Dear Miss Laura Edison: Thank you very much for your encouraging letter. It is especially nice to hear from England, one of my favorite countries. I was there during World War 11. In my opinion it is much more beautiful than our country. You asked about emission control plans in Victory City. We estimate there would be 1/10th as much pollution from automobiles. Also Victory City would be an all electric city. No gas would be used at all. You asked if investors would have a place to live in Victory City. The investors should receive dividends from their investment, no matter where in the world they live. They should also enjoy a high priority in renting apartments in Victory Cities. We hope that eventually they will be built all over the world. It was good to hear from you. Keep in touch. Orville Simpson
