the preparation of frameworks — the finding of the subject-matter of discourse — we hope is by this time apparent. The resolution of the subject could not be taught without thoroughly acquainting the pupil with the nature and office of a paragraph; the paragraph could not be explained without familiarizing the pupil with the sentence; and the sentence could not be understood by him without his seeing that it was the embodiment of thought. And so we have attempted to teach what thought is and how it is formed; how the sentence expressing it may grow up from two or three words to forms most complex and intricate, with words, phrases, and clauses in myriad combinations, and how by contraction, expansion, and substitution almost any sentence may be transformed; how sentences may combine into paragraphs, and why they must; and how the making of paragraphs compels the pupil to brood over his subject and bring to light the great thoughts, which, fitly joined, form the frame of the structure he is to build.

In addition to what was said in the Lesson upon the Preparation of a Framework, it may be serviceable to add that in forming frameworks upon

Narrative or Descriptive Subjects, real or fictitious, the pupil should be careful to select only the salient, the representative, points. These, arranged in their natural order, carry with them the minor points. Multiplicity confuses. The outline fully and clearly presented, the more the reader or hearer can easily supply, and is left to supply, the better.

Argumentative Subjects. — Resolve such subjects into all possible points, and then use great discretion in selecting such points as are cardinal; such as, if fitly developed, establish beyond question the conclusion you seek to prove. Here, perhaps, more than elsewhere, the matter of arrangement is vital. If, for example, a man were accused of burning his neighbor's house and were brought to trial, all evidence and the arguments based upon it going to show that the accused was near the building at the time of the
Invention.

burning, or that his clothes bore marks of his having done the deed, would have little weight with the jury unless preceded by proof that he was interested in the removal of the building or that he hated his neighbor, and that his character was such that he would not scruple to commit the crime if a fit opportunity offered. All circumstantial proof of the arson would be discounted, if not set aside, by the ignorance of the jury that the accused had any motive to commit the deed, and was without principle to restrain him. What Whately calls arguments from cause to effect, arguments accounting for anything, assigning the cause of it, should precede circumstantial proof, arguments of sign, arguments from effect to condition.

Direction. — Prepare the framework of a theme on each of these subjects:

A Scheme for Review.

LESSON 30.
ANALYSIS OF SUBJECTS.

Direction. — Prepare the framework of a theme on each of these subjects:

A Scheme for Review.

Definition and Vindication of Rhetoric (Lesson 1).
Definition of Invention and of Thought (Lesson 2).
Simple Sentence with Simple, Compound, and Complex Modifiers (Lessons 2-4, and 11).
Complex Sentence with the Adjective Clause (Lessons 5, 9, and 11).

1. Restrictive, 2. Unrestrictive.

Complex Sentence with the Adverb Clause (Lessons 6, 7, 9, and 11).

Complex Sentence with the Noun Clause (Lessons 8, 9, and 11).

QUALITIES OF STYLE.

LESSON 31.

PERSPICUITY.

Thus far we have been considering the thought, the subject-matter of discourse, one of the two things with which rhetoric is concerned. In doing this we have been forced to deal with the sentence and the paragraph, but we have dealt with them only as the necessary forms in which thought must be expressed. You have been made familiar with the various kinds of sentences, have learned to construct them in all their varieties and to combine them into paragraphs. But you have been taught little directly of the qualities which should belong to them,—qualities which everything written or spoken should have to make it the happy instrument of expression—and so you have learned little of style proper. To this great department of rhetoric we have now come.

Style. — We might, with De Quincey and others, assert that thought and expression are so "intertwined," so "inextricably blended," that the two are, in some real sense, one—that any change of either is or involves a change of the other. We might more properly insist that style applies to thought as well as to expression, since men differ as essentially in the one as in the other. And this we do not
deny, but rather affirm, when, uniting the two in the definition, we say, *By style we mean the manner in which the thought is expressed in words.* Every one has his manner of expressing thought, just as he has a cast of features, qualities of voice, and a carriage of body peculiar to himself.

Into every one's style, at least three elements should enter and determine it.

1. **The Topic.** — Just as a piece expressing various passions demands of the reader a varying pitch and stress, a varying rate of movement, and different tones of voice, so various topics require of the writer various styles — the topic entering into the style and helping to determine it. One writing on different subjects will not write uniformly if he writes naturally. "The perfectly endowed man will unconsciously write in all styles," says Herbert Spencer.

2. **The Writer's Individuality.** — Room for the man himself is always to be found in his style. This truth has found extreme statement in the definition, "Style is the man." His temperment, tastes, attainments, culture — everything mental that distinguishes him as an individual — may be expressed in his use of imagery, his choice of words and his arrangement and articulation of them in the sentence, in the cast of his paragraphs, and in all else that goes to the making of style. It is not the business of rhetoric to rob one's style of this element. It should only wear down the sharp angles and subdue the writer's peculiarities, so that his style shall be free from mannerisms — everything offensively characteristic of him. And this is done by the element of

3. **Authority.** — The principles which eminent writers have consciously or unconsciously observed and the means they have used furnish rhetoric the lessons it is to teach, and point out to the pupil the paths he may follow. What such writers have done is permissible to him, what they

have found they could not safely do is unlawful. And this element enters largely into all style that becomes classic, putting a curb upon the author's eccentricities, and becoming a spur to every effort made for the perfecting of his style.

- The first cardinal quality of style is

**Perspicuity.** — *Perspicuity is distinctness of expression, transparency.* Our thought should be seen through our words, requiring of the reader or hearer no careful search to discover it. What the air, washed clean of smoke and vapor and dust, is to the trees and the rocks of distant hills, bringing them near and into sharp distinctness, that should our language be to the thoughts it contains. Since we write and speak to communicate something, our purpose is defeated if we are not clear; we might better have spared our poor labor. It is a duty which every one owes his reader or hearer to speak not simply so that he can be understood but so that he cannot reasonably fail of being understood. One has scarcely more right to take another's time and energy in a hunt for the meaning than he has to take another's fruit or his wages without compensation. To be perspicuous, then, is in a just sense only to be honest.

Perspicuity is to other qualities of speech what light is to colors — that by which they exist and are seen. Style that lacks it has few excellences that are apparent, as the discourse has little thought that is obvious.

**A Relative Quality.** — But it ought to be said that perspicuity is a relative quality. That is, what may be clear to one reader or hearer may not be to another of fewer years or less culture. Style perfectly plain to an audience of scholars may be obscure to men and women less intelligent, or to children, just as food easily digested by a man in vigorous health may be indigestible to an invalid. In judging the style of any production, it is but fair to take into account the ability of those for whom it is intended.
Perspicuity depends

1. Upon the Author's Mastery of His Subject. — Much mistiness of expression is only the haze that partly hides the subject from the writer. The subject is seen by him but only in the gray dawn, it does not stand revealed in noon-day light. Remember that you cannot convey plainly to others more than you thoroughly know, or make your thought clearer to them than it is to yourself. It will be a triumph if you can make them see what you see, and see it as clearly. The work of accumulating material and of preparing frameworks, insisted on as preliminary to the writing, will be of great service here. It will supply you with the knowledge needed, and will distribute the facts, dropping each item into its place and bringing order out of confusion. Seeing everything you need, and seeing it where it belongs, your task of making it apparent to others should be comparatively easy.

2. Upon the Author's Use of Words. — This subject, which will run through many Lessons, must be subdivided.

1. Use Simple Words. — The simplest words in the English language are those which belong to the mother-element of it — the Anglo-Saxon. These were never so highly compounded as were the Latin and the Greek; they are therefore simpler, since each word in a compound enters its meaning into that of the whole. They were never so highly inflected as were the Latin and the Greek, and nearly all of the few inflections they once possessed fell off during the three centuries after the Norman Conquest; hence these words are the shortest in the language, and for that reason the simplest. Besides, the Anglo-Saxon were the original words in our language, used to name the things known to our ancestors, and to denote the qualities, acts, states, and relations of these things. They are thus our household words, and, as a whole, are better understood by all, even by the educated.

Use of Words — Simple Words.

Direction. — Find Anglo-Saxon expressions, each a single word where it is possible, for these root words of Latin or Greek origin, and use them in sentences of your own:

- Resilience, aggravate, instruct, invalidate, circumspect, disparage, atmosphere, occult, isothermal, depose, extinguish, idioms, synergies, termination, reside, accomplish, obliterate, ethereal, pabulum, aesthetic, supersede, interpolate, anomaly, tortuous, philanthropic, subordinate, simultaneous, deplorable, elimination, circumlocution.

LESSON 32.

USE OF WORDS — SIMPLE WORDS.

Direction. — Read this paragraph with great care, and substitute, where it is possible, Anglo-Saxon words for those italicized:

When an intelligent foreigner commences the study of English, he finds every page sprinkled with words whose form unconsciously betray a Greek or Latin origin, and he observes that these terms are words belonging to the dialect of the learned professions, of theological discussion, of criticism, of elegant art, of moral and intellectual philosophy, of abstract science, and of the various branches of natural knowledge. He discovers that the words which he recognizes as Greek and Latin and French have dropped those inflections which in their native use were indispensable to their intelligibility and grammatical significance; that the mutual relations of vowels and the sense of the English period are much more often determined by the position of the words than by their form, and in short that the sentence is built up upon structural principles wholly alien to those of the classical languages, and composed and held together by a class of words of which unknown or very much less used in those tongues. He finds that very many of the native monosyllables are mere determinatives, particles, auxiliary, and relatives; and he can hardly fail to infer that all the intellectual part of our speech, all that concerns
Mr. Marsh says, but by the words he uses in saying it. We submit that, if the Anglo-Saxon so nearly suffices for all our needs as Mr. Marsh here claims, he would not himself have been driven to a diction so largely classical.

If we count each word but once, we find that sixty per cent of the words Mr. Marsh here uses in enlacing the Anglo-Saxon are themselves classical!

The Anglo-Saxon and the Latin in Our Vocabulary.— The slight percentage of our words are the original Indo-European words; some are Celtic; some, Scandinavian; some, Greek; and a few have been adopted from the languages of the peoples with whom the English have had intercourse.

The remainder are Anglo-Saxon and Latin. It is of this remainder, more than ninety per cent of the vocabulary, that we are now to speak. And we should speak more plainly if we could speak specifically—if we could throw these words into classes and look at them there. This we cannot do here, but we can give the results reached by us in work of this kind substantially done elsewhere—results which not unfaithfully picture the functions of the Anglo-Saxon and the Latin in the English vocabulary.

The pronouns and the numerals (these not Indo-European), the irregular verbs (including the auxiliaries), the prepositions, and the conjunctions are Anglo-Saxon.

In addition we may say that the names of such things (1) in the animal and vegetable worlds as were native to the island and generally known before the Conquest; the names (2) of the outward parts of the animal body, and of those internal organs that easily reveal their presence; (3) of common buildings and their necessary parts; (4) of the household equipment that families living in such houses must have; (5) of such farm implements as a people rude in arts and agriculture could make and use; (6) of occupations mainly manual; (7) of the essential divisions of time;
Qualities of Style — Perspicuity.

(8) the verbs that express many of the customary acts in the material world and operations in the mental; and
(9) adjectives that denote obvious sensible qualities and the obtrusive attributes of the intellect, of the emotional nature, and of character; — these are mainly Anglo-Saxon.

But to name (1) things in the animal and vegetable kingdoms seen by travel; (2) to denote buildings higher and more complex than the common dwelling, and to mark those parts of them and those belongings to them unfamiliar to the Anglo-Saxons, but needful, we should think, even for comfort; (3) to indicate those parts of the body and their functions which science has disclosed; to denote (4) the longer or the more minute divisions of time, and the occupations that indicate higher culture; and (5) generally, to mark the less ordinary physical acts, requiring, many of them, plan and combination, and to denote the less obvious objects and qualities of objects in the outer world; — to do these things we draw largely upon the Latin element of the language. And when we turn to the words in English expressive (6) of civil and social organization, or used (7) to denote intellectual acts, states, qualities, powers, possessions, products, or required (8) to express the higher feelings and the traits of character, or needed (9) to denote classes and general notions,—we find the contrast between the Anglo-Saxon and the Latin in English most striking. It is in words expressive of these things that the Anglo-Saxon element is painfully lacking.

The Anglo-Saxon and the Latin in Actual Use. — The relative number of the Anglo-Saxon words and of the Latin used by writers and public speakers depends somewhat upon the man, upon his subject, and upon the culture of those addressed. But, in the showing, the percentages depend still more largely upon the method of counting adopted. If every word of the author is counted every time it is used, the results reached will be one thing; if each word of the author is counted but once, no matter how often used, the results reached will be quite another thing. The words oftenest employed, not alone in ordinary conversation, but for literary purposes as well, are the irregular verbs (especially the auxiliaries), the prepositions, the articles, the prepositions, and the conjunctions. These, with scarcely an exception, are Anglo-Saxon. The words then constantly appearing, reappearing, on the pages of literature and in public discourse as well as in colloquial speech are almost exclusively Anglo-Saxon. Surely the method of counting will have much to do with the exhibit made.

Mr. George P. Marsh at one time made several excerpts from British and American writers. He counted each word in these extracts every time it was found, and published the results in tables which show that the Anglo-Saxon words used by these men ranged from seventy to ninety five percent of all the words employed by them. We give these figures without judgment as to whether the extracts made were ample in number and in length to justify the claim that they fairly represent the few which these men in their complete works made upon the Anglo-Saxon.

It came in our way some years since to make a far more extended examination of the words eminent writers and speakers choose. The different words of one American, Rufus Choate, as found in his complete works, were brought together and arranged alphabetically. Twenty other distinguished men — ten British and ten American—were chosen. From each of these a speech, an argument at the bar, an oration, or some chapters of a book were taken, and the words of each author were alphabetically placed. No word in any one of the twenty-one lists thus formed was counted more than once, unless the several forms of it were
from distinct roots; only one degree of an adjective or an adverb; only one of the six or seven possible forms of any verb; only one case or number of a noun or pronoun. Let this be borne in mind—it is the one point of difference noteworthy here, between our work and that of Mr. Marsh.

After the classification of the words a count was made and the percentages were reached. Our tables show that twenty-one representative authors, in representative efforts, used a per cent of Latin words, varying from 50\% to 72\%, and of Latin and Greek together from 63\% to 70\%, over against a per cent of Anglo-Saxon ranging only from 29\% to 33\%. This is the showing if each word is counted but once.

The general belief (1) that for ordinary communication we make the heaviest drafts upon the Anglo-Saxon; (2) that the words coming most frequently to the tongue and most used in prose writing are Anglo-Saxon; and (3) that, while on social or business topics we can construct whole paragraphs without a word of Latin, it is all but impossible to frame a sentence without the Anglo-Saxon;—this belief the figures of the comparison do not disturb. And this is much to confess; for it is an acknowledgment that our dependence upon the Anglo-Saxon is absolute, so far as it extends. Nor do these figures (4) give the number of the Anglo-Saxon and of the Latin words in our vocabulary, or settle their ratio to each other, or (5) decide the question whether, had our ancestors of the thirteenth and fourteenth centuries imitated the ancient Greeks or the modern Germans, and formed new words by compounding words, or a ready English, we might not now be using a vocabulary all of a piece, and yet ample for our utmost needs. But from the exhibit made by the comparison above, we think we are warranted in claiming that we cannot do without the Latin words in our English; that, when we rise above the commonplace in matter and in manner, we find such words indispensable. We say indispensable; for, while the ferry-boat that takes us daily to our place of business is indispensable, the transatlantic steamer that bears us to Europe is not less so, even though we go but once.

It would seem that these two classes of words, mingling freely in the current of every English sentence, have dwelt so long and pleasantly together that we should cease to call either class foreign, alien. Often we cannot, without close scrutiny, tell which words are Latin and which are Anglo-Saxon. By some earmarks, perhaps, but certainly not by their length, by their strangeness, or by his inability to handle them deftly, would one of but average culture suspect that the following nouns, adjectives, and verbs belong to the Latin:

Age, art, case, cent, cost, fact, form, ink, line, mile, pain, pair, part, pen, pieces, price, rule, sound, ten, tone, and vail; apt, clear, cross, cradle, firm, grand, large, mere, nice, pale, plain, poor, rare, real, rich, round, safe, scarce, sure, vain, and vast; add, aid, aim, boil, close, cook, cure, fail, fix, fry, mix, move, pay, save, serve, try, turn, and use.

These and hundreds of other short Latin words, as well understood as the simplest Anglo-Saxon, are mostly without Saxon equivalents. But even those with Saxon duplicates are necessary; they give to our speech a rich and significant that aids us in making and in expressing the finer distinctions in thought.

The Latin are often (1) the most forcible words in English. What Anglo-Saxon verb of teaching matches in vigor inculcate—to drive in with the heel? What other adjective denoting health has the strength of robust—stark? Such words, unfortunately, are pregnant with meaning mainly to the etymologist. In this they differ from what the vigorous,
Qualities of Style — Perspicuity.

self-explaining Anglo-Saxon words would have been had that element been fostered. They give (2) conciseness to expression; like canals across isthmuses they shorten the route — witness mutual, reanimate, circumlocution. Often than the Anglo-Saxon they are (3) metaphorical, and flash upon the thought a poetic light; as, dilapidated, applied to fortune or dress; ruined, to character; luminous, to expression. They impart (4) grace and smoothness to style — are the musical, melodious, and mellifluous words of the language. They give (5) pomp and stateliness to discourse, and make possible the grand manner of Sir Thomas Browne, of Milton, and of De Quincey. A vocabulary like ours, duly compounded of the Teutonic and the Romance, has a manifoldness and an affinity of wealth that adapt it to every kind of writing, and are wonderfully stimulative of it. And so, while the literatures in other languages excel, each in some single department, ours is confessedly eminent in all.

While it is difficult to exaggerate the work and the worth of the Anglo-Saxon in English, we deprecate what has been called the "violent reaction" that has set in, in favor of it — a reaction that, carried to the extreme, would practically disinherit us of vast verbal possessions. But, without any wish or effort to champion the Latin element, we may safely say that this reaction cannot be carried to the extreme.

We are not surprised then to find the wise Alexander Bain breaking out, on the opening page of his work, On Teaching English, into, "To write continuously in anything like pure Saxon is plainly impossible. Moreover, none of our standard English authors, whether in prose or in poetry, have thought it a merit to be studiously Saxon in their vocabulary."

The words chosen should be appropriate to the topic, and

Use of Words — Difficult Words.

level to the comprehension of those addressed. Thus much we may properly insist upon; but it would be unwise to encourage our pupils to seek for such words in the Anglo-Saxon element alone.

LESSON 33.

USE OF WORDS — DIFFICULT WORDS, PROPERITY AND PRECISION.

The thought of a sentence may be largely or even wholly obscured by the excessive use of long and alien words.

To the Teacher. — In the Revision we have added so much to this Lesson that you will need to make two of it.

Direction. — Study these sentences till you think you understand them, and then give their meaning in simple language:

1. Diminutive and defective slave, reach my corporal wound immediately. 'Tis my complacency that rests to have some person from frigidity.
2. Network. — anything reticulated, or decussated, at equal distances, with interstices between the intersections.
3. An autopsy was held, which revealed extensive cardiac disease, consisting of hypertrophy, with aneurism of the aorta just below its bifurcation.
4. An, or a, used in a general sense to denote an individual member of a class or species or genus in all other respects indeterminate, is called an indefinite article.
5. He felt the full force of that subliminary equipoise that seemed evermore to hang suspended over the attainment of long-sought and uncommon felicity.
6. The last of men was Dr. Johnson to have abetted squandering the delicacy of integrity by multiplying the labors of talents.
7. He was assaulted during his precipitated return by the rudest fierceness of wintry elemental strife, through which with bad accommodations and innumerable accidents he became a prey to the merciless pangs of the acutest spasmodic rheumatism.

8. Language, or speech, is the utterance of articulate sounds rendered significant by usage for the expression and communication of thoughts — articulate sounds being those which are formed by the opening and closing of the organs. The closing or approximation of the organs is an articulation, or jointing.

2. Use Words with Propriety and with Precision. — Propriety requires that the words and phrases employed should be used in the senses recognized by good English authority, favored by prevailing usage.

Precision means exactness, and demands that one's words should express just what he means to express — no more, no less, no other. "Propriety is satisfied if we write good English: precision demands such a choice of good English as shall express our meaning."

The first half of precept 2 — that respecting propriety — enjoins us to use words with the meanings they have in good authors. We can find out these meanings only as we read such authors, and study the dictionaries, which reflect the usage such authors unconsciously create.

During the last ten or fifteen years many books have been written to tell the English world what words and phrases must not be used at all; or, if used, in what senses and with what functions. The writers of these books singularly agree in what they prescribe and in what, openly and by implication, they prescribe. But it does not appear that they have the warrant of usage for what they so oracularly teach — they seldom or never quote it. Each writer speaks for himself, and on the authority of his individual reason. This we can affirm, for we are able to show that in very many, in most, of the important judg-

ments pronounced, they are in conflict with usage — usage plainly allowing what they peremptorily forbid. To get at the verdict of usage on points thus dogmatically settled and on others that these critics have passed by, we have been consulting the best authors, British and American, now living, or, if dead, living till recently. We have carefully read fifty of these authors, and read three hundred pages of each. Just what these men by habitual use teach on these points and what they thus declare to be good English we have noted.

It is in place here, under the head of Propriety, to speak of a few of the words and phrases which usage says we may employ, but which these critics tell us we may not, must not use. We wish that the corrections here made might spread as widely as the errors taught have extended.

1. We may use such before an adjective and its noun even when such does not modify the noun alone — we are not restricted to so in such cases.

Such a valuable answer. — Tennyson. Surprise at such welcome news. — Pride.

2. We may use each other when speaking of more than two objects — we are not restricted to one another in such cases.

The three modes of shaping a proposition, distinct as they are from each other, follow each other in natural sequence. — J. H. Newman. Concourse of the various faculties of the mind with each other. — Walter Peter.

3. We may use one another when speaking of two objects only — we are not restricted to each other in such cases.

The two armies failed to find one another. — J. H. Green. How do the mind and the universe communicate with one another. — Martinsee.
Qualities of Style — Perspicuity.

4. We may use a great deal, a great many, or a good deal, a good many. Usage is equally divided between the two forms.

Means a great deal. — E. A. Freeman. A great many authors live because, etc. — Lowell. A good many things have gone out with the fire on the hearth. — C. D. Warner. Detained before the eye a good deal longer. — De Quincey.

5. We may use which with a clause for its antecedent.

On these subjects they are devoid of the false pretensions of the upper class, which is an unspeakable comfort. — P. G. Hamerton. If Olympe meant the last Duke of Buckingham, which is possible. — R. G. White.

6. We may use whether when three or more objects are spoken of — it is not restricted to two.

Whether as a citizen, a patriot, or a practical philosopher. — Everett. Whether grim, grotesque, whimsical, or playfully affective. — Minto. Whether art or science or practical craft. — Dean Church.

7. We may use the conjunctions either and neither when speaking of three or more objects, — we need not restrict them to two.

Neither Lear nor Othello nor Macbeth nor Hamlet is so typically perfect a tragedy as the Agamemnon. — Fr. Harrison. By either Marlowe, Greene, Peele, or Shakespeare. — R. G. White.

8. We may use the adjective pronoun either or neither when speaking of three or more objects — we are not restricted to any or none in such cases.

There is little or no reference, in either of the three parts, to the dialogue. — Verplanck. And so neither [of three families] can have precedence. — Higgins. The decision may come in either of many modes. — Prof. Wm. James.

9. We may use both or all with of and its noun after it — they need not be adjectives belonging to nouns or pronouns, though this is their more common use.

For all of them the Greek had only elegies. — A. Lang. There is enough of him for both of us. — Everett.

10. We may use either in the sense of each.

He saw the land swiftly receding on either side. — Irving. A long beach terminated by craggy rocks at either end. — Hawthorne.

11. We may use the forms any or every or no or some one else's, or any or every or no or some body else's. There is very little authority for putting the 's upon one or body.

My happiness is no more desirable than anybody else's. — Marlowe. Fight in some one else's quarrel. — Wm. Black. Our faith is apt to be a faith in some one else's faith. — Wm. James.

12. We may use none in the singular and in the plural.

But none of those who laugh at him possess a tith of his sensibility. — Macaulay. None has ever had a true sense. — Lowell.

13. We may use some, with numerals, in the sense of about.

Some six years ago or more. — Carlyle. Some thirty horsemen dashed through the gate. — Bulwer.

14. We may use the form seen in is being built, was being built, to denote continuing action in the passive — we are not restricted to the form seen in is building, was building.

The point on which the battle was being fought. — France. Which is being done by means of it. — J. Morley. While it was being prepared, . . . . he stayed at Bath. — J. A. Symonds.

15. We may use the with a participle and its object — we are not compelled to place the object after a preposition.

Use of Words — Propriety.

93
Modification is properly the bringing a thing into a certain mode.
—Hamilton. The making himself drunk... is a crime against others. — Mill. Pithounery is the acknowledging an inferiority to be incurable. — Emerson.

16. We may use between when speaking of three or more objects—we are not restricted to among in such cases. This use of between is favored by the great dictionaries, and can be traced all the way back into Anglo-Saxon.

The intercommunications between the eye, the ear, and the nose were of the oddest and the strangest. — Dr. John Brown. The family likeness between the nine is so strong. — Marsh. And they three were the dragon, the lion, and the wolf, which should divide the realm between them. — Holinshed. The genetic relationship claimed to exist between the five great branches of the Spathy family. — W. D. Whitney.

17. We may follow the indefinite adjective pronoun by a personal pronoun or a noun used in place of one—we need not repeat the one.

To have seen a numerous household assembled round the bed one would have imagined that he was transported back to the happy days. — Irving. To walk sturdily by the best light has... this is the discipline by which lone man is enabled to rescue his life from thralldom. — M.Arnold.

18. We may use had rather, had better before the infinitive—we need not say would rather, would better, instead. This is common usage from before Shakespeare and all the way down.

He had better go to an old curiosity shop on High Street. Hawthorne. I had rather believe all the fables in the Legend of the Talmud and the Aesopan. — Bacon. We had better seek for a system which will develop honest men. — Ruskin.

19. We may use get in other senses than to “express attainment by exertion.” It may be used with have to indicate (1) possession and (2) necessity; without have, (3) as temporal, (4) in the sense of become, to indicate (5) real movement, and (6) figurative movement.

What large eyes you have got, what large teeth you have got.— Thackeray. We have got to learn that statesmanship is the most complicated of all arts. — Lowell. They are the most easy to get at. — Burckhardt. Emerson got wet and chilled. — Holmes. Adam took from his horse. — George Eliot. How the Jews got on for the Mosaic law. — Stedman.

20. We may use at length instead of at last.

At length we can no longer touch the metal with impunity. — Thackeray. The leader at length arose. — Macaulay. At length he3 rusted. trembles on the brink of annihilation. — Thackeray. The fatal force which originates exact thinking will at length correct exact expression. — Prof. Phelps. Till at length we reached the Star Hills. — Everett.

21. We may use at best — we need not say at the best.

At all best but the Devil’s elixir. — Longfellow. Saw himself at and the chief of some wandering horde. — Prescott. They are not, but the insufficient representatives of the spirit of the — Buckle.

22. We may use the phrase at all.

I must have slept on it or not slept at all. — Daniel Webster. No one is better than an evil eye. — Dickens. If satisfied at all. — Hazlitt. If it has any meaning at all. — Hazlitt. In point of naked literal accuracy the English of America is not at all inferior to that of England. — Ruskin.

23. We may use consider with the meaning of deem, think, regard—we need not restrict it to the sense of ponder,
She considered him a renegade.—Motley. He considered it his duty to criticise Radicals.—Minto.

24. We may use just to denote time and in the sense of recently—we need not restrict it to mean exactly, precisely, only.

He had just been so indignantly and rhetorically denying.—Motley. Which had just been cleansed by a snow-storm.—Tyrrell.

25. We may use quite with the meaning very, rather—we need not use it only in the sense of completely.

Which is quite closely allied to one of the more common forms of insanity.—Humerton. Quite early in English literature.—Mash. He was quite a lion.—John Fiske. Quite ordinary humanity.—Walter Pater.

These are a few of the words and phrases respecting which usage and certain critics are at variance—usage allowing what they forbid. We say allowing, for the expressions which we here claim may be used are found in great abundance in the authors we have read. These expressions for which no alternatives are given by us are those commonly employed; of the alternative expressions we may say that the one condemned is more often the one especially favored by usage.

The second half of precept 2—that respecting precision—enjoins us to use such words as express precisely our ideas, such as fit the thought perfectly and convey it exactly. One is more liable to choose the wrong word when two or three words having some meaning in common, and differing from each other only in particulars, offer themselves for choice. Such words we call synonyms. Synonyms are words, in groups of two or three or more, that have a meaning in common, but have also each—sometimes only one—a meaning wholly its own. They come,

<p>| | | |</p>

<tr>
<td>1</td>
<td>2</td>
<td>3</td>
</tr>
</tbody>
</table>

and divide it into the two parallelograms 1-2 and 3-4, with 3-2 forming part of each. Now let us suppose the area 1-2 to represent the ground of meaning covered by one synonym, and 3-4 that covered by the other. 3-2, or the space marked e, will then picture that shared by the two synonyms; e, that which belongs exclusively to the first synonym; and b, that which belongs exclusively to the second. When then,
below, we use the letters a, c, b, it will be understood for what parts of the synonyms they stand.

Hear in mind that a and b do not give the full meaning of the synonyms. Add c to a for the meaning of the first synonym, add c to b for that of the second.

If there are more than two in the group, conceive the parallelogram c to be extended upwards and downwards. Each extension plus c will then symbolize another synonym, and the complete figure will represent a group of four with the common meaning c.

Sometimes the relation of the synonyms to each other is such that it would be better illustrated by the parallelogram divided thus:

\[
\begin{array}{ccc}
2 & 4 \\
1 & c & 3 \\
& b \\
\end{array}
\]

Here 1–2 and 1–4 represent the two synonyms; and c, their ground of common meaning, is all of the meaning covered by one of the synonyms—which synonym, then, has no meaning exclusively its own.

**Direction.**—Give (1) the sources of the synonyms grouped below, if you can; (2) the meaning which the synonyms of each group have in common—the c; (3) the meaning which belongs to each separately the a and the b; and (4) frame phrases or sentences illustrating the correct uses of these synonyms:

**Model.**—Chastity and Chasteness, both Latin; c, purity; a, moral; b, rhetorical.

Swift is eminent for chasteness of style, but not for chastity of thought.

In Untruth and a Lie, both Anglo-Saxon; c, all that is covered by untruth—a statement lacking truth; b, made with intent to deceive.

**Precision — Synonyms.**

Ananias was smitten dead for the lie he told. People unwittingly utter untruths.

Discover and invent; in and into; healthy and healthful; sea and ocean; subtle and subtle; artist and artisan; lie and lay and their preterits; sit and set and their preterits; shall and will and their preterits; lodgings and apartments; bring and fetch; asylum and refuge; two and couple; applause and praise; ancestors and forefathers; few and little; fewer and less; many and much; lease and hire; propose and purpose.

**LESSON 34.**

**USE OF WORDS — PRECISION.**

**Direction.**—Do with these synonyms as directed with those in Lesson 33:

On and upon; defend and protect; womanly and womanish; this and that and their plurals; the one and the other; station and depot; hope and expect; fault and defect; who and which; which and that; learn and teach; taste and hurry; news and tidings; high and tall; thankful and grateful; inability and disability; bonds and fatten; abacle and desert; instruction and education; apprehend and comprehend; epoch and era; happen and transpire; character and reputation; occasion and opportunity; long and lengthy; right and privilege; harmony and melody; hinder and prevent; like and love; mind and intellect; apt and liable; sensuous and sensual; relations and relatives.
LESSON 35.

USE OF WORDS — PRECISION.

Direction. — Do with these synonyms as directed with those in Lesson 33:

Knowledge and wisdom; proud and vain; stout and strong; illegible and unreadable; untruth and lie; bough, branch, and twig; pile and heap; sex and gender; gaze and stare; faculty and capacity; deist and atheist; black or blanch; and whiten; certain and sure; safe and secure; raise and rise; allude to and mention; feminine and effeminate; buyish and puerile; genuine and authentic; fancy and imagination; pity and sympathy; selfish and selfishness; right and just; jealousy and envy; noted and notorious; sin, vice, and crime; religious and pious; stay and remain; ride and drive; answer and reply; bid and order; custom and habit; emigrant and immigrant.

LESSON 36.

USE OF WORDS — PRECISION.

Direction. — Do with these synonyms as directed with those in Lesson 33:

Brutal and brutish; brute and beast; can but and cannot but; peaceful and peaceable; artery and vein; sweat and perspiration; flock and herd; interfere and interpose; trustworthy and reliable; enthusiasm and fanaticism; surprised and astonished; laconic and concise; benevolence and benevolence; chasteness and chastity; tame and gentle; enough and sufficient; doubt, uncertainty, and suspense; duty and obligation; disbelief and unbelief; doesn't and don't; lovely and amiable; flexible and pliable; ductile and malleable; blaze and flame; awake and waken; cry and weep; vibrate and oscillate; tolerate and permit; temperance and abstinence; human and humane; noxious and obnoxious; exile and banish.

Pupils should be held to this exercise till they have become critical in distinguishing between synonyms, and habitually careful in their use. It should be insisted that this care extend to all their recitations and exercises. The reactive effect of precision in the use of words will be seen in more exact and distinct thinking. Eberhard asks, "Who can transfer his thoughts with entire exactness of contour and significance of accessory ideas who does not form them definitely?"

LESSON 37.

USE OF WORDS — PERSONAL PRONOUNS.

3. Use Personal Pronouns with Care. — Much obscurity arises from the careless use of he, she, and it, in their several cases and numbers. It is impossible to tell which of many nouns the writer intends to be the antecedent — the word for which the pronoun stands — and so it is impossible to know certainly what the writer's meaning is. Here arises that kind of obscurity which we call ambiguity. It is not that you cannot extract a meaning from the sentence, but that you can extract many meanings, and are in doubt which the author wishes you to take.

If this ambiguity occurs, as it often does, in indirect quotation, it may be remedied by quoting the passage directly. In other cases avoid the pronoun by using the noun for which it stands: change the form of the sentence,
if need be, breaking it into parts and making each part a sentence.

Direction. — Study these sentences to see how many meanings each might have; then select that one which you suppose the author intended, and recast so as to express that clearly:

1. Charles the First's duplicity was revealed to Cromwell by a letter of his to his wife which fell into his hands.
2. Jones sent the man to his neighbor, and he lent him the money he desired.
3. John asked his cousin to bring his hat, as he was going on an errand for his mother.
4. The servant promised her mistress that she would pay her debt.
5. The lion had a struggle with a man, and he killed him.
6. The earth seemed to be asking the moon if it thought that its neighbor, the sun, supposed that it needed its light.
7. When David came into the presence of Saul, he threw a javelin at him.
8. The girls asked the boys whether the books which they had in their hands were those they had seen in their desks.
9. Johnson went to Goldsmith, and found that his landlady had arrested him for debt, at which he was very angry.
10. They were persons of moderate intellects even before they were impaired by their passions.
11. He told the coachman that he would be the death of him, if he did not take care and mind what he said.
12. Picchi discharged an "infernal machine" at the King as he passed his window.

Direction. — Bring in many sentences ambiguous through the careless use of personal pronouns, and free them from their ambiguity.

LESSON 38.

USE OF WORDS—OBSCURE WORDS, FOREIGN WORDS, AND WORDS NEWLY COINED.

4. Avoid Words and Constructions that have no Good Footing in the Language. — You learned in the introductory Lesson that usage is our authority in rhetoric. In nothing is usage less open to question than in the department of words—in diction. Long ago the rhetorician Campbell said that use respecting words should be (1) reputable use—that of the majority of the best writers and speakers, as opposed to that of the uncultivated; (2) national use, as opposed to provincial and foreign; and (3) present use, as opposed to obsolete and ephemeral. Rhetoricians since Campbell's day have accepted the principle, as explained by him, and in turn have inculcated it.

Campbell's Canons. — But sometimes good usage is so divided that it is impossible to tell which of two words or phrases is supported by the best authority. To guide the pupil to a choice in such cases Campbell laid down five simple precepts, or canons, the substance of which we here give:

1. Choose the word or phrase which has but one use or signification rather than that which has two or more. Take, as your adjective, extemporaneous in preference to extemporaneous, since extemporaneous is used as an adverb; and use ate and eaten for the preterit and the participle instead of eat, because eat is a form in the present.

2. Have regard, in your choice, to the analogy of the language. Use contemporary and not cotemporary, since usually the n of con is retained before a consonant, and is dropped before a vowel.
3. Prefer that which is most agreeable to the ear; as, 

ingenuity to ingenuousness.

4. Prefer the simpler expression; as, subtract to subtract.

5. When the other canons fail to settle the doubt, prefer that expression most conformable to ancient usage.

The pupil will not need to resort to these canons. Seldom can it be maintained that usage is equally divided respecting any two expressions, and, when it is so divided, neither can be called wrong. We do not give these canons supposing that they will be of great assistance to the pupil in his work.

Returning to the rule that good use is reputable, national, and present, we say that perspicuity interferes the use of all vulgar, provincial, foreign, obsolete, newly coined, or ephemeral words and phrases, because, whatever they have been or may hereafter be, they are not now English, and one cannot presume that they would be understood by the English reader. Purity, too, puts them under ban, because they would degrade style by tainting the language used.

This prohibition is not, in some of its specifications, to be taken absolutely. Words and phrases from the Latin and even from the Greek, from the French, Italian, and other modern languages, expressing shades of meaning for which no exact equivalents can be found in English, are sometimes seen on the pages of our best authors. Often they seem to be needed, but it would hardly be uncharitable to charge them, at times, to affectation. It is not infrequently happens, too, that new words are coined; and that old words wake up from what Marsh calls a Rip Van Winkle sleep, and begin service anew. The subjects to the discussion of which they are needful having ceased to engross attention, the words become obsolete and finally obsolete, to be revived, however, whenever the topic revives.

Use of Words — Barbarisms.

But the rule, not strictly observed by writers of note, is absolutely binding upon the inexperienced. "Be not the first," says Pope, "by whom the new are tried, nor yet the last to lay the old aside." Heed this advice in your choice and use of words.

A barbarism is an expression which violates the rule that in language good use is reputable, national, and present.

Direction. — Form sentences, where you can, containing good English equivalents for these expressions:

1. That is a sine qua non.
2. He is of the school.
3. He pitches right into the matter.
4. Several things if not more must be done.
5. The ne plus ultra has been reached.
6. It went off with éclat.
7. Americans are deficient in the petite monde.
9. He is troubled with a cold.
10. She made her debut last evening.
11. It was comme il faut.
12. Horace Walpole was a dilettante in literature.
13. Cum teriis paribus, the simplest words are the best.
14. Jovius, the heir, is bent on going while he is young.
15. The hero talks fast, like the others, only more so.
16. This was said sub rosa.
17. Uncle Wendell was up on his ear.
18. He gave himself away.
19. He looked down in the mouth.
20. One might see with a coup d'œil, that he belonged to the haute monde.
21. I don't pen out on the prophets.
22. A house on Rensselaer St. was burglarized last night, and the thief was this morning captured.
23. Not a bad shot.
24. All hope saved on me.
25. That was too then.
26. This is his magnum opus.
27. He made a furious pass.

Direction. — Bring into the class many such expressions, and give good English equivalents for them.
Qualities of Style — Perspicuity.

We must, in rhetoric, presume that the pupil is a grammarian, and writes sentences whose syntax passes muster. But any constructions not authorized by good usage sin against perspicuity as well, since they are an offence to the educated and distract their attention from the thought. A word or two upon grammar may not be out of place here.

A solecism is a construction at war with the grammar of the language. Solecisms may be found occasionally on the pages of even our best writers. They are slips resulting from carelessness, but are not on that account venial. They consist mainly in the use of the wrong modes, tenses, and numbers of verbs, the wrong numbers, genders, and cases of pronouns, and in the use of adjectives for adverbs and of adverbs for adjectives.

Direction. — Point out the grammatical errors in these sentences and correct them: —

1. Its members are the very officials whom Canning said existed to make a House. — Bayley. 2. Among the numerous events which are each in their turn the most delightful and melancholy. — Irving. 3. Tell me, whom am I, how I shall bear myself. — Stendhal. 4. An Irishman who, like Priestly, the Republicans delighted to honor. — Mr. Master. 5. A man whom the refugees declared had done atrocious deeds. — H. 6. The higher animals have each their own utterance. — Farrar. 7. Let every one please himself. — Kingsley. 8. Each in their separate world. — Hutton. 9. He is thinking of the little cubs whom he left rolling in the eternal snows. — Hawthorne. 10. The God that made both sky, air, earth, and heaven. — Milton. 11. The destruction of both horse and cart and loading. — Scott. 12. I should think she will be a great success. — Gen. Elliot. 13. It was Bacon's intention to have dedicated it to Prince Henry. — Strick. 14. Perona was not long before he came to Diplow. — Gen. Elliot. 15. The King's English policy, like his English name, are the sign of a new epoch. — Green. 16. Neither Pope nor South are on a level with the Apostles. — Newman. 17. I suppose it doesn't really deceive people any more than Arabian Nights or Gulliver's Travels do. — Holmes. 18. Neither June nor Elizabeth were comfortable on this subject. — Austen. 19. You have had the pocket-book fever when you were little. — Holmes. 20. We should have liked to have seen more of Emerson. — Brag. 21. Knowing that no action or institution can be salutary and stable which are not based on reason and the will of God. — M. Arnold. 22. Mr. Lang seems inclined to try and throw doubt upon it. — M. Arnold. 23. It's no use being one thing more than another. — Gen. Elliot. 24. I will try and ask more questions. — Bayley. 25. Both of them found the other more like other people than he had expected. — Kingsley. 26. And who do you think I saw standing upon deck? — Hawthorne. 27. Could bring myself to plainly make this charge against you. — Browning. 28. Neither the energy of this passage nor the endorsement of it by Prof. Max Muller, . . . move us at all. — Farrar. 29. Nothing but love, flirtation, and officers have been in her head. — Austen. 30. Pope could polish, correct, eliminate superfluities, and compress his meaning. . . . till he has constructed short passages of unsurpassed excellence. — L. Stephen. 31. It should seem that a full half of Johnson's life was passed under the roof of the Thieves. — Macaulay. 32. Any thing, . . . be by whom he might, should be hung. — Collins. 33. Let his collaborators be whom they may. — R. G. White. 34. My eyes see true. — H. Taylor. 35. Horrible sleep. — Shakespeare. 36. Josephine looks superbly in her white tulle. — R. Grant. 37. Her accredited envoy at the Hague, besides other more secret agents, were . . . hastily employed. — Motley. 38. Lowell and Arnold . . . the one in Old England and the other in the New. — Steelman.

Use of Words — Solecisms.

Other errors which might be set down as grammatical, but which belong more properly to rhetoric, may be found in the next two lessons.
LESSON 39.

USE OF WORDS—TAUTOLOGY, VERBOSITY, AND REDUNDANCY.

5. Avoid Tautology, Verbosity, and Redundancy. — Words that have no exclusive function in the presentation of the thought overload the sentence, and bury the thought beneath their rubbish. The same may be said of phrases and clauses that surround the leading thought with qualifying circumstances not essential to our understanding of it. They distract our attention from the leading thought and dissipate our energy.

Tautology consists in the repetition of the sense in different words.

Verbosity consists in the use of words, unnecessary, though not repeating the sense.

Redundancy consists in the addition of circumstances not essential to the sense.

We may avoid these faults and still present the thought in all the forms needful to the clear communication and full comprehension of it. De Quincey says, “There is a sort of previous lubrication, such as the box-constrictor applies to any subject of digestion, which is requisite to familiarize the mind with a startling or a complex novelty. And this is obtained for the intellect by varying the modes of presenting it—now putting it directly before the eye, now obliquely, now in an abstract shape, and now in the concrete.” Men whose style has been formed by public speaking are given to masking, “by slight differences in the manner, a virtual identity in the substance.” A single statement of a fact or a truth does not always put the audience in full pos-

session of it; and they cannot return, “where each sentence perishes as soon as it is born,” to complete their grasp of it. Webster, whose style was formed in addressing juries, reiterates his meaning but always varies his language, even in his great senatorial speeches.

Words used Needlessly. — (1) An, or a, before a noun which denotes the whole of a class; (2) the before a noun sufficiently distinguished without it; (3) he, she, and other personal pronouns when they have no function; (4) a second negative contradicting the first when you do not wish to affirm; (5) other or others when by its use an object would be brought into a class to which it does not belong; and (6), in general, an adjective or an adverb, a preposition or a conjunction which has no special function—all these should be omitted.

Direction. — Tell which of these three faults, tautology, verbosity, or redundancy, is committed here, and correct the faults in your recast of the sentences:

1. Ezra received a royal edict from the King.
2. I wrote to you a long letter yesterday.
3. I will not waste my strength for nothing.
4. Spruce timber is cheaper than the pine.
5. Redundancy sometimes arises from a want of thought, which leads the author to repeat over and over again his little medley of sense at his command.
6. Then there was a steel axe or hammer, called a mace-of-arms, and which hung to the saddle-bow.
7. Of all men else I have avoided thee.
8. That civil institution which of all others has had the longest life.
9. Men to whom this kind of an organization has been given.
10. During the 14th and the 15th centuries.
11. He has not yet gone, I don’t think.
12. Cast your eye in retrospect back over the past.
13. Charles V, and Francis I, were both mutually exhausted.
LESSON 40.

USE OF WORDS — TOO FEW WORDS.

6. *Use a Sufficient Number of Words.* — The thought may be obscured through failure to use a sufficient number of words.

*Words which should not be Omitted.* — Some of the words that should not be omitted are: (1) the when the object is not sufficiently distinguished without it; (2) an, a, or the before each of two or more connected adjectives modifying different nouns; (3) an, a, or the before each of two or more connected nouns denoting things that are to be distinguished from each other or emphasized; (4) a before few and little when these are opposed to none; (5) other when needed to keep an object in its class; (6) that or which or the words for which it stands, when required to complete a contrast or to express the thought fully; (7) the verb or the verb with its subject when needed after than or as to prevent ambiguity; (8) much when needed after very; (9) words required in order that two or more connected words or phrases referring to another word or phrase should each make good sense with it; and (10) adjectives, pronouns, prepositions, and all other parts of speech when their repetition would give distinctness or proper prominence to the ideas expressed by the following words.

*Direction.* — Find the faults below and correct them:

1. There is a great difference between the language under Charles I. and Charles II., between that under Charles II. and under Queen Anne. — *Trench.* 2. Who never had a taste or emotion or enjoyment. — *Thackeray.* 3. It makes one as hungry as one of Scott's novels. — *Warner.* 4. It is thinking makes what we read ours.
Qualities of Style — Perspicuity.

Locke. 5. Pompey more strikingly than any man in history illustrates the moral in his catastrophe. De Quincey. 6. The merit of Alfred both in private and public life may with advantage be set in opposition to that of any monarch. — Hume. 7. He had had the house thoroughly renovated and furnished it anew. — Holmes. 8. Both the ancient and modern idyllists. — Steadman.
9. There have been things enough happened in the time. — Austen. 10. Between a higher and lower preference. — R. G. White.
11. They would be better in the senate than the field. — L. Stephen.
12. The ways upon which a ship is launched are very like these. — R. G. White. 13. Which made him at once the glory and shame of English manhood. — Church.

The thought may be obscured (11) by the ambiguous use of nouns and pronouns in the possessive, (12) by the use of a word in many senses in the same sentence, and (13) by an expression too concise.

Direction. — The italicized words in these sentences, whether repeated words or not, save the sentences from ambiguity or self-contradiction, or bring ideas into proper clearness or prominence. Read these sentences without such words, and then point out the functions of these words: —

1. These have been more distinguished by zeal than by candor or by skill.
2. The poetry of Dante is picturesque beyond any other ever written.
3. The days of Charles II. were the golden age of the coward, the bigot, and the slave.
4. Every ancient and every modern language has contributed something of grace, of energy, or of music to Milton's poetry.
5. Did any brave Englishman who "rode into the jaws of death" at Halaklava serve England more truly than did Florence Nightingale?
6. The works of Clarendon and of Hume are the most authoritative and the most popular historical works in our language.
7. All the various kinds of interest which belong to the near

Use of Words — Words not to be Omitted.

and to the distant, to the present and to the past were collected on one spot and in one hour.
8. Voltaire gambols: he grins; he shakes the side; he points the finger; he turns up the nose; he shoots out the tongue.
9. In America, millions of Englishmen were at war with the country from which their blood, their language, and their institutions were derived.
10. I have always believed and still do believe that the soul is immortal.
11. A has travelled more than H, but is not so well educated as H.
12. There was a heart, a kindly feeling, which prevailed over the party.
13. The beating I gave or received (not my beating) did him good.
14. Lovest thou me more than these love me, or loveth thou me more than thou lovest them?
15. Those who drove James from his throne, who seduced his army, who alienated his friends, who imprisoned him in his palace, who broke in upon his very slumber by imperious messages, and who pursued him with fire and sword from one part of the empire to another were his nephew and his two daughters.

The errors hereafter given for correction will not have the authors' names appended. But we may say that almost all of these errors have been found in our reading.

Direction. — Find and classify the faults below, and correct them: —

1. There are few artists who draw horses so well as Mr. Leech.
2. The grave of Robert Bruce was only marked by two broad flag-stones, on which Burns knelt and kissed.
3. Our rebuke had the desired effect.
4. There is a great difference between the dog and cat.
5. She had not yet listened patiently to his heart-beats, but only felt that her own was beating violently.
6. He maketh his sun to rise on the evil and good, and sendeth rain on the just and unjust.
Qualities of Style—Perspicuity.

7. The error has and will again be exploded.
8. One should covet nothing less than the best.
9. Pines is the tallest of our trees.
10. Much to his comfort, few of his creditors met, and gave him little encouragement.
11. The brain needs rest as much if not more than the rest of the body.
12. We are charmed by that singularly humane and delicate humor in which Addison excelled all men.
13. He has worn to-day a silk and felt hat.
14. It required few talents to which most men are not born or, at least, do not acquire.
15. Sewal, Archbishop of York, complained of the way in which he had been harassed by suspensions, examinations, and in other ways.
16. Mrs. Horneck and her daughters were very pleased to have with them on this Continental trip so distinguished a person as Dr. Goldsmith.
17. The peasantry of Scotland loved Burns as never people loved a poet.
18. I ask him, you, and every honorable and patriotic man this question.
19. The rhythm of the second and third line is imperfect.
20. It is sometimes difficult to distinguish between an interrogative and exclamatory sentence.
21. Platinum is heavier but not so useful as iron.
22. Reform, therefore, without bravery or scandal of former times and persons; but yet set it down to thyself, as well to create good precedents as to follow them.

Direction.—Bring in sentences illustrating all these errors of omission, and correct them.

LESSON 41.

ARRANGEMENT OF WORDS, PHRASES, AND CLAUSES.

Perspicuity, we have seen, depends, I. Upon the author's mastery of his subject, and II. Upon his use of words. Through nine Lessons we have insisted (1) that you use simple words; (2) that you use words which express your meaning with propriety and with precision; (3) that you use personal pronouns with care; (4) that you avoid words and constructions which have no good footing in the language; (5) that you avoid an excess of words; and (6) that you use a sufficient number of words.

We add that perspicuity depends also

III. Upon the Arrangement of Words, Phrases, and Clauses. — This is a matter of supreme importance, and one not always carefully attended to even by the best of authors. One cannot rely upon punctuation to correct blunders of position.

Place (1) the subject before the object, or object complement, if there would be a doubt which word is subject and which is object in case the positions were reversed. Place (2) all single word modifiers, such as adjectives and adverbs, (3) all phrase modifiers, prepositional and participial, and (4) all clause modifiers, adjective or adverb, where their position will raise no doubt as to what they modify.

This rule does not rigidly exclude words from between these modifiers and the words qualified or limited; but it does exclude them in case their insertion would raise a reasonable question as to what you intend these words, phrases, or clauses to modify, or even when a second reading to ascertain this would be needed. Great freedom of
Arrangement of Words, Phrases, etc. 117

20. The Prince of Wales was forbidden to become king or any other man.
21. A great riferman with a bushy s. rd is called to hold his mamma's skein of wool by the asteroid, date of "Baby."

Direction. — Bring in sentences illustrating all these faulty arrangements, and correct them.

LESSON 42.

ARRANGEMENT OF WORDS, PHRASES, AND CLAUSES.

Direction — Do with these sentences as required with those in the preceding Lesson:

1. A rabin sees a worm while it is flying.
2. There is a great lack of disposition to labor among the educated.
3. One can pass by what does not affect themselves (sic) with a laugh and a shrew of indifference.
4. She went after dinner to show her ring and to boast of being married to Mrs. Hill and the two household.
5. Five express trains will be run to the Princeton-Crescent foot-ball game, to be played Saturday, on the King's Co. Elevated Road.
6. Sewal refused to accept of inexperienced persons recommended by the pontiff to benefices, on the ground of their ignorance of the English language.
7. The Sultan of Mysore was again defeated and slain.
8. James II. retained the great officers that had served under his brother that he could trust.
9. The warp of English is Anglo-Saxon, but the wool is Roman as well as the embroidery.
10. The voice is only suspended for a moment.
11. He is to speak of the landing of the Pilgrims at the Academy of Music.
12. The journals not only spoke in high terms of Mr. Moon's powers as a critic but also as a writer.
13. The first word of an example may also properly begin with a capital letter.
14. They rode in an enormous carriage full of carving and gilding in the style of the grandeur of Spain, which now stands in the courtyard.
15. Those who neither liked the Via Media nor my strong judgment against Rome.
16. A servant will obey a master's orders that he likes.
17. He celebrated the triumphs of Marlborough in verse.
18. Lord Brooke was shot from the church, in the eye, as he stood in a door, of which he instantly died.
19. The man came to his death by excessive drinking, producing apoplexy, in the minds of the jury.
20. And keep the flame from wasting by repose.
21. I did not hear what you said coming so suddenly into the noisy room.

Direction. — Bring in sentences illustrating the faulty position of single words, of phrases, and of clauses, and place these where they should stand.

LESSON 43.

UNITY OF THE SENTENCE. — MISCELLANEOUS ERRORS.

Perspicuity depends

IV. Upon the Unity of the Sentence. — A sentence is not a bag to be stuffed with miscellaneous matter, its value increasing with the quantity crowded into it. It is rather a picture, aiming to present a single object with or without accessories. As you saw in Lessons 12 and 13, a sentence may have more than a single leading clause, each modified, if need be, by dependent clauses. But the thoughts of those leading clauses must be closely related, — one continuing the other, in contrast with it, a consequence of it, or an inference from it, — and all the clauses must combine to form a unit and not a mass of units. Unity is often violated by a change of subject, by heterogeneous material, by long sentences, and especially by long parentheses, the matter of which might be dropped outright, or be absorbed into the body of the sentence.

Direction. — Recast these sentences, and secure unity by (1) omission or (2) by connecting more closely the parts or (3) by resolving each sentence into two or more sentences:

1. For who knows not that truth is strong next to the Almighty; she needs no policies, no stratagems, no licensing to make her victorious, those are the shafts and the defences that error uses against her power: give her but room, and do not bind her when she sleeps?
2. The Spartans were censured by the ancient writers for their inhuman treatment of the Helots, a race long subject to the Lacedemonians, who, when the former became too numerous, ordered the youth to hunt them down like beasts.
3. Here also would properly arise the question, started by Charles Fox, (but probably due originally to the conversation of some far subtler friend, such as Edmund Burke,) how far the practice of foot-notes (a practice purely modern in its form) is reconcilable with the laws of just composition; and whether in virtue, though not in form, such foot-notes did exist for the ancients, by an evasion we could point out.
4. The Spanish fleet continued its retreat, but, in its passage around Scotland and Ireland, a terrible storm arose, and the vessels dashed against the rock-bound coasts, and not more than fifty reached Spain, and the greater part of these were worthless.
5. To this succeeded that licentiousness which entered with the Restoration, and, from infecting our religion and morals, fell to corrupt our language, which last was not like to be much improved by those who at that time made up the Court of Charles II., so that the Court (which used to be the standard of propriety and
correctness of speech) was then (and, I think, has ever since continued) the worst school in England for that accomplishment, and so will remain till better care be taken in the education of our nobility.

MISCELLANEOUS VIOLATIONS OF PERSPICUITY.

Direction.—Classify and correct these violations of perspicuity:

1. Dr. Arnold wrote a History of Rome in three volumes, which was broken off by his death at the end of the second Punic war.

2. The editor went off on a jamboree.

3. Contraction only takes place before a vowel.

4. There is no reason why a prose writer should not avail himself, as well as a poet, of all means of expressing nice shades of meaning.

5. In the temper he is now, I cannot speak to him.

6. There is no stand or impediment to the wit but may be wrought out by fit studies.

7. We extend our classification from the more clearly to the more obscurely, from the more closely to the more remotely connected.

8. Charles V., wishing to aggrandize his family, he negotiated for the marriage of Philip to Mary.

9. The farmer went to his neighbor, and said that he knew his cattle were in his field.

10. So utterly was Carthage destroyed that we are unable to point out the place where it stood, at the present day.

11. Often as many as five dead bodies lay fostering in a single house, which no one could be induced to drag to the nearest ditch and bury.

12. Your beautiful clock was much admired, and is now in our parlor on the mantel-piece, where I hope to see you often.

13. When the searching eye of heaven is hid behind the globe, that lights the lower world, thieves and robbers range abroad unseen.

14. After the Phoenicians discovered the glass, they made money out of it.

15. Kneller used to send away the ladies who sat to him as soon as he had sketched their faces.

16. It received the popular assent of the people.

17. When the Spaniards saw the fireships bearing down upon them, every cable was cut, and the fleet drifted out into the open sea, and several vessels were lost, and the English pursued them, fighting all the time, and, had not the powder given out, they would have destroyed more than sixteen of the Armada which they did destroy.

18. There were two parties rose up.

19. It makes us blush to add that even grammar is so little of a perfect attainment amongst us that, with one or two exceptions, (one being Shakespeare, whom some affect to consider as belonging to a semi-barbarous age,) we have never seen the writer, through a circuit of prodigious reading, who has not sometimes violated the accuracy of the syntax of English grammar.

20. They travel to hard work, if they can, during the period of hard times.

21. "The Rehearsal" has not vitality sufficient to preserve it from putrefaction.

22. She doesn't mean nothing by that.

23. No country has grown so rapidly as this.

24. The fifth and the sixth pupils may change places.

25. A new species of fish has appeared.

26. The present is only intelligible in the light of the past.

27. These are so strong as to seem apparently insurmountable.

28. He saw two men fight a prize; one was a fair man, a sergeant of the guards; the other black, a butcher; the sergeant had red breeches, the butcher, blue; they fought upon a stage, about four o'clock, and the sergeant wounded the butcher in the leg.

29. He drew two horses—a bay and sorrel.

30. And thus the son the fervent sire addressed.

31. All goes wrong, and nothing as it ought.

32. The strawberry, of all other fruits, is the most delicious.

33. Confusion is the more preferable course.

34. She looks like to her mother.

35. We are thankful that we have few good friends.

36. Will he treat me as these others?
37. The Bible has and will be read by millions.
38. Preserve the right of thy place, but stir not questions of jurisdiction; and rather assume thy right in silence, and de facto, than voice it with claims and challenges.
39. She carried two flags — an American and English.
40. The walls were very defaced.
41. Threatening to cut my head off once a quarter.
42. I propose to trace the growth and development of these opinions by means of extracts from his letters.
43. Fare beyond the city limits for adults, three cents.
44. The elder of the two sisters was not yet twenty, and they had been educated since they were about twelve years old and had lost their parents, on plans at once narrow and promiscuous, first in an English family, and afterwards in a Swiss family.
45. Our times do not suffer by comparison with the times of Elizabeth, though these are called the good old times.
46. In several instances, Mr. Gould would not have taken the Dean to task had he known English better.

Scheme for Review.

A SCHEME FOR REVIEW.

Style.—Elements determining it.

1. The Topic.
2. The Author's Individuality.
3. Authority.

Perspicuity defined. (Lesson 31.)

I. Upon the Author's Mastery of his Subject. (Lesson 31.)

1. Use Simple Words. (Anglo-Saxon.)
2. Use Words with Propriety and with Precision. (Synonyms.)
3. Use Personal Pronouns with care. (Ambiguity.)
4. Avoid Words and Constructions that have no good footing in the language. (Obsolete, foreign, and newly coined words. Purity. Campbell's Canons. Barbarisms. Solecisms.)
5. Avoid Tautology, Verbiage, and Redundancy. (Words used needlessly.)
6. Use a Sufficient Number of Words. (Words that should not be omitted.)

II. Upon the Use of Words. (Lessons 31-40 and 43.)

III. Upon the Arrangement of Words, Phrases, and Clauses. (Lessons 41-43.)

IV. Upon the Unity of the Sentence. (Long sentences and long parentheses, Lesson 44.)
LESSON 44.

IMAGERY.

THE COMPARISON.

Things First Known and Named.—Our first knowledge is of concrete things—objects in the outer, the material world. Some of these things we only see or hear, some we see and touch, and some we see, touch, taste, and smell. By the use of our senses we learn the diverse qualities of things, and we learn to distinguish things by their qualities. This knowledge we begin early to acquire, we acquire it all through life; and, having to deal often with the same objects, we learn again and again the lessons they teach. With no other things are we so familiar as with those of the outer world, of no other knowledge are we so certain as of this, and no other words do we use with the clearness and ease with which we handle those denoting the objects of our senses.

And what is true of us individually is true of the race taken as an individual. It was long engrossed with what appealed so powerfully to the senses—the objects of the material world. Some of these objects were seen less frequently than others, and so were less thoroughly known. In process of time men came to think of things which they could not see or hear, touch, taste, or smell—abstract things, such as honesty, truth, health, strength; and things of the inner world, such as spirit, recollection, deliberation. Thinking of the new things of the inner world or of the outer, men would soon wish to speak of them. But the day for forming new words from new roots was then past. And even if it had not been, it was obvious that the old words, if they could be used, would be better understood. It was soon seen that the old words could be put to these new uses. They were, and on this principle—things, wherever they exist, stand in many striking relations to each other. In certain remarkable qualities and offices, real or imagined, things are (1) like each other, or (2) unlike each other, or, speaking generally, (3) they are connected by some other natural law, or relation. Things which men know to be connected in any of these ways are so associated in men's minds that one thing readily suggests the other.

Basis of Imagery.—Upon the basis of these real or fancied relations between things rests the possibility of setting one of these things over against the other, or of speaking of one of them in the terms that denote the other.

Figures of Speech—Images—Are those expressions in which, departing from our ordinary style, we assert or assume any of these notable relations. As images are used in all kinds of discourse, imagery may well be regarded as a quality of style.

Figures of speech of all kinds are invaluable, because, as we have seen, they convey the thought more clearly than plain language could, and thus make it easier of apprehension. They multiply the resources of language, too, enabling us to use the same word in many senses. They beautify style while being of service to the thought—a diamond pin may adorn while it does toilet duty.

A comparison, or simile, is a figure of speech in which a likeness is pointed out or asserted between things in other respects unlike.

Its rhetorical value lies mainly in the fact that it makes the thought easy of apprehension.

Direction.—Substitute, occasionally, plain language for the figurative, and note the loss of distinctness and of beauty: —
Qualities of Style — Imagery.

The Comparison, or Simile.

1. The vessel swept toward the roof — 2. Darkness falls from the wing of night — 3. She melted from her seat — 4. It was beamed as black — 5. The Old Guard rushed upon the broken squares of the English — 6. A thought sometimes hits one — 7. He is as deaf — 8. He was as blind — 9. He is more puzzled — 10. The telegraph stretches its ugly length across the continent — 11. Little troops of sparks, scattering as in fear, thread the tangled darks of the chimney — 12. Locomotives with their trains fly to and fro over the continent — 13. Webster's thoughts stand out as plainly to the sight — 14. In “Sartor Resartus” and in much of modern literature, pantheism gleams and glitters — 15. As we grow old we should grow sweet and mellow —

Direction. — Supply the words like, as, just as, or so, and convert each pair of sentences numbered below, into a single sentence:

1. Odious habits fasten only on natures that are already enfeebled. Moses and fungi gather on sickly trees, not on thriving ones.
2. One may speak and write in a style too base and condensed. Hay and straw must be given to horses in order to distend the stomach.
3. Specific words are more effective than general terms. The edge of a sword cuts deeper than the back of it.
4. Till men are accustomed to freedom, they do not know how to use it. In climates where wine is a rarity intemperance abounds.
5. Too swift arrives as tardy as too slow. The tortoise reached the goal before the hare.
6. When the presumption is on your side, you should not neglect the advantage. A body of troops able to defend a fortress, when inside of it, may be beaten if they sally forth, and fight in the open field.
7. Gentle means sometimes accomplish what harsh measures cannot. The sun made the traveller take off his coat when the wind failed to do it.
8. To adduce more than is needed to prove your conclusion is suicidal. If one strikes a wedge too violently, the elasticity of the wood throws it out.
LESSON 45.
THE COMPARISON.

Direction. — Bring into the class twenty-five rare comparisons, twenty of which were found in your reading, and five are your own. Let some be like those last given in the Lesson above.

LESSON 46.
THE METAPHOR.

In the comparison, the relation of likeness between things is, as you have seen, pointed out or asserted. But this relation may be assumed. It being taken for granted that the reader or hearer sees the point of resemblance, the words like, as, just as, and so may be omitted, and the word or words that denote one of the things may be brought over and applied to the other.

This assumption of likeness may be of different degrees. We may, for example, say, The stars are night’s candles; or, presuming on the reader’s or hearer’s fuller knowledge of the likeness between the things, candles and stars, we may substitute the name of one for that of the other, and, without using stars at all, say, Night’s candles are burned out, meaning, of course, that the stars have vanished in the dawn.

A metaphor is a figure of speech in which, assuming the likeness between two things, we apply to one of them the term that denotes the other. This figure is encountered everywhere in speech—in almost every sentence. Often there are words whose metaphorical significance has so faded out of them that we fail to detect it. Richter has called language “a dictionary of faded metaphors.”

The rhetorical value of the metaphor is the same as that of the comparison, or simile. But the metaphor, briefer than the comparison, leaving more to the reader or hearer to detect and stimulating him to the detection, is a stronger figure. Often it has more beauty. Metaphors may be changed into comparisons.

Direction. — Point out the metaphors in these sentences, substitute plain language for some of them, and note the loss of vividness and beauty:

1. The soul of Jonathan was knit to that of David.
2. Sir James Mackintosh’s mind was a vast magazine of knowledge.
3. Charles I. stopped and turned back the tide of loyal feeling.
4. The robin knows when your grapes have cooled long enough in the sun.
5. Stop my house’s ears.
6. The valiant taste of death but once.
7. While trying to prop the fortunes of another, Bacon was in danger of shaking his own.
8. He baited his hook for subscribers.
9. His strong mind reeled under the blow.
10. Keep you in the rear of your affection, out of the shot and danger of desire.
12. Antony is but a link of Caesar.
13. This rudeness is a sauce to his good wit.
14. Dwell I but in the suburbs of your good pleasure?
15. He can scarcely keep the wolf from his door.
16. It was written in a white heat.
17. Lord Rockingham was a willow and not an oak.
18. Strike while the iron is hot.
Qualities of Style — Imagery.

19. Ought has deserted the service of the verb once.
20. Fox winnowed and sifted his phraseology.
21. The fame of the elder Pitt has been overshadowed by that of the son.
22. If, gangrened by state jealousy, I get up here to abate the title of a hair from his just fame, may my tongue cleave to the roof of my mouth.
23. Inflections are words that have lost their specific gravity.
24. Murray's eloquence never blazed into sudden flashes, but its clear, placid, and mellow splendor was never overclouded.
25. We are to judge of a word by reference to its yoke-fellows in the sentence.

Direction. — Recast these sentences, using at least a single metaphor in each:

1. I have hidden my look.
2. I know Caesar would not be cruel but that he sees the Romans are gentle.
3. Talleyrand was cunning.
4. Marshal Ney was brave.
5. One may learn something from trees and brooks.
6. Pitt's fluency and personal advantages were noticed.
7. Keep the friends you have.
8. The common people of Rome were senseless.
9. Time passes.
10. I have forgotten that.
11. Everything favors your plan.
12. He was mild and gentle in his manners, but stern in disposition.
13. One is injured by evil associates.
14. He has committed himself to that policy.

Direction. — Bring into the class all the metaphors you have time to collect.

LESSON 47.

METAPHORS AND COMPARISONS.

Direction. — Point out the metaphors in the sentences of Lesson 46.
Direction. — Where you can, change the comparisons in that lesson into metaphors, and note the effect.
Direction. — Where you can, change the metaphors in the preceding Lesson into comparisons, and note the effect.

LESSON 48.

FADED METAPHORS — SO-CALLED MIXED METAPHORS.

Direction. — Restore the color to these faded metaphors by looking up the etymology of the words italicized:

1. The reason is obvious.
2. The objection is insuperable.
3. The impediments are many.
4. Select the cardinal qualities.
5. Afflictions are needful.
6. The greeting was cordial.
7. His manners were polished.
8. He is ruminating.
9. Inculcate this lesson.
10. It is a salient point.
11. Tribulations are sent.
12. His fortune is dilapidated.
13. Ponder my sayings.
14. He supports his mother.
15. God succors the weak, comforts the desponding, and corrects the erring.
16. I am astonished.
17. It is wrong to give such a man a furthering.
18. It was a radical measure.
19. He and I are rivals.
So-called Mixed Metaphors. — Whenever a metaphor runs through two or more words, it is always possible that the parts contained in the several words may not be of a piece — may not unite to form a homogeneous whole. The metaphor which is begun is not completed, but a fragment of another is added instead; what is begun in plain language ends metaphorically; or the metaphor begun is pieced out with plain language. Metaphors of this kind, if metaphors they may be called, are like the mythical mermaid — what begins as a human being ends otherwise. If, for example, one were to pray, *Pilot us through the wilderness of life,* the first word would bring before the hearer the picture of a vessel sailing; but *wilderness* compels it to sail on *dry land!* The correct figure would be, *Pilot us over the sea of life,* or *Guide us through the wilderness of life.*

But it ought to be said that, in criticizing such expressions, we should be certain that the author intended them to be metaphorical. In a preceding lesson we learned that the metaphorical meaning fades out of words that are much used. This sentence, instanced by Professor Whitney, "I propose to discuss an important subject," perfectly proper, if we suppose, as we may, that the etymology of the words was not in the author's thoughts, would be but a jumble of mixed or discordant metaphors if we suppose that the etymology was vividly present to him. When the metaphor stands in a single word, the danger we have been speaking of is not so threatening.

So-called Mixed Metaphors. — Recast these sentences, changing (1) the first part of the would-be metaphor to agree with what follows, and (2) the last part to agree with what precedes: —

1. They are brittle wits, the edge whereof is soon turned.
2. Let us cultivate thoroughly this branch of the vineyard of life.
3. The strong pillar of the church had fled.
4. The raw material from which he spins his finished fabric.
5. We thank thee for this spark of grace; water it, good Lord.
6. The chariot of the revolution is rolling along, and quenching its teeth as it rolls.
7. The chariot of day peers over the mountain tops.
8. Napoleon I. was of low moral caliber.
9. These assertions are only rockets which glance upon the ear.
10. From the throats of 300 cannon poured a shower of balls that winnowed the English ranks.
11. Exhume the scum of intemperance.
12. His bosom was swelled with the blame of patriotism.
13. He is swamped in the meshes of his argument.
14. We will burn all our ships; and, with every sail unfurled, steer boldly out into the ocean of freedom.
15. He is an ass of the first water.
16. Such a quaking of eagles' talons was never seen before.
17. A varnish of morality makes his actions palatable.
18. See how the blue beamed floors of the heavens are frescoed.
19. He kindles the slumbering fires of passion.
20. Solve the mazes of this dark tragedy.
21. He stupeled to such lengths of meanness.

Direction. — Bring into the class a few incongruous or mixed metaphors. Do not aim to make them grotesque, but let them be such as one through carelessness might make.
LESSON 49.

THE COMPARISON AND THE METAPHOR CONTAINING ALLUSIONS.

A figure of speech may contain a reference to some noteworthy incident in history, in classic story or literature, in the Bible, or to some familiar or proverb or well-known custom, and hence carry additional authority and beauty. Figures containing such allusions show not only the author’s perception of the relations which things sustain to each other, but that he has read as well, and for that reason are grateful to the reader or hearer.

Direction. — Point out and name the figures below, and explain the allusions in them:

1. Daily, with souls that cringe and plot, we Sinais climb and know it not.
2. He pours out all the vials of his wrath on my devoted head.
3. The schoolmen raised vast aerial Jacob’s ladders of vapor metaphysics.
4. He doth bestride the narrow world like a Colossus.
5. He received the lion’s share of the profits.
6. I’ll break a lance in your defence.
7. He threw down the gauntlet of debate.
8. This is the party shibboleth.
9. Hamilton smote the rock of public credit, and streams of revenue gushed forth.
10. Has the ghost of the murdered coalition come back like the ghost of Banquo?
11. Suffer not yourselves to be betrayed by a kiss.
12. They follow their chief for the heaves and fishes.
13. He will go from Dan to Beersheba in pursuit.
14. Who can clean the Augen stable of politics?
15. He falls like Lucifer, never to hope again.
16. Political antagonists should not strike below the belt.
17. Milton’s prose writings are a perfect field of cloth of gold.
18. I will not be anybody’s cat’s paw.
19. Summer was a man of talents.
20. Methinks I see in my mind a noble and puissant nation, rousing herself like a strong man after sleep, and shaking her invincible locks.
21. We should stop throwing grass at this evil and begin to throw stones.
22. These fishes in my stead are sent by him who gave the tangled ram to save the child of Abraham.
23. They are feathered Pecksniffs, to be sure.

Direction. — Bring in several figures containing allusions, a part gleaned from your reading, and a part of your own making.

LESSON 50.

PERSONIFICATION.

In the use of the metaphor we may transfer names to things, and give qualities or ascribe actions to them which lift them up from the plane of the inanimate to that of the brute, and even from the plane of the inanimate or of the brute to that of human beings. These planes we may picture by horizontal lines, thus:

Human
Brute
Inanimate

The figure thus formed is a metaphor; but, since it raises objects in the scale of being toward or to the realm of persons, we call it a personification.
Qualities of Style — Imagery.

A personification is a figure of speech in which things are raised to a plane of being above their own. This figure is, as you see, of three grades—(1) that in which inanimate things are raised to the rank of mere animals, (2) that in which mere animals are raised to the rank of man, and (3) that in which inanimate things are raised to the rank of man. Of these the (2) is the least common, and the (3), in which things are raised the farthest, is the most noticeable, and hence the most forcible.

The rhetorical value of the figure lies in this: to us things rise in dignity and importance as they rise in the scale of being.

Note that, while all personifications are metaphors, not all metaphors are personifications.

Direction. — Point out the figure in these sentences, name the grade to which it belongs, and then recast some of the sentences, using plain language, and note the loss in expressiveness and beauty:

1. Earth felt the wound.
2. Next Anger rushed, his eyes on fire.
3. Grim-visaged War hath smoothed his wrinkled front.
4. The Winds, with wonder whist, smooth the waters kissed.
5. Necessity is the mother of invention.
6. The moping Owl doth to the Moon complain.
7. True Hope is swift, and flies with swallow's wings.
8. Tongue was the lawyer, and argued the case.
9. Vice is a monster of so frightful men as to be hated needs but to be seen.
10. Speckled Vanity will sicken soon and die.
11. Into the Jaws of Death, into the mouth of Hell, rode the six hundred.
12. The Waves to sleep had gone.
13. And the very Stones of Rome will rise and mutiny.
14. The Breeze comes whispering to our ear.
15. With arms outstretched, the druid Wood waits with his beneficile.

Personification, Apostrophe.  

16. Bring with thee Sport that wrinkled Care derides, and
17. Laughter, holding both his sides.
18. Nor Heaven peep through the blanket of the dark to cry.
19. Hold, hold.
20. Grim Pestilence stalked o'er the land.
22. The very Walls will cry out against it.
23. The Ship wrestles with the storm.
24. Flattery spits her poison at the mightiest peers.
25. The Sun pillows his chin upon an orient wave.
26. He plucks the pearls that stud the deep, admiring Beauty's lap to fill.

Direction. — Bring in many rare personifications. Illustrate with them the three grades of personification.

LESSON 51.

THE APOSTROPHE.

One may stop in his speech to those before him, or turn from writing of things in the third person, and address the absent, living or dead, or even objects that were always inanimate.

An apostrophe is a figure of speech in which the absent are addressed as if present, and the inanimate as if intelligent and present. In the address to inanimate things — the form of the figure most common — these are, of course, personified. The essential difference between the two figures, apostrophe and personification, is the address. Objects personified are carried up toward or to the rank of persons, but are not addressed; objects apostrophized,
whether already persons or made such by the figure, now addressed.

The rhetorical value of the figure consists in this, that it gives variety and animation to style, and great importance to the object addressed.

Direction. — Point out the figure, express the thoughts in some of these sentences without it, and note the loss of liveliness and vigor:

1. O Rome, Rome, thou hast been a tender nurse to me.
2. Ho! matrons of Vienna! Ho! matrons of Lucerne! weep, weep, and rend your hair for those who never shall return.
3. But thou, O Hope, with eyes so fair, what was thy delighted measure?
4. There rose a shout, prolonged and loud, that to the ocean seemed to say, Take her, O Bridegroom, old and gray.
5. Come to the bridal chamber, Death.
6. Blow, Winds, and crack your cheeks!
7. Come, old Assyria, with the dove of Nineveh upon thy emerald crown, what said thee low?
8. Sleep, gentle Sleep, Nature's soft nurse, how have I frightened thee that thou no more wilt weigh my eyelids down?
9. Flag of the brave, thy folds shall fly the sign of hope and triumph high.
10. Sweet Flower, thou tell'st how hearts are pure, as tender as thy leaves will surely know the joy that peace imports.
11. Beazars, with the storied brave Greece murdered in her glory — time, rest thee.
12. Great Father of your country, we heed your words, we feel them as if you uttered them with lips of flesh and blood.

Direction. — Bring in as many rare apostrophes. Let them be of the different kinds given above.

LESSON 52.

ANTITHESIS.

The figures thus far considered are based upon the relation of likeness, real or imagined, which things sustain to each other likeness in quality or in function.

We come now to a figure which is based upon the relation of unlikeness between things. This unlikeness may be of many grades. It may extend even to one hundred and eighty degrees on the circumference of difference; in this case the things are diametrically opposed to each other, as black things to white things, things true to things false.

An antithesis is a figure of speech in which things mutually opposed in some particular are set over against each other. Antithesis is a striking figure, especially when things diametrically opposed to each other are contrasted by it; it is much used in oratory and in all forcible writing.

Its rhetorical value consists in this, that an object is seen most clearly when it stands relieved against its opposite. Each object, with reference to the quality in which it is contrasted, is measured by a standard less than the ordinary, and hence in that quality is magnified. Dark objects seem black when contrasted with things that are white. If the average height of people were five feet, then a giant ten feet tall and a child two and a half feet, standing side by side, would seem to be the one twice as tall as he really is and the other only half as tall, because each is measured by a standard having only one half of the average of the quality for which he is distinguished.

The second part of an antithesis sometimes contains a factor which multiplies the force and value of the figure.
Example 15 below, taken from Macaulay, would be a good antithesis if it run, Our Indian subjects submit patiently to a monopoly of salt; for such a restriction the fierce breed of the Puritans wrested from us an empire. How the force of the figure is increased when we are told that the Puritans did this, not because salt, necessary to life, was monopolized, but because a trilling stamp duty was imposed!

Direction. — Point out the words below which denote the things contrasted, note how the figure brings these things into relief, and restate some of the sentences without using antithesis:

1. Saul, seeking his father's asses, found himself turned into a king.
2. Fit the same intellect to a man, and it is a bow-string; to a woman, and it is a harp-string.
3. The French and the Germans have named their vowels; the English have nicknamed theirs.
4. Light may be defined as ether in motion; darkness, as ether at rest.
5. Truth gets well if she is run over by a locomotive, while Error dies of lockjaw if she scratches her finger.
6. I thought that this man had been a lord among wits, but I find that he is only a wit among lords.
7. In the world, a man lives in his own age; in solitude, in all ages.
8. The Athenians understand what is good, but the Lacedamonians practice it.
9. The mountains give their lost children berries and water; the sea mocks their thirst and lets them die.
10. Better to reign in hell than serve in heaven.
11. Plato's arrow, aimed at the stars, was followed by a track of dazzling radience, but it struck nothing: Bacon fixed his eye on a mark which was placed on the earth, and within bow-shot, and hit it in the white.
12. Kings will be tyrants from policy when subjects are rebels from principle.

The Metonymy.

13. The Saxon words are simple, homely, and substantial, fitted for every-day events and natural feelings; while the French and Latin words are elegant, dignified, and artificial, fitted for the pomp of rhetoric, the subtilty of disputations, or the courtly reserve of diplomacy.
14. For fools rush in where angels fear to tread.
15. Our Indian subjects submit patiently to a monopoly of salt. We tried a stamp duty — a duty so light as hardly to be perceptible — on the fierce breed of the old Puritans, and we lost an empire.
16. Presence of mind is greatly promoted by absence of body.
17. Put not your trust in money, but put your money in trust.
18. In conversation, Johnson was racy, laconic, fleet; in writing he was ponderous, lumbering, logy.

Direction. — Point out the antitheses in the extract from Holmes, Lesson 74.

Direction. — Bring in many good antitheses. Let some be of the kind seen in Nos. 5 and 15.

LESSON 53.

THE METONYMY.

The figures thus far considered are based upon the relation either (1) of likeness or (2) of unlikeness in which things stand to each other in quality or in office. But, you were told in Lesson 14 that things are connected by some other natural law or relation than these, and in such a way that they become intimately associated in our minds — one easily and always suggesting the other, and enabling us to use the word denoting one of them instead of that denoting the other.
A metonymy is a figure of speech in which the name of one thing connected to another by some bond not of likeness or unlikeness is taken to denote that other.

The natural laws which connect things, the laws by which we associate them, are many and diverse. The most important not yet spoken of are these: things are related, and are associated by us, (1) as sign, or symbol, and the thing symbolized, (2) as cause and effect, or source and what flows from it, (3) as instrument and the user of it, (4) as container and the thing contained, (5) as material and the thing made out of it, (6) as contiguous to each other, (7) as the abstract and the concrete, and (8) as part and whole or whole and part.

This last relation is so important that the metonymy based upon it has been dignified by a separate name—the synecdoche.

Rhetorical Value. — In the metonymy, as in the metaphor, the name of the related object which is best known is taken to denote the other object. Like the metaphor, the metonymy gives clearness, vigor, and beauty to style.

Direction. — Classify the metonymies below, note what they add to the expression, and revast some of the sentences, using plain language:

1. Uncle Ali sailed away with all his (c) crescent spread.
2. The (c) crescent in Europe is waning before the cross.
3. He is a slave to the cup.
4. Strike for your (v) alizes and your (v) pears.
5. Who steals my (p) erson steals truth.
6. He roses, and addressed the (x) new.
7. The sanctity of the (k) arm should be kept inviolate.
8. The palace should not seem the cottage.
9. The (r) red coat turned and fled.
10. Where (g) grey-hooded must and (s) bald reigned.
11. The (o) watered pot never boil.
12. The (t) turban yields to the (t) turban.
13. Iron hailed and lead rained upon the (e) enemy.
14. The (p) pen is usurping the office of the (w) sword.
15. The (b) bat is giving way to the (b) bat, etc.
16. We have prostrated ourselves before the (t) throne.
17. The (b) bowed at the little inn was excellent.
18. Death fell in showers.
19. The American sailor humbled the (b) Barbary flag.
20. The (h) hollow oak is our palace.
21. Your flashes of merriment that were wont to set the (t) able on a roar.
22. Ale and beer fresh from the (w) wood.
23. Even (b) beggars think.
24. Alike was famous for his arm and (b) blade.
25. We cut the (s) solid whiteness [snow] through.

Direction. — Bring in many good metonymies, illustrating the seven kinds treated above.

LESSON 54.

THE SYNECDOCHE. TROPES. HYPERBOLE.

Things are connected in reality, and are associated by us, in the relation of part to whole, or of whole to part. The figure based upon this—really a metonymy—has, because of its importance, received a separate name—the synecdoche. The species for the genus, the genus for the species, and the individual for the class, are all examples of a part for the whole or of the whole for a part.

A synecdoche is a figure of speech in which the name of a part denotes the whole, or the name of the whole denotes a part.

As we grasp a part of a thing more easily than the whole, that branch of the figure in which the name of the
Qualities of Style — Imagery.

part denotes the whole presents the object more vigorously than does the other, and is more common and more valuable than the other.

Its rhetorical value consists in the fact that it puts a thing well known in place of one less known.

Direction. — Tell which branch of the figure these synecdoches illustrate, recast some of these sentences, dropping the figure, and note the loss of vigor and of beauty:

1. Grace is said before meat.
2. Galileo raised his glass to the heavens, and beheld the planet Venus crescent like the moon.
3. Up came the reserve of foot and horse.
4. The boy left his father’s harvest.
5. Yarn is the product of the spindle; cloth, of the shuttle.
6. She left the protection of his roof.
7. Count noses.
8. Come and trip it, as you go, on the light fantastic toe.
9. Milton’s wife left his bed and board.
10. The commerce was carried on in British bottoms.
11. He bought forty head of cattle.
12. Few American keels plough the ocean.
13. He was riding on his wheel.
14. We travel by sail, by steam.
15. He employs a flock of hands.
16. Miles of hulls are rotting in the harbor of Portsmouth.
17. It is a village of 500 chimneys.
18. It is a city of spires.
19. The harbor was crowded with masts.
20. He cried, “A sail, a sail.”
21. Milton is the parent of Samson Agonistes.
22. Who would not like to visit the Old World?
23. James I. was ironically called the Solomon of his age.
24. The busy fingers toiled on.

Direction. — Bring in as many synecdoches, and illustrate both branches of the figure.

Tropes. — To our list some rhetoricians would add a figure with the old and familiar name of trope. In his “The Might and Mirth of Literature,” an American work showing wide reading and rare discrimination, Professor Macbeth is “daring enough to seize an unappropriated title [trope] and to wed it to a magnificent group of figures, which that title most exquisitely suits — those turns that lie in adjectives.” The adjectives in such expressions as these he calls tropes:

The merry bells ring round. Heaven’s forgiving rainbow. She wept to leave the fond roof. I have seen a face so very angry. Ripe October gathers in the grain. Places which pale passion loves. To hide her guilty front with innocent snow. The melancholy darkness gently weeps. She heard the cannon’s deadly rattle. Others from the dawning hills looked round.

But all these would fall into the classes of figures we have defined and illustrated. Others make trope the name of the genus of which the metonymy and the synecdoche are the species. The propriety of thus limiting the word is not apparent.

It accords best with the etymology of the word trope (Greek tropein, to turn) to apply it as the general name of all those figures in which words are turned from their first and literal meaning, are transferred, and used in a secondary sense. We may, then, say that tropes include metaphors, personifications, apostrophes which personify, metonymies, and synecdoches.

We may add that from the same root come trophy, which meant the monument once set up to commemorate the spot where an enemy turned and fled — now used to name the arms, flags, or soldiers taken in battle and indicating victory — and trope, which named the imaginary lines where the sun seems to turn in its northward and its
southward movement, and was then applied to the belt of the earth's surface between these lines.

**Hyperboles**, extravagant expressions overstating the facts or magnifying the truth, are set down by some writers as a separate figure. But though hyperbole may sometimes be found in expressions not figurative, it seems to us better to call it a characteristic of imagery than a separate image. All images magnify the thought they convey or illustrate. It is thus that they make the thought more prominent and distinct than a literal statement of it could.

**To the Teacher.** — We have always detained our classes here for one or two essays that should practically illustrate what has been said upon perspicuity, and should show skill in the use of imagery. We have noticed that these essays were always largely descriptive. This has suggested that a few words upon descriptive writing proper may be in place here.

Description can scarcely be called a distinct division of writing, but it forces itself, here and there and in bits, into all departments. — into history, travels, treatises, even, and into all kinds of poetry, — and is always welcomed as a grateful change. **Description is largely of things apprehended by the eye.** But it may be of men in their mental and social characteristics as well as of men and of things in their outward appearance.

Description is a kind of composition alluring to young writers since it deals mainly with concrete things, admits of abundant imagery and shows this off with happy effect. But it is a composition in which it is easy to be obscure. **A description is a picture, usually of something perceived at once and as a whole** — the parts in themselves, in their relation to each other, and as together constituting a unit. To be perfect, the description should represent its object to the reader as it was originally presented to the seer. This is plainly impossible. A verbal picture is not a painting or a photograph. Its words follow one another; it takes many to depict even a single feature of the object, and time to depict all and represent the whole. This limits the number of the points that can properly enter a description. You cannot see many in all their relations, and you cannot bring away and use in vivid description all the parts you saw. But if you could do both, you would not be able so to present all that the reader could distinctly see them. He has only your words out of which and by which to create in imagination, and one after another, the individual features, and blend them all into a just whole. He can see the details at best but vaguely, can hold but few of these in his grasp, and group still fewer into a picture. Multiplicity would confuse him and bring to nought the purpose of the description.

1. Out of the possible details, then, **select only a few — the fewest needed for clear presentation.** Let these few be essential, characteristic, suggestive of the rest, and let them be presented briefly and distinctly. Much, it is wonderful how much, can be done in this way. How a few skillful strokes of Irving place Wouter Van Twiller before us — a large spherical head, set, without neck, on the backbone; a body five feet six in height and six feet five in girth; on legs short and sturdy — a beard barber on skids; small gray eyes; cheeks mottled, and streaked with dusky red; toll-gatherers of all that had entered the mouth; and a vast expense of face unfurrowed by lines of thought! Who does not see him?

2. Much help is given by a **preliminary comprehensive outline presenting in sketch** that which follows in detail. Such as Victor Hugo's capital A (instance by Professor Gurney) picturing the field of Waterloo — Wellington and the English at the top of the A; Jerome Bonaparte, under
whom the battle began, at Hougoumont, at the foot of the left leg; Napoleon at La Belle Alliance, at the foot of the right leg; the cross of the A the sunken road of Ohain, which swallowed up so many of the Imperial Guard when under Ney its last charge was made; the struggle for the triangular plateau between the cross and the two sides of A meeting at the top being the whole of the battle.

3. Much, by a condensation even of a vivid description into an image at the close. How De Quincey groups the eminent men of Greece, clustering about the great Péricles, in the bisecting year of his life, 444 B.C., the tragedians Aeschylus, Sophocles, and Euripides, the comic Aristophanes, the philosophers Anaxagoras, Socrates, Plato, and Xenophon, the artist Phidias, and the historians Herodotus and Thucydides; and then, moving forward 111 years to 333 B.C. (mark the three dates), how he centers about Alexander the Great a glittering cortège of general officers, exquisite masters of refined comedy, great philosophers—chfeest, Aristotle, who played with men's minds as his princely pupil Alexander played with their persons—the great orator Demosthenes, Lysippus the sculptor, and Apelles the painter! And then in a figure that engraves forever upon the memory a description already graphic, he likens these two clusters of illustrious men to the two globes of a dumb-bell; and Socrates, whom in conscience De Quincey could not call great and so called long, he makes the cylindrical iron handle connecting the two globes.

4. Much, by a single sentence summarizing a long description. After a minute account of the fire, the sword, the exile, and the famine by which the country was devastated and depopulated, Burke gathers it all up into this sentence expressing the result:

So completely did these masters in their art, Hyde Ali and his more ferocious son, absolve themselves of their impious vow that, when the British armies traversed, as they did, the Carnatic for hundreds of miles in all directions, through the whole line of their march they did not see one man, not one woman, not one child, not one four-footed beast of any description whatever.

5. Turn to Lesson 74, to the extract from Carlyle, and see how much description derives from what Bain calls "associated circumstances" and "associated human feelings." The spectator and describer is in his watchtower in the attic of the highest house in the city. He is at the window, looking upon the city spread out below him. It is midnight. He is not describing what he really sees,—the lamps are dim and the roofs opaque,—but what he imagines; and he is imagining not so much sensible things as the thoughts, the feelings, and the purposes of the 500,000 people beneath him, awake or asleep, standing, sitting, or in a horizontal position. Moreover, the spectator is a philosopher, and is in a meditative mood. He is sad, sympathetic, and in earnest.

Direction.—Point out the features Carlyle selects in this passage and describe the treatment these receive—features and treatment derived from the "circumstances" and the "feelings" of the one describing.

6. 7. Imagery and word-painting play a great part in the best descriptions. What vividness and weight the adjectives showering, quelled, rickety, goose, grotesque, enemy, and voluptuous, and the nouns gallon, rodomontade, lyceum, and pelican impart to the description of James I. in the extract from J. R. Green, Lesson 74! And what force has the continued antithesis, which sets the inner man over against, and in contrast with, the outer!

Direction. Name the images in the extract from Carlyle, same lesson. In "crocodile of vapors," "fermenting cat," "tamed vipers," "smoke-counterpane," etc., etc., and in the many contrasts; and
Qualities of Style — Imagery.

tell how they add the description. Give the force of the expressive epithet "sterilous," "two-legged," "weltering," etc., etc.

8. Description is invoked now as never before in the attempt to make scientific truths easily intelligible and science popular.

Direction. — Study the extract from Tennyson, Lesson 74. Note how description aids in making clear the agency and the amount of the particles in the air, on whose power to reflect the smaller light waves depends the brightness of the sky — aid us too in understanding even the "cometary matter," used here by Tennyson only for illustration.

9. Description is found everywhere in poetry.

Direction. — Point out the descriptive portions of Nos. 1, 2, 7, 8 and 12, Lesson 84, and speak of the function of description in them.

Direction. — Write an essay that shall illustrate the two great Qualities of Style thus far treated. If the essay is descriptive, give especial heed to what has just been said.

LESSON 55.

EXERCISE IN THE DISCRIMINATION OF FIGURES.

The list of the figures of speech is now complete. Some things which a few authors call figures seem to us (1) characteristics of figures — allusion and hyperbole; or (2) qualities of style — wit and irony; or (3) products of writing, kinds of discourse — fable, epigram, allegory; or (4) ways in which words, phrases, and clauses are arranged — interrogation, dialogue, vision, exclamation, climax. Some of these have already been noted; the others will be spoken of in their proper places.

Discrimination of Figures.

Before leaving this subject we shall exercise the pupil in the discrimination of figures.

Direction. — Study these sentences very carefully, find the figures they contain, name two or more in a sentence, name and classify them, note their differences, point out the so-called mixed metaphors, explain the allusions, and speak of those figures that may be called tropes: —

1. Come, seeing Night, scatter up the tender eye of pitiful Day.
2. The coat does not make the man.
3. From 200 observatories in Europe and America, the glorious artillery of science nightly assaults the skies.
4. The veins of fermentation in the veins is over, and the action has commenced.
5. The lamp is shining.
6. Talent has many a compliment from the bench, but tact touches fees from attorneys and clients.
7. Blow, blow, thou winter Wind, thou art not so unkind as man's ingratitude.
8. His reasons are as two grains of wheat hid in two bushels of chaff.
9. Laughter and tears are meet to turn the wheels of the same machinery of sensibility; one is wind power, the other water power.
10. When you are an anvil, hold you still; when you are a hammer, strike your fill.
11. Tennyson's earliest poems are festoons of verbal beauty.
12. Save the engineer from peril, then.
13. Envy is a quelling passion and walketh the streets and doth not keep home.
14. The base she sat on, like a burnedish throne, burned on the water.
15. An ace in Middlesex is better than a principality in Utopia.
16. Wellington did not at Waterloo expose his bosom to the steel.
17. Horace Walpole loved to chat with the blue stockings.
18. Bees will not work except in darkness; thought will not work except in silence.
Every village boy is a Vauban of snow fortresses.
Her breath secures of June, like a new-made haycock.
Hope, enchanted, smiled, and waved her golden hair.
He is fairly launched upon the road to preferment.
The bench should be incorruptible.
A pun, like a penny on the rails, may throw the train of conversation off the track.
There is a tide in the affairs of men, which, taken at the flood, leads on to fortune; omitted, all the voyage of their life is bound in shallows and in miseries.
The stroke oar at Yale fell sick.
Careful to see the mantling bliss go round.
The prodigal robs his heir, the miser robs himself.
Wretchedness covers into truckle-beds, or shivers hunger-stricken into its hair of straw.

Direction.—Bring in sentences which illustrate all the figures in their several varieties.

LESSON 56.

EXERCISE IN THE DISCRIMINATION OF FIGURES.

Direction.—Do with these sentences as directed with those in the preceding Lesson:

1. Dean Swift aspired to the minister.
2. The towering Headlands, crowned with mist, their feet among the billows, know that Ocean is a mighty harmonist.
3. Things are in the saddle, and ride mankind.
4. Every person's feelings have a front-door and a side-door, by which they may be entered.
5. Night drew her sable curtain down, and pinned it with a star.
6. I'll use you for my mirth.

Discrimination of Figures.

7. There is nothing out of which the tremendous hydraulic press of Gower's allegory will not squeeze all freshness and feeling.
8. He was addicted to the bottle.
9. Tennyson's words gleam like pearls and opals, like rubies and emeralds.
10. Talent is a cistern, genius is a fountain; the one gives out what it has taken in, the other what has risen from its unsounded wells of living thought.
11. His pocket was affected.
12. Ye Storms, resound the praises of your King.
13. He commanded a company of lance.
14. The Troubadours were the conduit through which the falling stream of Roman literary tradition flowed.
15. All his good intentions were choked by the toils of evil habit.
16. His tongue grappled with a flood of words.
17. Suddenly closed the ivory gate of dreams, and the horn gate of every-day life opened.
18. Men of genius are often dull and inert in society; the blazing meteor, when it descends to earth, is only a stone.
19. Do not light by sea: trust not to fallen planks.
20. He commands the grape.
21. Smollett and Fielding were doomed to lay their bones under the soil of a strange isle.
22. The gown quarreled with the town.
23. Disappointments nourish us in the desert places of life, as the ravens feed the prophet in the wilderness.
24. The pew not infrequently has got beyond the teaching of the pulpit.
25. The advent of spring is the great annual miracle of the blossoming of Aaron's rod, repeated on myriads and myriads of branches.
26. Weariness can smite upon the flint when resty cloth finds the downy pillow hard.
27. The muddy pool of politics was the rock on which I split.

Direction.—Do as requested at the close of the preceding Lesson.
The rhetorical value of imagery, you are now prepared to see, lies in this — (1) that the image, likening one thing to another better known, or contrasting it with things that it is unlike, or substituting well known related objects and the words denoting them for those not so well known, makes the thought more perspicuous; (2) that the thought, more easily apprehended when thus expressed, is more forcible; and (3) that it is an ornament, beautifying the style and delighting the reader or hearer. This quality of style has, then, a value of its own, and does valuable service in securing and perfecting other great and essential qualities.

The value to the pupil of the habit of using imagery is incalculable. Since all imagery is based upon the relations that things sustain to each other, the creation of images compels a detection of these relations, and in this way begets a close observation of nature. It has been said that wisdom consists in the ready and accurate perception of analogies. How much greater truth the statement would have if for analogies we substituted the manifold relations between things, upon which imagery rests. Pupils should be stimulated to the cultivation of this quality of style. Let the teacher welcome it in their daily recitations, and exact it from them in their written efforts. Nothing can be more indicative or promotive of intellectual health and vigor, for it is the product of the excited imagination, of powers aroused and alert and rejoicing in their strength. As the pupil has found in his search for images, these flowers spring up in almost every line of poetry, of impassioned oratory, and of the eloquent essay. Especially should they be found in the speech of youth, who are not yet trained to exact scientific thinking-or statement. If the young tree has no grace and liveness, what will be true of it when the bulk of its wood has hardened, and little sap circulates through its veins?

Let the teacher see that the image is choice and apt and not far-fetched, that there is no mixing of incongruous things in it, that, so far as may be, it is the pupil’s own, and that he does not use it solely for veneering, but that he lays it under tribute to his thought — thinks in it, and expresses himself by it and through it.

To the Teacher We have noticed that sometimes the essays expected of our pupils, before going on to Energy, were narrative. This has suggested that a few words upon narration may be in place here.

A narrative is an account of a single event or of a series of events. We may be brief here as much under Description is in point under Narration, and as the most important topics regarding Narration are more appropriately treated under History, Lesson 77.

1. Whether of a single event or of a series, the account should follow some order, and that order should be natural — the order in which the facts occurred, the order of time and of dependence. The need of this as well as the necessity for, and the methods of, keeping distinct the concurrent streams of events, especially in History, are dwelt upon at some length in Lesson 77.

2. The narrator must have clearly in mind this order, must “see the end from the beginning” and make every step from the start bring him nearer to it. Episodically excursions to the right and to the left — confuse the reader. De Quincey says unparaphrastically in this.

3. The movement of the story should be imitative—tardly when the events linger, and rapid when they hurry to the conclusion. This will help to make the narrative life-like.

4. As in Description, only the salient and cardinal points should be selected. Skillfully presented, these will suggest
to the reader all that need be supplied, and call into grateful exercise his imagination. Good sense and a trained judgment are required to settle what particulars are important and what are not. The dull and ignorant mind sees little difference between the irrelevant and the pertinent, the trivial and the significant. Miss Bates in Jane Austen's "Emma," instanced by Professor James in his "Psychology," and Dame Quickly, in "Henry IV.," Part II., quoted by Sir William Hamilton, are good examples of such minds in literature. Unintelligent persons in the witness-box every day illustrate what we are saying.

5. There is abundant opportunity for all the arts by which clearness is secured; and, as in description, room for word-painting and expressive imagery.

Direction. — Write an essay that shall illustrate the two great qualities of Style thus far treated. If the essay is narrative, give special heed to what has just been said.

A SCHEME FOR REVIEW.

Things first Known and Named, Basis of Imagery, Definitions. (Lesson 44.)

I. The Comparison, or Simile, Rhetorical Value. (Lessons 44, 45, 47, 55, and 56.)

II. The Metaphor, Rhetorical Value. (Lessons 46, 47, 55, and 56.)

Change of Comparisons into Metaphors and of Metaphors into Comparisons. (Lesson 47.)

Failed and So-called Mixed Metaphors. (Lessons 48, 55, and 56.)

Comparisons and Metaphors containing Allusions. (Lessons 49, 55, and 56.)

III. Personification — Three Grades, Rhetorical Value. (Lessons 50, 55, and 56.)
manner is appropriate. But when the thought is weighty, and its comprehension demands exhausting effort, when upon its acceptance something vital seems to depend, especially when feeling respecting some duty is to be awakened, and the putting forth of an act of the will is to be secured, then the thought must be expressed with great earnestness. The speaker or writer will then be aroused to strong feeling, and his passion will pervade his thought as light fills the air, guiding him in the choice of words and in the construction of his sentences.

Energy is assisted not only by the means that secure perspicuity, and by the use of imagery, but also by the use of

1. Specific Words.—Words which denote individual things, having a narrow breadth of meaning, are more readily understood and produce a deeper impression than those whose meaning is broader, those which name classes of objects. Specific words, presenting each a single idea, prevent the reader’s using his energy in selecting the idea, and enable him to bestow upon the thought expressed.

A rhetoric might be written based almost wholly on the principle of economizing the reader’s attention. This is the one truth developed and illustrated in Herbert Spencer’s "Philosophy of Style"—that the writer should in all available ways prevent waste of the reader’s energy. The largest possible per cent of this should be concentrated upon the thought.

Direction.—Substitute generic words for some of those in italics, and note the loss of expressiveness and energy:

1. Will you die of hunger on the land which your sweat has made fruitful?
2. Did this save the Crown of James the Second?
3. Did it save the head of Otho 6th, First?
4. We are two millions, one with fighting men.
5. Days and ravening foes is shot read thy help.
6. I sat by her roost, I followed her heart.
7. Who comprised that gallant army without food, without pay, shelterless, shoeless, penniless, and almost naked, in that dreadful winter at Valley Forge?
8. Will you behold your village in flames and your harvests destroyed?
9. Will you die under the exterminating sword of the savage

Russian
10. God is seen in the growth of the grass, in the movement of the stars, in the working of the loom, in the thunder of heaven.
11. My wind, cooling my breath, would blow me to an ague.
12. Had he intended to make Ireland a slave, he should have kept her a beggar.
13. I now say, and say to your head, that you are not an honest man.
14. Will you look on while the Cossacks of the far North tread under foot the bodies of your fathers, mothers, wives, and children?
15. If you have tears, prepare to shed them now.
16. I saw the breast that had nourished me trampled by the hoof of the warhorse, the bleeding body of my father flung amidst the blazing ruins of our dwelling.
17. Exactly as you have seen the sea leap up at the breakwater, the advance must cross the crest, and, in a moment, those flags fluttered where they were kindled.
18. When Miss Biddy or Miss Porter or Miss Avery or the Misses Blackwell, accomplishing themselves in modesty, carry the balm of life to suffering humanity, it is as much their right as it is that of any long-haired, sallow, dissipated boy, who kisses them as they go upon their holy mission.
19. Do men gather grapes of thorns or figs of thistles?
20. Will you erect a gibbet in every field and hang men like scurrileux?

Direction: Bring in many sentences containing specific words, and do with them as directed above.
LESSON 58.

SPECIFIC WORDS.

Direction. — (1) Construct sentences containing these generic words; and then (2) exchange these words for corresponding specific ones, and note the gain in expressiveness and energy: —

Direction. — (1) Construct sentences containing these specific words; and then (2) exchange these words for corresponding generic ones, and note the loss of expressiveness and energy: —

In keeping with this teaching we may say that a characteristic **anecdote** or an **illustrious instance, incident, or fact** is invaluable in establishing a general statement; suggesting volumes of inference, it may even take the place of such statement. How completely is his opponent's objection met and answered by Wendell Phillips in the instance occupying three lines of the third paragraph of the first extract, Lesson 67! In his great speech on the Reform Bill, with what tremendous effect Macaulay uses a notable historical incident!

Sir, we read that in old times when the villains were driven to revolt by oppression, . . ., when the warehouses of London were pillaged, when a hundred thousand insurgents appeared in arms on Blackheath, when a foul murder, perpetrated in their presence, had raised their passions to madness, when they were looking round for some captain to succeed and avenge him whom they had lost, — just then, before Hob Miller or Tom Carter or Jack Straw could place himself at their head, the King rode up to them and exclaimed, “I will be your leader!” And at once the infuriated multitude laid down their arms, submitted to his guidance, dispersed at his command. Herein let us imitate him. Let us say to the people, “We are your leaders, — we, your own House of Commons.”

Direction. — Give some such story or incident, and state that which it was used to support.

LESSON 59.

TRANPOSED ORDER OF WORDS AND PHRASES.

**Natural Order of Subject and Predicate.** — A sentence, Lesson 2, is composed of a subject and a predicate — the subject naming that of which the predicate affirms something. We write or we talk to impart to others the information contained in the predicate concerning that which the subject names; hence the predicate is usually the longer and always the more important part of the sentence. In the common and natural order of a simple declarative sentence, the predicate follows the subject and ends the sentence.

**Natural Order of Words and Phrases.** — Possessive modifiers (nouns and pronouns in the possessive) precede their

1 For a fuller account and illustration of the natural and the transposed order of words and phrases in a simple sentence, see Lessons 61-67 in Red and Kellogg's "Higher Lessons in English."
nouns, and explanatory modifiers (words in apposition) follow theirs. Adjectives precede their nouns; if of unequal rank, the one most closely modifying the noun stands nearest to it; if of the same rank, they stand in the order of their length—the longest nearest the noun if they precede it, the shortest nearest if they follow it. The object complement (the object) and the attribute complement (predicate noun or adjective) follow the verb; the objective complement (the second object) follows the object complement; and the so-called indirect object precedes the direct. An adverb precedes the adjective, adverb, or phrase which it modifies; precedes or follows the simple verb with its complement, and follows one or more words of the verb if this is compound. Phrases, with or without prepositions to introduce them, follow the words they modify; if two or more modify the same word, those most closely modifying it stand nearest to it.

Energy may be secured by

11. Transposed Order of Words and Phrases. — One's meaning is never distributed evenly among his words; more of it lies in some than in others. Can we, in the placing of such words in the sentence, indicate that the meaning is heaped up in them—that in them the thought is intense? We can, and for this reason — what is customary does not attract attention, what in any noticeable respect is unusual at once becomes prominent. To place a word or phrase or clause where it usually stands in the sentence is not in any way to distinguish it; but to place it out of its wonted position is to proclaim that a heavier burden of thought is laid upon it than it ordinarily bears, heavier than any of its neighbors bears. As was said, the more important words are usually in the latter part of the sentence, the predicate. To bring such to the beginning of the sentence is to remove them furthest from their normal place, and to give them the greatest possible emphasis that position can bestow.

Much has been said about the emphatic places in a sentence. The first place and the last place have been called the places of emphasis. But neither place gives emphasis to a word that usually stands there. It is an obvious and purposed removal of a word from its customary position that calls attention to it — the attention and the emphasis increasing with the distance moved. Words at or near either extreme of the sentence gain most, consequently, if moved to the other extreme. In this sense the first and last places are emphatic.

Words and Phrases Removable. — When (1) adjectives that assume, in subject or predicate, are placed after their nouns; when (2) the object complement or (3) the explanatory modifier or (4) the attribute noun or (5) the attribute adjective or (6) an adverb in the predicate or (7) a phrase with or without a preposition to introduce it is carried to the front, we have a common instance of the transposed sentence. When any of these words or phrases, moved to the beginning, drags after it the verb or a part of it, changing wholly or in part the order of subject and predicate, the extreme case of transposition and the limit of energy depending upon it are reached. Moving any part of the predicate from its usual place to a place nearer the end of the sentence is slightly to emphasize it. Even in the use of the figure of speech called comparison, or simile, force is gained if we place first that part of it which begins with like, as, etc.

Notice that it is not said that removing words or phrases from their customary place gives energy to the whole sentence, strength is added only to those parts which it is plainly seen have been moved.
1. Beyond that I seek not to penetrate the veil.
2. Two hundred and eighty-five years has this church been at work.
3. Partakers in every peril, in the glory shall we not be permitted to participate?
4. Then and there was hurrying to and fro.
5. Sweet are the uses of adversity.
6. A spirit, aerial, informs the cell of hearing, dark and blind.
7. A torrent, terrible and strong, it sweeps to the abyss.
8. On some of them had risen the Sun of Austerlitz.
9. At ten minutes before five o'clock, on the tenth of Jan., 1800, the Pemberton Mill, all hands being on duty, fell.
10. Two hundred and fifty years ago, our fathers lighted a feeble watch-fire on the Rock of Plymouth.
11. Thus opened and closed the great campaign.
12. Slowly, under the rolling smoke of those great guns, the Old Guard advanced.
13. Sullen and sulky have we returned from the very field of honor.
14. All my fond love thus do I blow to heaven.
15. Me dibit thou constitute a priest of thine.
16. For four long years it was fire fighting fire.
17. Out she swung.
18. Around no Homeric battle-field hung the terrific sublimity of the field of Waterloo.
19. On the ridges fronting them were planted 300 pieces of cannon.
20. The roar of death from those 300 cannon threatens they heard un dismayed.
21. The best omen is our country's cause.
22. Directly given it is nowhere.
23. Never before had the Arctic borne such a host of passengers.
24. By terrible blows he drove the enemy, by swift and silent marches he flanked him.

---

**LESSON 60.**

**Transposed Order of Words and Phrases.**

**Transposed Order.**

25. "The supreme writer of his century" Burke has been called by De Quincey.

**Direction.** — Bring in sentences illustrating these seven methods of transposition, place the words and phrases in the natural order, and note the loss of vigor.

---

**Direction.** — Do with these sentences as directed with those above: —

1. So Oliver Cromwell held Ireland; so Wm. III. held it; so Mr. Pitt held it; and so the Duke of Wellington might perhaps have held it.
2. Beyond them lay fame and honor and victory.
3. In peace or in convulsion, by the law or in spite of the law, through the Parliament or over the Parliament, reform must be carried.
4. The gleam of the horses and the glittering of the cuirasses they creak unsawing.
5. Victors must we be in that struggle.
6. Such, Sir, was the conduct of the South.
7. All history, public and private, recounts the courage and the sufferings of soldiers.
8. Even so have societies their law of growth.
9. Shoulder to shoulder they went through the Revolution.
10. Favorites of the Mother Country they might have found in their situation a guarantee of the fostering care of Great Britain.
11. That Union we reached only by the discipline of our virtues in the severe school of adversity.
12. No more shall grief of mine the season wrong.
13. Above the crackle and the roar, a woman's voice rang out like a bell.
less expressive even than signs or gestures. "The strongest
effects are produced by interjections, which condense
entire sentences into syllables."

Direction. — Expand each expression below into a full sentence,
and note the loss of strength: —

1. Arbitrary principles, like
those against which we now con-
tend, have cost one king of Eng-
land his life; another his crown.
2. Miscreant!
3. No minute guns, no flags
at half mast, no nation in tears.
4. Well done, good and
faithful servant.
5. Cheers for the living,
tears for the dead.
6. Off with his head! so
much for Buckingham.
7. Beautiful!
8. From me awhile.
11. Ecclesiastical establish-
ments from the White Sea to
the Mediterranean.
12. Down in front!
13. Away with him!
14. Sure of that?
15. Hats off!
16. Merry Christmas; happy
New-Year.
17. True, the specter is now
small.
18. Not at all.
19. If the people do not elect
the president, somebody must.
20. No more of that.
21. Liberty first and Union
afterwards.
22. Liberty and Union, now
and forever, one and inseparable.

Direction. — Contract these sentences by omitting the words that
can be spared, and note the gain in vigor: —

1. He is a monster.
2. It is an unspeakable
cruelty.
3. It is not so.
4. America is young and
free and prosperous.
5. It is true that Napoleon
did not with bared arm rush
into the midst of the com-
batants.
6. May woe betide those
within.
7. What is the cause, then,
Sir, the cause?
8. You shall go hence upon
your wailing day.
9. What news have you
heard from Genoa?
10. Thou art a Daniel come
to judgment.

LESSON 61.

OMISSION OF WORDS EASILY SUPPLIED.

Often intense energy may be secured by the

III. Omission of Words easily Supplied. — Words, as
Spencer remarks, are sometimes a "hindrance to thought,"
11. Children are admitted at half price.
12. Rush ye to the field.
13. Do you let my deeds fall upon my head.
14. Let it be rich, but let it not be gaudy.
15. This do thou heed above all — to thine own self be thou true.
16. It is the cry of an aggrieved, of an insulted, and of a much abused man.
17. Woe unto the man and woe unto the dynasty and woe unto the party and woe unto the poisey on which her blighting indignation shall fall.

Direction. — Bring in as many sentences that may be stripped of adjectives or adverbs or phrases or conjunctions or prepositions or even of the subject or of the verb or of both, and gain in energy by the loss of words.

LESSON 62.

IDIOMS, EPIGRAMS, PROVERBS, AND QUOTATIONS.

Discourse may be made energetic by the use of

IV. The Idioms of the Language, Epigrams, Proverbs, and apt Quotations. — Idioms are constructions and expressions peculiar to the language containing them. When we speak of the idioms of a language, we mean its general characteristics — the structure, spirit, and genius by which it is known, and by which it is differentiated from other languages. But when we speak of an idiom of it, or of its idioms, we mean constructions peculiar to it, and expressions which translated literally into any other language, would not make sense in that language, or would not mean there what they mean in the original. These idiomatic expressions, with which every language swarms, are often figurative, and always brief, and pregnant with meaning. In them lies much of the strength of the language, and through them runs its very life-blood. Their use makes discourse fresh, crisp, native, and forcible.

Rashi says that an epigram rouses the mind (1) by the contradiction between the language and its real meaning — We cannot see the wood for the trees; (2) by the shock of an identical assertion — Bread is bread; (3) by irrelevance — Where snow falls, there is freedom; and (1) by an unexpected turn to a familiar saying — Summer has set in with its usual severity. He calls a pun a species of epigram.

But the epigram has a wider range than this. An Epigram is a sharp and terse expression of an important truth. It may or it may not meet any of the conditions above. Knowledge comes, but wisdom lingers. Fear is the mother of safety. Rank is but the gained stamp. Remedy worse than the disease. Where law ends, tyranny begins. These are illustrations. If often quoted, epigrams become proverbs. They arrest attention by crowning great truths into brief and portable form.

Proverbs are pithy and sententious sayings. They are packed with the wit and wisdom of those who originated them and of the generations which have used and approved them. Some of them can be fathered upon great authors, many can be traced to no parentage; but, whether the children of some one or of no one whom we can name, they have been adopted by all, belong to all, and disclose "the interior history, the manners, the opinions, the beliefs, the customs of the people among whom they have had their
course." Rolling down the stream of national life and smoothed and rounded by it, they are fit pebbles for use in any David's sling.

Other Quotations—thoughts and words borrowed from great writers and speakers—may fitly be used anywhere and by any one. One's discourse should not be a patchwork to which others have contributed as much as he has, but the occasional and happy use of quotations betrays an acquaintance with authors that is grateful to reader or hearer. Arraying behind his thought names greater than his own, these quotations give to what he says an authority which without such re-enforcement it could not have.

Direction. — We give below a few common idioms, epigrams, and proverbs. Render some of these in words of your own, and note, by comparison how tame and feeble is your translation of them:—

Idioms. — 1. He was beside himself with rage.
2. They got wind of his purpose.
4. The project took air.
5. This took place yesterday.
6. He had a stroke of luck.
7. How do you do?
8. Make way for liberty.
9. He jumped to the conclusion.
10. What's the matter?
11. Darnley turned out a dissolute husband.
12. The building took fire.
13. He fell asleep.
14. Look out.
15. He is out of his head.

16. She struck an attitude.
17. I have seen full many a chill September.
18. Etymology brings us acquainted with strange bedfellows.
19. We cannot help knowing that skies are blue and grass is growing.
20. Johnson did his sentences out of English into Johnesian.
21. He went about to show his adversary's weakness.
22. There are many obstacles in the way.
23. It is I, he, we, they.
24. Elizabeth played fast and loose with her Alleon lover.
25. Under the circumstances, he did right.

Idsioms, Epigrams, Proverbs, and Quotations. 171

26. I had rather be a dog.
27. They had a falling out, but are now at one.
28. Murder will out.
29. Now-a-days.
30. Methinks I see my father.
31. The train was behind time.
32. Salmasius was put to the worse by Milton.
33. From henceforward the movement has been toward simplicity.
34. He was in at the death.
35. Newton was out in his calculation.
36. I know it for certain.
37. He did not break off his bad habits for long.
38. The bridge gave way.
39. He drove a hard bargain.
40. Boswell scraped acquaintance with Voltaire and Wesley.
41. He got well, got out.
42. Luther broke with Erasmus.
43. Will you please help me?

Epigrams. — 1. The better part of valor is discretion.
2. Knowledge is power.
3. Strike, but hear.
4. An honest man's the noblest work of God.
5. The image of God cut in ebony (description of a negro).
6. Sweet is pleasure after pain.
7. Not to know me argues yourself unknown.
8. All men think all men mortal but themselves.
9. Devil take the hindmost.
10. The half greater than the whole.
11. 'Tis only noble to be good.

Proverbs. — 1. A carpenter is known by his chips.
2. Fact bind, fast find.
3. He has too many irons in the fire.
4. What can't be cured must be endured.
5. Make hay while the sun shines.
6. Give the devil his due.
7. Money makes the mare go.
8. Charity beggar at home.
9. A stitch in time saves nine.
10. The receiver's as bad as the thief.
11. Misfortunes never come single.
12. A burnt child fears the fire.
13. The river past, and God forgotten.
14. He who will not be ruled by the rudder must be ruled by the rock.
15. A fool's bolt is soon shot.
16. One must not look a gift-horse in the mouth.
17. Tell the truth, and shame the devil.
18. Ill weeds grow apace.
19. If you give him an inch, he'll take an ell.
20. Penny wise and pound foolish.
21. The lowest bird has no song.
22. Barking dogs seldom bite.
23. Short reckonings make long friends.
24. A good word costs nothing.
25. Two of a trade seldom agree.
26. Procrastination is the thief of time.
27. Better late than never.
28. Strike while the iron is hot.
29. He that is down need fear no fall.
30. One must have a long spoon that eats with the devil.
31. The child is father of the man.
32. Time and tide wait for no man.
33. Worth makes the man, and want of it the fellow.
34. Save the pennies, the dollars will take care of themselves.
35. Don't count your chickens before they're hatched.
36. A new broom sweeps clean.
37. Practice makes perfect.
38. A miss is as good as a mile.
39. Fore-warned is fore-armed.
40. Enough is as good as a feast.
41. If the shoe fits, put it on.
42. Still waters run deep.

LESSON 63.
IDIOMS, EPigrams, AND PROVERBS.

Direction. — Bring in as many idioms of expression and of construction, without any taint of vulgarity upon them, as many epigrams, and as many proverbs as you have time to find.

LESSON 64.
THE CLIMAX.

Discourse may be made energetic by an arrangement of parts seen in

V. The Climax. — A climax is an expression whose parts are arranged in the order of their strength, the weakest standing first. This order may hold in (1) words, (2) phrases, (3) clauses, and (4) sentences. Paragraphs, even, may stand in this order, and also the points of a discourse. The parts of a climax grow in importance, the most forcible standing last and making the deepest impression — the last impression being the impression of the whole which the reader or listener carries away. The opposite arrangement gives us the anti-climax — an arrangement in every respect weak; since, the last part being feeble, the whole is thought to be feeble; since, the strongest coming suddenly upon us, we do not fully appreciate it; and since, in our effort to do this, we are incapacitated for feeling the weight of the weaker parts, which follow. If we lift the animal each day, beginning with it when it is a calf, we can lift it, we are told, when it has become an ox; beginning with it when an ox, we can never lift the animal at all.
Qualities of Style — Energy.

Were we to strive for energy alone,—a quality not always desirable even where it is possible to secure it,—we should, in arranging the parts of a complex sentence, place the independent clause last when we could do so, since this is the strongest clause; and, in general, we should place the qualifying parts of any sentence before the qualified. This is the climactic order.

Direction. — Study these sentences, find and classify the climaxes, note the energy they give; and then, reversing the order in some of them, note the loss of strength:

1. It may be that the submissive loyalty of our fathers was preferable to that inquiring, censoring, resisting spirit which is now abroad.
2. All that I have and all that I am and all that I hope, in this life, I am now ready here to stake upon it.
3. You can no longer confine them (societies) within the swaddling bands or lull them in the cradles or amuse them with the rattles or terrify them with the bugbears of their infancy.
4. Civilization smiles, Liberty is glad, Humanity rejoices, Pity exults.
5. A day, an hour, an instant may prove fatal.
6. Shall an inferior magistrate, a governor, bind, scourge, torture, and put to an infamous death a Roman citizen?
7. The public treasure squandered, a consul stripped and betrayed, an army deserted and reduced to want, a province robbed, the civil and religious rights of a people trampled on.
8. I adjure you, I warn you, I implore you, on my bended knees I supplicate you.
9. All the talents of Charles I. and all his virtues did not save him from unpopularity, from civil war, from a prison, from a scaffold.
10. We may die, die colonists, die slaves, die, it may be, ignominiously and on the scaffold.
11. To weep for fear is childish: to weep for anger is wanishing; to weep for grief is human; to weep for compassion is divine.

The Climax.

12. The sky is overcast, the cloud breaks, the rain falls and deluges the land.
13. Give and it shall be given unto you; good measure, pressed down, shaken together, and running over.
14. You may make the change tedious, you may make it violent, you may — God in his mercy forbid! — you may make it bloody, but avert it you cannot.
15. Seven hours to law, to soothing slumber seven, ten to the world allot, and all to heaven.
16. In form and moving how express and admirable! in action how like an angel! in apprehension how like a god!
17. Frederick the Great found the men he had gathered around him to be the most paltry, vain, envious, quarrelsome, unprincipled, and vindictive of human beings.
18. They are the books, the arts, the academies that show, contain, and nourish all.
19. Have I not in my time heard lions roar? Have I not heard the sea, puffed up with winds, rage like an angry boar chafed with sweat? Have I not heard great ordinance in the field, and heaven's artillery thunder in the skies?

Direction. — Recast these sentences, if they need recasting, and arrange the parts in climactic order:

1. The snows grow powerless, the blood recedes, the muscles relax, the flesh deserts.
2. It is good to commemorate patriotic sentiments, good to honor them, good to encourage them, good to have them.
3. Our safety, our political happiness, our existence, depend upon the union of these states.
4. Without union we shall undergo the unspeakable calamities which bloodshed, discord, war, turbulence, and faction produce.
5. The law has no hands, the law is nothing, the law has no eyes, till public opinion breathes the breath of life into the dead letter.
6. Some words shoot a charge like trumpets, some breathe memories sweet as dates, some call like a clarionet, some sound out like drums.
7. The vessel ploughs the billows like a hurricane, her wheels turn, she throws the water from her bow, she starts.
8. This other Eden, this scarred isle, this seat of Mars, this earth of majesty.
9. I sink into the bosom of the grave, it opens to receive me, my race is run, my lamp of life is nearly extinguished.
10. May my tongue cleave to the roof of my mouth, if I see extraordinary virtue and capacity in any son of the South, and if, gangreened by state jealousy or mired by local prejudice, I get up here to aitute the tithe of a hair from his character and just fame.

Direction. — Bring in good climaxes of all the kinds spoken of — as many as you have time for.

LESSON 65.

THE PERIOD, THE LOOSE SENTENCE, AND THE COMPROMISE.

Discourse may be made energetic by the use of

VI. The Period. — The period is a sentence containing phrases or clauses so arranged that the meaning remains in suspense till the close. A loose sentence is one in which there is a single point, at least, before the close, where a thought is completed; but what follows is not, by itself, complete. It takes the whole of a period to express a thought; there may be many places in a loose sentence at any of which a thought has been expressed, and a full stop could be made. In constructing a period, the whole must be thought out before anything is set down; since the beginning has reference to the end, and the end recalls the beginning, and all that lies between looks back to the beginning and forward to the end. A loose sentence begins

Rhetorical Value of the Period, the Loose Sentence, and the Compromise. — The period is more artificial than the loose sentence, there is more of design in it; but it is more forcible, since the strength is concentrated and brought out at a single point, the close. One must hold and carry the accumulating items and conditions until the “coming round” of the sentence is reached. The office of the preliminary portions is not seen till you know what they qualify; but they must be carried in thought to the close, and then the relation of the conclusion to each must be traced, and the connection with it made. If the preliminary parts are many, the faculty of attention is taxed and wearied by the effort. In such cases the compromise would be serviceable, enabling the reader or listener to lay down his growing burden before the close is reached. If the parts are arranged in the order of their strength, the period becomes a climax.

without apparent consciousness of how it is to end — the preliminary part has, in construction, no dependence on what follows, though what follows depends for its construction and its sense on the preliminary part.

It what precedes and what follows are independent of each other both in construction and in sense, the sentence is neither a period nor a loose sentence, but rather a group of independent clauses forming a compound sentence. A compound sentence composed of two clauses similar in form and having these clauses set ever against each other — often in antithesis — is called a balanced sentence. Examples in which antithesis is bound may be seen in Lesson 52. This figure makes such sentences energetic.

That type of sentence whose point marking complete sense stands near the close we shall, for convenience, call the compromise, since it lies in between the ordinary loose sentence and the period, but can be rigidly classed with neither.
Qualities of Style—Energy.

The loose sentence is more natural, more colloquial, and does not exact such close attention; but it is liable to languish and grow tiresome. By an inversion of parts, loose sentences often may be changed into periods and periods into loose sentences.

**Direction.**—Below we give periods, loose sentences, sentences which are neither, and those which are both in one—a compromise between the two. (1) Classify these sentences, (2) convert, if possible, some of the periods into loose sentences, and some of the loose sentences into periods, and (3) note the loss or gain in energy:

1. There, on the verge of the ocean, hunted to the last asylum, the imperial race turned desperately to lay.
2. Though betrayed, deserted, disorganized, unprovided with resources, begirt with enemies, the noble city was still no easy conquest.
3. The defences were weak; the provisions were scanty; an incensed tyrant and a great army were at the gates.
4. Jenny Lind, enchanting the heart of the world, and Anna Dickinson, pleading for the equal liberty of her sex, are doing what God, by his great gifts of eloquence and of song, appointed them to do.
5. The sea is a poem as it means in a sad, minor key about the lonely fisher's hut to the heart of the watching fisher-wife, as it shrieks in wild glee, raging through the rigging of the tempest-beset vessel, as it sings an endless song of eternal sunshine and slumber about the isles of Eden, lying in dark, purple spheres of sea.
6. Endowed with a rare purity of intellect, a classic beauty of expression, a yearning tenderness towards all of God's creatures, no poet appeals more tenderly than Swinburne to our love for the beautiful, to our respect for our fellow-men, to our heart-felt charity for human weakness.
7. So completely did these masters in their art, Byron and his more fervent son, absolve themselves of their inspirers' work that, when the British army traversed, as they did, the Carnatic for hundreds of miles in all directions, through the whole line of their march, they did not see one man, not one woman, not one child, not one four-footed beast of any description whatever.
8. And when, at length, the moment for the last and decisive movement had arrived, and the valor, which had so long been wisely checked, was at last let loose, when, with words familiar, but immortal, the great captain commanded the great assault, tell me if Catholic Ireland, with less heroic valor than the natives of this your own glorious country, precipitated herself upon the foe.
9. The Church of God advances indomitably amid rocks and dungeons; she has entered Italy, and appears before the walls of the Eternal City; idolatry falls prostrate at her approach; her ensign floats in triumph over the Capitol; she has placed upon her brow the diadem of the Caesars.
10. And this our life, exempt from public haunt, finds tongue in trees, books in the running brooks, sermons in stones, and good in everything.

Rhetorical Value.

11. All that Greece produced of awful solemnity in her tragic stage, of robust mirth and fancy in her comic stage, of power in her eloquence, of wisdom in her philosophy; all that has since tingled in the ears of twenty-four centuries, of her prosperity in the arts, her sculpture, her architecture, her painting, her music—everything, in short, excepting only her higher mathematics, which waited for a further development, which required the induction of the musing intellect for yet another century—received the two neighboring planetary systems about these two solar orbs [Pericles and Alexander the Great].

**Direction.**—Study the climaxes in Lesson 64, and classify such of them as are included in the four kinds of sentences distinguished and illustrated in Lesson 65.
Qualities of Style — Energy.

Lesson 66.

The Period, the Loose Sentence, and the Compromise.

Direction. — Bring in as many periods, loose sentences, balanced sentences, compound sentences, and sentences called the compromise as you have time to find or construct.

Lesson 67.

Variety — Interrogation, Dialogue, Exclamation, Vision.

Energy may be secured.

VII. By Variety. — Variety is the opposite of uniformity. Some one has said that style is only the art of varying well. Nothing in discourse pleases more than light and shade, and nothing better exhibits and emphasizes the excellencies of style. Certainly nothing is more restful to reader or listener, and therefore nothing conduces more powerfully to energy. We grow weary of sameness — weariness is the only effect of which, in the end, it is capable. Without variety, nothing stands out in relief. "If we hold a flower to the nose for long, we become insensible to its scent." That which is strong appears so only when it is contrasted with what is weak. One tires of the Titanic energy of mountain regions, and at last ceases to feel it; the tranquil scenery of the plain is needed to restore vigor and delicacy to his deadened sensibilities.

Kinds of Variety. — The variety demanded in style is multiform. The same word should not appear with offensive frequency; adjectives, adverbs, or nouns in the possessive and their equivalent prepositional phrases should interchange, as, also, adjective, adverb, noun, or independent clauses and their equivalent infinitive, participial, and absolute phrases; clauses should have no rigidly fixed position; specific words should alternate with generic, long with short; long sentences with short, complex and compound with simple, the period with the loose sentence, and the compromise with each; sentences weighty with meaning should stand elbow to elbow with the light and the tripping; imagery of the several kinds should sparkle here and there from the setting of plain language; the natural order should now and then yield to the transposed, and the full statement to the abbreviated; — in a word, no one form or method of expressing thought should continue till it becomes monotonous, but should give way to some other, that the reader or the hearer may be kept fresh and interested throughout.

Interrogation, Dialogue, Exclamation, and Vision. — In orations and in all discourse where energy is sought, while most of the sentences may be declarative and imperative, not all should be. A question should now and then break in upon the monotony of assertion, denial, or command; at least in form those present should be asked to take part in the discussion. Breaking up routine, and conciliating the good will of those addressed by this show of respect to their opinions, the subject thus brought home to them and made personal takes on in their eyes additional importance and interest.

This interest becomes intense if reply follows question — the speaker answering for his auditors, real or supposed, and carrying on a lively dialogue between himself and them, — his auditors he may picture as denying, objecting, querying, or assenting.
determining what the law shall be in regard to the property of married persons? Neither common sense nor past experience encourages her to trust the protection of that right to the votes of men.

Responsibility is one instrument, a great instrument, of education, both moral and intellectual. It sharpens the faculties. It unfolds the moral nature. It makes the careless prudent, and turns recklessness into sobriety. Look at the young wife suddenly left a widow, with the care of her children's education and entrance into life thrown upon her. How prudent and sagacious she becomes! How fruitful in resources and comprehensive in her views! How much intellect and character she surprises her old friends with! And yet with what gracious condescension little men continue to lecture and preach on "the female sphere and female duties!" —Lecture on Woman's Rights. Wendell Phillips.

2. The 5th of Sept., 1774, dawned at last. At ten in the morning, the delegates assemble at the Merchants' Coffee House. From that point they march on foot along the street until they reach the threshold of this hall. And what a memorable procession! The young men cluster around them as they pass, for these are the chosen leaders in the struggle that has come. The women peep at them wondrously from the bowed windows of their low-roofed houses, little dreaming, perhaps, that these are the fathers of a republic for the sake of which their hearts are soon to be wrung, and their houses made desolate. Yonder urchin, playing by the roadside, turns his head suddenly to stare at the stately company. Does he dream of the wonders he shall live to see? Men, whose names his children shall revere through all descending generations, have brushed by him while he played, and yet he knows them not. And so along the street and down the narrow court and up the broad steps Congress takes its way.

The place of meeting has been well chosen. The Carpenters' Company, which owns the hall, are the friends of liberty. They have offered their hall to the delegates, and the place seems fit. The question is put whether the gentlemen are satisfied, and passed in the affirmative; the members are soon seated; and the doors are shut. The silence is first broken by Mr. Lynch of South Carolina. "There is a gentleman present," he says, "who has
Qualities of Style — Energy.

presided with great dignity over a very respectable society, and
greatly to the advantage of America,” and he moves that “The
Hon. Peyton Randolph, one of the delegates from Virginia be
appointed chairman.” He doubts not it will be unanimous. It is
so, and yonder “large, well-looking man,” carefully dressed and
with well-powdered wig, rises and takes the chair.—Oration at
Centennial Anniversary of First Continental Congress. HENRY
ARMITT BROWN.

Direction. — Write an essay which shall illustrate what has been
said concerning the ways of securing energy.

LESSON 68.

VARIETY.

For a partial review of the field of variety — the substi-
tution of one modifier for another, contraction, and expan-
sion — we shall ask the pupil to look back to Lessons 14—
19.

LESSON 69.

VARIETY.

Complex sentences may be varied in form by placing the
dependent clause in different positions. This clause may
begin the sentence or may end it, or the leading clause
may be parted, and this at several points perhaps, and the
subordinate clause inserted thus:—

A Scheme for Review.

"Charles I., cringing to Louis XIV, that he might triumph
on his own people." The purpose clause beginning with
that may stand where it does or where either care is.

Direction. — See in how many different places the dependent
clauses in the sentences of Lessons 6-11 can stand, and note the effect
of changing them.

To the Teacher. — See to it that in all their writing your pupils
avoid the monotonous we have been arranging. Persist in this service,
and your reward will be great if, at last, they attain to some mastery
of that variety of expression insisted on.

A SCHEME FOR REVIEW.

Energy Defined. When Needed (Lesson 57).
I. Specific Words (Lessons 57 and 58).
II. The Transposed Order of Words and Phrases (Lessons 59
and 60). (The Natural Order, The Words and
Phrases Removable.)
III. Omission of Words Easily Supplied (Lesson 61). (What
Parts of Speech.)
IV. Idioms, Epigrams, Proverbs, and Quotations (Lessons 62
and 63). (The Idiom, An Idiom of Expression or
of Construction.)
V. The Climax (Lesson 64). (Anti-Climax.)
VI. The Period (Lessons 65 and 66). (The Lose Sentence,
the Balanced Sentence, and the Compromise.)
VII. Variety (Lessons 67, 68, and 69). (Interrogation, Dia-
logue, Exclamation, Vision, Substitution, Contraction,
Expansion, Position of Dependent Clause, etc., etc.)
LESSON 70.

WIT AND PATHOS.

Wit. — Wit is a word once used to name our intellectual powers — powers by which we perceive, learn, understand, think. In Hamlet’s reply to Guildenstern, “I cannot make you a wholesome answer, my wit’s diseased,” the word is so used. In our infinitive phrase, to wit, the etymology of the word (A.-S. witan, to know) determines its meaning. The supreme act of the intellect is thinking. The relation upon which a thought is based — the relation affirmed by the thought — may be a relation between things, between ideas, that lie wide apart from each other, and are seemingly unrelated to each other. The union of such ideas in a thought excites surprise and pleasure in the reader or listener. It may even excite laughter — an expression of pleasure by the muscles of the face. Indeed, to produce laughter, the laughter of derision or the laughter of good-feeling, seem to be the purpose and the effect of what we now call wit. Of the thought which causes it we say that it is witty or that it is humorous. Wit, then, in our modern use of the word, denotes a power in the thinker to detect hidden and pleasing relations between ideas, and it names a quality of the thought which expresses these relations. In rhetoric, we may say that

Wit is a quality of style resulting from the union of seemingly unrelated ideas — a union producing surprise and pleasure.

Its Use. — Wit is not, like perspicuity, a common and necessary quality of style, since the feeling which begets it is not always or often the mood of the author. But the forms which it takes and its uses and occasions are many. Often wit is belligerent, and then it pricks the “swine-bladders” on which pretension or pomposity floats, or shoots its sharp arrows at follies and vices and meannesses and wickednesses wherever it finds them. Often wit is only sportive, genial, and humane, and, without hostility to anybody or anything, minister to our sense of the ludicrous, our feeling of mirthfulness.

Taking wit as the genus, we may, in subdivision of it, say that

Satire is a species of wit used to correct the follies and vices of men and to reform abuses. It attacks both men and institutions. A production, long or short, into which this quality enters is called a satire.

Sarcasm is a species of wit used only against the follies and follies and vices of men. We call a sentence or a group of sentences into which this quality enters a sarcasm. The etymology of the word implies that a sarcastic expression tears away a portion of the flesh.

Ridicule is a species of wit which provokes laughter at its object, and thus makes it contemptible. Nothing decried, or made ridiculous, can command respect, can long stand.

Irony is a species of wit used in discourse which, taken literally, conveys the very opposite of what is intended. The words convey a compliment in the guise of an insult; oftener, an insult in the guise of a compliment. Its presence in a sentence makes of it a boomerang, Lowell says. The weapon goes in a direction different from that in which it is thrown, and does not strike the one at which it is seemingly aimed.

A burlesque is a species of witty discourse or of caricature used to take off, by ludicrous imitation, what may be dignified and proper. Things may be burlesqued not by words
alone but by pictures, by gestures, by attitudes — by ludicrous imitations of all kinds.

The **mock-heroic** is a species of witty discourse used to raise low or trivial things to a plane of false dignity and importance.

A **parody** is a species of witty discourse in which the words of a production are copied in part, but the spirit of the piece is changed and lowered.

A **pun** is a witty expression in which a word agreeing in sound with another is used in place of it. Words agreeing in sound, but differing in meaning, are called **homonyma**.

Into a pun, not only is the homonym of a word imported, but, if there are any words which should accompany the homonym to identify it, these also are brought along to complete the incongruity and the ludicrousness of the expression. There must be consonance of sound to produce a pun; but perhaps we should qualify our definition by adding that the agreement of sound may be between a syllable and a word, between one word and a group of words, between two groups, or between one word or group and another misspelled and mispronounced but still capable of being recognized.

The wit we have thus far been describing and defining is the wit which, in various degrees, is essentially hostile, and is used to attack and to destroy. It raises a laugh at bad men and things. It is invaluable, almost indispensable, in the discussion and the reformation of bad manners, morals, and institutions.

But there is another department of wit, less earnest, sweeter in temper, more playful and tender, compassionate towards its objects, and sympathetic with them. It ministers to our desire for fun, but the laughter it provokes is not a "laugh at men and things," but a "laugh with them."

**Species of Wit — Humor.**

Humor. — Humor is that kind of wit which, without hostility to anything, ministers to our feeling of mirthfulness. Humor is not to be distinguished from wit, but from the subdivisions of wit just defined; it is one hemisphere of wit, these subdivisions being the other. That which distinguishes it from them all is its freedom from animosity. Humor looks leniently upon human frailties and foibles, and finds food only for harmless fun in the imperfections and infelicities of life. It is a shower that quickens, not a storm that destroys. For its effect, humor depends less upon surprise than do the other forms of wit; hence the productions into which it enters please continually.

It will be seen that, though we have called wit a quality of style, we have grouped under it the burlesque, the mock-heroic, the parody, and the pun, which are not species of wit, but species of witty discourse — productions or expressions into which wit enters. But it seemed best, even to the disregard of logic, to speak of these witty productions here where we were attempting to define wit and illustrate its nature and functions — especially as the door to this was opened by our being obliged to say of satire and sarcasm not only that they are species of this quality of style but that they are also productions into which wit enters.

Literature teems with witty productions and with productions in which witty expressions gleam and sparkle from the setting of serious discourse. Such productions appear in the decadence of manners and morals; and they appear at all times, since in our imperfect civilization there are always institutions that demand reformation, and evils that cry aloud for redress. And that form of wit which we have called humor, "full of humanity, flavored throughout with tenderness and kindness," has given us creations which are an exhaustless source of refreshment and delight.
Pathos. — Pathos is a quality of style found in passages that express sorrow or grief, or sympathy with these. Pathos brings tears into the eye and tremulousness into the voice. It has some natural connection with humor. Laughter and tears lie close to each other, and the transition from the humorously to the pathetic is short and easy. Pathetic passages, full of tender feeling, abound in discourse of almost every kind.

Tender feelings, prompting to pathetic expression, compassionate or sympathetic, may be awakened by allusions (1) to "tender relationships" as of home or country; (2) to "acts of goodness" as of heroism or devotion; (3) to "humane sentiments" toward the brute creation; (4) to "human misery or happiness."

Direction. — Classify the witty sentences below according to the species of wit which enters into them, and the pathetic sentences according to the source of the pathos:

1. Is not a patron, my lord, one who looks with unconcern on a man struggling for life in the water, and, when he has reached the ground, covers him with his help?
2. I can easier teach twenty what were good to be done than be one of the twenty to know mine own teaching.
3. What was Joan of Arc made of? She was Maid of Orleans.
4. I am, indeed, Sir, a surgeon to old shoes; when they are in great danger, I recover them.
5. I had rather be married to a Death's-head with a bone in his mouth than to either of these.
6. Father, I have sinned against Heaven and in thy sight, and am no more worthy to be called thy son; make me as one of thy hired servants.
7. Ichabod Crane was tall, but exceedingly lank, with narrow shoulders, long arms and legs, hands that dangled a mile out of his sleeves, feet that might have served for shovels, and his whole frame most loosely hung together. His head was small and flat at

Species of Wit — Pathos.

10. As you slip to and fro on the frozen levels of Gower's verse, which gives no foothold to the mind, as your nervous ear awaits the inevitable recurrence of his rhyme, regularly pertinacious as the tick of an eight-day clock, and reminding you of Wordsworth's

"Close more the isle did lengthen out
The hard, dry seasaw of his horrible lay,"
you learn to dread, almost to respect, the powers of this indefatigable man.

11. Why, hear me, my masters, was it for me to kill the heir apparent? Should I turn upon the true Prince? Why, thou know'st I am as valiant as Heracles; but beware instinct; the lion will not touch the true Prince.

12. Why is a ragged boy like a preacher nearing the end of his sermon? Because he's bored his clothes.

13. I have eaten as many shrimps as Samson slew Philistines.

14. Yes, to smell pork; to eat of the habitation which your prophet, the Nazarite, conjured the devil into!

15. "Tis true, this god did shake. I did hear him groan."
Qualities of Style—Wit and Pathos.

16. The Romans were said to un their dead, but we earn our living.
17. I fear I wrong the honorable men whose daggers have stabbed Caesar.
18. There is one secret a woman can keep—her age.
19. Of the Sergeant of Law, Chaucer says,

"Nowher so hay a man as he ther nas,
And yit he seemedes better than he was."

And of the Doctor,

"His stude was but litel on the Bible."

20. Late upon a midnight dreary, as I pondered, chill and cheery,
Over certain prosey volumes of contemporary lore,
Mildst prophetic pages prowling, suddenly I heard a growling,
As of something faintly howling, howling at my chamber door;
"'Tis some poor, stray tyke," I muttered, "howling at my chamber door.
Only this and nothing more."

21. If the day shall ever arrive when his parting counsels on
that head shall be forgotten, on that day, come it soon or come it late, it may as mournfully as truly be said that Washington has lived in vain. Then the vessels, as they ascend and descend the Potomac, may toll their bells with new significance as they pass Mount Vernon; they will strike the requiem of constitutional liberty for us, for all nations.

Chaucer, Shakespeare, Dryden, Congreve, Addison, Pope, Swift, Goldsmith, Lamb, Irving, Scott, Jerrold, Dickens, Thackeray, Carlyle, Holmes, and Lowell are but a few of the writers of English from whom illustrations of wit can be gleaned.

Direction.—Bring in illustrations of all the species of wit, and illustrations of pathos also.

Species of Wit—Pathos.

Lesson 71.

WIT AND PATHOS.

Direction.—Classify the witty sentences below according to the species of wit which enters into them, and the pathetic sentences according to the source of the pathos.

1. There are • • men whose visages do cream and mantle like a standing pond; and do a willful stillness entertain with purpose to be dressed in an opinion of wisdom, gravity, profound sincerity: as who should say, "I am Sir Oracle, and when I ope my lips, let no dog bark."

2. Ichabod rode with short stirrups, which brought his knees nearly up to the pomel of the saddle; his sharp elbows stuck out like grasshoppers; he carried his whip perpendicularly in his hand, like a scepter; and, as his horse jogged on, the motion of his arms was not unlike the flapping of a pair of wings. A small weed hat rested on the top of his nose.—For so his scanty strip of forehead might be called,—and the skirts of his black coat fluttered out almost to the horse's tail.

3. Making light of serious things is a very wicked matter.

4. So, with passionate heroism, of which tradition is never weary of tenderly telling, Arnold von Winkelried gathers into his bosom the sheaf of foreign spears that his death may give life to his country.

5. "Do you know what happened to Balaam?" said a would-be wit to Coleridge, as the poet was riding along the street. "The same that has happened to me—an ass spake to him."

6. The atrocious crime of being a young man, which the honorable gentleman has with such spirit and decency charged upon me, I shall attempt neither to palliate nor to deny.

7. Down the long street he walked, as one who said, "A town that breeds inhabitants like me can have no lack of good society."

8. Hector should have a great catch, if he knock out either of your brains; he were as good crack a dastardly nut with no kernel.
9. "You must be either a knave or a fool," said two lawyers to an Irishman sitting between them. "No, I'm between both," was his reply.

10. Should you ask me where I found it, I found this song, perhaps so stupend, Found this most abusive epic, I should answer, I should tell you That I found it at my Uncle's, Number one, around the corner, In a paper, in a pocket, In a coat, within a bundle, Tied up, ticketed and labelled, Labelled by my careful Uncle.

11. When the husband and son fell in the wild storm of battle, the brave woman's heart broke in silence, but the busy fingers did not falter.

12. Dear, gentle, patient, noble Neil was dead. Her little bird — a poor, slight thing the pressure of a finger would have crushed — was stitching him in its cage, and the strong heart of its child-mistress was mute and motionless forever.

13. "Three sons had I, three, wretched three; and now not one is left to me.

Out of his hole the watching cat dragged one,—a cursed mishap;

And monster man, with cunning fraught, my second in an engine caught,

A new-invented, monster-destroying engine, called a trap.

We had this third, our darling, sad to me and to his mother sad.

But let us arm and arm with speed, for this the villain frog shall bleed;

Arm, arm, be clad in mail complete, and let us vengeance take."

He said. At once to arms they flew, and Mars himself their weapons drew.

Split beans-shells green served them for grooves, which they were nibbling at.

14. The waters have gone over me. But out of the black depths, could I be heard, I would cry out to all those who have but set a foot in the perilous flood. Could the youth, to whom the flavor of his first wine is delicious as the opening scenes of life or the entering upon some newly discovered paradise, look into my desolation, and be made to understand what a dreary thing it is when a man shall feel himself going down a precipice with open eyes and a passive will, — to see his destruction and have no power to stop it, and yet to feel it all the way emanating from himself; to perceive all goodness emptied out of him, and yet not to be able to forget a time when it was otherwise; to hear about the pitious spectacle of his own self-rains; — could he see my fevered eye, feverish with last night's drinking, and feverishly looking for this night's repetition of the folly; could he feel the body of the death out of which I cry hourly with feblower and feblander cutery to be delivered; — it were enough to make him dash the sparkling beverage to the earth in all the pride of its manlike temptation; to make him clasp his teeth,

and not unclem,

To suffer wet damnation to run thir' tem.

15. Day hath put on his jacket, and around

His burning bosom buttoned it with stars.

Here will I lay me on the velvet grass,

That is like padding to earth's meager ribs.

Direction. — Bring in illustrations of all the species of wit, and illustrations of pathos also.
In ordinary prose, style is wholly in the service of the thought. Its worth is measured by the degree in which it makes the thought distinct or forcible, and forgets itself in this service. Here that is regarded as the best style which does not attract attention to itself, but leaves that for the thought. But style, while serving the thought, may do it with a consciousness that it has a value independent of the service rendered by it. The beautiful color of the horse, its grace of form, its style and carriage do not pull at the traces, are no part of the beast as a working animal; but they are qualities so valuable as to be secured at almost any cost.

Elegance is that quality of style which shows itself in grace and beauty of expression. In its rarest form it is found in poetry, the most artistic species of literature, and

The Requisites of Elegance.

is not sought with such anxious quest by writers of prose. Elegance is the highest and most delicate quality of style, the one most difficult of attainment, and the one last attained. The era of elegant prose in national life comes when the rough, pioneer work has been done, when disturbing questions no longer excite the thinkers, and when the friction of parties has been reduced to a minimum. The amenities and refinements of style can be reached only when energy has in a measure subsided, as ease and leisure follow, but do not precede, struggle and competence. In a writer, elegance is the outcome of high culture, perfect self-possession, a tranquil theme and complete mastery of it.

Its Requisites. I. There must be beauty in one's thought if he would have beauty in its expression — the soul within does much to fashion the body it inhabits.

II. Words must be chosen with regard to beauty and euphony. The verbal resources of the English for varied expression are great. In its composite vocabulary, words of Romance and words of Teutonic origin — the smooth, mellifluous words of the indolent Southern races and the harsh, vigorous words of the energetic Northern nations — stand side by side. Our vocabulary has recruited itself from the speech of every people and literature with which the English race has had communication. All needful, we had almost said all conceivable, sounds represented by vowels and consonants, single and in combination, are in our words — words, some of which glide from the tongue, and some of which must be ejaculated. In English, better perhaps than in any other speech, living or dead, words can be found that are an "echo to the sense," let the sense be what it will. (1) Rapid motion and (2) slow motion, (3) ease and (4) difficulty of effort, (5) smoothness and (6) harshness, (7) the agreeable and (8) the disagreeable in things, and
(9) size can, to a degree, be imitated by words combined into sentences. Every passion and every thought can be uttered in language especially appropriate to it. From this rich diversity in our vocabulary, it happens that the felicity of diction aptly used is at once seen, since every kind of it is set off by some other differing from it. When the words of a language are mainly euphonious or harsh, short or long, weak or forcible, there can be little beauty arising from the fitness in sound of the word to the idea, because there can be little or no contrast.

Elegance requires the choice of words agreeable to the ear.

**Direction.**—Turn to 6, Lesson 83, and find lines illustrating (1), (2), (4), (6), and (8) of the paragraph above.

III. There **must be beauty** in the imagery. While we insist that no figure of speech should be used, like carddrops, merely to adorn, it is true that no image need enlist wholly in the service of the thought. It may minister to our taste, gratify our craving for the beautiful, and this without neglecting its duty to the thought.

IV. **Elegance allows Alliteration.**—While in a prose sentence words which sound alike are offensive, it is agreeable to the ear to begin several successive words with the same letter. **Alliteration,** the repetition of the same letter at the beginning of successive words or words near each other, if not frequent and obviously striven for, contributes to elegance.

V. The **sentence may be long,** but it **must be smooth,** and **flowing** end in a **cadence agreeable** to the ear and in keeping with what precedes. Energy is sometimes impatient of long sentences and seeks those that are short, rugged, and fitted to express intense thought and passion; but elegance, insisting only that the sentence shall move smoothly, leisurely, and without apparent effort, allows it to run over long stretches without stopping. Its parts must not be separated and something more or less parenthetical be crowded in between, compelling the reader to dismount from the main thought only to leap back into the saddle when this thought is resumed.

VI. The **use of rhythm** contributes to elegance. **Prose rhythm** is that quality in a sentence which requires of the one reading it a due rise and a fall of the voice. The reader climbs one side of the hill and descends on the other. The parts of the sentence are nicely balanced, often turning on the pivot of a *but* or an *and* or a *yet.* If the parts are not distinctly antithetic, but rather parallel, we have a kind of **balanced sentence** other than that spoken of in Lesson 65 and illustrated in Lesson 52.

**Direction.**—Study these sentences, point out those possessing elegance, tell what gives them this quality, and show what is imitated in the remaining sentences:

1. The everlasting gates of heaven open wide to let him pass forth; and, clothed with majesty, and accompanied with thousands of seraphim and cherubim, anxious to behold the great work to be done, he does pass forth, far into that very Chaos through which the rebel angels have so recently fallen, and which now intervenes between Heaven and Hell.

2. While the wild wind went roaring everywhere, lamenting the dead children of the air.

3. Up the high hill he heaved a huge, round stone.

4. He listened to the song of the Nymph, yet he glided by without being seduced to their shore.

5. You common cry of eunuch whose breath I hate as rock of the rotten fens, whose loves I prize as the dead carcases of unburied men!

6. Chance's best tales run on like one of our inland rivers, sometimes hastening a little and turning upon themselves in eddies that dapple, without retarding, the current; sometimes flowing smoothly, while here and there a quiet thought, a tender feeling,
a pleasant image, or a golden-hearted rose opens quietly as a
water-lily to float on the surface without breaking it into ripple.
7. I sit the snow on the mountains below, and their great
pines groan aghast; and all the night 'tis my pillow white, while
I sleep in the arms of the blast. Sublime on the towers of my
skye-warriors, lightning, my pilot, sits; in a cavern under is fet-
tered the thunder, it struggles and howls at fits.
8. Now soft on the sand, now loud on the ledge, is heard the
trump of his steed as he rides.
9. Here they used to sit in the shade through a long, lazy sum-
ner's day, talking listlessly over village gossip, or telling endless,
sleepy stories about nothing.
10. And dashing soft from rocks around, bubbling tunnels
joined the sound.
11. The hope no longer crouched by his side, but stood before
him glorified, shining and tall and fair and straight as the pillar
that stood by the beautiful gate.
12. Nor is my admiration awakened by her armies mustered for
the battles of Europe, her navies overshadowing the ocean, or her
empire grasping the farthest East.
13. Though he who utter this should die, yet the immortal fire
shall outlast the humble organ who conveys it; and the breath of
liberty, like the word of the holy man, will not die with the prophet,
but will survive him.
14. Measured by any high standard of imagination, Pope will be
found wanting; tried by any test of wit, he is unrivalled.
15. There's a dance of leaves in that open bower, there's a litter
of winds in that beechen tree, there's a smile on the fruit, and a
smile on the flower, and a laugh from the brook that runs to the
sea.
16. As the soft air steals in and envelops everything in the
world, so that the trees and the hills and the rivers, the cities, the
crops, and the sea are made remote and delicate and beautiful by
its pure baptism, — so, over all the events of our lives, comforting,
refining, and elevating, fails, like a benediction, the remembrance
of our cousin the curate.
17. There are no fields of amaranth on this side of the grave;
there are no voices, O Rhadopis, that are not soon mute, however

Examples of Elegance.

Lesson 73.

Elegance.

Direction — Bring in sentences containing the several requisites
of elegance, and others whose sound is an "echo to the sense."

1. The waters wild went o'er his child, and he was left lamenting.
2. And the rain descended and the floods came and the winds
blew and beat upon that house, and it fell, and great was the fall
of it.
3. Ye that pipe and ye that play, ye that through your hearts
today feel the gladness of the May,
4. And thon, all-shaking Thunder, strike flat the thick round-
dity of the world.
5. In one rude clash he struck the lyre, and swept with hurried
hand the strings.
6. But far below I beheld tremulously vibrating on the bosom
of some half-hidden lake, a golden pillar of solar splendor which
had escaped through rifts and rents in the clouds that to me were
as invisible as the sun himself.
7. She crowned with olive green, came softly sliding down
through the turning sphere, i.e. ready harbinger, with turtle wing
the amorous clouds dividing: and, waving wide her myrtle wand,
she strikes a universal peace through sea and land.
8. They my loving followed through tooth'd briers, sharp furzes,
pricking grass, and thorns which entered their frail shins.
9. The cloud-capped towers, the gorgeous palaces, the solemn
temples, the great globe itself, yea, all which it inherit shall dis-
solve, and, like this insubstantial pageant faded, leave not a rack
behind.
10. But tell why the sepulcher, wherein we saw thee quietly
laid, hath oped his ponderous and marble jaws to cast thee up
again.

11. Not in entire forgetfulness and not in utter nakedness, but
trailing clouds of glory do we come from God who is our home.

12. When the loud surgelash the sounding shore, the hoarse,
rough verse should like the torrent roar.

13. A sloop was loitering in the distance, dropping slowly down
with the tide, her sail hanging uselessly against the mast.

14. Others might possess the qualities which were necessary to
save the popular party in the crisis of danger; Hampden alone had
both the power and the inclination to restrain its excesses in the
hour of triumph.

15. If, turning back, I could overpass the vale of years and
could stand on the mountain-top, and could look back again far
before me at the bright ascending goal, we would enjoy the
prospect together; we would walk along the summit hand in hand,
O Rhodope, and we would only sigh at last when we found our-

16. From the silence and deep peace of this saintly summer
night, from the pathetic blending of this sweet moonlight, dawn-
light, dreamlight, from the manly tenderness of this flattering,
whispering, murmuring love, suddenly as from the woods and
fields, suddenly as from the chambers of the air opening in reve-
lation, suddenly as from the ground yawning at her feet, leaped
upon her with the flashing of cataclysts, Death, the crowned phan-
tom, with all the equipage of his terrors and the tiger roar of his
voice.

17. When I remember what a noble and beautiful woman is,
what a manly man; when I feel, dazzled by this glare, drunken by
these perfumes, confused by this alluring music, and reflect upon
the enormous sums wasted in a pompous profusion that delights
no one; when I link around upon all this rampant vulgarism in
tussel and Brussels lace, and think how fortunes go, how men
struggle, and lose the bloom of their honesty, how women hide in
a smiling pretence, and eye with caustic glances their neighbor's
newer house, diamonds, or porcelain, and observe their daughters,
such as these;—why, I tremble and tremble, and this scene
to-night, every "crack" ball this winter will be, not the pleasant
society of men and women, but, even in this young country, an
orgie such as rotting Corinth saw, a frenzied festival of Rome in
its decadence.

18. For so have I seen a lark rising from his bed of grass and
soaring upwards, singing as he rises, and [he] hopes to get to
heaven and climb above the clouds; but the poor bird was beaten
back by the loud sighings of an Eastern wind, and his motion
made irregular and inconstant, descending more at every breath of
the tempest than it could recover by the libation and frequent
weiging of his wings, till the little creature was forced to sit
down and pant and stay till the storm was o'er; and then it made
a prosperous flight and did rise and sing as if it had learned music
and motion from an angel as he passed sometimes through the air
about his ministries here below.

Direction. — Bring in sentences containing the several requisites
eo'f elegance, and others whose sound is an "echo to the sense."

Direction. — Write an essay that shall illustrate what has been
said concerning the ways of securing elegance.

We here end what we have to say on Qualities of Style. We
have all along sought for quotations to illustrate and en-
force the rules laid down. This course we shall continue.
Even if these extracts did not elucidate and establish some
point in style, they would cultivate our Taste. It is to lit-

erature that under wise direction we are to go for this culti-

vation. By Taste we mean a power, delicate as well as cath-
ic, to detect the excellencies of an author, and a capacity
to enjoy them. We mean a feeling for the best and an in-
stinctive preference of it — the best in thought and the best
in expression. We mean a faculty that makes reading a
source of constant culture and delight. And we mean more.
We talk of the Taste which an author shows in his writings.
We have in mind his command of seasonable thought, fit
for his purpose and adequate to it. We think of his wis-

dom shown in omitting what was unsuitable. We think of
his apt expression—the inevitable word, the happy image, the felicitous phrase. We think how each sentence is so ordered and arranged that every part yields up the most and the best that can be got out of it. We think what self-restraint the author shows, how excess and surplusage are avoided, what moderation prevails and what discipline rules.

It is to Taste that betrays itself in doing as well as to that which makes us appreciative of what others have done that we may all in some measure aspire.

A SCHEME FOR REVIEW.

I. Elegance Defined.
   1. Beauty in the Thought.
   2. Epithets or Words.
   (Particulars in which Words can Echo the Sense.)
   4. Alliteration.
   5. Smooth and Flowing Sentences.
   6. Rhythm.
   7. Taste.

LESSON 74.

STYLE—EXTRACTS FOR THE CRITICAL STUDY OF IT.

Names of Styles. — The prevalence of any quality in one's style may name the style. If imagery abounds in it, we call the style florid; if it is barren of imagery, we say it is plain; if matter-of-fact and without fancy or imagination, dry or prosy. If in the metaphor or the antithesis is in excess, we call the style metaphorical or antithetic. Wit, in some of its forms, makes the style satirical or homely; a cast of sentences fitting the discourse for delivery makes the style forcible or oratorical; if the expression runs along musically, part arising out of part spontaneously and without abruptness, the style is smooth or flowing; and, if, being smooth, the words are chosen for beauty of sound and meaning, the style is graceful, even elegant. Spartan brevity makes the style laconic; freedom from superfluity of words and needless circumstances makes it concise; superfluity of expression and circumstance, and thinness of thought make it diffuse or tedious or prosy; the free use of the idioms of the language makes it idiomatic; the presence of short, pithy, portable sentences makes it sententious or epigrammatic; wordiness makes it verbose; household words and a colloquial cast of sentences make it simple; pedantic terms and a stiff and formal arrangement of them make it stilted; and expression too big for the thought makes the style bombastic.

If the common type of the sentences used is the period, the style is periodic; and if climax abounds, the style is dramatic. If the sentence is long and complex, one clause modifying another, and itself modified by a third, and that by a fourth, and the thought is thus obscured, — the style is involved. If the author deals with elevated ideas, with lofty passions, with heroic deeds, or with the imposing objects of the restless powers of Nature, and the expression is in keeping with the subject-matter, the style is sublime.

Great writers give their names to their style—Miltonic, Shakespearean, Adonisian, Johnsonian.

We give below, for minute study, a few prose extracts from contemporary authors, and some from authors not now living. We ask careful attention to the spirit in which each passage was written, and to the style which characterizes it. In particular, we ask the pupils to note the selection and ordering of the words, the cast of the sentence, their perspicuity, their unity. Of kind, the
allusions in it, its offices—the observation of men and of nature each extract reveals, its thought and the truth of it, and the character of the author as disclosed in the passages chosen.

The Extract from Lowell—as Example.—The pupils should, for example, be enabled to see, and speak appreciatively of, Lowell's choice of apt and expressive words, such as pip, pip, pop! bitter-rinded, shabby, pinched, shaken, gulped, out-face, depravity; his use, throughout, of words leading to the apprehension of every pupil; the transparency of his style, resulting from the careful selection and arrangement of his words; the idioms, such as there are, to be sure, look shabby, against the green, stand up, look like, and throw myself; the graceful variety of sentences, long alternating with short, simple with compound and complex, and assertive with interrogative and explanatory; the beautiful metaphors in solo singers, chorus, hail, muffle, bottom, robbing, store, Pecksniffs, spirit, expand, waistcoat, challenges, jury, peers, town, ever, blood; the comparisons in like, worshippers, as ... should, as ... streak; the allusions in fire-worshipper and Pecksniffs; the delicate thought of the piece; the deacon's humor pervading it; the touch of irony in various car, honest self-confidence, honest robin; the satirical thrust at the lobby member and at the jury-system; the author's close observation of birds as shown by the extract; his very loving sympathy with them; and the tender-heartedness and gentleness of the man.

The other extracts differ from this, but you can get as much out of every one of them.

To the Teacher. Question your pupils minute by these passages below. Begin by asking whether the extract is, as a whole, descriptive, narrative, or argumentative; and what the real or burden, of the extract is:

Extracts for the Study of Style.

Since the essence of wealth consists in power over men, will it not follow that the nobler and the more in number the persons are over whom it has power, the greater the wealth? Perhaps it may even appear, after some consideration, that the persons themselves are the wealth; that these pieces of gold with which we are in the habit of guiding them are, in fact, nothing more than a kind of Byzantine harness, or trappings, very glittering and beautiful in barbaric sight, with which we tride the creatures; but that, if these same living creatures could be guided without the fretting and jangling of the Byzants in their mouths and ears, they might themselves be more valuable than their bridles. In fact, it may be discovered that the true veins of wealth are purple, and not in rock, but in flesh; perhaps even that the final outcome and consummation of all wealth is in the producing as many as possible fall-breathed, bright-eyed, and hardy-hearted, human creatures.

Our modern wealth, I think, has rather a tendency the other way—most political economists appearing to consider multitudes of human creatures not conducive to wealth, or at best conduits to it by remaining in a dim-eyed and narrow-chested state of being. Nevertheless, it is open, I repeat, to serious question, which I leave to the reader’s pondering, whether, among national manufactories, that of souls of a good quality may not at last turn out a quite leadingly lucrative one.

John Ruskin.

One comes away from a company in which it may easily happen he has said nothing, and no important remark has been addressed to him; and yet, if in sympathy with the society, he shall not have a sense of this fact, such a stream of life has been flowing into him and out from him through the eyes. There are eyes, to be sure, that give no more admission into the man than blue berries. Others are liquid and deep, wells that a man might fall into; others are aggressive and devouring, seem to call out the police, take all too much notice, and require crowded Broadways and the security of millions to protect individuals against them. The inquiring eye I meet, now darkly sparkling under Jacob, now under music, knows, “I’m the city of London, I’m a stack of bayonets. There are asking eyes, asserting eyes, prowling eyes; and eyes full of hate—some of good and some of sinister omen.
The alleged power to charm down insanity, or frenzy in beasts, is a power behind the eye. It must be a victory achieved in the will before it can be signified in the eye. It is very certain that each man carries in his eye the exact indication of his rank in the immense scale of men, and we are always learning to read it. The reason why men do not obey us is because they see the end at the bottom of our eye. - R. W. Emerson.

The robins are not good solo singers, but their song, as the primitive fire-worshippers, they hail the return of light, and so do to the world, is unrivalled. There are a hundred sight-songs. They are noisy enough then, and sing, as poets should, with after-thought. But when they come after cherries to the tips of my window, they muffle their voices, and their faint sound far away at the bottom of the garden, where they knew I shall not suspect them of robbing the great black-walnut of its bitter-rinded store. They are feathered Puckatliffs, to be sure, but then how brightingly their breasts, that look rather shiny in the sunlight, shine in a rainy day against the dark green of the firs! After they have pinched and shaken all the life out of the earthworm, as Italian cooks pound all the spirit out of a man, and then gulped them, they stand up in honest endeavor against their red waistcoats with the virtuous air of a landed gentleman, and outface you with an eye that calmly challenges inquiry. They look like a bird that knows the flavor of my secret. I place myself upon a jury of my peers. Ask any honest man, when he sees anything less ascetic than the frugal heresy of the present, who will answer that his vow forbids him? Can such a one ever such depravity? Alas, yes! I have no doubt I look to the robber at that very moment with the blood of my ancestors. - J. R. Lowell.

To spend too much time in studies is sloth; to use them too much for ornament is affectation; to make judgment solely by the rules is the humor of a scholar; they perfect nothing but are perfected by experience, — for natural abilities are like natural plants that need pruning by study; and studies themselves do give fresh directions too much at large, except they be bounded in by experience. Crafty men contain studies, simple men admire them, and

wise men use them, for they teach not their own use; but that is a wisdom without them and above them, won by observation. Read not to contradict and confute, nor to believe and take for granted, nor to find talk and discourse, but to weigh and consider. Some books are to be tasted, others to be swallowed, and some few to be chewed and digested; that is, some books are to be read only in parts; others to be read, but not curiously; and some few to be read wholly and with diligence and attention. Reading makes a man a full man; conference, a ready man; and writing, an exact man; and, therefore, if a man write little, he had need have a great memory; if he read little, he had need have a present wit; and, if he read little, he had need have much cunning to seem to know that he doth not. Histories make men wise; poets, witty; the mathematics, subtle; natural philosophy, deep; moral, grave; logic and rhetoric, able to contend. — Francis Bacon.

Wisdom, justice, self-denial, nobleness, purity, high-mindedness — these are the qualities before which the free-born races of Europe have been contented to bow; and in no other order of men were such qualities to be found as they were found six hundred years ago in the clergy of the Catholic Church. They called themselves the successors of the Apostles. They claimed in their Master's name universal spiritual authority, but they made good their pretensions by the holiness of their own lives. They were allowed to rule, because they deserving to rule; and, in the fulness of reverence, kings and nobles bent before a power which was nearer to God than their own. Over prince and subject, chieftain and serf, a body of unarmed, defenseless men reigned supreme by the magic of sanctity. They tamed the fiery northern warriors who had broken in pieces the Roman Empire. They taught them, they brought them really and truly to believe, that they had immortal souls, and that they would one day stand at the awful judgment-bar and give account for their lives, there. With the brave, the honest, and the good, with those who had not oppressed the poor nor removed their neighbor's landmark, with those who had been just in all their dealings, with those who had fought against evil, and had tried valiantly to do their Master's will, — at that great day it would be well. For cowards, for profligates, for
those who lived for luxury and pleasure and self-indulgence, there was the blackness of eternal death. An awful conviction of this tremendous kind the clergy had effectually instilled into the mind of Europe.

J. A. Froude.

It is a true sublimity to dwell here. These fringes of lamp-light, struggling up, through smoke and thousand-fold exhalation, some fathoms into the ancient region of Night—what thinks Boote of them as he leads his hunting-dogs over the zenith in their leash of sidereal fire? That stifled hum of midnight—when traffic has lain down to rest, and the chariot-wheels of vanity, still rolling here and there through distant streets, are bearing her to halls roofed in and lighted to the dusky pitch for her, and only vice and misery, to prowl or to mean like night-birds, are abroad—

that hum, I say, like the stertorous, unquiet number of sick life, is heard in heaven! Oh, under that indescribable vault of vapours and mutractions and unimaginable gasses, what a fermenting vat lies simmering and hid! The joyful and the sorrowful are there; men are dying there, men are being born; men are praying—on the other side of a brick partition men are cursing; and around them all is the vast, void Night. The proud grandee still lingers in his perfumed saloons or reposes within damask curtains; wretchedness cowers into truckle-beds or shivers hunger-stricken into its hair of straw. In obscure cellars, Bougeois Noir languidly emits its voice of destiny to haggard, hungry villains; while councillors of state sit plating and playing their cheese-game, whereof the pawns are men. The lower whispers his mistress that the coach is ready; and she, full of hope and fear, glides down to fly with him over the borders: the thief, still more silently, sets to his picklocks and crowbars, or inks in wait till the watchmen first sound in their boxes. Gay merriments, with suppersomen and dancing-rooms, are full of light and music and high-sounding hearts: but, in the condemned cells, the pulse of life beats tremendous and faint, and bloomed eyes look out through the darkness, which is around and within, for the light of a stern last morning.

Six men are to hang on the morrow; comes no hammering from the Rathaus; their gauntlets must even now be a-building.
Upwards of 500,000 two-legged animals without feathers lie round us in horizontal position; their heads all in night-caps and full of the foolishest dreams. . . . All these bunched and huddled together, with nothing but a little carpentry and masonry between them; crammed in like salted fish in their barrel; or waltzing, shall I say, like an Egyptian pitcher of tamed vipers, each struggling to get its head above the others—such work goes on under that smoke-counterpane! But I, mein Weltler, sit above it all; I am alone with the stars.

Thomas Carlyle.

If the "thousand soiled" Shakespeare may be said to represent mankind, Ben Jonson as unmistakably stands for English-kind. He is Saxon England in epitome, John Bull passing from a name into a man,—a proud, strong, tough, solid, domineering individual, whose intellect and personality cannot be severed, even in thought, from his body and personal appearance. Ben's mind, indeed, was rooted in Ben's character, and his character took symbolic form in his physical frame. He seemed to be up, mentally as well as bodily, out of beef and sack, mutton and Canary; or, to say the beast, was a joint product of the English mind and the English harder, of the fat as well as the thought of the land, of the soil as well as the soul of England. He is a very pleasant bosom companion as long as we make our idea of his importance agree with his own; but, the instant we attempt to dissect his intellectual pretensions, the living animal becomes a dangerous subject, his countenance flames, his great hands double up, his thick lips begin to twitch with impending irascible; and, while the critic's impression of him is thus all the more vivid, he is checked, in its expression, by a very natural fear of the consequences. There is no safety but in taking this ready biwathian of letters at his own valuation; and the relation of critics towards him is as perilous as that of the juries towards the Irish advocate who had an unpleasant habit of sending them the challenge of the duellist whenever they brought in a verdict against any of his clients. There is, in fact, such a vast animal force in old Ben's self-assertion, that he buldies poverty as he bullied his contemporaries; and, while we admit his claim to rank next to Shakespeare among the dramatists of his age, we beg our readers to understand that we do it under intimidation.

E. N. WINTER.
No sovereign could have jarred against the conception of an English ruler which had grown up under the Tudors more utterly than James I. His big head, his slobbering tongue, his quilted clothes, his rickety legs, his goggle eyes, stood out in as grotesque a contrast with all that men recalled of Henry or Elizabeth as his gaucherie and redominate, his want of personal dignity, his coarse mutinonery, his drunkenness, his petulance, his contemptible cowardice. Under this ridiculous exterior, however, lay a man of much natural ability, a ripe scholar, with a considerable fund of shrewdness, of mother wit, and ready repartee. His caustic humor lights up the political and theological controversies of the times with quaint, inquisitive phrases, with puns and epigrams and touches of irony, which still retain their savour. His reading, especially in theological matters, was extensive; and he was a voluminous author on subjects which ranged from predestinarianism to tobacco. But his shrewdness and learning only left him, in the phrase of Henry IV, “the wisest fool in Christendom.” He had the temper of a pedant, and with it a pedant’s love of theories, and a pedant’s inability to bring his theories into any relation with actual facts. All might have gone well had he confined himself to speculations about witchcraft, about predestination, about the noxiousness of smoking. Unhappily for England and for his successor, he clung yet more passionately to two theories which contained within them the seeds of a death-struggle between his people and the Crown.

J. R. GREEN.

I have lived by the seashore and by the mountains. No, I am not going to say which is best. The one where your place is, is best for you. But this difference there is: you can domesticate mountains, but the sea is free nature. You may have a hut, or know the owner of one, on the mountainside; you see a light half-way up its ascent in the evening, and you know there is a home, and you might share it. You have not certain trees, perhaps; you know the particular zone where the hemlocks look so black in October, when the maples and beeches have faded. All its reliefs and intaglions have electrotyped themselves in the medallions that hang round the walls of your memory’s chamber.

The sea remembers nothing. It is feline. It licks your feet, its huge thanks very pleasantly for you, but it will crack your bones and eat you, for all that, and wipe the crimsoned foam from its jaws as it nothing had happened. The mountains give their lost children berries and water; the sea mocks their thirst and lets them die. The mountains have a grand, stupid, lovable tranquillity; the sea has a fascinating, treacherous intelligence. The mountains lie about like huge remnants, their bread back away to look upon but safe to handle; the sea smoothly its silver scales until you cannot see their joints, but their shining is that of a snake’s belly, after all. In deeper suggestiveness I find as great a difference. The mountains develop mankind and foreshorten the procession of its long generations. The sea draws out humanity and binds; it has no sympathy with either; for it belongs to eternity, and of that it sings its monotone song forever and ever. Yet, I should have to have a little box by the seashore. I should love to gaze out on the wild feline element from a front window of my own, just as I should love to look on a caged panther, and see it stretch its shining length, and then curl over and lap its smooth sides, and by and by begin to lash itself into rage, and show its white teeth, and pring at its bars, and howl the cry of its mad but, to me, harmless fury. And then, to look at it with that inward eye, who does not love to shuffle off time and its concerns, at intervals, to forget who is President and who is Governor, what race he belongs to, what language he speaks, which golden-headed maid of the instrument his particular planetary system is hanging upon, and listen to the great, liquid metronome as it beats its solemn measure, steadily swinging when the sole or duct of human life began, and to swing just as steadily after the human chorus has died out, and man is a fossil on its shores?

O. W. HOLMES.

From their porosity to stellar light... Sir John Herschel drew some startling conclusions regarding the density and weight of comets. You know that these extraordinary and mysterious bodies sometimes throw out tails 100,000,000 of miles in length, and 8,000 miles in diameter. The diameter of our earth is 8,000 miles. Both it and the sky, and a good portion of space beyond the sky, would certainly be included in a sphere 10,000 miles across. Let us fill a hollow sphere of this diameter with cometary matter,
and make it our unit of measure. To produce a comet’s tail of the size just mentioned, about 300,000 such measures would have to be emptied into space. Now, suppose the whole of this stuff to be swept together and suitably compressed, what do you suppose its volume would be? Sir John Herschel would probably tell you that the whole mass might be carted away, at a single effort, by one of your dray-horses. In fact, I do not know that he would require more than a small fraction of a horse-power to remove the cometary dust.

After this you will hardly regard as monstrous a notion I have sometimes entertained concerning the quantity of matter in our sky. [Tyndall is here speaking of the particles of matter in space which throw back only the smaller ether waves of light, and give, as a result, the blue color to the sky.] Suppose a shell to surround the earth at a height above the surface which would place it beyond the gasser matter that hangs in the lower regions of the air — say at the height of the Matterhorn or Mont Blanc. Outside this shell we have the deep-blue firmament. Let the atmospheric space beyond the shell be swept clean, and let the sky-matter be properly gathered up. What is its probable amount? I have sometimes thought that a lady’s portmanteau would contain it all. I have thought that even a gentleman’s portmanteau — possibly his muff-box — might take it in. And whether the actual sky be capable of this amount of condensation or not, I entertain no doubt that a sky quite as vast as ours, and as good in appearance, could be formed from a quantity of matter which might be held in the hollow of the hand.

JOHN TYNDALL.

LESSON 75.

EXTRACTS FOR THE CRITICAL STUDY OF STYLE.

Direction.—Do with these extracts as directed with those of the preceding Lesson; —

Writing for the general public, he [Shakespeare] used such language as would convey his meaning to his auditors — the common phraseology of his period. But what a language was that! In its capacity for the varied and exact expression of all moods of mind, all forms of thought, all kinds of emotion, all the reasoning of philosophy and the subtleties of metaphysics; a tongue unequalled by any other known to literature; a language of exhaustless variety, strong without ruggedness, and flexible without effeminacy; a manly tongue, yet bending itself gracefully and lovingly to the tenderest and daintiest needs of woman, and capable of giving utterance to the most awful and impressive thoughts in homely words that come from the lips and go to the heart of childhood? It would seem as if that language had been preparing itself for centuries to be the fit medium of utterance for the world’s greatest poet. Hardly more than a generation had passed since the English tongue had reached its perfect maturity, — just time enough to have it well worked into the unconscious usage of the people, — when Shakespeare appeared, to lay upon it a burden of thought which would test its utmost capability. Shakespeare seized this instrument, to whose tones all ears were open, and, with the touch of a master, he brought out all its harmonies. It lay ready to any hand; but his was the first to use it with absolute control; and, among all his successors, great as some are, he has had, even in this single respect, no rival.

R. G. WHITE.

If, on doing wrong, we feel the same tearful, broken-hearted sorrow which overwhelms us on hearing a mother; if, on doing right, we enjoy the same sunny serenity of mind, the same soothing, satisfactory delight which follows on our receiving praise from a father; we certainly have within us the image of some person to whom our love and veneration look, in whose smile we find our happiness, for whom we yearn, towards whom we direct our pleadings, in whose anger we are troubled and waste away. These feelings in us are such as require for their exciting cause an intelligent being: we are not affectionate towards a stone, nor do we feel shame before a horse or a dog; we have no remorse or compunction on breaking mere human law; yet, so it is, conscience excites all these painful emotions, confusion, foreboding, self-condemnation; and, on the other hand, it sheds upon us a deep peace, a sense of security, a resignation, and a hope which there is no earthly object.
to elicit. "The wicked flees when no one pursueth"; then why does he flee? whence his terror? Who is it that he sees in solitude, in darkness, in the hidden chambers of his heart? If the cause of these emotions does not belong to this visible world, the object to which his perception is directed must be supernatural and divine; and thus the phenomena of conscience, as a dictate, avail to impress the imagination with a picture of a Supreme Governor, a Judge, holy, just, powerful, all-seeing, and retributive—the creative principle of religion, as the moral sense is the principle of ethics.

J. H. Newman.

Sometimes a great ship, an East Indiaman, with rusty, scanted, blistered sides and dingy sails, came slowly up the harbor, with an air of insolent self-importance and consciousness of superiority, which inspired me with profound respect. If the ship had ever chanced to run down a row boat or a sheep, or any specimen of smaller craft, I shan't only have witnessed the tortur of any floating thing in crossing the path of such supreme majesty. The ship was leisurely chained and locked to the old dock, and then came the disembarking. How the state's monster had been fattening upon foreign spoils! How it had gorged itself (such galloons did never seem to me of the feminine gender ('sex') with the lusteous treasures of the tropics! It had laid its lazy length along the shores of China, and sucked in whole flaccid harvests of tea. The Brazilian sun flashed through the strong wicker prison, bursting with bananas and macanias fruits that excite the temperate zone. Streams of cream, of scalded wood arose from the boil. Sailors, chanting exhilarating stanzas, that had by no ear a shrill and monotonous pathos, like the uniform rising and falling of the autumn wind, turned cranks that raised the sails and boxes and crates, and swung them aboard. But to my mind the spell of their singing raised the fragrant freight, and not the crank.

Madagascar and Ceylon appined at the mystic bidding of the song. The placid sunshine of the docks was perfumed with India. The universal calm of southern seas parted from the east of the world, the ancient northern port.

G. W. Chris.

The first snow came. How beautiful it was! Falling so silently all day long, all night long, on the mountains, on the meadows, on the roofs of the living, on the graves of the dead! All white save the river, that marked its course by a winding, black line across the landscape; and the leafless trees, that against the leaden sky now revealed more fully the wonderful beauty and intricacy of their branches. What silence, too, came with the snow, and what seclusion! Every sound was muffled, every noise changed to something soft and musical. No more tramping hoofs, no more rattling wheels! Only the chiming sleighbells, beating as swift and merrily as the hearts of children.

All day long, all night long, the snow fell on the village and on the church-yard; on the happy home of Cecilia Vaughan, on the lonely grave of Alice Archer. Yes; for, before the winter came, she had gone to that land where winter never comes. Her long domestic slavery ended. She was dead, and with her had died her secret sorrow and her secret love. Kavanagh never knew what wealth of affection on her side left behind her to the world when she departed; Cecilia never knew what fidelity of friendship, what devotion, what gentle magnanimity, what angelic patience had gone with her into the grave. Mr. Campbell never knew that, while he was exploring the past, he records of obscure and unknown martyrs, in his own village, near his own door, before his own eyes, one of that silent sisterhood had passed away into oblivion, unknown and unknown.

H. W. Lawr. crow.

It must be confessed that a wood fire peek, as much teach a pair of twins. I would as soon have an Englishman without whiskers as a fish without a backbone; and I would rather have no fire than one that required no kindling; one of dead wood that could not sing again the improvised songs of the forest, or give out, in brilliant sentimential, the sign tune it absorbed in its growth. A wood fire on the hearth is a dower of the domestic virtues. It brings in cheerfulness, and a family center, and, besides, it is artistic. I should like to know if an artist could ever represent an oasis as a large, smoky, thatched room and a hole in the floor, called a register. Given a fireplace, and a tolerable artist could almost create a pleasant family round it. But what could he compose out of a re, dry, if the way mere virtuous our ancestors and they browsed under a great many disadvantages, and
had few of the aids which we have to excellence of life—I am convinced they drew it mostly from the fireside. If it was difficult to read the eleven commandments by the light of a pine knot, it was not difficult to get the sweet spirit of them from the commonplace of the serene mother knitting in the chimney-corner.

C. D. Warner.

When the high-born English lady in the Crimean hospital, ordered to a post of almost certain death, only raised her hands to heaven, and said, "Thank God!" she did not renounce her true position as a woman—she claimed it. When the queen of James I. of Scotland, already immortalized by him in stately verse, won a higher immortality by welcoming to her fair bosom the dagger aimed at his; when the Countess of Buchan hung confined in her iron cage, outside Berwick Castle, in penalty for crowning Robert the Bruce; when the stainless soul of Joan of Arc met God, like Moses, in a burning flame;—these were as they should be. Man must not monopolize these privileges of peril, birthright of great souls. Serenades and compliments must not replace the nobler hospitality which shares with woman the opportunity of martyrdom. Great administrative duties also, cares of state, for which one should be born gray-headed, how nobly do these sit upon a woman's brow! Each year adds to the storied renown of Elizabeth of England, greatest sovereign of the greatest of historic nations, Christina of Sweden, alone among the crowned heads of Europe—so says Voltaire—sustained the dignity of the throne against Richelieu and Mazarin. And these queens most assuredly did not sacrifice their womanhood in the process.

T. W. Higginson.

Lo, it is summer, almighty summer! The everlasting gates of life and summer are thrown open wide, and on the ocean, tranquil and verdant as a savannah, the unknown lady from the drearful vision and myself are floating—she upon a lofty pinnace, and I upon a English three-decker. Both of us are wooing gates of festive happiness within the domain of our common country, within that ancient, watery path, within that pathless chasm of ocean, where England takes her pleasure as a huntress through winter and summer, from the rising to the setting sun. Ah, what a wilderness of floral beauty was hidden, or was suddenly revealed, upon the tropic islands through which the pinnace moved! And upon her deck what a box of human flowers—young women how lovely, young men how noble, that were dancing together, and slowly drifting toward as amidst music and incense, amidst blossoms from forests and gorgeous corymb from vintages, amidst natural carolling and the echoes of sweet, girlish harps! Slowly the pinnace nearer us, gayly she hailed us, and silently she disappears beneath the shadow of our mighty bows. But then, as at some signal from heaven, the music and the carol and the sweet echoes of girlish laughter—all are hushed. What evil has smitten the pinnace, meeting or overtaking her? Did ruin to our friends come within our own dreadful shadow? Was our shadow the shadow of death? I looked over the bow for an answer, and beheld! the pinnace was dismantled; the revel and the revelers were bound no more; the glory of the vintage was dust; and the forests with their beauty were left without a witness upon the sea.

T. De Quincey.

The mass of mankind can be carried along a course full of hardship for the natural man, can be borne over the thousand impediments of the narrow way, only by the tide of a joyful and bounding emotion. It is impossible to rise from reading Epictetus or Marcus Aurelius without a sense of constraint and melancholy, without feeling that the burden laid upon man is well nigh greater than he can bear. Honor to the sages who have felt this, and yet have borne it! Yet, even for the sage, this sense of labor and sorrow in his march towards the goal constitutes a relative inferiority; the noblest souls of whatever creed, the pagan and the pious, the deist and the Christian, have insisted on the necessity of an inspiration, a joyful emotion, to make moral action perfect. An obscure indication of the necessity is the one drop of truth in the ocean of verbiage with which the controversy on justification by faith has flooded the world. But, for the ordinary man, this sense of labor and sorrow constitutes an absolute impossibility; it paralyzes him; under the weight of it he cannot move; he is drawn towards the goal at all. The paramount virtue of religion is, that it...
has lighted up morality; that it has supplied the emotion and inspiration needed for carrying the sage along the narrow way perfectly, for carrying the ordinary man along it at all. Even the religious with most dress in them have had something of this virtue; but the Christian religion manifests it with unexampled splendor.

Matthew Arnold.

A great cim-tree spread its broad branches over it, at the foot of which bubbled up a spring of the sweetest and sweetest water, in a little well formed of a barrel, and then stole sparkling away through the grass, to a neighboring brook, that bubbled along among ashes and dwarf willows. Hard by the barnhouse was a vast barn, that might have served a church, every window and crevice of which seamed bursting forth with the treasures of the farm: the rail was lustily resounding within it from morning to night: swallows and martins skittered twittering about the eaves; and rows of pigeons, some with one eye turned up, as if watching the weather, some with their heads under their wings or buried in their bosoms, and others, swaying and tossing and flapping about their dams, were enjoying the sunshine on the roof. Sleek, manners beasts were grunting in the reposing abundance of their pens, whence saluted forth, new and then, troopes of snuffling pigs, as if to meek the air.

A stately squadron of snow geese were riding in an adjoining pond, conviving whole flocks of duck; regiments of turkeys were gobbling through the fern yard, and fowls a fretting about it, like fretterful housewives, with their peckish, discontented cry. Before the barnhouse straddled the rent cock, that patent of a husband, a warrior, and a fine gentleman, clasping his burnished wing, and crowing in the pride and grandeur of his heart, —sometimes tearing up the earth with his feet, and then generously calling his ever-hungry family of wives and children to enjoy the rich morsel which he had discovered.

Washington Irving.

Of all the exhortations which it [The Farewell Address] contains, I care to heed say to you that none more are so essential to <1>(1)</1> our preservation of the union of the States. On this under work, the people of America shall follow the Old World example, and be broken up into a group of independent military powers, wasted by eternal border wars, feeding the ambition of petty sovereigns on the life-blood of wasted principalities — a custom-house on the bank of every river, a fortress on every frontier hill, a pirate lurking in the recesses of every bay, — or whether they shall continue to constitute a confederate republic, the most extensive, the most powerful, the most prosperous in the long line of ages. No one can read the Farewell Address without feeling that this was the thought and this the care which lay nearest and heaviest upon that noble heart; and, if — which Heaven forbid — the day shall ever arrive when his parting words on that head shall be forgotten, on that day, come it soon or come it late, it may as meaningly be truly said that Washington has lived in vain. Then the vessels, as they ascend and descend the Potomac, may tell their bills with new significance as they pass Mount Vernon; they will strike the rings of constitutional liberty for us, for all nations.

A great and venerable character, like that of Washington, which commands the respect of an entire population; however divided on other questions, is not an isolated fact in history to be regarded with barren admiration; it is a dispensation of Providence for good. It was well said by Mr. Jefferson in 1782, writing to Washington to dissuade him from declining a nomination, "North and South will hang together while you have you to banish." Washington in the flesh is taken from us; we shall never behold him as our fathers did; but his memory remains, and I say let us hang, to his memory. Let us make a national festival and holiday of his birthday; and ever, as the 22d of February returns, let us remember that, while with the solemn and joyous rites of observance we celebrate the great anniversary, our fellow-citizens on the Hudson, on the Potomac, from the Southern plains to the Western lakes, are openings in the same offices of gratitude and honor. Not we nor they have ever beyond the Ohio, beyond the Mississippi, along the stupendous aisle of navigation from East to West, — is it, for the first time in the great world, that ever the Western eye can command through the poet's eye of the "Rox" Mountains and the Alleghenies, the name and
the memory of Washington on that gracious night will travel with the silver queen of heaven through sixty degrees of longitude, nor part company with her till she walks in her brightness through the golden gate of California, and passes serenely on to hold midnight court with her Australian stars. There and there only, in barbarous archipelagoes, as yet untrodden by civilized man, the name of Washington is unknown; and there, too, when they swarm with enlightened millions, new honors shall be paid with ours to his memory.

Edward Everett.

LESSON 76.

ORAL DISCOURSE—KINDS OF.

Having treated (1) of Invention, the finding of the subject-matter, or thought, of discourse, and (2) of Style, the fitting embodiment of the thought in words, there remain for notice only the Productions into which discourse may be divided—the kinds of composition.

Departments of the Mind. — As all discourse, appealing to the ear or to the eye, is addressed to the mind, to group the powers and capacities of the mind is to make a rough scheme of literature. We may say, then, that the human mind can be dissected into the intellect, the emotive nature, and the will. Through the intellect the mind perceives, learns, retains, recalls, thinks; through the emotive nature it is susceptible to pleasure and to pain, experiences hope, joy, anger, fear, grief—the whole round of feelings and desires; and through the will it elects and rejects, determines to do and not to do. Some object is perceived, some memory of it is recalled, or some image of it created. With or without the intervention of bodily expression, feelings result in consequence of the perception, the memory, or the image. In the presence of the motives presented for action, action unhesitatingly follows, or follows the fiat, the volitional effort or mandate, the decision.
We here present

A SCHEME OF LITERATURE, OR DISCOURSE.

All discourse is intended, as was said, (1) for the intellect, bringing it facts, thoughts, truths, principles, and building it up in knowledge; or (2) for the emotive nature, bringing to this beauty-loving part of us the sustenance it craves; or (3) for the will, aiming to dissuade us from or persuade us to any act or line of action or of conduct. Of the three groups seen in the scheme above, we may say, speaking broadly, that that which forms the prose division of written discourse is addressed to the intellect, and aims to inform and instruct it. The group forming the division of written discourse called poetry aims to minister to our feelings and desires; while the group constituting oral discourses, co-ordinate with written, is dissuasive or persuasive, and is meant to affect the will.

Exposition.—Before taking up the several productions, or kinds of discourse, it is fitting that something should be said concerning the presentation of the matter, or the thought contained in all discourse. The handling of our knowledge so as to make clear the meanings of things discussed in every kind of composition rhetoricians call Exposition. In particular, Exposition is the method of making intelligible, concrete objects, ideas, general notions, or an assertion respecting any of these.

If it be a concrete object, description, treated in Lesson 54, will suffice to make it clear. If something more elusive, a generalized object, a class term, a complex notion, we may make it apprehensible by defining it. The definition may be more or less complete. (1) Strict definition places the object in its class or genus, and then gives some mark to distinguish it from other objects in that class. To say of a circle that it is a plane figure is to throw it into its class; to add, bounded by a curved line all of whose points are equidistant from a point within is to attach a mark that discriminates the circle from all other plane figures. What words, in Lesson 46, perform the first of these offices for the metaphor? and what the second? Perhaps (2) a giving of one or two marked qualities of the general term would be sufficient for the purpose — rhythm and meter, Lessons 80 and 81, might clearly enough denote poetry. Perhaps (3) some concrete instances would suffice—one or two poems might give one a sufficiently clear idea of poetry. By putting (4) over against the object its opposite—poetry as rhythmical and metrical and the expression of the imagination would be understood by the coupling of a rich poem with a bit of scientific prose.

If now it is a general principle or proposition that needs
clearing up and enforcing, this may be done (1) by repetition of the statement, — iteration, as it is technically called. Turn back to Lesson 39 and see what De Quincey says of repetition and what was Webster's habit learned in talking to juries. By (2) antithesis, or contrast. We saw, Lesson 52, how this figure, by placing in opposition things unlike in some particular, makes that likeness distinct and prominent; and we saw the philosophy of it. By (3) instances, or examples. The meaning of the statement. Men unaccustomed to freedom do not know how to use it, is shown by the instance, that indifference around in climates where wine is a rarity. By (4) illustrative figures. The thought in Specific words are more effective than general terms is made obvious by adding just as the edge of the sword cuts deeper than the back of it would. By (5) calling attention to the special difficulties of the matter. This excites curiosity, arouses an interest, and stimulates to an effort likely to result in a clear understanding of the subject. Every teacher has had experience of this. By (6) deductions and applications. The statement, Knowledge is power, is explained, not to say proved, by showing what knowledge has done for the inventor, the orator, and the navigator.

Oral Discourse. — Since oral discourse precedes written in the order of time, and since it is more common and necessary than written, we have placed it first in the scheme. The subdivisions of public oral discourse, or oratory, are demonstrative oratory, — the oratory of great occasions, parliamentary oratory, platform oratory, forensic oratory, pulpit oratory. The end, or purpose, of oratory is, in the main, to move the will — to lead men to do something or to refrain from doing it. The lawyer talking at the bar, the preacher pleading from the pulpit, the reformer denouncing on the platform, the politician haranguing from the stump, the statesman debating in a legislative assembly — all who write or speak with a distinct moral purpose, aiming this one at a verdict, that one at votes, every one at a change in belief or conduct, social, political, or religious, — all are training their guns upon the will, the fortress of one's personality.

Relation of the Intellect to the Feelings and to the Will. — When it is said that poetry brings its contents to the feelings, and that oral discourse, persuasion, bears down upon the will, we must not forget that poetry can reach the feelings only as it enters the mind through the intellect, and that persuasion can reach the will only through the intellect and the emotions. No direct or immediate address either to the feelings or to the will is possible; discourse must go through the door of the intellect to reach the one, must go through the door of the intellect and that of the feelings to reach the other. This necessity both persuasion and poetry recognize. The staple of all effective persuasion is argument, and argument is thought. But it is thought of such a kind, so pervaded by passion that, while it convinces the understanding, it arouses feeling and begets desire, in the presence and in the opportunity of which alone does the will ever act. For the feelings wait upon the intellect, and the will waits upon both.

There can be then but three great classes of discourse, since there are but three great ends which discourse can propose to itself. That which brings its contents to the intellect appeals directly to it; that which seeks to nourish the feelings brings at the same time its tribute to the intellect; and that which strives to take captive the will must first carry the judgment and awaken feeling and desire. But there may be many subdivisions of these great classes of discourse. The first division of oral discourse that we shall notice is

1. Conversation. Conversation is discourse between two
or more people. Much of oral discourse is written, but written to be spoken. Conversation never is. But its value as preparatory to written discourse — whether this is to be spoken or not — is beyond estimate.

1. Conversation Widens one’s Views of one’s Subject. — Conversation forces one to look at a subject through the eyes of another, and thus see what he could not discover for himself. Under the stimulus of opposition, he is carried in his own thinking over territory he could not traverse alone. He learns what will bear the heat of discussion and what will not. He sees that he must survey a subject from all sides if he would handle it well, finds that all the truth is never with any one disputant, has his own opinions corrected and broadened, settles down into a more modest estimate of his own powers, and masters what Curtis says is the great lesson of travel — toleration.

2. Conversation Puts one in Better Possession of his Thought. — One never knows that he knows anything till he finds himself able to tell others of it. Communication mirrors to us the exact condition of our knowledge. We learn by teaching. Conversation makes the vague definite, and tightens our grasp of what we before held loosely.

3. Conversation Teaches us how to Communicate. — Conversation teaches one where to begin and what order to follow. It gives him an easy handling of his thought, and the art of putting it so as to make the most of it. He learns from it that the strongest point may fail through one’s lack of tact in presenting it — it was not the more powerful Robespierre but the trained and skillful Fitz-James who won in the sword duel. He attains a facile use of words. Summoning them at the instant bidding of his needs, he acquires command of his vocabulary. He learns to choose the aptest words. Watching the face and speech of his opponent, he sees whether or not his own words have carried his thought home. He is taught the danger of verbiage, the necessity of an arrangement that is direct and of a style that is lucid. He learns that, while bringing his thought to bear from many sides if need be, his effort should cease when he has lodged his thought where he wants it. In many ways then conversation can be made serviceable to the writer and to the public speaker.

11. Debates. — A debate is a formal and public conversation. Having expounded one side of a question, the debater arrays all the facts and arguments he can find which support his position, and talks not so much to impart knowledge as to establish his proposition. What the preparation for the debate and the discussion of the question do for the disputants we attempted to show in our model given in Lesson 27. All that was said there and, in the same Lesson, on the Preparation of a Framework, and much said in this Lesson, on Conversation, might be repeated and emphasized here.

Burden of Proof and Presumption. — We wish to add that, in ordinary conversation, in debate, in spoken and written efforts of all kinds, you should not disregard what is called The Burden of Proof and The Presumption. Whoever attacks anything takes upon himself the burden of demonstrating its unreasonableness or falsity — of showing cause why it should be changed or abolished. His is the laboring ear. With that which is attacked lies the presumption that it has a right to exist. Its existence does not establish that right, else “Whatever is, is right,” and there should be no change and could be no improvement. But its defenders are not called upon to prove that it is reasonable or true, and therefore has a right to be. Exemption from proving this is assumed, and this the assailing concede.

The Burden of Proof is the labor of proving the unreasonableness or the falsity of that which is assailed, and the truth of that which is offered as a substitute.
The Presumption is the exemption from all labor in debate save that of defence.

Presumption, as Whately says, is like a fortress within which the defenders may fight. All they are called upon to do in order to win is to ward off attacks—repel the assailants. The fortress itself may be sufficient for this; it is at least a powerful protection. But if, abandoning this figure, we turn to the real one, the defenders sally forth to fight without its walls, they may like him be beaten.

The presumption of innocence belongs to every one until he is proved guilty. Any one arrested and accused is held in duress only to allow the prosecutor to attempt the proof of his guilt. If the prosecutor fails, the accused is discharged. Presumption, as has been said, lies with every existing institution. By a skillful throwing back of the question to a time when the institution did not exist, the burden of proof may be shifted, and the defenders of it may be called upon to show cause why the institution arose and exists. If this be allowed by them, they assume the labor of proof and lose the presumption.

Refutation. — A good illustration of the way an adversary's objections may be refuted, is found in the extract from Wendell Phillips, Lesson 67, which see. But time and strength may be wasted in answering objections. A principle may be true even if unanswerable arguments make against it. Holmes says, "If I had not force enough to project a principle full in the face of the half dozen most obvious facts which seem to contradict it, I would think only in single file from this day forward." See if you can overthrow your opponent's reasoning by showing (1) that the premises from which his argument proceeds are unwarrantably assumed; or that (2) if they prove anything they prove too much—an absurdity; or that (3) even if true, the reasoning from them is incorrect and illogical; that (4) the conclusion he reached is at war with that which you can establish as true by positive and irrefutable arguments of your own.

111. Orations. — An oration is a discourse delivered before an audience of scholars. Some orations commemorate great events—the Landing of the Pilgrims, the Declaration of Independence, the laying of a cornerstone, the death of a great statesman or scholar; others are prepared for the anniversaries of literary societies, as those of college alumni or of the Phi Beta Kappa fraternity; and even the speeches of the ancient orators come down to us with the title of orations. All such efforts take their key-note from the occasion; and, as this is never commonplace, so they are never familiar and colloquial, but laborious, graceful, polished, and dignified, disclosing rare scholarship, and abounding, often, in classic allusion.

We use the word oration to denote, also, the spoken productions of youth in schools and colleges. It may be of service to the student to say something of these productions. They borrow no importance from the occasion for which they are prepared, but most rely upon their intrinsic merit. What was said in Lesson 27, upon the Preparation of a Framework is in point here—there must be the selection of a subject, the accumulation of material, the planning and the putting together of the structure. But the consideration that a subject and a style of treatment suitable to an essay would be ill-suited to an oration, since the oration is to be spoken and not read, is all important and justifies an additional word.

1. The Choice of a Subject. — A subject should be taken which is adapted to awaken in the speaker not thought only but feeling also. Abstract subjects or subjects merely speculative are not suited to the student's purpose. The
subject should be one that in some demonstrable way is concerned with the well-being of men—the reformation of some abuse, the just claims of some fraction of the race, the improvement of humanity in some particular, the rights, the wrongs, the duties, or the development of men. It may be some question of the hour, agitating men’s minds, or some older topic that can never cease to interest. If the subject has in it this human element, and, in addition, is a question upon which men are not at one, so that the speaker may have, or imagine that he has, an opponent to goad him to his utmost, all is done that the subject can do to excite him to his best thinking, kindle strong feeling, give point and weight to his style, and animation to his delivery.

2. The Framework. — Select from your analysis of the subject not more than two or three points. But let these be pivotal — points which, if made, will establish what you aim to prove. The historic battles are not won by defending or capturing the fortresses all along the line, but by holding or carrying those which form the key of the position. The great debaters are those who have the discernment to see what points are commanding, and who, neglecting all else, concentrate their forces upon these. We do not listen and assent to one for his “much speaking,” but for his wise speaking.

3. The Treatment. — Energy is the quality of style that should dominate in your orations. Words and figures of speech should be chosen for vigor rather than for beauty. Keep to the concrete as far as possible, and array specific instances in the way of illustration and proof. In the arrangement of complex sentences, place the dependent and qualifying clauses before the independent and the qualified—the wasp carries its formidable weapon in its tail. Let this suggest the order of points where nothing else determines it, — those absolutely weak being dropped—and the development of each. While deep feeling may characterize the oration as a whole, yet each paragraph should begin colloquially, and deepen in thought and emotion as it proceeds, the burden growing heavier to the close. Long sentences and periods are in place here—great momentum cannot be attained if the stops are frequent. Great variety, especially in the kind, the length, and the character of the sentences used, should distinguish the oration.

4. The Parts. — The parts of an oration are three — the introduction, or exordium, the discussion, and the peroration, or conclusion. The introduction should be brief and graceful, and should prepare the way for the discussion; the discussion should be honest and thorough; and the peroration should match the discussion, looking back to the whole of it in recapitulation or inference or application, and fitly closing it.

Whether the proposition to be proved should be stated before the discussion or at the close of it depends largely upon your decision of the question, is my proposition, or thesis, agreeable to my auditors? If not agreeable, it should be withheld, and the audience be carried along by the argument and be forced, at the close of the discussion, to accept the thesis and the proof of it. The introduction you may write last, though it stands first—we build the porch after the house is erected, though we place it in front.

IV. Speeches. — Speeches are oral discourses usually delivered in legislative assemblies or before political bodies. Among the great spoken efforts that survive in English are the speeches made in Parliament and in Congress. Of Parliamentary speeches, some have treated of the political rights of the people, of the prerogatives of the Crown, of the relation and duties of England to her Colonies and of her
Colonies to her, of the foreign policy of the government, and of church, financial, and land questions. Some of those made in Congress have dealt with the nature of the central government, with its relation to the states composing the Union and to the territories, with the tariff, with internal improvements, with the currency, with our relations to the Indians and to foreign powers, and with negro slavery.

Their Style and Value. — These speeches contain the best thought of the wisest statesmen, and have been of service in settling intricate national and international questions, and shaping the foreign and domestic policy of governments. Delivered on opposite sides of questions that have called for a vote, they have elicited all the legal and political learning of the ablest public men, and all their powers of reasoning and persuasion. Republics and limited monarchies, in which the fullest freedom of speech is enjoyed, are favorable to this kind of discourse. The subject-matter of these speeches is usually thoroughly prepared, but commonly the speeches are not written out—the wording of the thought being left to the occasion. With some justice our Congressional speaking has been accused of a style bombastic and declamatory; but it is thought that age will bring sedateness, and beget a disposition among our orators to fly with less of “soar” in their movement.

Campaign Speeches. — Our annual and presidential elections form a valuable school for the cultivation of public speaking. The principles of the contending political parties are expounded, criticised, and defended; the merits of the rival candidates are canvassed, and the duties of the citizens at the polls are enforced in these speeches. These campaigns are highly exciting; every hamlet has its gatherings, every larger town its mass-meetings, and the land rings with the noisy conflict of opinions. When, as often happens, ignorance, misrepresentation, sophistry, and appeals to the lower passions mark these speeches, they deserve and should receive no higher title than harangues.

After-Dinner Speeches should be graceful, witty, full of happy allusions and ready repartee, and should be marked by a style suited to the occasion and to the toasts, or sentiments, that call them forth.

V. Lectures and Addresses. — Lectures and Addresses are oral discourses delivered before lyceums and lecture associations. Such institutions are found, one in almost every village of the North and West, and local talent is drafted and foreign engaged for the annual course. The topics discussed in these lectures are exhaustless in variety, as are also the styles in which they are treated. Such efforts are mainly intended to instruct, not a few are meant to amuse, and some to persuade. They have been, and are still, though in a waning degree, a means of popular education. Many of our best speakers have served an apprenticeship on the platform, and have learned from it invaluable lessons.

VI. Arguments. — Arguments are oral discourses delivered by lawyers before judges and juries. The occasions that give birth to arguments are suits-at-law concerning property, and the trials of those accused of misdemeanors and crimes. Arguments are based upon the documents submitted, upon the testimony of witnesses summoned to testify, and upon the law applicable to the case. They classify the evidence given, point to the conclusions which this establishes, array authorities, suggest to judges the rulings desired, and strive to persuade juries to bring in the verdicts wished for. They are extemporary, the lawyer talking from the points set down in his brief. From the importance of the questions involved, and from the ability displayed in handling them, some of these efforts have passed into permanent literature.
in a sermon is taken from some verse or passage in the Bible, and the sermon consists of a development and an enforcement of the truth found in the text, and an application of this truth to the conduct and life of the hearers. The design of the sermon is to teach what is to be believed concerning God and our relations to him and to our fellows, and to lead us to be and to do what is becoming to us, and imperative upon us, as accountable beings. Our moral and religious duties—the duties we owe to ourselves, to our neighbors, and to God—furnish the preacher his subjects. The range of these subjects is immense; and their importance is beyond estimate, since they have to do with the forming of the most precious thing conceivable—human character. The preacher’s function is extending with the advance made in the interpretation of the Scriptures, with the disclosure of new mines of truth, and with the application of it to us in the relations which we sustain to others—ever increasing in number and in reach. No other species of oral discourse ranks with the sermon in variety and dignity of topics, and in the importance of the motives arrayed and of the ends presented. The lawyer seeks to redress wrongs, the preacher seeks to prevent them; the occupation of the one would in certain directions decline, were the teaching of the other completely effective.

Oratory, as we have seen, is largely persuasive—forensic, parliamentary, platform, and pulpit oratory are. But the work to be done by the speaker with different audiences, on different themes, and at different times—may, on the same theme and with the same audience at different times—is very diverse. All the persuasion one’s hearers sometimes need is that which a clear presentation of the subject by description, by narration, by exposition, affords. An understanding of the subject is all they require—no proof by argument, no excitement of the feelings need follow.
But, ordinarily, proof, made up of facts arrayed in arguments linked into a chain of reasoning, and pressed home by all the arts of which we learned under qualities of Style, is needed to produce conviction and lead to action.

And this is often supplemented by what we call an appeal to the feelings. What do we mean by this? It was said some pages back that there could be no direct address to the feelings or to the will. They must be addressed, if at all, through the intellect, the understanding. But all truth addressed to the intellect is not equally adapted to arouse feeling. No one but its discoverer was ever moved to enthusiasm by the truth that the square of the hypotenuse of a right-angled triangle is equal to the sum of the squares of the remaining sides. A coldly logical and unanswerable argument dealing with our relations as citizens to our country, setting forth its claims upon us and our obligations to it, would hardly be effective in enlisting soldiers in a time of threatened invasion. It would not inflame our patriotism, and hurry us into the ranks of those setting out to the defence of native or adopted land. But, after proving all this, or even while assuming that we already know it, let the orator portray the glaring injustice of the impending attack, let him show us that, if successful, the invasion will wreck the nation, destroy our possessions, ruin our homes, and strip us of all that makes life dear, and then let him picture the men who here and there throughout history have gladly sought to avert these calamities even at the risk of death on the field—then, if at all, our feelings are kindled, the will surrenders, and the armies of defense are filled. And how much more likely to happen will all this be if the speaker is one in whose intelligence and virtue we have entire confidence, whose words, instinct with great passion, come from a full heart, and who has proved his sincerity by having already done what he is pleading with us to do! By appeal to the feelings, then, we mean a presentation to the intellect of those truths or those phases of truths best fitted to awaken human susceptibilities and lead to acts of the will, to conduct. In this, the passion of the speaker, suppressed or expressed, and his language—his whole demeanor—count for much.

LESSON 77.

WRITTEN DISCOURSE PROSE, KINDS OF.

The prose division of written discourse is intended mainly to nourish that department of the mind which is called the intellect. Its purpose is chiefly didactic, informing and instructing the cognitive part of us, by furnishing it facts, truths, and thoughts. We say that this is mainly its function, but, in certain subdivisions of it, we shall see that the author cherishes a moral purpose as well, attempts the reformation of some abuse, or tries to leave a permanent impression upon character.

1. Treatises.—A treatise is a written work containing the principles and the facts of any science or art. We have a right to demand of a treatise that the facts shall be grouped into the classes to which they belong; that the principles governing this classification shall be reasonable and apparent; that a rigid gradation shall be observed throughout, subordinating and co-ordinating, and bringing the parts into a scheme that brackets them all, holds everything in its place, and enables the reader, by a glance at the Table of Contents, to get a correct view of the parts, in their relation to each other and to the whole; that the definitions shall be brief, simple, accurate, and adequate;
and that the style and treatment shall be clear and exact. 

Exposition has great scope in treatises.

II. Histories. — A history is a written work detailing the achievements of a nation. Its purpose is instruction. It teaches us the bent, or genius, of the nation, what has been its government and whether helpful or hurtful to the people, what its solution of the great social, political, and religious problems, what great things it has done and by what means, and what has been its influence upon other nations.

The topics formerly discussed by the historian were the nation's martial exploits by land and sea, the majesty and power of its rulers, the wealth of its nobles, the literature of its scholars, the deeds of its heroes, and its bearing toward surrounding nations.

The topics now discussed concern rather the condition of the people. What are the houses in which they live and with what conveniences are these furnished, what dress do the people wear, what do they eat and drink, what is their education, their religion and how do they worship, what are their occupations and their sanitary regulations, by what laws are they governed, what is the measure of freedom they enjoy, what have been their struggles for it, and of what rights are they still deprived—these and such as these are the questions that engross the historian of today. Only within a short time have the Chinese walls of class and national exclusiveness been broken down, and a conscious feeling of the brotherhood of mankind has obtained. People now are anxious to know of other people. Only recently, too, have the national archives opened their treasures, and spread state papers and official records before the historian for his inspection and use.

The spirit in which history is now written is that of the humble, but jealous, secker after truth—truth for its own sake, and truth for the sake of the lessons it can teach. The material available is brought into the focus of the most critical scrutiny. Whatever will not stand the test of the severest scepticism is rejected. Documents are subjected to microscopic inspection, authorities are interrogated, and testimony weighed with a patience, a diligence, and a discriminating judgment unknown to our ancestors. It is said that, in the preparation of a recent history of England, 200,000 documents, mostly in manuscripts and in many languages, were consulted. We are not to look for absolutely impartial and authentic histories. A fact must take some form and color from the eye that sees it, and it may be pressed into the service of a certain theory or it may not, according as the historian accepts the theory or rejects it;—may, the same fact can be made to support opposing theories by men whose creeds are mutually opposed. What one man holds to have been caused by some agency another regards as existing in spite of it. This we must expect, but perhaps there is less of the calm, judicial spirit among historians of today than at first we are inclined to believe. We must remember, however, that historians are but men. Without intending or even knowing it, they look upon things with the eyes of partisans, are blind to the significance of certain facts, and see in others what they themselves put into them. Bias shows itself especially in those pen portraits of the great actors in human affairs—portraits that form so striking a feature of modern history—most of them masterly and enduring, but some of them done in colors already fading.

The style both in matter and in manner is varied. The narration of events, the description of men and of things, the drawing of warranted conclusions, making history teach by example, and the application of its lessons to questions agitating the world at the time of the historian—these
call, now for the most vigorous and logical exercise of his reasoning faculty, and now for the spurious flights of his imagination, and demand a wording which shall range from dry and matter-of-fact up through all grades of expression to the ornate and elegant.

In *Narration* there is a great need of keeping the events in their proper order of time and dependence and the concurring streams of events distinct. So eminent was Macaulay in these respects that we must quote a page from Minto respecting his methods.

"He is exemplary in keeping prominent the main action and the main actor. After the death of Charles II., our interest centers in James. We are eager to know how the change of monarch was received in London and through the country, and how James stood in his relations with France and Rome, with Scotland, and with the English clergy and the Dissenters. Macaulay follows the lead of this natural interest, and does not leave James until he is fairly settled on the throne. James once established, our interest in him is for the time satisfied, and we desire to know the proceedings of his baffled opponents. Accordingly, the historian transports us to the asylum of the Whig refugees on the Continent, describes them, and keeps their machinations in Holland, and their successive invasions of Britain, prominent on the stage until the final collapse of their designs and the execution of their leaders. That chapter of the history ends with an account of the cruelties perpetrated on the victors and abettors of the western insurrection under Monmouth. Then the scene changes to Ireland, the next interesting theater of events. And so on: there were various critical junctures in the history of the Government, and the events leading to each are traced separately.

"The arrangement is so easy and natural that one almost wonders to see it alleged as a merit. But, when we compare it with Hume's arrangement of the events of the same period, we see that even a historian of eminence may pursue a less luminous method. Hume relates, first, all that in his time was known of James's relations with France; then, the various particulars of his admin-

istration in England down to the insurrection of Monmouth; then, the state of affairs in Scotland, including Argyle's invasion and the conduct of the Parliament. He goes upon the plan of taking up events in local departments, violating both the order of time and the order of dependence. Macaulay makes the government of James the connecting rod or trunk, taking up one after another, the difficulties that successively besiege it, and, when necessary, stepping back to trace the particular difficulty on hand to its original, without regard to locality. By grappling thus boldly with the complexity of events, he renders his narrative more continuous, and avoids the error of making a wide separation between events that were closely connected or interdependent. He does not, like Hume, give the descent of Monmouth in one section, and the descent of Argyle upon Scotland, an event prior in point of time, in another and subsequent section."

Summaries are arrangements that gather up and present in comprehensive views the leading events of any period, or distinct portion, of the narrative. They resemble a map which presents in outline the country, on which is traced sharply and briefly the route we have travelled or are about to travel. In complicated history their aid is indispensable. A preface, like that in Motley's "Dutch Republic," may do for the whole history something like that which a summary performs for a portion.

How helpful to the ordinary reader are vivid geographical pictures, too, like that, for instance, which Motley in this same work, presents in saying of the Netherlands that it is a small triangle, enclosed between France, Germany, and the sea; divided by the modern kingdoms of Belgium and Holland into two nearly equal portions; watered by the Rhine, the Meuse, and the Scheldt, which for ages have deposited their slime among the dunes and sand-hanks heaved up by the ocean around their mouths— a district lying partly below the level of the ocean at its higher tides,
subject to constant overflow from the rivers, and to frequent and terrible inundations by the sea!

III. Travels. — A book of travels is a work that pictures places and peoples visited by the author. It gives his views of what he has himself seen. Such works are entertaining and instructive, though they do not pretend to be more than cursory and superficial, and should be read by those who desire a knowledge of countries they have not seen, and of contemporary events enacted beyond their immediate vision. They form an important part of literature; though, when compared with history proper, to which they are tributary, they are light and ephemeral.

IV. Fiction. — A work of fiction is a production which depicts the lives of imaginary persons. It may, indeed, deal with real men and women; but, when it does this, it does not claim to tell what they actually said and did. Ordinarily, a work of fiction treats only of imaginary persons, though it treats of them as if they were real. It has to do with the motives that influence persons, with the behavior of such persons under that influence, and with the development of character under the conditions imposed.

It aims, then, at the portrayal of character, and seeks to give a just insight into human nature. Some novelists show wonderful power in their impersonations, building up on the page before us their men and women, rounding them into completeness, and yet keeping them as distinct from each other as are the real men and women about us. Others, in their anxiety to preserve the individuality of their personages, make them the embodiment each of some single trait; and, instead of characters, present us something approaching caricatures. In the novel, dialogue abounds; and in this each person reveals his peculiarities and paints himself — the picture completed by the touches which the author adds when speaking, as it were, in his own name. Great ingenu-

ity is sometimes shown in the construction of the plot, and in the management of the incidents by which the action of the story is carried forward and the characters are made to grow before our eyes. Love forms, in great part, the staple of the novel, and it is this which gives the production much of its fascinating interest.

Some novels teach us much concerning the customs, habits, manners, domestic and social life, and even the history of the people during the age in which the scenes are laid. The pages of our best novels are strewn with wise thoughts also, which betray keen analysis, accurate observation, and powers of broad generalization. And, thrown into the novel, these are read by thousands who would never see them if they stood in works professedly serious or philosophical.

Some novels have a purpose beyond mere instruction. They aim to interest us in classes of society whose condition should be improved, to lay open to the attention of the public certain evils, and, if need be, to bring legislation into play to redress these evils.

The place of the novel in literature and its claim upon the reader are, perhaps, obvious from what has been said. Though one of the latest born of the departments of literature, one might surmise that fiction has been rapid in its growth, and that its stature is already imposing. Supply keeps pace with demand, and it may be said that readers do not need incitement to enter the field of fiction. Though it gives insight into human nature, teaches history, attacks evils, abounds in striking thoughts and rare descriptions, and has great wealth of style lavished upon it, yet fiction should not be read to the neglect of other branches of literature. But it is within bounds to say that it is supplanting its elders, in popular regard. Our youth should be taught a wise temperance in the use of fiction. The
The novel should be read as an amusement and a relaxation, and this implies that it should only alternate with more solid reading. And to get out of the novel the best lessons it can teach, the reader should in some way deliver himself from the excitement of the story. This hurries him over the pages and on with a rush to the crisis, and seals his eyes to that for which almost alone the book should be read. We almost dare advise the reader that he should, at the start, look on to the end to see how the hero and the heroine prosper, how things in general issue, and then return to the beginning and carefully gather the harvest worth reaping from the pages. He should remember that to become intensely alive to fancied suffering, he kindled to keen sympathy with fictitious personages, without opportunity to translate these feelings into acts, do what he is moved to do, is unbecoming, and tends to deaden him to the woes and sufferings of the real world.

We quote from Prof. Genuing a few lines pointing out the essential differences between the two great divisions of Fiction — the Novel and the Romance.

"The novel holds itself more strictly inside the limitations of fiction. Confining itself to the characters and manners of ordinary life, it aims merely 'to hold the mirror up to nature,' so that each reader may see reflected therein something parallel to his own experience. It is often concerned with finer shadings and traits of character than the romance exhibits; and these it finds in such histories as are passing every day all around us.

"Romance" obeys the tendency to emphasize the liberties of fiction. It deals with scenes and events outside the sphere of commonplace life — with adventure, mystery, striking contrasts, surprising incident; — or if with common scenes, it seeks to invest them with a hue and picturesque ness not of our everyday existence. It is generally concerned not so much with minute shades of character and motive as with the more violent and elementary passions, — love, revenge, jealousy, hatred, self-sacrificing courage. It is the result of an endeavor to create an imagined world more interesting and more striking than our common round of experience."

**Allegories** are a species of fiction in which virtues, vices, and difficulties are personified, and great moral duties inculcated. They are less frequently written now than formerly. There are a few in classic English literature.

**Fables** are short stories in which, by the imagined dealings of men with animals or mere things, or by the supposed doings of these alone, useful lessons are taught.

**Parables** are short accounts of something real or supposed, used by our Lord in illustration or in enforcement of his teaching.

---

**LESSON 78.**

**WRITTEN DISCOURSE — PROSE, KINDS OF.**

**V. Letters. — A letter** is a written communication from one person to another. Usually letters are upon matters purely personal and private — letters of friendship or letters of business; sometimes they are upon topics of general concern and are thought worthy of publication. Some of these, because of the standing of the writer and the desire to learn all that can be known of him, from the importance of the subject discussed, or from the exquisite style in which his thought is couched, have been gathered into volumes, and form a valuable part of literature.

Not every pupil can reasonably aspire to write histories or works of fiction, but every one writes letters. This fact coupled with another — that a letter has several parts, each of which has a definite and a proper form — justifies us in devoting a few pages to the subject of Letter-Writing.
In writing a letter there are seven things to consider—the **Heading**, the **Address**, the **Salutation**, the **Body**, the **Complimentary Close**, the **Signature**, and the **Superscription**.

1. **The Heading.**—**Parts.**—The Heading consists of the name of the place at which the letter is written, and the date. If you write from a city, give the door-number, the name of the street, the name of the city, and the name of the state. If you are at a hotel or a school or any other well-known institution, its name may take the place of the door-number and the name of the street, as may also the number of your post-office box. If you write from a village or other country place, give your post-office address, the name of the county, and that of the state. This part of the Heading should show your correspondent where to send his reply. If you wish the reply sent elsewhere, give full directions after the signature.

The date consists of the name of the month, of the day of the month, and of the year.

**How Written.**—Begin the Heading an inch or more from the top of the page. If the letter occupies a few lines of a single page, you may begin the Heading lower down. Begin the first line of the Heading a little to the left of the middle of the page. If it occupies more than one line, the second line should begin farther to the right than the first, and the third farther to the right than the second. The name of the place and the date are sometimes put below the signature, at the left of the page.

The door-number, the day of the month, and the year are written in figures; the rest, in words. Each important word begins with a capital letter, each item is set off by the comma, and the whole clauses with a period.

**Direction.**—Study what has been said, and write the following headings according to these models:

---

1. Bath, Maine, Oct. 3, 1890. 3. Plattsburgh, N.Y.,
2. 527 Michigan Ave., Sept. 11, 1891.
Chicago, Ill.
4. Sharon, Berkshire Co., Conn.
May 3, 1880, November 8, 1890.
6. 1876 Hall, Oct. 8, 1886.

2. **The Address.**—**Parts.**—The Address consists of the name, the title, and the place of business or residence of the one to whom the letter is written. Titles of respect and courtesy should appear in the Address. Prefix Mr. to a man's name; Miss, to the names of several gentlemen; Master to the name of a lad; Miss to the name of a young lady; Mrs. to the name of a married lady; Misses to the names of several young ladies; and Messieurs to the names of several married or elderly ladies. Prefix Dr. to the name of a physician, or write M.D. after his name. Prefix Rev. (or The R. Rev.) to the name of a clergyman, or The R. M., if you do not know his Christian name; The Rev., Dr., if he is a Doctor of Divinity, or write The Rev. before the name and D.D. after it. Prefix His Excellency to the name of a Governor or of an Ambassador; Hon, (or The Hon.) to the name of a Councillor, a Member of Congress, a State Senator, a Law Judge, or a Mayor. Esq. is added to the name of a lawyer, and sometimes to the names of other prominent persons. If two literary or professional titles are added to a name, let them stand in the order in which they were conferred—this is the order of a few years ago.

---

1 **His Excellency** was formerly used in addressing the President; but the preferred form is **To the President, Executive Mansion, Washington, D.C.** ; the salutation is simply Mr. President.
common ones: A.M., Ph.D., D.D., LL.D. Guard against an excessive use of titles—the higher implies the lower. Do not use two titles of the same meaning. Avoid such combinations as the following: Mr. Dr. Brown; Dr. Brown, M.D.; Mr. Brown, M.D.; Mr. Brown, A.M.; Dr. Brown, Ph.D.; Mr. Brown, Esq. Such as the following, however, are allowed: Mrs. Dr. Brown; Mrs. General Scott.

How Written. — In a business letter the Address should follow the Heading, beginning on the next line, and standing on the left side of the page. In a familiar letter the Address is generally placed at the end, on the left side of the page, beginning on the next line below the signature. There should always be a narrow margin on the left-hand side of the page, and the Address should always begin on the marginal line. If the Address occupies more than one line, the initial words of these lines should slope to the right, as in the Heading.

Every important word in the Address should begin with a capital letter; all the items of it should be set off by the comma; and, as it is an abbreviated sentence, it should close with a period.

3. The Salutation. — Forms. — Salutations vary with the station of the one addressed, or the writer’s degree of intimacy with him; as Sir, Reverend Sir, Rev. and dear Sir, General, Madam, Miss Brown, Dear Sir, Dear Madam, Dear Miss Brown, Dear Friend, Friend Brown, Friend James, Dear Cousin, My dear Sir, My dear Madam, My dear Miss Brown, My dear Friend, My dear Jones, My dear Wife, My dear Boy, Dearest Ellen, etc.

Miss is not used alone as a salutation. In addressing a young unmarried lady, the near repetition of Miss is generally avoided by omitting the Salutation and using the Address alone, or by placing the Address at the end of the letter. We can see no good reason for restricting Madam or Dear Madam to married and elderly ladies.

How Written. — Begin the Salutation on the marginal line or a little to the right of it when the Address occupies three lines; on the marginal line, or a little farther to the right than the first line, or a little farther than the second line, of the Address when this occupies two lines; a little to the right of the marginal line when the Address occupies one line; on the marginal line when the Address stands below.

The first word and every noun in the Salutation should begin with a capital letter, and the whole should be followed by a comma, or by a comma and a dash.

Direction. — Study what has been said, and write the following Introductions according to these models:

1. Mr. Stephen A. Walker,
   New York City.
   Dear Sir,

2. Dear Mother,
   Your, etc.

3. Hon. John W. Stewart,
   Middlebury, Vt.
   Respected Sir,—

   771 Broadway, N.Y.
   Gentlemen,

1. Rev. Dr. Pentecost Concord nh my dear friend.
2. Prof. George New broadman theo sem chicago ill my dear teacher.
3. Mr. Geo. R. Curtis 71 Livingston st Brooklyn n y sir.
5. Mrs. Clara E. Comstock Newport ri dear madam.
6. My dear daughter your letters etc.
7. Messrs. Tiffany & Co. 1000 Broadway New York City dear sir.

4. The Body of the Letter. — The Beginning. — Begin the Body of the Letter at the end of the Salutation; and on the same line, if the Introduction (= address and salutation) is long — in which case the comma after the Salutation should be followed by a dash; — on the line below, if the Introduction is short.
Style. — Be perspicuous. Paragraph and punctuate as in other kinds of writing. Spell correctly, write legibly and with care. Avoid blots, erasures, interlineations, cross lines, and all other offenses against epistolary propriety. The letter "bespeaks the man." Letters of friendship should be colloquial, chatty, and familiar. Whatever is interesting to you will be interesting to your friends, however trivial it may seem to a stranger. If addressing one of your family, write just as you feel, only feel right.

Business letters should be short and to the point. Repeat nothing, and omit nothing needful.

Official letters and formal notes should be more stately and ceremonious. In formal notes the third person is generally used instead of the first and the second. No Heading, Address, or Salutation is placed at the beginning, and no Complimentary Close or Signature at the end. The name of the place and the date, when given, are written at the bottom, thus:

Mr. and Mrs. A request the pleasure of Mr. B's company at a social gathering, on Tuesday evening, November fifteenth, at eight o'clock.
32 Fifth Ave.

Mr. B accepts with pleasure* Mr. and Mrs. A's kind invitation [or the polite invitation of Mr. and Mrs. A] for Tuesday evening, November fifteenth.
10 Astor Place, Nov. 6th.

5, 6. The Complimentary Close and the Signature. —

Forms. — The forms of the Complimentary Close are many,

and are determined by the relations of the writer to the one addressed. In letters of friendship you may use, Your sincere friend; Yours affectionately; Your loving son or daughter, etc. In business letters you may use, Yours, Yours truly; Truly yours; Yours respectfully; Very respectfully yours, etc. In official letters you should be more deferential. Use, I have the honor to be, Sir, your obedient servant; Very respectfully, your most obedient servant, etc. Among other forms are, — Very truly yours; Believe me sincerely yours; I am, dear sir, yours most respectfully; I am very sincerely your friend; Faithfully yours. Cordially yours; Yours very cordially; Most respectfully yours; I remain very truly your friend; Sincerely and gratefully yours; I remain yours faithfully; Yours, as ever; Your affectionate friend;

With kindest regards, ever affectionately. — Do not write, Yours, etc.

The Signature consists of your Christian name and your surname. In addressing a stranger write your Christian name in full. A lady addressing a stranger should prefix to her signature, her title, Mrs. or Miss (placing it within marks of parenthesis if preferred), unless in the letter she has indicated which of these titles her correspondent is to use in reply.

How Written. — The Complimentary Close should begin near the middle of the first line below the Body of the Letter; and, if occupying two or more lines, should slope to the right like the Heading and the Address. Begin each line of it with a capital letter, punctuate as in other writing, and separate it from the signature by the comma. The Signature should be very plain and should be followed by the period.

7. The Superscription. — Parts. — The Superscription is what is written on the outside of the envelope. It is the same as the Address, consisting of the name, the title, and the full directions of the one addressed.
How Written. — The superscription should begin above the middle, on the left side of the envelope, and should occupy three or four lines. These lines should slope to the right as in the Heading and the Address, the spaces between the lines should be the same, and the last line should end near the lower right-hand corner. On the first line the name and the title should stand. If the one addressed is in a city, the door-number and name of the street should be on the second line, the name of the city on the third, and the name of the state on the fourth. If he is in the country, the name of the post-office should be on the second line, the name of the county on the third, the name of the state on the fourth. The number of the post-office box may take the place of the door-number and the name of the street, or, to avoid crowding, the number of the post-office box or the name of the county may stand at the lower left-hand corner. The titles following the name should be separated from it and from each other by the comma, and every line should end with a comma, except the last, which should be followed by a period. The lines should be straight, and every part of the Superscription should be legible. Place the stamp at the upper right-hand corner.

Direction. — Put together the headings and the introductions given in this Lesson, let a few blank lines represent the body of the letter, conclude with a fitting complimentary close and your signature, and superscribe, using the forms below as models: —

Washington, D.C.,
February 2, 1819.

My dear Ezekiel,

All is safe. Judgment was rendered this morning reversing the judgment in New Hampshire.

Present — Marshall, Washington, Livingston, Johnson, Duval, and Story. All concurring but Duval: and he giving no reason to the contrary. The opinion was delivered by the Chief Justice. It was able and very elaborate: it goes the whole length, and leaves not an inch of ground for the University to stand on.

Yours affectionately,
Daniel Webster.

Ezekiel Webster,
Bozeman, A.H.
March 9, 1850. — I have seen the hippopotamus, both asleep and awake; and I can assure you that, awake or asleep, he is the ugliest of the works of God. But you must hear of my triumphs. Thackeray swears that he was eye-witness and ear-witness of the proudest event of my life. Two damsels were just about to pass that doorway which we on Monday, in vain attempted to enter, when I was pointed out to them. "Mr. Macaulay!" cried the lovely pair. "Is that Mr. Macaulay? Never mind the hippopotamus." And, having paid a shilling to see Behemoth, they left him in the very moment at which he was about to display himself to

them, in order to see — but spare my modesty. I can wish for nothing more on earth, now that Madame Tussaud, in whose Pantheon I once hoped for a place, is dead.

Jan. 22, 1829. — Rumor tells me that Miss — is married. Who is — ? Have I seen him at Montauktes? I hear he is a great chemist. I am sometimes chemical myself. A thought strikes me with horror. Pray heaven he may not have done it for the sake of trying chemical experiments upon her — young female subjects are so scarce. Ain't [Ar'n't] you glad about Burke's case? We may set off the Scotch murders against the Scotch novels. 'Harr, the Great Unchanged!'

Mr. B. is richly worth your knowing. He is on the top scale of my friendship ladder, on which an angel or two are still climbing, and some, alas! descending. Did you see a sonnet of mine in Blackwood's last? Curious construction. Elaboratus faciabilis! And now I'll tell. "Was written for "The Gem," but the editors declined it on the plea that it would shock all mothers; so they published "The Widow" instead. I am born out of time. I have no conjecture about what the present world calls delicacy. I thought "Rosamond Gray" was a pretty, modest thing. Hessey assures me that the world would not bear it. I have lived to grow into an indecent character. When my sonnet was rejected, I exclaimed, "Hang the age, I will write for antiquity!"

Erratum in Sonnet. — Last line but something, for tender read tend. The Scotch do not know our law terms; but I find some remains of honest, plain, old writing lurking there still. They were not so mealy-mouthed as to refuse my verses. May be 't is their oatmeal.

Blackwood sent me 20l. for the drama. Somebody cheated me out of it next day: and my pair of breeches, just sent home, cracking at first putting on, I exclaimed in my wrath, "All tailors are cheats, and all men are tailors." Then I was better.

Philadelphia, June 17, 1775. — I can now inform you that the Congress have made choice of the modest and virtuous, the amiable, generous, and brave George Washington, Esquire, to be General of the American army, and that he is to repair, as soon as possible, to the camp before Boston. This appointment will have a great effect in cementing and securing the union of these colo-
nies. The continent is really in earnest in defending the country. They have voted ten companies of riflemen to be sent from Pennsylvania, Maryland, and Virginia to join the army before Boston. These are an excellent species of light infantry. They use a peculiar kind of musket, called a rifle. It has grooves within the barrel, and carries a ball with great exactness to great distances. They are the most accurate marksmen in the world.

I begin to hope we shall not sit all summer. I hope the people of our province will treat the General with all that confidence and affection, that politeness and respect, which are due to one of the most important characters in the world. The liberties of America depend upon him, in a great degree. I have never been able to obtain from our province any regular and particular intelligence since I left it.

I have found this Congress like the last. When we first came together, I found a strong jealousy of us from New England and Massachusetts in particular; suspicions entertained of designs of independency; an American republic; Presbyterian principles; and twenty other things. Our sentiments were heard in Congress with great caution, and seemed to make but little impression; but the longer we sat, the more clearly they saw the necessity of pushing vigorous measures. It has been so now. Every day we sit, the more we are convinced that the designs against us are hostile and sanguinary, and that nothing but fortitude, vigor, and perseverance can save us.

But America is a great unwieldy body. Its progress must be slow. It is like a large fleet sailing under convoy. The fleetest sailors must wait for the dullest and slowest. Like a coach and six, the swiftest horses must be slackened, and the slowest quickened, that all may keep an even pace.

It is long since I heard from you. I fear you have been kept in continual alarms. My duty and love to all. My dear children, come here and kiss me. We have appointed a Continental fast. Millions will be upon their knees at once before their great Creator, imploring his forgiveness and blessing; his smiles upon American councils and arms.

My duty to your Uncle Quincy; your papa, mamma, and mine; my brothers and sisters, and yours.

To the Teacher.—Have your pupils write complete letters and notes of all kinds. You can name the persons to whom these are to be addressed. Attend minutely to all the points. Letters of introduction should have the word Introducing (followed by the name of the one introduced) at the lower left-hand corner of the envelope. This letter should not be sealed. The receiver may seal it before handing it to the one addressed.

VI. Biographies.—A biography is a written work descriptive of one’s life and character. It is a history, setting before us what manner of man the subject of it was and what he did. If a statesman, a distinguished general, or one in any way eminent in public life, a biography of him is largely a history of his times. A biography pictures the early and the later life of its subject, tells us what were his talents, his natural bent and surroundings, what he became in consequence or in spite of his environment, what he did, and what was his influence upon his times. Biography deals much with character. In this work the biographer is helped by the letters of his subject. In these the man speaks more fully and frankly than in his public efforts. His hopes and fears, his struggles, defeats, and triumphs are recorded in his letters—in these he opens himself to us. Hence it is that, in recent times especially, letters form a large part of biographies—often the most valuable part. Biographies abound in personal incidents and anecdotes which turn an electric light upon one’s character, and reveal much that we are eager to know. The works of literature cannot be rightly read till we have learned under what circumstances they were written, what was the author’s natural fitness for his task, and what were his limitations. What would not the admirers of Shakespeare’s plays give to know more of Shakespeare’s early life and training at Stratford, and of his later life in London?

An autobiography is a biography written by the subject of it.
A memoir is a brief sketch of one's life and character. It has been, and is still, a question whether the lives of men great in intellect and in executive ability, but not eminent in moral virtues, should be fully portrayed. It is difficult to see what good can come from an exhibition of one's vices, unless out of these some of his noteworthy achievements sprang. While the biographer should not, in what he says of him, misrepresent the man, he is not bound to present him fully. The man's private life does not belong to the public, it is his own. De mortuis nil nisi bonum — of the dead nothing but what is good should be spoken — may carry suppression to the point of distortion; but certainly the biographer wrongs no one by his silence upon so much of a man's evil nature and doings as had little or no influence in shaping his public career.

Great interest will always be felt in biographies. "The proper study of mankind is man," and certainly no study has greater fascination for us. The lives of others teach us invaluable lessons, and are an incentive to honest and even heroic endeavor. Biographies are of essential service to the historian, and constitute a most important part of literature.

VII. Essays. — An essay is a short composition. The subject may be of any kind whatever, one fit for fuller treatment in any of the species of discourse described above, or one without sufficient dignity for such treatment. No species of writing ranges over a wider and more varied field of topics — nothing less than that of all the others combined — and none other allows such freedom and diversity in the handling.

In style of thought the essay may be dreamy and semi-poetical, and charm by its beauty; it may be merely instructive or critical; it may blaze with brilliancy, sting with its satire, convulse with its humor, convince with its logic, or stir with its appeal and move to instant duty. The author may wander off leisurely to the right and the left, or, like the orator, he may keep his eye on the point he would reach, and move swiftly and in a straight line toward it.

The style of expression should fit the thought, and October woods are not more varied in color than this department of literature, in utterance. Essays, as the name indicates, are not ambitious works. Their subjects are specific, and the view the author allows himself to take is narrow rather than comprehensive. They are monographs, aiming each to present a single thing in a clear light. Most modern writers spend their predilection in essay-writing, and no better training for larger works can be devised. Essays are usually written for the monthlies or the quarterlies, and hence are prepared for readers of scholarly tastes and some culture. If they have met with favor, they are gathered into book form, and pass in permanent shape into our libraries.
A SCHEME FOR REVIEW.

The three Departments of Mind determining the three Divisions of Discourse. Exposition.

I. Conversation — Three Things it Accomplishes.
II. Debates — Burden of Proof and Presumption. Refutation.
III. Orations — Subject, Framework, Treatment, Parts.
IV. Speeches — Style and Value. Campaign and After-Dinner Speeches and Harangues.
V. Lectures and Addresses.
VI. Arguments. Arrangement of Points.
VII. Sermons. Appeal to the Feelings.
I. Treatises.
II. Histories — Topics, Spirit, Style, Arrangement, Summaries.
III. Books of Travel.
IV. Fiction — Purpose, Place, Division. Allegories, Fables, and Parables.
V. Letters — Purpose. The Seven Parts — Heading, Address, Salutation, Body of the Letter, Complimentary Close, Signature, and Superscription.
VI. Biographies. Autobiographies and Memoirs.
VII. Essays — Style of Thought and of Expression.

POETRY.

Two of the three great divisions of discourse we have spoken of — oral prose, which addresses itself to the will, and leads to action; and written prose, which is mainly intended to instruct the intellect. We come now to the second division of written, and to the last of the three divisions of all, discourse —

Poetry. — Poetry is that division of discourse which is rhythmical and metrical and is addressed to the feelings. Poetry differs from prose in three particulars — (1) in its mission, (2) in its style, and (3) in its form.

1. Its Mission. — The mission of poetry is to bring sustenance to that part of our nature which lies between the intellect and the will — that part which enjoys and suffers, which is open to disturbing influences and responds to every touch of impression — the feelings. Poetry finds its material in the world without and in human life — in concrete things, not in abstract. The most artistic department of literature, poetry, is near of kin, in its effects, to music and to painting. The poet is an artist, sensitive to impressions which ordinary nerves do not feel. His eye detects a beauty and a meaning in things — a beauty and a meaning that escape ordinary vision. His effort is to put this meaning into a picture, in which words are his colors, bringing all parts of it — the incidents, the persons, the events, the language, the feeling — into harmony, knowing that those blind to what he sees will see and appreciate what he does. Much of poetry is too ethereal in spirit to inhabit a body so gross as that of prose. Prose is masculine and matter-of-fact, the
"common drudge 'tween man and man." You can harness it to the light vehicles of conversation or to the lumbering trains of argument. Homely, serviceable, and made for wear, prose will drag your heavy drays of thought from premises to conclusion. But it lacks the grace of form and of movement demanded on the boulevard and in the park. Poetry is feminine. It takes to itself a delicacy of form, a warmth of coloring, and a richness of expression alien to prose. Poetry deals with things as October light with the objects upon which it falls, painting everything it touches in bewitching colors.

Nothing is so insignificant that it has not a poetic side to it, and may not furnish the poet a subject for his verse, and nothing is too high for the poet's reach. He catches glimpses and suggestions of outward and of inward beauty; and, in the play of imagination, he works them up now into studies, and now into finished pictures that cling to the walls of our memories, and stream their gracious influences down upon our feelings, -- a never failing source of consolation and delight.

Of all literature, poetry has in it the least of objective purpose, the most of spontaneity. No great moral purpose, no purpose of mere instruction, is supreme in the mind of the poet as he writes. Some phase of outward beauty, some deed disclosing inward grace, some glimpse of spiritual loveliness has been vouchsafed him, and he hastens to embody in verse the sweet vision that has dawned upon him. In just the ratio that the poet consciously aims to give instruction or turn any wheel of reform, does he abdicate his own function and seek to usurp that of the prose-writer. Not that poetry may not teach, may not even preach. It may and it does. That is great poetry, the greatest, which accomplishes both without neglecting its ministry to the feelings. But it does these things, when it does them, incidentally. It cannot subordinate its own proper vocation to any other without proving false to its mission, false to the mission of all fine art.

But no thoughtful person sets a light value upon this incidental service which all art performs for our intellect and for our moral nature. We are not to disparage poetry as an enlightening and as a reforming agency because it works intentionally neither upon the intellect nor upon the will. It works effectively upon both, even if incidentally —all the more effectively, it would be easy to show, because incidentally. The intellect takes more than miller's toll of the thought poetry contains, it appropriates the whole. The feelings, to which poetry intentionally ministers, react upon our intellectual faculties, and rouse them from any lethargy into which they may have fallen. And the feelings lie close, on the other side, to the will, which acts as they furnish the occasion and the motive.

II. Its Style. — 1. Words. — Poetry does not confine itself to the language of conversation or of common life. It selects words for their beauty of sound and association, for their picturesqueness, for their elevation — rare words often, words that are even obsolete in prose.

2. Arrangement. — Poetry uses the transposed order in a degree forbidden in conversation, unpardonable even in impassioned oratory. It condenses clauses into single epithets. "Imperfect periods are frequent; elisions are perpetual; and many of the minor words, which would be deemed essential in prose, are dispensed with."

3. Imagery. — Herbert Spencer says, "Metaphors, similes, hyperboles, and personifications are the poet's colors which he has liberty to employ almost without limit. We characterize as 'poetical' the prose which uses these appliances of language with any frequency; and condemn it as 'overflorid' or 'affected' long before they occur with the profusion allowed in verse."
III. Its Form.—In treating of the form of poetry, we shall group all we have to say under the three heads of rhythm, meter, and rhyme.

1. Rhythm.—Rhythm is that arrangement of words which allows and requires the alternate stress and remission of the voice in reading. For each sequence of stress and remission, of strong and weak impulse of the voice, two or three syllables are regularly required.

The rhythm-accent is the stroke, stress, or strong impulse of the voice which falls upon certain syllables. In English and in other modern poetry, the rhythm-accent must agree with the word-accent — must fall upon the syllable of the word which is accented in prose. For this reason ours is called an accentual rhythm. In Latin and Greek, the rhythm-accent falls upon a long syllable, a syllable whose vowel is long by nature or by position, a syllable requiring a long time for its enunciation. Hence ancient rhythm is based upon quantity. It is thought that these two rhythmic systems, theirs and ours, are so unlike as to be in antagonism. But we must remember that, in the ordinary pronunciation of an English word, we dwell longer upon the accented syllable than upon one not accented; that the syllable becomes long by this detention of the voice upon it, and hence presents itself as long for the rhythm-accent. Rhythm, then, in English, even if we call it accentual, rests ultimately upon time — the syllable receiving the rhythm-accent taking long time for its enunciation, the unaccented syllable or syllables short time.

It may turn out, as our greatest American philologist, Prof. Hadley, virtually claims, that, in their ordinary speech, the Greeks did not pronounce the accented syllables with any, or with any striking, increase of force. It is inconceivable that, in reciting his poetry, the Greek or the Roman should give both rhythmic-stress and word-stress when these did not fall upon the same syllable; and it is also inconceivable that he should neglect the word-stress, in the recitation, if, in ordinary speech, it was as marked in his language as in ours. In the one case there would be no proportion, no music, in the verse thus read; in the other, the word, robbed of its customary strong accent, would not be recognized by the hearer.

The rhythm-accent in English falls upon the syllable which receives the word-accent — the syllable made long by that accent. The two accents harmonize. The rhythm-accent in Greek falls upon a syllable long by nature or position, whether receiving the word-accent or not. But, if the word-accent could not have been distinguished by marked stress of voice, the two accents could not noticeably have clashed with each other when falling upon different syllables. The alleged antagonism, the radical difference, between the ancient rhythmical system and our own, is then, as it seems to us, somewhat imaginary.
It is to be noted that this alternation of long syllables with short, or of short with long, and the accompanying variety of force and volume of voice in the reading of poetry give it, in part, its musical quality, and make it so delightful to the ear.

A foot is the combination of two or three syllables that requires this compound movement of the voice in the reading. Any syllable of the foot may receive the rhythm-accent. A trochee, \( .v \), is a dissyllabic foot accented on the first syllable; an iambus, \( v. \), is a dissyllabic foot accented on the second syllable; a dactyl, \( v.v \), is a trisyllabic foot accented on the first syllable; an amphibrach, \( v.v \), is a trisyllabic foot accented on the second syllable; and an anapest, \( v. v \), is a trisyllabic foot accented on the third syllable. Verse is poetry, and a verse is a single line of poetry.

Verses with trochaic feet:­

Other | arms may | press thee,
Dearer | friends can | rest thee.

Verses with iambic feet:­

His books | were r̅ f̅ | vers, woods | and skīs,
The mead | sl̅ and | the mőr.

Verses with dactylic feet:­

Flashéd all th̅ ̅ th̅ ̅ ̅ e ̅ r̅ | sabrész bārē,
Flashéd as they | turned in air,
Sābring the | gānme ṛs therē.

Verses with amphibrachic feet:­

The wāters | are flashing,
The white hāil | is dāshing,
The hēar-spraj | is dāsing.

A stanza is a group of two, three, four, or more verses separated from other verses on the page. A poem is a collection of verses, grouped into stanzas or not, written on some one topic. Scansion is the reading of poetry so as to mark the rhythm.

It must not be supposed that all the feet of a poem, a stanza, or even of a single verse, are necessarily of the same kind. It is not always easy for the poet to compose a succession of such verses; it would be tiresome to the ear to listen long to lines so monotonous in their structure. A succession of verses so constructed would be rare; witness, for example, the poems in the next Lesson. The kind of foot beginning the poem should continue till the tongue and ear have caught the prevailing rhythm, then here and there other feet may be substituted for it. The substitutions should not be so frequent as to lead one to doubt what the prevailing rhythm is meant to be.

**Substituted Feet.** — If a foot accented on the last syllable, an iambus or an anapest, cannot, without a pause after it, be followed by a foot accented on the first syllable, a trochee or a dactyl, because this would bring two accented syllables together: and, if, as Abbott and Seeley assert, three clearly pronounced unaccented syllables cannot stand together; and so an anapest cannot follow a trochee, an iambus or an amphibrach or an anapest cannot follow a dactyl, and an anapest cannot follow an amphibrach; then the substitutions will be somewhat limited. In a trochaic verse, an iambus may be substituted for the last trochee, and a dactyl or an amphibrach for any trochee, represented thus: \( 2.0, 0.2; 0.2, 2.0 \), or \( 2.0, 2.0 \).
Productions — Poetry.

270

Productions — Poetry.

1. Half a league, half a league,
   Half a league onward.

2. Erin, my country, though sad and forsaken.

3. And again to the child I whispered.

4. Lesbia hath a beaming eye.

5. Then far below in the peaceful sea.

6. Then with eyes that saw not I kissed her.

7. Never, never, believe me,
   Never, never, alone.

8. He looks to the beacon that looms from the reef.

10. And worth a thousand! Indeed it is.

11. Think of your woods and orchards without birds.

12. That dandelions are blossoming near.

General Remarks upon Scansion.

1. Half a league, half a league,
   Half a league onward.

2. Erin, my country, though sad and forsaken.

3. And again to the child I whispered.

4. Lesbia hath a beaming eye.

5. Then far below in the peaceful sea.

6. Then with eyes that saw not I kissed her.

7. Never, never, believe me,
   Never, never, alone.

8. He looks to the beacon that looms from the reef.

10. And worth a thousand! Indeed it is.

11. Think of your woods and orchards without birds.

12. That dandelions are blossoming near.

LESSON 80.

SCANSION.

As I look from the Isle, o'er its billows of green,
   To the billows of foam-created blue,

You bark, that afar in the distance is seen,
   Half dreaming, my eyes will pursue:

Now dark in the shadow, she scatters the spray,
   As the chaff in the stroke of the flail;

Now white as the sea-gull, she flies on her way,
   The sun gleaming bright on her sail.

General Remarks. — The prevailing foot above is the anapest. Only the first foot in each of the verses 3, 4, 5, 7, and 8 varies from this and is an iambus. Each iambus is made, in the scansion, to have the same time as an anapest.

In pronouncing Yon, Half, Now, etc., we dwell as long upon each syllable as upon the two unaccented feet of any anapest.
Let us say generally that, in scansion, any substituted foot has the same time as the foot for which it is substituted. In this way are preserved, what should never be violated, the equal times of the feet in a line, or verse. Upon this depend the proportion, the music, the beauty of rhythm, depends the rhythm itself. What is said above applies to the mono-syllabic foot as well as to the others—it must have the time of the foot whose place it takes.

Notice that, though the rhythm-accent must fall upon the syllable having the word-accent, it need not fall upon every such syllable. *Gleam in gleaning*, verse 8, has a word-accent, but in the scansion has no rhythm-accent.

You will see hereafter that upon a long word more than a single rhythm-accent may fall.

Notice, too, that the unimportant words, those which, in expressing the sense, we should touch lightly in reading, are the ones upon which the rhythm-accent seldom falls. This is as it should be. Rhythm should not disguise the thought by conflicting with the lights and shades of emphasis through which the reader reveals to the hearer the relative importance of the ideas. Yet unemphatic words do sometimes take the rhythm-accent, as in these lines:

1. Vice is a monster of so frightful mien
   As to be hated needs but to be seen.
2. Worth makes the man and want of it the fellow.

Of the amphibrach it is proper to say that it is disallowed by many critics, and some who allow it admit that perhaps it is not required in English poetry. By making the first foot of an amphibrachic line an iambus, the remaining feet are converted into anapests, with an extra, unaccented syllable at the close. But there is no reason why the first and the last syllable of a trisyllabic foot should monopolize the accent. It is certain that the use of the amphibrach in

scansion prevents many irregularities, and often makes the line more musical. The rhythmical flow of example 9, Lesson 79, seems more delightful if we regard the verse as amphibrachic, with an iambus at the close, than it would be if we scanned it as anapestic, with an iambus at the beginning. Perhaps the same might be claimed of the five verses we have noticed in the extract at the head of this Lesson.

The *iambus* seems to be the commonest foot in English poetry.

There being two hastily uttered syllables in each *trisyllabic foot*, it will be seen that this foot gives a light, *tripping movement* to the verse, and affords great relief to the ear when occasionally substituted for the dissyllabic foot.

The *casura*, a pause, or rest, for the voice, so much used in ancient poetry with verses of six feet each, occurring at the end of a word and usually between the syllables of the third foot, is found in English poetry also, especially where the verse is very long. It serves to break the lines into parts as in these:

You must wake and call me early, | call me early, mother dear;
To-morrow will be the happiest time | of all the glad New-Year;
Of all the glad New-Year, mother, | the saddest, merriest day;
For I'm to be Queen of the May, mother, | I'm to be Queen of the May.

It may be found in verse of fewer feet, but it would be difficult to show that it is prominent in verses of ordinary length. Abbott and Seeley say that in the middle of the third foot in each of these lines:

Eternal sunshine of the spotless mind,
Each prayer accepted and each wish resigned,

there occurs a casura—in each verse the voice pauses for
a rest at the end of a word that breaks the foot into two
equal parts.

Elision, or slurring, is the running of two syllables into
one by the dropping of one or more letters. This may
sometimes be necessary in English verse, but some of our
best critics claim that in all cases it can be avoided by sup-
posing that, where it seems to be needed, the poet sub-
tituted a trisyllabic foot for a disyllabic. In the verse,

The illumined pages of his Doom's-Day book,
we must run The and it of the first foot together, if we
would preserve the iambic foot throughout. But, if we call
the first foot an anapest, there is no need here of elision.

Direction.—Scan these extracts, name the prevalent foot in each,
and the feet that are substituted:

1. Queen and huntress, chaste and fair,
   Now the sun is laid to sleep,
   Seated in thy silver chair
   State in wonted manner keep.
   Hesperus entertains thy light,
   Goddess, excellently bright.
   Earth, let not thy envious shade
   Dare itself to interpose.
   Cynthia's shining orb was made
   Heaven to clear, when day did close.
   Bless us, then, with wished sight,
   Goddess, excellently bright.
   Lay thy bow of pearl apart,
   And thy crystal-gleaming quiver:
   Give unto the flying hart
   Space to breathe, how short soever,
   Thou that mak'st a day of night,
   Goddess, excellently bright.

   Ben Jonson.

2. Is this a time to be cloudy and sad,
   When our Mother Nature laughs around,
   When even the deep blue heavens look glad,
   And gladness breathes from the blossoming ground?

   There are notes of joy from the hang-bird and wren,
   And the gossip of swallows through all the sky;
   The ground-squirrel gayly chirps by his den,
   And the wilding bee hums merrily by.

   The clouds are at play in the azure space,
   And their shadows at play on the bright, green vale;
   And here they stretch to the frolic chase,
   And there they roll on the easy gale.

   There's a dance of leaves in that aspen bower,
   There's a titter of winds in that beechen tree,
   There's a smile on the fruit, and a smile on the flower,
   And a laugh from the brook that runs to the sea.

   And look at the broad-faced sun, how he smiles
   On the dewy earth that smiles in his ray,
   On the leaping waters and gay young isles!
   Ay, look, and he'll smile thy gloom away.

   Bryant.

3. Break, break, break,
   On thy cold, gray stones, O sea!
   And I would that my tongue could utter
   The thoughts that arise in me.

   Oh, well for the fisherman's boy
   That he shouteth with his sister at play!
   Oh, well for the sailor lad
   That he sings in his boat on the bay!
Productions — Poetry.

And the stately ships go on
To their haven under the hill;
But oh, for the touch of a vanished hand,
And the sound of a voice that is still!

Break, break, break,
At the foot of thy crags, O sea!
But the tender grace of a day that is dead
Will never come back to me.

— Tennyson.

Listen, my boy, and hear all about it—
I don't know what I could do without it;
I've owned one now for more than a year,
And like it so well I call it "my dear";
"Tis the cleverest thing that ever was seen,
This wonderful family sewing machine.

It's none of your angular Wheeler things,
With steel-shod beak and cast-iron wings;
Its work would bother a hundred of his,
And worth a thousand! Indeed it is;
And has a way — you needn't stare —
Of combing and braiding its own back hair.

Mine is one of the kind to love,
And wear a shawl and a soft kid glove;
None of your patent machines for me,
Unless Dame Nature is the patentee;
I like the sort that can laugh and talk,
And take my arm for an evening walk.

One that can love and will not flirt
And make a pudding as well as a shirt;
Ready to give the sagrest advice,
Or do up your collars and things so nice.
What do you think of my machine?
Is it not the best that ever was seen?

— Anon.

Extracts for Scanning.

But long upon Araby's sunny, green highlands,
Shall maids and their lovers remember the doom
Of her who lies sleeping among the Pearl Islands,
With nought but the sea-star to light up her tomb.

And still when the merry date-season is burning,
And calls to the palm-groves the young and the old,
The happiest there, from the pastime returning
At sunset, will weep when thy story is told.

Around thee shall glisten the loveliest amber
That ever the sorrowing sea-bird has wept;
We, Peris of ocean, by moonlight have slept.

We'll dive where the gardens of coral be darkling,
And plant all the rosiest stems at thy head;
We'll seek where the sands of the Caspian are sparkling,
And gather their gold to strew over thy bed.

— Moore.

Say, shall we yield Him, in costly devotion,
Odors of Edom and offerings divine?
Gems of the mountains, and pearls of the ocean,
Myrrh from the forest, or gold from the mine?

Vainly we offer each ample oblation,
Vainly with gifts would his favor secure:
Richer far is the heart's adoration;
Dearer to God are the prayers of the poor.

Brightest and best of the sons of the morning,
Dawn on our darkness, and lend us thine aid;
Star of the East, the horizon adorning,
Guide where our infant Redeemer is laid.

— Bishop Heber.
7. Drunk and senseless in his place,
    Prone and sprawling on his face,
More like brute than any man,
    Alive or dead,
By his great pump out of gear,
    Lay the peon engineer,
Waking only just to hear,
    Overhead,
Angry tones that called his name,
    Oaths and cries of bitter blame,
Woke to hear all this, and waking, turned and fled.

    "To the man who'll bring to me,"
Cried Intendant Harry Lee, —
Harry Lee, the English foreman of the mine, —
    "Bring the shot, alive or dead,
I will give to him," he said,
    "Fifteen hundred pesos down,
Just to set the rascal's crown
Underneath this heel of mine:
    Since but death
Deserves the man whose deed,
    Be it vice or want of heed,
Stops the pumps that give us breath,—
    Stops the pumps that suck the death
From the poison lower levels of the mine."

BRET HARTE.

8. Do ye ne'er think what wondrous beings these?
    Do ye ne'er think who made them, and who taught
The dialect they speak, where melodies
    Alone are the interpreters of thought?
Whose household words are songs in many keys,
    Sweeter than instrument of man e'er caught.
Whose habitations in the tree-tops even
    Are half-way houses on the road to heaven.

Think, every morning when the sun peeps through
    The dim, leaf-latticed windows of the grove,
How jubilant the happy birds renew
    Their old, melodious madrigals of love!
And when you think of this, remember too
    'T is always morning somewhere, and above
The awakening continents, from shore to shore,
    Somewhere the birds are singing evermore.

Think of your woods and orchards without birds!
    Of empty nests that cling to boughs and beams,
As in an idiot's brain remembered words
    Hang empty 'mid the cobwebs of his dreams!
Will boast of flocks or bellowing of herds
    Make up for the lost music, when your teams
Drag homeward the stony harvest, and no more
    The feathered gleaners follow to your door?

And so the dreadful massacre began;
    O'er fields and orchards and o'er woodland crests,
The ceaseless fusillade of terror ran.
    Dead fell the birds, with blood-stains on their breasts,
Or, wounded, crept away from sight of man,
    While the young died of famine in their nests;
A slaughter to be told in groans, not words,
    The very St. Bartholomew of Birds!

That year in Killingworth the Autumn came
    Without the light of his majestic look,
The wonder of the falling tongues of flame,
    The illumined pages of his Doom's-Day book.
A few lost leaves blushed crimson with their shame,
    And drowned themselves despairing in the brook,
While the wild wind went moaning everywhere,
    Lamenting the dead children of the air.

LONGFELLOW.
LESSON 81.

METER AND RHYME.

Under the general head of the form of poetry, we have spoken, and at some length, of rhythm. We pass now to a closely related branch of the same subject —

2. Meter. — Meter is the quality of a poem determined by the number of feet in a regular verse. The number of feet which the verses regularly have determining the meter of the poem, meter should not be confounded, as it so often is, with rhythm. Rhythm concerns itself with the arrangement of syllables into feet, and it is the regular recurrence of the accent which divides the line into these syllabic combinations. It is the number of feet in each line, or, if this is not constant, in the prevailing line, which constitutes the meter of a poem. You have already seen, and will again see, that the number of feet in the verses of a poem is not always the same. But the variations from the standard number must occur with regularity. Poetry to be poetry must be rhythmical, but not all poetry has been metrical. Anglo-Saxon poetry was not always — verses not having each the same number of feet occur in an Anglo-Saxon poem, and not always in fixed and regular sequence, or order of succession. Rhythm, then, is more vital to poetry than is meter. Even a prose sentence, as we saw in Lesson 72, might be rhythmical, might demand of the reader at least a single swell and sinking of the voice, but prose could hardly be metrical. Meter, the regular succession of poetical feet, falls in like rhythm with our craving for proportion, modulation, regularity, and is in keeping with the spirit and mission of poetry.

The meter of a verse consisting of two feet is called dimeter; of one of three feet trimeter; of four feet tetrameter; of five feet pentameter; of six feet hexameter. A line of one foot, if such there be, is called monometer. These words are simply names of the number of feet in a line. The meter of a poem will be that of its standard verse.

Direction. — Name the meter of each extract in the preceding Lesson. If there are verses which do not have the standard meter of the extract, name theirs.

Meter of Psalms and Hymns. — Certain religious poems, called psalms and hymns and set to music, are written in meters with peculiar names. A psalm or hymn in long meter, marked L. M., is made up of four-line stanzas, each line tetrameter iambic, as this: —

O Lord divine, that stooped to share
Our sharpest pang, our bitterest tear,
On thee we cast each earthen care,
We smile at pain while thou art near.

Though long the weary way we tread,
And sorrow crown each lingering year,
No paths we shun, no darkness dread,
Our hearts still whispering, Thou art near.

A psalm or hymn in common meter, marked C. M., consists of four-line stanzas, the first and third line tetrameter iambic, and the second and fourth trimeter iambic, as this: —

No mortal can with him compare
Among the sons of men;
Fairer is he than all the fair
That fill the heavenly train.
A psalm or hymn in short meter, marked S. M., consists of four-line stanzas, the third line tetrameter iambic, and the first, second, and fourth trimeter iambic, as this:

Stand up and bless the Lord,
Ye people of his choice;
Stand up and bless the Lord your God
With heart and soul and voice.

A hymn in hallelujah meter, marked H. M., consists of eight-line stanzas (the last four sometimes written as two), the first, second, third, and fourth trimeter iambic, and the remaining four dimeter iambic, as this:

The warbling notes pursue,
And louder anthems raise,
While mortals sing with you
Their own Redeemer’s praise;
And thou, my heart,
With equal flame
And joy the same
Perform thy part.

A hymn in long particular meter, marked L. P. M., consists of six-line stanzas, all tetrameter iambic, as this:

Judges, who rule the world by laws,
Will ye despise the righteous cause,
When the oppressed before you stands?
Dare ye condemn the righteous poor,
And let rich sinners go secure,
While gold and greatness bribe your hands?

Other hymns, whose feet are not iambic, marked 4’s or 8’s or 6’s or 9’s and 7’s, etc., etc., are found in our books. These numerals mark the number of syllables in a verse.

Rhythm and meter, two of the three elements that determine the form of poetry, have been examined and illustrated. We come now to the third and last element, which is not necessary or universal.

3. Rhyme. — Rhyme is the accordance in sound of the final syllables of verses. A couplet is the two verses which rhyme with each other. The rhyming syllables must not be completely identical in sound but only similar — the accented vowel and what follows, identical, as in this couplet:

A man he was to all the country dear,
And passing rich with forty pounds a year.

If the final foot in each verse of the couplet is accented on the last syllable but one, — is a trochee or an amphibrach, — the syllables next to the last must rhyme, the last syllables in this case being identical. Such rhymes, called double rhymes, are illustrated in the first and third verses below:

But the young, young children, O my brothers,
Do you ask them why they stand
Weeping sore before the bosoms of their mothers
In our happy father-land?

If the final foot in each verse of the couplet is a dactyl, the last syllable but two in one verse is that which must rhyme with the corresponding syllable in the other. Such rhymes, called triple rhymes, are illustrated in the first and third verses below:

Take her up tenderly,
Lift her with care,
Fashioned so slenderly,
Young and so fair.

Line-Rhyme is the agreement in sound between the final letters of two words or of two syllables of words in the same verse, as in these lines which we borrow from Marsh:
1. Her look was like the morning star.
2. Here in front you can see the very dust of the bullet.
3. Long at the window he stood, and wistfully gazed on the landscape.

These verses from Poe do not contain line-rhymes, since at *beams* and *rise* the first and third lines might be broken, each into two, and then the rhyme would be terminal, or ordinary, rhyme:

For the moon never *beams*, without bringing me *dreams*
Of the beautiful Annabel Lee;
And the stars never *rise*, but I feel the bright *eyes*
Of the beautiful Annabel Lee.

**Alliteration**, the repetition of the same letter or letters at the beginning of words, is also found in poetry, as in these verses:

1. There lived in *Lombardy*, as authors write,
   In dayés old a wise and worthy Knight.
2. And rivulets, rejoicing, rush and leap.
3. He rushed into the field, and foremost-fighting, fell.
4. Steady, straightforward, and strong, with irresistible logic.

Rhyme proper, or terminal rhyme, line-rhyme, and alliteration are all repetitions of similar sounds. They are agreeable to the ear in poetry. They accord with the other appliances by which the form of poetry is fitted to the spirit, and deepen the effect upon the feelings.

**Direction.** — Point out all illustrations of these in the preceding Lesson.

The stanza named *Spenserian* from Edmund Spenser, its inventor, is a stanza of nine lines, or verses. Eight of these are pentameter, and the last is an *Alexandrine* composed of six iambic feet. Note what lines rhyme in this stanza, and what is the effect of the extra foot in the last line:

<table>
<thead>
<tr>
<th>Alliteration and Blank-Verse.</th>
<th>285</th>
</tr>
</thead>
</table>

The sky is changed! and such a change! O night
And storm and darkness, ye are wondrous strong,
Yet lovely in your strength, as is the light
Of a dark eye in woman! Far along,
From peak to peak, the rattling crags among,
Leaps the live thunder! not from one lone cloud,
But every mountain now hath found a tongue,
And Jura answers, through her misty shroud,
Back to the joyous Alps, who call to her aloud!

**Direction.** — Note (1) the feet in the psalms and hymns just described, and (2) the number of lines in the sonnet (6, Lesson 82), the meter, and the rhyme.

Rhyme in English is more difficult than it is in languages highly inflected, and abounding in common terminations. It has been estimated that casting out the English words incapable of rhyme, the ratio of those which have rhymes to the total number of rhyming endings is as three to one; or, to turn it about, the number of different rhymes in English to the words having them is as one to three. This is very much less than in many other modern languages. This poverty in rhyme in English accounts for many incorrect rhymes — some of which may be seen in the extracts of the preceding Lesson — and for the introduction and wide adoption, especially in long poems, of blank-verse.

**Blank-Verse** is verse without rhyme. Here are a few lines in it:

But, looking deep, he saw
The thorns which grow upon this rose of life:
How the swart peasant sweated for his wage,
Toiling for leave to live; and how he urged
The great-eyed oxen through the flaming hours,
Goading their velvet flanks: then marked he, too,
How lizard fed on ant, and snake on him,
And kite on both; and how the fish-hawk robbed
The fish-tiger of that which it had seized;}
The shrike chasing the bulbul, which did chase
The jewelled butterflies; till everywhere
Each slew a slayer and in turn was slain,
Life living upon death. So the fair show
Veiled one vast, savage, grim conspiracy
Of mutual murder, from the worm to man,
Who himself kills his fellow; seeing which—
The hungry ploughman and his laboring kine,
Their dewlaps blistered with the bitter yoke,
The rage to live which makes all living strife—
The Prince Siddharta sighed.

LESSON 82.

WRITTEN DISCOURSE—POETRY, KINDS OF.

I. Didactic Poetry. — Didactic poetry is that which aims to teach. But to call that which directly aims to teach, poetry, is to be guilty of a misnomer. In so far as poetry aims directly at instruction, it usurps, as has been said, the function of prose. Prose is free from all the artifices and all the restraints of poetry — rhythm, meter, rhyme — those peculiarities of poetry which solicit our thoughts from the subject-matter, and fix them attentively upon the expression of it. That poetry, then, which essays to teach, "defeats its strong intent," the charm and fascination of the form withdrawing us from the instruction conveyed; the instruction, if attended to, luring us away from the beauty of the expression. Still, there is that which we must name didactic poetry. We are compelled to call that poetry which is poetic in form, even if not eminently so in spirit.

II. Satirical Poetry. — Satirical poetry is that which deals with the vices and follies of men. Its aim is destructive, its spirit often malevolent; there is little of sweetness in it, the feelings which engender it and those to which it ministers are not the most healthful and humane. When the relations of poets to poets and to critics were less courteous than now, poetry of this kind, in poems of great length, abounded. But since Addison's day, when English prose first overtook poetry and commenced running abreast with it, satire and instruction have sought expression through prose; and both satirical and didactic poetry have lost favor; they are not now cultivated as they were. The great satires of Dryden and of Pope did much, Thackeray thinks, to bring the profession of literature into contempt.

III. Lyric Poetry. — Lyric poetry is that which is written to be sung. The range of its topics is wide, but the range of feelings which inspire it and which it inspires is narrow; within this realm, however, its reign is supreme. Lyric poetry may be divided into sacred and secular. Hymns and psalms, expressing our feelings towards God, constitute the one; songs relating to battle, to patriotism, to party, to sociality, and odes, elegies, and sonnets form the bulk of the other. The ode, a poem longer than an ordinary song and full of lofty passion; the elegy, also a long poem whose burden is regret for the dead; and the sonnet, a poem of fourteen lines, cannot always be called lyric now, if we rigidly restrict lyric to poetry which is sung.

Prof. Hadley says, "The poetry of our day has been almost exclusively lyrical; our poets have, to a singular extent, been song-writers." And he accounts for this by adding, "Moving hotly and hurriedly in the career of politics, or swallowed up in business, or prosecuting science with a zeal never before paralleled, we have found no time for lengthened poems."
The influence of lyric poetry is well expressed in that oft-quoted sentence of Sir Andrew Fletcher's, "If a man were permitted to make all the ballads of a nation, he need not care who should make its laws." For out of the very songs that we sing there steals an influence that enters into us, and does much to direct our conduct and shape our character, almost rendering needless the powerful restraints of law.

IV. Pastoral Poetry. — Pastoral poetry is that which deals with the objects of external nature. It finds its topics in the greenness and freshness of verdure, in the life and growth of spring; in the sunrise and the sunset, the sunshine and the rain of summer; the yellow harvests, the rich coloring of the woods, the dreamy Indian summer days, and the gradual decadence of nature's growths in autumn; and in the winds, the falling snow, the bracing outdoor sports of winter. Flower and leaf and bird and insect, the scenery of mountain and valley and rivers and lakes and clouds, rural life in all its changes, nature in all her moods — these not as matter for mere description or for science, but as objects of beauty — these, seen by the eye of a Bryant, or by the keener eye of a Wordsworth — these are the subjects of pastoral poetry. No poetry is better understood or appreciated, and none is more popular. Poems of this kind, short and endlessly varied in subject and in form, abound, and constitute a most entertaining and valuable part of poetic literature.

V. Epic Poetry. — Epic poetry is that which deals with the life and adventures of some real or mythic personage, called a hero. An epic poem is usually long — too long to be read at a single sitting. Intense feeling, such as poetry arouses, is in its nature exhausting, and in duration is, and must be, brief. "Violent delights have violent ends, and in their triumph die." The opinion of Poe that such a composition as "Paradise Lost" is not so truly a poem as a series of poems, seems to be gaining acceptance. Such sustained efforts are now rare in English, though not wholly of the past. We must take this statement of Hadley's, made in 1849, with some grains of allowance: "As for great constructive poems, vast systems of narrative, meditation, and description, built up in the deeps of an ideal world, they have well-nigh disappeared. In America, where the influences that oppose their construction are the strongest, we have nothing of the kind. The occasional attempts which we have seen in epic and dramatic composition have been generally unsuccessful. Yet this has been almost equally the case in England."

An epic poem affords room for a vast variety of topics and of treatment, and demands of the poet a higher grade and a wider range of powers than are common. A great epic is the work of genius toiling it may be for years. It "does not need repeat," but insures at once the author's immortality.

The heroic measure, the pentameter, the iambic of ten syllables, is the meter generally used in the English epic. A few great epics can be found in our inheritance of English literature.

The romance, of which we have examples in Scott's "Marmion" and his "Lady of the Lake," is a subdivision of the epic. So also is the tale, a story in which love may be the motive as in "Enoch Arden." Still another subdivision of the epic is the ballad — a short and simple poem full of incident, serious or humorous, and moving rapidly to its conclusion. "Chevy Chase" and "Lord Ullin's Daughter" illustrate this species of the epic.

VI. Dramatic Poetry. — Dramatic poetry is poetry written to be acted. Dramatic poetry exists in the form called plays. These are written in a style that fits them for
stage representation. There is in them little that is commonplace; everything is positive and pronounced; the passion is strong, often tumultuous, the thought is vigorous, the incidents exciting.

The divisions of dramatic poetry commonly made are comedy and tragedy. Comedy is light and humorous, abounding in ludicrous action and incident. There is often a dash of satire in the wit, but its main purpose is to amuse. Tragedy is earnest and serious, deals often with great men and lofty actions—with those actions which lead to calamitous and even fatal issues. But comedy and tragedy are found side by side in some of the greatest dramas, as they are in real life.

The human element is the prevailing one in dramatic poetry. Such poetry brings people of all grades of station, culture, and character upon the stage, there to act and talk as real men in their circumstances would do. It is by what they do and say, and by this alone, that they exhibit what manner of men and women they are. The great work of the dramatist is impersonation—the embodiment and the revelation of character. This kind of poetry is in verse, what fiction is in prose; indeed, plays not written in verse belong to that division of prose called fiction.

History furnishes a favorite field for the dramatist. The real personages of the past or of the present, as the poet conceives them, are placed upon the stage before us, and are made to live over again some portion of their lives. In doing this and in uttering what the dramatist puts into their mouths, they stand out in the play more distinct, and often truer to life, than they do on the pages of history. Mark Antony, Julius Caesar, Coriolanus, and Cleopatra are better revealed in the dramas of Shakespeare than they are in "Plutarch's Lives."

But the triumphs of dramatic art are better seen perhaps in its purely fictitious personages, representations of classes of men or women in real life. In the creation of these, all the poet's knowledge of human nature in its broad features and in the delicate shades of character by which men differ, one from another, is brought into use. His ability to construct a plot and to invent opportunities for the development of his characters—each made to influence others and their material surroundings to influence all—has widest scope and is put to the severest test. There is room here for profound insight, for imagination of high order, and for the most varied exercise of artistic skill. Without intending it as his main purpose, the poet makes a deep impression upon the intellect of the spectator or reader, and so becomes a teacher.

In dramatic poetry, the poet keeps himself behind the scenes and out of sight. His choices and his personality are not disclosed. The excellence of the play depends, in large part, on the poet's fidelity to nature, on his bringing into active exercise the proper agencies, and those only, and in allowing these to work out their natural issue without help or hindrance from him.

Into dramatic poetry, description and narrative are freely introduced. There may be great variety of incident, but there must be unity of action, each part helping on every other, and all contributing to one result.

Rhyme may occasionally alternate with blank-verse, and prose may be put into the mouths of some of the characters, especially the more common,—even into the mouths of the greater characters in their more common moods.

A farce is a species of comedy marked by low humor and abounding with ludicrous incidents. There are prose farces also. A mask is a dramatic production, once common, in which the actors wore masks and represented mythical or allegorical characters. An opera is a tragic or a comic
drama set to music and sung as well as acted. Orchestral music accompanies the vocal.

**Concluding Remarks upon Poetry.** — In his early paper upon Milton, Macaulay says, "As civilization advances, poetry almost necessarily declines." The truth of this assertion seems open to question. In its highest essentials, civilization had advanced in the two thousand years between Eschylus and Shakespeare, but surely dramatic poetry, as represented by these two, did not decline in the interval. The lyric poetry of Burns is not inferior to that of Anacreon, nor the great epic of Milton to that of Dante or that of Virgil. In all that goes to the making of the highest and the best poetry, the manhood of the race is richer than its infancy. It is not rash to affirm that in sensibility to the charms of rural scenery and landscape beauty, as well as in the ethereal perception of the graces of character, our own Chaucer,—and we have advanced in the five hundred years since his day—living in the autumn of the race, is superior to Homer living in its spring-time. It is certain that poetry is more needed now than ever before, and that it is more widely read and better appreciated now than ever before. If here, as elsewhere, the demand creates a supply, we need not be apprehensive of the future of poetry. It has this added felicity that, as knowledge accumulates, material for poetry accumulates. Every truth that brings any incitement to the intellect has a poetic side to it, and can furnish the poet a suggestion that may be worked into the background of his picture, or even stand as the subject of it.

But whatever may be the future of poetry, we may comfort ourselves with the thought that there is enough for all our needs, though another line of poetry should never be written. From the beginning, poetry has attracted to itself the greatest writers. The best thought, alive and aglow with the best feelings, has gone into it. These rich products of the imagination, the great masters have incarnated in language, mellifluous, gemmed with imagery, musical with the melody of rhythm,—fit body for the indwelling soul,—and on the shelves of all libraries stand these productions possessing a power to charm denied to painting or to statuary.

And this inheritance of ours never wastes. Poetry does not grow old and unserviceable. What satisfies our aesthetic nature completely will continue to satisfy it—we can no more outgrow it than our lungs can outgrow air. Poetry is immortal. The feeling, the sentiment which floods the thought preserves it—is the spices and the aloe that embalm it. Nay, poetry, which haunts the memory as prose never does, is not only a "joy forever" but is ever becoming more and more a joy. For poems grow richer and better by use; and this not by what they lose but by what they gain, for out of us there goes, at every reading of them, something that enters into them, and sweetens them as sunbeams sweeten grapes. Not only do their words grow into place and grow together from frequent repetition of them, but, little by little, poems fill their pores with the emotions they awaken in us, and which pass out of us and enter into them until they exhale a fragrance that makes their very atmosphere aromatic.

Substituting **Read** for *Not* in a stanza of Longfellow's, we conclude these remarks by quoting,

[Read] from the grand old masters,
[Read] from the bards sublime,
Whose distant footsteps echo
Through the corridors of time;

Read from some humbler poet
Whose songs gushed from his heart,
As showers from the clouds of summer
Or tears from the eyelids start;—
And the night shall be filled with music;
And the cares that infest the day
Shall fold their tents, like the Arabs,
And as silently steal away.

Extracts for the Study of Poetry.

LESSON 83.

EXTRACTS FOR THE STUDY OF POETRY.

Direction. — Classify these extracts, scan them, give their meter, and note their beauty of thought, words, and imagery: —

1. A brook came stealing from the ground;
   You scarcely saw its silvery gleam
   Among the herbs that hung around
   The borders of that winding stream, —
   The pretty stream, the placid stream,
   The softly-gliding, bashful stream.

   A breeze came wandering from the sky,
   Light as the whispers of a dream;
   He put the o'erhanging grasses by,
   And gayly stooped to kiss the stream, —
   The pretty stream, the flattered stream,
   The shy, yet unreluctant stream.

   The water, as the wind passel o'er,
   Shot upward many a glancing beam,
   Dimpled and quivered more and more,
   And tripped along a livelier stream, —
   The flattered stream, the simpering stream,
   The fond, delighted, silly stream.

   Away the airy wanderer flew
   To where the fields with blossoms teem,
   To sparkling springs and rivers blue,
   And left alone that little stream, —
   The flattered stream, the cheated stream,
   The sad, forsaken, lonely stream.
The careless wind no more came back;
He wanders yet the fields, I deem,
But, on its melancholy track,
Complaining went that little stream —
The cheated stream, the hopeless stream,
The ever-murmuring, moaning stream.

The Wind and Stream. — BRYANT.

2. DUKE. Now, my co-mates, and brothers in exile,
Hath not old custom made this life more sweet
Than that of painted pomp? Are not these woods
More free from peril than the envious court?
Here feel we but the penalty of Adam. —
The seasons' difference — as, the icy fang
And churlish chiding of the Winter's wind —
Which when it bites, and blows upon my body,
Even till I shrink with cold, I smile, and say,
This is no flattering — these are the counsellors
That feelingly persuade me what I am.
Sweet are the uses of adversity;
Which, like the toad, ugly and venomous,
Wears yet a precious jewel in his head;
And this our life, exempt from public haunt.
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in everything:
I would not change it.

AMIENS. Happy is your Grace,
That can translate the stubbornness of fortune
Into so quiet and so sweet a style.

DUKE. Come, shall we go and kill us venison?
And yet it irks me the poor dappled fools,
Being native burghers of this desert city,
Should, in their own confines, with forked heads
Have their round haunches gored.

1 LORD. Indeed, my lord,
The melancholy Jaques grieves at that;
And, in that kind, swears you do more usurp
Than doth your brother that hath banished you.

To-day my lord of Amiens and myself
Did steal behind him, as he lay along
Under an oak, whose antique root peeps out
Upon the brook that brawls along this wood:
To the which place, a poor sequestered stag,
That from the hunter's aim had ta'en a hurt,
Did come to languish; and, indeed, my lord,
The wretched animal heaved forth such groans
That their discharge did stretch his leathern coat
Almost to bursting; and the big, round tears
Coursed one another down his innocent nose;
Much marked of the melancholy Jaques,
Stood on th' extremest verge of the swift brook,
Augmenting it with tears.

DUKE. But what said Jaques?
Did he not moralize this spectacle?

1 LORD. Oh yes, into a thousand similes.
First, for his weeping into th' needless stream;
"Poor deer," quoth he, "thou mak'st a testament
As worldlings do, giving thy sum of more
To that which had too much." Then, being there alone,
Left and abandoned of his velvet friends;
"'Tis right," quoth he; "thus misery doth part
The flux of company." Anon, a careless herd,
Full of the pasture, jumps along by him,
And never stays to greet him. "Ay," quoth Jaques,
"Sweep on, you fat and greasy citizens;
'T is just the fashion; wherefore do you look
Upon that poor and broken bankrupt there?"
Thus most invectively he pierceth through
The body of the country, city, court,
Yea, and of this our life; swearing that we
Are mere usurpers, tyrants, and what's worse,
To fright the animals, and to kill them up
In their assigned and native dwelling-place.

DUKE. And did you leave him in this contemplation?

2 LORD. We did, my lord, weeping and commenting
Upon the sobbing deer.
3. But Buddha softly said,

"Let him not strike; great King," and therewith loosed

The victim's bonds, none staying him, so great

His presence was, then, craving leave, he spake

Of life, which all can take, but none can give,

Life, which all creatures love and strive to keep,

Wonderful, dear, and pleasant unto each,

Even to the meanest; yea, a boon to all

Where pity is, for pity makes the world

Soft to the weak and noble for the strong,

Unto the dumb lips of his flock he lent

Sad, pleading words, showing how man, who prays
For mercy of the gods, is merciless,

Being as god to those; albeit all life

Is linked and kin, and what we slay have given

Mock tribute of the milk and wool, and set

Fast trust upon the hands which murder them.

Also he spake of what the holy books

Do surely teach, how that at death some sink

To bird and beast, and these rise up to man

In wanderings of the spark which grows purged flame.

So were the sacrifice new sin, if so

The fated passage of a soul be stayed.

Nor spake he, shall one wash his spirit clean

By blood; nor gladden gods, being good, with blood;

Nor brine them, being evil; nay, nor lay

Upon the brow of innocent bound beasts

One hair's weight of that answer all must give

For all things done amiss or wrongly done,

Alone, each for himself, reckoning with that

The fixed arithmetic of the universe,

Which meteth good for good and ill for ill,

Measure for measure, unto deeds, words, thoughts;

Watchful, aware, implacable, unmoved;

Making all futures fruits of all the pasts.

Thus spake he, breathing words so piteous

With such high loftiness of ruth and right,

The priests drew back their garments over the hands

Extracts for the Study of Poetry.

Crimsoned with slaughter, and the King came near,

Standing with clasped palms reverencing Buddha;

While still our Lord went on, teaching how fair

This earth were if all living things be linked

In friendliness and common use of foods,

Bloodless and pure; the golden grain, bright fruits,

Sweet herbs which grow for all, the waters wan,

Sufficient drinks and meats. Which when these heard,

The might of gentleness so conquered them

The priests themselves scattered their altar flames

And flung away the steel of sacrifice.

Light of Asia.—Edwin Arnold.

4. Jesus, lover of my soul,

Let me to thy bosom fly,

While the hillrows near me roll,

While the tempest still is high.

Hide me, O my Saviour, hide,

Till the storm of life is past;

Safe into the haven guide,

Oh! receive my soul at last.

Other refuge have I none:

Hang my helpless soul on thee;

Leave, ah! leave me not alone,

Still support and comfort me.

All my trust on thee is stayed,

All my help from thee I bring;

Cover my defences head

With the shadow of thy wing.

Thou, O Christ, art all I want;

More than all in thee I find;

Raise the fallen, cheer the faint,

Heal the sick, and lead the blind.

Just and holy is thy name;

I am all unrighteousness;

False, and full of sin I am,

Thou art full of truth and grace.
Productions — Poetry.

Plenteous grace with thee is found,
Grace to cover all my sin;
Let the healing streams abound,
Make and keep me pure within.
Thou of life the fountain art,
Freely let me take of thee;
Spring thou up within my heart,
Rise to all eternity.

_A Hymn._ — Charles Wesley.

5. But most by numbers judge a poet’s song,
   And smooth or rough, with them, is right or wrong.
In the bright muse though thousand charms conspire,
Her voice is all these tuneful fools admire;
Who haunt Parnassus but to please their ear,
Not mend their minds; as some to church repair,
Not for the doctrine, but the music there.
These equal syllables alone require,
Though oft the ear the open vowels tire;
While exprestive their feable aid do join,
And ten low words oft creep in one dull line:
While they ring round the same unvaried chimes,
With sure returns of still expected rhymes.
Where'er you find "the cooling western breeze,"
In the next line it "whispers through the trees."
If crystal streams "with pleasing murmurs creep,"
The reader's threatened (not in vain) with "sleep."
Then at the last and only couplet fraught
With some unmeaning thing they call a thought,
A needless Alexandrine ends the song,
That, like a wounded snake, drags its slow length along.
Leave such to tune their own dull rhymes and know
What's roundly smooth or languishingly slow,
And praise the easy vigor of a line
Where Denham's strength and Waller's sweetness join,
True ease in writing comes from art, not chance,
As those move easiest who have learned to dance.
'Tis not enough no harshness gives offence,

Extracts for the Study of Poetry.

The sound must seem an echo to the sense.
Soft is the strain when Zephyr gently blows,
And the smooth stream in smoother numbers flows;
But, when loud surges lash the sounding shore,
The hoarse, rough verse should like the torrent roar.
When Ajax strives some rock's vast weight to throw,
The line too labors, and the words move slow.
Not so when swift Camilla scours the plain,
Flies o'er the unbending corn, and skims along the main.
Hear how Timotheus' varied lays surprise,
And bid alternate passions fall and rise!
While, at each change, the son of Libyan Jove
Now burns with glory, and then melts with love.
Now his fierce eyes with sparkling fury glow,
Now sighs steal out, and tears begin to flow;
Persians and Greeks like turns of nature found,
And the world's victor stood subdued by sound.
The power of music all our hearts allow,
And what Timotheus was is Dryden now.
Avoid extremes, and shun the fault of such
Who still are pleased too little or too much.
At every trifle scorn to take offence—
That always shows great pride or little sense.
Those heads, as stomachs, are not sure the best
Which nauseate all, and nothing can digest.
Yet let not each gays turn thy rapture move,
For fools admire, but men of sense approve.
As things seem large which we through miste descry,
Dulness is ever apt to magnify.

_Essay on Criticism._ — Pope.

6. Cyriaek, this three years' day these eyes, though clear
   To outward view of blemish or of spot,
   Bereft of light, their seeing have forgot;
   Nor to their idle orbs doth sight appear
   Of sun or moon or star, throughout the year,
   Or man or woman. Yet I argue not
   Against Heaven's hand or will, not bate a jot
Of heart or hope, but still bear up and steer
Right onward. What supports me dost thou ask?
The conscience, friend, to have lost them overplied
In Liberty's defence, my noble task,
Of which all Europe rings from side to side.
This thought might lead me through the world's vain mask
Content, though blind, had I no better guide.

Sonnet — To Cyriack Skinner. — Milton.

7. And what is so rare as a day in June?
Then, if ever, come perfect days;
Then Heaven tries the earth if it be in tune,
And over it softly her warm ear lays.
Whether we look, or whether we listen,
We hear life murmur, or see it glisten;
Every cloud feels a stir of might,
An instinct within it that reaches and towers,
And, groping blindly above it for light,
Climbs to a soul in grass and flowers.
The flush of life may well be seen
Thrilling back over hills and vallies;
The cowslip startles in meadows green,
The buttercup catches the sun in its chalice,
And there's never a leaf nor a blade too mean
To be some happy creature's palace.
The little bird sits at his door in the sun,
Attire, like a blossom among the leaves,
And lets his illumined being o'errun
With the deluge of summer it receives;
His mate feels the eggs beneath her wings,
And the heart in her dumb breast flutters and sings.
He sings to the wide world and she to her nest,
In the nice ear of Nature which song is the best?

Now is the high tide of the year,
And whatever of life hath ebbed away
Comes flooding back with a ripply cheer.
Into every bare inlet and creek and bay.
8. Time was, ere yet in these degenerate days
Ignoble themes obtained mistaken praise,
When sense and wit with poetry allied,
No faltered graces, flourished side by side,
From the same fount their inspiration drew,
And, reared by taste, bloomed fairer as they grew.
Then, in this happy isle, a Pope's pure strain
Sought the rapt soul to charm, nor sought in vain.
A polished nation's praise aspired to claim,
And raised the people's, as the poet's fame.
Like him great Dryden poured the tide of song
In stream less smooth, indeed, yet doubtless strong.
Then Congreve's scenes could cheer, or Otway's melt;
For nature then an English audience felt.
But why these names, or greater still, retrace,
When all to feeble bards resign their place?
Yet to such times our lingering looks are cast,
When taste and reason with those times are past.
Now look around, and turn each trifling page,
Survey the precious works that please thy age.
This truth, at least, let satire's self allow,
No dearth of bards can be complained of now.
The lordly press beneath her labor groans,
And printers' devils shake their weary bones,
While Southey's spars could creak the sounding shelves,
And Little's lyrics shine in hot-pressed twelves.

Thus saith the preacher: "Nought beneath the sun
Is new," yet still from change to change we run.
What varied wonders tempt us as they pass!
The cow-pox, tractors, galvanism, and gas
In turns appear, to make the vulgar stare,
Till the swoln bubble bursts, and all is air!
Nor less new schools of Poetry arise,
Where dull pretenders grapple for the prize.
O'er taste awhile these pseudo-bards prevail,
Each country book-club bows the knee to Baal,
And, hurling lawful genius from the throne,
Erects a shrine and idol of its own:
Some laudable—if but whom it matters not,
From roasting Southey down to grovelling Stott.

As for the smaller fry, who swarm in shoals
From silly Hafiz up to simple Bowles,
Why should we call them from their dark abode
In broad St. Giles's or in Tottenham-road?
Or (since some men of fashion nobly dare
To scam in verse) from Bond Street or the Square?
If things of toil their harmless lays indite,
Most wisely deemed to shun the public sight.
What harm? In spite of every critic's wit,
Sir T. may read his stanzas to himself.
Miles Andrews still his strength in complete try,
And live in prologues, though his dramas die.
Lords too are bards, such things at times befall,
And 'tis some praise in peers to write at all.
Yet, did or taste or reason sway the times,
Oh! who would take their titles with their rhymes?
Roscomon! Sheffield! with your spirits fled,
No future laurels deck a noble head;
No muse will cheer with renovating smile
The paralytic rivals of Carlisle.
The puny schoolboy and his early lay
Men pardon, if his follies pass away.
But who forgives the senior's ceaseless verse,
Whose hairs grow hoary as his rhymes grow worse?

English Bards and Scotch Reviewers. — Byron.

9. There was a time when meadow, grove, and stream,
The earth, and every common sight
To me did seem
Apparel'd in celestial light,
The glory and the freshness of a dream.
It is now as it hath been of yore;
—
Turn where'er I may,
By night or day,
The things which I have seen I now can see no more.
The rainbow comes and goes,
And lovely is the rose;
The Moon doth with delight
Look round her when the heavens are bare;
Waters on a starry night
Are beautiful and fair;
The sunshine is a glorious birth;
But yet I know, wherever I go,
That there hath passed away a glory from the earth.

Now, while the birds thus sing a joyous song,
And while the young lambs bound
As to the lark's sound,
To me alone there came a thought of grief;
A timely utterance gave that thought relief,
And I again am strong.
The cataracts blow their trumpets from the steep;
No more shall grief of mine the season wrong;
I hear the echoes through the mountains throng;
The winds come to me from the fields of sleep,
And all the earth is gay;
Land and sea
Give themselves up to jollity,
And with the heart of May
Both every beast keep holiday;—
Thou Child of joy,
Shout round me, let me hear thy shouts, thou happy Shepherd-boy.

Ye blessed creatures, I have heard the call
Ye to each other make; I see
The heavens laugh with you in your jubilee;
My heart is at your festival,
My head hath its coronal,
The fulness of your bliss I feel—I feel it all.
Oh, evil day! if I were sullen
While Earth herself is adorning,

This sweet May morning,
And the children are calling
On every side,
In a thousand valleys, far and wide,
Fresh flowers; while the sun shines warm,
And the babe leaps up on his mother's arm:
I hear, I hear, with joy I hear!—
But there's a Tree, of many, one,
A single Field which I have looked upon,
Both of them speak of something that is gone.
The fancy at my feet
Doth the same tale repeat.
Whither is fled the visionary gleam?
Where is it now, the glory and the dream?

Our birth is but a sleep and a forgetting;
The Soul that rises with us, our life's Star,
 Hath had elsewhere its setting
And cometh from afar.
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come
From God, who is our home.
Heaven lies about us in our infancy!
Shades of the prison-house begin to close
Upon the growing Boy,
But he beholds the light, and whence it flows,
He sees it in his joy;
The Youth, who daily farther from the East
Must travel, still is Nature's Priest,
And by the vision splendid
Is on his way attended.
At length the Man perceives it die away,
And fade into the light of common day.

Earth fills her lap with pleasures of her own;
Yearnings she hath in her own natural kind.
And, even with something of a Mother's mind,
And no unworthy aim,
The homely Nurse doth all she can
To make her foster-child, her Inmate Man.
Forget the glories he hath known,
And that imperial palace whence he came.

Behold the Child among his new-born blisses,
A six years' Darling of a pigny size!
See, where 'mid work of his own hand he lies,
Fretted by sallies of his mother's kisses,
With light upon him from his father's eyes!
See, at his feet, some little plan or chart;
Some fragment from his dream of human life,
Shaped by himself with newly-learned art;
A wedding or a festival,
A mourning or a funeral;
And this hath now his heart,
And unto this he frames his song;
Then will he fit his tongue
To dialogues of business, love, or strife;
But it will not be long
Ere this be thrown aside,
And with new joy and pride
The little Actor cons another part;
Filling from time to time his "humorous stage"
With all the Persons, down to paisied Age,
That Life brings with her in her equipage;
As if his whole vocation
Were endless imitation.

Thou, whose exterior semblance doth belie
Thy soul's immensity;
Thou best Philosopher, who yet dost keep
Thy heritage, thou Eye among the blind,
That, deaf and silent, read'st the eternal deep,
Haunted for ever by the Eternal mind,—
Mighty Prophet! Seer blest!
On whom those truths do rest
Which we are toiling all our lives to find,
In darkness lost, the darkness of the grave;
Thou, ever whom thy Immortality
Broods like the day, a Master o'er a slave,
A Presence which is not to be put by;
Thou little Child, yet glorious in the might
Of heaven-born freedom on thy being's height,
Why with such earnest pains dost thou provoke
The years to bring the inevitable yoke,
This blindly with thy blessedness at strife?
Full soon thy Soul shall have her earthly freight,
And custom lie upon thee with a weight;
Henry as vast, and deep almost as life.

Oh joy! that in our embers
Is something that doth live,
That nature yet remembers
What was so fugitive!

The thought of our past years in me doth breed
Perpetual benediction; not indeed
For that which is most worthy to be blest,—
Delight and liberty, the simple creed
Of Childhood, whether busy or at rest,
With new-fledged hope still fluttering in his breast:
Not for these I raise
The song of thanks and praise,
But for those obstinate questionings
Of sense and outward things,
Failings from us, vanishings,
Blank misgivings of a Creature
Moving about in worlds not realized,
High instincts, before which our mortal Nature
Did tremble like a guilty thing surprised;
But for those first affections,
Those shadowy recollections,
Which, be they what they may,
Are yet the fountain light of all our day,
Are yet a master light of all our seeing;
Uphold us, cherish, and have power to make
Our noisy years seem moments in the being
Of the eternal Silence; truths that wake
To perish never:
Which neither listlessness nor mad endeavor
Nor man nor boy
Nor all that is at enmity with joy
Can utterly abolish or destroy.
Hence in a season of calm weather,
Though inland far we be;
Our Souls have sight of that immortal sea
Which brought us hither,
Can in a moment travel thither,
And see the Children sport upon the shore,
And hear the mighty waters rolling evermore.

Then sing, ye Birds, sing, sing a joyous song!
And let the young Lambs bound
As to the tailor’s sound.
We in thought will join your throng,
Ye that pipe, and ye that play,
Ye that through your hearts to-day
Feel the gladness of the May.
What though the rain-dance which was once so bright
Be now for ever taken from my sight,
Though nothing can bring back the hour
Of splendor in the grass, of glory in the flower!
We will grieve not, rather find
Strength in what remains behind;
In the primal sympathy
Which having been must ever be;
In the soothing thoughts that spring
Out of human suffering;
In the faith that looks through death,
In years that bring the philosophic mind.

And, O ye Fountains, Meadows, Hills, and Groves,
Forebode not any severing of our loves!
Mild Hermes spake, and touched her with his wand
That calms all fear: "Such grace hath crowned thy prayer,
Laodamia, that, at Jove's command,
Thy husband walks the paths of upper air:
He comes to tarry with thee three hours' space;
Accept the gift, behold him face to face!"

Forth sprang the impassioned queen her lord to clasp;
Again that consummation she essayed:
But unsubstantial form eludes her grasp
As often as that eager grasp was made.
The phantom parts, but parts to re-unite,
And re-assume his place before her sight.

"Protesilaus, lo! thy guide is gone!
Confirm, I pray, the vision with thy voice:
This is our palace, yonder is thy throne;
Speak, and the floor thou tread'st on will rejoice.
Not to appall me have the gods bestowed
This precious boon, and bless a sad abode."

"Great Jove, Laodamia, doth not leave
His gifts imperfect. Specter though I be,
I am not sent to scare thee or deceive,
But in reward of thy fidelity.
And something also did my worth obtain,
For fearless virtue bringeth boundless gain.

Thou knowest the Delphic oracle foretold
That the first Greek who touched the Trojan strand
Should die; but me the threat could not withhold;
A generous cause a victim did demand,
And forth I leapt upon the sandy plain;
A self-devoted chief — by Hector slain."

"Supreme of heroes — bravest, noblest, best!
Thy matchless courage I bewail no more,
Which then, when tens of thousands were deprest

By doubt, propelled thee to the fatal shore;
Thou found'st — and I forgive thee — here thou art —
A nobler counsellor than my poor heart.

But thou, though capable of sterner deed,
Wert kind as resolute, and good as brave;
And he whose power restores thee hath decreed
Thou should'st elude the malice of the grave:
Redeem'd are thy locks, thy lips as fair
As when their breath enriched Thessalian air.

No spectre greets me, no vain shadow this;
Cone, blooming hero, place thee by my side!
Give, on this well-known couch, one nuptial kiss
To me, this day, a second time thy bride!"
Jove frowned in heaven; the conscious Parce threw
Upon those rosy lips a Stygian hue.

"This visage tells thee that my doom is past;
Know virtue were not virtuous, if the joys
Of sense were able to return as fast.
And surely as they vanish. Earth destroys
Those raptures duly — Krebus disdain's
Calm pleasures there abide — majestic pains.

Be taught, O faithful consort, to control
Rebellious passion; for the gods approve
The depth and not the tumult of the soul;
A fervent, not ungovernable love.
Thy transports moderate, and meekly mourn
When I depart, for brief is my sojourn — "

"Ah, wherefore? Did not Hercules by force
Wrest from the guardian monster of the tomb
Alecthis, a reanimated corpse,
Given back to dwell on earth in vernal bloom?
Medea's spells dispersed the weight of years,
And Jason stood a youth mid youthful peers.
The gods to us are merciful, and they
Yet further may relent; for mightier far
Than strength of nerve and sinew, or the sway
Of magic, potent over sun and star,
Is love, though oft to agony distrest,
And though his favorite seat be fickle woman's breast.

But if thou goest, I follow—" Peace!" he said.
She looked upon him, and was calmed and cheered;
The ghastly color from his lips had fled;
In his deportment, shape, and mien, appeared
Elysian beauty, melancholy grace,
Brought from a pensive though a happy place.

He spake of love, such love as spirits feel
In worlds whose course is equable and pure;
No fears to beat away, no strife to heal,
The past unheed'd for, and the future sure;
Spake of heroic acts in graver mood
Revived, with finer harmony pursued;

Of all that is most beauteous—imag'd there
In happier beauty; more delicious streams,
An ampler ether, a diviner air,
And fields invested with purpureal gleams;
Climes which the sun, who sheds the brightest day
Earth knows, is all unworthy to survey.

Yet there the soul shall enter which hath earned
That privilege by virtue—" lil," said he,
"The end of man's existence, I discerned,
Who from ignoble games and revelry
Could draw, when we had parted, vain delight,
While tears were thy best pastime, day and night;

And while my youthful peers before my eyes
(Each hero following his peculiar bent)
Prepared themselves for glorious enterprise

Extracts for the Study of Poetry

By martial sports, — or, seated in the tent,
Chiefs, and kings in council were detained,
What time the fleet at Aulis lay enchanted.

The wished-for wind was given; — I then resolved
The oracle, upon the silent sea;
And, if no worthier led the way, resolved
That, of a thousand vessels, mine should be
The foremost prow in pressing to the strand,—
Mine the first blood that tinged the Trojan sand.

Yet bitter, oft-times bitter, was the pang
When of thy loss I thought, beloved wife!
On thee too fondly did my memory hang,
And on the joys we shared in mortal life,—
The paths which we have trod; these fountains, flowers,
My new-planned cities, and unfinished towers.

But should suspense permit the fate to cry,
" Behold they tremble! haughty their array,
Yet of their number no one dares to die!"
In soul I swept the indignity away:
Old frailties then recurred; but lofty thought,
In act embodied, my deliverance wrought.

And thou, though strong in love, art all too weak
In reason, in self-government too slow.
I counsel thee by fortitude to seek
Our blest re-union in the shades below.
The invisible world with thee hath sympathized;
Be thy affections raised and solemnized.

Learn, by a mortal yearning, to ascend
Towards a higher object. Love was given,
Encouraged, sanctioned, chiefly for that end;
For this the passion to excess was driven —
That self might be annulled; her bondage prove
The fetters of a dream, opposed to love" —
Ah, pale ghosts, rejoice!
For never has such soothing voice
Been to your shadowy world convey'd,
Since erst, at morn, some wandering shade
Heard the clear song of Orpheus come
Through Hades and the mournful gloom.

Wordsworth has gone from us — and ye,
Ah, may ye feel his voice as we!
He too upon a wintry clime
Had fallen — on this iron time
Of doubts, disputes, distractions, fears.

Extracts for the Study of Poetry.
Productions — Poetry.

He found us when the age had bound
Our souls in its benumbing round;
He spoke, and loo'd our heart in tears.
He laid us as we lay at birth
On the cool, flowery lap of earth;
Smiles broke from us and we had ease.
The hills were round us, and the breeze
Went o'er the sunlit fields again;
Our foreheads felt the wind and rain.
Our youth return'd ; for there was shed
On spirits that had long been dead,
Spirits dried up and closely furl'd,
The freshness of the early world.

Ah! since dark days still bring to light
Man's prudence and man's fiery might,
Time may restore us in his course
Goethe's sage mind and Byron's force;
But where will Europe's latter hour
Agiin fill Wordsworth's healing power?
Others will teach us how to dare,
And against fear our breast to steel;
Others will strengthen us to bear—
But who, ah! who will make us feel
The cloud of mortal destiny,
Others will front it fearlessly—
But who, like him, will put it by?

Keep fresh the grass upon his grave,
O Rotha, with thy living wave!
Sing him thy best! for few or none
Hears thy voice right now he is gone.

Memorial Verses. — Matthew Arnold.

I.

12. O wild West Wind, thou breath of Autumn's being,
Thou, from whose unseen presence the leaves dead
Are driven like ghosts from an enchanting scene.

Extracts for the Study of Poetry.

Yellow and black and pale and hectic red,
Pestilence-stricken multitudes! O thou,
Who charioted to their dark, wintry bed
The winged seeds, where they lie cold and low,
Each like a corpse within its grave, until
Thine azure sister of the Spring shall blow
Her clarion o'er the dreaming earth, and fill
(Driving sweet buds like flocks to feed in air),
With living hues and odors, plain and hill;—
Wild Spirit, which art moving everywhere,
Destroyer and preserver, hear, oh, hear!

II.

Thou, on whose stream, 'mid the steep sky's commotion,
Loose clouds, like earth's decaying leaves, are shed,
Shook from the tangled boughs of heaven and ocean,
Angels of rain and lightning! there are spread
On the blue surface of thine airy surge,
Like the bright hair uplifted from the head
Of some fierce Maenad, even from the dim verge
Of the horizon to the zenith's height,
The locks of the approaching storm! — Thou dirge
Of the dying year, to which this closing night
Will be the dome of a vast sepulcher,
Vaulted with all thy congregated might
Of vapors, from whose solid atmosphere
Black rain and fire and hail will burst; oh, hear!

III.

Thou, who didst waken from his summer dreams
The blue Mediterranean, where he lay,
Lulled by the coil of his crystalline streams,
Beside a pumice isle in Baim's bay,
And saw in sleep old palaces and towers
Quivering within the wave's intenser day,

All overgrown with azure moss, and flowers
So sweet the sense faints picturing them! — Thou,
For whose path the Atlantic's level powers

Cleave themselves into chasms, while far below
The sea-blooms and the oozy woods which wear
The sapless foliage of the ocean know

Thy voice, and suddenly grow gray with fear,
And tremble and despoil themselves; oh, hear!

IV.

If I were a dead leaf thou mightest bear,
If I were a swift cloud to fly with thee,
A wave to pant beneath thy power, and share

The impulse of thy strength, only less free
Than thou, O uncontrollable! if even
I were as in my boyhood, and could be

The comrade of thy wanderings over heaven,
As then, when to outstrip thy skye'ey speed
Scarce seemed a vision, — I would ne'er have striven,

As thus, with thee in prayer in my sore need.
Oh, lift me as a wave, a leaf, a cloud!
I fall upon the thorns of life! I bleed!

A heavy weight of hours has chained and bowed
One too like thee — tameless and swift and proud.

Extracts for the Study of Poetry.

V.

Make me thy lyre, even as the forest is;
What if my leaves are falling like its own?
The tumult of thy mighty harmonies

Will take from both a deep autumnal tone,
Sweet though in sadness. Be thou, Spirit fierce,
My spirit! Be thou, impetuous one!

Drive my dead thoughts over the universe,
Like withered leaves, to quicken a new birth,
And, by the inunction of this verse,

Scatter, as from an unextinguished hearth
Ashes and sparks, my words among mankind!
Be through my lips to unawakened earth

The trumpet of a prophecy! O Wind,
If Winter comes, can Spring be far behind?

Ode to the West Wind. — Shelley.

13. It little profits that an idle king,
By this still hearth, among these barren crags,
Match'd with an aged wife, I mete and dole
Unequal laws unto a savage race,
That hoard and sleep and feed, and know not me.
I cannot rest from travel: I will drink
Life to the lees: all times I have enjoy'd
Greatly, have suffer'd greatly, both with those
That loved me and alone; on shore, and when
Thro' scudding drifts the rainy Hyades
Vext the dim sea: I am become a name;
For, always roaming with a hungry heart,
Much have I seen and known; cities of men,
And manners, climates, councils, governments,
Myself not least, but honor'd of them all;
And drunk delight of battle with my peers,
Far on the ringing plains of windy Troy,
I am a part of all that I have met;
Yet all experience is an arch wherein
Gleams that untravel'd world whose margin fades
Forever and forever when I move.
How dull it is to pause, to make an end,
To rest unburnish'd, not to shine in use!
As tho' to breathe were life. Life piled on life
Were all too little, and of one to me
Little remains; but every hour is saved
From that eternal silence, something more,
A bringer of new things; and vile it were
For some three suns to store and hoard myself.
And this gray spirit yearning in desire
To follow knowledge like a sinking star,
Beyond the utmost bound of human thought.

This is my son, mine own Telemachus,
To whom I leave the scepter and the isle—
Well-loved of me, discreeving to fulfill
This labor, by slow prudence to make mild
A rugged people, and though soft degrees
Sublime them to the useful and the good.
Most blameless is he, centered in the sphere
Of common duties, decent not to fail
In offices of tenderness, and pay
Meet adoration to my household gods
When I am gone. He works his work, I mine.

There lies the port; the vessel puffs her sail;
There gloom the dark, broad sea. My mariners,
Souls that have told and wrought and thought with me—
That ever with a frolic welcome took
The thunder and the sunshine, and opposed
Free hearts, free foreheads, — you and I are old;
Old age hath yet his honor and his toil;
Death closes all: but something, ere the end,
Some work of noble note, may yet be done,

Not unbecoming men that strove with gods.
The lights begin to twinkle from the rocks;
The long day wanes; the slow moon climbs; the deep
Means round with many voices. Come, my friends,
’T is not too late to seek a newer world.
Push off, and, sitting well in order, suite
The sounding furrows; for my purpose holds
To sail beyond the sunset, and the baths
Of all the western stars, until I die.
It may be that the gulf will wash us down:
It may be we shall touch the Happy Isles,
And see the great Achilles, whom we knew.
Theo’ much is taken much abides; and, tho’
We are not now that strength which in old days
Moved earth and heaven, that which we are, we are,—
One equal temper of heroic hearts,
Made weak by time and fate, but strong in will
To strive, to seek, to find, and not to yield.

Ulysses. — Tennyson.

LESSON 84.

AUTHORSHIP OF QUOTATIONS, PUNCTUATION, AND
PROOF-READING.

We have been asked by teachers and pupils to name the
authors of the sentences quoted in Lessons 44, 46, 49, 50—
52, 55, 56, 72, and 73. We comply in part. But some of
these quotations are not sufficiently striking to justify giving
their parentage; some have been so long and so often
used that it would be impossible to father them upon any
one; and some, still fresh, we confess we are unable to trace
to their source.

If teachers shall be led by this work to the authors
whom we name, and with their pupils shall read the pas-
sages in which these sentences have their original setting, we shall not repent of our labor.

Lesson 49. — 1. Vision of Sir Lawful, Prelude I. — allusion, Exodus, xix. 3. 2. Hayne’s Reply to Webster — all., Revelation, xvi. 1. 3. De Quincey’s essay, Style — all., Genesis, xxviii. 12. 4. Julius Caesar, I. ii. 134 — all., the Statue over the entrance to Rhodes. 5. All., Esop’s Fable of the Lion, the Fox, and the Ass that went hunting; the spoils of which hunt fell mainly to the Lion. 6 and 7. All., customs of the Tournament. 8. All, Judges, xii. 1-8. 9. Webster, all., Numbers, xx. 11. 10. Hayne’s Reply to Webster — all., Macbeth, III. iv. 93. 11. Patrick Henry’s great speech — all., Matthew, xxvi. 48 and 49. 12. All., Mark, viii. 6 and 7. 13. All, the Jewish expression of great distance; these places are at the extreme northern and southern limits of Palestine. 14. All, one of the twelve Labors of Hercules. 15. Henry VIII., III. ii. 369 — all, Isaiah, xiv. 12. 16. All, the custom of the Ring. 17. Macaulay’s essay, Milton — all., the meeting of Henry VIII. and Francis I. near Guines, the profuse expenditure giving the field the name. 18. All, the Story of the Monkey’s using the cat’s paw to poke the chestnuts from the fire. 19. All, Matthew, xxv. 16. 20. Milton’s the Areopagitica — all, Judges, xvi. 13 et seq. 21. All, the Story of the Old Man’s bringing the boys down from his fruit-tree. 22. Whittier’s Snow-Bound — all, Genesis, xxii. 13. 23. Lowell’s essay, My Gard. Acq. — all, character in Martin Chuzzlewit.

Summary of Rules.

Summary of Rules for Capital Letters and Punctuation.

Capital Letters. — The first word of (1) a sentence, of (2) a line of poetry, of (3) a direct quotation making complete sense or a direct question introduced into a sentence, and of (4) phrases or clauses separately numbered or paragraphed should begin with a capital letter. Begin with a capital letter (5) proper names (including all names of the Deity), and words derived from them, (6) names of things vividly personified, and (7) most abbreviations. Write in capital letters (8) the words I and O, and (9) numbers in the Roman notation.¹

Interrogation Point. — A direct interrogative sentence or clause should be followed by an interrogation point.

Exclamation Point. — An exclamatory expression should be followed by an exclamation point.

Comma. — Set off by the comma (1) a phrase that is placed out of its natural order and made emphatic, or that is loosely connected with the rest of the sentence; (2) an explanatory modifier which does not restrict the modified term or combine closely with it; (3) a participle used as an adjective modifier, with the words belonging to it, unless restrictive; (4) the adjective clause when not restrictive; (5) the adverb clause, unless it closely follows and restricts the word it modifies; (6) a word or phrase independent or nearly so; (7) a direct quotation making complete sense and introduced into a sentence, unless it is formally introduced or is a noun clause used as subject; (8) a noun clause used as an attribute complement; and

¹ Small letters are preferred where numerous references to chapters, etc., are made.
(3) a term connected to another by or and having the same meaning. Separate by the comma (10) connected words and phrases, unless all the conjunctions are expressed; (11) connected predicates and other phrases, when long or differently modified, though no conjunction is omitted; and (12) co-ordinate clauses when short and closely connected.

*Hyphen.* — Use the hyphen (1) after as, namely, viz., to wit, that is, introducing examples or illustrations; and (15) whenever it will prevent ambiguity or make the meaning clearer.

**Semicolon.** — Co-ordinate clauses, (1) when slightly connected, or (2) when themselves divided by the comma, should be separated by the semicolon. Use the semicolon (3) between serial phrases or clauses having a common dependence on something which precedes or follows; and (4) before as, to wit, viz., namely, i.e., and that is, when they introduce examples or illustrations.

**Period.** — Place a period after (1) a declarative or an imperative sentence, (2) an abbreviation, (3) a number written in the Roman notation, and (4) Arabic figures used to enumerate.

**Colon.** — Use the colon (1) between the parts of a sentence when these parts are themselves divided by the semicolon, and (2) before a quotation or an enumeration of particulars when formally introduced.

**Dash.** — Use the dash where there is an omission (1) of letters or figures, and (2) of as, namely, viz., i.e., or that is, introducing illustrations or equivalent expressions. Use the dash (3) where the sentence breaks off abruptly, and the same thought is resumed after a slight suspension, or another takes its place; and (4) before a word or phrase repeated at intervals for emphasis. The dash may be used (5) instead of marks of parenthesis, and (6) may follow other marks, adding to their force.

---

**Marks of Parenthesis.** — Marks of parenthesis may be used to enclose what has no essential connection with the rest of the sentence.

*Aperture.* — Use the aperture (1) to mark the omission of letters, (2) in the pluralizing of letters, figures, and characters, and (3) to distinguish the possessive from other cases.

**Hyphen.** — Use the hyphen (1) between the parts of compound words that have not become consolidated, and (2) between syllables when a word is divided.

**Quotation Marks.** — Use quotation marks to enclose a copied word or passage. If the quotation contains a quotation, the latter is enclosed within single marks.¹

**Brackets.** — Use brackets to enclose what, in quoting another's words, you insert by way of explanation or correction.

---

1 If, within the quotation having single marks, still another quotation is made, the double marks are again used.
Legend of Caedmon. 

There was in the monastery of Whitby, or, which presided the Abbess, a certain brother who had learned the art of poetry, not from men, but from God; for having lived in a secular Habit till he was advanced in years he had never learned anything of versifying; for which reason, being sometimes at entertainments, where it was agreed for the sake of mirth that all should sing, he sometimes turns, when he saw the instrument come toward him, he rose up from the table and returned home. Having seen so at a certain time, and gone out of the house, where the entertainment was, he there composed the horses that he there composed him self to rest. In his to him, and saluting him, said, "Caedmon sing some song to me." He answered, I cannot sing, for that was the reason why I left the entertainment.

ABBREVIATIONS.

Remarks. — Few abbreviations are allowable in ordinary composition. They are very convenient in writing lists of articles, in scientific works, and wherever certain terms frequently occur.

Titles prefixed to proper names are generally abbreviated, except in addressing an officer of high rank. Titles that immediately follow names are almost always abbreviated.

Names of women are not generally abbreviated except by using an initial for one of two Christian names.

Abbreviations that shorten only by one letter are unnecessary; as, Jul. for "July," Jun. for "June," &c. for "day," etc.

1st, 2d, 3d, 4th, etc., are not followed by the period. They are not treated as abbreviations.

@, At.
A. B. or B. A. (Artium Baccalaureus), Bachelor of Arts.
Acct. or acct., or %, Account.
A. D. (Anno Domini), In the year of our Lord.
Adjt., Adjutant.
A. E. or A. E., Of age, aged.
A. La., Alabama.
A. Alex., Alexander.
A. M. or M. A. (Artium Magister), Master of Arts.
A. M. (ante meridiem), Before noon.
Amt., Amount.
And., Andrew.
Anon., Anonymous.
Ans., Answer.
Anth., Anthony.

Abbreviations.

Cap., Capital. Caps., Capitals.
Capt., Captain.
C. E., Civil Engineer.
f. (confer), Compare.
